In addition, ambassadors attend regular meetings and serve as coordinators for activities in the Office of Admission, Student, and Career Services.

For information, contact the Office of Admission, Student, and Career Services (172 MVR, 255-5471).
The mission of the Human Ecology Voices is to build unity among students, faculty, and staff in the College of Human Ecology. Membership consists of all representatives of all other Human Ecology student organizations and other interested students. Patti Papapietro serves as Voices adviser from the Office of Admission, Student, and Career Services (172 MVR, 255-2532).

The Human Ecology Mature Students Association is an organization of students who are 24 years of age or older at the time of matriculation. Many mature students need to balance family, work, and other concerns with their academic efforts. The Mature Students Association strives to help by providing a forum for resource exchange and referral, support, socializing, and special projects depending upon expressed interest. These goals are pursued through seminars and informational meetings, the mature students listserv, supplementary orientation activities, liaison with other university offices, and the encouragement of informal networking. Contact Patti Papapietro in the Office of Admission, Student, and Career Services (172 MVR) for more information.

Students interested in the relationship between the physical environment and human behavior may join the Human-Environment Relations Students Association (HERSA). For more information, contact the Department of Design and Environmental Analysis.

The International Facility Managers Association (IFMA) also has a student chapter. Membership information is available from the Department of Design and Environmental Analysis.

The Association for Students of Color (ASC) unites human ecology minority students to provide a supportive foundation for their enrollment, retention, graduation, and career placement. ASC members work toward these goals by:
- participating in admissions hosting programs and conducting high school visitations
- sponsoring presentations on career and graduate school outcomes of a human ecology education
- providing volunteer services to the Cornell and Ithaca communities,
- attending regular meetings and hosting annual fall and spring forums.

Contact Verdene Lee in the Office of Admission, Student, and Career Services (172 MVR, 255-2532) for more information.

The Orientation Committee consists of students and alumni interested in planning and implementing programs to acquaint new students with the College of Human Ecology. The committee is particularly active at the beginning of each semester and is always eager for new members. For information, contact Patti Papapietro in the Office of Admission, Student, and Career Services (172 MVR, 255-2532).

Membership in the Sloan Student Association is open to students interested in health and related fields. Contact the president of the association (N1222 MVR, 255-8015) for more information.

The Students for Gerontology (SGF) is composed of students from a wide variety of majors who are interested in career and internship opportunities that contribute to the well-being of our aging population. Programs sponsored by this organization focus on developing linkages with community organizations and other student gerontology groups. SGF meets monthly. Contact Donna Dempster-McClain, faculty adviser, Bronfenbrenner Life Course Center, (259 MVR Hall, 255-2567), for further information.

The Undergraduate Nutrition Organization (UNO) promotes nutritional well-being through education, communication, and research. Members of the student chapter organize programs such as Food and Nutrition Day in March, host on-campus speakers in nutrition and health-related fields, and publish NutRinews, a campus-wide nutrition newsletter. The student chapter is open to all students interested in nutrition education. For further information contact Gail Canterbury (302 MVR, 255-5473).

Committees and Councils
Several official organizations exist within the college to deal with matters of policy and to provide leadership in college planning. Most include elected student and faculty representatives, the activities of which groups affect all students directly or indirectly.

The Educational Policies Committee (EPC) has two student members, one graduate and one undergraduate, who vote along with the faculty members on all matters relating to college academic policy. Recommendations are submitted to this committee regarding revisions in degree requirements, new curriculum changes, and new course approval.

Students also have the opportunity to serve on the Admissions Policy Subcommittee, and the Academic Integrity Hearing Board.

The Selection Committee for the Chancellor’s Award for Excellence in Teaching or Professional Service handles the nomination and selection process for this prestigious yearly award. The committee consists of three teaching faculty members, one professional staff member, and three undergraduate members.

The Human Ecology Alumni Association Board of Directors also has two student board members—one junior and one senior. One student is selected each spring to begin a two-year term as student representative. The two students co-chair the board’s Student Activities Committee, which works to increase the visibility of the Alumni Association among the student body by funding a variety of activities. The student members also bring an important perspective to board deliberations about programming and annual goals.

The Committee on Academic Status does not include student representatives, but has a faculty representative from each department. This committee is responsible for upholding the academic standards of the college and takes action when appropriate. The committee also hears appeals regarding student petitions and requests to be readmitted.

Courses with names and descriptions enclosed in brackets—[ ]—are not offered fall 2000 and spring 2001.

INTERDEPARTMENTAL COURSES

HE 100 Critical Reading and Thinking
Fall, spring, or summer. 2 credits.
Enrollment limited. Priority is given to freshmen and sophomores; juniors and seniors are admitted with permission of the instructor. Letter or S-U grade.

The objective of this course is to enable students to increase critical reading and thinking abilities. Theory and research associated with a wide range of reading, thinking, and learning skills are examined. Emphasis is placed on developing and applying analytical and evaluative skills. Laboratory instruction is individualized and provides the opportunity to focus intensively on increasing comprehension, reading rate, and vocabulary.

HE 101 College Achievement Seminar
6-week summer session. 2 credits.
Enrollment limited to and required of Prefreshman Summer Program students. Letter or S-U grade.

The objective of this course is to improve the study and learning skills of incoming freshmen. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note-taking, mapping, textbook comprehension, exam preparation, and exam strategies. The application of theory to the demands of Cornell course work is stressed. In addition, students are introduced to library and computing resources through hands-on projects.

THE URBAN SEMESTER PROGRAM IN MULTICULTURAL DYNAMICS IN URBAN AFFAIRS

Cornell in New York City provides students with many study limited to urban affairs on multicultural dynamics in urban affairs. Experiential learning practices inform all courses of study. The options available include internships, individual and group community service projects, research, independent study, collaborative learning, and mentorships. Students must enroll concurrently in the three courses, HE 470, HE 480, and HE 490. Students learn through reflection and action. Program options are possible throughout the academic year, during winter break, and in the summer.

Courses of study enable students to seek out the relationship between theory and practice, apply theory to practice, identify and acquire professional practice skills, and learn about the impact of diversity on New York City. By applying ethnographic research techniques and methods, students learn to think conceptually, reflect on their actions, and be agents of change.

Several majors in the college require internships or encourage field study. Check with the director of undergraduate study of each major for more information. The Career Development Center in 159 MVR and counselors in the Office of Admission, Student, and Career Services in 172 MVR can help you find internships and provide more information on department opportunities and enrolling in Cornell in New York City.
Multicultural Practice
Fall and spring semesters: HE 470

This course is a study of multicultural issues in urban affairs. It occurs as students enhance their academic foundations and their career development. Using a historic perspective, students examine issues of diversity (e.g., race, ethnicity, religion, class, gender, sexual orientation) in relationship to (1) professional life in different sectors of the economy; (2) the development of neighborhoods and communities; and (3) the basis of a just and democratic society. Readings focus on inner-city children and youth under a variety of multicultural-influenced conditions and contexts. Costs include travel to and from sites by public transportation at about $3.00-6.00 each week.

Multicultural Issues in Urban Affairs
Fall and spring semesters: HE 480

This course analyzes environment and human behavior. We examine the interaction of social and environmental sciences with application for the design and management of built and natural habitats. Topics include environmental effects on health, well-being, moods, aesthetics, performance, interpersonal relationships, and organizational effectiveness as well as the ecological consequences of human attitudes and behaviors. Visit our web site at instruct.cit.cornell.edu/courses/dea150.

Communities in Multicultural Practice
Fall and spring semesters: HE 490

This course provides students with an understanding of community building processes and enables them to interact with children, youth, and their families in school settings. For a full day once each week, students work in inner city schools with teachers, staff, and children, providing community service. Student learning is focused on how to increase children's learning capacities and expand their horizons by teaching them to envision success. Students focus on the assets that inner city children bring to their school environment and learn how to mentor them. They help teach skills, knowledge, values, behaviors, and perspectives that school children must develop in order to enter the working world. Costs include public transportation costs to and from the various sites, about $3.00-6.00 each week.

The Winter Intersession in Community Service and Mutual Learning: The South Bronx-Banana Kelly/Cornell University Project in Community Building
Winter intersession: HE 402

Over the course of two intensive weeks, students participate in an ongoing community service project in the South Bronx with children of the Banana Kelly community. In carrying out community service, students participate with the director of the Cornell New York City Program. Since the 1995 intersession, students have mentored children in an after-school program through projects that have documented the community with photographs, models, and stories. Each intersession, several students mentor 15 ninth graders from Banana Kelly High School. A photography exhibit was produced and circulated. In 1998, Cornell students and children produced three-dimensional models of their imagined community in future years and a book of essays and photographs.

Fieldwork in Diversity and Professional Practice
Summer session: HE 406

Over the course of an eight-week summer session, students will participate in a literacy project in internships of their choosing and a weekly reflection seminar with the director of the Urban Semester Program in New York City.

DESIGN AND ENVIRONMENTAL ANALYSIS
F. Becker, chair; W. Sims, director of undergraduate studies; P. Eshelman, director of graduate studies; A. Basinger, S. Danko, J. Elliott, G. Evans, K. Gibson, R. Gilmore, A. Hodge, J. Jennings, L. Laquatra, L. Maxwell

Note: A minimal charge for photocopied course handouts may be required.

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

DEA 101 Design Studio I
Fall. 3 credits. Each section limited to 18 students. Permission of instructor required for non-DEA majors. Priority given to interior design majors. Option I majors must take DEA 101 in fall of their first year. Approximate cost of materials, $60. M W F 1:25-4:25, or T R 10:10-1:10. J. Elliott.
A studio course introducing the fundamental vocabulary and principles of two- and three-dimensional design. Students experiment with the development of form through problem-solving approaches.

DEA 102 Design Studio II
Spring. 3 credits. Limited to Option I DEA majors only. B- or higher in DEA 101 required to register for this course. Option I majors must take DEA 102 and 115 concurrently. Approximate cost of materials, $200. shop fee, $10. T R 1:25-4:25. P. Eshelman.
A studio course in three-dimensional design with an interior design emphasis. Problems in spatial organization are explored through drawings and models.

DEA 111 Making a Difference: By Design
Students in any academic area examine how design affects their daily life and future profession. Course focuses on issues of leadership, creative problem-solving, and risk-taking through case study examination of leaders in business, education, medicine, human development, science, etc., who have made a difference using design as a tool for positive social change. Utilizing a micro to macro framework, students explore the impact of design from the person to the planet. Additional topics: nurturing innovation, visual literacy, design criticism, design and culture, semiotics, proactive/reflective decision making, and ecological issues.

DEA 115 Design Graphics
Spring. 3 credits. Option I DEA majors only. Prerequisite: DEA 101; must take DEA 102 and DEA 115 concurrently. Minimum cost of materials, $100; technology fee $10. M W F 9:05-11:00. K. Gibson.
A studio drawing course for interior designers. Discussion groups on drawing techniques are held to develop a visual understanding and vocabulary. Students are introduced to the functions of line, shape, and value. Perspective, spatial, and conceptual drawing are emphasized.

DEA 150 Introduction to Human-Environment Relations
This course analyzes environment and human behavior. We examine the interaction of social and environmental sciences with application for the design and management of built and natural habitats. Topics include environmental effects on health, well-being, moods, aesthetics, performance, interpersonal relationships, and organizational effectiveness as well as the ecological consequences of human attitudes and behaviors. Visit our web site at instruct.cit.cornell.edu/courses/dea150.

DEA 201 Design Studio III
Fall. 4 credits. Limited to Option I DEA students. Prerequisites: DEA 101,102, and 115 (minimum grades of B—Recommended: DEA 111 and 150. Coregistration in DEA 205 is required. Minimum cost of materials, $150; lab fee, $40, optional field trip, approximately $100. M W F 1:25-4:25. J. Jennings.
Beginning interior design studio. Focus is on development of basic proficiency in interior design skills. The course is structured around a series of elementary interior and interior-product design problems of three to five weeks in length.

DEA 202 Design Studio IV
Spring. 4 credits. Each section limited to Option I DEA students. Prerequisites: DEA 201 and 203. Prerequisites or corequisites: DEA 204. Minimum cost of materials, $120; diazo machine fee, $8; field trip fee. T R 12:20-4:25. R. Gilmore.
Second interior design studio. Emphasis of the course is on continued development of basic proficiency in design and conceptualization techniques for architectural and interior designers. Students study the various forms of communication used throughout the design process, from programming and conceptualization through construction documentation, and the most effective utilization of those forms. Both verbal and visual presentation methods are stressed.

DEA 203 Digital Communications
Fall. 2 credits. Priority given to DEA majors. Lab fee $10. Sec 01 M 7:30-9:55 P.M., sec 02 W 7:30-9:55 P.M., sec 03 W 7:30-9:55 P.M., sec 04 W 7:30-9:55 P.M. J. Elliott.
Communication techniques for architectural and interior designers. Students study the various forms of communication used throughout the design process, from programming and conceptualization through construction documentation, and the most effective utilization of those forms. Both verbal and visual presentation methods are stressed.

DEA 204 Introduction to Building Technology
Introduction to building technology for interior designers and facility managers. Emphasis is placed on developing basic understanding of buildings and building systems and their implications for interior design and facility management. Covers basic building types; structural systems; construction materials and methods; HVAC systems; plumbing, electrical, lighting, fire, and security systems; and telephone, computer, and other communication systems.
DEA 243 Inside Out: The American Everyday Interior (also WOMNS 243, AM ST 243)

DEA 250 The Environment and Social Behavior
Fall. 3 credits. Limited to 16. Priority order: DEA seniors, juniors, sophomores, freshmen. Prerequisite: DEA 150 or permission of instructor. Field trip fee $65. T R 2:55-4:10. G. Evans. A combination seminar-and-lecture course for students interested in the social sciences, design, or facility management. Through projects and readings the influence of environmental form on social behaviors such as aggressiveness, perception, communication, community, and crime is explored. Also covered are the influences of stage in life cycle, family structure, and social class on environmental needs and purposes. Implications for the planning, design, and management of complex environments such as offices, hospitals, schools, and housing are emphasized.

DEA 251 History and Theory of the Interior
Fall. 3 credits. Limited to 65. Priority given to DEA majors. M W F 9:05-9:55. J. Jennings. An historic study of interior architecture and design with an emphasis on the concepts of design theory. Overarching themes encompass several time periods from the classical to the twentieth century and isolate cultural patterns, spatial ideas, dialectics, design elements, and theorists. Reading, discussion, analytical exercises, essays, examinations. Field trip.

DEA 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged. Department faculty. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from the College Registrar's Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

DEA 301 Design Studio V
Fall. 4 credits. Prerequisites: DEA 111,150, 201, 202, 203, and 204. Corequisite: DEA 303 and 459. Minimum cost of materials, $150; shop fee, $10, optional field trip, approximately $100. Diazo machine fee, $8. T R 12:20-4:25. P. Eshelman. Intermediate-level interior design studio. The course is organized around a series of interior and interior-product design problems of intermediate-level complexity, three to five weeks in duration. Focus is on development of design skills and on understanding of a selected set of generic problem types.

DEA 302 Design Studio VI
Spring, 5 credits. Prerequisites: DEA 301 and 305 or permission of instructor. Corequisite: DEA 305. Minimum cost of materials, $150; shop fee, $10; diazo machine fee, $8. M W F 1:25-4:25. K. Gibson. Intermediate-level interior design studio with an introduction to computer applications. Emphasis on using the microcomputer as a design tool in the process of creating and planning interior spaces. Continued development of design skills and problem solving in relation to a selection of problem types.

DEA 303 Introduction to Furnishings, Materials, and Finishes
Fall. 2 credits. W 2:30-4:25. R. Gilmore. Basic understanding of furniture types and systems; interior products and equipment such as work-stations; window, and floor coverings; ceiling and lighting systems; and materials and finishes. Emphasis is placed on criteria for selection of furnishings, materials, and finishes for typical interior design and facility management problems.

DEA 304 Introduction to Professional Practice of Interior Design
Spring. 1 credit. W 2:30-4:25. A. Basinger. Introduction to the professional and management principles for delivery of interior design and facility management services. Covers basic organizational structures and basic management functions within interior design and facility management organizations, work flow and scheduling, business practices, legal and ethical responsibilities and concerns, contracts, basic contract documents such as working drawings and specifications, supervision of construction and installation, and cost estimation.

DEA 305 Construction Documents and Detailing

DEA 325 Human Factors: Ergonomics-Anthropometrics
Fall. 3 credits. Recommended: DEA 150. T R 8:40-9:55. A. Hedge. Implications of human physical and physiological characteristics and limitations on the design of settings, products, and tasks. An introduction to engineering anthropology, biomechanics, control/display design, work physiology, and motor performance. Course includes practical exercises and field project work.

DEA 350 Human Factors: The Ambient Environment
Spring, 3 credits. Recommended DEA 150. T R 8:40-9:55. Not offered spring 2003; next offered spring 2002. A. Hedge. An introduction to human-factor considerations in lighting, acoustics, noise control, indoor air quality and ventilation, and the thermal environment. The ambient environment is viewed as a support system that should promote human efficiency, productivity, health, and safety. Emphasis is placed on the implications for planning, design, and management of settings and facilities. Course includes a field project.

DEA 374 Elements of Business for Non-Business Majors (also H ADM 104)
Spring. 1 credit. Limited to 30. Weekend course. P. Rainsford. Focus will be to provide hands-on skills and knowledge about how to start or run a small business. Especially appropriate for students interested in professional careers such as architecture, design, writing, art, engineering, law, and other service businesses. Course structure will use a computer-based management simulation game and will require students to work in management teams of six to start and operate a hotel. Introductory-level course. No previous business experience or computer knowledge required. Students are required to attend all sessions and complete a paper, which will be due a week after conclusion of the course.

DEA 400-401-402-403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grades optional. Department faculty. For advanced independent study by an individual student or for study on an experimental basis when a group of students in a field of DEA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multiplicity description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department head and filed at course registration or within the change-of-registration period after registration in 145 MVR, College Registrar's Office, along with an add/drop slip. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department head is necessary. Students, in consultation with their advisors and the instructor should register for one of the following subdivisions of independent study.

DEA 400 Directed Readings
For study that predominantly involves library research and independent reading.

DEA 401 Empirical Research
For study that predominantly involves data collection and analysis or laboratory or studio projects.

DEA 402 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

DEA 403 Teaching Apprenticeship
For study that includes teaching methods in the field and assisting faculty with instruction. Students must have demonstrated a high level of performance in the subject to be taught and in the overall academic program.

DEA 407 Design Studio VII
Fall. 5 credits. Prerequisites: DEA 302, DEA 303, DEA 304, and DEA 305. Minimum cost of materials, $150. Diazo machine fee, $8. Field trip, $50. T R 12:20-4:25. R. Gilmore. Advanced interior design studio organized around a series of interior design problems, three to five weeks in duration. Focus is on development of design skills and on competence in solving a selected set of generic interior design problem types.
DEA 408 Design Studio VIII
Spring. 5 credits. Prerequisites: DEA 301, 302, 303, and S-U option. Class fee of $150; diazo machine fee, $8 per semester. T R 12:20-4:25. S. Danko.
Design-problem-solving experiences involving completion of advanced interior design problems. Problems are broken into five phases: programming; schematic design and evaluation; design development, including material and finish selection; design detailing; and in-process documentation and the preparation of a professional-quality design presentation.

DEA 422 Ecological Literacy and Design
Design oriented lecture/seminar course for students becoming design professionals that will discuss their effect on a biophysical world. Objectives are to develop knowledge of environmental issues, construct conceptual frameworks for analysis, and demonstrate how ecological knowledge can be applied to the practice of design. Seminars, readings, field trips, and group projects.

DEA 430 Furniture as a Social Art
Spring. 3 credits. Limited to 15. Permission of instructor. Building materials: $150. Students must also sign up for 2 hours of DEA shop time each week for model building. M W 10:10-12:05. P. Eschelman.
This course examines furniture as a design process that emphasizes support of human behavior. Information about specific social issues including health care, aging, child care, and education is the starting point for assignments. Students analyze products currently available and design new furniture. Also covered are furniture materials, fabrication processes, and manufacturing techniques.

DEA 443 Cultural Construction: The Nineteenth- and Twentieth-Century American Interior
A topical study of nineteenth- and twentieth-century American vernacular interiors, exploring the relationship between interior design theory and social and cultural values. Sources include historic interiors, literature and art, and architectural and material culture studies. Reading, discussion, comparative analysis, and critical writing.

DEA 451 Seminar on Facility Planning and Management
Fall. 1 credit. Letter grades only. M 3:30-4:25. F. Becker, W. Sims.
Series of seminars led by Cornell faculty and other facility management professionals. Topics include strategic space planning, space standards, office automation, project management, energy conservation, environmental protection, and regulatory issues.

DEA 453 Planning and Managing the Workplace
Spring. 3 credits. Prerequisite: limited to juniors and seniors. Purchase of course packet required. F 10:10-11:10. F. Becker.
Intended for students interested in the planning, design, and management of facilities for complex organizations. The purpose of the course is to explore how characteristics of the workplace, including building, design, furniture and equipment, and policies governing their use and allocation, affect individual and organizational effectiveness. Special topics, such as the human implications of new information technologies and work at home, are also covered.

DEA 454 Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: DEA 459 or permission of instructor. Letter grades only. Minimum cost of materials: $100. T R 1:25-4:25. W. Sims.
For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. Covers strategic and tactical planning for facilities, organizing to deliver facility management services, project management, space forecasting, space allocation policies, programming, relocation analysis, site selection, building assessment, space planning and design, furniture specifications, and moves. Sociopsychological, organizational, financial, architectural, and legal factors are considered.

DEA 455 Research Methods in Human-Environment Relations
Fall. 3 credits. Prerequisites: DEA majors only or permission of instructor, and a statistics course. M W F 1:25-2:15. G. Evans.
The course develops the student's understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasis is placed on selection of appropriate methods for specific problems and the policy implications derived from research. Topics include research design, unobtrusive and obtrusive data-collecting tools, the processing of qualitative and quantitative data, and effective communication of empirical research findings.

DEA 459 Programming Methods in Design
Fall. 5 credits. T R 10:10-11:25. W. Sims.
Introduction to environmental programming. Emphasis on formulation of building requirements from user characteristics and limitations. Students analyze products currently available and design new furniture. Also covered are furniture materials, fabrication processes, and manufacturing techniques.

DEA 465 Dancing Mind/Thinking Heart: Creative Problem-Solving Theory and Practice
Spring. 5 credits. Limited to 15 graduate and advanced undergraduate students. Prerequisite for undergraduates: permission of instructor. T 4:30-7:30. S. Danko.
Focuses on thinking processes and techniques that support creative problem solving. Theories of creative behavior and critical thinking are examined. Course is highly participatory and experiential by design. Weekly discussions include hands-on applications of theories and methods to solving problems tailored to the backgrounds of the students. Primary goal is to demonstrate perceptual, emotional, intellectual, cultural, and environmental blocks to creative thinking and expand the students' repertoire of creative problem solving strategies for use in day-to-day professional practice. Case studies of creative individuals and organizations from a variety of fields are presented.

DEA 499 Senior Honors Thesis
Fall or spring. Variable credit. Prerequisite: permission of thesis advisor and DEA director of undergraduate studies. Letter grades only.
This is an opportunity for DEA majors to undertake original research and scholarly work leading to the preparation of a thesis. Students work closely with their thesis advisor on a topic of interest.

DEA 600-603 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades optional. Department faculty.
Independent advanced work by graduate students recommended by their special committee chair and approved by the head of the department and instructor.

600: Special Problems
For study of special problems in the areas of interior design, human environment relations, or facilities planning and management.

601: Directed Readings
For study that predominantly involves library research and independent study.

602: Graduate Empirical Research
For study that predominantly involves collection and analysis of research data.

603: Graduate Practicum
For study that predominantly involves field experiences in community settings.

DEA 643 Cultural Construction: The Nineteenth- and Twentieth-Century American Interior
Spring (even-numbered years). 4 credits. Enrollment limited to 15 students. S-U option. Field trips $50. T R 10:10-11:30. Next offered spring 2002. J. Jennings. A course intended for graduate students who want a more thorough grounding in the history of vernacular interiors than is provided by DEA 443. Each student is required to attend DEA 443 lectures, meet with the instructor and other graduate students for an additional class hour each week, and do additional readings and projects.

DEA 645 Programming Methods in Design
Fall. 5 credits. T R 10:10-11:25. W. Sims.
Introduction to environmental programming. Emphasis on formulation of building requirements from user characteristics and limitations. Students analyze products currently available and design new furniture. Also covered are furniture materials, fabrication processes, and manufacturing techniques.

DEA 649 Senior Honors Thesis
Fall or spring. Variable credit. Prerequisite: permission of thesis advisor and DEA director of undergraduate studies. Letter grades only.
This is an opportunity for DEA majors to undertake original research and scholarly work leading to the preparation of a thesis. Students work closely with their thesis advisor on a topic of interest.

600: Special Problems
For study of special problems in the areas of interior design, human environment relations, or facilities planning and management.

601: Directed Readings
For study that predominantly involves library research and independent study.

602: Graduate Empirical Research
For study that predominantly involves collection and analysis of research data.

603: Graduate Practicum
For study that predominantly involves field experiences in community settings.

DEA 643 Cultural Construction: The Nineteenth- and Twentieth-Century American Interior
Spring (even-numbered years). 4 credits. Enrollment limited to 15 students. S-U option. Field trips $50. T R 10:10-11:30. Next offered spring 2002. J. Jennings. A course intended for graduate students who want a more thorough grounding in the history of vernacular interiors than is provided by DEA 443. Each student is required to attend DEA 443 lectures, meet with the instructor and other graduate students for an additional class hour each week, and do additional readings and projects.

DEA 645 Dancing Mind/Thinking Heart: Creative Problem-Solving Theory and Practice
Spring. 5 credits. Limited to 15 graduate and advanced undergraduate students. Prerequisite for undergraduates: permission of instructor. T 4:30-7:30. S. Danko. Focuses on thinking processes and techniques that support creative problem solving. Theories of creative behavior and critical thinking are examined. Course is highly participatory and experiential by design. Weekly discussions include hands-on applications of theories and methods to solving problems tailored to the backgrounds of the students. Primary goal is to demonstrate perceptual, emotional, intellectual, cultural, and environmental blocks to creative thinking and expand the students' repertoire of creative problem solving strategies for use in day-to-day professional practice. Case studies of creative individuals and organizations from a variety of fields are presented.
DEA 656 Research Methods in Human-Environment Relations
Fall. 4 credits. Prerequisites: DEA majors only or permission of instructor; and a statistics course. M W F 1:25-2:15. G. Evans.
Intended for graduate students who want a more thorough understanding of the research to study the relationship between physical environment and human behavior than is provided by DEA 455. Each student is required to attend DEA 455 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 455 for more detail.

DEA 659 Seminar on Facility Planning and Management
Fall. 1 credit. For graduate students interested in careers in facility planning and management. Letter grades only. M 3:35-4:25. F. Becker, W. Sims.
Series of seminars led by Cornell faculty members and other professionals directly involved in facility planning and management. Topics include strategic and tactical facility planning, space management, computer and facility management, facility maintenance and operations, energy conservation, and building systems.

DEA 660 The Environment and Social Behavior
Fall. 4 credits. Prerequisite: DEA 150 or permission of instructor. Field trip fee $65. T R 2:55-4:10. G. Evans.
Intended for graduate students who want a more thorough understanding of the influence of environmental form on social behavior than is provided by DEA 250. Each student is required to attend DEA 250 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 250 for more detail.

DEA 668 Design Theory Seminar
Spring. 4 credits. Enrollment limited to 25 students. T R 10:10-11:25, J. Jennings.
Directed toward advanced undergraduate and graduate students interested in theory of design. The purpose is to provide an understanding of major theoretical ideas underlying design movements of the twentieth century. Explores these ideas through readings, lectures by faculty and visitors, student presentations of research papers, and seminar discussions.

DEA 670 Applied Ergonomics Methods
Intended for graduate students who want a more thorough understanding of applied ergonomics methods than is provided by DEA 470. Each student is required to attend DEA 470 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 470 for more detail.

HUMAN DEVELOPMENT

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

HD 115 Human Development
Fall or summer. 3 credits. S-U grades optional. M W F 1:25-2:15. J. Garbarino.
Provides a broad overview of theories, research methods, and current knowledge of human development from conception into adulthood. Course material covers infancy, childhood, and adolescence. Topics include biological, intellectual, linguistic, social, and emotional development as well as the cultural, social, and interpersonal contexts that affect developmental processes and outcomes of these domains.

HD 116 Exploring Human Development
Fall. 1 credit. Letter grades only. Limited to Human Development freshmen. TBA. HD faculty.
This course is a series of small group discussions with HD freshmen and a HD faculty member. Each faculty member will set the topics and style of discussion. Discussion groups will meet one hour a week, each week of the fall semester. No exams will be given. Grading will be done on attendance, participation, and short written assignments.

HD 216 Human Development: Adolescence and Youth
Spring. 3 credits. Prerequisite: HD 115 or Psychology 101 or permission of instructor. S-U grades optional. T R 11:40-12:55. C. Schelhas-Miller.
Provides a broad overview of theories, research, and issues in the study of human development from early to late adolescence (youth). Attention is focused on the major biological, cognitive, and social changes during adolescence; the psychosocial issues of adolescence, including identity, autonomy, intimacy, sexuality, achievement, and problems; and the contexts in which adolescent development occurs, particularly families, peer groups, schools, work, and popular culture. Empirical research, theories, case studies of the lives of real adolescents, and, to a lesser degree, public policies are discussed.

HD 218 Human Development: Adulthood and Aging
Provides a general introduction to theories and research in adult development and aging. Psychosocial, social, and biological changes from youth through late adulthood are discussed. Both individual development within generations and differences among generations are emphasized.
HD 230 Cognitive Development  
Spring. 3 credits. S-U grades optional. Prerequisites: Psychology 101 or Psychology 102  
T R 11:40-12:55. Staff.
This course surveys theories and research in perceptual and cognitive development from infancy through adolescence. Extensive coverage of infant perception, cognition, and learning during the first two years of life forms the foundation of the course. Significant linkages between brain development and behavioral development are covered when possible. Language, memory, concepts, and problem solving among the topics covered in the second half of the semester. The course is intended to serve as a foundation for more advanced study in cognitive development, but also as an overview for students whose primary interests lie in other areas.

[HD 233 Children and the Law]  
Fall. 3 credits. Prerequisites: HD 115 and an introductory statistics course. W 2:30-5:00. S. Ceci.
This course examines psychological data and theories that shed light on the practical issues that arise when children enter the legal arena. It attempts to integrate theories, research, and methodology from several areas of psychology including, developmental, cognitive, social, and clinical. This course also attempts to examine the degree to which basic research can (and should) be used to solve applied issues. The topic of children and the law provides an opportunity to meet all these requirements. Rapid changes involving child witnesses in our legal system have forced social scientists to bring their work into the courtroom. At the same time, bringing this fray into the legal system has changed the course of research and thinking about certain aspects of child development and cognition. It has encouraged researchers to tackle new issues and to develop innovative experimental paradigms. Selected topics to be covered include: memory development, suggestibility, theory of mind, childhood amnesia, expectancy formation, symbolic representational abilities, and several actual cases involving child witnesses will be presented to illustrate the application of scientific data to the courtroom. Because of the heavy use of case materials, video and textual coverage of actual trials, it is expected that students will devote more than the usual number of hours to this course.

HD 241 History of Childhood in the United States (also HIST 271, AM ST 241)  
An examination of childhood and adolescence in various historical contexts: Puritan New England, slave plantations, evangelical revivals, the West, the family, family chart, Victorian families, reform schools, early high schools and colleges, the sexual revolution of the 1920s, immigrant communities, the Depression and World War II, the 1950s, and more recent social and cultural changes affecting families. Students will evaluate continuities and changes in the lives of American children as well as changing scientific ideas about children. Students have an opportunity to reflect on and write about their own child hood and adolescence. This course is designed to give students a humanities perspective on approaches to childhood.

HD 242 Participation with Groups of Young Children  
Fall or spring. 3 credits. Limited to 20 students (limit depends on availability of placements and of supervision). Prerequisites: HD 115 and permission of instructor. S-U grades optional. W 1:25-3:30. J. Ross-Bernstein.
This course is designed to integrate developmental theories with supervised experience in child care centers, with the intention of enhancing the student's abilities to understand and to relate effectively with young children. The course involves participation, observation, reflection, reading, writing, and sharing of viewpoints. Placements are in local nursery schools, day care centers, Head Start programs, and kindergartens.

HD 250 Families and the Life Course (also SOC 251)  
This course provides an introduction to social scientific research on family roles and functions in American society. Topics include the family, the family cycle, parent-child relationships, the life course, and the influence of cultural and economic forces on families.

HD 251 Social Gerontology: Aging and the Life Course  
Spring. 3 credits. Limited to 60 students. Strongly recommended: HD 250 or equivalent to be determined by instructor. S-U grades optional. T R 8:40-9:55. D. Dempster-McClain.
This course analyzes the social aspects of aging in contemporary American society from a life course perspective. Topics to be covered include: (1) an introduction to the field of gerontology, its history, theories, and research methods, (2) a brief overview of the physiological and psychological changes that accompany aging, (3) an analysis of the contexts (societal, family, friends, social support, employment, volunteer work) in which individual aging occurs, including differences of gender, ethnicity, and social class. (4) The influence of society on the aging individual. (5) This course will provide an introduction to various careers in the field of gerontology.

HD 253 Gender and the Life Course  
Fall. 3 credits. S-U grades optional. M 7:30-10:00 P.M. T. Mirano.
We will examine the complex interplay between gender and age as well as the social construction of the life course. Students explore the relationship between social change and individual lives, observing the significance of two key institutions—work and family—in shaping basic life choices and their consequences. Emphasis will be placed on (1) the consequences of key life trajectories and transitions for individual lives and for social policy will also be discussed.

[HD 258 History of Women in the Professions, 1800 to the Present (also WOMNS 238 and HIST 238, AM ST 258)]  
Fall. 3 credits. S-U grades optional. Human ecology students must register for HD 258. J. Brunberg.
The historical evolution of the female professions in America (midwifery, nursing, teaching, librarianship, home economics, and social work) as well as women's struggles to gain access to medicine, law, and the sciences. Lectures, reading, and discussion aim to identify the cultural patterns that fostered the conception of gender-specific work, and the particular historical circumstances that created these different work opportunities. The evolution of "professionalism" and the consequences of professionalism for women, family structures, and American society are also discussed.

HD 260 Introduction to Personality (also PSYCH 275)  
Spring. 3 credits. Recommended: introductory course in psychology or human development. T R 1:25-2:40. C. Hazan.
This course is designed as an introduction to theory and research in the area of personality psychology, with a special emphasis on personality development. It covers the major influences—including genetic, environmental, and gene-environment interactions—and involves in-depth study of the major theories. The assumptions and models of human behavior that form the basis of each theoretical orientation will be examined and compared, and the relevant empirical evidence reviewed and evaluated. In addition, basic psychometric concepts and the methods for measuring and assessing personality will be covered, as will the major related debates and controversies.

[HD 261 The Development of Social Behavior]  
Issues in the development of social behavior are viewed from the perspective of theory and research. Likely topics include bases of social behavior in infancy and early childhood, the role of parents, siblings, and peers in the development of prosocial and aggressive behavior, the development and functioning of attitude and value systems, and the function and limits of experimental research in the study of social development.

HD 266 Emotional Functions of the Brain  
Fall. 3 credits. Prerequisite: a biology course. Letter grades only. M 10:10-12:35. R. Depue.
Much of our social behavior, and what we refer to as personality, is related to phylogenetically-old emotional systems, systems that helped us to adapt to critical stimuli in the environment. These systems are structured and organized within the brain, but they are also capable of being modified by our everyday experiences. After an overview of the gross anatomy of the primates brain is presented, the focus of the course concerns networks of brain regions that are organized around the integration of processes related to emotion and motivation. First, general features of the brain in response to emotional evaluation and expression processes are discussed, and then the brain organization related to several specific types of emotional systems are explored. Neurobiological modulation of emotional processes by neurotransmitters of wide distribution in the brain are detailed as well. The latter helps to lay the groundwork for understanding the nature of individual differences in much of our social and emotional behavior.

HD 281 Foundations of Clinical Practice (also PSYCH 281)  
Fall. 3 credits. Enrollment limited to 60 students. Letter grades only. W 1:30-4:30. C. Maxwell Miller.
This course provides an introduction to the theoretical and practical aspects of some of the basic elements of counseling. Students will develop an understanding of the most current research on important aspects of counseling and will be introduced to the basic theoretical foundations underlying different approaches. Students will be expected to acquire and demonstrate elementary helping skills. Through role-play, observation of videos, and class demonstrations, students will learn such skills as attending and active listening; they will also develop a capacity to recognize, interpret, and respond to the emotions and cognitive distortions as well as the similarities between intra-psychic and interpersonal processes. Other topics include issues of transference and counter-transference, the multi-axial dimensions of the DSM IV, defensive strategies as they appear in the DSM IV, and ethical considerations and practices. While this course gives an introduction to the applied aspects of psychology, it does not prepare students to provide treatment of any sort.

**HD 282 Community Outreach (also PSYCH 282)**

Fall and spring. 2 credits. Letter grades only. Prerequisites: HD 115 or Psychology 101. Students may not concurrently register with HD 327 or HD 328 or Psych 327 or Psych 328. T 10:10-11:25, H. Segal. This course provides the background in information and perspectives essential to do volunteer fieldwork with human and social service programs in the community. To gain a practical understanding of what mental health professionals do in the workplace, students will examine problems that emerge in the fieldwork settings, which raise ethical, methodological, theoretical, and practical issues in the observation or treatment of clients or patients. They will also be introduced more generally to the Field of Community Psychology, its history, theory, and applications. Although students are not required to volunteer at a local agency, the instructor will assist students in finding sites that may provide appropriate learning opportunities. A paper, relating current research to issues relevant to community mental health, is due at the end of the course.

**HD 284 Introduction to Sexual Minorities (also WOMNS 285)**

Fall. 3 credits. Prerequisite: one social science course. S-U grades optional. M 6:30-9:00 P.M. R. Savin-Williams. This course introduces students to theories, empirical scholarship, public policies, and current controversies with lesbian, gay, bisexual, transgender, sexual questioning, and other sexual minority populations. The major focus is on gay, lesbian, and bisexual development, lifestyles, and communities with additional emphasis on ethnic, racial, gender, and class issues. Videos supplement the readings and lectures.

**HD 300 Special Studies for Undergraduates**

Fall or spring. Credit to be arranged. Permission required. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from the College Registrar’s Office. The form, signed by both the instructor directing the study and the coordinator of undergraduate education, is filed at course registration or during the change-of-registration period.

**HD 313 Problematic Behavior in Adolescence**

Fall. 3 credits. Prerequisite: HD 115 or Psychology 101; HD 216 recommended. M W 2:55-4:10, J. Haugard. This course will explore several problematic behaviors of adolescence, including depression, drug abuse and delinquency. Various psychological, sociological, and biological explanations for the behaviors will be presented. Appropriate research will be reviewed; treatment and prevention strategies will be explored. An optional discussion section will be available to students who would like an opportunity to discuss readings and lectures in greater depth.

**HD 327 Field Practicum I (also PSYCH 327)**

Fall. 3 credits. Enrollment limited to 30 students. Prerequisite: must commit to taking HD 328 in the spring semester. Prerequisites: HD 370 or Psychology 325 and permission of instructor. Letter grades only. M W 8:40-9:55, H. Segal. This course provides three components, which form an intensive undergraduate field practicum. First, students spend three to six hours a week at local mental health agencies, schools, or nursing facilities working directly with children, adolescents, or adults. Supervision is provided by host agency staff. Second, Cornell faculty provide additional weekly educational supervision for each student. Third, seminar meetings cover issues of adult and developmental psychopathology, clinical technique, case studies, and current research issues. Students write two short papers, two final take-home exams, and present an account of their field experience in class. There are no fees, but students pay for transportation to their weekly field placement, most of which are located in and around Ithaca.

**HD 328 Field Practicum II (also PSYCH 328)**

Spring. 3 credits. Enrollment limited to 30 students. Prerequisites: HD 327 or Psychology 327 taken the previous term, Psychology 325 or HD 370 and permission of instructor. Letter grades only. M W 8:40-9:55, H. Segal. This course provides three components which form an intensive undergraduate field practicum. First, students spend three to six hours a week at local mental health agencies, schools, or nursing facilities working directly with children, adolescents or adults; supervision is provided by host agency staff. Second, Cornell faculty provide additional weekly educational supervision for each student. Third, seminar meetings cover issues of adult and developmental psychopathology, clinical technique, case studies, and current research issues. Students write two short papers, two final take-home exams, and present an account of their field experience in class. There are no fees, but students pay for transportation to their weekly field placement, most of which are located in and around Ithaca.

**HD 334 The Growth of the Mind**

Spring. 4 credits. Open to undergraduate and graduate students. Students should also enroll in HD 635, a supplemental graduate seminar. Prerequisites: a course in human experimental psychology, statistics, or HD 115 or equivalent, or permission of the instructor. S-U grades optional. In this course the fundamental issues of cognition are introduced. What is the nature of human intelligence? Of logical and scientific reasoning? How are knowledge and understanding acquired and represented in the human mind? What is the nature of mental representation? What are the cognitive characteristics of the mind at birth? What is the relation of the acquisition of knowledge and understanding to their final representation? What are the relations between language and thought? In the study of those issues, how can epistemology and experimental psychology be related through the experimental method?

Basic debates within the study of cognition are introduced and discussed throughout: for example, the roles of nature and nurture, the distinction between competence and performance, and the relation between induction and deduction in the acquisition of knowledge. Those psychological issues are set in a context of basic philosophical issues involving the tension between rationalism and empiricism. The course will analyze Piaget's comprehensive theory of cognitive development and experimental results. Current research in cognitive development will be contrasted.

**HD 346 Infant Behavior and Development**

Fall. 3 credits. Prerequisites: HD 115, a biology course, and a statistics course. Not open to freshmen. M W 1:25-2:15, S. Robertson. Behavior and development from conception through the first two years after birth will be examined in traditional areas (e.g., perception, cognition, socioemotional, language, motor). The fundamental interconnectedness of these aspects of development will be strongly emphasized, as well as their relation to the biology of fetal and infant development. Topics with implications for general theories of development will be emphasized (e.g., the functional significance of early behavior, the nature of continuity and change, the role of growth in the environment in development). Conditions which put infants at risk for poor development (e.g., premature birth, exposure to environmental toxins, maternal depression) and topics with current social, ethical, or political implications (e.g., infant day care, fetal rights) will also be considered. An emphasis on research methodology in the study of early behavior and development will be maintained throughout the course.

**HD 348 The Role and Meaning of Play**

Fall. 2 credits. Limited to 30 juniors and seniors. Prerequisite: HD 115. M W 7:30-9:25, P.M. J. Ross-Bernstein. The aim of this course is to examine the play of children ages three through seven. Through seminar discussions, workshops, films, and individualized research the student will explore the meaning and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.
HD 347 Human Growth and Development: Biological and Behavioral Interactions (also B&SOC 347 and NS 347) Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109, and HD 115 or Psychology 101. Limited to 150 students. M W F 10:10-10:35. Offered alternate years. S. Robertson and J. Haas. This course is concerned with the interrelationships of physical and psychological growth and development in humans during infancy. Intrinsic and extrinsic causes of variations in growth and development, including various forms of stimulation, are considered. In addition, the consequences of early growth and its variations for current and subsequent behavioral, psychological, and physical development are examined. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.

HD 348 Advanced Participation with Children Spring. 4-8 credits. Limited to 20 students (limit depends on availability of placements and supervision). Prerequisites: HD 115 and HD 242, and permission of instructor. Recommended: HD 346. S-U grades optional. T 12:20-2:15. J. Ross-Bernstein. An advanced, peer-supervised field-based course designed to help students deepen and consolidate their understanding of children. Students are expected to define their own goals and assess progress with supervising teachers and to keep a journal, and to plan, carry out, and evaluate weekly activities for children within their placement. Conference groups and readings focus on contexts of development and on ways to support children's personal and interpersonal learning. Each student is expected to do a presentation and paper on a self-selected topic within the scope of the course. Participation is in settings that serve typical or special children from three to eight years of age and provide education, care, or special-purpose interventions for them.

HD 353 Risk and Opportunity Factors in Childhood and Adolescence Spring. 3 credits. Enrollment limited to 100 students. Prerequisites: HD 115 and HD 250. S-U grades optional. T 1 R 1:25-2:40. J. Cathrino. This course explores the meaning of risk and opportunity in the lives of children and youth. It begins from an understanding of risk accumulation and resilience as they relate to social policy, professional practice, and community development. The concept of "social toxicity" is a central theme of the course. Assignments include writing research-based editorials and participating in a simulated public-policy debate.

HD 359 American Families in Historical Perspective (also WOMNS 357, HIST 359, AM ST 359) Spring. 3 credits. Prerequisite: HD 250 or one 200-level social science or history course. S-U grades optional. Human ecology students must register for HD 359. J. Brumberg. This course provides an introduction to and overview of problems and issues in the historical literature on American families and the family life cycle. Reading and lectures demonstrate the pattern of American family experience in the past, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family deals with changing cultural conceptions of sexuality, sex roles, gender, relationships, stages of life, and life events. Students are required to do a major research paper on the history of their family, covering at least two generations, and demonstrating their ability to employ the course development theory, data drawn from the social sciences, and historical circumstances.

HD 362 Human Bonding Fall. 3 credits. Recommended: introductory course in psychology or human development. S-U grades optional. T R 1:25-2:40. C. Hazan. The science of interpersonal relationships. Examines the basic nature of human affectional bonds, including their functions and dynamics. Covers such topics as interpersonal attraction and mate selection, intimacy and conflict, and jealousy and loneliness, the neurobiology of affiliation and attachment, and the role of relationships in physical and psychological health.

HD 363 The Psychological Development of Women Fall. 3 credits. Limited to 60 students. Strongly recommended: HD 115, 290, and a 200-level course. Letter grades only. T R 11:40-12:55. C. Raver. Historically, psychologists have effectively charted the pathways of boys' normative development yet sometimes neglected to pursue a full understanding of girls' development. To address this gap, this seminar will pursue a number of theoretical perspectives that focus on the social development of girls and women. Theory and research on girls' gender identity, peer relationships, romantic relationships, and parenting will be considered, with an eye toward understanding their meaning within different historical and sociocultural frameworks. Relations between psyche, body, and culture will be considered, using the works of such authors as Freud, Horney, Miller, Chodorov, and Gilligan. Students will rigorously evaluate these theoretical perspectives in light of recent empirical research on women's psychological development.

HD 366 Psychobiology of Temperament and Personality Spring. 3 credits. Letter grades only. Prerequisite: HD 266. T R 10:10-11:25. R. Depue. This course is for students who have an interest in the neurobiology of behavior, in general, and in temperament and personality, in particular. The course material is presented within an evolutionary biology perspective, where the development of neurobehavioral systems as a means of adapting to critical stimuli is explored as the basis of emotional traits in humans. The nature of temperament, social affiliation, and personality is explored from psychometric, genetic, and biological points of view. There is a focus on the general role played by the biogenic amines (dopamine, noradrenaline, and serotonin) and opiates in determining individual differences in temperament and personality. Implications for several forms of personality disorders and psychopathology are also discussed. Finally, the manner in which environmental influences across the life span may be coded in the brain and influence the development of personality is explored.

HD 368 Children's Development in Different Cultures Spring. 3 credits. Letter grades only. Prerequisites: HD 115 or Psych 101 and one college-level statistics course. M W 2:55-4:10. K. Greene. This course will examine the influence of ecological, cultural, and ethnic factors on the social and cognitive development of children in different cultures. Particular attention will be given to research methodologies that guide us in making comparisons about parent-child development across cultures. Topics will include family origin and universality, parental roles, child-family interaction, patterns of kinship, and economic and health issues.

HD 370 Psychopathology (also PSYCH 325) Spring. 3 credits. Limited to sophomores, juniors, and seniors. Prerequisites: HD 115 or Psychology 101. Letter grades only. M W F 11:15-12:05. S. Bem. A research-based survey of the cognitive, emotional, and biological aspects of psychopathology across the life span. The major mental illnesses will be covered, including schizophrenia, anxiety disorders, affective disorders, and personality disorders, as well as psychopathological disorders of childhood. Emphasis will be placed on the development of psychopathology, current theories and models of etiology, and intervention strategies. This course is intended to be a rigorous introduction to the scientific study of psychopathology and psychopathological development; minimal attention to psychotherapy.

HD 397 Experimental Child Psychology Fall. 4 credits. Prerequisites: HD 115 or Psychology 101 and one course in statistics. Intended primarily for students interested in entering graduate programs involving further research training. Limited to 16 students. M 10:10-12:00. L. Lee. A study of experimental methodology in research with children includes lecture, discussions, and practicum experiences covering general experimental design, statistics, and styles and strategies of working with children.

HD 400-401-402-403 Special Studies for Undergraduates Fall or spring. Credits to be arranged. Enrollment limited to juniors and seniors with a minimum 3.0 G.P.A. Permission required. Prerequisites: either HD 115, 250, and two intermediate level HD courses, or four courses in psychology or sociology. S-U grades optional. For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of HD not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multiplicity description of the study they want to undertake, on a form available from the department office in NG 14. This form must be signed by the instructor directing the study and the student's faculty advisor and submitted to NG 14. After clearance that all prerequisites are met, the student picks up the form in NG 14 to file at course registration.
or within the change-of-registration period after registration in the College Registrar's Office, 145 MVR along with an add/drop slip.

To ensure review before the close of the or within the change-of-registration period

section with their supervisor, should register for

400: Directed Readings. Prerequisites: in addition to the general prerequisite courses, a statistics or methods course and at least one course directly linked to the area of study.

Permission required. For study that predominately involves library research and independent study.

401: Empirical Research. Prerequisites: in addition to the general prerequisite courses, a statistics or methods course and at least one course directly linked to the area of study.

Permission required. For study that predominately involves library research and independent study.

402: Supervised Fieldwork. Prerequisites: in addition to the general prerequisite courses, an observation or participation course.

Permission required. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing.

Academic credit is awarded for this integration of theory and practice.

403: Teaching Apprenticeship. Prerequisites: in addition to the general prerequisite courses, students must have taken the course or equivalent and received a grade of B+ or higher.

Permission required. For study that includes assisting faculty with instruction.

HD 417 Female Adolescence in Historical Perspective (also WOMNS 438, HIST 458, AM ST 417)

Spring. 3 credits. Limited to 25 students.

Prerequisites: HD 210 and at least one 300-level history or women's studies or American studies course. Permission of instructor required. Juniors and seniors only. T 1:55-2:50 J. Brumberg.

A reading, writing, and discussion course that will attempt to answer a basic historical question that has consequences for both contemporary developmental theory and social policy: how has female adolescence in the United States changed in the past 200 years? The focus will be on the ways in which gender, class, ethnicity, and popular culture shape adolescent experience. Although the required readings are primarily historical in nature, students are encouraged to think about the interaction of biology, psychology, and culture. Students are required to do a primary source research paper.

HD 436 Language Development (also COGST 436, PSYCH 436 and LING 436)

Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also register in HD/LING 700, a supplemental graduate seminar. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, neuropsychology, and linguistics. S/U grades optional.

A supplemental lab course is available (HD 437). T R 2:55-4:40 J. Lust.

This course surveys basic issues, methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of rhyming, symbolic, and linguistic foundations from infancy on. The fundamental issues of relationships between language and thought are discussed, as are the fundamental linguistic issues of universal grammar and the biological foundations for language acquisition. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.

HD 437 Lab Course: Language Development (also COGST 450, LING 450 and PSYCH 437)

Spring. 2 credits. In conjunction with HD, COGST, LING, and PSYCH 436 TBA.

B. Lust.

This lab course will provide undergraduates with an introduction to hands-on research experience in the Cognitive Studies research labs. This project is partially funded by a new National Science Foundation grant to Cornell's Cognitive Studies program, "Interdisciplinary Approaches to the Scientific Study of Language Knowledge and Acquisition." This project is intended to involve undergraduates in active research and to coordinate related subfields of several disciplines in a unified, laboratory-supported curriculum.

The course will include several structured modules dealing with topics covered in the survey course, 436 Language Development. They will include training in how to study and analyze original child language data, including the use of selected portions of a large database of child language data from many languages in the Cornell Language Acquisition Lab (CLAL), and training necessary to the collection and analysis of new child language data. Emphasis will be placed on developing research methods to test hypotheses.

The lab course will meet once a week in group format. In addition, students will be given access to a research lab environment for independent work on assigned modules, and independent research, throughout the week and throughout the term.

HD 438 Thinking and Reasoning

Fall. 3 credits. Prerequisite: HD 115 or Psychology 101. T R 1:25-2:40 B. Koslowski.

The course will examine problem solving and transfer, pre-causal thinking, logical thinking, practical syllogisms, causal reasoning, scientific reasoning, theories of evidence, expert vs. novice differences, and nonrational reasoning. Topics will run through the course: the extent to which children and adults approximate the sorts of reasoning that are described by various types of models, and the extent to which various models accurately describe the kind of thinking that is required by the types of problems and issues that arise and must be dealt with in the real world.

HD 439 Cognitive Development: Infancy through Adolescence

Spring. 3 credits. Prerequisites: HD 115 or Psychology 101. Letter grades only. T R 1:25-2:40 B. Koslowski.

The course will be an overview of current and classic issues and research in cognitive development. Central topics of both "hard cognition" (e.g., information processing and neuropsychological functioning) and "soft cognition" (e.g., problem solving, concepts, and categories) will be covered. Selected topics will be linked to methodological issues and to important social-cultural topics such as cross-cultural cognitive development and putative racial and social class differences.

HD 440 Internship in Educational Settings for Children

Fall or spring. 8-12 credits. Prerequisites: HD 115, 242, or 243 and 348. Recommended: HD 346. Permission of instructor required. S/U grades optional.

J. Ross-Bernstein

Opportunity to integrate theory with practice at an advanced level and to further develop understanding of children ages 2 to 10 and their families. Interns will function as participants in varied settings and participate in curriculum planning, evaluation, staff meetings, home visits, parent conferences, and parent meetings. Supervision by head teacher and intern. Students are expected to define their own goals and to assess their progress, to do assigned and self-directed readings, and to keep a critical incident journal.

HD 451 Nontraditional Families and Troubled Families

Spring. 3 credits. Limited to 30 students.

J. Haugaard.

This is an advanced course designed to explore the functioning of families. The first part of the course examines family system theory and how it relates to our understanding of all families. Four types of families are then examined: two nontraditional families (e.g., adoptive families) and two troubled families (e.g., families with a chronically ill child).

HD 456 Families and Social Policy

Spring. 3 credits. Prerequisite: one course in the area of the family or in sociology. S/U grades optional. M 7:30-10:00 a.m. T. Mitroff.

An examination of the intended and unintended family consequences of governmental policies, using case studies in areas such as social welfare, day care, and employment. The policy implications of changes in the structure and composition of families are also considered.

HD 457 Health and Social Behavior (also SOC 457)

Fall. 3 credits. Prerequisites: a course in statistics and one of the following: HD 250, Sociology 101, Sociology 251, or Rural Sociology 101. Letter grades only. T R 10:10-11:25. Offered alternate years.

E. Wethington.

This course critically examines theories and empirical research on the relationships among social group membership, social status, and physical and mental health. The lectures focus on social stress, social support, and socioemotional status, all of which are associated with variations in physical health, mental health, and health maintenance behaviors. Students are expected to read widely from current literature in medical sociology, health psychology, public health, and epidemiology.

HD 459 Parent-Child Development in African-American Families

Fall. 3 credits. Letter grades only. Enrollment limited to 25 seniors and juniors. Prerequisites: HD 115, HD 250.
and a college level statistics course, T R 10:10-11:25, K. Greene. This course will examine parent-child relationships in African-American families. Topics include influences of contemporary parenting behaviors, the impact of societal forces on African American families' socialization practices, and the influence of parental child rearing beliefs, strategies, and success on African American children's development. Particular attention will be given to the relevance of mainstream theoretical formulations of African American's parental and family functioning.

[HD 459 Disease in American Culture and Society (also AM ST 430) Fall. 4 credits. Limited to 15 students. Prerequisites: HD 241, or HD 258, or HD 359, or HD 417. Permission of instructor required. Times TBA. J. Brumberg. How a society defines, explains, treats, and tries to prevent disease reveals a great deal about its basic ideas, values, and institutions. Diseases are not simple biological "facts," but the product of a complex amalgam of biological and social forces. This course uses the history of specific diseases to examine: (1) the ways in which the social and cultural environment shape the experience of illness, (2) the ideas that Americans have held about why people get sick and others do not, (3) how those ideas reflect larger cultural as well as scientific ways in which power relationships are involved in defining and responding to the threat of disease and (5) the impact that disease has had on American society. A short response paper must be written for each session. An additional historiographical essay or research paper will be prearranged with the instructor.]

[HD 464 Sexual Minorities and Human Development (also WOMNS 467) Spring. 3 credits. Limited to 25 students. Priority given to seniors and juniors. T R 10:10-11:25, R. Savin-Williams. This course covers topics selected by students regarding theoretical, research, and applied issues on sexual minorities. In the second half of the course, students lead a class that focuses on a research topic of their choosing. The success of the course depends on students feeling personally engaged and committed to the course content. Students are expected to participate fully in the class discussions. Because of the multidisciplinary nature of the course, students from a variety of backgrounds in academic disciplines, gender, sexual orientation, ethnicity, race, class, and religious affiliation will be in the course.

[HD 467 Psycho-social Issues in Asian American Identity (also AAS 467) Spring. 3 credits. Prerequisites: HD 115 or Psychol 101 preferred. Letter grades only. M 6:30-9:00 p.m. L. Lee. The course will review theories of identity and self and their usefulness in understanding identity formation for various ethnic groups within the Asian American population. It will examine the impact of various societal forces, e.g., racism, stereotypes, etc. as well as life experiences, e.g., immigration, family values, etc. in shaping or contributing to the formation of identity or identities of Asian Americans.]

[HD 468 Stress in Childhood and Adolescence Fall. 3 credits. Recommended: HD 115, HD 250 and a statistics course. Letter grades only. TBA. J. Brumberg. This is an advanced seminar that will review research related to the nature and consequences of stressful experiences in childhood and adolescence, particularly those arising in the family. This seminar will explore salient stressors present in the lives of children (e.g. divorce of parents), which have potentially damaging consequences for development (e.g. child abuse). Topics in which faculty at Cornell have conducted significant research (e.g. children's memories for stressful events) are also covered. In addition to considering the negative affect of stress on development, we will also consider issues of individual differences in stress reactivity, including the concepts of coping and resilience. These topics lead naturally into discussions of practice and policy.]

[HD 471 Child Development and Psychopathology Fall. 3 credits. Limited to 60 advanced-level students. Prerequisites: HD 115 or Psychology 101. Strongly recommended: a basic course in psychopathology. Letter grades only. M W 8:40-9:55, J. Haugaard. This class will explore the development and process of mental, emotional, and behavioral disorders in children such as mental retardation, autism, and attention deficit disorders. Topics will include (1) the classification of mental disorders; (2) biological, psychological, and sociological theories regarding the development and mental disorders; (3) prevalence and etiology of childhood mental disorders, and (4) therapeutic and preventive interventions. If there is sufficient enrollment, an optional discussion section will be available to those students who would like an opportunity to discuss readings and lecture material in greater depth.]

[HD 482 Child Development and Social Policy Fall. 3 credits. Enrollment limited to 25 juniors and seniors or by permission of instructor. Prerequisites: HD 115, HD 250, and a course in statistics. HD 260 OR 261 strongly recommended. Letter grades only. Offered alternate years; next offered 2001-2002. T R 12:20-1:45, C. Raver. Course work and seminar discussion emphasize the integration of basic research in young children's social and emotional development with intervention- and prevention-oriented research. The course also examines theoretical models of the relations between risk and resilience in child development, family functioning, community, and culture. Policies in the domains of parenting, early childhood education, family and community violence, poverty, and child care are analyzed. Broad questions regarding the identification of social problems and the design of solutions are considered within cultural and historical contexts.]

[HD 483 Early Child Care and Education in Global Perspective Fall. 3 credits. Enrollment limited to 25 juniors and seniors. Prerequisites: HD 115 and HD 250. S-U grades only. T R 2:55-4:10. M. Cochran. In this course we examine American child care policies and programs, broadly defined, in the context of policies and programs in Africa, Asia, Europe, and Latin America.]

Comparison and analysis are guided by several complementary conceptual frameworks. Particular attention is given to relativism and universalism as applied to developmental and educational principles and concepts. Students are encouraged to consider early child-care policies and programs of another country, work in teams to analyze a contemporary policy issue, and apply course content to an issue of their choice in a final paper.

[HD 498 Senior Honors Seminar Fall and spring. 1 credit. Required for, and limited to, seniors in the HD honors program. S-U grades only. TBA. S. Cornelius. This seminar is devoted to discussion and presentation of honors theses being completed by the senior students.

[HD 499 Senior Honors Thesis Fall or spring. Credit to be arranged. Prerequisite: permission of thesis adviser and coordinator of honors program. S-U grades optional. Department faculty.

[HD 106, 206, 306, 406 Topics in Human Development 2-4 credits. S-U grades optional. These topics vary each time the course is offered and are taught by advanced graduate students in the field of human development. Descriptions are available at the time of course registration. These courses do not fulfill any requirements for the major, they must be taken as electives.

Topics Courses Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor may be required. This series of courses provides an opportunity for undergraduates to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other format.

General Courses

**HD 610 Processes in Human Development: Theoretical Models and Research Designs**
Spring. 3 credits. Open to graduate students and juniors and seniors in HD and related fields with instructor's permission. Prerequisite: a minimum of one course in statistics. Letter grades only. W 2:00-4:25. U. Bronfenbrenner.

The purpose of the seminar is to acquaint students with selected scientific paradigms being employed at the forefront of developmental science for investigating the conditions and processes that shape human development over the life course. Particular attention will be given to research models that draw on disciplines (such as evolutionary biology, human genetics, developmental psychology, sociology, anthropology, history, economics). The principal seminar activities consist of faculty and student development of research questions, critical analysis of these questions in the light of diverse theoretical perspectives, and their corresponding research designs. In this process, the human being is treated as an integrated organism.

**HD 617 Adolescence**
Spring. 3 credits. Staff. Critical examination of seminal theoretical and empirical writings on adolescent development. Empirical research on specific questions chosen by students is considered in the light of these approaches.

**HD 631 Cognitive Development**
Fall. 3 credits. Letter grades only. Staff. Faculty members involved in the course will present their area of specialization in cognitive development. These areas will include perception, attention, memory, language, thinking and reasoning, learning, creativity, and intelligence.

**HD 640 Infancy**
Fall. 3 credits. TBA. S. Robertson. Development in infancy will be examined through a critical review of key research and theories in selected aspects of neurobehavior, perception, cognition, language, emotion, and social relationships. Theoretical issues to be considered include the role of experiences in early development, sensitive periods, continuity and discontinuity in development, and the functional significance of early behavior. Some of the conditions that put infants at risk for poor development will also be considered, such as premature birth, perinatal medical complications, and exposure to environmental toxins. The course will combine perspectives from developmental psychology and psychobiology.

**HD 650 Contemporary Family Theory and Research**
Fall. 3 credits. E. Wethington. Sociological and social psychological theories and research on the family are examined with reference to the relationship between the family and society. Topics change from year to year, but focus on the processes of socialization and social control, the reproduction of gender and social class across generations, changes in family "values" across time, the rise of divorce and single motherhood, family diversity, and the genesis of deviance and psychological disorder.

**HD 660 Social Development**
Spring. 3 credits. S-U grades optional. C. Raver. This course is designed to provide both broad and in-depth training in the areas of social and emotional development during infancy and childhood. It will cover most of the major topic areas and theoretical orientations. Consideration will be given to basic influences on socioemotional development—biological, social, and cultural. Coverage will include normative development as well as the origins and nature of individual differences. We will explore such fundamental issues and questions as: What are emotions? What role do they play in the development and organization of personality? What are the effects of early social relationships on emotional regulation? When and how does the self-system emerge? Emphasis will be on the processes—both internal and external—that help determine the course and outcome of development.

**HD 670 Experimental Psychopathology**
Spring. 3 credits. Prerequisite: an undergraduate course in abnormal psychology or psychopathology; a course in multivariate statistics; and substantive course work in neuropsychology or related biological science. Staff. Overview of current theories and empirical research on functional and organically based psychological disorders. Topic areas to be covered include autism, schizophrenia, anxiety disorders, affective disorders, and personality disorders. Focus is on the developmental and etiology of psychopathology.

**Topical Seminars**
Seminars offered irregularly, with changing topics and instructors. Content, hours, credit, and instructors to be announced. Seminars offer concentrated study of specific theoretical and research issues.

**HD 618 Seminar in Adolescence and Adult Development**
Topics include peer relations, parent-teen relationships, self-esteem, youth and history, work, and moral development.

**HD 633 Seminar on Language Development**
Topics include acquisition of meaning in infancy, precursors of language in early infancy, and atypical language development.

**HD 635 Seminar in Cognitive Development**
Topics include early attention, perception, memory, and communication. Assessment and intervention in relation to these processes will be considered when possible.

**HD 645 Seminar on Infancy**
Focuses on selected topics in the developmental psychology and psychobiology of infancy (including fetal development). Special topics vary and depend on student interests.

**HD 646 Seminar in Early-Childhood Development and Education**
Topics include analysis of models and settings, design of assessment techniques, program evaluation, and early childhood in a cross-cultural context.

**HD 655 Seminar in Family Studies and the Life Course**
Topics include the sociology of marital status, the single-parent family, work-family linkages, women and work, and families and social change.

**HD 665 Seminar in Personality and Social Development**
Focuses on selected issues related to personality and social development. The issues selected vary each year according to current importance in the field and student interests.

**HD 675 Seminar in Developmental Psychopathology**
Topics include learning disabilities, therapeutic interventions in atypical development, child abuse and maltreatment, family factors in the etiology of functional disorders, and cognitive characteristics of atypical groups.

**HD 685 Seminar in Human Development and Family Studies**
Topics include development of self-concept, sex-role identity, observational methods, and interviews in developmental research.

**HD 690 Seminar on Ecology of Human Development**
Topics include the institutional setting as a determinant of behavior, the poor family, and the identification and measurement of ecological variables.

**Individualized Special Instruction**

**HD 700-806 Special Studies for Graduate Students**
Fall or spring. Credits and hours to be arranged. Credits 1-15 (3 hours work per credit). S-U grades at discretion of instructor.

**HD 701 Empirical Research**
For study that predominantly involves library research and independent study.

**HD 704 Research Assistantship**
For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

**HD 705 Extension Assistantship**
For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

**HD 706 Supervised Teaching**
4 credits. For advanced students who assume major responsibility for teaching a course. Supervision by a faculty member is required.
HD 806 Teaching Practicum
4 credits. For advanced graduate students to independently develop and teach an undergraduate topics course under the supervision of a faculty member.

HD 899 Master's Thesis and Research
Fall or spring. Credit to be arranged. Credits 1–15 (3 hours work per week per credit). S-U grades only. Prerequisite: permission of thesis adviser.

HD 999 Doctoral Thesis and Research
Fall or spring. Credit to be arranged. Credits 1–15 (3 hours work per week per credit). S-U grades only. Prerequisite: permission of thesis adviser.

POLICY ANALYSIS AND MANAGEMENT

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PAM 180 Human Services in Contemporary Society
Fall. 3 credits. Recommended for freshmen and first-year transfer students. Staff.
A lecture and discussion course designed as an introduction to the community base of services. Current and historical human services are examined. Emphasis is placed on social services, education, health, and criminal justice. Barriers to service delivery are discussed, such as racism, sexism, class, age, and disability. Contemporary issues that impact on service delivery will also be discussed with attention to the relationship between direct service and public policy.

PAM 200 Intermediate Microeconomics
Fall or spring. 4 credits. Prerequisite: Econ 101 or equivalent. Fall preference to sophomores and juniors. Spring: preference to juniors and seniors. Staff.
A section is mandatory. Theory of demand and consumer behavior including classical and indifference curve analyses; theories of production and cost; models for the following markets—competitive, monopoly, monopolistic competition, oligopoly, and inputs; general equilibrium; welfare economics; public goods; risk.

PAM 204 Applied Public Finances
Fall or spring. 3 credits. Prerequisites: PAM 200. S-U grades optional. E. Peters, D. Kenkel.
The public sector now spends nearly $2 out of every $5 generated as income in the U.S. economy. A thorough knowledge and understanding of this important sector is an essential part of training in policy analysis and management. This course will provide an overview of the public sector of the U.S. economy, the major categories of public expenditures, and the main methods used to finance these expenditures. The principles of tax analysis and cost-benefit analysis will be presented with a focus on the role of public policy in improving economic efficiency, promoting the goals of equity and social justice, and improving equity by altering the distribution of wealth and income.

PAM 205 Research Methods
Fall or spring. 3 credits. Sections TBA. Staff.
Students will learn the logic and methods of social science research, as well as how to create researchable questions out of their issues of interest. Readings, written assignments, and in-class exercises focus on stating hypotheses, designing studies and samples to test hypotheses, measuring variables, and simple statistical analysis. PAM majors should take this course no later than their junior year.

PAM 220 Introduction to Management: Principles and Differences Among Sectors
Fall or spring. 3 credits. D. Tobias, R. Heck.
This course is a basic introduction to major management and related concepts of planning, organizing, controlling, leadership, and special topics within five major management contexts including individual/personal, groups/families, firms, not-for-profit organizations, and governments/communities.

PAM 223 Consumer Markets I
Fall. 4 credits. Offered alternate years. R. J. Avery.
A study of the structure and functions of consumer retail markets with emphasis on the role and activities of the major players in these markets—firms, consumers, and governments. The nature and consequences of various types of market failures are studied from each of these perspectives. Case studies and outside lecturers are used.

PAM 230 Introduction to Policy Analysis
Fall or spring. 3 credits. R. Avery, J. Gemer.
Policy analysis is an interdisciplinary field that uses theories, concepts, and methods from disciplines such as economics, sociology, and political science to address substantive issues in the public policy arena. Students will be introduced to the functions of and interactions between the major institutions (public and private) at the national, state, and local level involved in the policy making process. The course will focus on public policy analysis in the consumer, health, and family/social welfare areas and will also include an introduction to the technical skills required to undertake policy analysis.

PAM 240 Critical Perspectives
Fall or spring. 3 credits. C. McClintock, staff.
This course examines the implications and importance of perspective when examining of public policy. It considers the sources of differing perspectives, including demographic characteristics, historical experience, and intellectual tradition. We also consider how these differing perspectives affect what is considered to be empirical evidence, what assumptions are made, and what outcomes are considered to be important. We will explore these ideas using several specific public policy proposals.

PAM 270 Housing and Society
Spring. 3 credits. S-U grades optional. P. Chi.
A survey of contemporary American housing issues as they relate to the individual, the family, and the community. The course focuses on the current problems of the individual housing consumer, the resulting implications for housing the American population, and governmental actions to alleviate housing problems.

PAM 280 Race, Power, and Privilege in the United States
Fall. 3 credits. J. Turner, D. Barr.
For description, see AS&RC 280.

PAM 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged. Special arrangement for course work to establish equivalency for training in a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the College Registrar's Office. This form, signed by both the instructor directing the study and the head of the department, should be filed at the time of the course registration during the change-of-registration period.

PAM 303 Ecology and Epidemiology of Health
Fall. 3 credits. S-U grades optional. Limited to 50 students. E. Rodriguez.
Ecological and epidemiological approaches to the problems which affect human health within the physical, social, and mental environment. The course introduces epidemiological methods to the students and surveys the epidemiology of specific diseases such as AIDS, hemophilia, Legionnaires' disease, plague, cancer, herpes, and chlamydia. Application of epidemiology to health care will be discussed.

PAM 305 Introduction to Multivariate Analysis
Fall or spring. 4 credits. Prerequisites: ARME 210 or ILRST 210 or equivalent. W. Rosen, J. S. Butler.
The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models, economic relations, and policy problems encountered in the use of multiple regression procedures are discussed. Students are required to specify, estimate, and report the results of an empirical model. Factor analysis and analysis of variance will be covered as well. Section meets once a week.

PAM 310 Evaluation of Public Policies
Fall. 3 credits. Prerequisites: PAM 200, 330, or permission of instructor. Staff.
This is an advanced course in economic policy analysis that builds on the material covered in PAM 330. Intermediate to Policy Analysis. The course includes a set of policy examples to demonstrate the economic approach. Special topics in cost-benefit
analysis and policy evaluation techniques will be developed when necessary for the example under study. Topics that may be addressed include excise taxation, economic evaluations of health care innovations, environmental policies, traffic regulations, consumer policies, and welfare reform.

[PAM 323 Consumer Markets II]
Fall. 4 credits. Offered alternate years; next offered 2001–2002. R. J. Avery.
This course focuses on external and internal forces that drive consumer demand. Material in this course will cover the processes whereby consumers interpret market-provided information and the social forces affecting consumer purchase decisions. Particular emphasis will be placed on communication institutions in the market (advertising, the news, and other mass media) and the control of these institutions through government regulation. A select group of consumer policy issues will be covered, such as consumer evaluation of product safety and quality, food additives, consumer privacy, and socially responsible advertising.

[PAM 326 Personal Financial Management]
Spring. 3 credits. Preference given to human ecology students; limit 50; not open to freshmen. S-U grades optional. R. Heck.
The study of personal financial management at various income levels and during different stages of the family life span. Course topics include financial management frameworks and decision-making processes, basic economic and financial principles, returns to human resources, income and wealth allocation, the roles of manage credit, personal financial insolvency and counseling, expenditure and purchase analyses, the use of budgets and record keeping in achieving family economic goals, economic risks and available protection, income and estate planning, and alternative forms of savings and investments.

[PAM 330 Intermediate Policy Analysis]
Fall or spring. 3 credits. Prerequisite: PAM 200. Staff.
Introduction to the tools and techniques of policy analysis. Topics covered include microeconomic concepts such as consumer and producer surplus; deadweight loss; rationale for public policy; benefit-cost analysis; impact assessments; experimental, quasi-experimental, and nonexperimental designs; and the social ecology of policy analysis.

[PAM 340 The Economics of Consumer Policy]
Spring. 4 credits. Prerequisites: PAM 200 or permission of instructor. S. Tennyson.
This course is designed to familiarize students with the basic approaches to consumer policy and the economic analysis of consumer policy issues. The course is structured around the major forms of government intervention in consumer markets, and examines a wide variety of economic and social regulations from the economic perspective. Students are required to write a term paper analyzing a consumer policy issue of their choosing.

[PAM 341 Economics of Consumer Law and Protection]
Fall. 3 credits. Prerequisite: Econ 101 or equivalent. S-U grades optional. A. Mathios.

[PAM 346 Economics of Social Security (also ECON 447)]
Spring. 3 credits. Prerequisite: PAM 200. S-U grades optional. R. Burkhauser.
This course provides students with an economic perspective on social security policies. The readings illustrate the use of economic analysis to predict the behavioral effects and income distributional consequences of policy. The course primarily focuses on the Old-Age, Survivors, and Disability Insurance Program. But other programs such as the Supplemental Security Income, Food Stamps, etc., will be discussed as will policies that attempt to end discrimination against the elderly or those with disabilities.

[PAM 350 Contemporary Issues in Women's Health]
Fall. 3–4 credits. A. Parrot.
This course will deal with the history of women in medicine and historical and cultural treatment of women's health problems. Health care research and the exclusion of women from research trials and protocols will also be addressed. Reproductive issues, alternative approaches to treatment, medical problems, ethical issues, cancers, factors that contribute to post-traumatic stress disorders, health promotion behaviors, political issues, and routine medical recommendations will also be discussed in depth. Students may take the course for a fourth credit, which will require attending a discussion section every other week and observations of seven facilities that provide a variety of women's health care (i.e., birthing center, mammogram; and ultrasound center, wellness center, hospital labor and delivery unit, women's self-defense class, etc.) on the alternate weeks.

[PAM 370 Wealth and Income]
Fall. 3 credits. Open to sophomores, juniors, and seniors; graduate students may elect to audit and write a research paper for 1 to 2 credits under PAM 600.
Prerequisites: Econ 101–102 or equivalent. S-U grades optional. Staff.
The wealth and income positions of American households are defined and described. Various statistics are employed to present conflicting pictures of the distribution of income using both absolute and relative data. Several models of economic determinants of wealth and income are presented and redistributive policies are discussed in the context of the economics of the political and philosophical positions for and against such policies.

[PAM 371 Economics of Family Policy—Advanced]
Fall. 4 credits. Limited to 40 students.
Junior or senior standing; non-PAM majors by permission of instructor. Staff.
This course examines the economics of family policy issues that have a particular impact on adult family members. Emphasis in this course is on the economic behavior surrounding the policy and the incentives set up by the policy. Policies considered include marriage and divorce, family leave policy, policies assisting single parents, and policies affecting caregiving.

[PAM 372 Economics of Family Policy—Children]
Spring. 4 credits. Limited to 40 students. Junior or senior standing; non-PAM majors by permission of instructor. Staff.
This course examines the economics of family policy issues that particularly affect children. The course focuses on the economic behavior that generates the policies and (2) the economic incentives and behavior that result from the policies. Topics include child welfare, education, day care provision, child support, and adoption.

[PAM 373 The Economics of Welfare Policy]
Fall. 4 credits. Prerequisite: Econ 101 or equivalent. S-U grades optional. Staff.
Using the tools of economics, this course examines welfare policy. Included is an examination of the populations affected, the behavior of various policy makers are likely to engender, and how much income redistribution occurs as a result of these welfare policies. Various proposals for welfare reform are also evaluated.

[PAM 374 Urban Economics and Policy]
Spring. 4 credits. Prerequisite: PAM 200 or equivalent. S-U grades optional. Staff.
This course explores the economics of cities and urban problems and studies the growth of cities, location choices of firms and households, and the factors which determine land rents. The urban policy issues explored include: housing, urban poverty, zoning, and urban congestion.

[PAM 376 Housing, Neighborhood and Community]
Spring. 3 credits. Prerequisite: PAM 270 or permission of instructor. S-U grades optional. P. Chi.
The course examines the interrelationships of housing conditions, neighborhood transitions, and community development. Both theoretical and empirical perspectives on residential patterns, neighborhood change, and community power will be examined. Special attention is given to government policies that deal with fair housing, residential segregation, neighborhood revitalization, and community development.

[PAM 380 Human Sexuality]
Spring. 3 credits. Limited to 500 students. Prerequisite: an introductory course in human development and family studies, psychology, or sociology (or equivalent social science course). Recommended: one course in biology. A. Parrot.
The aim of this course is to provide students with an understanding of the interactions and interrelationships of human behavior that influence sexual development and behavior. The course will focus on the evolution of sexual norms, cross-cultural customs, legislation within changing sociopolitical systems, and delivery of services related to sexual issues, needs, and/or problems. Future trends in sexuality will be addressed. Biological and developmental components of human sexuality will also be addressed. An underlying issue is the influence of our social and cultural system on the development of sexual needs, standards, and values. Research and the theory of human sexuality will be explored through human and organizational behavior, biology, history, communication
PAM 301 Health-care Services and the Consumer  
Fall. 3 credits. Prerequisite: an introductory course in human services or health or biology. S-U grades optional. Offered alternate years. A. Parrott. This course is an introduction to health care services and will present developments in the health field that affect the availability and kinds of health services. Emphasis is placed on the interrelationships of practitioners, institutions, and agencies. The part each can play in prevention, diagnosis, and treatment of disease and disability is also explored. Topics will include historical and current trends, quality health care, consumer issues, cultural concerns, ethical issues, politics and policies, and the contemporary problems of health care.

PAM 383 Social Welfare As a Social Institution  
Fall. 3 credits. J. Allen. A philosophical and historical introduction to social welfare services. The course reviews the historical, social, and political contexts within which social welfare programs and the profession of social work have evolved. It discusses the political and ideological processes through which public policy is formed and the way policies are translated into social welfare programs. Basic issues in welfare are discussed through project and program designs, public concerns, and the interrelationships and support of services in the community.

PAM 392 New York State Government Affairs  
Spring semester only. 12 credits. Letter grade only. Instructor permission only. Preference given to juniors and seniors. Sophomores considered. PAM 220 or a course in political science strongly recommended. C. McGintock. Students participate in the New York State Assembly Intern Program, which includes coursework on legislative, intergovernmental and political party dynamics, that has been approved as upper division baccalaureate credit by the New York State Regents National Program on the Social Sciences. S-U grades optional. Staff.

PAM 400-401-402 Special Studies for Undergraduates  
Fall and spring. Credits to be arranged. S-U grades optional. Staff. For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of CEG, HSS, or PAM not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multipage description of the study they want to undertake on a form available from the department field office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration with an added drop slip in 145 MVR, College Registrar's Office. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students must have consultations with their faculty supervisor, should register for one of the following subdivisions of independent study.

PAM 400: Directed Readings. For study that predominantly involves library research and independent reading.

PAM 401: Empirical Research. For study that predominantly involves data collection and analysis.

PAM 402: Supervised Fieldwork. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

PAM 403 Teaching Apprenticeship. Prerequisite: students must have taken the course (or equivalent) in which they will assist. VSU students have demonstrated a high level of performance. For study that includes assisting faculty with instruction.

PAM 404 Senior Seminar: Self-Evaluation of Professional Practice. Spring. 3 credits. Prerequisite: limited to students with field experience or ongoing field experience. Staff. The process of change at the individual, family, and community level is a major theme of the senior seminar. The second theme, which is integrated throughout the course, concerns ethical principles and values that should inform professional practice. We will also discuss value dilemmas attendant on interventions to promote change at both the micro and macro levels of practice.

PAM 420 Management Information Systems for the Public Sector. Spring. 3 credits. L. O'Neill. This course focuses on managing information systems in the nonprofit sector. Its purpose is to present an overview of the management of technology and to develop the computer literacy that is required of today's managers. It will consist of three modules: technology, planning and management, and public/nonprofit applications such as those related to family and social welfare, health care, and consumer policy.

PAM 423 Risk Management and Policy  
Fall. 3 credits. Prerequisite: Econ 101 and a course in statistics. Enrollment limited to 30. S. Tennyson. The objective of this course is to provide students with a broad understanding of risk management problems and solutions, a greater appreciation of the importance of risk and risk regulation in our society, and increased comprehension of the complexities of making decisions about risk. Topics covered include alternative ways to define and measure risk, the importance of risk-tradeoffs, and models of decision making under risk. With this background, alternative approaches to risk management are discussed, including insurance, noninsurance financing alternatives, and loss control. The impact on risk management of the legal liability system and government programs, laws and policies are also considered.

PAM 424 Families in Business  
Fall. 3 credits. Prerequisite: introductory statistics or permission of instructor. S-U grades optional. R. Heck. Offers students the opportunity to explore family business topics such as business formation, growth and expansion, strategic management, professionalization, succession, locational choices, and family dynamics, conflicts, and relationships relative to the business. An overview of families who own businesses and the profiles of their businesses will be presented. This introduction to the examination of the course topics relative to the various stages of business activity including feasibility, start-up, ongoing maintenance, expansion or redirection, and exit or transfer. Case studies from the Harvard Business School series will be utilized to examine the course topics listed above. The course also provides an introduction to research on family businesses by surveying the conceptual issues and methodological approaches related to the study of family businesses.

PAM 425 Empirical Research on Family Businesses  
Fall. 3 credits. Prerequisites: introductory statistics or permission of instructor. S-U grades optional. R. Heck. Allows students to develop research skills by providing opportunities for hands-on survey and fieldwork. Topics and activities include research design, sampling, questionnaire development, and statistical analyses related to family-owned businesses. A critical review of current research and applications in using databases used to research business ownership and implementation and completion of an actual survey of fieldwork project of selected family business owners, or the use of existing databases for alternative analyses of family-owned businesses.

PAM 426 Policy and Management Issues on Foreign Investment in China  
Spring. 3 credits. P. Chi. This course will help students understand the general investment environment in China and learn how social, cultural, political, and economic factors affect foreign investments. It focuses on market entry strategies, marketing mix strategies, and other management strategies for foreign-invested enterprises (FIEs) in China. This course will not only examine the growth of FIEs since the 1980s, but also discuss the policy initiatives and institutional barriers for direct foreign investment in China. Both multiplier and linkage effects of foreign investment on China's economy will also be evaluated. Further, the management issues on formation, performance, profitability, and dissolution of FIEs will be systematically examined.

PAM 427 Complementary Alternative Medicine  
Fall. 3 credits. Prerequisites: a health course and intro biology or permission of instructor. A. Parrott. This course will help pre-medical students, health administration students, as well as health economics students understand the relationship between alternative medicine and western allopathic medicine. The course will educate students about health and wellness, treatments for specific health conditions, differing philosophies of health care, financing health services, and cross-cultural approaches to health and wellness.
PAM 435  The U.S. Health Care System  
Fall. 3 credits. R. Battistella.  
This course provides an introduction to the health care delivery systems in the United States, and covers the inter-relatedness of health services, the financing of health care, and the key players in health care delivery including regulators, providers, health plans, employers, and consumers. The course describes the history and organization of health care, behavioral models of utilization, incentives of health care reform, and current trends. The course provides an overview of the key elements of the field including ambulatory care services, mental health services, hospitals and clinicians, insurers, the role of public health organizations, and the politics of health care in the United States.

PAM 450  Economics of Health Behavior and Policy  
Spring. 3 credits. S-U grades optional.  
Prerequisites: PAM 200 or equivalent or permission of instructor. D. Kenkel.  
This course uses the tools of economics to provide a better understanding of health behavior and policy. One focus is on policies that promote public health, including education programs and cigarette and alcohol taxation. Policies that influence consumer choices about health care and health insurance are also considered. A common theme is that to understand the effects of health policy it is necessary to analyze the incentives faced by consumers and the incentives of the employers, insurers, and health care providers. Analyses of specific health policies help develop this theme.

PAM 454  Contemporary Issues in Human Sexuality and Research  
Spring. 4 credits. Permission of instructor required. A. Parrot.  
An in-depth seminar in theoretical and applied methodology for the study of human sexuality. Topics covered include current and contemporary issues, educational strategies, policy formation, legal jurisdiction, cultural mores, social attitudes, and individual sexual behavior.

PAM 471  The Politics of Power and Empowerment in Community Development  
Fall. 3 credits. Limited to 20 students. D. Barr.  
The course will take a theoretical world view of power and the historically colonial relationship between the American ruling class and other people. The three dimensions of power will be used as the framework for analysis. The relationships between social class, race, sex, and power will be studied. In addition, the class will explore the nature of empowerment and new theories of power and empowerment.

PAM 473  Social Policy  
Spring. 3 credits. Prerequisite: PAM 383 or Government 111 or Sociology 141. S-U grades optional. J. Allen.  
An examination of the policy-making process and the significance of national policies as they affect the distribution of social services. Frameworks for analyzing social policy are used to evaluate existing social programs and service-delivery systems. Implications for change in policies at the national, state, and local levels are discussed.

PAM 480  Professional Internship in Human Services  
Fall or spring. 4–7 credits. Limited to juniors and seniors majoring in human service studies. Prerequisite: PAM 100.  
Preco core enrollment required. D. Tobias.  
Students interested in a minimum of 10 hours a week in a human service organization and attend a weekly seminar or office hours with a focus on integrating classroom and field-based learning. The course is structured as an opportunity which will become familiar with the field and at the same time, provide meaningful services to human service organizations. Interns are expected to take active roles in structuring, monitoring, and assessing their learning under the guidance of a faculty instructor.

PAM 486  Child Welfare I  
Fall. 3 credits. Staff.  
This course is an introduction to the field of child welfare with its many contemporary, traditional, and sometimes controversial issues. Included is an overview of current child welfare practice and policy as it affects such problem areas as drugs and alcohol, children and homelessness, and children and violence. This seminar will present a broad perspective on these subjects along with a systems theory orientation.

PAM 487  Child Welfare II  
Spring. 3 credits. Staff.  
This course is a sequel of Child Welfare I, which exposes students to the numerous problems plaguing children of the child welfare system. Students will have the opportunity to take a closer look at how the system works and to decide if it is not working to improve the lives of children, and what might be done about it. The purpose of the course is to prepare students to be change agents regarding the child welfare system and to accept the status quo. The course will also focus on the major policy issues that are emerging for the future of children contending with the system.

PAM 499  Honors Program  
Fall or spring.  
The honors program provides students with the opportunity to undertake basic or applied research which will be presentation of a thesis representing original work of publishable quality. The program is intended for students who desire the opportunity to extend their interests and efforts beyond the current course offerings in the department. Furthermore, the program is designed to offer the student the opportunity to work closely with a professor on a topic of interest. PAM majors doing an honors program may take PAM 499 for up to 15 credits under the guidance of Professor Alan Mathios for more details.

PAM 575  Housing and Long-term Care for the Elderly  
Fall. 3 credits. S-U grades optional. P. Chi.  
This course focuses on the housing of the elderly, their current housing conditions, and options for alternative housing. "Housing" is viewed as a resource of long-term care for the elderly, integrating housing with related health and social services. Attention is also given to government housing and long-term care programs for the elderly, analyzing how the residential environment influences the ability of elders to function independently and affects their need for long-term care services. Finally, the senior living and long-term care industries are examined.

PAM 600  Special Problems for Graduate Students  
Fall and spring. Credits to be arranged. S-U grades optional. Staff.  
Independent advanced work by graduate students recommended by their chair and approved by the department chair and the instructor.

PAM 601  Introduction to Policy Analysis and Management  
Fall. 3 credits. C. McClintock.  
This course provides the conceptual framework for research and practice in policy analysis and management. Key topics will include (1) the rational model of the policy cycle; (2) alternative models of policy decision making and implementation; (3) approaches to policy analysis and program management; and (4) the role of social science in policy analysis and management.

PAM 602  Measurement and Validity in Policy Analysis and Management  
Spring. 3 credits. E. Rodriguez.  
This course provides an introduction to the theoretical foundations of validity in applied social research, basic probabilistic and nonprobabilistic sampling methods, survey research methods (including questionnaires, interviews, and scaling), and other practical inquiry methods required for valid inferences.

PAM 603  Experimental, Quasi-experimental, and Economic Evaluation Methods  
Spring. 3 credits. Staff.  
This course focuses on the logic of randomized experimentation, the role of structural experiments, quasi-experimental evaluation methods, nonexperimental regression techniques, issues of sample selection, and cost-benefit analysis.

PAM 604  Qualitative and Mixed-Method Approaches to Policy Analysis and Management  
Spring. 3 credits. Staff.  
This course introduces qualitative traditions of social inquiry and their roles in policy analysis and management. The course will also address visions of and strategies for mixing different inquiry traditions and approaches in applied policy analysis and management.

PAM 605  Economics of Household Behavior  
Spring. 3 credits. Prerequisite: PAM 604 or Economics 609-610 or consent of instructor. S-U grades optional. E. Peters.  
This course examines household decision making in both single agent and multiple agent (e.g., game theoretic or bargaining) frameworks. The first half of the course focuses on (1) family life cycle, (2) household production, and (3) time allocation models of behavior—decisions that are usually modeled in a single-agent framework. The second half of the course looks at (1) marriage markets, (2) family formation and dissolution, (3) bargaining models of resource allocation within the household, and (4) intergenerational transfers across households. These kinds of behaviors are more fruitfully studied using multiple agent models such as contract theory, game theory, and household bargaining. Empirical applications of the theoretical models are presented for both developed and developing countries. Implications for family and household policies such as child care subsidies, divorce laws, family planning, government subsidies to education, and social security are also discussed. Much of the
294
This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

PAM 608 Economics of Consumer Demand (also ARME 670) Fall. 3 credits. Prerequisite: PAM 200, Economics 313, or concurrent enrollment in one of the 2 and 2 semesters of calculus. S-U grades optional. C. Ranney. A graduate level introduction to theory and empirical research on household demand, consumption, and saving. Emphasis is on the use of the theory in empirical research. Topics include neo-classical theory of demand, stability, comparison of systems, conditional demand, demographic scaling and translating, consumption, and savings. Becker and Lancaster models of demand will be introduced.

[PAM 614-615 Program Evaluation in Theory and Practice 614, fall; 615, spring. 4 credits each semester. Prerequisites for PAM 614: 612 and 613 or 617, or permission of instructor. Prerequisite for PAM 615: 614. Students must register for both semesters. Staff. This course is a practicum in which the class designs and conducts an evaluation of a human service program. Students are involved in all phases of the evaluation from design to the production and dissemination of a final report. Emphasis is on research methods in the social sciences. Application of knowledge developed in prerequisite courses is stressed (for example, planning and managing an evaluation, ethics, methods of data collection, data processing, and strategies for analysis and feedback of results).]

PAM 616 Strategies for Policy and Program Evaluation Fall. 3 credits. Prerequisites: PAM 612 and 613, or 617 or equivalent. W. Trochim. This course examines a wide range of approaches to the evaluation of policies and programs in the human services. The approaches are examined with respect to their purposes, key audiences, and methodologies, as well as their philosophical, political, and value frameworks. Analysis of commonalities and differences across evaluation approaches are used to judge the appropriateness of a given strategy for a particular context.

[PAM 623 Consumer Decision Making Spring. 3 credits. R. J. Avery. Individual and family decision making with respect to their market purchases will be investigated from a multidisciplinary perspective. Topics to be covered in the course include cognitive theories of information processing; theories of group interaction in decision making; and the effect of advertising, imperfect information, and uncertainty on consumer product evaluation and purchase behavior. Special attention will be given to consumer decision making in various market segments, e.g., low-income consumers, children, and the elderly. Specific attention will be paid to how consumers in these segments process marketer-provided information and their related consumption decisions.]

[PAM 630 Seminar in Program Planning and Development Fall. Variable credit. Staff. Topics include microlevel program planning, third-sector organizations, and intergovernmental influences on program planning, policy formation, program implementation, and mainstreaming. Two or more human services are examined.]

[PAM 631 Ethics, Public Policy, and American Society Fall. 3 credits. J. Ziegler. This course will explore current issues of ethics and public policy against a background of theories of ethical behavior. Questions of how public officials and managers of public and nonprofit agencies and private enterprises act will be examined. How do standards of ethical behavior in these professions get established? How is violation of professional ethics with ethical implications resolved? Readings will draw from political philosophy, contemporary social science, and imaginative writing. This class is a seminar and class participation is essential. Open to seniors and graduate students.]

[PAM 632 The Intergovernmental System: Analysis of Current Policy Issues Fall. 3 credits. Open to seniors who have had a course in American government and to graduate students. J. Ziegler. This course offers advanced policy analysis of current political/social/economic issues in the context of the intergovernmental system. Particular attention is paid to how certain policy and human service issues are played out at the federal, state, and local levels of government, the relationship of federal and state budget policy. General public administration theory is considered. Students work in teams on a policy/administrative research project and report to the class.]

[PAM 640 Information and Regulation Spring. 3 credits. Prerequisite: PAM 608 or PAM 200 and two semesters of calculus. J. Mathis. A survey of the problems and policies accompanying informational failures and other market failures with regard to consumer well-being. Governmental regulation of products, producers, consumers, and prices are examined. Antitrust activity, disclosure requirements, advertising restrictions, and regulatory agencies are examined in terms of their ability to serve the public and special interests. Economic analysis, rather than institutional structure, is emphasized.]
PAM 656 Managed Health Delivery Systems: Primary-Ambulatory Care
Spring. 3 credits. Prerequisite: PAM 657. J. Kuder.
The concept of primary care is used to enhance understanding of the direction and purpose of ongoing changes in health services organization and financing. Pressures on traditional indemnity insurance and solo fee-for-service medicine are examined in the context of the transition from unmanaged to managed delivery systems. The course is divided into two parts: Part 1 examines the development of health maintenance organizations and related forms of managed care against the backdrop of federal public policy concerns. Part 2 centers on administrative-financial topics associated with the design, marketing, and operation of managed delivery systems in highly competitive markets. Considerable attention is given to the relationship between physicians and management with respect to such subjects as medical practice styles, productivity, quality assurance, and outcome measurement. The consumer health care behavior literature is reviewed in the context of marketing strategies and utilization control objectives. Many of the managerial topics are highlighted with field trips and visiting speakers.

PAM 657 Health Care Organization
Fall. 3 credits. Limited to 30 students. Priority given to Sloan students or permission of instructor. R. Battistella.
The course will provide an introduction at the graduate level to the organization of health providers in the United States, the interrelations of health services and the major sources and methods of paying for care. The course will describe how health services are structured in the United States and how these different services interrelate along the continuum of care. The course will describe and analyze organization, delivery, and financing issues from a variety of perspectives using specific performance criteria (e.g., equity, quality, efficiency). Innovations by the public and private sectors in the delivery and reimbursement of health care will also be presented.

PAM 658 Field Studies in Health Administration and Planning
Fall or spring. 1–4 credits. Staff.
Students interested in developing administrative and program-planning research skills are given an opportunity to evaluate an ongoing phase of health care agency activity in the light of sound administrative practice and principles of good medical care. In planning and carrying out the research, students work closely with a skilled practicing administrator and with members of the faculty.

PAM 659 Epidemiology, Clinical Medicine, and Management Interface Issues
Spring. 3 credits. E. Rodriguez.
From an empirical and analytical framework this course explores the relationships between epidemiology, clinical medicine, and management. The course will review the epidemiology, policy issues, and treatment of selected diagnoses accounting for a significant percentage of utilization and cost of health care delivery. Students are expected to have an opportunity to explore issues of resource allocation and continuous quality improvement. The format for the class is lecture, discussion, and case analysis.

PAM 660 Quality in Health Care Organizations
Fall. 3 credits. Staff.
The quality of health services—the extent to which the appropriate and most effective care is properly administered in the least costly manner—is a topic of paramount importance to patients. It is also a central concern of the providers and managers of health services and those who pay for care. It is a cornerstone of health care reform. Through readings, lectures, discussion, and group work, this course will acquaint the student with the basic elements of managing quality in health care organizations including: defining quality from many perspectives, measuring performance and detecting problems, technical and progressive approaches to managing quality including Continuous Quality Improvement; and the politics of quality, both within and outside the organization.

PAM 661 Economics of Health and Medical Care
Spring. 3 credits. D. Kenkel.
The course is designed for graduate students who seek an understanding of the tools, vocabulary, and way of thinking of economics as it applies to decision making in health services delivery, administration, and policy. The philosophy of the course approach is based on the often-quoted credo of John M. Keynes: "The theory of economics does not furnish a body of settled conclusions immediately applicable to policy. It is a method rather than a doctrine, apparatus of the mind, a technique of thinking which helps its possessor to draw correct conclusions."
The basic methods of micro-economics will be emphasized as tools to help individuals and organizations make decisions about health services delivery, administration, financing, and policy issues.

PAM 662 Health Care Financial Management I
Spring. 3 credits. T. Reeves.
The course is designed to give graduate students an introduction to the issues and techniques in the financial management of health service organizations. Class lectures, readings, guest speakers, problems, case studies, and research for term paper/projects will all be used to demonstrate important points, which will be reinforced by examples and applications. The course emphasizes the internal financial management knowledge and skill necessary for financial success in complex health organizations.

PAM 663 Health Care Financial Management II: Payment Systems
Fall. 3 credits. Prerequisite: PAM 662. J. Kuder.
The purpose of this course is to develop an understanding of the theories on which health care payment and reimbursement systems are based and the techniques by which they operate.

PAM 664 Information Resources Management in Health Organizations
Spring. 3 credits. Recommended: strong basic computer skills. S-U grades optional. L. O'Neill.
Students are expected to have basic computer skills upon entry into the course. This course is a graduate course in Health Services Administration. Students will be exposed to the opportunities and challenges inherent in the use of health management information systems (HMISs) in clinical and nonclinical applications. The course focuses on the manager's role in the application of HMISs to solve problems and address concerns in today's health care service industry. Students will learn how an HMIS can enhance the ability to apprise multilochanical and nonclinical services of care.

PAM 665 Managing Health and Human Service Organizations I
Fall. 3 credits. Staff.
This is the second segment of a six-credit sequence addressing the management and leadership of health and human services organizations. Different perspectives are emphasized, from that of the first-line supervision to the CEO level. This course begins with a study of basics of management—communications, motivation, change management, leadership, human resources, organizational design issues, and labor relations. It then looks at the development of technical skills in the areas of problem solving, decision making, productivity measurement, resource allocation and performance measurement. The course is taught with an applied focus and utilizes a case study approach.

PAM 666 Strategic Management and Organizational Design of Health Care Systems
Fall. 3 credits. Prerequisite: PAM 665. T. Reeves.
This is the second segment of a six-credit sequence in the management and leadership of health and human services organizations. This course concentrates on strategy issues, marketing, organizational culture issues, development of mission, the management of professionals, and studies the importance of roles, structure, and inter- and intra-institutional relationships within these organizations. The course is taught via a case study approach.

PAM 667 Health and Welfare Policy
Fall. 3 credits. Staff.
Health and welfare issues are seen as reflecting alternate solutions to the broader institutional problems of allocation (economics), control (politics), and normative behavior (morality). A basic tenet is that health and welfare policy is deeply rooted in social values and the availability of economic resources. Health policy is interpreted from a multidisciplinary perspective in which change emanates from structural dynamics accompanying socioeconomic development such as the evaluation of the economy from the entrepreneurial to the managerial to the post-industrial stages, together with shifts in social and political ideology—libertarianism, welfare statism, and secular humanism.

PAM 668 Long-Term Care and the Aged: Alternative Health and Social Service Delivery Systems
Spring. 3 credits. Prerequisite: PAM 657. R. Battistella.
Alternatives for the organization and delivery of long-term care services are examined within the context of public-financing constraints. Progressive long-term care is viewed as a continuum encompassing medical and social services positioned to optimize independent living. Relevant experience from other highly developed countries is presented. Visiting speakers from the public and private sectors are featured. Field trips provide additional insights into the many challenges and opportunities of long-term care policy and management.
PAM 669 Regression Analysis and Managerial Forecasting
Fall. 3 credits. Prerequisite: at least one statistics course. L. O'Neill.
This course teaches various statistical methods for making inferences in public and private human service organizations. A particular emphasis is placed on regression and forecasting. Other topics include: ANOVA, correlation, confounding, interaction, and statistical process control. Applications to health care organizations are emphasized.

[ ]

PAM 674 Housing Economics
Spring. 3 credits. Prerequisite: Economics 331 or 313. Instructor's permission required. Staff.
A survey of economic theory and empirical research related to housing markets. The course studies the demand and supply sides of the housing market as applications of microeconomic theory. Topics related to housing demand include tenure choice (decision to own or rent), household formation, mobility, and discrete choice models. A. Lemley, director of graduate studies, A. Racine, director of undergraduate studies, S. Ashdown, C. C. Chu, C. Coffman, C. Jirousek, S. Loker, S. K. Obendorf, A. Racine, P. Schwartz
NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PAM 704-705 Internship in Human Service Studies
Fall, spring, or summer. 1-15 credits. S-U grades optional.
Internship placement in human services is determined by availability and students' academic and professional goals. Opportunities exist in public and private human service organizations at the national, state, and local levels in positions consistent with students' needs and desires. The duration of an internship is negotiated between the student and the agency, while course credit and residence units are arranged between the student and the Special Committee.

PAM 718 Advanced Seminar in Program Evaluation
Fall, spring. 1-3 credits. S-U grades optional. Prerequisite: permission of instructor. Staff.
This advanced seminar course is intended for students with at least three courses in evaluation (PAM 612 series or equivalent) and statistics through multiple regression. The seminar focuses on analysis and appraisal of current literature on program evaluation and evaluative research. The seminar is topical, addressing current issues of importance in the field.

PAM 760 Challenges and Trends in the Health Services Industry
Fall and spring. 1 credit. S-U grades only. Staff.
The goal of the course is to provide students with information and exposure to current and emerging issues in the health services industry. Topics may include such matters as financial management of health care facilities, human resource management, information systems, cost effective clinical decision making, quality measurement and outcomes, public health, and entrepreneurship in the health services industry.

PAM 799 MPS Problem Solving Project
Fall or spring. Credits to be arranged. For students recommended by their chair and approved by the instructor in charge of independent advanced work. S-U grades optional.
TXA 269 Style, Fashion, and the Apparel Industry  
Spring (first 7 weeks of semester). 2 credits. Limited to 45 students. Recommended: TXA 125 and TXA 135. Not open to freshmen. S-U grades optional. Lec M W 2:30-4:30. A. Chatman. This course will focus on changes in the U.S. apparel industry and fashion from the nineteenth century to the present day due to social forces, technological developments, and shifting demographics. The Cornell Costume Collection will be used for discussion. Students will write a term paper on issues relating to the fashion industry.

TXA 275 Photoshop for Portfolio Presentations in Textiles and Apparel  
Spring (final 7 weeks of semester). 2 credits limited to 20 students. Prerequisite: TXA 114, TXA 217, or TXA 225. Course fee covering CAD lab color printing, $15.00. T R 10:10–12:10. J. Jurasek. This course will explore the use of Adobe Photoshop as a tool for portfolio development in textile and apparel design. Building on studio work produced in other courses, students will learn the basics of Photoshop and create a formal portfolio that will involve textile design applied to either apparel or home furnishings use.

TXA 300 Special Studies for Undergraduates  
Fall or spring. Credit to be arranged. Staff. Special arrangement for course work to establish equivalence for courses not transferred from a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from the College Registrar’s Office. The form, signed by both the instructor directing the study and the department chair, is filed at course registration or during the change-of-registration period.

TXA 331 Apparel Production and Management  
Fall. 3 credits. Prerequisites: Economics 101 and 102 and an upper-division course in an area of apparel or textiles. T R 10:10–11:25. S. Lorer. Introduction to the global textile and apparel industry, particularly the technical and economic aspects of apparel production. Analysis of specific apparel manufacturing and management issues such as international sourcing, quick response, mass customization, production and information technology, labor, and logistics.

TXA 335 Fiber Science  
Spring. 3 credits. Limited to 20 students. Prerequisites: college chemistry and physics. Lec L M W T 1:25–2:15. Lab M 2:30–4:25. A. Netravali. This course covers fibers commonly used in various engineering, medical, and apparel applications. Topics include nature of polymer molecules, chemical structure of organic fibers, inorganic fibers, micro-macro structure of fibers, fiber dimensions, environmental effects, mechanical, optical, thermal, and frictional properties of fibers. Fiber uses such as composites in medicine and other structural components, circuit boards, bulletproof vests, sutures, artificial arteries, geotextiles, sporting goods, etc. will be discussed.

TXA 338 Fundamentals of Color and Dyeing  
Fall. 3–4 credits. 3 credits for lecture only; 4 credits for lecture and lab. Prerequisite: college Natural Science Requirements. Fiber science students are required to take the lab. Lab fee, $15. Lec M W F 10:10–11:00; lab M 1:25–4:25. C. C. Chu. Color is an extremely important and useful factor in daily life. This course will emphasize theories and scientific principles of color, providing a framework for the use of color in design, marketing, or research. How colorants are used to dye fabrics will be addressed. Although fabrics are chiefly used to illustrate color in the class, much of the information and knowledge will be useful to nontextile majors. Guest lecturers from the industry will address the practical aspects of color in business.

TXA 346 Apparel Design Process and Pattern Development  
Spring. 4 credits. Prerequisite: TXA 135 and TXA 145. Letter grades only. Minimum cost of materials, $125; lab fee, $10. M W 1:25–4:25. Staff. This studio course applies the principles and processes of advanced pattern making and the theory of functional clothing to the development of apparel for active leisure activities. Assigned problems will require students to use the design process to apply information about body structure, user needs (thermal protection and comfort, mobility, and visibility), and the nature of materials to the production of functional, fashionable apparel. Drawing techniques will be taught that emphasize the communication of technical information about the design.

TXA 366 Computer-Aided Apparel Design  
Fall. 2 credits. Prerequisite: TXA 114, TXA 145. Pre or co-requisite: TXA 264. Minimum cost of materials, $60. M W 10:10–12:05. A. Racine. A team-based studio course in which a finished line of apparel is completed with patterns, sketches, flat drawings, and cost sheets created on the computer. An appropriate special study project for management students who have taken TXA 114 and TXA 145.

TXA 400-401-402-403 Special Independent Studies for Undergraduates  
Fall, summer, or spring. Credits to be arranged. S-U grades optional. Staff. For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of TXA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multiplicity description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration along with an add/drop slip in 145 MVR, College Registrar Office. To ensure review close to the course registration or change-of-registration period, early submission of the special-studies form to the department chair is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

TXA 404 Apparel/Textile Retailing and Distribution  
Spring. 3 credits. S-U grades optional. Undergraduates. Junior and senior year students only. Prerequisites: TXA 135 and TXA 331 or ARME 240 or equivalent. Lec T R 2:55–4:10. Staff. This course provides an overview of the business of design, production, distribution, marketing, and merchandising of apparel and related products from a management perspective. The organization and structure of...
both domestic and international retailers is included along with pricing strategies, merchandise planning, inventory management, and sale promotion. New uses of computer systems and information technologies will be emphasized throughout.

**TXA 465 Apparel Design: Product Development and Presentation**

Fall: 4 credits. Prerequisites: minimum of 3 drawing or art courses, TXA 204, TXA 366, and TXA 225 or permission of instructor. Recommended: TXA 114. Minimum cost of materials, $250; lab fee, $10. M W 10-11:10. S. Ashdown. Through studio problems in apparel design, students examine the influence of manufacturing technology and cost on apparel products. Garments are developed to various stages from sketches to finished samples. Sketching exercises explore the relationship between technical drawing and illustration. Some portfolio development included.

**TXA 499 Honors Thesis Research**

Fall and spring. 1-6 credits (maximum 6 credits for graduation). S-U grades optional. Prerequisite: TXA students who have been admitted to college honors program, Staff. Independent research leading to the honors thesis. College honors program guidelines are to be followed.

**TXA 600 Special Problems for Graduate Students**

Fall or spring. Credit to be arranged. S-U grades optional. Independent advanced work by graduate students recommended by their chair and approved by the department chair and instructor.

**TXA 620 Physical Properties of Fiber-Forming Polymers and Fibers**

Fall: 3 credits. Prerequisite: permission of instructor. Offered alternate years. A. Netravali. Formation and properties of fiber-forming polymers, rubbery, glassy, and crystalline states and their interconnection. Fiber structure, relationship between chemical structure and physical properties of manufactured fibers. Mechanical, thermal, and viscoelastic properties of fibers and testing methods will be discussed.

**TXA 626 The Chemistry of Textile Finishes and Dyeing**

Spring: 3 credits. S-U optional. Prerequisites: TXA 356 or equivalent and organic chemistry, or permission of instructor. Offered alternate years. C. C. Chu. Chemical aspects of textiles with emphasis on finishes and dyeing are discussed. Industrially important textile chemicals used for dying and finishing and their chemical properties, such as durable press, anti-soiling, water repellency will be studied. The emphasis is on the correlation of the observed effect with chemical structure, end-use influences, interaction with fabric and fibers, sources, and synthetic routes. The environmental effect of these textile chemicals and current federal regulation will be briefly discussed.

**TXA 637 Research Seminars in Apparel Design**

Fall and spring. 1 credit; S-U only; repeat of course each semester is encouraged for all apparel design graduate students. Available to advanced undergraduate students with permission of individual instructor. Apparel Design faculty.

**[TXA 639 Mechanics of Fibrous Assemblies]**

Fall: 3 credits. Prerequisite: solid mechanics or permission of instructor. Offered alternate years. M W F 11:15-12:05. P. Schwartz. A study of the mechanics of fiber assemblies: idealized yarn and fabric models; statistical bundle theories; deformation of yarns and fabrics in tensile, shear, and compressive stress; bending and buckling; and the mechanical behavior of nonwoven textile materials.

**[TXA 664 Human Factors: Anthropometrics and Apparel]**

Spring (even-numbered years): 3 credits. S-U grades optional. Prerequisites: course in statistics and permission of instructor. Open to advanced undergraduates. Offered alternate years. S. Ashdown. Seminar course focusing on the human form and its relationship to clothing. Includes discussion of quantification of body sizes and human variation, historical, cultural, and aesthetic concepts of fit, apparel sizing techniques, national and international sizing systems and standards, impact of sizing systems on various populations (elderly, handicapped, etc.).

**[TXA 666 Formation of Manufactured Fibers]**

Spring: 3 credits. Prerequisites: Organic chemistry, college physics, TXA 450, TXA 620, or permission of the instructor. S-U grades optional. Offered alternate years beginning 2001. M W F 2:30-3:25. P. Schwartz. This course covers the practical and theoretical analysis of the chemical and physical principles of the methods of converting bulk polymer to fiber; rheology; melt, dry, and wet polymer spinning; fiber drawing; heat setting; and general theory applied to unit processes.

**[TXA 675 Aesthetics and Meaning in World Dress]**

Spring: 3 credits. S-U grades optional. Prerequisites: TXA 125 or course in history of art, costume history, or other history. Offered alternate years. C. Jirousek. An examination of the aesthetic and social psychological relationship between body and clothing in the context of various cultures. Students will develop a research topic to be presented orally and in a term paper and will participate in the development of an exhibition.

**[TXA 899 Master's Thesis and Research]**

Fall or spring. Credits to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Staff.

**[TXA 999 Doctoral Thesis and Research]**

Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Staff.

DEGREE PROGRAMS

Industrial and Labor Relations

- B.S.
- M.I.L.R.
- M.P.S.
- M.S.
- Ph.D.

THE SCHOOL
The School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university. It tries to maintain the small-college atmosphere expected of an institution that has about 750 undergraduates and approximately 150 graduate students, even as ILR students participate fully in the activities of the larger Cornell community.

ILR students study in modern, technologically advanced lecture halls, seminar rooms, and libraries. Almost half of the school's typical freshman class comes from the greater New York City area. Another 30 percent live in other parts of New York State. Students from other states and a few from foreign countries make up the rest of the class. Women constitute about 50 percent of recent entering classes, and minority students comprise about 25 percent of new freshmen and transfer students.

Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the university, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other services of the university.

The school operates in four areas: (1) resident instruction, (2) extension and public service, (3) research, and (4) publications. It provides instruction to undergraduates and graduate students who are preparing for careers in industrial and labor relations, as well as to men and women already engaged in industrial relations activities and the general public through its Extension and Public Service Division.

The school's Conference Center, part of the extension division, initiates and hosts conferences covering the full scope of industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

GRADUATE DEGREES
More than 150 students on the Cornell campus are enrolled in graduate study in industrial and labor relations, one of the largest graduate fields in the university. Students may work toward the degrees of Master of Industrial and Labor Relations, Master of Professional Studies, Master of Science, and Doctor of Philosophy. For further information on graduate programs, contact the Graduate Office, School of Industrial and Labor Relations, Cornell University, 216 Ives Hall, Ithaca, NY 14853-3901.

DEPARTMENTS OF INSTRUCTION
Courses in the school are organized into six departments:

**Collective Bargaining, Labor Law, and Labor History**
In the study of workers, employers, and the government policies affecting them, members of this faculty concentrate on subjects of industrial and labor relations best understood by reliance on the fields of administration, economics, history, and law. Courses explore subjects within the framework of American society, stress fundamental forces of change, and analyze texts and empirical data with methods drawn from the social sciences, the humanities, and the legal professions.

**Human Resource Studies**
This department offers specialization in human resource studies. Human Resources focuses on employer-employee relationships and deals with such topics as human-resource planning, staffing, computer applications to personnel, personnel information systems, training, management development, performance appraisal, compensation administration, organization development, and the sociological environment of human resource management. The study of human resource policy focuses on government efforts to enhance the population's ability to be employed. Although primarily concerned with governmental measures that influence the supply of labor (for example, training, education, health, mobility, and immigration), the subject area also includes policies in private industry that relate to the demands for labor.

**International and Comparative Labor Relations**
International and Comparative Labor Relations is concerned with industrial and labor relations systems and labor markets in other parts of the world. Countries include those in Western Europe, as well as in Asia, Latin America, and South America.

**Labor Economics**
Labor Economics deals with labor markets: that is, the institutional arrangements, terms, and conditions under which workers supply their labor and under which firms demand their labor. Faculty members are especially concerned with understanding the workings of labor markets and the effects of various public policies. The topics dealt with in courses and research include the following: analysis of the labor force, employment and unemployment, wages and related terms of employment, income distribution, income security programs, health and safety in industry, retirement, pensions and social security, economic aspects of collective bargaining, and economic demography.

**Organizational Behavior**
By studying individuals, groups, single organizations, and associations or organizations, persons in the field of organizational behavior understand human behavior within organizations as well as the actions of the organizations themselves. At the individual level of analysis, courses consider motivation, leadership, attitudes, personality, group processes, organizational change, and worker participation. At the organizational level, courses examine occupations, deviance in the work place, conflict, power, organizational design, public policy regarding organizations, and industrial conflict. The department also offers courses on research methods in organizational research and general survey courses in both psychological and sociological research.

**Social Statistics**
Economic and social statistics includes the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis. A full list of required and elective courses is available from the Office of Student Services, 101 Ives Hall.

RESIDENT INSTRUCTION
This division conducts the on-campus programs leading to the degrees of Bachelor of Science, Master of Industrial and Labor Relations, Master of Science, and Doctor of Philosophy from Cornell.
Office of Student Services
Staff members from the Office of Student Services, 101 Ives Hall, work closely with faculty and faculty committees to administer degree programs for the school and many of the school's support services. The office's responsibilities include the admitting and orienting of new students, maintaining students' personal and academic records, and counseling students on personal and academic problems. The office also works closely with seniors who are planning graduate study.

Counseling and Advising
New students will be provided advising on orientation, academic procedures, and course registration by counselors in the Office of Student Services.

Each of the school's academic departments names faculty members to serve as advisers for students who wish to consult with them regarding career possibilities in the field, postgraduate programs, or similar matters. Questions or issues related to graduation requirements, course registration, and related academic procedures should be raised with counselors in the Office of Student Services.

Minority Programs
Cornell University administers a variety of special opportunity programs designed to provide financial assistance and other forms of assistance to (1) minority students and (2) low-income students meeting program guidelines. The purpose of these programs is to provide access to a Cornell education for capable students who otherwise might not secure the admissions consideration, financial assistance, or supportive services necessary for their success at the university. The associate director for minority education in the Office of Student Services provides academic and personal counseling to all ILR minority students. ILR also offers a variety of support services to enhance academic achievement.

STUDY OPTIONS
Several study options are open to ILR undergraduates, making it possible to tailor a program to fit special circumstances. One such option is the five-year ILR master's degree. With early planning, some students may earn the M.S. degree in the fifth year. Using another option, some ILR students arrange for dual registration in the Johnson Graduate School of Management, earning their bachelor's degree at ILR and a master's degree in the Johnson Graduate School of Management after five years of study.

Some students elect to spend a semester in New York City, Albany, or Washington, D.C., with a chance to observe actual labor problem solving as interns in congressional offices, labor organizations, personnel offices, and state and federal agencies. For more information, see "Special Academic Programs," below.

Study abroad options are also available at a number of foreign universities. Qualified students may spend a semester or a full year studying abroad.

A number of ILR courses deal directly with today's problems and involve fieldwork in the Ithaca area and elsewhere in New York State.

The ILR program allows juniors and seniors who want to conduct their own research to receive course credit for individually directed studies if the program is supervised by a faculty member.

Study in Absentia
Registration in absentia enables a student to seek admission in another American institution for a semester or a year and transfer credit toward completion of the Cornell degree. This study option requires the development of a plan of study, a statement of appropriate reasons for study away from the university (e.g., availability of courses not offered at Cornell), good academic standing, approval of the plan by the director of student services, and payment of a special in absentia registration fee. Course work taken in absentia is usually not evaluated for transfer credit until the work has been completed and the student has returned to the school. Students then submit a course syllabus and other evidence of content to the chairman of the department that might have offered the respective course, or to a counselor in the Office of Student Services if the course is more appropriate as a general elective.

Leave of Absence or Withdrawal
If a student desires to withdraw or to take a leave of absence from the university, an interview should be scheduled with a counselor in the Office of Student Services. Counselors will assist students in petitioning for approval of a leave of absence and in contacting the appropriate offices or departments of the university.

REQUIREMENTS FOR GRADUATION
To earn the Cornell Bachelor of Science degree in industrial and labor relations, the student needs to successfully complete 120 credits. This requires eight terms for an average of 30 credits a year although some students accelerate their studies. (Currently being revised.)

Freshman Year Fall Semester
Freshman Writing Seminar 3
Introductory Microeconomics (ECON 101) 3
History of American Labor: Nineteenth Century (ILRCB 100) 3
Social and Psychological Foundations of Organizational Behavior I (ILROB 170) 3
ILR Colloquium (ILR 150) 1
Elective 3 16

Spring Semester
Freshman Writing Seminar 3
Introductory Macroeconomics 102 3
History of American Labor: Twentieth Century (ILRCB 101) 3
Social and Psychological Foundations of Organizational Behavior II (ILROB 171) 3
Elective 3 15
Physical Education, Fall and Spring

Sophomore Year Fall Semester
Statistics I (ILRST 210) 3
Development of Economic Institutions (ILRLE 140) 3
Labor and Employment Law (ILRHR 260) 3
Human Resource Management (ILRHR 250) Fall 3
Elective 3 15

Spring Semester
Statistics II (ILRST 211) 3
Economics of Wages and Employment (ILRLE 240) 3
Distribution: Cultural Perspectives 3
Distribution: Western Intellectual Tradition 3
Elective 3 15

Junior and Senior Years
Economic Security (ILRLE 340) 3
Collective Bargaining (ILRHR 300) 3
Distribution: International and Comparative ILR 3
Distribution: Upper Division Writing 3
Distribution: Science and Technology 3
ILR and General Electives ILR Advanced Electives—30 credit hours in no fewer than 10 courses
General Electives—34 credit hours of which up to 22 hours may be freely elected in the university's endowed divisions

Required Courses (55 credits)
The curriculum prescribes the courses and subjects listed in the table above; some are illustrative. In the senior year, all courses will be electives.

Elective Courses (65 credits)
From the courses offered by the school, students must select a minimum of 10 courses and 30 credits of ILR elective courses. No more than nine of these credits may be satisfied by ILR 499, Directed Studies, or ILR 497-498, Internships. ILR 495; Honors Program, or one semester of Study Abroad.

Undergraduates are required to select one intensive writing course (for a minimum of three credits) from a list of designated courses. The remaining 34 credits may be selected from the courses of any other college at Cornell, but a student who takes more than 34 credits in the endowed colleges (the College of Architecture, Art, and Planning; the College of Arts and Sciences; the Johnson Graduate School of Management, the College of Engineering; and the School of Hotel Administration) must pay for each credit taken in excess of 34, whether or not the courses are passed. For the precise fee per credit, students should call the Office of the Bursar.

The number of credits that may be taken in the endowed colleges at no additional cost to
the student may be changed at any time by official action of the school.

**ILR Math Requirement**
If you took AP calculus in high school and scored a 3 or better on the AB exam or a 2 or better on the BC exam, you have fulfilled the ILR math requirement. If you did not take AP calculus, or if you did not achieve the scores noted above, you will be expected to take and pass the ILR Math Assessment before you may register for required courses in Statistics and Labor Economics. The Math Assessment is based on materials covered in New York State Regents Exams for Courses 2 and 3. (Calculus is not covered in those courses.)

The ILR Math Assessment will be scheduled in August, January, and May. Those who do not pass in the first attempt will be expected to register in an appropriate math course and pass the assessment before the beginning of their third semester in the school. Anyone who cannot meet the requirement by the beginning of the third semester may be enrolled for a terminal term and will be expected to leave the school thereafter.

Transfer students will be expected to meet the same standards in math: either present the score required by Cornell University for AP calculus (AB or BC) credit, or pass the ILR Math Assessment before being permitted to register in ILRST 210 or ILRLE 240 with a terminal semester possible after failing the assessment given at the beginning of a third semester as an ILR student.

**SCHEDULING AND ATTENDANCE**

**Schedule Changes**
Occasionally it may be necessary for a student to request changes in his or her course schedule either before a term begins or during the semester. Such requests must be directed to the Office of Student Services to avoid possible loss of academic credit.

**Class Attendance**
It is each student's responsibility to attend all scheduled classes unless excuses have been approved by the faculty. In some courses an instructor may permit a maximum number of class absences without a grade penalty or dismissal from the course. An explanation for absence from class may occasionally be secured from the Office of Student Services in advance of the expected absence. An approved absence may be warranted by:

1) participation in authorized university activities such as athletic events, dramatic productions, or debates;  
2) medical problems supported by a record of clinic or infirmary treatment;  
3) serious illness or death in the immediate family;  
4) other circumstances beyond the student's control.  

A request for explanation of an absence should, when possible, be made to the Office of Student Services before the date of expected absence. A reported and explained absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Student Services of any problems they have meeting course requirements.

**ACADEMIC STANDING AND GRADES**

**Academic Integrity**
In 1987 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat.

Absolute integrity is expected of all Cornell students in all academic undertakings. They must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity. The code specifically prohibits:

1) knowingly representing the work of others as one's own;  
2) using or obtaining unauthorized assistance in any academic work;  
3) fabricating data in laboratory or field work;  
4) giving fraudulent assistance to others;  
5) fabricating data in support of laboratory or field work.

Full details on the applications of these prohibitions to course work, term papers, examinations, and other situations are listed in the code. Copies are available from the Office of Student Services, 101 Ives Hall.

**Dean's List**
A Dean's List is compiled for each of the four undergraduate classes each term on the seventh day following receipt of final grades from the registrar. Eligibility for the Dean's List is determined by applying all of the following criteria:

1) achievement of a term average for freshmen of 3.3 or better; for sophomores of 3.4 or better, and for juniors and seniors of 3.6 or better;  
2) a minimum course load for the term of 12 letter-graded credits;  
3) completion of all courses registered for at the beginning of the term;  
4) satisfaction of all good-standing requirements.

**Academic Standing**
Good standing requires that all of the following criteria be met at the end of each term:

1) an average of C- (1.7) for the semester's work, including a minimum of eight completed and letter-graded credits;  
2) no failing grades in any course, including physical education;  
3) a cumulative average of C- (1.7) for all completed terms.

If at the end of any term a student fails to maintain good standing or if overall academic performance is so marginal as to endanger the possibility of meeting school and university degree requirements, his or her record is reviewed by the Committee on Academic Standards and Scholarships. The committee may issue a written warning to the student at that time. If a student does not improve after the written warning, he or she may be denied permission to register for the next term.

**Involuntary Separation from the School for Academic Reasons**
A student may be denied permission to reregister at the end of any term when he or she has failed:

1) to establish good standing after a semester on warning;  
2) to maintain an average of 1.7 in any term after a previous record of warning;  
3) to achieve good standing after being on warning any two previous semesters;  
4) two or more failures in one term or has a term average of 1.0 or below.

The Academic Standards and Scholarship Committee may decide to permit a student to remain on warning more than one semester if there has been significant improvement even though the cumulative average is still below 1.7.

**S-U Grading Policy**
An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—either in the school or in other divisions of the university—subject to the following conditions:

1) the S-U option may be used in ILR and in out-of-college course electives only, not in directed studies;  
2) students are limited to registering in two S-U courses a term;  
3) S-U registration is limited to four credits for each course;  
4) students registering for S-U grades must be in good standing;  
5) students must fulfill the graduation requirement of 105 letter-graded credits.

ILR faculty members assign a grade of U for any grade below C- and a grade of S for any grade of C- or better. A grade of U is considered equal to an F in determining a student's academic standing, although it is not included in the cumulative average.

No change of grading (from letter to S-U or from S-U to letter) may be made after the first three weeks of class. There are no exceptions to this restriction, and appeals will not be accepted.

**Grades of Incomplete**
A grade of incomplete is assigned when the course has not been completed for reasons that are acceptable to the instructor. It is understood that the work will be completed later and credit given. Instructors may grant a grade of incomplete for a limited number of clearly valid reasons, but only to students with substantial equity in a course. A firm and definite agreement on the conditions under which it may be made up must be made with the instructor. The school's policy allows a maximum of two full terms of residence for removal of a grade of incomplete. If it is not made up within this time, the grade automatically becomes an F.
SPECIAL ACADEMIC PROGRAMS

To meet the special academic objectives of some students, the school's faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Student Services. Counselors will explore the program with students to help them decide if it suits their interests.

Dual Registration in the Johnson Graduate School of Management

Dual informal registration in the Johnson Graduate School of Management leads to a Bachelor of Science degree in industrial and labor relations and a master's degree in management after five years of study and is open to students who meet the requirements of the Johnson Graduate School of Management.

Early planning by each student, preferably in the sophomore year, is desirable to ensure that the expectations of the Johnson Graduate School of Management and ILR curriculum requirements are fulfilled. Students interested in the very limited and selective program of the Johnson Graduate School of Management should contact the Admissions Office, 519 Malott Hall, and a counselor at the Office of Student Services.

Five-Year Master of Science Degree Program

With early planning it is possible to earn the M.S. degree in a fifth year of study. This program is designed specifically for those who wish concentrated study in an area of specialization in preparation for a Master of Science degree. Students considering this program should consult a counselor in the Office of Student Services after their freshman year.

Internships

The Internship Program has provided students with a vivid understanding of problems in labor and industrial relations through observation and participation in "real-life" labor problem solving. A number of selected students spend a term of the junior year in Albany, New York City, or Washington, D.C., in close contact with practitioners. Their activities include independent research under direction of ILR faculty members and seminars drawing on fieldwork experience with employers, labor organizations, and government agencies. More information about this program is available from the Office of Student Services.

Honors Program

Undergraduates who are ranked in the top 20 percent of their class at the end of the junior year may propose a two-semester research project, an honors thesis, for review by the Committee on Academic Standards and Scholarships. When approved, the candidate for graduation with honors works for two semesters (for three credits in each term) to research, write, and then defend the thesis.

Study Abroad

Cornell students with strong academic records and the necessary preparation in required and elective courses are encouraged to consider study abroad. The university currently has contact with universities in more than 40 countries that permit undergraduates to register for courses while maintaining Cornell registration and financial aid for a semester or a year. Information about those opportunities may be requested from Cornell Abroad, 474 Uris Hall. Some study abroad programs require the development of language proficiency and preparation in appropriate courses at Cornell. Students should consult the Office of Student Services and Cornell Abroad in the freshman and sophomore years to be sure that they comply with the academic and procedural requirements for study abroad.

COLLECTIVE BARGAINING, LABOR LAW, AND LABOR HISTORY

ILRCB 100 Introduction to U.S. Labor History: Nineteenth Century

Fall. 3 credits. C. Daniel, I. DeVault, N. Salvatore.

This first semester of a two-semester sequence covers the major changes in the nature of work, the workforce, and the institutions involved in industrial relations in the United States through the end of the nineteenth century.

ILRCB 101 Introduction to U.S. Labor History: The Twentieth Century

Spring. 3 credits. Prerequisite: ILRCB 100. C. Daniel, I. DeVault, N. Salvatore.

This second semester of a two-semester sequence covers the major changes in the nature of work, the workforce, and the institutions involved in industrial relations in the United States from the end of the nineteenth century up to the present.

ILRCB 201 Labor and Employment Law

Fall. 3 credits. M. Gold, R. Lieberwitz, K. Stone.

A survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half of the course surveys additional issues of rights in employment, including such topics as employment discrimination, the developing law of "unjust dismissal," and union democracy. Also serves as an introduction to judicial and administrative systems.

ILRCB 300 Collective Bargaining (200)

Fall and spring. 3 credits. M. Cook, H. Katz, S. Kuruvilla, L. Turner.

A comprehensive introduction to industrial relations and collective bargaining in the United States; the negotiation, scope, and day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy, industrial conflict; the major challenges facing unions and employers today; U.S. industrial relations in international and comparative perspective.

ILRCB 301 Labor Union Administration

Fall. 3 credits. Staff.

Study and analysis of the structure and operations of American unions, including the complicated internal life of the organizations; the varied environments in which unions develop and grow or decline; the relationship of national unions, local unions, and members in the many different sections of internal union government; the ways in which unions are set up to handle organizing, collective bargaining, contract administration, and political activity; and the widespread movement toward merger and consolidation of unions that began in the sixties and continues today. All of these will involve a study of union constitutions and other primary documents, in addition to secondary readings. Attention will be given to relevant legislation, current problems of unions, and the eternal problems of attaining union democracy.

ILRCB 302 Strangers and Citizens: Immigration and Labor in U.S.

History

Fall or spring. 3 credits. I. DeVault.

Will explore immigrant workers' experiences in the nineteenth and twentieth centuries from different perspectives. We will examine what it meant to the immigrants themselves to arrive as strangers in the United States, while also examining the ways in which pre-existing American groups defined these immigrants as "strangers." Similarly, we will look at U.S. citizens in their roles as greeters of immigrants, detractors of immigrants, and as models for the aspirations of immigrants. Throughout the course our main examples will come from the industrial and union realms.

ILRCB 304 Seminar in American Labor and Social History

Fall or spring. 4 credits. Permission of instructor.

ILRCB 305 Introduction to Labor Arbitration and Alternative Dispute Resolution

Fall. 3 credits. M. Gold.

An introductory survey that focuses in part on the U.S. labor arbitration process in the private and public sectors (legal issues, discipline and discharge, contract language interpretation, remedies, and procedures) and in part on alternative dispute resolution systems in the United States and other countries. Student participation in class discussion is expected and assignments will include an original research paper.

ILRCB 384 Women and Unions (also WOMNS 384)

Fall or spring. 4 credits. I. DeVault.

Will explore women's participation in the United States labor movement in the nineteenth and twentieth centuries. Issues covered will include women workers' relations with male-dominated union movements, the role of cross-class alliances of women in organizing women workers, interactions with radical parties and organizations, problems faced by women union leaders and activities, and others.
ILRCB 385 The African-American Workers, 1865-1910: The Rural and Urban Experience
Spring. 3 credits. Prerequisites: junior or senior or permission of instructor. N. Salvatore.
Examines the history of blacks in America from Emancipation through the experience of the first generation born after slavery, with a focus on the work experience. Topics will include the restructuring of work during Reconstruction; the relationship between work and black organizational developments; between black and white workers; and the nature of work in the agricultural south and in cities throughout the nation.

ILRCB 386 The African-American Workers, 1910-the Present: Race, Work, and the City
Fall. 3 credits. Prerequisites: junior or senior. N. Salvatore.
Examines the history of blacks in America from the start of the Great Migration through the 1970s, with a focus on the work experience. Topics will include the effect of migration and urbanization on black workers; the nature of the relationship between black and white workers as influenced by depression and two world wars; and an examination of the effect of the civil rights movement on the economic circumstances of black workers.

ILRCB 400 Union Organizing
Spring. 3 credits. Prerequisites: undergraduates, ILRCB 201 and 300; graduate students, ILRCB 500 and 501.
K. Bronfenbrenner.
Explores various aspects of unions' attempts to organize workers: why some workers join unions and others do not; strategy and tactics implemented by unions and management during organizing campaigns; present status of labor law as it affects organizing; creative approaches to union organizing; the organizing model of unionism.

ILRCB 401 My Brother's Keeper: Volunteering and Philanthropy
Spring. 3 credits. Prerequisites: junior or senior or permission of instructor. M. Gold.
The philosophy, practice, economics, and law of volunteering and donating money; the structure and practices of charitable organizations; the economic effects of voluntary labor and philanthropic gifts; and the law of raising and distributing money.

ILRCB 404 Contract Administration
Fall. 3 credits. Prerequisites: ILRCB 300 and 201 or ILRCB 500 and 501.
K. Bronfenbrenner.
This course will focus on the practice, nature, and challenges of union representation under collective bargaining agreements. Working with union contracts, constitutions, and by-laws from a diversity of national and local public and private sector agreements, the course examines how U.S. unions represent their members in different industries and different collective bargaining environments. Issues to be addressed include union representative/steward rights and responsibilities, contract enforcement structures and practice, access to information, new work systems, hours of work and scheduling, contingent staffing arrangements, workplace discrimination, health and safety, promotional opportunities, down-sizing, leadership development, membership involvement and commitment, internal organizing, community coalition building, and decertification campaigns. Students will practice hands-on work in interpreting contract language and preparing and presenting grievances and unfair labor practices.

ILRCB 405 Negotiation & Dispute Resolution
Spring. 3 credits. Prerequisites: background in economics and social sciences. Permission of instructor. D. Lipsky.
Distance Learning. Deals with four related topics: (1) nature of conflict particularly between organizations; (2) negotiation and bargaining, with a focus on process, practice, and procedures; (3) third party dispute resolution, with a focus on mediation and arbitration; and (4) alternative dispute resolution (ADR), with a focus on its current use in the labor movement for the protection of our system of justice. It will be a general dispute resolution course, i.e., it will not focus on labor relations or any particular types of disputes, but will deal with many different kinds of conflicts. Will use examples and cases to illustrate general principles. Few if any of these cases and examples will be drawn from labor relations, rather, illustrative material in the course will be based on examples from areas such as product liability, environmental regulation, commercial relations, and personal injury disputes.

ILRCB 407 Contemporary Trade Union Movement
Spring. 3 credits. Prerequisites: undergraduates, ILRCB 100, 101, graduate students ILRCB 502. R. Seibert, R. Hurst.
An examination of the nature of the contemporary trade union movement, including union power, political action, collective bargaining agreements, and organizing efforts. The course will cover structural, functional, and strategic aspects of contemporary unions. Specific attention will be given to the union movement to address the class.

ILRCB 482 Ethics at Work
Fall or spring. 3 credits. Prerequisites: junior or senior or permission of instructor. M. Gold.
Major theories of ethics are examined, then applied to issues in the employment relationship such as genetic screening of job applicants, random drug testing of employees, affirmative action, discipline for off-duty conduct, whistle-blowing, worker safety and cost/benefit analysis, comparable worth, strikes by employees providing crucial services, and crossing a picket line.

ILRCB 488 Liberty and Justice for All
Fall or spring. 3 credits. Prerequisite: junior or senior or permission of instructor. M. Gold.
Major theories of ethics are examined, then applied to contemporary issues such as affirmative action and reverse discrimination, the right to life (from abortion to capital punishment), comparable worth, and constitutional rights such as freedom of speech.

ILRCB 495 Honors Program
Fall and spring (yearlong course). 3 credits each term. Admission to the ILR senior honors program may be obtained under the following circumstances: (a) students must be in the upper 20 percent of their class at the end of their junior year; (b) an honors project, entailing research leading to completion of a thesis, must be proposed to an ILR faculty member who agrees to act as the thesis supervisor; and (c) the project, endorsed by the proposed faculty sponsor, is submitted to the Committee on Academic Standards and Scholarships. Accepted students embark on a two-semester sequence of research. The first semester consists of determining a research design, familiarization with germane scholarly literature, and preliminary data collection. The second semester involves completion of the data collection and preparation of the honors thesis. At the end of the second semester, the candidate is examined orally on the completed thesis by a committee consisting of the thesis supervisor, a second faculty member designated by the appropriate department chair, and a representative of the Academic Standards and Scholarship Committee.

ILRCB 497-498 Internship
Fall and spring. 497, 3 credits; 498, 6 credits. Staff.
All requests for permission to register for an internship must be approved by the faculty member who will supervise the project and the chairman of the faculty member's academic department before submission for approval by the director of Off-Campus Credit Programs. Upon approval of the internship, the Office of Student Services will register each student for 497, for 3 credits graded A+ to F for individual research, and for 498, for 6 credits graded S-U, for completion of a professionally appropriate learning experience, which is graded by the faculty sponsor.

ILRCB 499 Directed Studies
Fall and spring. 3 credits.
For individual or group research projects conducted under the direction of a member of the ILR faculty, in a special area of labor relations not covered by regular course offerings. Sophomores, juniors and seniors with a preceding semester of 3.0 average, are eligible to submit projects for approval by the Academic Standards Committee. Students should consult with a counselor in the Office of Student Services at the time of CourseRoll in order to arrange for formal submission of their Directed Study.

ILRCB 500 Collective Bargaining
Fall. 3 credits. Open only to graduate students. Recommended: ILRCB 501 taken previously or concurrently. M. Cook, R. Hebdon, H. Katz, S. Kuruvilla, L. Turner.
A comprehensive introduction to the industrial relations system of the United States. The negotiation, scope, and day-to-day administration of contracts; union and employer bargaining structures; implications of industrial relations issues for U.S. competitiveness and public policy, industrial conflict, and U.S. industrial relations in international and comparative perspective.
ILRCB 501 Labor and Employment Law
Fall. 3 credits. Open only to graduate students. M. Gold, R. Lieberwitz, K. Stone. A survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework in which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half of the course surveys additional issues of rights in employment, including such topics as employment discrimination, the developing law of "unjust dismissal," and union democracy. Also serves as an introduction to judicial and administrative systems.

ILRCB 502 History of Industrial Relations in the United States since 1865
Spring. 3 credits. Open only to graduate students. C. Daniel, I. DeVault, N. Salvatore. This introductory course emphasizes historical developments in the twentieth century. Special studies include labor union struggles over organizational alternatives and such labor related industrial conflicts, working-class life styles, radicalism, welfare capitalism, union democracy, and the expanding authority of the federal government.

ILRCB 504 The U.S. Industrial Relations System
4 credits. Offered only in New York City for the M.P.S. Program. Staff. Examines the development, operation, and outcomes of the U.S. industrial relations system in a comparative context. Specifically, the course contrasts the American experience with industrial relations institutions and outcomes with the experience of several other countries in Europe and Asia. We will look at the process of union formation, the practice of collective bargaining at different levels, the methods of dispute resolution, and the legal regime germane to industrial relations.

We will also focus on both processes and outcomes of different country systems, focusing on the degree of collaboration or conflict, the level of wage and wage inequality, and practices in different industries and firms. Finally, we will address the role played by industrial relations and human resource policy in economic and social development in these nations.

ILRCB 602 Arbitration
Fall and spring. 4 credits. Limited to 21 students. Prerequisites: undergraduates, ILRCB 201, 300; graduate students, ILRCB 500 and 501; permission of instructor. J. Gross, R. Lieberwitz. A study of the process and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of a mock arbitration hearing, and the preparation of arbitration opinions and post-hearing briefs.

ILRCB 603 The Economics of Collective Bargaining in Sports
Fall. 3 credits. L. Kahn. Surveys economic and industrial issues in the sports industry. Topics include (1) salary determination, including free agency, salary caps, salary arbitration; (2) competitive balance and financial health of sports leagues; (3) anti-trust issues in sports; (4) labor disputes, union history, and contract administration issues in sports leagues; (5) discrimination in sports; and (6) performance incentives.

ILRCB 604 Theories of Equality and Their Application in the Workplace
Spring. 3 credits. R. Lieberwitz. An examination of the various aspects of equality in the workplace, focusing on issues of race, gender, and national origin, and the ways in which societal discrimination on these bases are institutionalized in the workplace. Theories attempting to define "equality" and specific workplace issues are studied, including the means for achieving equality at the workplace. The course entails a high level of student participation in class discussions, and assignments include a research paper.

ILRCB 605 Readings in the History of Industrial Relations in the United States
Fall. 3 credits. Limited to seniors and graduate students. C. Daniel, N. Salvatore. A seminar covering, intensively, original printed source materials and scholarly accounts for different periods in American history.

ILRCB 606 Theories of Industrial Relations Systems
Fall or spring. 3 credits. Limited to seniors and graduate students. Prerequisites: seniors, ILRCB 100, 101, 300; graduate students, ILRCB 500. H. Katz. Will trace the evolution of theory and research on industrial relations. Topics include: theories of the labor movement, institutional models and evidence regarding what unions do, the origins of internal labor markets and their relationship to industrial relations, theories of strikes, empirical studies of arbitration, research on union decline, and empirical evidence of the impacts of new technology.

ILRCB 607 Values in Law, Economics, and Industrial Relations
Fall and spring. 3 credits. Limited to 21. Prerequisites: ILRCB 201, 300, 500, 501. J. Gross. An examination of the often hidden values and assumptions that underlie the contemporary U.S. systems of employment law, work and business, and industrial relations. Classroom discussion and research projects will use novels and short stories (as well as the literature of industrial and labor relations) to focus on issues such as: discrimination, law, economics, and the state; work and business; power, conflict, and protest; and rights and justice.

ILRCB 608 Special Topics in Collective Bargaining, Labor, Law, and Legislation
Fall. 3 credits. Lec 08 open to juniors and seniors. S. Kuruvilla. This course introduces ILR undergraduates to the research process and to research methods used in the area of industrial relations. The course is organized in two parts. The first part will develop the research process, and part 2 will deal with the nature of the research process, paradigms of inquiry, developing research questions, the role of theory in research, and the development of research proposals. Part 2 will focus on acquainting students with the research methods used in the field of industrial relations (broadly defined). Each week students will read selected research articles in several fields (e.g., labor economics, collective bargaining, human resource management, and organizational behavior), understand and critique the methodology, and discuss alternate approaches that could have been used. Where possible, the faculty member who has written articles will be present to defend the methods used. Students will turn in a completed research proposal or completed research as the final product for the course.

ILRCB 609 Special Topics: Labor Law Policy Seminar
Spring. 3 credits. K. Stone. The United States collective bargaining system, which had its origins during the New Deal period, has been transformed. The intellectual premises of the system have been challenged by scholars on both the right and the left, and at the same time the decline in the labor movement has undermined its political support. This seminar will look at the theoretical attacks on the New Deal collective bargaining system and at some of the current proposals for its replacement. Some of the topics to be discussed: the theory of regulation embodied in the National Labor Relations Act and its critique; alternative concepts of labor markets and their policy ramifications; the emerging of the global economy and its ramifications for domestic labor regulation. There will also be discussion of alternative systems of labor regulation, such as found in West Germany, Sweden, and Japan.

ILRCB 650 Service Work and Workers in Historical Perspective
Fall or spring. 3 credits. I. DeVault. Takes a historical perspective on the development of a service economy in the United States. Readings will include general and theoretical works, but the main focus will be recent historical scholarship on specific occupations and situations in the "nonproductive" workforce. Students will explore primary sources for research on the subject and write research papers.

ILRCB 651 Industrial Relations in Transition
Spring. 3 credits. Limited to seniors and graduate students. H. Katz. Considers whether recent developments such as concession bargaining, worker participation programs, and the growth of nonunion firms represent a fundamental transformation in industrial relations practice. Will review recent research and new theories arguing that such a transformation is occurring, including the work of Piore and Sabel, Bluestone and Harrison, and Kochan, McKersie, and Katz. Will also review the counterarguments and evidence put forth by those who believe no such transformation is under way. Course material will focus on industrial relations practice in the private sector in the United States, although some attention will be paid to developments in Western Europe, the United Kingdom, and Japan.

ILRCB 655 Employment Law
Spring. 3 credits. Prerequisites: ILRCB 201/205. M. Gold. Examines a number of major federal and state laws designed to protect workers in their employment relationships. The material covered will be selected from the following: the Fair Labor Standards Act, unemployment insurance, workers' compensation, the Occupational Safety and Health Act, the Employee Retirement Income Security Act, the doctrine of employment at will, Social Security, workers' right-to-know, plant closings, and protection of workers' privacy.
ILRCB 682 Seminar in Labor Relations Law and Legislation  
Fall or spring. 3 credits. Limited enrollment. Prerequisite: permission of instructor. R. Lieberwitz. Legal problems in public employment and other areas of labor relations affecting the public interest.

ILRCB 683 Research Seminar in the History of Industrial Relations  
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 100 and 101; graduate students, ILRCB 502. C. Daniel, J. DeVaught, N. Salvatore. The areas of study are determined each semester by the instructor offering the seminar.

ILRCB 684 Employment Discrimination and the Law  
Fall. 3 credits. Prerequisite: ILRCB 201/501 or equivalent. M. Gold. An examination of the laws against employment discrimination based on race, color, religion, sex, national origin, age, and disability.

ILRCB 685 Research Seminar on Trade Unions  
Fall or spring. 3 credits. Prerequisite: ILRCB 300 or 500; permission of instructor. S. Kurnikova. Designed to provide an analytical survey of research on trade unions in the United States. Major topics include unions in politics, unions as complex organizations, public opinion and attitudes toward unions, determinants of union growth and decline, economic and noneconomic effects of unions on policy and policy formulation. Efforts are made to explore the theoretical and empirical content. Efforts are made to explore the theoretical and empirical content. Efforts are made to explore the theoretical and empirical content.

ILRCB 686 Collective Bargaining in the Public Sector  
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 300 and 201; graduate students, ILRCB 500 and 501. S. Kurnikova. An examination of the development, practice, and extent of collective bargaining between federal, state, and local governments and their employees. The variety of legislative approaches to such matters as representation rights, unfair practices, scope of bargaining, impasse procedures, and the strike against government are considered along with implications of collective bargaining for public policy.

ILRCB 689 Constitutional Aspects of Labor Law  
Spring. 3 credits. R. Lieberwitz. In-depth analysis of the Supreme Court decisions that interpret the United States Constitution as it applies in the workplace. This study will focus on the First Amendment, Fifth Amendment, Fourteenth Amendment, and Commerce Clause, with issues including freedom of speech and association, equal protection, due process, and other issues in the area of political and civil rights. The course entails a high level of student participation in class discussion, and assignments include a research paper.

ILRCB 703 Theory and Research in Collective Bargaining  
Spring. 3 credits. Open to graduate students who have had ILRCB 500 and ILRCB 723 or their equivalents. Recommended: a statistics course beyond the level of ILRST 510. R. Lieberwitz. This is a second-level course in collective bargaining that builds on the institutional research covered in ILRCB 500. The existing literature in the area of collective bargaining is appraised for its theoretical and empirical content. Efforts are made to explore the appropriate role for theory and empirical analysis in moving research in collective bargaining toward a more analytical perspective and to identify and appraise the underlying paradigms used to study collective bargaining-related issues.

ILRCB 705 The Economics of Collective Bargaining  
Spring. 3 credits. Prerequisites: ILRCB 500; ILRLE 540 (or their equivalents) and an understanding of multiple regression analysis; or permission of instructor. Staff. Focuses on both the economic analysis of unions and collective bargaining in our economy and on the economic forces that affect collective bargaining. The method is to identify and conceptualize the structural determinants of relative bargaining power. On this basis, the course examines both the economic outcomes of collective bargaining and current bargaining trends in a variety of industries. Tentative theoretical analyses of unionism (neoclassical, institutionalist) are compared. The statistical techniques and empirical results of research on the union effect on economic outcomes (wages, prices, inflation, profits, productivity, earnings inequality) are also evaluated. The effect of technology, corporate structures, and public policy on union bargaining power is outlined, and a number of case studies of collective bargaining in the private sector are reviewed. A term paper is required.

ILRCB 783 Seminar in American Labor History  
Spring. 3 credits. Permission of instructor. N. Salvatore. A reading and research seminar for graduate students that focuses on selected topics in nineteenth- and twentieth-century labor history. The topic changes each semester.

ILRCB 790 ILR M.P.S. Program  
Fall and spring. 1-9 credits. Staff. Supervised research only for those enrolled in the ILR M.P.S. program.

ILRCB 798 Internship  
Fall and spring. 1-3 credits. Designed to grant credit for individual research under the direction of a faculty member by graduate students who have been selected for an internship. All requests for permission to register for ILRCB 798 must be approved by the faculty member who will supervise the project.

ILRCB 799 Directed Studies  
Fall and spring. Credit TBA. For individual research conducted under the direction of a member of the faculty.

ILRCB 890 Workshop in Collective Bargaining, Labor Law, and Labor History  
Fall and spring. 2 credits. Limited to M.S. and Ph.D. candidates in the department. S-U grades only. Staff. Designed to provide a forum for the presentation of current research being undertaken by faculty members and graduate students in the Department of Collective Bargaining, Labor Law, and Labor History, and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student in the course will be expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of that student's thesis research.

HUMAN RESOURCE STUDIES

ILRHR 260 Human Resource Management  
Fall. 3 credits. Open only to ILR students; others by permission. R. Batt and staff. An introductory overview of the management of human resources. Topics include human resource decisions dealing with staffing, employee development, work system rewards, and employee relations. Emphasis is on (a) problem-solving and decision-making approaches; (b) operational methods, technologies, and practices; (c) application of relevant behavioral science theory and research; and (d) legislation and other environmental constraints having an important bearing on the effective use of human resources by an enterprise.

ILRHR 266 Personal Computer Basics  
Fall, spring, and summer. 2 credits. Limited. Staff. Provides basic skills in the use of IBM personal computers (PCs) using the Windows environment. Course covers basic fundamentals of Lexis Nexis, Windows 95, Microsoft Excel, Access, and Powerpoint. Emphasis is placed on hands-on experience using examples demonstrating human resource issues and PC-based solutions. This course is a prerequisite to several advanced Human Resource Management electives.

ILRHR 268 Human Resource Economics and Public Policy  
Fall, spring. 3 credits. Open to sophomores, juniors, and seniors. J. Bishop, V. Briggs. A review of labor-market trends, data collection systems, and theories pertaining to public efforts to develop the employment potential of the nation's human resources and to combat unemployment. The major segments of the nation's educational training enterprise—public education, higher education, employer-provided training, apprenticeship, and special training programs for the disadvantaged—are examined. Special policy and programmatic issues pertaining to youth, rural workers, welfare reform, direct job creation, worker relocation, economic development, targeted tax credits, industrial policy, and "enterprise zone" proposals are examined. Comparisons are made with other industrialized nations.
ILRHR 362 Career Development: Theory and Practice
Fall, spring. 2 credits. 7 weeks. Limited to 30. S-U only. J. McPherson.
This course is designed to provide students with an opportunity to develop their leadership and management skills. The philosophy of the class is that effective managing and leading in organizations must be based on self-assessment, the comprehension of organizational circumstances and practices encountered as leaders develop. Grade based on short writing assignments and research paper.

ILRHR 363 Leadership Seminar for Fraternities and Sororities
Spring. 2 credits. S-U only. Permission of instructor. Staff.
This seminar will provide students with an opportunity to develop their leadership and management skills. The seminar will cover the topics of leadership, communication, teamwork, and conflict resolution. Grade based on participation and a final project.

ILRHR 366 Women at Work
Spring. 3 or 4 credits. J. Farley.
Various aspects of female occupational roles in twentieth-century United States. Historical, social, and legal factors that influence women's choices of careers, work socialization and training, and subsequent labor-market experience are considered. Working women’s entry-level jobs, opportunities for advancement, and income are compared to men's.

ILRHR 456 International Human Resource Management
Spring. 3 credits. Staff.
Provides an examination of international human resource management issues in multinational enterprises. The course has two major objectives: to enhance understanding of key strategic and functional issues related to HRM and to develop analysis skills for HRM issues in multinational enterprises. Will include topics such as strategic issues for HRM, cross-cultural management issues, coordination issues, and expatriate management.

ILRHR 460 Human Resource Strategies and Practice
Fall. 4 credits. Open to juniors and seniors. ILR 260 or permission of instructor. Staff.
This course uses a semester-long case study that focuses on human resource issues and strategies for growing, entrepreneurial firms. Students solve weekly dilemmas by integrating their knowledge of the functional areas of human resource management with general management, human resource strategy, entrepreneurship, organizational behavior, finance, marketing, public relations, and small business management. Creative solutions to problems are communicated to the class via role plays, formal presentations, impromptu meetings, and class discussions. In addition to the semester-long case study, students work in teams to develop their own case of an existing company. The emphasis is on integration of concepts, application to real-life business situations, and acquisition of general management skills and knowledge.

ILRHR 461 The Design of Work Systems: Comparative and Interdisciplinary Perspectives
Fall or spring. 4 credits. Prerequisite: ILR 260 or equivalent and consent of instructor. Limited to juniors and seniors. R. Batt.
This seminar is designed to explore the state of knowledge and current research concerning the design and development of alternative work systems. The focus is on understanding various approaches to work restructuring and their differential effects on firm competitiveness and employee welfare. The first half of the course considers classic texts on mass production, flexible specialization, the sociotechnical systems, diversified quality production, and lean production. It compares these workplace models in their original national contexts and in subsequent transplant. Relevant research from economics, engineering, organizational behavior, human resources, and industrial relations is examined. The second half of the course examines these alternative approaches to restructuring in the context of specific industries and service industries and occupational groups. Students are required to hand in weekly memos covering the readings, actively participate in seminar discussions, and write two research papers on topics relevant to the course.

ILRHR 462 Staffing, Training, and Development
Spring. 3 credits. Prerequisites: ILRHR 260 or by permission of the instructor. C. Collins.
Provides overviews of the staffing, training, and development functions in organizations. The first half of the semester will focus on the process by which organizations fill positions. Topics will include legal issues, job competency analysis and planning, external selection practices, and internal staffing decisions. The second half of the course will focus on the process by which organizations train and develop employees. Topics will include training needs assessment, program design, training evaluation, and management development. Throughout the semester we will examine the relationship between the staffing and training development functions.

ILRHR 463 Employee Relations and Diversity
Fall. 3 credits. Q. Roberson.
Explores the policies, programs, and practices used by employers to promote the fair treatment of employees, especially managerial, professional, and other employees not covered by collective bargaining contracts. Includes such policies as the protection of employee rights and the nature of processes used to allocate organizational opportunities and rewards; such programs as employee assistance plans and due process procedures; and elements of such practices as employee communication and supervision. Also examines individual and organizational climate factors that are important to the management of diversity in business organizations. Considerations in employee relations and diversity management strategies, the motives of employers in establishing such strategies, and the effects of these strategies on relevant individual and organizational outcomes.

ILRHR 464 Business Strategy
Fall. 3 credits. C. Collins.
Intended to be an integrative course focusing on strategic management. The main purpose of the course is to provide an opportunity for students to study and analyze issues associated with strategic thinking in complex business situations, top management decision making, and the functions of corporations as a whole. Will allow students to come together all of the functional skills they have learned in other business or related classes (e.g., marketing, accounting, finance, human resources, etc.) and to apply this knowledge to business problems faced by top management in existing organizations. Class will be comprised of both a lecture and case study format.

ILRHR 466 Comparative Human Resource Management
Fall. 3 credits. Staff.
Provides a survey of human resource management practices in the Asia-Pacific region and Europe. Focus of the course is on HRM issues such as selection and staffing, training and development, and appraisal and reward systems. Special attention is given to the role of HRM in global mergers and acquisitions. Issues of transferability of HRM practices and implications for multinational enterprises operating in these regions will also be discussed.

ILRHR 468 Comparative Human Resource Management Simulation
Spring. 2 credits. Limited to 30 juniors and seniors. Prerequisite: ILRHR 260 or equivalent. 7 weeks. W. Wasmuth.
Uses a simulation model and an open-systems approach as a means to enhance students' skills in strategic planning and managerial decision making. Attention will be given to the implications and efforts of strategic human resource management and supervisory decisions as measured by 10 organizational performance indicators, including quality of work life, employee productivity, customer satisfaction, employee retention, internal control, and the bottom line. Each student will be assigned to a group (team) of five members and must be committed to the work of that group. An individual research project is also required. Regular attendance is required.

ILRHR 469 Immigration and the American Labor Force
Fall and spring. 3 credits. V. Briggs.
Assesses the role that immigration policy plays as an instrument of human resource development in the United States. Immigration policy will be placed in an evolutionary context but primary attention will be given to the post-1965 revival of mass immigration. In addition to legal immigration, policies pertaining to border communities, illegal immigration, "maquiladoras," refugees, and nonimmigrant workers are also examined. Comparisons are also made with immigration systems of other nations.

ILRHR 495 Honors Program
Fall and spring (yearlong course). 3 credits each term.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRHR 497-498 Internship
Fall and spring. 3 and 6 credits.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.
research on state-of-the-art IHRM practices in leading U.S. multinationals. In addition, each student will prepare a review paper on one specific area of IHRM of his or her choice.

ILRHR 560 Human Resource Management
Fall and spring. 3 credits. Open only to graduate students. Otis, Q. Roberson.
A survey course covering the major areas of the management of human behavior in work organizations. Consideration is given to such aspects of strategic and human resource planning, design and management of workforces, and management development, organization development, compensation, and employee and labor relations. Emphasis is on the application of theory and research to the solution of personnel problems.

ILRHR 564 Human Resources Management and Effective Organizations
Fall or spring. 4 credits. Offered only in New York City for the M.P.S. Program. Staff.
This course offers the opportunity to become better prepared to make effective decisions about human resources. Successful organizations depend on people; their human resources. The first module examines strategic human resource resourcing and the effective use of HR decisions on organization success and fair treatment of people. Another module focuses on alternative systems used to staff and develop people. The third module focuses on compensating and rewarding people. And the final module includes employee relations and alternative work systems. Case and field studies are used throughout the course.

ILRHR 653 Research on Education Reform and Human Resource Policy
Spring. 3 credits. J. Bishop.
State and local efforts to improve K-12 education are employing a variety of (sometimes contradictory) reform strategies. A research seminar that will critically examine the case that is made for (and against) each of the major reform proposals and review studies that provide objective evidence on their effectiveness. The education reform strategies that will be examined include: vouchers, charter schools, site-based decision making by teachers and parents, smaller classes, direct instruction versus discovery learning, extending the school day and year, better preparation and selection of new teachers, better professional development, ending tenure, merit pay, state standards and school accountability, ending social promotion, and externally set end-of-course examinations.

ILRHR 656 International Human Resource Management (also MBA 588)
Fall. 3 credits. Prerequisite: ILRHR 260/560. Limited. Seniors or graduate students only or permission of the instructor. Staff.
The focus of the course is on international human resource strategies in multinational firms. It has two major objectives: to enhance the understanding of key functional and strategic issues related to HRM activities in international firms, and to review practical applications of concepts learned from the course in leading U.S. corporations. The first part of the course, the emphasis is on the theory of international HRM, the second part is focused on field analysis. During the semester, students will conduct TEAM projects requiring a comprehensive proposal and implementation of a chosen subject; and a final project involving a specific method, technique, or critical issue; an in-class demonstration/presentation illustrating applications of a chosen subject; and a final project requiring a comprehensive proposal that describes an appropriate and logically supported intervention strategy.

ILRHR 662 People in Agile Organizations
Fall. 4 credits. Prerequisites: ILRHR 260, 560, or equivalent, plus two functional courses in HR management. Enrollment limit, 25. L. Dyer.
Organizational agility is defined as the capacity to be infinitely adaptable without having to change. It is a core competence for organizations operating in rapidly moving marketplaces. Accordingly, an increasing number of organizations are striving to become more agile, i.e., creating new ways of managing all aspects of organizational capability. Course explores the opportunities and challenges posed by organizational agility, with particular emphasis on crafting human resource strategies that support this evolving paradigm. Every effort is made to run the course as an agile organization rather than using a traditional classroom format.

ILRHR 664 HR Online Research and Reporting Skills
Fall. 3 credits. J. Boudreau, S. Basefsky.
Designed to teach students skill-based techniques in HR research methodology. The students will be taught to act as their own consultants in both a classroom and workforce setting as they access data and find statistical information to support their research topics. The first five weeks of the semester will consist of weekly meetings with the reference librarians at the Martin P. Catherwood Library. These meetings will cover a different research technique each week, and students will be given readings and a hands-on assignment to gain practical experience on these techniques.

ILRHR 665 Business Strategy and Human Resources
Fall. 4 credits. Limited. Prerequisite: ILRHR 260/560 plus 2 other courses in human resource studies and permission of instructor. P. Wright.
As the capstone course in HR studies, students will integrate the theories and practices learned in other courses, to explore the linkages between business strategy and HRM. Extensive field-based projects are included. The field projects are designed to require students to explore and understand business strategy and to draw upon and integrate their course work in HR planning, staffing, development, compensation and regard, and new work systems.

ILRHR 666 Human Resource Metrics
Fall. 4 credits. Prerequisites: ILRHR 260/560 or equivalent, 1 course in statistics, 1 elective in human resource studies. J. Boudreau.
Explores how to account for the contribution of human resource management programs and decisions to achieving organizational goals. It emphasizes a systematic decision-making system that integrates the discipline of human resource management and can assist in planning and evaluating programs. Topics include the role of financial-accounting statements in managing human resources, cost-benefit analysis in business, managing human resources as a profit center, and identifying human resource management constituents to address their goals.

ILRHR 667 Employee Relations and Diversity
Spring. 4 credits. Prerequisites: ILRHR 260/560 or equivalent and permission of instructor. Q. Roberson.
Explores the policies, programs, and practices used by employers to promote the fair treatment of employees, especially managerial, professional, and other employees not covered by collective bargaining contracts. Includes such policies as the protection of employee rights and the nature of processes used to allocate organizational opportunities and rewards; such programs as employee assistance plans and due process procedures; and elements of such practices as employee communication and supervision. Also examines individual and organizational climate factors that are important to the management of diversity in business organizations. Considers variations in employee relations and diversity management strategies, the motives of employers in establishing such strategies, and the effects of these strategies on relevant individual and organizational outcomes.

ILRHR 668 Staffing Organizations
Spring. 4 credits. Limited to 25 students. Prerequisites: ILRHR 260/560 or equivalent, 1 course in statistics. M. Cavanaugh.
This seminar provides an overview of the process by which organizations staff positions from pools of external and internal applicants. Will focus on theories, research, policies, and practices concerning attraction and selection for the most effective use of human resources. Topics covered in the course include staffing strategy and context, measurement of staffing effectiveness, job/competency analysis and human resource planning, recruitment and job choice, initial and substantive external selection practices, and internal staffing decisions. Throughout the course, considerable emphasis will be placed on relevant legislation and court decisions, and practical application of relevant theory and past research.

ILRHR 669 Managing Compensation
Fall and spring. 4 credits. Limited to 30 students. Prerequisites: ILRHR 260/560 or equivalent, ILRHR 266 and basic statistics or permission of instructor. R. Broderick, G. Milkovich.
Focuses on managing employee compensation in contemporary organizations. The major objectives are to examine the current state of compensation decision making, to examine how recent theoretical and research developments inform compensation decisions, and to offer an opportunity to develop competencies in making compensation decisions.
ILRHR 670  Seminar in Manufacturing
Spring. 15 credits. Staff.
Semester in Manufacturing ("SIM") is designed to give students a basic understanding of the functions and processes of manufacturing, as well as a broad overview of current issues and trends. The 15-credit immersion format allows development of the linkage of manufacturing to other functions in the enterprise (research and development, marketing, corporate strategy, human resources, etc.). A highlight of SIM is that each student will visit more than 20 manufacturing facilities during the semester, representing diverse sets of products, processes, and situations. These visits include extended discussion sessions with managers, and often union representatives, as well as a factory tour. These visits bring the "real-world" perspective to the course. SIM is built around five basic themes. The 15-credit immersion format allows each theme to be discussed in depth, and the interrelationships between these themes to be developed over the semester, giving students a broad understanding of how an enterprise functions.

ILRHR 690  Comparative Human Resource Management
Surveys human resource practices in two key regions of the world: Western Europe and the Pacific Rim. The focus is on HR issues related to management of professional and managerial work force, such as selection and staffing, development, and appraisal and reward systems. Special attention is given to current changes and trends in the human resource management area (e.g., unification of Europe, transformation of Japanese firms). Implications for multinationals operating in these countries will also be discussed.

ILRHR 691  Human Resource Planning and Strategy
2 credits. Limited. Prerequisites: ILRHR 560 or equivalent, one course in statistics, and permission of instructor. 7 weeks. Not offered 2000-2001. L. Dyer.
Covers the content of human resource strategies and the process of human resource planning. The emphasis is on developing human resource strategies that are integrated with firm business strategies. Covered are methods and techniques used to forecast and plan for organization structures and processes, work force population, employee contribution, and employee morale. Much of the course is organized around cases and simulations in which students make policy and program decisions for fictional organizations. Decisions are evaluated on the basis of their contributions to the organizations' human resource and business objectives.

ILRHR 692  Training the Displaced and Disadvantaged
Examines public and private efforts to lower unemployment and underemployment of displaced and disadvantaged workers. The seminar examines the type of the problem, its causes, and why specific programs have worked and others have not. Topics covered will include training for displaced workers, rehabilitation of the disabled, job-search training, tax credits for hiring, vocational training, literacy instruction, EEO, public service employment, assisting new business, and industrial policy. The seminar also investigates how the structure of the economy influences the ability of targeted training and job creation to achieve sustained reductions in unemployment and draws lessons from the experience of other societies.

ILRHR 693  Training and Development in Organizations
Spring. 3 credits. Prerequisites: ILRHR 260/560 or equivalent, 1 course in statistics or permission of instructor. M. Cavanaugh.
The purpose of this course is to acquaint students with aspects of learning in organizations. We will begin by discussing organizational learning, and then focus more narrowly on specific ways in which learning is achieved through the training and development functions. Topics throughout the semester include: how learning is linked to organizational strategy, how to determine that training is needed, issues regarding the design of training programs, current training techniques, evaluation strategies, and management development practices.

ILRHR 694  Human Resource Information System Applications
4 credits. Limited to 22 students. Prerequisites: ILRHR 260/560 or equivalent; ILRHR 266; at least 1 upper-level HRS elective; basic statistics; and permission of instructor. Not offered 2000-2001. J. Boudreau.
Explores the development, implementation, and management of computerized personnel information systems relevant to the design and implementation of human resource management. Theories and concepts relevant to the design and implementation of such systems are presented and used as the framework for hands-on experience with personal and mainframe computer systems. Students create and use applications of current popular human resource software to design their own applications and present them to the class. Where possible, student applications are based on field work in actual organizations.

ILRHR 695  Education, Technology, and Productivity
Fall. 3 credits. J. Bishop.
The seminar investigates the nexus between the education and training in schools and at the workplace and the technological modernization, productivity, and competitiveness of firms, individuals, and nations. We will investigate (1) how technological progress is changing the nature of work and what this implies for reform of education and training, (2) why United States productivity has increased so little in the past two decades, (3) how education and training contribute to growth and competitiveness, (4) why educational achievement has declined, and (5) how the respecification of education and training should be apportioned among individuals, firms, private nonprofit organizations, and government.

ILRHR 697  Special Topics in Resource Studies
Fall or spring. 3 credits. Staff.
The areas of possibility are determined each semester by the instructor offering the seminar.

ILRHR 698  International Human Resource Policies and Institutions
Fall. 3 credits. J. Bishop.
A comparative study of human resource practices and institutions in Europe, North America, Japan, and East Asia (with special emphasis on math and science education) and of the effects of these institutions on productivity, growth, and equality of opportunity. The institutions studied include primary and secondary education, apprenticeship, employer training, and higher education. Data on the consequences of policies is presented and an effort made to understand underlying causes. Human resource policies and institutions have contributed to the rapid growth and low levels of inequality in Europe, Japan, and the Pacific Rim nations. Another focus of the course is understanding the causes of the low levels of achievement of American high school students relative to their counterparts abroad.

ILRHR 760  Seminar in Human Resource Studies
Fall or spring. 3 credits. Prerequisites: ILRHR 560, ILRST 510/511, and ILRHR 699 and permission of instructor. P. Wright
A "flexing" seminar designed to give faculty and students an opportunity to pursue specific topics in detail, with an emphasis on theory and research. Topics vary from semester to semester. Interested students should consult current course announcements for details.

ILRHR 765  International Compensation
4 credits. G. Milkovich.
Seminar focuses on international developments in employee compensation. Will study recent research, theoretical developments, and specific organizations' practices in a wide variety of countries. Local national practices will be our principal focus along with expatriates and others. Almost everyone believes they are experts in pay, so we will be drawing upon research and theories from sociology, economics, psychology, etc. Four operative terms are seminar, comparative, compensation, and organization. This is a seminar, so come to each session prepared to be an active player in discussions. Our focus is comparative, including research, theory, and practices of specific countries and groups of countries. Compensation includes all forms of pay including cash, benefits, allowances, and so on. Primary focus is at the organization level of analysis.

ILRHR 767  Human Resource Strategies for Entrepreneurial Firms
Fall or spring. 4 credits. Open to graduate students only. ILRHR 560, equivalent, or permission of instructor. Staff. For course description, see ILRHR 460.

ILRHR 769  Topics in International Compensation Theory and Research
Spring. 4 credits. Prerequisite: ILRHR 699. G. Milkovich.
Examines recent developments in theory, research, and practice related to compensation. Discussion emphasizes the relevance of theory and research to compensation decision making. Students examine compensation and reward-related theories and research from supporting disciplines such as economics, psychology, sociology, and organizational behavior and evaluate their relevance to employee, managerial, executive, and international compensation.
This seminar is aimed at reading, understanding, formulating, design, and execution of his or her research, and skills necessary to evaluate, criticize, and contribute to the literature on human resource studies (HRS). Topics include bargaining, Labor Law, and Labor History. Immigration to NAFTA. The course provides an introduction to Mexican political economy for those with no prior background and an opportunity for students with more knowledge of Mexico to explore a research topic in greater depth.

ILIRC 533 Economic Geography
Explores the range of challenges affecting contemporary Mexican politics, society, and economic development—from democratization to immigration to NAFTA. The course provides both an introduction to Mexican political economy for those with no prior background and an opportunity for students with more knowledge of Mexico to explore a research topic in greater depth.

ILIRC 499 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILIRC 532 Europe, the United States, and Japan in a Global Economy
Fall. 4 credits. Graduate students. L. Turner.
See description for ILIRC 533. Graduate students attend class, take the midterm, and submit an analytical research paper at the end of the semester.

ILIRC 537 Special Topics
Fall or spring. 3 or 4 credits. Staff. Devoted to new topics in the field. The specific content and emphasis vary depending upon the interests of the faculty member teaching the course.

ILIRC 633 Labor, Industry, and Politics in Germany
Fall. 4 credits. Open to seniors with permission and graduate students. L. Turner.
Is the successful postwar "social partnership" model of organized capitalism in the Federal Republic of Germany viable in the 1990s? To answer this question, we will study the works of Karl Popper and the codetermination, the rise of a strong postwar labor movement, the contemporary German version of social partnership, with an emphasis on social events and the new challenges for German industry and labor posed by German unification and the single European market.

ILIRC 635 Labor Markets and Income Distribution in Developing Countries
Spring. 4 credits. Prerequisite: ILRLE 240 or Economics 315 or permission of instructor. Not offered 2000-2001. G. Fields.
A course analyzing who benefits and how much from economic growth in developing countries and how income distribution would be affected by various public policies. Topics to be covered include: poverty, inequality, social welfare, and economic growth theory and evidence; poverty profiles, earnings functions and decompositions; employment, unemployment, wages, and labor markets; and an introduction to benefit-cost analysis, with application to the economics of education.

ILIRC 636 Comparative History of Women and Work (also WOMNS 636)
Fall. 4 credits. Permission of instructor. I. DeVault.
Will explore the similarities and differences between different cultures' assumptions about the work of women as well as women's experiences in varying work circumstances in an increasingly deregulated global economy?
throughout history. Beginning with theoretical pieces and overviews of the history of women and work, most of the course will consist of in-depth examinations of specific work situations or occupations across time and geography. Comparative examples will be taken from the United States, Europe, and the Third World.

ILRIC 637 Labor Relations in Asia
A comparative survey of the industrial relations systems of selected Asian nations such as Japan, S. Korea, Thailand, Malaysia, Singapore, Hong Kong, China, and several others. The emphasis is on economic development strategies and industrial relations policies in these countries. Industrial relations practices, the extent of union organization, and labor force demographics of these countries will be examined. The primary objective is to provide students with an introduction to industrial relations systems in Asia. The countries chosen are representative, but not exhaustive.

ILRIC 638 Labor, Free Trade, and Economic Integration in the Americas
Analyses the contemporary movements toward free trade and regional economic integration in the Western Hemisphere. Special attention is paid to labor's role in this process. Examines the origins and implications of the North American Free Trade Agreement (NAFTA) and looks at integration schemes in South America (Mercosur), Central America, and the Caribbean, and at hemisphere-wide initiatives. A research paper is required.

ILRIC 730 Research Seminar on Labor Markets and Economic Development
Fall or spring. 3 credits. Prerequisite: open to M.S. and Ph.D. students only. G. Fields. Research seminar for students writing theses or dissertations on aspects of labor markets and economic development. Will address research questions, methodologies, and contributions in the areas of employment and unemployment, income and earnings, educational and human resource development, welfare economics, and economic growth. Numerous presentations and written papers will be required.

ILRIC 739 The Political Economy of Mexico
For course description, see ILRIC 339.

ILR 790 ILR M.P.S. Program
Fall and spring. 1-9 credits. Supervised research only for those enrolled in the ILR M.P.S. Program.

ILR 799 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

Other courses approved to fulfill ILRIC distribution

ILRCB 304 Latin American Labor History
Fall. 1-credit. Open only to ILR freshman. S/U only. Staff.
This course is offered to (a) acquaint new freshman students with some of the issues and disciplines in the field of industrial and labor relations and (b) establish acquaintance among members of the ILR faculty and small, randomly assigned groups of students. The course includes a plant visit and several meetings early in the semester designed to introduce issues encountered in studying the employment relationship.

ILRHR 456 International Human Resource Management
Spring. Staff.
For description, see the section, Human Resource Studies.

ILRHR 461 The Design of Work Systems: Comparative and Interdisciplinary Perspectives
Fall or spring. R. Batt.
For description, see the section, Human Resource Studies.

ILRHR 466 Comparative Human Resource Management
Fall. Staff.
For description, see the section, Human Resource Studies.

ILRHR 469 Immigration and the American Labor Force
Fall and spring. V. Briggs.
For description, see the section, Human Resource Studies.

ILRHR 556 International Human Resource Management
Spring. V. Pucik.
For description, see the section, Human Resource Studies.

ILRHR 690 Comparative Human Resource Management
Fall. Staff.
For description, see the section, Human Resource Studies.

ILRHR 698 International Human Resource Policies and Institutions
Spring. Bishop.
For description, see the section, Human Resource Studies.

ILRLE 444 The Evolution of Social Policy in Britain and America
Spring. G. Boyer.
For description, see the section, Labor Economics.

ILRLE 448 Topics in Twentieth-Century Economic History: The Economics of Depression and the Rise of the Managed Economy
Fall. G. Boyer.
For description, see the section, Labor Economics.

ILRLE 640 Economic History of British Labor 1750-1940
Fall. G. Boyer.
For description, see the section, Labor Economics.

ILRLE 628 Cross-Cultural Studies in Organizational Behavior
Spring. Staff.

INTERDEPARTMENTAL COURSES

ILR 150 Freshman Colloquium
Fall. 1 credit. Open only to ILR freshman. S/U only. Staff.
This course is offered to (a) acquaint new freshman students with some of the issues and disciplines in the field of industrial and labor relations and (b) establish acquaintance among members of the ILR faculty and small, randomly assigned groups of students. The course includes a plant visit and several meetings early in the semester designed to introduce issues encountered in studying the employment relationship.

ILR 355 Documentary Research Methodology
Fall. 3 credits. P. Sine.
Critical evaluation of evidence is a fundamental skill for every professional engaged in the processing of information. Lawyers, arbitrators, and human resource managers are asked to find, assess, and use the appropriate sources to build their case, for a legal decision or the formulation of a particular policy. Will help develop the ability to analyze a broad range of retrospective evidence, critically evaluate it as to pertinence and accuracy, and place it in a well thought-out and coherent context. Designed to provide research methodology training specifically for professionals in the labor field. Topics will be selected from relevant studies in Industrial and Labor Relations.

ILR 451 Science, Technology, and the American Economy
Spring. 4 credits. V. Briggs.
The industrial revolution did not begin in the United States, but the nation became the world's first technological society. Attention will be given to the evolutionary confluence of science, technology, mathematics, religion, and capitalism in the formation of the U.S. economy, its institutions, and its labor force. Primary attention will be given to the post-World War II economic developments. The vantage point will be the linkage with employment, unemployment, income, and productivity considerations. Public policy issues (such as the employment impact of the computer, research and development policy, national defense influences, the "agricultural revolution," savings and investment rates, labor force preparedness) will be explored. Critical concerns pertaining to environmental impacts, income polarization, and consumerism will also be examined.

ILR 452 Writing in Industrial and Labor Relations
Fall or spring. 3 credits. J. Farley.
Will require close reading of four or five books related to the term's theme in the field of industrial and labor relations and careful writing about them. Students will also have an opportunity to practice writing about the world of work for different audiences.

ILR 790 ILR M.P.S. Program
Fall and spring. 1-9 credits. Supervised research only for those enrolled in the ILR M.P.S. program.

LABOR ECONOMICS

ILRLE 140 Development of Economic Institutions
Fall. 3 credits. Prerequisite for non-ILR students: permission of instructor. G. Boyer.
Provides students with an understanding of the historical roots of the economic system currently dominant in Western Europe and the United States. The course will focus on (a) the process of European economic growth prior to 1914, (b) the effect of industrialization on labor in Great Britain, and (c) the historical evolution of economic thought from Adam Smith to J. M. Keynes.
ILRLE 240 Economics of Wages and Employment (also ECON 341)
Fall and spring. 3 credits. Prerequisites: Economics 101-102, Economics 315, or permission of instructor.
Applies the theory and elementary tools of economics to the characteristics and problems of the labor market. Considers both the demand (employer) and supply (employee) sides of the market to gain a deeper understanding of the effects of various government programs and private decisions targeted at the labor market. Topics covered include employment demand, basic compensation determination, education and training, benefits and the structure of compensation, labor force participation and its relation to household production, occupational choice, migration, labor-market discrimination, and the effects of unions.

ILRLE 340 Economic Security (also ECON 451)
Spring. 3 credits. Prerequisites: ILRLE 240 or equivalent.
Considers the economic and social effects of income security measures. Analyzes programs offering protection against economic loss due to industrial accident, temporary and permanent disability, illness, old age, premature death, and unemployment, as well as private efforts to provide security, and the problems of integrating public and private programs. Proposals for amending or modifying economic security measures are also considered.

ILRLE 348 The Economics of Unemployment (also ECON 453)
Fall. 4 credits. Prerequisite: ILRLE 240/450 or permission of instructor.
This course introduces students to several issues fundamental to an understanding of unemployment: the social costs; definitional questions and measurement problems; the patterns of unemployment; and the various types of unemployment, their causes, and the policies that can or have been pursued to alleviate unemployment. The course is designed for undergraduate and graduate students who have taken a survey course in labor economics or its equivalent.

ILRLE 440 Special Topics in Labor Economics
Fall or spring. 4 credits. An undergraduate seminar whose topic changes depending on semester and instructor.

ILRLE 441 Income Distribution (also ECON 455)
Fall. 4 credits. Prerequisite: ILRLE 240 or Economics 341. R. Hutchens.
Explores income distribution in the United States and the world. Topics to be covered include functional and size distributions of income, wage structure, income-generating functions and theories, discrimination, poverty, public policy and income distribution, and changing income distribution and growth. Students who have taken CEH 355 may not receive credit for 441.

ILRLE 442 The Economics of Employee Benefits (also ECON 456)
Fall. 4 credits. Prerequisites: ILRLE 240 or equivalent. F. Biau.
An in-depth treatment of the economics and financial management and administration of all employee benefits: health care, insurance, retirement income, family-care benefits, executive incentive plans, and other compensations provided as a service or contingent financial package to employees. Detailed international comparisons of health care and retirement systems are included.

ILRLE 444 The Evolution of Social Policy in Britain and America
Spring. 4 credits. Prerequisite: ILRLE 240 or equivalent. G. Boyer.
Surveys the history of social policy in Great Britain and the United States from 1800 to the adoption of the British welfare state after World War II. Topics covered include: the role of poor relief in the early nineteenth century; the changing relationship between public relief and private charity; the adoption of social insurance programs and protective labor legislation for children and women; government intervention in the Great Depression; and the beginnings of the welfare state.

ILRLE 445 Women in the Economy (also ECON 457 and WOMENS 446)
Fall. 4 credits. Prerequisite ILRLE 240 or equivalent.
Examines the changing economic roles of women and men in the labor market and in the family. Topics include: a historical overview of changing gender roles, the determinants of the gender division of labor in the family, trends in female and male labor force participation, gender differences in occupations and earnings, and the consequences of women's employment for the family.

ILRLE 446 Economic History of British Labor 1750-1940 (also ECON 459)
Fall or spring. 4 credits. G. Boyer.
Will examine various aspects of British labor history from the beginning of the Industrial Revolution until World War II. Specific topics will include: (1) monetary and nonmonetary changes in workers' living standards; (2) internal migration and emigration; (3) the London labor market; (4) the extent of poverty and the evolution of the welfare state; (5) Luddism and Chartism; and (6) the development of trade unions.

ILRLE 448 Topics in Twentieth-Century Economic History: The Economics of Depression and the Rise of the Managed Economy (also ECON 458)
Spring. 4 credits. Prerequisites: ILRLE 240 or Economics 314. G. Boyer.
Topics covered include: the causes of the Great Depression in the United States; the economics of the New Deal; the causes of high unemployment in interwar Great Britain; the rise of Keynesian economics and the development of demand management policies in Great Britain and the United States after 1945.

ILRLE 495 Honors Program
Fall and spring (yearlong course). 3 credits each term.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 497-498 Internship
Fall and spring. 3 and 6 credits for description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 499 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 540 Labor Economics
Fall. 3 credits. Prerequisites: Economics 101-102 or Economics 103 or equivalent. Required of graduate students majoring or minorin in labor economics and M.I.L.R. candidates.
Applies the theory and elementary tools of economics to the characteristics and problems of the labor market. The course considers both the demand (employer) and supply (employee) sides of the market to gain a deeper understanding of the effects of various government programs and private decisions targeted at the labor market. Topics covered include employment demand, basic compensation determination, education and training, benefits and the structure of compensation, labor force participation and its relation to household production, occupational choice, migration, labor-market discrimination, and the effects of unions.

ILRLE 544 The Economics of Occupational Safety and Health (also ECON 461)
Spring. 3 credits. Offered only in New York City (for the M.P.S. Program). Staff.
A four-module course, in which the first module covers the basic elements of supply and demand in the labor market, the second and third modules cover the "new personnel economics" (e.g., personnel decisions in a firm that relate to selecting, training, assigning, motivating, and compensating workers), and the final module covers key institutions and economic security issues (including unemployment, pension, disability, discrimination, and unions). The goals of this course are to have students learn to analyze both business and public policy problems, taking into account both basic principles of economic theory and the relevant institutional environments.

ILRLE 642 Economic Analysis of the Welfare State (also ECON 460)
Spring. 4 credits. R. Hutchens.
Includes economic rationales for government intervention and analysis of the effects of programs on economic welfare. Discusses taxes, in-kind, and cash transfer programs. Includes some discussion of welfare states in other countries.

ILRLE 644 The Economics of Occupational Safety and Health
Spring. 3 credits. R. Hutchens.
Includes economic rationales for government intervention and analysis of the effects of programs on economic welfare. Discusses taxes, in-kind, and cash transfer programs. Includes some discussion of welfare states in other countries.
stringency of safety standards considered in a benefit-cost framework; the difficulties in enforcing the act; and estimates of the impact of the act.

ILRLE 647 Evaluation of Social Programs
Fall. 4 credits.
An introduction to the methodologies used by economists to evaluate the impacts of social-action programs and legislation. General evaluation methodology, cost-benefit analysis, and econometrics are discussed. Case studies are considered to illustrate the uses of these techniques, to acquaint the student with major current governmental programs and legislation, and to estimate these programs' economic impacts. Throughout, the primary analytic framework used by the instructor is microeconomics.

ILRLE 648 Economic Analysis of the University (also ECON 342)
Spring. 4 credits.
Seeks to illustrate the complexity of decision making in a nonprofit organization and to show how microeconomic analysis in general, and labor market analysis in particular, can be usefully applied to analyze resource allocation decisions at universities. Among the topics covered are financial aid, tuition, admissions policies, endowment policies, faculty salary determination, the tenure system, mandatory retirement policies, merit pay, affirmative action, comparable worth, collective bargaining, resource allocation across and within departments, undergraduate versus graduate education, research costs, libraries, athletics, and "socially responsible" policies. Lectures and discussion of the extensive readings will be supplemented by presentations from Cornell administrators and outside speakers who have been engaged in university resource allocation decisions or have done research on the subject.

ILRLE 744 Seminar in Labor Economics I (also ECON 641)
Spring. 3 credits.
ILRLE 744, 745, and 746 constitute the Ph.D.-level sequence in labor economics.
Reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 745 Seminar in Labor Economics II (also ECON 642)
Fall. 3 credits. ILRLE 744, 745, and 746 constitute the Ph.D.-level sequence in labor economics.
Reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 746 Seminar in Labor Economics III (also ECON 643)
Spring. 4 credits. ILRLE 744, 745, and 746 constitute the Ph.D.-level sequence in labor economics.
Reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 747 Economics of Education
Spring. 4 credits. R Ehrenberg.
A survey of the research on a wide variety of issues at the elementary, secondary, and higher education levels. Examples of the issues addressed at the elementary and secondary level are the labor markets for teachers and administrators, educational production functions, class size experiments, financing and voter behavior, special education, and school choice. At the higher education level, issues addressed include public and private funding, financial aid and tuition policies, faculty labor markets and Ph.D. production. While the emphasis is on the American educational system, research from other countries may also be discussed. Interested students other than economics and labor economics Ph.D. students should speak to the instructor before enrolling for the course.

ILRLE 748 Economics of Employee Benefits
Fall. 4 credits.
Students in this course attend the lectures in ILRLE 442 (see description for 442) but have additional course requirements. If enrollment warrants, they will also meet separately at a time TBA for discussion of topics in 442 and additional topics.

ILRLE 749 Economics of Development (also ECON 672)
Fall. 4 credits. Prerequisites: first-year graduate economic theory and econometrics.
Analytical approaches to the economic problems of developing nations. Topics to be covered include: some old and new directions in development economics thinking; the welfare economics of poverty and inequality, empirical evidence on who benefits from economic development, labor market models, project analysis with application to the economics of education, and development policy.

ILRLE 790 ILR M.P.S. Program
Fall and spring. 1-9 credits.
Supervised research only for those enrolled in the ILR M.P.S. program.

ILRLE 798 Internship
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 799 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 940 Workshop in Labor Economics
Fall and spring. 3 credits. Intended for Ph.D. students who have started to write their dissertations. Presentations of completed papers and work in progress by faculty members, advanced graduate students, and speakers from other universities. Focus is on the formulation, design, and execution of dissertations.

ORGANIZATIONAL BEHAVIOR

ILRLE 171 Introduction to Micro Organizational Behavior and Analysis: The Social Psychology of the Workplace
Spring. 3 credits. Staff.
This introductory (survey) course considers the basic individual and group processes in the workplace. At the individual level, we will study personality, motivation, perception, attitude formation, and decision making. On the group level, we will emphasize group dynamics, leadership, power and influence, and culture.

ILRLE 321 Group Solidarity (also SOC 311)
4 credits. M. Macy.
What is the most important group that you belong to? What makes it important? What holds the group together, and how might it fall apart? How does the group recruit new members? Make and enforce rules? Do some members end up doing most of the work while others get a free ride? We will explore these questions from an interdisciplinary perspective, drawing on sociology, economics, and social psychology, as we apply alternative theories of group solidarity to a series of case studies, such as urban gangs, spiritual communities, the civil rights movement, protest-life activists, athletic teams, work groups, and college fraternities.

ILRLE 322 Work and Organization (also SOC 323)
Fall. 4 credits. M. Lounsbury.
This course will theoretically examine the concept of work and track how the nature of work and the operations of organizations are changing, highlighting the complex linkages between economic activity, social change, and individual experience. Includes a service-learning requirement that is designed to involve students in projects at local government or community organizations. This field based activity will also enable students to complement theoretical perspectives learned in class with a more grounded, experiential understanding of the relationship between work and organization.

ILRLE 324 Gender and Work (also SOC 314/514 and WOMNS 314/514)
Spring. 4 credits. M. Brinton.
The purpose of this course is to familiarize students with the field of gender stratification. The first part of the course will examine long-term changes in women's labor force participation and the division of labor between the sexes as societies industrialize. We consider theoretical work as well as empirical case studies of a number of countries ranging from Taiwan to Ireland. The second part of the course focuses on gender and work in highly industrialized societies.
and includes empirical studies of the gendered division of labor in households and the labor market of the United States in particular. The structure of the course is lecture one day per week and detailed discussion and critique of selected readings on the second day. Students take a mid-term exam and prepare a research proposal on some aspect of gender and work. During the last two weeks of the course, students present synopses of their research proposals and we discuss and constructively critique them.

ILROB 328 Cooperation, Competition, and Conflict Resolution
Spring. 4 credits. Prerequisite: one course in social psychology or equivalent. Staff. An examination of theory and empirical evidence relating to the resolution of interpersonal, intergroup, and international conflict. Specific attention is devoted to studying factors that contribute to the development of cooperative or competitive bonds between parties to a conflict. The factors considered include: the availability and use of threat; the credibility, intensity, and costs of threat; fractioning and escalating conflict. Personality and situational factors that regulate conflict intensification are stressed.

ILROB 329 Organizational Cultures
Fall or spring. 3 credits. Prerequisite: 1 or more courses in sociology. Staff. Reviews the concept of culture as it has evolved in sociology and anthropology, applying it to formal organizations such as corporations and unions. The course first examines the nature of social institutions such as corporations, emphasizing the role of cultural psychological forms that operate as collective messages, rituals, symbols, myths, sagas, legends, and organizational stories. Considerable attention will be given to rites and ceremonies as a cultural form in organizational life that consolidates many of these expressive forms into one. The course will examine types of ceremonial behavior such as rites of passage, rites of enhancement, and rites of degradation, including the role of language gestures, physical settings, and artifacts in ceremonial behavior. The presence of subcultures and countercultures in organizational behavior will also receive attention, especially the part played by occupational subcultures in informal organizations.

ILROB 370 The Study of Work Motivation
Fall. 4 credits. Open to juniors and seniors. T. Hammer. Designed to acquaint the student with the basic concepts and theories of human motivation with implications for job design and organizational effectiveness. Focus is on theories of worker motivation and on research approaches and results as these apply to the performance of individuals and groups in formal organizations. Readings are predominately from the field of organizational psychology, supplemented by relevant contributions from experimental and social psychology. Each student will design, execute, and analyze a research study of his or her own.

ILROB 371 Individual Differences and Organizational Behavior
Fall or summer. 4 credits. Recommended: some acquaintance with the substance and methods of behavioral or social science. L. Gruenfeld. Examines personality from a comparative psychodynamic point of view. Social behavior, authority relationships, and work motivation are used to illustrate how various theories could be applied to understand behavior and experience in organizations.

ILROB 373 Organizational Behavior Simulations
Fall. 5 credits. Prerequisites: ILROB 170 and 171 or equivalent. Limited enrollment. R. Stern. Basic principles of organizational behavior are studied through participation in simulation games. Simulations model traditional organizations and cooperatives. Games model executive decision making, running a company, assembly work, and cooperative decision making. Organizational design, decision making, conflict, cooperation, and power are the central topics of discussion. The contrasting bases of power in the organizations permits the study of the assumptions underlying organization structure and process.

ILROB 420 Contemporary Organizational Behavior: Applications
Fall or spring. 3 credits. Prerequisites: ILROB 170 and 171. L. Gasser. An exploration of current practical applications of OB theory in organizations. Using a range of contemporary resource, students will sift through practitioner articles and research; manage discussions; meet with managers, consultants, and employees; and explore organizational issues and problems from micro and macro perspectives in a political and ethical way. Students will also develop a toolbox of knowledge and skills to effectively carry out several organizational interventions or development initiatives. Choice of topics may differ to focus on contemporary issues such as: emotional intelligence, influencing organizational climate and morale, engaging strategic planning processes, managing large-scale participative techniques, using job or workplace design concepts, applying SWOT analysis, developing effective teamwork, managing diversity, applying quality management tools, etc.

ILROB 421 Regulating the Corporation
Spring. 4 credits. R. Stern. Will examine public and private power from an organizational perspective. The resource-dependence approach to organization-environment relations provides a framework for interpreting government attempts at the regulation of corporate behavior. Topics cover the structure and functioning of government regulatory agencies and corporate responses to regulation, including corporate strategy, change, and political influence. Business ethics and corporate social responsibility are considered along with the role of interest groups such as consumer or citizen organizations. Research and case materials focus on the implementation of environmental protection, occupational health and safety, equal opportunity, antitrust, securities, and consumer regulations.

ILROB 422 Organizations and Deviance
Fall. 3 credits. Enrollment limited to 60. W. Sonnestuhl. Focuses upon the deviant actions of organizations, including such behaviors as price fixing, environmental pollution, illegal campaign contributions, and discrimination in hiring and promotion. Examines the origins of such behaviors in organizations, the processes by which they became institutionalized, and the processes by which they became defined as deviant organizational actions. Within this context, the course will examine such contemporary cases as Exxon's Valdez oil spill, Iran-Contra, oil price fixing, and the federal savings and loan scandal. These events raise troubling questions about what it means to live and work in an organizational society, and they cannot be dismissed as instances of a few individuals gone bad.

ILROB 425 Sociology of Industrial Conflict
Spring. 4 credits. R. Stern. The course focuses on the social, economic, and political causes of industrial conflict. The nature of work and the employment relationship provide the foundation for understanding both individual and collective expressions of conflict in work settings. Worker background, psychological contracts and authority relations set the stage for studying conflict expressions including strikes, labor turnover, absenteeism, sabotage, accidents, deviant behavior, violence, and other forms of conflict at work.

ILROB 427 The Professions: Organization and Control
Fall. 3 credits. Prerequisite: permission of the instructor. P. Tolbert. Focuses on the sources of power and control exercised by professional groups in contemporary society. A number of issues will be examined in this context including: the role of professions in society, processes through which an occupational group becomes defined as a profession, sources of control that professional associations have over their members, relations between professionals and nonprofessionals in organizations, and the relationship between unionization and professionalization of occupations.

ILROB 428 Organizational Change and Intervention
Fall or spring. 3 credits. Limited to 25. Juniors and seniors with permission of instructor. L. Williams. Seminar will focus on planned and unplanned change in organizations. Topics will include: market and acquisition announcements, downsizing, self-management, and the role of change agents. Participants will be required to develop and present topics in addition to keeping a weekly journal and participating in exercises.

ILROB 429 Organizational Politics and Institutional Change
Spring. 2 credits. 7 weeks. Limited to juniors and seniors with permission of the instructor. Please see instructor before the first class. S. Bacharach. Will examine the market, cultural, political, and structural forces that change the organizational "rules of the game." How those changes affect individuals and organizations, and the distortions that occur as individuals and organizations attempt to adjust to a new unstable order. Issues to be examined include power, corruption, re-shaking, rationality, uncertainty, and competition. Course requirements include completing a major research paper and leading a class discussion.

ILROB 470 Group Processes
Fall. 3 credits. Prerequisites: ILROB 170 and 171 or equivalent. Permission of instructor. L. Lawler. A review of theoretical approaches and selected research on group phenomena, including the formation of groups, the
structure of group relations, and group performance. Specific topics include conformity and obedience, status and power relations, tactics of influence, solidarity and commitment, the management of emotion, the emergence and change of microcultures, and the role of groups in networks and organizations.

ILROB 472 Applied Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 170 and 171. S. Bacharach.
Introduces students to intermediate theory of organizational behavior. It will specifically concentrate on teaching students to use organizational theories for analytical and applied purposes. Among the issues to be addressed are organizational structure, work processes, organizational politics, organizational design, job design, incentive systems, and quality-of-work-life programs.

ILROB 474 Personality and Organizational Behavior Only
3 credits. Prerequisite: ILROB 170 or permission of instructor. B. Smith.
Will provide an overview of theoretically grounded perspectives on personality assessment. While this is not a class in personality theory, various theories will be discussed. Will cover the historical rise, fall, and rebirth of personality theory. In addition, the course will examine the use of personality theory to understand both the behavior of people in organizations and the "behavior of organizations." Students will be offered the opportunity to participate in a series of personality assessments designed for individual self-assessment. These assessments will be used throughout the course as an aid to understanding the relationship between personality and behavior in the world of work.

ILROB 495 Honors Program
Fall and spring (yearlong course). 3 credits each term.
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 497-498 Internship
Fall and spring. 3 and 6 credits.
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 499 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 520 Organizational Behavior and Analysis
Fall or spring. 3 credits. Staff.
Survey of concepts, theories, and research from the fields of organizational and social psychology as these relate to the behavior of individuals and groups in organizations. Job attitudes, motivation, performance, leadership and power, group formation, perception, and cognizance. While this is not a class in personality theory, various theories will be specifically analyzed. An attempt will be made to understand how the micro-political rules of organizational games are institutionalized in change. Among the ideas to be discussed are the institutionalization of ideology and the specification of the relationships among power, tactics, and strategy. Interest groups and coalition politics examined in terms of conflict and bargaining. Other issues to be discussed include corruption, dealmaking, and competition. Examples will be selected from both the private and public sectors. Seminar requirements include a major paper and/or take-home final exam.

ILROB 624 Groups in Work Organizations
Fall. 4 credits. Enrollment limited. Permission of instructor required. L. Gruenfeld.
This is an experiential learning course designed primarily for advanced students who have a comprehensive background in the theory and methods of the behavioral sciences. Work group members study their roles and relationships to each other, the task, other work groups, and especially authorities. Students write a number of self-reflective papers in which they conceptualize their experiences and relate them to theory and method in organizational behavior and experience.

ILROB 625 Conflict, Power, and Negotiation
Fall. 3 credits. Open to seniors and graduate students. Permission of instructor required. L. Gruenfeld.
This course considers theories and techniques for the identification and improvement of organizational problems at the behavioral (micro) level. Methods for the implementation of change are evaluated in the light of several normative and descriptive theories of individual and group development and effectiveness. The course emphasizes both quantitative and qualitative data processing procedures.

ILROB 626 Sociology of Markets (also SOC 622)
3 credits. M. Lounsbury.
Since World War II, the diffusion of "markets" in Asia, Eastern Europe, and Latin America as well as changes in the structure of Western economies has reinvigorated questions about how markets are socially structured. Drawing on the literature in economic sociology, this course explores the social, cultural, economic, and political factors that shape the emergence and dynamics of markets. Among the issues to be addressed are: the social organization of markets, market discrimination, the cooperative aspects of market formation and functioning, the role of government and other institutional arrangements, the relationship of economic change to broader social forces such as social movements, and the shift towards globally market-oriented economies.

ILROB 627 Micropolitics in Organizations
Spring. 3 credits. Prerequisites: ILROB 170 and 171. Limited, permission of instructor. B. Smith.
Examines micro-political processes in organizations. Neo-Machiavellian, Marxian, and Weberian approaches to organizational politics will be specifically analyzed. An attempt will be made to understand how the micro-political rules of organizational games are institutionalized in change. Among the ideas to be discussed are the institutionalization of ideology and the specification of the relationships among power, tactics, and strategy. Interest groups and coalition politics will be examined in terms of conflict and bargaining. Other issues to be discussed include corruption, dealmaking, and competition. Examples will be drawn from both the private and public sectors. Seminar requirements will include an in-class presentation and a major paper and/or take-home final exam.

ILROB 629 Personality in Organization
Fall. 4 credits. Open to undergraduates with permission of instructor. L. Gruenfeld.
This advanced course considers psychodynamic theories of organizational diagnosis at the individual and group levels. Topics include leadership, power, authority, work motivation, intervention, and change. The topics are discussed and applied in small study groups. The professor's role is as a consultant and resource person. Class members study and research their own behavior and present their qualitative and quantitative findings to the class. Students are expected to have background and interest in both research methods and theory.

ILROB 670 Seminar in Manufacturing
Spring. 15 credits. Open to master's and Ph.D. students in Industrial and Labor Relations with permission of instructor.
Intended for students who want to work as professionals or who have a strong interest in the manufacturing industries. It is taught by an interdisciplinary faculty team from the College of Engineering, the Johnson School of Management, and the School of Industrial and Labor Relations. Course material will be based on plant visits and project work with local industry. Student participation will be in

ILROB 626 Organizations and Social Inequality
Spring. 3 credits. P. Tobler.
Examines the central role that organizations in industrial societies play in allocating income, status, and other resources to individuals. A variety of theoretical explanations of social inequality will be examined, and the social policy implications of each will be considered.

ILROB 627 Leadership in Organizations
Spring. 3 credits. Prerequisites: 2 organizational behavior courses at the 300 level or advanced courses in sociology or psychology. L. Gruenfeld.
An examination of theories and research findings from the behavioral sciences that are relevant to leadership and the influence process in groups and organizations. Personality, situational, group, and interpersonal processes, interpersonal perception as well as the motivation to both lead and follow will be discussed. The implications for leadership training, organization development, and action research are explored.

ILROB 628 Cross-Cultural Studies in Organizational Behavior
Spring. 3 credits. Limited. Permission of instructor before registering in course. L. Gruenfeld.
Designed for students interested in social psychological theory and research in international culture comparisons of behavior and experience in organizations. Variables such as power distance, individualism-collectivism, universalism-particularism, and attiudes toward authority as well as work motivation will be examined. Upon completion of the readings and discussion of conceptual materials and consideration of several major international comparison studies, each student will prepare and present a paper on a topic of his/her own choosing. The topic is usually related to his/her country of origin (China, Japan, German, United States, etc.).
ILROB 671 Organizations as Social Networks
Spring. 3 credits. Prerequisites: 1 or more courses in organizational behavior, sociology, anthropology, or political science. A course in statistics or research methods would be helpful.

ILROB 674 The Social Psychology of Behavior and Experience in Organizations
Fall. 3 credits. Prerequisite: ILROB 170 and 171 or ILROB 520. L. Gruenfeld.
Considers theories that seek to explain behavior at the individual, group, and organizational level. Work motivation, leadership, and the member composition and dynamics of groups will be discussed. Harmony, conflict, and other aspects of the relationship among groups in the organization will be evaluated.

ILROB 675 Cooperative Strategies for Improving Organizational Performance
Spring. 4 credits.
Will concentrate on presentation and analysis of a series of case studies involving projects using cooperative strategies to improve organizational performance. Emphasis will be given to cases in which union and management have been working together to enhance productivity and the quality of working life. Cases will be used to develop an understanding of the use, strengths, and limitations of cooperative labor relations.

ILROB 676 Systems of Labor Participation in Management
Fall. 4 credits. Prerequisites: senior standing and permission of instructor. Examines the theory and practice of worker participation in systems ranging from informal shop-level participation to self-management. Special emphasis is placed on socio-technical systems of work design and work restructuring that give workers control over the labor process. Attention is also given to legislation programs of participation (codetermination) and to participation in employee-owned firms.

ILROB 679 Methods of Observation and Analysis of Behavior Attitudes and Values in Work Groups and Organizations
Fall or spring. 4 credits. Permission of instructor required.
Considers qualitative and psychometrically precise and systematic research methods for the study of behavior in groups and organizations. Includes a workshop that is designed to improve teamwork among the use of on-line data generated by group members. Personality, leadership culture, and group dynamics are the major focus. Students will observe, record, and videotape groups and individual behavior, which will be analyzed with the help of microcomputer programs, especially SYMLOG (a system for the multiple-level observation of groups) developed by Bales (1970, 1979). In addition to lectures and discussion of research papers, this course will also include a research project designed and executed by the students.

ILROB 720 Issues of Measurement in Research on Organizations (Instrumentation)
Fall. 4 credits.
Concerns the study of tests and measures used to assess central phenomena in organizations and behavior related fields. Students will learn where to find measures suitable for their research purposes and will examine the theories that define the constructs being measured, the empirical information available about different measures—construction, reliability, and validity, and the ways in which the instruments have been used in research and practice.

ILROB 721 Advanced Micro Organizational Behavior
Spring. 3 credits.
Examines the historical development of psychological theories of organizational behavior and contemporary issues in micro organizational research. The course will emphasize reading and analysis of primary source material.

ILROB 722 Advanced Macro Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 520.
Examines the historical development of sociological theories of organizations and contemporary issues in macro organizational research. The course will emphasize reading and analysis of primary source material.

ILROB 723 Behavioral Research Theory, Strategy, and Methods I
Fall. 4 credits. Designed to meet the needs of M.S. and Ph.D. candidates majoring in organizational behavior, but other graduate students may enroll.
Materials covered in ILROB 723 and 724 include (1) theoretical, conceptual, and ethical questions; (2) survey research and attitude-scaling procedures; (3) laboratory research methods; (4) participant observation and interviewing methods and an examination of records and qualitative data analysis. Provides students with important philosophical background for doing research and exposes them to a well-balanced, interdisciplinary set of quantitative and qualitative research tools.

ILROB 724 Behavioral Research Theory, Strategy, and Methods II
Spring. 3 credits. Designed to meet the needs of M.S. and Ph.D. candidates majoring in organizational behavior, but other graduate students may enroll.
Course will cover (a) analysis and interpretation of quantitative data, (b) traditional problems encountered in the assessment of human and organizational characteristics, (c) the use of different methods of data analysis, and (d) an examination of the limitations imposed on data collection and analysis by traditional measurement procedures. Examples of topics covered in the course: the use of Chi-square, t-tests, ANOVA, simple and multiple correlation and regression, reliability and validity analyses, causal models, factor analysis, scale construction.

ILROB 725 Analysis of Published Research in Organizational Behavior (also SOC 725)
Fall. 3 credits. Prerequisites: ILROB 520 and 1 year of statistics.
An advanced research methods course that critically examines published research papers in the field of organizational behavior in terms of research design and method as well as theory.

ILROB 726 Selected Topics in Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 520 and permission of instructor.
An advanced seminar course that seeks to develop an interdisciplinary perspective on selected topics in organizational behavior. The topics themselves will change from year to year depending on participants' interests.

ILROB 727 Work and Industrial Conflict
Spring, weeks 7-14. 2 credits.
A concentrated examination of the sociology of industrial conflict. The seminar focuses on classic formulations of conflict theory in sociology, then the social, political, economic causes of industrial conflict. Both individual and collective forms of conflict expression are examined. Some discussion of the implications of various types of worker management interventions for industrial conflict will be included.

ILROB 728 Theories of Motivation and Leadership
Spring. 4 credits. Prerequisite: ILROB 520.
(1) Theories of Work Motivation. 7 weeks.
Course will provide an introduction to basic concepts of human motivation in general, with particular emphasis on the theories that explain and predict work motivation. Students will examine the empirical research that tests the validity of the theories and shows how and under what conditions different motivation models can be used for practice in work organizations.

(2) Theories of Leadership and Power. 7 weeks.
Several current microtheories of leadership and power and related research are examined. The disciplinary perspective employed is social organizational psychology and the level of analysis emphasized is action and experience of individuals in groups.
ILRST 210 Statistical Reasoning I
Fall, spring, and summer 2000–2001. 3 credits. Attendance at weekly discussion section is required. J. Angellotti, P. Velleman. An introduction to the basic concepts of statistics and data analysis. Descriptive methods, normal theory models, and inference procedures for univariate and bivariate data. Basic statistical design, introduction to probability and applications of the Binomial and Normal distributions. Estimation, confidence intervals, and tests of significance for a single population mean and proportion, the difference in two population means and proportions, simple linear regression, correlation, and two-way contingency tables. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

ILRST 211 Statistical Reasoning II
Spring, 3 credits. Prerequisite: ILRST 210 or suitable introductory statistics course. A. Hadi, P. Velleman. A second course in statistics. Applications of statistical data analysis techniques, particularly to the social sciences. Topics include statistical inference; simple linear regression; multiple linear regression; logistic regression; and analysis of variance. Computer packages are used throughout the course.

ILRST 310 Statistical Sampling
Fall. 3 credits. Prerequisite: 2 terms of statistics. J. Bunge. Theory and application of statistical sampling, especially in regard to sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of applications to social and biological sciences and to business problems. Course includes an applied project.

ILRST 311 Practical Matrix Algebra
Spring. 3 credits. J. Angellotti, A. Hadi. Matrix algebra is a necessary tool for statistics courses such as regression and multivariate analysis and for other “research methods” courses in various other disciplines. One goal of this course is to provide students in various fields of knowledge with a basic understanding of matrix algebra in a language they can easily understand. Topics include special types of matrices; matrix calculations; linear dependence and independence; vector geometry; matrix reduction (trace, determinant, norms); matrix inversion; linear transformation; eigenvalues; matrix decompositions; ellipsoids and distances; some applications of matrices.

ILRST 312 Applied Regression Methods
Fall. 3 credits. Prerequisite: ILRST 211 or equivalent courses. T. DiCiccio, P. Velleman. Matrix algebra necessary to analyze regression models is reviewed. Multiple linear regression, analysis of variance, nonlinear regression, and linear logistic regression models are covered. For these models, least squares and maximum likelihood estimation, hypothesis testing, model selection, and diagnostic procedures are considered. Illustrative examples are taken from the social sciences. Computer packages are used.
INDUSTRIAL AND LABOR RELATIONS - 2000-2001

ILRST 313  Design and Analysis of Experiments
Spring. 3 credits. Prerequisite: ILRST 211 or equivalent. J. Angellotti.

The statistical design and analysis of comparative experiments including completely randomized, factorialized, randomized block, latin squares, and split-unit designs including crossover and repeated measures. Application of statistical design to research problems. Analyses to compare treatment groups including ANOVA, ANCOVA, contrasts, and multiple comparison procedures. Computer packages are used.

ILRST 314  Graphical Methods for Data Analysis
Spring. 3 credits. Prerequisite: ILRST 211 or equivalent. P. Velleman.

Classical and recently developed graphical methods for analysis and display. Characteristics of effective and honest graphs with comparison of alternative methods for understanding data. Includes study of current computer programs and methods expected to be practical in the near future. Graphing of univariate data, bivariate plots, multivariate data, graphical methods of data analysis; the specification, modification, and control of graphs; study of interaction between choice of display and underlying patterns.

ILRST 410  Techniques of Multivariate Analysis
Spring. 3 credits. Prerequisite: ILRST 312 or equivalent. Not offered 2000-2001. P. Velleman.

Techniques of multivariate statistical analysis discussed and illustrated by examples from various fields. We emphasize application, but theory will not be ignored. Deviation from assumptions and the rationale for choices among techniques are discussed. Students are expected to learn how to thoroughly analyze real-life data using computer-packaged programs and should have some knowledge of matrix notation. Topics include: multivariate normal distribution, sample geometry and multivariate distances, inference about a mean vector; comparison of several multivariate means, variances, and covariances; detection of multivariate outliers; principal component analysis; factor analysis; canonical correlation analysis; discriminant analysis, and multivariate multiple regression.

ILRST 411  Statistical Analysis of Qualitative Data
Fall. 3 credits. Prerequisite: 2 statistics courses or permission of instructor. T. DiCiccio, M. Wells.

An advanced undergraduate and beginning graduate course. Includes treatment of association between qualitative variables, contingency tables, log-linear models, binary ordinal, and multinomial regression models, limit dependent variables.

ILRST 499  Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILRST 510  Statistical Methods for the Social Sciences I
Fall, spring, and summer. 3 credits. J. Angellotti, J. Bunge, T. DiCiccio, P. Velleman.

A first course in statistics for graduate students in the social sciences. Descriptive statistics, probability and sampling distributions, estimation, hypothesis testing, simple linear regression and correlation. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

ILRST 511  Statistical Methods for the Social Sciences II
Fall, spring, and summer. 3 credits. Prerequisite: ILRST 510 or equivalent introductory statistics course. J. Bunge, T. DiCiccio, A. Hadi, P. Velleman.

A second course in statistics that emphasizes applications to social science data. Topics include: simple linear regression; multiple linear regression (theory, model building, and model diagnostics); and the analysis of variance. Computer packages are used extensively.

ILRST 610  Seminar in Modern Data Analysis
Fall. 3 credits. Prerequisite: 2 statistics courses or permission of instructor. Not offered 2000-2001. P. Velleman.

A survey of new aspects of statistical analysis as distinct and unique, we will treat them as special cases of a common model. Another goal of the course is to emphasize the application of these techniques.

ILRST 611  Statistical Computing

A survey of the range of topics that are involved in statistical computing. Topics include: basic numerical methods, numerical linear algebra, nonlinear statistical methods, numerical integration and approximation, smoothing and density estimation. Additional special topics may include: Monte Carlo methods, statistical graphics, computing-intensive methods, parallel computation, or computing environments. Designed for graduate students in the statistical sciences or fields interested in new advances. Students may be asked to write programs in a programming language of their choice.

ILRST 612  Data Mining
Spring. 3 credits. Prerequisite: 3 courses in statistics including multiple regression, computer experience (preferably cross platform), and matrix algebra (may be taken concurrently). J. Bunge.

Data mining is the fastest-growing business application of statistics. The term typically refers to a suite of methods used to estimate or predict a response (e.g., probability that a customer will buy a new product), based on a large set of predictors (5,000 independent variables is not large). Methods include: logistic regression, decision trees (CART, CHAID), neural networks, and discriminant analysis; diagnostics and outlier detection are also important. We will use the new SAS software package Enterprise Miner, which gives a point-and-click interface for data cleaning, exploration via several methods, and we will also use the IBM competitor Intelligent Miner. I will draw on my consulting experience in industry and will hopefully obtain real (sanitized) datasets for us to work on. For more information e-mail John Bunge at jab18@cornell.edu, see also www.cornell.edu/Academic/RSF9/RSF9ILRST.html.

ILRST 613  Bayesian and Conditional Inference
3 credits. Prerequisites: graduate level courses equivalent to OR&IE 670 and OR&IE 651 or permission of instructor. Not offered 2000-2001. M. Wells.

Covers the following topics: loss functions and utility theory, prior information and subjective probability, coherency, basic Bayesian inference, empirical Bayesian inference, robust Bayesian inference, Bayesian computations, and confirmatory. One purpose of the course is to demonstrate the generality of this model. Rather than treating path analysis, recursive models, classical econometrics, and confirmatory factor analysis as distinct and unique, we will treat them as special cases of a common model. Another goal of the course is to emphasize the application of these techniques.

ILRST 615  Expert Systems and Probabilistic Network Models

This is an interdisciplinary course for students in applied mathematics, computer science, statistics, and other related fields of applications such as medical, engineering, and social sciences. Topics include: components of expert systems, rule-based expert systems, probability-based expert systems, uncertainty measure, dependency models, Bayesian and Markov networks, change in state based on probability, learning structure from data, and examples of applications. Students will use computer software to gain experience.

ILRST 711  Robust Regression Diagnostics
3 credits. S-U only. Prerequisite: ILRST 512 or equivalent or permission of instructor. Not offered 2000-2001. P. Velleman.

Regression models are simplifications of reality; we rarely expect the model to be exactly true. In many applications of regression, however, small changes in a model, a model assumption, or a data point can have very large effects on the results. Regression analysis is viewed in this course as a cyclical process, which takes inputs and produces outputs in an interactive or cyclical way, a way in which the outputs can be used to diagnose, validate, criticize, and possibly alter the inputs. This is an attempt to narrow the gap between the theory and practice of regression analysis. We discuss classical methods as well as a recently developed general framework for assessing the sensitivity of the outputs to small changes in the input. Students are expected to be able to perform through analyses of real-life data using computer packages. Topics to be discussed include: role of variables in a regression equation, regression outliers and influential observations, robust statistics, diagnostics for least squares (e.g., LSMS, LAV, ILRS) error-in-variables models, and generalized linear models.
mathematical statistics. The first part of the
Sampling theory from the viewpoint of
ILRST 712 Theory of Sampling
ILRST 713 Counting Processes with
Statistical Applications
Spring. 3 credits. Prerequisite: a course at the technical level of Math 572 and 574 or permission of instructor. M. Wells. The statistical analysis of life history data is playing an increasing role in the social, natural, and physical sciences. We will formulate and solve various practical problems in the statistical analysis of life history data using the modern theory of stochastic processes. We will examine the martingale dynamics for point processes relevant to life history data. Both parametric and nonparametric inference will be considered. The large sample properties of the proposed procedures will be discussed in detail using recent extensions of functional central limit theorems for martingales.

ILRST 714 Topics in Modern Statistical Distribution Theory
3 credits. Prerequisites: courses equivalent to OR&E 651 or Math 571, and STATS 409 or OR&E 670. Not offered 2000–2001. Recent research has revealed vast territories of distribution theory that are unfamiliar to most statisticians. An introduction to three topics underlying this "modern" theory: infinite divisibility, decomposability, and stability; characterization of distributions; extensions of univariate distributions to multivariate distributions.

ILRST 715 Likelihood Inference
3 credits. Prerequisites: graduate courses equivalent to OR&E 670 and OR&E 672. Not offered 2000–2001. In most statistical models, exact distribution theory for testing hypotheses or constructing confidence intervals is either unavailable or computationally cumbersome. Inferences are routinely performed by using large-sample approximations to the distributions of test statistics. This course provides a survey of some recent higher-order asymptotic approximations for likelihood-based methods of inference.

ILRST 716 Statistical Consulting
2 credits. Prerequisite: limited to graduate students S-U only. Not offered 2000–2001. A course in practical consulting on "real-world" statistical problems. Under the supervision of the instructor(s), students will handle problems presented by clients (usually faculty and graduate students from other fields) and will collaborate in proposing a statistical model, analyzing data, and interpreting results. Statistical computing will be used as needed.

ILRST 717 The Analysis of Discrete Data
Spring. 3 credits. Prerequisites: graduate courses equivalent to OR&E 670 or permission of instructor. Not offered 2000–2001. T. DiCiccio. This course concerns statistical models and methods for analyzing categorical data. The key models to be covered are log-linear models for contingency tables and logistic regression models for binary-response and multinomial data. Asymptotic distribution theory necessary for inference in these models will be emphasized. Other topics include conditional inference and connections with generalized linear models. Computer packages will be used for analyses in practical examples.

ILRST 799 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILR Extension
Statewide
The following courses are open to participants in the Extension Division's statewide credit programs in labor studies and management studies. Extensive curriculum is offered in Buffalo, Albany, Rochester, Ithaca, New York City, and Long Island. These courses are not open to undergraduate or graduate students matriculated in the Ithaca ILR programs. Courses and course credits earned in Extension Division certificate programs are not automatically accepted as transfer credits or as a basis of admission to the resident ILR undergraduate and graduate programs in Ithaca. Student applications for course transfer are evaluated by the ILR school on an individual basis.

204 Managing Conflict
Fall or spring. 3 credits. The purpose of this course is to provide students with opportunities to apply conflict resolution theory to specific situations, based on real-life problems that require resolution. Students will examine situations, analyze the facts and perceptions driving the actors, and engage in applying communication, negotiation, and mediation techniques to reduce or eliminate the conflict.

205 Oral Skills for Conflict Management
Fall or spring. 3 credits. This course emphasizes the development of oral communication skills required to successfully manage conflict both as a party to a dispute, and as a third party who is charged with helping to resolve a dispute. The course presents simulations to help the participants practice their skills.

206 The Nature of Conflict
Fall or spring. 3 credits. The purpose of the course is to provide students with the conceptual foundation to engage in further study of conflict management and conflict resolution. Having taken the course, the students will (1) be able to identify and describe types of conflict; (2) be able to identify the various sources of conflict; (3) be able to apply a conceptual model of conflict to interpersonal, organizational, and international conflict situations; (4) be able to describe conflict situations in terms of social psychological aspects using a "person perception" or "attribution" theoretical orientation, and (5) be able to identify their personal response styles to conflict.

208 Workplace Negotiations
Fall or spring. 3 credits. Will cover the theory and practice of negotiation as it applies to workplace and business situations. Students will be exposed to theoretical models of negotiation and will participate in negotiation exercises. Students will be participating in two negotiation exercises and will be asked to write a paper on their negotiating position in each exercise. More weight will be given in grading to the student's ability to provide a thought-out rationale for positions and tactics than to the outcome of the negotiation itself.

241 Arbitration
3 credits. A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of an arbitration hearing, and the preparation of an arbitration opinion.

242 Public Sector Collective Bargaining
Fall or spring. 3 credits. This course is designed as an introduction to collective bargaining in the public sector. The course examines the historical development of bargaining in public employment, the evolution of state and federal and bargaining theory and practices, as well as impasse resolution techniques frequently found in this sector. Special emphasis will be given to developing an understanding of the similarities and differences between public and private sector bargaining and how they have affected tactics and strategies employed by the parties.

243 Growth of American Business and Management History
Fall or spring. 3 credits. The growth and cycles of American business enterprise produced significant changes in education, government, work, the family, the ethnic composition of the population, and the landscape. As business and industry expanded, new methods evolved for managing these enterprises. This course will examine the development of managerial practices, the relationship of management to the work force, and the social ramifications of capitalist expansion.

245 Public Sector Labor Law
3 credits. A survey and analysis of the New York State Public Employees Fair Employment Act as made as well as a comparison with other state laws covering public employees. The course will examine the extent to which the law protects and regulates concerted actions by employees in the public sector. The intent is to study and understand the law as written, but more importantly how it has been interpreted by the courts of New York State in its application. Major emphasis will be employee and employer rights, including recognition and certification, improper practices, strikes, grievances, and disciplinary procedures of the New York State Public Employment Relations Board.

247 Labor and the American Economy
3 credits. Will help the student understand how economic theories relate to the economic problems confronting the American citizen in general and the American union member in particular. Emphasis will be placed on contemporary economic theories and how their proponents attempt to solve American economic problems.
248 Employment Practices Law
Fall or spring. 3 credits.
Consider laws and regulations that directly affect managers and employers. Students will examine issues and laws such as Equal Employment Opportunity, Employee Retirement Income Security Act, Federal Wage and Hour Laws, Occupational Safety and Health Act, unemployment laws and other topics. Students will focus on the practical application of laws and their impact on the workplace.

250 New York Workers' Compensation Law for Trade Unionists and Injured Workers
Fall or spring. 3 credits.
There is a collective perception that the New York Workers' Compensation system is too punitive and too slow in its handling of personal injury claims. Students will study the impact of the workers' Compensation system in New York and the role of the injured workers' organizations believe that, if properly empowered, they can be just as effective as lawyers in looking after their injured colleagues' claims. This course is structured to give both an introduction and an understanding of this system. We will delve into every nook and cranny of New York's Workers' Compensation law. The course will be entirely practical. Skills teaching, how to present a case, document, ethics, and perseverance, are built into the course. Experts on how the system really works will also be used.

251 Principles and Practices of Management
Fall or spring. 3 credits.
Examines the principles of contract bargaining, including bargaining environments and structures as well as standards used in bargaining. Students will learn to prepare bargaining documents, cost economic issues, draft noneconomic contract language, negotiate economic and noneconomic issues, and resolve a contract bargaining impasse. The course will consider the impact of contract bargaining outcomes on workers, unions, employers, and the public.

252 Contract Bargaining
Fall or spring. 3 credits.
Examines the principles of contract bargaining, including bargaining environments and structures as well as standards used in bargaining. Students will learn to prepare bargaining documents, cost economic issues, draft noneconomic contract language, negotiate economic and noneconomic issues, and resolve a contract bargaining impasse. The course will consider the impact of contract bargaining outcomes on workers, unions, employers, and the public.

253 Contract Administration
Fall or spring. 3 credits.
Focuses on the role of the steward in administering the union contract in the workplace. Students will evaluate grievance and arbitration clause in practice, the role of the union steward, the role of local and international unions, negotiation of grievances, and preparation for arbitration. Students will analyze the impact of grievance and arbitration procedures on workers, unions, and employers.

254 Labor Law
Fall or spring. 3 credits.
Examines the principles of labor law by looking at social philosophy and the historical context of federal labor legislation from the 1930s. Students will concentrate on major provisions of the National Labor Relations Act, examining how the National Labor Relations Board and the federal courts have interpreted the national labor laws. Discussion will include new directions in labor legislation and interpretation with consideration given to the impact of labor law on workers, unions, and employers.

255 Labor History
Fall or spring. 3 credits.
Reviews American labor history from the perspective of workers' social dimensions of the development of the working class, reform and revolutionary movements, and the emergence of craft, industrial, and public employee unions. The course will be a discussion of the development of trade union institutions and leaders and the evolution of union political activities and collective bargaining. Special attention will be paid to the involvement of women and minority workers with unions.

256 Dispute Resolution
Fall or spring. 3 credits.
Examines third-party participation in dispute resolution in private and public sector collective bargaining. Development of dispute resolution methods in American labor relations continues in neutral, binding arbitration of grievances and mediation; conciliation; and fact finding procedures will be discussed. We will also look at exclusive labor-management mechanisms to settle industry disputes.

257 Human Resource Administration
Fall or spring. 3 credits.
Designed to prepare personnel practitioners in the modern organization. It will focus on manpower planning, employment, training and development, motivation and compensation, and personnel appraisal and communication for students who are currently supervised or personnel practitioners or for those aspiring to those positions.

258 Organizational Behavior
Fall or spring. 3 credits.
Designed to illustrate how behavioral science theory leads to research and how theory and research provide a basis for practical application in business, industry, education, and government.

259 Union Administration
Fall or spring. 3 credits.
Focus is on the principles and practices of effective union administration. Students will study the dynamics of democratic organizations and the development of organizational leadership. The course explores alternative methods of decision making and lines of responsibility. The legal obligations of unions and union officials will be discussed and analyzed. The course also examines the structure and evolution of relationships inside the labor movement.

260 Project Management
Fall or spring. 3 credits.
Through the process of restructuring, many companies are "flattening out" the hierarchy of management levels. This means that more responsibilities are being shared downward to employees who may not have the status (authority) of supervisor or manager, but who have the enormous responsibility of completing complex, critical projects within well defined business response to the shift in responsibility downward and with much more to be accomplished with limited resources, the demands for employees with effective project management skills is increasing. Employees who can successfully manage projects are and will continue to be the most marketable individuals in the work force because their skills are transferable to all disciplines, organizations, and situations.

261 Contemporary Labor Problems
Fall or spring. 3 credits.
Surveys contemporary labor problems that confront the American labor movement. Students will be presented with cases and be asked to identify the appropriate labor relations; issues and practices in neutral, interest arbitration; the role of the National Labor Relations Board and the federal courts have interpreted the national labor laws. Discussion will include new directions in labor legislation and interpretation with consideration given to the impact of labor law on workers, unions, and employers.

262 Professional Writing: The Power of the Written Word in Business
Fall or spring. 3 credits.
Focuses on the importance of effective writing skills and strategies required to be successful in business communities. Students will sharpen existing writing skills, correct bad writing habits, and develop new writing habits through "real life" exercises taken from case studies and their own experiences. In addition, they will learn the importance of using rhetorical strategies such as defining situations required writing responses, writing to a specific audience, attending to a specific purpose, choosing the appropriate language, and varying tone and style as the situation demands. Students, upon completing this course, will have the confidence and the writing skills to successfully address most situations requiring written communication. Genres include memos, proposal letters, and reports.

263 Speaking and Listening for Business and the Professions
Fall or spring. 3 credits.
The overall objective is to equip participants with the skills and knowledge they need to speak and listen effectively. By the end of the course, students will be able to accurately listen to, and interpret oral communication; identify major causes of listening misunderstandings such as biases, distractions, emotions, etc.; describe and employ techniques for overcoming these listening barriers; speak effectively in front of an audience; describe ways to build rapport with an audience; persuade, persuade, persuade, and make presentations, and speak extemporaneously.

264 The Evolution of Work in America
Fall or spring. 3 credits.
Explores the evolution of contemporary business operations. Discussion will focus on historical and present-day theories of work organization, changes in the workplace and workforce, and future trends. The relationships between businesses and the societies in which they exist, in both local and global economies, will also be examined.

265 Health in the Workplace
Fall or spring. 3 credits.
Examines the state and federal laws that affect job safety, health, and the way workers and their unions can use legislation to promote safe and healthy working conditions. Topics include safety and health standards; the enforcement of these standards, the responsibilities of management; the rights of employees and their unions, including the rights to information; collective bargaining for safety and health; and discrimination.
344 Union Strategies for Safety and Health
Fall or spring. 3 credits.
Even with OSHA, the most effective tool for change in the unionized work environment remains the collective bargaining process and collective action. This course explores specific strategies for making the workplace safer through collective bargaining, workers education, safety and health committees, joint labor-management committees, working with COSH groups, union-sponsored medical exams at occupational health clinics, and the OSHA complaint process. Case studies will consider integration of occupational health initiative into broader union strategies such as organizing drives and industrial development planning.

345 Health Hazards Identification and Evaluation in the Workplace
Fall or spring. 3 credits.
Students will learn about the many work site health hazards including toxic chemicals, biological agents, radiation, and electromagnetic fields. Routes of exposure, acute and chronic health effects, and the bases of regulatory exposure limits such as TLV's and OSHA PEL's will be discussed. Basic hazard evaluation and information gathering techniques will familiarize students with available resources for evaluating work site conditions.

346 Introduction to Industrial Hygiene: Hazard Evaluation and Control
Fall or spring. 3 credits.
This course builds on the knowledge acquired in both the safety hazard and health hazard courses to provide students with greater mastery of hazard evaluation and control methods. (Students are encouraged to complete the health hazard and safety hazard courses before taking industrial hygiene.) It will provide practical, hands-on training in evaluating potential workplace hazards. Students will learn about environmental monitoring methods such as air sampling and become familiar with the commonly used equipment. They will also learn to interpret and evaluate monitoring data provided by professional testers.

347 Safety Hazards Identification and Evaluation in the Workplace
Fall or spring. 3 credits.
Safety hazards (as opposed to health hazards) generally involve harm of an immediate and sometimes violent nature; health effects include burns, electrical shock, broken bones, and the loss of limbs, eyesight, or hearing. With chemicals, the primary concern is their explosive, reactive, or flammable nature rather than with the toxic effects that are the focus of health hazard evaluation. Students will become familiar with site inspection and hazard identification methods and will learn about control techniques appropriate for a variety of work settings.

360 Labor, Government, and Politics
3 credits.
A survey of the ways the American political system affects labor and how organized labor affects the system through voting, political parties, and interest groups.

367 Safety and Health in the Workplace
Fall or spring. 3 credits.
To provide basic education and training in workplace safety and health. The course will focus on applicable federal and state laws, standards for safety and health, industrial hygiene, and such health concerns as asbestos, radon, and AIDS. Practical experience will be provided through workplace walk-through safety and health inspections and in use of industrial hygiene equipment that measure noise, temperature, humidity, airflow, and airborne toxins.

FACULTY ROSTER
Abowd, John M., Ph.D., U. of Chicago. Prof., Labor Economics
Angellotti, Jon E., M.S. candidate, Cornell U. Social Statistics
Bacharach, Samuel, Ph.D., U. of Wisconsin. Jean McKeen-Alvey Grant Prof. of Labor Management Relations, Organizational Behavior
Batt, Rosemary, Ph.D., Mass. Inst. of Technol., Human Resource Studies
Blau, Francine D., Ph.D., Harvard U. Francis Perkins Prof. of Industrial and Labor Relations, Labor Economics
Boudreau, John W., Ph.D., Purdue U. Assoc. Prof., Human Resource Studies
Boyer, George R., Ph.D., U. of Wisconsin. Prof., Labor Economics
Briggs, Vernon M., Jr., Ph.D., Michigan State U. Prof., Human Resource Studies
Bunge, John A., Ph.D., Ohio State U. Assoc. Prof., Social Statistics
Collins, Christopher, Ph.D., U. of Maryland. Asst. Prof., Human Resource Studies
Compa, Lance, J.D., Yale Law School. Sr. Lecturer, Collective Bargaining, Labor Law, and Labor History
Cook, Maria L., Ph.D., Univ. of Calif, Berkeley. Assoc. Prof., Collective Bargaining, Labor Law, and Labor History
DiCicco, Thomas J., Ph.D., U. of Waterloo. Assoc. Prof., Social Statistics
Dyer, Lee D., Ph.D., U. of Wisconsin. Prof., Human Resource Studies
Ehrenberg, Ronald, Ph.D., Northwestern U. Irving M. Ives Professor of Industrial and Labor Relations and Economics, Labor Economics
Fairley, Jennie T., Ph.D., Cornell U. Prof., Extension
Fields, Gary S., Ph.D., U. of Michigan. Prof., Labor Economics
Hadi, Ali S., Ph.D., New York U. Prof., Social Statistics
Hammer, Tove H., Ph.D., U. of Maryland. Prof., Organizational Behavior
Homighouse, Christina, B.S., Ithaca College. Lecturer, Human Resource Studies
Hurd, Richard W., Ph.D., Vanderbilt U. Prof., Extension and Public Service
Hutchens, Robert M., Ph.D., U. of Wisconsin. Prof., Labor Economics
Jakubson, George H., Ph.D., U. of Wisconsin. Assoc. Prof., Labor Economics
Katz, Harry C., Ph.D., U. of California at Berkeley. Jack Sheinkman Prof. in Collective Bargaining, Labor Law, and Labor History
Kuruvilla, Sarosh C., Ph.D., U. of Iowa. Assoc. Prof., Collective Bargaining, Labor Law, and Labor History
Lawler, Edward J., Ph.D., U. of Wisconsin at Madison. Prof., Organizational Behavior
Lipsky, David B., Ph.D., Massachusetts Inst. of Technology. Prof., Collective Bargaining, Labor Law, and Labor History
Lounsbury, Michael, Ph.D., Northwestern U. Asst. Prof., Organizational Behavior
Milkovich, George, Ph.D., U. of Minnesota. Martin P. Gafterwood Professor of Industrial and Labor Relations, Human Resource Studies
Roberson, Quinetta, Ph.D., U. of Maryland. Asst. Prof., Human Resource Studies
Salvatore, Nicholas, Ph.D., U. of California at Berkeley. Prof., Collective Bargaining, Labor Law, and Labor History
Seebor, Ronald L., Ph.D., U. of Illinois. Assoc. Prof., Extension
Smith, D. Brent, Ph.D., U. of Maryland. Asst. Prof., Organizational Behavior
Smith, Robert S., Ph.D., Stanford U. Prof., Labor Economics

Stern, Robert N., Ph.D., Vanderbilt U. Prof., Organizational Behavior
Stone, Katherine J. D., Harvard U. Prof., Collective Bargaining, Labor Law and Labor History
Tolbert, Pamela S., Ph.D., U. of California. Assoc. Prof., Organizational Behavior
Velllemen, Paul F., Ph.D., Princeton U. Assoc. Prof., Social Statistics
Wells, Martin T., Ph.D., U. of California at Santa Barbara. Prof., Social Statistics
Wright, Patrick M., Ph.D., Michigan State U. Prof., Human Resource Studies
The primary function of the Law School is to prepare attorneys for both public and private practice who will render the highest quality of ethical and professional service to their clients and who will further legal progress and reform. The curriculum is designed to prepare students for admission to the bar in all American states and territories.

Ordinarily, a student who is admitted to the Law School must have a baccalaureate degree from an approved college or university. The course of study leading to the degree of Doctor of Law (J.D.) covers three academic years. Students may be admitted as special students, to pursue advanced legal studies without seeking a degree.

For further information, refer to the Law School catalog, which may be obtained from the Office of the Registrar, Myron Taylor Hall.

FIRST-YEAR COURSES

**LAW 500 Civil Procedure**
- Fall and spring. 6 credits. K. M. Clermont, B. J. Hensley, P. Fossi.
- An introduction to civil litigation, from commencement of action through disposition on appeal, studied in the context of the federal procedural system. Also, a detailed consideration of federalism and ascertainment of applicable law; jurisdiction, process, and venue; and former adjudication.

**LAW 502 Constitutional Law**
- Fall. 4 credits. K. A. Abrams, S. H. Shuffrin, G. J. Simson, J. P. Stotzky.
- A study of basic American constitutional law, including judicial review, some structural aspects of the Constitution as developed, particularly in light of the passage of the Civil War amendments, and certain of its rights provisions.

**LAW 504 Contracts**
- Fall and spring. 6 credits. R. A. Hillman, R. S. Summers, W. F. Taylor.
- An introduction to the nature, functions, and processes of exchange, contract, and contract law. The course focuses on the predominant rules and principles governing contract and related obligation, including the substantive reasons underlying the rules and principles.

**LAW 506 Criminal Law**
- Spring. 4 credits. S. D. Clymer, S. P. Garvey.
- An introductory study of the criminal law, including theories of punishment, analysis of the elements of criminal liability and available defenses, and consideration of specific crimes as defined by statute and the common law.

**LAW 508 Legal Methods**
- Legal Methods is a full-year course designed to introduce first-year students to lawyering skills, with primary emphasis on legal writing, analysis, and research. In the context of a law office, students create some of the essential legal writings that lawyers produce. For example, students prepare predictive memoranda for their boss, pointing out the strengths and weaknesses of their client’s case and attempting to develop winning arguments. Students may also write a “client letter,” using plain English to explain to their client the law, the merits of the case, and, possibly, advise the client on the best course of conduct. Finally, students develop their oral and written advocacy skills and start thinking about litigation strategy by researching and writing persuasive memoranda or legal briefs for a trial or appellate court and then, at the end of the year, orally arguing their case. Instruction occurs in small sections of approximately 37 students and in individual conferences. Each student receives extensive editorial and evaluative feedback on each written assignment.

**LAW 512 Property**
- Spring. 4 credits. G. S. Alexander, A. D. Davis.
- An investigation of the law’s protection of ownership, including the beginnings of property, legal and equitable estates, concurrent ownership, and public and private regulation of land use.

**LAW 515 Torts**
- An introduction to the principles of civil liability in the tort field: intentional wrongs, negligence, and strict liability. Attention is also given to the processes by which tort disputes are handled in our legal system.

UPPERCLASS COURSES

**LAW 602 Administrative Law: The Law of the Regulatory State**
- Fall or spring. 3 credits. Limited enrollment. Prerequisite: Constitutional Law strongly advised. Students without such background should consult the instructor. C. R. Farina, J. J. Rachlinski.
- An introduction to the constitutional and other legal issues posed by the modern administrative state. Topics include: procedural due process, separation of powers, procedural modes of administrative policymaking; judicial review of agency action; the oversight and control relationships between agencies and Congress or the President. The course provides a working familiarity with the fundamentals of administrative procedure, as well as a larger inquiry into the role of agencies in our constitutional system—and the effect of legal doctrine on shaping that role.

**LAW 608 American Indian Law**
An examination of the primary themes and materials of the federal law concerning Native American tribes and individuals. The course devotes considerable attention to the historical development of law and policy in that area and to banking regulation and authority over Indian country among federal, state, and tribal governments.

LAW 610 Antitrust Law
Fall. 2 or 3 credits. Students who have taken an antitrust course in the Paris Program may take this course for 2 credits. G. A. Hall.
A consideration of the basic antitrust rules enacted by Congress and amplified by the courts to protect competitive markets and limit the exercise of monopoly power. Price fixing, boycotts, and market allocation agreements among competitors; agreements between suppliers and customers; joint ventures; attempts to monopolize and monopolization; price discrimination; and mergers.

LAW 611 Arbitration
Fall. 3 credits. Limited enrollment. R. K. Hull.
Arbitration is the principal method of resolving disputes between unions and employers, between securities brokers and their clients, and, under international business agreements, and is gaining favor in many other areas. This course familiarizes students with arbitration practice in a variety of fields through the use of simulation exercises, role-playing, and discussion of readings and videotapes. Class exercises focus on practical skills, including case preparation, preliminary hearings, all phases of case presentation, and post-hearing briefs. The practical distinctions between arbitration and traditional litigation are noted throughout.

LAW 612 Banking Law and Regulation
The course begins by defining the roles that banks and other financial intermediaries play in the economy. It considers the claim that a specialized set of regulations governing the activities of financial intermediaries is justified by the special role banks occupy in society. In that context a variety of theoretical arguments about the role of banking regulation are considered. The course then examines each of the major laws that govern banking activities against the background of the various regulatory theories discussed. Topics addressed include entry restrictions, growth and expansion of bank activities, regulation of the business of banking, expansion through the bank holding—company structure, branch banking, interstate banking, and regulation of failing or failed banks.

LAW 613 Bankruptcy
Spring 3 credits. Prerequisite: Students who have taken Debtor-Creditor Law are ineligible for this course. T. Eisenberg.
Selected topics in the law of bankruptcy. An overview of the various bankruptcy chapters and a detailed study of the bankruptcy procedures of most general applicability. The relationship between the rights of an Article 9-secured creditor and the bankruptcy trustee's power to avoid liens. Related topics in the bankruptcy division of assignments and the law of fraudulent conveyance.

LAW 614 The Business Acquisitions Process
Spring. 3 credits. Prerequisite: Corporations. Limited enrollment. V. F. Garrett, Jr.
The focus of this course is developing the lawyering skills required by an attorney advising a client who is selling or purchasing a business. Individual drafting exercises, as well as client interview/strategy discussions and negotiations. By student respect acting as counsel to the buyer or seller, will be interspersed with period lectures on the business acquisition process and analysis of selected publicly available documentation of actual acquisitions. The typical chronology of an acquisition: analysis of the financial statement of the target company; negotiation by the buyer and the seller of the basic terms of the deal including selection of structure (sale vs. merger); drafting and negotiation of a term sheet or letter of intent; due diligence investigation; drafting and negotiation of the definitive acquisition agreement; handling of problems encountered between the execution of that agreement and the closing of the acquisition; and the closing.

LAW 615 Children, Parents, and the State
Spring. 2 credits. L. Teitelbaum.
This course explores legal and social understandings of the rights of children, parents, and the state. It examines cases such as access to and control over the content of education, authority regarding health care, claims to speech and expression, and procreative decisions. The course also examines the implication of rights in connection with juvenile court jurisdiction over neglect and abuse, delinquency, and status offenses.

LAW Civil Rights Legislation
Explores in depth the history and current status of federal civil rights legislation. The course focuses on 42 U.S.C.§1983, the dominant vehicle for vindication of constitutional rights in civil cases, and on Title VII of the Civil Rights Act of 1964, the principal federal statute covering employment discrimination.

LAW 616 Commercial Law
Spring. 3 credits. W. F. Taylor.
Examines a variety of commercial dealings and focuses on Articles 2 and 3 of the Uniform Commercial Code, with some coverage of other Articles and the Convention on Contracts for the International Sale of Goods. The course is designed to give students an understanding of commercial statutes and to inform them about many of the underlying commercial transactions to which the law relates.

LAW 617 Comparative Law
Spring. 3 credits. F. Werro.
The course provides students with a comprehensive overview of the U.S. copyright law. It begins with the laws of the states and the laws of the United States of America and expands to include international laws. The course then provides an in-depth study of the rights granted to authors under this law, the standards for judging copyright infringement, public policy limitations on the scope of copyright interest (such as the fair use defense), and remedies available to successful litigants. Issues raised by new information technologies and recent amendments addressing them will receive special attention. Partly as an aid for understanding the full-faith-and-credit clause to respect sister-state judgments, and conflicts between federal and state law.

LAW 618 Comparative Law: Asian Legal Systems
Spring. 3 credits. A. Riles.
This course has two related goals. First, we will consider some elements and motifs of legal systems of the Asia Pacific region. Second, we will consider basic elements and motifs of the discipline of comparative law—its aims, tradition, methods, and achievements—and use materials and problems from the Asia Pacific region to reflect critically and programmatically on a disciplinary project that traditionally defines itself in predominantly Euro-American terms. One question for the course will be how to bring to fruition the practical implications and theoretical richness of the materials we will study, from the points of view of both academics and practitioners.

LAW 619 Conflict of Laws
Spring. 3 credits. G. J. Simson.
A study of the methods used by courts to decide the applicable law in cases that, in their parties or events, involve more than one state or country. Attention to the due-process limitations on jurisdiction, a state's obligation under the full-faith-and-credit clause to respect sister-state judgments, and conflicts between federal and state law.

LAW 620 Constitutional Law II: The First Amendment
Spring. 3 credits. S. H. Shiffrin.
A comprehensive discussion of freedom of speech, press, and association. The free-exercise-of-religion clause and the establishment clause of the First Amendment are treated less extensively.

LAW Constitutional Remedies
Explores in depth the history and current status of 42 U.S.C.§1983, the major statutory vehicle for vindication of constitutional rights in civil cases.

LAW 621 Copyright
Fall. 3 credits. P. W. Martin.
Copyright law has become increasingly important as the American economy has shifted from a predominantly manufacturing economy to an information economy. This course provides students with a comprehensive overview of the U.S. copyright law. It begins with coverage of the substantive and procedural requirements for qualifying for copyright protection, then provides an in-depth study of the rights granted to authors under this law, the standards for judging copyright infringement, public policy limitations on the scope of copyright interest (such as the fair use defense), and remedies available to successful litigants. Issues raised by new information technologies and recent amendments addressing them will receive special attention. Partly as an aid for understanding the full-faith-and-credit clause to respect sister-state judgments, and conflicts between federal and state law.
LAW 622 Corporate Finance and Emerging Markets
Spring. 3 credits. A. B. Kingston.
The course examines legal aspects of various types of corporate finance transactions in emerging markets and evaluates the role of commercial lawyers in these transactions. The course focuses on corporate finance transactions occurring in the midst of the transformation of former Soviet bloc states from command to market economies. Transactions in emerging markets pose different political, economic, social, and legal challenges from those arising from transactions in other, more predictable, legal systems. At the same time, the globalization of the worldwide economy and the profound shortage of capital in many emerging markets make this one of the fastest growing fields of commercial law.

LAW 624 Corporate Governance
Fall. 2 credits. Prerequisite: Corporations
This course focuses, at an advanced level, on the principal legal and economic governance questions facing major corporations today. Among the subjects considered are: (1) a reevaluation of the consequences of the divorce of corporate control from ownership; (2) the status of the corporation in the law of shareholder democracy; (3) proper corporate goals; (4) the corporation and its constituencies (shareholders, labor, consumers, etc.); (5) the duties and responsibilities of corporate directors, officers, and insiders; (6) the role of the corporate lawyer; (7) the role—and new activism—of institutional investors; (8) the respective roles of state corporation law and federal securities law; and (9) comparative corporate governance and the problems of systemic convergence and transitions.

LAW 625 Corporations
Fall or spring. 4 credits. J. R. Macey, P. Pur.
An introduction to the business corporation laws affecting the rights and roles of corporate boards of directors, senior executive officers and shareholders, with an emphasis on large, publicly traded firms. Shareholders' economic interests are examined from the perspective of limited liability and dividend standards, expectations of liquidity or transferability of shares and the use of debt capital as a mode of financing corporate activity. Shareholders' limited participation rights in corporate decision making are examined from the perspective of state and federal rules governing shareholder voting and the duties of corporate insiders and the notion of managerial expertise (e.g., as evidenced by judicial application of the "business judgment rule"). The latter part of the course focuses on directors' and officers' fiduciary obligations to shareholders, examining the operation of these duties in a variety of settings and transactions. Issues relating to the roles and functions assumed by corporate attorneys (with respect to their clients) and the role of business corporations within society are also addressed. No previous business knowledge is assumed.

LAW 627 Criminal Procedure
Spring. 3 credits. S. D. Clymer.
This course surveys the law of criminal procedure, with emphasis on the constitutions of the United States and the states that regulate the pretrial stage of the criminal process. More specifically, the course focuses on the law of interrogations and confessions, the admissibility of evidence, and on the right to counsel throughout all stages of the criminal process.

LAW 629 Death Penalty in America: A Survey
Fall. 2 credits. J. H. Bluene.
The course will survey the law relating to the administration of the death penalty.

LAW 630 Directed Reading
Fall or spring. 1 or 2 credits. Arrange directly with instructor. See Law School Registrar.
An examination of a topic through readings selected by arrangement between the instructor and an individual student or group of students (not exceeding eight).

LAW 633 Employment Law
Spring. 3 credits. S. J. Schwab.
Survey of major statutory schemes and common law doctrines that regulate the employer-employee relationship in the private sector, other than laws regulating union formation and collective bargaining which are covered in Labor Law. Topics covered include unjust dismissal, drug testing, free speech, privacy, and antidiscrimination laws. In addition, the course will provide an overview of major statutory schemes affecting the terms and conditions of employment, such as unemployment insurance, employee benefits regulation, workers' compensation, the Fair Labor Standards Act, and the Occupational Safety and Health Act.

LAW Entertainment Law
This course explores areas within the broad field of entertainment law. Topics include contract law, labor, antitrust, the role of agents, personal and privacy rights, literary and music publishing, sound recordings, films and television.

LAW 636 Environmental Law
Spring. 3 credits. J. J. Rachlinski.
The course surveys the major environmental laws with a primary focus on federal statutes (CERCLA, RCRA, NEPA, the Clean Water Act, the Clean Air Act, and the Endangered Species Act). The course lays out the various governmental tools used to address the problems of environmental degradation and discusses the value of these tools. Special attention is paid to economic, social, and political obstacles to efficient regulation of the environment.

LAW Estate and Gift Taxation
This course surveys the federal taxes imposed on wealth transfers: the estate tax, the gift tax, and the generation-skipping tax.

The course uses a problem-oriented approach, with emphasis on the Internal Revenue Code, regulations, and other tax materials.

LAW 640 Evidence
Fall or spring. 3 credits. S. D. Clymer, F. F. Rossi.
The rules of evidence in civil and criminal cases with emphasis on relevance, authentication, witnesses, expert testimony, and hearsay. The course focuses on the Federal Rules of Evidence, with some attention to how they diverge from the common law.

LAW 641 Family Law
Spring. 3 credits. M. A. Fineman.
Broadly understood, family law is the study of state imposed rules regulating intimate and intemal relationships in society. Consideration of the legal regulation of intimate relations collapses traditional law school distinctions such as those drawn between "civil" and "criminal" or "public" and "private" mechanisms for control of behavior. The laws that effect family formation and dissolution are many and varied. They reach deep into our lives, influencing as well as being influenced by our assumptions and beliefs about what is "natural," and "normal." In this course we will use scientific and social scientific explanations to explicitly evaluate some of those assumptions and beliefs, and to call into question the appropriateness of a number of current state laws regulating families. We will examine the evolution of our society's understanding of and expectations for marriage, as well as shifts over the past several decades in the nature of and justification for state regulation of that institution. Substantial attention also will be paid to the social and economic consequences of marriage dissolution, including an examination of the imposition of a gender neutrality—gender equality model in the divorce context. The imposition of this model has resulted in a transformation of the legal rule governing distribution of property and allocation of custody and control over children with some problematic consequences. Topics to be considered include: definitions, policy and trends in American law; the regulation of marriage, the legal significance of marriage rights and obligations, private ordering within the marital context, nonmarital relationships—rights and obligations, divorce and divorce substitutes, separation, and child support obligations, marital property and theories of marital equality, rights to children.

LAW 643 Federal Courts
Spring. 4 credits. Prerequisite: Constitutional Law and second semester of Civil Procedure. Students without such background should consult with instructor. B. J. Holden-Smith.
An intensive examination of the federal courts and their constitutional and statutory role in the federal system. The relationship of the federal courts with the other branches of the federal government and with the states, and the relationship between state and federal law. Case-or-controversy problems, the allocation of jurisdiction between state and federal courts, federal question and diversity jurisdiction of the federal courts, and limitations thereon. The course is strongly recommended for anyone planning a judicial clerkship.

LAW 644 Federal Income Taxation
Fall or spring. Fall, 4 credits; spring, 3 credits. Limited enrollment. T. Eisenberg, R. A. Green.
A basic course designed to develop understanding of tax concepts and ability to work effectively with the Internal Revenue Code, regulations, cases, and other tax materials.

LAW 646 Feminist Jurisprudence
Spring. 3 credits. Limited enrollment. K. A. Altvater.
This course examines the role of law, and, more generally, the role of the state, in perpetuating and remedying inequities against women. We will study several paradigmatic feminist legal theories, including equality, difference, dominance, and various antessentialist theories (e.g., intersectional, poststructuralist). Among the questions considered will be: How does the law help to construct gender? In what ways does it interact with cultural images and assumption regarding women? How can a set of institutions implicated in women's marginalization be used to remedy it?

Can a legal system predicated on the liberal assumption of a unitary, prepolitical, autonomous self accommodate feminist accounts of social construction, constrained "choice," or decentered subjects? What methods have feminists used to argue in and about the law, and do these methods themselves have the potential to transform legal thinking?

LAW 647 Health Law
Fall. 3 credits. L. J. Palmer.
This course examines the role of law and policy in the health care industry. Students will be invited to take a "systems approach" to the study of the role of law in arriving at coherent policy solutions for a host of dilemmas facing a rapidly evolving industry. Students will be asked to consider if a particular statute, regulation, or judicially crafted legal doctrine is consistent with new developments or any public policy towards health care. Topics covered include: access to health care; purchasing health care; commercialism vs. professionalism; the antitrust challenge to professional dominance; the assumption of a unitary, prepolitical, autonomous self; the role of law in arriving at coherent policy solutions; and more generally, the role of the state, in effectively with the Internal Revenue Code, regulations, cases, and other tax materials. The topics covered include: access to health care; purchasing health care; commercialism vs. professionalism; the antitrust challenge to professional dominance; the assumption of a unitary, prepolitical, autonomous self; the role of law in arriving at coherent policy solutions; and more generally, the role of the state, in effectively with the Internal Revenue Code, regulations, cases, and other tax materials.

LAW 655 International Human Rights
Spring. 3 credits. D. Wippman.
This course explores the development and effectiveness of international law governing the conduct of a state toward people within its jurisdiction. Topics include the substantive norms of human rights, and their philosophic basis; the mechanisms for the protection of human rights, such as the United Nations, specialized agencies, international human rights commissions, and domestic courts; and current issues such as the doctrine of humanitarian intervention, the status of indigenous peoples, and human rights during armed conflicts, illustrated where possible through case studies of current situations.

LAW 656 International Mergers and Acquisitions
Spring. 1 credit. J. J. Hanks.
This course covers issues relating to mergers and acquisitions in an international context. Topics include due diligence, pricing and negotiation, and other important topics from both the buy and sell side. The course will use both lecture and case formats. Students will be evaluated on the basis of group and individual written assignments.

LAW 657 International Organizations and Human Rights
Fall. 2 credits. M. Nolao.
The course provides a comprehensive legal analysis of problems concerning membership, the structure of the United Nations organs, and a variety of other international organizations. It considers their functions and acts taking into account the United Nations Charter and texts establishing these organizations. The course further considers the structure, jurisdiction, and functions of the International Court of Justice and the International Criminal Court. It also examines the international machinery for the protection of human rights in the world community including the United Nations Human Rights Committee, the European Court of Human Rights, and the Inter-American Court of Human Rights. Relevant decisions of those courts and of municipal courts are studied as well as basic documents.

LAW 658 International Protection of Intellectual Property
Fall. 2 credits. Recommended prerequisite: Intellectual Property. L. J. Barcelo.
This course studies intellectual property rights in the international legal system. A general introduction reviews the international protection of patents, trademarks, industrial design, and copyright. The starting and focal point is the Agreement on Trade-Related Aspects of Intellectual Property (TRIPS) adopted in the framework of the World Trade Organization (WTO). The international protection of intellectual property is studied through consideration of the TRIPS agreement and the several international conventions the observation of which is made mandatory for WTO Members by TRIPS. Also examined are issues of international court jurisdiction and applicable law in the area of intellectual property.
[LAW International Taxation
This course examines the U.S. income tax treatment of foreign investment and business operations in the United States, as well as the treatment of U.S. investment and business operations abroad. The course focuses on international tax jurisdiction and on the methods by which the United States relieves international double taxation, both by statute and through income tax treaties.]

LAW 660 Labor Law
Fall. 3 credits. S. J. Schwaib.
A study of collective bargaining, including the process of union formation, legal regulation of strikes and other economic weapons, negotiation and enforcement of collective agreements, the duty of fair representation, the application of antitrust law to union activity, and the relationship between federal labor law and local laws regulating the employment contract.

[LAW Law and Medicine
This course considers legal issues related to medical care and biomedical science. Topics include constraints on access to health care, organization and financing of health services, promoting quality of care in hospitals and outpatient sites, fraud and abuse in clinical practice, and biomedical research, dilemmas engendered by therapeutic applications of new technologies, and pathways to reform of the U.S. health care system. Teaching materials will comprise a law and medicine casebook, and scientific literature.]

LAW 668 Lawyers and Clients
Fall. 3 credits. Satisfies the professional responsibility requirement. D. A. Kysar, A. Sarat.
This course uses the lawyer-client relationship as a lens through which to consider the nature and function of the law governing lawyering and its complex relations to ethics, politics, culture, and identity. Among the questions we will address are: To whom do lawyers owe duties? And what are the duties that are owed? What role does the law governing lawyers have in the constitution of competing ideologies of professionalism? From the viewpoint of ethics, how satisfactory is the law governing lawyering? In addressing these questions we will analyze the varying settings in which lawyers practice, and inquire about the social and cultural conditions which encourage or discourage conformity to the law governing lawyering. Do we need more and/or better rules to regulate the profession? Or, should attention also be focused on the character of the profession itself and the domains and conditions under which law is practiced? What kinds of allegiances should lawyers develop to their firms, to third parties, to professional associations? We will examine representations of lawyers in popular culture and the significance of those representations in the lives of lawyers. In addition, the course we will discuss the interactions of personal and group identity in the practice of law. For example, is it appropriate for African-American lawyers to represent leaders of the KKK, for Jewish lawyers to advocate on behalf of the free speech rights of Nazis, for gay and lesbian lawyers to defend those accused of harassing gays and lesbians? Throughout, we will consider what effective assistance of counsel entails and whether the law of lawyering contributes to, or impedes, the attainment of a meaningful and personally fulfilling career in law.

LAW 669 Legal Aspects of Foreign Investment in Developing Countries
Fall. 3 credits. M. B. Ndubo.
This course will study legal aspects of foreign investments in developing countries. It will seek to identify legal tools that are likely to affect a commercial investment in a developing country. Inter alia, it will deal with the public international law principles and rules governing the establishment by foreign business of various factors of production (persons and capital) on the territory of other states and the protection of such investments. Thus, the course includes a discussion of the following topics: economic development and foreign capital, obstacles to the flow of investments to developing countries, guarantees to investors and investment codes, bilateral treaties, nationalization, joint ventures, transfer of technology, arbitration, investment insurance, unification of trade law, and the settlement of investment disputes.

LAW 670 Legislation
Fall. 3 credits. L. I. Palmer.
This course explores various theories of legislation by studying how statutes become a source of public policy, how judges interpret them, and how laws affect them. The course examines theories and doctrines of statutory interpretation as a means of determining the degree to which legislation can be used to reform law or to remedy particular social problems.

LAW 671 Mergers and Acquisitions
Fall. 2 credits. R. F. Balotti.
This course examines the principal business and legal issues in the purchase and sale of publicly held businesses. Emphasis is placed on the duties of directors in the acquisitions of publicly held companies (including hostile takeover).

LAW 672 Negotiations
Fall or spring. Enrollment limited. 3 credits.
The purpose of this course is to provide opportunities for class participants to develop their negotiating abilities for use in organizational and other settings. The course is premised on the assumption that negotiating concepts and practices which are grounded in rigorous analysis and reflection. While theoretical principles and concepts from various reference disciplines (such as social psychology, sociology, and economics) will be presented through lectures and readings, this course will focus primarily on improving practical skills. Class participants will not only learn to enhance their individual abilities in dyadic and group situations, but also to shape the most effective application of these skills.

LAW 675 Patent Law
Fall. 3 credits. J. R. Thomas.
The patent law is a regime of private regulation, initiated by individual inventors and resulting in proprietary interests in an increasingly ambitious range of human endeavor. This course will provide a thorough review of the requisites of patentability, including eligible subject matter, utility, novelty, nonobviousness, and disclosure. It then turns to patent enforcement issues such as claim interpretation, the doctrine of equivalents, and remedies. Most inventors seek to obtain proprietary interests in multiple jurisdictions, so the course includes considerable coverage of comparative and international patent law. Because the system of patents is a capacious one, allowing individuals to appropriate such inventions as sports methods, techniques from the sciences, and methods of doing business, a traditional technological background is neither required nor recommended as a prerequisite to enroll in this course.

LAW 676 Private Justice: Arbitration and Other Forms of Alternative Dispute Resolution
Spring. 4 credits. Limited enrollment. K. V. W. Stone.
Arbitration has become a major aspect of legal practice in such fields as labor law, commercial law, securities law, family law, and other areas. This course will examine the developing law of arbitration and the relationship between private arbitration and the judicial system. It will examine issues such as the enforceability of arbitration agreements, arbitral due process, judicial review of arbitration awards, and the effect of arbitration on statutory rights. It also examines other forms of alternative dispute resolution, including mediation, small claims courts, and the new mandatory arbitration requirements of some federal and state judicial systems. The course focuses on the law of alternative dispute mechanisms and includes six simulations and problem-solving sessions.

LAW 678 Products Liability
Fall. 3 credits. J. A. Henderson, Jr.
Applications of products-liability doctrine and theory to a variety of problems drawn from or closely approximating actual litigation. An overview of the relevant case law, statutes, and administrative regulations, including the new Restatement, Third, of Torts: Products Liability.

LAW 680 Public International Law
Fall. 3 credits. W. W. W. Wippman.
An introduction to the legal rules governing the conduct of states vis-a-vis other states, individuals, and international organizations, with reference to major current events and issues. Topics include the nature, sources, and effectiveness of international law; the establishment and recognition of states; principles concerning state sovereignty, territory, and jurisdiction; the law of treaties, state responsibility, international environmental law, and human rights. Special attention will be given to the law governing the use of force.

[LAW Remedies
This is an overview of legal remedies and their origins, including equitable remedies, restoration, and damages. The emphasis is on private rather than public law. A considerable amount of the course is spent on the nature and history of equity.]

[LAW Securities Regulation
This course examines the federal system of regulation of the offering, sale, and distribution of securities, including the Securities Act of 1933 and the Securities Exchange Act of 1934. Emphasis is placed on the structure, negotiation, and consumption of securities transactions as part of the capital-raising process. The responsibilities of securities professionals are also reviewed.]
This course examines trademark, trade dress, dividends, redemptions, liquidations, taxation of corporate structure and transactions, including the relationship of various forms of financial intermediary and capital formation, and on the role of these activities in corporate governance. The increasing internationalization of the capital markets, and the public policy issues related to globalization, will also be discussed.

**LAW 683 Securities Regulation and the Regulation of Financial Intermediaries**
Fall. 2 credits. R. Macey.
This course covers the federal rules relating to the public offering of securities, secondary market trading of securities, and the regulation of commercial banking, investment banking, and investment companies (mutual funds). Emphasis is placed on the relationship between the various forms of financial intermediary and the capital formation, and on the role of these activities in corporate governance. The increasing internationalization of the capital markets, and the public policy issues related to globalization, will also be discussed.

**LAW Social and Cognitive Psychology for Lawyers**
In their short history, cognitive and social psychology have produced a rich understanding of how human beings think and how they interact with each other. It should therefore come as no surprise that these two fields have a number of applications to law. This course will explore these applications. Examples include: what effect common errors in judgment have on tort and contract law; how the perception of risk affects societal demand for regulation in environmental law; how organizational and group decision-making processes affect corporate governance; how social norms about fairness impede or facilitate negotiation and dispute resolution; how biases in judgment influence litigation strategies; and what studies of conformity mean for the development of international human rights law. The goal of this course is to introduce students with interests in different areas of law to some general principles of human thought and social interaction that will be valuable to them in their future practice.

**LAW 684 Sports Law**
Spring. 2 credits. Recommended prerequisite: Antitrust Law and Labor Law.
W. B. Briggs.
The course traces the development of sports law in the United States. Particular attention is given to those applications of sports with antitrust and labor law. Contemporary issues involving arbitration, collective bargaining, amateur athletics, agents, torts, criminal law, and constitutional law are addressed.

**LAW 687 Supervised Teaching**
Fall or spring. 1 or 2 credits. Arrange directly with instructor. See Law School Registrar.

**LAW 688 Supervised Writing**
Fall or spring. 1, 2, or 3 credits. Arrange directly with instructor. See Law School Registrar.

**LAW 689 Taxation of Corporations and Shareholders**
Spring. 3 credits. Prerequisite: Federal Income Taxation. R. Green.
This course examines the federal income taxation of corporate structure and transactions involving alterations in structure, including the rules governing incorporation, dividends, redemptions, liquidations, divisions, and reorganizations.

**LAW 690 Trademark and Related Doctrines**
Spring. 3 credits. D. Bordewieck.
This course examines trademark, trade dress, trade secret, and trade libel law, and related doctrines such as unfair competition, false advertising, and the right of publicity. We will examine the various kinds of marks, names, slogans, symbols, product configurations, and packaging for which federal trademark and trade dress protection can be obtained; the need to establish secondary meaning; what constitutes likelihood of confusion; trademark infringement on the Internet; remedies for trademark infringement, counterfeiting, and dilution, and for trade secret misappropriation; and defenses to infringement, dilution, and misappropriation claims. This course may not be taken by students who previously took Patent and Trademark Law.

**LAW 692 Trial Advocacy**
Spring. 4 credits. Prerequisite: Evidence. Limited enrollment. G. G. Galbreath.
This course is devoted to the study of the trial. Fundamental skills are taught in the context of challenging procedural and substantive law problems. Each stage of the trial is examined: jury selection, voir dire, direct examination, cross-examination, impeachment, expert witnesses, children witnesses, summation, and pretrial. In addition to exercises every week on a particular segment of a trial, there will be a full-day trial at the completion of the course. Video equipment is used to teach and critique student performances. There are a few written assignments.

**LAW 694 Trusts and Estates**
Spring. 3 credits. E. Sherwin.
The course surveys the basic law of succession to property, including probate and intestate succession, and the law of trusts. Among the recurring themes of the course are strict and lenient enforcement of formal requirements and methods of interpretation. This is not a course on estate taxation. Grades will be based primarily on a closed book exam with essay and objective questions.

**PROBLEM COURSES AND SEMINARS**
All problem courses and seminars satisfy the writing requirement. Limited enrollment.

**LAW 700 Advanced Civil Procedure**
Fall. 3 credits. B. J. Holden-Smith.
A study of complex civil litigation involving multiple parties and multiple claims. Topics include joinder of parties and claims, impleader, interpleader, class actions, and intervention.

**LAW Advanced Criminal Procedure Seminar: Post-Conviction Remedies**
Fall. 3 credits. Not offered 2000-2001. This seminar will explore various post-conviction remedies available to state and federal prisoners, including motions for new trial, state post-conviction proceedings, federal habeas corpus, and other extraordinary writs.

**LAW Advanced Criminal Procedure Seminar: Pre-Conviction**
This seminar starts where the course, criminal procedure, ends. The topics may include double jeopardy, restraints on the decision to prosecute, pretrial detention and release, prejudgment and pretrial delay, discovery and the obligation to disclose exculpatory evidence, the right to an impartial jury, jury selection, the right to confront witnesses and to present a defense, and sentencing.

**LAW African Americans and the Supreme Court**
Beginning with its first decisions related to the slavery question, the Supreme Court has at times aided and at other times hindered efforts to afford African Americans full citizenship. This seminar explores the relationship between blacks and the Supreme Court by examining the major Court decisions affecting African Americans and how they understand those decisions in their historical contexts. The course begins with a review of the background and meaning of the constitutional provisions pertaining to the status of blacks in the new nation and ends with an intensive look at Brown v. Board of Education.

**LAW 703 Advanced Legal Research**
Spring. 3 credits. C. M. Germain and staff.
Teaches cutting-edge research techniques to prepare students for practice in the law office of the future. Focuses on desktop electronic legal research, and covers U.S., international, and foreign law, as well as multidisciplinary research. The course is designed to teach students, whose careers will begin in a period of information transition, how to handle traditional and electronic sources and formats and make efficient choices.

**LAW 707 American Legal Theory**
Fall. 3 credits. R. S. Summers.
The fall 2000 topic for this seminar is the appropriate form of basic types of legal phenomena such as criteria of valid law (for both publicly and privately made law), statutory rules, accepted methods of statutory interpretation, the principle of stare decisis and common law rules, adjudicative processes, limitations on judicial power to modify rules, and the formal characteristics of the legal system viewed as a whole. American law lacks appropriate form in many important ways and a heavy price is paid for this. However, appropriate legal form and its distinctive underlying rationales (general legal values) profoundly affect the overall content of law and its practice by lawyers in the American as well as other legal systems. Such form and its rationales have as much or more of a claim to primacy as the essence of law than do problem-specific policies that also inform the laws content. In this seminar, there is equal emphasis on practical skills and theory.

**LAW 709 Biblical Law**
Spring. 3 credits. C. M. Carmichael.
Analysis of law and narrative in the Bible from the perspective of ancient law and legal history. Topics include: the application of the law codes (e.g., hypothetical formulation versus statutory law), legal issues in the narratives (e.g., law of adultery and women's rights), law and morality (e.g., Ten Commandments), law and religion (e.g., institutions guaranteed by the law but condemned by religious authority), the transformation of extralegal relations into legal ones (e.g., with the introduction of money), legal interpretation in antiquity (e.g., Sermon on the Mount), social factors in legal development (e.g., shame and guilt), and aspects of criminal, family, and private law (e.g., eye for an eye, incest rules, and unjust enrichment).
LAW 710 Civil Rights in Housing: Theory and Practice
Fall. 3 credits. M. B. Grant.
Students will explore federal fair housing laws, history, and policies, while learning practical litigation skills. The seminar includes reading materials, class discussion, legal writing, and litigation exercises. The seminar material focuses on contemporary issues in the prosecution of white collar crime, with special attention to crimes committed within corporations and other large organizations. The initial focus will be on the substantive law and the primary federal statutes: mail and wire fraud, the Hobbs Acts, the federal securities laws, RICO, money laundering statutes, the False Statements Act, and the Foreign Corrupt Practices Act. A second focus will be on corporate criminal liability, including the rationale therefor and the problems of optimal corporate sanctions. Some attention will be given to the current proposals before the United States Sentencing Commission. A final focus will be on representing defendants, both corporate and individual, in a white collar prosecution.

LAW 711 The Common Law and African Legal Systems
Spring. 3 credits. M. Ndulo.
This seminar will study legal systems in post colonial Africa. It will concentrate on the former British colonies. During the colonial period, the common law was imported into British Africa. As a result, these countries are now common law jurisdictions. The description is supported by the history of the countries as well as by current statutes and legal literature. The legal writing assignments and the litigation exercises simulate work assignments common in a civil litigation practice. Students will draft two briefs on different issues at various procedural postures (injunction, trial, appeal). The seminar will include reading assignments and the writing of a litigation note.

LAW 715 Corporate and White Collar Crime
Fall. 3 credits. P. Puri.
This seminar focuses on contemporary issues in the prosecution of white collar crime, with special attention to crimes committed within corporations and other large organizations. It emphasizes the role of the insurer in white collar crimes, and considers the extent to which civil and criminal liability for environmental crimes may be assessed. In addition, corporate liability is examined in the context of crimes committed during the course of business practices.

LAW 716 Corruption Control
Spring. 3 credits. R. C. Goldstock.
This seminar examines the factors that facilitate and inhibit public or private corruption and analyzes the wide variety of criminal, civil, and administrative sanctions designed to control corruption and to promote governmental and commercial integrity.

LAW 720 European Union Law
Spring. 3 credits. J. J. Barcelo III.
The course studies the EU and EU treaty, including the single market provisions. It explores the principles of EU law in the member states, the development of EU law, and the role of the European Court of Justice in interpreting and enforcing EU law. Special attention is given to the role of the European Parliament in the EU decision-making process.

LAW 721 Environmental Litigation
Fall. 3 credits. T. B. Schmit.
This seminar examines the legal consequences of environmental litigation in the context of specific cases. Topics include environmental liability, hazardous waste cleanup, and natural resource damage.

LAW 722 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 723 Environmental Litigation
Fall. 3 credits. P. Puri.
This seminar examines the legal consequences of environmental litigation in the context of specific cases. Topics include environmental liability, hazardous waste cleanup, and natural resource damage.

LAW 725 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 726 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 727 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 728 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 729 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 730 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 731 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 732 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 733 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 734 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 735 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 736 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 737 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 738 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 739 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 740 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 741 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 742 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 743 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 744 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 745 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 746 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 747 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 748 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 749 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 750 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 751 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 752 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 753 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 754 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.

LAW 755 Employment Discrimination
This seminar focuses on the legal issues arising in employment discrimination cases. It examines the legal standards for proving discrimination, the defenses to discrimination claims, and the remedies available for successful plaintiffs.
LAW 731 Immigration and Refugee Law
Fall. 3 credits. Prerequisite: Constitutional Law, S. W. Yale-Loehr.
This seminar explores the evolving relationship between U.S. immigration policy and our national interests. Immigration plays a central role in contemporary American life, significantly affecting our foreign relations, human rights posture, ethnic group relations, labor market conditions, welfare programs, public services, and domestic politics. It also raises in acute form some of the most basic problems that our legal system must address, including the rights of insular minorities, the concepts of nationhood and sovereignty, fair treatment of competing claimants for scarce resources, the imperatives of mass administrative justice, and preventing discrimination. In approaching these questions, the course draws on diverse historical, judicial, administrative, and policy materials.

LAW 733 International Criminal Law
Spring. 3 credits. D. Wippman.
This seminar will examine the evolution of modern international criminal law, from Nuremberg to the contemporary International Criminal Court. Topics will include the nature and sources of international criminal law, jurisdiction, individual and state responsibility, penalties and deterrence, and alternatives to criminal trials, such as truth commissions and amnesty. The seminar will emphasize recent developments, such as the Pinochet extradition proceedings and efforts to try senior Khmer Rouge leaders.

LAW 734 Introduction to French Law
Spring. 3 credits. Prerequisite: Not available to students with significant knowledge of civil law system. C. M. Germain.
Introduction to the French legal system from a comparative law perspective, with a focus on civil law methodology and French legal institutions. Topics studied include French law sources and authorities, such as legislation, court decisions, and scholarly writings; the relationship between French law and the European Union; the French court structure in civil, criminal, and administrative law matters; and its major procedural features and the organization of the legal profession.

LAW 735 Introduction to Islamic Law
Spring. 3 credits.
This course is designed to introduce students to the terminology, principles, and concepts of Islamic law. In part one, devoted to the classical period, we will examine the historical formation of Islamic law, jurisprudence, judicial procedure, penal law, personal status, and property law. In part two, devoted to the modern period, we will examine the modern transformation of Islamic law through a series of case studies focusing on Egypt, Saudi Arabia, The United Arab Emirates, Morocco, and Iran. Seminar discussions will be based on primary sources (court cases, judicial opinions, statutes, etc.) in English translation.

LAW 736 Juvenile Advocacy
Spring. 4 credits. C. Grumbach.
In this simulation-based lawyering course, students learn about litigation involving juveniles charged with either criminal acts or status offenses. Using accusatory instruments from juvenile delinquency and Persons in Need of Supervision proceedings as a framework for discussion, students examine the substantive juvenile and criminal laws that underlie such proceedings and explore the sometimes controversial role that lawyers play when representing juveniles, and practice defending juveniles in such cases. Either through simulated cases or cases from the Tompkins County law guardian office, Citizens Council for Juvenile Law, or students will have an opportunity to examine and potentially work on different aspects of a case. Possible areas include: interviewing the client, attempting to negotiate a settlement, developing a trial strategy and theory of the case, preparing discovery requests and pre-trial memoranda, and developing a dispositional plan. Students may also have a chance to research and write a portion of an appellate brief for the New York City Legal Aid Society, Juvenile Rights Division.

LAW 740 Law and Economics
Spring. 3 hours. Prerequisite: No prior acquaintance with economics is assumed. J. J. Mingle.
An examination of the interaction between legal principles and economic theories and scientific research and development. Topics include the role of the law in regulating cloning, recombinant DNA research, surrogacy, and in vitro fertilization; plant breeders' rights and the patentability of organic matter; judicial assessment of expert scientific evidence; and compensation for damage caused by scientific experiments and new technologies.

LAW 741 Law and Higher Education
Spring. 3 credits. Prerequisite: Constitutional Law or Administrative Law, J. J. Mingle.
Higher education is a complex, idiosyncratic institution. Universities and colleges have a unique mission—teaching, research, and public services—and a uniquely challenging task of accommodating the various constituencies and organizations both internal (governing boards, faculty, students) and external (alumni, legislatures, courts, government agencies), that influence how they are managed and how policies are shaped. This seminar will explore the dynamic tensions, high expectations, and complex legal policy issues universities face in fulfilling their mission.

LAW 743 Law and Mental Health
Seminar
Fall. 3 credits. H. R. Beresford.
The seminar explores issues at the interface of law and psychiatry. After an introduction to clinical and scientific aspects of mental illness, the seminar will address issues of autonomy, limits of competency, coercion, and criminal responsibility as they relate to persons with disorders of behavior, cognition, or mood. Students write and present seminar papers on self-selected topics.

LAW 744 Law, Science, and Technology
Fall. 3 credits. Y. M. Cripps.
An examination of the interaction between legal principles and scientific research and development. Topics include the role of the law in regulating cloning, recombinant DNA research, surrogacy, and in vitro fertilization; plant breeders' rights and the patentability of organic matter; judicial assessment of expert scientific evidence; and compensation for damage caused by scientific experiments and new technologies.

LAW 745 Law through Literature
Fall. 3 credits. N. L. Cook.
In this seminar, students use literature, supplemented by law, to explore for understanding operations of law and the impact of legal process on people's lives. An explicit goal of the course is the acquisition of literary skills that can be cross-utilized in law.
practice. Students thus not only analyze legal principles in the context of stories, but also learn how to apply such literary concepts as metaphor, imagery, plot and character development, perspective, and point of view in their legal work.

**LAW 746 Lawyering Skills: Practical Ethical Challenges in Firm Litigation**

Fall. 3 credits. D. French.

This course is dedicated to a "real world" look at typical, real challenges faced by associates and partners in the law firm litigation context. Rather than focusing on abstract discussions of sometimes vague ethical guidelines, the course will focus on common, concrete problems. From inadequately researched complaints; to partners who blatantly abuse the discovery rules; to the suspected lying client, the course problems will reflect a full range of realistic challenges that students will face in practice. Students will be asked to discuss and debate these problems and make affirmative, realistic decisions—decisions that reflect the political and social realities of law firm life.

**LAW 765 Real Estate Development**

Spring. 3 credits. J. E. Blyth.

Through the use of several written memos and one oral presentation, this seminar addresses considerations basic to commercial real estate development. It focuses on purchase agreements, options, rights of refusal, memorandum thereof, representations, and warranties; disclosures and procedures required of brokers and sellers, attorneys as brokers, notarial misconduct, conveyancing and surveys; commercial leases; conventional financing, conflicts between commercial tenants and institutional landlords; alternatives to conventional financing; title insurance; attorney opinion letters; and choice of real estate entity. About one-half of the course is devoted to commercial leases; conventional financing, and alternatives to conventional financing (such as tax exempt financing and synthetic leases).

**LAW 760 Organized-Crime Control**

Fall. 3 credits. Prerequisite: Criminal Procedure. R. Goldstock.

This seminar discusses selected aspects of criminal procedure and civil remedies that are used to combat illegal syndicates activity. Constitutional, statutory, and practical concerns in the use of electronic surveillance and RICO are a particular focus.

**LAW 766 Origins of English and American Law**

Spring. 3 credits. E. Sherwin.

This course will provide a contemporary legal history, including Roman law origins, early English law, early American law, and modern social and intellectual legal debates. Approximately one half the course will be spent on foundational reading; the second half will consist of presentation of student papers.

**LAW 770 Reproductive Issues Seminar**

Fall. 3 credits. M. A. Fineman.

This seminar will consider various reproductive dilemmas, paradoxes, and policies in modern American society. Birth control and abortion will be addressed, but the emphasis will be on placing the reproductive process within a broad sociological context. To this end, we explore issues such as eugenics, the use and regulation of medical technology, lesbian mothering, the relationship between reproduction and poverty programs, and a variety of other contemporary issues.

**LAW 772 Selected Business Transactions Seminar**

Fall. 3 credits. Prerequisite: Corporations. Z. J. Shulman.

An in-depth look at initial public offerings and acquisitions from a practitioner's point of view. With respect to initial public offerings, the course will cover: the applicable statutory framework, pre-offering corporate preparations (such as the implementation of poison pills and stock option plans), the due diligence process; the implementation of corporate governance structures appropriate for a public company, the offering registration process, liability under federal securities laws, the Securities and Exchange Commission review process, underwriting arrangements, selection of a trading forum (i.e., NYSE, NASDAQ, or AMEX) and the transaction closing. Regarding mergers and acquisitions, the course will explore financing alternatives, accounting treatment, due diligence, choosing an appropriate transaction structure (i.e., stock versus asset sale). Other topics will include company transition issues (i.e., antitakeover matters and fiduciary concerns, fiduciary duties, and crucial legal aspects of the acquisition, such as letters of intent, successor liability, continuity of employees, and noncompetition agreements.

**LAW 773 Selected Topics of Tax Policy**

Spring. 3 credits. Prerequisite: Federal Income Taxation. R. Green.

This seminar will focus on one or more topics of current importance in tax policy. Examples might include the taxation of electronic commerce, the taxation of new financial products, the problem of corporate tax shelters, or international tax competition.

**LAW 774 Separation of Powers**

Spring. 3 credits. Prerequisite: Constitu­tional Law and Administrative Law strongly advised. Students without such back­ground should consult instructor. C. R. Farina.

The last 20 years have witnessed more debate about the nature and consequences of "separation of powers" than we have seen since the Founding Era. This seminar examines the ways this concept is understood and used by legislative, executive, and judicial officials, and scholars to justify, or to attempt to modify, the distribution of power within contemporary American government.

**LAW 775 Social Security Law**

Spring. 3 credits. P. W. Martin.

The course focuses especially on how Social Security's benefits relate to employment, families, and household composition and how its procedures address the challenge of adjudicating the massive numbers of benefit claims that arise each year. It introduces the general features of the Social Security Act's entitlement, benefit formulae, and procedural rules, highlights those that pose the greatest difficulty to administrators and advocates, and surveys current proposals for change.

**LAW The Supreme Court and the Death Penalty**

This seminar examines the role of the Supreme Court in modem capital punishment jurisprudence focusing on how, and to what extent, the Court's view of death penalty cases has changed in the last 30 years. Students will have the option of writing a paper or assisting in the research for and drafting of a petition for writ of certiorari or brief filed in the Supreme Court.

**LAW Theories of Property**

This seminar explores the various ways that people have conceived of, or understood, property. The materials studied are eclectic and interdisciplinary. They include readings on slavery and property, women and property, community interests in property, as well as classical theories (libertarian, utilitarian, Marxist).

**LAW 776 Topics in Criminal Law**

Spring. 3 credits. Prerequisite: Criminal Law. S. P. Garvey.

This seminar examines a range of topics in the substantive criminal law, including recent accounts of why and when punishment is justified, the extent to which political commitments and principles impose limits on the state's authority to wrongdoers, the meaning and legitimacy of "abuse" excuses, recent proposals to reform the law of rape, the role of character, virtue, and multiculturalism in the criminal law, and the relationship between punishment and reason in the assessment of criminal liability.

**LAW 777 Topics in the Anthropology of Law**

Spring. 3 credits. A. Riles.

What makes law distinctive as a set of knowledge practices? What does an understanding of late modern law contribute to current debates in legal theory, the "aesthetics" of legal knowledge, that is, the "aesthetics" of understanding of, and commitment to form, and its relationship to other kinds of twentieth-century social scientific accounts of why and when punishment is justified, the extent to which political commitments and principles impose limits on the state's authority to wrongdoers, the meaning and legitimacy of "abuse" excuses, recent proposals to reform the law of rape, the role of character, virtue, and multiculturalism in the criminal law, and the relationship between punishment and reason in the assessment of criminal liability.

**LAW 778 Transition to Democracy**

Fall. 3 credits. I. Stotzky.

The closing decades of the twentieth century can rightly be characterized as the era of democracy. During the 1970s, several southern European nations abandoned longstanding dictatorships and adopted democratic regimes. During the early 1980s, most Latin American nations repudiated their aged military dictatorships and instituted democratic regimes. In the 1990s another wave of democratization swept Eastern Europe and the Soviet Union, destroying the "Communist Empire." In nations undergoing this transition, economic, political and social stability has not yet been fully achieved. The corporatist political and social structures have not yet been transformed to allow the vast, under­privileged majority access to the basic necessities that ensure a dignified life. Institutional structures and forms of public life, such as a representative legislative branch, a competent judiciary, and an executive branch that adheres to its constitutionally imposed
boundaries must be developed and stabilized. The rule of law—and thus the fundamental guarantees of due process—have to become an accepted, basic requirement of public life and private social interaction. In this seminar, we will examine the very complicated issues involved in the transition process. For example, we will look at the relationship between constitutionalism, democracy, human rights, and law. We will also discuss the role in the democratization process of cultural norms, human rights trials, economic development, and the international community. A paper is required.

**LAW United Nations, Elections, and Human Rights**

Fall. 3 credits. Not offered 2000–2001. The seminar provides a wide range examination of the current status of the international protection of human rights with special emphasis on civil and political rights relating to elections and governance. Taking part in the conduct of public affairs is a basic human right increasingly prized by people throughout the world. Universally, the right to take part in government is proclaimed and guaranteed by the Universal Declaration of Human Rights and the International Covenant on Civil and Political Rights and is recognized in many other international treaties and declarations. At times free access to international assistance to countries to aid them in fulfilling international human rights standards, and cooperation in establishing and strengthening the legal, technical, and physical infrastructure necessary to carry out elections. The seminar will examine: self-determination, truth commissions, and the role of non-governmental organizations with regard to standard setting and monitoring of human rights.

**CLINICAL COURSES AND EXTERNSHIPS**

All clinic courses have limited enrollment.

**LAW 781 Capital Punishment Clinic: Post Conviction Litigation**

Spring. 4 credits. Prerequisite: permission of instructor. J. Blume, S. L. Johnson. This course is taught as a clinic. Two or three cases from the South Carolina Center for Capital Litigation will be handled by students. These cases may be state postconviction or federal habeas corpus cases, depending on the vagaries of litigation and the needs of the South Carolina Center for Capital Litigation. Students will read the record, may assist in drafting the initial pleading (an application for postconviction relief or a federal habeas petition), and/or may then assist in the preparation of briefs. Students are included in discussion regarding the necessary investigation and the thought process about the case, and in some instances will be involved in investigation.

**LAW 782 Capital Trial Clinic**

Spring. 4 credits. Prerequisite: permission of instructor. J. Blume, S. L. Johnson. This course addresses the issues that are unique to a capital trial, with a focus on a specific capital trial and the issues it presents. Students will be involved in the preparation of the defense for one or two capital trials. They will also learn about the Colorado voir dire method and the use of focus groups. Both investigation and writing will be required.

**LAW 784 Government Benefits Clinic**

Spring. 6 credits. Course has two classroom, group and clinical components: Government Benefits Clinic class and Clinical Skills 1 or Clinical Skills 3 (formerly Legal Aid 1 and 3 class). B. Strom. The course has a substantive component, in which there is an in-depth conceptual understanding of a complex and controversial area of law and public policy development, and a live client clinical experience, in which those concepts can be applied in solving actual client problems. The substantive component provides an introduction to government benefits law by examining various social insurance and need-based benefit programs including Social Security, Unemployment Insurance, Temporary Assistance to Needy Families (TANF), Supplemental Security Income (SSI), Medicaid, and Food Stamps. Case handling involves the representation of clients in government benefits cases involving the Tompkins County Department of Social Services, the N.Y.S. Department of Labor and the Social Security Administration. The course also includes Clinical Skills 1 or Clinical Skills 3. Clinical Skills 1 class will address interviewing, counseling, negotiation, and advocacy skills through the use of readings, videotapes, discussions, demonstrations, and simulation exercises. Clinical Skills 3 builds on the skills taught in Clinical Skills 1 and addresses such topics as alternative dispute resolution, formal discovery, and motion argument.

**LAW 785 Government Benefits Clinic/ Neighborhood Legal Services Externship**

Spring. 6 credits. B. Strom. This course is a combination of Government Benefits and the Neighborhood Legal Services Externship and either Clinical Skills 1 or Clinical Skills 3 (formerly Legal Aid 1 or 3). The course is the same as Government Benefits except that the case handling component involves handling cases for the Ithaca office of Neighborhood Legal Services. See the description for the Government Benefits Clinic and the Neighborhood Legal Services Externship for additional details.

**LAW 786 Judicial Externship**

Fall or spring. 4 credits. G. G. Galbreath. Students work with a trial court judge. Work involves courtroom observation, conferences with the judge, writing opinions, and drafting decisions. The emphasis is on learning about judges, the judicial decision-making process, and trials. There are weekly class meetings with readings and discussions of topics related to the externship experience. While the primary focus is the student’s work at the placement, each student will also do class presentations, a final project, and will meet individually with the faculty member.

**LAW 790 Law Guardian Externship**

Fall or spring. 4 credits. J. M. Miner. Students will learn about the representation of children in abused and neglect cases, juvenile delinquency proceedings, and PINS (Person in Need of Supervision) cases through their placement at the Tompkins County Law Guardian office. Duties may include interviewing, investigation, drafting memoranda and motions, and assisting in trial preparation. The classroom component is provided by Clinical Skills 1, 2 (fall), or 3 (spring), depending on whether the student has previously been enrolled in a course in which Clinical Skills 1 (formerly Legal Aid 1) was a component. Clinical Skills 1 class will address interviewing, counseling, negotiation, and advocacy skills through the use of readings, videotapes, discussions, demonstrations, and simulation exercises. Clinical Skills 2 builds on the skills taught in Clinical Skills 1 and addresses such topics as fact investigation and analysis, informal discovery, and drafting of pleadings. Clinical Skills 3 builds on the skills taught in Clinical Skills 1 and 2 and addresses such topics as alternative dispute resolution, formal discovery, and motion argument.

**LAW 791 Legislative Externship**

Fall or spring. 3 credits. B. Strom. The students work with the local New York State Member of Assembly. Work involves drafting legislation, tracking legislation for constituents, legal research and writing responding to constituent requests that particularly require legal research or an explanation of law. The emphasis is on learning about legislative process, drafting of legislation, understanding the reasons for statutory ambiguity, and developing various skills. There are several informal meetings with the faculty supervisor during the semester with readings and group discussions related to the externship experience.

**LAW 792 Neighborhood Legal Services Externship**

Fall or spring. 4 credits. B. Strom. Classroom component is provided by Clinical Skills 1, 2 (fall), or 3 (spring), depending on whether the student has previously been enrolled in a course in which Clinical Skills 1 (formerly Legal Aid 1) was a component. Other student work may include simulation exercises. Clinical Skills 1, 2, or 3. The classes are devoted to the development of lawyering skills and issues related to professional responsibility and the role of an attorney. In addition, each student will meet periodically with the faculty supervisor for review of the placement experience.

**LAW 793 Public Interest Clinic 1**

Fall or spring. 4 credits. NOTE: During the second or third week there may be an additional class session. Classes are mandatory. N. Cook, G. Galbreath, J. Miner, B. Strom. Students handle civil cases for low-income clients of the Public Interest Clinic under the supervision of the clinic faculty. Students interview and counsel; investigate and analyze facts; prepare substantive and procedural law with facts in the context of actual representation; develop a strategy to handle clients’ problems; identify and resolve professional responsibility issues; do legal writing; negotiate and mediate; present clients at administrative hearings. Classroom component is provided by the Clinical Skills 1 class, in which students will develop interviewing, counseling, negotiation, and advocacy skills through the use of readings, videotapes, discussions, demonstrations, and simulation exercises.

**LAW 794 Public Interest Clinic 2**

Fall. 4 credits. Prerequisite: Public Interest Clinic 1 or a clinic course that included the Clinical Skills 1 (formerly Legal Aid 1) classroom component. N. Cook, J. Miner, G. Galbreath, B. Strom. Students handle Public Interest Clinic cases, participate in a classroom component, Clinical
Skills 2, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest Clinic 1. The classroom component, Clinical Skills 2, builds on the skills taught in Clinical Skills 1 and addresses such topics as fact investigation and analysis, informal discovery and drafting of pleadings. Students represent the clinic’s clients in both federal and state courts.

**LAW 795 Public Interest Clinic 3**  
Spring. 4 credits. Prerequisite: Public Interest Clinic 1 or a course that included the Clinical Skills 1 (formerly Legal Aid 1) classroom component. N. Cook, G. Galbreath, J. M. Miner, B. Strom. Students handle Public Interest Clinic cases, participate in a classroom component, Clinical Skills 3, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest Clinic 1. The classroom component, Clinical Skills 3, builds on the skills taught in Clinical Skills 1 and 2, and addresses such topics as alternative dispute resolution, formal discovery and motion argument. Students represent the clinic’s clients in both federal and state courts.

**LAW Public International Law Clinic**  
3 credits. Prerequisites: Public International Law or International Human Rights. Not offered 2000–2001. Students will prepare legal memoranda and policy proposals for foreign governments and international organizations. The memoranda will be prepared in coordination with the Public International Law and Policy Group, a nonprofit organization that provides pro bono advice on issues of public international law to governments, NGOs, and international organizations. Possible subject areas include minority rights, border treaties, citizenship and nationality disputes, state succession issues, and war crimes.

**LAW Religious Liberties Clinic**  
4 credits. Year-long offering. Not offered 2000–2001. Students work in teams on cases provided by organizations that handle Establishment and Free Exercise Clause cases. All students do substantial research and memoranda writing, and some may draft portions of briefs. To help ensure that students have the opportunity to take a case to completion (or at least to the next stage of litigation), this is a full-year course, with students required to register for both semesters for a total of four credit hours and a grade at the end. Given the nature of litigation, demands on student time may be sporadic, and students should be prepared to do some work over intercession if court deadlines so require.

**LAW 796 Small Business Clinic**  
Fall or spring. 5 credits. W. Kell. Students will learn and apply a broad range of knowledge in business-related law, through participating in interdisciplinary teams of students assisting small business entrepreneurs with legal and business needs, particularly child care programs, nonprofit programs, and teen start-up businesses. Faculty from the Law School, the Johnson School of Management, and College of Human Ecology will supervise teams of students from each of the above colleges and provide classroom teaching. Under such supervision, student teams will work autonomously to consult with and provide technical assistance to the small business entrepreneur. There will be weekly classroom sessions focused on substantive areas of knowledge, the development of client relationships, and ethical issues. Skills in building effective working relationships with clients will also be developed through simulations and actual client representation. Readings are drawn from areas of contract, tort, property, employment, and administrative law, as well as areas of business planning, entrepreneurship, and consumer issues. Biweekly team meetings are also required for supervision.

**LAW 797 Women and the Law Clinic**  
Fall. 6 credits. Course has two classroom components: Women and the Law Clinic class and Clinical Skills 1 or Clinical Skills 2 (formerly Legal Aid 1 and 2). J. M. Miner. Students will represent women clients who have legal matters primarily in the family law area (divorce, custody, support, domestic violence). The Women and the Law Clinic class will focus on such issues as the impact of substantive law on women, the impact of legal institutions on women, professional role development, feminist lawyering methods, and other topics related to women and the law. Students will also participate in the lawyering skills classroom component. Clinical Skills 1 or Clinical Skills 2 (formerly Legal Aid 1 or 2). Clinical Skills 1 will address interviewing, counseling, negotiation, and advocacy skills through the use of readings, videotapes, discussions, demonstrations, and simulation exercises. Clinical Skills 2 builds on the skills taught in Clinical Skills 1 and addresses such topics as fact investigation and analysis, informal discovery, and drafting of pleadings.

**LAW 798 Youth Law Clinic**  
Fall or spring. 6 credits. Course has two classroom components. Youth Law Clinic class and Clinical Skills 1, 2 (fall), or 3 (spring) (formerly Legal Aid 1, 2, and 3). N. Cook. Students will work with groups of youth and service providers in a multi-faceted approach to identifying and resolving problems of a legal nature. Under the supervision of faculty and community experts, clinic students will both handle individual representation cases and participate in nonlitigation project work such as community education, legislative advocacy, and mediation training. The emphasis of the course is on planning, communication, policy development and nondisadvantage problem solving. Students will also participate in the lawyering skills classroom component. Clinical Skills 1, 2, or 3 (formerly Legal Aid 1, 2, and 3). Clinical Skills 1 class will address interviewing, counseling, negotiation, and advocacy skills through the use of readings, videotapes, discussions, demonstrations, and simulation exercises. Clinical Skills 2 builds on the skills taught in Clinical Skills 1 and addresses such topics as fact investigation and analysis, informal discovery and drafting of pleadings. Clinical Skills 3 builds on the skills taught in Clinical Skills 1 and 2, and addresses such topics as alternative dispute resolution, formal discovery, and motion argument.

**NONPROFESSIONAL COURSE**

**GOVERNMENT 313 The Nature, Functions, and Limits of Law**  
Spring. 4 credits. Undergraduates only. J. A. Siliciano. A general-education course for students at the sophomore and higher levels. Law is presented not as a body of rules but as a set of techniques for resolving conflicts and dealing with social problems. The course analyzes the roles of courts, legislatures, and administrative agencies in the legal process, considering also constitutional limits on their power and practical limits on their effectiveness. Assigned readings consist mainly of judicial and administrative decisions, statutes and rules, and commentaries on the legal process.

**FACULTY ROSTER**

Sherwin, Emily L., J.D., Boston U. Visiting Prof.
Shifrin, Steven H., J.D. Loyola U. of Los Angeles Prof.
Siliciano, John A., J.D., Columbia U. Prof.
Simson, Gary J., J.D. Yale U. Prof.
Stone, Katherine V. W., J.D., Harvard U. Prof.
Stotzky, Irwin P., J.D., U. of Chicago. Visiting Prof.
Taylor, Winnie F., LL.M., U. of Wisconsin. Prof.
Teitelbaum Lee E., LL.M., Northwestern U. Prof.
Wippman, David, J.D., Yale U. Prof.

Legal Aid Clinic
Cook, Nancy L., J.D., Georgetown U. Senior Lecturer
Galbreath, Glenn G., J.D., Case Western Reserve U. Senior Lecturer
Miner, JoAnne M., J.D., U. of Connecticut. Senior Lecturer
Strom, Barry, J.D., Cornell U. Senior Lecturer and Director, Cornell Legal Aid Clinic

Academic Library Staff
Germain, Claire M., LL.B., U. of Paris. Edward Cornell Law Librarian and Professor of Law
Hyrum, Charlotte L., J.D., Tulane U. Reference Librarian
Cooper, Eric A., J.D., Indiana U. at Bloomington. Head of Acquisitions and Reference Librarian
Court, Patrica G., J.D. Hamline U. Asst. Director for Administration and Public Affairs
Gillespie, Janet M., M.S., Cornell U. Administrative Supervisor/Access Service
Kreisler, Brandy, J.D., Texas Tech. Reference Librarian
Krakorian, Elaine E., J.D., New England Reference Librarian
Pajerek, Jean M., M.L.S., SUNY-Albany. Head of cataloging

Members of Other Faculties Associated with the Law School
Carmichael, Calum M., B. Litt., Oxford U. Prof. College of Arts and Sciences

Adjunct Faculty Members
Balotti, R. Franklin, LL.B., Cornell U. Adjunct Prof.
Beresford, H. Richard, M.D., U. of Colorado. Adjunct Prof.
Blyth, John E., Dr.jur., Goethe U. Adjunct Prof.
Breidewieck, Douglas, J.D., Harvard U. Adjunct Prof.
Briggs, W. Buckley, J.D., Georgetown U. Adjunct Prof.
Goldstock, Ronald G., J.D., Harvard U. Adjunct Prof.
Grant, Mary Elizabeth, J.D., Cornell U. Adjunct Prof.
Hanks, James J., Jr., LL.M. Harvard U. Adjunct Prof.
Hull, Robert K., LL.M., Harvard U. Adjunct Prof.

Kingston, Andrew, J.D., Harvard U. Adjunct Prof.
Mingle, James J., J.D., U. of Virginia. Adjunct Prof.
Shulman, Zachary, J.D., Cornell U. Adjunct Prof.
Taishuda John, J.D., Cornell U. Adjunct Prof.
Yale-Loehr, Stephen W., J.D., Cornell U. Adjunct Prof.

Legal Methods Program
Anderson, Paige S., J.D. Cornell U. Lecturer
Atlas, Joel, J.D., Boston U. Senior Lecturer
Bond, Cynthia D., J.D., Cornell U. Lecturer
French, David A., J.D., Harvard U. Lecturer
Gambach, Carol J., J.D., Cornell U. Director of Legal Methods Prog. and Senior Lecturer
ADMINISTRATION
Robert J. Swierenga, dean
John A. Elliott, associate dean for academic affairs
Michael J. Hostetler, associate dean for executive education
Cathy S. Dove, associate dean for MBA Program and operations
Richard A. Shafer, associate dean for corporate relations
Steven J. Sharratt, executive director of development
Natalie M. Grinblatt, director of admissions
John D. Nozell, director of career services
Harriet Peters, director of advising and student activities
Debra Gulini, assistant to the dean
Ann W. Richards, financial aid director and associate director of admissions
Janet S. Gray, registrar and associate director for MBA Program

The Johnson Graduate School of Management prepares men and women for managerial careers in business. The school offers course work in many disciplines to provide potential managers with an understanding of the complexities of the professional world in which they will operate and of the organizations of which they will become a part.

A bachelor’s degree or its equivalent is required for admission to the two-year program leading to the Master of Business Administration (M.B.A.) degree. Nearly half of the students have a background of undergraduate studies in arts and sciences, and about one-quarter in engineering. Five percent of the students begin their graduate training immediately after receiving their bachelor’s degrees and the remaining 95 percent following work experience.

Combined degree programs allow highly qualified Cornell students to co-register in the school during their senior year, thereby earning a master’s degree in less than the usual time.

The doctoral program, administered through the Graduate School, provides an advanced level of education in business for those who seek careers in teaching and research at leading universities.

More detailed information about these programs is available from the Office of Admissions and Student Affairs, Johnson Graduate School of Management, Room 111 Sage Hall.

Students in other graduate programs and undergraduate students registered with the university are welcome in many classes. Since matriculated MBA students require certain courses for graduation, non-Johnson School students are not allowed to pre-enroll. During the first week of classes, registration of non-Johnson School students occurs on a space available basis.

UNDERGRADUATE ONLY

NBA 300 Entrepreneurship and Enterprise
Fall, spring. 3 credits. D. BenDaniel.
The course uses Cornell-developed case studies and lectures to address entrepreneurial management in start-up ventures and management of business development in existing companies. Among the topics covered are valuation of business, planning, obtaining resources, management of growth, and cashing out. Guest lecturers speak on specialized topics such as corporate and patent law, bankruptcy and workouts, leveraged buy-outs, and valuations of businesses. Students team up to write and present business plans. The course attempts to integrate marketing, finance, operations, and human-resource topics in the context of high-growth business ventures. For non-Johnson School students only. Johnson School students see NBA 564.

NBA 401 Entrepreneurship for Scientists and Engineers
Fall, spring. 3 credits. J. Nesheim.
This course is intended to introduce students to the new business startup process. Small teams will be formed to come up with an idea for a startup and create a business plan that can attract venture capital or other funding for the new enterprise. Guest lecturers are from successful high-technology companies. The course is led by instructors from Silicon Valley and Ithaca who created high-technology businesses.

COURSES FOR NON-JOHNSON SCHOOL STUDENTS

NCC 550 Financial Accounting
Fall, spring. 3 credits. Course intended for non-Johnson School students only. Staff.
An introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis; the accounting cycle; financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure. This course is similar in content to the MBA core course: NCC 500.

NCC 553 Marketing Management
Fall, spring. 3 credits. Course intended for non-Johnson School students only. Staff.
The course addresses controllable and uncontrollable marketing variables that managers in multi-product firms face in today’s business environment. Topics include customer behavior, product planning, distribution, advertising and promotion, pricing, and competitive strategy. This course is similar in content to the MBA core course NCC 503.

NCC 554 Management and Organizations
Fall. 3 credits. Course intended for non-Johnson School students only. Staff.
This course takes a resource-based approach to management by arguing that organizations should link their strategy to their internal resources and capabilities. This theme is developed by addressing: (1) the strategic value of internal resources and capabilities, (2) the role of human resources and organizational behavior in formulating and implementing strategy, and (3) the importance of structure and the design of organizations in formulating and implementing strategy. Included among the topics are: how firms create sustainable competitive advantage through internal resources and capabilities, what the best practices are for managing people, what effects best practices have on attitudes and behaviors, why putting the customer first is not necessarily best practice from a resource-based perspective, why organizational culture is central to organizational effectiveness, why the formal organizational chart and structure of an organization are important, how organizations innovate, how organizations change through re-architecture and re-engineering, what firms gain and lose through pursuing core competencies, and what firms gain through strategic alliances and networks. The course makes extensive use of case materials. This course is similar in content to the MBA core course: NCC 504.

NCC 556 Managerial Finance
Fall, spring. 3 credits. Course intended for non-Johnson School students only. Staff.
An introduction to business finance through theory and case studies. Topics include stock and bond valuation, the capital-budgeting decision, portfolio theory, the asset-pricing models, raising capital, capital structure, mergers and acquisitions, costs of capital, option pricing, and risk management. International applications are considered within each topic area. Letter grade only, based on exam, group case reports, homework and class participation. This course is similar in content to the MBA core course: NCC 506.

NCC 558 Production and Operations Management
Spring. 3 credits. Course intended for non-Johnson School students only. Prerequisites: NCC 501 or permission of the instructor. Staff.
Operations management deals with the problems of producing and delivering goods and services, topics that are of strategic importance in almost every organization. Production scheduling is a significant problem for manufacturing firms; smooth work flow and quality control are important in banking operations; inventory control is crucial in large retail establishments; and proper task sequencing is a major problem in the construction industry. The course deals with these problems and others from a managerial viewpoint. The course is designed around managerial problems in the operations area. Students use case studies to improve skills in problem identification. This course is similar in content to the MBA core course NCC 508.
IMMERSIONS

Only at the Johnson School will you find learning immersion courses in manufacturing, managerial finance, investment banking, brand management, and e-business. Immersions offer a semester of continuous focus, real-world problem solving, and site visits to dozens of companies.

IMMERSIONS

This is a unique immersion course specifically designed for students planning to pursue finance careers. Some students interested in non-finance careers (including consulting) may wish to consider this course, but they should recognize that it is not specifically designed for this purpose. A major objective of this course is to help students make more informed choices about how to launch their finance careers.

NBA 502 Managerial Cost Accounting 3.0 credits.
NBA 549 Managerial Finance—Practicum 2.5 credits.
NBA 506 Financial Statement Analysis 1.5 credits.
NBA 511 Financial Modeling 1.5 credits.
NCC 508 Managing Operations 2.5 credits.
NCC 509 Strategy 2.5 credits.
NBA 656 Valuation Principles 1.5 credits.

SMI—Semester in Manufacturing

This is a full-time program for the semester, students will not be able to take other courses concurrently. The course objective is to begin developing students to think and act like brand managers, some of the best trained and most upwardly mobile professionals in industry. It will provide students with a unique opportunity to begin internalizing the concepts, principles, and tools necessary to achieve success in brand management. While the course will focus on managing traditional consumer brands, high tech products, services, and global branding will also be addressed. In-class methods will consist of: (1) academic and industry lecturers; (2) on-site visits with marketing and manufacturing professionals; (3) case and project discussions and presentations; and (4) a brand management simulation. Course requirements will consist of: (1) discussion of readings; (2) individual case write-ups and presentations; (3) group projects and presentations (including a capstone simulation); and (4) in-class exams. There will be considerable off-campus travel for field study. Prerequisites: NCC 501, 502, 503, and 506. Restricted enrollment—permission of the instructor required.

NBA 624 Brand Management—Practicum 7.5 credits.
NBA 502 Managerial Cost Accounting 3.0 credits.
NCC 508 Managing Operations 2.5 credits.
NCC 509 Strategy 2.5 credits.

EPI—Electronic Business Intensive

This intensive will take a comprehensive look at all emerging areas of this new way of doing business. The E-Business Intensive is designed to offer instruction in different, fundamental areas of e-business. For spring 2000, there will not be one leading professor who champions the experience, as there is in the immersions. However, the participating professors will support a one-credit, team-based project that will stand alone or extend work required in the component courses. This intensive may lead to a full-fledged immersion for the spring of 2001. Therefore, in the future, as with the other immersions, it will most likely be a curriculum solely for first-year students.

The total of 12 credits for first years will allow students to bid for an additional three-credit elective. As this intensive is a response to student and recruiter interest and has been created quickly, it is likely that it will evolve. This dynamic situation offers some obvious advantages and disadvantages. Students in the initial year of the intensive will be a part of shaping the future of this new course of study. They will introduce many people outside the Johnson School to the existence of the intensive in interviews and through other avenues of corporate interaction. They will also encounter the frustrations common to early adopters and innovators. Students choosing the intensive should be prepared to provide constructive feedback and positive energy.

NCC 508 Managing Operations 2.5 credits.
NCC 509 Strategy 2.5 credits.
NBA 601 Electronic Commerce 3.0 credits.
NBA 613 E-Business Project 1.0 credit.
NBA 619 Workshop: Internet Startups 1.5 credits.
NBA 633 Internet Marketing 1.5 credits.

SBI—Semester in Brand Management

This is a full-time program for the semester, students will not be able to take other courses concurrently. The course is concerned with the integration of technological, human-resource, logistical, and financial considerations to produce a manufacturing enterprise that can respond quickly and effectively to market requirements. It will be taught by a team of faculty and industrial practitioners, and much of the student work will be team-oriented. There will be off-campus travel for field study of a variety of manufacturing plants. Johnson School students should complete NCC 501 and NCC 506 before taking this course. Enrollment limited; permission of instructor required.

NCC 508 Managing Operations 2.5 credits.
NCC 509 Strategy 2.5 credits.
NBA 650 Semester in Manufacturing Practicum 10 credits.
NCC COMMON CORE COURSES

NCC 500 Financial Accounting
Fall. 2.5 credits. Johnson School core course. Enrollment limited. J. D’Souza, R. Libby.

An introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis, the accounting cycle, financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure.

NCC 501 Statistics for Management
Fall. 2.5 credits. Johnson School core course. Enrollment limited. J. McClain, J. Thomas.

An introduction to decision making under conditions of uncertainty. Topics include descriptive statistics, probability theory, classical statistics, statistical decision theory, and simple and multiple regression analysis. Applications in finance, marketing, and operations management are discussed.

NCC 502 Microeconomics for Management
Fall. 2.5 credits. Johnson School core course. Enrollment limited. M. Waldman.

Microeconomic theory is introduced and applied to problems faced by managers. Specific topics covered include supply and demand, consumer behavior, pricing when a firm has market power, and the role of contracts. The class employs a lecture format and emphasizes problem solving. Grading is based on a midterm and a final exam.

NCC 503 Marketing Management
Fall. 2.5 credits. Johnson School core course. Enrollment limited. D. Stayman.

The course is designed to convey the key concepts of marketing and how they fit into the larger context of management strategy and decisions. Both the practical "how" and the fundamental "why" of marketing activities are presented in the light of contributions from behavioral science, economics, and statistics. The goals are to provide sufficient understanding for those who will need only to interact with the marketing function, as well as communication concepts and developing processes that can provide the foundation for further course work and future experience in marketing. The course makes extensive use of case materials.

NCC 504 Management and Organizations
Fall. 2.5 credits. Johnson School core course. Enrollment limited. D. Sally.

If you think about it, stories are central to how we know and remember events, people, and facts. There are many reasons for this, not the least of which is the way we communicate knowledge and history. Most of the jobs you aspire to involve a particular form of story-telling—the CEO’s vision, the analyst’s report, the planner’s strategy, the salesperson’s pitch, the consultant’s analysis, and the manager’s brand. What distinguishes these as business stories is that they are often analytical (based on a set of objective facts and statistics) and reflect a deep understanding of the complex interactions of individuals and organizations. This course has two goals: (1) to help you appreciate the complexity of the issues that often arise in organizations, and (2) to develop and refine your analytical story-telling abilities. To achieve these goals, the course will be taught by the case-study method. Cases are an efficient way to expand your experience base with respect to such issues as motivation, power, leadership, ethics, structure, design, and change. We hope to teach you how to make good inferences about what will and won’t work in particular situations, and how to learn from your own experiences and those of others.

NCC 506 Managerial Finance
Fall. 2.5 credits. Johnson School core course. Enrollment limited. R. Michael. A course whose objective is to introduce students to the basic concepts of finance. In particular, we address the issue of what type of investments should firms and individuals take on, and how these investments should be financed. Underlying concepts are essential to financial managers and professional investors, and have important applications to many aspects of financial decisions all of us have to make on a daily basis (e.g., getting an MBA a good investment?). These issues involve capital budgeting decisions, stock and bond valuation, how to assess and account for risk through the capital asset pricing model (CAPM), option pricing, capital structure, and capital and market efficiency. Letter grade only, based on examinations, quizzes, group case reports, homework, and class participation.

NCC 508 Managing Operations
Spring. 2.5 credits. Johnson School core course. Enrollment limited. Prerequisite: NCC 501 or permission of instructor. M. Lojo, L. Roberts.

This course focuses on managing processes, actions that convert inputs into outputs. Almost any business function can be modeled as a network of processes. The first part of the course examines processes, both individually and as part of a larger system; we see that good process design reflects both the volume and the variety of the product. A common course theme is the deleterious effect of variability (in demand, supply, quality, or capacity) in complex systems. Queueing theory and simulation are particularly helpful for analyzing process capabilities. The second part of the course analyzes how goods and services are produced. After describing the strategic roles of operations, we examine forecasting systems, inventory management, and just-in-time, and logistic management. Constrained optimization models provide information about managing with finite resources. The final part of the course examines process improvement through quality and productivity management and corporate learning.

NCC 509 Strategy
Spring. 2.5 credits. Johnson School core course. Enrollment limited. V. Kachiyal.

Among the critical tasks facing any senior manager are the creation, implementation, and evaluation of a business unit’s strategy. This course seeks to provide the management student with the tools and frameworks essential to carrying out these tasks. Many of these tools and frameworks will be based on recent advances in game theory, industrial organization, and organization theory, although the course will also draw from the older business policy tradition as well. Students who successfully complete this course will be able to analyze industries, identify areas of strategy advantage and disadvantage, and to devise strategies that exploit advantages and remedy disadvantages.

NBA ELECTIVE COURSES

NBA 500 Intermediate Accounting
Fall, spring. 3 credits. Prerequisite: NCC 500 or the equivalent. T. Dyckman.

The course is based on the essential concepts and techniques of accounting introduced in the accounting core course. Students learn to evaluate financial statements through the use of case studies drawn from actual corporate financial reports.

NBA 501 Accounting for Mergers and Consolations
Spring, first half of semester. 1.5 credits. Prerequisite: NBA 500 or permission of the instructor. R. Libby.

The course focuses on accounting problems related to equity financing, including leveraged restructuring, intercorporate investments, leveraged buyouts, consolidated reports, proforma statements for a merger prospectus, and other related financial reporting problems. The method of instruction is lecture mixed with cases. Grading is based on examinations, quizzes, and case discussions. Student evaluations will be based on a midterm exam, a final exam, and class participation.

NBA 502 Managerial Cost Accounting
Fall, spring. 3 credits. Prerequisites: NCC 500, NBA 501, and NBA 502, or the equivalent. R. Hilton.

The course is designed both for those responsible for interpreting accounting information and those who use such information for decision making. Topics include budgeting, accumulating costs for product costing, activity-based costing, standard costs, and the analysis of cost variances, cost estimation and prediction, cost-price-volume decisions, performance measurement, nonmanufacturing cost analysis, cost allocation, and transfer pricing. Instruction will be a mixture of lecture and case discussion. Student evaluation will be based on a midterm exam, a final exam, a project, and class participation.

NBA 503 Strategic Cost Management
1.5 credits. R. Hilton.

This course focuses on the role of cost management and related issues in helping a firm compete successfully in the global market. Topics considered include activity-based costing, activity-based management, value chain analysis, the lean enterprise, confronting competition in an industry dominated by lean enterprises, re-engineering, process value analysis, identification of non-value-added activities and costs, target costing, Kaizen costing, continuous improvement, time-based competition, cost versus quality, and benchmarking. The course is mostly entirely based on cases, many of them lean enterprises in Japan.

NBA 504 Taxation Affecting Business and Personal Decision Making
Spring, first half of semester. 1.5 credits. Prerequisite: NCC 500 or permission of the instructor. R. Bloomfield.

This course introduces students to the fundamental concepts and techniques of tax planning for individuals and businesses. Planning opportunities considered include changing the timing and nature of income, investments, and expenses; choosing an
organizational form; constructing transactions that allow two or more parties to engage in tax arbitrage. The course also introduces tax research techniques and issues regarding tax compliance. Course continues with NBA 507.

**NBA 505 Auditing**
Spring. 3 credits. Prerequisite: NCC 500 or permission of the instructor. M. Nelson.
The course examines the process by which financial-accounting systems are audited. Topics include ethics, the meaning of audit reports, the legal liability of auditors, the study and evaluation of internal control systems, and various approaches for testing account balances. Problems, cases, and video simulations are used to illustrate concepts.

**NBA 506 Financial Statement Analysis**
Spring, first half of semester. 1.5 credits. Prerequisite: NCC 506, NBA 500 (or concurrent enrollment) or permission of the instructor, S. Tasker.
This course develops a set of core skills essential to financial statement analysis. We will cover some ratio analysis, cash flow analysis, pro forma financial statements, financial modeling, credit analysis, bond rating and bankruptcy predictions, and firm valuation using discounted cash flow techniques. Emphasis is on practical applications. The course format is a combination of case studies and lectures. The lectures communicate subtler aspects of the material while the cases provide hands-on experience. There will be an exam.

Note: Students who have completed the three-credit version of NBA 506 cannot enroll in this course.

**NBA 507 Tax Implication of Mergers and Acquisitions and Other Special Topics**
Spring, second half of semester. 1.5 credits. Prerequisite: NBA 504 or permission of instructor. R. Bloomfield.
This course examines special topics in tax planning for businesses, with particular emphasis on capital structure choices and reorganizations (mergers and acquisitions), and intra-entity transactions (transfer pricing issues). Readings include many current research papers examining how large corporations exploit their tax planning opportunities.

**NBA 508 Advanced and International Accounting**
Spring, second half of semester. 1.5 credits. Prerequisite: NBA 501 or permission of the instructor. J. D Souza.
The course examines advanced topics in accounting for international transactions and international subsidiaries, including foreign currency translation, price level adjustments, and international variation in accounting principles. The method of instruction is lectures mixed with cases. Grading will be based on two exams and some written cases. Continuation of NBA 501, Accounting for Mergers & Consol (offered first half of semester).

**NBA 509 Advanced Financial Analysis**
Fall, second half of semester. 1.5 credits. Prerequisite: NBA 506, a finance immersion course, or permission of the instructor. L. White.
This course builds on the core financial analysis skills developed in NBA 506. Topics covered include equity valuation, residual income models, quality of earnings assessments, earnings manipulation detection, market efficiency issues, fairness opinions in MBOs, and large sample stock screening strategies. The overall focus is on using accounting-based information to make investment decisions. Emphasis is on practical applications and special attention is given to cultivating analytical communication skills. The course features both lectures and cases. There will be a group term project, but no final exam.

Note: Students who have completed the three-credit version of NBA 506 cannot enroll in this course.

**NBA 510 Cornell Equity Research**
Fall, spring. 1.5 credits. S-U grading only. Prerequisites: NCC 500 and NCC 506 or equivalent, and be taking (or have completed) NBA 506 or have permission of the instructor, R. Bloomfield.
Students write and revise equity research reports on companies that are neglected by analysts and preferentially undervalued. Class work includes lectures and cases on equity research and valuation, presentations by guest visitors, and presentations by students who must persuade the class to approve their stock recommendations.

**NBA 511 Financial Modeling**
Fall, spring, second half of the semester. 1.5 credits. Prerequisites: NBA 506 or permission of the instructor, and mastery of basic excel skills. S. Tasker.
Financial modeling is the art and science of constructing spreadsheet models of firms' future financial statements. In this class, we build on the brief introduction to financial modeling in NBA 506 by modeling the effect on the income statement, balance sheet, and statement of cash flows of more complicated financial transactions such as leveraged buyouts, mergers & acquisitions, and corporate reorganizations. The class meets in the state-of-the-art Parker Center computer lab, and active student participation is emphasized.

**NBA 512 Applied Portfolio Management**
Fall, spring. 3 credits. Restricted: C. Lee.
An accounting/finance elective course that focuses on the management of an investment fund (see Charles Lee for a full course description). Students enrolled in this course must commit to taking the course for fall and spring semesters. They will receive three credit hours for each semester's work. Strong preference is given to second year MBA students who have successfully completed either NBA 506 or one of the finance immersions. Students need to apply formally. If the number of applicants exceeds 12, admission will be competitive and merit-based.

**Economics**

**NBA 523 Business and Economic Forecasting**
Spring, second half of the semester. 1.5 credits. S-U grading only. Prerequisite: NCC 501 or the equivalent. R. Highfield.
This course will focus on statistical and econometric approaches to forecasting business and economic data series that have a time dimension (time series). The course provides students with a toolbox of time series forecasting methods and teaches them how to choose the appropriate one. Topics will include the relationship of forecasting to decision making, univariate methods such as ARIMA modeling, and some multivariate methods such as transfer function, regression, vector autoregression, and neural networks. Applications will usually involve the forecasting of business and economic data. Although statistical theory will be covered as necessary with lecture and supplemented by exams, the emphasis will be on applications and learning by doing. Passing the course requires participation in class discussions and satisfactory performance on both individual and group projects. There is no text for the course but students will be required to use the student version of a sophisticated econometric software package.

**NBA 524 Macroeconomics and International Trade**
Fall. 3 credits. Prerequisite: NCC 502 or equivalent or permission of the instructor. R. Lind.
The course applies basic macroeconomic theory to such problems as inflation, unemployment, economic growth, and productivity and examines how these problems interact with trade and finance. Students learn to be informed observers of national and international economic policies and discerning users of economic analyses and forecasts. A lecture/discussion format is used as the method of instruction.

**NBA 527 Applied Economic Analysis**
(also ECON 616)
Spring. 4 credits. Letter/S-U optional grading. R. Frank.
This course will emphasize how economics analysis can help firms and individuals make the most of their opportunities. Of special interest to managers and consultants will be the course's focus on examples that illustrate how faulty economic reasoning leads to inefficient outcomes. The course will also emphasize strategic thinking, and will instruct students in the art of "economic naturalism"—the use of economic reasoning to understand and explain patterns of individual and firm behavior.

**NBA 529 Economics of Imperfect Information**
(also ECON 757)
6 credits. Prerequisites: ECON 609-610 and 619.
The purpose of this course is to consider some major topics in the economics of uncertain information. Although the precise topics considered will vary from year to year, subjects such as markets with asymmetric information, signaling theory, sequential choice theory, and search theory will be discussed.

**Finance**

**NBA 540 Advanced Corporate Finance**
(Theory and Practice)
Fall, spring. 3 credits. Prerequisite: NCC 506 or the equivalent. Students who took NBA 540 and/or NBA 548, 1.5 credit version, can not enroll in this course. J. B. Emery.
This course is relevant for both investment banking and the treasurer's activities of an operating corporation. Most class sessions are lecture-discussion, but there are several corporate finance case studies. Topics include common stock, preferred stock, debt securities (duration, convexity, inverse floaters, bond
refunding, term structure, swaps), hyb... capital structure issues, cash... markets, their pricing function, the interaction... financial markets and macroeco... and the processes of... third, we look at the workings of a variety of... different problems which different types of... and the processes of... the emphasis is on option contracts. Underlying assets include stocks, futures,... in a bank-simulation exercise.

NBA 545 Corporate Finance
Fall, first half of semester. Spring, second half of semester. 1.5 credits. Prerequisite: NCC 506, 507.
This half-semester course will cover some of the more advanced topics in the area of corporate finance, including executive compensation, corporate governance, and bankruptcy law. The course will include lecture/discussion sessions in which the main ideas and the existing evidence (i.e., the theory and the empirics) will be presented and discussed. Cases will be used to illustrate the importance and applicability of these ideas... understanding of the material.

NBA 546 Introduction to Derivative Securities
Fall, spring. 3 credits. Prerequisite: NCC 506 (Finance Core) or permission of the instructor. C. Gulhati, H. Li. The course introduces students to the pricing and hedging of derivative securities. The course briefly covers forward contracts, futures contracts, and swaps. The primary emphasis is on option contracts. Underlying assets include stocks, currencies, and commodities. Fixed income derivatives are covered in NBA 555. The method of instruction is primarily lectures, supplemented by guest speakers. A midterm and a final exam comprise roughly half the grade, with the remaining half determined by assignments and class participation. The course is a prerequisite for NBA 550, Advanced Topics in Derivative Securities.

NBA 547 Applied Financial Engineering (also OR & IE 585)
Spring. 3 credits. Prerequisites: NCC 506, NBA 546, NBA 555, NBA 542, OR & IE 523, OR & IE 529, COMS 211, permission of instructor. F. Diz. This course is designed to integrate the students' coursework in engineering (computers, stochastic modeling, finance, options/futures and investment theory) through the completion of a project. The course project will be undertaken by student teams. It will involve the implementation of a financial model to a real-world problem. Projects will cover issues facing the financial industry. The implementation will include model formulation, computer programming, data collection, and data analysis. The course format will be a mixture of lectures by faculty and professionals and students (project presentations).

NBA 550 Risk Management with Derivatives
Spring. 3 credits. Prerequisites: NBA 546 and NBA 555 (NBA 555 can be taken concurrently). R. Gukhal.
This course studies advanced topics in derivatives and risk management. The first part of the course covers topics in derivatives and develops the tools necessary for analysis and the second part is their application to risk management. This course is intensive and demanding—about 50 percent more demanding than the Fall NBA 546 course.

NBA 552 Cases in Corporate Finance
Spring. 3 credits. Prerequisites: NCC 505 or the equivalent. Prerequisite: NBA 540. Course is limited to second-year MBA's and Twelve-Month Option Students. Students who took NBA 535 and/or NBA 536, 1.5 credit version, can not enroll in this course. H. H. Hiaman. This course consists of discussions of corporate finance cases dealing with corporate financing. Students will form groups and formally present one case and critique a second. This is in addition to the normal class sessions. The cases in this course deal with mergers, acquisitions, valuation, corporate restructuring, LBO's, MBO's, Merchant Banking, and the financing of corporations. The material applies equitably to the study of investment banking and managerial finance. The course does not deal with sales trading or the details of managing an investment banking firm. Several executives working in corporate finance will present cases.

NBA 554 Bank Management
Spring. 3 credits. Prerequisites: NBA 543. M. O'Hara. This course provides an in-depth treatment of management issues in commercial banking. Topics include risk management, credit decision making, informational problems, bank performance evaluation, international lending, and strategic planning. Students learn concepts through case studies and participate in a bank-simulation exercise.

NBA 555 Current Topics at the Crossroads of Law and Finance
Spring. 3 credits. M. O'Hara. This course explores a series of selected topics that involve important issues in law and financial economics. The premise of the course is that financial institutions of all kinds, whether they are known as insurance companies, banks, investments banks, or pension funds, invest money and advise clients in a wide variety of settings. This agency relationship introduces a number of important dimensions to the intermediary-client relationship and this course will look at these issues from both an economic and legal perspective. Emphasis will be placed on the intersections between modern finance theory and legal analysis.

NBA 556 Financial Markets and Institutions
Spring. 3 credits. Prerequisites: NCC 506 or the equivalent. Prerequisite: NBA 540. Course is limited to second-year MBA's and Twelve-Month Option Students. Students who took NBA 535 and/or NBA 536, 1.5 credit version, can not enroll in this course. H. H. Hiaman. This course is designed to integrate the students' coursework in engineering (computers, stochastic modeling, finance, options/futures and investment theory) through the completion of a project. The course project will be undertaken by student teams. It will involve the implementation of a financial model to a real-world problem. Projects will cover issues facing the financial industry. The implementation will include model formulation, computer programming, data collection, and data analysis. The course format will be a mixture of lectures by faculty and professionals and students (project presentations).
cross international borders, both problems and opportunities arise. We focus on these issues and highlight how finance theory can be extended to address them. Starting with basic principles of international finance, we then apply those principles to a variety of problems. The course helps students to understand the ideas and research results of international finance and how to adapt what they learn to the practical problems of the increasingly globalized business world beyond the classroom. The first part of the class outlines three basic themes: exchange rate volatility, barriers to international capital flows, and the value of international diversification. The second part of the class presents a variety of problems, examples, and applications from the three basic themes. These range from corporate finance applications of capital budgeting to portfolio management strategies. Spreadsheet assignments and a term project requiring data analysis develop research skills and illustrate academic concepts. Exams consist of computational, short answer, and short essay questions.

NBA 555 Fixed Income Securities and Financial Instruments
Fall, spring. 3 credits. Prerequisites: NCC 506 (Finance core), NCC 501 (Quantitative Methods core). R. Jarrow.
This course is designed to study the pricing, hedging, and risk management of fixed income securities and interest rate derivatives. Topics to be studied include: the term structure of interest rates, interest rate swaps (caps, floors, collars), the risk structure of interest rates, credit risk spreads, and corporate bond valuation. The method of instruction is lectures and discussion, with computer illustrations being an integral part of the class content.

NBA 577 Case Studies in Venture Investment and Management
Fall. 2 credits. Prerequisites: NCC 500 and NCC 506 or concurrent enrollment.
W. Thomas.
A series of cases that focus on the venture capital investment process and on the subsequent management of such ventures. The primary role of the venture capitalist in assembling and evaluating information, preparing forecasts, assessing risks, developing and negotiating investment structure and terms, and deciding whether to invest. Cases also focus on management and financial problems, policy issues, and the relationship between venture capitalists and entrepreneurs. The secondary perspective is that of the entrepreneur and the techniques and skills employed in managing growing enterprises. Presentations by venture capitalists and entrepreneurs will supplement student discussion and analysis of cases. Grades will be based on written reports, quality of classroom participation, and a final exam.

NBA 558 Corporate Financial Policy
Fall, second half of semester. Spring, first half of semester. 1.5 credits. Prerequisite: NCC 506 (Finance core). J. Zender.
The course will deal with frontier topics in corporate finance and investment strategy. The financial world is changing at an increasing pace. New financial products are being offered, and the financial structure of many corporations is becoming more and more complicated. Corporate financial officers and investors (such as money managers) need to know the driving forces behind the financial products (debt, equity, and more complicated products) to understand the products themselves. Understanding these issues will enable us to estimate firm values more precisely. The course objective is to enable you to better analyze financial situations you may encounter in the future, as well as firms' valuation techniques.

Entrepreneurship

NBA 530 Entrepreneurship Lab
Fall, spring. 3 credits. Prerequisites: NBA 564 Entrepreneurship, or concurrent enrollment, or permission of the instructor. MBA students only. Letter/S-U optional grading. P. Sears.
Students will team up with entrepreneurs in the greater Ithaca area on defined projects, which will be integral to the companies' operations, such as production planning, new product launches, or assessing organizational structure. Through these projects the student will gain first-hand experience with the application of functional knowledge in a start-up setting, bringing real value to the host company.

NBA 531 Startup Forum: Cornell Technologies with New Venture Potential
Fall, spring. 1 credit. S-U grading only. R. Holsten.
The course will focus on research at Cornell, which may be a basis for new businesses. Ventures. It will address the fundamental ways in which university-based research differs from industrial research. Students will explore and critique the business potential of each concept.

NBA 532 Venture Partnerships-The Corporate Business Development Role, Big Company vs. Emerging Company
Spring. 1.5 credits. Letter/S-U optional grading. P. Sears.
In an era when large corporations are 'downsizing' and 'outsourcing' in order to save on fixed costs, and small companies are dependent upon strategic partnerships with large companies as part of their financing strategies, the business development executive must be at the forefront of this activity. Priorities for the business development executive are distinctly different depending upon the size and history of the enterprise. This course, taught by a venture capitalist, examines the multitude of rules played by managers in business development deals. A significant amount of attention will be paid to planning and managing the merger and acquisition process, as well as to the role of the strategic partner. There will be several guest speakers, each an acknowledged expert in the field. Students will be assigned deal-making tasks in the context of a case study that will be the centerpiece of the class. Class dates will be announced. Students will be expected to have read the Big Pharm case study prior to the first class.

NBA 559 The Venture Capital Industry and Private Equity Market
Spring. 0.5 credit. S-U grading only. D. BenDaniel, J. Reyes.
This course focuses on the industry from the practitioners' perspective. Topics include (1) an introduction to the private equity market, focusing on the transactions that define the industry, its structure, participants, history and trends, (2) institutional private equity investing—now an increasingly important and dynamic part of the asset allocation mix, and (3) issues in private equity investing such as concentration in fewer, larger funds and the critical role of a new class of gatekeeper/consultants for limited partners. The course will involve four lectures and a final paper. The course is given jointly by Professor David BenDaniel and Jesse Reyes, director of Research of Venture Economics Information Services.

NBA 563 Initial Public Offerings and Acquisitions
Spring. 3 credits. Letter/S-U optional grading. J. Shulman.
A deep look at initial public offerings (IPOs) and acquisitions from a practitioner's point of view. With respect to IPOs the course will cover: the applicable statutory framework, pre-offering corporate preparation (such as implementation of poison pills and stock option plans), the due diligence process, the implementation of corporate governance policies appropriate for a public company, the offering registration process, liability under federal securities laws, the Securities and Exchange Commission review process, and the underwriting arrangements, pricing, selection of a trading forum (i.e., NYSE, NASDAQ, or AMEX) and the consequences of going public. Regarding acquisitions, the course will explore: financing, due diligence, treatment, due diligence, choosing an appropriate transaction structure (i.e., stock versus asset sale) and crucial aspects of acquisitions, such as letters of intent, continuity of employees, anti-takeover strategies, and non-competition agreements.

NBA 564 Entrepreneurship and Enterprise
Fall, spring. 3 credits. D. BenDaniel.
The course uses Cornell-developed case studies and lectures to address entrepreneurial management in start-up ventures and new-business development in existing companies. Among the topics covered are: valuation of business, planning, obtaining resources, management of growth, and cashing out. Guest lecturers speak on specialized topics such as corporate and patent law, bankruptcy, and work-outs, leveraged buy-outs, and valuations of businesses. Students team up to write and present business plans. The course attempts to integrate marketing, finance, operations, and human-resource topics in the context of high-growth business ventures.

General Management

NBA 560 Business Law I (also ARME 320)
Fall. 3 credits. Limited to juniors, seniors, and graduate students. D. Grossman.
The course introduces the basic tenets of law as they apply to businesses and their operations. Topics include personal property, contracts, agency, real property, and landlord-tenant concerns. Text readings and case
studies are used. All students intending to be professional accountants are required to take the course, and it is strongly recommended for finance students.

**NBA 561 Business Law II (also ARME 422)**
Spring. 3 credits. Prerequisite: NBA 560 or permission of the instructor. D. Grossman. The first portion of this course examines legal issues in the formation and operation of businesses. Special scrutiny is given to partnerships, corporations, and limited liability companies. The second portion of the course will review selected topics in business law, such as employment discrimination, secured transactions, product liability, unfair competition, and international business law.

**NBA 562 Estate Planning (also ARME 423)**
Fall. 1 credit. S-U grading only. Limited to juniors, seniors, and graduate students. D. Grossman. Fourteen sessions on the various aspects of estate planning. The law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and probate procedures are covered.

**NBA 567 Management Writing**
Fall, spring (sections offered in both first and second halves of semester). 1.5 credits. S-U grades only. B. Mink, A. Pike, M. Hirtleman, C. Rosen. Students learn to write clearly and effectively by focusing on the writing process as well as the finished product. Course topics include audience perspective, style, organization, strategy, and persuasion. There is a writing assignment every week. Students receive instructor and peer feedback. Priority given to MBA students. Open to other graduate students and employee degree candidates if there is room.

**NBA 568 Oral Communication**
Fall, spring (sections offered in both first and second semesters). 1.5 credits. S-U grades only. B. Mink, A. Pike, C. Rosen. This course focuses on improving the presentation skills of management students. The course covers the areas of speaking formats (impromptu, extemporaneous, manuscript), delivery, organization, visual aids, and question/answer. Student speeches constitute the bulk of class time, with each student presenting seven or eight speeches in the seven-week session. The small class size allows for significant individual attention. Students receive feedback from classmates and the instructor, and have the opportunity to review in tutorials the videotapes of most of their speeches. This course is given to MBA students. Open to other graduate students and employee degree candidates if there is room.

**NBA 569 Management Consulting**
Fall. 3 credits. A. McAdams. The course is case-study oriented and focuses on strategic consulting. It has multiple objectives. First, it provides students with the opportunity to understand the role of the consultant and to gain indirect experience in that role through dealing with a broad range of practical and real-world issues. Second, it helps students improve their analytic skills through practice with case studies. Third, it provides students with information that they are unlikely to gain in other courses, as well as experience in making group presentations and evaluating them. In addition, students are required to write a comprehensive analytic term paper.

**NBA 570 Leadership in Management**
Spring (meets during winter break). 1.5 credits. MBA students only. S-U grades only. R. Peterson, RPW Executive Development, and other Johnson School faculty. This course is a partnership with RPW Executive Development to provide MBA students with the self-awareness and interpersonal skills required to be effective leaders (the general principles of leadership course is NBA 668). RPW has partnered extensively with the Johnson School Executive Education Department. The course consists of five full-day training sessions. Staff from RPW and Johnson School faculty will provide training. The first two days will focus on self-awareness and employ several self-assessment instruments including, the Campbell Leadership Index (CLI), Meyers-Briggs Type Indicator (MBTI), the Fundamental Interpersonal Relations Orientation-Behavior (FIRO-B), the Kirtson Adaptation/Innovation Inventory (KAI), and the Ambiguity Preference Scale (APS). Class members will also be trained in giving and receiving feedback from team members and faculty. Mid-week activities include various leadership and team challenges, including a business simulation. Attendance is required each day of the course to receive credit. NOTE: most of the self-assessment instruments listed above will need to be completed by the first day of class to allow for scoring and analysis.

**NBA 571 Cornell Management Simulation**
Fall, spring. 1.5 credits. Restricted to second-year MBA students. J. Hass, S. Smith. This computer-based simulation is played by self-selected teams of four students who make marketing, production, and finance decisions for one of five companies operating competitively in the same industry. After the first week, during which the rules of the simulation are explained and software used by each team is demonstrated, the teams make periodic decisions (meeting at their own convenience). At the beginning of the simulation, each team writes a Strategic Intent paper and, before the results of the last decision have been determined, each team presents an in-depth analysis of its performance and its strategy for the future in a “Board of Directors” meeting. Letter grading only, based on the value created for the company’s shareholders (relative to other firms in the same industry), the team’s Strategic Intent paper and the instructor’s evaluation of team performance at the BOD meeting. Students who have completed NBA 549 cannot take this course. Open to MBA IIs only. Meetings will be periodic throughout the semester.

**NBA 572 Environment, Economics, and Management Policy**
Fall. 3 credits. Enrollment preference to Johnson School and other graduate students, others by permission. D. Chapman. Environmental protection and pollution controls are of major importance in the United States and OECD countries, and are growing in importance in developing countries. This course analyzes the economic rationale affecting business and public decision making. It investigates the success achieved in the United States, and the important role that business has played in that success. Case studies review government-business cooperation, methods of analysis, and management strategy. The course concludes with business leaders presenting their past experiences and current challenges for analysis by the class. The general goal of the course is to introduce future managers to the realistic process of successful environmental decision making.

**NBA 573 Seminar in Sustainable Development (also ABEN 673)**
Spring, first half of semester. S-U grading only. 1–3 variable credits. A. McAdams. This seminar-style course will involve readings and discussion of issues in environmental management, and will also feature four significant outside speakers on the subject of environmental management. (Students interested in doing consulting projects in environmental management will be accommodated in NBA 575, Advanced Consulting.)

**NBA 575 Field Projects**
Fall. 3 variable credits. J. Russo. The course teaches how to frame unstructured business problems and develop solutions in small team projects. Teams must identify what the central issues are, and then determine the most appropriate tools and concepts to provide insight into these issues. Students also learn to approach business problems from a multi-functional perspective. Specific conceptual content includes: project management; power, politics, and personalities in work groups; managing in for-profit versus not-for-profit organizations; and organizational change. Field Projects is not classroom-based. Although there will be a few class sessions early in the semester, the course structure will revolve around (a) periodic reviews and (b) coaching sessions as needed. The instructor team will contain one regular member of the Johnson School’s faculty, an experienced executive, and an administrator.

**NBA 577 The Political, Legal, and Regulatory Environment of Business**
Spring. 3 credits. Letter/S-U optional grading. R. Schuler. The political climate, laws, regulations, and government arrangements for infrastructure have a profound effect on the nature, operation, and profitability of business. Many of the most important decisions that top management makes are driven by political, legal, and regulatory considerations (e.g., the responses of Exxon to the Exxon Valdez oil spill and Union Carbide to the Bhopal, India, gas leak and the decision of AT&T to accept the division of its company in response to an antitrust suit filed by the U.S. government). Environmental and waste-management concerns are leading to new laws and regulations that will affect many aspects of business well into the next century, creating opportunities as well as posing problems. The course begins with a discussion of the political and economic foundations of business regulation. Students examine different areas of application, including economic regulation, environmental regulation, antitrust, and product liability. Guest speakers include leading scholars from throughout the university and business and government leaders.
NBA 578 Business Ethics Fall. 3 credits. Students examine actual situations in business, both in the United States and abroad, that involve ethical issues affecting individuals and organizations. They are challenged to decide on appropriate ethical positions.

NBA 579 Business Strategy Fall, first half of semester. 1.5 credits. Enrollment limited to second-year MBA students only. J. Suwinski. A well-defined strategy is essential for business success—describing where the business is going, how it is going to get there, and then providing a framework for making decisions along the way. Strategy is the responsibility of top executives of a company/business, and the ability to formulate effective strategy is one of the key skills that distinguishes General Managers from functional managers. This course will focus on the process of effective strategy formulation from the perspective of the general manager of a business unit. This perspective also applies to consultants working for clients on business unit strategy. Correlating the company strategy with business unit strategies will be discussed, as well as tools useful for industry and company analysis. Situational analysis will also be covered. This course will complement the other strategic emphases on understanding and practicing frameworks that are useful in case-based interviews. The course will draw heavily on the instructor's experience developing strategy for numerous businesses at Corning Incorporated. Guest speakers from industry and strategy consulting firms and also from industry will present their approaches to strategy, and the analytical tools they find most effective in working on business strategy. Students will gain experience, via assigned cases, in analyzing business problems/opportunities, using the strategic process to formulate effective business strategies, and in presenting their recommendations in written form and orally in class. A major case write-up and presentation in a mock board environment at the end of the course gives students an opportunity to play the role of strategy consultants working on a real case.

NBA 580 Strategies for Global Competitiveness Spring. 3 credits. A. McAdams. Initially, students explore the role of government in several private-market industrialized nations—Japan, France, Germany, the United Kingdom, and the United States. The impact of government change on the global economy is discussed. The course assesses important factors and implications for multinational corporations. The course will be directed by the instructor, with guest speakers and assigned readings.

NBA 581 Special Topics—Contemporary Development of Southeast Asian Economies Spring. 3 credits. I. Aziz. This course will analyze the patterns and processes of Southeast Asian economic development during the last three decades. The five plus two countries in the region that will be the focus of the course include Thailand, Indonesia, Malaysia, Singapore, the Philippines, Brunei, and Vietnam. The topics will be divided into the following categories: Southeast Asian economic development, regional economic cooperation in Southeast Asia, and the financial crisis of the 1990s. The course will assess important factors and consequences of the region's development patterns and use international comparative analysis to explicate the relative position and uniqueness of the region's performance. Evaluation will be based equally on the student's participation in class discussions and debates and on a term paper.

NBA 584 International Competitive Strategy Fall and spring, first half of semester. 1.5 credits. Letter/S-U optional grading. This course can be used to fulfill the strategy requirement. J. Katz. Focuses on the development of competitive strategies in the global environment—including the identification of internationally relevant strengths and weaknesses, the movement and use of resources to gain competitive advantage, and strategies to confront competitors, both domestic and multinational.

NBA 585 Cross-National Management Fall, second half of semester. 1.5 credits. Letter/S-U optional grading. J. Katz. Focuses on the differences in managerial style across countries and the development of skills to deal with these differences. Most of the material will be applicable to all countries, though two specific countries will be highlighted each semester.

NBA 586 Global Management Structures Spring, second half of semester. 1.5 credits. Prerequisites: the new version of NBA 564. Letter/S-U optional grading. J. Katz. Focuses on the control, communication, and coordination systems within multinational corporations. Design and development of appropriate systems, to ensure enactment of corporate strategy will be addressed.

NBA 587 International Mergers & Acquisitions Spring. 1.5 credits. J. Hanks. This course covers issues relating to mergers and acquisitions in an international context. Topics include business due diligence, pricing and negotiation, and other important topics from the global perspective. The course will use both lecture and case material. Students will be evaluated on the basis of group and individual written assignments. The instructor for the course, Arthur Rosenbloom, is a partner and chairman of the board of Patricof & Co. Capital Corp, a New York City-based firm specializing in mergers and acquisitions, private placements, and valuations of going concern businesses for tax and corporate purposes. Patricof has offices in New York and Palo Alto, affiliates in London, Paris, Zurich, Madrid, and Munich and is part of Apax Partners, which includes Patricof & Co. Ventures, Inc., one of the world's largest international venture capital firms. He holds a bachelor's degree from Bucknell University, a master's degree from Columbia University, and a law degree from Cornell. He has taught a similar course at Columbia.

Beginning with the third meeting of the course, Mr. Rosenbloom will conduct the course via a video-teleconferencing link from New York City.
NBA 590 Managing in Developing Countries
Fall, first half of semester. 1.5 credits. Letter/S-U optional grading. J. Katz.
This class centers on the unique features of industrialized and newly industrializing countries as hosts for multinational business operations. In the first part of the course each class is spent discussing one or two cases. Topics include environmental variation and how to deal with it and concentrated national power structures and their management. We cover the developing countries spread throughout the world. Students are responsible for providing in-class updates on the countries discussed. Grading is based on the country update presentation, a final case write-up, and class participation.

NBA 592 Experience in International Management
Spring. 1.5 credits. S-U grades only. J. Katz.
The objective of this course is to combine classroom sessions and international experience to increase awareness of business environments outside the United States. NOTE: Participation in a faculty approved study trip is required to complete this course (fee charged). On trips, students will visit local businesses, subsidiaries of foreign multinational corporations, government officials, local business school students, etc. Students must attend two pre-trip meetings (1 1/4 hours each) and two Saturday meetings during spring semester (2 1/2 hours each). Those meetings will be used to present information on international business conditions, international business structures, management styles, and also, to develop cross-cultural skills. A final paper, integrating the material learned in the classroom with their experiences, will be required.

Management Information Systems

NBA 600 Database Management
3 credits. L. Orman.
Database technology is the principal tool of bookkeeping, reporting, and auditing. It is also the primary infrastructure technology for all information systems. Not only is it critical to managing the information flow in modern organizations, but also in building systems to support managerial decisions. The course introduces the basic principles of management, design, and use of databases in organizations. Topics include: data storage and organization, efficiency and optimization, retrieval and end-user languages, reporting and auditing, and the impact on the organization. Students design, create and use databases using various database management systems.

NBA 601 Electronic Commerce
Electronic commerce is the use of information technology in conducting economic transactions and managing businesses over computer networks. It is a phenomenon that has captured the business attention because of its wide-ranging implications for businesses, markets, public institutions, and the general public. Electronic commerce involves a wide variety of cooperating technologies such as communications, networks, databases, expert systems, and multimedia. It also affects a wide variety of managerial issues. Electronic commerce created a new emphasis on information technologies and systems in management. It led to the development of new technologies and new combinations of existing technologies. On occasion, it radically altered business practices and the role of management. The students in this course will learn to conduct economic transactions and manage businesses on the Internet. All major technical and managerial issues will be covered through computer exercises on the Internet, and case studies and examples of businesses on the Internet.

NBA 612 Imaging and the Electronic Age
Fall. 3 credits. D. Greenberg.
The advances of computer graphics, computer processing power, network bandwidths, and video compression technologies are forcing the merger of the telephone, television, and computer industries. The influence of these technologies has created paradigm shifts that will drastically change the way we communicate, how we are educated, the way we work, design, and in essence, how we will live in the next century. We are just beginning to fathom how these changes will influence our modus operandi and greatly modify our traditional patterns of behavior, both personal and organizational. Clearly, business and industry must learn to understand the implications of the advanced technology. This course will start by presenting historical technological advances that created major paradigm shifts for communications. Advances in computer technology emphasizing the fundamentals behind the increases in processing power, video and computer graphics capabilities, and network transmission will be presented. The latter half of the course will cover the effect of these scientific advances on many discipline-specific areas including photography, the film industry, the entertainment and animation industry, television broadcasting, publishing, as well as the computer industry itself. Sessions will be devoted to the social and legal issues rising from the rapid advances in electronic communication. In attempting to predict the disruptive changes of the future, it is best to understand the disruptive technologies. Thus, students with technology or science background are preferred. Although no computer programming will be required, a working knowledge of computers is necessary. The course will be especially tailored to a business school and industrial concerns and will have interactive live demonstrations at the state-of-the-art laboratory of the Program of Computer Graphics. No prior knowledge in computer science is required.

NBA 614 Managing in the Information Age
Fall, first half of semester. 1.5 credits. A. McAdams.
In this course we explore a topic that is just beginning to emerge: the implications of the explosion of the Internet and interactive multimedia on the way managers think and manage. We examine the origins of the Internet and some of the forces that have led to its rapid development, noting along the way, why and how it has "blindsided" us as Andy Grove of Intel and Bill Gates of Microsoft candidly stated. We then look at how information is being used today in pioneering applications in organizations of various kinds based, in part, on original case studies and observations. Throughout the semester the student will be asked to identity new and innovative use of modern information technologies. The course itself will evolve—even in real-time—with the developments in the field.

NBA 615 Information Technology to Manage Business
Fall. 1.5 credits (variable). S-U grades only. A. McAdams.
This course will rely on visiting speakers from several technology-based firms. The speakers will address how to manage the information technology function as a business and how to use IT to deal with business problems. Speakers will come from hardware companies, software companies, and other organizations dealing with large issues of managing the information resources. There will be weekly assignments, with student groups interacting with speakers, and a short paper at the end of the course. The course will meet approximately 10 times during the semester for up to two hours. HP, Intel, and other firms have indicated an interest in being involved.

Marketing

NBA 520 Pricing and Strategy
Spring, second half of semester. 3 credits. Prerequisite: NCC 502, V. Rao.
This course extends material introduced in the core microeconomics course, where the focus is on pricing decisions. The course is taught very much like the core microeconomics course; i.e., the course consists mostly of lectures and problem sets that use the ideas contained in the lectures. The difference is that some understanding of calculus is required. The grading for the course is based on a midterm exam, a final exam, and a paper. Specific topics covered include price discrimination, peak-load pricing, product line pricing, and pricing when information is asymmetric.

NBA 521 Marketing Research
Fall. 3 credits. Prerequisites: NCC 501 and NCC 503, or the equivalent. V. Rao.
This course deals with marketing research as a critical support function in corporations. The broad objective is to develop a fundamental understanding of marketing research methods employed by better managed firms or proposed by leading academicians. The course is aimed at the manager, the ultimate user of marketing information, who is responsible for the scope and direction of research activities involved in obtaining, analyzing, and interpreting results of research. The course will cover the use of secondary sources of marketing information as well as designing studies for collecting primary data. Students will be exposed to up-to-date methods in research design, qualitative research, measurement, data collection, and analysis. The emphasis will be on evaluating research methods and on interpretation and use of results rather than on mathematical derivations. Students will also be exposed to the practical side of marketing research through case studies, problem sets, and projects.

NBA 522 Marketing Communications
Fall. 1.5 credits. Prerequisite: NCC 503 (marketing core). D. Stayman.
The course is designed to give students an understanding of the advertising and promotion management process. It covers the components of a successful advertising campaign and helps students develop an
appreciation of the issues involved in advertising planning and decision making. They also learn how recent social-science findings and theory can facilitate advertising management.

**NBA 622 Marketing Strategy**
Fall. 3 credits. Prerequisite: NCC 503 (Marketing core). V. Rao.
The course balances theoretical and practical approaches to the development and evaluation of marketing strategies for multiproduct firms. It considers various environmental opportunities and constraints in developing and evaluating integrated marketing strategies for new and established products and services. Recent research results are applied to decisions on product-market boundary definition, resource allocation, product positioning, and competitive reactions. It includes selected current topics such as brand equity, acquisitions, and lead-user analyses. Students use case studies extensively to develop skills in strategy analysis and to enhance skills in assessing external threats and opportunities. They employ computer-assisted market strategy simulations to evaluate the effects of competing strategies. Guest speakers from industry provide a view of the operational aspects of marketing strategy.

**NBA 623 Customer-Based New Product Development**
Fall, spring, first half of semester. 1.5 credits. Prerequisites: NCC 501 and NCC 503.
The successful introduction of new products requires careful planning and systematic screening and testing. This course covers models and methods useful to managers in the development (e.g., specification of products and services) and marketing of new products. Heavy emphasis is placed on the measurement of consumer preferences. Students are required to compose a group project, consisting of a measurement instrument, data collection (from at least 30 respondents) and data analysis, for a self-chosen product category. The method of instruction combines simulations, lectures and discussion of cases and articles. Performance is evaluated primarily based on exams and the group project.

**NBA 625 International Marketing**
Spring, second half of semester. 1.5 credits. Letter/S-U optional grading. Recommended: NCC 503; J. Katz.
Designed to train students to take a domestic product and expand it into international markets successfully. Market selection, international market research issues, and international marketing strategies are all discussed. The group project (actually submitted in three parts throughout the term) requires that students choose some product and develop a plan for taking it abroad. Each class includes cases, therefore, class preparation is essential. Grading is based on the term project, the final, and class participation. Core marketing provides a useful background, but is not a prerequisite.

**NBA 626 Consumer Behavior**
Spring. 3 credits. A. Isen.
Topics include factors that influence response to advertising, customer satisfaction, and the basic methodologies for understanding consumer behavior.

**NBA 627 Affect, Brand Equity, and Internet Marketing**
Spring. 3 credits. A. Isen.
The course will focus on concepts central to brand equity, including brand association, brand perceptions, brand loyalty, relationship marketing, and brand extensions and revitalization with a special focus on the role of affect (feelings) in decision-making and thought processes that are fundamental to these and other concepts central to brand equity establishment, maintenance, and management. Additionally, it will cover the emerging area of internet marketing from the consumer perspective relative to brand equity, including consumer response to the internet as a medium and marketing channel.

**NBA 630 Policies for Marketing Channels**
Spring. 3 credits. Prerequisite: NCC 503. V. Kadiyali.
Marketers are analyzed as a chain of interdependent and interlocking organizations that produce and deliver goods and services to various types of consumers. We will look at various aspects of these relationships, such as efficiency, equity, competitiveness and government intervention. Instruction consists of lectures, cases, and guest speakers. Evaluation is based on cases and a final project (presentation and write-up) and on class participation.

**NBA 631 MARKSTRAT Simulation**
Fall, second half of semester. 1.5 credits. Prerequisite: NCC 503; V. Rao.
MARKSTRAT Simulation offers an opportunity for students to make various marketing strategy decisions in a realistic, dynamic, competitive environment. Students, working in teams, will model a part of a firm's product for several years (periods). They will learn how to make long term decisions (introduction of new products) and will deal with various cross-functional issues related to marketing management (e.g., research and development, product design, and budgeting). A major portion of the course will be devoted to an understanding of the basic concepts (e.g., competitive positioning, resource allocation, market segmentation and product design) on which the game is based and to a discussion of suitable methods of analysis of data generated in the game. Students will develop an initial strategy statement and strategic marketing plan for their firm. This game has become quite popular in various schools of management that are perceived to be competitive to the Johnson School. Students will develop an initial strategy statement and strategic marketing plan for their firm.

**NBA 633 Internet Marketing**
Spring, first half of semester. 1.5 credits. S-U grades only. V. Rao, D. Stayman, V. Kadiyali.
This class explores the effect of the Internet on marketing. The topics include an overview of the online industry, analysis of models of the Internet, advertising and promotions on the Internet, marketing research on the Internet, loyalty programs for Internet marketing, and disintermediation or channel conflict resulting from Internet distribution. The course will comprise industry speakers from Cendant, CSC, Netcentives, H-P, 1st USA, Catalina marketing, and Bausch and Lomb and others. Course requirements include write-ups on a subset of speakers, and a final report and presentation on an Internet marketing issue of your choice. NBA 638 is restricted to MBA I's because the same information is available for MBA I's in the strategy core.

**NBA 635 Marketing Models**
Fall. 3 credits. Prerequisite: NCC 503. V. Kadiyali.
Students learn how to use mathematical models to solve marketing problems. The objective is to develop students' skills in evaluating marketing models and implementing them in management practice.

**NBA 637 Direct Marketing**
1.5 credits. Prerequisite: NCC 503. Marketing Management, or equivalent. V. Rao, D. Stayman.
The objective of this short course is to expose MBA students to selected contemporary issues in the area of direct marketing. In addition to providing an overview of the direct marketing industry and potential trends, in database technology, the course will address major strategic and tactical issues in the management of direct marketing. The discussion will mainly consider the perspective of a marketer interested in employing the opportunities in direct marketing as an integral element of the marketing mix for a product/service. It will also address appropriate ethical concerns with direct marketing. To acquire a flavor of various practices in the field, students will visit one or two direct marketing firms in New York City or its vicinity toward the end of the course.

**NBA 638 Analysis of Competitive Decision Making**
Spring. 3 credits. Prerequisite: NCC 502 (Microeconomics core course). V. Kadiyali.
This course brings methods of microeconomics analysis to competitive decision making. Specifically, we will address issues relating to optimal competitive decisions for a firm interacting with current and potential rivals. We discuss how firms can, by their choice of appropriate decisions, best signal to rivals their intentions and their degree of commitment to them. We also look at sustainability, flexibility, and correction of decision choices. Game theory perspectives are used to understand these concepts. The dimensions of competitive strategy that we look at include product proliferation, R&D and patent policies, choice of compatibility with existing products, bundling of products, investing in capacity, vertical integration, choice of channels of distribution partners, pricing, and promotions. We also discuss problems caused in the optimal choice and implementation of firm strategies when information is imperfect. Specifically, we look at issues of moral hazard and adverse selection, and how these issues affect firm choices of strategies (e.g., pricing, choice of channel partners, etc.). Instruction includes lectures and cases. Grading is based on cases, class participation, and a final project. This course can be used to fulfill the strategy requirement.

**NBA 639 Data-Driven Marketing**
Fall. 3 credits.
Data-Driven Marketing will introduce the future brand manager to the use of data management and consumer analytics to develop insights and construct pricing and promotional strategies. The course will introduce new sources of data available on product purchases and consumers' reactions to the marketing environment. The course focuses on the practical use of data available on product purchases and consumers' reactions to the marketing environment. The course will cover panel data on
Operations Management

NBA 641 Logistics and Manufacturing Strategy
Spring. 3 credits. Letter/S/U optional grading. Prerequisite: NCC 508, OR&IE 410, or permission of the instructor. L. Thomas.

The course is about supply-chain integration, which involves strategic management of the value chain, from materials to customer. Students discuss operations strategy issues that are important to both manufacturing and service. The course emphasizes written and oral communication skills. About a fourth of the classes are spent on case studies, with small groups presenting their analyses of them. There is one mid-term examination, but the majority of the grade is evaluated based on projects and class participation. There is an option of replacing some assignments with a "live case," a project with a local company.

NBA 644 Quality Management
Fall. 3 credits. Prerequisite: NCC 508 or permission of the instructor. L. Robinson.

This course centers on developing a major product and improvement of products and processes. The topics to be covered within this survey course include: (1) principles of process improvement (the formal seven-step improvement process: define, measure, analyze, improve, control); (2) process monitoring (statistical process control, process capability, Motorola's "6 sigma" program); (3) product design (the Kano model, customer satisfaction and delight, issues in survey design, quality function deployment (QFD), design and manufacturability); (4) product delivery and support (quality in service and administration, satisfaction guarantees, and customer loyalty); (5) process design and improvement (kaizen vs. business process reengineering, benchmarking, design of experiments); and (6) issues in implementing quality improvements. The structure of the course will emphasize "hands-on" applications of the principles and learning's from the course. The course and local plant tour will be supplemented with Harvard cases, several exercises (e.g., assuming the role of a Baldwin Examiner, finding and correcting the root causes of problems in a process), and homework assignments (to allow you to work through quantitative problems without any time pressure). A sizeable component of this course will be a group project, which applies the formal quality improvement process at a local firm.

NBA 645 Product Development Practicum
Spring. 3 credits. J. Thomas.

This course centers on developing a major new product for firms. It will involve training in creativity by a consulting firm and readings in product development. This course will provide the opportunity to learn from many different sources, consultants, faculty, and executives.

NBA 646 Managing Knowledge-Based Services
Spring. 3 credits. Prerequisite: NCC 508.

This course is designed for students who plan to manage technical and high-skill service enterprises. We discuss the pros and cons of the "service" and examine the unique aspects of producing service products, focusing on high-end, high-value-added services. Although some consumer service examples will be included, the primary emphasis is on corporate and industrial services that occur between large firms, including technical, financial, and expert services. We will explore the use of traditional operations management tools in the context of service industries, as well as concepts from other disciplines such as sociology, psychology, and economics. In addition to managing the efficient provision of services, we will address service design, marketing, evaluation, and innovation along with a combination of case analyses, discussion, student projects and presentations, guest lectures, and readings.

NBA 651 Employment Relations
Spring. 1 credit.

The course will be offered over two full days and will consist of three parts: (1) an overview of U.S. labor law and its effect on today's management, (2) a case analysis of what can lead a workforce to seek union representation to be able to bargain collectively over wages and conditions of employment, and (3) an examination of union-management productivity partnership.

NBA 652 Integrating Product Design, Marketing, and Manufacturing
Spring. 1 credit. J. Bradley, J. Thomas.

The course will make the necessity of integrating product design, marketing, and manufacturing for a firm's success apparent. Managerial tools and useful concepts that facilitate this integration will be introduced. Students will have the opportunity, through homework assignments or projects, to make a more in-depth foray into the course topics.

Organizational Behavior

NBA 663 Managerial Decision Making
Fall. 3 credits. J. Thomas.

This course presents practical concepts from the behavioral sciences that can serve as guides to managerial action. Lectures, cases, and exercises are used to acquaint students with new perspectives on decision making, critical thinking, problem solving, and group processes. Taken together, these perspectives offer a trouble-shooter's guide to the uncertainty, complexity, and conflict in the business world.

NBA 666 Judgment and Negotiations
Fall. Spring. 3 credits. R. O'Connor.

Judgment is the art and science of transforming perception into thought or opinion. Negotiation is the art and science of securing agreements between two or more interdependent parties. The purpose of this course is to understand the theory and processes of negotiation as it is practiced in a variety of settings. This course is designed to comple-
DOCTORAL SEMINARS

NRE 502 Doctoral Seminar in Marketing
3 credits. A. Ainslie
This class is intended to introduce students to empirical research in marketing. There will be a strong focus on the historical development of econometric specifications of consumer choice models (with an emphasis on heterogeneity and issues of dynamic consumption patterns), and Bayesian methods in marketing. However, by the very nature of the class, the content will to some extent be driven by the participants in the course. Teaching will be interactive, and each participant will be expected to present one of the papers studied to the rest of the class. Furthermore, each participant will be expected to replicate the results of one of the papers, requiring the participant to write the necessary code and briefly discuss their findings. Enrollment is by consent of the instructor. Students are required to have taken a graduate level course in either mathematical statistics or econometrics, although this restriction may be waived in special cases. Students are welcome to sit in on parts of the class; for example, the section on Bayesian Methods will be broad enough that students from other areas may find the presentation useful.

NRE 504 Doctoral Seminar in Accounting
3 credits. Staff
The seminar provides a rigorous and integrative exposure to those aspects of the literature in accounting, behavioral economics, and psychology that are related to questions of accounting and auditing theory and research. This course is for Ph.D. students only.

NRE 507 Doctoral Seminar: Affect and Cognition
Fall. 3 credits. Prerequisites: courses in statistics and experimental design. A. Isen. The course examines research on some of the ways affect influences such thought processes as memory, decision making (including risk taking), and problem solving (including creative problem solving). Applied topics relevant to management concerns (for example, organizational behavior and consumer behavior) as well as other theoretical and applied topics (among them medical decision making, social interaction, self-concept, and cognitive and affective development) are considered, depending on student interests.

NRE 509 Doctoral Seminar in Research Methods
3 credits. Staff
This course concerns the fundamentals of scientific research: theory, research design, methods, and criticism. It is designed for doctoral students who wish to undertake research publishable in scholarly journals. Little or no scientific training is assumed. Statistics will not be emphasized; however, familiarity with elementary statistical concepts and inference will be useful. The course will cover: (1) the principles of theory building; (2) the pros and cons of various general research designs (laboratory and field experiments, surveys, interviews, participant observation, archival studies, simulations, and formal mathematical models); and (3) the structure of research papers and the review process.

NRE 510 Ethnography in Organizations
3 credits. B. Nelsen
This course is a comprehensive introduction to the philosophy and practice of fieldwork in an ethnographic tradition, with particular emphasis on conducting fieldwork in organizational settings. The course has four primary objectives: (1) to acquaint students with various philosophies and techniques for doing field research in organizational settings; (2) to provide students with an opportunity to engage in field research; (3) to provide students with an opportunity to develop unique insights into an organizational setting(s) and to contribute to the theoretical understanding of social phenomena in their field of study; (4) to provide a climate of social support throughout the student's field experience.

NRE 511 Doctoral Seminar in Finance—Corporate Finance
1.5 credits. Staff
This course will cover topics in corporate finance and empirical asset pricing.

NRE 513 Doctoral Seminar in Finance—Market Microstructure
3 credits. Staff
The course examines recent research in market microstructure, particularly as it relates to theoretical issues. Topics covered include asymmetric information in securities markets, market behavior, and market structure.

NRE 514 Doctoral Seminar in Finance—Asset Pricing Theory
1.5 credits. Permission of instructor required. Staff
This course will cover asset pricing theory as based on either economic equilibrium or the absence of arbitrage. The method of instruction is primarily presentations given by the students on important papers. The presentation and the final exam each comprise about half the grade.

NRE 515 Doctoral Seminar in Behavioral Decision Research
Spring. 3 credits. J. Russo
This seminar focuses on decision making. The first topic is competing paradigms for research in decision making. A central question of this topic is, "Which paradigms have been most successful or show promise in being most productive in the future?" Other topics will be guided by the interest of participants. They include connectionist approaches, dynamical systems, the interpretation (and distortion) of

Nesheim, John L., MBA, Cornell U. Visiting Lecturer, President, Aladdin Systems, Inc.
Perez, Pedro D., Ph.D., Rochester Polytechnic Inst. Visiting Asst. Prof.
The Division of Nutritional Sciences offers three programs: a B.S. degree, an undergraduate major in Nutrition, Food, and Agriculture (NFA), and the College of Human Ecology: Human Biology, Health, and Society (HBHS).

Undergraduate students in these three programs complete the requirements of their colleges as well as the courses required by the program of their specific interests. The NS, NFA, and HBHS programs all require a rigorous sequence of courses in chemistry and biology; including introductory chemistry and biology, organic chemistry, biochemistry, and physiology. A minimum competency in college algebra is required with an additional math and/or statistics requirement for some programs and career paths. Students in the HBHS major also complete a course in physics and two additional courses in advanced biology.

All students complete the introductory course, Nutrition and Health: Concepts and Controversies (NS 115). The NS and NFA Programs require the completion of four other core courses: Social Science Perspectives on Food and Nutrition (NS 245), Nutritional and Physicochemical Aspects of Foods (NS 345), Physiological and Biochemical Bases of Nutrition (NS 331), and Methods in Nutritional Sciences (NS 332). Students in these programs also must select a minimum of nine credits in advanced courses in the nutritional sciences.

The HBHS major requires a minimum of six credits from courses that integrate biology and the social sciences as they examine health issues. In addition, students must also complete nine credits of advanced electives in courses focused on human biology, health, and society.

The Division also offers the Program of Study in Nutrition for biological sciences majors who may be enrolled in the College of Agriculture and Life Sciences or College of Arts and Sciences. Students interested in this program should consult the description in the Biological Sciences section of the catalog.

Students in the Nutrition, Food, and Agriculture (NFA) College of Agriculture and Life Sciences: this program is for students who want strong training in human nutrition combined with supportive course work in the agriculture and the life sciences. Strong preparation in biology, chemistry, and math is required. Students in this program prepare themselves for careers in counseling, clinical nutrition, dietetics, nutritional biochemistry, community nutrition, and nutrition education.

The Division is affiliated with both the College of Human Ecology and the College of Agriculture and Life Sciences. The undergraduate program in Nutritional Sciences is offered through the College of Human Ecology. An undergraduate program, Nutrition, Food, and Agriculture, is offered in the College of Agriculture and Life Sciences. The undergraduate program in Human Biology, Health, and Society is offered through the College of Human Ecology. A program of study in nutrition for biological science majors is offered in collaboration with the undergraduate program in biology.

Graduate study in the Field of Nutrition, is administered by faculty members throughout the university.

Faculty members of the division work in Savage Hall, Kinzeltberg Hall, and Martha Van Rensselaer Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. The division’s Learning Resource Center in Martha Van Rensselaer Hall is used by students for individual study and for small group discussions. The Learning Resource Center contains computers and printed and audiovisual resources which give students access to specialized software. Savage Hall also has a graduate reading room.

The curriculum

Undergraduate students in these three programs complete the requirements of their colleges as well as the courses required by the program of their specific interests.

The NS, NFA, and HBHS programs all require a rigorous sequence of courses in chemistry and biology; including introductory chemistry and biology, organic chemistry, biochemistry, and physiology. A minimum competency in college algebra is required with an additional math and/or statistics requirement for some programs and career paths. Students in the

Career options and course planning

Requirements for the three programs are the minimum set of courses necessary for a bachelor’s degree in these fields. Students should supplement their requirements with elective courses and other learning experiences that will prepare them for entry-level jobs or advanced study in their field(s) of interest. A summary of suggested electives for different career interests follows.

Medicine and Other Health Careers: Recommended courses for pre-med students include calculus and two terms of physics. Specific information about medical school admissions requirements can be obtained from the university’s Health Careers Office, 213 Barnes Hall. Students interested in other health careers should acquire specific information about those requirements.

Courses of interest may include those related to the biological and social determinants of health; human growth, development, and behavior through the life course; interpersonal communications; advanced biology; sociology; psychology; and ethics.
Dietetics: Students who wish to work in the areas of clinical nutrition, nutrition counseling, sports nutrition, community nutrition, or food and nutrition management should complete the academic requirements for The American Dietetic Association (ADA). Courses in foods, nutrition and disease, microbiology, management, statistics, and nutritional care are added to the courses required for the nutrition programs. For more information about meeting ADA requirements see Anne Kendall, S5 MVR.

Exercise, Nutrition, and Health Promotion: Students should complete a course in physiology and a course in anatomy after introductory biology. Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in kinesiology, exercise physiology, and biomechanics. Students who wish to apply to graduate schools to study physical therapy should complete a year of introductory physics; a course in statistics; a course in ethics; and three courses in psychology. Students should check the specific requirements of their schools of interest. For information about the Applied Exercise Science Contact the DNS Academic Affairs Office, 309 MVR.

Biomedical Research/Nutritional Biochemistry: Recommended electives include calculus, physics, genetics, advanced biology and chemistry, toxicology, and nutritional sciences courses related to the physiology, biochemistry, and metabolism of different nutrients and disease states.

Public Health and Community Nutrition: Suggested electives include courses in communications, education, human development, policy analysis and management, maternal and child nutrition, geriatric nutrition, nutrition and disease, and food economics.

Nutrition, Food, and Business: Recommended electives include courses in management, marketing, economics, communications, hotel administration, and food science.

Nutrition and Agriculture: Recommended electives include courses in food science, animal science, plant sciences, international agriculture, agricultural economics, biological sciences, and food economics.

International Nutrition: Recommended electives include courses in language, anthropology, agricultural economics, policy, economics, rural sociology, international agriculture, and nutritional sciences related to maternal and child health and problems of developing nations.

Biology and Behavior: Recommended electives include courses in psychology, human development, and neurobiology.

Food, Nutrition, and Health Policy: Recommended electives include courses in economics, sociology, government, policy analysis, and management.

SPECIAL EXPERIENCES
Undergraduates can enhance their experiences by participating in structured field experiences or study abroad. Academic credit can be earned for field experiences in a community agency, health-care facility, or business. The Urban Semester in the College of Human Ecology provides students with an opportunity to study and gain field experience in New York City. All students intending to spend a term off campus in field experience or study abroad must plan their courses well in advance to be sure that all program requirements can be met.

INDEPENDENT STUDY ELECTIVES
Independent study courses (NS 400, 401, 402) can be used to obtain credit for more diverse or intensive experience than the classroom can offer, whether this involves laboratory work, library research, or field study. Any student interested in independent study should obtain the sponsorship of a faculty adviser and the approval of the associate director for academic affairs or consider applying to the honors program.

HONORS PROGRAM
The honors program, leading to a B.S. degree with honors in the College of Human Ecology, or B.S. degree with Distinction in Research in the College of Agriculture, is open to all students. Students with a high GPA and a strong background in nutrition can apply to the honors program. The honors program includes courses in advanced nutritional sciences, such as advanced food science, human nutrition, and public health. Students must complete a minimum of six honors courses in nutritional sciences. The honors program includes a thesis option or honors project. The honors program requires a minimum of 36 credits, with at least 18 credits in nutritional sciences courses.

NONMAJORS
Courses in nutritional sciences can strengthen programs of study in biological sciences, nutrition and dietetics, nutrition and health, and human nutrition. Nonmajors may be an important component of concentrations in community, international and public health nutrition, and animal nutrition. Teaching experience and participation in the graduate student seminar (NS 703) are important aspects of graduate training.

For more information about the graduate program, please write for the brochure. Graduate Study in Nutrition, available from the Director of Graduate Studies, Field of Nutrition, Cornell University, 309 MVR Hall, Ithaca, NY 14853-4401; telephone (607) 255-4410; web site: www.nutrition.cornell.edu/grad.html; e-mail: nutrition_gfr@cornell.edu

GRADUATE PROGRAMS
Graduate study is administered by the Field of Nutrition, a group of faculty members from throughout the university who have a common interest in nutritional problems. In the M.S. and Ph.D. degree programs, students may specialize in molecular and biochemical nutrition, human or animal nutrition, community nutrition, or international nutrition. Research is emphasized in all graduate programs. Field experience may be an important component of concentrations in community, international and public health nutrition, and animal nutrition. Teaching experience and participation in the graduate student seminar (NS 703) are important aspects of graduate training.

The specialties and interests represented by faculty in the Field of Nutrition provide almost unlimited opportunity for graduate study. Cornell's extensive laboratory and agricultural facilities ensure that students interested in experimental nutrition have exceptional choices and thorough training. As the largest faculty in the country devoted to the study of human nutrition, the field includes specialists in biochemical, metabolic, epidemiological, and sociocultural research. Opportunities to work with community and federal agencies are available to students interested in applied nutrition and public policy. Students in international nutrition are expected to conduct their thesis research abroad.

For more information about the graduate program, please write for the brochure. Graduate Study in Nutrition, available from the Director of Graduate Studies, Field of Nutrition, Cornell University, 309 MVR Hall, Ithaca, NY 14853-4401; telephone (607) 255-4410; web site: www.nutrition.cornell.edu/grad.html; e-mail: nutrition_gfr@cornell.edu

COURSES

**NS 115 Nutrition and Health: Concepts and Controversies**
Fall. 3 credits. S-U grades only. MWF 1:25. D. Levitsky.

The course will discuss the facts and fallacies concerning the role that nutrition, exercise, and other health behaviors play in preventing disease, maintaining good health, and maximizing athletic performance. Emphasis is on understanding the biological mechanisms through which good nutrition and regular exercise affect psychological and physical health.

**NS 116 Personalized Concepts and Controversies**
Fall. 1 credit. Corequisite: NS 115. S-U only. Limited to freshmen and transfer students, 10 per section. TBA. E. West.

This course provides students enrolled in NS 115 individualized assistance in many skills including using computers to analyze diets, finding and using scientific references, understanding and criticizing scientific articles, and reviewing material presented in lectures.

**NS 120 Nutrition and Health: Issues, Outlooks, and Opportunities**
Spring. 1 credit. S-U grades only. Limited to 120 freshmen, sophomores, and juniors, others by permission of instructor. W. E. Weisbrod.

A course for students interested in exploring careers in the broad fields of food, nutrition, and health.
and health. Experts representing different areas will discuss their work, focusing on current issues and trends as well as their requisite knowledge and skills. This course describes the many disciplines that are drawn upon in addressing human problems related to food, diet, and health. It also explores the related intellectual and career opportunities. This is not an introductory nutrition course for nonmajors.

[N.S. 262 Nutrients and Cells
The course will focus on the relationships of the cell with the environment. Examples from three general areas will be considered: (1) Mechanisms of uptake of nutrients by bacterial and by mammalian cells. (2) Intracellular outcomes of nutritional stimuli: effects on metabolism and gene expression, toxicity. (3) Pathways of neutralization: detoxification, secretion, DNA repair.]

[N.S. 275 Human Biology and Evolution
(also Biological Sciences 275 and Anthropology 275)
Fall. S-U grades optional, with permission of instructor. S-U grades optional. M. C. Mateo. See BIO SCI 275 for course description.

[N.S. 300 Special Studies for Undergraduates
Fall or spring. Prerequisites: permission of instructor. S-U grades optional. DNS faculty.
Special arrangements to establish equivalency for courses not transferred from a previous major or institution. Students prepare a description of the study they want to undertake on a form available from the College Registrar's Office. The form, signed by both the instructor directing the study and the associate director for academic affairs, is filed at course registration or during the change-of- registration period.

[N.S. 306 Nutritional Problems of Developing Nations
Spring. 3 credits. Prerequisites: NS 115. S-U grades optional. M. C. Latham.
The course is designed for undergraduates interested in the nutritional problems of developing countries. Attention is given to the causes of hunger and malnutrition, the epidemiology of the major nutritional problems afflicting poor nations, the functional consequences of these problems on individuals and societies, and the types of programs that can be implemented to improve health and nutrition.]

[N.S. 315 Obesity and the Regulation of Body Weight (also Psychology 613)
This course is a multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, genetic factors, role of activity and energy metabolism, psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.]

[N.S. 320 Introduction to Human Biochemistry
Fall. 4 credits. Prerequisites: one year college biology; one year college general chemistry; and CHEM 257 or 357-358, or permission of the instructor. S-U grades optional. M W F 10:10, sec T1 12:25. W. Arntz.
The principles of biochemistry are presented within the context of human health and disease. Metabolism of carbohydrates, lipids, proteins, and selected micro-nutrients is taught from a perspective that emphasizes their role in supporting the structure and physiological functions of the major organs of the body, including blood. The concepts of enzyme catalysis, enzyme regulation, hormone action and bioenergetics are incorporated within this framework. The fundamental concepts of eucaryotic DNA structure, function, and gene expression are covered with reference to their importance in regulating metabolism and the impact of a changing nutrient environment.

[N.S. 331 Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits. Prerequisites: Biological Sciences 330, or 331, or NS 320, or equivalent. S-U grades optional. M. W. F 10:10; disc. W or R. M. Stapanuk.
This course examines the biochemical and physiological bases of human nutritional requirements. The instructors use an integrated approach to cover the digestion and metabolism of the nutrients (carbohydrates, proteins, lipids, vitamins, and minerals), and obesity. Metabolic and chronic diseases that are related to nutrition are discussed throughout the semester. The discussion sections and problem sets provide an opportunity to examine in greater depth selected topics from lecture.

[N.S. 332 Methods in Nutritional Sciences
Laboratory introduction to principles and analytical techniques of nutritional research. Emphasis is on analytical concepts and skills required to determine nutrient function and nutritional status of individuals. Topics include methods of nutrient, metabolite, and enzyme analysis in body fluids, and methods for assessing individual food intake and nutritional status.]

[N.S. 341 Human Anatomy and Physiology
Spring. 4 credits. Letter grade only. Prerequisites: college biology; NS 115 recommended. Laboratory prerequisite required in 309 MVR during preregistration. Limit 120. Lec. M W F 12:20; lab W or R or F, 9:05-11:00 or 2:30-4:25. V. Uttermehl.
Introduction to human anatomy and physiology with particular emphasis on aspects of relevance to the nutrition sciences and medicine. All major organ systems will be covered. Laboratories will emphasize location, recognition, and description of anatomical structures. Testing of laboratory procedures will focus on the tests with nutritional and medical relevance.

[N.S. 345 Nutritional and Physicochemical Aspects of Food
Spring. 3 credits. Prerequisite: college course in organic chemistry or biochemistry or NS 320, S-U grades optional. M W F 10:10, sec T1 12:25. B. Lewis, B. Parker.
A study of the nutritional, physical, and chemical properties of foods including composition, food structure, enzyme- and nonenzymic phenomena, and processing, preparation aspects. Issues related to food storage.]

NS 200 Vegetarian Nutrition: An Introduction
Fall. 3 credits. S-U grades optional. Prerequisites: NS 115. M W F 11:15. T. C. Campbell.
This introductory course will survey vegetarianism from a variety of nutrition and health considerations. The material to be presented and discussed will primarily include the empirical scientific evidence presented for easy comprehension for students without nutrition training. The course will also consider the historical and sociocultural roots, both ancient and of more recent times, that have led to the growing interest in, and acceptance of, this type of dietary practice. Particular attention will be given to the role of vegetarianism in the prevention and reversal of chronic diseases. Special topics on competitive sport, childhood nutrition, food preparation, and dietary transition will be offered. Internationally known guest speakers, will provide six to eight of the lectures.

NS 222 Maternal and Child Nutrition
Spring. 3 credits. Prerequisites: NS 115 and a college biology course or permission of the instructor. S-U grades optional. Limited to 25 students. Preregistration is required in room 309 MVR Hall. M W F 1:25. C. Garza.
Involves the study of nutritional requirements in pregnancy, lactation, infancy, and childhood through adolescence. Topics include the relationship between maternal diet and pregnancy outcome; analysis of different methods of infant feeding; and nutritional status of pregnant women, children, and adolescents in the United States and in developing countries.

NS 245 Social Science Perspectives on Food and Nutrition
Fall. 3 credits. Prerequisite: NS 115. Letter grade only. T 10:10-11:25. J. Sobal.
Theories, concepts, and methods from the social sciences will be used to examine food, eating, and nutrition. The course will use the food and nutrition system and the food choice process as conceptual models for examining the scope of social aspects of nutrition.

NS 249 Food for Contemporary Living
Fall and spring. 2 credits. Laboratory sections limited to 32 students. Preregistration during course prerequisite required in 309 MVR Hall. Laboratory coat or apron required. Fall T 1:25-4:25; spring T 1:25-4:25 or R 9:05-12:05. A. Kendall.
Emphasizes meal planning for healthy individuals using national nutrition standards; the development of food preparation and presentation skills; the application of sensory evaluation techniques; food science principles as they apply to cooking and ethnic and cultural influences on cuisine.
safety, regulation, and food composition data bases will also be discussed.

**NS 346 Introduction to Physiochemical Aspects of Foods—Laboratory**

Spring. 1 credit. Each section limited to 18 students. Limited to dietetics students in DNS. Prerequisites: NS 345 or concurrent registration. This course will develop the ability to organize complex information in organic chemistry and permit of instruction will vary during course registration (permission-of-instructor forms must be obtained from and returned to 309 MVR). Letter grade only. M 1:05-2:05 or T 9:05-12:05. B. Lewis, B. Parker.

Laboratory exercises designed to illustrate principles related to food quality and ingredient functionality, and to introduce students to the analytical methodology associated with food evaluation.

**NS 347 Human Growth and Development: Biological and Behavioral Interactions (also Human Development 347 and Biology and Society 347)**

Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent. Human Development 115 or Psychology 101 or equivalent. M W F 1:25. Offered alternate years. J. Haas, S. Robertson.

This course assumes that the interrelationships of physical and psychological growth and development in humans, particularly during infancy. Intrinsic and extrinsic causes of variations in growth, including various forms of stimulation, are considered. In addition, the consequences of early growth and its variation for current and subsequent behavioral, psychological, and physical development are examined. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.

**NS 361 Biology of Normal and Abnormal Behavior (also PSYC 361)**

Fall. 3 credits. Prerequisites: Biological Sciences 101-102 and Psychology 101, or permission of the instructor. A fundamental knowledge of biology and psychology is essential. S-U grades optional. Limited to juniors and seniors. M W F 9:05. B. Strupp.

A critical evaluation of biological factors thought to influence behavior and/or cognitive functioning. Biological, psychological, and societal influences will be integrated. Topics include nutrition and behavior, psychiatric disorders, developmental exposure to environmental toxins and abused drugs, biopsychology of learning, memory, intelligence, and related cognitive disorders.

**NS 378 Food, Nutrition, and Service Management**

Fall. 3 credits. Prerequisites: NS 115, NS 247 or permission of instructor. T R 8:40-9:55. M. Kamp.

The course discusses how management principles and theories apply to foodservice operations and nutrition services. The systems concept of organization is utilized. Emphasis is placed on leadership development, decision making/problem solving as it relates to procurement, production, distribution, and quality assurance in food and nutrition services. Menu development projects demonstrate the interrelationships of nutrition, labor, equipment, food costs, and customer satisfaction. Marketing strategies and implementation are discussed. Teamwork and negotiating skills are emphasized.

**NS 380 Integrating Food Systems and Human Nutrition Needs**

Spring. 2 credits. Prerequisites: NS 115 or Food 200 or An Sc 100. Letter grade only. T R 8:40-9:55. G. C. Dubbs.

A student-centered course that uses case studies to examine the link between human nutrition and health issues to those involving systems of food production and distribution. Student teams will investigate new and existing technological options within food systems to address domestic or international human nutrition needs.

**NS 398 Honors in Nutritional Sciences**

Fall. 1 credit. Limited to students admitted to the division honors program. S-U grades optional. T 12:20. M. Kazarinoff.

Research design. Analysis of research papers on selected topics.

**NS 400-401-402-403 Special Studies for Undergraduates**

Fall or spring. Credits to be arranged. S-U grades optional. Division faculty. For advanced independent study by an individual or group of students who want to study a field of nutritional sciences not otherwise provided through course work in the division or elsewhere at the university. Students prepare a description of the study they want to undertake on a form to be signed by the instructor directing the study and the associate director for academic affairs. The form, available from the department office, is filed at course registration or within the change-of-registration period along with an additional slip in 145 MVR, College Registrar Office. To ensure review before the close of the course registration or change-of-registration period, students should submit the special-studies form to the associate director for academic affairs as early as possible.

**NS 400 Directed Readings**

For study that predominantly involves independent reading. Letter grade is possible. S-U grades optional. Division faculty.

**NS 401 Empirical Research**

For study that predominantly involves data collection and analysis or laboratory or studio projects.

**NS 402 Supervised Fieldwork**

For study that involves both responsible participation in a community setting and reflection or discussion on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

**NS 403 Teaching Apprenticeship**

For study that includes assisting faculty with instruction.

**NS 411 Nutrition and Exercise**

This course will acquaint students with the interaction between nutrition, exercise, and athletic performance. Topics will cover the biological, psychological, and sociological aspects of nutrition as it relates to exercise performance. Students will learn nutritional counseling techniques for educating the recreational and professional athlete, coach, and trainer.

**NS 425 Nutrition Communications and Counseling**

Spring. 3-4 credits. Prerequisites: NS 115, NS 245. S-U grades optional. Lec T 11:15. Section T R 9:05-11:00 or F 1:25-3:20. S. Travis.

Students will understand the theoretical basis of effective health promotion communications and develop effective nutrition communication skills through application in a variety of settings. The course will provide hands-on experiences in counseling, educational program development, and oral and written communications.

**NS 431 Mineral Nutrition and Chronic Disease**

Fall. 2 credits. Prerequisites: NS 331, An Sc 410, or permission of instructor. S-U grades optional. T R 11:15. C. McCormick.

We will evaluate the evidence that diet plays a role in osteoporosis and hypertension and whether iron status affects the development of heart disease and cognitive function. A goal of the course is to review the data upon which recommendations for daily nutrient intakes are currently based. Class discussion of key research articles will be conducted and evaluated.

**NS 441 Nutrition and Disease**

Fall. 4 credits. Prerequisites: NS 331 and a human physiology course. S-U grades optional. M W F 10:10; F 8:00.

V. Utermohlen.

Study of the anatomical, physiological, and metabolic abnormalities in acute and chronic illness and the role of nutritional therapy in their prevention and care. Topics covered include: nutritional assessment, nutritional pharmacology, starvation, infection, trauma, cancer, diabetes mellitus, and renal, cardiovascular, pulmonary, skeletal, neurological, liver, and gastrointestinal disorders.

**NS 442 Implementation of Nutrition Care**

Fall. 3 credits. Prerequisites: NS 247, concurrent registration in NS 441 (or equivalent background in either course). S-U grades optional. Lec M W F 9:05.

A. Kendall.

Development of skills necessary to implement nutrition care in clinical settings: nutrition screening, dietary assessment, principles of medical nutrition therapy, menu planning for disease states, the role of other allied health practitioners in assessing nutritional health, and reimbursement and legislation in dietetics practice.

**NS 450 Public Health Nutrition**

Spring. 3 credits. Prerequisites: NS 115, and one course dealing with population-level studies; e.g., NS 245, HDFS 150, PAM 201, PAM 303, RSOC 100, RSOC 200. M W F 11:15. K. Rasmussen, D. Pelletier.

Public health nutrition is the major professional career track for nutritionists outside of dietetics. It deals with efforts to improve the diets and nutritional status of whole populations by working at the community, state, and national level. This course helps prepare students to work in public health nutrition by describing methods used in the assessment of nutrition problems, development of nutrition-related policies, and delivery of health, nutrition, and food assistance programs.
NS 451 Epidemiology and Health of Human Communities
Fall. 3 credits. Prerequisite: one semester of statistics (can be taken concurrently). M W F 1:25. E. Frongillo.
Examinations through a series of case studies, the role of epidemiological investigation in understanding, assessing, and improving the health and nutrition of human communities and populations. Students will read and discuss scientific research and public policy literature on specific topics of current interest. Emphasis is on the conceptualization of epidemiology as an ecological science that studies the interdependence and interaction of humans with their social, cultural, and physical environment. Intended for advanced undergraduates and graduate students with an interest in health, human biology, nutrition, or epidemiology.

NS 475 Molecular Nutrition and Development
This course explores the role of maternal nutrition, maternal genotype, and placentation function in mammalian embryo development. The role of vitamins and nutrients including folic acid, vitamins A and D, iron, and cholesterol in cellular and morphogenetic processes during development are discussed at the molecular level. The course is based on the current primary literature and concentrations on the modern experimental approaches used to address these relationships including mutagenic, transgenic, and field and fetal animal models.

NS 488 Applied Dietetics in Foodservice Systems
Spring. 3 credits. Limited to 27 students. Prerequisites: NS 578, Micro 290. Laboratory prerequisites during course: programming in MS Excel and MS Access or equivalent. M W F 10:10. White lab coat is required. Approximately $25.00 will be needed for special supplies/activities. Rec M 9:05; labs, M or T or W 1:30-6:00. M. Kamp.
Students will gain experience in facility design; equipment selection, use, and care; job analysis and evaluation; human resources planning; management of financial resources; recipe development and volume food production; computer-assisted management; employee training; applied safety and sanitation standards; and will develop other skills required to operate/manage a foodservice program. The application of quality management and food service operations and facility management is stressed. Laboratories will be arranged through Cornell Dining.

NS 498 Honors in Nutritional Sciences
Spring. 1 credit. Limited to students admitted to the division honors program. Students may register in NS 498 concurrently. M or F 2:30. M. Kazazinoff and division faculty.
Juniors (Mondays). Discussion of research opportunities in nutrition and orientation to research facilities. Delination of honors research problems in consultation with faculty mentors. Seniors (Fridays). Workshop sessions on honors thesis and oral presentation preparation.

NS 499 Honors Problem
Fall and spring. Credits to be arranged. Open only to students in the division honors program. M. Kazazinoff and division faculty.
An independent literature, laboratory, or field investigation. Students should plan to spread the work over two or more semesters.

NS 600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. Limited to graduate students recommended by their chair and approved by the instructor. T 9:05. S-U grades optional. Division faculty.
Emphasis on independent advanced work. Experience in research laboratories in the division may be arranged.

NS 601 Proteins and Amino Acids (also Animal Science 601)
Spring. 2 credits. Prerequisites: physiology, biochemistry, and nutrition. Offered alternate years. W F 12:20. R. E. Austic.
The course emphasizes the dynamic aspects of protein digestion and absorption, amino acid transport, and amino acid and nitrogen metabolism and their relationships to the nutritional requirements for amino acids.

NS 602 Lipids (also Bio Sci 619)
Fall. 2 credits. T 11:15. A. Bensadoun.
Advanced course on biochemistry, metabolic, and physiological aspects of lipids, more specifically lipid transport. Topics covered include lipid methodology, structure of plasma lipoproteins, molecular biology and cell biology of apolipoproteins, lipoprotein receptors, lipid transfer factors, lipolytic enzymes, and atherosclerosis.

NS 603 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also An Sc 603)
Fall. 2 credits. Letter grade only. Prerequisites: biochemistry, physiology, and nutrition. T 2:20-4:25. Offered alternate years. X. G. Lei, G. F. Combs, Jr.
The course emphasizes the metabolic roles and environmental impacts of mineral nutrition in animal, human, and food systems. Team-taught lectures include general physiological and pathological aspects of mineral metabolism and specific mechanisms of gene expression, signal transduction, and mineral health disorders associated with individual elements. Methodology and facility of mineral nutrition research is also discussed.

NS 604 The Vitamins (also An Sc 604)
Fall. 2 credits. T 10:10. G. Combs.
Text-based discussion sessions on nutritional aspects of the vitamins, including recent developments in and biological interrelationships with other nutrients and metabolites.

NS 605 Nutritional Biochemistry Colloquium
Fall and spring. 1 credit. S-U grades only. R 12:20. Nutritional Biochemistry faculty.
Nutritional biochemistry is a graduate seminar series that focuses on recent advancements in biochemical nutrition. Weekly presentations are made by faculty, postdocs, and graduate students and are based on their current literature. The presentations are followed by a discussion involving all participants.

NS 607 Nutrition as an Integrating Discipline: Concepts and Paradigms
Fall. 3 credits. Prerequisite: some prior coursework or experience in nutrition, or permission of the instructor. M W F 10:10. M. Kazazinoff, D. Pelletier, and division faculty.
An overview course for beginning graduate students which introduces them to the full breadth of nutritional science disciplines, including quantitative and qualitative sciences. Also suitable for seniors as an integrating course. The course presents concepts and paradigms of molecular biology, biochemistry, clinical nutrition, epidemiology, anthropology, economics, program evaluation, and administration, policy development, and ethics. This course is offered every other semester. Students may register in NS 607 concurrently. A. S-U grades optional. TBA. S. Bloom, S. Dietert.
A study of the functional and behavioral mechanisms of absorption, transport, metabolism, and excretion of drugs, carcinogens, and toxicants. Emphasis on oxidative and conjugative pathways of metabolism and of environmental and nutritional factors that influence toxicant metabolism and disposition. Methods of evaluating in vivo and in vitro metabolism are also addressed.

NS 611 Molecular Toxicology (also Toxicology 611)
Spring. 3 credits. Prerequisite: Toxicology 610 and a full-year 400-level course in biochemistry or equivalent. S-U grades optional. TBA. S. Bloom, R. Dietert.
A study of the biochemical mechanisms of absorption, transport, metabolism, and excretion of drugs, carcinogens, and toxicants. Emphasis on oxidative and conjugative pathways of metabolism and of environmental and nutritional factors that influence toxicant metabolism and disposition. Methods of evaluating in vivo and in vitro metabolism are also addressed.

NS 612 Methods of Assessing Physical Growth in Children
Spring. 3 credits. Limited to graduate students and undergraduate students who have permission of the instructor. A previous course in statistics required. S-U grades optional. Lec T 1:25; lab, R 1:25-4:25; disc T 2:15-3:05. Not offered 2000-2001. J. Haas.
A laboratory course to train students in methods and techniques used to assess the physical growth and development of children. The methods explored are those applicable for field, community, and clinical studies and for anthropometric body composition, skeletal age, maturity indicators, physical fitness, and energy expenditure.

NS 614 Topics in Maternal and Child Nutrition
Fall. 3 credits. Prerequisites: NS 331, and 222 or 347, Biological Sciences 311, and permission of instructor. T R 8:30-9:55. Not offered 2000-2001. K. Rasmussen.
An advanced course on the role of nutrition during pregnancy and lactation. The feeding and growth of infants and children in health and disease is considered. Critical evaluation of current literature is emphasized via lecture, discussions, and a term paper.

NS 617 Teaching Seminar
Fall or spring. 0 credit. Limited to division graduate students and students who have permission of the instructor. S-U only. C. Bisogni, D. Way.
Individualized instruction focusing on development of teaching skills for guiding classroom learning in lecture, discussion, and laboratory settings. Preparation of content, presentation, and interaction techniques and evaluative methods are emphasized in relation to the student's specific teaching assignment.
Videotaped simulations provide opportunity for practice and analysis of teaching behaviors.

**NS 618 Teaching Experience**
Fall or spring. 0 credit. Limited to division graduates and students who have permission of instructor. S-U only. C. Bisogni. Designed to provide experience in teaching nutritional sciences by direct involvement in college courses under supervision of a faculty member. The aspects of teaching and the degree of involvement vary, depending on the needs of the course and the experience of the student.

**NS 619 Field of Nutrition Seminar (also Animal Science 619)**
Fall or spring. 0 credit. S-U only. M 4:00. Faculty and guest lecturers. Lectures on current research in nutrition.

**NS 620 Food Carbohydrates (also Food Science 620)**
Spring. 2 credits. Prerequisites: Biological Sciences 330 or equivalent. Letter grades only. T R 10:10. Offered alternate years. Next offered 2001–2002. J. Brady, B. Lewis. A consideration of the chemistry of carbohydrates, including sugars and complex carbohydrates (starches, pectins, hemicelluloses, gums, cellulose, and glycoconjugates). Emphasis is on intrinsic chemistry, functionality in food systems, and changes occurring during food processing and storage.

**NS 626 Special Topics in Food**
Fall. 2 credits. TBA. B. Lewis. Discussion of current research on specific topics related to functional foods and nutraceuticals/phytochemicals.

**NS 630 Anthropometric Assessment**
Spring. 1 credit. Prerequisite: NS 331 or equivalent and permission of the instructor. 5 weeks only. W 1:25-4:25 J. Haas. Topics covered in this lecture/lab course are: biological basis of anthropometry for nutritional status assessment, quality control of anthropometric data, applications to special groups (infants, children, adolescents, pregnant women, and elderly), statistical analysis and presentation of anthropometric data, references standards and interpretation, measurement techniques of anthropometry, and body composition assessment.

**NS 637 Epidemiology of Nutrition**
Spring. 3 credits. Limited to graduate students. Prerequisites: Biometry 601 and concurrent registration in Biometry 602 or NS 641 or equivalent knowledge. Basic knowledge about the nutritional aspects of growth and development and about nutritional biochemistry. TBA. Not offered 2000–2001. J-P. Habicht. This course covers principles of nutritional epidemiology, impact assessment of nutrition intervention programs, and nutritional surveillance. Principles of using nutritional information in decision making are presented. The course shows how the biochemistry and physiology of nutrition can be related to epidemiological assessment and research strategies.

**NS 638 Epidemiology of Nutrition Seminar**
Spring. 3 credits. Reserved for graduate students planning field intervention studies; by permission of instructor. Prerequisite: NS 620. TBA. Not offered 2000–2001. J-P. Habicht. Covers the meta-analysis, design, measurement, and analytic issues involved in developing, implementing, and analyzing studies of field interventions with nutritional impact.

**NS 639 Epidemiology Seminar (also Statistics and Biometry 639)**
Spring. 0–1 credit. Limited to graduate students; others by permission of instructor. Contact P. Cassano 255–7551 for permission and credit information. S-U grades only. M 12:20. P. Cassano. This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

**NS 640 Social Science Theories in Nutrition**
Fall. 3 credits. Limited to 20 graduate students. T R 10:10–12:05. J. Sobal. Social science theories and paradigms from sociology, psychology, anthropology, economics, political science, geography, and history that contribute to understanding food, and nutrition related to poverty and their underlying causes are discussed. Emphasis is placed on programs and policies that can assist poor countries and communities to improve their nutritional and health status.

**NS 641 Nutritional and Public Health Importance of Human Parasitic Infections**
Fall. 2 credits. Prerequisite: permission of instructor. T R 11:15–12:30. M. Latham. Designed for graduate students who want to learn about the important nutritional problems of developing countries. The major forms of malnutrition related to poverty and their underlying causes are discussed. Emphasis is placed on programs and policies that can assist poor countries and communities to improve their nutritional and health status.

**NS 644 Community Nutrition Seminar**
Fall and spring. Non-credit. S-U only. Fall M 11:15, spring M 12:20. A. Gillespie and Cornell Community Nutrition faculty. This seminar, sponsored by the Cornell Community Nutrition Program, bases on research presentations in nutrition education and other areas of community nutrition. Cornell faculty, graduate students, and invited outside speakers present research proposals, results from ongoing research, theoretical bases for research, program evaluations, and discuss current programs and issues in community nutrition. The format varies but always includes discussion by participants.

**NS 646 Seminar in Physicochemical Aspects of Food**
Spring. 1–3 credits. Prerequisite: a college course in organic chemistry or biochemistry. S-U grades optional. T R 1:25–2:40. B. Lewis, B. Parker. An introduction to physicochemical aspects of food, for graduate students who have had limited or no work in this area. The seminar uses the lectures of NS 345 as a basis for supplementary readings and critical review of research on selected topics.

**NS 650 Assessing Food and Nutrition in a Social Context**
Fall. 4 credits. Prerequisite: course in Social Sciences. S-U grades only. T R 1:25–2:40. D. Pelletier, G. Pelto. Food and nutrition problems in developed and developing countries may manifest themselves in biological or functional terms but their causes are ultimately rooted in the socio-political world. This course provides multidisciplinary perspectives and some community experiences needed to assess and analyze the social context of nutrition problems that are relevant to developed and developing countries and to research and practice related to community nutrition as well as nutrition policy.

**NS 651 Food and Nutrition Action in a Social Context**
Spring. 3 credits. Prerequisites: at least 1 course in social sciences; NS 650 strongly recommended. S-U grades only. T R 1:25–2:40. D. Pelletier, G. Pelto. This course builds upon the perspectives developed in NS 650. It provides a framework for combining socio-political considerations and analytical criteria in the planning, implementation, and evaluation of nutrition actions at community and policy levels. Case studies from the United States and developing countries are used extensively for examining a wide range of nutrition actions from the perspective of this integrated framework.

**NS 660 Special Topics in Nutrition**
Fall or spring. 3 credits maximum each term. Registration by permission of the instructor. Division faculty. Designed for students who want to become informed in any specific topic related directly or indirectly to nutrition. The course may include individual student and/or faculty experience in research laboratories, a lecture series on a special topic selected by a professor or a group of students, and/or selected lectures of another course already offered. Topics may be changed so that the course may be repeated for credit.

**NS 680 International Nutrition Problems, Policy, and Practice**
Fall. 2 credits. Prerequisites: graduate student status or permission of instructor. S-U grades optional. M 2:30–4:15. L. Stephenson. Reviews the scientific evidence on the relationships between human nutritional status and common human parasitic infections. Concentrates on malnutrition (protein-energy malnutrition, anemia) in developing countries. The parasitic infections emphasized are malaria, hookworm, ascaris, schistosomiasis, and trichuriasis. Format is lecture-discussion.

**NS 683 Field Studies in International Nutrition**
Spring. 1 credit. Graduate student status or permission of instructor required. Strongly recommended for graduate students doing field research. S-U grades only. Mainly audio-tutorial format. Available as independent study most semesters. TBA. L. Stephenson. Reviews practical considerations in conducting field research in developing countries, including (1) seeking fundings, (2) experimental design issues, (3) choice of procedures, and (4) planning for and carrying out data collection. Also includes how to (a) construct a C.V., (b) write an abstract and prepare a clear 10-minute talk with legible slides (FASEB formation), and (c) when, where, and how to publish research results. Extensive handouts. Lecture/demonstration/discussion.
Topics covered include methodologies for economic policy analysis of time use and food acquisition behavior, the "production" of nutritional outcomes, and the role of price policies. Course readings draw largely on examples from Africa and Asia.

**NS 685 Food and Nutrition Policy (also Agricultural Economics 685)**

Spring. 3 credits. Prerequisites: introductory microeconomics, intermediate statistics (through multiple regression), or instructor's permission. M.W. 2:55-4:10. D. Sahn.

This course examines the role of government policy in alleviating poverty, food insecurity, and malnutrition in developing countries. Topics covered include methodologies for economic policy analysis of time use and food acquisition behavior, the "production" of nutritional outcomes, and the role of price policies and markets. Course readings draw largely on examples from Africa and Asia.

**NS 690 Trace Element and Isotopic Analysis (also Chemistry 628)**

Spring. 3 credits. Primarily for graduate students and advanced undergraduates.

Prerequisites: Chemistry 288 or 590, 302 or Chemistry 208 and Mathematics 112, or permission of instructor. S-U grades optional. T R 11:15. Offered alternate years. Next offered 2001-2002.

J.T. Brenna.

Survey course in modern high precision isotope ratio mass spectrometry (IRMS) techniques and trace/trace methods of analysis. Topics include dual inlet and continuous flow IRMS, thermal ionization MS, inductively coupled plasma MS, atomic absorption spectroscopy, ion and electron microscopies, X-ray and electron spectroscopies, and biological and solid state applications. The first five weeks of CHEM 628/NS 690 focus on IRMS instrumentation and are offered as a separate 1 cr. special topics course (NS660).

**NS 698 International Nutrition Seminar**

This seminar series consists of presentations by Cornell faculty and graduate students, and by invited outside speakers. Speakers cover a range of topics relating to nutritional problems, policy, and programs in the nonindustrialized countries.

**NS 699 Special Topics in International Nutrition**

Fall and spring. 3 credits maximum each term. Registration by permission of instructor. Faculty in International Nutrition Program.

This option is designed for graduate students, mainly those with a concentration in international nutrition, who wish to become familiar with some specific topic related to international nutrition that is not adequately covered in an existing course. It usually consists of tutorial/reading on an agreed topic. Because the topics change, the course may be repeated for credit.

**NS 700 Current Topics in Toxicology (also Toxicology 690)**

Fall or spring. 1–3 credits. S-U grades optional. TBA. Staff.

A discussion of the most current developments in various areas of toxicological research and testing. Faculty and students will participate jointly in evaluating research findings and provide seminars and discussion of such material. For information regarding the topic, instructor, and credit, contact the office of the Graduate Field of Environmental Toxicology.

**NS 702 Seminar in Toxicology (also Toxicology 702)**

Fall or spring. 1 credit. S-U grades only. F 12:20. Staff.

The seminar program covers varied topics in biochemical, genetic, nutritional, veterinary, and regulatory toxicology, ecotoxicology, and environmental chemistry. Included are presentations of basic research studies, fundamental concepts, and research activities involving environmental problems of a toxicological nature. Presentations are given by speakers from Cornell and visitors.

**NS 703 Seminar in Nutritional Sciences**

Fall and spring. 1 credit. S-U grades only. T 12:20 or W 12:20. Division faculty.

Presentations of original articles pertinent to the Nutritional Sciences. Students will learn how to make professional presentations and how to critique the presentations by others. In addition, students will read and learn how to interpret original articles published in a wide variety of journals.

**NS 707 Nutrition as an Integrating Discipline: Evaluation, Criticism, Application**

Fall. 3 credits. Prerequisites: advanced graduate standing and permission of the instructor. 2-hour class period per week plus discussion and workshops. M 1:25-3:20. Not offered 2000-2001. M. Kazarinoff, K. Rasmussen.

The goal of this course is to provide an integrative capstone learning experience for advanced graduate students with majors or minors in nutrition. Groups of students will focus on a series of special problems in nutrition drawn from those currently faced by nutrition professionals. Special problems may involve assuming the role of consultants, expert committee members or peer-reviewers who are charged with answering questions or formulating recommendations related to research, programs, or policies.

**NS 898 Master's Thesis and Research**

Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Division graduate faculty.

**NS 899 Doctoral Thesis and Research**

Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Division graduate faculty.

**Faculty Roster**

Aron, William J., Ph.D., U. of N. Dakota. Prof.
Bensdoudou, Andre, Ph.D., Cornell U. Prof., Nutritional Sciences/Physiology
Bisogno, Carole, Ph.D., Cornell U. Assoc. Prof. and Associate Director for Academic Affairs
Branon, Patsy, Ph.D., Cornell U. Professor and Dean, College of Human Ecology
Brenna, Thomas, Ph.D., Cornell U. Assoc. Prof.
Campbell, T. Colin, Ph.D., Cornell U. Jacob Gould Schurman Professor of Nutritional Biochemistry
Cassano, Patricia, Ph.D., U. of Washington. Asst. Prof.
Chen, Junshi, M.D., Peking Medical College, China. Adjunct Prof.
Combs, Gerald F. Jr., Ph.D. Cornell U. Prof.
Devine, Carol M., Ph.D., Cornell U. Asst. Prof.

**Other Teaching Personnel**

Thorpe, Mary, M.S., Cornell U. Lab Coordinator
West, Eilee, M.S., Cornell U. Teaching and Curriculum Specialist

**Joint Appointees**

Bauman, Dale, Prof., Animal Science/Nutritional Sciences
Miller, Dennis, Prof., Food Science/Nutritional Sciences
Military instruction began at Cornell University in 1868 under the provisions of the Morrill Act of 1862. Since that time, officer education has been highlighted by the construction of Barton Hall in 1914 and the establishment of a formal Reserve Officers Training Corps (ROTC) unit in 1917. The program evolves to keep pace with the latest military changes and emphasizes the development of leadership and managerial skills. Cornell's Officer Education Program has produced many outstanding civilian and military leaders.

The Officer Education Programs prepare students for a commission as an officer in either the United States Army, Navy, Air Force, or Marine Corps. Each service program is headed by a senior military officer who also serves as a full professor on the Cornell faculty.

**MILITARY SCIENCE**

Lieutenant Colonel John M. Keefe, Engineer, United States Army, Professor of Military Science and Commanding Officer, U.S. Army ROTC Instructor Group

Major Brian Edholm, Military Intelligence, United States Army

Captain Scott Hillmer, Infantry, United States Army

Captain Reginald Snell, Armor, United States Army

**United States Army ROTC Program**

The primary objective of the Army Officer Education Program at Cornell is to commission the future officer leadership of the United States Army. Intermediate objectives are to provide students with an understanding of the fundamentals of responsibility, integrity, and self-discipline, as well as an appreciation of the citizen's role in national defense. The application of the decision-making process to a variety of situations is given major emphasis as a valuable aid in developing leadership potential. These objectives are achieved through a program normally covering four years. A two-year program is available for those who qualify. The program includes specific courses in military science, more general academic subjects that assure a well-rounded education, practical training in leadership through participation in the Cadet Corps and Army (including attendance at one six-week summer camp at an Army installation), and the opportunity to participate in a number of extracurricular activities. The combination prepares the student for commissioning and effective performance in the many branches of the Army. The student's academic major, academic performance, leadership ability, personal desires, and the needs of the Army determine the branch of the Army in which the student is commissioned upon graduation.

### Requirements for Enrolling

Applicants must be citizens of the United States and be able to obtain a Secret level security clearance prior to being commissioned as lieutenants. Noncitizens may enroll in selected portions of the program. Students must meet Army medical requirements. Overall sound mental and physical condition is essential, and students are required to undergo periodic physical fitness tests. Enrollment and continuation in the program is subject to the approval of the Professor of Military Science. Enrollment in specific courses by students not formally enrolled in the program must be approved by course instructors. Contracted students must register for letter-grade military science classes and leadership laboratories for the purpose of commissioning into the United States Army.

**Four-Year Program**

The Four-Year Program is open to students in their freshman year or, with the approval of the Professor of Military Science, with senior standing, if qualified. Under the Four-Year Program students enroll in the Basic Course (Mil S I and Mil S II) during the first two years, and the Advanced Course (Mil S III and Mil S IV) during the next two years. A total of 12 credits of military subjects are taken. In addition, academic-enrichment courses are required in such fields as written communications, computer science, and military history. All cadets attend a five-week camp, with pay, between the junior and senior years. All cadets participate in physical fitness training three days per week. Each year selected cadets are sent to the Army's Airborne School, Winter Survival School, and Air Assault Course, depending upon availability and student standings within the ROTC program.

**Basic Course (Mil S I and Mil S II)**

Students in the first year of the Basic Course take one classroom course in military science in the fall and spring semesters, for which they receive academic credit depending upon their college. These courses include study of the U.S. organization for defense and principles and techniques of leadership and management.

Students also participate in leadership modules that include rappelling, orienteering, drill and ceremony, physical training, winter survival, rifle marksmanship, historical site visits, land navigation, interpersonal communication, and individual tactical training. These modules are designed to promote personal development and enrichment. While they do not receive academic credit for these activities, students may receive physical education credit. Typical freshman participation in Army officer education is 48 1/2 program-related hours.

During the fall of the second year, students take a two-credit course in American military history. The course consists of instruction in three primary areas. The first section develops the concept of the art and theory of modern warfare. It analyzes America's first attempt at war, the American Revolution, and ends with the development of modern warfare under Napoleon Bonaparte. The second section focuses on America at war in the nineteenth century. Section three focuses on warfare in the twentieth century and concludes with the prospects of future actions for the military. During the spring of the second year, students take a one-credit course in map reading and spend approximately two hours a week in practical leadership training, land navigation, and military skills.

**Advanced Course (Mil S III and Mil S IV)**

The Advanced Course of the Four-Year Program is open to students who have successfully completed the Basic Course and are accepted by the Professor of Military Science for further enrollment. It is also open to students who have gained appropriate advanced standing through either successful completion of Basic Camp, a six-week summer training camp, or prior military training. Students entering the Advanced Course must have the equivalent of four academic semesters remaining at Cornell or another degree-granting institution. Students must pass required physical and aptitude tests. In addition, the past performance and desire of each student is evaluated to determine potential for eventual commissioning.

When students are accepted for the Advanced Course or accept a scholarship, they sign a written contract with the U.S. government. Under terms of the contract, they agree to complete the Advanced Course and to accept a commission if offered. Concurrently with the signing of the contract, students enlist in the United States Army Reserve.

Classroom study in the Advanced Course includes one military science course each semester on such subjects as leadership and management, small-unit tactics, and command and staff organization and functions. The two hours a week of practical leadership training continues, and between the junior and senior years all cadets attend a five-week advanced summer camp conducted at Ft. Lewis, Washington.

**Scholarships**

Scholarships are awarded on the basis of merit and may be available for two, three, or four years. AROTC scholarships are awarded each year to outstanding Basic Camp participants and students in the freshman and sophomore classes. Scholarships pay up to $16,000 toward tuition and mandatory fees. Scholarship cadets and Advanced Course cadets also receive $200 a month for up to ten months a year. Scholarship cadets also receive $450 per year toward the cost of textbooks.
Commissioning
All students who successfully complete the Advanced Course, including the advanced summer camp, are commissioned as second lieutenants in the United States Army upon graduation.

Service Obligations
ROTC graduates may serve on Active Duty, in the Army Reserve, or in the National Guard, depending upon the needs of the Army and the leadership abilities of the cadet. Officers beginning active duty attend the Officer Basic Course (normally 10 to 16 weeks) of their assigned branch. Upon completion, officers are assigned to a unit and location determined by the desires of the individual and the requirements of the Army. Officers selected for reserve duty attend the Officer Basic Course, after which they are released to reserve status.

Choice of Branch
Cadets in the second year of the Advanced Course (normally the senior year) may specify the branch of the Army—such as Infantry, Armor, Field Artillery, Air Defense Artillery, Aviation, Corps of Engineers, Signal Corps, Military Police, Military Intelligence—in which they prefer to serve. They are notified in December of the branch to which they are assigned. Appointment in a chosen branch departs upon the student’s academic and officer education performance, degree area, and the needs of the Army at that time.

Graduate Study
Active duty deferments, or educational delays, may be granted to individuals who want to attend graduate school at their own expense. Requests will be considered on the basis of needs of the service. Admission to graduate school is the student’s responsibility.

Benefits
Each cadet in the Advanced Course (Mil S III and Mil S IV) receives $200 a month for up to 10 months a year. While attending the advanced summer camp (between the junior and senior years), each cadet receives approximately $700. A cadet in the Two-Year Program receives the same payments as cadets in the Advanced Course, including the advanced summer camp, are commissioned as second lieutenants in the United States Army upon graduation.

Military Science Courses
All cadets take one course and a leadership laboratory each semester in military science. The number of hours a week spent in the classroom varies from semester to semester, as does the credit received for each course.

Freshman Year (Mil S I)

Mil S 101 United States Organization for Defense
Fall. 1 credit. Required. B. Edholm. Students examine the U.S. defense structure in terms of organization, mission, personnel, and relationships among and between military forces and branches and departments of the government. The U.S. Army force structure is examined at all levels. The complexities and magnitude of operating the defense organization are studied to provide a framework for subsequent instruction. Students develop skills in conducting oral and written presentations.

Mil S 102 Leadership Theory
Spring. 1 credit. Required. B. Edholm. This course allows students to develop a basic understanding and appreciation of theories of social and organizational psychology and behavior as they apply to the military setting. Attention is given to leader types, the source and exercise of authority, and the impact of varying styles of leadership, resource management, motivation, and organization effectiveness. The student is introduced to the concepts of integrity, ethics, and professionalism. Classes on historical events and strategy are also presented.

Sophomore Year (Mil S II)

Mil S 222 Small Organizational Operations/Land Navigation
Spring. 1 credit. Required. Prerequisite: Mil S 102 or instructor approval. J. Lopez. Students learn the basic principles of group dynamics at the level of the smallest military unit, the squad. Troop-leading procedures are introduced through case studies and role-playing exercises. Leadership theories introduced in Mil S 102 are examined in a variety of realistic settings. The practical application of behavioral theories is explored in the context of small military organizations. The course will also provide practical knowledge of the various forms of topographic representation. Students will use maps in terrain association and land navigation. Knowledge of topography is complemented by an orientation on significant environmental influences of physical, social, and climatic factors. Portions of the course offer experience in land navigation and orienteering.

Mil S 321 Armed Conflict in Society
Fall. 2 credits. Required. J. M. Keefe. This course provides practical knowledge in American Military History. It is primarily an overview course designed to provide an understanding of the art and nature of warfare and particularly how warfare has affected the United States. The course consists of three primary areas of instruction with an emphasis on American military history. The first area of instruction addresses the art and theory of modern warfare. It analyzes America’s first attempt at war, the American Revolution, and ends with the development of modern warfare under Napoleon Bonaparte. The second phase focuses on America at war in the nineteenth century. It places particular emphasis on the American Civil War and the strategy of annihilation versus the strategy of attrition. The final phase looks at warfare in the twentieth century and finishes with an analysis of the future of warfare for the military of the United States.

Junior Year (Mil S III)

Mil S 331 Theory and Dynamics of the Military Team
Fall. 2 credits. Required. R. Brown. After an initial introduction to techniques of presenting briefings, students are provided with a broad understanding of the principles and application of teamwork in military organizations. Particular emphasis is given to leadership responsibilities of the commander as the team coordinator. This course helps students develop an understanding of the roles and contributions of the various branches of the Army in support of the military team.

Mil S 332 Leadership in Small-Unit Operations
Spring. 2 credits. Required. Prerequisite: Mil S 331. R. Brown. This course provides an understanding of the nature of decision making and the tactical application of the military team. Through the use of conferences and extensive practical exercises, students develop familiarity with the factors influencing a leader’s decisions and the process of planning, coordinating, and directing the operations of military units through operation plans and orders.

Senior Year (Mil S IV)

Mil S 441 Leadership, Management, and Ethics for the Junior Military Officer
Fall. 2 credits. Required. J. M. Keefe. An overview of the functions, responsibilities, and interrelationships among small unit leaders, the commander, and the staff. Detailed discussions focus on actions of small-unit leaders, communication skills, army operations, the logistical support of the army in the field, and the army training system. The course focuses on the dynamics of leadership in battle through the detailed analysis of a series of case studies. Just war theory, ethics, and professionalism are also addressed in a seminar-type environment.

Mil S 442 Contemporary Military Environment
Spring. 2 credits. Required. J. M. Keefe. A continuation of Mil S 441. Conferences and seminars examine the techniques of effective military leadership with special attention given to professionalism and ethical considerations in the armed forces during both peacetime and armed conflict. Army operations and basic doctrine are also discussed. This is a capstone course designed to prepare the student for commissioning.

Practical Leadership Training
All Army Officer-Education Students
As with many laboratory periods, no credit is given, and participation is required for successful completion of the AROTC program. Students receive physical education credit for the laboratory. Each semester, cadets register for the appropriate leadership laboratory, consisting of physical fitness training three times per week, two hours of military training each week, and one or two weekend training exercises per semester.

Mil S 1 Leadership Laboratory I
Fall. 0 credits. S.U. Spring. 0 credits. S.U.

Mil S 151 Mil S 152
Fall. Spring.

Mil S 151 Cadets meet for two hours each week to learn a variety of military skills including rappelling, first aid, drill and ceremonies, weapons familiarization, and physical fitness training.

Mil S 1 Leadership Laboratory II
Fall. 0 credits. S.U. Spring. 0 credits. S.U.

Mil S 251 Cadets meet for two hours each week as members of the cadet organization to participate in practical leadership exercises.

Types of practical activities include rifle
marksanship, orienteering, drill and ceremonies, signal communications, physical fitness training, first aid, tactics, and field exercises.

**MIL S III Leadership Laboratory III**
- Fall: 0 credits. Spring: 0 credits. Required: S-U. Required: S-U. S-U. Required: S-U.
- Mid S 351
- Mid S 352
- Cadets meet for two hours a week and some weekends to prepare for a five-week summer camp that follows the junior year. Emphasis is on individual leadership and leadership through small groups. Cadets are given an ability to apply decision-making processes to a myriad of situations. Cadets also acquire the technical expertise and proficiency in signal communications, physical fitness, drill and ceremonies, rappelling, orienteering, tactics, water survival, and other military skills.

**MIL S IV Leadership Laboratory IV**
- Fall: 0 credits. Spring: 0 credits. Required: S-U. Required: S-U. Required: S-U. Required: S-U.
- MIL S 452
- MIL S 456
- Fall senior cadets plan and operate the leadership laboratory programs for MIL S I-III cadets. The development of planning and supervisory skills is emphasized. Cadets have an opportunity to practice leadership skills developed during previous ROTC training and summer camp experiences. Includes two to three hours a week devoted to physical fitness.

**Professional Military Education (PME) Requirements**

In addition to the ROTC classes and leadership laboratories listed above, a number of courses are required as part of the contracted student's academic program. These courses are offered by the university and round out the student's professional education. The PME component of the ROTC program requires at least one college course in each of the following areas: communication skills, military history, and an introduction to computers. These courses must be completed prior to graduation. The courses that meet these requirements are approved by the Professor of Military Science.

**NAVAL SCIENCE**

Captain J. Alley, United States Navy, Professor of Naval Science and Commanding Officer, Naval ROTC Unit
Lieutenant Colonel R. Minor, United States Marine Corps
Lieutenant J. Cleary, United States Navy
Lieutenant J. Lankford, United States Navy
Lieutenant J. Biondi, United States Navy

The objective of the Naval Officer Education Program is to prepare selected students for service as commissioned officers in the United States Navy or United States Marine Corps by supplementing their undergraduate education with instruction in essential concepts of naval science and fostering development of leadership, integrity, and dedication to their country and the naval services. The program is compatible with most undergraduate major fields of study, including five-year baccalaureate degree programs on a case-by-case basis. The objective is achieved through a broad program, normally covering four years, that combines specific courses in naval science and specified academic subjects. These courses supplement weekly professional development seminar sessions in which the practical aspects of naval science and leadership procedures are stressed. It also includes at least one summer-at-sea period.

Non-naval officer education students: Though the Navy-Marine Corps Program has been designed to prepare future officers, naval science courses are open to all students at Cornell as space limitations allow.

**Requirements for Enrollment**

An applicant for the Naval ROTC program at Cornell must be a citizen of the United States. Applicants must have reached their twentieth birthday by June 30 of the entering year and be less than 27 years of age on June 30 of the calendar year in which they are commissioned. Waivers of the upper age limit may be available for applicants who have prior active duty military service. Applicants must also meet physical and medical requirements. Interested students can visit the Naval ROTC Unit in Barton Hall or contact their local recruiter.

**Programs**

There are two programs: the Scholarship Program and the College Program. They differ primarily in benefits to the student.

**Scholarship Program**

The Scholarship Program provides approximately 1,000 scholarships in more than 60 universities nationwide to selected students who want to serve in the Navy or Marine Corps. Financial support is provided to students during college preceding the award of the baccalaureate degree.

**Benefits**

The program offers scholarships that provide full tuition and are not need-based. While on scholarship, students also receive money for instructional fees, textbooks, nonconsumable supplies, and a $200-a-month stipend for a maximum of 40 months.

Successful completion of the Scholarship Program leads to a commission in the Navy or Marine Corps Reserve. At Cornell University, over 90 percent of NROTC students have a scholarship. Students entering NROTC without a prior scholarship award are entitled to compete for two- or three-year scholarships controlled by the Chief of Naval Education and Training.

**Choice of Assignment**

Graduates have an opportunity to request the duty they prefer upon graduation. These requests are given serious consideration, and every effort is made to assign newly commissioned officers their duty of choice. Among the assignments available are duty in naval aviation as either a pilot or naval flight officer, on submarines, and on surface ships. Other specialties, such as special warfare or medical service corps, may be available on a limited basis.

**College Program**

There are two College Programs available. Both lead to a commission in the Naval or Marine Corps Reserve.

Starting in the junior year, each of these programs provides textbooks for naval science courses, uniforms, and a subsistence allowance of $200 a month.

The regular College Program is four years long. Academic requirements for students in this program are somewhat less than those for scholarship students, as noted in the curriculum section of this booklet.

The Two-Year College Program begins the summer before the junior year, when students attend a required program with pay at the Naval Science Institute in Newport, R.I.

**Summer Training**

Each summer, students in the Scholarship Program spend approximately four to six weeks on a Navy ship or with a naval activity anywhere in the world for on-the-job training. College Program students attend one summer training session of the same duration between the junior and senior years.

**Active Duty Requirements**

Scholarship midshipmen commissioned in the Navy or Marine Corps Reserve serve on active duty for a minimum of four years. College program midshipmen commissioned in the Navy or Marine Corps Reserve serve a minimum of three years. In some cases, following commissioning, specialized training such as aviation or nuclear power will add additional active duty requirements.

**Naval ROTC Program**

The United States Marine Corps is an integral part of the Naval Services and is commanded by the Commandant of the Marine Corps. One-sixth of the NROTC scholarship students may be Marine selects who will be designated Marine-option midshipmen. Upon successful completion of the program they will be appointed second lieutenants in the United States Marine Corps Reserve.

Marine-option midshipmen follow the same program as other NROTC midshipmen for the first two years. Beginning with the junior year, Marine-option midshipmen are taught Marine oriented courses by a Marine Officer Instructor. For first class summer training (after the junior year), Marine-option students travel to Quantico, Virginia, where they undergo six weeks of intensive training known as the USMC Officer Candidate School. Upon commissioning the following year as second lieutenants, they are assigned to the Basic School at Quantico, Virginia. After the Basic School, the Marine officer is assigned duty in a variety of occupational fields. Among the
duties available are infantry, aviation, artillery, tracked vehicles, engineering, communications, electronics, supply, administration, and computer science. The officer may serve on board naval vessels or at shore installations of the Marine Corps or Navy, either in this country or overseas.

The Marine Corps has a postgraduate training system similar in objectives and organization to that of the Navy. Marine officers selected for aviation receive flight training at the Naval Air Station, Pensacola, Florida, along with their Navy counterparts.

Curriculum
A student has three categories of requirements to fulfill as a midshipman. The first of these requirements is a weekly naval professional development session each semester. The second requirement is a naval science course each semester. The last set of requirements consists of other required courses prescribed by the Navy to meet the growing need for more and better technically educated junior officers.

Naval Professional Laboratories
Nav S 141-142, 241-242, 341-342, or 441-442
All students in the program participate in one 90-minute professional development session each week. The session is held from 2:30 until 4:00 on Wednesday afternoons. This period consists of both drill and professional information briefings. Students gain experience in actual leadership situations and at the same time learn the fundamentals of seamanship, military formations, movements, commands, discipline, courtesies, and honors. During information briefings, special emphasis is given to applied leadership as it relates to the administrative and managerial aspects of a Navy or Marine Corps officer's duties.

Naval Science Courses
All Navy and Marine midshipmen take one naval science course each semester during their freshman and sophomore years. Navy-option students continue to take a naval science course each semester during their junior and senior years. Marine-option students have slightly different curriculum requirements for their junior and senior years.

Freshman Year (Navy and Marines)
Nav S 101 Fundamentals of Naval Science
Fall. No credit
A study of fundamental aspects of naval science, including its contributions to sea power, factors, and different warfare communities involved in the physical development of naval forces, resources that must be managed, and prospects for the future. Naval uniforms, customs, and traditions are also covered.

Nav S 102 Sea Power and Maritime Affairs
Spring. 3 credits.
Discussions examine the history of the Navy as a force in the national defense and an instrument of U.S. foreign policy. Relationships between Congress and the military for determining the national defense policy are also explored. An integrated examination of current events and issues gives a historical perspective throughout the course.

Nav S 157 Principles of Sailing
Fall and spring. Physical education credit.
Instruction in basic sailing skills and safety principles. Students sail small boats on Cayuga Lake. Focus is on U.S. Navy Class B inshore skipper certifications.

Sophomore Year (Navy and Marines)
Nav S 201 Organizational Behavior and Small Group Processes
Fall. 3 credits.
The theme of the course is the "evolving role of the manager, organizational decision maker, and leader." The course will begin by briefly studying the theoretical principles of management and will progress through practical skills of managers and leaders. Lectures, reading assignments, films, and discussions should provide students with an excellent opportunity to wrestle with complex managerial and leadership issues. The goal of this course is for students to begin to develop a sound personal leadership philosophy that will enable them to more effectively accomplish assigned responsibilities leading men and women in today's demanding and increasing "hi-tech" naval environment.

Nav S 202 Naval Ship Systems I (also Mechanical and Aerospace Engineering 101)
Spring. 3 credits.
An introduction to primary ship-systems and their interrelationship. Basic principles of thermodynamics, propulsion, mechanical operation, internal communications, electronics, ship structure, and other marine systems.

Junior Year (Navy)
Nav S 301 Principles of Navigation (also Agricultural Engineering 305)
Fall. 4 credits.
An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. The course covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tides and currents. Electronic navigation systems are discussed.

Nav S 302 Naval Operations
Spring. 3 credits.
The course covers the application of the nautical rules of the road and maneuvering board in order to avoid collisions at sea. Other aspects of naval surface ship operations that are introduced include visual and electronic communication methods, tactical disposition of forces, ship handling theory, and deck seamanship topics.

Senior Year (Navy)
Nav S 401 Naval Ships Systems II (Weapons)
Fall. 3 credits.
The principles and theories used in the development of naval weapon systems are examined. Initially, extensive study is made of detection systems, especially radar and sonar, followed by discussions of weapon systems for computing, stabilizing, tracking, and weapons control and delivery.

Nav S 402 Leadership and Ethics
Spring. 3 credits.
A variety of topics important to the naval officer for both professional and managerial development are reviewed. The material is tailored for the midshipman to provide an understanding and appreciation of leadership and ethics in preparation for assignments in the naval service. Through the use of lectures, case studies, and role playing, the student will learn various aspects of Navy leadership and ethical decision making. Marine-option students may also take this course.

Junior or Senior Year (Marine Options)
Nav S 310 Evolution of War
Spring. 3 credits.
A study of warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and national political realities and values, the evolution of warfare, including principles of war, weapons, and associated equipment; and the effects of nuclear weapons and guerrilla warfare on traditional concepts of national strategy.

Nav S 410 History of Amphibious Warfare
Spring. 3 credits.
The history of the development, theory, techniques, and conduct of amphibious operations from 490 B.C. to the present. Special emphasis will be on amphibious operations conducted in the central Pacific during World War II and the future of amphibious operations.

Other Required Courses
Naval Option Scholarship Program
To be eligible for a commission in the United States Navy, midshipmen must successfully complete all the requirements for a baccalaureate degree in any field of study offered by Cornell University and complete courses in the following subjects (specified courses to be approved by the Professor of Naval Science):
American military affairs or national security policy (one semester)
English (one year)
calculus (one year)
calculus-based physics (one year)
computer science (one semester)
The calculus requirement must be satisfied by the end of the sophomore year and the physics requirement by the end of the junior year.
Although free choice of academic majors is permitted, students are encouraged to pursue majors in engineering and the physical sciences to meet the technological requirements of the modern Navy.

Naval Option College Program
Naval-option College Program: students must complete one year of college-level study in mathematics, physical science, and English as a prerequisite for commissioning. The mathematics course must be completed by the end of the junior year, the physical science course by the end of the senior year. In addition, one term of computer science is required. College Program students who desire entry into the Navy-option Scholarship Program should fulfill all of the requirements applicable to Navy-option scholarship students if they wish to be eligible and competitive for a scholarship controlled by the Chief of Naval Education and Training.
Marine Option
Any midshipman, in either the Scholarship Program or the College Program, who completes all of Cornell University's degree requirements in any academic major, is eligible for a commission in the U.S. Marine Corps or U.S. Marine Corps Reserve. Marine-option students take the same naval science courses and naval professional laboratories as Navy-option students for the freshman and sophomore years. During the junior and senior years, Marine-option students have slightly different naval science course requirements than their Navy-option student counterparts. Two semesters of courses (a minimum of 3 hours each) in the subject area of American Military Affairs or National Security Policy are required. One semester of a modern foreign language must be completed.

Extracurricular Activities
The NROTC midshipman at Cornell is offered a broad range of activities, including sailing training and a comprehensive intramural sports program. Midshipmen participate in a myriad of social events, including the annual Navy/Marine Corps Birthday Ball.

DEPARTMENT OF AEROSPACE STUDIES
Colonel James L. Wilson, Jr., United States Air Force, Professor of Aerospace Studies and Commander, Air Force ROTC Detachment 520
Captain Daniel P. McAlister, United States Air Force
Lieutenant Michael Mowry, United States Air Force

The objective of the Air Force Officer Education Program at Cornell is to prepare men and women for positions as officers in the United States Air Force. The program is designed to teach students about the mission and organization of the Air Force, the historical development of air power, leadership, and management. Students study national security policy and the role of the military in a democratic society. This program includes specific courses in aerospace studies and practical leadership laboratories.

Requirements for Enrollment
The Air Force Officer Education Program is open to any qualified undergraduate or graduate student enrolled in any major field of study. An applicant must be a United States citizen to become a commissioned officer. Noncitizens may enroll and will receive certificates acknowledging completion of the course but cannot receive a commission. All applicants receive physical examinations at no cost and must meet certain physical requirements to be accepted. Students who are interested in qualifying for flying (fighter pilot or navigator) must meet more stringent physical requirements. In addition, students enrolled in the commissioning program must meet specified physical fitness requirements.

Though the program is designed to prepare future Air Force officers, the Department of Aerospace Studies’ academic courses are open to all students at Cornell.

Four-Year Program
The Four-Year Program is open to all qualified freshmen. Sophomores may also enter a condensed version of the four-year program after coordination with the AFROTC staff. Students in a five-year program may enroll during their freshman, sophomore, or junior year.

Veterans of the U.S. armed forces and students entering Cornell from military schools may receive advanced standing, subject to approval by the Professor of Aerospace Studies.

The Four-Year Program consists of General Military Courses (GMC) and Professional Officer Courses (POC). For scholarship cadets, the first year of the GMC carries no military commitment, and students may withdraw at any time. For nonscholarship cadets, both years of the GMC carry no military commitment, and students may withdraw at any time.

General Military Course
Students in General Military Courses (GMC) take a one-credit-hour Aerospace Studies course each semester. During the freshman year, the student examines the organization and mission of the United States Air Force and the environment of the Air Force officer. In the sophomore year, the student studies the history and development of American air power. In both years, officership and professionalism within the United States Air Force are emphasized.

Students also spend two hours a week in a leadership laboratory. Leadership laboratory provides cadets with the opportunity to put into practice the skills they learn in their aerospace studies classes. These laboratories focus on the development of officer qualities through such activities as drill and ceremonies, group leadership problems, confidence-building exercises, and guest lecturers. In addition, all students participate in summer field training for four weeks between their sophomore and junior years.

Professional Officer Course
The Professional Officer Courses (POC) provide a two-year advanced program of instruction. Students who are accepted for the POC must have successfully completed or validated the basic course and must meet academic and physical standards. Each cadet accepted into the POC must sign an agreement to complete the program and accept, if offered, a commission in the United States Air Force upon graduation.

Classroom study in the POC is a three-credit-hour course each semester. In the junior year, cadets study Air Force leadership and management at the junior officer level. During the senior year, cadets study the elements of national security and the military’s role in American society. Leadership laboratory requires two hours a week in the junior and senior years. In leadership laboratory, cadets are exposed to advanced leadership experiences and apply principles of leadership learned in the classroom.

Two-Year Program
The Two-Year Program consists of the last two years (Professional Officer Courses) of the regular Four-Year Program plus a five-week summer training course preceding enrollment.

The Two-Year Program is open to all qualified students with two years of academic study remaining at Cornell (graduate or undergraduate) or at schools supported under a crosstown agreement. Applications are accepted from October through April of the academic year preceding the applicant’s planned entry into the program. Selectees are then required to complete a five-week summer training program at government expense.

Scholarships
The Air Force offers four-year scholarships to high school seniors and two- and three-year scholarships to college students. Four-year scholarships are offered on a competitive basis in specified majors to high school seniors. Scholarship information can be obtained from a local Air Force recruiter, from AFROTC/RRO (ROots) Scholarship Coordinator, or from AFROTC/RRO, Maxwell AB, AL 36112-6106. The deadline for submitting a four-year scholarship application is December 1 of the year preceding the academic year in which a student wants to enter the program. Students should apply early.

Scholarships for two and three years
Applications for two-year scholarships should be made to the Professor of Aerospace Studies during the freshman or sophomore years of college. All selections are based on the student’s major, scores achieved on the Air Force Officer Qualifying Test, the student’s overall grade point average, and the recommendation of the Professor of Aerospace Studies. Scholarships include amounts ranging from $3,000 per year to full tuition, fees and books, and provide a $200-a-month non-taxable allowance during the school year. Scholarships do not include the cost of room and board.

Benefits
All cadets in the advanced program (POC)—whether they are on scholarship or not—receive a military subsistence allowance during the academic year. During the four- or five-week summer field training (see below), each cadet receives a pay allowance plus an allowance for travel to and from the field site. Textbooks and supplies required for Department of Aerospace Studies courses are provided.

All cadets are eligible to participate in AFROTC-sponsored field trips made to Air Force bases throughout the country as well as voluntary summer programs for professional development. Scholarship and advanced cadets (POC) are entitled to space-available travel on Air Force aircraft flying within the continental United States.

Field Training
There are two types of field training: a four-week course for cadets in the Four-Year Program and a five-week course for Two-Year Program applicants. Students in these
programs normally attend field training between their sophomore and junior years. Field training is designed to stimulate the development of military leadership skills through meaningful experiences. The curriculum consists of aircraft, aircrew, and survival orientation, junior officer training, physical training; small arms training, a social-action program; and supplemental training. The five-week training program includes sixty hours of Air Force ROTC academic course work that substitutes for the freshman and sophomore Aerospace Studies courses. Cadets may also volunteer for one of many Advanced Training Programs. These programs include the Professional Development Program, Air Force Academy Free-Fall Parachute Training, the British Royal Air Force (RAF) Exchange Program, Research and Development Experiences, the Academy Soaring Program, and Army Airborne Training.

Commissioning Obligations

All students who successfully complete the AFROTC advanced program (POC) are awarded a baccalaureate degree, tendered a commission, and enter the Air Force as second lieutenants. Second lieutenants commissioned in nonflying categories are required to serve on active duty for four years. Pilots are required to serve on active duty for ten years after completing flying training. Navigators serve six years after completing training.

Air Force Careers

The Air Force assigns new officers to a career field based on mission requirements, educational background, and officers' preferences. Students in the engineering-science category may be assigned to practice in their specialty in research and development, communications, electronics, aeronautics, astronautics, the biological sciences, computer design and maintenance, meteorology, space, or other engineering and scientific fields. Graduates in the nontechnical category can anticipate assignments in manpower management, information management, logistics, law enforcement and investigation, intelligence, personnel, transportation, accounting and finance, and other career fields. They will be placed in positions of responsibility and be given the opportunity to further their development in leadership and management skills. Their specific educational expertise may be required.

Any undergraduate major is suitable for those who are qualified and interested in entering the space and missile career fields or becoming pilots, navigators, or air battle managers. After completion of flying training, personnel are assigned to a specific type of aircraft.

Curriculum

Students in the Four-Year Program are required to take all courses listed below. Students in the Two-Year Program are required to take all of the courses listed for the junior and senior years. There are no prerequisites for any Aerospace Studies courses.

Freshman Year

**Air S 161 The Foundations of the United States Air Force I**
Fall. 1 credit.
This is a survey course designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and the organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, group leadership problems, and an introduction to communication skills. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

**Air S 162 The Foundations of the United States Air Force II**
Spring. 1 credit.
Continuation of Air S 161.

Sophomore Year

**Air S 211 The Evolution of USAF Air and Space Power I**
Fall. 1 credit.
This course is designed to examine general aspects of air and space power through a historical perspective. Using this perspective, the course covers a time period from the first balloons and dirigibles to the role of air power in Bosnia-Herzegovina. Historical examples are provided to extrapolate the development of Air Force capabilities (competencies) and missions (functions) to demonstrate the evolution of what has become today's USAF air and space power. Furthermore, the course examines several fundamental truths associated with war in the third dimension: e.g., Principles of War and Tenets of Air and Space Power. As a whole, this course provides the students with a knowledge-level understanding of the general element and employment of air and space power from an institutional, doctrinal, and historical perspective. In addition, students will continue to develop the knowledge of the Air Force Core Values by examining operational examples and historical Air Force leaders while continuing to develop their communication skills.

**Air S 212 The Evolution of USAF Air and Space Power II**
Spring. 1 credit.
Continuation of Air S 211.

Junior Year

**Air S 331 Air Force Leadership Studies I**
Fall. 3 credits.
This course is a study of leadership, quality management fundamentals, professional knowledge, Air Force personnel and evaluation systems, leadership ethics, and communication skills required of an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts being studied. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences in duty and wing activities, giving students the opportunity to apply leadership and management principles of this course.

**Air S 332 Air Force Leadership Studies II**
Spring. 3 credits.
Continuation of Air S 331.

Senior Year

**Air S 401 National Security Affairs/Preparation for Active Duty I**
Fall. 3 credits.
This course examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest focus on the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Within this structure, continued emphasis is given to refining communication skills. A mandatory Leadership Laboratory complements this course by providing advanced leadership experiences, giving students the opportunity to apply the leadership and management principles of this course.

**Air S 402 National Security Affairs/Preparation for Active Duty II**
Spring. 3 credits.
Continuation of Air S 401.

Leadership Laboratory Courses

All Air Force cadets spend two hours a week throughout the academic year in a leadership laboratory, for which no academic credit is given. Occasionally laboratories are held at times other than the normally scheduled period. All cadets are expected to participate in an evening formal dinner and to meet minimum physical fitness and weight standards each semester. Leadership lab is open to students qualified to compete for an Air Force commission.

**Air S 141-142 Initial Military Experiences**
Introduction to the responsibilities, life, and work of an Air Force officer. Basic knowledge of drill and ceremonies, military courtesies, and the wearing of the uniform. Field trip to a local military installation.

**Air S 241-242 Intermediate Military Experiences**
Develops skills in giving commands for drill and ceremonies. Introduction to the Air Force base environment in which the Air Force officer functions. Includes a look at career areas available based on academic majors. Students participate in leadership situations through military drills and ceremonies. Field trip to a local military installation.

**Air S 341-342 Junior Officer Leadership**
Cadets assume leadership responsibilities similar to those of a junior officer. Emphasis is on the importance of applying effective human relations skills in dealing with superiors, peers, and subordinates. Cadets also gain insight into the general structure and progression patterns common to selected Air Force officer career fields.

**Air S 441 Advanced Leadership Experiences**
Cadets assume command leadership responsibilities to operate a military organization. Cadets apply effective leadership and managerial techniques with individuals and groups and participate in self-analysis of leadership and managerial abilities.

**Air S 442 Precommissioning Laboratory**
Factors that facilitate transition from civilian to military life are reviewed. The need for military security, base services and activities, personal finances, travel regulations, and social obligations are introduced.
ADMINISTRATION
Alan E. Gantert, director

COURSES
The courses and fees described in this catalog are subject to change or cancellation at any time by official action of Cornell University. For current fee information on physical education courses call 255-4286; for outdoor education courses, call 255-6415 (ext. 2).

Enrollment in any course is limited by the space available. Other restrictions are included in the course description. Most courses are cumulative. The specific time and place of class meetings, as well as information about fees, are available at the physical education course registration or may be found on "Bear Access," a package of software for accessing a variety of network services at Cornell, or on the web (www.athletics.cornell.edu/PE).

Course fees are billed through the Office of the Bursar. Additional course offerings may be listed at registration, as the curriculum is frequently reviewed and changed.

Aquatic Courses
Lifeguard Training
Fall and spring. Fee charged. Prerequisite: swimming test consisting of 500 yards, demonstrating 5 strokes, treading water without the use of hands, and retrieving a brick from 7 feet of water. 3 classes a week.

This course is an American Red Cross certification course. Practice and execution of lifeguarding first aid and CPR techniques. Certification is awarded in lifeguarding, first aid, and CPR upon satisfactory completion of the course.

Lifeguard Training Instructor
Fall and spring. Fee charged. Prerequisite: current American Red Cross I or instructor card, written and skill tests in lifeguarding, first aid, and CPR techniques. Students must not miss first class. 2 classes a week.

American Red Cross lifeguarding instructor and CPR-FPR certifications are awarded upon successful completion.

Scuba, Open-Water
Fall, spring, and summer (6 weeks). Fee charged.

Program includes classroom work, skill training in a pool, and open-water training in Cayuga Lake. P.A.D.I. open water certification awarded upon successful completion.

Scuba, Advanced Open-Water
Fall and spring. Fee charged. Advanced level open-water training in Cayuga Lake. For those who have completed the open-water course.

Rescue Diver
Fall and spring. Fee charged. Advanced course for scuba divers. For those who have completed Advanced Open-Water Scuba certification and are interested in learning rescue and safety techniques.

Dive Master
Fall and spring. Fee charged. Advanced-level scuba course open only to those who have completed the Rescue Diver course. NOTE: This is a long, time-consuming course, which requires the student to be in good physical and swimming shape.

Specialty Scuba Diving
Fall and spring. Fee charged. Courses offered in the following specialty diving areas: navigation, search and recovery, night diving, deep diving, underwater photography, wreck, multi-level, boat, tropical fish identification and buoyancy control, and underwater naturalist.

Scuba Diving Trips
Spring. Fee charged. This course is designed for the spring intersession period. Scuba trips to various destinations such as the Bahamas. Locations change from year to year. See the information sheet at the registration table.

Swimming, Introduction to (ARC)
Fall, spring, and summer. (6 weeks). Instruction and practice in skills leading to passing the basic swimming proficiency test.

Swimming, Advanced Beginning (ARC)
Spring. Ideal for all who have taken one term of Beginning Swimming, regardless of whether the test was successfully completed. Areas of special emphasis are the crawl stroke and rotary breathing, back crawl, elementary backstroke, diving, treading water, and underwater swimming. The primary objective is to strengthen the student's confidence and competence.

Swimming, Intermediate (ARC)
Fall and spring. Practice of basic skills and five basic strokes: front crawl, back crawl, elementary backstroke, breaststroke, sidestroke.

Swimming, Advanced (ARC)
Fall and spring. Practice of nine strokes: front crawl, back crawl, elementary backstroke, breaststroke, breaststroke, sidestroke, overarm, sidestroke, treading water, and underwater swimming.

Swimming Conditioning
Fall and spring. Prerequisite: reasonable swimming ability. Introduction to, and practice of, different training methods. Final objective: to swim 2,500 yards during class period. Primarily a conditioning and not an instructional course.

Water Safety Instructor
Spring. Fee charged. Prerequisite: passing of written and skill water tests which are given on the first day. American Red Cross water safety instructor certification is awarded upon satisfactory completion of the course. This is not a course for a casual participant. Approximately 45 hours of work is required.

Water Safety Instructor Refresher Course
Spring. Fee charged. Selected sessions of the water safety instructor certification course.

Bowling Courses
Bowling
Fall and spring. Fee charged. For the beginning and intermediate bowler. Sho e rental is included in the fee.

Dance Courses
Develop flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with rhythmic accuracy, clarity of body design, and fullness of feeling. Auditions are required for admission to all advanced courses, since they require the mental and physical ability to perform more-complex phrases in various styles.

Ballet I
Fall and spring.

Ballet II
Fall and spring.

Ballet III
Fall and spring.

Ballroom Dancing
Fall and spring. Fee charged. One class a week, Helen Newman Hall. Students and their partners must sign up at course registration.

Includes instruction in the waltz, swing, cha cha, calypso, tango, and others.

Belly Dancing
Fall and spring. Fee charged. Includes instruction in belly dancing, an exciting Middle Eastern folk art that can help in the development of flexibility, body awareness, and overall body tone. The class will begin with warm-ups and continue with basic movements and rhythms, then put them together in a dance to music of the Middle East.

Introduction to Swing Dance
Fall and spring. Fee charged. No partners are needed. Beginners can expect to develop significant capacity for enjoyment of two forms of swing dance: jitterbug and street boogie. Partners will be rotated throughout the course. Effort will be made at registration to equalize male and female ratios.

Latin Dance
Fall and spring. Fee charged. Partner sign-in required. This is an introductory course that will teach salsa, mambro, Latin and merengue. Emphasis on listening, feeling, and expressing Latin rhythms with precise detail and technique.

Modern Dance I (also THETR 124)
Fall and spring.

Modern Dance II (also THETR 232)
Fall, spring, and summer (6 weeks).

Modern Dance III (also THETR 306)
Fall and spring.

Modern Dance IV (also THETR 308)
Spring.
Equitation Courses

Basic, Intermediate, Advanced
Fall, spring, and summer (6 weeks). Fee charged.
All riding classes are held at the Cornell Equestrian Center located on Pine Tree Road near East Hill Plaza. Detailed information will be offered by the equitation staff at the registration sign-up table. Basic—never ridden. Intermediate I—completed basic with knowledge of walk/trot/canter; Intermediate II—walk/trot/canter with control over 2' course. Advanced—strong jumping/dressage skills with experience hunting/showing/eventing. Students must fill out a release form to participate in any riding class.

First Aid/CPR Courses

Emergency Response
Fall and spring. Fee charged.
This advanced-level first aid course is the most comprehensive available without NYS certification. Sixty hours of training includes CPR for the Professional Rescuer and oxygen administration, as well as many of the first aid skills taught in a basic EMT class. American Red Cross certification is valid throughout the United States and is accepted by many states as a Certified First Responder equivalent. Certification is valid for three years. This certification would be appropriate for camp medical directors and those who work closely with pre-hospital medical staff.

NYS Emergency Medical Technician—Basic
Two-semester course. Fee charged. This intensive 130-hour course is taught throughout both the fall and spring semesters. Course includes training in CPR for the Professional Rescuer, oxygen administration, airway management, fracture management, bleeding control, expanded patient assessment, spinal immobilization, medical anti-shock trousers, and defibrillation. Students will qualify for the NYS EMT Certification Exam upon successful completion of this course. Rigid attendance and participation requirements are strictly enforced.

Fishing Courses

Fly Fishing and Basic Flytying Techniques, Level I
Fall and spring. Fee charged.
Learn the art of fishing and at least two of your own artificial flies while you learn the art of fly casting. Students must have a valid NYS fishing license and their own wader boots. All other materials provided.

Salt Water Fly Fishing
Fall. Fee charged.
Learn the special techniques necessary for salt water fly fishing. This course includes four hours of classroom instruction and four days of fishing over fall break.

Fitness Courses

Aerobic Dance
Fall, spring, and summer (6 weeks). Fee charged.
A dance program designed to keep the cardiovascular system in top shape by making the body demand increased amounts of oxygen.

Body Sculpting
Fall and spring. Fee charged.

Cardio Crazy
Fall and spring. Fee charged.
The course is designed to acquaint the student with the various types of indoor aerobic training equipment, rowing machines, tread mills, stair machines, exercycles, and Nordic Traks, and to teach them to design a personal fitness program incorporating the equipment.

8 O'Clock Rock
Fall and spring. Fee charged.
This class combines the best of the principles of weight training and the cardio training in the 8 O’Clock Rock Class.

Aerobic Instructor Training
Fall and spring. Fee charged.
The course is designed to train the student to teach aerobics and prepare for the A.F.A.A. Primary Aerobics Instructors Certification Test.

Aerobics—Techniques, Level I
Fall and spring. Fee charged.
The course will cover running and stretching techniques. A conditioning program with the objective to develop the capacity to run three miles after 12 weeks of training.

Aerobics—Techniques, Level II
Fall and spring. Fee charged.
A course designed for the intermediate runner who can run an average of 3 miles in 30 minutes. Most tours will be 3–4 miles long and will go through campus and nearby countryside.

Wellness and Fitness—Fitness
Fall and spring. Fee charged.
"Here's to a Healthier You"—a wellness experience for the busy student. This course will assess the student’s physical fitness status, blood cholesterol levels, and overall lifestyle health habits. Each student will receive an individual exercise prescription and have access to the Wellness Program fitness room in Helen Newman Hall. Lectures on nutrition and stress management are also presented. This course has been made possible through the generosity of the Bateman family in memory of Ms. Dorothy Bateman, Cornell’s first director of women’s sports and physical education (1920 to 1962).

Golf Courses

Golf, Introduction to
Fall and spring. Fee charged.
A PGA program of instruction is geared to all levels of experience and ability. The objective is to give beginners enough skill to play, and to give more-advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals. Equipment is furnished.

Golf, Recreational
Fall and spring. Limited to students who are experienced golfers. Fee charged. Students must provide their own clubs. A minimum of ten rounds of nine holes each must be played to receive credit. Fee covers a semester’s membership.

Gymnastics Courses

Gymnastics, Introduction to
Fall and spring.
Introduction to gymnastics deals with a majority of the Olympic events. The course will focus upon beginner-level skills and is open to both male and female participants.

Ice Skating Courses

Skating, Introduction to
Fall and spring. Fee charged.
The course covers the basic skills of footprint, defensive, and offensive techniques. Skipping rope, shadow boxing, and heavy bag work will be taught as methods for individual aerobic conditioning.

Boxing, Thai
Fall and spring. Fee charged.
A martial art system developed from the unique culture of Thailand is a blend of art, science, and sport.

Fencing, Introduction to
Fall and spring. Fee charged.
Includes warm-up exercises and offensive and defensive moves. Equipment furnished.

Fencing, Intermediate
Spring. Fee charged. Prerequisite: Introduction to Fencing or the equivalent. Interclass competition is stressed. Equipment is furnished.

Fencing, Classical
Fall and spring. Fee charged.
Classical fencing is a martial art that uses the practice of the sword to cultivate self-mastery.

Judo, Introduction to
Fall and spring. Fee charged.
Conditions and increases suppleness. Continue to develop skills in the two parts of judo—standing techniques (throws and trips) and mat techniques.

Judo, Intermediate
Fall and spring. Fee charged.
Conditions and increases suppleness. Continue to develop skills in the two parts of judo—standing techniques (throws and trips) and mat techniques.

Karate, Introduction to
Fall and spring. Fee charged.
A beginning course taught by professional black belt instructors. Involves mastery of basic blocks, kicks, and punches.

Karate, Advanced
Fall and spring. Fee charged.
Open to those who have taken basic Karate or the equivalent.
Kung Fu
Fall and spring. Fee charged.
Introduction to the various techniques and principles of Kung Fu, including movement for generating strong blocks, kicks, and punches.

Self-Defense and Empowerment for Women
Fall and spring. Fee charged.
Basic methods of physical protection for women.

Tae Kwon Do, Introduction to
Fall and spring. Fee charged.
A Korean martial art distinguished by its emphasis on high and powerful kicks. Basic kicking, punching, and blocking are emphasized.

Tae Kwon Do, Intermediate
Fall and spring. Fee charged.
A Korean martial art distinguished by its emphasis on high and powerful kicks. Intermediate-level kicking, punching, and blocking are emphasized.

Tae Kwon Do, Advanced
Fall and spring. Fee charged.
A Korean martial art distinguished by its emphasis on high and powerful kicks. Advanced-level kicking, punching, and blocking are emphasized.

T'ai Chi Chuan, Introduction to, and Intermediate
Fall and spring. Fee charged.
Introduction to T'ai Chi, a system of graceful exercises that aim at nurturing relaxation, deep breathing, and improved circulation.

Outdoor Education Program
See the brochure for the Cornell University Outdoor Education Program at registration for more information about courses.

Climbing Courses
Basic Rock-Climbing
Fall, spring, and summer. Fee charged.
Seven afternoons climbing inside on the Lindseth climbing wall.

Basic Rock-Climbing, for Women
Fall, spring. Fee charged.
Seven afternoons climbing inside on the Lindseth climbing wall taught by and for women.

Basic Rock-Climbing, for 24 and Over
Fall, spring. Fee charged. Non-credit course.
Four evenings climbing indoors on the Lindseth wall for people age 25 or older.

High Adventure 101
Fall, spring, and summer. Fee charged.
Six afternoons at local parks and wilderness areas, some classes on indoor Lindseth climbing wall.

Continuing Rock-Climbing
Fall, spring. Fee charged.
Seven afternoons of advanced climbing techniques on the Lindseth climbing wall.

Ice Climbing
Spring. Fee charged.
Four outings to local state parks and gorges.

Outdoor Top Roping
Fall, spring. Fee charged.
Two outings (nights) on the Lindseth climbing wall and two outings at local climbing areas.

Shawangunks Rock-Climbing
Fall, spring. Fee charged.
Four-day climbing camp at the Shawangunks.

Backpacking Courses
Natural History of the Finger Lakes
Fall, spring. Fee charged.
Backpacking skills with a strong environmental focus.

Backpacking in the Finger Lakes
Fall, spring. Fee charged.
Classes lead to two full weekends on the trail.

Southwest Backpacking
Spring. Fee charged.
Spring break trip to the SW deserts and canyons.

Trail Maintenance
Fall, spring. Fee charged.
Work with the local trails club to support and maintain trail systems.

Wilderness Skills
Fall, spring. Non-credit course.
Break trip focusing on wilderness travel and living skills.

Wilderness Survival Skills
Fall, spring. Fee charged.
Primitive living skills taught in three classes and a weekend backpack trip.

Biking Courses
Bike and Hike
Fall, spring. Fee charged.
Four full days exploring local countryside.

Bike Repair, Beginning
Fall, spring. Fee charged. Non-credit.
Two evenings of hands-on repair work.

Bike Repair, Intermediate
Fall, spring. Fee charged. Non-credit.
One evening of hands-on repair work.

Mountain Biking
Fall. Fee charged.
Four full days exploring local countryside.

Canoeing Courses
Canoeing, Adirondacks
Fall. Fee charged.
Break trip explores the beauty of the Adirondacks via canoe.

Introduction to Paddling
Fall, spring. Fee charged.
A sampler of beginning canoeing and kayaking.

Canoe/Camping, Flatwater
Fall, spring. Fee charged.
Four full days paddling local waterways including an overnight.

Canoeing, Moving Water
Fall, spring. Fee charged.
Includes a full weekend of river paddling.

Caving Courses
Caving
Fall, spring. Fee charged.
Four days in the fall and two weekends in the spring in Pennsylvania caves.

Hiking Courses
Day Hiking
Fall, spring. Fee charged.
Day outings in the Finger Lakes Region.

Snowshoeing
Spring. Fee charged.
Day outings in the Finger Lakes Region.

Kayaking Courses
Whitewater Kayaking Day Trip
Spring. Fee charged. Non-credit course.
Day excursion for paddlers with basic skills.

Wildwater Kayaking
Fall, spring. Fee charged.
Includes a full weekend of whitewater paddling.

Sea Kayaking
Fall, spring. Fee charged.
Break trip exploring various coastal areas.

Outdoor Leadership
Wyoming Expedition
Spring and fall. Fee charged.
Two-week leadership and mountaineering expedition to the Wind River Mountains.

Wilderness Emergency Care, Basic
Fall, spring, summer (6 weeks).Fee charged.
Full weekend of wilderness first aid and CPR.

Wilderness First Responder
Fall, spring. Fee charged. Non-credit.
Two evenings of specialized wilderness care.

Wilderness First Responder
Offered in January, over winter break. Fee charged.
Ten days of instruction and practical application of backcountry first aid. Participants earn CPR and First Responder certifications. Taught by SOLO Wilderness Medical Institute.

Skiing—Cross-Country Courses
Cross-Country Skiling, Basic
Spring. Fee charged.

Cross-Country Skiling, Intermediate
Spring. Fee charged.

Cross-Country Ski Day Touring
Spring. Fee charged.
Four full-day weekend outings. Emphasis on backwoods touring.

Telemark Skiling
Spring. Fee charged.
Four evenings at Song Mountain Ski Area.

Personal Growth Courses
Body-Mind
Fall and spring. Fee charged.
Activities are drawn from ancient Eastern practices as well as modern Western psychology, and are designed to give the student first-hand experience of the interaction between their own bodies and minds.

Introduction to Meditation
Fall and spring. Fee charged.
This course provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation. The methods serve to evoke the deep relaxation from which heightened awareness and creativity arise.
Living Routines
Fall and spring.
Provides the opportunity to explore a variety of current and modern methods designed to bring one into a state of meditation.

Health Issues for Student Athletes
Fall and spring.
To promote and encourage lifestyle choices on the part of student athletes that will help them establish and maintain high levels of all-around health, and thereby contribute positively to their academic and athletic achievement. NOTE: This is an NCAA requirement open to sophomore athletes only.

Relaxation and Stress Management
Fall and spring.
Introduction to basic relaxation techniques for the management of everyday stress. Techniques will be taught that can be used in normal everyday living situations.

Swedish Massage
Fall, spring, and summer. Fee charged.
Learn to give a relaxing, stress-reducing Swedish massage. You will master the basic strokes of Swedish massage and learn about their application to the different parts of the body. Students will use oils and lotions as a part of their training.

Therapeutic Massage
Fall, spring, and summer. Fee charged.
Provides an experiential introduction to several types of massage. Included are Swedish, shiatsu, polarity, and sports massage. Class members will participate in group exercises and practice on each other during class time. All exercises and techniques can be done while wearing street clothing.

Shiatsu Massage
Fall and spring. Fee charged.
Gain an experimental understanding of your body and learn certain shiatsu massage techniques.

Yoga, Introduction to
Fall, spring, and summer (6 weeks). Fee charged.
Fundamentals of hatha-yoga. Covers basic postures, breathing techniques, and deep relaxation. Introduces chanting.

Racket Sports Courses
Badminton, Introduction to
Fall and spring. Helen Newman Hall. Fundamental shots, scoring, and general play.

Badminton, Intermediate
Fall and spring. Helen Newman Hall. Review of fundamental shots, scoring, and general play.

Racquetball, Introduction to
Fall, spring, and summer. Fee charged. Instruction for beginners. Equipment is furnished. Protective eyewear required.

Squash, Introduction to, Intermediate
Fall, spring, and summer. Fee charged. Classes for appropriate level of play. Equipment is furnished. Protective eye wear required.

Tennis, Introduction to
Fall, spring, and summer. Fee charged. Basic skills taught include forehand, backhand, serve, and volley. Scoring methods taught.

Tennis, Intermediate
Fall, spring, and summer. Fee charged. Review basic strokes plus topspin and underspin. Doubles strategy emphasized.

Tennis, Advanced
Fall, spring. Fee charged. Advanced strokes and doubles play emphasized. Recommended for tournament players or those with previous team experience.

Tennis, Indoor-Recreational
Fall and spring. Fee charged.
Play is conducted at the new Reis Tennis Center. Players must have high school or college tournament experience or a rating of 3.5 or higher from the USTA. Matches are played in both doubles and singles. Equipment furnished. NO BLACK-SOLE SHOES ALLOWED ON COURTS!

Sailing Courses
Board Sailing (Wind Surfing)
Fall, spring, and summer (6 weeks). Fee charged.
A Mistral Board Sailing Academy certificate is awarded on successful completion.

Catamaran, Introduction to
Fall, spring, and summer (6 weeks). Fee charged.
Learn basic skills necessary for sailing multihull catamarans.

Small-Boat Sailing, Introduction to
Fall, spring, and summer (6 weeks). Fee charged.
Learn basic skills necessary to sail small sailboats and basic keelboats safely.

Small-Boat Sailing, Competitive
Fall and spring. Fee charged.
Vanguard 420 sailboat used for the course. USYRA Rules Book used as a text for the course. Fee includes one-year membership in university sailing team program.

Water Sking
Fall only. Fee charged.
Introductory course for beginning water skiers. Classes will be conducted from East Shore Marina.

Skiing and Snow Boarding
Downhill Skiing and Snowboarding
Spring. Fee charged.
Transportation, instruction, ski-lift fees, and skiing time are offered in a package deal. Greek Peak and Song Mountain personnel are present at registration to explain the program and accept fees. Bus transportation to Greek Peak is provided six afternoons a week for six weeks.

Cross-Country Skiing—See Outdoor Program.

Target Shooting Courses
Archery, Introduction to
Fall and spring. Fee charged. Two classes a week. Instruction in the care of equipment; seven basic steps for shooting; scoring; practice shooting at 20, 30, and 40 yards.

Pistol, Introduction to
Fall, spring, and summer (6 weeks). Fee charged.
Instruction in the handling of the pistol. In the three modes of 50-foot competitive target shooting—slow fire, timed fire, and rapid fire. Emphasis on safety and responsibility while firing.

Riflery
Fall and spring. Fee charged.
Instruction and practice in the techniques of target rifle shooting from various shooting positions.

Trap and Skeet
Fall, spring, and summer (6 weeks). Fee charged.
Includes lectures and shooting at the Tompkins County Rod and Gun Club range. Guns and shells are furnished.

Team Sports Courses
Basketball
Fall and spring.
Fundamental drills in passing, shooting, and dribbling. Scrimmages each class session.

Ice Hockey, Introduction to
Fall and spring. Prerequisite: basic skating ability. Fee charged.
Stick handling, passing, and shooting are stressed. Some scrimmaging. Students provide their own skates and sticks; all other equipment is furnished.

Ice Hockey, Intermediate
Fall and spring. Fee charged. Prerequisite: beginning hockey or previous participation in organized hockey.
This course is designed for the intermediate hockey player. Advanced techniques taught include possession, power play, penalty killing, and offensive and defensive attack. Each session emphasizes game situations and scrimmaging. Skates and hockey sticks must be supplied by the participants.

Soccer
Fall and spring.
Instruction to the game. Includes basic individual skills (passing, trapping, shooting) and team play and strategy.

Volleyball, Introduction to
Fall and spring.
Instruction in use of pistol in the three modes of target riflery from various shooting positions.

Volleyball, Intermediate
Fall and spring.
Passing and blocking strategy; scrimmages in class.

Volleyball, Advanced
Fall and spring.
Offensive and defensive team strategy is emphasized in class scrimmages.

Weight Training Courses
Trotter Circuit Training
Fall and spring. Fee charged.
Students will gain a working knowledge of the basic principles of Trotter selectorized weight lifting equipment. Emphasis on principles of weight training, circuit training, intensity training, and program design.

Principles of Weight Training
Fall and spring. Fee charged.
Introduces the proper use of Olympic weights for improving physical condition and muscular strength. Instruction with focus on the relation between high-rep light weight lifting, low-rep heavy lifting, and the development of bulk, strength, and endurance.

Independent Study
Fall and spring.
Independent study is designed for those who have difficulty fitting any of the regularly scheduled courses into their academic program. Class activities will be based on personal fitness programs. A term paper is required. Permission to enter this program must be granted by the program director.
Summer Sessions provides a wide variety of educational opportunities beyond the degree-granting programs of the university. These programs serve virtually all age groups in a great variety of formats and time frames. For information about the following programs write B20 Day Hall, Ithaca, New York 14853-2801; call 255-4087; e-mail cusce@cornell.edu; or fax 255-9697; unless indicated otherwise below. You may also visit us on the web at www.continuingeducation.cornell.edu.

ADMINISTRATION
Glenn C. Altschuler, dean
Abby H. Eller, director, Cornell University Summer College
Christine Holmes, special programs coordinator
Ralph Janis, director, Cornell's Adult University
Charles W. Jenny, Jr., associate dean, and director, Cornell University Summer Session
Joseph Lindner, manager, computing
Ann L. Morse, media manager
Cathy M. Pace, registrar
Diane E. Sheridan, director, finance and administration

CORNELL UNIVERSITY SUMMER SESSION
The Cornell University Summer Session provides unique and unusually attractive opportunities for study and recreation at a time when the Cornell campus and the Finger Lakes region of central New York are at their loveliest and the Ithaca weather is at its best. Participants may choose from a wide spectrum of courses scheduled during three-, six-, and eight-week sessions. Although admission is open to persons of all ages, the majority of summer session participants are matriculated Cornell students. Classes meet daily and are usually kept small to foster a close association between students and teachers. For information call 255-4087; e-mail cusce@cornell.edu; or visit our web site at www.summer.cornell.edu.

SPECIAL AND PROFESSIONAL PROGRAMS
Intensive learning experiences are presented year-round both for students and for professionals in many fields. Formats include for-credit courses of one- to eight weeks and noncredit weekend and weeklong short courses. Programs can also be designed to respond to the needs and interests of corporations, professional societies, and other groups. These programs take place on the Cornell campus, on site, at other locations worldwide, and via distance learning. For information call 255-7259; e-mail cusce@cornell.edu; fax 255-9697; or visit www.continuingeducation.cornell.edu/SP/.

Summer College Programs for High School Students
High school sophomores, juniors, and seniors attend regular university courses through Cornell University Summer College and may earn college credit. They also explore career options through specially designed workshops. Students live in residence halls, become familiar with campus life, and attend seminars describing the college admissions process. The program is designed to help ease the transition from high school to college. For information call 255-6203; e-mail summer_college@cornell.edu; fax 255-6665; or visit www.summercollege.cornell.edu.

Cornell's Adult University
Cornell's Adult University (CAU) offers weeklong noncredit courses on campus for adults and families during the summer. The courses are usually offerings of the Cornell School of Continuing Education and Summer Sessions. Students live in residence halls, attend workshops, and interact with the instructor and other students. There is usually no credit available. For information, write to CAU, 422 West State Street, Ithaca, New York 14850-2490; call 255-6260; or e-mail cuainfo@cornell.edu; fax 254-4482; or visit www.cau.cornell.edu.

Distance Learning
The School of Continuing Education and Summer Sessions offers courses through distance learning. Instructional materials for these courses may be presented on the web, video tapes, and/or CD-ROMs. Students interact with the instructor and other students by phone or e-mail. Assignments and examinations are completed within a scheduled session, just as in on-campus courses, but students have the option of beginning study prior to the start of the session. For information, visit www.continuingeducation.cornell.edu/DL/.

Extramural Study
Cornell undergraduate or graduate students whose studies have been interrupted may find it appropriate to resume their studies by taking courses on a part-time basis. Area residents may take courses on a part-time basis by registering as extramural students. Those interested may enroll in almost any course offered in the fall and spring terms if they receive the instructor's written approval. Another offering, the Visitor's Program, allows adults to attend classes in many divisions of the university on a space-available basis at a reduced charge. In this program, no credit is given, and no record is kept of attendance or performance. Visitors are required to obtain written permission from the instructor. For information, write Extramural Study, B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; e-mail cusce@cornell.edu; fax 255-9697; or visit www.continuingeducation.cornell.edu/EXMU/.

Winter Session
Cornell undergraduate and graduate students, as well as employees and area residents, can earn three to four credits between the fall and spring semesters by enrolling in the winter session. This quiet time on campus allows students to enjoy generally smaller classes and to concentrate on intensive study. Winter-session students may enroll in scheduled courses or design individualized study with a faculty member. For information, write to Winter Session, B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; e-mail cusce@cornell.edu; fax 255-9697; or visit www.wintersession.cornell.edu.

Continuing Education Information Service
This service provides free information, counseling, and referral to people who have been out of school for several years and want to resume their education. It also provides information about short courses, workshops, professional updates, and executive programs offered by the university to people inside and outside Cornell. For information, write to Continuing Education, B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; e-mail cusce@cornell.edu; or fax 255-9697.

SUMMER COURSE ROSTER
The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session Office. Courses are posted in the web roster (www.summer.cornell.edu) in the fall as the roster is developed. A preliminary course roster is available beginning in late November. If a course is also offered through distance learning, the course title will be followed by DL.

NEW YORK STATE COLLEGE OF VETERINARY MEDICINE

ADMINISTRATION
Donald F. Smith, dean
Robert O. Gilbert, associate dean for clinical programs and professional service
Douglas D. McGregor, associate dean for research and graduate education
Hollis N. Erb, secretary of the college

DEPARTMENT CHAIRS
Biomedical Sciences: M. Kothkoff
Clinical Sciences: R. Hackett, acting chair
Microbiology and Immunology: D. Russell
Molecular Medicine: G. Weiland
Population Medicine and Diagnostic Services: D. Lein

THE COLLEGE
The College of Veterinary Medicine offers a professional program that requires four years of full-time academic and clinical study of the normal and abnormal structure and function of the animal body and the diagnosis, treatment, and prevention of animal disease.

Graduates of the college receive the Doctor of Veterinary Medicine (D.V.M.) degree, which is recognized by licensing boards throughout the world. Graduates generally enter private practice, academia, or become engaged in one of the increasing number of other biomedical activities.

Admission requires a minimum of three years of college work, including specific prerequisite courses and experience. Applications must be filed approximately one year before the proposed matriculation date. The competition for admission is keen, since there are many more qualified applicants than can be admitted.

Graduate programs in veterinary research and postdoctoral training in clinical specialties are open to Doctors of Veterinary Medicine and some highly qualified holders of baccalaureate degrees and lead to the degree of Master of Science or Doctor of Philosophy.

More detailed information is contained in the catalog of the College of Veterinary Medicine, which may be obtained by writing to the college.

Note: 500- and 600-level courses are open only to veterinary students except by written permission from the instructor.

The College of Veterinary Medicine has revised its professional curriculum; the new course requirements apply to the class that matriculated in the fall of 1993 and to subsequent classes. Courses in the revised professional curriculum are designated with the prefix “VTMED” and consist of two categories of courses: foundation courses and distribution courses.

The Professional Curriculum

FOUNDATION COURSES
In foundation courses I, II, III, and IV (VTMED 510, 520, 530, 540), students work in small groups under the guidance of a faculty tutor. Case-based exercises are used to facilitate the understanding of basic science concepts within the context of clinical medicine. On average, three to four 2-hour tutorial sessions are scheduled each week. These are complemented by lectures, laboratories, and discussion sessions or other organized learning opportunities specific to the individual course. Faculty are available to respond to questions that arise as a result of the case-based exercises.

Tutorial sessions and all other organized learning programs are usually scheduled during the mornings, thereby reserving the afternoons for independent study. By situating learning in a clinical context, students are better able to integrate material from the basic and clinical sciences and are encouraged to develop an understanding of the clinical reasoning process from the beginning of the curriculum. The tutorial-based educational format creates an atmosphere that requires students to be involved actively in their learning and allows them to develop skills in communication, information retrieval, and analysis.

Note: Courses listed in brackets [ ] are approved courses that are not offered during the 2000-2001 academic year.

VETMED 510 The Animal Body (Foundation Course I)
Fall. 12 credits. Limited to first-year veterinary students. Letter grades only. J. W. Hermanson and staff.

This course is designed to enable students to understand the principles of veterinary anatomy at the gross, microscopic, and ultrastructural levels. Developmental anatomy is emphasized to the extent that it reflects determinants of major morphological differences. Radiologic and related imaging techniques are used throughout the course to assist in the understanding of normal and abnormal anatomy. Understanding of the anatomic basis of common surgical procedures is achieved during the various dissection procedures. The course is based on tutorials with significant emphasis on practical laboratories. Lectures and modules complement student learning.

VETMED 517 Animals, Veterinarians, and Society: Part A (Foundation Course II)
Fall. 1 credit. Limited to first-year veterinary students. Letter grades only. A fee of approximately $10 is charged for the course guide. Staff.

This course is the correlate for VETMED 510 The Animal Body. It is a laboratory-based course that teaches physical examination of four species (dog, cat, cow, and horse). The class is divided into small groups and each group meets for two hours each week during the first 11 weeks. The skills of auscultation, percussion, palpation, and observation are taught along with clinically related diagnostic procedures.

VETMED 520 Genetics and Development (Foundation Course II)
Fall and spring. 9 credits. Limited to first-year veterinary students. Prerequisite: VETMED 510 The Animal Body. Letter grades only. R. A. Levine and staff.

An appreciation of how gene expression and cell behavior contribute to normal animal development and health is crucial for our understanding of the pathogenesis of disease. Students will gain an understanding of the cellular and molecular mechanisms that regulate development and maintain normal structure and function throughout the life of an animal. Emphasis will be placed on defining and characterizing normal cellular behaviors and on understanding how mutations in specific genes promote disease. Students will become familiar with the common molecular procedures being used to develop new diagnostic and therapeutic tools to maintain health and combat disease. Tutorial sessions are complemented by lectures, laboratories, and class discussions.

VETMED 521 Neuroanatomy and Clinical Neurology
Spring. 3 credits. Limited to first-year veterinary students. Letter grades only. A. deLahunta.

Fundamentals of functional neuroanatomy and diseases of the nervous system are taught so that each student is competent in the...
diagnosis of clinical neurologic disorders of domestic animals. This is a vertically integrated course that includes dissection of the central nervous system of the dog, the anatomic basis for the diagnosis of diseases of the nervous system, and the differential diagnosis of those disorders. Clinical cases with pertinent lesions are demonstrated with each system. Films and videotapes of clinical patients are used to demonstrate the clinical signs produced by the various diseases. Slides of gross and microscopic lesions are used to emphasize the clinical and neuroanatomic relationships and to stress characteristic features of representative conditions.

**VETMED 527 Animals, Veterinarians, and Society: Part B (Foundation Course VIIb)**

This course begins in the last part of fall semester and finishes at the end of winter session. 1 credit. Limited to first-year veterinary students. Prerequisite: VETMED 517 Animals, Veterinarians, and Society: Part A. Letter grades only. A fee of approximately $7 is charged for the course guide. Staff.

This course is the correlate for VETMED 520 Genetics and Development. It enters into a study of ethical issues related to animal use, animal welfare, animal genetics, clinical application of genetics, genetics counseling, and clinical day-to-day ethics. The course meets for one 2-hour session each week.

**VETMED 530 Function and Dysfunction: Part I (Foundation Course Illa)**

Spring. 9 credits. Limited to first-year veterinary students. Prerequisite: VETMED 520 Genetics and Development. Letter grades only. D. Roberts and staff.

This course is designed to develop students’ understanding of how an animal maintains itself as a functional organism, how this is achieved through the integration of different functional organ systems, how tissue structure relates to tissue function; how injury alters structure and leads to dysfunction, manifested as clinical signs; how organ function can be assessed; and how it can be modulated pharmacologically. The course incorporates aspects of physiology, biochemistry, cell biology, histology, pathology and histopathology, clinical pathology, and pharmacology.

**VETMED 531 Function and Dysfunction: Part II (Foundation Course Illb)**

Fall. 7 credits. Limited to second-year veterinary students. Prerequisite: VETMED 530 Function and Dysfunction: Part I. Letter grades only. D. Roberts and staff.

A continuation of VETMED 530 Function and Dysfunction: Part I. This course also provides opportunities to practice client interview skills and to participate in a home or farm visit.

**VETMED 538 Animals, Veterinarians, and Society: Part C2 (Foundation Course VIIc, continued)**

Fall. 1 credit. Limited to second-year veterinary students. Prerequisite: VETMED 537 Animals, Veterinarians, and Society: Part C1. Letter grades only. A fee of approximately $7 is charged for the course guide. Staff.

This course is the correlate for VETMED 531 Function and Dysfunction: Part II. This course provides for unique the importance of the medical record, the diversity of clients, employees, and society in general, and a session on alternative medicine and its various practices. How to critically read and evaluate clinical studies and journal articles is also addressed.

**VETMED 540 Host, Agent, and Defense (Foundation Course IV)**

Fall. 12 credits. Limited to second-year veterinary students. Prerequisite: VETMED 531 Function and Dysfunction: Part II. Letter grades only. J. Baines (course leader) and others.

This course is divided into six sections: the host response, intracellular environment, extracellular environment, somatic environment, external environment, and surrounding environment. Using this approach, students develop an understanding of the host response to insult, a familiarity with groups of important pathogens, an understanding of how pathogens manipulate the host and how the host defends itself against attacks, and an understanding of the roles played by the external environment and human intervention in the epidemiology of infectious organisms.

**VETMED 547 Animals, Veterinarians, and Society: Part D (Foundation Course VIId)**

Fall. 1 credit. Limited to second-year veterinary students. Prerequisite: VETMED 538 Animals, Veterinarians, and Society: Part C2. Letter grades only. A fee of approximately $12 is charged for the course guide. Staff.

This course is the correlate for VETMED 540 Host, Agent, and Defense. The course will emphasize maintaining health in both individuals and populations of animals and humans. Topics will include animal bites, nosocomial infections, rabies control programs, vaccines and vaccine reactions, zoonotic diseases, and integrated health maintenance programs. The course emphasizes veterinary public health.

**VETMED 550 Animal Health and Disease: Part I (Foundation Course V)**

Spring. 10 credits. Limited to second-year veterinary students. Prerequisite: VETMED 540 Host, Agent, and Defense. Letter grades only. D. M. Ainsworth.

This course integrates the clinical sciences of medicine, surgery, anesthesiology, radiology, and theriogenology, which are themselves integrated subjects, with systems pathology and relevant aspects of applied pharmacology. The course will be presented on a systems basis moving from clinical signs of alteration in function, to pathophysiology of clinical signs, to strategies for diagnosis and treatment. Specific examples will be used to establish a cognitive framework and knowledge of the most important diseases. This course will provide a sound foundation for clinical rotations in Foundation Course VI. It builds on the strengths developed in earlier courses by an increased exposure to case examples in a more directed way, taking advantage of the diversity of skills and special knowledge of both faculty and students. A variety of educational techniques, including lectures in which interaction is encouraged, laboratories, demonstrations, case discussions, and autotutorials.

**VETMED 551 Animal Health and Disease: Part II (Foundation Course V, continued)**

Fall. 10 credits. Limited to third-year veterinary students. Prerequisite: VETMED 550 Animal Health and Disease: Part I. Letter grades only. D. M. Ainsworth and staff.

**VETMED 557 Animals, Veterinarians, and Society: Part E (Foundation Course VIIe)**

Spring. 1 credit. Limited to second-year veterinary students rolling over into fall semester for the then third-year veterinary students. Prerequisite: VETMED 547 Animals, Veterinarians, and Society. Part D. Letter grade only. A fee of approximately $14 is charged for the course guide. Staff.

This course is a correlate with Foundation Course V, Animal Health and Disease. The course will examine governmental regulation of the veterinary profession, including proper drug usage, extra label drug use (FDA), controlled substances (DEA), substance abuse, professional liability and malpractice insurance; professional and unprofessional conduct, hazardous materials in the workplace (OSHA), and environmental issues (EPA). Also included will be sessions relating to controlling and preventing the spread of animal diseases and the role of USDA and specifically APHIS in these regulatory functions.

**VETMED 560 Ambulatory and Production Medicine I**

Fall, winter, spring and summer. Credit variable (either one or two credits). Letter grades only. M. E. White and staff.

A clinical service course in which students accompany ambulatory clinicians on farm and stable calls and learn the skills and procedures necessary for operation of a modern veterinary practice offering primary care to large- animal clients. Routine herd health visits are conducted for cattle, horses, sheep, goats, and swine. Reproductive evaluations (including pregnancy and fertility examinations), nutritional evaluation, and disease prevention are stressed. Herd health programs also include vaccinations, parasite control, mastitis prevention, and routine procedures. With appropriate herds, analysis of computerized performance data is conducted and discussed with the owner. In addition to assisting with routine scheduled work, students participate in diagnosis and medical or surgical treatment of ill or injured animals. This includes rotating assignments for night and weekend duty.

**VETMED 561 Community Practice Service—Medicine (enroll in Foundation Course VII)**

2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. E. Hornbuckle and staff.

The Community Practice—Medicine Service is structured to provide supervised clinical
experience in the practice of small companion animal medicine. The course is conducted in the Small Animal Clinic of the Cornell University Hospital for Animals. Students interact directly with clients presenting their pets for primary medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients. After review, students explain their plans to the clients and provide follow-up care and management of these patients.

**VETMED 562 Community Practice Service—Surgery and Anesthesia**
2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. H. J. Harvey and staff. Basic principles of anesthesiology and surgery are developed in the clinical rotation. Under direct staff supervision, students will anesthetize and perform surgical procedures on patients presented to the Small Animal Clinic for neutering and minor elective procedures. Students will formulate and carry out plans for all aspects of patient care: during their hospital stay and will be expected to fully participate in client communications. Ordinarily, this course will precede Anesthesiology Service and Small Animal Surgery Service (soft tissue component).

**VETMED 563 Small Animal Medicine**
Fall, spring, winter, and summer. 4 credits. Required course open to second-semester third-year and all fourth-year veterinary students; not open to others. Letter grades only. S. C. Barr, S. A. Center, J. F. Randolph, and K. W. Simpson. The Small Animal Medicine Service is structured to provide supervised clinical experience in the practice of companion small animal medicine. The course is conducted in the Small Animal Clinic of the Cornell University Hospital for Animals. Students interact directly with clients presenting their pets for primary or referral medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients. After review, students explain their plan to the clients and provide follow-up care and management of these patients.

**VETMED 564 Small Animal Surgery Service**
Fall, winter, spring, and summer. 4 credits. Required of all third- and fourth-year veterinary students; not open to others. Letter grades only. H. J. Harvey and small animal surgery faculty. A clinical service rotation, this course exposes the student to the practice of surgery under hospital conditions. Students participate in the diagnostic techniques, planning of therapy and daily care of dogs, cats, and exotic species under the direction of a faculty veterinarian. Students assist experienced surgeons in the operating room and, with house-officer supervision, are responsible for patients undergoing elective ovariohysterectomy or castration. Client communications and the basics of efficient practice are emphasized.

**VETMED 565 Ambulatory and Production Medicine II**
Fall, winter, spring, and summer. 4 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. M. E. White and staff. A clinical service rotation in which students accompany ambulatory clinicians on farm and stable calls and learn the skills and procedures necessary for operation of a modern veterinary practice offering primary care to large animal clients. Large animal health issues are conducted for cattle, horses, sheep, goats, and swine. Reproductive evaluations (including pregnancy and fertility examinations), nutritional evaluation, and disease prevention are stressed. Herd health programs also include vaccinations, parasite treatment, mastitis prevention, and routine procedures such as castration and dehorning. With appropriate herds, analysis of computerized performance data is conducted and discussed with the owner. In addition to assisting with routine scheduled work, students participate in diagnosis and medical or surgical treatment of ill or injured animals. This includes rotating assignments for night and weekend duty.

**VETMED 566 Large Animal Medicine Service**
Fall, winter, spring, and summer. 3 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. D. Ainsworth, T. Divers, and staff. Students assigned to this service will assist the faculty and house staff of the Large Animal Medicine service in the diagnosis and care of patients. The goal of this course is for students working on this service to acquire knowledge and skills in history taking, physical examination, evaluation and completion of appropriate ancillary tests, treatment, and patient care. Daily rounds and discussions are used to monitor patient progress and further educate students.

**VETMED 567 Large Animal Surgery Service**
Fall, winter, spring, and summer. 4 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. A. J. Nixon and staff. This clinical rotation is structured to provide supervised clinical experience in the practice of large animal surgery. Under the direction of faculty and house staff, students participate in the diagnosis, surgical treatment, and care of patients presented to the Large Animal Clinic. Training through patient care is supplemented by formal rounds and didactic instruction.

**VETMED 568 Anesthesiology Service**
Fall, winter, spring, and summer. 3 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. R. D. Gleed, J. W. Ludders, P. F. Moon, and staff. This course is designed to provide clinical experience in the use of anesthetics in small companion animals, horses, and some food animals. The students participate in selecting suitable anesthetic techniques for patients in the Cornell University Hospital for Animals and then implement these techniques under the supervision of faculty and residents. The goal is for students to learn the skills and thought processes necessary to perform safe anesthesia in a modern veterinary practice.

**VETMED 569 Dermatology Service**
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. H. Miller and D. W. Scott. During this clinical rotation, students participate in the diagnosis and management of skin disorders in small and large animals. Patients are examined by appointment and through consultation with other hospital services.

**VETMED 570 Ophthalmology Service**
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. R. C. Riss, T. Kern, and N. Irby. This course combines clinical experience with beginning skills in diagnostic ophthalmology. Students learn how to apply the ophthalmic diagnostic tests. A competent ocular examination is the goal of this rotation. Confidence in using direct and indirect ophthalmoscopes, slit lamps, tonometers, gonioscopes, conjunctival cytology, and surgery comes with the practice provided by this rotation. Students are required to review the introductory orientation videotapes in the Autotutorial Center titled Ocular Examination I and II before the start of the rotation. This rotation provides surgical experience and cases are referred to other services that usually challenge the service. Adequate routine case material is presented to prepare most students for practice.

**VETMED 571 Pathology Service**
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. B. A. Summers and staff. This course involves the hands-on diagnostic necropsies of most mammalian species that are presented to the pathology necropsy room and of avian and aquatic animal medicine necropsy room. Students work in groups of three to five for the two-week rotation. Necropsies are performed under the guidance of pathology faculty and residents. Students prepare written reports of necropsies, microscopic hematology and cytology slides, perform urinalyses, and discuss case studies.

**VETMED 572 Radiology Service**
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. N. L. Dykes and staff. A two-week clinical experience in the Imaging Section of the Cornell University Hospital for Animals. Students will use radiographic, CT, ultrasonographic, and nuclear medicine imaging techniques to evaluate animal patients under treatment in the Cornell University Hospital for Animals. Students obtain and interpret radiographic and ultrasonographic studies with guidance from radiology faculty and residents. Two 3-hour laboratory sessions are given to allow hands-on experience in patient positioning and radiographic technique. An autotutorial teaching film file is used to familiarize students with radiographic examples of common diseases of large and small animal species. Small-group discussions are scheduled to present and discuss current cases. The use of x-ray-producing equipment and radioisotopes is discussed.
VETMED 573 Fourth-Year Seminar
Fall and spring. 1 credit. Required of all fourth-year veterinary students. First-, second-, and third-year students and all staff members are invited and encouraged to attend. S-U grades only. F. H. Fox, chair of the Senior Seminar Committee.

The aim of this course is to give the student the opportunity and opportunity of selecting and studying disease entity on the basis of a case or series of cases, or to conduct a short-term, clinically oriented research project under the direction of a faculty member. In either case, an oral report will be presented at a weekly seminar. A written report will also be submitted at the time of the seminar. All participants are encouraged to foster an atmosphere in which discussion, exchange of ideas, and the airing of controversial opinions might flourish.

DISTRIBUTION COURSES

Distribution courses comprise 30 percent of the curriculum and are usually scheduled during the first month of each spring semester. During the first two years, many of the distribution courses are oriented to the basic sciences. During years three and four, students have additional distribution course offerings from which to choose. Some will emphasize clinical specialties, whereas others will integrate basic science disciplines with clinical medicine and will be co-taught by faculty representing both areas. Students from different classes have the opportunity to take many of these courses together.

Grades: Grading options for distribution courses are either letter or S/U.

VETMED 601 Anatomy of the Carnivore
Spring. 3 credits. Prerequisite: VETMED 510 The Animal Body or permission of instructor. First-, second-, third-, and fourth-year veterinary students; others by permission. Letter grades only. A. J. Benzinidheadtbrt.

Carnivore anatomy is studied by detailed systematic and regional dissection of the cat, with comparison to the dog. Student dissection is supplemented with prosections, radiographs, models, and an understanding of surgical approaches. There are opportunities to dissect other carnivores, such as the ferret and the fox, depending on availability of specimens. The lectures augment the laboratory dissection and introduce the student to functional morphological comparative features in the Order Carnivore. Students do an independent research project on the carnivore species of their choice and give an oral presentation on this to the class.

VETMED 602 Anatomy of the Horse
Spring. 3 credits. Prerequisite: VETMED 510 The Animal Body or permission of instructor. First-, second-, third-, and fourth-year veterinary students; others by permission. Letter grades only. M. S. Hacker.

This course is organized as a traditional anatomy course that relies primarily on hands-on dissection laboratories augmented by lectures and highlighted by clinical correlations. An understanding of anatomy that provides the foundation for surgery and is directly relevant to clinical practice will be emphasized in the regional approach to dissection. Most lectures will emphasize structural-functional correlations that are unique or important in the horse. Microscopic anatomy will be integrated into the course in selected areas to lay a foundation for the later study of pathology or when it reinforces concepts of structure and function that are difficult to understand by a study of the gross anatomy alone. Student dissection cadavers will be supplemented by skeletal materials, radiographs, models, preserved dissection specimens, and fresh specimens when they are available.

VETMED 603 Anatomy of the Ruminant
Spring. 3 credits. Prerequisite: VETMED 510 The Animal Body or permission of instructor. First-, second-, third-, and fourth-year veterinary students; others by permission. Letter grades only. J. Hernandez.

The regional anatomy of several ruminant species will be covered using dissection laboratories, lectures, and large-group discussions. Functional consequences of structural modifications and anatomical features directly relevant to clinical practice will be emphasized. Microscopic anatomy will be correlated with gross anatomy when appropriate to relate structure to function and to provide a foundation for later study in pathology. Student dissection material will be supplemented by skeletal materials, radiographs, models, preserved specimens, and postmortem specimens. Students will be required to complete an independent study project on a relevant subject of their choice. Assessment includes written and practical examination.

VETMED 605 Comparative Anatomy: Pattern and Function
Spring. 3 credits. Prerequisite: VETMED 510 The Animal Body. First-, second-, third-, or fourth-year veterinary students; others by permission. Letter grades only. L. A. Mitz.

The goal of this course is to study anatomical variability among amniote (mammals, birds, reptiles, and amphibian and fish species. This is accomplished by relating the anatomy of major organ systems in each species to a common basic pattern and considering the differences in a functional perspective. Five major systems will be explored (i.e., integumentary, locomotor, cardiorespiratory, digestive, and urogenital) in a variety of species as available.

VETMED 606 Advanced Clinical Neurology
Spring. 1 credit. Prerequisite: VETMED 521 Neuroanatomy and Clinical Neurology. Third- and fourth-year veterinary students. Letter grades only. A. deLahunta.

The objective of this course is to further the experience and confidence of the student in the diagnosis and understanding of clinical neurological disorders. It continues their correlation of anatomy, physiology, and pathology in the various diseases of the nervous system and the understanding of their pathogenesis. Neurological disorders that are not covered in the foundation course will be considered here. The course is entirely based on case examples that are presented on videotapes and slides.

VETMED 607 The Literature and Subject Matter of Natural History
Spring. 1 credit. First-, second-, third-, and fourth-year veterinary students; others by permission. S-U grades only. H. F. Evans. This course is an introduction to classic and current natural history literature. Materials relating to the earth sciences and the biology of plants and animals from around the world will be shown and discussed. Students will be required to show and discuss a book that concerns natural history in a country of their choice. A recommended reference text for this course is The Cambridge Illustrated Dictionary of Natural History, R. J. Lincoln and G. A. Boxshall, 1990.

VETMED 609 Anatomy and Histology of Fish
Spring. 2 credits. Minimum enrollment 4; maximum enrollment 6. First-, second-, third-, and fourth-year veterinary students; others by written permission of instructor. S-U grades only. Others by written permission of instructor. Letter grades only. Offered even-numbered years. Next offered spring 2002. N. Abou-Madied.

This course provides an overview of the diversity of anatomy and physiology of fish. Students will participate in lecture, discussion, and laboratory exercises to review the major organ systems. Extensive use of library resources for assigned readings will be expected. Each student will prepare a term project and make one oral presentation.

VETMED 610 Veterinary Aspects of Avian Biology
Spring. 1 credit. Minimum enrollment 10; maximum enrollment 60. First-, second-, third-, and fourth-year veterinary students; others by written permission of instructor. S-U grades optional. Offered odd-numbered years. P. Bohyansky. This course will present a summary of important diseases of fin fishes. Diseases covered will be those of importance in commercial aquaculture as well as those encountered by the tropical fish hobbyist. The course is designed to provide the students with a knowledge base and hands-on diagnostic experience in diseases of fish. Each student will prepare a term project and make one oral presentation.

VETMED 611 Fish Health Management
Spring. 1 credit. Minimum enrollment 8; maximum enrollment 16. First-, second-, third-, and fourth-year veterinary students; others by written permission of instructor. S-U grades optional. Offered even-numbered years. P. Bohyansky. This course will present a summary of important diseases of fin fishes. Diseases covered will be those of importance in commercial aquaculture as well as those encountered by the tropical fish hobbyist. The course is designed to provide the students with a knowledge base and hands-on diagnostic experience in diseases of fish. Each student will prepare a term project and make one oral presentation.

VETMED 612 Management of Aquarium Systems
Spring. 1 credit. Minimum enrollment 8; maximum enrollment 16. First-, second-, third-, and fourth-year veterinary students; others by written permission of instructor. S-U grades optional. Offered even-numbered years. P. Bohyansky. This is a lecture and laboratory course dealing with procedures and practices involved in management of aquarium systems. Topics include water quality, types of aquarium filtration systems, fish health, fish nutrition, and general fish biology. A portion of the
course will require independent work in aquarium system management. Each student will prepare a term project and make one oral presentation.

**VETMED 613 Aquavet I: Introduction to Aquatic Veterinary Medicine**

Four weeks of full-time instruction at Woods Hole, Massachusetts, immediately after the spring term. 2 credits. Prerequisites: formal course work in diseases of aquatic animals or appropriate experience and permission of instructor. Maximum enrollment 18. S-U grades optional. Course fee required. Available, by a competitive application process, to veterinary and graduate students. P. R. Bowser.

This course is sponsored by Cornell University, the University of Pennsylvania, and three marine science institutions at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institute, and Northeast Center of the National Marine Fisheries Service. It is designed to introduce veterinary students to aquatic animal medicine. The marine environment is described and visited on field trips in the Woods Hole area. Specific aspects of the comparative anatomy, physiology, nutrition, microbiology, pathology, and medicine of a variety of marine and freshwater species are discussed. Some emphasis is placed on systems of aquaculture. The specific diseases of a few selected species are presented as examples, including the diseases of a crustacean, a shellfish, a finfish, and marine mammals. The course is taught by an invited faculty of 35 individuals who are leaders in their respective fields of aquatic animal medicine. Students present seminars on appropriate topics.

**VETMED 614 Aquavet II: Comparative Pathology of Aquatic Animals**

Two weeks of full-time instruction at Woods Hole, Massachusetts, immediately after the spring term. 2 credits. Prerequisites: formal course work in diseases of aquatic animals or appropriate experience and permission of instructor. Maximum enrollment 18. S-U grades optional. Course fee required. Available, by a competitive application process, to veterinary and graduate students. P. R. Bowser.

This course is sponsored by Cornell University, the University of Pennsylvania, and three marine science institutions at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institute, and Northeast Center of the National Marine Fisheries Service. It is an advanced course in the comparative pathology of aquatic invertebrates and vertebrates commonly used as laboratory animals. The material presented will consist of discussions of the diseases of aquatic animals as well as extensive use of the microscope to examine the histopathology associated with these diseases. The course is taught by an invited faculty of 12 individuals who are leaders in their respective fields of aquatic animal medicine.

**VETMED 615 Veterinary Medicine in Developing Nations**

Spring. 2 credits. Maximum enrollment 20. First-, second-, third-, and fourth-year veterinary students, others by permission of instructor. S-U grades only. Offered odd-numbered years. K. A. Schat.

Veterinary medicine has an important role to play in developing nations in (1) developing and providing economical sources of animal proteins for human consumption and (2) protecting ecological resources. This seminar course will provide interested veterinary students with information on and insight into the multitude of issues facing U.S. veterinarians working in developing nations.

**VETMED 616 Diseases of Birds**

Spring. 2 credits. Minimum enrollment 10; maximum enrollment 80. Second-, third-, and fourth-year veterinary students. Letter grades only. S. Naqi and G. V. Kollias. This course is designed to introduce second-, third-, and fourth-year veterinary students to a basic and practical knowledge of the most common infectious and noninfectious diseases affecting a variety of avian species. The course will emphasize the latest diagnostic and control approaches. The course format will be a combination of didactic lectures and discussions.

**VETMED 618 Adaptation of Animals to the Environment**

Spring. 1 credit. Minimum enrollment 10. Graduate and first-, second-, third-, and fourth-year veterinary students. Letter grades only. D. Robertshaw. The course will emphasize the physiological adaptations of animals to their environment in addition to methods of acclimatization to new environments. The course will focus on environmental parameters that exist in harsh environments and include heat, cold, altitude, and salt conditions. Thus the physiological mechanisms of thermoregulation in mammals, birds, and echthromerans will be examined together with their responses to low food and water availability. The knowledge obtained will be in understanding the consequences of translocation of both wild and domestic animals and provide a rational basis for animal housing and the provision of appropriate habitats for zoological gardens. The degree of environmental adaptation will also be examined in terms of animal production from a basic science standpoint.

**VETMED 619 Pathogenesis of Viral Disease (also VETMI 701)**

Course content and objectives: the course will focus on the balance between host defense against viral infections and the mechanisms by which viruses perpetuate themselves in human and animal populations. In the process, the mechanisms of cell and animal infection, spreading between cells, disease mechanisms, and the roles of the immune response in enhancing and suppressing disease will be explored. This will include a systems-based approach exploring the pathogenesis of disease in the CNS, gastrointestinal, hepatic, tegumentary, respiratory, and urogenital systems. The basic principles of virus taxonomy, structure and replication will be included to introduce various viral groups and their special properties. Methods of intervention (vaccination, antiviral drugs) will also be covered. Lectures are derived from relevant current literature, the text, Nathanson's *Viral Pathogenesis*, 1997, and Field's *Virology*, third edition, 1996. Relevant materials will be placed on reserve in the veterinary library.

**VETMED 620 Molecular Biology and Immunology of Host-Parasite Interactions (also VETMI 702)**

Spring. 2 credits. First-, second-, third-, and fourth-year veterinary students, others by permission of instructor. Letter grades only. Offered even-numbered years. E. J. Pearce.

The primary objective of this lecture course is to make the student aware of the most important areas of research in contemporary parasitology. Lectures will focus on a broad range of parasites, with an emphasis on those of medical importance. Recently published research articles and reviews will be used as the basis from which to explore the issues of host invasion, evasion of host defense mechanisms by parasites, vaccination against parasitic infections, chemotherapy, drug resistance, vector biology, and molecular diagnosis. Biological processes that are especially well understood through work on parasites, such as RNA editing and GPI-anchor biosynthesis and structure, will be covered in detail.

**VETMED 622 Foreign Infectious Diseases of Animals**

This course describes the etiology, pathogenesis, clinical signs, gross pathology, differential diagnosis, methods of spread, reservoir hosts, and control of foreign animal diseases that present serious economic threats to the United States. The format is student seminar presentations with each student responsible for presenting one seminar. Ordinarily the course will also include presentations by college faculty and research scientists working on foreign infectious diseases.

**VETMED 624 Feline Infectious Diseases**

Spring. 1 credit. Minimum enrollment 10; maximum enrollment 80. Second-, third-, and fourth-year veterinary students. Letter grades only. S. C. Barr.

The course consists of two 50-minute lecture periods a week for eight weeks. The letter grade will be obtained entirely from the result of a written examination (usually multiple choice format) given in the final period. The course will emphasize the clinical aspects of the more common feline infectious diseases common to cats in North America and will complement knowledge acquired in Blocks IV and V. The overall objective is to provide detailed information about specific infectious diseases a future small animal practitioner may need to know to effectively diagnose and treat diseases. Etiology, epidemiology (prevalence and transmission), pathogenesis, clinical findings, diagnosis, pathologic findings, therapy, prevention, and public health considerations will be emphasized. Lectures will be presented from a clinician's point of view and therefore the material will be oriented towards practical skills in managing clinical cases.

**VETMED 625 Osteoarthritis**

This course provides a basis at the molecular, cellular, and tissue levels for understanding the function of mammalian diarthrodial joints. It includes a description of a diarthrodial joint and the composition and metabolism of articular cartilage, subchondrial bone,
ligaments, meniscus, capsule, and synovium. The interrelationships of synovium, synovial fluid, articular cartilage, joint lubrication, biomechanical considerations, and enumeration are considered. Canine hip dysplasia is a focus of the course. The onset, pathogenesis, and treatment of hip dysplasia will be discussed. The student will gain an appreciation of the importance of the pelvic bones and the hip joint to the function of the dog.

**VETMED 630 Clinical Biostatistics for Journal Readers**
Spring. 1 credit. Minimum enrollment 6; maximum enrollment 20. First-, second-, third-, and fourth-year veterinary students; others by permission of instructor. Letter grade. H. N. Erb.

The student will become familiar with the statistical methods commonly used in veterinary clinical articles, will be able to recognize obvious misuse of those methods, and will be able to interpret the statistical results.

**VETMED 631 Clinical Diagnostic Parasitology**
Fall and spring. 0.5 credit. Prerequisite: VETMED 551. Third- and fourth-year veterinary students. S/U grades only. TBA with Dr. Frongillo, D. D. Bowman and M. K. Frongillo.

This course will provide a chance to perform diagnostic parasitology methods using samples obtained from ongoing clinic cases. Students will attend eight 1-hour sessions as they rotate through the ambulatory, community practice, and pathology rotations. In the ambulatory service (four sessions with students), diagnostics will concentrate on the laboratory examination of samples from animal cases that have been observed during the previous week. In the Community Practice Service, one hour will concentrate on the examination of samples from ongoing cases, while a second hour will cover a discussion of the treatment of common endo- and ectoparasites. The two hours spent as part of the pathology rotation will examine methods of recovering parasites from pathology specimens, including the examination of wet preparations and the digestion of tissues for parasite recovery. The course is considered to be a logical extension to the foundation course Host, Agent, and Defense and is expected to build on the didactic material presented in Large and Small Animal Pathobiology.

**VETMED 632 Senior Seminar**
Fall and spring. 1 credit. First-, second-, and third-year veterinary students. S/U grades only. Must be completed in two consecutive terms (either fall to spring or spring to fall). D. O. Gilbert.

Attendance at 14 of the senior seminar sessions presented during the academic year constitutes acceptable completion of this course.

This course does not fulfill the 1-credit Set VII.

**VETMED 633 Introduction to Nontraditional Companion and Laboratory Animals**

This course introduces veterinary students to primary care small-animal clinical practice through direct exposure to the Cornell University Hospital for Animals. Students observe and assist with restraint, examination and routine treatment of pets, and communication with clients. Successful completion requires satisfactory participation during 10 half-days of clinical service.

**VETMED 634 Physiological Nutrition**
Spring. 1 credit. First-year veterinary students. Letter grades only. F. A. Kallfelz.

The course will provide information on the evaluation and formulation of rations for large and small animals. These concepts will be applied in discussion on the nutrition requirements of these animals during maintenance, gestation, lactation, growth, stress, and aging. The course is recommended for all second-year veterinary students who do not have a strong background in ruminant, equine, canine, and feline nutrition. This course, or its equivalent, will be necessary for comprehension of clinical nutrition concepts in Foundation Courses V and VI.

**VETMED 635 Introduction to the Professional Literature**
Fall, winter, spring, and summer. 1 credit. First-, second-, third-, and fourth-year veterinary students; others by permission of instructor. Letter grades only. D. Lee.

This course introduces veterinary students to primary care small-animal clinical practice through direct exposure to the Cornell University Hospital for Animals. Students observe and assist with restraint, examination and routine treatment of pets, and communication with clients. Successful completion requires satisfactory participation during 10 half-days of clinical service.

**VETMED 636 Clinical Pathology**

This six-week course addresses a range of issues related to laboratory medicine and interpretation of laboratory results. General topics include hematology, clinical chemistry and immunology, and urinalysis. The primary mode of instruction is student-driven small-group (untutored) exploration of case materials followed by faculty-moderated large-group discussions. Selected lectures and laboratory sessions will be supplemented and expanded on issues generated by the case discussions. This course builds on concepts previously addressed in Block 3 and 4 and also provides additional experiences in practical clinical pathology procedures and microscopy.

**VETMED 637 Introduction to the Professional Literature**
Spring. 1 credit. Minimum enrollment 6; maximum enrollment 20. First-, second-, third-, and fourth-year veterinary students; others by permission of instructor. Letter grade. H. N. Erb.

This course will provide a chance to perform diagnostic parasitology methods using samples obtained from ongoing clinic cases. Students will attend eight 1-hour sessions as they rotate through the ambulatory, community practice, and pathology rotations. In the ambulatory service (four sessions with students), diagnostics will concentrate on the laboratory examination of samples from animal cases that have been observed during the previous week. In the Community Practice Service, one hour will concentrate on the examination of samples from ongoing cases, while a second hour will cover a discussion of the treatment of common endo- and ectoparasites. The two hours spent as part of the pathology rotation will examine methods of recovering parasites from pathology specimens, including the examination of wet preparations and the digestion of tissues for parasite recovery. The course is considered to be a logical extension to the foundation course Host, Agent, and Defense and is expected to build on the didactic material presented in Large and Small Animal Pathobiology.

**VETMED 638 Senior Seminar**
Fall and spring. 1 credit. First-, second-, and third-year veterinary students. S/U grades only. Must be completed in two consecutive terms (either fall to spring or spring to fall). D. O. Gilbert.

Attendance at 14 of the senior seminar sessions presented during the academic year constitutes acceptable completion of this course.

This course does not fulfill the 1-credit Set VII.

**VETMED 639 Veterinary Dentistry**
Spring. 1 credit. Minimum enrollment 90. Second-, third-, and fourth-year veterinary students; others by permission of instructor. Letter grades only. D. Lee.

This course will provide information on the evaluation and formulation of rations for large and small animals. These concepts will be applied in discussion on the nutrition requirements of these animals during maintenance, gestation, lactation, growth, stress, and aging. The course is recommended for all second-year veterinary students who do not have a strong background in ruminant, equine, canine, and feline nutrition. This course, or its equivalent, will be necessary for comprehension of clinical nutrition concepts in Foundation Courses V and VI.
This course will concentrate on principles of captive wildlife management, both clinical and nonclinical. Students will be challenged to learn and integrate a variety of disciplines that are essential to managing wildlife successfully in a captive or semi-free-ranging environment. These disciplines include but are not limited to species-specific (1) behavior and behavioral problems, (2) nutritional requirements and problems, (3) natural history, (4) zoonotic and toxicological problems, (5) manual restraint and anesthesia, (6) preventive medicine, and (7) medical and legal ethics. In even-numbered years the course will emphasize non–North American wildlife species (examples include African, Asian, Australian, Central and South American species), and in odd-numbered years the course will focus more on the North American (native) wildlife species.

**VETMED 640 Veterinary Aspects of Captive Wildlife Management**
Spring. 2 credits. First-, second-, third-, and fourth-year veterinary students. Letter grades only. N. Abou-Madi.

This course will concentrate on principles of captive wildlife management, both clinical and nonclinical. Students will be challenged to learn and integrate a variety of disciplines that are essential to managing wildlife successfully in a captive or semi-free-ranging environment. These disciplines include but are not limited to species-specific (1) behavior and behavioral problems, (2) nutritional requirements and problems, (3) natural history, (4) zoonotic and toxicological problems, (5) manual restraint and anesthesia, (6) preventive medicine, and (7) medical and legal ethics. In even-numbered years the course will emphasize non–North American wildlife species (examples include African, Asian, Australian, Central and South American species), and in odd-numbered years the course will focus more on the North American (native) wildlife species.

**VETMED 641 Approaches to Problems in Canine Infectious Diseases**

The course consists of two 50-minute lecture periods each week for eight weeks. The letter grade will be determined entirely from the result of a written examination (usually multiple-choice format) given in the final period. The course will emphasize the clinical aspects of the more common canine infectious diseases that are not covered in Foundation Course IV or V. The overall objective is to provide details about specific infectious diseases a future small animal practitioner may need to know to effectively diagnose and treat these diseases. Clinical signs, presentation, clinicopathologic data, diagnostic choices, treatment plans, and prevention will be emphasized. Most lectures will be presented by clinical faculty and therefore the material will be oriented toward practical skills in managing clinical cases.

**VETMED 642 Management of Fluid and Electrolyte Disorders**

Students will focus on clinical manifestations and the pathophysiological mechanisms associated with fluid, electrolyte, and metabolic acid–base disturbances in domestic animals. The course is divided into segments dealing with salt and water imbalances, potassium abnormalities, metabolic acidosis, metabolic alkalosis, and mixed acid–base disturbances.

**VETMED 643 Fundamental Aspects of Embryo Transfer**
Spring. 1 credit. Minimum enrollment 16. Enrollment is determined by lottery. Third- and fourth-year veterinary students or graduate students by permission of instructor. S-U grades only. J. R. Hill.

This course introduces the theory and practice of embryo transfer in domestic animals. Topics include background, advantages and disadvantages, superovulation, embryo recovery techniques, embryo culture and manipulation, embryo transfer techniques, registration of offspring, import and export, and related topics in assisted reproductive technologies. Students are exposed to practical techniques of embryo transfer in cattle, small ruminants, horses, and swine. The course consists of lectures, demonstrations, and laboratory classes during which students practice techniques of embryo recovery, evaluation, handling, and transfer.

**VETMED 644 Equine Surgical and Anesthetic Techniques**
Winter. 1 credit. Prerequisite: VETMED 602 Anatomy of the Horse. Minimum enrollment 3; maximum enrollment 21. Enrollment is determined by lottery. Third- and fourth-year veterinary students. S-U grades only. S. L. Fabini (coordinator) and other large-animal surgeons.

This course consists of five laboratories performing surgical procedures on ponies and cadaver specimens. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with some specialized surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating equine practice after graduation. This course is offered during a one-week period over winter intersession.

**VETMED 645 Food Animal Surgical and Anesthetic Techniques**

This course consists of five laboratories performing surgical procedures on sheep, calves, cadaver specimens, and adult cattle. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating food animal practice after graduation. This course is offered during a one-week period over winter intersession.

**VETMED 646 Llama Tutorial**
Fall, spring, summer. 1 credit. Prerequisite: VETMED 562 Anatomy of the Horse. Minimum enrollment 10; maximum enrollment 20. Second-, third-, or fourth-year veterinary students. Letter grades only. M. C. Smith.

This autotutorial or group tutorial course covers common problems of llamas and alpacas. Participants will be provided with study guides consisting of brief case descriptions and study sample questions. Reference will be made to textbooks, journal articles, videotapes, and (if available) a teaching llama to assist students in finding the answers to the questions efficiently. Grading is based on an oral exam.

**VETMED 647 Poisonous Plants**
Fall. 1 credit. First-, second-, third-, and fourth-year veterinary students; others by permission of instructor. S-U grades only. R. Hillman and M. Smith.

Field trips demonstrate toxic plants growing in natural or cultivated settings. Lectures address economically important poisonous plants native to the United States. Information presented includes plant identification, natural history, toxic principles, clinical signs of toxicity, and treatment and prevention of poisoning in animals. Some of the major toxic principles found in plants and considered in detail in the course are nitrates, cyanide, oxalates, photodynamic agents, alkaloids, and mycotoxins.

**VETMED 648 Clinical Management of Native Wildlife**
Fall, spring, summer (credit given in fall). 1 credit. Enrollment not to exceed 20 students per semester, 2 students per rotation. First-, second-, third-, and fourth-year veterinary students by permission of instructor. Letter grades only. N. Abou-Madi and staff.

This course introduces veterinary students to primary native wildlife care and to wildlife issues that practicing veterinarians face on a daily basis. Students are responsible for the assessment, physical examination, and medical care of native wildlife presented to the Cornell University Hospital for Animals by the public and local wildlife rehabilitators. Student activities are directly supervised and assessed by faculty wildlife clinicians on a daily basis. Successful completion of the course requires 40 hours of satisfactory supervised participation per semester in the clinic. Clinic times will be appropriately scheduled throughout the semester. Students are required to submit two case summaries before the end of the semester and a log of their clinical hours.

**VETMED 649 Introduction to Equine Practice**
Spring. 0.5 credit. Minimum enrollment 30. First- and second-year veterinary students. Letter grades only. R. Hackett and C. Colby.

This is an introductory course in equine husbandry intended for students with little or no experience working with horses. Lecture topics will include horse breeds and colors, housing facilities and fencing, and overview discussions of the racing, showing, and breeding industries. Laboratories will emphasize basic equine handling and restraint as well as feeds and bedding.

**VETMED 652 Avian Medicine and Surgery**
Spring. 2 credits. Minimum enrollment 20; maximum enrollment 80. Third- and fourth-year veterinary students. Letter grades only. N. Abou-Madi and staff.

This course is designed to introduce third- and fourth-year veterinary students to the principles and practice of clinical avian medicine and surgery. The course will be taught in a basic didactic lecture and discussion format with laboratories that will reinforce concepts presented in the lectures.

**VETMED 653 Advanced Equine Lameness**
Spring. 1.5 credits. Minimum enrollment 7; maximum enrollment 21. Third- and fourth-year veterinary students. Enrollment is determined by lottery. S-U grades only. N. Ducharme, A. Nixon, and staff.

This course is designed to help students understand the methodology and to develop the manual skills required for lameness examination in horses. Emphasis will be on developing diagnostic skills. Specifically, the student will be expected to develop proficiency in the identification of clinical characteristics associated with recognized lamenesses and to localize the origin of the lameness. Teaching aids will include video modules outlining various gait abnormalities.
In addition, horses with specific gait abnormalities will be available for physical, radiographic, and ultrasonographic examination.

**VETMED 654 Current Therapy in Equine Reproduction**  
Spring. Lec, 1 credit; lab, 0.5 credit. Lab minimum enrollment 12; maximum enrollment 24. Laboratory enrollment is done by lottery, if oversubscribed; concurrent enrollment in lecture is required. Third- and fourth-year veterinary students. Letter grades only. D. H. Volkmann and C. M. Schweizer. This course deals with specific reproductive disorders of production animals as well as reproductive management of mares and stallions using natural and artificial breeding strategies is discussed. Diagnosis, treatment, and prevention of common reproductive disorders are stressed. The laboratory component builds on skills acquired during Foundation Courses and provides experience in techniques important in equine theriogenology.

**VETMED 655 Production Animal Theriogenology**  
Spring. Lec, 1 credit; lab, 1 credit. Lab minimum enrollment 12; maximum enrollment 24. Laboratory enrollment is done by lottery. Concurrent enrollment in Production Animal Theriogenology Lecture is required. Third- and fourth-year veterinary students. Letter grades only. J. R. Hill. This course deals with specific reproductive disorders of production animals as well as reproductive management of production units. Content includes reproductive biology of production animals, economic considerations, and medical and surgical approaches to management of reproductive disorders. Laboratory sessions are tailored to acquisition of specific skills fundamental to the practice of theriogenology of production animals. Emphasis is on dairy cows.

**VETMED 656 Special Problems in Equine Medicine**  
Spring. 1.5 credits. Minimum enrollment 10; maximum enrollment 30. Enrollment is done by lottery. Third- and fourth-year veterinary students. S-U grades only. T. Divers and staff. This course is intended for students who plan to or may enter equine practice. In-depth study of important diseases, review of recent literature, health management, and hands-on procedures or demonstrations will be the core of this course.

**VETMED 657 Disorders of Large Animal Neonates**  
Spring. 1 credit. Minimum enrollment 10; maximum enrollment 100. First-, second-, third-, and fourth-year veterinary students. Letter grades only. Not offered 2000–2001. D. Ainsworth. The common medical problems of foals and calves, with emphasis placed on the neonatal period, are discussed. Specific topics examined in detail include disorders affecting the respiratory, gastrointestinal, and musculoskeletal systems. Students will also spend several hours in the neonatal intensive care unit providing medical care of hospitalized patients under staff supervision.

**VETMED 659 Equine Soft Tissue Surgery**  
Spring 1 credit. Minimum enrollment 6; maximum enrollment 21. Third- and fourth-year veterinary students. Enrollment is done by lottery. Letter grades only. R. Hackett and staff. This course, intended for students anticipating equine practice after graduation, will build on material presented in the foundation courses to provide supplemental instruction in surgical disorders of the horse. Lectures will be case based and emphasis will be placed on principles of general practice (e.g., traumatic injuries, upper respiratory tract disorders, preoperative evaluation). Laboratories will emphasize diagnostic and therapeutic procedures in which an entry-level equine practitioner should be competent.

**VETMED 661 Surgical Pathology**  
Spring, summer, fall. Variable 1–2 credits. Second-, third-, and fourth-year veterinary students with permission of instructor. Letter grades only. S. McDonough. This one- or two-week course (approximately eight hours per day for one credit per week) will provide hands-on experience in the Surgical Pathology Service of the Department of Biomedical Sciences. Working with the attending pathologist, students will examine tissue specimens histologically, propose diagnoses, and discuss their interpretations. Students may enroll in this course only through the Office of Student Records within the official add/drop period. All requests to enroll must be accompanied by the Supplemental Enrollment Form and must be signed by Dr. McDonough's approval of the enrollment and the amount of credit to be awarded. Second-year students should not enroll for any term other than summer unless they have actually reserved a January or Spring break slot through Dr. McDonough.

**VETMED 665 Medical and Surgical Problems of Dairy Cattle—Emphasis on the Individual Animal**  
Spring. 1.5 credits. Minimum enrollment 6; maximum enrollment 28. Enrollment is done by lottery. Third- and fourth-year veterinary students. Letter grades only. S. Fubini and staff. This course will provide students with a special interest in dairy practice the opportunity for in-depth discussion of special problems in mastitic disease and surgery. Emphasis will be on case discussions, physical examination techniques, and ethical and practical matters. The course will emphasize individual cow treatment.

**VETMED 666 Small Animal Clinical Oncology**  
Spring. 1 credit. Third- and fourth-year veterinary students. Letter grades only. Not offered 2000–2001. H. J. Harvey. This course will present common tumor syndromes in small animals. Emphasis will be placed on biological behavior, patient management, and client relations. Format will include lectures, journal club discussions, demonstrations, and seminars.

**VETMED 667 Special Problems in Small Animal Medicine**  
Spring. 1 credit. Minimum enrollment 10; maximum enrollment 40. Third- and fourth-year veterinary students. S-U grades only. K. Simpson and staff. During the four-week course, students will work through cases in small-animal medicine. The course consists of a 50-minute weekly discussion period. The focus will be on the medical problems associated with cases using histologic, clinical, clinical pathologic, and pathologic findings to elucidate basic pathophysiologic principles of disease. The overall objective is to give future small-animal practitioners skills in the approach to clinical problems with specific emphasis placed on history taking, clinical signs and examination skills, assessment of clinical pathology data and diagnostic materials (radiographs, ultrasonounds), treatment plans, and prevention. The course expands the knowledge gained in Foundation Course V and, under the instruction of a clinical faculty member, is aimed at facilitating the use of that knowledge into the practical skills of managing clinical cases.

**VETMED 668 Practice Management**  
Spring. 2 credits. Number of sections will be determined by enrollment. Third- and fourth-year veterinary students. S-U grades only. Staff. Course participants form a veterinary group practice that includes the specialties of each participant's interest. Topics covered are discussed in the staff meeting format of the practice. Topics include basic practice organization, leadership styles, career planning, communication skills, facility management, human resource management, maintenance of standards, marketing and merchandising, building and maintaining clients, practice growth, finances, computing systems and information management, money management, legal issues, tax management, professional relations and responsibility, and maintaining an acceptable quality of life, including stress management. Various practitioners and practice managers will speak to the group about their very different successful practices, concentrating on management and organizational skills.

**VETMED 669 Sheep and Goat Medicine**  
Spring. Lec, 1 credit; lab, 0.5 credit. Lab congregation enrollment in Sheep and Goat Medicine Lecture is required. Third- and fourth-year veterinary students. S-U grades only. M. Smith. This course will discuss diagnosis, treatment, and prevention of medical and surgical problems of individual small ruminants and of sheep and goat herds. Basic information on breeding behavior, nutrition, management, and management systems will be supplied. Economically important contagious or metabolic diseases will be discussed in depth. The diagnostic evaluation and differential diagnoses for common clinical presentations such as skin disease, neurologic disease, lameness, and mastitis will be considered. Herd monitoring of economically important parameters and necropsy diagnosis of abortions and neonatal losses will be addressed. Breeding systems, pregnancy diagnosis methods, and correction of dystocias will be discussed and demonstrated in optional laboratory sessions.

**VETMED 670 Drug Handling in the Body**  
Spring. 0.5 credit. Maximum enrollment 60. Second-, third-, and fourth-year veterinary students. Letter grades only. B. A. Cerione and G. A. Weiland. This course will provide an in-depth consideration of the pharmacological principles of administration, absorption, distribution, metabolism, and elimination of drugs. Emphasis will be on the conceptual basis of the pharmacokinetic considerations in the
therapeutic use of drugs. The course will build on the pharmacological and physiological principles introduced in Foundation Course III.

**VETMED 671 Autonomic Pharmacology**
Spring. 0.5 credit. Maximum enrollment 80. Second-, third-, and fourth-year veterinary students. Letter grades only. G. A. Weiland. This course will provide an in-depth consideration of pharmacological and physiological principles of autonomic pharmacology. Molecular, cellular, and organ system mechanisms will be emphasized. The course will explore in more detail the fundamental pharmacological and physiological principles of the effects of drugs on autonomic organs introduced in Foundation Course III.

**VETMED 672 Antimicrobial Drug Therapy in Veterinary Medicine**
Spring. 1 credit. Second-, third-, and fourth-year veterinary students. Letter grades only. W. S. Schwark. This course will be designed to familiarize students with antimicrobial drugs used in veterinary practice. The course will build on fundamental pharmacological and microbiological principles covered in Foundation Course III and IV. It will consider antibacterial, antifungal, antiparasitic, and antiviral drugs from the point of view of unique pharmacokinetic properties, indications for clinical use, and potential toxicities as the basis for rational use.

**VETMED 673 Growth Factor-Coupled Signal Transduction**
Spring, even-numbered years. 0.5 credit. First-, second-, third- and fourth-year veterinary students and permission of instructor. Letter grades only. R. A. Cerione. This course will present basic information regarding regulation of cell growth and differentiation. The emphasis will be on signal transduction pathways that are responsible for translating growth factor binding to the cell surface into nuclear responses. The course should complement cases covered in Foundation Course II and tie together the biochemical pathways underlying cell growth with biological processes such as wound healing and disease states such as cancer.

**VETMED 674 Physiology and Pharmacology in the Understanding and Treatment of Diabetes**
Spring, odd-numbered years. 1 credit. Maximum enrollment 24. S-U grades only. G. Sharp. This course will cover the basic causes of the manifestations of diabetes, signal transduction mechanisms controlling insulin secretion and insulin action, and the principles underlying current and potential future treatment for this group of diseases. The course will stress the value of basic research into cellular and molecular mechanisms for the treatment and cure of disease.

**VETMED 675 Fundamental Principles of Vertebrate Central Nervous System Pharmacology**
Spring. 0.5 credit. Minimum enrollment 6. Second-, third-, and fourth-year veterinary students. Letter grades only. Not offered 2000–2001. Next offered spring 2002. C. M. Nowak. This course will include up-to-date knowledge of physiological and pharmacological aspects of the main central nervous system neurotransmitter receptors and provide a basis for rational understanding of the drugs used during surgery and in treatment of neurological diseases.

**VETMED 676 Clinical Ophthalmology**
Spring. 0.5 credit. Third- and fourth-year veterinary students. S-U grades only. R. Riis, N. Irby, and T. Kern. This course will explore in more detail the fundamental ophthalmological principles covered in Block V. Introduction to Veterinary Ophthalmology, are supplemented by lectures and discussions that emphasize species differences, basic surgical decision-making, and recognition of ocular conditions appropriate for referral.

**VETMED 677 Dairy Production Medicine**
Fall. 2 credits. Minimum enrollment 6. Maximum enrollment 15. First-, third-, and fourth-year veterinary students. S-U grades only. C. Guard. This is an intermediate course in the techniques and procedures used by veterinarians in modern dairy practice. Many of these activities fall outside the traditional boundaries of medicine, surgery, and theriogenology and might include housing, facilities, manure management, and employee education. Data analysis, disease and productivity monitoring, and evaluation of performance are used to plan corrective interventions or corrections, followed by continued surveillance to monitor their effect. Students will be introduced to the dominant software currently used in dairy management. Local dairy herds will serve as additional laboratories for class projects.

**VETMED 678 Small Animal Theriogenology**
Spring. 1 credit. Third- and fourth-year veterinary students. Letter grades only. Not offered 2000–2001. R. G. Gilchrist. This is a distribution course in a lecture-based format designed to complement the knowledge gained in the theriogenology component of Foundation Course V. Animal Health and Disease. Content includes discussion of breeding management, noninfectious causes of infertility and pathology of the male and female reproductive tracts, their diagnosis and management. The emphasis of the course will be on conditions affecting dogs and cats, but some conditions of other common pet species will be discussed.

**VETMED 679 Clinical Pharmacology**
Spring. 0.5 credit. Third- and fourth-year veterinary students. S-U grades only. W. Schwark. This course is offered after Blocks I-V and formal exposure to pharmacology course work is completed. The course is designed to familiarize students with drug use in the clinical setting and uses ongoing cases in the teaching hospital as a teaching tool. Pharmacological concepts are emphasized, with a focus on the rationale for drug choice, alternative drug choices available, pharmacokinetic considerations, and potential drug interactions/toxicities. This course is offered at the time students are about to embark on clinical rotations. It is designed to emphasize practical aspects of pharmacology in the clinical setting, using basic concepts obtained during formal course work. The onus will be placed on the student to explain/rationalize drugs employed in clinical cases in the teaching hospital.

**VETMED 680 Behavior Problems of Horses**
Spring. 1 credit. Prerequisite: one semester of veterinary curriculum. First-, second-, third-, and fourth-year veterinary students. S-U grades only. K. A. Houpt. The goal of this course is to give veterinary students the ability to treat the behavior problems of horses. History-taking, counseling, diagnostic tests, follow-up, the importance of cooperation with the referring veterinarian, preventive procedures, training techniques, value of the practitioner, and socialization of foals will be presented.

**VETMED 681 Behavior Problems of Small Animals**
Spring. 1 credit. Prerequisite: one semester of veterinary curriculum. First-, second-, third-, and fourth-year veterinary students. S-U grades only. K. A. Houpt. The goal of this course is to give veterinary students the ability to treat the behavior problems of dogs and cats. History-taking, counseling, and follow-up will be presented. Each student will have the opportunity to participate in three cases. Behavioral and pharmacological treatments for behavior problems will be presented.

**VETMED 682 Topics in Veterinary Emergency and Critical Care Medicine**
Spring. 1 credit. Minimum enrollment 10. Maximum enrollment 35. Enrollment is done by lottery. Third- and fourth-year veterinary students, all others by permission of instructor. S-U grades optional. P. Moon. This course will provide an introduction to emergency and critical care medicine. It is designed to have one to two topics per week. An introductory seminar will present basic information on the topic(s) at the beginning of the week followed by a two-hour group discussion later in the week. Although most of the cases will be based on small-animal cases, the same principles will apply to both large- and small-animal cases. Topics that might be covered include: triage, emergency fluid therapy, cardiac and pulmonary emergencies, nutritional support, common toxicology problems, emergency surgical procedures (chest tubes, tracheotomies), and basic and advanced cardiopulmonary resuscitation. When two courses (i.e., section "A" and "B") are offered in the same year, different topics will be covered in each course.

**VETMED 684 Thermoregulation and Exercise**

**VETMED 685 Physiology of Pregnancy**
Spring. 2 credits. Maximum enrollment 20. Second-, third-, and fourth-year veterinary students. Letter grades only. P. W. Nathaniel. This course is presented in lecture fashion. One major reference per lecture will be assigned each week. Subjects covered are placental function, fetal growth, central nervous system development, fetal breathing,
biohythms in maternal and fetal physiology, parturition, and adaptations to newborn life.

**VETMED 689 Fundamentals of Ruminant Digestion and Metabolism**  
Spring. 0.5 credit. Minimum enrollment 5; maximum enrollment 50. First-, second-, third-, and fourth-year veterinary students; selected graduate students by permission of instructor. Letter grades only. T. R. House.  
This course is designed for the student who has little or no previous work in ruminant digestive physiology. It will consist primarily of lectures surveying the functional aspects of control of feed intake; salivation; reticulorumenal motility, including rumination and eructation; microbial flora and fauna; fermentation in reticulorumen (digestion of carbohydrates, proteins and fats); ruminal gas formation; absorption of short-chained fatty acids; special features of ruminal nitrogen metabolism; passage of nutrients to lower tract; and a brief consideration of the functions of omasum, abomasum, and small and large intestines. Emphasis will be on the differences of the ruminant digestive processes from those of the simple-stomached animals.

**VETMED 690 Molecular and Genetic Basis of Inherited Disorders in Animals and Application to Clinical Medicine**  
Spring. 2 credits. Minimum enrollment 5; maximum enrollment 15. First-, second-, third-, and fourth-year veterinary students; graduate and undergraduate students also welcome. Letter grades only. Offered even-numbered years. J. Ray.  
This course introduces the molecular basis of inherited diseases in domestic animals. Topics include several inherited metabolic defects causing systemic malfunctions; muscle and bone abnormalities; retinal degeneration; and failure of the immune systems. Techniques to characterize genetic defects are introduced. Use of molecular techniques for diagnosis and prevention. Use of molecular tools for the treatment of inherited disorders.

**VETMED 692 Current Concepts in Reproductive Biology**  
Fall. 3 credits. First-, second-, and third-year veterinary or appropriate undergraduate/graduate training. Letter grades only. Lect., 2 hours each week; disc. 2 hours each week; 1 R 10:10--12:05. Offered odd-numbered years. Next offered fall 2001. J. Fortune, W. R. Butler, and staff.  
This is a team-taught survey course in reproductive physiology-endocrinology. Lectures are given by several reproductive biologists on various aspects of male reproductive function (spermiation, testis function, spermatogenesis, and sperm physiology/function); female reproductive function (endocrinology, ovarian development and function, oocyte physiology/fuction); pregnancy, parturition, pathology; and reproductive technology. Students participate in the form of discussions and/or presentations.

**VETMED 695 Genetic Basis of Eye Diseases**  
This course covers the molecular and genetic basis of inherited eye diseases in domestic and laboratory animals. It is aimed at the professional student in the veterinary curriculum but is open to graduate-level students. The course will be given in a combination lecture/seminar format, with students leading and actively participating in discussions. The students are expected to do assigned and independent outside research. Both for class discussions and the paper.

**VETMED 696 Fundamental Principles and Techniques of Small Animal Anesthesia: Dogs, Cats, and Birds**  
This course is designed for the veterinary medical student interested in small-animal practice. The course will consist of lectures, case discussions, and development of anesthetic protocols for routine and complicated cases. Subjects to be covered include anesthetic management for elective and emergency surgery, management of the high-risk patient, fluid therapy, drug interactions, pain management, and the management of anesthesia-related complications, cardiopulmonary resuscitation, and post-anesthetic management. While fundamental concepts and recent advances in anesthesia will be discussed, the practical application of anesthetic principles and techniques will be a major objective of the course.

**VETMED 697 Fundamental Principles of Large Animal Anesthesia: Equine and Mixed Animal Practice**  
This course is designed for the veterinary medical student interested in equine or mixed animal practice. The course will consist of lectures, case discussions, and development of anesthetic protocols for routine and complicated cases. Subjects to be covered include anesthetic management for elective surgery, field anesthesia, management of the high-risk patient, fluid therapy, drug interactions, pain management, and the management of anesthesia-related complications, cardiopulmonary resuscitation, and post-anesthetic management. While fundamental concepts and recent advances in anesthesia will be discussed, the practical application of anesthetic principles and techniques will be a major objective of the course.

**VETMED 698 Special Projects in Veterinary Medicine**  
Fall, winter, spring, summer. Variable 1--4 credits. Must be arranged with a College of Veterinary Medicine tenure-track faculty member. S.U.G. grades optional. J. Fortune.  
This course provides opportunity for students to work individually with a faculty member to pursue an area of particular interest and, typically, not part of the established curriculum. Specific course objectives and course content are flexible and reflect the scope and academic expertise of the faculty.

**VETMED 699 Research Opportunities in Veterinary Medicine**  
Fall, winter, spring, summer. Variable 1--4 credits. Must be arranged with a College of Veterinary Medicine tenure-track faculty member. S.U.G. grades optional. J. Fortune.  
This course provides the opportunity for individual students to work in the research environment of faculty involved in veterinary or biomedical research. Specific course objectives and course content are flexible and reflect the specific research environment. Research projects may be arranged to accumulate credit toward requirements in Distribution Sets I, II, III, IV, and V.

**VETMED 700 Large Animal Theriogenology Service**  
Spring. 2 or 4 credits. Prerequisite VETMED 551. Minimum enrollment 6 per rotation. Third- and fourth-year veterinary students. Letter grades only. D. H. Volkman and staff.  
This clinical service rotation is offered to provide additional hands-on experience in all phases of reproductive medicine and management and medicine is stressed. Experience includes teasing, transrectal palpation, ultrasonography, semen collection, evaluation, extension and shipping, artificial insemination, and management of natural breeding. Other techniques emphasized include taking and evaluating endometrial biopsy and cytology samples, as well as samples for culture. Both university-owned and client-owned animals are used to provide experience for these experiences. Experience in routine dairy reproductive management is provided in the college-owned dairy herd. In addition, client-owned animals admitted to the Cornell University Hospital for Animals with reproductive disorders are managed by this service.

**VETMED 701 Cardiology Service**  
Fall and spring. 2 credits. Prerequisite VETMED 551. Minimum enrollment 1 per rotation: maximum enrollment 2. Third- and fourth-year veterinary students. Letter grades only. S. Moise.  
The purpose of the cardiology rotation is to provide the student with the opportunity to put into practice what they have learned in the foundation years. The management of the most common cardiac diseases will be emphasized including heart failure, arrhythmias, and secondary cardiac diseases. All species will be examined, large and small, although the majority will be small animals. Diagnostics, including cardiovascular physical examination, electrocardiography, radiography, and echocardiography, will be taught. The rotation includes clinical work, didactic teaching, and self-initiated digging for information.

**VETMED 702 Laboratory Animal Medicine**  
Fall and spring. 2 credits. Prerequisite VETMED 551. Minimum enrollment 4 per rotation. Third- and fourth-year veterinary students. Letter grades only. F. Quimby and staff.  
The practice of laboratory animal medicine requires a combination of veterinary science, clinical skills, knowledge of various species' biology, familiarity with research methodology, and acquaintance with state and federal regulations. This course is offered as a two-week introduction to that specialty. Students accompany laboratory animal veterinarians on clinical rounds of Cornell's research animal housing and participate in laboratory diagnostic work. Review sessions are conducted on the biology, medicine, pathology, and husbandry of rodents, rabbits, and primates and on current legislation regulating the care and use of research animals. The course may include a field trip to the research animal facilities of Rockefeller University, the Cornell University Medical.

**VETMED 703 Clinical Wildlife, Exotic, and Zoo Animal Medicine**
Fall, winter, spring, summer. 2 credits. Prerequisite: VETMED 551. Maximum enrollment 2 per rotation. Third- and fourth-year veterinary students. Letter grades only. N. Abou-Madi and staff.

This course introduces students to primary medical, surgical, and anesthetic principles of wild animals, exotic domestic animals, and zoo animals. Students, directly supervised by the attending clinician, are responsible for the assessment, physical examination, and medical management of exotic animal species presented to the Cornell University Hospital for Animals. Other opportunities available to assist in the development of clinical skills in wildlife, zoo, and exotic animal medicine include the wildlife clinic cases, ongoing wildlife research and service projects, and trips to the Burnett Park Zoo. Successful completion of the course requires satisfactory performance during this 14-day clinical rotation.

**VETMED 704 Quality Milk**
Fall or spring. 2 credits. Prerequisite: VETMED 551. Third- and fourth-year veterinary students. Letter grades only. R. Gonzalez, Y. Schukken, D. Wilson and staff.

This course covers the causes, diagnosis, treatment, and prevention of bovine mastitis. The role and importance of management practices is stressed. The course includes lectures, readings, discussions, laboratory exercises, and farm visits as part of the Quality Milk Promotion Service—New York State Mastitis Control Program. Participants are expected to complete a case study on a dairy farm with udder health problems and present their findings to the producer and farm personnel. Grading is on performance during the course and a final exam.

**VETMED 705 Special Opportunities in Clinical Veterinary Medicine**
Fall, spring, and summer. Prerequisite: VETMED 551. Third- and fourth-year veterinary students. S-U grades only.

This course provides opportunities for students finished with Foundation Course V to explore particular areas not covered through the regular curriculum. Blocks of two to four weeks are usually spent at other teaching hospitals, research laboratories, or zoological facilities. Student proposals are submitted to the associate dean for academic programs for review and approval. On-site supervisors of the block act as ex-officio faculty members and are required to evaluate each student participant.

**VETMED 707 Poultry Medicine and Production Rotation**
Fall 2 credits. Prerequisite: VETMED 551 and VETMED 616. Diseases of Birds, is recommended. Third- and fourth-year veterinary students. K. A. Schat.

This course is a two-week rotation that will take place at the University of St. Hyacinthe or the University of Guelph in alternating years. The course provides students with an introduction in practical poultry medicine by a combination of lectures, discussions, and laboratory sessions including postmortem examination. Students will also visit hatcheries, broiler, layer, and turkey farms.

**VETMED 708 Clinical Oncology**
Fall and spring. 2 credits. Prerequisite of VETMED 551. Maximum enrollment 4 per rotation. Third- and fourth-year veterinary students. Letter grades only. R. Page.

Management and prevention of cancer in companion animals represents a significant component of the practice of veterinary medicine. This clinical rotation will be the development of a comprehensive set of skills necessary for a veterinarian to become an advocate for the client/patient with cancer. These skills will include appropriate identification of animals with cancer, sensitive and effective client and referring veterinarian communication, ability to access relevant information from numerous sources related to cancer management, understand and apply principles of surgical, medical, and radiation oncology as well as techniques specifically related to minimize pain and treatment-related effects in cancer patients.

**VETMED 720 Issues and Preventive Medicine in Animal Shelters**
Spring. 1 credit. Prerequisite: VETMED 540. Minimum enrollment 5; maximum enrollment 30. Second-, third-, and fourth-year veterinary students. Letter grades only. J. M. Scarlett and staff from the American Society for Prevention of Cruelty to Animals.

Veterinarians often work for or with animal shelters, serve on shelter boards of directors, are community resources for issues relating to companion animal welfare, participate in spay and neuter programs, and influence the quality of the human-animal bond. This course will address the history of the humane movement, role of the veterinarian in relation to shelters, preventive and palliative health management (including highlighting diseases of major concern), issues surrounding euthanasia, reasons for relinquishment, programs for behavior modification, and the legal concerns of shelters. These issues will be addressed using lectures and large group discussions.

**VETMED 721 Timely Topics in Veterinary Parasitology: Small Animal**

This course will present an in-depth look at one or a few parasites of special interest relative to small-animal medicine. The course will present details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts will be made to discuss those aspects of the disease as it relates to the practical control of these and in-depth coverage of primary literature relating to the parasite being discussed. Topics will vary annually. The course will be presented in a lecture/discussion format.

**VETMED 722 Bacteria and Fungi in Veterinary Medicine**

This course will provide an overview and listing of important bacterial and fungal diseases of domestic animals (cow, horse, sheep, pig, goat, dog, cat) in preparation for medicine courses. The etiology, pathogenesis, host response, and prevention will be emphasized. Avian, zoonotic, and exotic (foreign animal) bacterial and fungal diseases will be covered in less detail because they are covered in other courses. The course will also provide insight into diagnostic procedures for bacterial and fungal diseases such as available tests, what samples to take, how to handle samples, and how diagnostic procedures are performed.

**VETMED 725 Diagnostic Cytology**

This two-week course will provide in-depth experience in preparation and interpretation of cytological specimens. Evaluation of the cytological specimens will be incorporated into clinical cases, so that the results are interpreted with respect to the provided case material. The primary mode of instruction is based on faculty-led microscopic slide evaluation. Students will be required to evaluate the slides independently before the microscope sessions. Selected mini-tutorials and laboratories will complement the microscopic sessions. The course builds on concepts previously introduced in the Diagnostic Cytology course in the Foundation Blocks 3 and 4 in the Clinical Pathology Distribution Course (VETMED 628). This course is limited to students participating in or who have completed the Clinical Pathology Distribution Course.

**VETMED 726 Reptile Medicine and Surgery**

This course is designed to introduce third- and potentially fourth-year veterinary students to the principles and practices of reptile medicine and surgery. The course will be taught in a basic lecture and discussion format with laboratories (limited) reinforcing concepts presented in the lectures.

**VETMED 730 Vaccines: Theory and Practice**
Spring. 1 credit. Prerequisite: introductory course in immunology or VETMED 540 or VETMI 315. Minimum enrollment 10; maximum enrollment 40. Second-, third- and fourth-year veterinary students and graduate students; others by permission of instructor. Letter grades only. Grades based on two examinations. Offered even-numbered years.

This course will provide an overview of vaccines used in clinical practice, as well as an in-depth look at vaccine development.
Emphasis will be placed on the most recent advances in vaccine design and delivery, including the use of recombinant DNA techniques for targeting specific immunological responses. Lectures will touch on vaccines commonly used in veterinary practice and will address in detail the use of carriers, adjuvants, and immunostimulants; attenuated pathogens; synthetic peptides; recombinant subunit vaccines; viral and bacterial vectors for vaccine delivery; synthetic antibodies; and genetic immunization with "naked" DNA.

**VETMED 732 Veterinary Clinical Toxicology**

Spring, fall, winter, and summer. 2 credits. Prerequisite: VETMED 560. Letter grades only. M. R. White and K. Earnest-Koons.

This course will provide the veterinary student with knowledge of common poisons and principles of toxicology and how they are applied in the clinical setting. Students will learn about specific common toxicants, clinical signs in affected animals, and treatment protocols for the diseases in question. Students will also gain an understanding of the clinical approach to suspected or unknown toxicoses, sample collection and handling, and resources available for clinical toxicologic procedures. The course will be conducted with two 1-hour lectures per week and one hour-long large-group discussion per week. The class will meet two days per week, the first day for one hour and the second day for two hours. Grading will be based on weekly quizzes, a final exam, a short paper, and/or oral presentation.

**VETMED 733 Selected Infectious Diseases of Swine**

This course will provide veterinary students with a solid introduction to concepts and principles of swine infectious diseases and how they are treated in the clinical setting. Students will learn about specific infectious diseases, clinical signs in affected animals, and treatment protocols for the diseases in question. Students will also gain an understanding of the clinical approach to suspected or unknown infectious agents, sample collection and handling, and resources available for infectious disease diagnosis. The course will be conducted with two 1-hour lectures per week and one hour-long large-group discussion per week. The class will meet three days per week for one hour each. Grades will be based on weekly quizzes, a final exam, a short paper, and/or oral presentation.

**VETMED 735 Special Topics in Ambulatory and Production Animal Medicine**

Fall, winter, spring, and summer. Variable 2 credits. Prerequisite: VETMED 560. Enrollment is by lottery. Second-, third-, and fourth-year veterinary students. Letter grades only. M. R. White and staff.

This course provides specialized experiences in the Ambulatory and Production Medicine Service. The course will consist of participation in scheduled and emergency farm calls and completion of projects designed to provide experience in herd problem solving, records analysis and implementing herd-health programs. Clinical service assignments will be planned to meet individual student goals.

Examples of focuses areas available include livestock production medicine, dairy reproductive examinations, small-ruminant medicine, and equine ambulatory practice.

**VETMED 736 Veterinary Diagnostic Imaging: Anatomy and Interpretation**

Spring. 1.5 credits. Minimum enrollment 20; maximum enrollment 50. First- and second-year veterinary students by permission of instructor. Third- and fourth-year veterinary students. Letter grades only. P. Scrivani.

The course is designed to emphasize the relevance of a solid foundation in veterinary anatomy as it relates to diagnostic imaging. Additionally, the course is designed to provide students with an understanding of the strengths and limitations of diagnostic imaging by discussing interpretation principles, pitfalls, and measurements obtained through lectures, laboratory exercises, weekly quizzes, and reading assignments. Integration of these objectives will culminate in weekly laboratory exercises where students will make or evaluate decisions regarding patient management based on evaluation of clinical signs and imaging examinations. The "Roentgen-Sign" approach to diagnostic imaging interpretation will be used as a model.

**VETMED 737 Principles of Pathology**

Principles of Pathology is intended for students who wish to strengthen and broaden their knowledge of the pathologic basis of disease. Fundamental biologic processes as revealed by gross and microscopic pathologic changes will be emphasized. Molecular mechanisms will be emphasized in the discussion where appropriate. General pathologic processes will be organized into a logical and uniform system in order to facilitate comprehension and learning with particular emphasis on terminology and proper usage of terminology. The course will include two lectures per week and a one-hour large-group discussion. The large-group discussion will allow students to apply general knowledge gained in lecture to a specific problem. Approximately half of the large-group discussions will be held in the Necropsy Teaching Laboratory using actual diseased organs for illustration of general pathologic principles.

**VETMED 738 Veterinary Parasitology**

Spring. 2.5 credits. First-, second-, third-, and fourth-year veterinary students. Letter grades only. D. Bowman.

This course provides a basic introduction to small-animal parasites of veterinary importance, concentrating mainly on the biology, control, and epidemiology of parasites and metazoa parasites. Emphasis will be given to parasites representative of significant disease processes or of significant clinical importance to veterinarians and pet owners. The course will elaborate on the biology and pathogenesis of these major pathogens with the ultimate goal being to maximize the recognition of the major disease manifestations induced through examples of each of the different groups of organisms.

**VETMED 739 Viruses in Veterinary Medicine**

This course is designed to supplement the information provided in the Foundation Courses, particularly courses IV and V. The objective would be to provide, in a survey form, an overview of the major groups of viruses, which infect animals, and to give a summary of the diseases that they cause. The diseases, which are most commonly encountered in veterinary practice, would be given the greatest amount of the available time, and diseases which are less frequently seen would be given less detailed coverage. It is not a major objective of the course to teach students differential diagnosis or treatment of disease, as that information is more appropriately covered in Foundation Courses V and VI. However, knowledge of the agents and diseases that are described in this course will be useful background for the other courses.

**VETMED 745 Dynamics of Dairy Herd Health and Management**

Spring. 1.5 credits. First-, second-, third-, and fourth-year veterinary students. Letter grades only. Y. T. Grohn and D. Warnick.

Competitive pressure, increasing input costs, and comparatively stagnant milk and salvage values require dairy producers to become more efficient. The current trend of increasing herd size drives changes in management. Dairy cattle are handled in groups, although individual cow health and productivity fundamentally underpin the financial success of the dairy enterprise. Veterinarians are called upon to advise dairy producers not only in matters of herd health but increasingly in matters of productivity and management decision making. Identifying opportunity areas to improve productivity and ultimately profitability requires modern veterinarians to recognize and solve complex problems that are interdependent and require holistic thinking. The course is designed to introduce students to the dynamic relationships of herd health and management. This will be done through a combination of lectures and exercises using two computer simulation models. The following topics will be addressed: (1) how milk production, reproduction, and health issues. Until the advent of the new veterinary curriculum, biological systems were often taught in isolation. Yet there are research models that integrate the dynamic nature of dairy production, health, management, and economics through epidemiological and economic modeling. Despite the existence of such advanced research models, they have not been integrated fully into the curriculum. The goal of this course is to teach students the dynamic relationships of herd performance parameters with dairy herd health and management. This will be done with a combination of lectures and exercises using two computer simulation models. The following topics will be addressed: (1) how often production diseases occur and when, (2) how they are interrelated, (3) the impact of diseases on milk production, reproductive performance, and risk of culling, and (4) how to use this information in production medicine.

The format of this eight-week course (two days per week) is a lecture one day and hands-on work with computer simulation models on the other day.
Biomedical Sciences

VETBMS 346 Introductory Animal Physiology (enroll in VETPH 346) (also BIOAP 311) (Undergraduate)
Fall. 3 credits. Prerequisites: BIOG 105, BIOG 106, or BIOG 101, BIOG 102, BIOG 103, BIOG 104, BIOG 107, BIOG 108; CHEM 207, CHEM 208; or CHEM 206, or CHEM 215, CHEM 216; MATH 106, MATH 111 or MATH 191 or AP credit for any of the above; or one year of college-level biology, chemistry, and mathematics. S-U grades optional.

VETBMS 628 Graduate Research in Animal Physiology (Graduate) (enroll in VETPH 628) (also BIO S 719)
Fall. 2 credits. Prerequisites by written permission of department chairperson and faculty mentor who will supervise the work and assign the grade. S-U grades optional.

VETBMS 639 Autotutorial in Laboratory Animal Medicine and Science (enroll in VETPA 639)
Spring. 1-3 credits. Letter grades only. F. W. Quimby.

VETBMS 700 Predictions of Form or Phology (enroll in VETA 700)
Spring. 1 credit. By permission of instructor. S-U grades optional. J. W. Hermanson.

VETBMS 713 Cell Cycle and Growth Regulation (enroll in VETPA 713)
Spring. 1 credit. S-U grades only. A. Yen. Current topics in the control of mammalian cell division will be discussed, including growth factors and oncogenes.

VETBMS 720 Special Problems in Physiology (Graduate) (enroll in VETPH 720)
Fall, spring. 1-3 credits. By permission of instructor. Laboratory work, conferences, collateral readings, and reports. Adapted to the needs of students. S-U grades optional.

VETBMS 788 Seminar in Surgical Pathology
Fall, spring. 1 credit. Intended for residents; third- and fourth-year veterinary students may attend. Letter grades only.

VETBMS 796 Medical Primatology (enroll in VETPA 796)
Fall. 1 credit. For residents and graduate students by permission of instructor. Offered even-numbered years. F. W. Quimby.

VETBMS 811 Advanced Physiology Methods I (enroll in VETPH 811) (also BIO S 811) (Graduate)
Fall. 2 credits. Enrollment limited. Prerequisite: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. J. Ray.

VETBMS 812 Advanced Physiology Methods II (enroll in VETPH 812) (also BIO S 812) (Graduate)
Spring. 2 credits. Enrollment limited. Prerequisite: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. J. Ray.

Clinical Sciences

VETCS 700 Pathophysiology of Gastrointestinal Surgery
Fall. 1.5 credits. S-U grades only. Offered every third year. Next offered fall 2001.
N. G. Duchamele.
Normal anatomy and physiology of the gastrointestinal system in carnivores, herbivores and ruminants will be presented initially. This will be followed by in-depth discussion of the pathophysiological mechanisms and sequelae of gastrointestinal obstructions including reflux in partition injury, peritonitis, adhesions and small bowel syndrome. The emphasis of this course is development of advanced understanding of surgically relevant gastrointestinal problems that lead to appropriate decision making.

VETCS 701 Pathophysiology of Orthopedic Surgery (Graduate)
Spring. 1.5 credits. Prerequisites include DVM, MD, or equivalents or approval of instructor. S-U grades only. Offered every third year. Next offered spring 2002.
E. J. Trotter.

VETCS 702 Pathophysiology of Cardiopulmonary Surgery (Graduate)
Fall. 1.5 credits. Prerequisites: DVM degree or equivalent. S-U grades only. Offered every third year. Next offered fall 2002.
P. P. Hackett, S. L. Fabini, N. G. Duchamele, H. J. Harvey.
Using lectures and group discussions, the objective of this course is to explain the pathophysiology of various cardiovascular diseases (cardiac arrest, cardiac arrhythmia, ischemia under anesthesia) and airway disease (thoracic and upper airway disease). As a basis for these abnormalities, cardiopulmonary hemodynamics and biomechanical aspects of ventilation will be emphasized. The emphasis will be placed on understanding these mechanisms and outlining the surgeon’s response to them.

VETCS 703 Surgical Principles and Surgery of the Integumentary System (Graduate)
Spring. 1.5 credits. For graduate DVMs (or equivalent) in residency or graduate training programs. S-U grades only. Offered every third year. Next offered spring 2003.
This course is designed for surgery residents and graduate students. It is largely discussed format and examines surgical principles and surgery of the integumentary system.

VETCS 704 Pathophysiology of Urogenital Surgery (Graduate)
Fall. For graduate DVMs or equivalent in residency or graduate training programs. 1.5 credits. S-U grades only. Offered every third year. Next offered fall 2001. S. Pabini.
This course is designed to review and discuss urogenital surgical procedures in animals and the rational basis for them. Pathophysiology will be stressed. Some classes will consist of reprints with discussion.

VETCS 705 Animal Pain and Its Control
This course is open to third- and fourth-year veterinary medical students, interns, residents, graduate students, and postdoctoral associates.
who are interested in the fundamental and applied concepts of pain in animals. The course will emphasize both the physiologic and pathophysiologic mechanisms involved in pain perception by animals, their responses (physiologic and behavioral) to pain, and the pharmacologic mechanisms underlying analgesic therapy. The subject material will be presented through lectures, group discussions, and group evaluation of analgesic protocols.

VETCS 706 Pathophysiology of Neurosurgery (Graduate)  
Spring. 1.5 credits. Prerequisite: VETMED 568 Veterinary Anesthesiology or permission of instructor. Third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. Offered every third year. This course provides specialized training in neurosurgical techniques and application and discusses pathophysiologic implications of neurosurgical and neurologic diseases.

VETCS 710 Advanced Veterinary Anesthesiology I  
Fall, winter, 1 credit. Prerequisite: VETMED 568 Veterinary Anesthesiology or permission of instructor. Third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. P. F. Moon and staff.

The content of this course is designed for preparation for the American College of Veterinary Anesthesiology examinations. However, the course is also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers will be from both inside and outside the college. Topics will cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology, and pathology. Clinically oriented lectures will also be given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

VETCS 711 Advanced Veterinary Anesthesiology II  
Fall, winter, spring. 1 credit. Prerequisite: VETMED 568, Veterinary Anesthesiology or permission of instructor. Third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. P. F. Moon and staff.

The content of the course is designed for preparation for the American College of Veterinary Anesthesiology examinations. However, the course is also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers will be from both inside and outside the college. Topics will cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology, and pathology. Clinically oriented lectures will also be given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

Microbiology and Immunology

VETMI 315 Basic Immunology (Undergraduate) (also Biological Sciences 305)  
Fall. 3 credits. Strongly recommended: basic courses in microbiology, genetics, and biochemistry. S-U grades optional. J. A. Marsh.

This course is a survey of immunology, with emphasis on the cellular and molecular bases of the immune response. More information is available at the biog305 courseinfo web site.

VETMI 320 Principles of Toxicology (Undergraduate) (also Biological Sciences 320 and Toxicology 320)  
Spring. 3 credits. Prerequisites: one year each of introductory biology and chemistry, with lab; one semester of organic chemistry, lecture or waiver by instructor. S-U grades optional. T.R. 1:25–2:40. S. Penningsho, R. Dietert, and S. Bloom. This course is an introduction to the interdisciplinary science of toxicology, drawing on material from biology, chemistry, pharmacology, ecology, earth science, risk analysis, and policy studies. Basic principles of toxicological science are presented and illustrated by case examples, such as pesticide toxicity to wildlife reproduction and human health risk assessment at a Superfund hazardous chemical waste site. Chemical risk management is described as a sociopolitical process involving the integration of scientific, economic, and cultural factors.

Independent student projects include a toxic chemical profile and a team analysis of a hypothetical scenario. "Periodic talks by toxicology faculty acquaint students with basic research in this interdisciplinary branch of biological science. This is an introductory-level course in toxicology. Format: lecture supplemented by case examples. One field trip to a hazardous chemical waste site. Appropriate for nonmajors seeking basic literacy in environmental and human toxicology. "Gateway course" for students interested in 400- and 600-level toxicology courses.

VETMI 404 Pathogenic Bacteriology and Mycology (BION 404)  
Spring. 2 or 3 credits (3 credits with lecture and seminar). Prerequisites: BIOMI 290 and 291. Seminar is required of graduate students and open to undergraduates with permission of instructor. Maximum enrollment 15 students. Letter grades only. Offered odd-numbered years. Microbiology faculty.

This course is in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary medicine. The course emphasizes infection and disease pathogenesis. Topics include disease causality, interactions of host, pathogen, and environment, including immunity to bacteria and fungi, and principles of antimicrobial therapy and drug resistance. A companion seminar addresses the current and classic literature related to microbial pathophysiology on the cellular and molecular levels.

VETMI 408 Viruses and Diseases I (also Biological Sciences 408)  
Spring. 2 credits. Intended primarily for graduate and undergraduate microbiology majors. Prerequisites: Microbiology 290 and 291 (College of Agriculture and Life Sciences). Recommended: VETMI 315, Genetics 281. Letter grades only. Offered even-numbered years. J. W. Casey. The course will cover basic concepts in virology with emphasis primarily on DNA virus-host interactions, as well as regulation, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasia will be highlighted in the context of approaches to prevent or reduce the severity of diseases.

VETMI 409 Viruses and Disease II (also BIOMI 409)  
Fall. 2 credits. Prerequisites: BIOMI 290 and 291 or permission of instructor. Recommended: BIOMI 408, BIOMI 330–332, BIOMI 432. Offered even-numbered years. This course will be complementary to BIOMI 408, Viruses and Disease I, and will emphasize RNA viruses. The course will be complete in its own right. As such, completion of BIOMI 408 is not a requirement. The course will cover the structure and classification of viruses, entry, genome replication, and virus assembly. Particular emphasis will be placed on virus-host cell interactions. Vaccinations, chemotherapy and evolution of viruses will also be discussed.

VETMI 420 Environment and Inflammation  

The course will cover environmental factors (chemicals, bacterial, and selected infectious agents) that represent important risk factors in host inflammatory reactions. Emphasis will be placed on environmental contaminants, dietary factors, and pharmacological agents that influence the potential for problematic inflammatory reactions in animals and humans. Additionally, the basic mechanisms of inflammation will be covered in the context of specific case studies. Chemicals and societally pervasive health challenges such as allergic diseases and cancer will be introduced. In addition, health issues such as multiple chemical sensitivity (MCS), chronic fatigue syndrome (CFS), sick building syndrome (SBS), and Persian Gulf War illnesses will be discussed.

VETMI 431 Medical Parasitology (Undergraduate)  
Fall. 2 credits. Prerequisites: zoology or biology, any of the following courses: BIOES 261, 263, 264, 267, 274, 275, 278; BIOMI 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 170, 202, 207, BIOMI 192, 290, 298 or equivalent course. Letter grades only. D. D. Bowman.

This course is a systematic study of arthropod, protozoan, and helminth parasites of public health importance, with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasites.

VETMI 605 Special Projects in Microbiology (Undergraduate)  
Fall, spring. 1–3 credits. By permission of instructor. Prerequisite: a good background in microbiology or immunology. Preferably, students should have background in pathogenic microbiology and immunology. S-U grades only. Microbiology staff. The course normally provides an opportunity for the student to work in a research laboratory or carry out a special project under supervision.

VETMI 700 The Biology of Animal Viruses (Graduate and Upper-level Undergraduate)  
Fall. 2 credits. Letter grades only. Offered odd-numbered years. C. R. Parrish and staff.

This course will examine the current topic of studies of animal viruses, including some comparisons with plant viruses where similar mechanisms apply. Selected topics will be examined in depth, including the structures of viruses and their components, viral necle.
VETERINARY MEDICINE - 2000-2001

VETMI 708 Selected Topics in Animal Virology
Spring, odd-numbered years. 2 credits. Letter grades only. Microbiology faculty.
Principles of animal virus biology with focus on mechanisms in viral pathogenesis.

VETMI 710 Microbiology Seminar (Graduate)
Fall, spring. 1 credit. Required of all graduate students in the Department of Microbiology and Immunology. S-U grades only. G. Whittaker.

VETMI 719 Immunology of Infectious Diseases and Tumors (also Biological Sciences 706) (Graduate)
Spring. 2 credits. Prerequisite: VETMI 315 Basic Immunology or permission of instructor. S-U grades optional. Offered odd-numbered years. E. Y. Denkers and staff.
Coverage at an advanced level of the immunology of diseases caused by selected bacterial, viral, protozoan, and helminthic parasites, and tumor immunology.

VETMI 737 Advanced Work in Animal Parasitology (Graduate)
Fall, spring. 1-3 credits. For advanced undergraduate, graduate, and veterinary students. Letter grades only. D. D. Bowman and other faculty.
This course is intended for advanced undergraduate, graduate, and veterinary students with interests in parasitology research.

VETMI 770 Advanced Work in Avian Diseases (Graduate)
Fall, spring. 1-3 credits. By arrangement with instructor. Letter grades only. Microbiology faculty.

VETMI 772 Advanced Work in Aquatic Animal Diseases (Graduate)
Fall, spring. 1-3 credits. By arrangement with instructor. S-U grades only. P. R. Bowser.

VETMI 783 Seminars in Parasitology (Graduate)
Fall, spring. 1 credit. Open to veterinary students or graduate students; others by permission of instructor. S-U grades only. D. D. Bowman.
This is a seminar series designed to acquaint students with interests in parasitology, and tumor immunology.

Molecular Medicine

VETMM 470 Biophysical Methods (also A&EP 470) (enroll in VETPR 470)
Spring. 3 credits. Prerequisite: permission of instructor. Letter grades only. R. A. Linsdau.
This course is an overview of the diversity of modern biophysical experimental techniques used in the study of biological systems at the cellular and molecular level found in articles published in the Biophysical journal. Topics covered include methods that examine both structure and function of biological systems: light microscopy, fluorescence microscopy, Fourier optics and image processing, confocal and multiphoton microscopy, phase contrast, electron microscopy, X-ray diffraction and protein structure determination, multidimensional NMR, spectroscopy, chromatography, calcium measurements, resonance energy transfer, membrane biophysics, electrophysiology, ion channels, action potentials, ligand-gated channels, fluctuation analysis, patch-clamp, molecular biology of ion channels, rapid kinetics, caged compounds, transmembrane release, capacitance measurements, amperometry, optical traps, and molecular force measurements. The course format includes assigned literature reviews by the students on specific topics and individual students’ presentation of these topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods. Due to the interdisciplinary nature of the course, students will have diverse backgrounds. A basic knowledge of and interest in physics and mathematics is expected but strong attempts are made to give an intuitive understanding of these topics.

VETMM 672 Protein Kinetics (enroll in VETPR 672) (also CHEM 672)
Fall. 4 credits. Prerequisite: CHEM 288 or 390, BIOM 331, or permission of instructor. Letter grades only. B. A. Baird.
This course focuses on protein interactions with ligands and consequent changes in structure and activity. Topics include protein structure and dynamics, thermodynamics, and kinetics of ligand binding: steady state and transient enzyme kinetics; enzyme catalysis and regulation; and role of cell membrane receptors in regulating cellular activities.
This is a survey course in vertebrate central nervous system physiology and pharmacology, and it focuses on mechanisms of neurotransmitter function. This course covers a variety of topics related to the research interests of the faculty.

**VETMM 711 The Role of Calcium in Systemic-Secretion Coupling (enroll in VETPR 711)**
- C. M. S. Fewtrell.

**VETMM 713 Mechanisms of Growth-Factor Action (enroll in VETPR 713)**
- R. A. Cerione.

**VETMM 714 Central Nervous System Neurotransmitters (enroll in VETPR 714)**
- L. M. Nowak.

**VETMM 718 Structure-Function of the Nicotinic Acetylcholine Receptor (enroll in VETPR 718)**
- R. E. Oswald.

**VETMM 720 Modulation of Nicotinic Acetylcholine Receptor Function (enroll in VETPR 720)**
- G. A. Weiland.

**VETMM 724 The Control of Hormone Secretion (enroll in VETPR 724)**
- G. W. G. Sharp.

**VETMM 730 Graduate Research in Molecular Medicine (enroll in VETPR 730)**
- Fall, spring, and summer. 1–12 credits. By permission of instructor. S-U grades only. This course is offered by individual faculty members in the Department of Molecular Medicine for graduate students undertaking research toward M.S. or Ph.D. degrees.

**Directed Readings in Pharmacology**
- Fall, spring, and summer. 1–3 credits each. By arrangement with instructor. S-U grades optional. Field of pharmacology faculty. Reading and discussions. These courses are offered to small groups or to individual students.

**VETMM 742 Receptor Mechanisms (enroll in VETPR 742)**
- G. A. Weiland.

**VETMM 745 Biochemical Neuropharmacology (enroll in VETPR 745)**
- G. A. Weiland.

**VETMM 747 Amino Acid Neurotransmitters (enroll in VETPR 747)**
- L. M. Nowak.
Population Medicine and Diagnostic Sciences

VETPMD 664 Introduction to Epidemiology (Graduate) (enroll in VETCS 664)
Fall. 3 credits. Prerequisites: VETCS 665 and Statistics and Biometry 601. S-U grades optional. H. O. Mohammed. Design and interpretation of cross-sectional case-control, and cohort studies (including controlled clinical trial) are covered. Design issues will include sample size, bias, and relative advantages and disadvantages. The course objectives are (1) to know the difference between different epidemiologic study designs and relative advantages and disadvantages of each; (2) to be able to design an appropriate epidemiologic study; (3) to be able to effectively analyze and criticize published epidemiologic studies. The course will consist of lectures on the principles of epidemiologic study design and related issues (sample size calculations, validity and precision, and identification and minimizing of bias); basic analysis of epidemiologic data; and discussion of published epidemiologic studies. These studies include observational cohort studies (prospective and retrospective), cross-sectional studies, case-control studies, and hybrid studies (ambidirectional, and other hybrid designs).

VETPMD 700 Special Projects in Diagnostic Endocrinology (enroll in VETDL 700)
Fall, spring. 1-3 credits. By permission of instructor. T. J. Reimers. An independent study course. Students have the opportunity to research a particular topic in diagnostic clinical endocrinology.

VETPMD 701 Special Projects in Infectious Diseases (enroll in VETDL 701)
Fall, spring. 1-3 credits. By permission of instructor. S-U grades optional. Diagnostic Laboratory faculty. This course provides laboratory experience with attention to specific aspects of infectious disease problems.

VETPMD 702 Special Topics in Infectious Diseases (enroll in VETDL 702)
Fall, spring. 1-3 credits. By permission of instructor. S-U grades optional. Diagnostic Laboratory faculty. The objective of this course is to offer a broad exposure to various aspects of infectious diseases.

VETPMD 703 Doctoral-Level Thesis Research (Graduate) (enroll in VETDL 703)
Fall, spring. 6-9 credits. By permission of instructor. S-U grades optional. Diagnostic Laboratory faculty. Research leading to a Ph.D. degree.

VETPMD 704 Master's - Level Thesis Research (Graduate) (enroll in VETDL 704)
Fall, spring. 1-3 credits. By permission of instructor. S-U grades optional. Diagnostic Laboratory faculty. Research leading to an M.S. degree.

VETPMD 705 Interdisciplinary Approaches to Animal Health (enroll in VETDL 705)
Spring. 3 credits. Minimum enrollment 7. U. T. Grohn.

VETPMD 707 Clinical Biostatistics (Graduate) (enroll in VETCS 707)
Spring. 2 credits. For veterinary residents or graduate students. Offered odd-numbered years. H. N. Erb, Y. T. Grohn, H. O. Mohammed, and J. M. Scarlett. This course will explain the theory behind and interpret parametric and nonparametric statistical techniques commonly employed in research/clinical medicine. Students will analyze small data sets using a commercial statistical software package.

VETPMD 708 Epidemiology Seminar Series (Graduate) (enroll in VETCS 708)
Fall, spring. 1 credit. By permission of instructor. S-U grades optional. Advanced theoretical and analytical epidemiologic concepts and techniques will be discussed.

VETPMD 766 Advanced Methods in Epidemiology (Graduate) (enroll in VETDL 766)
Fall, spring, summer. Credit and hours TBA. Students must be registered in masters or Ph.D. program in epidemiology and obtain permission of the graduate faculty member concerned. S-U grades only. Epidemiology faculty. This course enables students outside the section of Epidemiology to receive graduate research credits for projects with epidemiologic components.

VETPMD 799 Independent Studies in Epidemiology (enroll in VETCS 799)
Fall, spring. 1-3 credits. T. J. Reimers, Y. T. Grohn, H. O. Mohammed, and J. M. Scarlett. The purpose of this course is to investigate an epidemiologic topic with one of the instructors. It provides experience in problem definition, research design, and the analysis of epidemiologic data.

FACULTY ROSTER

Abou-Madi, Noha, D.V.M., U. of Montreal (Canada). Lecturer, Clinical Sciences.
Antczak, Douglas F., Ph.D., U. of Cambridge (England). Dorothy Havemeyer McConville Professor of Microbiology and Immunology.
Appel, Max J., Ph.D., D.V.M., Emeritus, Microbiology and Immunology.
Appleton, Judith A., Ph.D., U. of Georgia. Assoc. Prof., Microbiology and Immunology.
Appleton, Jordan L., Ph.D., U. of Georgia. Assoc. Prof., Microbiology and Immunology.
Appleton, Judith A., Ph.D., U. of Georgia. Assoc. Prof., Microbiology and Immunology.
Bell, Richard P., Ph.D., John Curtin School (Australia). Prof., Microbiology and Immunology.
Beylevich, Klaus, Ph.D., Washington State U. Prof., Biomedical Sciences.
Bliss, Stuart, D.V.M., Cornell U. Instructor, Clinical Sciences.
Bloom, Stephen E., Ph.D., Penn State U. Prof., Microbiology and Immunology.
Bowman, Brian, D.V.M., Tulane U. Assoc. Prof., Microbiology and Immunology.
Bos, Paul R., Ph.D., U. of Louisiana. Prof., Microbiology and Immunology.
Butler, Emily C., D.V.M., Cornell U. Instructor, Clinical Sciences.
Cassaret, Alison F., Ph.D., U. of Rochester. Prof., Emeritus, Biomedical Sciences.
Casey, James W., Ph.D., U. of Chicago. Assoc. Prof., Microbiology and Immunology.
Chow, Richard A., Ph.D., Rutgers U. Prof., Molecular Medicine.
Chang, Yung Fu, Ph.D., Texas A&M. Assoc. Prof., Population Medicine and Diagnostic Services.
Clark, Theodore G., Ph.D., SUNY-Stony Brook. Asst. Prof., Microbiology and Immunology.
Collins, Ruth N., Ph.D., Imperial Cancer Research Center. Asst. Prof., Molecular Medicine.
Cooper, Barry J., Ph.D., U. of Sydney (Australia). Prof., Microbiology and Immunology.
Cooper, Gordon D., Ph.D., U. of Minnesota. Prof., Microbiology and Immunology.
Davies, Christopher, Ph.D., D.V.M., Cornell U. Asst. Prof., Microbiology and Immunology.
DeLahunta, Alexander, Ph.D., Cornell U. James Law Professor of Veterinary Anatomy, Biomedical Sciences.
Dietert, Rodney R., Ph.D., U. of Texas-Austin. Prof., Microbiology and Immunology.
COLLEGE OF ARTS AND SCIENCES

PROGRAM OF STUDY

Introduction

The College of Arts and Sciences—composed of departments in the humanities and the arts, the basic sciences, mathematics and computer science, and the social sciences and history—is a community of about 4,000 undergraduates and 600 faculty members. The college values intellectual breadth and rigor, individual choice and responsibility, imaginative courses of study, and development of critical thinking and writing. The college is also a graduate school and research center attracting faculty whose research and scholarly and creative work require first-rate academic facilities and who bring to all their students the profound questioning and the current ideas of contemporary scholarship. Finally, the college exists within a university of about 19,000 students and 1,500 faculty members. This wider community provides depth and diversity of applied and professional studies beyond what one undergraduate college alone can offer. Students may draw upon the knowledge and facilities of the other undergraduate colleges at Cornell to supplement their studies. Abundant variety and outstanding quality in many fields, including interdisciplinary fields, give the college and the university its distinctive character.

The richness of the college’s curriculum is extraordinary; there is no course that all students must take, and there are nearly 2,000 from which they may choose. By choosing courses each semester, students design their own education. They strike a balance between developing known interests and exploring new subjects. They sharpen their verbal and quantitative skills. They also come to understand more thoroughly the Western tradition and learn something about the non-Western world and its peoples. An education in the liberal arts and sciences means honing one’s critical capacities, learning about oneself in nature and culture, and gaining real experience with views of the world radically unlike one’s own. All this is highly individual, and the college relies on each student and faculty adviser to design a sensible, challenging, and appropriate course of study.

Yet the faculty believes that each student’s education should have certain common qualities. These include familiarity with several different ways of knowing that are reflected in clusters of disciplines in the natural sciences, the social sciences, and the humanities and the arts. In addition to these general areas of knowledge, students study foreign languages, acquire effective writing and quantitative skills, and concentrate on one particular field to develop the powers of imaginative and critical thinking as fully as possible. To accomplish these objectives, the college has certain requirements for graduation.

The College of Arts and Sciences awards one undergraduate degree, the Bachelor of Arts degree

Summary of Requirements

1) First-Year Writing Seminars: two courses. (See “John S. Knight Writing Program,” p. 563.)
2) Foreign language: proficiency in one language or qualification in two; zero to four courses, depending on background.
3) Distribution: nine courses, three of which are satisfied with a major in humanities or social sciences and four of which are satisfied with a major in sciences.
4) Breadth: two courses (may be among courses for distribution, major, or electives).
5) Major.
6) Electives: four or five courses (at least 15 credits) not used to fulfill other requirements and not in the major field.
7) Residence: eight full-time semesters, unless a student can successfully complete all other requirements in fewer than eight semesters and meet the additional criteria to accelerate graduation. (See “Acceleration.”)
8) 34 courses: a three- or four-credit course counts as one course. A two-credit course counts as half a course; a one-credit course does not normally count toward the requirement; a six-credit language course counts as one and one-half courses and for counting other five and six credit courses.
9) Credits: a total of 120 academic credits, of which 100 must be taken in the College of Arts and Sciences. (Note “Non-credit courses below.”)
10) Physical education: completion of the university requirement (passing a swim test and two one-credit non-academic courses). Please note that physical education credit does not count toward graduation or toward the 12-credit minimum required for graduation.
11) Application to graduate. (See below under “Graduation.”)

Explanation of Requirements

Foreign Language Requirement

The faculty considers competence in a foreign language essential for an educated person. Studying language other than one’s own helps students understand the problems of language, our fundamental intellectual tool, and more fully opens another culture for exploration. The sooner a student acquires competence, the more useful it will be. Hence, work toward the foreign language requirement should be undertaken in the first two years. Courses in foreign languages and/or literature are taught in the College of Arts and Sciences by the following departments: Africana Studies and Research Center, Asian Studies, Classics, German Studies, Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

The language requirement may be satisfied in one of two ways:

1) by attaining proficiency (competence at the intermediate level) in one language or
2) by attaining qualification (mastery of an introductory sequence) in two languages.

Proficiency

Proficiency may be attained in languages by passing an intermediate (usually 200-level) Cornell course (or Chinese or Japanese 161). Some introductory language courses are taught at the 300- or 400-level (for example, Near Eastern Studies 333, 334); these do not confer proficiency. Proficiency can also be earned by examination. A score of 4 or 5 on an AP language exam earns three credits but does not carry with it proficiency. However, a student who received a score of 4 or 5 on an AP language exam can earn proficiency and an additional three credits by scoring high enough on the CASE (Cornell Advanced Standing Examination), which is given during orientation week. On the other hand, a score of 4 or 5 on an AP literature exam in French or Spanish earns proficiency, as well as three credits.

Qualification

Qualification may be attained in any of the following ways:

1) Three years of high school study in any one language gives qualification in that language. No demonstration of competence is necessary. Note, however, that this route to qualification does not guarantee entrance into an intermediate level course. Students who want to continue studying the language must be placed in the appropriate course through an examination. Being placed below the intermediate level does not cancel the qualification.
2) Passing the requisite Cornell course: 102, 123, or 134 in most languages; Chinese 110, 112, or 114; Japanese 120, 160; or 241; Korean 102 or 110; Near Eastern Studies 102 or Jewish Studies 106 in Hebrew, 112 in elementary Arabic; 118 in
Elementary Turkish, Classics 103 or 104 in Greek, 106 or 107 in Latin; 132 in Sanskrit (also Classics 132).

Note: Except in the case of Sanskrit, completion of language sequences 131-132 does not constitute qualification.

3) A score of 600 in French, 580 in German, and 590 in Italian or Spanish on the SAT II taken in high school or a score of 56 or higher on the appropriate Cornell LP (Language Placement) test.

Students may earn a score of 56 on the placement test at the end of a course numbered 122 (second semester of the introductory sequence) and consequently attain qualification without taking 123, the third semester of the introductory sequence.

4) By departmental or (when no placement test is available) individual examination at Cornell (if a qualified examiner is here).

Placement in Language Courses and Advanced Placement Credit
Placement into language courses and advanced placement credit are separate results of examinations.

Placement
Entering students who have had two or more years of high school study in a language, who have been awarded credit for language work at another college or university, or who are native speakers, bilingual, or have spoken the language at home, may enroll in a course in the same language only after being placed by examination. The placement exam may have been taken in high school (SAT II, taken after the last course, or AP, if the score was 4 or 5) or at Cornell (LP test). Students may, but need not, retake a language test if a year or more has passed since last taking it. Being placed into a 200-level course does not earn credit toward the degree. Credit is earned only for high school work equivalent in level to language courses numbered 200 and above at Cornell.

Placement Tests and Advanced Placement Credit
The type of test depends upon the language and the student's level of achievement:

1) Eight languages offer scheduled placement and advanced standing tests at the beginning of each semester. The schedule of Chinese, Japanese and Korean is available from the Department of Asian Studies; German from the Department of German Studies; French, Italian, and Spanish from the Department of Romance Studies; and Russian from the Department of Russian Literature. Please note that the advanced standing examination in French, German, Italian, Russian, and Spanish, is called the CASE (Cornell Advanced Standing Examination). Eligibility for the CASE may be determined from the placement tables below. In Russian only, all students seeking placement take the CASE.

Native speakers of Spanish who have completed their secondary education in a Spanish-speaking country do not take the CASE. For these students, the Spanish program offers a walk-in service, the Native Language Accreditation for Spanish, in the third week of September and the first week of February. Students...

AP 4 or 5 in language, 3 credits CASE recommended for placement in language.

AP 4 or 5 in literature, 3 credits and proficiency CASE recommended for placement in language.

*Students who have a score of 65 of higher on the LPI, or 690 or higher on the SAT II, or an AP score of 4 or 5 may enroll in Italian 201 or 203 without taking the CASE.
1. Physical and Biological Sciences

In fulfilling the science distribution requirement, students must take at least one course from the primary list of courses and may select additional courses from the supplementary list.

**Primary list:**
- Astronomy: all courses except 233 and 234
- Chemistry: all courses
- Earth and Atmospheric Sciences: all courses
- Physics: all courses
- Biological Sciences: all courses except 152, 200 (unless permission of the associate director of biology is obtained), 208, 209, or 367. The following courses are especially suitable for the distribution requirement because they have no prerequisites: BIOG 101-104, 105-106, 107-108, 109-110, 154, 170, 202, 207; BIOGD 184, BIOMI 192; BIOAP 212, BIOL 240, 241; BIOS 264, 275. Note that introductory biology can count for distribution only when completed as a two-semester sequence: 109-110, 105-106; or 101 and 103 plus 102 and 104, or 107-108, or a combination of the first term of one sequence and the second term of another.

**Supplementary list:**
- Animal Science: 100, 150, 212
- Anthropology: 101, 208, 275, 371, 390, 474, 490
- Applied and Engineering Physics: 110
- Biology and Society: 301
- Entomology: 212
- Food: 200
- Materials Science and Engineering: 277
- Natural Resources: 201, 210, 301
- Nutritional Science: 115
- Plant Breeding: 225
- Psychology: 223

2. Quantitative and formal reasoning

City and Regional Planning: 320
Computer Science: 100, 211, 312
Economics: 319, 320, 321
Industrial & Labor Relations: 210, 211
Linguistics: 216
Mathematics: all courses except 101 and 109
Operations Research & Industrial Engineering: 115
Philosophy: 231, 331, 431, 432, 434, 436
Philosophy: 231, 331
Psychology: 231, 331, 431, 432, 434, 436
Psychology: 205, 209, 210
Psychology: 350
Sociology: 301

If students choose two courses from the list to satisfy part of the distribution requirement, those two courses may not have significant overlap. For example, students may not choose two beginning courses in statistics.

Under exceptional circumstances and upon petition, certain Cornell courses not listed above under Group 2 (courses such as those appearing on the following auxiliary list) may be used to satisfy the requirement in quantitative and formal reasoning. The petition should provide a persuasive rationale both in terms of the student's course of study and in terms of meeting the goals of the requirement.

**Auxiliary list:**
- Agricultural Economics: 310, Agricultural Engineering 151, City and Regional Planning 231, Industrial and Labor Relations 312; Linguistics 421, 450; Psychology 472-473 (a sequence of two two-credit courses which may count only in its entirety as one course)

3. Social sciences and history

American Studies: 101, 102, 109, 110, 201, 202, 320
Anthropology: all courses except 101, 208, 275, 571, 590, 451, 452, 453, 474, 490
Archaeology: 100, 201, 202, 203, 204, 255, 256, 263, 275, 317, 355, 356, 362, 370, 405, 409, 458, 459, 466, 467, 469, 493, 494
Asian Studies: courses in Asian anthropology, economics, government, history, linguistics, or sociology
Asian American Studies: 110
Biology and Society: 301, 342, 407, 427
City and Regional Planning: 100, 101
Cognitive Studies: 101, 201
Economics: all courses except 317, 318, 319, 320, 321
Engineering: 250, 292
Geological: all courses
History: all courses
Linguistics: all courses except 131, 132, 236, 238, 251, 252, 315, 316
Near Eastern Studies: 244 and all other courses in Near Eastern archaeology and history
Philosophy: 191
Religious Studies: 150, 203, 239, 244, 248, 251, 257, 258, 263, 264, 265, 320, 322, 335, 345, 350, 365, 368, 393, 442, 443, 451, 459
Sociology: all courses except 301
Women's Studies: 206, 211, 212, 234, 244, 277, 281, 307, 321, 362, 438, 459, 467, 478, 479, 480, 487, 488, 631, 688

4. Humanities and the arts

African Studies: 202, 210, 211, 265, 285, 303, 304, 310, 422, 425, 431, 452, 455, 455
American Studies: 101, 102, 109, 110, 201, 202, 324
Anthropology: 100, 290, 451, 452, 453, 455
Restrictions on Applying Cornell Courses to the Distribution Requirement

1) Freshman writing seminars may not count towards any distribution requirement.

2) No single course may satisfy more than one distribution requirement. However, students may count courses in their major towards distribution. Courses offered or cross-listed by their major department may not be counted towards any distribution category beyond the usual category of the major department itself. For example, a history major may not count a course cross-listed between history and a literature department towards distribution in the humanities.

Breadth Requirements

Students must include in their undergraduate curricula at least one Arts and Sciences course that focuses on an area or a people other than those of the United States, Canada, or Europe and one course that focuses on an historical period before the twentieth century. Courses that satisfy the geographic breadth requirement are marked with an @ when described in this catalog. Courses that satisfy the historical breadth requirement are marked with a *. Many courses satisfy both requirements, and students may in fact use the same course to satisfy both. Students may use courses satisfying distribution, major, or elective but not writing requirements in satisfaction of either of the breadth requirements. They may also apply Cornell courses conferring proficiency in a non-Western language toward the geographical breadth requirement. They may not apply (a) to either of the breadth requirements, (b) credit awarded by examination, or (c) if matriculating as freshmen (unless through the Mid-Year Freshman Program), transfer credit.

The Major

In their last two years, students devote roughly one-half their time to acquiring depth and competence in a major subject. The choice of major does not define a student's intellect or character or lead directly to a lifetime's occupation, although it sometimes does some of each. By majoring, students focus and develop their imaginative and intellectual capacities through a subject they find especially interesting.

Most departments and programs specify certain prerequisites for admission to the major; they are found on the following pages in the descriptions of the department and program.

Available Majors

Majors are offered by each of the departments. There are also majors in American studies, archaeology, biology and society, religious studies, science of earth systems, and women's studies.

Double Majors

Only one major is required for graduation. Some students choose to complete two majors. No special permission or procedure is required; students simply become accepted into both majors and find an adviser in each department. Both majors will be posted on the official transcript.

Electives

Of the 34 courses and 120 credits required for graduation, almost one-third are free electives. How students use these electives frequently makes the difference between an ordinary and a truly interesting course of study. Students must complete at least four courses and at least 15 credits offered outside the major field and not used to fill another requirement except breadth. AP credits not otherwise used may be used to fulfill elective requirements. Students may group electives to complete one of the established interdisciplinary concentrations described in the pages following descriptions of departments and majors from their own unofficial concentration or "minor" separate from their major. Students may also group electives into a second major. Since only one major is required, students may count courses in a second major as electives.

Residence

The College of Arts and Sciences is a residential college for students who devote their energy and spirit to full-time study. The
Transfer students from other institutions must spend a minimum of four semesters on the Cornell campus in Ithaca enrolled in the College of Arts and Sciences. Transfers from other colleges at Cornell must spend four semesters on campus in Ithaca as students in the Internal Transfer Division or in the college.

Approved study abroad, SEA Semester, Urban Semester, and Cornell-in-Washington are considered semesters of residence, but not as semesters on the Cornell campus. Nonetheless, students may spend no more than two semesters on such programs and must be on campus during their last semester.

Semesters of extramural study in the Division of Continuing Education and summer sessions do not count as semesters of residence.

Students occasionally enter with credit from other institutions, take leaves and complete courses at other institutions, or take summer courses at other institutions. The college will accept credit for such courses, if they are comparable to courses offered by departments at Cornell and are approved by those departments. Approval forms are available in the Office of Undergraduate Admissions and Advising.

Students may not, however, count such credit as part of the 100 credits required in the College of Arts and Sciences or as part of the 100 credits required in the College of Arts and Sciences credit only if credit courses do not aggregate to count as one course or more.

Accelerating students from other institutions must complete the criteria for accelerated graduation, and must meet the guidelines for part-time study. They may not exit through any program other than a regular, full-time Cornell semester in Ithaca.

Students matriculating as freshmen may not compress their undergraduate education into fewer than six semesters of residence. Transfer students, both from other institutions and from other colleges at Cornell, must spend at least four semesters in the college on campus in Ithaca.

### Ninth term

Students who can graduate in eight semesters should do so. If a worthy academic plan for a full ninth or tenth semester is approved, the student enrolls in the college as a special student for the additional work. Such a status allows enrollment in a full schedule of courses for full tuition and full use of campus resources, but allows financial aid only from loans or outside agencies, not from Cornell funds. Students who need only a part-time schedule of courses in a ninth or tenth term in order to graduate should complete the outstanding courses as part-time students paying pro-rated tuition. Students may spend a ninth term with Cornell aid only with permission of the Committee on Academic Records. Such permission is normally granted only to:

1. Students who have been ill or have an exceptionally compelling academic plan.
2. Students who are advanced in their field and are remaining to complete study beyond the criteria for accelerated graduation, and need to spend an additional semester to complete a defined program of study (See Dean Turner, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, about this option.)

### Part-time study in special circumstances

The college and university support students (with financial aid and services) as best they can to make full-time study possible. Occasionally, however, extraordinary but nonfinancial personal, academic, or medical circumstances make becoming a part-time student necessary and appropriate. Students in good academic standing who face extraordinary situations or who have documented disabilities may petition the Committee on Academic Records for part-time status and proration of tuition in the college.

Students requesting part-time status should discuss their situation with Dean Walbridge if their reason is a documented disability that, under the Americans with Disabilities Act, requires appropriate accommodations. Otherwise, students should meet with a dean of their class.

### Part-time study in final semester

Students may complete their degrees as part-time students at Cornell after fewer than eight semesters of full-time residence only if:

1. They have completed all requirements by the end of the seventh or sixth term, met the criteria for accelerated graduation, and are remaining to complete study beyond what is required.
2. They are writing an honors thesis in the eighth semester and can complete all degree requirements by taking two courses, one of which is the thesis itself. They must register for the thesis and at least one additional course.

In all cases, approval of an advising dean must be sought in the semester prior to the part-time semester.

### Courses and Credits

#### Counting courses and credits

Students must complete at least 34 courses to graduate—that is, an average of four courses during each of six semesters and five courses during each of two semesters. A three- or four-credit course counts as one course; a two-credit course counts as one-half course.

Single-credit courses do not count as part of the 34 except in certain cases when they form a part of a series and two in the same series can be aggregated to count as one-half course (certain offerings in the Departments of Music and of Theatre, Film and Dance). Three-credit courses do not aggregate to count as one course. A six-credit language course counts as 1 1/2 courses, while the summer Falcon Programs in Asian languages count as eight credits and 2 1/2 courses each. Archaeology and geology fieldwork for more than six credits counts as two courses each. Biology 281 counts as 1 1/2 courses. Other five- or six-credit courses count as one course. AP exam scores that result in an award of three or four credits count as one course, those in language that result in six credits count as 1 1/2 courses; those in biology that result in six credits count as two courses; those that result in an award of eight credits count as two courses each.

Students must also complete 120 credits, 100 of which must be from courses taken in the College of Arts and Sciences. Liberal arts courses approved for study abroad during a semester or academic year of full-time study (not summer study) and courses taken in...
certain off-campus Cornell residential programs may be counted toward the 100 credits required in the college and also toward the required 34 courses. Credits earned in other colleges at Cornell, or in any subject at certain off-campus Cornell residential exceptions are for courses (usually no more than three) that certain departments accept from other colleges at Cornell as fulfilling major requirements and for up to two courses that an adviser accepts as part of a completed and formally established cross-college, interdisciplinary concentration.

Using courses towards more than one requirement
A course may fulfill more than one college requirement in the following situations:

1) A course may be used to fulfill a distribution requirement and also a major requirement.
2) A one-semester course in foreign literature (not language) that is acceptable for achieving proficiency in that language may also be used as a partial fulfillment of the distribution requirement in the humanities and the arts.
3) Courses may count toward breadth requirements and toward any other requirement except Freshman Writing Seminars.
4) Courses in a second major may count as electives.

Auditing
The college encourages its students to take advantage of its rich curriculum by sitting in on courses that interest them but that they cannot commit themselves to for credit. As long as the instructor agrees, students are welcome to visit courses. Small seminars and language courses are sometimes not open to visitors. Audited courses do not appear on the student’s schedule or transcript.

Repeating courses
Students occasionally need to repeat courses. If the instructor certifies that the course content has been changed, credit will be granted a second time. If content has not changed, both grades nonetheless will appear on the transcript and be included in any average that is calculated, but credit will be counted toward the degree only once; students considering repeating a course under this circumstance should discuss the matter with their adviser and an advising dean. Students who plan to repeat a course submit a petition to the college registrar. If the original course grade was F, no petition is necessary.

Non-credit courses
The college does not grant credit toward the degree for every course offered by the university. Courses in physical education, remedial or developmental reading, high school mathematics, supplemental science and mathematics offered by the Learning Strategies Center, keyboarding, shorthand, military training, technical medical technician, and service as a teaching assistant are among those for which degree credit is not given and that do not constitute part of the 12 credits required for good academic standing.

Students enrolled in courses for undergraduate teaching assistants may petition once to have the nondegree credits count towards good academic standing. This would allow continued eligibility for graduating with distinction in all subjects, but would disqualify the student from being on the dean’s list that semester.

Examples of noncredit courses:
- Physical Education
- All courses numbered below 100 (with the exception of Computer Science 099)
- All courses in Military Science, Naval Science, and Aerospace Studies (they are cross-listed in a college department)
- ARLS 134
- Biology G 498
- Communications 498
- Education 498
- Engineering 470
- Hotel Administration 170
- Human Development and Family Studies 403
- Human Ecology 100, 101
- Human Service Studies 403, 454
- Mathematics 109
- Nutritional Science 403
- Psychology 498

Advanced placement credit
See p. 5. Advanced placement credit counts as part of the 120 credits and 34 courses required for the degree. It does not count as part of the 100 credits required in Arts and Sciences; its application to distribution requirements is restricted, as explained above under “Distribution.”

Summer session credit
A student may earn credit toward the degree by completing courses in Cornell’s summer session or by petitioning to take summer courses at other colleges. Students should consult their advisers regarding summer study plans.

Credit for summer courses not taken at Cornell must be approved by the appropriate Cornell department. Approval forms and information are available in the Office of Undergraduate Admissions and Advising. 55 Goldwin Smith Hall and from Robin Perry, 172 Goldwin Smith Hall. Credit earned in summer courses other than those at Cornell (including summer or orientation programs abroad) will not count toward the 100 credits required in the college and may be applied only to part of the Group 1 and 2 distribution requirements. Transcripts from other institutions must be sent to Robin Perry, 172 Goldwin Smith Hall.

Entering students who want to receive credit toward the degree for courses completed before matriculation in a summer session away from Cornell should obtain approval forms as soon as possible and have transcripts sent to Robin Perry, 172 Goldwin Smith Hall. Credit earned in Cornell summer sessions will be awarded automatically.

Summer session at Cornell or elsewhere does not count toward the eight-semester residence requirement.

Transferring credit earned away from Cornell while on leave of absence
Students may petition to transfer credits from other accredited institutions for work completed while on leave of absence.

Petitions are available in 55 and 172 Goldwin Smith Hall. The relevant department will decide whether the course is comparable to Cornell courses. Credit approved for transfer counts as part of the 120 required for graduation and as part of the 34 courses. It does not count toward the 100 credits required in Arts and Sciences and cannot be used toward graduation in fewer than eight semesters. Its application to distribution and breadth requirements is restricted as described above under “Distribution.”

Transferring credit (for transfer students from another institution or from another Cornell college)
Transfer students must successfully complete at least 60 credits and 16 courses at Cornell; they must be in residence in the college for four regular semesters (summer session does not count toward the residence requirement). The college evaluates credit earned either at another school or college at Cornell University or at another accredited institution of collegiate rank and determines the number of credits and courses the student may apply toward the various requirements for the Bachelor of Arts degree at Cornell. In addition, it evaluates advanced placement credit allowed by another institution, including another college at Cornell. Evaluations of transfer credits are normally provided when students are notified of their admission.

SPECIAL ACADEMIC OPTIONS

Degree Programs
The following five programs allow students to alter the regular college or major requirements or to work toward more than one degree.

Independent Major Program
The Independent Major Program allows students to design their own interdisciplinary majors and pursue a subject that cannot be found in an established major. Proposals for an independent major must be equivalent in coherence, breadth, and depth to a departmental major, well suited to the student's academic preparation, and consistent with a liberal education. Proposals must also be supported by a faculty adviser and are assessed by a board of faculty members.

Independent majors substitute for established majors, but students must still satisfy all the other requirements for the baccalaureate degree: Students should contact the director of the Independent Major Program, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall, for further information. Deadlines for submitting independent major program proposals are listed in the academic calendar supplement for the College of Arts and Sciences.

College Scholar Program
The College Scholar Program frees up to 40 students in each class from the usual college requirements for a degree and allows them to design their own course of study. It is meant to serve students whose interests and talents would benefit from a little more academic freedom than other students have, who demonstrate exceptional promise, and who show the maturity to plan and carry out, with the help of their adviser, a well-designed program of studies. College Scholars design idiosyncratic programs: some pursue diverse
Arts and Sciences - 2000-2001

interests; others integrate a variety of courses into a coherent subject.

College Scholars must complete 120 credits of course work (64 in college). 34 courses, and, unless they receive permission from the program to accelerate, eight full terms of undergraduate study. They must complete the physical education requirement. All College Scholars must complete a senior project. They are not required to complete or fulfill the general education requirements, although members of the College Scholar Advisory Board believe that the spirit of those requirements is a good one.

Each applicant to the College Scholar Program is asked to write an essay, which is due the last Wednesday in April of the freshman year. Mid-year freshmen apply by that date in their first spring semester in the college. Students should contact the director of the program, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall, for further information.

Dual-Degree Program with Other Colleges

The Dual-Degree Program enables especially ambitious undergraduate students to pursue programs of study in two colleges. Dual-degree candidates may earn both a Bachelor of Arts degree from the College of Arts and Sciences and (1) a Bachelor of Science degree from the College of Engineering or (2) a Bachelor of Fine Arts degree from the Department of Art in the College of Architecture, Art, and Planning or (3) a Bachelor of Science degree in urban and regional studies from the Department of City and Regional Planning in the College of Architecture, Art, and Planning. Students enter one of these colleges as freshmen or sophomores and begin the Dual-Degree Program with the second college in the second or, in some cases, the third year. The Dual-Degree Program ordinarily takes five years to complete, and students are eligible for the college's full financial aid. For further information contact the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Double Registration with and Early Admission to Professional Schools

Registration in the senior year of the College of Arts and Sciences and the first year of Cornell Law School, Cornell Medical College, or the Johnson Graduate School of Management, is occasionally possible. A very few exceptionally well-prepared students who have earned 105 credits before the start of the senior year and have been accepted by one of the above-named professional schools may be permitted to register simultaneously in the college and in one or another of these professional schools during the seventh and eighth terms. They earn the A.B. degree after the first year of professional school.

Students with eight or fewer credits and two or fewer courses to complete may apply to enter the Master's of Engineering program during the (but no earlier than) the eighth semester; dual-degree students may enter this program no earlier than the ninth semester. They earn the bachelor degree(s) after one semester of graduate school.

Students interested in the joint program with the Law School or the Graduate School of Management or, in early admission to the Master's of Engineering program should apply to the relevant program. Students interested in the joint program with Cornell Medical College should contact the health careers coordinator, 205 Barnes Hall. All candidates should confirm their eligibility with the dean of seniors, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Double-registered students must, of course, complete all requirements for the A.B. degree, including 100 credits in Arts and Sciences courses.

Teacher Education in Agriculture, Mathematics, and Science

Students at Cornell may pursue teaching credentials in agriculture, biology, chemistry, earth science, general science, mathematics, and physics. Teacher Education in Agriculture, Mathematics and Science (TEAMS) is a university program jointly conducted by the departments of education and mathematics. Although TEAMS offers options for undergraduate and graduate study, most Cornell students enroll in a five-year program, which combines an undergraduate major in mathematics or one of the sciences with a one-year Master of Arts in Teaching degree (MAT). Students from any college at Cornell are eligible to apply to the program as undergraduates, during their sophomore or junior years.

For more information, contact the TEAMS student support specialist at 255-9255 or D. Trumbull, 255-5108.

Special-Interest Options

The following options do not alter the college's requirements but enable students to pursue special interests within the usual programs.

Informal Minors

Some students organize electives within a discipline or department. Such informal minors can be developed with the help of the departmental directors of undergraduate studies. They are not noted on the transcript.

Concentrations

Established interdisciplinary concentrations, described in the pages following the descriptions of the departments and their curricula, provide structures for organizing electives. Completed concentrations are noted on the transcript.

Independent Study

Independent study affords students the opportunity to pursue special interests or research not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the independent course, must approve the program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study (proposal forms are available in the Office of Undergraduate Admissions and Advising, 55 and 172 Goldwin Smith Hall). In one semester students may earn up to eight credits with one instructor or up to eight credits with more than one instructor.

Undergraduate Research Program

An excellent way to benefit from being an undergraduate at a research university, at Cornell in particular, is to become an apprentice in on-going faculty research. About 400 students participate each year in creating new knowledge and earn independent study credit for what they learn and contribute. They sharpen their critical and creative abilities and test their interest in pursuing a research career. Sometimes they publish their work.

The Undergraduate Research Program gathers information about research opportunities in most disciplines of the liberal arts and sciences, guides students in finding further opportunities—on campus and elsewhere and during the academic year and the summer—and helps students prepare for research and presenting themselves as candidates for apprenticeships. Other students locate research opportunities independently through faculty whose courses they have taken, through their major departments, or through published materials.

The Cornell Undergraduate Research Board, an undergraduate organization, conducts an annual open house to help students get started in research and an annual forum at which undergraduates present their work.

Students interested in this program should consult the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

Language Study

FALCON (Full-Year Asian Language Concentration). FALCON allows students who are interested in the Far East to study Chinese or Japanese exclusively for one year. They gain proficiency in the language and familiarity with the culture. Students who are interested in the Far East should be aware of the opportunities to pursue rapid and thorough beginning studies on campus with the objective of studying abroad later—in China or Japan. Students interested in this program should contact the Department of Asian Studies, 388 Rockefeller Hall, e-mail: falcon@comell.edu.

Language House Program

A complement to classroom cultural and linguistic instruction, the Language House Program combines residential and academic opportunities for developing and practicing conversational skills in French, German, Italian, Japanese, Mandarin Chinese, Russian, and Spanish. It helps prepare students who plan to study abroad and helps returning students share their cultural experiences while further increasing their language skills. Students interested in this program should see Academic Administrator Daniel Evett, 136 Goldwin Smith Hall.

Prelaw Study

Law schools neither require nor prefer any particular program of study, they do seek students with sound training in the liberal arts and sciences. It is important that students plan a program in which they are interested and do well. Beyond that, students are advised to take courses that will develop their powers of precise, analytical thinking and proficiency in writing and speaking.

The college offers a concentration in law and society. Students should work toward
Students in the College of Arts and Sciences who are applying to law school may consult a career adviser in the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

Premedical Study
The breadth and depth afforded by a liberal arts education are invaluable for people who plan medical careers, whether they intend to practice medicine or conduct research. Such training has a profound effect on the doctor's usefulness to patients, and it affords the flexibility of mind that is needed for major research undertakings. Medical and dental schools do not prescribe or even prefer a particular major; they do, however, require particular undergraduate courses, and most students are well advised to begin chemistry in their freshman year. Students who are interested in medical careers are urged to visit the Health Careers Office, 203 Barnes Hall.

The adviser for students in the College of Arts and Sciences who are planning careers in medicine is Dean Turner, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

Off-Campus Programs
Many students find it important to their majors or to their overall academic programs to study off campus or abroad for one or two semesters. When it makes academic sense, the college encourages its students to pursue such studies and grants credit toward the degree for work satisfactorily completed.

Study Abroad
Each year about 200 undergraduates in Arts and Sciences include semester- or year-long study abroad as part of their formal undergraduate education. Ideally, study abroad builds on a broad liberal arts background in the early semesters: area studies, language training, and preparation in the proposed field of study are all essential.

Many students go abroad to pursue work in their majors. Focused academic work in an appropriate institution abroad can prepare students for advanced study or honors work in the final semesters back in Ithaca.

The college insures wherever possible on study at foreign institutions alongside their degree candidates rather than study in self-contained programs that offer courses specially designed for foreigners. The primary goals of this educational immersion are to learn firsthand the modes of inquiry, methods of analysis, and educational values of higher education offered to students of another country and to involve students in social relationships with peers who may hold a new and unexpected range of social attitudes.

The college advocates study abroad that enables students to become competent enough in another language to experience daily life, develop social relationships, and accomplish formal course work in that language. Students who intend to study abroad in a country where the host language is not English must demonstrate a serious commitment to learning the language through course work before studying abroad; proficiency in the language is generally the prerequisite. At least one area studies course or one course in the history, culture, economics, politics, or social relations of the country of destination must be part of every student's preparation for study abroad.

Students planning to study abroad need solid academic credentials to do so productively and successfully. The college requires a minimum overall grade point average of 3.0 for all Cornell course work and good academic standing in the semester immediately before going abroad.

Study abroad is possible during the sophomore and junior years or during the first semester of the senior year. Study abroad in the final semester is rarely approved. Important steps to prepare for study abroad include:
- substantial progress with college distribution requirements;
- admission to a major and a faculty adviser in the major;
- clear academic agenda for study abroad;
- appropriate preparatory study of the country or region of destination, especially language study.

Study abroad can earn up to 15 liberal arts and sciences credits per semester of full-time course work as long as the curriculum abroad is consistent with that of the college. A maximum of 10 credits is awarded for each trimester of study. Courses that fall outside the scope of college requirements and sciences may earn non-Arts credits. Students must carry a full course-load as defined by the host institution. Students may spend up to two semesters abroad. Only those with compelling academic reasons may study in more than one location over two semesters. The college does not approve study abroad that tours more than one country or that is more touristic than scholarly in content and structure. Students must continue work on the host language while abroad. Only in exceptional circumstances will the college approve programs which, in non-English speaking countries, provide no language training.

Applications to study abroad must have the support of a faculty adviser in the major and the approval of an advising dean in the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall. Although students investigate options for study abroad and submit final applications through the Cornell Abroad office, Arts and Sciences applicants submit to the college an essay describing the academic rationale for study abroad, an outline of prospective courses to be taken and any other relevant materials.

All courses taken abroad will appear on the Cornell transcript and grades earned are reported in the system of the host institution. Grades earned through course work abroad do not, however, become part of the Cornell grade point average.

Students who transfer to Cornell and must complete at least four semesters of residence on campus in Ithaca may not study abroad as one of the four semesters.

Summer Residential Programs in Archaeology
During the summer months students may participate in a Cornell-sponsored archaeological project. In recent years the program has organized archaeological projects in Central America, Greece, Israel, Italy, and New York State. Students should contact the Archaeology Program for information about the sites currently available.

Marine Science
Shoals Marine Laboratory is a seasonal field station that offers a variety of courses and experiences designed to introduce undergraduates to the marine sciences. The laboratory is located on Appledore Island, six miles off the Maine/New Hampshire coast. Students should contact the Office of Undergraduate Biology for further information.

Cornell-in-Washington
The Cornell-in-Washington program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Cornell-in-Washington program offers two study options: (1) studies in public policy, and (2) studies in the American experience. The program also offers unique externship opportunities: students serve as externs in a federal agency, congressional office, or non-governmental organization and take part in a public policy or humanities seminar. They define and carry out individual research projects under the supervision of Cornell faculty. Potential externships are arranged through, and approved by, the Cornell-in-Washington program. For further information, see p. 20 or inquire at 311 Caldwell Hall, 255-4090. Study in Washington during a final semester of residence is allowed only and unusually by petition. Students should consult with the dean of seniors, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Fieldwork
Sometimes it is appropriate for students to include fieldwork as part of their major. A three-member faculty committee helps the student plan the project, arranges for ongoing supervision, and evaluates the project at the end of the term. Fieldwork almost always involves writing a long paper or several short ones, as well as practical experience. All proposals for fieldwork must be presented in advance to the college faculty's Committee on Academic Records for approval. A maximum of 15 credits in fieldwork may be earned. For further information students should contact an advising dean in Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.
Advisers and new advisees meet first during orientation week to discuss course selection. New students are encouraged to see their faculty advisers, and sign into courses. The college reserves spaces in courses for its in-coming students.

Enrollment in Courses in the College of Arts and Sciences

New Students
During orientation week, new students attend briefings and other information sessions, meet with faculty advisers, and sign into courses. After acceptance into a major, students negotiate the university. Advisers and advisees meet at least once each semester to discuss courses for the following term and more often if advisers wish to discuss academic or personal issues or to petition for an exception to college rules.

Student Advisers
Student advisers pass on lore about the college and life at Cornell and help new students negotiate the university.

Major Advisers
After acceptance into a major, students are assigned a major adviser, a faculty member in the major department, with whom they shape and direct their course of study. The adviser eventually certifies the completion of the major. The major adviser should be consulted by the student about all academic plans, including honors, study abroad, acceleration, and graduate study. The adviser's support is especially important if a student petitions for an exception to the requirements for the degree.

Office of Undergraduate Admissions and Advising
This office, 55 Goldwin Smith Hall, 255-5004 and 172 Goldwin Smith Hall, 255-4833, is a resource for faculty and student advisers and for students themselves and their parents. Advising deans are available to help students define their academic and career goals and to help with special academic options and exceptions to college rules.

Lynne S. Abel, associate dean for undergraduate admissions and advising—255-3386
Gerry Cox, juniors and seniors and pre-law advising—255-4833
Daniel Eivet—Language House—255-6543
Stephen Friedfeld, dean's scholars, Cornell presidential research scholars, and undergraduate research
Ken Gabard, first- and second-year students—255-5004
Lisa M. Harris, career services—255-6926
Lawrence Lampere, internal transfers and minority students—255-4833
Diane J. Miller, career services—255-6924
Herta Teitelbaum, faculty advising, first-year and (pre-law) students with disabilities—255-4833
Janice Turner, minority students and pre-med advising—255-5004
Peggy Walbridge, transfer students and students with disabilities—255-4833
Catherine Wagner, juniors and seniors and dual degree students—255-4833
Patricia Wasyliw, first- and second-year students and study abroad—255-6570

Limits on Numbers of Courses and Credits
To meet the 34-course requirement, students must normally take four courses during each of six semesters and five courses during each of two semesters. To meet the 120-credit requirement, students must average 15 credits per semester. (AP credit and/or summer credits may reduce the average numbers of courses and credits required each semester.)

Minimum number of credits per semester
To maintain good academic standing as a full-time student, students must complete at least twelve degree credits per semester; if for compelling personal or academic reasons students need to carry fewer than 12 credits, they should consult their faculty adviser and an advising dean. Permission is by petition only; it is freely given for first-semester students.

Maximum number of credits per semester
First-term freshmen must petition to register for more than 18 credits; other students may register for more than 18 credits only if their previous term's average was 3.0 or higher. No more than 22 credits may be taken in a regular semester without permission of the faculty's Committee on Academic Records. Students who fail to receive approval for excess credits from the committee run the risk of having only 18 credits for the semester count toward the degree.

Attendance
Attendance in classes is a matter between students and their instructors. If a student cannot attend classes because of illness or family crisis, the Office of Undergraduate Admissions and Advising will notify instructors at the request of the student or the family. Nonetheless, the student must arrange to make up examinations or other work with each instructor. A student who will be absent because of religious holidays or athletic competitions must discuss arrangements for making up work with his or her instructors well in advance of the absence. A student who must miss an examination must also consult with the professor in advance. Alternative arrangements are at the discretion of the instructor.

Adding and Dropping Courses
After course enrollment (also known as pre-registration), students may adjust their schedules until the new term begins. During the first three weeks of the semester, students may change courses without petitioning. Add/drop forms are available in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

After the third week of classes, students must petition to add courses and may normally add them only for a letter grade. They may drop courses up to the seventh week of the term, if the department approves and no issue of academic integrity is at stake. Before the seventh and twelfth weeks students may petition to withdraw from courses, if (1) the instructor approves, (2) the adviser approves, (3) no issue of academic integrity is at stake, and (4) an advising dean approves. Students must meet with an advising dean to obtain petition forms.

Courses dropped after the seventh week will be noted on the transcript by a "W" where the grade would normally appear. No petitions to withdraw from courses may be submitted after the end of the twelfth week in the term. Deadlines for short courses will be adjusted according to the length of the courses.

Leaves of Absence
Taking time off from college to explore goals and direction or to gain experiences or funds is sometimes useful. Usually, of course, students take leaves at the end of a semester for the following semester. Students in good academic standing, however, may take a leave as late as the seventh week of a semester, although there are special consequences to taking leaves after a term has begun. Five years is the maximum length of time a student may be on leave and return without special permission. Leaves of absence are of four types:

1) **Personal leaves** impose no conditions concerning reentering the college except for the five-year limit. Re-admission is automatic upon written request made at least one month before the beginning of the term in which the student wishes to return.

2) **Medical leaves,** usually for at least six months, are granted by the college only upon recommendation by University Health Services. In some cases, students must satisfy the UHS that the condition requiring the leave has been corrected before they may return. The student's academic standing and final grades will also be subject to review at the time of the leave and on return.

3) **Conditional leaves** are granted when the student is not in good academic standing or, in unusual circumstances, between the seventh and twelfth weeks of the term. In consultation with the student, an advising dean sets the conditions for the student's return. Normally students may not return from conditional leaves for at least two
terms or until specific and individual conditions, such as completing unfinished work, have been met. Students may be granted conditional leaves after the twelfth week of a term only under extraordinary circumstances and with the approval of the faculty's Committee on Academic Records.

4) Required leaves. The Committee on Academic Records may require a leave of absence if a student is not making satisfactory progress toward the degree. See the section "Academic Actions."

Any student who wishes to take a leave of absence should consult an advising dean in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall. On readmission, the student's graduation date will be recalculated.

Students who take courses elsewhere while on leave may petition to have credits transferred. If approved, these credits may be applied toward the 120 credits needed for graduation, but not toward the 100 credits required in the college. Approval depends on acceptable grades and the judgment of the relevant departments about the quality of the courses. Credits earned during a leave do not count toward the eight semesters of residence and may not be used to reduce the terms of residence. See the section "Residence."

Withdrawals

A withdrawal is a permanent severance from the university and from status as a degree candidate. Students planning to withdraw should consult an advising dean. Students not requesting a leave and failing to register for a term will be withdrawn from the college. The college faculty's Committee on Academic Records may require a student to withdraw for a highly unsatisfactory academic record.

Transferring within Cornell (Internal Transfer)

Internal transfer from one college or school at Cornell into another is attractive for many students whose intellectual interests change. Students who want to transfer should discuss their eligibility with a counselor in the new school or college.

In some cases, students who want to transfer into the College of Arts and Sciences may transfer directly. In other cases, they may be referred to the Internal Transfer Division. During the term immediately preceding transfer into the College of Arts and Sciences, students should complete at least 12 credits of courses in the College of Arts and Sciences with a 3.0 average and without any grades of Incomplete, any S-U grades (unless only S-U grades are offered for that particular course), or any grades below C. Satisfying this minimum requirement does not, however, guarantee admission. Admission to the college is based on consideration of the student's entire record at Cornell and the high school record, not just the work of one semester. It is also based on ability to complete the A.B. degree within a reasonable time. Interested students should see Dean Lamphere, 172 Goldwin Smith Hall.

ACADEMIC STANDING

Students are in good academic standing for the term if they successfully complete at least 12 degree credits by the end of the term and earn no more than one D and no F or U grades. If a student completes only three courses, all grades must be above D. In addition, students are expected to make acceptable progress toward satisfying requirements for the degree and to earn grades of C (not C-) or better in at least 100 of the total credits for the degree. Courses listed above as "Noncredit courses" do not count toward good academic standing.

Academic Actions

Students who are not in good academic standing will be considered for academic action by the faculty Committee on Academic Records or by one of the advising deans of the college. They are urged to present evidence that will help explain their poor academic performance. Students may appeal a decision or action of the committee if they have new relevant information. They must consult an advising dean about appealing.

Warning

Any student who fails to maintain good standing will, at a minimum, be warned. A warning is posted on a student's college record but is not reported to the university registrar and does not appear on official transcripts.

Required leave of absence

A student in serious academic difficulty may be required by the faculty Committee on Academic Records to take a leave of absence, normally for one year. Usually, but not always or necessarily, the Committee on Academic Records warns students before suspending them. Before being allowed to return and reregister in the college, students must describe what they did on leave and how they resolved their problems and submit a plan for completing the degree. In some cases students will be required to furnish evidence that they are ready to return or satisfy other conditions before being allowed to reregister in the college. Students who request to return in less than a year must present to the committee extraordinarily convincing evidence of their readiness to return. "Required leave" and the date are posted on the student's official transcript.

Required withdrawal

The faculty Committee on Academic Records may dismiss a student from the college because of a highly unsatisfactory record for one term or for failure to make satisfactory overall progress in grades, credits, or the requirements of the major. This action expels the student permanently from the college.

"Required withdrawal" and the date are posted on the student's official transcript.

Academic Integrity

Cornell's Code of Academic Integrity and policy about the work of others are among the documents new students receive. Students should read them carefully rather than assume they understand what integrity and cheating are and are not. Academic integrity implies more here at the university than it usually did in high school. The standards of integrity are those that prevail in professional life. This means that students must acknowledge and cite ideas they adopt from others (not just direct quotes) and help they receive from colleagues. With productive emphases on collaborative learning and writing, students must understand the general standards and policies about academic integrity and be sure they understand the expectations in individual courses as well. When in doubt, ask your instructor.

Forgery on Forms

Forging signatures or credentials on college forms is an academic offense. In all cases of forgery on academic forms, the effect of the forged documents shall be negated. Students may then petition properly to do whatever they attempted to do improperly. Such incidents will be recorded in the Academic Integrity Hearing Board's confidential file for forgeries. If a student forges more than once or if the forgery would advance the student's academic standing unfairly or fraudulently, or if for any other reason the situation requires some response in addition to the uniform penalty, the Academic Integrity Hearing Board may make a different recommendation, such as a notation on the student's transcript, suspension, or dismissal.

GRADES

Letter Grades

See Grading Guidelines, page 12.

S-U Grades

The S-U (satisfactory-unsatisfactory) option allows students to explore unfamiliar subjects or take advanced courses in subjects relatively new to them without being under pressure to compete with better prepared students for high grades. It is not meant to allow students to reduce the amount of work they complete in a course or the amount of effort they devote to it. The S-U option is contingent upon the instructor's willingness to assign such grades. Students must select their grading option and obtain the instructor's approval for the S-U option during the first three weeks of the term. Virtually no exceptions to this deadline are permitted, and consequently students adding courses after the third week of the term must normally add them for a letter grade. A grade of S is equivalent to a grade of C- or higher, a grade of U, which is equivalent to any grade below C-, is a failing grade equal to an F. S means the student receives the credit specified for the course. U means no credit is given. A few courses in the college are graded exclusively S-U; in that case, the student's grade appears on the transcript as SX or UX.

Courses that will count toward satisfaction of major requirements should not be taken for an S-U grade unless the department grants permission. Students may elect the S-U option in courses used to satisfy the distribution, language, and elective requirements, provided that such courses do not also count toward major requirements or serve as prerequisites for admission to the major. Students are advised to use the S-U option sparingly if they intend to apply to graduate school or for transfer to another college. There is no limit on the number of courses each term for which students may elect the S-U grade, but within the 120 credits required for the degree, a
minimum of 80 credits must be in courses for which a letter grade was received.

Grades of Incomplete
A grade of incomplete signifies that a course was not completed before the end of the term for reasons beyond the student's control and acceptable to the instructor. Students must have substantial (normally at least 50 percent) equity in the course, that is, they must be able to complete the remaining work without further registration and must have a passing grade for the completed portion. When a grade of incomplete is reported, the instructor submits a form stating what work must be completed, when it must be completed, and the grade (or "frozen" incomplete) earned if the work is not completed by that date. When a final grade is reported, it is recorded on the official transcript with an asterisk and a footnote explaining that this grade was formerly an incomplete.

Students must resolve (make up or "freeze") any incompletes with their instructors before graduation.

R Grades
R designates two-semester or year-long courses and students enroll in the course both semesters, each time for the full number of credits for the whole course. The R is recorded on the student's transcript at the end of the first term. The grade recorded at the end of the second term evaluates the student's level of performance in the course for the entire year. The total of credits earned for the whole course is listed each term.

Grade Reports
Students should periodically check their courses and grades on "Just the Facts" to be sure that they are recorded correctly.

Class Rank
The college does not compute class rank.

Dean's List
Inclusion on the Dean's List for academic excellence is an honor bestowed by the dean of the college semester by semester. Based on grades, the criteria include about the top 30 percent of students and vary with the number of credits the student completes. The criteria are subject to slight changes from semester to semester and are available in the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

GRADUATION

The Degree
The College of Arts and Sciences grants only one degree (no matter what the student's major): the A.B. (or B.A.). A.B. is the abbreviation of the Latin name for the degree, "Artium Baccalarius," or translated into English, B.A., "Bachelor of Arts."

Application to Graduate
In the first semester of their senior year, students attend senior briefings and then complete an application to graduate. The application allows the college to check each student's plan for fulfilling college requirements. This process is intended to help seniors identify problems early enough in the final year to make any necessary changes in course selection to satisfy those requirements. Nonetheless, meeting graduation requirements is the student's responsibility: problems that are discovered, even late in the final term, must be resolved by the student before the degree can be granted.

Degree Dates
There are three degree dates in the year: May, August, and January. Students who plan to graduate in May may attend graduation ceremonies in the preceding May. Students graduating in January are invited to a special recognition ceremony in December, they may also attend graduation ceremonies the following May.

Honors
Bachelor of Arts with Honors
Almost all departments offer honors programs for students who have demonstrated exceptional ability in the major and who have completed original independent research. The honors programs are described by individual departments in their following sections. The degree of Bachelor of Arts with honors will be conferred upon students who, in addition to having completed the requirements for the degree of Bachelor of Arts, have satisfactorily completed the honors program in their major and have been recommended for honors by their major department, the Independent Major Program, or the College Scholar Program. Concentrations do not offer honors programs.

Bachelor of Arts with Distinction
The degree of Bachelor of Arts with distinction in all subjects will be conferred on students who have completed the requirements for the degree of Bachelor of Arts, if they have met the following requirements by the end of their final semester:
1) completed at least 60 credits while registered in regular sessions at Cornell;
2) ranked in the upper 30 percent of their class at the end of the seventh semester, or next-to-last semester for transfers and accelerants;
3) received a grade below C- in no more than one course;
4) received no failing grade;
5) maintained good academic standing, including completing a full schedule of at least 12 credits, in each of their last four terms; and
6) have no Incompletes remaining on their records.

CALENDAR SUPPLEMENT
All of the dates in the university calendar at the front of this volume apply to all Cornell students. Listed below are some additional dates that are of importance for students in the College of Arts and Sciences.

Jane V. Pedersen, associate dean of administration—255-7507
Courses and Departments

SPECIAL PROGRAMS AND AREAS OF CONCENTRATION

The college offers a number of interdisciplinary programs described in the section following the departmental program descriptions.

AFRICAANS
See Department of German Studies (Dutch).

AFRICANA STUDIES MAJOR
See Special Programs and Interdisciplinary Studies.

AKKADIAN
See Department of Near Eastern Studies.

AMERICAN STUDIES
See Special Programs and Interdisciplinary Studies.

ANTHROPOLOGY

Anthropology is one of the most diverse disciplines in the university. Spanning human evolution, the development and heterogeneity of language and culture, human history, and the diversity of cultures past and present, the field has broad scope, uses a variety of methods, addresses basic issues about human origins and human life, and maintains commitment to understanding social life and using this understanding to improve society. Anthropology is an ideal "liberal arts" major. It also serves as a major that, when well designed by the student with their adviser, prepares students for a wide range of professional careers, e.g., law, medicine, foreign service, social services, and business, among others.

Courses for nonmajors: Anthropology welcomes nonmajors into many of its courses. Unless prerequisites are explicitly stated, 200- and 300-level courses do not have formal prerequisites and can be taken by students without prior experience in anthropology. Such students are welcome in these upper-level courses. For additional information to assist nonmajors and students from other colleges in selecting anthropology courses, see the anthropology department web page (falcon.arts.cornell.edu/~anthro/).

The Major

The range and complexity of the Field of Anthropology requires active collaboration between the student and a faculty adviser in developing an individualized program of study. To enter the anthropology major, a student must pass one course in each of the two broad introductory areas of anthropology: "Nature and Culture" and "Culture and History" listed below under the heading "Introductory Courses." Provisional acceptance into the major is possible before completing these courses, with permission from the Director of Undergraduate Studies in anthropology. Students are encouraged to contact the Director of Undergraduate Studies or other faculty members as soon as possible in their studies to discuss their interests and a possible major in anthropology.

Students see the Director of Undergraduate Studies to apply to the major and get an adviser. They prepare a short statement about their interests and goals for the major, then meet with their adviser to develop a course plan reflecting these special interests. This concentration should include at least 32 credits in addition to the two introductory courses used to enter the major. Examples of possible concentrations are myth and ritual, ethnicity and identity, action research, nature and culture in human history; anthropology and literature, or law, or the arts, or medicine; human origins; ethnomusicology; primate and human behavior; prehistory of the Americas, or Europe, or Africa; cultural construction of the person; etc. When warranted, the adviser is free to approve up to two cognate courses from other departments totaling up to eight credit hours to fulfill the 32-credit requirement. Students may revise their program of study in consultation with their adviser as they move through their studies. Our goal is to provide a close and supportive advising relationship and a strong and coherent structure for the student's major.

In their senior year, anthropology majors are required to take a Senior Seminar (archaeologists may substitute Approaches to Archaeology or Archaeological Research Design). These seminars meet weekly, are discussion-based, and are limited to anthropology majors. A professor serves as the coordinator for the group, collects course materials and the professor plans the seminar to reflect the concentrations and/or research interests of the participating students. Thus, the Senior Seminar serves as a space where students develop their own synthesis of their undergraduate work in anthropology.

Study abroad and off-campus study programs: The Department of Anthropology encourages students to consider a semester of study abroad or off-campus study developed as an integral part of the student's major concentration. The Director of Undergraduate Studies serves as the Anthropology Study Abroad adviser.

The Cornell-Nepal Study Program: The Cornell-Nepal Study Program is a joint program of Cornell University and Tribhuvan University, the national university of Nepal. Qualified juniors, seniors, and first- or second-year graduate students work with faculty from both universities to prepare for and undertake field research projects in Nepal. Students receive 15 credits per semester; students may enroll for either fall or spring semester, or for the entire year; application is through Cornell Abroad. For further information, consult David Holmberg or Kathryn March in the Department of Anthropology.

Other anthropologically-relevant study abroad options, using existing Cornell Abroad and off-campus options, can be worked out in consultation with the major adviser, the Anthropology Study Abroad adviser, and Cornell Abroad.

Honors

Honors in anthropology are awarded for excellence in the major, which includes overall grade point average and completion of an honors thesis. Anthropology majors interested in the Honors Program should consult the chair of the Honors Committee in their junior year. To qualify for entrance into the Honors Program, a student must have at least a 3.0 GPA overall and 3.5 GPA in the major, and the consent of a faculty member in anthropology who will guide the honors thesis. After applying to the program and being admitted as a candidate by the Honors Committee, the student will conduct research and write a thesis. This thesis will be evaluated by the faculty research adviser and two other faculty members. Honors (i.e., cum laude, magna cum laude, or summa cum laude) are awarded based on the quality of the thesis and the student's overall record. Honors candidates must start this process by consulting their major adviser about the honors program early in their junior year.

While working on the thesis during the senior year, students should make use of the Senior Seminar as a place to develop the ideas for their thesis. In addition, students may enroll in Anthropology 483 (fall or spring) "Honors Thesis Research." To complete the thesis, students must enroll in 491 (fall or spring) "Honors Thesis Write-up." Only Anthropology 483 may count toward hours for completion of the anthropology major requirements. The credit hours for these courses are variable, grades for these courses are given by the faculty research adviser, and they are based on performance during thesis research and writing.

Any honors candidate whose research directly involves working with human subjects must receive approval for the project from the Cornell University Committee on Human Subjects.

Special Programs and Facilities

Collections: the department has an extensive collection of archaeological and ethnological materials housed in the anthropology collections. A limited number of students can make arrangements to intern in the anthropology collections. Olin Library houses some of the most extensive collections of materials on the ethnology of Southeast Asia, South Asia, East Asia, and Latin America to be found anywhere in the United States. The biological anthropology laboratory (McGraw B65) houses an extensive collection of materials for teaching purposes, including (1) human skeletal remains, (2) articulated skeletons and cranial casts of primates, and (3) casts of important fossils in the human lineage.

Independent Study: specialized individual study programs are offered in Anthropology 497, Topics in Anthropology, a course open to a limited number of juniors and seniors who have obtained consent and supervision of
ARTS AND SCIENCES - 2001-2002

faculty member. Undergraduates should note that many 600-level courses are open to them by consent of the instructor.

Colloquia: the Department of Anthropology holds colloquia almost every week of the semester on Friday at 3:30 in McGraw 215. Faculty members from Cornell and other universities participate in discussions of current research and problems in anthropology. Students are encouraged to attend.

For more complete information about the anthropology major, see the Director of Undergraduate Studies, pick up a copy of the major brochure (which includes descriptions of the courses not offered during 2000-2001), or visit the Anthropology Department web page (falcon.arts.cornell.edu/~anthro/).

I. Introductory Courses

A. Nature and Culture:

ANTHR 101 Introduction to Anthropology: Biological Perspectives on the Evolution of Humankind
Fall. 3 credits. M. Small.
The evolution of humankind is explored through the fossil record, studies of the biological differences among current human populations, and a comparison with our closest relatives, the primates. This course investigates the roots of human biology and behavior with an evolutionary framework. Fee for lab usage and maintenance, $5.

ANTHR 103 The Scope of Anthropology
Spring. 1 credit. Prerequisite: concurrent enrollment in or prior completion of Anthropology 101 or Anthropology 102. S-U grades only. Staff.
This course is intended for majors or prospective majors in anthropology. Each week a different member of the faculty in anthropology at Cornell will make a presentation on the nature of their work within the field and discuss their interests with students. The course is meant to introduce the range of approaches found within anthropology and help students in planning future course work.

ANTHR 211 Nature and Culture
Spring. 4 credits. S. Sangren.
Sociocultural anthropology, because it encompasses the comparative study of humankind in society, provides a unique vantage on the nature of humanity. One of the focal questions of the discipline is the relationship between the physical/biological, the symbolic/biological, and the symbolic/moral worlds in which people live. This inquiry places anthropology squarely at the center of social theory, as most social theories and political ideologies are founded on premises regarding human nature. Through study of several conceptual categories which have been flashpoints for debates about nature and culture (e.g., gender, race, and sexuality), this course examines a variety of past and current attempts to explain the relationships between nature and culture in human life.

ANTHR 275 Human Biology and Evolution (also BIOE 275 and NS 275)
Fall. 5 credits. S-U grades optional, with permission of instructor. Offered alternate years. Lecs. W F 10:10; disc. M 10:10. K. Kennedy.
An introduction to the biology of Homo sapiens through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers complex biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Phldown fraud, and sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology. These topics and others are the focus of the optional one-hour weekly discussions.

B. Culture and History:

ANTHR 100 Introduction to Archaeology (also ARKEO 100)
Fall. 3 credits. J. Henderson.
A broad introduction to archaeology—the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societies and illustrate the varied methods and interpretive frameworks archaeologists use to reconstruct them. This course can serve as a platform for both archaeology and anthropology undergraduate majors.

ANTHR 102 Introduction to Anthropology: The Comparison of Cultures
Spring. 3 credits. T. Bestor.
An introduction to cultural anthropology through ethnographies, or the descriptive accounts of anthropologists. Through readings and lectures, students acquaint themselves with a number of cultures from several parts of the world. The cultures range in form from those of small-scale tribal societies to those of state societies. Throughout the course, we attempt to make evident the diversity of cultures in their own terms. Attention is focused on variation in cultural patterns as they are expressed in social, economic, and ritual practices. In this encounter, the principles of anthropology as a comparative enterprise that pose distinct cultural systems in relief will be developed. Fiction, films, and exercises supplement the formal anthropological materials.

ANTHR 103 The Scope of Anthropology
Spring. 1 credit. Prerequisite: concurrent enrollment in or prior completion of Anthropology 101 or Anthropology 102. S-U grades only. Staff.
For course description, see section I.A.

ANTHR 200 Cultural Diversity and Contemporary Issues
Fall. 3 credits. J. Borneman.
This course will introduce students to the meaning and significance of forms of cultural diversity for understanding contemporary issues. Drawing from films, videos, and selected readings, students will be confronted with different representational forms that portray cultures in various parts of the world and they will be asked to critically examine their own prejudices as they influence the perception and evaluation of cultural differences. We shall approach cultures holistically, assuming the inseparability of economics, kinship, religion, and politics, as well as interconnections and dependencies between world areas (e.g., Africa, Latin America, the West). Among the issues considered: "political correctness" and truth; nationalism and ecological diversity; race, ethnicity, and sexuality; sin, religion, and war; global process and cultural integrity.

[ANTHR 202 Interpretive Archaeology (also ARKEO 202)]

[ANTHR 204 Ancient Civilizations (also ARKEO 204)]

[ANTHR 215 Stone Age Art (also ARKEO 215)]

[ANTHR 240 Old World Prehistory (also ARKEO 240)]

II. Honors and Independent Study

ANTHR 483 Honors Thesis Research
Fall or spring. Credit and hours TBA. Prerequisite: consent of the Honors Committee. Staff.
Independent work under the close guidance of a faculty member selected by the student.

ANTHR 491 Honors Thesis Write-Up
Fall or spring. Credit and hours TBA. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 497 Topics in Anthropology
Fall or spring. Credit and hours TBA. Intended for undergraduate students only. Staff.

III. Anthropology Major/Senior Seminars

In the senior year, anthropology majors are required to take a Senior Seminar. These seminars meet weekly, are discussion-based, and are limited to anthropology majors. A professor serves as the coordinator for the group. Collaboratively, the students and the professor plan the semester to reflect the concentrations and/or research interests of the participating students. Thus the Senior Seminar serves as a space where students develop their own synthesis of their undergraduate work in anthropology.

ANTHR 489 Anthropology Senior Seminar
Fall or spring. 4 credits. Limited to 15 students. Prerequisite: anthropology majors only. Fall, A. Willford; spring, V. Murasinghe.
This course is a synthesis of each student's undergraduate concentration in the major. In collaboration, the instructor and the students will develop a series of topics representing the interests of the students. Students will be required to read extensively and present topics.
IV. Nature and Culture

Thinking about nature and culture and their interaction is central to contemporary anthropology. The courses in this section present a biological and evolutionary perspective on human behavior, focusing on the interaction between nature and culture, and discuss the controversies surrounding these relationships between these dimensions of human life.

ANTHR 208 The Evolution of Human Mating  

ANTHR 211 Nature and Culture  
Spring. 4 credits. S. Sangren.  
For course description, see section I.A.

ANTHR 242 Early Agriculture  
Spring. 3 credits. N. Russell.  
Throughout most of the human career, people survived by hunting and gathering wild foods. The advent of food production is one of the most profound changes in human history, and the environment and spread of agriculture (plant and animal domestication) are major events in the development of human societies. This course will consider the origins and spread of agriculture around the world. We will consider definitions of agriculture and domestication, the conditions under which it arises, the consequences for those who adopt it, and why it has spread over most of the world.

ANTHR 344 Male and Female in Chinese Culture and Society (also WOMNS 344)  

ANTHR 370 Environmental Archaeology (also ANTHR 670 and ARKEO 370/670)  
Spring. 4 credits. Prerequisite: 2 previous courses in archaeology or permission of instructor. T. Volman.  
A survey of selected topics in paleoenvironmental analysis and reconstruction, with emphasis on how they inform interpretations of the archaeological record. The course ranges broadly from a general consideration of human ecology and the role of environment in cultural change to detailed study of specific techniques and approaches.

ANTHR 371 Human Paleontology (also BIOES 371)  

ANTHR 372 Hunters and Gatherers (also ANTHR 672)  

ANTHR 375 Evolutionary Theory and Human Behavior (also ANTHR 675)  
Spring. 4 credits. Limited to 20. M. Small.  
Humans are biological organism designed by Nature Selection. Our bodies and our behavior are products of genes, environment, and experience. This course will explore the interaction of all three in molding broad patterns of human behavior. The course will begin with the basics of evolutionary theory and then review the most recent research on human mating patterns, aggression, parenting, kin relations, and social interaction. Students will be required to conduct original research on human behavior.

ANTHR 390 Primate Behavior and Ecology  

ANTHR 409 Approaches to Archaeology (also ANTHR 609 and ARKEO 409/609)  

ANTHR 422 Anthropology and Environment  
Fall. 4 credits. Prerequisite: ANTHR 100, 101, or 102 plus one 300-level course in anthropology. D. Holmberg.  
This course explores issues in the environment that anthropology addresses in unique ways. Topics include indigenous knowledge, intellectual property, local and global interrelations, ecotourism, cultural ecology, development and resistance, environmentalism, and cultural diversity framed in the context of extended case studies.

ANTHR 490 Topics on Primates and Evolution: The Evolution of Language  
Fall. 4 credits. Limited to 12. Prerequisite: Anthropology 390 or permission of instructor. A. Arcadi.  
This seminar will begin by examining general theoretical issues in the study of animal communication. What is the function of communication? How do signalers and receivers benefit from communicative interactions? The focal behavior of our nearest relatives, the primates, will then be examined. Emphasis will be placed on areas relevant to human language: are primate signals learned? Do they have semantic content? Are they assembled syntactically? What do they tell us about primate cognition? Finally, distinguishing features of language, as both a highly structured system and a social behavior, will be considered from the point of view of evolution. Did language evolve from a primate focal communication system? Is there fossil and/or symbolic evidence for the origin of language? What does language tell us about human cognition?

ANTHR 490 Topics on Primates and Evolution: Evolutionary Medicine  
Spring. 4 credits. Limited to 12. Prerequisite: Anthropology 390 or permission of instructor. M. Small.  
This seminar will focus on high current controversy in primatology. Through readings and discussion, the issues will be subject to critical examination. Current topics might include social intelligence, primates as predators and prey, primate conversation, sexual selection theory, reproductive success, dominance, etc.

V. Human History and Archeology

Anthropology tells the story of human origins, the invention of farming and settled life, the rise of complex social institutions and technologies, and the worldviews of the past, while also teaching field and laboratory methods for uncovering the human past.

ANTHR 203 Early People: The Archaeological and Fossil Record (also ARKEO 502)  

ANTHR 215 Stone Age Art (also ARKEO 215)  

ANTHR 240 Old World Prehistory (also ARKEO 240)  
Human-animal relationships are often seen in utilitarian, especially nutritional terms. This is particularly true of the analysis of animal remains from archaeological sites. It is clear, however, that animals and meat have significance far beyond their economic value. This course focuses on these non-diary roles of animals in human societies, past and present. We will explore a broad range of issues to gain a fuller view of human relations to animals. Domestication involves not only the technical process of controlling animal movements and breeding, but more crucially requires a fundamental shift in the human perception of animals and their relationship to them. Are pets domestic animals in the same sense as animals that are eaten, or do those animals' relationships with their owners more closely resemble that of hunters with their prey? Do wild animals mean the same thing to both hunter-gatherers and farmers who hunt? We will consider the importance of animals as wealth, as objects of sacrifice, as totems (metaphors for humans), and symbols in art. Meat has undeniable dietary value, but the social aspects of consumption is also important. Meat can be used in the context of such behaviors as feasting and meat sharing to create, cement, and manipulate social relationships. In this seminar, we will examine issues primarily (but not exclusively) in the context of the ethnography and archaeology of the Old World with which the instructor is most familiar, but students are encouraged to offer examples from their own areas of expertise. This course is open to students of anthropology, cultural anthropology, and other disciplines with an interest in human-animal relations.

VI. Anthropological Thought and Method

As a form of inquiry, anthropology has a long and complex history and utilizes a wide variety of theories and methods. In this section, topics in the history of anthropological thought and a wide variety of anthropological approaches are presented, along with courses focused on the design of anthropological research projects.

ANTHR 215 Stone Age Art (also ARKEO 215)  

ANTHR 291 Filming Other Cultures (also ANTHR 691 and THETR 291/691)  
Spring. 3 credits. Limited to 20 students. Preference given to students who have taken either Anthropology 102 or Theatre Arts 474. Fee for film screening and maintenance, $35. R. Ascher. Shortly after the first films were screened, their makers saw in motion pictures a promise for greater understanding among peoples. Was the promise fulfilled? In this discussion course, responses to this question are examined through the study of short, representative films and related readings. The discussions are framed and informed by ideas from anthropology and film studies. For example, we consider: aesthetics, ethics, and responsibility in filming and editing; connections between sound—or lack of it—and image; the implications of film as a product of Euroamerican culture; cultural assumptions in camera movements, film color, and film pace; indigenous people's presentations of themselves and Euroamerican representations of others; and the blurry, ever-changing space that separates fiction from nonfiction film. For one meeting each week, two students, in cooperation with the instructor, are responsible for leading the discussion.

ANTHR 306 Ethnographic Description  

ANTHR 324 Anthropology Amongst the Disciplines  
Fall. 4 credits. J. Siegel. Ethnography has as one of its aims the comprehension of the "other" in whose eyes the "I" or the first person is constructed. The history of this idea in Western philosophy and literature has influenced anthropologists' understanding. We look at this history and at its inflection in ethnography, particularly in the study of ritual.

ANTHR 362 Democratizing Society: Participation, Action, and Research (also ANTHR 662)  
Fall. 4 credits. D. J. Greenwood. This course poses an alternative to distanced, "observer" social science by reviewing some of the numerous approaches to socially engaged research. Among the approaches discussed are those centering on the pedagogy of liberation, feminism, the industrial democracy movement, "Southern" participatory action research, action science, and participatory evaluation. There are no prerequisites and undergraduates are welcome.

ANTHR 368 Marx: An Overview of His Thought (also ANTHR 668)  
Spring. 4 credits. T. Turner. A reading and interpretation of Marx's principal writings, emphasizing both the continuities and the changes from his earlier to his later works, with attention given to contemporary developments and controversies in Marxian scholarship.

ANTHR 403 The Craft of Anthropology: Ethnographic Field Methods (also ANTHR 603)  
Fall. 4 credits. V. Santiago-Irizarry. This course will provide students with practical understanding about what anthropologists actually do in the field. We will examine problems that emerge in conducting fieldwork which raises ethical, methodological, theoretical, and practical issues in the observation, participation in, recording, and representation of culture(s). Students will be expected to develop a semester-long, local research project that will allow them to experience fieldwork situations.

ANTHR 405 Archaeology Research Design (also ANTHR 605 and ARKEO 405/605)  
the factors that are contributing to the production of diasporic consciousness, the intensity and variety of transnational flows of culture, commodities, corporations, and people are considered in order to assess challenges these processes pose to the modern nation-state. Has culture been liberated from the control of the nation-state through the emergence of new cultural networks created by immigration, electronic media, tourism, and multinational corporations and organizations? Or has the acceleration of global processes in the modern world system created new tools of domination within an increasingly capital economy? This course addresses these and related questions utilizing both anthropological theories of and ethnohistoric studies on globalization, ethnicity, diaspora, and nationalism.

**ANTHR 487 Field Research Abroad**
Fall or spring. Credit TBA. Intended for undergraduate students only. Staff: Field research abroad as part of the Cornell-Nepal Studies Program, the Cornell-Honduras Program, or other departmentally-approved programs. Topics are selected and project proposals prepared by students in consultation with faculty. Fieldwork typically involves extended research (usually four-six weeks) in a foreign setting with faculty supervision, culminating in a major paper or report.

**ANTHR 494 Seminar in Archaeology: The Archaeology of Human Origins (also ARKEO 494)**

**ANTHR 495 Classic Theorists Seminar**

**VII. Understanding Cultures**

Anthropologists examine the diversity of human behaviors, social relationships and structures, economies, political and legal orders, worldviews, logics, languages, symbols, myths, and religions among the many other social-units human beings invent to create and reproduce social life around the world. Anthropologists work from a holistic perspective to account for differences and similarities across cultures. Anthropologists also take small-scale societies and local sociocultural systems as the object of analysis. They collect data primarily through ethnographic fieldwork, that is, months or years of participating in and observing of the societies they study. Anthropologists seek inherent linkages between the practical and the meaningful dimensions of human existence.

A. Anthropological Approaches to Economy, Society, Law, and Politics:
The courses below take as their starting point what are usually defined as the social, political, legal, and economic practices and structures of human life and show how they are shaped culturally and how they shape culture.

**ANTHR 217 Nationalism and Revivalism**
Spring. 4 credits. A. Willford.
This course explores the growing phenomenon of religious and ethnic nationalism within modern nation-states. We also examine ways in which religious and ethnic revivalism presents alternative models of identity and group identity, often defined in opposition to state-sponsored nationalist ideologies.

**ANTHR 305 Emotion, Gender, and Culture (also WOMNS 305)**

**ANTHR 313 Anthropology of the City**

**ANTHR 321 Sex and Gender in Cross-Cultural Perspective (also ANTHR 621 and WOMNS 321/631)**
Fall. 3 credits. K. March.
An introduction to the study of sex roles cross-culturally and to anthropological theories of sex and gender. The course examines various aspects of the place of the sexes in social, political, economic, ideologi-cal, and biological systems to emphasize the diversity in gender and sex-role definition around the world.

**ANTHR 323 Kinship and Social Organization**

**ANTHR 326 Economic Anthropology**

**ANTHR 328 Conflict, Dispute Resolution, and Law in Cultural Context**

**ANTHR 380 State, Nation, and Everyday Life**

**ANTHR 422 Anthropology and Environment**
Fall. 4 credits. Prerequisite: Anthr 100, 101, or 102 plus one 300-level course in anthropology. D. Holmberg.
For course description, see section IV.

**ANTHR 426 Ideology and Social Reproduction**

**ANTHR 429 Anthropology and Psychoanalysis**
Fall. 4 credits. S. Sangren.
This seminar is premised on the notion that an accommodation between anthropology and psychoanalysis is not only potentially productive, but also conceptually necessary. However, there are good reasons why such an accommodation has yet to develop, and an exploration of these reasons is an important part of the seminar. How can the general or (in some cases) universalizing theories of psychoanalysis address cultural differences? Can understanding of collective institutions be advanced with reference to theories of individual motivation and desire? Conversely, can such understanding be advanced in the absence of reference to individual motivation and desire? The course will survey the history of anthropological engagement with psychoanalysis, but the main focus will be a juxtaposition of current psychoanalysis theory (mainly Lacanian) and anthropological treatments of the social production of the person (including interpretivist and structuralist arguments, but with an emphasis on the advantages of a Marxist focus on production).

**ANTHR 460 Culture and International Order**
Spring. 4 credits. R. Borneman.
This course focuses on the interplay of culture, understood in the broadest anthropological sense, with international order. We will examine how different models of linguistic categorization are replicated by and interact with one another at the level of culture and the international (or world) system. By bringing together research from different domains that tend to be seen as discrete, this seminar hopes to explore how an anthropological perspective can inform the study of international order, and conversely, how an awareness of transnational and transcultural processes can open up more fruitful areas of anthropological research.

**ANTHR 470 Anthropology, Theory, Politics, Performance (also GOVT 470)**

**ANTHR 479 Ethnicity and Identity Politics: An Anthropological Perspective**

**ANTHR 481 Sex, Money, and Power: Topics in Kinship Theory**

**ANTHR 485 Mothers, Priests, Rebels, and Indian Chiefs: New Social Movements in Latin America (also ANTHR 685)**
Spring. 4 credits. B. J. Isbell.
Latin America is characterized today as a region of widespread yet diverse forms of mobilization that appear to be in constant transformation. The "Mad Mothers" of Argentina, indigenous environmentalists, liberation theologians, revolutionaries, ethnic leaders, gay activists, and urban squatters are challenging history, engaging in cultural innovation, and articulating in diverse ways with the state and national cultures. This seminar will chart a course between theoretical texts on power and mobilization and examples of ethnography/historical cases of social movements.

B. Interpretive Approaches in Cultural Anthropology:

These courses stress symbolic or textual approaches to human society. They take as their object of analysis structures of meaning in such diverse areas as performance and text, myth and religion, views of the self, gender, and the sociology of knowledge. These same topics arise in many of the area-focused courses as well (Section D), but take center stage in the following courses.

**ANTHR 291 Filming Other Cultures (also ANTHR 691 and THETR 291/691)**
Spring. 3 credits. Limited to 20 students. Preference given to students who have taken either Anthropology 102 or Theatre Arts 474. Fee for film screening and maintenance. $55 R. Archer.
For description, see section VI.

**ANTHR 320 Myth, Ritual, and Symbol (also RELST 320)**
Spring. 4 credits. D. Holmberg.
This course examines how systems of thought, symbolic forms, and ritual practice are formulated and expressed in primarily non-Western societies. It focuses on anthropologi-cal interpretations of space, time, cosmology, myth, classificatory systems (such as color, totems, food, dress, kinship), taboo, sacrifice, witchcraft, sorcery, and rites of passage (birth, initiation, marriage, death). It will examine both the roles of specialists (spirit mediums, curers, priests, ascetics, etc.) and nonspecialists in producing these cultural forms.
explored this relationship, which is engendered but also operates within and on subliminal experiential realms. In this course we shall examine how anthropologists and archaeologists have explored this relationship, which is engendered in the interaction between culture and language as parallel mediating devices for the constitution, interpretation, and expression of human experience.

**ANTHR 406 The Culture of Lives (also WOMNS 406)**

**ANTHR 408 Gender Symbolism (also WOMNS 408)**

**ANTHR 417 Person, Gender, and Song (also WOMNS 416)**

**ANTHR 432 Culture and Performance and Performing Culture**

**ANTHR 453 Visual Anthropology**

**ANTHR 455 Mesoamerican Religion, Science, and History**

**ANTHR 460 Culture and International Order**
Spring. 4 credits. J. Borneman.
For course description, see section VII.

**ANTHR 469 Gender and Age In Anthropology #**

**C. Cultures in Anthropological Perspective:**

Anthropology constructs its theories in the comparison of different social and cultural systems and thus depends integrally on knowledge about particular places. The courses below are all focused on the cultures and societies of particular areas of the world and organize knowledge about these areas in reference to key anthropological questions. Students without prior experience in anthropology are welcome in these courses.

**ANTHR 221 Anthropological Representation: Ethnographies on Latin America (also LSP 221 and AM ST 221)**
Fall. 3 credits. V. Santiago-Irizarry.
Representation is basic to anthropology. In translating cultures anthropologists produce authoritative representations of and about other people's lives. In this course we will examine, with a critical eye, the production of representations of U.S. Latino cultures as these are embodied in anthropological texts. Issues to be explored include the relation between the ethnographer and the people s/he is studying, the contexts in which ethnographic texts are produced, and the way they may position different cultural groups within the larger national context.

**ANTHR 230 Cultures of Native North America @ #**
Fall. 4 credits. B. Lambert.
A survey of the principal Eskimo and American Indian culture areas north of Mexico. Selected cultures will be examined to bring out distinctive features of the economy, social organization, religion, and worldview. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.

**ANTHR 303 Asians In the Americas: A Comparative Perspective (also AAS 303)**
Fall. 4 credits. V. Munasinghe.
The common perception of ethnicity is that it is a "natural" and an inevitable consequence of cultural difference. "Asians" overseas, in particular, have been characterized as a people who cling tenaciously to their culture and refuse to assimilate into their host societies and cultures. But, who are the "Asians"? On what basis can we label "Asians" an ethnic group? Although the Asian presence in the Caribbean, the category "Asian" itself does not exist in the Caribbean. What does this say about the nature of categories that label and demarcate groups of people on the basis of alleged cultural and phenotypical characteristics? This course will examine the dynamics behind group identity, namely ethnicity, by comparing and contrasting the cultural and phenotypical characteristics. This course will focus on the East Indian and Chinese experiences in the Caribbean and the Chinese, Korean, Japanese, Filipino, and Indian experiences in the United States.

**ANTHR 316 Power, Society, and Culture in Southeast Asia @**
Spring. 4 credits. A. Williams.
Southeast Asia is a region where anthropologists have paid great attention to the symbolic within cultural and social processes. While this intellectual orientation has produced comparatively rich accounts of cultural uniqueness, there has been a tendency within "interpretive" ethnographies to downplay the role of power and domination within culture and society. This course aims to utilize the traditional strengths of symbolic anthropology by examining the role of power, art, religion, and "traditional" values within contemporary Southeast Asian societies. In doing so, however, we examine how these practices and ideas can also address the issue of the "control" of culture and the power that resides in it. In addition to providing a broad and comparative ethnographic survey of Southeast Asia, this course also investigates how culturally-specific forms of power and domination are reflected in national politics and in local and regional responses to the economic and cultural forces of globalization.

**ANTHR 335 Ethnology of the Andean Region @ #**

**ANTHR 336 Change and Continuity in the Pacific Islands @**

**ANTHR 377 The United States (also LSP 377 and AM ST 377)**

**ANTHR 405 Global Tokyo (also S HUM 404 and ASIAN 405)**
Fall. 4 credits. T. Bestor.
Since the 1980s, structures of identity, class, social integration, and consumption in Tokyo have a focus on the city that is well known and diverse. This seminar will focus on social interactions that have occurred in the city and how they have been reshaped by Japan's encounters with other societies. From the Tsukiji foreign settlement to Tokyo's Disneyland, this seminar will explore the social interactions that have occurred in the city and how they have been reshaped by Japan's encounters with other societies.

**ANTHR 433 Andean Thought and Culture @ #**
A core set of seminars is required of all graduate study in archaeology and biological social life. This definition resists institutional Anthropology 603 is strongly recommended. cultural anthropology. For information about undergraduate students in socio-cultural anthropology through the Director of Graduate Studies. This The graduate program in anthropology is described in much greater detail in the -anthro/). The seminars described immediately below pertain to the program in socio-cultural anthropology. For information about graduate study in archaeology and biological anthropology, see the anthropology department web page. A core set of seminars is required of all graduate students in socio-cultural anthropolology. Anthropology 600, 601, and 602. Anthropology 603 is strongly recommended. These courses are open to graduate students from other related fields. This sequence, and the graduate curriculum in general, is premised on the idea that anthropological study is best defined as the comparative study of human social life. This definition resists institutional pressures in the academy to distinguish social science from humanistic or cultural studies and scholarship from more worldly applications. Our most important method, ethnography, is at once scientific and humanistic; disciplinary aspirations refuse to view cultural interpreta- tion and analytic explanation as separable values. Furthermore, theory in anthropology is directly related to practice in the world whether in relation to research or more action-oriented pursuits. Consequently, the core sequences as well as most other courses for graduate students are oriented explicitly toward subverting an ideological construction of social life as separable into cultural and social (or political-economic) domains. ANTHR 600 Proseminar: Culture and Symbol Fall. 6 credits. J. Bornemann. This course focuses on an appreciation of symbolic, expressive, and representational forms and processes both as producers and products of social activities. Through the study of anthropological theory, the course will endeavor to set the stage for a dialectical understanding of social, political, economic, and symbolic activities as interrelated phenomena. The works of de Saussure, Levi-Strauss, Dumont, Geertz, Victor Turner, Sahlin, among others, as well as contemporary theories are given careful attention.

VIII. Graduate Seminars

The graduate program in anthropology is described in much greater detail in the Graduate Program brochure which is available through the Director of Graduate Studies. This document is also found on the anthropology department web page (falcon.arts.cornell.edu/anthro/). The seminars described immediately below pertain to the program in socio-cultural anthropology. For information about graduate study in archaeology and biological anthropology, see the anthropology department web page.

ANTHR 603 Research Design Fall. 4 credits. V. Santiago-Inizarry. For course description, see section VI.

ANTHR 607 Special Problems in Anthropology Fall or spring. Credit and hours TBA. Intended for graduate students only. Staff.

Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 609 Approaches to Archaeology (also ANTHR 409 and ARKEO 409/R09) Fall. 4 credits. Not offered 2000–2001.

ANTHR 610 Language and Myth Fall. 4 credits. J. Seigel. An analysis of the theories on language leading to Levi-Strauss and Derrida. Myth and the notion of "the father.

ANTHR 616 Cultural Production of the Person Spring. 4 credits. J. Faapas. The course will address the interdisciplinary nature of the relations between the person and both culture and society. Focusing on the integration of theories of the self with models of cultural forms and social interaction, the aim will be to develop an understanding of the processes and activities that simultaneously produce the cultural subject, the culture, and the society.

ANTHR 621 Sex and Gender in Cross-Cultural Perspective (also ANTHR 321 and WOMNS 321/631) Fall. 4 credits. Time TBA. Graduate section of ANTHR 321. K. March. For course description, see ANTHR 321, section VII.A.

ANTHR 635 Southeast Asia: Readings in Special Problems Fall or spring. Credit and hours TBA. Staff. Independent reading course on topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 641 South Asia: Readings in Special Problems Fall or spring. Credit and hours TBA. Staff. Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.
ANTHR 645 Japanese Ethnology  

ANTHR 647 Death of the Father  

ANTHR 648 Marriage and Death  

ANTHR 649 Narrative and the Analysis of Culture  
Spring. 4 credits. J. Borneman. The purpose of the course is to acquaint students with narrative form and the use of narrative techniques in the analysis of cultural artifacts. Narrative—a specific set of genres of discourse sharing the property of temporally sequenced clauses—is the subject of much research within many disciplines. Narrative is often said to fashion diverse human experiences into a form assimilable to structures of meaning that are generally human rather than culture-specific. By making personal knowledge communicable, narrative is intrinsic to the making of culture, its representation, and its comprehension. Participants will be introduced to the work of major narrative theorists and to attempts to apply narrative theory to culture. They will also be asked to examine critically a variety of cultural artifacts—including ethnography, performance art, film/video, and law—in terms of the theories discussed.

ANTHR 653 Myth Onto Film (also THETR 653)  
Spring. 4 credits. Enrollment limited by available studio space and equipment. Satisfactory knowledge of one of the following: anthropology, filmmaking, mythology, graphics, drawing, or painting is required. Open to undergraduates and graduate students with permission of instructor. Fee for film screening and maintenance, $50. R. Ascher.

In myths, whales fly, pebbles throw themselves across streams, and trees are transformed into women. Toward the end of visualizing myths—in particular the myths of other people—we explore the possibilities of animated film. The technique used is cameraman animation; that is, we draw and paint, frame by frame, directly onto movie film. The intellectual problem is to visualize the myths of other cultures so that they are comprehensible to us but are not thought to be of us. Reading includes introductory works on both myth and animation and there is background reading on the particular myth that is committed to film.

ANTHR 655 East Asia: Readings in Special Problems  
Fall or spring. Credit and hours TBD. Staff. Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 656 Maya History  

ANTHR 658 Archaeological Analysis (also ANTHR 458 and ARKEO 458/658)  

ANTHR 659 Archaeology of the Household (also ANTHR 459 and ARKEO 459/659)  
Fall. 4 credits. J. Henderson, N. Russell. For course description, see section V.

ANTHR 660 Language, Ideologies and Practices (also LSP 660)  
Spring. 4 credits. V. Santiago-Infrazra. Cultural identity and citizenship in the United States have often been organized around linguistic difference and the issues this raises in an English-dominant society. Drawing from anthropological theories on language, this course will look at the place of language as a signifying practice in the United States by focusing on the experience of Latino communities. Topics to be explored include linguistic diversity and change, accommodation and resistance, language maintenance and shift, linguistic ideologies, the production of language hierarchies, and institutional applications of language.

ANTHR 662 Democratizing Society: Participation, Action, and Research (also ANTHR 362)  
Fall. 4 credits. D. J. Greenwood. For description, see ANTHR 362, Section VI.

ANTHR 663 Action Research  
Spring. 4 credits. D. Greenwood. This seminar is a practicum in action research (AR) in which the semester becomes a self-managing learning environment for the exploration of the techniques and group processes involved in AR, including co-generative learning, and AR facilitation. Participation in a seminar-centered LISTSERV on the Internet is expected.

ANTHR 665 Topics in Native American Societies and Cultures  

ANTHR 666 Humans and Animals (also ANTHR 466 and ARKEO 466/666)  
Fall. 4 credits. N. Russell. For course description, see section VI.

ANTHR 668 Marx: An Overview of His Thought (also ANTHR 368)  
Spring. 4 credits. T. Volman. For course description, see section VI.

ANTHR 669 Gender and Age in Archaeology (also ANTHR 469 and ARKEO 469/669)  

ANTHR 670 Environmental Archaeology (also ANTHR 370 and ARKEO 370/670)  
Spring. 4 credits. T. Volman. For course description, see section IV.

ANTHR 671 Palaeoanthropology of South Asia (also BIOES 671 and ASIAN 620)  
Fall. 3 credits. Limited to 15 students. Lect. M afternoons for 1 hour; sem, W 7:30-9:30 P.M. K. Kennedy.

The course explores recent developments in the prehistoric archaeology, palaeo-ecology, and biological anthropology of the ancient peoples of India, Pakistan, Sri Lanka, and the bordering countries. Issues of origin and decline of the Indus Civilization, fossil record of early humans in the Indian subcontinent, and current research topics are discussed.

ANTHR 672 Hunters and Gatherers (also ANTHR 372)  

ANTHR 673 Human Evolution: Concepts, History, and Theory (also BIOES 673)  

ANTHR 680 Anthropology and Globalization (also ANTHR 480)  
Fall. 4 credits. A. Willford.

For course description, see section VI.

ANTHR 682 Perspectives on the Nation (also AAS 682)  

ANTHR 685 Mothers, Priests, Rebels, and Indian Chiefs: New Social Movements in Latin America  
Spring. 4 credits. B. J. Isbell. For course description, see section VIIa.

ANTHR 690 Ritual and Myth: Structure, Process, Practice  

ANTHR 691 Filming Other Cultures (also ANTHR 291 and THETR 291/691)  
Spring. 4 credits. Fee for film screening and maintenance, $35. For description, see ANTHR 291 and THETR 291. Graduate students who register in this course attend the meetings of 291. In addition, they write in-depth studies of one or more films in consultation with the instructor.

ANTHR 699 Current Fields in Biological Anthropology  

ARABIC AND ARAMAIC  
See under Department of Near Eastern Studies.

ARCHAEOLOGY  
See under Special Programs and Interdisciplinary Studies.

ASIAN AMERICAN STUDIES  
See under Special Programs and Interdisciplinary Studies.

ASIAN STUDIES  

The Department of Asian Studies encompasses the geographical areas of East Asia, South Asia, and Southeast Asia and offers courses in most of the disciplines of the social sciences and the humanities. Asian studies courses through the 400 level (ASIAN is the prefix) are
taught in English and are open to all students in the university. Some of these courses may be counted toward majors in other departments; others fulfill the humanities distribution requirement. Courses listed under Asian Studies offered through other departments may fulfill distribution requirements in history, social sciences, and arts.

The Major
A student majoring in Asian studies normally specializes in the language and culture of one country and often chooses an additional major in a traditional discipline.

 Majors complete two courses at the 200 level (a minimum of six credits with a grade of C or better) in one of the Asian languages offered at Cornell. The major consists of at least 30 additional credits (which may include up to six credits of further language study) selected by the student in consultation with his or her adviser from among the courses listed under the Department of Asian Studies and numbered 250 and above.

The applicant for admission to the major in Asian studies must have completed at least one area studies course selected from among those listed under the Department of Asian Studies and must receive permission for admission to the major from the director of undergraduate studies. The student must have received a minimum grade of C in this course and in all other courses counted toward the major.

Honors
To be eligible for honors in Asian studies, a student must have a cumulative grade average of A- in all Asian studies area courses, exclusive of language study only, and must successfully complete an honors essay during the senior year. Students who wish to be considered for honors should apply to the director of undergraduate studies during the second term of their junior year. The application must include an outline of the proposed project and the endorsement of an appropriate Asian studies faculty. During the first term of the senior year the student does research for the essay in conjunction with an appropriate Asian studies course or Asian Studies 401. By the end of the first term the student must present a detailed outline of the honors essay or other appropriately written work and have it approved by the project supervisor and the director of undergraduate studies. The student is then eligible for Asian Studies 402, the honors course, which entails writing the essay. At the end of the senior year, the student has an oral examination (with at least two faculty members) covering both the honors essay and the student's area of concentration.

Concentration in East Asia Studies
A candidate for the Bachelor of Arts or Science degree at Cornell may take a concentration in East Asian studies by completing at least 18 credits of course work. A recommended plan would include Asian Studies 208 and four courses at the intermediate or advanced stage, two of which could be Asian language courses.

Students taking a concentration in East Asian studies are members of the East Asia Program and will have an adviser from the program faculty. (This adviser will be for the student's concentration and is not a substitute for a student's academic adviser in his or her major.)

Concentration in Southeast Asia Studies
A candidate for the Bachelor of Arts or Science degree at Cornell may take a concentration in Southeast Asian studies by completing 18 credits of course work. A recommended plan would include Asian Studies 208 and four courses at the intermediate or advanced stage, two of which could be Southeast Asian language courses.

Students taking a concentration in Southeast Asian studies are members of the Southeast Asia Program and are assigned an adviser from the program faculty. Such students are encouraged to commence work on a Southeast Asian language either at the 10-week intensive courses offered by the Southeast Asia Studies Summer Institute (SEASSI) or by studying for one semester at IKIP Malang, Indonesia; Khon Kaen University, Thailand; or Hanoi University, Vietnam; fellowships are available for undergraduates through the Cornell Abroad Program.

Intensive Language Program (FALCON)
The FALCON Program offers intensive instruction in Japanese or Chinese. The program is still the only one in the world offering a full year of intensive instruction, except perhaps for the exclusive language schools of some government agencies. Students must formally apply to the program, but the application process is simple and admissions are open to all students. (Applications available for FALCON from the secretary, room 416 Morrill Hall, or visit the site dml.comell.edu/FALCON/ and apply online.) Students may take the entire sequence of 160, 161, 162, or any other portion of the program if they have the necessary background (to be determined by FALCON placement test). The courses are full-time intensive language study; the degree of intensity required does not allow students to enroll simultaneously in other courses or to work, except perhaps on weekends.

Study Abroad
Cornell is a member of the Inter-University Center for Chinese Language Study in Taipei and a member of the Council on International Educational Exchange offering study in China at Peking University and Nanjing University. These centers offer intensive training in both spoken and written forms of the languages. The Kyoto Center for Japanese Studies (KCJS) is an undergraduate program for students who want to spend one or two semesters in Japan studying both language and culture.

Cornell is a class-A member of the American Institute of Indian Studies, which offers fellowships in India for intensive language study in Hindi, Bengali, and Tamil.

Cornell and the central campus of the Nepalese national university—Tribhuvan—at Kirtipur, Kathmandu, cosponsor an academic semester or year in Nepal.

Other opportunities include a junior year abroad at IKIP-Malang, in Indonesia, or at the School of Oriental and African Studies, University of London. Many other options for study in Asia exist, including in Indonesia, Thailand, and Vietnam through the Council for International Educational Exchange. Undergraduates should consult Cornell Abroad; graduate students should inquire at the East Asia Program, the Southeast Asia Program, or the Southeast Asia Program offices.

First-Year Writing Seminars
See Freshman seminar booklet for course times and descriptions.

ASIAN 100 Half the Sky: Women in Modern China (also WOMNS 100)
Fall. 3 credits. H. Lee.

ASIAN 111 Asian Theater
Fall and spring. 3 credits. J. Young and K. Brazzel.

ASIAN 115 People and their Environment in China
Fall. 3 credits. R. McNeal

General Education Courses

ASIAN 191 Introduction to Modern Asian History (also HIST 191)
Fall. 4 credits. F. cheeses.
SEE HIST 191 for description.

ASIAN 203 Introduction to Comparative Literature (also COM L 203)
Fall. 4 credits. Team.
See ComL 203 for description.

ASIAN 204 Global Fictions (also COM L 204)
Spring. 4 credits. N. Melas.
See ComL 204 for description.

ASIAN 206 The Occidental Tourist: Travel Writing and Orientalism in Southeast Asia (also HIST 207)
Spring. 4 credits. T. Loechel.
See HIST 206 for description.

ASIAN 208 Introduction to Southeast Asia
Spring. 3 credits. T. Chaloemtiarana.
This course is for anyone curious about the most diverse part of Asia; it defines Southeast Asia both as the nation-states that have...
emerged since 1945 (Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, and Viet Nam) and as a larger cultural world extending from southern China to Madagascar and Polynesia. Students will find a serious, organized introduction to a variety of disciplinary and topical approaches to this region, including geography, linguistics, history, religion and ideology, anthropology, marriage and family systems, music, literacy and literature, art and architecture, agriculture, industrialization and urbanization, politics and government, warfare and diplomacy, ecological and human degradation, and business and marketing. The course aims to teach both basic information and different ways of interpreting that information.

ASIAN 211 Introduction to Japan: Japanese Texts in History © # Fall. 3 credits. N. Sakai.

An interdisciplinary introduction to Japanese Studies especially designed for nonmajors. The course takes up a diverse series of cultural artifacts and demonstrates how, against the background of simultaneous and successive waves of politics on the Japanese archipelago, the meanings and readings generated by these artifacts have changed dramatically over time. We will consider verbal and visual, fictional and historical, canonical and non-canonical texts, including the eighth century Kojiki, the courtly Tale of Genji, eighteenth century puppet theater, modern Ainu autobiography, and films and comic books dealing with themes of nuclear warfare and apocalypse.

ASIAN 212 Introduction to China © Spring. 3 credits (4 credits with a special project; consult instructor for information). E. Gunn.

An interdisciplinary introduction to Chinese culture especially designed for students not majoring in Asian Studies.

ASIAN 215 Introduction to South Asian Civilization © Fall. 3 credits: D. Gold.

An interdisciplinary introduction to the culture and history shared by India and other states of South Asia. Designed for students not majoring in Asian Studies. Guest lecturers will provide the perspective of their disciplines to the general course; cultural diversity and the role of tradition in contemporary life.

ASIAN 218 Introduction to Korea (also HIST 218 and GOVT 218) © Spring. 3 credits. C. Kim.

An interdisciplinary introduction to Korean history including geography, ethnography, language, literature, philosophy, religion, political economy, government, music, and art (sculpture, architecture, and painting), with an overview of Korean history from the Three Kingdoms Period to the present, focusing on the March 1, 1919 Independence Movement, the Korean War, the 1960 Student Revolution, the 1980 Kwangju Massacre, and other events.

Asia—Literature and Religion Courses

The following courses are taught entirely in English and are open to any Cornell student.

ASIAN 250 Introduction to Asian Religions (also RELST 250) © # Spring. 3 credits. D. Boucher.

This course will explore a range of religious traditions in South Asia (Pakistan, India, and Sri Lanka) and East Asia (China and Japan) including Hinduism, Buddhism (South and East Asian), Confucianism, Daoism, and Shinto. We will concentrate on these religions in traditional times in order to understand better the historical foundations that have influenced much of what these cultures are today. We will attempt to integrate collectively into the nature of religious impulses among peoples who are in some fundamental ways both very much like us and very much different from us. The course format will include lectures and discussion sections.

This course probes the truths behind traditional claims of the priority of internal practice in Indian traditions. We will examine both practices themselves—techniques of meditation and contemplation, religious ways of using intellect, forms of chait and ritual—and the dynamics through which these have left a wider mark on South Asian civilization. These dynamic processes include not only the evanescent and reverberations of practice in philosophical reflection and socioreligious institutions, but also wide-ranging processes of stylization, elaboration, and popularization found throughout South Asian culture. In order to get a sense of the experiences treated in classical religious texts, students will be expected to experiment with some basic meditation practices. At least as important for the work of the course (and much more important for the grade) will be the ways in which students situate these practices within larger South Asian world views as suggested by doctrines, rituals, iconic forms, and literary texts. To keep the interaction between internal practice and broader world views central, we will examine both Hindu and Buddhist sources, consistently examining the ways in which similar practices are given distinct shapes by the two religious traditions.

This course will survey events in Vietnam, the United States, and elsewhere related to the U.S. policy of intervention in Vietnam between 1954 and 1975. Readings will include historical narratives, memoirs, and literature. The courses will evaluate the standard winner (Hanoi) and loser (U.S.) narratives and how they have silenced southern Vietnamese voices.

[ASIAN 299 Buddhism (also RELST 299) © # Fall. 4 credits. D. Boucher.

This course will explore the Buddhist tradition from its origins in ancient India to its migrations throughout Asia and eventually to the West. The first half of the course will deal with Indian Buddhism: the Buddha, the principal teachings and practices of his early followers, and new developments in spiritual orientation. We will then turn to the transmission of Buddhism to Central and East Asia, including China, Japan, and Tibet, concentrating on those traditions in traditional times. From there we will look at the southern migration to Sri Lanka and Southeast Asia and conclude with an examination of Buddhism in America.

This course is an introduction to classical Chinese literature. A variety of forms and genres, such as poetry, fiction, essays, and historical writings, are chosen and arranged in chronological order as well as by general topics and issues, so as to present an overview of how the Chinese literary tradition evolves and to show the interplay of Chinese literature, culture, and history.

ASIAN 301 Schools of Thought-Ancient China Spring. 4 credits. R. McNeal.

This course introduces students to the most important of China’s early moral and political philosophers, such as Confucius, Laozi, and Sunzi, through readings in translation. We will address the traditional conception of six schools of thought in ancient China as reflected in classical and modern historiography and examine newly discovered texts with an eye toward clarifying the relationships among early schools and their representatives.

A survey of the literature of the Post-Liberation period (1945–present), with an emphasis on the development of modern Korean poetry and its relation to the intellectual history of this time. Students will read major poetic texts of each period in English translation as well as writings on cultural movements and major arguments in intellectual history.

ASIAN 314 Europe & Its Others (also COM L 304) © Fall. 4 credits. D. Gold.

This course addresses the complexity of religion in Japanese history through a focus on the dominant iconography of Japanese religious practice and thought—that system commonly referred to as Shinto. In this course, we are interested in understanding the
general methodological issues surrounding tradition formation, continuity, change, and revision. The Shinto case reveals the complexity of a given religious system which simultaneously serves as both a cultural ideology and a path for individual spiritual cultivation. A study of Shinto allows us to develop the intellectual frameworks for understanding the dynamics of religious traditions in societies. We will explore the Shinto tradition by looking at (1) the means by which a central corpus of values, tastes, traditions in societies. We will explore the understanding the dynamics of religious development the intellectual frameworks for revision. The Shinto case reveals the complex­ system from the perspective of those (2) the academic sources for the study of this religious system from the perspective of those who are actively shaping its discourse; (4) the view of this religious system from the perspective of those peripheralized by its ideologies; (5) the issue of personal cultivation and aesthetic taste in the tradition; and (6) the relationship between this religious system and imperialism, war, and historical revisionism.

ASIAN 357 Chinese Religions (also RELST 357) @ #
Spring. 4 credits. D. Boucher.
This course will present a broad survey of Chinese religions from the earliest historic records through the late imperial and modern periods, from highbrow philosophical movements to local deity cults. Our survey will focus intensively on the great traditions of Confucianism, Taoism, and Buddhism as well as the lesser known practices that often fall through the cracks. Our goal in part will be to trace patterns of continuity among competing and sometimes acrimonious voices.

ASIAN 358 Chinese Buddhism (also RELST 357) @ #
Fall. 4 credits. D. Boucher.
Buddhism was a mature tradition when it came to China, a society of great sophistica­ tion and antiquity, and in their remarkable religious and cultural encounter both Buddhism and China were transformed. We will consider its introduction and acceptance, the social impact of its monastic system and moral ideals, the literary and artistic contributions of its scriptures and sculpture, the efflorescence of its doctrine and various schools, and its role in Chinese history.

ASIAN 359 Japanese Buddhism: Texts in Context (also RELST 359) @ #
Spring. 4 credits. J. M. Law.
This course explores a number of major dynamics in Japanese Buddhism within the context of the larger Japanese religious ethos. We will focus on the following: (1) strategies used in the introduction and spread of Buddhism in Japan, and systems of accommo­ dation, with special attention to the Lotus Sutra; (2) the formulation of Buddhist doctrine and practice of four major figures in Japanese Buddhism: Saicho, Kakui, Nichiren, and Dogen; and (3) understandings of Buddhist practice expressed in the "new" religion, with Keiyou as our case. Readings are in English, with optional readings in Japanese for graduate students.

[ASIAN 360 Buddhist and Confucian Cultures of Asia @ #]
Confucius and Buddha were contemporaries 2,500 years ago. Teachings attributed to them spread over large parts of Asia and were used to formulate expressions of cultural authority in many times and places. This course surveys historical, philosophical, and literary themes in Buddhist and Confucian studies, such as Theravada and Mahayana, Pure Land, Zen, and other forms of Buddhist thought and practice; including interaction with and adaption to local religions, Confucius and Mencius. Han eclectic Confucianism, Song Chu Hsi Confucianism, and dissenting or variant forms of Confucian thought. This course explores and compares specific examples of these themes in Japan, Korea, China, Vietnam, Thailand, and Burma. This course is intended for Asian studies majors and other interested students. Premodern focus.

[ASIAN 373 Twentieth-Century Chinese Literature @]
A survey of the principal works in English translation, the course introduces fiction, drama, essays, and poetry of China beginning with the Republican era and continuing up to the present in the People's Republic and Taiwan, with attention to social and political issues and literary theory.

[ASIAN 374 Chinese Narrative Literature (also COM L 376) @ #]
Selected works in classical Chinese fiction are read in translation. Major novels, such as The Dream of the Red Chamber and Water Margin, are emphasized.

[ASIAN 376 Modern Japanese Literature: From Meiji through the Pacific War (also COM L 369) @ #]
We will read Japanese works of fiction, poetry, and critical theory written from the Meiji Restoration into the Showa Period. The course will take up such issues as modernization and the narrative of discovery, imperial­ ism and the novel, the politics of visibility, gender and representation, and Japanese colonialism. We will consider how writings of critics like Karatani, Fujii, and Layoun have complicated modemizationist schemas of literary development. We will also attempt to explore what Nagahara Yutaka has called the "phenomenology of discrimination" in relation to Japanese literary texts, pursuing contradictions between egalitarianism and discrimination in the thought of Meiji Enlighten­ ment thought. Reading of non-Japanese (other Asian, as well as African, American, and European) texts raising pertinent theoretical perspectives will be integrated into the course work.

[ASIAN 377 Japanese Tales of Love, War, and the Supernatural @ #]
The romantic adventures of the Shining Prince Genji, the battles of twelfth-century samurai clans, the ghosts and demons of folklore, and the adventures of Saikaku's men and women who "loved love" are still very much alive in modern Japanese mass culture—in films, comic books, commercials, TV programs, and video games. This course will survey the original tales (in English translation) to introduce students to this rich array of literature. We will explore some of the changes in the representations of sex and gender, death and dying, and supernatural forces that occurred between the ninth and the nineteenth centuries.

ASIAN 383 Introduction to the Arts of China (also ART H 380 and ARKEO 380) @ #
Fall. 4 credits. A. Pan.
See ART H 380 for description.

[ASIAN 384 Representation and Meaning in Chinese Painting (also ART H 385)]
See ART H 385 for description.

[ASIAN 388 Theorizing Gender & Race in Asian Histories & Literatures @]
In recent years some studies have been published about the questions of gender and race in the fields related to East Asia. Yet, compared with the accumulated factual knowledge about these topics, little attention has been paid to how to conceptualize gender and race, how to analyze the mutual implications of sexism and racism, and how to understand the relationships of those topics to the broader contexts of colonialisms, imperialisms, and nationalisms. This course is designed to offer a series of discussions about the following problems: (1) the historically specific modes of sexism and racism in social spaces which are related to Japan and other areas in East Asia; (2) the mutual implication of sexism and racism in various contexts including those of colonialism, imperialism, and nationalism; (3) the roles of gender and race in the production of knowledge about Japan and East Asia in general; and (4) the conceptions of gender and race in the social formations particular to East Asia. The assigned readings include both English and Japanese materials. Those who register in AS 388, however, are exempt from reading the Japanese materials.

*Students are allowed to take this course either as AS 388 or as AS 688, although those who have studied Japanese for more than four years are strongly encouraged to register in AS 688. Those who register in AS 688 have to spend additional time in class in order to deal with texts in Japanese.

[ASIAN 390 The Sanskrit Epics @ #]
Readings in translation from the two Sanskrit epics, the Mahabharata and the Ramayana, supported by a study of the reception of the epics in later Indian narrative literature. Attention will also be given to comparative theories of the epic in ancient Indo-European languages.

ASIAN 394 The House and the World: Architecture of Asia (also ART H 394) @ #
Spring. 4 credits. K. McGowan.
See ART H 395 for description.

ASIAN 395 Classical Indian Philosophical Systems (also CLASS 395 and RELST 395) @ #
Fall. 4 credits. Prerequisite: some background in philosophy or in classical culture. C. Minkowski.
A survey of the traditions of philosophical inquiry in ancient India, especially Nyaya, Sankhya, Mimamsa, and Vedanta. Topics will include the origins in and relationships to the Vedanta, the formulations of distinct positions on such subjects as perception, language, identity, karma, and liberation; the dialogue with Buddhist, Jains, skeptics, materialists, and cynics, and new theistic models, particularly among the Saiva philosophers in Kashmir.

ASIAN 396 Southeast Asian History from the Eighteenth Century (also HIST 396)
Spring. 4 credits. T. Loos. See HIST 396 for description.

ASIAN 400 Tibetan Buddhism (also RELST 400) #
Fall. 3 credits. Prerequisites: at least 1 course on Buddhism or Asian religions, or the permission of the instructor. Class size is limited to 15. J. M. Law.
This course is an exploration of the development of the Vajrayana tradition through a focus on the figures behind it, and writings by central figures in, what is known in the west as Tibetan Buddhism. Following an overview of the historical development of this tradition, we will explore the contributions made by seven mythico-historical semi-real thinkers in the tradition including Atisa, Naropa, Marpa, Milarepa, and Tsongkapa, and explore how their life works reflect the process of adapting Buddhism to the Tibetan context. (We will also include myths and stories about the mythical founder Padmasambhava.) Readings will include primary source religious works written by or attributed to these figures, hagiographical accounts of their lives (their "biographies" and "autobiographies" and tributes to them by their disciples), and treatises and commentaries on their works which are influential in the formulation of the various schools of Tibetan Buddhism. In the final segment of the course, we will explore the implications of exile for Tibetan Buddhism, and will read several popular works by the Ven. Tenzin Gyatso (the fourteenth Dalai Lama), to show the dramatic changes made in the tradition as it reformulated itself in a new global context. Through out the course, we will be directing our attention to dynamics of tradition formulation, articulation, and reformulation as it changes throughout Tibetan history. In addition to two short writing assignments and a final research project, we will also take field trips to two regional Tibetan monasteries.

ASIAN 405 Global Tokyo (also S HUM 404)
Fall. 4 credits. T. Bestor. See S HUM 404 for description.

[ASIAN 406 Contemporary Literary Criticism in Korea
A survey of literary criticism and theory from the liberation in 1945 to the 1990s, including the influence of the discipline of deconstruction, postcolonialism, poststructuralism, postmodernism, cultural studies, feminism, and new historicism.

ASIAN 407 Religion and Human Rights (also RELST 407)
Spring. 3 credits. Prerequisite: Permission of instructor. Limited to 15 students. J. M. Law.
This course, open to advanced students with a strong background in either religious studies, human rights work, or international law pertaining to human rights, is an exploration of the various ways that the sub-disciplines within religious studies (hermeneutics, critical ideological studies, the sociology of religion, etc.) can shed light on our understanding of human rights issues. In particular, the course will focus on four intersections of religion and human rights: religious traditions as ideologies of oppression used to legitimize major human rights violations; religious traditions identification as the primary "subject relationships" causing certain people to be targeted for persecution; religious traditions and doctrine as the motivation for certain human rights workers to campaign as advocates for victims; and the role of religious discourse in attempts at reconciliation after major human rights violations have occurred. Through specific cases (mostly Asian), students will explore the methodological issues that each of these intersections raises. The focus of the course will be on close readings of primary source documents (some in translation by necessity), context studies of historical and social events surrounding major violations of human rights, and preparation of public response papers for each of the cases studied. In addition to weekly writing assignments prepared as part of a portfolio of written work, students will also prepare one group presentation for the class. This course is being offered in conjunction with the Writing in the Majors Program.

ASIAN 410 Chinese Performing Arts # Fall. 4 credits. E. Gunn.
The course will survey drama, music theater, and film in twentieth-century China. Some material will require knowledge of Chinese.

[ASIAN 411 History of the Japanese Language (also LING 411)
See LING 411 for description.

[ASIAN 412 Linguistic Structure of Japanese (also LING 404)
See LING 404 for description.

[ASIAN 415 Virtual Orientalisms (also S HUM 415 and COM L 418) #
By reading successive examples of Mahayana Buddhist literature, we will study the formation and evolution of the ideal of the bodhisattva, the understanding of transcendental wisdom and the concept of emptiness, and the workings of both the conscious and subconscious mind in the course of spiritual practice. We will also include discussion of major philosophical schools, as well as issues of social setting and popular religious practice, in both India and East Asia.

[ASIAN 449 History and Methods of the Academic Study of Religion (also RELST 449)
Spring. 4 credits. D. Boucher.
By reading successive examples of Mahayana Buddhist literature, we will study the formation and evolution of the ideal of the bodhisattva, the understanding of transcendental wisdom and the concept of emptiness, and the workings of both the conscious and subconscious mind in the course of spiritual practice. We will also include discussion of major philosophical schools, as well as issues of social setting and popular religious practice, in both India and East Asia.
in Europe in the mid-nineteenth century as a self-consciousness and an academic approach to the study of religious texts and phenomena. We explore the ways this discipline interacted with existing disciplines in the academy, giving special attention to the growing fields of sociology and anthropology. We look at a number of assumptions inherent in this intellectual movement and focus on (1) the conception of the sacred, (2) the idea of rationality, and (3) the "discovery" and construction of non-Western religious traditions. This course and segment surveys major approaches to the academic study of religion currently used today: anthropology, hermeneutics, history, history of religions, literary studies, phenomenology, sociology, and theology. For each of these cases, we will be studying how these angles on religious data both build on the nineteenth-century assumptions of Religiouswissenschaft, and address twentieth-century religion.

### ASIAN 460 Indian Meditation Texts (also RELST 460) @
- **Fall. 4 credits. Not offered 2000-2001. D. Gold.**
- Because texts that record visionary experience prescribe the practice of contemplation, and present enigmatic utterances are highly valued in Indian tradition, they need to be taken seriously by Indian and world civilizations. Yet the special problems of interpretation that they present have often caused meditation texts to be passed over in embarrassed, sometimes reverent silence. In this course we will draw on approaches from literary criticism, anthropology, and religious studies to explore a number of the problems to which these texts give rise: in what ways are the apparent differences in experience presented in meditation texts shaped by different cosmologies and ritual practice? Do different literary genres have particular religious implications? What are the relations between convention and experience in the creation of the texts? Readings will be drawn from the Upanishads and Tantra, devotional verse in the vernaculars, and the classical meditation manuals of Hinduism and Buddhism. Some attention may be given to Indian Sufi materials. No knowledge of Indian languages is required.

### ASIAN 463 Readings in Hindi and Urdu Literature
- Selected topics in Hindi and Urdu literature, with readings in the original; discussions in Hindi-Urdu and English. May be repeated for additional credit with consent of instructor.

### ASIAN 470 The Japanese Noh Theater and Modern Dramatists (also COM L 470 and THETR 470) @
- **Fall. 4 credits. Alternates with ASIAN 471. Not offered 2000-2001. K. Brazell.**
- Several weeks will be spent studying the literary, performance, and aesthetic aspects of the noh theater. Emphasis will be on noh as a performance system, a total theater in which music, dance, text, costume, and props all interact to create the total effect. Then attention will turn to modern theater people who have reacted to noh in some creative way. Choice of dramatists will depend partly on student interests but will probably include Yeats, Eliot, Beckett, Claudel, Groteskis, Mishima. All readings may be done in English translation.

### ASIAN 471 Japanese Theatre (also THETR 471)
- **Fall. 4 credits. Alternates with ASIAN 470. K. Brazell.**
- A study of traditional forms of Japanese theatre. Topics will include ritual and theatre, noh and kyogen, kabuki, and the puppet theatre, and the contemporary theatrical use of the traditional forms. Special emphasis will be placed on dramaturgy, acting styles, performance aesthetics, and theories of performer training.

### ASIAN 479 Art of the T’ang Dynasty (also ART H 481)
- **Spring. 4 credits. A. Pan. See ART H 481 for description.**

### ASIAN 481 Translation and Identities @
- **Spring. 4 credits. N. Sakai.**
- Translation establishes a division of two spheres and thereby marks the limit of what can be expressed in one medium. Broadly understood, translation can take place not only between two national languages but also at a variety of boundaries within a putatively single society. The seminar will investigate different economics of translation by which different social and cultural identities are constructed, and the disappearance of multi-lingualism in modern nation-state and the mutation of translation economics which gave rise to new ways of imagining the organism unity of the society in eighteenth-century and twentieth-century Japan. Seminar readings will be translations of pre-modern Japanese and Chinese writings, and modern European and Japanese philosophical articles (in English).

### ASIAN 482 Seminar: Gender Adjudicated (also HIST 480)
- **Fall. 4 credits. T. Loos. See HIST 480 for description.**

### ASIAN 483 Internationalism, Nationalism, and Modern Japanese Discursive Space @
- **Spring. 3 credits. N. Sakai.**
- The late nineteenth century marks an important transitional period, nation-states formed in Britain, France, Japan, Germany, the United States, and elsewhere sought to become imperial powers and "internationalism" virtually collapsed. Focusing on Japanese examples, but not excluding other cases, we will study the discursive spaces of modern national subjectivity with a view to the problems of ethnicity, imperialism, colonialism, sex, violence, historical memory, post-coloniality and academic knowledge. A major critical paper will be required.

### ASIAN 490 Tales of the Heike (also History 490) @

### ASIAN 491 Art and Collecting: East & West (also ART H 490)
- **Spring. 4 credits. K. McGowan. See ART H 490 for description.**

### ASIAN 496 Tokugawa Literature and Thought @
- **Spring. 4 credits. Not offered 2000-2001. N. Sakai.**
- An introduction (in English translation) to literary, theatrical, and intellectual works of the Tokugawa period (1600-1868). We will examine the characteristics of early Tokugawa literary and theatrical works and see how different they are from the literary works of the later Tokugawa period. We will also read the philosophical and critical works on the classics by writers such as Oggy Sorai and Motoori Norinaga to understand the ways contemporary Japanese intellectuals understood cultural activities and literature during the Tokugawa period.

### ASIAN 560 Problems in Asian Art: Water & Politics in Southeast Asia (also ART H 580)

### ASIAN 601 Southeast Asia Seminar: Indonesia (also GOVT 652)
- **Fall. 3-4 credits. Not offered 2000-2001. J. Siegel.**
- The course will serve as an introduction to Indonesia, considered in several dimensions: nationalist Indonesia, ethnic Indonesia, the recent history of nationalism and the politics of the present, minority problems, etc. No knowledge of Indonesian is required.

### ASIAN 602 Southeast Asia Seminar: Thailand
- **Spring. 4 credits. K. Kesboonchoo-Mead.**

### ASIAN 603 Southeast Asia Topical Seminar: Sociology of Natural Resources & Development (also R SOC 607)
- **Fall. 3 credits. Not offered 2000-2001. P. Gilbert.**
- Building on theories in the sociology of development, this seminar will examine the role of natural resource extraction, processing, and exports to global markets in the development trajectories of nations in Asia, Africa, and Latin America. This course engages students in both theoretical debates and practical implications of resource access, control, and conflict amongst various social stakeholders. Detailed historical cases will be examined primarily from Southeast Asia (Indonesia, Malaysia, Philippines).)

### ASIAN 604 Southeast Asia Topical Seminar
- **Spring. 3-4 credits. Not offered 2000-2001. Staff.**

### ASIAN 605-606 Master of Arts Seminar in Asian Studies
- 605, fall; 606, spring. 2-4 credits. Staff.

### ASIAN 607-608 The Plural Society Revisited (also GOVT 653)
- 607, fall; 608, spring. 4 credits. 607 may be taken independently for credit. 607 is a prerequisite for 608. B. Anderson. See GOVT 653 for description.

### ASIAN 609 Modern Japanese Studies: The Formation of the Field in History and Literature (also HIST 609)
- **Spring. 4 credits. Not offered 2000-2001. N. Sakai, J. V. Koschmann, B. de Bary. See HIST 609 for description.**

### ASIAN 610 SLA and the Asian Languages (also LING 609)
- **Fall. 4 credits. Not offered 2000-2001. Y. Shirai. See LING 609 for description.**
ASIAN 612 Japanese Bibliography and Methodology
Fall. 1 credit. Prerequisite: permission of instructor. Required of honors students and M.A. candidates. F. Koiz.

ASIAN 613 Southeast Asian Bibliography and Methodology
Fall. 1 credit. Prerequisite: permission of instructor. A. Riedy.
This course is designed to instruct students in methods of identifying and locating resources for the study of Southeast Asia. Emphasis will be on the practical aspects of using various types of bibliographic tools to identify both primary and secondary sources in Southeast Asian and Western languages. Electronic databases and online services as well as traditional printed resources will be covered. Relevant arcsana of library science will be explained as necessary. Required of honors students and Master of Arts candidates. No foreign language competence is required but a reading knowledge of at least one Southeast Asian language or other Asian language (especially Chinese or Japanese) and a major European language (especially French, Spanish, or Dutch) is highly desirable.

ASIAN 620 Paleanthropology of South Asia (also BIODES 671 and ANTHRR 671)
Fall. 3 credits. K. Kennedy. See BIODES 671 for description.

[ASIAN 623-624 Topics in South Asia 623, fall; 624, spring. 1 credit. Not offered 2000–2001. Staff]
A series designed to introduce as well as enhance and build on students' knowledge of various topics of importance to South Asia (Bangladesh, India, Nepal, Pakistan, and Sri Lanka). Weekly lectures will survey contemporary themes in South Asian scholarship where visiting scholars and members of the Cornell community will discuss a multidisciplinary range of issues. These may include science and nation building, ritual power and resistance, tribal communities and the environment; industrial and agrarian relations; gender and the media; and economic liberalization. A short essay will be required at the end of the course.

A survey of texts and secondary literature about Vietnamese speakers from the Hong Duc era (end of the fifteenth century) to the founding of the Nguyen dynasty (beginning of the nineteenth century). Required work will include class presentations, short essays, and a seminar paper representing new research.

ASIAN 676 Reading Seminar: Thai Political Novel
Fall or spring. 3–4 credits. T. Chaloemtiarana.

In recent years some studies have been published about the questions of gender and race in the fields related to East Asia. Yet, compared with the accumulated factual knowledge about these topics, little attention has been paid to how to conceptualize gender and race, how to analyze the mutual implication of sexism and racism, and how to understand the relationships of these topics to the broader contexts of colonialisms, imperialisms, and nationalisms. This course is designed to offer a series of discussions about the following problems: (1) the historically specific modes of sexism and racism in social spaces which are related to Japan and other areas in East Asia; (2) the mutual implication of sexism and racism in various contexts including those of colonialism, imperialism, and nationalism; (3) the roles of gender and race in the production of knowledge about Japan and East Asia in general; and (4) the conceptions of gender and race in the social formations particular to East Asia. The assigned readings include both English and Japanese materials. However, those who register in AS 688 are exempt from reading the Japanese materials. *Students are allowed to take this course either as AS 688 or as AS 698, although those who have studied Japanese for more than four years are strongly encouraged to register in AS 688. Those who register in AS 688 have to spend additional time in class in order to deal with texts in Japanese.

ASIAN 701–702 Seminar in East Asian Literature
701, fall; 702, spring. 1–4 credits. Staff.

ASIAN 703–704 Directed Research
703, fall or spring; 704, fall or spring. 1–4 credits. Staff.

ASIAN 899 Master's Thesis Research
Fall, spring. 2–4 credits. Staff.

ASIAN 999 Doctoral Dissertation Research
Fall, spring. 2–4 credits. Staff.

Hons Courses

ASIAN 401 Asian Studies Honors Course
Fall or spring. 4 credits. Intended for seniors who have been admitted to the honors program. Staff. Supervised reading and research on the problem selected for honors work.

ASIAN 402 Asian Studies Honors: Senior Essay
Fall or spring. 4 credits. Prerequisite: admission to the honors program. Staff. The student, under faculty direction, prepares an honors essay.

ASIAN 403–404 Asian Studies Supervised Reading
Fall, spring, or both. 3–4 credits. Prerequisite: permission of instructor. Open to majors and other qualified students. Intensive reading under the direction of a member of the staff.

Bengali

BENGALI 121–122 Elementary Bengali
121, fall; 122, spring. 3 credits each term. Prerequisite: for Bengali 122, Bengali 121 or examination. D. Susan.
The emphasis is on basic grammar, speaking, and comprehension skills; Bengali script will also be introduced.

BENGALI 201–202 Intermediate Bengali
201, fall; 202, spring. 3 credits each term. Prerequisites: for Bengali 201, Bengali 122 or examination; for Bengali 202, Bengali 201 or examination. D. Susan.
Continuing instruction in grammar with attention to speaking and reading skills.

BENGALI 203–204 Intermediate Bengali Composition and Conversation
203, fall; 204, spring. 3 credits each term. Prerequisites: for Bengali 203, Bengali 122 or examination; for Bengali 204, Bengali 203 or examination. D. Susan.
Continuing instruction in grammar with attention to writing skills.

BENGALI 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. D. Sudan.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

BENGALI 303–304 Bengali Literature I, II
303, fall; 304, spring. 4 credits each term. Prerequisites: Bengali 203–204 or equivalent. D. Sudan.
An introduction to noted Bengali writers. Selections of works by Rabindranath Tagore and Abanindranath Tagore and short stories by Bonophul will be covered. The course will be devoted to reading these works and developing literary criticism and creative writing in Bengali.

Burmese

NOTE: Contact S. Tun in Morrill Hall 405 before classes begin for placement or other testing and organizational information.

BURM 103–104 Burmese Conversation Practice
103, fall; 104, spring. 2 credits each term. Prerequisites: for Burmese 104, Burmese 103 and Burmese 121. May not be taken alone. Must be taken simultaneously. Burmese 121–122. Satisfactory completion of Burmese 104/122 fulfills the qualification portion of the language requirement. D. Sudan.

Additional drills, practice, and extension of materials covered in Burmese 121 and 122. These courses are designed to be attended simultaneously with Burmese 121–122 respectively, allowing students to obtain qualification within a year.

BURM 121–122 Elementary Burmese
121, fall; 122, spring. 4 credits each term. Prerequisite: for Burmese 122, Burmese 121. May be taken alone or simultaneously with Burmese 103–104. Satisfactory completion of Burmese 104/122 fulfills the qualification portion of the language requirement. D. Sudan.
A thorough grounding is given in all language skills: listening, speaking, reading, and writing.

BURM 123 Continuing Burmese
Fall. 4 credits. Prerequisite: Burmese 122. Satisfactory completion of Burmese 123 fulfills the qualification portion of the language requirement. D. Sudan.
Continuing instruction in conversational and reading skills, to prepare students for 200-level courses.
Burmese

BURM 201-202 Intermediate Burmese Reading
201, fall or spring; 202, fall or spring. 3 credits each term. Prerequisites: Burmese 201, Burmese 123; for Burmese 202, Burmese 201. S. Tun.

Continuing instruction in Burmese, with emphasis on consolidating and extending conversational skills, and on extending reading ability.

BURM 300 Directed Studies
Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. S. Tun.

Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

BURM 301-302 Advanced Burmese @
301, fall or spring, 302, fall or spring. 3 credits each term. Prerequisites: for Burmese 301, Burmese 202 or permission of instructor; for Burmese 302, Burmese 301. S. Tun.

Continuing instruction on conversational and literary skills, but with special emphasis on reading. Students encounter various genres and styles of written Burmese. Readings will include articles on current events, and either several short stories or a novel. Focus is on developing reading skills, particularly on vocabulary development, consolidating and expanding grammar, and appreciating stylistic and cultural differences.

BURM 303-304 Advanced Burmese II
303, fall or spring; 304, fall or spring. 3 credits each term. Prerequisite: for Burmese 303, Burmese 202 or permission of instructor; for Burmese 304, Burmese 303. S. Tun.

This is a course for students who have good conversational ability in Burmese and some familiarity with Burmese culture, but who need to strengthen reading skills and further enrich their vocabulary. Students will, in consultation with the instructor, be able to select reading materials. There will also be an opportunity for those who need it, to strengthen listening skills, through the study of current films, TV, and radio programs in Burmese.

BURM 401-402 Directed Individual Study
401, fall; 402, spring. 2-4 credits variable each term. Prerequisite: permission of instructor. S. Tun.

This course is designed to accommodate the needs of advanced or specialized students, and faculty interests. Topics of reading and discussion are selected on the basis of student need.

Cambodian

See Khmer.

Chinese

NOTE: Testing for placement, except for those with near-native abilities (particularly those schooled in a Chinese setting up until the age of about 12) takes place in registration week, before classes begin. Time and place will be posted on the web at dmi.comell.edu and the Chinese bulletin board opposite Morrill 416. Students with some Chinese schooling who want to obtain 3 or 6 credits for their proficiency will be tested at the beginning of the second week of classes. Again, the time and place will be announced.

CHIN 101-102 Elementary Standard Chinese ('Mandarin')
101, fall, 102, spring. 6 credits each term. Prerequisite: Chinese 102, Chinese 101, or equivalent. You must enroll in lecture and 1 section. Since each section is limited to 10-12 students, students missing the first 2 class meetings without a university excuse or others may register. No student will be added after the second week of classes. Satisfactory completion of Chinese 102 fulfills the qualification portion of the language requirement. Staff.

A course for beginners primarily for students who have had little or no formal training in Chinese ('Mandarin'). Students who do not read characters should take 109-110. Students who want Chinese, but who speak 'dialects,' such as Cantonese or Amoy, should consult with the staff before enrolling.

CHIN 109-110 Beginning Reading and Writing (Standard Chinese)
109, fall, 110, spring. 4 credits each term. Prerequisite: for Chinese 110 normally continue with Chinese 209 and 210. Because of high demand for this course, students missing the first 2 meetings without a university excuse are dropped so others may register. Satisfactory completion of Chinese 110 fulfills the qualification portion of the language requirement. F. Lee Mehta.

This course gives a thorough grounding in conversational and reading skills. Students with some facility in the spoken language (because Chinese is spoken at home) but who do not read characters should take 109-110. Students who want Chinese, but who speak 'dialects,' such as Cantonese or Amoy, should consult with the staff before enrolling.

CHIN 111-112 Beginning Cantonese (Spoken)
111, fall; 112, spring. 3 credits each term. Prerequisite: for Chinese 112, Chinese 111 or equivalent. Chinese 111-112 only satisfies the qualification portion of the language requirement if the student can also demonstrate a comparable reading ability. H. Huang.

A course in conversational standard Cantonese (as spoken in Hong Kong and Canton) for beginners. Students need not have a Mandarin background to take this course, but those with elementary reading skills will also be introduced to Cantonese (character) writing.

CHIN 113-114 Beginning Reading for Cantonese Speakers
113, fall; 114, spring. 3 credits each term. Prerequisite: everyday conversational ability in Cantonese. Completion of 114 satisfies the qualification portion of the language requirement. H. Huang.

This course is intended primarily for students who speak some Cantonese (e.g., at home), but who have had little or no formal training in writing. The focus is on characters, reading comprehension, standard grammar, and reading aloud with Cantonese pronunciation.

CHIN 209-210 Intermediate Reading and Writing @
209, fall, 210, spring. 4 credits each term. Prerequisites: for Chinese 209, Chinese 110 or equivalent; Chinese 210, Chinese 209. Satisfactory completion of 209 fulfills the proficiency portion of the language requirement. After completing 210, students may only take 400-level courses in Chinese. X. Sun.

Continuing focus on reading and writing for students with spoken background in standard Chinese, introduction of personal letter writing and other types of composition.

CHIN 211-212 Intermediate Cantonese
211, fall; 212, spring. 4 credits each term. H. Huang.

Continuing instruction in spoken Cantonese in characters (Cantonese and Mandarin), reading comprehension, and reading aloud with Cantonese pronunciation.

CHIN 300 Directed Studies
Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. Staff. Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

CHIN 301-302 High Intermediate Chinese
301, fall; 302, spring. 4 credits each term. Prerequisites: for Chinese 301, Chinese 202 or equivalent; for Chinese 302, Chinese 301. F. Lee Mehta.

Continuing instruction in spoken Chinese and in various genres and styles of written Chinese.

CHIN 411-412 Advanced Chinese: Fiction, Reportage, Current Events
411, fall; 412, spring. 4 credits each term. Prerequisites: for Chinese 411, Chinese 302 or equivalent; for Chinese 412, Chinese 411 and permission of instructor required. Q. Teng.

Reading, discussion, and composition at advanced levels.

CHIN 425 Special Topics
Fall or spring, according to demand. 4 credits. Prerequisite: permission of instructor. Staff.

A number of different topics in advanced Chinese language, advertised the previous semester, will be offered under this title to accommodate the needs of advanced or specialized students, and take advantage of faculty interests. Topics may include: correspondence and composition, excerpts from classical novels, Ch'ing documents, xiesheng comedy routines, etc. May be repeated for credit.
Chinese FALCON (Full-year Asian Language CONcetration)

For full information, brochures, etc., see the FALCON secretary 125 Rockefeller Hall (e-mail: falcon@cornell.edu).

CHIN 160 Introductory Intensive Mandarin
Summer only. 8 credits. Completion of 160 fulfills the qualification portion of the language requirement. S. Hoare and staff. Introduction to spoken and written Mandarin. Lectures on linguistic and cultural matters, intensive practice with native speakers, and laboratory work. Students who complete this course with a grade of at least B are normally eligible to enroll in Chinese 201.

CHIN 161-162 Intensive Mandarin @
161, fall; 162, spring. 16 credits each term. Prerequisites: for Chinese 161, Chinese 160 or equivalent or permission of instructor; for Chinese 162, Chinese 161. Satisfactory completion of Chinese 161 fulfills the proficiency portion of the language requirement. S. Hoare and staff.

Literature in Chinese

CHLIT 213-214 Introduction to Classical Chinese @ #
213, fall; 214, spring. 3 credits each term. Prerequisite: qualification in Chinese or permission of instructor. May be taken concurrently with Chinese 101–102, 201–202, 301–302. R. McNeal.

CHLIT 300 Reading from the Early Masters
Fall. 4 credits. Prerequisites: CHLIT 213-214 or permission of instructor. R. McNeal. Students will read and discuss several passages from early classical texts, including the Confucian Analects, the Mozi, the Guanzi, and others. Attention will be paid to grammar, historical context, and methodology. Students who have not completed one year of classical Chinese at Cornell need permission from the instructor to register.

CHLIT 420 T'ang and Sung Poetry @ #
Spring. 4 credits. Prerequisite: permission of instructor. T. L. Mei. Readings in the original Chinese, together with secondary works by Chinese and Western critics.

CHLIT 421-422 Directed Study
Fall or spring. 2-4 credits each term. Prerequisite: permission of instructor. Staff.

CHLIT 423 Readings in Chinese History
Fall. 4 credits. Staff. Selected Readings.

CHLIT 424 Readings in Literary Criticism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered 2000–2001. T. L. Mei.

CHLIT 426 History of the Chinese Language (also CHIN 403) @ #
Spring. 4 credits. Prerequisite: reading knowledge of Chinese. T. L. Mei. This course explores the development of the Chinese language from its Sino-Tibetan beginnings to the present. Topics covered include changes in sound, vocabulary and grammatical structure, external influences, Old Chinese, Middle Chinese, and historical origins of modern dialects.

CHLIT 435 Chinese Buddhist Texts @ #
Fall. 4 credits. Prerequisite: 1 year of literary Chinese or permission of the instructor. Not offered 2000–2001.

CHLIT 603 Seminar in Chinese Fiction and Drama
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2000–2001. E. Gunn.

CHLIT 605 Seminar in Chinese Fiction and Drama

CHLIT 607 Early Medieval Chinese Poetry

CHLIT 610 Chinese Cultural Criticism

CHLIT 621-622 Advanced Directed Reading: Chinese Historical Syntax
621, fall; 622, spring. 2–4 credits. Prerequisite: permission of instructor. Staff.

Hindi

HINDI 101-102 Elementary Hindi-Urdu
101, fall; 102, spring. 6 credits each term. Prerequisite: for Hindi 102, Hindi 101 or equivalent. M. Farooqi.

HINDI 201-202 Intermediate Hindi Reading @
201, fall; 202, spring. 3 credits each term. Prerequisites: for Hindi 201, Hindi 102; for Hindi 202, Hindi 201 or permission of instructor. M. Farooqi.

HINDI 203-204 Intermediate Composition and Conversation @
203, fall; 204, spring. 3 credits each term. Prerequisites: for Hindi 203, Hindi 102; for Hindi 204, Hindi 203 or permission of instructor. Not offered 2000–2001.

HINDI 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. M. Farooqi.

HINDI 301-302 Advanced Readings in Hindi Literature @
301, fall; 302, spring. 4 credits each term. Prerequisites: for Hindi 301, Hindi 202; for Hindi 302, Hindi 301 or equivalent. M. Farooqi.

HINDI 303-304 Advanced Composition and Conversation @
303, fall; 304, spring. 4 credits each term. Prerequisites: for Hindi 303, Hindi 204 or equivalent; for Hindi 304, Hindi 303 or equivalent. Not offered 2000–2001. M. Farooqi.

Indonesian

For students who have completed Indonesian 121-122-123 or its equivalent there is the option of a one-semester program in Malang, East Java, during the junior year. The program combines a variety of cultural and artistic options with area course work and advanced language study. Complete information is available through Cornell Abroad.

Students who have completed a minimum of 18 credits or the equivalent are eligible to apply for a summer program in the Advanced Indonesian Abroad Program. Further information is available from Professor John Wolff (307 Morrill Hall, 255–0733).

INDO 121-122 Elementary Indonesian
121, fall; 122, spring. 4 credits each term. Prerequisite: for Indonesian 122, Indonesian 121. J. Wolff and staff.

A thorough grounding is given in basic speaking and listening skills with an introduction to reading.

INDO 123 Continuing Indonesian
Fall. 4 credits. Prerequisite: Indonesian 122 or equivalent. Satisfactory completion of Indonesian 123 fulfills the qualification portion of the language requirement. Not offered 2000–2001. J. Wolff and staff.
Improves speaking skills, such as fluency and pronunciation, focusing on verbal communication skills; offers a wide range of readings and sharpeners listening skills.

**[INDO 203-204 Intermediate Composition and Conversation]**

203, fall; 204, spring. 3 credits each term. Prerequisites: for Indonesian 203, Indonesian 123; for Indonesian 204, Indonesian 203 or permission of instructor. Not offered 2000–2001. J. Wolff and staff.

**[INDO 205-206 Intermediate Indonesian]**

205, fall; 206, spring. 3 credits each term. Prerequisites: for Indonesian 205, Indonesian 123 or equivalent; for Indonesian 206, Indonesian 205 or equivalent. Satisfactory completion of Indonesian 205 fulfills the proficiency portion of the language requirement. Not offered 2000–2001. J. Wolff and staff. This course develops all four skills: reading, writing, speaking, and comprehension.

**[INDO 300 Directed Studies]**

Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. J. Wolff.

Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

**[INDO 301-302 Advanced Readings in Indonesian and Malay]**

301, fall; 302, spring. 4 credits each term. Prerequisites: for Indonesian 301, Indonesian 205–206 or equivalent; for Indonesian 302, Indonesian 301. Not offered 2000–2001. J. Wolff and staff.

**[INDO 303-304 Advanced Indonesian Conversation and Composition]**

303, fall; 304, spring. 4 credits each term. Prerequisites: for Indonesian 303, Indonesian 205 and 206; for Indonesian 304, Indonesian 303 or equivalent. Not offered 2000–2001. J. Wolff and staff.

**[INDO 305-306 Directed Individual Study]**

305, fall; 306, spring. 2–4 credits. Prerequisites: Indonesian 301–302 and 303–304 or equivalent knowledge of Indonesian or Malay. J. Wolff and staff.

A practical language course on an advanced level in which the students will read materials in their own field of interest, write reports, and meet with the instructor for two hours a week for two credits and twice a week for four credits.

**[INDO 401-402 Advanced Readings in Indonesian and Malay Literature]**

401, fall; 402, spring. 4 credits each term. Prerequisites: for Indonesian 401, Indonesian 302 or equivalent; for Indonesian 402, Indonesian 401 or equivalent. Not offered 2000–2001. J. Wolff and staff.

**[FALCON (Full-year Asian Language Concentration)]**

**[INDO 161-162 Intensive Indonesian]**

161, fall; 162, spring. 16 credits each term. Prerequisite: permission of instructor. Not offered 2000–2001. J. Wolff and staff.

---

**Japanese**

**JAPAN 101-102 Elementary Japanese**

101, fall; 102, spring. 6 credits each term. Prerequisite for Japanese 102: Japanese 101 or placement by the instructor during registration period. Intended for beginners or for those who have been placed in the course by examination. You must enroll in lecture and 1 section. R. Sukle and staff. A thorough grounding in all four language skills—speaking, hearing, reading, writing—at the beginning level, but with a special emphasis on oral communication and actual use of the language in social context.

Homework for the course is largely work on the skill aspects of language through practice in the language lab with tapes or CD-ROM. The lecture provides explanation, analysis, and cultural background necessary for successful interaction with Japanese people. The sections are conducted entirely in Japanese. Materials covered are not the same as for Japanese 141–142.

**JAPAN 121 Continuing Japanese**

Fall. 6 credits. Prerequisite: placement by the instructor at beginning of semester. Sections will co-meet with JAPAN 101–102 sections. Staff.

Accelerated training in listening, speaking, reading, and writing with special emphasis on oral communication. For students who have already acquired a limited facility in Japanese through residence in Japan or through brief formal study and require fewer contact hours per week.

**JAPAN 141-142 Beginning Japanese at a Moderate Pace**

141, fall; 142, spring. 4 credits each term. Prerequisite for Japanese 142: Japanese 141 or placement by instructor during registration period. Y. Shirai and staff.

Beginning level training in listening, speaking, reading, and writing, with more emphasis on written skills than Japanese 101–102. Classroom activities focus on oral communication skills. Homework for the course is largely written exercises. Fewer class contact hours than Japanese 101–102; the course meets five hours per week (MTWRF). Materials covered are not the same materials as Japanese 101–102.

**JAPAN 201-202 Intermediate Japanese Conversation**

201, fall and summer; 202, spring and summer. 4 credits each term. Prerequisites: for Japanese 201, Japanese 102 or placement by the instructor during registration; for Japanese 202, Japanese 201 and 203 or placement by the instructor during registration. You must enroll in lecture and 1 section. N. Nakada.

Reading of elementary texts emphasizing practical materials, with development of writing skills.

**JAPAN 241-242 Intermediate Japanese at a Moderate Pace**

241, fall; 242, spring. 4 credits each term. Prerequisites: for Japanese 241, Japanese 142 or placement by instructor during registration period; for Japanese 242, Japanese 241 or placement by instructor. Y. Kawasaki and staff.

Training in listening, speaking, reading, and writing for those students who have acquired a basic beginning-level command.

**JAPAN 251-252 Elementary/Intermediate Japanese**

251, fall; 252, spring. 4 credits each term. Prerequisites: for Japanese 251, Japanese 150 or placement by instructor during registration period; for Japanese 252, Japanese 251, 102, or placement by instructor during registration period. Not offered 2000–2001. Y. Nakamishi-Whitman.

Training in listening, speaking, reading, and writing for those students who have acquired a basic beginning-level command. Provides an alternate choice for students who find it difficult to schedule the more intensive Japanese 201, 203 and 202, 204 into their schedules: MBA students, engineering students, hotel school students, arts college students, and others identical with 541–552. Can be followed by Japanese 351–352.

**JAPAN 300 Directed Studies**

Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Staff.

Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

**JAPAN 301-302 Communicative Competence**

301, fall; 302, spring. 3 credits each term. Prerequisites: for Japanese 301, Japanese 202 and placement by the instructor during registration; for Japanese 302, Japanese 301 or placement by the instructor during registration. Y. Katagiri.

This is a course for students who have learned basic Japanese grammar and oral skill and would like to use their language skills for natural conversation and effective oral communication. The course is intended to: (1) expand vocabulary for daily life use, (2) brush up on knowledge of basic grammar for fluency, and (3) develop communicative skills for varied situations.

**JAPAN 303-304 Intermediate Japanese Reading II**

303, fall; 304, spring. 4 credits each term. Prerequisites: for Japanese 303, Japanese 202 or placement by the instructor during registration; for Japanese 304, Japanese 303 or placement by the instructor during registration. K. Selden.

Reading of selected modern texts with emphasis on expository style.

**JAPAN 351-352 Advanced Japanese at a Moderate Pace**

351, fall; 352, spring. 4 credits each term. Prerequisites: for Japanese 351, Japanese 252 or placement by instructor during registration period; for Japanese 352, Japanese 351 or placement by instructor during registration period. Not offered 2000–2001. Y. Katagiri.

Training in intermediate to advanced listening and speaking, and continued work on reading and writing. Provides an alternate choice for students who find it difficult to schedule the more intensive Japanese 201, 203 and 202, 204.
into their schedules: MBA students, engineering students, hotel school students, arts college students, and others. Also highly recommended for those with prior background in the language who are weak in the more complex and difficult grammar patterns.}

**JAPAN 401-402 Oral Narration and Public Speaking**
401. fall; 402. spring. 2 credits each term.
Prerequisites: for Japanese 401, Japanese 301. Placement by the instructor during registration.
Instruction in making and delivering socially appropriate and effective speeches, with emphasis on both the construction of discourse and Japanese patterns of oral delivery.

**JAPAN 403-404 Advanced Japanese Reading**
403. fall; 404. spring. 4 credits each term.
Prerequisite: Japanese 304 or permission of instructor.
Section I: Area of Humanities. Cannot be used for distribution. K. Selden. Reading of selected modern texts with emphasis on expository style.
Section II: Area of Economics and Social Science. Cannot be used for distribution. Y. Kawasak. Reading of selected modern texts with emphasis on expository style.

**JAPAN 410 History of the Japanese Language (also LING 411)**
Fall. 4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 2000–2001. J. Whitman.
An overview of the history of the Japanese language followed by intensive examination of issues of interest to the participants. Students should have a reading knowledge of Japanese.

**JAPAN 414 Linguistic Structure of Japanese (also LING 404)**
Fall. 4 credits. Prerequisites: Japanese 102 or permission of instructor and Linguistics 101 or equivalent introductory course in linguistics. Offered alternate years. Not offered 2000–2001. J. Whitman.
Introduction to the linguistic study of Japanese, with an emphasis on morphology and syntax.

**JAPAN 421-422 Directed Readings**
421. fall; 422. spring. Credit TBA. Limited to advanced students. Prerequisite: placement by the instructor during registration. K. Selden.
Topics are selected on the basis of student needs.

**JAPAN 551-552 Intermediate Japanese for Business School Students**
551. fall; 552. spring. 4 credits each term.
Training in listening, speaking, reading, and writing for students who have already acquired a basic oral proficiency. Course times are arranged to accommodate those in the MBA program, but the material is oriented toward any student. Particularly suited to students who find it difficult to schedule the more intensive 201/203 or 202/204 courses into their schedules.

**JAPAN 555-556 Advanced Japanese for Business School Students**
555. fall; 556. spring. 4 credits each term.
Training in listening and speaking at intermediate to advanced level. continued work on reading and writing at intermediate level. Course times are arranged to accommodate those in the MBA program, but the material is oriented toward any student. Particularly suited to students who find it difficult to schedule the more intensive 202/204 courses into their schedules.

**Japanese FALCON (Full-year Asian Language Concentration)**
Director: R. Sukle, 122 Rockefeller Hall; FALCON Secretary 125 Rockefeller Hall, 255-6597.
There are three small interactive classes per day conducted entirely in Japanese and one lecture conducted in English and Japanese.
The interactive classes are conducted by experienced and highly trained native teachers; the lecture is conducted by an expert in Japanese language structure. Two one-hour sessions in the language lab are required daily. Additional preparation time in the language lab is necessary in the evenings. Exposure to the language exceeds that of even students living and studying in Japan, providing over 1,200 hours of exposure throughout the full-year program. The extensive exposure and intensive work on the language allows students to develop a level of fluency, accuracy, and control of the language not achieved in any other type of academic settings. The course is designed to develop "copability" in the students by bringing them up to the level where they will be able to successfully complete their language study on their own even if they do not have further formal instruction. The intensive nature of the program allows graduate students to complete their language work in minimal time and undergraduates, including freshmen, to achieve levels of Japanese that are far beyond what is normally achieved in a four-year program, provided they continue their study of Japanese after FALCON.

**JAPAN 160 Introductory Intensive Japanese (FALCON)**
Summer only. 8 credits. R. Sukle and staff. (See general description above.) This is the first term of the FALCON Program. It is a full-time, intensive, nine-week course which begins at the absolute beginning level, in speaking as well as rudimentary reading and writing. Formal application must be made to the program (see above), but admission is open to all students, not just those planning to take the full-year program. Students completing this course can move smoothly into their study of Japanese after FALCON.

**JAPAN 161-162 Intensive Japanese (FALCON)**
161. fall; 162. spring. 16 credits each term.
Prerequisites: for Japanese 161, Japanese 160, or Japanese 102 at Cornell, or placement by FALCON staff prior to beginning of fall term; for Japanese 162, Japanese 161, or placement by FALCON staff prior to beginning of spring term. Students must apply formally to program (see above); application open to all Cornell students and students from other institutions. R. Sukle and staff.
(See general description above.) Work on spoken and written Japanese from an intermediate level to an advanced level. This is a full-time program and full academic load: the demands of the program do not normally permit students to take other courses simultaneously. With a sequence of 160-161-162, in only one calendar year a student can complete as much Japanese as would be contained in three or more years of regular study at most academic institutions. This course sequence also serves to fulfill the language requirement for the M.A. in Asian studies and the joint M.B.A./M.A. in Asian studies.

**Literature in Japanese**

**JPLIT 406 Introduction to Classical Japanese (FALCON)**
Fall. 4 credits. Prerequisite: permission of instructor. K. Brazell.

**JPLIT 421-422 Directed Readings**
421. fall; 422. spring. 2-4 credits. Prerequisite: for JPLIT 421, Japanese 402 or equivalent; for JPLIT 422, Japanese 421 or equivalent. Staff.

**JPLIT 611 Seminar in Classical Japanese Literature**
Spring. 2-4 credits. Prerequisite: permission of instructor. Offered alternate years. K. Brazell.
For advanced graduate students in the field of East Asian literature. This seminar will focus on the reading of classical Japanese literature in its original literary-critical texts in relation to a selected topic in classical literature.

**JPLIT 612 Seminar in Medieval Genre**
This seminar will explore medieval literary genres in the context of the contemporary religious, social, political, and aesthetic discourses. Readings will be in classical and modern Japanese as well as in English.

**JPLIT 613 Seminar in Tokugawa Culture and Thought**
Spring. 2-4 credits. Prerequisite: permission of instructor. Offered alternate years. N. Sakai.
This seminar will examine a variety of texts written during the Tokugawa period. The topics discussed in these texts are: from the concept of Confucianism to the composition of Waka poetry. The texts are not selected from one school or from one teaching but encompass a wide range of intellectual trends including Neo-Confucianism, the Kogaku and the Kogakusa. In addition to the original texts of the Tokugawa period, we are going to read a few works of modern historiography on Tokugawa thought and culture. These works...
do not necessarily represent the standard of the present-day Tokugawa studies, but they clearly show different approaches. In this seminar, we will evaluate critically these works through a careful reading of the original texts of the Tokugawa period.

[JPLIT 614 Seminar in Modern Japanese Literature (also COM L 695)]
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2000–2001. B. de Bary.

How might postmodern debates on language and difference transform our understanding of the project of cross-cultural learning institutionalized in postwar American area studies? Intended as an introductory course for graduate students, this class will emphasize weekly readings of important texts which have grappled with, or attempted to challenge, epistemological assumptions, categories, and processes which have informed modern disciplinary knowledge of cultural others. All readings will be done in English and will attempt to trace the contours of debate over broad theoretical issues whose relevance is by no means confined to the question of area studies. Readings will include texts by Rosi Braidotti, Rey Chow, James Clifford, Jacques Derrida, Gilles Deleuze, William Haver, Luce Irigaray, Alice Jardine, and others.

Graduate-Level Reading Courses

[JPLIT 621 Advanced Readings in Pre-Modern Japanese Narrative Literature]
Fall or spring. 2–4 credits. Prerequisite: permission of instructor. Not offered 2000–2001. K. Brazell.

[JPLIT 622 Advanced Readings in Pre-Modern Japanese Poetry]

[JPLIT 623 Advanced Readings in Pre-Modern Drama]
Fall or spring. 2–4 credits. Prerequisite: permission of instructor. Not offered 2000–2001. K. Brazell.

[JPLIT 624 Advanced Readings in Modern Japanese Literature]
Spring. 4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 2000–2001. B. de Bary.
The course will consider representations of the body and eroticism in fiction, poetry, film, and theoretical writings from the Taisho through early Showa periods (1912 to the late 1930s). Special attention will be given to writings about the “New Woman” and “Modern Girl,” to sexuality in modernist cinematic and literary experiments, and to reciprocal relations between colonial and metropolitan culture. All readings will be done in Japanese.

JLVIT 700–701 Seminar: Reading of Historical Materials—Japanese Imperial Nationalism and Its Literature
700, fall; 701, spring. 4 credits. N. Sakai.

[JAVANESSE]

[JAVA 131–132 Elementary Javanese]
131, fall; 132, spring. 3 credits each term. Prerequisite: for Javanese 152, Javanese 151 or equivalent. This language series (131–132) cannot be used to satisfy the language requirement. Not offered 2000–2001. J. Wolff and staff.

An elementary language course for those who have had no previous experience in the language.

[JAVA 133–134 Continuing Javanese]
133, fall; 134, spring. 5 credits each term. Prerequisites: for Javanese 133, Javanese 132 or equivalent; for Javanese 134, Javanese 133 or equivalent. Satisfactory completion of Javanese 134 fulfills the qualification portion of the language requirement. Not offered 2000–2001. J. Wolff and staff.

An intermediate conversation and reading course.

[JAVA 203–204 Directed Individual Study]
203, fall; 204, spring. 3 credits. Prerequisite: Javanese 134 or equivalent. Not offered 2000–2001. J. Wolff and staff.

This is a practical language course on an intermediate level in which the student will work through readings and conversations under the guidance of a native speaker for three contact hours a week.

[JAVA 300 Directed Studies]
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Not offered 2000–2001. J. Wolff.

Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

Khmer (Cambodian)

[KHMER 101–102 Elementary Khmer]
101, fall; 102, spring. 6 credits each term. Prerequisite: permission of instructor. Not offered 2000–2001. J. Wolff.

A course for beginners or for those who have been placed in the course by examination. The course gives a thorough grounding in speaking and reading.

[KHMER 201–202 Intermediate Khmer]
Reading @ 201, not offered 2000–2001; 202, fall. 3 credits each term. Prerequisites: for Khmer 201, Khmer 102, Khmer 101 or equivalent. Not offered 2000–2001. Staff.

A course for beginners or for those who have been placed in the course by examination. The course gives a thorough grounding in speaking and reading.

[KHMER 203–204 Intermediate Composition and Conversation @ 203, fall; 204, spring. 3 credits each term. Prerequisites: for Khmer 203, Khmer 102; for Khmer 204, Khmer 203. Not offered 2000–2001. Staff.

Letter writing and other forms of composition.

Khmer 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Not offered 2000–2001. J. Wolff.

Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

Khmer [301–302 Advanced Khmer @ 301, not offered 2000–2001; 302, fall. 4 credits each term. Prerequisites: for Khmer 201, Khmer 202 or equivalent; for Khmer 302, Khmer 301. S. Son.

Continuing instruction in spoken and written Khmer; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

[KHMER 401–402 Directed Individual Study]
401, fall; 402, spring. For advanced students. 2–4 credits each term. Prerequisite: permission of instructor. Not offered 2000–2001. Staff.

Various topics according to need.

Korean

[KOREA 101–102 Elementary Korean]
101, fall; 102, spring. 6 credits each term. Prerequisite completion of Korean 102 fulfills the qualification portion of the language requirement. H. Diffloth and staff.

Covers basics of speaking, reading, and writing. Introduces Hangul writing system and grammar.

[KOREA 109–110 Elementary Reading]
109, fall; 110, spring. 3 credits each term. Prerequisite: permission of instructor. Satisfactory completion of Korean 110 fulfills the qualification portion of the language requirement. H. Diffloth and staff.

This course is for students who have spoken some Korean in the home, but whose reading and writing skills are limited or nonexistent. If in doubt about eligibility, see instructor.

[KOREA 201–202 Intermediate Korean @ 201, fall; 202, spring. 4 credits each term. Prerequisites: for Korean 201, Korean 202 or permission of instructor; for Korean 202, Korean 201. Satisfactory completion of Korean 201 fulfills the proficiency portion of the language requirement. H. Diffloth and staff.

Covers the basics of speaking, reading, and writing at the intermediate level. Introduces some reading and writing with Chinese characters.

[KOREA 209–210 Intermediate Reading]
209, fall; 210, spring. 4 credits each term. Prerequisites: for Korean 209, Korean 210 or permission of instructor; for Korean 210, Korean 209 or permission of instructor. Satisfactory completion of Korean 209 fulfills the proficiency portion of the language requirement. H. Diffloth and staff.

An intermediate level of reading comprehension and writing course for students who have acquired basic oral proficiency. Introduces some reading and writing with Chinese characters. If in doubt about eligibility, see instructor.

[KOREA 300 Directed Studies]
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Not offered 2000–2001. H. Diffloth.

Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.
Juniors and seniors in good academic standing may participate in the Cornell-Nepal Study Program, and to undertake rigorous field research. No experience in Nepal is necessary. Students may participate in one or two semesters. Courses are offered both at Tribhuvan University and at the Cornell-Nepal Study Program House adjacent to the university. All courses are officially taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

NEPAL 301-302 Advanced Nepali
Fall, 1st term; spring, 2nd term. 6 credits each term. Prerequisite: Nepali 201, or permission of instructor. S. Oja.

NEPAL 160 Intensive Nepali
Summer only. 6 credits. Intended for beginners. Offered alternate years. S. Oja. Emphasis will be on the spoken language, in dialogues, exercises, and conversation practice. In addition, however, special attention is given to assisting students to develop vocabularies and abilities appropriate to their unique professional needs. Reading and writing practice use both colloquial and scholarly materials in the Nepali (Devanagari) script.

Sanskrit

[SANSK 131-132 Elementary Sanskrit (also CLASS 131-132 and LING 131-132)]
131, fall; C. Minkowski; 132, spring, staff. 4 credits each term. Not offered 2000-2001. An introduction to the essentials of Sanskrit grammar. Designed to enable the student to read classical and epic Sanskrit as quickly as possible.

[SANSK 251-252 Intermediate Sanskrit (also CLASS 251-252 and LING 251-252)]
251, fall; 252, spring. 3 credits each term. Prerequisite: Sanskrit 132 or equivalent. C. Minkowski.

Readings from the literature of classical Sanskrit. Fall: selections from the two Sanskrit epics, the Mahabharata and the Ramayana. Spring: more selections from the epics and selections from other Sanskrit literature.

Literature in Sanskrit

SNLIT 467-468 Reading in Sanskrit Literature: The Vedas @ #
Spring. 3 credits. Prerequisite: permission of instructor. C. Minkowski.

Readings in translation; readings in the original Vedic. Both courses must be taken as a sequence.

Sinhala (Sinhalese)

SINHA 101-102 Elementary Sinhala
Fall, 1st term; spring, 2nd term. 6 credits each term. Prerequisite: for Sinhala 102, Sinhala 101 or equivalent. Staff.

A semi-intensive course for beginners. A thorough grounding is given in all the language skills; listening, speaking, reading, and writing.

SINHA 160 Intensive Sinhala
Summer only. 6 credits. Intended for beginners. Offered alternate years. Emphasis is on the spoken (colloquial) language, the writing system is introduced and used to present all Sinhala materials, with additional reading practice with colloquial materials. A foundation is laid for later study of the written language (literary Sinhala).

SINHA 201-202 Intermediate Sinhala
Fall, 1st term; spring, 2nd term. 3 credits each term. Prerequisite: for Sinhala 202, Sinhala 201 or equivalent. Staff.

[SINHA 203-204 Intermediate Composition and Conversation]
203, fall; 204, spring. 3 credits each term. Prerequisite: for Sinhala 203, Sinhala 202 or permission of instructor; for Sinhala 204, Sinhala 203 or equivalent. Not offered 2000-2001. Staff.

SINHA 300 Directed Studies
Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. Staff. Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.
A thorough grounding is given in basic reading, speaking and listening skills with an introduction to cross-linguistic family influences and convergence.

TAG 121-122 Elementary Tagalog
121, fall; 122, spring. 4 credits each term. Prerequisite: for Tagalog 122, Tagalog 121.
A thorough grounding is given in basic speaking and listening skills with an introduction to reading.

TAG 123 Continuing Tagalog
Fall. 4 credits. Prerequisite: Tagalog 122 or equivalent. Satisfactory completion of Tagalog 123 fulfills the qualification portion of the language requirement. Not offered 2000-2001. J. Wolff and staff. Improves speaking skills, such as fluency and pronunciation, focusing on verbal communication skills; offers a wide range of readings; and sharpens listening skills.

TAG 205-206 Intermediate Tagalog
205, fall; 206, spring. 3 credits each term. Prerequisites: for Tagalog 205, Tagalog 123 or equivalent; for Tagalog 206, Tagalog 205 or equivalent. Satisfactory completion of Tagalog 205 fulfills the proficiency portion of the language requirement. Staff. This course develops all four skills: reading, writing, speaking, and comprehension.

TAG 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Staff. Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

Southeast Asian Languages

LING 230 Introduction to Southeast Asian Languages and Linguistics
This is a survey of the languages of Southeast Asia. The goal of this course is to expose students to Southeast Asia as a linguistic area and introduce them to the rich language diversity of the region. It includes three main parts: (1) sociolinguistic and ethnolinguistic issues of language and politics, language and culture, and language use; (2) language structures and typological patterns of the area’s languages; and (3) historical linguistics, as well as the linguistic effects of language contact and linguistic evidence for prehistory.

LING 653-654 Seminar in Southeast Asian Linguistics
653, fall; 654, spring. 4 credits each term. Prerequisite: permission of instructor. Language 653 isn’t a prerequisite for Language 654. Not offered 2000-2001. J. Wolff.
Languages of mainland Southeast Asia. Topics, chosen according to student interests, may include description, dialectology, typology, comparative reconstruction, and historical studies.

LING 655-656 Seminar in Austronesian Linguistics (also LING 655-656)
655, fall; 656, spring. 4 credits each term. Prerequisites: for 655, permission of instructor; for 656, Language 655. Not offered 2000-2001. J. Wolff.
Descriptive and comparative studies of Malayo-Polynesian languages.

Tagalog

THAI 101-102 Elementary Thai
101, fall; 102, spring. 6 credits each term. Prerequisite: for Thai 102, Thai 101 or equivalent. Intended for beginners or students placed by examination. N. Jagacinski.
A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

THAI 201-202 Intermediate Thai Reading
201, fall; 202, spring. 3 credits each term. Prerequisites: for Thai 201, Thai 102; for Thai 202, Thai 201 or equivalent. N. Jagacinski.

THAI 203-204 Intermediate Composition and Conversation
203, fall; 204, spring. 3 credits each term. Prerequisites: for Thai 203, Thai 102; for Thai 204, Thai 203. N. Jagacinski.

THAI 301-302 Advanced Thai
301, fall; 302, spring. 4 credits each term. Prerequisite: Thai 202 or equivalent. N. Jagacinski.
Selected readings in Thai writing in various fields.

THAI 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. N. Jagacinski.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

THAI 303-304 Thai Literature
303, fall; 304, spring. 6 credits each term. Prerequisite: Thai 302 or equivalent. N. Jagacinski.
Reading of significant novels, short stories, and poetry written since 1890.

THAI 401-402 Directed Individual Study
401, fall; 402, spring. 4 credits each term. Prerequisite: permission of instructor. N. Jagacinski.

Vietnamese

VIET 101-102 Elementary Vietnamese
101, fall; 102, spring. 6 credits each term. Prerequisite: for Vietnamese 102, Vietnamese 101 or equivalent. Intended for beginners or students placed by examination. Satisfactory completion of Vietnamese 102 fulfills the qualification portion of the language requirement. T. Tranviet.
A thorough grounding is given in all language skills: listening, speaking, reading, and writing.

VIET 201-202 Intermediate Vietnamese
201, fall; 202, spring. 3 credits each term. Prerequisites: for Vietnamese 201, Vietnamese 102 or equivalent; for Vietnamese 202, Vietnamese 201. T. Tranviet.
Continuing instruction in spoken and written Vietnamese.

VIET 303-304 Intermediate Vietnamese Composition and Reading
203, fall; 204, spring. 3 credits each term. Prerequisite: permission of instructor only. T. Tranviet.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

VIET 301-302 Advanced Vietnamese
301, fall or spring; 302, fall or spring. 3 credits each term. Prerequisites: for Vietnamese 301, Vietnamese 302 or permission of instructor; for Vietnamese 302, Vietnamese 301. T. Tranviet.
Continuing instruction in spoken and written Vietnamese; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

VIET 401-402 Directed Individual Study
401, fall; 402, spring. 2–4 credits variable each term. Prerequisite: permission of instructor. Intended for advanced students. T. Tranviet.
Various topics according to need.

URDU

See listings under Hindi.

VIETNAMESE

VIET 101-102 Elementary Vietnamese
101, fall; 102, spring. 6 credits each term. Prerequisite: for Vietnamese 102, Vietnamese 101 or equivalent. Intended for beginners or students placed by examination. Satisfactory completion of Vietnamese 102 fulfills the qualification portion of the language requirement. T. Tranviet.
A thorough grounding is given in all language skills: listening, speaking, reading, and writing.

VIET 201-202 Intermediate Vietnamese
201, fall; 202, spring. 3 credits each term. Prerequisites: for Vietnamese 201, Vietnamese 102 or equivalent; for Vietnamese 202, Vietnamese 201. T. Tranviet.
Continuing instruction in spoken and written Vietnamese.

VIET 303-304 Intermediate Vietnamese Composition and Reading
203, fall; 204, spring. 3 credits each term. Prerequisite: permission of instructor only. T. Tranviet.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

VIET 301-302 Advanced Vietnamese
301, fall or spring; 302, fall or spring. 3 credits each term. Prerequisites: for Vietnamese 301, Vietnamese 302 or permission of instructor; for Vietnamese 302, Vietnamese 301. T. Tranviet.
Continuing instruction in spoken and written Vietnamese; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

VIET 401-402 Directed Individual Study
401, fall; 402, spring. 2–4 credits variable each term. Prerequisite: permission of instructor. Intended for advanced students. T. Tranviet.
Various topics according to need.

VTLIT 222-223 Introduction to Classical Vietnamese
222, fall; 223, spring. 3 credits. Prerequisite: qualification in Vietnamese or permission of instructor. Not offered 2000-2001. K. Taylor.
This is the first semester of a two-semester sequence of courses introducing students to Han (Classical Chinese as used in the Vietnamese language) and Nom (vernacular Vietnamese character writing). Students will learn to read Han and Nom texts, mostly from the seventeenth through nineteenth centuries, including historical records, prose writings, and poetry.)
ARTS AND SCIENCES - 2000-2001

[VTILIT 224 Continuing Classical Vietnamese @ #
K. Taylor.
This course continues study for students who have completed VTILIT 222-223 "Introduction to Classical Vietnamese.
]

ASTRONOMY

Cornell's astronomy faculty, research staff, graduate, and undergraduate students are active in diverse areas of modern astronomy ranging from theoretical astrophysics and general relativity to radio and radar astronomy, infrared and optical astronomy, and the exploration of the solar system. Cornell operates two local optical observatories, the world's largest radio telescope at Arecibo, Puerto Rico, and with two other institutions, the 200-inch optical telescope at Mt. Palomar in California. Several members of the department faculty are also Principal Investigators on major NASA space and planetary exploration missions.

The department offers a number of courses to satisfy a general interest in astronomy. These courses have few or no prerequisites and are not intended for the training of professional astronomers. Among the introductory courses, several choices are available, depending on background and on the requirements to be fulfilled. The 100-level courses are designed primarily for nonscience majors. The alternative introductory sequence Astronomy 211-212 is geared toward sophomore physical science and engineering majors and requires coregistration in beginning calculus. Astronomy 201 and 202 are intended for students with an interest in astronomy but no scientific background: they are topical rather than survey-oriented. Astronomy 352 is
work with faculty members on independent research. Students are also encouraged to participate in undergraduate research projects in the upperclass years.

Students whose interest in astronomy is sparked somewhat later in their undergraduate career are encouraged to discuss possible paths with the Director of Undergraduate Studies in Astronomy.

Honors. A student may be granted honors in astronomy upon the recommendation of the Astronomy Advisers Committee of the astronomy faculty.

Double majors. A double major in astronomy and another subject is possible in many circumstances. However, the set of courses used to fulfill the requirements for each major must be completely independent.

Concentration. The concentration in astronomy for other majors normally requires 12 credits, at least eight of which must be at the 300 level or above. Astronomy 233 is recommended for sophomore planning to concentrate in astronomy.

Distribution Requirement

All courses in astronomy, except Astronomy 233 and 234, may be used to fulfill the science distribution requirement in the College of Arts and Sciences.

Courses

ASTRO 101 The Nature of the Universe

Fall. 4 credits. No prerequisites. Limited to 18 students each and discussions limited to 30 students each. T. Herter, labs: J. Houck. This course introduces students to the cosmos. The birth, evolution, and death of stars, the formation of the chemical elements, and the nature of white dwarfs, neutron stars, and black holes are discussed. An introduction to the theories of special relativity and general relativity is given. The course covers the search for other worlds outside the solar system and the possible existence of life and intelligence elsewhere in the universe. Modern theories of cosmology are presented, and the origin, structure, and fate of the universe are discussed. The full notes for the course as well as sample exams and simulations are available on the web.

ASTRO 102 Our Solar System

Spring. 4 credits. Labs limited to 18 students each; discussions limited to 30 students each. J. Bell, labs: J. Houck. This course provides a "hands-on" introduction to observational astronomy intended for liberal arts students at the freshman and sophomore level. High school mathematics is assumed, but there are no formal prerequisites. The course objective is to teach how we know what we know about the universe. The course is set up with two lectures and one evening laboratory per week. Not all of the evening sessions will be used. Planned exercises include five or six observational labs (star gazing with binoculars and small telescopes, telescopic observations and CCD imaging of star clusters, nebulae, and the planets, solar observations, radio observations of the Milky Way Galaxy), plus a selection of exercises from the following: construction and use of simple instruments such as optical spectroscopes and sun dials; experiments in planetary cratering; collection and study of micrometeorites; computer simulations of planetary orbits and the effects of obliquity on planetary weather; and cosmological explorations using data from the Hubble Space Telescope available on the web.
ASTRO 201  Our Home in the Universe
Fall. 3 credits. Assumes no scientific background. Intended for freshmen and sophomores. R. Giovanelli, M. Haynes.
A general discussion of our relation to the physical universe and how our view of the universe has changed from ancient to modern times. Several major themes are covered over the course of the semester: (1) our view of the night sky from the ancient Greeks to the Hubble Space Telescope; (2) the death of stars and the formation of black holes; (3) dark matter and the structure of galaxies and the origin, evolution, and fate of the universe.
We present a nonmathematical introduction to these subjects and discuss uncertainties and unresolved issues in our understanding.

ASTRO 202  Our Home in the Solar System
Spring. 3 credits. Prerequisite: some background in science required. Course intended for freshmen and sophomores. P. Gierasch, J. Veverka.
This writing course is designed to develop an understanding of our home planet as a member of the diverse family of objects in our solar system. Discussion will center on how studies of other planets and satellites have broadened our knowledge and perspective of Earth, and vice versa. We will study, debate, and learn to write critically about important issues in science and public policy, that benefit from this perspective. Topics to be discussed include global warming, the impact threat, the searches for extrasolar planets and extraterrestrial intelligence and the exploration of Mars.

ASTRO 211  Astronomy: Stars, Galaxies, and Cosmology
Fall. 4 credits. Intended for engineering and physical sciences freshmen and sophomores. Prerequisite: introductory calculus or coregistration in Mathematics 111 or 119, J. Houck.
The course examines the formation and evolution of normal stars, supernovae, pulsars, and black holes. The interstellar medium. Cosmology and the structure and evolution of galaxies.

ASTRO 212  The Solar System: Planets, Satellites, and Rings
Spring. 4 credits. Intended for first and second year engineering and physical sciences freshmen. Prerequisite: introductory calculus or coregistration in Mathematics 111 or 119, J. Houck.
An introduction to the solar system, with emphasis on the application of simple physical principles. Topics will include the Sun, nucleosynthesis of the elements, radioastronomy, seismology and planetary interiors, and the outer planets. Small objects in the solar system, including asteroids, comets, the Kuiper belt, and the Oort cloud.

ASTRO 233  Topics in Astronomy and Astrophysics
Fall. 2 credits. Prerequisites: Physics 112 or 116 and 213 or 217, Mathematics 112, 122, or 192, or permission of Instructor. Intended for sophomores planning to major in astronomy or the related fields. D. Lai, S. Squyres.
A seminar course on selected topics in astronomy and astrophysics designed for prospective astronomy majors. Content will vary from year to year, but will include topics from the fields of planetary, galactic, and extragalactic research.

ASTRO 234  Modern Astrophysical Techniques
Spring. 2 credits. Prerequisites: 2 semesters of introductory physics and 2 semesters of calculus plus ASTRO 235 or permission of instructor. Some experience with computer programming expected. Intended for sophomores majoring or concentrating in astronomy or related majors. S. Eikenberry.
The course reviews the basic techniques employed in astrophysical research, both observational and theoretical, to explore the universe: Basic methods and strategies of data acquisition and image and signal processing will be discussed. Students will gain hands-on experience with visualization techniques and methods of error analysis, data fitting, and numerical simulation. Exercises will address the processes by which astrophysicists piece together observations made with today's foremost astronomical instruments to solve questions concerning the origin of planets, stars, galaxies, and the universe itself.

ASTRO 280  Space Exploration
Fall. 3 credits. S. Squyres.
This course provides an overview of space science, with a focus on the solar system and a detailed examination of a few selected objects, including the planet Mars, the satellites in the outer solar system, and comets. The focus is on methods of collecting information and especially on spacecraft and space missions. Topics will include the design and limitations of instruments. Ethical and political questions associated with space exploration will be discussed. Intended for students with an interest in science, technology, and associated policy issues. No special background in physical sciences, math, or engineering is assumed.

ASTRO 290  Relativity and Astrophysics
Spring. 4 credits. Prerequisites: knowledge of freshman physics, calculus, and geometry. J. Wasserman.
This course provides a geometrically based introduction to special and general relativity, followed by consideration of astrophysical applications. Included will be discussion of tests of Einstein's theory of space, time, and gravity, physics of white dwarfs, neutron stars, and black holes; introduction to modern cosmology.

ASTRO 299  Search for Life In the Universe
Spring. 4 credits. Prerequisites: 2 courses in any physical science subject or permission of instructor. J. Cordes, Y. Tordzian.
The contents of the universe will be surveyed. Theories of cosmic and stellar evolution, and of the formation and evolution of planetary systems, planetary atmospheres, and surfaces will be reviewed. Questions regarding the evolution of life and the development of technology will be discussed. Methods to detect extraterrestrial life with emphasis on radio telescopes and associated instrumentation will be presented. Hypothetical communication systems will be developed and discussed.

ASTRO 331  Climate Dynamics (also SCAS 331)
Spring. 4 credits. Prerequisites: Math 112, 122, 192, or equivalent. Physics 213 or 217.

ASTRO 332  Elements of Astrophysics
Spring. 4 credits. Prerequisites: Math 112, 122, 192, or equivalent. Physics 213 or 217.
G. Stacey.
An introduction to astrophysics, with emphasis on the application of physics to the study of the universe. Physical laws of radiation, Distance, size, mass, and age of stars, galaxies, and the universe; stellar evolution and nucleosynthesis. Supernovae, pulsars, and black holes. Galaxies and quasars. Introduction to cosmology. The structure and evolution of planets and of the solar system. Mainly intended for students of science, engineering, and science education interested in astronomy and astrophysics.

ASTRO 410  Experimental Astronomy
Fall. 4 credits. Prerequisites: Physics 214/8 (or 310 or 360), Physics 323/7 (or coregistration) or permission of instructor. J. Cordes, J. Houck, S. Eikenberry, P. Goldsmith.
Observational astrophysics. Major experiments will involve techniques in CCD (charge-coupled-device) imaging, optical photometry, optical spectroscopy, radioastronomy, and radio astronomy. The experiments involve use of the Hartung-Boothroyd Observatory's 24-inch telescope, a laboratory two-element radio interferometer, and a radio telescope mounted on top of the Space Sciences Building. The laboratory covers the fundamentals of using astronomical instrumentation and data analysis as applied to celestial phenomena, including the Sun, stars, supernova remnants, globular clusters, planetary nebulae, the interstellar medium, OH masers, and galaxies.

ASTRO 431  Introduction to Astrophysics and Space Sciences I
Fall. 4 credits. Prerequisites: mathematics above the 200 level and physics above the 300 level. Physics 443 is recommended. I. Wasserman.
A systematic development of modern astrophysical concepts for physical science majors. Stellar structure and evolution, stellar atmospheres, compact objects (white dwarf, neutron star, and black hole), planets, and brown dwarfs. Current research problems in these areas will be introduced along the way. The emphasis will be on using fundamental physics principles to explain astronomical phenomena. A variety of physics, including elements of general relativity, nuclear physics, solid state physics and fluid mechanics, will be introduced or reviewed in a practical, hands-on fashion and put into use in solving astrophysics puzzles.

ASTRO 432  Introduction to Astrophysics and Space Sciences II
Spring. 4 credits. Prerequisite: Astronomy 431 or permission of instructor. TBA.
This course is divided into two broad topics; the astrophysics of the interstellar medium and cosmology. The first section will cover thermal equilibrium and radiative transport in HII regions, atomic gas regions, and molecular clouds. The cosmology section will include expansion of the universe, metrics, Friedmann equations, dark matter, cosmological tests, the early universe, and the cosmological production of the elements.

ASTRO 434  The Evolution of Planets
An introduction to the physical and chemical processes that have been active in altering the environment of Earth and other planets, from their original to their present state. Theories of the formation of the solar system are revealed with special emphasis on chemical differentiation of the primeval solar nebula. A critical
This course is an introduction to the study of the structure of galaxies via the laws of coregistration in ASTRO 699 recommended. The course aims to provide tools for modeling and detection of various kinds of signals encountered in the physical sciences and engineering. Data mining and statistical inference from large and diverse databases will also be designed. Experimental design is to be discussed. Basic topics covered include: probability theory, Fourier analysis, and digital filtering. Specific applications will be chosen from current areas of interest in astronomy, where large-scale surveys throughout the electromagnetic spectrum and using non-electromagnetic signals (e.g., neutrinos and gravitational waves) are ongoing and anticipated. Applications will also include topics from geophysics, plasma physics, electronics, artificial intelligence, expert systems, and genetic programming. The course will be self-contained and is intended for students with thorough backgrounds in the physical sciences or engineering.

ASTRO 520 Radio Astronomy
Fall. 3 credits. J. Burns. Radio astronomy telescopes and electronics. Observation procedures and data analysis; concepts of interferometry and aperture synthesis.

ASTRO 523 Signal Modeling, Statistical Inference, and Data Mining in Astronomy
Spring. 4 credits. J. Burns. The course aims to provide tools for modeling and detection of various kinds of signals encountered in the physical sciences and engineering. Data mining and statistical inference from large and diverse databases will also be designed. Experimental design is to be discussed. Basic topics covered include: probability theory, Fourier analysis, and digital filtering. Specific applications will be chosen from current areas of interest in astronomy, where large-scale surveys throughout the electromagnetic spectrum and using non-electromagnetic signals (e.g., neutrinos and gravitational waves) are ongoing and anticipated. Applications will also be chosen from topics in geophysics, plasma physics, electronics, artificial intelligence, expert systems, and genetic programming. The course will be self-contained and is intended for students with thorough backgrounds in the physical sciences or engineering.

ASTRO 555 Theory of the Interstellar Medium

ASTRO 560 Theory of Stellar Structure and Evolution (also PHYS 667)
Spring. 4 credits. D. Lai. Observational overview; hydrostatic equilibrium; equations of state; radiative and convective energy transport; nuclear burning; solar neutrinos; rotation and magnetic fields; stellar astrophysics; known dwarfs; pre-main sequence contraction.

ASTRO 570 Physics of the Planets
Fall. 4 credits. Not offered 2000–2001. P. Nicholson. An introductory survey of planetary science with an emphasis on the application of physical principles. Planetary dynamics, including satellite orbits, tidal interactions, resonances, and ring dynamics. An introduction to the theory of planetary interiors, gravitational fields, heat sources, and rotational mechanics. Physics of planetary atmospheres, including radiative transfer, convection, and thermal structure. Important observational results, including those of ground-based optical, infrared, radio, and radar astronomy, as well as those made by spacecraft, will also be discussed. Intended for graduate students and seniors in astronomy, physics, and engineering.

ASTRO 571 Mechanics of the Solar System (also T&AM 673)

ASTRO 579 Celestial Mechanics
Fall. 3 credits. J. Burns. For description, see T&AM 672.

ASTRO 590 Galaxies and the Universe
This course is intended to provide a detailed theoretical development of current ideas in cosmology. Topics will include observational overviews: growth of irregularities, galaxy formation, and clustering; big bang cosmology, recombination, nucleosynthesis, very early universe, symmetry breaking, inflationary scenarios. At the level of Peebles, Principles of Physical Cosmology.

**ASTRO 620 Seminar: Advanced Radio Astronomy**
Fall. 2 credits. Prerequisites: some background in astronomical spectroscopy suggested. Open to advanced undergraduates by permission of instructor. W 2:30-4:30. R. Giovaneli, P. Goldsmith. M. Haynes

Selected topics in the application of spectroscopic techniques from the infrared through radio regime to studies of the "dark ages" and the origin of galaxies, stars, and planets. We will emphasize the processes of star formation from the earliest times to the current circumstances of stellar and planetary formation in the Milky Way and other galaxies. Discussions will include the potential of new facilities including the Arecibo and Green Bank telescopes, the Expanded VLA, the Atacama Large Millimeter Array, the Large Millimeter Telescope, the Square Kilometer Array, SRTF, and the Cornell Atacama Telescope.

**ASTRO 621 Seminar: Planetary Radar Astronomy**
Spring. 3 credits. Prerequisites: intended for graduate students and upper-level undergraduates in astronomy, engineering, and geology. A good background in undergraduate mathematics and physics is required. Not offered 2000-2001. The application of radar to the study of the surfaces of planets, planetary satellites, asteroids, and comets. Topics covered will be target detectability and the specification of the needed antennas, transmitters, and receiving systems; theoretical ideas; imaging techniques including delay-Doppler imaging, synthetic aperture radar (SAR) and interferometric SAR; target characterization from cross section, scattering laws and polarization measurements; results from earth-based and spacecraft radar observations of Mercury, Earth, the Moon, Mars, the satellites of Jupiter, the rings of Saturn, asteroids, and comets.

**ASTRO 640 Advanced Study and Research**
Fall or spring. Credit TBD.

Guided reading and seminars on topics not currently covered in regular courses. Students need to register in the department office, 610 Space Sciences Building.

**ASTRO 651 Atmospheric Physics (SCAS [EAS] 651)**
Fall. 3 credits. R. Cook, S. Colucci, P. Gierasch.

For description, see SCAS [EAS] 651.

**ASTRO 652 Advanced Atmospheric Dynamics (SCAS [EAS] 652)**
Spring. 3 credits. Offered alternate years.

S. Colucci, K. Cook, P. Gierasch.

For description, see SCAS [EAS] 652.

**ASTRO 660 Cosmic Electrodynamics (also AAEP 608)**

**ASTRO 671 Seminar: Asteroids**
Fall. 3 credits. J. Veverka, J. Bell.

We will review what is known currently about asteroids and focus on the discoveries being made by the NEAR mission to S-asteroid 433 Eros. The class will emphasize what the NEAR results tell us about the history and evolution of S-asteroids in general.

**Jupiter**
Spring. 3 credits. P. Nicholson.

An informal series of lectures discussing the techniques used to obtain and interpret spacecraft and earth-based remote sensing data of the planets, satellites, and smaller bodies in the solar system. Intended for graduate students and seniors. The emphasis this year will be on the Jovian System, reviewing the results on Jupiter—its satellites and rings obtained by the Galileo Orbiter since 1995 and by Cassini during its upcoming flyby in December 2000.

**ASTRO 673 Seminar: Planetary Atmospheres**

This course will deal with motions in planetary atmospheres. Among the topics to be discussed are: the Venusian general circulation, dust and water transports on Mars, alternating jets on the outer planets, and compositional layering in the outer planets.

**ASTRO 690 Seminar: Computational Astrophysics (also PHYS 680)**
Spring. 3 credits. Prerequisites: working knowledge of FORTRAN. Not offered 2000-2001. S. Teukolsky.

A course designed to familiarize graduate students with numerical techniques for solving diverse problems in astrophysics. Numerical methods discussed in the course will include solving ordinary and partial differential equations, linear algebra and eigenvalue problems, Monte Carlo techniques, fast Fourier transforms, etc. In contrast to traditional numerical analysis courses, the course will be "how-to," rather than theoretical. No theorems will be proved. Students will be allotted computer time to solve, both individually and in small teams, assigned numerical exercises. Text: Numerical Recipes by Press, Teukolsky, Vetterling, and Flannery.

**ASTRO 699 Seminar: Problems in Theoretical Astrophysics (also PHYS 665)**

An informal seminar that will examine "New Directions in Astrophysics." The participants will discuss neutrino astronomy, LIGO (the gravitational wave observatory), high energy gamma rays and cosmic rays, laboratory searches for dark matter, and the future of optical, radio, and infrared astronomy, both on the ground and in space. The seminar is open to all graduate students.

**ASTRO 699 Seminar: Observational High Energy Physics**
Spring. 2 credits. ASTRO 511 (PHYS 525) is strongly recommended as a co- or prerequisite. Not offered 2000-2001.

S. Eikenberry

This is a seminar for graduate students, and is intended as a companion course to ASTRO 511 (PHYS 525). The seminar will take an approach to understanding compact objects (primarily black holes and neutron stars) based on their observed properties, in order to complement the primarily theoretical approach of ASTRO 511. The focus will be on areas of recent progress in the field of high energy astrophysics. Topics to be covered include (but are not limited to): rotation-powered pulsars (including millisecond pulsars and magnetars), black-hole X-ray binaries, microquasars and other relativistic jet sources, X-ray bursters, kilohertz QPO sources, and gamma-ray bursts.

**BIOLOGICAL SCIENCES**

Biology is a popular subject at many universities for a variety of reasons. It is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences at Cornell is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Student services provided by the Office of Undergraduate Biology are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include animal physiology, biochemistry, ecology and evolutionary biology, general biology, genetics and development, microbiology; molecular and cell biology, neurobiology and behavior, nutrition, plant biology, and systematics and biodiversity. Students interested in the marine sciences may consult the Cornell Marine Programs Office (G14 Stimson Hall, 255-3717) for academic advice and career counseling. For more details about the biology curriculum, see the section in this catalog on Biological Sciences.

**BIOLOGY AND SOCIETY MAJOR**

See under Special Programs and Interdisciplinary Studies.

**BURMESE**

See Department of Asian Studies.

**CAMBODIAN**

See Department of Asian Studies.
CHEMISTRY AND CHEMICAL BIOLOGY

The chemistry department offers a full range of courses in physical, organic, inorganic, analytical, theoretical, biorganic, and biophysical chemistry. In addition to their teaching interests, chemistry faculty members have active research programs. The link between teaching and research is a vital one in a continuously evolving scientific subject; it ensures that students will be provided with the most advanced information and perspectives, and affords opportunities for students to participate in research.

The Standard Major

The chemistry major at Cornell provides a great deal of flexibility and prepares students for a large variety of career options. In recent years, chemistry majors have gone on to graduate study in chemistry, medicine, law, and business management, as well as directly into professional positions in chemical, pharmaceutical, and other industrial companies. A major in chemistry can also provide the basis for work in related areas such as molecular biology, chemical physics, geochemistry, chemical engineering, materials science, solid state physics, and secondary education. Nearly all of the required courses for the major can be completed in three years, leaving the senior year open for advanced and independent work under the supervision of a professor.

The courses are arranged as a progression, with some (including mathematics and physics) prerequisite to those that are more advanced. During the first year, a student should normally register for general chemistry (preferably Chemistry 215–216 although Chemistry 207–208 or 206–208 is acceptable), mathematics, a freshman writing seminar, a foreign language if necessary, or physics. Chemistry 215–216 is aimed at those students with good preparation and a strong interest in chemistry. Students who do not know if their preparation is adequate should consult the instructor. In the second year a student should complete calculus and take physics and organic chemistry (Chemistry 359–360 is preferred to Chemistry 357–358). The second-year laboratory courses include 300, Quantitative Chemistry and 301, Experimental Chemistry I; Chemistry 389–390, Physical Chemistry I and II, and Chemistry 302–303, Experimental Chemistry II and III, should be completed in the third year. Chemistry 410 should be completed in the third or fourth year. Advanced work in chemistry and related subjects can be pursued in the fourth year and in the earlier years as well. The opportunity for independent research is also available. All students with questions about the major are encouraged to consult the chair of the Department of Chemistry and Chemical Biology or the chair's representative. Entering students who are exceptionally well prepared in chemistry may receive advanced placement credit for Chemistry 207.

Prerequisites for admission to a major in chemistry are (1) Chemistry 215–216, 300; or 207–208, 300; or 211, 208, 300; or 206, 208, 300; (2) Physics 207 or 112, and (3) Mathematics 111 or 101. Students are not encouraged to undertake a major in chemistry unless they have passed those prerequisite courses at a good level of proficiency. The minimum additional courses that must be completed for the standard major in chemistry are listed below.

1) Chemistry 301–302–303, 359–360 (357–358 may be substituted), 389–390, and 410
2) Mathematics 112, 213, or 122, 221–222, or 192–293–294
3) Physics 208

Potential majors electing to take Mathematics 213 are strongly encouraged to do so in their sophomore year to avoid scheduling conflicts with Chemistry 389 in their junior year. The sequence described above is a basic program in chemistry that students can extend substantially in whatever direction suits their own needs and interests. Those going on to do graduate work in chemistry should recognize that these requirements are minimal and should supplement their programs, where possible, with further courses such as Chemistry 405, 605, 606, 665, 666, 668, and 681. Even students not planning graduate work in chemistry should consider advanced work in physics and mathematics, courses in the biological sciences, and advanced work in chemistry as possible extensions of the basic program.

Honors. The honors program in chemistry offers superior students in the standard major an opportunity to study independently in seminars and to gain additional experience by engaging in research during the senior year. It is particularly recommended to those who plan graduate work in chemistry. Prospective candidates should complete the introductory organic, physical, and general chemistry sequences by the end of the junior year, although failure to have completed those courses in the junior year does not in itself disqualify a student from the honors program. Completion of the program at a high level of performance leads to the degree of Bachelor of Arts with honors in chemistry. Students will be admitted to the program by invitation of the department, with selection based on a superior cumulative average, including chemistry grades, and good performance in at least four credits of research at Cornell.

Prospective candidates should discuss their plans with advisers by March 1 of their junior year. Students are notified of their status by early January of their senior year. To be considered for honors, candidates must show outstanding performance in at least eight credits of undergraduate research such as is offered in Chemistry 421, 533, 541, or 661. In addition, the writing of a thesis in the honors seminar (Chemistry 498) is expected.

The Alternative Major

The alternative major is a flexible program that provides core coverage of chemistry around which students can design a program to meet their own career goals. Requirements consist of a core program along with four additional courses chosen by the student. One of the four must be Chemistry 421 at the 300 level or above; the other three may be in another field but should represent a cohesive plan and must be approved by a departmental committee.

The Core Program for the Alternative Major

1) Chemistry 215–216, 300 (or 207–208, 300; or 211, 208, 300; or 206, 208, 300), 251, 257, 287, 289, and 410 (Chem 357–358 or 359–360 can be substituted for Chem 257, or Chem 389–390 can be substituted for Chem 287, thereby fulfilling the requirement for an additional 300-level chemistry course)
2) Mathematics 111–112, or 111, 122, or 191–192
3) Physics 207–208; or 112, 213

Additional Courses for the Alternative Major

Possible plans for the remaining three courses might include programs in Biochemistry, Biology, Physics, Chemistry, Materials Science, Science, Technology, and Society; History and Philosophy of Science and Technology; Business and Management; Economics; Education; and others.

Premedical students and those interested in pursuing double majors might find the alternative major particularly attractive. The course requirements for admission to the alternative major are the same as those for the standard major.

Program for Science Teachers

Chemistry majors who wish to become teachers will be interested to know that Cornell University offers a certification program for teachers of secondary (grades 7–12) science. Interested students apply to the program during their sophomore or junior years. If accepted, students integrate some course work in Education with the rest of their undergraduate studies. All chemistry majors who enter this program will remain in the College of Arts and Sciences to complete the major.

After earning the bachelor's degree, certification students will be eligible for a master's degree from Cornell and a teaching certificate from New York State. Additional information is available from Susie Slack, 424 Kennedy Hall, 255-9255 or Prof Deborah Trumbull, 426 Kennedy Hall, 255-3108.

Laboratory Course Regulations

Students registered for laboratory courses who do not appear at the first meeting of the laboratory will forfeit their registration in that course.

Students and members of the teaching staff are required to wear safety goggles and lab aprons in all chemistry laboratories. Closed-toed footwear is required (no sandals).

Students are reminded to take their goggles and lab aprons to the first laboratory session. Those who fail to cooperate with the safety program will be asked to leave the laboratory.

Students are required to pay for glassware and any other items broken or missing from their
laboratory desks at the close of each semester. Students who fail to inventory their desks at the appointed time in the presence of their instructor are charged a $10 fee in addition to charges for any breakage.

Courses
Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

Preliminary examinations for all courses may be given in the evening.

CHEM 105 The Language of Chemistry
Fall. 3 credits. This course contributes to meeting the College of Arts and Sciences "Physical and Biological Sciences" (Group I) distribution requirement, as well as satisfying the CALS physical science requirement of one course in chemistry. S-U or letter grades. Lecs, M W F 12:20. Prelims in normal class period at 12:20 P.M. TBA.

In his autobiography, A. Kornberg (Nobel Laureate in Medicine, 1959) wrote, "much of life can be understood in rational terms if expressed in the language of chemistry. It is an international language, a language for all time, a language that explains where we came from, what we are, and where the physical world will allow us to go." Through careful examination of a few milestone investigations of naturally occurring biologically important compounds (such as the antimarial quinine, benzodiazepines, and the sperm attractants of algae), the principles of chemistry to which Kornberg refers will be developed. Methods of analyzing chemical problems will be emphasized, rather than the memorization of specific results or formulas. There will be an opportunity for students, working in small groups, to prepare and present short reports on topics of particular current interest at the interface between chemistry and biology.

CHEM 106 Strategies in Science: The World of Chemistry
Spring. 3 credits. This course contributes to meeting the College of Arts and Sciences "Physical and Biological Sciences" distribution requirement (Group I) as well as satisfying the CALS physical science requirement of one course in chemistry. S-U or letter grades. Lecs, M W F 12:20. Prelims: 7:30–9 P.M., Feb. 27, March 29. TBA.

A general appreciation of chemistry in the everyday world which will highlight for nonchemists the way the scientific method works. The course will focus not only on what modern chemistry has accomplished, but more generally on the way scientists think and how they function.

CHEM 206 Introduction to General Chemistry
Fall or summer. 4 credits. Enrollment limited. Recommended for students who have not had high school chemistry and for those needing a less intensive course than Chemistry 207. Lecs, M W F 11:15, lab, T R 9 or 8:00–11:00, or M W F 12:25–4:25. Prelims: 7:30–9 P.M., Oct. 3, Nov. 9. C. F. Wilcox.

An introduction to general chemistry, with emphasis on chemical principles and facts. Chemistry 206 covers much of the same material as Chemistry 207 plus the basics of chemical equilibrium, but does so at a slower pace.

CHEM 207-208 General Chemistry
Fall or summer, 207; spring or summer, 208. 4 credits each term. Recommended for those students who will take further courses in chemistry. Prerequisite for Chemistry 207: high school chemistry. Prerequisite for Chemistry 208: Chemistry 206 or 207. Lecs, T R 10:10 or 12:20, lab, T R F 8–12 or M T W R F 12:20–4:25. Prelims: 7:30–9 P.M., Oct. 3, Nov. 9, Feb. 27, April 10. Fall: J. E. McMurry; spring: C. T. Gayton.

Fundamental chemical principles and descriptive facts are covered, with considerable attention given to the quantitative aspects and to the techniques important for further work in chemistry. Second-semester laboratory includes a systematic study of qualitative analysis.

Note: Entering students exceptionally well prepared in chemistry may receive advanced placement credit for General Chemistry 207 by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall. Taking Chemistry 208 after 215 is not recommended and can be done only with the permission of the 208 instructor.

CHEM 211 Chemistry for the Applied Sciences
Fall or spring. 4 credits. Recommended for those students who intend to take only one term of chemistry. Enrollment limited. Prerequisite: high school chemistry or permission of instructor. Corequisite: a calculus course at the level of Mathematics 111 or 191. Lecs, M W F 12:20; lab, fall and spring, M T W R F 12:25–4:25. Prelims: 7:30–9 P.M., Sept. 21, Oct. 19, Nov. 21, Feb. 15, Mar. 13, Apr. 12. Fall: D. B. Zax; spring: J. Marohn.

Important chemical principles and facts are covered with the objective of understanding the role of chemistry in other fields. Emphasis is on topics such as state materials, periodic trends, and specific classes of compounds, such as polymers.

Note: Entering students exceptionally well prepared in chemistry may receive advanced placement credit for General Chemistry 207 by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall.

CHEM 215-216 General and Inorganic Chemistry
Fall, spring. 215, spring. 216. 4 credits each term. Recommended for students who intend to specialize in chemistry or related fields. Enrollment limited. Prerequisites: good performance in high school chemistry, physics, and mathematics. Corequisite: a calculus course at the level of Mathematics 111 or 191 for students who have not taken high school calculus. Prerequisite for Chemistry 215: Chemistry 215. Lecs, M W F 12:20; lab, M T W R or F 12:25–4:25. Prelims: 7:30–9 P.M., Oct. 3, Nov. 9, Feb. 15, Mar. 13, Apr. 12. Fall: B. Wisdom; spring: S. Lee.

An intensive systematic study of the laws and concepts of chemistry, with considerable emphasis on quantitative aspects. Second term includes systematic study of inorganic chemistry. Laboratory work covers qualitative and quantitative analysis, transition metal chemistry, and spectroscopic techniques.

Note: Taking Chem 208 after 215 is not recommended and can be done only with the permission of 208 instructor.

CHEM 233 Introduction to Biomolecular Structure
Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207–208 or equivalents. Lecs, T R 2:30–5:30. S. E. Ealick.

This course is intended for students with a basic understanding of chemistry who are considering a program of study in biochemistry. The interrelationship of the structure and function of biologically important molecules are explored. Emphasis is placed on understanding the way in which the three-dimensional arrangements of atoms determine the biological properties of both small molecules and macromolecules such as proteins and enzymes. The study of molecular structure is aided by interactive computer graphics for visualizing three-dimensional structures of molecules.

CHEM 251 Introduction to Experimental Organic Chemistry
Fall, spring, or summer. 2 credits. Recommended for non-chemistry majors. Enrollment limited. Prerequisite: CHEM 251. Lecs: Fall, R 11:15 of F 8:00, spring, F 8, lab, M T W R or F 1:25–4:25, or T or R 8–11. Prelims: 7:30–9 P.M., Fall: Nov. 9; Spring: Apr. 17. S. Russo.

An introduction to the synthesis, separation, and handling of materials, including applications of many types of chromatography, simple and fractional distillation, crystallization, extraction, and others.

CHEM 252 Elementary Experimental Organic Chemistry

A continuation of Chemistry 251.

CHEM 257 Introduction to Organic and Biological Chemistry
Spring. 3 credits. Prerequisite: Chemistry 206 or 207. Because Chemistry 257 is only a 3-credit course, it does not provide a practical route to satisfying medical school requirements. Lecs, M W F 11:15. Prelims in normal class period at 11:15. D. A. Usher.

An introduction to organic chemistry with an emphasis on those structures and reactions of organic compounds having particular relevance to biological chemistry.

CHEM 287-288 Introductory Physical Chemistry

A systematic treatment of the fundamental principles of physics, chemistry, focusing in the fall on thermodynamics and the quantum mechanics of the periodic table and chemical bonding. In the spring the course will be oriented to the application of physical chemistry to biological systems, including
transport, kinetics, electrochemistry, spectroscopy. Chemistry 287 satisfies the minimum requirement for physical chemistry in the alternative chemistry major.

CHEM 289-290 Introductory Physical Chemistry Laboratory
Fall, 289; spring, 290. 2 credits each term. Lecs: fall, R 8:00 A.M.; spring, R 8:00 or 9:05 Lab: fall, M W R F 9:05-4:25; spring, M W R 1:25-4:25. T. McCarrick
A survey of the methods basic to the experimental study of physical chemistry, with a focus on the areas of kinetics, equilibrium, calorimetry, and molecular spectroscopy.

CHEM 300 Quantitative Chemistry
Volumetric, spectrophotometric, and potentiometric methods are emphasized. Techniques are learned by analysis of knowns, and then are used on unknowns. Lectures and problem sets stress the relationship between theory and applications.

CHEM 301 Experimental Chemistry I
Spring. 4 credits. Prerequisites: Chemistry 300, and 357 or 359. Lecs, M W F 12:20; 2 labs, M W 1:25-4:25 or T R 8-11 or T R 1:25-4:25. J. M. Burlitch.
An introduction to the techniques of synthetic organic chemistry. A representative selection of the most important classes of organic reactions will be explored in the laboratory. Laboratory techniques and the theoretical basis for the separation and characterization techniques used will be discussed in the lectures.

CHEM 302 Experimental Chemistry II
Fall. 4 credits. Enrollment limited; preference given to chemistry majors. Prerequisite: Chemistry 301. Lecs, M W F 9:05; 2 labs, M W 1:25-4:25, T R 8-11 or T R 1:25-4:25. F. J. DiSalvo.
Instrumental methods of analysis, including chemical microscopy, UV, IR, and AA spectroscopies, and gas chromatography. The design, execution, and analysis of experiments is stressed.

CHEM 303 Experimental Chemistry III
Spring. 4 credits. Each lab limited to 11 students. Prerequisites: Chemistry 302, 389, 390; coregistration in the latter is permissible. Lecs, M W F 9:05; 2 labs, M W 1:25-4:25, or T R 9:00-12 or T R 1:25-4:25. H. D. Abruna.
An introduction to experimental physical chemistry, including topics in calorimetry, spectroscopy, and kinetics. The analysis and numerical simulation of experimental data is stressed.

CHEM 357-358 Organic Chemistry for the Life Sciences
Fall or summer, 357: spring or summer, 358. 3 credits each term. Prerequisite for Chemistry 357: Chemistry 208 or 216 or advanced placement; recommended concurrent registration in Chemistry 251 or 300. Prerequisite for Chemistry 358: Chemistry 357 or permission of the instructor. Lecs, M W F 9:05 or 10:10, optional rec may be offered. Prelims: 7:30-9 P.M., Oct. 17, Nov. 14, Feb. 15, Mar. 13, Apr. 12. Fall: B. Gamem; spring: J. Meinekald.
A study of the more important classes of carbon compounds, especially those encountered in the biological sciences. Emphasis will be placed on their three-dimensional structures, mechanisms of their characteristic reactions, their synthesis in nature and the laboratory, methods of identifying compounds and their role in modern science and technology.

Note: Because of duplication of material, students who take both Chemistry 257 and 357 will receive graduation credit only for Chemistry 257.

CHEM 359-360 Organic Chemistry I and II
Fall, 359; spring, 360. 4 credits each term. Recommended for students who intend to specialize in chemistry or closely related fields. Enrollment limited. Prerequisites: Chemistry 216 with a grade of B or better, Chemistry 208 with a grade of A or better, or permission of instructor. Prerequisite for Chemistry 360: Chemistry 359. Recommended: coregistration in Chemistry 300-301-302. Lecs, M W F 9:05; dis sec, W 7:30 P.M. prelims, 7:30-9:00 P.M., Sept. 20, Oct. 18, Nov. 15, Spring: 7:30-9:00 P.M., Feb. 14, Mar. 14, Apr. 18. Fall: D. B. Collum; spring: G. W. Coates.
A rigorous and systematic study of organic compounds, their structures, the mechanisms of their reactions, and the ways they are synthesized in nature and in the laboratory.

CHEM 389-390 Physical Chemistry I and II
Fall, 389; spring, 390. 4 credits each term. Prerequisites: Mathematics 213 or, ideally, 221-222, Physics 208; Chemistry 208 or 216 or permission of instructor. Prerequisite for Chemistry 389: Chemistry 208 or 216. Lecs, M W F 10:10; rec. M or W 1:25 or T 9:05. Lecs, M W F 10:10; prelims, 7:30-9 P.M. Sept. 26, Oct. 24, Nov. 21, 390: Feb. 15, Mar. 13, Apr. 12. Fall: M. A. Hines; spring: H. F. Davis.
The principles of physical chemistry are studied from the standpoint of the laws of thermodynamics, kinetic theory, statistical mechanics, and quantum chemistry.

CHEM 391 Physical Chemistry II (also CHEM E 391)
Spring. 4 credits. Enrollment limited to engineering students only. Prerequisites: Mathematics 293; Physics 112, 215; Chemistry 208 or 216 or permission of instructor. Corequisite: Math 294. Prerequisite for Chemistry 391: Chemistry 389. Lecs, M W F 9:05; rec. M 1:25 or T 9:05; T. M. Duncan.
The study of two topics: (1) Quantum chemistry—the electronic structure of atoms, molecules, and condensed matter; the interaction of electromagnetic radiation with matter for spectroscopy and chemical reaction. (2) Chemical kinetics—reaction rate laws from experimental data and reaction mechanisms; approximation methods and applications to polymerization and heterogeneous catalysis.

CHEM 404 Entrepreneurship in Chemical Enterprise
Designed to acquaint students with the problems of planning, starting, and managing a new scientifically oriented business venture, the course will consist of six weekly 90-minute meetings focusing on case studies and assigned reading, as well as outside lectures by entrepreneurs in the chemical, pharmaceutical, and biotechnology industries. Topical topics will include new technology evaluation and assessment, business formation, resource allocation, management development, as well as manufacturing and sales issues.

CHEM 405 Techniques of Modern Synthetic Chemistry
Spring. 3 or 6 credits. Enrollment limited. Prerequisites: Chemistry 302 and permission of instructor. To receive 3 credits, students must perform a minimum of three 2-week experiments. 6 credits will be given for 3 additional experiments.
Completion of 5 exercises in elementary glass-blowing will count as 1 experiment. Lab time required: 16 hours each week, including at least two 4-hour sessions in 1 section (M W 1:25). First meeting will be at 1:30 on first class day of semester. Lec, first week only, at times TBA. Not offered 2000-2001. J. M. Burlitch.
The syntheses of complex organic, organometallic, and inorganic compounds is carried out with emphasis on the following techniques: vacuum line, high pressure, high-temperature solid state, inert atmosphere, nonaqueous solvents, radioactive labeling, solid-phase, photochemical and electrochemical methods, solid phase peptide synthesis, and polymer synthesis. Elementary glassblowing will be taught.

CHEM 410 Inorganic Chemistry
Fall. 4 credits. Prerequisites: Chemistry 358 or 360, and 287 or 390. Lecs, M W F 11:15. Prelims: 7:30-9:00 P.M., Sept. 21, Oct. 19, Nov. 16. P. T. Wolczanski
A systematic study of the synthesis, structure, bonding, reactivity, and uses of inorganic compounds, organometallic complexes, and solid state species.

CHEM 421 Introduction to Inorganic Chemistry Research
Fall or spring. 2-4 credits. Prerequisites: Chemistry 303 and 390, or Chemistry 287-288, and Chemistry 299-300 with an average of B- or better, or permission of instructor. Selected faculty.
Research in inorganic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 422 Introduction to Analytical Chemistry Research
Fall or spring. 2-4 credits. Prerequisites: Chemistry 303 and 390 with an average of B- or better or permission of instructor. Selected faculty.
Research in analytical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 450 Principles of Chemical Biology
Fall. 3 credits. Prerequisites: Chemistry 357-358, Chemistry 359-360 or equivalent. Lecs, T R 10:10-11:25. J. C. Clardy.
Biological processes are increasingly understood in chemical terms, and this course introduces some of the most important chemical approaches to biological processes. Topics such as structure-based drug design, small molecule mediators or protein-protein interaction, combinatorial synthesis, chemical genetics, conformational analysis of biological molecules, and the molecules transfer of biological information will be covered.
CHEM 461 Introduction to Organic Chemistry Research Fall or spring. 2-4 credits. Prerequisite: Chemistry 302 and 358 or 360 with a grade of B- or better or permission of instructor. Selected faculty. Research in organic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 477 Introduction to Physical Chemistry Research Fall or spring. 2-4 credits. Prerequisite: Chemistry 390 with an average of B- or better or permission of instructor. Selected faculty. Research in physical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 498 Honors Seminar Spring. No credit. Admission to standard chemistry majors only by departmental invitation. Additional prerequisites or corequisites may be determined by the student. Students may combine traditional courses and library material to form a coherent topic. Each student will be assisted by a faculty member in his own research area.

CHEM 600-601 General Chemistry Colloquium Fall, 600; spring, 601. No credit. Required of all graduate students except those majoring in biorganic chemistry. Juniors and seniors are encouraged to attend. R 4-00. Staff. A series of talks representative of all fields of current research interest in chemistry other than organic chemistry, given by distinguished visitors and faculty members.

CHEM 602 Information Literacy for the Physical Scientist Spring. 1 credit. Primarily for first-year graduate students and undergraduate chemistry majors doing research. Lec, T 4:45-6:00. L. Sola. An introduction to physical science information research methods, including use of paper and electronic resources. With the continued information explosion, information overload may become a problem. Students will learn to use information retrieval techniques to locate accurate, timely, and useful information.

CHEM 605 Advanced Inorganic Chemistry I: Symmetry, Structure, and Reactivity Fall. 4 credits. Prerequisite: Chemistry 389-390 or equivalent or permission of instructor. Lecs, M W F 11:15. R. C. Fay. Selected topics in structure, bonding, and reactivity of inorganic compounds with emphasis on main group elements at the level of Chemistry of the Elements, by Greenwood and Earnshaw. Group theory applications—hybrid orbitals, molecular orbitals, molecular vibrations, and ligand field theory; at the level of Cotton's Chemical Applications of Group Theory.

CHEM 622 Chemical Communication Fall. 3 credits. Lecs, M W F 10:10. J. Meinwald, T. Eisner. For description, see BIONB 623.

CHEM 625 Advanced Analytical Chemistry I Spring. 4 credits. Prerequisite: Chemistry 288 or 390 or equivalent. Lecs, M W F 9:05; occasional prelims W 7:30 P.M. B. K. Carpenter. The application of molecular spectroscopy to chemical problems. Topics in infrared, NMR, and mass spectroscopy are discussed.

CHEM 627 Advanced Analytical Chemistry II Spring. 4 credits. Primarily for graduate students. Prerequisite: Chemistry 793 or equivalent is preferable. Lecs, M W F 9:05-9:55. D. B. Zax. Modern techniques in nuclear magnetic resonance. Little overlap is expected with CHEM 625, as this course will focus on more general questions of experimental design, understanding of multipulse experiments, and aspects of coherent averaging theory. Examples to be taken from both liquid and solid-state NMR. May also be of interest to other coherent spectroscopists.

CHEM 628 Isotopic and Trace Element Analysis (also NS 690) Spring. 3 credits. Primarily for graduate students and advanced undergraduates. Prerequisite: Chemistry 288 or 390 or 302, or Chemistry 206 and Mathematics 112, or permission of instructor. Lecs T R 10:10. Offered alternate years. Not offered 2000-2001. J. T. Brenna. Survey course in modern high precision isotope ratio mass spectrometry (IRMS) techniques and trace element methods of analysis. Topics include dual inlet and continuous flow IRMS, thermal ionization MS, inductively coupled plasma MS, atomic spectroscopy, ion and electron microscopies, X-ray and electron spectroscopies, and biological and solid state applications.

CHEM 629 Electrochemistry Fall. 4 credits. Primarily for graduate students and upperclass undergraduates. Prerequisite: Chemistry 390 or equivalent (Mathematics 213 helpful). Lecs, T R 8:40-9:55. H. D. Abruna. Fundamentals and applications of electrochemistry. Topics will include the fundamentals of electrode kinetics, electron transfer theory, the electrical double layer, diffusion, and other modes of transport. A wide range of techniques and their application as well as instrumental aspects will be covered.

CHEM 665 Advanced Organic Chemistry Fall. 4 credits. Primarily for graduate students and upperclass undergraduates. Prerequisites: Chemistry 358 or 360, and 390 or equivalents or permission of instructor. Lecs, M W F 9:05-9:55. B. K. Carpenter. A survey of reaction mechanisms and reactive intermediates in organic chemistry.

CHEM 668 Chemical Aspects of Biological Processes Fall. 4 credits. Prerequisite: Chemistry 360 or equivalent. Lecs, T R 8:40-9:55. T. P. Begley. A representative selection of the most important classes of enzymes-catalyzed reactions will be examined from a mechanistic perspective. Topics discussed will include the chemical basis of enzymatic catalysis, techniques for the elucidation of enzyme mechanism, cofactor chemistry, and the biosynthesis of selected natural products. The application of chemical principles to understanding biological processes will be emphasized.

CHEM 670 Fundamental Principles of Polymer Chemistry Fall. 4 credits. Prerequisite: Physical Chemistry 389-390 and Organic Chemistry 359/360 or equivalent or by permission of instructor. Primarily for graduate students and advanced undergraduates. No previous knowledge of polymers is required. Lecs, T R 10:00-11:15. G. W. Coates.
This course emphasizes general concepts and fundamental principles of polymer chemistry. The first part of the course deals with general introduction to classes of polymers, molar masses and their distributions, and a survey of major methods of polymer synthesis—radical, step-growth, ionic, transfer, Ziegler-Natta, and metathesis polymerization methods—with emphasis on kinetics and mechanisms rather than on structure. The second part deals with characterization and physical properties. These include: solution properties—solubility and solubility parameters, solution viscosity, molecular weight characterizations; gel permeation chromatography, viscometry, light scattering, osmometry; bulk properties—chemical and mechanical properties, and structure-property relationships. The discussions will focus on chemistry rather than engineering of polymers.

**CHEM 671 Synthetic Polymer Chemistry** (also MS&E 671 and CHEM 675) Spring. 4 credits. Prerequisites: a minimum of organic chemistry at the level of CHEM 358 or 360 and an understanding of polymer chemistry. This course will provide an overview of organic chemistry background should see the instructor before registering for the course. Primarily for graduate students and advanced undergraduates. No previous knowledge of polymer chemistry is required although knowledge of material covered in CHEM 670 or MS&E 452 will be helpful but not required. Lecs. T R 8:30-10:00. D. Y. Sogah.

The objective of the course is to teach general concepts of polymer synthesis and discuss application of organic synthetic methods to the development of new polymerization methods and polymer architecture control. Emphasis will be on modern concepts in synthetic polymer chemistry and topics of current interest: the study of new methods of synthesis, preparation of polymers with reactive end groups, the control of polymer stereochemistry and topology, and the design of polymers tailored for specific uses and properties. Topics on synthesis will be selected from the following: step-growth polymerization, free radical polymerization and radical polymerization, cationic polymerization, group transfer polymerization, ring-opening metathesis polymerization, and cyclopolymerization.

**CHEM 672 Kinetics and Regulation of Enzyme Systems** Fall. 4 credits. Primarily for graduate students with interests in biophysical chemistry. Prerequisite: Chemistry 288 or 390, BIOBN 331, or equivalents or permission of instructor. Lecs. M W F 10:10-11:00. A. P. Carreira.

Focus is on protein interactions with ligands and consequent changes in structure and activity. Topics include protein structure and dynamics, thermodynamics and kinetics of ligand binding, and transport of enzyme kinetics; enzyme catalysis and regulation; role of cell membrane receptors in regulating cellular activities.

**CHEM 677 Chemistry of Nucleic Acids** Fall. 4 credits. Primarily for graduate students. Prerequisites: Chemistry 358 or 360, and 389/390. Lecs. M W F 10:10-11:00. D. A. Usher.

Properties, synthesis, reactions, and biochemical reactions of nucleic acids.
CHEM 787 Modern Methods of Physical Chemistry
Fall. 4 credits. Prerequisites: 1 year of undergraduate physical chemistry, 3 semesters of calculus. 1 year of college physics, (same as for CHEM 681). Lecs, T R 10:10-11:15; J. H. Freed.
This course provides the methodological background for graduate courses in chemical thermodynamics, kinetics, statistical mechanics, and quantum chemistry. It will include the methods of solution of relevant differential equations; the eigenvalue problem and linear algebra; partial differential equations for diffusion and wave mechanics; integral transforms; variational methods; and modern numerical methods. At the level of Mathematical Methods in the Physical Sciences, 2nd Edition, by Boas. There will be two prelims, one final exam, and 10-12 problem sets.

CHEM 788 Macromolecular Crystallography (also BIOSBM 738)
Spring. 3 credits. S-U grades optional. Prerequisites: Permission of instructor. Offered alternate years. Lecs, M W F 11:15; dis sec 6:00 r. S. E. Ealick, P. A. Karplus, J. C. Clardy.
Lectures briefly cover the fundamentals of crystallography and focus on methods for determining the three-dimensional structures of macromolecules. These include crystallization, data collection, multiple isomorphous replacement, molecular replacement, model building, refinement, and structure interpretation.

CHEM 789 X-ray Crystallography
Spring. 4 credits. Prerequisite: Chemistry 288 or 390 or permission of instructor. Offered alternate years. Lecs, M W F 10:10. Not offered 2000-2001. J. C. Clardy.
A beginning course in the applications of X-ray crystallography to chemistry. Topics include symmetry properties of crystals, diffraction of X-rays by crystals, interpretation of diffraction data, and refinement of structures. The chemical information available from a diffraction experiment is stressed, and practical aspects are incorporated.

CHEM 791 Spectroscopy
Spring. 4 credits. Prerequisite: Chemistry 793 or Physics 443 or equivalent. Lecs, M W F 11:15-12:05. G. S. Ezra.
Principles of molecular rotational, vibrational, and electronic spectroscopy. Topics include interaction of molecules with radiation; Born-Oppenheimer approximation, diatomic molecules; polyatomic molecules, feasible operations and the molecular symmetry group, and spectroscopy, dynamics, and IVR. At the level of Kroto’s Molecular Rotation Spectra.

CHEM 792 Molecular Collision Theory
The concepts and methods of scattering theory are described with particular emphasis on applications to problems of chemical interest. At the level of Child’s Molecular Collision Theory and Taylor’s Scattering Theory.

CHEM 793 Quantum Mechanics I
Fall. 4 credits. Prerequisites: Chemistry 390, coregistration in A&EP 321 or equivalents or permission of instructor. Lecs, M W F 11:15 G. S. Ezra.
Schrödinger’s equation, wave packets, uncertainty principle. WKB theory, matrix mechanics, orbital and spin angular momentum, exclusion principle, perturbation theory, variational principle. At the level of Cohen-Tannoudji’s Quantum Mechanics.

CHEM 794 Quantum Mechanics II
Spring. 4 credits. Prerequisites: Chemistry 793 or equivalent and the equivalent of or coregistration in A&EP 322, or permission of instructor. Lecs, T R 10:10-11:25. B. Widom.

CHEM 796 Statistical Mechanics
Spring. 4 credits. Prerequisite: Chemistry 678 and 703 or equivalent. Lecs, T R 8:30-9:55. R. Loring.

CHEM 798 Special Topics in Physical Chemistry (Chemical Bonding in Polymers, Surfaces, and the Solid State)
Spring. 4 credits. Prerequisite: Chemistry 605, or 681, or 793, or Physics 443, or the equivalent. Lecs, T R 10:10-11:25. Not offered 2000-2001. R. Hoffmann.
The qualitative aspects of the electronic structure and chemical bonding on extended one-, two- and three-dimensional systems will be discussed, in a way accessible to a wide range of inorganic and organic chemists, and to engineers and physicists as well.

CHINESE
PALC0N Program (Chinese)
See Department of Asian Studies.

CLASSICS
Cornell University has long recognized the importance of studying the civilizations of ancient Greece and Rome. Particularly in an age of increasing specialization, study of the Classics is widely viewed as an excellent means of acquiring a liberal education. In Cornell, we are deeply interested in the continuing humanistic values contained in the literature of the ancient world and in gaining a fuller understanding of these important cultures and their imprint on subsequent ages. The Department of Classics at Cornell maintains an active program to the needs of each student, if there is a Classical writer you would like to study, the department will do its best to help you do so whether you are a major in the department or not.

Majors
The Department of Classics offers majors in Classics, Greek, Latin, and Classical Civilization.

Classics
The Classics major comprises seven courses in advanced Greek and Latin (numbered 201 or above) and three courses in related subjects (see below) selected in consultation with the adviser. Classics majors are required to take a minimum of one 300-level course in one language and two 300-level courses in the other
Students who are considering the option of undertaking graduate study in Classics are strongly advised to complete the Classics major.

Greek
The Greek major comprises Classics 201 plus five advanced courses in Greek (numbered 203 and above) of which at least three are to be taken at the 300-level, and three courses in related subjects (see below) selected in consultation with the adviser.

Latin
The Latin major comprises Classics 205 plus five advanced courses in Latin (numbered 207 and above) of which at least three are to be taken at the 300-level, and three courses in related subjects (see below) selected in consultation with the adviser.

Classical Civilization
Those who major in Classical Civilization must complete (a) qualification in Latin and Greek or proficiency in either; (b) Classics 211 (or History 265), Classics 212 (or History 266), and Classics 220, plus five courses selected from those listed under Classical civilization. Classical archaeology, Ancient Philosophy, Latin, and Greek; and (c) three courses in related subjects (see below) selected in consultation with the adviser.

Related Subjects
The field or scope of the subject "Classics" is the interdisciplinary study of Greek and Roman antiquity, comprising Greek and Latin language, literature, and linguistics; ancient philosophy, history, art, archaeology and art history, papyrology, epigraphy, and numismatics. It covers the ancient Mediterranean and neighboring lands as they were during the period extending from approximately 3000 B.C.E. to the sixth century C.E. In addition to the required courses in language and literature, the major includes related courses intended to give breadth and exposure to the other disciplines within the field and to enrich the student's study of the original languages. Since the influence of the Greco-Roman world extended far beyond antiquity, a related course could well focus on some aspect of the classical tradition in a later period. Students select related courses in consultation with their advisers or the DUS.

Honors
Candidates for the degree of Bachelor of Arts with honors in Classics, Greek, Latin, or Classical civilization must fulfill the requirements of the appropriate major study as given above and must also successfully complete the special honors course 472. Credit for the honors course may be included in the credits required for the major. Students who wish to become candidates for honors must have a cumulative average of B, and B+ in the major. In consultation with the Standing Committee on Honors, the students should choose an honors adviser by the end of their sixth semester. By the second week of their seventh semester they should submit an outline of their proposed honors work to the Standing Committee and to the adviser(s). The thesis will be written under the supervision of the honors adviser(s) chosen by the student. Honors advisers will submit recommendations to the Standing Committee on Honors. The Committee will read all honors theses and will determine the level of departmental honors. A copy of each successful honors thesis will be filed with the department.

Independent Study
Independent study at the 300 level may be undertaken by undergraduates upon completion of one semester of work at the 300 level. 200-level independent study may be undertaken only in the case of documented schedule conflict upon application to the DUS.

Study Abroad
Cornell participates in the Intercollegiate Center for Classical Studies in Rome, which offers courses in Latin, Greek, ancient history, art, archaeology, and Italian. Another opportunity for a semester's study abroad is available through College Year in Athens. (Consult Cornell Abroad for details.) In addition, Cornell is a member institution of the American School of Classical Studies at Athens, whose Summer Program is open to graduate students and qualified undergraduates. The American Academy in Rome, of which Cornell is also a member institution, offers full-year and summer programs for qualified graduate students. For graduate students the Department of Classics offers a few travel grants each year. Townsend Memorial Fund. Detailed information on these programs is available in the Department of Classics Office, 120 Goldwin Smith Hall.

Summer Support for Language Study
The Beatrice R. Kanders Memorial Scholarship (for the summer immediately following the freshman or sophomore year; preference given to dyslexic students) is available to students who want to enroll in Intensive Latin or Greek in the Cornell Summer session. These courses are designed to enable students to enter second-year Latin or Greek the following fall. Preference is given to Classics undergraduate majors, and other students needing Latin or Greek for completion of their majors. Applications are due to the chair of the Department of Classics by March 16.

Placement in Latin, Ancient Greek, and Modern Greek
Placement of first-year students in Latin and ancient Greek courses, and proficiency level in modern Greek, is determined by an examination given by the Department of Classics during orientation week or by arrangement with the director of undergraduate studies.

First-Year Writing Seminars
The department offers freshman writing seminars on a variety of topics. Consult John S. Knight Writing Seminar Program brochures for times, instructors, and descriptions.

Classical Civilization
CLASSICS 429

CLASSICS 100 Word Power: Greek and Latin Elements in the English Language
Spring. 3 credits. E. Hohendahl.

CLASSICS 210 English Words: Histories and Mysteries (also LING 109)
Fall. 3 credits. M. Weisz.

CLASSICS 211 The Greek Experience #
Fall. 3 credits. Limited to 50 students. P. Ahl.

An introduction to the literature and thought of ancient Greece. Topics will include epic and lyric poetry, tragedy and comedy, and historical, political, philosophical, and scientific writings. Some attention will also be given to the daily life of ordinary citizens, supplemented by slides of ancient art and architecture.

CLASSICS 212 The Roman Experience #

An introduction to the civilization of the Romans as expressed in their literature, religion, and social and political institutions.

CLASSICS 217 Initiation to Greek Culture #
Fall. 4 credits. Limited to 18 students. This course is intended especially for freshmen (a few exceptionally motivated sophomores or upperclass students may be accepted). Apply in writing to the chair, Department of Classics, 120 Goldwin Smith Hall. P. Pucci and L. Abel.

Knowledge of Greek or Latin is not necessary, since all texts are in translation. What is necessary is the willingness to participate in three one-hour seminars each week and also a supplementary one-hour seminar (two-hour) session, during which the class will participate in workshops with specially invited guests.

This course covers a wide range of Greek literary and philosophical works, as well as modern critical and philosophical writings on the Greeks. Our focus throughout will be on the status of language, the many forms of discourse that appear in the literature, and the attempts the Greeks themselves made to overcome the perceived inadequacies and difficulties inherent in the medium of poetry and philosophy.

We will inquire into the development of philosophy in the context of a culture infused with traditional, mythological accounts of the cosmos. We will ask how poetic forms such as tragedy responded to and made an accommodation with philosophical discourse while creating a most emotional effect on the audience; how the first historians, using literary and philosophical discourse while attempting the Greeks themselves made to overcome the perceived inadequacies and difficulties inherent in the medium of poetry and philosophy.

We will inquire into the development of philosophy in the context of a culture infused with traditional, mythological accounts of the cosmos. We will ask how poetic forms such as tragedy responded to and made an accommodation with philosophical discourse while creating a most emotional effect on the audience; how the first historians, using literary and philosophical discourse, created space for their own inquiry, and we will try to discuss how these issues persist and are formulated in our own thinking.

CLASSICS 218 Initiation to the Classical Tradition #

CLASSICS 223 The Comic Theater (also COM L 223 and THETR 223) #
Spring and summer 2001. 3 credits. J. Rusten.

The origins of comic drama in ancient Greece and Rome, and its subsequent incarnations especially in the Italian renaissance (Commedia erudita and Commedia dell'arte), Elizabethan England, seventeenth-century
France, the English Restoration, and Hollywood in the thirties and forties. Chief topics will be: the growth of the comic theatrical tradition and conventions; techniques and themes of comic plots (trickster, parody, farce, caricature); and the role of comedy in society. All readings in English.

CLASS 229 War and Peace in Greece and Rome (also HIST 222)  
Fall. 4 credits. B. Strauss. 
For description, see HIST 228.

CLASS 231 Ancient Philosophy (also PHIL 211)  
Fall. 4 credits. G. Fine. 
For description, see PHIL 211.

CLASS 236 Greek Mythology (also COM L 236)  
Fall 2000 and summer 2001. 3 credits. 
Limited to 200 students. D. Mankin. 
A survey of the Greek myth will be taken, with emphasis on the content and significance of the myths in Mediterranean society, including the place of myth in Greek life and consciousness; the factors and influences involved in the creation of myths; and the use of myths for our understanding of Greek literature, religion, and moral and political concepts.

CLASS 237 Greek Religion and Mystery Cults (also RELST 237)  
Spring. 3 credits. K. Clinton. 
Greek religion constitutes one of the essential features of ancient Greek civilization and distinguishes it from later Western civilization. Since religion permeates Greek culture, the major art forms (epic poetry, tragedy, comedy, architecture, painting, and sculpture), the course will investigate the interaction of religion with these forms—an investigation that is fruitful both for the understanding of Greek religion and the forms themselves, some of which, like tragedy, originated in cult. A representative variety of cults will be studied with special emphasis on mystery cults, such as the Eleusinian mysteries of Demeter and Persephone, the Kaliopi, the Great Gods of Samothrace, and Bacchic rites.

CLASS 238 The Ancient Epic and Beyond  
We will move, Odysseus-like, to the West-beginning with Homer's Iliad (and including the British poet Christopher Logue's "account" of the opening books) and Odyssey, we will continue in the Hellenistic and Augustan eras, with Apollonius of Rhodes' Argonautica and Virgil's Aeneid. A violent shift in space and time will have us conclude with two New World maritime epics: Herman Melville's Moby Dick and Derek Walcott's Omeros.

CLASS 258 Periclean Athens  
Spring. 4 credits. H. Pellecchia. 
H. R. Rawlings III, and J. Rusten. 
The first five weeks will provide a synoptic view of Athens' historical and cultural achievement in the middle of the fifth century B.C., the tragic age of Thucydides, "The Glory that was Greece." Readings will be taken from Greek historians, philosophers, poets, and documentary texts, and from J. J. Politi's Art and Experience in Classical Greece. At least three of the 75-minute lectures will be devoted to art history and delivered by a guest speaker. The next 7–8 weeks will follow the course of the Peloponnesian War to its end: readings from Thucydides will be interwoven with contemporaneous texts composed by the dramatists (Sophocles, Euripides, and Aristophanes) and the sophists (supplemented with readings from Plato). The remaining classes will consider the fate of Socrates and a few other fourth-century developments. The basic aim of the course is to approach an understanding of how and why a vital and creative society came unglued. There will be weekly discussion sections.

CLASS 265 Ancient Greece from Homer to Alexander the Great (also HIST 265)  
For description, see HIST 265.

CLASS 268 A History of Rome from Republic to Principate (also HIST 268)  
Spring. 4 credits. Open to freshmen. 
J. Ginsburg. 
For description, see HIST 268.

CLASS 291 Classical Indian Narrative (also ASIAN 291)  

CLASS 303-304 Independent Study in Classical Civilization, Undergraduate Level  
303, fall; 304, spring. Up to 4 credits.

CLASS 331 Goths, Vandals, Franks, and Romans  
Fall. 4 credits. D. Starzec. 
Continuations of The Visigothic Sack of Rome by Alaric in 410 will be followed by three different case-studies for co-existence of Roman and barbarian in Late Antiquity: the Vandal kingdom (North), the Ostrogotic Kingdom (Italy), and finally the one that lasted, the Frankish kingdom (Gaul). Readings will include contemporary primary works as well as modern historiography.

CLASS 333 Greek and Roman Mystery Cults and Early Christianity (also RELST 333)  
Fall. 4 credits. A previous course in Classics (civilization or language) or Religious Studies 101 is recommended. Not offered 2000–2001. K. Clinton. 
A study of the controversial question of religious continuity between paganism and early Christianity. 

CLASS 335 Byzantine Theocracy: Church and State from the Fourth to Eighth Centuries A.D. (also HIST 334, NES 340, and RELST 340)  
Fall. 3 credits. S. Wessel. 
The Byzantine state and society was dominated by two institutions: church and state. These institutions were closely affiliated and mutually supportive. We will study the relationship between these two institutions throughout the first five centuries of the Byzantine Empire, and the impact that these institutions had on the formation of Byzantine society, culture, and religion. A variety of sources will be considered, including ecclesiastical histories, secular historiography, and the works of conciliar proceedings, letters, and theological treatises, as well as material sources, such as coins and images.

CLASS 339 Plato (also PHIL 309)  
Spring. 4 credits. Prerequisite: at least 1 previous course in philosophy. 
C. Brittain. 
For description, see PHIL 309.

CLASS 345 The Tragic Theater (also COM L 344 and THETR 345)  
Tragedy and its audiences from ancient Greece to modern theater and film. Topics: origins of the various forms; techniques and theatrical conventions; tragedies in modern theater and film. Works studied will include: Aeschylus' Agamemnon, Sophocles' Oedipus Tyrannus, Plutarch, Euripides' Alcestis, Helen, Iphigenia in Aulis, Orestes, Seneca's Thyestes, Trojan Women, Shakespeare's Julius Caesar, Titus Andronicus, Othello, Strindberg's The Father, Durrenmatt's The Visit, Bergman's Seventh Seal, Cacoyannis' Iphigenia.

CLASS 382 Greeks, Romans, and Victorians (also COM L 382)  
This course explores the nineteenth-century (and especially Victorian) British poets, dramatists, and to a lesser extent, novelists, present Greco-Roman antiquity. The varied influences of Vergil and Homer, Seneca and Sophocles, Plautus and Aristophanes, Horace, and Greek lyric poetry will be discussed in selected works of Thomas More, Shelley, Byron, Swinburne, W. S. Gilbert, Oscar Wilde, and the pre-Raphaelites and Victorian poets.

CLASS 390 The Sanskrit Epics (also ASIAN 390)  
For description, see ASIAN 390.

CLASS 395 Classical Indian Philosophical Systems (also ASIAN 395 and RELST 395)  
Spring. 4 credits. Prerequisite: some background in philosophy or in classical Indian culture. 
C. Minkowski. 
For description, see ASIAN 395.

CLASS 450 The Peloponnesian War (also CLASS 632 and HIST 450/630)  
Fall. 4 credits. Prerequisites: CLASS 211 or 217, HIST 265, or permission of instructor. 
B. Strauss. 
For description, see HIST 450.

CLASS 463 Gender and Politics in the Roman World (also HIST 463 and WOMNS 464)  
Spring. 4 credits. J. Ginsburg. 
An undergraduate seminar examining the relationship between gender and politics in the late Roman Republic and early Empire. Among the questions this course will address are: what political the exclusive domain of men in Roman society (as is generally assumed) or does a broader definition of politics and an understanding of the various forms of political activity in ancient Rome might have taken place. A separate course in the political role of women in Roman political life? What role did gender have in Roman political discourse and ideology? Why did issues such as family, marriage, and sexuality become subjects of political debate and legislation?
CLASSICS 431

GREEK

[CLASS 369 Equality and Inequality in Ancient Greece (also HIST 469)]
Fall. 4 credits. Prerequisite: History 265, Classics 211 or 217, or written permission of the instructor. Not offered 2000–2001. B. Strauss.
For description, see HIST 469.

[CLASS 480 Roman Society and Politics under the Julio-Claudians (also HIST 473)]
This course examines several of the important social and political changes in Roman society under Augustus and his successors, the Julio-Claudians. Topics to be investigated include Augustus's consolidation of power through political and social revolution, the Augustan attempt to regulate family life and social relations by legislation, the relation of the emperor Tiberius with the members of the old ruling class, the growth of the imperial bureaucracy and the new opportunities for social mobility, the political opposition to Claudius and Nero, Nero's cultural and provincial policy, and the manipulation of the imperial cult. All readings will be in English.

CLASS 711–712 Independent Study for Graduate Students in Classical Civilization
711, fall; 712, spring. Up to 4 credits.

Classics 307–308 Independent Study in Greek, Undergraduate Level
307, fall; 308, spring. Up to 4 credits.

CLASS 310 Greek Undergraduate Seminar #
Fall and spring. 4 credits. Prerequisite: two 200-level courses in Greek or permission of instructor. Fall topic: Euripides. K. Clinton. Spring topic: Greek Lyric Poetry. H. Pelliccia.

CLASS 311 Greek Philosophical Texts: (also PHIL 411) #
Fall and spring: up to 4 credits. Prerequisites: knowledge of Greek and permission of instructor. T. Irwin, C. Brittain.
Readings of Greek philosophical texts in the original.

CLASS 313 Greek Epic #
Fall. 4 credits. Prerequisite: Classics 206 or equivalent. Not offered 2000–2001.

CLASS 342 Greek Prose Composition
Spring. 4 credits. Prerequisite: one term of 200-level Greek or permission of instructor. P. Pucci.

CLASS 417 Advanced Readings in Greek #

CLASS 419 Advanced Greek Composition

CLASS 555 Graduate Proseminar
Fall. 1 credit. Not offered 2000–2001. Staff. Graduate students will be introduced to the tools, techniques, and methods of classical scholarship.

GREEK 605–606 Graduate Survey of Greek Literature
605, fall; 606, spring. 4 credits each term. Prerequisite: linguistic proficiency to be determined by instructor. Not offered 2000–2001.

A survey of Greek literature in two semesters. Classics 605: Greek literature from Homer to the mid-fifth century. Classics 606: Greek literature from the late fifth century to the Empire.

CLASS 632 Topics in Ancient History (also CLASS 450 and HIST 450/630)
Fall. 4 credits. B. Strauss.
For description, see HIST 630.

CLASS 671 Graduate Seminar in Greek
Fall. 4 credits.
671.1 topic: Homer. A. Nussbaum and H. Pelliccia.
671.2 topic: Problems in Greek Religion. K. Clinton.

CLASS 672 Graduate Seminar in Greek: Sophocles
Spring. 4 credits. P. Pucci.

CLASS 701–702 Independent Study for Graduate Students in Greek
701, fall; 702, spring. Up to 4 credits.

CLASS 105 Latin for Beginners
Fall. 4 credits. Staff. An introductory course in the essentials of Latin, designed for rapid progress toward reading the principal Latin writers.

CLASS 106 Elementary Latin
Spring. 4 credits. Prerequisite: 105 or equivalent. Staff. A continuation of Classics 105, using readings from various authors.

CLASS 107 Intensive Latin
Spring and summer. 6 credits. Staff. Prepares students in one term for 200-level Latin.

CLASS 108 Latin in Review
Fall. 4 credits. Prerequisite: placement by departmental examination. E. Hohendahl. This course will accommodate students who place too high for beginning Latin, but not high enough for intermediate.

CLASS 205 Intermediate Latin #

CLASS 216 Vergil #

CLASS 227–228 Independent Study in Latin, Undergraduate Level
227, fall; 228, spring. Up to 4 credits. Only by permission of the DUS in the case of documented schedule conflict.

CLASS 312 Latin Undergraduate Seminar #
Fall and spring. 4 credits. Prerequisite: 2 terms of 200-level Latin or permission of instructor. Fall topic: Horace. D. Mankin.

CLASS 314 The Augustan Age #
4 credits. Prerequisite: 2 terms of 200-level Latin or permission of instructor. Not offered 2000–2001.

CLASS 315–316 Independent Study in Latin, Undergraduate Level
315, fall; 316, spring. Up to 4 credits.

CLASS 317 Roman Historiography #

CLASS 341 Latin Prose Composition

CLASS 369 Intensive Medieval Latin Reading
Summer only. 4 credits. D. Shanzer.
Web site: www.arts.cornell.edu/classics/Classics/Classics 369/Med_Latin.html
CLASS 411 Advanced Readings in Latin Literature: Lucan #
Fall. 4 credits. F. Ahl.

CLASS 412 Advanced Readings in Latin Literature #

CLASS 420 Plautus
4 credits. Prerequisite: at least one 300-level Latin course or permission of instructor. Not offered 2000–2001.
A. Nussbaum.

CLASS 441 Advanced Latin Prose Composition
Spring. 4 credits. For graduate students. Only those undergraduates who have completed Latin 341 and have permission of the instructor may enroll. J. Reed.

CLASS 555 Graduate Proseminar
Fall. 1 credit. Not offered 2000–2001. Staff. Graduate students will be introduced to the tools, techniques, and methods of Classical scholarship.

CLASS 603 Later Latin Literature: Late Antique and Medieval Hagiology
Spring. 4 credits. D. Shanzer.

CLASS 625-626 Graduate Survey of Latin Literature
625 fall; 626 spring. 4 credits each term. Prerequisite: linguistic proficiency to be determined by instructor. Not offered 2000–2001.
A survey of Latin literature in two semesters. 625: Latin poetry from its beginnings to the early Empire. 626: Latin literature of the Empire.

CLASS 679 Graduate Seminar in Latin
Fall. 4 credits. Not offered fall 2001.

CLASS 680 Graduate Seminar in Latin

CLASS 751-752 Independent Study for Graduate Students in Latin
751, fall; 752, spring. Up to 4 credits.

Classical Art and Archaeology

CLASS 220 Introduction to Art History: The Classical World (also ART H 220) #
Fall. 4 credits. J. Rife.
An overview of the art and archaeology of the Greek and Roman world. The sculpture, vase painting, and architecture of the ancient Greeks from the Geometric period through the Hellenistic, and the art of the Romans from the early Republic to the late empire.

CLASS 221 Minoan-Mycenaean Art and Archaeology (also ARKEO 221 and ART H 221) #
Spring. 3 credits. J. Coleman.
The birth of civilization in Greece and the Aegean islands during the Bronze Age. The main focus is on the rise and fall of Minoan Crete and Mycenaean Greece, with consideration given to the nature and significance of Aegean interactions with Egypt, the Near East, and Anatolia.

CLASS 232 Archaeology in Action I (also ARKEO 232 and ART H 224) #
P. I. Kuniholm.

CLASS 233 Archaeology in Action II (also ARKEO 233 and ART H 225) #
P. I. Kuniholm.
For description, see Art H 225.

CLASS 256 Practical Archaeology (also ARKEO 256)
Spring. 3 credits. J. Coleman.
An introduction to the aims and methods of field archaeology. Topics covered include: remote sensing (satellite images and aerial photos); surface survey; subsurface investigations by magnetometer, ground penetrating radar, etc.; the layout and development of a land excavation; underwater excavations; the collection, description, illustration, and analysis of artifacts and data, such as pottery, lithics, botanical samples, and radiocarbon samples. Hands-on experience with potsherds and other artifacts from prehistoric and Classical Greece and Cyprus in the university's collections is intended to prepare students for work in the field.

CLASS 309 Dendrochronology of the Aegean (also ARKEO 309 and ART H 309) #
Fall and spring. 4 credits. Prerequisite: permission of instructor. Limited to 10 students. P. I. Kuniholm.
For description, see Art H 309.

CLASS 310 Art in the Daily Life of Greece and Rome (also ART H 310) #
A. Ramage.
For description, see ART H 310.

CLASS 320 The Archaeology of Classical Greece (also ART H 320) #
A. Ramage.

CLASS 321 Mycenaean and Homer (also ARKEO 321 and ART H 321) #
Fall. 4 credits. Prerequisite: at least 1 previous course in archaeology, classics, or history of art. Not offered 2000–2001.
J. Coleman.
Study of the relationship between the Mycenaean period of Greece (known primarily from archaeology) and the Homeric Iliad and Odyssey. Topics include Mycenaean architecture, burial customs, kingship, and military activities; the reasons for the collapse of the Bronze Age palatial economies; the archaeological evidence for society in the "Dark Ages" that followed; the writing systems of Mycenaean Greece (Linear B) and the Iron Age (the Semitic/Greek alphabet); the nature of the Homeric poems and their value as historical sources.

CLASS 322 Greeks and Barbarians (also ART H 328) #
Fall. 4 credits. Prerequisite: Classics 220 or 221, or permission of instructor.
J. Coleman.
A study of the archaeological and other evidence for the interaction between Greek civilization and the peoples of the eastern and western Mediterranean from the thirteenth to the fourth centuries B.C.E. The course will focus on Greek relationships with Egypt, Phoenicia, Cyprus, Anatolia, and Italy in the post-Bronze Age period.

CLASS 323 Painting in the Greek and Roman World (also ART H 323) #
A. Ramage.

CLASS 325 Greek Vase Painting (also ART H 325) #
Fall. 4 credits. A. Ramage.
For description, see ART H 325.

CLASS 327 Greek and Roman Coins (also ART H 327) #
A. Ramage.
For description, see ART H 327.

CLASS 329 Greek Sculpture (also ART H 329) #
J. Coleman.
An examination of ancient Greek sculpture, both three-dimensional and two-dimensional, from the Archaic to the Hellenistic period. Aspects of the works studied include: technological advances; changing ideology of the sculptors, regionalism of styles, and taste of individual patrons.

CLASS 330 Arts of the Roman Empire (also ART H 330) #
Fall. 4 credits. A. Ramage.
For description, see ART H 330.

CLASS 357-358 Independent Study in Classical Archaeology, Undergraduate Level
357, fall; 358, spring. Up to 4 credits.

CLASS 423 Ceramics (also ARKEO 423 and ART H 423)
A. Ramage.
For description, see ART H 423.

CLASS 430 Seminar on the Bronze Age Architecture of Asia Minor (also ARKEO 425 and ART H 425) #
Spring. 4 credits. P. I. Kuniholm.
For description, see ART H 425.

CLASS 432 Sardis and the Cities of Asia Minor (also ARKEO 432 and ART H 424) #
A. Ramage.
For description, see ART H 424.

CLASS 434 The Rise of Classical Greece (also ARKEO 434 and ART H 434) #
4 credits. Recommended: Classics 220 or 221, History of Art 220 or 221, or permission of instructor. Not offered 2000–2001.
P. I. Kuniholm.
For description, see ART H 434.

CLASS 435 Seminar on Roman Art and Archaeology (also ARKEO 435 and ART H 427) #
A. Ramage.
For description, see ART H 427.

CLASS 629 The Prehistoric Aegean (also ARKEO 629) #
J. Coleman.
Seminar with focus on the Aegean and neighboring regions in the Neolithic and Early Bronze Ages.
The language of the Homeric epics: dialect background, archaisms, modernizations. The tional technique.

CLASS 427 Homeric Philology (also LING 459) #

Spring. 4 credits. Prerequisite: thorough familiarity with the morphology of Classical Greek. A. Nussbaum.

Sanskrit

[CENTER 131-132] Elementary Sanskrit (also LING 131-132 and SANSK 131-132)  
131, fall; 132, spring. 4 credits each term.
An introduction to the essentials of Sanskrit grammar. Designed to enable the student to read classical and epic Sanskrit as quickly as possible.

CLASS 251-252 Intermediate Sanskrit (also LING 251-252 and SANSK 251-252) #

251, fall; 252, spring. 3 credits each term.
Prerequisite: Classics 132 or equivalent.
C. Minkowski.

Readings from the literature of Classical Sanskrit. Fall: selections from the two Sanskrit epics, the Mahabharata and the Ramayana. Spring: more selections from the epics, and from either Sanskrit story literature or from Sanskrit dramas.

CLASS 403-404 Independent Study in Sanskrit, Undergraduate Level

403, fall; 404, spring. Up to 4 credits.
C. Minkowski.

CLASS 703-704 Independent Study for Graduate Students in Sanskrit

703, fall; 704, spring. 4 credits each term.
C. Minkowski.

Also see Classics 291, 390, and 395 (Classical Civilization listings).

Honors Courses

CLASS 472 Honors Course: Senior Essay

Fall and spring. 8 credits. An advisor must be chosen by the end of the student's senior semester. Topics must be approved by the Standing Committee on Honors by the beginning of the seventh semester. See "Honors," Classics front matter.

COMPARATIVE LITERATURE 433

CLASS 630 Seminar in Classical Archaeology (also ARKEO 520 and ART H 520)

Fall. 4 credits. J. Coleman.
The subject of the seminar in 2000 is the rise and development of the polis in the Aegean during the eighth to the sixth centuries B.C.

Topical topics will include the archaeological evidence for the existence of the polis in the eighth and seventh centuries B.C.; the importance of trade for the rise of the polis; the city center (acropolis) and its fortifications; the evidence for religious and civic institutions in the early polis; the relationship between center and territory (chora); the role of landlords, laborers, and slaves in agriculture; port cities and cities with ports; and piracy and warfare as means of production in the polis.
Throughout the seminar the archaeological remains of particular cities and towns will be compared and contrasted with the written sources, particularly the descriptions of the ideal poleis of Plato (Laws) and Aristotle (Politics).

CLASS 721-722 Independent Study for Graduate Students in Classical Archaeology

721, fall; 722, spring. Up to 4 credits.

Greek and Latin Linguistics

[GCLASS 421 Greek Comparative Grammar (also LING 451) #

The prehistory and evolution of the sounds and forms of ancient Greek as reconstructed by comparison with the other Indo-European languages.

[GCLASS 422 Latin Comparative Grammar (also LING 452) #

The prehistory and evolution of the sounds and forms of Classical Latin as reconstructed by comparison with the other Indo-European languages.

[GCLASS 424 Italic Dialects (also LING 454) #

[GCLASS 425 Greek Dialects (also LING 456) #

Fall. 4 credits. A. Nussbaum.

[GCLASS 426 Archaic Latin (also LING 456) #

[GCLASS 427 Homeric Philology (also LING 457) #

The language of the Homeric epics: dialect background, archaisms, modernizations. The notion of a Kranzhrraphikis its constitution, use, and internal consistency. The phonological and morphological aspects of epic compositional technique.

COMPARATIVE LITERATURE

W. J. Kennedy, chairman (141 Goldwin Smith), C. Carmichael, director of Undergraduate Studies, (159 Goldwin Smith);

The Department of Comparative Literature provides a broad range of courses in European as well as non-European literature. Courses stress significant authors, themes, problems, styles, genres, historical periods, and theoretical perspectives. In cooperation with related departments in the humanities, the departmental offerings reflect current interdisciplinary approaches to literary study: hermeneutics, semiotics, deconstruction, cultural criticism, Marxism, reception aesthetics, feminism, and psychoanalysis.

The Major

The major enables students to develop an integrated knowledge of Western literature, to strengthen their reading and writing abilities, and to prepare for careers demanding analytical, interpretive, and evaluative skills. Prospective majors should consult with the director of undergraduate studies. After declaring a major, a student chooses an advisor from the department's faculty. The requirements for the major are designed to allow each student to follow a course of study that combines intellectual rigor with the pursuit of personal interests. The specific contours of such a program are worked out in consultation with the student's advisor.

Requirements for the Major

1) Five courses in Comparative Literature at the 200 level and above, including the core course listed below. A student may include up to two literature courses from other departments.

2) One core course in Comparative Literature (for 2000-2001 Comparative Literature: 304 [fall]), to be taken by all majors in their junior or senior year. At the discretion of the department, students may enroll in core courses in both their junior and senior years.

3) Five courses in literature and other areas of the humanities at the 200 or higher level, to be taken in one or more foreign literature departments. Texts must be read in the original language. A student may offer one language course (composition, etc.) towards fulfilling the language requirement.

4) An honor's essay (Comparative Literature 493) of roughly 50 pages is now optional. It is to be written during the senior year under the direction of a faculty member, preferably from within the department, who has agreed to work in close
1) a program that includes broad historical coverage (e.g., Comparative Literature 201–202: Great Books), intensive study of a single period (e.g., Comparative Literature 203: Literature and Theory, Comparative Literature 448: Subject to Translation). The department also offers a number of strongly recommended 200-level courses designed to acquaint undergraduates with the discipline. Comparative Literature 203: "Introduction to Comparative Literature," as well as broadening introductory courses in World Fiction (Comparative Literature 204) and World Poetry (Comparative Literature 205), with emphasis on the nineteenth and twentieth centuries.

2) a second foreign language, especially for students interested in graduate work in literature.

Honors
A student who completes the requirements for the major is eligible for the degree of Bachelor of Arts with honors in comparative literature. The department bases its decision on the students achieving grades of at least B+ on the senior essay, in course work for the major, and in their overall academic performance at Cornell.

First-Year Writing Seminars
Most 100-level courses may be used toward satisfying the freshman writing seminar requirements. See "John S. Knight Writing Program" for a full description of the first-year seminar program.

Courses

COM L 203 Introduction to Comparative Literature (also ASIAN 203)
Fall. 4 credits. Fall: W. Kennedy and department members.
The course is intended to answer the question persistently asked by undergraduates: "What is comparative literature, anyway?" The format of the course is designed to acquaint students with the range and variety of the field by having members of the department present those aspects, and project their areas of expertise and their methods of teaching. Of the two meetings each week, the first will generally take the form of a lecture; the second will be a discussion of the assigned text. Texts and topics range from the Bible and Dostoievsky to the naturalism of Mann and the word play of Joyce, and from modern American poetry to post-modern critical theory.

COM L 204 Global Fictions (also ASIAN 204)
N. Melish
This course will be an introduction and an inquiry into global perspectives on fiction. Can the reading of fiction point us towards becoming citizens of the world? How might we know this? How might we imagine it? We will consider the condition of the stranger in this global era as well as construct a geography of reading. Readings will be drawn mainly but not only from the contemporary period and outside Europe. Readings will change depending on the instructor, but may include works of Rushdie, Marquez, Conde, Munif, Castellanos, Oe, Ngugi, Wolf, Kincaid, and Homer.

COM L 205 Introduction to Poetry, Chiefly Modern
Unlike Comparative Literature 207, 205 is intended to be a survey that concentrates largely (but of course not exclusively) on foreign poetry. The course will cut across historical periods and poetic genres, from conventional "strict" genres of the sonnet to free verse. The course will introduce students to the vast field of comparative literature, anyway?" The format of the course is designed to acquaint students with the range and variety of the field by having members of the department present those aspects, and project their areas of expertise and their methods of teaching. Of the two meetings each week, the first will generally take the form of a lecture; the second will be a discussion of the assigned text. Texts and topics range from the Bible and Dostoievsky to the naturalism of Mann and the word play of Joyce, and from modern American poetry to post-modern critical theory.

COM L 206 Introduction to Literary Criticism
More advanced undergraduate seminars naturally tend to focus on contemporary literary theory; after all, it is essential for students of literature to be well-informed about contemporary theoretical debates, methodological projects, and problems. But literary theory and criticism did not begin with the structuralist revolution of the 1960s, and it is essential for students to understand earlier developments—many of which still have the power to provoke and inspire. Critical historiography should begin at home, with an awareness of how different the formats, practices, institutions, and politics of literary criticism have been, and this course will thus introduce students to the vast field of pre-1960 debates. We will examine the historical evolution of key terms now more or less taken for granted as part of critical vocabulary, and we will pay particular attention to the relatively recent emergence of literary itself as a category of study. Critics and theorists will be chosen from among Plato, Aristotle, Cicero, Horace, and Augustine; Renaissance and neo-classical critics such as Spenser, Dryden, and Dr. Johnson; Enlightenment, Romantic, and post-Romantic theorists such as Kant, Hegel, Schiller, Coleridge, Wilde, and Pater; and such major twentieth-century figures as Heidegger, Bataille, Sartre, Benjamin, Adorno, and J. A. Richards. No prior knowledge will be assumed, and all texts will be read in English.

COM L 208 Shakespeare and the Twentieth Century (also ENGL 208)
W. Cohen
What is the relationship between the plays of Shakespeare in their own time and the various ways they have functioned in modern culture? We will compare selected works of Shakespeare with their adaptations in fiction, theater, film, the educational system, government, and popular culture. The discussion of each play will be centered around one or more critical approaches. The course as a whole will attempt to provide a systematic introduction to the contemporary study of literature and culture.

COM L 209 Introduction to Cultural Studies
What is culture above and beyond literature, and how are the aesthetics of walking in the city or receiving a postcard different from (or related to) that of reading a detective story or National Geographic? Are we immersed in culture or precipitated out of it? Are cultural subjects or objects? And who is this "we" in any case? Is this imaginary collective identity itself a product or fantasy of culture? When does culture demand assimilation, and when does it allow for or violently enforce the operations of (class, sexual, racial) difference? Do cultures exist in the plural, and would this plural be one of particularity or relationality? How does or do culture(s) mediate between recent enactments of multiculturalism? Are the cultural subjects or objects? Readings will range from Freud, Marx, and Saussure to contemporary poststructuralist critiques and reformulations of cultural identification.

COM L 215 Comparative American Literatures (also AM ST 215)
Spring. 4 credits. B. Maxwell
Twentieth-century writing from Canada, the United States, the Caribbean, and Latin America. A hemispheric American Studies perspective will encourage thinking about and across cultural, linguistic, and national demarcations. This course proposes that a question put by the poet William Carlos Williams—"History, history! What do we fools know or care?"—finds its counter-statement in the works that we will read cannot forget, and wees the words of peace, but their hearts do not forgive. Generations perform ceremonies of reconciliation but there is no end." Countering the literature of amnesia and baseless optimism, the works that we will read cannot forget, and to decline to forgive, the historical traumas that so bitterly flavor them. Our concern largely will be with understanding the aesthetic means and strategies that certain writers use to perform ceremonies not bent on reconciliation.

Readings (in English) will include Joy Kogawa, Obamaan; Sheila Watson, The Double
COM L 220 Thinking Surrealisms  
Fall. 4 credits. B. Maxwell.  
Borrowing its title from a formulation of the Marxist philosopher Ernst Bloch and beginning from the “forays of demoralization” instigated by the Dadas, who bequeathed to surrealism the precious gift of unreconciliation to the given, this course will range over the protean expressiveness of several surrealist moments of the last century. The inception of surrealist precept and practice in Paris in the mid-1920s will be a consideration, perhaps only slightly more central to the course than the emergent anti-fascist political phase of the 1930s and ’40s, the supplementation of Parisian surrealism by Caribbean, Mexican, African American, Quebecois, and Mauritian writers and artists; the renegade practice of Hans Bellmer and the unchristened surreality of Eugene Atget; the reflections of and on surrealism by Walter Benjamin, Ernst Bloch, and Theodor W. Adorno; the relations of surrealism to the Situationist International; and the recent curricula of surrealism in fiction (Milan Kundera) and scholarship (Hal Foster). Throughout, the course will ask what the proliferation of “thinking surrealisms” meant to twentieth-century culture and politics. All readings in English.

COM L 223 The Comic Theater (also CLASS 223 and THETR 223)  
Spring and summer 2001. 3 credits. J. Rusten.  
For description, see Classics 223.

COM L 236 Greek Mythology (also CLASS 236)  
Fall. 3 credits. Limited to 200. D. Mankin.  
For description, see Classics 236.

COM L 239 Cultural History of the Jews of Spain (also NES 239, JWST 239, RELST L 239 and SPAN L 239)  
Fall. 3 credits. E. Alfonso.  
For description, please see Near Eastern Studies 239.

COM L 250 Muhammad and Mystics in the Literatures of the Islamic World (also NES 250)  
Spring. 4 credits. S. Toorawa.  
For course description, please see Near Eastern Literature 250.

COM L 279 The Russian Connection, 1830-1867 (also RUSSL 279)  
Fall. 4 credits. P. Carden.  
For course description, please see Russian Literature 279.

COM L 280 The Russian Connection, 1870-Present (also RUSSL 280)  
Spring. 4 credits. P. Carden.  
For course description, please see Russian Literature 280.

COM L 302 Literature and Theory (also COM L 622 and ENGL 302/602)  
Fall. 4 credits. J. Culler.  
Study of issues in contemporary theoretical debates, with particular attention to structuralism, deconstruction, psychoanalysis, and feminism. Readings from Barthes, Derrick, Foucault, J. Butler, B. Johnson, and others. No previous knowledge of literary theory is assumed.

COM L 304 Europe and Its Others: An Introduction to the Literature of Colonialism  
Fall. 4 credits. Limited to 15. N. Melas.  
Through an examination of selected works from the early twentieth century to the present from France, England, Africa, and the Caribbean, this course will provide an introduction to the literature written alongside and against the historical and cultural phenomena that has arguably had the most far reaching impact in modern history: European colonialism. How was culture instrumental in the political project of domination? How have writers of the postcolonial period attempted to write back? What problems and possibilities does colonialism present for cultural identity and cultural resistance? In addition to close reading of texts and a consideration of historical background, we will also examine visual representations of colonialism, particularly film. Authors will include Conrad, Ngugi, Nandy, Condé, Duras, Salihi, Fanon, Memmi, Djebar, Resnais, and Pontecorvo. All readings available in English.

COM L 311 Modern European Literature and Culture (also FRLIT 315)  
Spring. 4 credits. Staff.  
We shall concern ourselves with European culture as embracing the area from Russia to the Atlantic Ocean, not as divided into Western, Eastern, or Central. European culture crosses the official West political boundaries. Case studies: Ireland, France, Czech Republic, Spain, and Russia.  
This course is designed for those interested both in the artistic, imaginative side of European literature and in the ways in which culture expresses some of the most significant concerns of our age. The conceptual links will include issues of national identity and social justice, as well as concerns of private emotions and individual personality. Popular culture, film, TV, and theatre will be integrated with the reading and class discussion. Some authors who will be read: Flaubert, Charlotte Bronte (Villette), Karl Marx, Dostoevsky, Mayakovsky, Yeats, Malraux, Camus, Joyce, Solzhenitsyn, and others.

COM L 313 Bodies Politic: Queer Theories and Literature of the Body (also WOMNS 318)  
Fall. 4 credits. T. Hope.  
This course will examine notions of corporeality—of bodies both social and individual—as deployed and analyzed in theories of gender and sexuality of the last century. How do concepts of perversion and degeneration haunt the idea of the social body? How are individual bodies stigmatized, encoded, and read within the social sphere? Sexology, psychoanalysis, and new-historicist critiques, including those that emphasize the discursive intersections of sexuality, race, and nationhood, will constitute our textual corpus; in an attempt to question the habitual dichotomization of “theoretical” and “cultural” production, we shall also include a small number of literary and visual texts which comment upon these theoretical traditions. Included are works by: Sigmund Freud, Havelock Ellis, Max Nordau, André Gide, Radclyffe Hall, E. M. Forster, Luce Trigaray, Cherie Moraga, Judith Butler, Michael Foucault, Homi Bhabha, Biddy Martin, Esther Newton, Julia Kristeva, Janine Chasseguet-Smigel, Adrienne Rich, Leo Bersani, Richard Fung, Kobena Mercer, Jewelle Gomez, Teresa de Laurets.

COM L 319 Crime and Conflict in the Modern Arabic Novel (also NES 319)  
Fall. 4 credits. S. S. Torrawa.  
For course description, please see Near Eastern Studies 319.

COM L 326 Christianity and Judaism (also RELST 326)  
Spring. 4 credits. C. Carmichael.  

COM L 328 Literature of the Old Testament (also RELST 328)  
Fall. 4 credits. C. M. Carmichael.  
Analysis of small sections of well-known material for in-depth discussion.

COM L 336 European Drama 1660-1900: Molière to Ibsen (also ENGL 335 and THETR 333)  

COM L 337 Contemporary Mass Culture in Japan and in the U.S. (also ASIAN 363)  
For description, please see Asian Studies 363.

COM L 344 Tragic Theatre (also CLASS 345)  
For course description, please see Classics 345.

COM L 352 European Cultural History, 1815-1870 (also HIST 362)  
Fall. 4 credits. M. Steinberg.  
For description, please see History 362.

COM L 356 Renaissance Literature  
Spring. 4 credits. W. Kennedy.  
An introduction to Renaissance literary texts with some attention to cultural backgrounds and intellectual history. Readings from Machiavelli, Erasmus, Rabelais, Shak, Cervantes, and others.

COM L 358 Literature and Religion: Western Mysticism (also ROMS 358, RELST 358)  
Analysis of some canonical texts of western mysticism toward a systematic view of their common features (a semiotics of the mystic text). Readings include: excerpts from the Bible, Plotinus, Pseudo-Dionysius, Bernard of Clairvaux, Ibn Arabi, and Murcia, The Zohar, Meister Eckhart, Teresa of Avila, John of the Cross, and expressions of silence and the ineffable in our times.)

COM L 362 The Culture of the Renaissance II (also ENGL 325, HIST 364, MUSIC 390, ART H 351 and RELST 362)

Members of various departments will lecture on Luther, Michelangelo, Edmund Spenser, Cervantes, Copernicus, Galileo, and Montaigne. Guest lectures will include Peter Dear, History; Esther Dotson, History of Art; and Rebecca Harris-Warrick, Music. Lectures and discussion will introduce different methods of interpretation and of historical analysis. Writings: two short papers and a final take-home examination.

COM L 363-364 The European Novel (also SPANL 363)

363, fall; 364, spring. 4 credits. Comparative Literature 363 and 364 may be taken independently of each other. Fall: staff; spring, E. Rosenberg.

363: From Boccaccio to Goethe. Survey of the history of the novel from its origins to the end of the eighteenth century. The new genre of Humanism and the medieval romances of chivalry. Ambiguites derived from the lack of the word "novel." Different steps in the conquest of realism. The novel and intellectual history in different epochs: character and structure in the novels and contemporary philosophical views on man, cosmos, gender, and social classes. Readings include Boccaccio's Filomena, G. Perez's Lazarillo de Torre, Cervantes's Don Quixote, Mme de Lafayette's The Princess of Cleves, Defoe's Robinson Crusoe, Horace Walpole's The Castle of Otranto; and Goethe's The Sorrows of Young Werther, as well as a short package containing theoretical statements about the genre from Giraldi Cinthio to Goethe. All texts in English read.

364: From Stendhal to the present (in translation). Close reading of novels from the nineteenth and twentieth centuries: Stendhal's The Red and the Black; Flaubert's Madame Bovary; Joyce's Dubliners; Kafka's The Metamorphosis; and Kundera's The Unbearable Lightness of Being. Study of the changing ways of representing recurring themes: the role of the creative imagination, the rebellions and revolutions, community and solidarity, dominant groups and minorities (social, ethnic, religious, psychological); interplay of politics, sex, and humor. Artistic and structural developments, coherence, connectedness, fragmentation, from realism to modernism.

COM L 365 Contemporary Fiction

A study of European fiction and drama largely drawing on texts from the first half of the twentieth century. We will pay particular attention to the making of literary types and characters; to traces of utopian and messianic elements; to the relations between memory and political revolution; and to the motive of resurrection. Texts (and a short interdisciplinary course) chosen from the following: Robert Walser, Snow White and the Walk; Franz Kafka, The Trial; Thomas Mann, Death in Venice; Bertolt Brecht, The Rise and Fall of the City of Mahagonny; Joseph Roth, Hotel Savoy; Alfred Doblin, Berlin Alexanderplatz; Christa Wolf, The Quest for Christa T.; Louis Aragon, Paris Peasant; Louis-Ferdinand Celine, Death on the Installment Plan; Elio Vittorini, In Sicily; Natalia Ginzburg; stories; and Isaac Babel, stories. Collateral theoretical readings by Georg Lukács, Ernst Bloch, Bertolt Brecht, Walter Benjamin, Siegfried Kracauer, Gershom Scholem, Elias Canetti, and Christa Wolf.

COM L 367 The Russian Novel (also RUSS L 367)

Fall. 4 credits. A. Poljak.

For description, please see Russian Literature 367.

COM L 368 Visual Culture and Social Theory (also GOVT 375 and ART H 370)

Fall. 4 credits. S. Buck-Moors.

For description, please see Government 375.

COM L 371 A Mediterranean Society and Its Culture: The Jews under Classical Antiquity (also NES 371, JJWT 371, RELST 371)

Spring. 4 credits. R. Brann.

For course description, please see Near Eastern Studies 371.

COM L 385 Reading Nabokov (also RUSS L 385, ENGL 379)

Fall. 4 credits. Enrollments limited to 25. G. Shapiro.

For course description, please see Russian Literature 385.

COM L 404 History into Fiction: Nazis and the Literary Imagination (also JEWST 414, ENGL 404 and GERST 414)

Fall. 4 credits. Limited to 15. E. Rosenberg.

For description, see English 404.

COM L 411 The Short Novel from Flaubert and James to the Present

Discussion of some 10 authors who excelled in the form of the novella and whose names are thus up to a point "given": in addition to James and Flaubert, writers like Conrad, Tolstoy, Mann, Kafka, Joyce, Faulkner, Marquez, and Morrison. One novella each week or week and a half, but not in canonical order; e.g., Conrad's Heart of Darkness; Kafka's Penal Colony; and Ozick's Shavel as versions of modern politics (or atrocities); the question of "status" as this is reflected in the relations between employer and employee in things like Flaubert's Simple Heart, Tolstoy's Master and Man, and Gertrude Stein's The Good Anna; versions of the "recht"—specifically on the conditions of marriage—in Tolstoy's Kreutzer Sonata and (to stick with Beethoven) André Gide's Pastoral Symphony; same-sex relations in James's Pulpil and Mann's Death in Venice; then also varieties of the fantastic in, say, Jekyll and Hyde, Torn of the Screw, and Dostoevsky's Double.

COM L 413 Death, Culture, and the Literary Monument

Beginning with Homer's Iliad, this course will inquire into the monumental transformation of death into immortality in the literary composition. How do death's negations become literature's triumph? We will pay particular attention to the fate of this procedure when its subjects are no longer heroic warriors but slaves and women. How do colonial domination and gender difference alter the aesthetic procedures and assumptions underlying commemoration and literary immortality? In addition to death and language, we will consider such themes as the relation of antiquity to the present, of identity to its dissolution and of politics to culture. Readings of literary texts drawn from a variety of languages and traditions will be attended by selected readings in literary theory and a glance at visual culture, particularly surrounding monuments commemorating the emancipation of slaves and the holocaust. Authors will include Homer, Derek Walcott, Simone de Beauvoir, Wolf, Krassa Wolf, Tayeb Salih, Maurice Blanchot, Hegel, Orlando Patterson, Walter Benjamin.

COM L 417 Faust (also GER ST 417)

Spring. 4 credits. H. Deinet.

For course description, please see German Studies 417.

COM L 418 Virtual Orientalisms (also ASIAN 415)

Registration limited to 25. For course description, please see Asian Studies 415.

COM L 419-420 Independent Study

419, fall; 420, spring. Variable credit. Comparative Literature 419 and 420 may be taken independently of each other. Applications available in 14G S.

COM L 426 New Testament Seminar (also RELST 426)

COM L 428 Biblical Seminar (also RELST 427)

Fall. 4 credits. C. Carmichael.

We will discuss attitudes to sexuality in the Bible. In Old and New Testament texts we will examine the clash between ancestral behavior and subsequent laws and between legal and religious ideas. Topics will include marriage and divorce, incest, immigration, gender discrimination, guilt and shame, homosexuality, women and purity, sexual language, and symbols.

COM L 430 Brecht, Artaud, Mueller, Wilson (also GERST 430, THEAT 420)

Fall. 4 credits. D. Bathrick.

For course description, please see German Studies 430.

COM L 442 Spinoza and New Spinozism (also GERST 409)

Spring. 4 credits. G. Waite.

For course description, please see German Studies 409.

COM L 448 The City as Text (also S HUM 403, SPANL 403)

Fall. 4 credits. J. Resina.

For description, please see Society for the Humanities 403.

COM L 450 Renaissance Poetry (also COM L 650, ENGL 422/622)

Spring. 4 credits. W. Kennedy.

COM L 451 Renaissance Narrative

A reading and discussion of key texts in narrative epic and chivalric romance from
COM L 452 Renaissance Humanism (also COM L 562)
Spring. 4 credits. Enrollment limited to 15.
A reading and discussion of key texts by Renaissance humanists in Italian, French, English, and other European literatures from the fourteenth to seventeenth centuries.

COM L 453 Rescreening the Holocaust (also GERST 449, THETR 450)
Spring. 4 credits. D. Bathrick.
For description, please see German Studies 449.

COM L 461 Art and Social Histories (ART H 461)
Spring. 4 credits. L. McEner.
For description, please see History of Art 461.

COM L 463 Decadence, Degeneration, and the Nineteenth-Century Imaginary (also FRLIT 482)
Spring. 4 credits. Limited to 15. T. Hope.
Core course for 2000-2001. Through critical reading of French, British, and German prose fiction as well as examples of medical, anthropological, and philosophical thought, we shall examine the social significance of discourses of disease, decadence, and degeneration from the late eighteenth century to the early twentieth. How are questions of bodily pathology related to the construction of "national" bodies? How does perversion emerge at the core of theories of heredity and genealogy that traverse Europe's colonial "national" bodies? How does perversion respond to a new era of altered expectations and redrawn boundaries, a time of renewal and redefinition, we will track the principal issues, directions, figures, and forces shaping the process of poetry's unfolding in the twentieth century's final decade. Materials will be drawn from a wide variety of forms and contexts, including movies, literary journals, general circulation magazines, and anthologies, as well as individual poetry collections.

COM L 474 Topics in Modern European Intellectual and Cultural History (also HIST 474)
Fall. 4 credits. D. LaCapra.
For course description, please see History 474.

COM L 480 Baudelaire in Context (also COM L 680)
Spring. 4 credits. J. Culler.
A reading of Les Fleurs du Mal and Les Petits poèmes en prose, in conjunction with major twentieth-century critical treatments of them, so as to grasp what has been at stake in discussions of Baudelaire. Critics to be read include Benjamin, Bersani, de Man, Friedrich, Jakobson, Jussi, Johnson, and Sartre. Reading knowledge of French required.

COM L 482 Latin American Women Writers (also SPANL 492, WOMN 481)
For course description, please see Spanish Literature 492.

COM L 483 Imagining the Holocaust (also ENGL 458/458, JWS 458/458, COM L 683, GERST 483)
Spring. 4 credits. D. Schwarz.
For course description, please see English 458.

COM L 489 Seminar in Comparative Twentieth-Century Anglophone Drama (also ENGL 483, THETR 483)
Fall. 4 credits. 15. TBA.
For description, please see English 483.

COM L 493 Senior Essay
Fall and spring. 8 credits.
Hours TBA individually in consultation with the director of the Senior Essay Colloquium. Approximately 50 pages to be written over the course of two semesters in the student's senior year under the direction of the student's adviser. An "A" grade will be assigned on the basis of research and a preliminary draft completed in the first semester. A letter grade will be awarded on completion of the second semester.

COM L 495 The Cultural Theory of the Frankfurt School (also GERST 495, GOVT 471)
Fall. 4 credits. P. Hohenadl.
For description, please see German Studies 495.

COM L 604 Translation and the Global Marketplace

The seminar will investigate the global politics of translation, focusing on how works are picked up (or not) for international circulation. Issues to be examined will include: how the politics of local censorship restrict or enable visibility, how the problem of cultural essentialism is packaged and marketed transnationally, how cultural and national identity come through (or don't) in translation, how experiments in non-standard English (ebonies, cubonics, creolite, drug argot, and class stigma) disturb or reaffirm linguistic identity politics. In addition to critical texts, the course will engage with textual studies of Ken Saro-wiwa's Sozaboy: A Novel Written in Rotomende, Salmon Rushdie's The Satanic Verses, Theresa Hak Cha's Dictée, Patrick Chamoiseau's Texaco, Irvine Welsh's Trainspotting, and Gustavo Perez Firmat's Life on the Hyphen. The final section of the seminar will explore some of the ways in which a growing number of non-Western writers have begun to break out of traditionalist narrative modes in order to "translate" the effects of new media on literary representation, from Afro-futurism to postcolonial cyberpunk.

COM L 609 Comparison and Cultural Difference
This course will be a wide-ranging investigation of the pitfalls and possibilities for cross-cultural comparison. We will examine the structure and mechanisms of comparison, both as a disciplinary method and as a concept or practice: to what extent and in what circumstance can comparison produce cultural difference, consolidate it, dissolve it, or even reconfigure its effect, never mind the question of cultural difference itself. We will analyze the complex ways in which communication is shaped by cultural identity politics. In addition to critical texts, assignments will include readings in the social sciences and selected poetry and film. Authors may include Lyotard, Foucault, Fanon, Tilley, Gilroy, Clifford, Appadurai, Braithwaite, Limer, Kincad, Wallcott.

COM L 610 Modern Japanese Studies: The Formation of the Field in History and Literature (also ASIAN 609)
For description, please see Asian Studies 609.

COM L 619-620 Independent Study
619, fall; 620, spring. Variable credit.
Comparative Literature 619 and 620 may count toward the major.

COM L 622 Literature and Theory (also COM L 302 and ENGL 302/602)
Fall. 4 credits. J. Culler.
For description, please see Comparative Literature 302.

COM L 630 Aesthetics in the Eighteenth Century (also ENGL 630)
Fall. 4 credits. N. Saccamano.
For description, please see English 630.

COM L 650 Renaissance Poetry (also COM L 450, ENGL 462, ITALL 450/650)
Spring. 4 credits. W. Kennedy.
For course description, please see Comparative Literature 450.
The term "globalization" has become ubiquitous in recent years as the primary conceptual frame and material basis for understanding contemporary transnationalism. It evokes a brave new borderless world in which politics, culture, and social formations are no longer necessarily congruent nor primarily beholden to national boundaries, thus making neocolonial domination easier to see and harder to combat. It triumphantly or despairingly announces the end of history when space precedes time as the measure of human experience, and that experience exceeds the grasp of modernity's autonomous subject. Globalization thus challenges almost all aspects of our understanding of culture—in both its ethnographic and humanist guises—and the categories through which we apprehend and analyze it. This course will provide an introduction to recent writings surrounding globalization in that shifting borderland between the humanities and the social sciences. The course will, however, focus on some theoretical implications of globalization rather than attempt to provide an exhaustive survey; emphasis, consequently, will be placed on examining the philosophical and methodological presuppositions of various texts and approaches and on engaging the difficulties and aporias of cross-disciplinary discussion. We will dwell specifically on (1) the theoretical implications for culture's relation to space, time, and subjectivity of the "time-space compression" that underlies globalization and (2) the redrawing of boundaries for comparative transnational studies around the pairing of the global and the local. While considering these issues, this seminar will focus on how globality is represented, or rather imagined, particularly in cultural texts (chiefly theory, literature, and film) marginal to the centers of power. In addition to providing a critical survey of some of the most influential texts and debates on the subject of globalization, this seminar will also attempt a re-evaluation (not to say a rehabilitation) of the notion of "imagination" and the pivotal role it often covertly plays in claims for cultural resistance. Authors may include Amin, Wallerstein, Hall, Mooshe, Harvey, Robertson, Appadurai, Agamben, Walcott, Brennan, Jameson, Gissant, and Mies.

[COM L 652 Renaissance Humanism (also COM L 452)]

[COM L 655 Decadence (also ENGL 655, WOMNS 656)]
Fall. 4 credits. E. Hanson.
For description, please see English 655.

[COM L 663 Nietzsche and Heidegger (also GERST 603)]
Fall. 4 credits. G. Waite.
For description, please see German Studies 663.

[COM L 667 Poetry and Rhetoric (also COM L 661)]
Fall. 4 credits. C. Chase.
For course description, please see Comparative Literature 467.

[COM L 670 Joyce’s Ulysses (also ENGL 670)]
Fall. 4 credits. D. Schwarz.
For description, please see English 670.

[COM L 671 Transnational Imaginaries: Globalization and Culture]
Fall. 4 credits. N. Melis.
The term "globalization" has become ubiquitous in recent years as the primary conceptual frame and material basis for understanding contemporary transnationalism. It evokes a brave new borderless world in which politics, culture, and social formations are no longer necessarily congruent nor primarily beholden to national boundaries, thus making neocolonial domination easier to see and harder to combat. It triumphantly or despairingly announces the end of history when space precedes time as the measure of human experience, and that experience exceeds the grasp of modernity's autonomous subject. Globalization thus challenges almost all aspects of our understanding of culture—in both its ethnographic and humanist guises—and the categories through which we apprehend and analyze it. This course will provide an introduction to recent writings surrounding globalization in that shifting borderland between the humanities and the social sciences. The course will, however, focus on some theoretical implications of globalization rather than attempt to provide an exhaustive survey; emphasis, consequently, will be placed on examining the philosophical and methodological presuppositions of various texts and approaches and on engaging the difficulties and aporias of cross-disciplinary discussion. We will dwell specifically on (1) the theoretical implications for culture's relation to space, time, and subjectivity of the "time-space compression" that underlies globalization and (2) the redrawing of boundaries for comparative transnational studies around the pairing of the global and the local. While considering these issues, this seminar will focus on how globality is represented, or rather imagined, particularly in cultural texts (chiefly theory, literature, and film) marginal to the centers of power. In addition to providing a critical survey of some of the most influential texts and debates on the subject of globalization, this seminar will also attempt a re-evaluation (not to say a rehabilitation) of the notion of "imagination" and the pivotal role it often covertly plays in claims for cultural resistance. Authors may include Amin, Wallerstein, Hall, Mooshe, Harvey, Robertson, Appadurai, Agamben, Walcott, Brennan, Jameson, Gissant, and Mies.

[COM L 674 Contemporary Poetry and Culture: 1968–1998 (also ENGL 697 and GERST 674)]
The redrawing of cultural and political boundaries underway since the late 1980s has made it possible to conceive of the poetry of the Cold War era with a degree of closure unimaginable only a few years ago. In light of this changed situation, we will focus on the second half of the post-1945 period—the 30 years extending from 1968 to the present—with particular attention to the past two decades. Exploring issues of emerging and evolving importance for a poetry of the present moment in light of the recent past, we will consider dominant modes as well as alternative practices; canon formation, gender, and multiculturalism; the roles of the publishing industry, popular culture, creative writing programs, and new computer technologies in shaping reading habits and writing communities.

[COM L 675 After the Divide: German Critical Theory of the Seventies and Eighties (also GERST 675 and HIST 675)]
For description, please see German Studies 675.

[COM L 680 Baudelaire in Context (also COM L 480)]
Spring. 4 credits. J. Culler.
For course description, please see Comparative Literature 480.

[COM L 683 Imagining the Holocaust (also COM L 483, ENGL 458/658, JWST 458/658, GERST 483)]
Spring. 4 credits. D. Schwarz.
For course description, please see English 458.

[COM L 685 Gramsci and Cultural Politics (also GERST 685, GOVT 675)]
Spring. 4 credits. G. Waite.
For description, please see German Studies 685.

[COM L 689 Adorno’s Aesthetic Theory (also GERST 689)]
For course description, please see German Studies 689.

[COM L 693 “The Sign of History”: Kant and Lyotard (also GERST 693, GOVT 761)]
Spring. 4 credits. P. Gilgen.
For description, please see German Studies 693.

[COM L 695 Post-Modem Thought and Area Studies (also JAPL 614)]
For course description, please see Japanese Literature 614.

[COM L 721 Baroque Perspectives (also ENGL 721)]
Spring. 4 credits. T. Murray.
For description, please see English 721.
3) A grade of C or better in all math courses, with the overall average of these courses being not less than 2.7.
4) An overall GPA of not less than 2.0 (2.5 or better recommended).

If any courses are repeated, both grades will be counted in the averages used for admissions. Qualifying courses must be taken at Cornell. Note: Students who do not meet these requirements are discouraged from attempting affiliation with the major. The COM S major can be exceptionally rigorous for students who are not suitably prepared for the academic requirements of the program and are unlikely to be admitted to the major if they do not meet the admissions standards listed above.

Honors. To qualify for departmental honors a student must have:
• maintained a cumulative GPA => 3.5
• completed eight credit hours of COM S course work at or above the 500 level
• completed six credit hours of COM S 400 research with a COM S faculty member, spread out at least two semesters and with grades of A- or better.

Note: Honors courses may not be used to satisfy the COM S 400+ elective requirement, the COM S project requirement, the math elective, or the specialization. See the COM S undergraduate web site for more information on eligibility: www.cs.cornell.edu/ugrad.

Courses
For complete course descriptions, see the computer science listing in the College of Engineering section.

COM S 099 Fundamentals of Programming
Concepts
Fall, summer. 2 credits. S-U grades only. No prerequisites.

COM S 100 Introduction to Computer Programming
Fall, spring, summer. 4 credits.
During the fall semester, two versions of COM S 100 (COM S 100M and COM S 100J) are available as described in the computer science listing in the College of Engineering.

COM S 101 Introduction to Cognitive Science (also COGST 101, LING 170, and PSYCH 102)
Fall. 3 credits.

COM S 113 Introduction to C
Fall, spring. 1 credit. Usually weeks 1-4. Prerequisite: COM S 100 or equivalent programming experience. Credit is granted for both COM S 113 and 213 only if 113 is taken first. S-U grades only.

COM S 114 Unix Tools
Fall, spring. 1 credit. Usually weeks 5-8. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.

COM S 130 Creating Web Documents
Fall. 3 credits.

COM S 201 Cognitive Science in Context Laboratory (also COGST 201 and PSYCH 201)
Fall or spring. 4 credits. Concurrent or prior registration in "Introduction to Cognitive Science". PSYCH 102/COGST 101/COM S 101/LING 170/PHIL 191 is suggested but not required. Knowledge of programming languages is not assumed. Limited to 24 students. Fall, B. Halpern and staff; spring, D. Field and staff.

COM S 202 Transition to Java
Fall, spring. 1 credit. Usually weeks 1-4. Prerequisite: one-semester-long programming course.

COM S 211 Computers and Programming (also ENGRD 211)
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or an equivalent course in Java or C++.

COM S 213 C++ Programming
Fall, spring. 2 credits. Prerequisite: COM S 100 or equivalent programming experience. Students who plan to take COMS 113 and 215 must take 113 first. S-U grades only.

COM S 221 Numerical Methods in Computational Molecular Biology
Fall. 3 credits. Prerequisites: at least one course in calculus such as MATH 106, 111, or 119 and a course in linear algebra such as MATH 221 or 294 or BTRY 417. No particular course in programming is required, but the student should have some familiarity with iteration, arrays, and procedures.

COM S 222 Introduction to Scientific Computation (also ENGRD 222)
Spring, summer. 3 credits. Prerequisites: COM S 100 and (MATH 222 or 294).

COM S 230 Intermediate Web Design
Spring. 3 credits. Prerequisite: COM S 230. Not offered every year, may be offered spring 2001.

COM S 280 Discrete Structures
Fall, spring. 4 credits. Pre- or corequisite: COM S 211 or permission of instructor.

COM S 312 Structure and Interpretation of Computer Programs
Fall, spring. 4 credits. Prerequisite: COM S 211 or equivalent programming experience.

COM S 314 Computer Organization (also ELE E 314)
Fall, spring. 4 credits. Prerequisite: COM S 211; COM S 312 or ENGRD 251/ELF E 252 recommended, but not required.

COM S 381 Introduction to Theory of Computing
Fall, summer. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481.

COM S 400 The Science of Programming
Spring. 4 credits. Prerequisite: COM S 280 or equivalent. Not offered every year; semester TBA.

COM S 409 Data Structures and Algorithms for Computational Science
Spring. 4 credits. This course is not open to COM S majors. Prerequisite: COM S 211 or equivalent programming experience.

COM S 411 Programming Languages and Logics
Fall. 4 credits. Prerequisites: COM S 312 or permission of instructor. Not offered every year; semester TBA.

COM S 412 Introduction to Compilers and Translators
Spring. 3 credits. Prerequisites: COM S 211, 312 (or permission of instructor) and 314. Corequisite: COM S 413.

COM S 413 Practicum in Compilers and Translators
Spring. 2 credits. Corequisite: COM S 412. A compiler implementation project related to COM S 412.

COM S 414 Systems Programming and Operating Systems
Fall, summer. 3 credits. Prerequisite: COM S 211, 312 (or permission of instructor), and 314.

COM S 415 Practicum in Operating Systems
Fall. 2 credits. Corequisite: COM S 414.

COM S 417 Computer Graphics and Visualization (also ARCH 374)
Spring. 3 credits. Prerequisite: COM S 211.

COM S 418 Practicum in Computer Graphics (also ARCH 376)

COM S 421 Numerical Analysis
Fall. 4 credits. Prerequisites: MATH 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming.

COM S 432 Introduction to Database Systems
Fall. 3 credits. Prerequisites: COM S 211 and 312 (or permission of instructor). Recommended: COM S 213 and strong programming skills in C, C++, or Java.

COM S 433 Practicum in Database Systems
Fall. 2 credits. Corequisite: COM S 432.

[COM S 444 Distributed Systems and Algorithms
Fall. 4 credits. Pre- or corequisite: COM S 416 or permission of instructor. Not offered every year. Not offered 2000-2001.]

COM S 472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: COM S 211 and 280 (or equivalent).

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Corequisite: COM S 472.

COM S 478 Machine Learning
Spring. 3 credits. Prerequisites: COM S 211, 280, and 312.

COM S 481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481. A faster-moving and deeper version of COM S 381. Corrective transfers between COM S 481 and 381 (in either direction) are encouraged during the first few weeks of instruction.

COM S 482 Introduction to Analysis of Algorithms
Spring, summer. 4 credits. Prerequisites: COM S 211, 280, 312, and either 381 or 481, or permission of instructor.
COM S 483 Quantum Information Processing (also PHYS 481, 681) Fall. 2 credits. Prerequisite: familiarity with the theory of vector spaces over the complex numbers.

COM S 486 Applied Logic (also MATH 486) Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (such as MATH 332, 432, 434, 481), and some course in mathematics or theoretical computer science.

COM S 490 Independent Reading and Research Fall, spring. 1–4 credits.

COM S 501 Software Engineering Fall. 4 credits. Prerequisite: COM S 211 or 410 and experience programming in Java or C++.

COM S 502 Computing Methods for Digital Libraries Spring. 3 credits. Prerequisite: COM S 211 or 410 and some familiarity with the technology of web sites.

COM S 504 Applied Systems Engineering I (also CEE 504, ELE E 512, MAE 591, ORIE 512) Fall. 3 credits. Prerequisite: permission of instructor.

COM S 505 Applied Systems Engineering II (also CEE 505, ELE E 512, MAE 592, ORIE 513) Spring. 3 credits. Prerequisite: Applied Systems Engineering I.

COM S 513 System Security Spring. 4 credits. Prerequisites: COM S 414 or 519 and familiarity with JAVA programming language.

COM S 514 Intermediate Computer Systems Fall or spring. 4 credits. Prerequisites: COM S 414 or permission of instructor.

COM S 515 Practicum in Systems Fall or spring. 1–2 credits. Corerequisite: COM S 514.

COM S 519 Engineering Computer Networks Fall. 4 credits. Prerequisites: COM S 314 or permission of instructor. Not offered every year.

COM S 522 Computational Tools and Methods for Finance Spring. 4 credits. Prerequisites: programming experience (e.g., FORTRAN, or MATLAB) and some knowledge of numerical methods, especially numerical linear algebra. Not offered every year.

COM S 574 Heuristic Methods for Optimization (also CEE 509) Spring. 3 or 4 credits. Prerequisite: COM S/ ENGRD 211 or 222 or CEE/ENGRD 281, or graduate standing, or permission of instructor.

COM S 601 System Concepts Fall. 3 credits. Prerequisite: open to students enrolled in the COM S Ph.D. program.

COM S 611 Advanced Programming Languages Fall. 4 credits. Prerequisites: graduate standing or permission of instructor.

COM S 612 Compiler Design for High-Performance Architectures Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor.

COM S 613 Concurrent Programming Spring. 4 credits. Prerequisites: COM S 414 or permission of instructor. Not offered every year; semester TBA.

COM S 614 Advanced Systems Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

COM S 618 Principles of Distributed Computing—Message Passing Fall. 4 credits. Prerequisites: mathematical maturity and some basic knowledge of distributed systems. Offered in even-numbered years. Not offered fall 2000.

COM S 619 Principles of Distributed Computing—Shared Memory Fall. 4 credits. Prerequisites: mathematical maturity and some basic knowledge of distributed systems. Offered in odd-numbered years.

COM S 621 Matrix Computations Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor.

COM S 622 Numerical Optimization and Nonlinear Algebraic Equations Spring. 4 credits. Prerequisite: COM S 621. Offered in odd-numbered years.

COM S 624 Numerical Solution of Differential Equations Spring. 4 credits. Prerequisite: previous exposure to numerical analysis (e.g. COM S 421 or 621) to differential equations, and knowledge of MATLAB. Offered in even-numbered years.

COM S 626 Computational Molecular Biology Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations and nonlinear optimization methods.

COM S 632 Advanced Database Systems Spring. 4 credits. Prerequisite: COM S 432/433 or permission of instructor.

COM S 664 Machine Vision Spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATLAB 221 or equivalent.

COM S 671 Introduction to Automated Reasoning Fall. 4 credits. Prerequisite: COM S 611 and graduate standing or permission of instructor.

COM S 672 Advanced Artificial Intelligence Spring. 4 credits. Prerequisites: COM S 472 and permission of instructor.

COM S 674 Natural Language Processing Spring. 3 credits. Prerequisites: COM S 472 or permission of instructor. Not offered every year; semester TBA.

COM S 676 Reasoning about Knowledge Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Offered in even-numbered years. Not offered every year.

COM S 677 Reasoning about Uncertainty Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Offered in odd-numbered years.

COM S 681 Analysis of Algorithms Fall. 4 credits. Prerequisite: (COM S 581 or 481, and graduatestanding) or permission of instructor.

COM S 682 Theory of Computing Spring. 4 credits. Prerequisite: (COM S 381 or 481) and (COM S 482 or 681) or permission of instructor.

COM S 686 Logics of Programs Spring. 4 credits. Prerequisites: COM S 481, 682, and (MATH 481 or MATH/COM S 486).

COM S 709 Computer Science Colloquium Fall, spring. 1 credit. S-U grades only. For staff, visitors, and graduate students interested in computer science.

COM S 713 Seminar in Systems and Methodology Fall, spring. 4 credits. Prerequisites: a graduate course employing formal reasoning, such as COM S 611, 613, 671, a logic course, or permission of instructor. Not offered every year; semester TBA.

COM S 715 Seminar in Programming Refinement Logics Fall, spring. 4 credits. Prerequisite: permission of instructor.

COM S 717 Topics in Parallel Architectures Fall. 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year; semester TBA.

COM S 719 Seminar in Programming Languages Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.

COM S 722 Topics in Numerical Analysis Fall, spring. 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year; semester TBA.

COM S 729 Seminar in Numerical Analysis Fall, spring. 1–4 credits (TBA). Prerequisite: permission of instructor. S-U grades only.

COM S 754 Systems Research Seminar Fall, spring. 1 credit. S-U grades only.

COM S 772 Seminar in Artificial Intelligence Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 773/774 Proseminar in Cognitive Studies I & II (also COGST, PHIL, LING, and PSYCH 773/774) Fall, 773; spring, 774. 4 credits.

COM S 775 Seminar in Natural Language Understanding Fall, spring. 2 credits.

COM S 789 Seminar in Theory of Algorithms and Computing Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.
COM S 790 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. Letter grade only. Independent research or Master of Engineering project.

COM S 890 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Master of Science degree research.

COM S 990 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.

EARTH AND ATMOSPHERIC SCIENCES

For the latest information about these programs, please consult our web site at www.geo.cornell.edu.

The Geological Sciences Major
The geological sciences major reveals Earth's turbulent history from the formation of our solar system to the plate tectonic cycles that dominate Earth's present behavior. That history is highlighted by the co-evolution of life and the Earth system, a dramatic story that starts with the origin of life in our sun's planetary system and leads to the modern interglacial phase of our planet's latest ice age during which our species has emerged to play a major role in the planetary system. Topics of study also include the fundamental processes responsible for the concentration of mineral and energy resources that have enabled our technological evolution, and inclusion of natural hazards such as earthquakes, volcanic eruptions, floods, and landslides which pose dangers to our increasingly vulnerable cities and infrastructure.

The geological sciences major prepares students in geology, geophysics, geochemistry, and geobiology for careers in mineral and petroleum exploration, environmental geology, and academic and government research enterprises. Many of these career tracks involve graduate study, for which the major is excellent preparation. Alternatively, it is a valuable major for a pre-law or pre-med program or in preparation for a career in K-12 education.

In addition to course work, students learn by outdoor fieldwork and involvement in the vigorous research programs of the department. Facilities include equipment for processing seismic signals and satellite images of the Earth's surface using extensive libraries of earthquake records, satellite images, and exploration seismic records, and instruments for highly precise chemical and physical analyses of earth materials, including instruments of the Cornell Center for Material Research, Ward Laboratory and the Cornell High Energy Synchotron Source (CHESS). Undergraduates have served as field assistants for faculty members and graduate students in Argentina, Mexico, British Columbia, the Aleutian Islands and southeastern Alaska, Scotland, Switzerland, Tibet, and the Baraodos. Undergraduates are encouraged to participate in research activities, frequently as paid assistants.

For admission to the geological sciences major, a student should have made substantial work from earth and atmospheric sciences courses numbered 300, 400, or 600, plus an additional course in either computer science or biological sciences and an intermediate level course in biological science, mathematics, chemistry, or physics. In addition, a requirement for an advanced outdoor field experience may be met by completing one of the following four-credit options: (a) EAS 417 (Field Mapping in Argentina, 3 credits) and EAS 491 or 492 (based on field observations) for a combined four-credit minimum; (b) EAS 437 (Geophysical Field Methods, 3 credits) plus at least one credit of EAS 491 or 492 using geophysical techniques from EAS 437; (c) EAS 491-492 (Undergraduate Research, 2 credits each) with a significant component of field work; or (d) an approved outdoor field course taught by another college or university (4-credit minimum).

Core Courses
EAS 326 Structural Geology
EAS 355 Mineralogy
EAS 356 Petrology and Geochemistry
EAS 375 Sedimentology and Stratigraphy
EAS 388 Geophysics and Geotectonics

Prospective majors should contact R. W. Kay as early as possible for advice in planning a program. Students majoring in geological sciences may attend the departmental seminars and take advantage of courses, field trips, and conferences offered through the Department of Earth and Atmospheric Sciences.

Courses offered at the 100 and 200 level are open to all students. Certain 300- and 400- level courses in earth and atmospheric sciences may be of particular interest to students of chemistry, biology, and physics. Students are encouraged to inquire about courses that interest them at the department office in 2122 Snow Hall.

Honor's An honors program is offered by the Department of Earth and Atmospheric Sciences for superior students. Candidates for honors must maintain an overall 3.0 grade-point average, a cumulative average of 3.5 in the major, and complete an honors thesis (EAS 491 or 492). Students interested in applying should contact the director of undergraduate studies during the second semester of the junior year.

Courses
EAS 101 Introductory Geological Sciences
Fall, spring, or summer. 3 credits. Fall, A. Moore; spring, J. M. Bird; summer, W. W. Brace.

Designed to enhance an appreciation of the physical world. Emphasizes natural environments, surface temperatures, and dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems. Interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth system science). Water, mineral, and fuel resources; environmental concerns. Field trips in the Ithaca region.

EAS 104 The Sea: An Introduction to Oceanography (also BIO ES 154) Spring, summer. 3-4 credits (4 credits with lab section). Spring: C. H. Greene, W. M. White; summer: J. Chiment. A survey of the physics, chemistry, geology, and biology of the oceans for both science and nonscience majors. Topics include: seafloor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate change, coral reefs, energy cycles, ocean pollution, and resources.

EAS 105 Writing on Rocks (Freshman Seminar) Fall. 3 credits. J. Chiment. See Freshman Seminar Handbook for description.

EAS 106 Vertebrate Fossil Preparation Spring. 1 credit. Prerequisite: 1 introductory geology course or concurrent enrollment. Prerequisite, class size is limited. J. Chiment. A laboratory-oriented course that will expose students to techniques of vertebrate fossil preparation. Roughing-out and fine preparation of large specimens in solid matrix will be covered, as well as screen washing and microscope techniques for the recovery of micro-vertebrate remains. Specialized scanning techniques will be discussed.

The class will meet for one hour each week for the first six weeks of the semester. Students will be exposed to an individual or group project requiring two hours of participation each week for the remainder of the semester.

EAS 107 How the Earth Works Fall. 1 credit. J. L. Gisn. A user-friendly introduction to the workings and interactions of solid earth, ocean, atmosphere, and life as they relate to understanding ongoing global change.

EAS 109 Dinosaurs Fall. 1 credit. J. L. Gisn. An introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

EAS 111 To Know the Earth and Build a Habitable Planet Fall. 3 credits. J. M. Bird. Acquaints the nonscientist with Earth. Major features and how Earth has evolved. Earth system science and building a habitable planet. Effects of human activity on geologic environments, mitigating environment damage, living with natural hazards. Mineral resource use in the twenty-first century and an environmentally sound fuel-minerals cycle.

EAS 122 Earthquake! (also ENGR 1 22) Fall. 3 credits. L. D. Brown. The science of natural hazards and strategic resources is explored. Techniques for locating and characterizing earthquakes and assessing the economic impacts of using sound waves to image the earth's interior to search for strategic minerals; the historical importance of such resources. Seismic experiments on campus to probe for groundwater, the new critical environmental resource.

EAS 200 Art, Archaeology, and Analysis (also ARKEO 285, ARTH 200, ENGR 185, PHYS 200) Spring. 3 credits. R. W. Kay. An interdepartmental course on the use of techniques of science and engineering in cultural research. Applications of physical and physiological principles to the study of archaeological artifacts and works of art. Historical and technical aspects of artistic creation. Analyses by modern methods to deduce geographic origins and for exploration, dating, and authentication of cultural objects. Does not meet liberal studies distribution requirement for engineering.

EAS 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 201) Fall. 3 credits. Prerequisites: PHYS 112 or 207. L. M. Caltus. Formation of the solar system: accretion and evolution of the earth. The rock cycle: radiogenic isotopes and the geological time scale, plate tectonics, rock and minerals, earth dynamics, mantle plumes. The hydrologic cycle: runoff, floods and sedimentation, groundwater flow, and contaminant transport. Weathering cycle: chemical cycles, CO2 (weathering), rock cycle, controls on global temperature (CO2, ocean currents), oil, and mineral resources.

EAS 204 Ocean Sciences Laboratory Spring. 3 credits. Prerequisite or corequisite: BIO ES 154/EAS 104. C. H. Greene, B. W. Monger. A laboratory course investigating the physics, chemistry, geology, and biology of the oceans. This course is intended for science majors to supplement the course offered in BIO ES 154/EAS 104. The course includes a discussion section and laboratory each week.

EAS 210 Introduction to Field Methods in Geological Sciences Fall. 3 credits. 1 lecture, Saturday field trips. Prerequisites: GEOG 101 (or 201) or permission of instructor. S. Mushberg Kay (255-7401, smk16@cornell.edu). The methods by which rocks are used as a geological database. Field methods used in the construction of geological maps and cross sections; systematic description of stratigraphic sections. Field and laboratory sessions on Saturdays until Thanksgiving. One additional lecture during most of these weeks. One weekend field trip to eastern New York.

EAS 212 Caribbean Field Trip Spring. 2 credits. Prerequisite: permission of instructor. Enrollment limited to 15. Approximate cost $1,100. L. D. Brown. A multidisciplinary look at earth science and environmental issues in the Caribbean. Base for operations will be the Centro Ecológico Akumal, located on the Caribbean coast south of Cancun. This coast and its associated reef epitomizes the conflict between ecological preservation and economic development on an international scale. Excursions may include visits to Merida, a historic Spanish town which lies above the buried impact structure that many believe resulted in the death of the dinosaurs; ruins at Chichen Itza, Mayapan, Coba, and Tulum associated with the rise and fall of Mayan culture; and wildlife (monkeys, jaguars, crocodiles) preserves where recent geological studies have found evidence that the fall of the Mayans may have been triggered by climate change. The field trip will feature snorkel tours of reefs and lagoons as well as the cenotes (sinkholes) that characterize this classic karst landscape. Weekly lectures during the fall semester will provide background; field trip scheduled for January.

EAS 213 Marine and Coastal Geology Summer. 2 credits. Prerequisite: an introductory course in geology or permission of instructor. Staff. A special one-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island near Portsmouth, New Hampshire. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost for 2001 (including tuition, room, board, and ferry transportation) is $1,100.

EAS 260 Soil Science (also CSS 260) Fall. 4 credits. S-U grades optional. S. J. Ribu. Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective, this course is divided into three units. A unit on soil information introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. A soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. The unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs will initially be field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs will focus on accessing, interpreting, and applying soil information.

EAS 296 Forecast Competition Fall and spring. 1 credit. S-U grades only. Prerequisite: sophomore undergraduate standing in atmospheric science or permission of instructor. D. S. Wilks. This two-semester course provides daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully. Enroll for two consecutive semesters, with credit awarded after the second semester. May be repeated for credit.
Co-evolution of life and the earth system: atmosphere and oceans. Also treated are modification by physical interaction with the point of departure as we examine their our own emergence during the past ten billion years; mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting information preserved in the rock record.

EAS 315 Geomorphology
Fall. 4 credits. Prerequisite: 1 of the following: a 3-credit EAS or SES course, or EAS 260. T. E. Jordan and B. L. Isacks. A study of the processes that sculpt the Earth's landscapes (above and below sea level) and the nature of those landforms. Landforms constructed by Earth's internal processes are the point of departure as we examine their modification by physical interaction with the atmosphere and oceans. Also treated are depositional landforms that are generated by accumulations of grains or sediment. Laboratory exercises include both field examination of landforms of the Finger Lakes area and computer analysis of satellite images from around the globe. Two Saturday field trips.

EAS 321 Introduction to Biogeochemistry (also SES 321, NTRES 321)
Fall. 4 credits. Prerequisite: CHEM 207, MATH 112, plus a course in biology and/or geology. L. A. Derry, J. Yavitt. Control and function of the Earth's global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

EAS 325 Geology
Spring. 4 credits. Prerequisite: MATH 112, EAS 101 or 201, or permission of instructor. R. W. Allmendinger. Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics. Topics include stress, strain, rheology, deformation mechanisms, minor structures, faulting, folding, and structural families.

EAS 331 Climate Dynamics (also ASTRO 331)
Fall. 4 credits. Prerequisite: MATH 112 or 192 or equivalent. Lec, M W F 1:25-2:25, disc W 2:30. K. H. Cook, P. J. Gierasch. Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

EAS 334 Microclimatology
Spring. 3 credits. Prerequisite: a course in physics. Offered alternate years. Not offered 2000–2001. D. S. Wilks. The relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.

EAS 341 Atmospheric Thermodynamics and Hydrostatics
Fall. 3 credits. Prerequisites: 1 year of calculus and 1 semester of physics. W. W. Knapp. Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics covered include thermodynamic processes of dry air, water vapor, and moist air and concepts of hydrostatics and stability.

EAS 342 Atmospheric Dynamics
Spring. 3 credits. Prerequisites: 1 year each of calculus and physics. K. H. Cook. Introduction to atmospheric dynamics and to the methods and quantitative analysis used in meteorology. Topics considered include equations of atmospheric motion, motion in the free atmosphere, vertical variations of wind and pressure fields, mathematical representation and characteristics of fronts, mechanisms of pressure change, concepts of circulation and vorticity, and effects of friction on atmospheric motion.

EAS 355 Mineralogy
Fall. 4 credits. Prerequisites: EAS 101 or 201 and CHEM 207 or permission of instructor. S. Mahlburg Kay. Examination of minerals by hand-specimen properties and optical microscopy. Geological setting, classification, crystal structures, phase relations, chemical properties, and physical properties of minerals. X-ray diffraction is introduced. Independent research project.

EAS 356 Petrology and Geochemistry
Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay. Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. The petrological evolution of the planets.

EAS 375 Sedimentology and Stratigraphy

EAS 388 Geophysics and Geotectonics
Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. B. L. Isacks. Global tectonics and the deep structure of the solid earth as revealed by investigations of earthquakes, earthquake waves, the earth's gravitational and magnetic fields, and heat flow.

EAS 391 Satellite Remote Sensing in Geosciences
Fall. 3 credits. Prerequisite: permission of instructor. Not offered in 2000–2001. B. L. Isacks. Instruction in satellite remote sensing, image processing, geographic information systems (GIS), and analysis or digital elevation models, using advanced computer workstations, via participation in current research on earthquakes, glaciers, and tectonics.

EAS 397 Field Mapping in Argentina
Summer. 3 credits. Prerequisites: EAS 210 and 326. Spanish not required, but not recommended. S. Mahlburg Kay. Modern techniques of geological mapping applied in the region of San Juan, Argentina, including folded and faulted sedimentary rock units of the Andean Precordillera (San Juan River section), intensely deformed Precambrian metamorphic rocks of the Pampes Ranges (Pie de Palo), and shallow-level silicic intrusives (Cerro Blanco-Ullum).

EAS 393 Petroleum Geology

EAS 394 Reflection Seismology
Spring. 4 credits. Prerequisites: MATH 192 and PHY 208, 213, or equivalent. Not offered in 2000–2001. L. D. Brown. Fundamentals of subsurface imaging by multichannel seismic reflection techniques as used in oil exploration and geohydrological investigations. Covers survey design, acquisition, analysis, processing, and interpretation in both 2-D and 3-D. Includes discussion of related techniques such as seismic refraction analysis, tomographic inversion, vertical seismic profiling, and ground penetrating radar. Lab is keyed to state-of-the-art seismic processing, modeling and interpretation software from LandMark.

EAS 395 Statistical Methods in Meteorology
Fall. 3 credits. Prerequisite: an introductory course in statistics (e.g., BTRY 215 or ARME 210) and calculus. D. S. Wilks. Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Some statistical characteristics of meteorological data, including probability distributions and correlation structures. Operational forecasts derived from multiple regression models, including the MOS system. Forecast verification techniques and scoring rules. Time series analysis, EOFs, and other research topics as time permits.

EAS 397 Geophysical Field Methods
Fall. 3 credits. Prerequisite: PHYS 213 or 208, or permission of instructor. L. D. Brown. Introduction to field methods of geophysical exploration, especially as applied to environ-
mental issues. Emphasis on seismic, ground penetrating radar, gravity, and magnetic techniques. Field surveys carried out at the beginning of the semester are analyzed and interpreted. A field companion to EAS 436, which is recommended but not required prior to this course.

[EAS 444 Tropical Meteorology][1]

Spring. 3 credits. Prerequisite: EAS 342 or instructor's approval. Offered alternate years. Not offered 2000–2001.

K. H. Cook

Structure and dynamics of the tropical atmosphere on a wide range of time and space scales. Topics include meso-scale convective systems to planetary waves. Topics include hurricanes, monsoonal circulation, and El Nino.

EAS 445 Hydrology and the Environment (also ABEN 471 and CEE 431)[2]

Fall. 3 credits. Prerequisites: MATH 294 and ENGR 202. L. M. Cathles, J.-Y. Parlange, T. S. Steenhuis.

Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

EAS 447 Physical Meteorology[3]

Fall. 3 credits. Prerequisites: 1 year each of calculus and physics. Offered alternate years. Not offered 2000–2001.

W. W. Knapp

Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, solar and terrestrial radiation, and principles of radar probing of the atmosphere.

The Earth from a chemical perspective. Formation of the elements; cosmochemistry; chemical evidence regarding the formation of the Earth and solar system; trace-element geochemistry; isotope geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemistry of rivers and the oceans; hydrothermal systems and ore deposition.

EAS 451 Synoptic Meteorology II Fall. 3 credits. Prerequisites: EAS 341 and 342. S. J. Colucci

Structure and dynamics of large-scale, mid-latitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes and precipitation. Laboratory sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale, mid-latitude weather events.

EAS 453 Advanced Petrology Fall. 3 credits. Prerequisite: EAS 356.

Offered alternate years. R. W. Kay

Magmas and metamorphism in the context of plate tectonics. Major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks. Temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems.

EAS 454 Advanced Mineralogy Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. W. A. Bassett

Crystallography and crystal chemistry of minerals and the methods of their study. X-ray diffraction, optical methods, computer simulation of crystal structures. Emphasis on effects of high pressures and temperatures with implications for understanding the Earth's interior.

EAS 456 Mesoscale Meteorology Fall. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. R. W. Kay and W. M. White.

EAS 462 Marine Ecological Processes (also BIOES 462)[4]

Spring. 3 credits. Limited to 75 students.

Prerequisite: BIOES 261. Offered alternate years.

C. D. Harvell, C. H. Greene

Lectures and discussions focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats including polar seas, temperate coastal waters, and tropical coral reefs.

The Earth from a chemical perspective. Formation of the elements; cosmochemistry; chemical evidence regarding the formation of the Earth and solar system; trace-element geochemistry; isotope geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemistry of rivers and the oceans; hydrothermal systems and ore deposition.

EAS 466 Oceanography Spring. 2–5 var. credits. Prerequisites: CHEM 207 and MATH 192.

The techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with and guided by a staff member. A short written report is required, and outstanding projects are prepared for publication.

EAS 475 Special Topics in Oceanography Spring, summer. 2–5 var. credits. Prerequisites: EAS 104 or BIO ES 154, and permission of instructor. C. H. Greene.

Undergraduate instruction and participation in advanced areas of oceanographic research. Topics will change from term to term. Contact instructor for further information.

EAS 476 Sedimentary Basins: Tectonics and Mechanics Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. T. E. Jordan.

Subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Interactions of subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences. Stratigraphic characteristics of active-margin, passive-margin, and cratonic basins. Geochemical and stratigraphic modeling; sequence stratigraphy. Modern and ancient examples.

EAS 478 Advanced Stratigraphy Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. Not offered 2000–2001. T. E. Jordan.

Modern improvements on traditional methods of the study of ages and genetic relations among sedimentary rocks, emphasizing 3-D relationships. Techniques and interpretations of sequence stratigraphy at scales ranging from beds to entire basins. Physical correlation, dating techniques, and time resolution in sedimentary rocks. Physical controls on the stratigraphic record. Numerical modeling.

EAS 479 Paleobiology (also BIOES 479)[5]

Fall. 4 credits. Prerequisites: 1 year of introductory biology for majors and either BIOES 274, 373, EAS 375, or permission of instructor. W. Allmon.

A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological foundations of earth and atmospheric sciences students concerning the nature and significance of the fossil record for their respective studies.

EAS 481 Senior Survey of Earth Systems Fall. 3 credits. Limited to seniors majoring in geological science. J. M. Bird.

Survey course that integrates undergraduate course work, intended to enhance overall understanding of geological sciences. Emphasis on current models of earth's dynamic systems (e.g., global climate change, mantle evolution). Guest lecturers; synthesis and review literature; scientific literature readings; discussions; student presentations.

EAS 483 Environmental Biophysics (also CSS 483)[6]

Spring. 3 credits. Prerequisites: EAS/CSS 260 or equivalent, or permission of instructor. Offered alternate years. S. J. Rubi.

Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum will be covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problem sets.

EAS 491-492 Undergraduate Research Fall, spring. 1–4 credits. Staff. (R. W. Kay, coordinator.)

Introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with, and guided by, a staff member. A short written report is required, and outstanding projects are prepared for publication.

EAS 496 Internship experience Fall or spring. 1–2 credits. S-U grades only.

EAS 497 Individual Study in Atmospheric Science Fall or spring. 1–6 credits. S-U grades optional. Students must register with an independent study form.

Topics are arranged at the beginning of the term for individual study or for group discussions.
[EAS 498] Teaching Experience in Atmospheric Science
Fall or spring. 1–5 credits. S-U grades optional. Students must register with an Independent Study form. Teaching experience is obtained by assisting in the instruction of an atmospheric science course.

[EAS 499] Undergraduate Research in Atmospheric Science
Fall or spring. Credit by arrangement. Students must register with an Independent Study form. Independent research on current problems in atmospheric science.

[EAS 500] Design Project in Geohydrology
Fall, spring. 3–12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over 2 or more semesters.

L. M. Cathles.
The project may address one of the many aspects of groundwater flow and contamination and must involve a significant geological component and lead to concrete recommendations or conclusions of an engineering nature. Results are presented orally and in a professional report.

[EAS 502] Case Histories in Groundwater Analysis
Spring. 4 credits. L. M. Cathles.
Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, is analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report. Results are presented in a half-day seminar at the end of term.

[EAS 522] Advanced Structural Geology I
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. Not offered 2000–2001.

R. W. Allmendinger.
Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement, microstructure, preferred orientation, and TEM analysis; pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and ductile deformations of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.

[EAS 524] Advanced Structural Geology II
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.

Geometry, kinematics, and mechanics of structural provinces. Concentration on thrust belts, rift provinces, or strike-slip provinces. Techniques of balanced cross sections.

[EAS 528] Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor. M. M. Willis.
A seminar course in which students study specific geologic topics of an orogenic belt selected for study during the term. The course is intended to complement EAS 681.

[EAS 534] Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics
Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. Not offered 2000–2001.

D. L. Turcotte.
Definitions of fractal sets and statistical fractals, scale invariance, self-affine fractals, multifractals, applications to fragmentation, seismicity and tectonics, petroleum distribution and reserves, ore grade and tonnage, drainage networks and landforms, and floods and droughts. Definitions of chaos and self-organized criticality, renormalization groups, diffusion limited aggregation and percolation clusters, wavelet transforms, applications to mantle convection, the earth’s dynamo, and distributed seismicity.

[EAS 635] Advanced Statistical Meteorology
Fall. 3 credits. Prerequisites: coursework in or elementary knowledge of statistics, calculus, matrix algebra, and computer programming. Lectures and topics concurrent with EAS 435, plus an extra 40-minute session per week in which selected topics from EAS 435 are treated in more depth and additional topics are covered, may vary from year to year according to student interest. Term project required. Not open to students who have taken EAS 435 for credit.

Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. D. L. Turcotte.
Stress and strain in the earth, elasticity and flexure, heat transfer, gravity, fluid mechanics, rock rheology, faulting, chemical geodynamics, flow in porous media.

[EAS 641] Analysis of Biogeochemical Systems
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. L. A. Derry.
Dynamics of biogeochemical systems. Kinetic treatment of biogeochemical cycles. Box models, nonequilibrium, time. Analytical and numerical solutions of model systems. Eigen-analysis of linear systems. Feedback and nonlinear cases, problems of uncertainties in natural systems. Modeling software such as Stella II and Matlab, applications to current research of participants or from recent literature.

[EAS 651] Advanced Atmospheric Thermodynamics (also ASTRO 651)
Fall. 3 credits. Prerequisite: a good background in undergraduate calculus and physics is required. Offered alternate years.

A survey of the fundamental physical processes in atmospheres. Topics include thermodynamics of atmospheric gases, moist effects, hydrostatics, convective instability, atmospheric radiation and radiative heating, radiative-convective equilibrium, clouds, cloud microphysics, and precipitation processes. Thermal structure and greenhouse effects on the Earth and other planets will be discussed. The course will be taught at the level of Fundamentals of Atmospheric Physics by Salby.

[EAS 652] Advanced Atmospheric Dynamics (also ASTRO 652)
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. S. J. Colucci, K. H. Cook, P. J. Gierasch.
Quasigeostrophic theory, atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

[EAS 656] Isotope Geochemistry

[EAS 675] Modelling the Soil-Plant-Atmosphere System (also CSS 675)
Introduction to the structure and use of soil-plant-atmosphere models. Topics covered will include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition, and land surface processes as well as model data requirements, validation, and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation will be discussed.

[EAS 691] Geotectonics
Fall. 3 credits. Prerequisite: permission of instructor. J. M. Bucur.

[EAS 692] Special Topics in Atmospheric Science
Fall or spring. 1–6 credits, S-U grades optional.
Study of topics in atmospheric science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

[EAS 695] Computer Methods in Geological Sciences
Fall, spring. 3 credits. L. Brown, B. L. Inacks.
Independent research projects using state-of-the-art computational resources in the Department of Earth and Atmospheric Sciences. Possibilities include image and seismic processing, remote sensing, computational geomechanical modeling, GIS, use of interpretation workshops for 3-D seismic and satellite imagery, modeling fluid flow through complex media.
EAS 700-799 Seminars and Special Work
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.
Advanced work on original investigations in earth and atmospheric sciences. Topics change from term to term. Contact appropriate professor for more information.

EAS 722 Advanced Topics in Structural Geology
R. W. Allmendinger.

EAS 731 Plate Tectonics and Geology
J. M. Bird.

EAS 733 Fractals and Chaos—Independent Studies
D. L. Turcotte.

EAS 751 Petrology and Geochemistry
S. Mahlburg Kay, R. W. Kay.

EAS 753 Advanced Topics in Mineral Physics
W. A. Bassett.

EAS 755 Advanced Topics in Petrology and Tectonics
J. M. Bird, W. A. Bassett.

EAS 757 Current Research in Petrology
S. Mahlburg Kay, R. W. Kay.

EAS 762 Advanced Topics in Petroleum Exploration
Fall. W. R. Travers.

EAS 771 Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

EAS 773 Paleobiology
J. L. Cisne.

EAS 775 Advanced Topics in Oceanography
Spring. C. H. Greene.

EAS 780 Earthquake Record Reading
Fall. M. Barazangi.

EAS 781 Geophysics, Exploration Geology
L. D. Brown.

EAS 783 Advanced Topics in Geophysics
B. L. Isacks.

EAS 789 Lithospheric Seismology (COCODBPI Seminar)
L. D. Brown.

EAS 793 Andes-Himalayas Seminar

EAS 795 Low Temperature Geochemistry
Spring. L. A. Derry.

EAS 796 Geochemistry of the Solid Earth
W. M. White.

EAS 797 Fluid-Rock Interactions
L. M. Cattle.

EAS 799 Soil, Water, and Geology Seminar
L. M. Cattle, T. S. Steenhuis.

EAS 850 Master's-Level Thesis Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in the master's program in atmospheric science.

EAS 950 Graduate-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty. Limited to students in the atmospheric science Ph.D. program only after the "A" exam has been passed.

EAS 951 Doctoral-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy in the atmospheric science Ph.D. program after the "A" exam has been passed.

ECON 101 Introductory Microeconomics
Fall, spring, winter, and summer. 3 credits. Economics 101 is not a prerequisite for 102. Explanation and evaluation of how the price system operates in determining what goods are produced, how goods are produced, who receives income, and how the price system is modified and influenced by private organizations and government policy.

ECON 102 Introductory Macroeconomics
Fall, spring, winter, and summer. 3 credits. Economics 101 is not a prerequisite for 102. Analysis of aggregate economic activity in relation to the level, stability, and growth of national income. Topics discussed may include the determination and effects of unemployment, inflation, balance of payments, deficits, and economic development, and how these may be influenced by monetary, fiscal, and other policies.

ECON 230 International Trade and Finance
For description, see ARME 230.

ECON 301 Microeconomics
Fall. 4 credits. Prerequisite: calculus. Intended for students with strong analytical skills who have not taken Economics 101, 102. Can be used to replace both Economics 101 and 313. (Can replace 313 only with grade of B or better.) This course covers the topics taught in Economics 101 and 313. An introduction to the theory of consumer and producer behavior and to the functioning of the price system.

ECON 302 Macroeconomics
Spring. 4 credits. Prerequisite: Economics 301. Intended for students with strong analytical skills who have not taken Economics 101, 102. Can be used to replace both Economics 102 and 314. This course covers the topics taught in Economics 102 and 314. (Can replace 314 only with grade of B or better.) An introduction to the theory of national income determination, unemployment, growth, and inflation.

ECONOMICS

The study of economics provides an understanding of the way economies operate and an insight into public issues. The department offers a broad range of undergraduate courses in such fields as money and banking, international and comparative economics, econometrics, theory, history, growth and development, and the organization, performance, and control of industry.

Social Science Distribution Requirement
The microeconomics distribution requirement can be fulfilled with any of the following: Economics 101, Economics 301, or Economics 313.

The macroeconomics distribution requirement can be satisfied with any of the following: Economics 102, Economics 302, or Economics 314.

The Major
Prerequisites
Economics 101 and 102 and Math 111 (or equivalents, with approval of the director of undergraduate studies), all with grades of C or better. Economics 301 cannot be.

Economics 301 with a grade of C or better substitutes for 102. Intended for students with strong analytical skills who have not taken Economics 101, 102. Can be used to replace both Economics 101 and 313. (Can replace 313 only with grade of B or better.) This course covers the topics taught in Economics 101 and 313. An introduction to the theory of consumer and producer behavior and to the functioning of the price system.

ECON 302 Macroeconomics
Spring. 4 credits. Prerequisite: Economics 301. Intended for students with strong analytical skills who have not taken Economics 101, 102. Can be used to replace both Economics 102 and 314. This course covers the topics taught in Economics 102 and 314. (Can replace 314 only with grade of B or better.) An introduction to the theory of national income determination, unemployment, growth, and inflation.
This course provides an introduction to statistical methods and principles of probability. Topics to be covered include analysis of the American economic history from the Civil War to World War I.  

**ECON 324 American Economic History**  
Spring. 4 credits. Prerequisites: Economics 101–102 or equivalent.  
A survey of problems in American economic history.  

**ECON 324A American Economic History #**  
Spring. 4 credits. Prerequisites: Economics 101–102 or equivalent.  
Same material as Economics 324, seminar limited to 12 students.  

**ECON 331 Money and Credit**  
Fall. 4 credits. Prerequisites: Economics 101–102 and 314.  
A systematic treatment of the determinants of the money supply and the volume of credit.  

**ECON 333 Financial Economics**  
Spring. 4 credits. Prerequisites: Economics 331 and 314.  
The theory and decision making in the presence of uncertainty and the practical aspects of particular asset markets are examined.  

**ECON 335 Public Finance: The Microeconomics of Government**  
Fall. 4 credits. Prerequisites: Economics 101–102 and 313, or their equivalent, and 1 semester of calculus.  
The role of government in a free market economy is examined. Topics covered include public goods, market failures, allocation mechanisms, optimal taxation, effects of taxation, and benefit-cost analysis. Current topics of an applied nature will vary from term to term.  

**ECON 336 Public Finance: Resource Allocation and Fiscal Policy**  
Spring. 4 credits. Prerequisites: Economics 101–102, 313 or their equivalent and 1 semester of calculus.  
This course covers the revenue side of public finance and special topics. Subjects covered include the federal debt, the budget, and government regulation and transfers, as well as problems like local public goods, health care, education, the hierarchy of governmental structure, and a variety of applied problems.  

**ECON 341 Labor Economics**  
For description, see ILRRE 240.  

**ECON 351 Industrial Organization I**  
Fall. 4 credits. Prerequisites: Economics 313 or equivalent.  
This course examines the choice of firms in oligopolies, cartels and other forms of collusive behavior, competition between firms producing differentiated products, entry behavior, R&D behavior, and government interventions in oligopoly industries (e.g., antitrust laws).  

**ECON 352 Industrial Organization II**  
Spring. 4 credits. Prerequisites: Economics 313 or equivalent.  
This course primarily focuses on the pricing decisions of firms. The course does not consider the strategic response of other firms to these pricing decisions. The pricing decisions include price discrimination, commodity bundling, pricing a product line and pricing a durable good. In addition to pricing decisions, the course will consider topics associated with private information such as adverse selection, signaling, and moral hazard. Numerous theoretical models are presented and empirical results are discussed.  

**ECON 355 International Trade Theory and Policy**  
Fall. 4 credits. Prerequisites: Economics 101–102 and 313.  
This course surveys the sources of comparative advantage. It studies commercial policy and analyzes the welfare economics of trade between countries. Some attention is paid to the institutional aspects of the world trading system.  

**ECON 356 International Monetary Theory and Policy**  
Spring and summer. 4 credits. Prerequisites: Economics 101–102 and 314.  
This course surveys the determination of exchange rates and theories of balance-of-payments adjustments. It also explores open economy macroeconomics, and it analyzes some of the institutional details of foreign exchange markets, balance of payments accounting, and the international monetary system.  

**ECON 371 Economic Development**  
Fall. 4 credits. Prerequisites: Economics 101–102 or equivalent.  
Study of the problem of sustained accelerated economic growth in less developed countries. Trade-offs between growth, welfare, and equity: the legacy of colonialism; relevance of history and economic theory; problems of capital formation, economic planning and international specialization; and the interaction of industrialization, agricultural development, and population change are emphasized.  

**ECON 372 Applied Economic Development**  
Spring. 4 credits. Prerequisite: Economics 101–102.  
This course examines several special topics in the economics of developing countries. Among the topics covered recently are the concepts of development and underdevelopment, the debate over development economics, the peasant household and its place in the world economy, the debt crisis, the state vs. market debate and the role of the state in economic development, and the question of sustainable development.  

**ECON 404 Economics and the Law**  
Fall. 4 credits. Prerequisite: Economics 101.  
An examination, through the lens of economic analysis, of legal principles drawn from various branches of law, including contracts, torts, and property. Cases are assigned for class discussion; in addition, there are several writing assignments.
ECON 408 Production Economics and Policy
For description, see ARME 608.

ECON 409 Environmental Economics and Policy
For description, see ARME 451.

ECON 415 Price Analysis
For description, see ARME 415.

ECON 416 Intertemporal Economics
This course is intended for advanced economics majors who are especially interested in economic theory. Topics to be covered: (1) review of the one good Ramsey model of optimal savings and accumulation; conditions for intertemporal efficiency in production; comparative dynamics and sequencing of capital accumulation; (2) competitive equilibrium (the Physicocrats). The most recent reading assignment in this course is Adam Smith's Wealth of Nations but the emphasis is on the relationship between the precursors of Adam Smith and his Wealth of Nations to modern economics and current efforts to answer some of the questions raised in the early writing on economics.

ECON 417 History of Economic Analysis
Fall or spring. 4 credits. Prerequisites: Economics 101–102 or permission of instructor.
This course provides an introduction to the theory of decision making under uncertainty with emphasis on economic applications of the theory.

ECON 419 Economics of Family Policy—Uncertainty
This course offers a perspective on how to follow up logical implications form propositions in clear-cut fashion, and shows how to make language fit reality rather than the other way around.

ECON 420 Economics of Family Policy—Adults
Economics 420 and 421 together, count as 1 course for the Economics major.
For description, see CEH 320.

ECON 421 Economics of Family Policy—Children
Economics 420 and 421 together, count as 1 course for the Economics major.
For description, see CEH 321.

ECON 422 The Economics of Infrastructure and a Sustainable Environment
For description, see CEE 422.

ECON 425 Economic History of Latin America @
Spring. 4 credits.
A survey of changing economic institutions and policies from pre-Columbian to modern times.

ECON 426 History of American Enterprise #
History of the changing structure of American business from 1800 to the present, with major emphasis on developments after the Civil War. The focus of the course will be the changing structure of challenges (for example, the rise of unions, development of a national capital market, changing role of government) and the various responses of business organizations and entrepreneurs to those challenges.

ECON 430 Policy Analysis: Welfare Theory, Agriculture, and Trade
For description, see ARME 630.

ECON 440 Analysis of Agricultural Markets
Economics 440 and 441 together, count as 1 course for the Economics major.
For description, see ARME 641.

ECON 444 Modern European Economic History
For description, see ILRLE 444.

ECON 445 Topics in Microeconomic Analysis—Markets and Planning
Fall. 4 credits. Prerequisites: Economics 313. This course introduces students to the theory of economic activity, production and pricing of commodities, utility maximization, and intertemporal choice. The course covers the basic theories of demand, supply, and market equilibrium, as well as welfare economics, the theory of the firm, and the theory of factor demand.

ECON 447 Economics of Social Security
For description, see CEE 345.

ECON 450 Resource Economics
For description, see ARME 450.

ECON 451 Economic Security
For description, see ILRLE 340.

ECON 452 History of American Enterprise #
History of the changing structure of American business from 1800 to the present, with major emphasis on developments after the Civil War. The focus of the course will be the changing structure of challenges (for example, the rise of unions, development of a national capital market, changing role of government) and the various responses of business organizations and entrepreneurs to those challenges.

ECON 453 The Economics of Unemployment
For description, see ILRLE 348.

ECON 454 The Economics of Health Care
For description, see ILRLE 449.

ECON 455 Income Distribution
For description, see ILRLE 445.

ECON 456 The Economics of Employee Benefits
For description, see ILRLE 442.

ECON 457 Women in the Economy
For description, see ILRLE 445.

ECON 458 Topics in Twentieth-Century Economic History
For description, see ILRLE 448.

ECON 459 Economic History of British Labor 1750–1940
For description, see ILRLE 640.

ECON 460 Economic Analysis of the Welfare State
For description, see ILRLE 642.

ECON 461 The Economics of Occupational Safety and Health
For description, see ILRLE 644.

ECON 462 Labor in Developing Economies
For description, see ILRLE 332.

ECON 464 Economics of Agricultural Development
For description, see ARME 464.

ECON 465 Food and Nutrition Policy
For description, see ARME 665.

ECON 466 Economics of Development
For description, see ARME 666.

ECON 467 Game Theory
Fall. 4 credits. Prerequisites: Economics 313 and 319. This course studies mathematical models of conflict and cooperation in situations of uncertainty (about nature and about decision makers).

ECON 468 Economic Problems of Latin America #
Spring. 4 credits. Prerequisites: Economics 101–102. Current topics include, international debt, capital flight, economic integration, stabilization programs, etc.

ECON 469 China's Economy under Mao and Deng @
Fall. 4 credits. Prerequisites: Economics 101–102 or permission of instructor. Examines the development of the Chinese economy and the evolution of China's economic system between 1939 and the early 1990s.

ECON 471 The Economies of the Former Soviet Union and of Central Europe: From Central Planning to Markets
Fall. 4 credits. Prerequisites: Economics 101, 102. The course will introduce first the basic features of a centrally planned economy and proceed to consider the most important example: the rise and fall of the Soviet Union. Secondly, the analysis will be extended to what used to be known as 'Eastern Europe' (e.g., Czechoslovakia, Hungary, Poland). From this necessary historical background, the course will proceed to current attempts to move away from Socialist central planning.
and its legacies to market economy, privatization, and independence.

**ECON 472 Comparative Economic Systems: East and West**
Fall. 4 credits. Prerequisites: Economics 101-102.

The course will develop first a framework for studying economic systems and national economies and present three simple stylized systemic models: capitalist market, socialist market, and central planning. Secondly, the course will consider economic goals to be achieved (such as growth, stability, and productivity) and introduce quantitative measures used in the evaluation of the performance. Thirdly, comparative studies of selected national economies representing the models will be carried out.

**ECON 473 Economics of Export-Led Development @**
Spring. 4 credits. Prerequisites: Economics 313, 314, or their equivalent.

This course will examine the phenomenon of export-led development from both the theoretical and empirical points of view. Concentration will be on experiences within the West Pacific Rim.

**ECON 474 National and International Food Economics**
For description, see NS 457.

**ECON 475 The Economy of India @**
Fall. 4 credits. Prerequisite: Economics 101-102 or equivalent background.

This course will present the major economics and development problems of contemporary India and examine the country's future economic prospects. It will, however, be our aim to discuss these problems in their proper historical perspectives. Hence, the course will start with a brief outline of the social and political history of India. It will then turn to a more detailed account of the economic history of India in two stages.

**ECON 477 Contemporary Development of Southeast Asian Economies**
Spring. 3 credits. Prerequisite: Economics 101, 102.

See CRP 679.09 for description.

**ECON 498 Readings in Economics**
Fall or spring. Variable credit.

Independent study.

**ECON 499 Honors Program**
Fall and spring. 8 credits. Prerequisites: Economics 313, 314, 321 (or 319-320). Consult the Director of Undergraduate Studies for details. Interested students should apply to the program in the spring semester of their junior year.

**Graduate Courses and Seminars**

**ECON 609 Microeconomic Theory I**
Fall. 4 credits.

Topics in consumer and producer theory.

**ECON 610 Microeconomic Theory II**
Spring. 4 credits.

Topics in consumer and producer theory, equilibrium models and their application, externalities and public goods, intertemporal choice, simple dynamic models and resource depletion, choice under uncertainty.

**ECON 613 Macroeconomic Theory I**
Fall. 4 credits.

**ECON 614 Macroeconomic Theory II**
Spring. 4 credits.

**ECON 616 Applied Price Theory (also NBA 527)**
Spring. 4 credits.

The course emphasizes the applications of the principles of price theory to a variety of problems taken from concrete, practical settings.

**ECON 617 Intermediate Mathematical Economics I**
Fall. 4 credits. Prerequisites: Calculus II and intermediate linear algebra.

The course will cover selected topics in Matrix algebra (vector spaces, matrices, simultaneous linear equations, characteristic value problem), calculus of several variables (elementary real analysis, partial differentiation, convex analysis), classical optimization theory (unconstrained maximization, constrained maximization).

**[ECON 618 Intermediate Mathematical Economics II]**

A continuation of Economics 617, the course develops additional mathematical techniques for applications in economics. Topics covered could include study of dynamic systems (linear and nonlinear difference equations, differential equation, chaotic behavior), dynamic optimization methods (optimal control theory, nonstochastic and stochastic dynamic programming), and game theory (repeated dynamic and evolutionary games).

**ECON 619 Econometrics I**
Fall. 4 credits. Prerequisites: Economics 319-320 or permission of instructor.

This course gives the probabilistic and statistical background for meaningful application of econometric techniques. Topics to be covered are (1) probability theory: probability spaces, random variables, distributions, moments, transformations, conditional distributions, distribution theory and the multivariate normal distribution, convergence of random variables, laws of large numbers, central limit theorems, Monte Carlo simulation; (2) statistics: sample statistics, sufficiency, exponential families of distributions. Further topics in statistics will be considered in Economics 620.

**ECON 620 Econometrics II**
Spring. 4 credits. Prerequisite: Economics 619.

This course is a continuation of Economics 619 (Econometrics I) covering (1) statistics: estimation theory, least squares methods, method of moments, likelihood, generalized method of moments, theory of hypothesis testing, asymptotic test theory, and nonnested hypothesis testing and (2) econometrics: the general linear model, generalized least squares, specification tests, instrumental variables, dynamic regression models, linear simultaneous equation models, nonlinear models, and applications.

**ECON 699 Readings in Economics**
Fall or spring. Variable credit.

Independent study.

**ECON 703 Seminar in Peace Science**
Fall. 4 credits.

Among topics to be covered at an advanced level are game theory, coalition theory, bargaining and negotiation processes, cooperative and noncooperative solution concepts for matrix games, models, macroeconomic processes, and general systems analysis.

**ECON 710 Stochastic Economics: Concepts and Techniques**
Spring. 4 credits. Prerequisites: Economics 609, 610, 613, 614, 619, and 620.

This course will review a number of techniques that have been useful in developing stochastic models of economic behavior. Among these are (a) discrete-time Markov processes, (b) dynamic programming under uncertainty, and (c) diffusion processes. Examples of economic models will be drawn from recent literature on optimal capital accumulation and optimal savings and portfolio selection problems, permanent income hypothesis, dynamic models of price adjustment, etc. Advanced graduate students contemplating work in economic theory and econometric theory will gain exposure to current research.

**ECON 712 Advanced Macroeconomics**
4 credits. Prerequisites: Economics 613, 614.

The purpose of this course is to introduce the student to some of the topics and analytic techniques of current macroeconomic research. The course will fall into three parts: dynamic programming, new Keynesian economics, and recent theories of economic growth. The dynamic programming section will include models of consumption, investment, and real business cycles. The new Keynesian section will cover models of wage and price rigidity, coordination failure and credit markets. The section on endogenous growth will look at recent efforts to add nonconvexities to models of optimal growth. These topics are intended to complement the material on overlapping generations covered elsewhere.

**ECON 713 Advanced Macroeconomics II**
Spring. 4 credits. Prerequisites: ECON 613, 614.

This course reviews the most recent research in endogenous growth theory. This theory is little more than a decade old, but it has produced a large amount of both empirical and theoretical work that have substantially reshaped the general field of macroeconomics. It is perhaps no exaggeration to say that most of the work at the frontier of today's macroeconomics belongs to this field. An increasing number of papers have been touching important issues such as, learning by doing, R&D investment, market structure, private and public organization of R&D, education financing, human capital accumulation, technological unemployment, growth and business cycles, inequality and growth, political equilibrium, democracy and growth, instability, social conflict, capital accumulation, intergenerational analysis, international transfers of technologies, sustainable development, etc.
This course tries to orient the student in this large and variegated literature consisting of recently published articles and working papers. Understanding this literature is a sound training in the analytical methods used at the frontier of research, but it also provides a number of empirical results at the center of the economic debate.

**ECON 717 Mathematical Economics**
4 credits. Prerequisites: ECON 609-610 (or equivalent training in micro theory) and MATH 415-414 (or equivalent training in micro theory).

The primary theme of this course is to explore the role of prices in achieving an efficient allocation of resources in dynamic economies. Some of the classical results on static equilibrium theory and welfare economics on attaining optimal allocation through decentralized organizations are examined through an axiomatic approach. Some basic issues on capital theory are also analyzed. 

**ECON 718 Topics in Mathematical Economics**

This course focuses primarily on recent theoretical advances in the study of industrial organization. Topics covered include market structure, nonlinear pricing, quality, durability, location selection, collusive games, collusion, entry deterrence, managerial incentives, switching costs, government intervention, and R&D/Patents. These topics are discussed in a game-theoretic context.

**ECON 719 Advanced Topics in Econometrics I**
Fall. 4 credits. Prerequisites: Economics 619-620 or permission of instructor.

Advanced topics in econometrics, such as asymptotic estimation and test theory, robust estimation, Bayesian inference, advanced topics in time-series analysis, errors in variable and latent variable models, qualitative and limited dependent variables, aggregation, panel data, and duration models.

**ECON 720 Advanced Topics in Econometrics II**
Spring. 4 credits. Prerequisites: Economics 619-620 or permission of instructor.

For description see Economics 719.

**ECON 721 Time Series Econometrics**
Spring. 4 credits. Prerequisites: Economics 619-620 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA(p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation, current developments in distributional theory: estimation and testing in models with integrated regressors including, unit root tests, cointegration, and permanent vs. transitory components.

**ECON 731 Monetary Theory and Policy**
Spring. 4 credits. Prerequisites: Economics 614 or permission of the instructor.

Advanced topics in monetary economics, macroeconomics, and economic growth—such as overlapping-generations, taxes and transfers denominated in money, transactions demand for money, multi-asset accumulation, exchange rates, and financial intermediation.

**ECON 732 Monetary Theory and Policy**
Fall. 4 credits. Prerequisites: Economics 731 or permission of the instructor.

Advanced topics in monetary economics, macroeconomics, and economic growth—such as economic volatility, the "burden" of government debt, restrictions on government borrowing, dynamic optimization, endogenous growth theory, technological evolution, financial market frictions, and cyclical fluctuations.

**ECON 735 Public Finance: Resource Allocation and Fiscal Policy (also ARME 735)**
Spring. 4 credits.

This course develops a mathematical and highly analytical understanding of the role of government in market economies and the fundamentals of public economics and related issues. Topics covered include generalizations and extensions of the fundamental theorems of welfare economics, in-depth analysis of social choice theory and the theory on implementation in economic environments, public goods and externalities and other forms of market failure associated with asymmetric information. The theoretical foundation for optimal direct and indirect taxation is also introduced along with the development of various consumer surplus measures and an application to benefit cost analysis. Topics of an applied nature vary from semester to semester depending on faculty research interests.

This course focuses primarily on recent theoretical advances in the study of industrial organization. Topics covered include market structure, nonlinear pricing, quality, durability, location selection, games, collusion, entry deterrence, managerial incentives, switching costs, government intervention, and R&D/Patents. These topics are discussed in a game-theoretic context.

**ECON 752 Industrial Organization and Regulation**
Spring. 4 credits. Prerequisites: ECON 609, 610, and 751.

This course rounds out some topics in the Theory of Industrial Organization with the specific interest of addressing the empirical implications of the theory. The course reviews empirical literature in the SCP paradigm and in the NEO paradigm.

**ECON 753 Public Policy Issues for Industrial Organizations**

The course takes an in-depth view of the interaction between the government and business. Methods of business control, including antitrust, price regulation, entry regulation, and safety regulation. Emphasis will be on both the economic effects on business, but on the economics of selecting and evolving the method of control.

**ECON 755 Rivalry and Cooperation**
Fall. 4 credits. Prerequisites: Economics Graduate Core or instructor's permission.

In standard models, economic interaction is impersonal. Agents respond to price signals and measure their own welfare not in relative but in absolute terms, and cooperative behavior emerges only when it coincides with narrow self-interest. This course will explore the details of rivalry and cooperation in an effort to synthesize broader views of economic interaction. Topics will include the effect of concerns about relative income on wage rates, consumption, savings, and regulation; the effect of concerns about fairness on prices and wages; the conditions that foster trust and cooperation; and the role of positional competition in the distribution of economic rewards.

**ECON 756 Noncooperative Game Theory**
Fall. 4 credits. Prerequisites: Economics 609-610 and 619.

This course surveys equilibrium concepts for noncooperative games. We will cover Nash equilibrium and a variety of equilibrium refinements, including perfect equilibrium, proper equilibrium, sequential equilibrium and more! We will pay attention to important special classes of games, including bargaining games, signalling games, and incomplete information. Most of our analysis will be from the strict decision-theoretic point of view, but we will also survey some models of bounded rationality in games, including games played by automata.

**ECON 757 Economics of Imperfect Information**
Spring. 4 credits. Prerequisites: Economics 609-610 and 619.

The purpose of this course is to consider some major topics in the economics of uncertain information. Although the precise topics considered will vary from year to year, subjects such as markets with asymmetric information, signalling theory, sequential choice theory, and record theory will be discussed.
ECON 760 Topics in Political Economy  
Fall. 4 credits. Prerequisite: Economics graduate core or instructor's permission. This course will develop critiques and extensions of economic theory, taking into account the political and social moorings of economic activity and equilibria. The formation and persistence of social norms; the meaning and emergence of property rights; the role of policy advice in influencing economic outcomes; and the effect of political power and ideology on economic variables will be studied. While these topics were popular in the classic works of political economy, recent advances in game theory and, more generally, game-theoretic thinking allows us to approach these topics from a new perspective. Hence, the course will begin by devoting some lectures to elementary ideas in game-theory and strategic analysis.

ECON 761 International Economics: Trade Theory and Policy  
Fall. 4 credits. Prerequisites: ECON 609, 610. This course surveys the sources of comparative advantage. It analyzes simple general equilibrium models to illustrate the direction, volume, and welfare effects of trade. Topics in game theory and strategic analysis as applied to international economics will be covered by devoting some lectures to elementary ideas in game-theory and strategic analysis.

ECON 762 International Economics: International Finance and Open Economy Macroeconomics  
Spring. 4 credits. Prerequisite: ECON 761. This course surveys the determination of exchange rates and theories of balance of payment adjustments. It explores open economy macroeconomics by analyzing models of monetary economies. Topics in monetary economics and econometrics as applied to international economics will be covered.

ECON 770 Topics in Economic Development  
For description, see ARME 667.

ECON 771 Economic Development and Development Planning  
Spring. 4 credits. Prerequisites: graduate core or instructor's permission. Reviews the existing literature on the determinants of economic growth and the interrelationship of growth and income distribution through the process of economic development. A general equilibrium approach to development is taken. Computable general equilibrium models, based on social accounting matrices, are used to explore the performance of a variety of developing countries. Among the topics explored are: impact of structural adjustment and stabilization policies, demand and supply elasticities, and the role of income, population, and interdependent variables in international trade. Critical review and evaluation of national, regional, and sectoral development models are built for such developing countries as India, Brazil, Indonesia, and Ecuador.

ECON 772 Economics of Development  
Spring. 4 credits. Prerequisites: first-year graduate economic theory and econometrics. Analytical approaches to the economic problems of developing nations. Topics to be covered include: some old and new directions in development economics thinking, the welfare economics of poverty and inequality, empirical evidence on who benefits from economic development, labor market models, project analysis with application to the economics of education, and development policy.

ECON 773 Economic Development  
Fall. 4 credits. Prerequisites: Economics 609 and 620. The course is concerned with theoretical and applied works that seek to explain economic development, or lack thereof, in countries at low-income levels. Specific topics vary each semester.

ECON 774 Economic Systems  
Spring. 4 credits. The course deals with economic systems, formerly centrally planned economies, and economies in transition.

ECON 784 Seminars in Advanced Economics  
Fall and spring. 4 credits.

ENGLISH  
H. Shaw, chair; B. Correll, director of undergraduate studies (255–5492); D. Mermin, director of graduate studies (255–7986); H. S. McMillin, director of honors program; B. Adams, J. Ashton, A. Boehm, F. Bogel, L. Bogel, M. P. Brady, L. Brown, C. Chase, J. Culler, S. Davis, E. DeLoughrey, L. Fukundiny, R. Farrell, D. Fried, A. Galloway, R. Gilbert, J. Goldsky, K. Gottschalk, E. Hanson, L. Herrin, T. Hill, M. Hite, M. Jacobus, P. Janowitz, B. Jeffrey, C. Kaske, M. Koch, B. Maxwell, D. McCall, K. McClane, M. McCoy, S. McPherson, A. Morgan, T. Murray, R. Parker, J. Porte, E. Bishop, J. Blackall, A. Caputi, D. Eddy, R. Elia, A. Lurie, P. Marcus, J. McConkey, S. Parsh, M. Radzio, S. C. Stout. The Department of English offers a wide variety of courses in all areas of English, American, and Anglophone literature as well as in creative writing, expository writing, and film analysis. Literature courses focus variously on close reading of texts, study of particular authors and genres, questions of critical theory and method, and the relationship of literary works to their historical contexts and to other disciplines. Writing courses typically employ the workshop method in which students develop their skills by responding to the criticism of their work by their classmates as well as their instructors. Many students supplement their formal course work in English by attending public lectures and poetry readings sponsored by the department or by writing for campus literary magazines. The department not only to foster critical analysis and lucid writing but also to teach students to think about the nature of language and to be alert to both the rigors and the pleasures of reading texts of many sorts.

First-Year Writing Seminars  
As part of the university-wide First-Year Writing Seminars program administered by the John S. Knight Writing Program, the department offers many one-semester courses dealing with various forms of writing (e.g. narrative, autobiographical, and expository), with the study of specific areas in English and American literature, and with the relation of literature to culture. Students may apply any of these courses to their First-Year Writing Seminars requirements if added course descriptions may be found in the First-Year Writing Seminars program listings, available from college registrars in August for the fall term and in November for the spring term. Freshmen interested in majoring in English are encouraged to take at least one of the department's 200-level First-Year Writing Seminars: "The Reading of Fiction" (ENGL 270), "The Reading of Poetry" (ENGL 271), and "Introduction to Drama" (ENGL 272). These courses are open to all second-term freshmen. They are also open, as space permits, to first-term freshmen with scores of 700 or above on the CEEB College Placement Tests in English composition or literature, or 4 or 5 on the CEEB Advanced Placement Examination in English, as well as to students who have completed another First-Year Writing Seminar.

Courses for Nonmajors  
For students majoring in fields other than English, the department provides a variety of courses at all levels. Most of the courses in the 200 level are open to qualified freshmen, and are open to sophomores. Courses at the 300 level are open to all sophomores, juniors, and seniors; they are also open to freshmen who have received the instructor's prior permission. There is a readiness requirement at the 400 level for nonmajors depending on the course topics, which are subject to change from year to year. Permission of the instructor is sometimes required; prior consultation is always in order and strongly advised.

The Major in English  
Students who major in English develop their own programs of study in consultation with their major advisers. Some choose to focus on a particular historical period or literary genre or to combine sustained work in creative writing with the study of literature. Others pursue special interests in such areas as women's literature, African-American literature, literature and the visual arts, or critical theory.

The department recommends that students prepare themselves for the English major by taking one or more of its preparatory courses, such as "The Reading of Fiction" (ENGL 270), "The Reading of Poetry" (ENGL 271), or "Introduction to Drama" (ENGL 272). (The "ENGL" prefix identifies courses sponsored by the Department of English, all of which appear in the English section of Courses of Study or the department's supplementary lists of courses; it also identifies courses sponsored and taught by other academic units and cross-listed with English.) These courses concentrate on the skills basic to the English major and to much other academic work—responsive, sensitive reading and thoughtful, forceful writing. As First-Year Writing Seminars, any one of them will satisfy one-half the College of Arts and Science's First-Year writing requirement. ENGL 280, 281, 288, and 289 are also suitable preparations for the major and of course to students who have completed their First-Year Writing Seminar requirement. ENGL 201 and 202, which together constitute a two-semester survey of major British writers, though not
required are strongly recommended for majors and prospective majors. ENGL 201 and 202 (unlike ENGL 280, 281, 288, and 289) are also “approved for the major” in the special sense of that phrase explained below.

To graduate with a major in English, a student must complete with passing letter grades 10 200-level courses in creative and expository writing (ENGL 280, 281, 288, and 289), and additional nondepartmental courses approved for the major. All ENGL courses numbered 300 and above are approved for the major. In addition, with the exception of First-Year Writing Seminars (ENGL 270, 271, and 272), 200-level courses in creative and expository writing (ENGL 280, 281, 288, and 289), and courses designated for nonmajors, all 200-level ENGL courses are also approved for the major. Courses used to meet requirements for the English major may also be used to meet the college’s “historical breadth” requirement as well.

Of the 40 credits required to complete the major, 8 credits (4 courses) must be at the 400 level or above; 12 credits (three courses) must be from courses in which 50 percent or more of the material consists of literature originally written in English before 1800; and another 12 credits (four courses) must form an intellectually coherent “concentration.” The 400-level and pre-1800 requirements may be satisfied only with ENGL courses, and ENGL 493–494, the Honors Essay Tutorial, may not be used to satisfy either one. Courses that satisfy the pre-1800 requirement are so designated in Courses of Study. Many English majors use ENGL 201 to begin meeting this requirement since it provides an overview of earlier periods of British literature and also enables them to make more informed choices of additional pre-1800 courses. ENGL 202, however, does not qualify as a pre-1800 course. Neither do courses offered by other departments unless they are cross-listed with English. Although courses in foreign literature read in the original languages may not be used to fulfill the pre-1800 requirement, they may be used for English major credit provided they are included within the 12-credit limit described below. The three course concentration requirement may be satisfied with any courses approved for the major. The department’s “Guide to the English Major” contains suggested areas of concentration and lists of courses that fall within the areas proposed, but majors are expected to define their own concentrations in consultation with their advisers.

As many as 12 credits in courses offered by departments and programs other than English may under certain conditions be used to satisfy English requirements. Courses in literature and creative writing offered by academic units representing neighboring or allied disciplines (German Studies, Romance Studies, Russian, Asian Studies, Classics, Comparative Literature, Africana Studies, the Society for the Humanities, American Studies, Women’s Studies, Religious Studies, Asian American Studies, Latino Studies, and Theatre, Film, & Dance) are routinely counted toward the 40 hours of major credit provided they are appropriate for juniors or seniors, as are most courses at the 300 level and above. English majors who are double majors may exercise the option of applying 12 credits in courses offered by another department toward their second major. All English majors are urged to take courses in which they read foreign works of literature in the original language, and for that reason 200-level literature courses for which qualification is a prerequisite (as well as more advanced literature courses read in the original language) may be counted toward the English major. Credit from other non-ENGL courses may be included within the 12 credits of nondepartmental courses approved for the major only when the student is able to demonstrate to the adviser’s satisfaction their relevance to his or her individual program of study.

Students who declared the English major prior to July 1999 may elect to substitute for these requirements those in effect when they entered the major.

The Major in English with Honors

Second-term sophomores who have done superior work in English and related subjects are encouraged to seek admission to the department’s program leading to the degree of Bachelor of Arts with Honors in English. Following an interview with the chair of the Honors Committee, qualified students will be admitted provisionally to the program. During their junior year these students must complete at least one Honors Seminar (ENGL 491 or 492); they are encouraged to take an additional 400-level English course in the field in which they plan to concentrate. On the basis of work in these and other English courses, a provisional Honors candidate is expected to select a thesis topic and secure a thesis adviser by the end of the junior year. A student who has been accepted by a thesis adviser becomes a candidate for Honors rather than a provisional candidate.

During the senior year, each candidate for Honors in English enrolls in a year-long Honors Seminar (ENGL 491 or 492); they are encouraged to take an additional 400-level English course in the field in which they plan to concentrate. On the basis of work in these and other English courses, a provisional Honors candidate is expected to select a thesis topic and secure a thesis adviser by the end of the junior year. A student who has been accepted by a thesis adviser becomes a candidate for Honors rather than a provisional candidate.

Expository Writing

ENGL 288 Expository Writing

Fall, spring, winter, 3 credits. Each section limited to 15 students. Prerequisite: English language proficiency for non-native speakers or writing sample (critical/interpretive prose), submission of written work are required.

ENGL 271 The Reading of Poetry

Fall, spring, each summer. 3 credits. This course examines modern fiction, with an emphasis on the short story and novella. Students will write critical essays on authors who flourished between 1870 and the present, such as James, Joyce, Woolf, Hurston, Lawrence, Fitzgerald, Hemingway, Faulkner, Rhys, Welty, Salinger, and Morrison. Reading lists vary from section to section, and some may include a novel, but close, attentive, imaginative reading and writing are central to all. This course does not satisfy requirements for the English major.

ENGL 271 The Reading of Poetry

Fall, spring, 3 credits. Each section limited to 12 students. Recommended for prospective majors. How can we become more appreciative, alert readers of poetry, and at the same time better writers of prose? This course attends to the rich variety of poems written in English, drawing on the works of poets from William Shakespeare to Sylvia Plath, John Keats to Li-Young Lee, Emily Dickinson to A. R. Ammons. We may read songs, sonnets, odes, villanelles, even limericks. By engaging in thorough discussions and varied writing assignments, we will explore some of the major periods, modes, and genres of English poetry, and in the process expand the possibilities of our own writing. This course does not satisfy requirements for the English major.
This course practices related arts: reading selected nineteenth- and twentieth-century prose fictions and poems and writing intensive creative nonfiction and in addition, writing as a reader of one's own work and revising in the light of others' responses to it. Course members will work with a fairly small number of texts—conventionally, Wordsworth's 'Tintern Abbey', Preludia, Bronte's Jane Eyre, James T urner of the Screw, Rhy's Wide Sargasso Sea, Wilde's Dorian Gray, and Nabokov's Pale Fire—and build sustained essays from shorter (written) "readings" of them. Students will present their work to the group at various stages of completion and develop a portfolio of well-crafted prose for submission at the end of the term. They will also pay conscious attention to the ways in which both critical readers and creative writers "rewrite" the texts they read.

This is a course for English majors and nonmajors who wish to extend their mastery of critical and interpretive prose and their understanding of what they do when they write it. It will be particularly advantageous for students planning to write honors theses in English or another discipline.

ENGL 386 Philosphic Fictions
Fall. 4 credits S. Davis.
Course limited to 15 students. Prerequisite: permission of the instructor on the basis of a reading sample (critical interpretive prose), which should reach the instructor before the first day of class.

"Fictions"—of voice, audience, plot, point of view, figurative language, and thought—abound in good expository writing; they stand out in works that deliberately test and play with ideas: dialogues, satires, parodies, philosophical tales, and "thought-experiments." Students will write critically about such works and the issues they raise and will experiment with writing in similar forms. The "fictions" read and written in this course are not realistic narratives or evocations of personal experience; they are the vehicles and animating resources of writers who want to argue flexibly, provoke thought, ridicule vice or folly, play games, or involve readers in puzzlingly or disturbingly insoluble problems. Readings will include such works as Plato's Gorgias, Swift's "Modest Proposal" and Tale of a Tub, Voltaire's Candide. Carroll's Alice books, short fictions by Jorge Luis Borges and Octavia Butler, and essays by Richard Rorty and Anthony Appiah.

ENGL 387 Autobiography: Theory and Practice
Spring. 4 credits A. Boehm.
In this nonfiction prose-writing seminar we explicate canonical autobiographies as models of rhetoric to be imitated in weekly writing assignments.

ENGL 388 The Art of the Essay
Fall. 4 credits. Limited to 15 students. Interested students should submit 1 or more pieces of recent writing (prose) to the instructor before the beginning of the term, preferably at preregistration. L. Fakundiny.

For both English majors and nonmajors who have done distinguished work in first-year writing seminars and in such courses as English 280-281, 288-289, and who desire intensive practice in writing essays as a kind of creative nonfiction. The course assumes a high degree of self-motivation, a capacity for independent work, and critical interest in the work of other writers; it aims for a portfolio of conceptually rich and stylistically polished writing.

Creative Writing

Students usually begin their work in Creative Writing with English 280 or 281, and only after completion of the First-Year Writing Seminar requirement. Please note that either English 280 or 281 is the recommended prerequisite for 300-level creative writing courses. English 281 and 282 may satisfy a distribution requirement in your college (please check with your college adviser). English 382-383, 384-385, and 480-481 are approved for the major.

ENGL 280-281 Creative Writing
Fall, spring, summer, winter session. 3 credits. Prerequisites: completion of the Freshman Seminar requirement. Limited to 18 students.

 Majors and prospective majors, please note. Although recommended for prospective English majors, English 280-281 cannot be counted towards the 40 credits required for completion of the English major. It is a prerequisite for 300-level courses in creative writing, which count towards the major.

English 280 is not a prerequisite for English 281.

An introductory course in the theory, practice, and reading of prose, poetry, and allied forms. Students are given the opportunity to try both prose and verse writing and may specialize in one or the other. Many of the class meetings are conducted as workshops.

ENGL 382-383 Narrative Writing
Fall, spring, spring, 3 credits each term. Each section limited to 15 students.
Previous enrollment in English 280 or 281 recommended. Prerequisite: permission of instructor, normally on the basis of a manuscript. Fall: Sec. 1, H. Viramontes; sec. 2, D. McCall; sec. 3, M. McCoy, Spring: S. Vaughn, M. McCoy, L. Herrin.
The writing of fiction, study of models; analysis of students' work.

ENGL 384-385 Verse Writing
Fall or summer, 384; spring, 385. 4 credits each term. Each section limited to 15 students.
Prerequisites: English 280 or 281, or permission of instructor. Fall: P. Janowicz, K. McClane. Spring: R. Shepherd, N. Cuoto.
The writing of poetry; study of models; analysis of students' poems; personal conferences.

ENGL 480-481 Seminar in Writing
Fall, spring 480; spring 481. 4 credits each term. Each section limited to 15 students. Prerequisite: permission of instructor, normally on the basis of a manuscript. The manuscript should be submitted to the instructor no later than the first day of class. Previous enrollment in English 280 or 281 and at least one 300-level writing course recommended. Successful completion of one half of the 480-481 sequence does not guarantee enrollment in the other half; students must receive permission of the instructor to enroll in the second course. Fall: Sec. 1, M. McCoy, sec. 2, K. McClane. Spring: R. Morgan, R. Shepherd.
Intended for those writers who have already gained a basic mastery of technique. Although

ENGLISH 480 is not a prerequisite for English 481. Students normally enroll for both terms and should be capable of a major project—a collection of stories or poems, a group of personal essays, or perhaps a novel—to be completed by the end of the second semester. Seminars are used for discussion of the students' manuscripts and published works that individual members have found of exceptional value.

Courses for Freshmen and Sophomores

These courses have no prerequisites and are open to freshmen and nonmajors as well as majors and prospective majors.

Introductions to Literary Studies

ENGL 201-202 The English Literary Tradition

ENGL 201 Fall. 4 credits. English 201 is not a prerequisite for 202. This course may be used as one of the three pre-1800 courses required of English majors. D. Fried.

An introduction to the study of English literature, examining its historical development and achievements. Works to be read include Sir Gawain and the Green Knight, selections from Chaucer's Canterbury Tales and Spenser's Faerie Queen; Shakespeare's Twelfth Night and King Lear, poems by Sidney, Jonson, Donne, Herbert, Herrick and Marvell, and selections from Milton's Paradise Lost.

ENGL 202 Spring. 4 credits. D. Fried.
A survey of English literature from the late seventeenth century to the early twentieth century, including poem and some prose works from the Restoration and eighteenth century, the Romantic period, the Victorian period, and Modernism. Lectures and discussion sections.

[ENGL 204 Mostly Poems and Stories
4 credits. Next offered 2001-2002.]

ENGL 207 Introduction to Modern Poetry
Fall. 4 credits. R. Shepherd.
This course will sample the vast array of poetic modes and forms employed over the past century and a half, with primary emphasis on the work of American poets. Our focus in the course will be on the poems themselves—what they mean, how they feel, sound, look, and behave. Lectures, discussions, and written assignments will emphasize both the craft of writing poetry and the discipline of reading it with understanding and appreciation. No previous study of poetry required.

ENGL 208 Shakespeare and the Twentieth Century
Spring. 4 credits. S. Davis.
What can we learn about Shakespeare's plays from their reception in the twentieth century? What can we learn about twentieth-century culture from its appropriations of the Shakespearean legend and texts? We will compare four or five plays with their adaptations in fiction, theater, and film and explore the uses made of Shakespeare in education, advertising, and public culture. Our discussions will try to illuminate the vast differences and surprising continuities among the Shakespearean handbooks' and texts and the variety of critical approaches readers and viewers have taken to Shakespeare on the page and in performance.
ENGL 227 Shakespeare #
Spring, summer, and winter. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. W. Welty.

ENGL 228 Shakespeare # Special Topics
Careful study of 10 of Shakespeare's major plays, including at least three videotaped performances.

Major Genres and Areas

ENGL 203 Major Poets

ENGL 205 Readings in English Literature
3 credits. This course is intended for nonmajors. Next offered 2001–2002.

ENGL 206 Readings in English and American Literature
3 credits. This course is intended for nonmajors. Next offered 2001–2002.

ENGL 209 Introduction to Cultural Studies

ENGL 210 Medieval Romance: The Voyage to the Other World

ENGL 212 Introduction to Medieval Epic
4 credits. This course may be used as one of the three pre-1800 courses required for the English major. Next offered 2001–2002.

ENGL 240 Survey in U.S. Latino Literature (also LSP 240)

ENGL 251 Twentieth-Century Women Novelists (also WOMNS 251 and AM ST 252)

ENGL 253 The Modern Novel

ENGL 255 African Literature
Spring. 4 credits. B. Jeyifo.

ENGL 260 Introduction to American Indian Literatures (also AM ST 260)

ENGL 262 Asian American Literature (also AAS 262 and AM ST 262)

ENGL 265 Introduction to African American Literature (also AM ST 265)

ENGL 274 Scottish Literature and Culture #
3 or 4 credits. The course may be taken for 3 or 4 credits at 4 credits. Each student will complete an additional writing project. This course only counts towards the English major when taken for 4 credits. Nonmajors are welcome. Enrollment limited to 20. Next offered 2001–2002.

ENGL 275 The American Literary Tradition (also AM ST 275)
Fall. 4 credits. H. T. Mahoney.

ENGL 278 Queer Fiction (also WOMNS 278)
Spring. 4 credits. E. Hanson.

ENGL 295 The Essay in English #
Fall. 4 credits. Prerequisite: completion of ENGL 212. This course may be used as one of the three 1800 courses required of English majors. L. Fakundiny.

ENGL 315 Rewriting the Classics: Stories of Travels and Encounters
Spring. 4 credits. E. Deloughrey.

ENGL 325 Interpreting Hitchcock (also THETR 263)
Fall. 4 credits. Lab fee. Enrollment limited to 20. L. Boigelot.

Special Topics

ENGL 235 Rewriting the Classics: Stories of Travels and Encounters
Spring. 4 credits. E. Deloughrey.

This course will examine the way particular narratives travel across time and space. We will read canonical works of literature produced during the era of the British empire such as The Tempest, Robinson Crusoe, Jane Eyre, and Heart of Darkness and position them in relation to novels that rewrite, contest, and mitigate the depictions between Europeans and others. We will not only interrogate the relationship between writers from the colonies (in Africa, India, and the Caribbean) and those from Great Britain, but also examine the ways in which these British texts were revisions of earlier European travel narratives and legends. Requirements: active class participation, student presentations, a few short essays, and a final paper.

ENGL 268 Politics and Culture in the 1960s (also AM ST 268)
Spring. 4 credits. P. Sawyer.

Were the sixty a time of dangerous experimentation with drugs, sex, and alternative lifestyles on the part of a pampered generation that gradually learned to straighten up and join the mainstream? Or was it a time of revolutionary hopefulness, when the civil rights movement and the Vietnam War stimulated an impassioned critique that changed American society? What can the experiences of young "boomers" contribute to a later generation, the last of the twentieth century? The course explores these and other questions by focusing on the topics of racial justice, the Vietnam War, the counterculture, the New Left, the woman's movement and the anti-war movement for gay rights. Texts will include The Autobiography of Malcolm X, The Electric Kool-Aid Acid Test, Dispatches, the poems of Allen Ginsburg and Adrienne Rich, films, music, speeches, and manifestos.

ENGL 271 Children's Literature
Spring. 4 credits. J. Adams.

An historical study of children's literature from the seventeenth century to the present, principally in Europe and America, which will explore changing literary forms in relation to the social history of childhood. Ranging from oral folktales to contemporary, novelistic realism (with some forays into film narrative), major figures will include Perrault, Newbery, the Grimms, Andersen, Carroll, Alcott, and others.
Courses for Sophomores, Juniors, and Seniors

Courses at the 300 level are open to sophomores, juniors, and seniors and to others with the permission of the instructor.

**ENGL 301 Mind and Memory (also S HUM 301, THETR 301, and MUSIC 372)**
Spring. 4 credits. J. Morgenroth.
For complete description see Society for the Humanities 301.

**ENGL 302 Literature and Theory (also ENGL 602 and COM L 302 and 622)**
Fall. 4 credits. J. Caller.
Study of issues in contemporary theoretical debates, with particular attention to structuralism, deconstruction, psychoanalysis, and feminism. Readings by Roland Barthes, Judith Butler, Jacques Derrida, Michel Foucault, Barbara Johnson, Jacques Lacan, and others. No previous knowledge of literary theory is assumed.

**ENGL 308 Icelandic Family Sagas**

**ENGL 310 Old English in Translation**

**ENGL 311 Old English (also ENGL 611)**
4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2001–2002.

**ENGL 312 Beowulf (also ENGL 612)**
4 credits. This course may be used as one of the three pre-1800 courses required of English majors. One semester’s work, or the equivalent, of Old English is a prerequisite. Next offered 2001–2002.

**ENGL 319 Chaucer**
Fall. 4 credits. R. Farrell.
This course may be used as one of the three pre-1800 courses required of English majors.

This course will begin with the study of the major Canterbury Tales and some of his minor works, such as The Tale of Our Dulce. If time permits, we will read at least part of his great epic romance Troilus and Criseyde. All works will be read in Middle English, but ample time will be devoted to learning the language, for it is impossible to read Chaucer as a poet without Middle English. There will be lectures on Chaucer’s life, society, literary, and religious content. There will be take-home, mid-, and end-of-term exams and student presentations.

**ENGL 321 Spenser and Malory (also RELST 319)**
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Informal lecture and discussion. 2 papers, no exams. C. Kaske.
Paired selections covering about half of Malory’s Morte d’Arthur and half of Spenser’s Faerie Queene. Chretien’s romances, Sir Gawayne and the Grene Knight, and some of Spenser’s minor poems will be mentioned occasionally as background. Comparisons will assess possible literary influence, the distinctive genius of each author as a writer of romance, and the development of Arthurian romance from the Middle Ages to the Renaissance.

**ENGL 327 Shakespeare: Gender and Society (also WOMNS 227)**
Fall. 4 credits. G. Teskey.
A study of Shakespearean texts—comedy, tragedy, narrative poetry—in which questions of gender and power are of central importance. The reading will include The Rape of Lucrece, The Taming of the Shrew, Antony and Cleopatra, Troilus and Cressida, and Coriolanus. Among others. Lectures and discussions will address issues of form, thematic content, historical context, and some lively cultural debates of the Renaissance.

**ENGL 328 The Bible**

**ENGL 329 Milton**
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. G. Teskey.
An introduction to the life, poetry, and ideas of John Milton, the most important English poet after Shakespeare.

**ENGL 330 Restoration and Eighteenth-Century Literature**
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. F. Bogel.
Close reading of texts in a variety of genres (poetry, fiction, drama, autobiography) will be guided by such topics as the nature of satire, irony, and mock-heroic modes; sentiment, the ridiculous and the sublime; the authority and fallibility of human knowledge; connections among melancholy, madness, and imagination. Works by such writers as Rochester, Dryden, Swift, Gay, Defoe, Johnson, Boswell, Sterne, and Cowper.

**ENGL 333 The Eighteenth-Century English Novel**
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. N. Saccamano.
A study of form and theme in the British novel traditionally the novel that first appeared in novel form in the eighteenth century. Works will be selected chiefly from the eighteenth-century novel mostly from the eighteenth century, paying close attention to language and structure but also to cultural contexts and to the development of the novel form itself. We explore such topics as truth and fiction; romance, realism, satire, and the gothic; heroic and mock-heroic modes; sentiment, sensibility, and sexuality; race and gender; and the forms and uses of narrative. Readings may include Behn’s Oroonoko, Fielding’s Tom Jones, Johnson’s Rasselas, Walpole’s The Castle of Otranto, Sterne’s A Sentimental Journey, and Austen’s Emma.

**ENGL 340 The English Romantic Period**
Spring. 4 credits. C. Chase.
Readings in various writers from the early 1790s to the early 1820s—among them Blake, Wordsworth, Wollstonecraft, Coleridge, Byron, Mary Shelley, Percy Shelley, and Keats—with major emphasis on poetry but with attention also to prose fiction, letters, and political and literary essays. The course will be concerned with close reading of formal experiments in lyric and narrative, and analysis of their relation to political and cultural issues and contexts in an age of national reform and international revolution and conflict.

**ENGL 345 Victorian Controversies**
Fall. 4 credits. S. Siegel.
Economic, political and technological changes transformed the nineteenth century. We will consider some of the controversies these transformations provoked in England and Ireland. Our readings will be selected chiefly from leading nineteenth-century periodicals and from essays that contributed greatly to shaping public opinion. We will explore the social problems Victorian critics and artists identified, the various solutions they proposed, and their contrasting visions of their nation and its colonies. The men and women who contributed to the periodical press, and who anticipated new cultural forms were preoccupied with questions about the nature of Britain: Was their century marked by progress or by decline? Would machines degrade or ennoble workers? Did aesthetic experience complement or compete with religious doctrine? Would industrial society be self-regulating or would it have to be regulated by the state? Was the international revolution and conflict?
ENGL 305 The Modern Tradition I: 1890-1930
Fall. 4 credits. D. Schwarz
Critical study of major works by Hardy, Conrad, Lawrence, Joyce, Woolf, Eliot, Yeats, Hopkins, Wilde, Wallace Stevens, and others. While the emphasis will be on close reading of individual works we shall place the authors and works within the context of literary and intellectual history. The course will seek to define the development of literary modernism (mostly but not exclusively in England), and relate literary modernism in England to that in Europe and America as well as to other intellectual developments. We shall be especially interested in the relationship between modern literature and modern painting and sculpture, occasionally looking at slides.

ENGL 355 Decadence (also COM L 355 and WOMNS 355)

ENGL 361 Early American Literature (also AM ST 361)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. S. McMillin
Major plays and other events in the English theatre from the medieval craft cycles through the age of Shakespeare and into the Restoration period. Writers include Marlowe, Kyd, Shakespeare, Dekker, Jonson, Middleton, Beaumont and Fletcher, Webster, Wycherley, and Congreve.

ENGL 372 English Drama from 1700 to the Present (also THETR 372)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. S. McMillin
The modern side of English drama, from the Restoration to contemporary plays. Writers include Behn, Congreve, Dryden, Tate, Sheridan, Shelley, Robertson, Shaw, and Churchill.

ENGL 376 Survey in African American Literature: 1918 to Present
Spring. 4 credits. H. Splatter
This course will select its readings from the genres of poetry, drama, fiction, and nonfiction produced by black American writers from the period of the Harlem Renaissance, to the present. Readings will include poems by Harlem Renaissance poets, the poets of African-American modernism, i.e., Gwendolyn Brooks and Robert Hayden, and some of the poetry of the Black Arts Movement of the 60's, by way of Leroi Jones/Imamu Baraka's and Larry Neal's Black Fire, plays by Lorraine Hansberry, Ed Bullins, and August Wilson; nonfictional and fictional writings by Malcolm X, Martin Luther King, Nella Larsen, Jean Toomer, Zora Neale Hurston, Toni Morrison, and Alice Walker; and the poetry of Luci Murphy, Jack Spicer, and Jack Kerouac. The course will explore the motifs of exile and border crossing and sketch out the ways in which gender, nation, and class relate to postmodernism, postcolonialism, the United States, and the world. A special section of the course is designed for majors, but will be open to all interested students.

ENGL 378 American Poetry Since 1950 (also AM ST 372)

ENGL 379 Reading Nabokov
Fall. 4 credits. G. Shapiro.
For complete description, see Russian literature 305.

ENGL 381 Reading as Writing
See complete course description in section headed Expository Writing.

ENGL 382-383 Narrative Writing
See complete course description in section headed Creative Writing.

ENGL 384-385 Verse Writing
See complete course description in section headed Creative Writing.

ENGL 388 Philosophic Fictions
See complete course description in section headed Expository Writing.

ENGL 387 Autobiography: Theory and Practice
See complete course description in section headed Expository Writing.

ENGL 388 The Art of the Essay
See complete course description in section headed Expository Writing.

ENGL 390 Autobiography: Memoir, Memory, and History

ENGL 395 Video: Art, Theory, and Politics (also THETR 395)
Fall. 4 credits. T. Murray
The course will offer an overview of video art, alternative documentary video (which often incorporates styles of "video art"), and new digital art. It will analyze four phases of the history of video: 1) the development of video from its earliest times (from television); 2) video's relation to performance art and installation; 3) video's incorporation in film through experiments in technology; 4) digital art's transformation of video. Screenings will include early political and feminist video (from Art Farm, Chip Lord, Martha Rosler, Joan Jonas, Lynn Hershman, and Paper Tiger TV, etc.), conceptual video of the 80's and 90's (Woody Vasulka, Thierry Kuntzel, Mary Lucier, Bill Viola, Garth Fagan, etc.), gay and multicultural video of the 90's (Muntadas, Juan Downey, the Yonemotos, Baraka's and Larry Neal's Cane, The Bedouin Hornbook), and art on the net and CD-Rom (Chris Marker, Reginald Wootery, Guillermo Gómez-Peña, etc.). Secondary theoretical readings on postmodernism, video theory, multiculturalism, and documentary will provide students with a cultural and political context for the discussion of video style, dissemination, and reception.

ENGL 396 Introduction to Global Women's Literature (also WOMNS 396)
Spring. 4 credits. E. DeLoughrey
This course is an introduction to contemporary women's writing in English from "postcolonial" regions such as the Pacific, Caribbean, India, and Africa. During the semester we will look at how women from these regions depict the process of migration within the nation (from rural to urban spaces) or from the "postcolony" to metropoles such as England. As women are generally associated with private, domestic space, this course will explore the motifs of exile and border crossing and sketch out the ways in which gender, nation, and class relate to predominantly masculinist productions of "traveling
theory.” We will read novels/poetry by Joan Riley, Merle Hodge, Patricia Grace, Bapsi Sidhwa, and Grace Nichols and align these texts with theoretical works by Edward Said, Caren Kaplan, Paul Gilroy, and M. Nourbese Philip. Requirements: active class participation, student presentations, a few short essays, and a final paper on the writer of your choice.

ENGL 397 Policing and Prisons in American Culture (also AM ST 395)

Spring. 4 credits. B. Maxwell.

Having attained the highest number of incarcerated persons of any nation on earth, while subjecting the citizenry to ordeals that most recently bear the names King, Louima, and Diallo, United States regimes of policing and imprisonment compel historical and critical attention. We will consider policing and imprisonment in United States culture, stressing prisoners’ writing, song, slang, and graphic art. Edgar Allan Poe wrote in 1849: “in looking back through history...we should pass over all biographies of ‘the good and great,’ while carefully the slight records of wretches who died in prison, in Bedlam, or upon the gallows.” These records—novels, stories, poems, plays, raps, songs, essays, autobiographies, letters, manifestoes, paintings, drawings, crafts, and tattoos—are of course less slight than they were in Poe’s day and will make up the greater part of our source material. In addition to work by imprisoned people, readings will draw on carceral theory, activist documentation, and the history of criminal justice. Finally, we will consider questions raised by noncriminal confinement in U.S. history: slavery, indentured servitude, the reservation system for indigenous peoples, prisoners of war in the Civil War, the wartime internment and the history of criminal justice. These courses consider policing and imprisonment in United States culture together with novels that will most probably read include Nadine Gordimer, Doris Lessing, and Kazuo Ishiguro.

ENGL 403 Studies in American Poetry: Great Books, 1855–1926 (also AM ST 403)

Fall. 4 credits. R. Gilbert.

A close study of seven classic volumes of American poetry, mainly published in the second two decades of the twentieth century, with careful attention to each book’s thematic design and its stylistic and formal range as well as to the individual poems it contains. We’ll also consider each book’s critical reception and its influence on later American poetry. Books of poetry to be studied: Walt Whitman, Leaves of Grass (1855–60), Gertrude Stein, Tender Buttons (1914), Robert Frost, North of Boston (1914), Wallace Stevens, Harmonium (1923), T.S. Eliot, The Waste Land (1922), Marianne Moore, Obsomations (1924), Hart Crane, White Buildings (1926).

ENGL 404 History into Fiction: Nazis and the Literary Imagination (also COM L 404 and GERST 414)

Fall. 4 credits. E. Rosenberg.

The 12 years of Hitler’s rule remain the most critical, “longest” years of the century. We shall read some eight texts by Anglophone and Continental novelists (and a few playwrights and poets) that explore the salient features of the regime. Weimar and Hitler’s rise to power (e.g., Mann’s “Maria and the Magician,” Brecht’s Arturo Ui, Isherwood’s Goodbye to Berlin); civilian life in Nazi Germany (Brecht’s “Jewish Wife” and other one-actors, Girgenti’s “Darin’s Elusive Love” and the anti-Semitism it prefigures); war and the Occupation of Europe (e.g., Camus’s The Plague, Heinrich Boll’s short fiction, Anne Frank’s Diary); the persecution of the European Jews and genocide (e.g., Sartre’s “Children of Slaughter,” Peter Weiss’s The Investigation, Boworski’s This Way for the Gas, Speigelman’s Maus I or Maus II, Ozick’s “The Shawl”). Lastly some lyrics by Celan, Nelly Sachs, Anthony Hecht. Brief ancillary readings by historians and memorialists (Arendt, Primo Levi, Bettelheim) and the instructor’s private documentation of life under Hitler. Two papers, no exam.

ENGL 411 Middle English (also ENGL 613)

Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2001–2002.

ENGL 415 Medieval Writers and the City (also ENGL 515 and S HUM 409)

Fall. 4 credits. A. Galloway.

For complete description, see Society for the Humanities 409.

ENGL 416 Chaucer and the Politics of Love

Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2001–2002.

ENGL 417 Early Medieval Archaeology and Literature (also ENGL 617 and ARKEO 417 and 617)

Fall. 4 credits. Prerequisite: permission of instructor. This course may be used as one of the three pre-1800 courses required of English majors. R. Farrell

This course is intended to provide an overview of the early middle ages in which is now called Great Britain. A massive amount of evidence on the material culture has come to light in the past 50 years, evidence which permits us a far better comprehension of written sources. We will start with a reading of the great Old English epic Beowulf and a close study of the material culture of a society in transition from pagan Germanic to cosmopolitan Christian culture. Our next focus will be Beude’s Ecclesiastical History of the English People and the material evidence for the complex cultural developments in England, Ireland, Scandinavia, and the continent. There will be frequent student oral reports, a take-home midterm, and a take-home final OR extended research paper. Graduate students will be expected to do more detailed oral reports and research papers.

ENGL 420 Biblical Cities (also ENGL 620 and S HUM 406)

Fall. 4 credits. G. Tomsey.

For complete description, see Society for the Humanities 406.

ENGL 421 Urban Archeology of the Manuscript (also ENGL 621 and S HUM 403)

Spring. 4 credits. A. Galloway.

For complete description, see Society for the Humanities 403.

ENGL 423 Seventeenth-Century Lyric

Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Not open to sophomores.

ENGL 426 Seminar in Theatre History: The Provincetown Players and Greenwich Village Culture: 1915–1922 (also THETR 429)

Fall. 4 credits. J. E. Gainor.

For complete description, see Theatre Arts 429.

ENGL 427 Studies in Shakespeare

4 credits. This course may be used as one of the three pre-1800 courses required of English majors.

ENGL 432 Studies in the Sixteenth Century: The Development of Print Culture

4 credits. This course may be used as one of the three pre-1800 courses required of English majors.

ENGL 433 Electronic Art and Culture

4 credits. This course may be used as one of the three pre-1800 courses required of English majors.

ENGLISH 457

This course examines works of South African and Afro-American fiction and drama in light of the powerful claim that "race" is a socially constructed fiction with no scientific, rationally provable basis to it. The works explored in the course also see race, while consistent with the dialectics of artistic representation, they juxtapose the fiction of...
principal texts, however, will be limited to a few essays by each author.

ENGL 454 American Musical Theatre (also MUSIC 490 and THETR 454) Spring. 4 credits. Prerequisite: English 272 or Theatre Arts 240-241 plus some ability to read music. Limited to 15 students.

ENGL 458 Imagining the Holocaust (also ENGL 658, JST 458 and 658, COM L 483 and 683) Spring. 4 credits. D. Schwarz.

What is the role of the literary imagination in keeping the Holocaust alive for our culture? We shall examine major and widely read Holocaust narratives which have shaped the way we understand and respond to the Holocaust. As we move further away from the original events, why do the kinds of narratives with which authors render the Holocaust horror evolve to include fantasy and parable? Employing both a chronological overview and a synchronic approach—which conceives of the authors having a conversation with one another—we shall discover recurring themes and structural patterns in the works we read.

We shall begin with first person reminiscences—Wiesel's Night, Levi's Survival at Auschwitz, and The Diary of Anne Frank—before turning to seemingly realistic fictions such as Herschel and Henrietta's The Pigeon Trees, Jan Karski's The Painted Bird, and Oszk's The Shawl. In later weeks, we shall explore diverse kinds of fictions and discuss the mythopoetic vision of Schwarz-Bart's The Last of the Just, the illuminating distortions of Epstein's King of the Jews, the Kafkaesque parable of Appelfeld's Badenheim 1939, and the fantastic cartoons of Spiegelman's Maus books. We shall also include Kneally's Schindler's List, which was the source of Spielberg's academy award winning film, and compare the book with the film.

ENGL 460 Riddles of Rhythm Fall. 4 credits. D. Fried.

What makes a poem's pulse beat? How and why does language ordered into rhythm affect us? How do poets shape their responses through rhythm? What are some of the ways that poets and their readers have tried to make sense of the essence and effects of rhythm? Is poetic rhythm best understood on the model of music? Does ordinary language outside of poetry have its own rhythms? What does the arrangement of poems in lines have to do with its rhythms? Is "free verse" free from rhythm? We will read a variety of poems from the Renaissance to the present, and a range of essays about poetry in an attempt to answer these questions. Writing assignments will include interpretive essays about poems, analysis of accounts of poetic rhythm, including accounts offered by the poets themselves, and occasional short exercises working with poetic rhythm and other formal features of poems. Poets to be studied may include Shakespeare, Herbert, Marvell, Milton, Pope, Keats, Byron, Poe, Dickinson, Whitman, Hopkins, Hardy, Owen, Frost, Williams, Moore, Bishop, and Ammons. No previous study of poetic meter or rhythm is assumed.

ENGL 462 Between Aztlán and Queens: Latina Culture and the Making of Space (also LSP 462) Fall. 4 credits. M. P. Brady. How do cultural practices like music and film produce space? What do freeways, zoning laws, advertising codes, and hiking trails have to do with literature? How have changing urban demographics and immigration shaped, even "Latinoized," cities, and how have these changes been reflected or resisted in Latina cultural production? How does paying attention to space change our reading practices? This interdisciplinary course will examine these questions and explore how place and space shape Latina cultures and how Latina cultures shape place and space. We will draw from scholarship in fields such as urban planning, law, architecture, geography, anthropology, literature, and history. Students should plan to do extensive reading, write two to three papers, and produce a research paper.

ENGL 466 James on Film 4 credits. Next offered 2001-2002.

ENGL 469 Faulkner (also AM ST 469) 4 credits. Next offered 2001-2002.

ENGL 471 Humor in Literature Fall. 4 credits. A. Larue.

Why do we laugh, and at what? Why do some works seem funny at certain periods and in certain social contexts? This course will look at different ways of answering these questions, and at different kinds of literary humor: romantic comedy, black comedy, farce, satire, parody, and nonsense. Among works that may be read are humorous folktales, comic verse, A Midsummer Night's Dream, The Way of the World, Gulliver's Travels, Alice in Wonderland, The Importance of Being Earnest, Patience, Waiting for Godot, and stories by James Thurber, Flannery O'Connor, Grace Paley, Philip Roth, Donald Barthelme, and Garrison Keillor.

ENGL 474 Contemporary African American Poetry

ENGL 475 Studies in the Twentieth Century Writers in Twentieth-Century Literature
Spring. 4 credits. Limited to 20 students. L. Herrin.
The term "a writers' writer" has sometimes been regarded as a dubious distinction. Does a writer's appeal to his fellow writers come at the expense of a broader audience? Can a writer write too well for his own good? Does "elegance" carry a connotation of "elusiveness"? Is there something unAmerican (and, hence, proEuropean) about too much attention to style? I propose reading a list of fictional works spanning the century to see which of them survive because of or in spite of their heightened attention to style. Opinionated discussion from start to finish and wise and passionate papers defending (or deifying) your favorite writers' writer. Works taken from the following authors: Henry James, Ernest Hemingway, Katherine Anne Porter, Eudora Welty, William Gass, J. D. Salinger, John Hawkes, Grace Paley, Vladimir Nabokov, James Salter, and Cormac McCarthy.

ENGL 476 Global Women's Literature (also WOMNS 476)

ENGL 477 Studies in Native American Literature: Native American Literature and Criticism (also ENGL 677)

ENGL 479 Jewish-American Writing (also AM ST 479 and JEWST 478)

ENGL 480-481 Seminar in Writing
Fall. 480; spring 481. 4 credits. See complete description in section headed Creative Writing.

ENGL 483 Seminar in Comparative Twentieth-Century Anglophone Drama
Fall. 4 credits. B. Jeyifo.
The course will explore twentieth-century Anglophone drama in diverse areas of the English-speaking world. Through works of Irish, African, Caribbean, and U.S. playwrights like Friel, Soyinka, Fogard, Walcott, and Shange, the seminar will be organized around two principal issues: the use of folk, ritual, vernacular, and carnivalesque performance idioms to transform the received genre of Western literary drama; themes of empire, colonialism, and postcoloniality in the making of the modern world. Some knowledge of classical and avantgarde theories of drama and theatre would be useful, but is not a prerequisite for this course.

ENGL 484 Poetry and Rhetoric (also ENGL 463, COM L 467 and 667 and FRLIT 437 and 637)
Fall. 4 credits. C. Chase.
For complete description, see Comparative Literature 467.

ENGL 490 Literature of the Archipelagoes: Caribbean and Pacific "Tidalectics"

ENGL 491 Honors Seminar I
Fall. 4 credits. Open to students in the Honors Program in English or related fields, or by permission of instructor.

ENGL 492 Honors Seminar II
Spring. 4 credits. Open to students in the Honors Program in English or related fields, or by permission of instructor.

Section I: Reading Joyce's Ulysses
D. Schwarz.
A thorough episode-by-episode study of the art and meaning of Joyce's Ulysses. We will explore the relationship between it and the other experiments in modernism and show how Ulysses redefines the concepts of epic and hero. We will also view Ulysses to address major issues in literary study and to test various critical and scholarly approaches. Such a self-conscious inquiry into theories and methods should prepare students to confront other complex texts, as well as help them define their own critical positions as they plan their senior honors theses.

Section II: Victorians and the Unconscious
P. Sawyer.
Though Freud claimed that his theories of unconscious mental functioning were universally valid, they are also in some ways products of Victorian culture. This course will look at some of Freud's antecedents in Victorian literature by asking two questions: To what extent does Freudian psychoanalysis help us interpret literary texts? And to what extent do they help us to "interpret" Freud— that is, to illuminate ways of thinking about identity, sexuality, and social order that Freud shared with the Victorians, and to some extent with us as well? We will consider such topics as the theory of the "hidden soul," the double, the id as a dangerous social force, female sexuality, the woman as confessors and patient, and the invention of "perversions." Readings will include: The Autobiography of John Stuart Mill, Great Expectations, The Lifted Veil, Dracula, and The Picture of Dorian Gray; also, essays by Freud and Michel Foucault's powerful challenge to Freud, The History of Sexuality (Vol. I). Students will write a research paper that may serve as a preperation for the honors thesis.

ENGL 493 Honors Essay Tutorial I
Fall or spring. 4 credits. Prerequisites: senior standing and permission of Director of the Honors Program.

ENGL 494 Honors Essay Tutorial II
Fall or spring. 4 credits. Prerequisites: English 493 and permission of Director of the Honors Program.

ENGL 495 Independent Study
Fall or spring. 2-4 credits. Prerequisites: Permission of departmental adviser and director of undergraduate studies.

Courses Primarily for Graduate Students

ENGL 600 Colloquium for Entering Students
M. Hite.

ENGL 602 Literature and Theory (also ENGL 302 and COM L 302/622)
J. Culler.

ENGL 615 Medieval Writers and the City (also ENGL 415 and S HUM 409)
A. Galloway.

ENGL 617 Early Medieval Archaeology and Literature (also ENGL 417 and ARKEO 417/617)
R. Farrell.

ENGL 620 Biblical Cities (also ENGL 420 and S HUM 408)
G. Teskey.

ENGL 630 Aesthetics in the Eighteenth Century (also COM L 630)
N. Saccamano.

ENGL 646 Studies in Victorian Literature: Gender in Fiction
P. Sawyer.

R. Morgan.

ENGL 781.02 M.F.A. Seminar: Fiction
D. McCall.

ENGL 785 Reading for Writers: Fiction
S. Vaughn.

English for Academic Purposes

ENGL 205 English as a Second Language
Fall. 4 credits. Prerequisite: placement by examination. S. Schaffzin.

ENGL 206 English as a Second Language
Spring. 3 credits. Prerequisite: ENGL 205 or placement by examination. S. Schaffzin.

ENGL 209 English as a Second Language
Fall or spring. 1 credit. Prerequisite: permission of instructor. S. Schaffzin.

First-Year Writing Seminar

ENGL 212 Written English for Non-Native Speakers
Spring. 3 credits. Prerequisite: permission of instructor. S. Schaffzin.

Intensive English Program

105 Morrill Hall

This noncredit, non-degree program provides full-time intensive English language instruction as well as academic, social, and cultural orientation to the United States and its institutions. The aim of the program is for participants to acquire proficiency in the language in order to pursue goals in English for academic, business, professional, or personal purposes.

Programs are offered both fall and spring semesters and in the six-week summer session (from late June to early August). Participants receive a minimum of 20 hours of classroom instruction weekly in speaking, listening, reading, writing, and grammar, which are taught at all levels from low intermediate through very-high advanced. Applicants must be at least 17 years of age, hold the equivalent of a high school diploma, and have had some previous study of English.

Students who have gained full admission to or who are already registered in degree-granting programs at Cornell should consult the section "English for Academic Purposes" (series ENGL).

The Intensive English Program is coordinated by the director, Jeanette Mancusi. Information and application materials are available directly from the program at Cornell University, Intensive English Program, Morrill Hall, Ithaca, NY 14853-4701, U.S.A.: tel. 607/255-4803, fax 607/255-7491; e-mail CUIEP@cornell.edu; web page: dml.cornell.edu/lanuages/IEP/cuiep.html

FIRST-YEAR WRITING SEMINARS

For information about the requirements for writing seminars and descriptions of seminar offerings, see "Special Programs and Interdisciplinary Studies" at the end of the Arts and Sciences section of this catalog and consult the John S. Knight Writing Program brochure, available from college registrars in August for the fall term and in October for the spring term.

GERMAN STUDIES

L. Adelson, chair; P. Gilgen, director of undergraduate studies; A. Schwarz, director of graduate studies; D. Bathrick, M. Briggs (Dutch); B. Buettner, H. Deinert, I. Ezergailis, A. Groos, P. U. Hohendahl, G. Lischke, B. Martin, L. Tranck (Swedish); G. Valk, G. Waite.

The Department of German Studies offers students a wide variety of opportunities to explore the literature and culture of German-speaking countries, whether as part of their general education, a major in German Studies, or a double major involving another discipline, or as preparation for graduate school or an international professional career. Courses are offered in English translation as well as in German; subjects range from medieval to contemporary literature and from film and visual culture to intellectual history, music, history of psychology, and women's studies.
The department's offerings in English begin with a series of First-Year Writing Seminars introducing various aspects of German literature (the fairy-tale and romantic narratives, 18th-century novelists such as Kafkas, Hesse, Mann, Brecht), issues in mass culture and modernity, problems of German national identity/ies, and cinema and society. A variety of courses in English translation is also offered at the 300 and 400 level. They explore such topics as the Faust legend, aesthetics from Kant to Heidegger, Freud and his legacy, opera from Mozart to Strauss, the German novel, political theory and cinema, the Frankfurt School, and feminist theory. It may be possible to arrange a German section for courses taught in English, either informally or formally (for credit). Students are encouraged to discuss this possibility with instructors.

Students wishing to begin German language at Cornell enroll in GERST 121-122. Those successfully completing this sequence and those placing into the 200 level may pursue further language study or begin with the literature and cultural studies tracks in German Studies. The beginning sequence of 200-level courses in German Studies, with readings and discussion in German, is designed to provide further grounding in the language as well as to introduce German literature and cultural studies. More advanced courses introduce majors and other qualified students to a broad variety of literary and cultural topics.

(Starting in spring 1998, GERST 201 and GERLA 203 were replaced by GERST or GER 200.)

Sequence of courses
First level: German 121-122, after completion, placement into German 123 or 200, 205
Second level: German 200, 202, 204, 205-206.
Further 300- and 400-level literature and culture courses.

Advanced Standing
Students with an AP score of 4 or better are automatically granted three credits in German. Students with an AP score of 3 or better, an LPG score of 65 or higher, or an SAT II score of 680 or higher must take the CASE examination for placement in courses above GERST 200. Students coming to Cornell with advanced standing in German and/or another subject are encouraged to consider a double major and to discuss the options with the director of undergraduate studies as early as possible.

The Majors
The department offers two options for the major: German literature/culture and German area studies, the latter a more broadly defined sequence that includes work in related disciplines. The course of study in either major is designed to give students proficiency in reading, speaking, and writing in German, to acquaint them with German culture, and to help them develop skills in reading, analyzing, and discussing German texts in relevant disciplines. For both majors, there is a wide variety of courses co-sponsored with other departments (Literature, Government, History, Music, Theatre, Film, and Dance; Women's Studies).

The department encourages double majors and makes every effort to accommodate prospective majors with a late start in German. Students interested in a major should consult the director of undergraduate studies, Peter Gilgen, 192 Goldwin Smith Hall.

German (Literature/Culture)
Although the emphasis of this track is on literature, majors may also pursue individual interests in courses on film and visual culture, theater and performing arts, music, intellectual and political history, and women's studies that have a substantial German component. Please consult with the director of undergraduate studies.

Admission: By the end of their sophomore year, prospective majors should have successfully completed GERST 202, GERST 220, or GERST or GERLA 204.

To complete the major, a student must:
1. Demonstrate competence in the German language by successful completion of two 300-level courses with intensive language work (GERST 301, 302, GERST or GERLA 303, 305) or the equivalent.
2. Complete six courses in German Studies at the 300 level or above. One of these must be the Senior Seminar (GERST 410).

German Area Studies
Students select courses from the Department of German Studies as well as courses with a substantial German component from other departments, such as Comparative Literature: Government, History, Music, Theatre, Film, and Dance; Women's Studies.

Admission: By the end of their sophomore year, prospective majors should have successfully completed GERST 202, GERST 220, or GERST or GERLA 204.

To complete the major, a student must:
1. Demonstrate competence in the German language by successful completion of two 300-level courses with intensive language work (GERST 301, 302, GERST or GERLA 303, 305) or the equivalent.
2. Complete six courses with a substantial German component at the 300 level or above. Three of these must be in German Studies, including the Senior Seminar (GERST 410).
3. Select a committee of one or more faculty advisers to help formulate a coherent program of study. One of the advisers must be from the Department of German Studies.

Study Abroad
The department encourages undergraduate majors to consider studying abroad for 1-2 semesters, normally during the junior year, as regular students at a German-speaking university. Interested students should consult Bonnie Buettner or Gunhild Lischke as early as possible.

Honors
Eligibility: A student wishing to receive honors in German Studies must have a GPA of 3.5 in all courses of that major.

Committee: Candidates for honors form an advisory committee consisting of an adviser from German Studies and at least one additional faculty member.

Honors essay: During the first term of their senior year, students determine the focus of their honors essay through an appropriate course, GERST 453, under the direction of their advisers. During the second term they complete an honors essay, GERST 454, which will be evaluated by the committee.

Determination of honors: An oral examination concludes the process. Honors will be determined by the essay, the exam, and grades in the major.

Freshman Writing Seminars
See Freshman Seminar booklet for course times and descriptions.

GERST 109 From Fairy Tales to the Uncanny: Exploring the Romantic Consciousness
Fall or spring. 3 credits. B. Buettner, P. Gilgen, and staff.

GERST 111 Workshop in German Studies

GERST 130 Metropolis, Modernity, and Mass Culture: The Roaring Twenties, German-Style
Fall. 3 credits. B. Buettner, P. Gilgen, and staff.

GERST 130 Imaging Germany/s

GERST 150 Kafka, Hesse, Brecht, and Mann
Spring. 3 credits. H. Deinert.

GERST 170 Marx, Nietzsche, Freud
Fall. 3 credits. G. Waite and staff.

GERST 175 Cinema and Society
Fall. 3 credits. G. Waite and staff.

GERST 180 Toward the Net.Citizen: Writing and New Communication Technologies

Courses Offered in German

All courses are now designated GERST. Courses in earlier years were designated either GERLA or GERST. Course numbers remain the same.

GERST 121 Elementary German I
Fall or spring. 4 credits. Intended for students with no prior experience in German or with a language placement test (LPG) score below 57, or an SAT II score below 570. G. Lischke, G. Valk, and staff. Elementary German I is designed to familiarize students with basic vocabulary and syntax so they can communicate about everyday life. Videos and audio tapes facilitate listening comprehension and insight into German culture. Daily practice in section provides the opportunity to learn vocabulary and syntax.

GERST 122 Elementary German II
Fall or spring. 4 credits. Prerequisite: GERST 121. LPG score 37–44, or SAT II score 570–590. Students who obtain an LPG score of 56 or above after German 122 attain qualification and may enter a 200-level course; otherwise successful completion of German 123 is required for qualification. G. Lischke, B. Buettner, and staff.
Elementary German II, the second semester of elementary German, presupposes that students have not yet learned narrative past, subjective, passive, or dependent word order. Topics include travel, leisure activities, work and the media, including TV, newspaper, film, and fiction. There is also discussion of a timeline of key events in Germany from 1917-1989.

GERST 123 Continuing German
Fall or spring. 4 credits. Limited to students who have previously studied German and have an LPG score of 45-55 or SAT II score of 560-570. Satisfactory completion of German 123 fulfills the language qualification requirement. B. Buettner, G. Valk, and staff.

GERST 200 Contemporary Germany (formerly also GERLA 200)
Fall or spring. 3 credits. Prerequisite: completion of German 123 or an LPG score of 56-64 or SAT II score of 580-670 or placement by examination. Successful completion of German 200 fulfills the Arts and Sciences language proficiency requirement and counts toward the distribution requirement for the humanities. B. Buettner, G. Valk, and staff.

GERST 202 Exploring German Literature
Fall or spring. 3 credits. Prerequisite: GERST or GERLA 200, or GERST or GERLA 204 or GERST or GERLA 205 or placement by examination (placement score and CASE). G. Valk. Emphasis on improving oral and written expression of idiomatic German. Enrichment of vocabulary and appropriate use of language in different conversational contexts and written genres. Material consists of readings in contemporary prose, articles on current events, videos, and group projects. Topics include the development of dependence on perspective, interviews with native German speakers, German news broadcasts, reading German newspapers on the Internet.

GERST 205 Business German I
Fall. 3 credits. Prerequisite: GERST or GERLA 205, GERST or GERLA 200, or GERST or GERLA 204 or GERST or GERLA 205 or placement by examination (placement score and CASE). G. Valk. Learn German and understand German business culture at the intermediate level. This is a German language course that examines the German economic structure and its major components: industry, trade unions, the banking system, and the government. Participants will learn about the business culture in Germany and how to be effective in a work environment. Germany's role within the European Union, the dual education system, the importance of trade and globalization, and currency in Germany. The materials consist of authentic documents from the German business world, TV footage, and a Business German textbook.

GERST 206 Business German II
Spring. 3 credits. Prerequisite: proficiency in German (GERST or GERLA 205, GERST or GERLA 200, or GERST or GERLA 204, or GERST or GERLA 205 or placement by examination (placement score and CASE)). G. Lischke. This course is a continuation of GERST or GERLA 205; however students without previous knowledge of Business German are welcome. This business course that examines the German economic structure and its major components: industry, trade unions, the banking system, and the government. Participants will learn about the business culture in Germany and how to be effective in a work environment. Germany's role within the European Union, the role of the German Bundesbank, the importance of trade and globalization, and current economic issues in Germany. The materials consist of authentic documents from the German business world, TV footage, and a Business German textbook. At the end of the course, the external Goethe Institut exam "Deutsch für den Beruf" will be offered.

GERST 204 Intermediate Conversation and Composition
Fall or spring. 3 credits. Prerequisite: GERST or GERLA 200, GERST or GERLA 204, or GERST or GERLA 205 or placement by examination (placement score and CASE). G. Valk. Learning of improving oral and written expression of idiomatic German. Enrichment of vocabulary and appropriate use of language in different conversational contexts and written genres. Material consists of readings in contemporary prose, articles on current events, videos, and group projects. Topics include the development of dependence on perspective, interviews with native German speakers, German news broadcasts, reading German newspapers on the Internet.

GERST 207 Modern Germany (1749-1832) #

GERST 301 Scenes of the Crime: German Mystery and Detective Fiction
Fall. 4 credits. Prerequisite: GERST 202, GERST 220, or GERST/GERLA 204 or equivalent or permission of instructor. Taught in German. This course may be arranged in German formally or informally (for credit). Students are encouraged to bring their own texts. This course is an introduction to contemporary German detective fiction.

GERST 302 Youth Culture: Adolescence in German Fiction
Spring. 4 credits. Prerequisite: GERST 202, GERST 220, or GERST/GERLA 204 and GERST 301 or equivalent or permission of instructor. Taught in German. B. Buettner. Examination of literary and cultural approaches to childhood, youth, and adolescence in texts ranging from the late eighteenth century to the present. Students will study the development of youth culture in Germany and how to be effective in a work environment. Germany's role within the European Union, the dual education system, the importance of trade and globalization, and currency in Germany. The materials consist of authentic documents from the German business world, TV footage, and a Business German textbook.

GERST 303 Advanced Conversation and Composition

GERST 304 Advanced Conversation and Composition

GERST 306 Zeitungsdeutsch

GERST 353 Kleist #

GERST 354 Schiller #

GERST 357 Major Works of Goethe (1749-1832) #

Courses offered in English
It may be possible to arrange a German section for courses taught in English, either informally or formally (for credit). Students are encouraged to bring their own texts. This course is an introduction to contemporary German detective fiction.

GERST 220 Was ist deutsch?

[GERST 320 Postwar German Novel Not offered 2000–2001.]

[GERST 374 Opera and Culture (also MUSIC 374) Spring. 4 credits. Prerequisite: any 3-credit music course or proficiency in German or Italian. A. Groos. This course is designed to explore interrelationships between opera and cultural practice, using examples principally from the German and Italian repertories (e.g., Mozart, Wagner, Verdi, Puccini, Strauss). Lectures and discussions will examine operatic representations of central issues in the emergence of modern culture in the late eighteenth and nineteenth centuries: politics and national identity, issues of gender and sexuality, orientalism, representations of madness and disease. Depending on student interest, a final segment of the semester may extend our focus into twentieth-century opera or other media such as film and theater.]

[GERST 378 German Aesthetic Theory: From Kant to Hegel Not offered 2000–2001.]

[GERST 383 German Literature of the Twentieth Century Not offered 2000–2001.]

[GERST 392 Minority Literature in the Federal Republic Spring. 4 credits. Prerequisite: German 301, or 302, or 303, or 307 or equivalent or permission of instructor. Taught in German. Required readings are in German. I. Adelson. The course will focus on West German literature by Jewish, Iranian, Turkish, and Afro-German authors. Additionally, critical questions about the German public sphere since 1945 will be explored against the background of twentieth-century German history and demographics. Readings include works by Grete Weil, Irene Dische, TORKAN, May Ayim, Katharina Ogutnyoe, Sinasi Dikmen, Zafer Senocak, and others. Some films will also be shown.]

[GERST 396 German Film (also COM L 396 and THETR 396) Not offered 2000–2001.]

Advanced Undergraduate and Graduate Courses

[GERST 403 The Afro-Europeans Not offered 2000–2001.]

[GERST 405 Introduction to Medieval German Literature I Fall. 4 credits. Prerequisite: reading knowledge of German. A. Groos. After a brief introduction to basic aspects of the medieval universe, ranging from cosmology to psychology, readings will focus on introductory texts of late twelfth-century courtly culture. Using the predominant genres of aristocratic self-representation, the heroic epic ("Nibelungenlied"). Arthurian romance (Hartmann's "Iwein"), and Minnesang, discussions will investigate the court as the locus of conflicting forces in the rise of the secular culture in Germany, examining such issues as the first vernacular construction of social and sexual identity, generational conflicts within the communal-dynastic order, the rise of individualism (the knightly quest), and subjectivity (the love lyric).]

[GERST 406 Introduction to Medieval German Literature II Spring. 4 credits. Prerequisite: German 405 or equivalent or permission of instructor. This is the anchor course for the medieval period. A. Groos. Political lyric. Walter von der Vogelweide will introduce agendas of conflict in thirteenth-century German culture, ranging from crusades to civil war. Against this background, we will examine the utopian quest to win the Holy Grail and heal the Fisher King in Wolfram's "Parzival," using Bakhtin's approach to pre-novelistic discourse. Readings from the love lyric trace representation of gender across emerging class differences, the increasing complexity of self, and instabilities of the performance text. Concluding topics include women mystics and late medieval narratives of socio-sexual violence, anti-Semitism, and urban "Angst."

[GERST 407 Teaching German as a Foreign Language Fall. 4 credits. Staff. This course has been designed to familiarize students with current ways of thinking in the field of applied linguistics and language pedagogy. It introduces different concepts of foreign language methodology as well as presents and teaches techniques as they can be implemented in the foreign language classroom. Special consideration is given to topics such as planning syllabi, writing classroom tests, and evaluating student's performance.]

[GERST 408 Uncanny Communities Not offered 2000–2001.]

[GERST 409 Spinoza and New Spinozism (also COM L 442, GOVT 464, FRLIT 403) Spring. 4 credits. G. Waite. This course is an introduction to the basic works of Spinoza, including selections from the early writings, the Ethics, Theologico-Political Treatise, Political Treatise, and letters. Of particular interest to us will be the hypothesis of the post-Althusserian New Spinozists that Spinoza provides the most radical alternative to later (more dominant and familiar) philosophical systems, including not only those of Kant and Hegel but indeed of all others. That is, we will be challenged by Henri Bergson's remark that "every philosopher has two philosophies: his own and Spinoza's" and by Fredric Jameson's that "the new world system, the ultimate third stage of capitalism, is for us the absent totality, Spinoza's God or Nature: the ultimate (indeed perhaps the only) referent, the true ground of Being in our time." In addition to our primary focus on Spinoza's own works, we will study the recent anthology The New Spinoza (essays by Gabriel Althic, Edward W. Said, Eliéna Bulbir, Gilles Deleuze, Emilia Giannotti, Luce Irigaray, Pierre Macherey, Alexandre Matheron, Pierre-François Moreau, Antonio Negri, and André Tosel), as well as works in other traditions (e.g., Pierre Bayle, F. W. J. Schelling, Roger Scruton, and Leo Strauss).]

[GERST 410 Senior Seminar Fall. 4 credits. Open to all students with an adequate command of German. Prerequisite: any German course at the 300 level or equivalent or permission of instructor. Texts and seminar discourse in German. P. Gilgen. Topic: Goethe's Novels Each of Goethe's four novels had a tremendous cultural impact, beginning with the bestselling Die Leiden des jungen Werthers of 1774, which instantly became a literary model and enticed many a sentimental reader into suicide. Wilhelm Meisters Lehrjahre, published in 1795–96, contains echoes of Werther and reflects Goethe's encounter and collaboration with Karl Philipp Moritz in Rome. Goethe's interest in Kant's philosophy, and his literary friendship with Schiller. One of the three "greatest tendencies of the age" (F. Schlegel), Wilhelm Meister came to represent the Bildungsroman and define the romantic novel. The plan for a continuation was interrupted several times. In one instance, Goethe decided to turn a novella that was meant to be part of the second Wilhelm Meister novel into a novel of its own. Die Wahlverwandtschaften, published in 1809, met with some vocal disapproval. Goethe's sustained exploration of the question of "fate" earned him the reputation of a determinist. His final novel, Wilhelm Meisters Wanderjahre (1821; republished in an augmented version in 1829), stretched the possibilities of the novel, an "archival novel," it is more an aggregate of seemingly disjointed elements than an organic whole. Goethe himself described it as "the incommensurable" at work in his text. In this course, we will address Goethe's responses to contemporary social and cultural questions in his novels, the theory of subject formation exemplified in each novel, the discontinuity of Goethe's literary aesthetics, and the dialectics between hermeneutics and hermeneutics instigated by and thematized in these texts. A number of critical works, ranging from Walter Benjamin's influential essay on the Wahlverwandtschaften to Friedrich Kittler's groundbreaking analysis of the discursive changes that can be traced in the re-writing of Wilhelm Meisters Lehrjahre, will provide orientation in our attempt to read Goethe against the grain of the prevalent hagiographic-hermeneutic tradition.]

[GERST 412 German Literature from 1770 to 1848 Not offered 2000–2001.]

[GERST 413 Women around Freud (also COM L 412 and WOMNS 412) Not offered 2000–2001.]

[GERST 414 History into Fiction: Nazis and the Literary Imagination (also ENGL 404, COM L 404, and NES 404) Fall. For description, see COM L 404.]

GERMAN STUDIES 463
[GERST 415] Marx, Nietzsche, Freud (also COM L 425 and GOVT 473)

[GERST 417] Faust: Transformations of a Myth (also COM L 417) #
Spring, 4 credits. Taught in English. H. Deinert.
Few legends have so engaged the imagination as that of the man who signed a pact with the devil to obtain pleasure, power, and knowledge. While the myth itself is timeless, the modern version takes its inspiration from one real character, a half scholar, half quack, during the time of the German Reformation. The German Volksbuch depicting his adventures was almost immediately translated into English and became the baseline for Marlowe's Doctore Faustus. Goethe devoted some 60 years to his Faust, completing it only months before his death in 1832. While Marlowe's Faust will be our main texts, we will listen to some representations of the myth from the late sixteenth century through the early nineteenth. The Faust Book, Marlowe, and Goethe will be our main texts. We will listen to some selections from several recent versions: Bulgakov's The Master and Margarita (1938), Valéry's Mon Faust (1940), and Thomas Mann's Doktor Faustus (1947).

[GERST 418] Thomas Mann

[GERST 428] Genius and Madness in German Literature (also COM L 409)

[GERST 430] Brecht, Artaud, Müller, Wilson (also COM L 430 and THETR 430)
Fall, 4 credits. D. Batrick.
This course will explore in depth the writings and practices of four major twentieth-century theatrical artists: Bertolt Brecht, Antonin Artaud, Heiner Müller, and Robert Wilson, in order to (1) map out differences and similarities among the four as representatives of avant-garde theater and performance art; (2) situate their respective work in the political and cultural contexts out of which they emerged; and (3) explore their impact on succeeding movements and artists of modern drama and cinema. A central focus of the course will be to explore the differing and changing notions of "avant-garde theater" as demonstrated in the work and reception of Brecht, Artaud, Müller, and Wilson. Exploration of the work of these four artists will serve methodologically both to interrogate critically what have become competing strategies in the development of performance theater and avant-garde theater as well as to consider ways in which these models have been and could be synthesized.

[GERST 435] Introduction to Literary Theory (also COM L 435)

[GERST 441] Introduction to Germanic Linguistics (also LING 441)

[GERST 447] Reading Freud: Gender, Race, and Psychoanalysis (also COM L 447 and WOMNS 447)

[GERST 449] Rescreening the Holocaust (also COM L 453 and THETR 450)
Spring, 4 credits. D. Batrick.
Rescreening the Holocaust will offer a survey of the major films dealing with the Holocaust beginning with Night and Fog (1955) and including such works as the TV film Holocaust, Schindler's List, Shoah, Life is Beautiful, Sophie's Choice, Jacob the Liar, The Diary of Anne Frank, Kapo, My Mother's Courage, and others. The course will focus on major issues of debate around the possibilities and limits of representing the Holocaust cinematically as well as questions more specifically concerning commercialization, fictionalization, trivialization, documentation, visualization, and narrativization in the making and distributing of films about this event. What are the concerns that have arisen over the years concerning the dangers of aestheticizing the Holocaust in works of literature and the visual arts? Is it possible to employ a comedic narrative to deal with such a topic, and, if so, what are the benefits or potential problems of such an approach? Is the very treatment of such a topic within the framework of the Hollywood entertainment industry itself a violation of respect for those who perished? The title of the course suggests a methodological approach which emphasizes the notion that screenings of the Holocaust are at the same time often rescreenings, to the extent that they are built on, presuppose, or even explicitly claim to take issue with earlier cinematic renderings.

[GERST 451-452] Independent Study
451, fall; 452, spring. 1-4 credits each term. Prerequisite: permission of instructor.

[GERST 453] Honors Research
Fall. 4 credits. Staff.

[GERST 454] Honors Thesis
Spring. 4 credits. Staff.

[GERST 457/458] Imaging the Holocaust (also COM L 483/483, ENGL 458/458, and JWST 458/458)
Spring. 4 credits. D. Schwarz.
For description, see ENGL 458/458.

[GERST 472] Poetry of the 1990s (also COM L 472)

[GERST 479] The Cultural Theory of the Frankfurt School (also COM L 496, GOVT 471)
Fall. 4 credits. Minimum junior level or permission of instructor. P. U. Hohendahl.
Designed as an introduction to the history of the Frankfurt School and the essential concepts of critical theory. Emphasis on the theory of culture and its application to the understanding of literature, music, and aesthetics. The reading material will be taken from the works of Georg Lukacs, Max Horkheimer, Herbert Marcuse, Walter Benjamin, Theodor W. Adorno, and Jürgen Habermas. Designed for advanced undergraduates and graduate students.

[GERST 480] Theorizing the Public Sphere (also COM L 496 and HIST 486)

[GERST 493] German Literature in Exile

Graduate Courses
Note: For complete descriptions of courses numbered 600 or above consult the appropriate instructor.

[GERST 600] Special Topics in Feminist Germanic Phonology

[GERST 607] Topics in Historical Germanic Morphology

[GERST 608] Topics in Historical Germanic Syntax

[GERST 614] Gender in the Fin-de-siècle
Fall. 4 credits. B. Martin.

[GERST 615] Jews in German Culture Since 1945 (also JWST 615)

[GERST 617] Literature and Affect (also COM L 625)

[GERST 618] "The Science of the Experience of Consciousness": Hegel's Phenomenology of Spirit (and Beyond)

[GERST 621] Issues in Gay and Lesbian Studies (also WOMNS 621)

[GERST 624] Seminar in Medieval German Literature II

[GERST 626] Nuremberg

[GERST 627] Baroque (also COM L 626)

[GERST 629] The Enlightenment
Spring, 4 credits. Prerequisite: reading knowledge of German. Open to undergraduates with permission of instructor only. P. U. Hohendahl.
The seminar will focus on eighteenth-century German literature and philosophy from 1750 to 1790. Emphasis will be placed on the concept of "Aufklärung" and its meaning for the development of German thought. The discussions will stress major areas of critical inquiry, such as religion, philosophy, and literature. Readings will be taken from authors like Forster, Gellert, Gottsched, Kant, Lessing, and Wieland. The critical literature will include the writings of Adorno, Foucault, Habermas, Horkheimer, and Koselleck.

[GERST 630] Classicism and Idealism

[GERST 631-632] Academic German I and II
631, fall; 632, spring. 3 credits each term. Limited to graduate students. Prerequisite: German 632, German 631 or equivalent. Staff.
This seminar provides, primarily, a basic introduction to Heidegger, including the latter's appropriation of Nietzsche and his influence on writers across the "Left-Center-Right" spectrum (e.g., T.W. Adorno, G. Bataille, P. Bourdieu, J. Butler, J. Derrida, G. Deleuze, M. Foucault, H.-G. Gadamer, L. Irigaray, P. Klossowski, S. Rosen, L. Strauss).

[GERST 664] Freyd and the Fin de siècle

[GERST 666] Ingelberg Bachmann

[GERST 676] "Minor" German Literatures?

[GERST 668] Literature and the Uncanny
(also COM L 664)

[GERST 669-670] Modern Social Theory I & II
(also GOVT 669-670)
669, fall; 670, spring. 4 credits.
For description, see GOVT 669–670.

[GERST 671] Postcolonial Theory and German Literature

[GERST 672] German Opera Topic: Wagner (also MUSC 674)

(also COM L 674, ENGL 697, and SPAN L 674)

[GERST 675] After the Divide: German Critical Theory of the Seventies and Eighties
(also COM L 675 and HIST 675)

[GERST 679] Bertolt Brecht in Context
(also COM L 679 and THTR 679)

[GERST 685] Gramsci and Cultural Politics
(also COM L 685 and GOVT 675)
Spring. 4 credits. G. Waite.
This seminar provides a basic introduction to the political and cultural writings of Antonio Gramsci and to his legacy: Contemporary transnational capitalism and nation states rule not only by overt domination but by "hegemony," that is, the "noncoercive coercion" of discursive and cultural practices. The basic question is whether alternative, oppositional practices are possible. Other questions follow: What is the proper role of intellectuals (and what is an intellectual?) in cultural politics? How do, or should leftist cultural critics, theorists, and artists living under late capitalism relate to one another globally, including to political parties and movements? Is Gramsci's work best understood as 'Western Marxist' or rather as an "extension of Leninist orthodoxy"? Starting from Gramsci's pre-prison writings, letters from prison, and Prison Notebooks, we will work both backwards to his main sources (e.g., Machiavelli, Marx, Lenin, and Croce) and forward to his extensive influence, including on Althusser, Pasolini, and other filmmakers, Lacan and Mouffe, and AlJaz Ahmed, but also on social movements around the world.

(also COM L 686, GOVT 679, and FRLIT 623)

Dutch

DUTCH 121-122 Elementary Dutch
121, fall; 122, spring. 4 credits each term.
Prerequisite: permission of instructor.

DUTCH 203 Intermediate Composition and Conversation
Fall. 3 credits. Prerequisite: qualification in Dutch or permission of instructor.

DUTCH 685 The Politics of Culture in the German Democratic Republic

DUTCH 689 Art and Truth: The Aesthetic Theory of Theodor W. Adorno
(also COM L 689)

DUTCH 690 Feminist Criticism and Theory
(also WOMNS 690)

DUTCH 693 "The Sign of History": Kant and Lyotard
(also COM L 693, GOVT 761)
Spring. 4 credits. P. Gilgen.
This course examines Immanuel Kant's political writings and their underlying philosophy of history, a topic that has perplexed Kant scholarship and led to a number of mutually incompatible readings. In part this is due to the relatively unsystematic treatment that Kant affords these topics in a series of popular essays. Furthermore, even a cursory reading shows that Kant's views on the subject underwent changes over time. We will read all relevant texts, from the "Idea for a Universal History with a Cosmopolitan Purpose" (1784) to "The Conflict of the Faculties" (1798) to reconstruct Kant's thought on history. In addition, we will analyze Kant's moral philosophy as well as his theory of teleological judgment in order to relate his view of history to modern anthropology. In this process, the traditional inflections in the treatment of Kant (especially his practical philosophy) will be supplemented by emphases on history in relation to the "final purpose" of creation and the doctrine of the "highest good." In a second part, we will review Jean-François Lyotard's postmodern reconstruction of the Kantian "sign of history." Of particular concern will be: the application of "negative Darstellung" (as outlined in the "Analytic of the Sublime" in Kant's Critique of Judgment) to meaning in history. Lyotard's Kantian turn and its consequences for the postmodern condition, and the possibility of a post-historical ethics of commemoration.
DUTCH 204 Intermediate Composition and Conversation
Spring. 3 credits. Prerequisite: Dutch 203 or permission of instructor. M. Briggs. The course is designed to emphasize written and oral application of accurate, idiomatic Dutch. Reading of authentic material such as newspapers, literature, and history, with emphasis on the students’ interests and specializations. Taught in Dutch.

DUTCH 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: proficiency in Dutch or permission of instructor. M. Briggs. Individualized advanced Dutch studies. This course aims to provide students with individually designed programs which can be anything from advanced mastery in any or all skills to the mastery of Dutch for research. Literature history in support of all disciplines. Taught in Dutch. Topic for fall: Afrikaans.

Swedish

SWED 203 Intermediate Swedish
Spring. 3 credits. Prerequisite: Swedish 122 or equivalent. L. Trancik. Intermediate level instruction using audio-visual material and text to enhance language comprehension.

SWED 204 Advanced Swedish
Fall. 3 credits. Prerequisite: Swedish 203 or permission of instructor. L. Trancik. Emphasis on improving oral and written expression of Swedish, including vocabulary, readings in contemporary prose, treatment of specific problems in grammar, and presentation of videos and films.

SWED 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. L. Trancik. Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

GOVERNMENT

Government is what Cornell calls a department that elsewhere might be termed political science. The focus of this discipline is power applied to public purposes. Some faculty concentrate on purposes, some on applications. Some engage in the close reading of great texts of political philosophy, while others analyze the behavior of power-wielders and publics in this and other societies.

Government is divided into four subfields: U. S. politics, comparative politics (other nations), political theory (philosophy), and international relations (transactions between nations). To accommodate new courses or course changes, a supplementary announcement is prepared by the department. Before enrolling in courses or registering each term, students are requested to consult the current supplement listing courses in government, available in 125 McGraw Hall.

The Major
To be admitted to the major, a student must pass two government courses.

To complete the major, a student must (1) pass two of the introductory government courses (Government 111, 131, 161, 181); (2) pass an additional course in one of the remaining subfields (American government, comparative government, political theory, or international relations). This course may be any course offered in the government department, including introductory courses, upper-level courses or seminars. Students are strongly advised to take at least one course in each of the four subfields; (3) accumulate an additional 28 credits of government course work at the 200-level or above; (4) complete at least one seminar-style course in government which may be applied toward the 28 credits. These courses include those numbered 400 XX to which students are admitted by application only; (5) accumulate 12 credits in upper-level courses in related fields (such as anthropology, economics, history, science and technology studies, psychology, and sociology). Upper-level courses are usually numbered at the 300 level or above. (200-level courses are not considered upper-level). Students should consult with their major adviser to choose appropriate courses. All choices of related courses must be approved by the major adviser or the director of undergraduate studies; (6) all courses used to fulfill a government major must be passed with a letter grade.

To summarize, a total of 10 government courses and three additional courses (12 credits) of upper-level related courses are required to complete the major.

Cornell-in-Washington Program. Government majors may apply to the Cornell-in-Washington program to take courses and undertake a closely supervised externship during a fall or spring semester.

European Studies Concentration.
Government majors may elect to group some of the required and optional courses in the area of European studies, drawing from a wide variety of courses in relevant departments. Students are invited to consult Professors P. Katzenstein, J. Pontusson, and S. G. Tarrow for advice on course selection and foreign study programs.

Model European Community Simulation.
Undergraduates with an interest in the European Union, public affairs, or debating may participate in an annual European Union simulation held, on an alternating basis, in April at SUNY Brockport or in January in Brussels. The simulation provides an opportunity for participants, representing politicians from the member states, to discuss issues and resolutions of current concern to the European Union.

To prepare for the simulation, a two-credit course is offered by the Government department each year (Government 431 or Government 432). Participation in the simulation is open only to those who register for this course. Anyone interested in participating or finding out more information should contact the Institute for European Studies at 120 Uris Hall, 255-7592.

International Relations Concentration. See the description under "Special Programs and Interdisciplinary Studies."

Honors. In their junior year, Government majors with a G.P.A. of 3.3 in all subjects may join the honors program, which involves a sequence of special courses in the junior and senior year. Application to the honors program will be made in the late spring of the sophomore year and application forms will be available in 125 McGraw Hall. The courses comprising the honors sequence (honors courses) are described below. Students may be admitted to the honors program in the junior or senior year only with the special permission of the Director of Undergraduate Studies.

Introductory Courses

Students registering for introductory courses should register for the lecture only. Sections will be assigned during the first week of class. Introductory courses are also offered during summer session.
### Government 111 Introduction to American Government and Politics
Fall and summer. 3 credits. T. J. Lowi.
An introduction to government through the American experience. Concentration on analysis of the institutions of government and politics as mechanisms of social control.

### Government 131 Introduction to Comparative Government and Politics
Spring and summer. 3 credits.
J. Pontusson.
This course provides a survey of the institutions, political processes, and policies of contemporary states. It focuses on the conditions for and workings of democracy. Looking at Western Europe, we will analyze institutional variation among liberal democracies, and their political implications. We will then probe the origins of democracy in Western societies and the reasons why communism and other forms of authoritarian rule have prevailed elsewhere. Finally, we will explore the impetus behind and the obstacles to democratization in the Third World and the erstwhile Communist Bloc. Throughout this survey, problems of democracy will be related to problems of economic development, efficiency, and equality.

These seminars, emphasizing important controversies in the discipline, cap the majors' experience. This preference in admission is given to majors over nonmajors and seniors over juniors. Topics and instructors change each semester. To apply, students should pick up an application in 125 McGraw Hall during the course selection period the semester before the seminar is given.

The following courses are open to sophomores, juniors, and seniors without prerequisites unless otherwise indicated.

### American Government and Institutions

**Government 111 is recommended.**

**GOVERNMENT 467**
What would Adam Smith and Karl Marx suggest and their evidence? Is representative democracy itself part of the problem? Can Woodrow Wilson, Thomas Jefferson, or Grant McConnell help us understand the effects of legislative behavior on economic transactions? This course will use selected works of Smith, Marx, Durkheim, Wilson, and more recent authors like Mancur Olson, Bendix, and Mcconnell. Substantive focus will be on classical political economy, the development of the state, the rise of professions, guilds, and labor unions; regulation and the increased delegation of public authority to private groups. Methodological focus will be on the ways of evaluating both discursive and quantitative evidence for the factual and causal claims of the authors studied.

**GOVT 465/705 Government and the Economy**

Spring. 4 credits. E. W. Kelley. What would Adam Smith and Karl Marx consider the causes of such problems as stagnation, an unfavorable balance of trade, the threat of protectionism, the growth of massive public and private sector bureaucracies, and excessive government regulation? What suggestions would they make about remedies? How can we evaluate both their suggestions and their evidence? Is representative democracy itself part of the problem? Can Woodrow Wilson, Thomas Jefferson, or Grant McConnell help us understand the effects of legislative behavior on economic transactions? This course will use selected works of Smith, Marx, Durkheim, Wilson, and more recent authors like Mancur Olson, Bendix, and Mcconnell. Substantive focus will be on classical political economy, the development of the state, the rise of professions, guilds, and labor unions; regulation and the increased delegation of public authority to private groups. Methodological focus will be on the ways of evaluating both discursive and quantitative evidence for the factual and causal claims of the authors studied.

**GOVT 406/706 Politics of Education**

Fall. 4 credits. E. W. Kelley. Education is simultaneously America's biggest business and the institutional process through which skills and values are passed on to the next generation. This course deals with the conflicts about, and the politics of, education as they occur at national, state, and local levels. What (including values) will be taught and to whom? Who will benefit from formal education as a vehicle for entry into economic opportunity? What are the powers and restrictions on government in this area? How does the American system differ from other systems? How does educational testing affect equal opportunity to obtain meaningful competencies and jobs?

**GOVT 408 Politics of the American Civil War (also AMST 430)**

Spring. 4 credits. R. Bensel. The Civil War, along with the Founding of the nation in the late eighteenth century, is one of the two most important influences on the course of nation and political development. Arising out of intense ideological, cultural, and economic competition between the slave South and the free labor North, the conflict created two new national states: a northern Union that replaced the loose federation of the antebellum period and a southern Confederacy that perished at Appomattox. In this course, particular attention will be paid to: (1) the political economy and culture of plantation slavery in the antebellum South; (2) the apparent inevitability of collision between the slave and free states and their respective societies; (3) the military, political, and economic strategies that determined, on both sides, the course and duration of the war; (4) the limits and possibilities of reform of southern society during Reconstruction; and (5) the impact of the Civil War on the subsequent development of the United States.

**GOVT 409 Racial Prejudice and Political Intolerance**

**GOVT 412 American Political Parties and Elections**

Spring. 4 credits. J. Cowden. This seminar examines changes in the character of political parties and the behavior of the electorate. It also considers the changing relationship between political parties and elections, on the one hand, and other political processes and institutions, on the other.

**GOVT 413/613 Finance, Federalism, and Politics**

**GOVT 419 The Politics of Scandal**

Spring. 4 credits. M. Shaffer, J. Ralbin. This seminar will discuss the politics of "scandal" and "reform" in constitutional doctrine, American history, and recent experience.

**GOVT 427 The Politics of Environmental Protection in America**

**GOVT 428/728 Government and Public Policy: An Introduction to Analysis and Criticism**

Fall. 4 credits. T. J. Lowi. Government 428 concentrates on history and criticism of U.S. policies and the politics associated with them. Particular attention is given to the origins and character of the regulatory state and the welfare state.

**GOVT 429 Government and Public Policy: An Introduction to Analysis and Criticism**

Spring. Open to undergraduates. 428 and consent of instructor are required for 429. T. J. Lowi. Government 429 is an opportunity to pursue further the research begun in 428.

**Comparative Government**

Government 131 is recommended.

**GOVT 251 The Politics of Economic Life**

**GOVT 326 Building a Better Democracy**

Fall. 4 credits. K. O'Neill. How would you put together a constitution for a newly democratic country? Democracy exhibits a variety of forms throughout the world. While all of these forms are democratic, the different structures and rules adopted by countries can lead to surprisingly different outcomes. This course explores the tradeoffs inherent in choosing a presidential versus a parliamentary structure. We will look at the consequence of using different electoral rules, whether there is a meaningful difference between systems with two parties and those with multiple parties, and the different arguments for choosing a unitary versus a federal government structure. The course combines theoretical arguments about different democratic institutions with real world examples of constitutional assemblies and constitutional reforms from Africa, Latin America, Israel, the United States, and Western and Eastern Europe.

**GOVT 332 Modern European Politics**

Fall. 4 credits. D. Schirmer. The course gives an introduction to politics and political systems in Western Europe. It starts with a brief history of the formation of the nation state and the establishment of democratic rule. It continues with the modes and structures of political conflict and explores political cultures, party and electoral systems, the roles of interest groups and social movements, and the mass media. It then turns to a discussion of parliament and government. The main countries studied include Britain, France, Germany, and Italy. The main dimensions guiding the comparison will be conflict vs. consent, federalism vs. centralism, parliamentary vs. presidential systems, and majority vs. proportional representation. The course will conclude with a discussion of minority-majority relations and the problem of democratic inclusion.

**GOVT 333 Government and Politics of the Former Soviet Union**

Fall. 4 credits. E. W. Kelley. The main countries studied include Britain, France, Germany, and Italy. The main dimensions guiding the comparison will be conflict vs. consent, federalism vs. centralism, parliamentary vs. presidential systems, and majority vs. proportional representation. The course will conclude with a discussion of minority-majority relations and the problem of democratic inclusion.

**GOVT 334 Political Economy of East Asia**

Spring. 4 credits. R. Bullock. This lecture course examines East Asian political economy in historical and comparative perspective. Central questions include: Why have Japan, South Korea, and Taiwan developed so rapidly in the postwar era? Can we identify an East Asian mode of development? What does the region's growth mean for other countries and for the international economy? Are Southeast Asian countries following a similar trajectory today? Particular topics include Japanese colonialism, industrial policy and its critics, domestic political consequences of rapid growth, political corruption, U.S.-Japan economic conflict, and recent attempts at political-economic liberalization.

**GOVT 335 America in the World**

Spring. 4 credits. M. Bernal and J. Henderson. Most studies of America deal with local or autochthonous developments up to 1492 or with the influences of other continents, notably Europe, on "the New World" after that date. In this course we shall look at the other sides of these pictures and consider contacts between America and the other continents of Asia, Europe, and Africa before Columbus, as well as some of the influences of America on the rest of the world. The course will involve discussions with professors from archaeology, anthropology, and classics on the possibilities of Pre-Columbian contacts.

**GOVT 336 Postcommunist Transitions**

Fall. 4 credits. V. Bunce. This course will compare economic and political developments since the collapse of communism in Eastern Europe and the former Soviet Union. Primary emphasis will be placed on the relationship between democratization and the transition to capitalism, with some attention paid as well to nationalism and for the new states in the region) state-building. Cases examined in greatest detail will vary by year, but will always be multiple such as to encourage comparative observations and generalizations.
GOVT 338 Comparative Political Economy
Spring. 4 credits. C. Way.
This course examines the juncture of politics and the economy in the advanced industrial democracies. Why do some countries have large, inclusive welfare states while others have minimal social programs? Is the welfare state in decline, and if so why? Does it really make any difference for the economy whether parties of the left or right govern? Do strong unions have negative effects on the economy, or can they actually boost economic performance? What do the increasing globalization of the world economy mean for the constraints and opportunities facing governments in managing the economy and providing social welfare? How will the Euro and increasing European integration change the world? Are all market economies pretty much the same, or are there varieties of capitalism that differ in important ways? We will use a variety of theoretical perspective to provide some insight into these and other questions, paying particular attention to evaluating the theoretical arguments with both systematic and historical evidence.

[GOVT 340 Latin American Politics @ 4 credits. Not offered 2000–2001.]

GOVT 341 Modern European Society and Politics (also SOC 341)
Spring. 4 credits. S. Tarrow.
Since the French and industrial revolutions, modern Europe has been the major source of innovation and stability, freedom and imperialism, war and peace, capitalism and socialism, rule of law and state terror, and modernity and its critics. Even the 50-year division of the continent by the Cold War could not destroy its common, but contradictory heritage. This interdisciplinary core course in Modern European Studies will serve as an introduction to European society and politics. Topics include European state-building and capitalism, nationalism and socialism, cycles of revolution and reaction, stratification and mobility, law and violence, and war and democracy. The course will end with an introduction to the European Union and the condition of the United States (may be local and foreign, or in combination with Government 342, The New Europe, which focuses on contemporary Europe). Should qualified student interest permit it, a section will be offered in French or German.

GOVT 342 United Germany in the New Europe
Fall. 4 credits. P. Katzenstein.
German unification in 1990 and the accelerating movement toward European integration have created new political conditions for our understanding of Germany and European politics. The end of the Cold War has brought fears about the domination of Europe by an unpredictable German giant. Alternatively, these changes have also fueled new hopes for Germany and Europe as models of political pluralism in a more peaceful and prosperous world. This course will thus reflect on two kinds of politics: the specter of the "Germanization" of Europe and the vision of the "Europeanization" of Germany.

GOVT 346 Modern Japanese Politics @
Fall. 4 credits. R. Bullock.
This course is an introduction to Japanese domestic politics and political economy. Subject matter begins with post-Meiji Japan but focuses on the postwar era. Questions to be explored include: Who rules Japan? How is policy formulated? How do we account for postwar political stability and rapid economic growth? How are opposition interests accommodated or ignored? How is the political system changing today?

GOVT 347 Government and Politics of China @
Fall. 4 credits. V. Shue.
An introduction to the political currents in China's domestic politics over the last 60 years. Topics include the revolutionary rise of communism; Maoism, in theory and in practice; the politics of bitterness during the "Cultural Revolution"; the evolving roles of the party and the state, and of peasants, workers, and intellectuals in the polity; the prospects for democracy, perceived social inequality, violence, corruption, and other pressing problems that have emerged with the reforms under Deng Xiaoping.

[GOVT 351 India 4 credits. Not offered 2000–2001.]

[GOVT 356 Enlarging the New Europe: Labor, Business, and Politics (also ILR 357) 3 credits. Not offered 2000–2001.]

GOVT 357 American Indian Politics and Policy (also AIS 367 and R SOC 367) Fall. 3 credits. Enrollment limited to 20. B. Baker.
This course addresses the Constitutional basis of the Federal-Indian Relationship through an examination of treaties, Supreme Court decisions, and Congressional law/policy. The effects of European and American forms of governance on traditional American Indian political structures are detailed and contrasted with contemporary governments and political organizations. Issues relating to sovereignty and self-governance with respect to American Indian tribal governments are addressed relative to state and federal governments.

GOVT 358 Modern History of the Middle East: Changing Politics, Society, and Ideas @
Spring. 4 credits. Staff.
For description, see NES 390.

[GOVT 415 Race, Gender, and Organization 4 credits. Not offered 2000–2001.]

GOVT 431 Model European Union
Spring. 2 credits. J. Pontusson.
This two-credit course is designed to prepare students to participate in the annual Model European Union Simulation held, on an alternating basis, at SUNY Brockport and in Brussels. The simulation provides an opportunity for participants, representing politicians from the member states of the European Union, to discuss issues and resolutions of current concern to the E.U. The preparatory course introduces students to the E.U., the country that the Cornell team will represent, and the issues to be discussed at the simulation. A substantial part of travel costs for the Cornell team will be paid by the Institute for European Studies, and course enrollment will be restricted by budgetary considerations. Students enrolled in this course are required to write a research paper.

GOVT 433 The Politics of Economic Liberalization in the Developing World @
Fall. 4 credits. H. Schamis.
What drives the current processes of economic liberalization taking place in most of the developing world? What kinds of constraints and opportunities do governments embark upon such policy reforms face? What types of factors account for their success or failure? What is the relationship between the international dimension of this phenomenon and the domestic political conditions? This seminar addresses these questions by examining the interplay of domestic and international ideas, local and foreign actors, and national and transnational institutions which take part in these processes. The course focuses extensively on, but is not limited to, Latin America.

GOVT 437 Contemporary China: Society and Politics @
Fall. 4 credits. V. Shue.
Selected reading and in-class discussion of some of the central dilemmas that have been posed by the rapidly escalating processes of social change taking place under conditions of continuing political authoritarianism in China today. Topics include broad changes in demographic and social structure; rising tensions in family and gender relations; the enduring salience of community and workplace; the resurgence of Chinese nationalism, of ethnic nationalisms, of regionalism, and of popular religious movements; the significance of rising rates of crime and of political corruption; the growing crisis of social welfare delivery; the limits on political dissent and on the development of civil society.

[GOVT 438 Contemporary China: Political Economy @ 4 credits. Not offered 2000–2001.]

GOVT 439 Japan in International Politics @
Spring. 4 credits. R. Bullock.
The focus of the course is on how Japan shapes and is shaped by the international environment, with particular emphasis on the post-cold war era. Our approach will be both thematic and institutional. Topics to be discussed include U.S.-Japan trade friction, Japan's investment and tourism in Southeast Asia, and cultural politics and notions of a New Asian Identity.

[GOVT 440 The Political Economy of Market Reform (also GOVT 630) 4 credits. Not offered 2000–2001.]

[GOVT 446] Social Welfare and International Competitiveness

[GOVT 448] The Quality of Democracy in Latin America
Spring. 4 credits. K. O'Neill
This course explores major issues affecting the quality of democracy in Latin America. We begin by trying to capture the many meanings of the term "democracy" and by thinking through how to measure changes in the quality of democracy over time. The course will examine both institutional bases for Latin America's level of democracy—whether the quality of democracy is affected by government structures in the region—and also specific topics that affect the region's democracies. These subjects will include ethnic mobilization, guerrilla insurgencies, civil wars and peace processes, human rights violations, rising poverty rates, income inequality, and economic globalization.

Spring. 4 credits. V. Shue
A course of readings, research, and seminar discussions illuminating the intersections, past and present, between popular religious organizations, mass spiritual movements, the exercise of state power, and the patterns of political dissent in China. Topics include the Taiping Heavenly Kingdom, the Boxer Uprising, Chinese medicine and contemporary charismatic healing cults, as well as the recent global rise (and repression in China) of the Falun Dafa movement.

[GOVT 454] The Herodotean Moment: The Uses and Abuses of "Western Civilization" (also COM L 454, HIST 454)

[GOVT 456] Poor People's Movements
Fall. 4 credits. M. Katzenstein and S. Tarrow.
In the world today, millions of poor people are being hit by globalization, liberalization, and "flexibilization" of industry. Even in the United States, a period of unprecedented economic expansion has seen a greater gap between rich and poor. Movements on behalf of the poor, the homeless, single welfare mothers, and poor peasants are being launched all over the world. How do these movements—mainly staffed by well-trained, articulate, and middle class activists—articulate with the disorganized and dispossessed of the world? What role do traditional representatives of the lower classes—trade unions and political parties of the left—play in this struggle? What kinds of new collective identities and modes of protest can help the poor to organize themselves? What is the future of poor people's movements in a world of wealth and globalization?

[GOVT 458] Comparative Democratization

[GOVT 460] Global and Domestic Dimensions of Science and Technology Policy (also S&T 425)

---

Political Theory

[GOVT 260] Social and Political Philosophy (also PHIL 260)

[GOVT 293] Inequality, Diversity, and Justice
Fall. 4 credits. R. Miller. See Philosophy 193 for description.

[GOVT 360] Ideology
Fall. 4 credits. D. Rubenstein. This course will focus on critical approaches to the study of ideology in order to understand the role of ideology in political subject formation. After an initial exploratory presentation of key Marxist (Marx, Gramsci, Althusser, Hebdige), structuralist/semiotic (Barthes, Eco), and psychoanalytic models (Freud, Lacan), we will focus on specific ideologies of race, technology, and gender. Students will be required to write a seven- to eight-page take-home examination and a longer 10- to 12-page (double spaced) paper related to the issues addressed by the course material. A recommended bibliography will be available to assist in the selection of the final paper topics.

[GOVT 361] Modern ideologues: Liberalism and its Critics

[GOVT 364] The Selfish Individual and the Modern World

[GOVT 366] American Political Thought from Madison to Malcolm X (also HIST 316 and AM ST 366)
Fall. 4 credits. T. Kramnick. A survey of American political thought from the eighteenth century to the present. Particular attention will be devoted to the persistence of liberal individualism in the American tradition. Politicians, pamphleteers, and poets will provide the reading. The professor offers insightful historical and social context.

[GOVT 369] Introduction to Feminist Political Thought (also WOMNS 269)

[GOVT 370] Political Theory and Cinema (also GERST 330, COM L 330, THETR 330)

[GOVT 375] Visual Culture and Social Theory (also ART H 370 and COM L 368)
Fall. 4 credits. S. Buck-Morss. Introduction to critical concepts for the analysis of visual culture, in specific socio-historical contexts.

[GOVT 377] Concepts of Race and Racism

[GOVT 461] Interpreting Race and Racism

[GOVT 462] Modern Political Philosophy (also PHIL 346)
Fall. 4 credits. R. Miller. See Philosophy 346 for description.

[GOVT 464] Spinoza and New Spinozism (also GERST 409)
Spring. 4 credits. G. Waite. For description, see GERST 409.

[GOVT 465] Reconciling Liberalism (also PHIL 447)

[GOVT 466] Feminism and Gender Discrimination

[GOVT 467] Radical Democratic Feminisms

[GOVT 468] Global and Domestic Dimensions of Science and Technology Policy

[GOVT 469] Limiting War (also PHIL 369)

[GOVT 470] Contemporary Reading of the Ancients
Spring. 4 credits. D. Rubenstein. This course will focus on contemporary theoretical strategies of reading Plato, Aristotle, and St. Augustine. We will be primarily concerned with French deconstructive (Derrida), feminist (Irigaray, Le Doeuff), post-structuralist (Foucault), and psychoanalytic (Lacan) approaches to the ethics of love, pedagogy, friendship, and citizenship. We will also consider the contribution of queer theory (Halperin, Davidson) to the understanding of key texts such as Plato's Symposium. Readings will include Plato's Phaedrus, Symposium, Apology, Aristotle's Nichomachean Ethics and Physics, and St. Augustine's Confessions. Students will be required to write a short five-page (double spaced) paper based on one week's readings and a longer 10- to 12-page final paper that would be a sustained close reading of an ancient text of political thought informed by a theoretical approach discussed in the course.

[GOVT 471] The Cultural Theory of the Frankfurt School (also GERST 495, COM L 495)
Fall. 4 credits. P. U. Hohenadl. For description, see German Studies 495.

[GOVT 473] Marx, Nietzsche, Freud (also GERST 415)

[GOVT 474] Community, Nation, and Morality (also PHIL 446)
Spring. 4 credits. R. Miller. See Philosophy 446 for description.

International Relations

[GOVT 294] Global Thinking (also PHIL 294)

[GOVT 380] The Politics of Modern Germany

[GOVT 382] International Relations of East Asia
Spring. 4 credits. J. J. Suhl. An introduction to the East Asian international relations, this course focuses primarily on interaction among the Northeast Asian powers (China, Japan, Korea, Russia, and the United States). After an initial survey of regional dynamics in a historical, Cold War, and post-Cold War context, we will attempt to answer a number of theoretically driven questions regarding stability and security in the region.
Themes emphasized include the influence of domestic factors; the nexus between economics and national security; the influence of cultural and religious factors on international relations; the post-Cold War Asian redistribution of power and influence; the changing configuration of regional relations; and alternative futures of Asian security.

**GOVT 385 American Foreign Policy**
Fall. 4 credits. R. McDermott.
This course will provide an overview of the historical development of American foreign policy, concentrating on the period between 1914 and the present. Various theoretical approaches to the study of American foreign policy will be covered, including international, domestic, and political science perspectives. These interpretations will be used to examine events including: the First World War and the League of Nations; the rise of American hegemony; various crises of the Cold War, including the U-2 crisis, the Suez and Berlin crises, and the Cuban missile crisis; and the Korean, Vietnamese, and Gulf Wars. Emphasis will be placed on security as opposed to economic foreign policy issues.

**GOVT 386 The Causes of War**

**GOVT 387 Political Psychology in International Relations**
Spring. 4 credits. R. McDermott.
This course provides a survey of how social and cognitive psychology are used in the study of international relations. This course will cover various methodologies including psychobiography and experimental and survey research. It will also cover several theoretical approaches including recent work in neuroscience and evolutionary psychology. These theories and methods will be applied to topics including risk taking, leadership, group dynamics, and the influence strategies of the media. Particular attention will be placed on the interaction of emotion, cognition, and behavior in processes of judgment and decision making.

**GOVT 388 International Political Economy**

**GOVT 389 International Law**
Spring. 4 credits. J. Ratkic.
Is international law a pious delusion, helpless in the face of real power? Or is it a policy becoming so entangled in international standards that international law is now eroding national sovereignty? This course will survey the theoretical foundations and general history of international law since the seventeenth century in order to highlight what is new in the doctrines and institutions by which it operates in the contemporary world. The course will give special attention to the relation between international and U.S. law and to the workings of international law in particular fields—including environmental and human rights protection, trade regulation, and control of terrorism.

**GOVT 390 International Relations and Film Theory**
4 credits. J. Kirshner.
This course will consider how ideas about major themes in the history of world politics have been expressed through film. The course will include a review of principal theories of international relations as well as a consideration of visual analysis: how filmmakers express their ideas through the construction, juxtaposition, and manipulation of images. Topics such as World War I, the Cold War, and globalization will be addressed and films discussed will include Paths of Glory, Lifeboat, and The Manchurian Candidate.

**GOVT 391 Chinese Foreign Policy**
Fall. 4 credits. A. Carlson.
In this course we will examine the dramatic rise of China through review of the main themes and trends in contemporary Chinese foreign policy since the establishment of the People’s Republic, and more specifically concentrating on major developments in Chinese foreign policy during the 1980s and 1990s. Such a survey will involve not only a consideration of the evolution of China’s relations with its major bilateral partners, but also investigating its changing relationship with international institutions and norms. In addition, students will be asked to consider the extent to which Chinese foreign policy is simply a reflection of systemic and structural variables, such as shifts in the relative balance of power, and what role other factors, such as ideology, culture, leadership psychology, and/or domestic politics play. In short, we will be exploring how important “China” is in determining the course of Chinese foreign policy.

**GOVT 392 International Relations of the Middle East (also NES 399)**

**GOVT 393 Introduction to Peace Studies (also SOC 310)**

**GOVT 394 Comparative Foreign Policy**

**GOVT 395 Palestinian Nationalism (also NES 399)**

**GOVT 475 The Politics of International Monetary and Financial Relations**

**GOVT 477 Rational Choice Approaches to International Relations**
Spring. 4 credits. R. McDermott.
Rational choice paradigms are becoming increasingly predominant in international relations scholarship. This course teaches international relations from a rational choice perspective. This course will cover modeling methodology and theoretical issues. Familiarity with mathematics is not required, but logical reasoning is emphasized. This course will cover rational choices approaches to social choice and public-good problems, negotiation, alliances, and constraints of domestic politics. Critiques of balance of power, deterrence, and power transition theories from a rational choice perspective will be included. An introduction to game theory will be provided. Alternative psychological approaches will be mentioned briefly.

**GOVT 479 Sovereignty and International Relations**
Spring. 4 credits. A. Carlson.
In recent years, international relations theorists have become embroiled in an increasingly heated debate over the role of sovereignty in the contemporary international system. In this seminar we will investigate the main aspects of this debate by paying particular attention to questions involving the historical evolution of sovereignty and its contemporary meaning in an international system that is increasingly defined by apparent signs of economic and political integration. The intent of such a course is not only to critically analyze sovereignty’s role in international politics, but also to explore what the approach of IR theorists takes in regards to sovereignty, and about their understanding of systemic and structural change within the international system.

**GOVT 481 Democracies in the International System**
Fall. 4 credits. C. Way.
In what ways do the incentives created by democratic political institutions lead to distinctive behavior in international politics? The “democratic peace” literature has spurred great interest in the relationship between democracy and war. We will delve into this literature in depth, but not stop there. In addition, we will explore a range of ways that democracies might behave in a distinctive fashion across a variety of issue areas. Are democracies more peaceful than other types of states, and if so what explains this “democratic peace”? Why do democracies seem to be more likely to win the wars they do choose to fight than other types of states? If they are indeed doves, why do democratic publics seem to reward threats to use force by “rallying around the flag” in support of their governments? Are democracies more vulnerable to protectionist forces, or more likely to be free traders? How do the rhythms of the electoral cycle influence diplomacy in both the economic and security realms? Do democratic institutions make it harder or easier to pursue deterrence policies successfully? We will assess the theoretical and empirical literature addressing these and other questions about how democracies behave in the international system.

**GOVT 482 International Relations of East Asia @**

**GOVT 483 The Military and New Technology (also S&TS 483)**

**GOVT 486 Gender, Nationalism, and Conflict**
Fall. 4 credits. M. Katzenstein and M. Evangelista.
This course will consider how gender is imbedded in the theories and experiences of colonialism, nationalism, and conflict more generally. We will consider such fundamental questions as: How is gender related to the propensity for peaceful or conflictual behavior? Are men more prone to violence? Are women better mediators? We will also direct ourselves to specific topics such as (1) the role gender plays in ethnic conflict—the use of gender identities and violent strategies in “ethnic cleansing”; (2) the ways colonial experiences and nationalist movements produce different ideas of gender and gender practices; (3) how changing ideas of gender
and sexuality have shaped and been shaped by the institution of the military.

[GOVT 491 Conflict, Cooperation, and Norm: Ethical Issues in International Affairs

Honors Courses

Late each spring a limited number of sophomore majors are admitted to the honors program, their work to begin the following fall. Application forms and a full description of the program may be obtained in 125 McGraw Hall.

GOVT 493 Studying Politics: The Junior Seminar
Fall and spring. 4 credits. Fall, K. O’Neill; spring, H. Schamis.
The seminar will meet twice weekly under the supervision of a senior faculty member with numerous classes being led by other members of the department faculty. The seminar will survey the broad range of what we mean by “the study of politics” and the various methods we enlist to carry out the study. The seminar will be writing intensive, requiring at least five papers.

GOVT 494 Honors Seminar: Thesis Clarification and Research
Fall. 4 credits. E. Sanders.
Each student works individually with a faculty member. The student initiates the tutorial by interesting a faculty member in his or her likely thesis project and by submitting to the director of undergraduate studies a form outlining the general area the thesis will treat and bearing the faculty tutor’s signature. This form is due the third week of classes. The tutorial culminates in a 10- to 15-page paper setting forth the central questions to be addressed by the thesis, the state of existing knowledge regarding those questions, and why they matter.

GOVT 495 Honors Thesis: Research and Writing
Spring. 4 credits. Limited to students who have successfully completed Government 494.
Students continue the work of the preceding semester typically with the same faculty tutor. Research on the thesis is completed and writing begun. The tutorial culminates in a thesis of some 60 to 80 pages. The grade for the tutorial is determined by the faculty tutor, while the degree of honors (if any) awarded the thesis is decided by a committee of faculty members established for that purpose.

Independent Study

Independent study, Government 499, is a one-on-one tutorial which is arranged by the student with a faculty member of their choosing. Government 499 is open to government majors doing superior work, and it is the responsibility of the student to establish the research proposal and to find a faculty sponsor. Applicants for independent study must present a well-defined program of study that cannot be satisfied by pursuing courses in the regularly scheduled curriculum. No more than four credits of independent study may count toward fulfillment of the major. Students who elect to continue taking this course for more than one semester must select a new theme or subject each semester.

Credit can be given only for work that results in a satisfactory amount of writing. Emphasis is on the capacity to subject a body of related readings to analysis and criticism. Keep in mind that independent study cannot be used to fulfill the seminar requirement. The application form for Independent Study is available in 125 McGraw Hall and must be completed at the beginning of the semester in which the course is being taken.

GOVT 499 Readings
Fall or spring. 1-4 credits.

Graduate Seminars

Qualified undergraduates are encouraged to apply for seminars listed with 600 course numbers but may only register with the permission of the instructor. Students may consult the supplement that lists graduate courses, available in the department office.

GOVT 503 Field Seminar in American Politics
Spring. 4 credits. F. Sanders.
The basic issues and institutions of American government and the various subfields of American politics are introduced. The focus is on substantive information and theoretical analysis and problems of teaching and research.

GOVT 505 Comparative Methods
Fall. 4 credits. M. Evangelista and J. J. Suh.
A general survey of the literature and propositions of the international relations field. Criteria are developed for judging theoretical propositions and are applied to the major findings. Participants will be expected to do extensive reading in the literature as well as research.

GOVT 507 The Western Political Tradition: A Survey
Spring. 4 credits. N. Hirschmann.
An introduction to political theory through a reading of selected classics in political thought from Plato to Marx.

Methodology

GOVT 601 Scope & Methods of Political Analysis
Fall. 4 credits. W. Meehan.
This course introduces the major analytical approaches used in contemporary political science research. We touch on broad philosophical issues concerning the nature of theory and inference, the practices of cultural and historical interpretation, and the relevance of moral values and political commitments. Several kinds of research designs, including comparative case study and quasi-experimentation, are briefly examined. The basic analytical ideas involved in statistical methods such as sampling and regression analysis are introduced, as are the basic concepts of the theory of collective choice and the elementary methods of applied game theory.

GOVT 602 Field Seminar in Political Methodology
Spring. 4 credits. J. Cowden.
This seminar provides an introduction to some of the quantitative methods used in the social sciences. Topics discussed will include elementary probability theory, random variables, functions of random variables, and sampling distributions, concepts of inference including point estimation, confidence intervals, and hypothesis testing, bivariate regression, and multiple regression.

GOVT 605 Comparative Methods
Spring. 4 credits. C. Way and K. O'Neill.
This seminar provides a survey of different methodological approaches to the study of comparative politics: single case studies, comparative case studies based on Millian logic, qualitative comparative analysis, and a variety of quantitative methods. Substantive works will be used to illustrate each approach. Throughout, the discussion will emphasize methodological issues that are common to all forms of comparative inquiry.

GOVT 707 Game Theory for Political Science

American Government and Institutions

[GOVT 611 The Political Economy of American Development, 1860–1900

[GOVT 613/413 Finance, Federalism, and Politics

[GOVT 615 State and Economy in Comparative Perspective

[GOVT 618 Politics, Markets, and the Middle Classes

GOVT 620 The United States Congress
Spring. 4 credits. R. Bensel.
The United States Congress will be examined first, as a "closed system" in which institutional arrangements decisively apportion political power; and second, as the product of electoral and social forces outside the institution. Emphasis will be placed on the historical relationship between institutional growth and state formation; parliamentary rules as both arrangements within which the "rational choices" of legislators are played out and as deliberate constructions and allocations of political influence; and the use of legislative behavior as evidence in the analysis of fundamental principles of politics. Because the literature on the lower chamber is generally more rich, the House of Representatives will receive greater attention than the Senate.

GOVT 623 The Politics of Courts

GOVT 628 Bureaucracy and Law

GOVT 703 Political Economy
Spring. 4 credits. J. Kirschen.
This course will undertake a general survey of the classical and modern theories of political economy. The works of Smith, List, Marx, Weber, Keynes, Schumpeter, Hayek, and Friedman, among others, will be studied and placed within the context of the history and evolution of the thought, practice, and method of the field.

GOVT 705/405 Government and the Economy
Spring. 4 credits. E. W. Kelley.
See Government 405 for description.

GOVT 706/406 The Politics of Education
Spring. 4 credits. E. W. Kelley.
See Government 406 for description.
GOVT 728 Government and Public Policy
Fall. 4 credits. T. J. Lowi.
For description see Government 428.

Comparative Government

GOVT 630 The Political Economy of Market Reform
Fall. 4 credits. V. Bunce and H. Schamis.
This seminar is open to advanced undergradu­
ate and graduate students. It addresses the
political economy of market reform in East­
Central Europe and Latin America. Specifically,
we will study the relatively fast collapse of
state socialism versus the long decline of
import substituting industrialization, and their
respective legacies on new economic and
political systems. We will focus on the role
of major agents in the transformation process—
the international system, coalitions of interest
groups, political (especially state) institutions,
and ideologies. Throughout the semester,
we will examine the emerging market societies
in the east and the south in comparative fashion.

[GOVT 632 Politics and Society in
Western Europe
[GOVT 633 European Party Systems and
Political Change
[GOVT 634 Genetic Engineering: Politics
and Society in Comparative
Perspective
[GOVT 638 Latin American Political
Economy

GOVT 639 Studying Political Culture
Spring. 4 credits. D. Schirmer.
Selected readings deploying a range of
differing approaches to the study of the
relations between culture and politics.
Discussion of central methodological and
interpretive questions and paradigms
including the linkage of cultural with
structural explanations and the framing of
informative comparisons across cultures.
Readings and discussion will focus on
European and North American examples.

GOVT 642 Comparative Political
Economy: East and Southeast Asia
Fall. 4 credits. R. Bullock.
This seminar focuses on the political economy of
rapid growth in postwar Japan, South
Korea, and Taiwan. Seminar themes include:
Japanese colonial legacies, contending models of
East Asian economic success, international
implications of rapid growth, the "Japanese
model of development" and regional variance;
one-party conservative rule; structural
corruption and political scandal; ongoing
efforts at political-economic liberalization;
and Southeast Asian cases as second-generation
NGOs.

[GOVT 645 Chinese Politics
[GOVT 652 Southeast Asia Seminar: The
Philippines (also ASIAN 601)

GOVT 653 The Plural Society Revisited
(also ASIAN 607)
Fall. 4 credits. B. Anderson.
John Fumivall’s concept, invented 40 years
ago, posited colonial society as one in which
race (and ethnicity), class, occupation, and
residence were distributed more or less
isomorphically. The seminar will review the
utility of the concept in light of subsequent
research on colonial Asia, and its applicability
to developments since the achievement of
independence. It will also consider the
relevance of the concept to (uncolonized)
modem Thailand. The core problematic issue
will be the relationship between classification
(naming) and power.

[GOVT 655 Gender, Politics, and Welfare
Policies in Europe and the U.S. (also
GOVT 442)

GOVT 656 Comparative Political
Economy
Spring. 4 credits. J. Pontusson.
While exploring selected topics in the
comparative political economy of advanced
industrial societies, this seminar seeks to
delineate "political economy" as a subfield of
political science. At the level of theory, our
goal is to bridge two research traditions, one
concerned with microeconomic issues
(industrial organization, industrial policy,
competitiveness) and the other concerned
with macroeconomic issues (wage bargaining,
fiscal and monetary policy), and to explore
what a synthesis of these research traditions
might look like. At the level of methodology,
we seek to bridge and integrate qualitative
and quantitative approaches to comparative
political economy. Students are expected to
have some prior exposure to quantitative
analysis (e.g., GOVT 601).

[GOVT 657 Comparative
Democratization

GOVT 660 Social Movements and
Contentious Politics (also SOC 660)
Fall. 4 credits. S. Tarrow.
This is a research seminar on the relationships
among politics, organized social movements,
and periods of mass mobilization like those
that swept through Western Europe and the
U.S. in the 1960s and in Eastern and Central
Europe today. The course begins with a
theoretical introduction to major approaches
to social movements and collective action,
concentrating on the factors which induce
masses of people to adopt disruptive forms of
collective action. It moves from there to a
historical section focusing on cycles of protest
in the recent and not-so-recent past. It
continues with case materials that illustrate a
series of theoretical problems in the study of
movements and collective action—particularly
that of the relations between protest and
reform. Students will write term papers on
particular cycles of protest and reform.

GOVT 692 The Administration of
Agriculture and Rural Development
Spring. 4 credits. N. Uphoff.
For description, see INTAG 603.

[GOVT 731 Political Ecology

GOVT 737 Politics of South Asia
Fall. 4 credits. R. Herring.
This course investigates the politics of the
South Asian region by examining the
substantive and theoretical literature on
various specific subjects, with special
emphasis on India. Themes will vary by term,
but include some mix of political economy
and development; agrarian movements and
policy; politics of ethnicity, identity and
subnationalism; and environmental politics.
An explicit focus is comparative method, both
within the region and between the region and
other world areas. The course is seminar in
format and premised on significant student
participation.

GOVT 749/449 Politics and Magic:
Religious and Political Power in
China
Spring. 4 credits. V. Shue.
See Government 449 for description.

Political Theory

[GOVT 663 Political Theories of Power
[GOVT 664 Contemporary Democratic
Theory
[GOVT 665 American Political Thought:
From Madison to Malcolm X
[GOVT 667 Major Figures in Modern
Political Theory

GOVT 668 Major Figures in Modern
Political Theory II: Freedom
Fall. 4 credits. N. Hirschmann.
A complementary course to Government 667,
this graduate seminar will allow students to
continue intensive study of major figures in
modern political theory through particular
temporal or thematic lenses. While the focus
will change from year to year, the seminar will
either engage in intensive analysis of two or
three particular "great names" in the field of
political theory, or focus on a specific
theme—such as freedom, justice, obligation—
as it is treated by significant theorists of the
modern era. Theme for fall 2000: The Concept
of Freedom.

GOVT 669 Modern Social Theory I (also
GERST 669)
Fall. 4 credits. S. Buck-Morss.
Readings vary, but topics are drawn from the
traditions of Marx, Weber, Durkheim, the
Frankfurt School, and Freud. They include
political economy, the transformation to
"modernity," ideology as the legitimation of
power, and social institutions as social
constraints. The methods of critical theory,
pluralism, post-structuralism, and feminism
will be considered. The focus in fall 2000 will
be on the topic of globalization.

GOVT 670 Modern Social Theory II (also
GERST 670)
Spring. 4 credits. S. Buck-Morss.
Issues raised by neo-Marxism, critical theory,
post-structuralism, and feminism.

[GOVT 671 Graduate Seminar in
Feminist Political Theory

GOVT 673 Republicanism and Liberalism
Spring. 4 credits. I. Kramnick.
This seminar will look at the intellectual roots
of what is today, at least in Anglo-American
political thought, a central debate between
community-oriented visions of the ideal polity
and individual-centered ideals. The seminar
will read Aristotle, Cicero, Machiavelli,
Hobbes, Locke, Mill, Rousseau, Paine, Smith,
and the Federalist Papers.
Topics, readings, and writing requirements will be designed through consultation. This course is looking to use this as an option to fulfill their graduate studies. GOVT 799 Independent Study Fall or spring. 4 credits. B. Anderson

This course will be devoted to the comparative study of the rise and transformation of nationalism, according to different theoretical and philosophical traditions. The relationship of nationalism to questions of race, gender, class, and time will also be discussed on the basis of both theoretical and empirical studies.

GOVT 675 Gramsci and Cultural Politics (also GERST 685)
Spring. 4 credits. G. Waite. See German Literature 685 for description.

[GOVT 760 Theoretical Approaches to Ideology 4 credits. Not offered 2000–2001.]

GOVT 761 “The Sign of History”: Kant and Lyotard (also GERST 693)
Spring. 4 credits. P. Gilgen. For description, see GERST 693.

International Relations

GOVT 685 International Political Economy
Fall. 4 credits. P. Katzenstein and J. Kirshner.

An exploration into a range of contemporary theories and research topics in the field of international political economy. The seminar will cover different theoretical perspectives and a number of substantive problems.

GOVT 689 International Security Politics

[GOVT 691 Normative Elements of International Relations 4 credits. Not offered 2000–2001.]

Independent Study
This course is NOT open to undergraduates. Undergraduates wishing to conduct supervised study should register for Government 499.

GOVT 799 Independent Study
Fall or spring. 4 credits.

Government 799 is a course of individualized readings and research for graduate students. Topics, readings, and writing requirements will be designed through consultation between the student and the instructor. Graduate students in government who are looking to use this as an option to fulfill their course requirements should check with their chairs to be certain that the program of study is acceptable for this purpose. Applications must be completed and signed by the instructor and by the chairs of their special committees. They are available from, and must be returned to, the graduate assistant in 125 McGraw Hall.

See Department of Classics.

HEBREW
See Department of Near Eastern Studies.

HINDI-URDU
See Department of Asian Studies.

HISTORY

The popularity of history among Cornell students is due to its usefulness as preparation for graduate, professional, or law school and for any career that requires critical thinking and good writing; the reputation of the faculty for scholarship, teaching, and advising; and most of all, the intrinsic interest of the discipline. A wide variety of introductory and advanced courses is offered. The department is particularly strong in ancient, medieval, and modern European history; in American, Latin American, and Asian history; and in the history of science.

Advanced Placement and International Baccalaureate

Advanced placement and International Baccalaureate credit awarded by the College of Arts and Sciences counts towards the 120 credits needed for graduation, but does not count toward completion of the history major. Students earning a 4 or 5 in the Advanced Placement Examination or a 6 or 7 in the International Baccalaureate history examinations are urged to enroll in intermediate or advanced history classes. Students who are unsure about their qualification should consult the instructor.

The Major
To complete the history major, a student must fulfill the requirements listed below:

Entry requirement: completion of any two History courses excluding First-Year Writing Seminars.

1) Take nine history department courses (for either 3 or 4 credits each), comprising all of them with a grade of C or better. (Courses taken for entry may count towards fulfilling the major.)

2) Of the total nine courses:
   a) four must be outside of American history and
   b) three must be in history before 1800.

Courses used to fulfill Requirement (1) above may also be used to fulfill Requirement (2), in respect both to (a) and (b) if applicable. A course in American history before 1800 may be used to fulfill Requirement (2b). A course before 1800 in a field other than American history can be used toward fulfillment of both Requirements (2a) and (2b).

3) Of the total nine courses, one must be a 400-level seminar: History 400 may be used to fulfill this requirement. Appropriate 400-level seminars may be used to fulfill Requirements (2a) and (2b).

Honors
The history department offers an honors program for students who wish to research and write a thesis during their senior year. In addition to writing the thesis, honors students must maintain a 3.5 average in their history courses, take the Honors Seminar (History 400) plus an additional 400-level seminar, preferably during their junior year, and complete 10 courses in history (for 3 or 4 credits each). During the second term of sophomore year or early in junior year, interested students should speak to a faculty member or faculty adviser about the honors program.

Before the beginning of senior year, the candidate presenst in conversation or in writing a thesis proposal to an appropriate member of the faculty. The faculty member who approves the proposal orally becomes the thesis supervisor. If for any reason it is necessary to change supervisors, this arrangement should be confirmed no later than the fourth week after the beginning of the candidate's senior year.

Honors candidates should register in History 401, Honors Research, with their supervisors. Any exceptions to this must be approved by the Honors Committee. History 401 is a four-credit course that permits honors candidates to conduct research and to begin writing the honors essay. At the end of the first semester of the senior year, as part of the requirements for History 401, the student submits to the supervisor a 10- to 15-page overview, or, alternatively, a preliminary draft of some part of the thesis along with an outline of the whole and meets with a committee consisting of the student's supervisor and one other department member who will eventually serve as a reader of the thesis. That committee then recommends whether the student may proceed to enroll in History 402, Honors Thesis, during the final semester of the senior year. History 402 is a four-credit course that permits honors candidates to complete the honors essay and to demonstrate their understanding of the ways in which the themes explored in the thesis fit into a larger historical context.
The completed thesis is evaluated by three readers, including the two faculty members who administered the preliminary oral interview in December.

The text of the honors essay may not exceed 60 pages except by permission of the chair of the honors committee and the student's supervisor. Two copies are due during the third or fourth week of April. In May each honors candidate is given an oral examination administered by the supervisor; examination focuses on the essay as well as the specific subfield of history in which the student has conducted research (e.g., Periclean Athens, seventeenth-century science, nineteenth-century American politics).

To qualify for a bachelor of arts degree with honors in history, a student must (1) sustain at least a 3.5 cumulative average in all history courses and (2) earn at least a cum laude grade on the honors essay and on the oral examination.

Cornell-in-Washington Program. History majors may apply to the Cornell-in-Washington program to take courses and undertake a closely supervised externship during a fall or spring semester.

Medieval, Renaissance, and Early Modern European history

Modern European history

Honors and research courses

Course Numbering System

100-level courses are very general introductory courses (like 151-152, 190-191) and freshman writing seminars.

200-level courses come in two kinds: seminars or lecture courses. Neither kind has prerequisites and both admit freshmen.

200-level seminars (which are identified by the name "seminar" in the title) are similar to first-year writing seminars, except that there is greater emphasis on subject matter and less on writing.

200-level lecture courses cover a relatively broad geographical area, period of time, or subject.

300-399-level courses may have specified prerequisites or deal with more-specialized subjects than do those numbered 250-299. Admission of freshmen varies from course to course and is indicated in the course descriptions.

400-499 are upper level undergraduate courses.

600-699 and 700-799 are graduate level courses.

Comparative History

HIST 274 Foodways: A Social History of Food and Eating #

Fall. 4 credits. S. L. Kaplan.

An interdisciplinary examination of the validity of the adage "man is what he eats." Among the topics: food and religion, food and social structure, the politics of food control, food and modernization, taste making, and food in religion and literature. Cases will be drawn widely across space and time, from Pharaoh's Egypt to the 1990s.

HIST 360 Early Warfare, East and West #

Spring. 4 credits. C. Peterson.

A study of the principal modes of warfare found both in the East and the West from ancient times up to the eighteenth century. Tactical evolution and the impact of innovations are stressed, but attention is also paid to the general social and cultural background and the role of nonmilitary factors.

[HIST 380 Social History of Western Technology #

4 credits. Not offered 2000-2001. J. Weiss. For description, see History of Science.]

[HIST 393 Images of Humanity in Medieval China (also ASIAN 393) # #

Fall. 4 credits. Prerequisite: any course on premodern Chinese or Chinese religions, or permission. Not offered 2000-2001. C. Peterson.]

[HIST 405 Population and History #

[HIST 409 Seminar on Work in Europe and America #

Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2000-2001. S. L. Kaplan.

A comparative study of the meaning of work found in different societies from premodern times to the present. Emphasis on the "representations" of work of the actors themselves who worked, as well as of those, who for various critical reasons, did not work. The seminar will examine not only ideology but also the organization, practice, and physical place of work. It will explore theory as well as "cases," and draw on anthropological and sociological as well as historical materials.]

[HIST 432 The City in History: Europe and America #

Reading and discussion of significant interpretations of the rise, role, and character of cities in medieval and early-modern Europe and in modern Europe and America. Individual research projects.]

[HIST 451 Lord and Peasant in Europe: A Seminar in Social History #

4 credits. Prerequisite: permission of instructor. Not offered 2000-2001. S. L. Kaplan.]

[HIST 454 The Herodotean Moment: The Uses and Abuses of "Western Civilization" (also GOVT 454) #

History of Science

[HIST 250 Technology in Society (also ENGRG 250, ELE E 250, and S&TS 250) #

Fall. 3 credits. Not offered 2000-2001. R. Kline. For description, see ENGRG 250.]

HIST 280 The Sciences in the Twentieth Century (also S&TS 283)

Spring. 4 credits. M. A. Dennis.

Science emerged as a powerful source of social, economic, and political power during the twentieth century. Through an examination of the development of the sciences—physical and biomedical—during the twentieth century, students will learn about the reciprocal relations between science and society. Topics covered may include the rise and development of quantum mechanics, the emergence of Big Science, the history of the sciences in totalitarian nations, especially the former Soviet Union, Nazi Germany, and Communist China; the evolutionary synthesis; the rise and fall of molecular biology; the multiple forms of eugenics; the changing character of the social sciences; the role of new technologies in scientific change, especially computer and communication technology; the growth of science as a profession; and the development of science in non-Western cultures.

[HIST 281 Science in Western Civilization (also S&TS 281) #

Fall. 4 credits. History 281 is not a prerequisite to 282. Not offered 2000-2001. P. R. Dear.

This course aims to make comprehensible both to science majors and to students of the humanities the historical structure and development of modern science and to show science as a cultural phenomenon. Changing perceptions of nature and human knowledge from Greek Antiquity to the twentieth century form the framework for current Western views of the world, while the roots of the present-day dominance of "science" as a symbol of progress and modernity lie in an alliance between knowledge of nature and power over nature that took shape in the nineteenth century after a long period of emergence. 281 runs chronologically up to the death of Isaac Newton and focuses on the cultural traditions of Christian Europe and its selective appropriation of a Greek heritage.]

HIST 282 Science in Western Civilization (also S&TS 282) #

Spring. 4 credits. History 281 is not a prerequisite to 282. M. A. Dennis.

This course aims to make comprehensible both to science majors and to students of the humanities the historical structure and development of modern science and to show sciences as a cultural phenomenon. Changing perceptions of nature and human knowledge from Greek Antiquity to the twentieth century form the framework for current Western views of the world, while the roots of the present-day dominance of "science" as a symbol of progress and modernity lie in an alliance between knowledge of nature and power over nature that took shape in the nineteenth century after a long period of emergence. This course covers the eighteenth, nineteenth, and early twentieth centuries.
in sixteenth- and seventeenth-century European knowledge of nature. Students will be expected to produce a substantial paper focused on the study of primary source documents. The seminar will focus alternately on the study of recent historiography in selected areas, and an examination of primary source materials intended to critique and test those historiographical approaches. Topics will include: credibility and social status; the academic environment; philosophy and court culture; and the situated meaning of experiment.

[HIST 711 Introduction to Science and Technology Studies (also S&TS 711)] Fall. 4 credits. Not offered 2000-2001. S. Hilgartner. For description, see S&TS 711.

American History

[HIST 101 Introduction to American History (also AM ST 103)] # Summer and fall. 4 credits. 101 is not a prerequisite to 102. S. Blumin. A survey of American history from the beginnings through the Civil War. Topics include cultural encounters in the age of Columbus, European colonization, the American Revolution, the early republic, antebellum reform movements, and the coming of the Civil War.

[HIST 102 Introduction to American History (also AM ST 104)] Summer and spring. 4 credits. 101 is not a prerequisite to 102. T. Borstelmann. An introductory survey of the development of the United States since the Civil War.

[HIST 201 Seminar: Immigration and Ethnicity in Twentieth-Century U.S. History (also AM ST 104)] Spring. 4 credits. Sophomore seminar. Prerequisite: permission of instructor. Not offered 2000-2001. M. C. Garcia. This seminar will look at immigration to the United States in the twentieth century, highlighting the experiences of several groups as case studies. We will analyze the "push/pull" historical-structural factors that compelled people to come to the United States; the nature of cultural and structural assimilation; nativist movements; the evolution of U.S. immigration policy; the formation of ethnic identity in U.S. society. Attention will be given to current issues such as immigration reform, bilingual education, and the multiculturalism debate.

[HIST 202 Comparative Migration in the Americas (also AM ST 204 and LSP 203)] Spring. 4 credits. Letter grade only. M. C. Garcia. A seminar examining migration both within and to the Americas in the nineteenth and twentieth centuries. Topics to be discussed are the reasons for population movements; immigration policies; social, economic, and political factors on the migration; nativist and restrictionist responses; women and migration; remittances and transnationalism. Among the immigrant-receiving nations studied are Argentina, Brazil, Canada, Cuba, Mexico, and the United States.

[HIST 208 Seminar: The Era of Franklin D. Roosevelt (also AM ST 208)] Fall. 4 credits. Seminar designed for underclassmen but open to all students. Enrollment limited to 15 students. Prerequisite: permission of instructor. Not offered 2000-2001. R. Polenberg. The impact of the Great Depression and World War II on American politics, law, and culture.

[HIST 209 Seminar: Political History of Indians in the United States (also AIS 209)] # Fall. 4 credits. Seminar designed for underclassmen but open to all students. Enrollment limited to 15 students. Prerequisite: permission of instructor. Not offered 2000-2001. D. Usner. An investigation of political organization and change among Native American societies. Discussions and assignments examine forms of tribal government, diplomacy, and warfare, as well as political relations with European colonies and the United States. Specific topics include pan-Indian confederacies, Indian policy, struggles over sovereignty, and Indian strategies of autonomy and resistance.

[HIST 210 The Atlantic World from Columbus to 1800 (also AM ST 210)] Spring. 4 credits. Not offered 2000-2001. R. J. Weil and M. B. Norton. After Europeans first crossed the Atlantic in the late fifteenth century, the ocean became a vast highway linking the European powers—Spain, France, Britain, and the Netherlands—with their colonial outposts in America. This seminar will explore the Atlantic world through reading such primary sources as the log of Christopher Columbus and the autobiography of Olaudah Equiano, an Anglo-African sailor, and recent scholarly examinations of the slave trade and other aspects of the Atlantic economy. Intended primarily for sophomore prospective history majors; open to others by permission of instructors.

[HIST 212 African-American Women in the Twentieth Century (also AM ST 212 and WOMNS 212)] Spring. 4 credits. Sophomore seminar. M. Washington. An examination of twentieth-century themes significant in the historical experience of Black women. Major emphasis will be on race, gender, community, art, and politics in post World War II America. Specific topics include African-American women's involvement in such areas as political activism at the electoral and grass root levels; socio-economic issues affecting women and the community, religion, representation and participation of Black women in art and entertainment; and issues specific to gender cross-racially as well as intra-racially.

[HIST 213 Asian American History (also AAS 213)] Fall. 4 credits. V. Jew. Comparative introductory history of Asian Indians, Chinese, Filipino, Japanese, and Koreans in the U.S. from about 1850 to World War II. Themes include U.S. expansionism in the Pacific, Asian migrant labor in Hawaii and the American West, the anti-Asian movement, and Asian resistance.

[HIST 214 Seminar on American Foreign Policy (also AM ST 214)] Fall. 3 credits. Prerequisite: permission of instructor. Not offered 2000-2001. Next offered fall 2001. W. LaFever.
[HIST 238 History of Women in the Professions, 1800 to the Present (also AM ST 258, WOMNS 238, and HIST 258) Spring. 3 credits. Not offered 2000–2001. J. Brumberg. For description, see HD 258.]

[HIST 251 Black Religious Traditions from Slavery to Freedom (also AM ST 251, RELST 251) Fall 4 credits. Sophomore seminar. Letter only. M. Washington. A survey on the black religious and spiritual traditions during bondage and the early years of freedom. The course will examine slave hold work, the women’s rights movement, the role of black churches in the North, the formation of black churches after the Civil War, the independent church movement and the churches’ role in social protest.]

[HIST 260 Introduction to U. S. Latino History, Part I (also LSP 260 and AM ST 260) Spring. 4 credits. Not offered 2000–2001. M. C. Garcia. This course introduces students to the history of Latinos in the United States. We will focus specifically on the history of Chicanos (Mexican Americans) and Central Americans. Part II of this course, History 261, focuses on the history of Puerto Ricans, Cubans, and Dominicans in the U.S. (students are not required to take both courses). Among the topics that will be addressed are: historical immigration patterns and the “push/pull” factors that compelled migration to the United States; the social and political events that shaped the evolution of these Latino communities; the role of cultural identity, race, class, and gender in shaping experience; the role of foreign policy in formulating immigration policy.]

[HIST 261 Introduction to U.S. Latino History, Part II (also LSP 261 and AM ST 261) Fall 4 credits. Not offered 2000–2001. M. C. Garcia. This survey will discuss the history of Latinos from the Caribbean: the Puerto Ricans, Cubans, and Dominicans. Students will be introduced to some of the most important historical and theoretical works in this field. Topics to be discussed include the push-pull/historical-structural factors that influenced migration to the United States; the historical evolution of these communities; the role of cultural identity, as well as race, class, and gender in shaping experience; the intersection of foreign policy and immigration policy.]

[HIST 273 Women in American Society, Past and Present (also WOMNS 273) Spring. 4 credits. Not offered 2000–2001; next offered 2002–2003. M. B. Norton. A survey of women’s experiences in America from the seventeenth century to the present. Among the topics to be discussed are women’s familial roles, the changing nature of household work, the women’s rights movement, employment of women outside the home, racial and ethnic differences in women’s experiences, and contemporary feminism.]

[HIST 276 American Indian History, 1500-1850 (also AIS 276 and AM ST 272) Fall 4 credits. D. Usner. A survey of North American Indian history from the sixteenth century to the mid-nineteenth century. Relations between Indian Nations and with European colonies will be explored. Different cultural groups and cross-cultural encounters will be compared, with emphasis on resistance and adaptation to European colonialism. The formative years of U.S. Indian policy and the experiences of Indian people through the removal era will receive close attention.

[HIST 277 American Indian History Since 1850 (also AIS 277 and AM ST 277) Spring. 4 credits. D. Usner. A historical study of American Indians in the United States and Canada from the mid-nineteenth century to the present. The active and complex role played by Indian people in their responses to government policies and to socioeconomic changes will be emphasized. Challenges faced and initiatives taken by Indians will be traced from the early reservation years to the present to self-determination. Cultural change and continuity within Indian communities will be closely examined.

[HIST 303 African-American Women in Slavery and Freedom (also WOMNS 307 and AM ST 303) Fall. 4 credits. Letter only. M. Washington. Historical exploration of African-American women from a sociopolitical perspective. Topics include women in Africa, slavery and freedom, sexuality, labor, the family, gender cross-racially that begins with the African background and ends at 1900.

[HIST 304 American Culture in Historical Perspective, 1860-1980 (also AM ST 304) Spring. 4 credits. M. Kammen. An introduction to the study of modern American culture. Emphasis on the role of culture in the quest for national identity, the function of cultural myths and myth making, the advent of modernism, relationships between mass culture, popular culture, and high culture; and on the question of American exceptionalism (distinctiveness). Special attention also to the situation of subcultures and regions, to the changing role of entertainment in relation to leisure, the media, ethnicity (pluralism), the decorative and popular arts.

[HIST 311 The Structure of American Political History (also AM ST 311) Fall 4 credits. J. Silbey. Examines the course of American politics from the eighteenth century to the Gilded Age, focusing on the development of American political culture, the nature of decision making, and the role of social conflict, mass behavior, political parties, and political elites in shaping our political history.

[HIST 312 The Structure of American Political History (also AM ST 312) Spring. 4 credits. J. Silbey. A continuation of History 311 but can be taken independent of it. Examines the course of American politics from the 1890s to the present, focusing on the massive transformation of American political life in the late nineteenth and twentieth centuries in response to industrialization and urbanization, the depression, and the international crises from the 1930s to the 1990s.

[HIST 313 U.S. Foreign Relations, 1750-1912 Fall. 4 credits. W. LaFeber. Examines the development of the U.S. continental and global empires by analyzing policy and policymakers from Benjamin Franklin to Woodrow Wilson. Emphasis is placed on domestic events that shaped foreign policy. In conjunction with HIST 313, a special course, 301, for discussion and guided research will be offered.

[HIST 314 History of American Foreign Policy, 1912 to the Present Summer and spring. 4 credits. T. Borstein. Students examine the emergence of the United States as a world power in the twentieth century. The course focuses on the domestic sources of foreign policy and the assumptions of the major policymakers (Wilson through Clinton). Important themes include the American response to a revolutionary world since 1912, the role of American racial views in the making of foreign policy, and the increasingly dominant role of the president in the making of U.S. foreign policy.

[HIST 316 American Political Thought: From Madison to Malcolm X (also GOVT 366) Fall. 4 credits. I. Kramnick. For description, see GOVT 366.

[HIST 318 American Constitutional Development Fall. 4 credits. Not open to freshmen. R. Polenberg. Major issues in constitutional history. Topics include: the drafting of the Constitution; the Bill of Rights; the Marshall era; the crises caused by slavery and emancipation; the rise of substantive due process; Holmes, Brandeis, and freedom of speech; the Roosevelt “revolution”; civil liberties and civil rights in modern America: the right of privacy; the contemporary Supreme Court.

[HIST 324 Varieties of American Dissent, 1880-1900 (also AM ST 324) Fall. 4 credits. Not offered 2000–2001. N. Salvatore. The idea of dissent in American society raises a variety of images. Civil rights activists, striking workers, and student radicals of the 1960s are familiar enough symbols of dissent. But might we understand a Pentecostal believer, filled with the spirit of his or her God in criticizing contemporary society, as an example of American dissent? This course will explore the varieties of economic, political, and cultural dissent in America between 1880 and 1950, and will examine how understanding dissent in its specific historical context illuminates major aspects of American life and culture.

[HIST 325 Age of the American Revolution, 1754-1815 Spring. 4 credits. Not offered 2000–2001. M. B. Norton. The idea of dissent in American society raises a variety of images. Civil rights activists, striking workers, and student radicals of the 1960s are familiar enough symbols of dissent. But might we understand a Pentecostal believer, filled with the spirit of his or her God in criticizing contemporary society, as an example of American dissent? This course will explore the varieties of economic, political, and cultural dissent in America between 1880 and 1950, and will examine how understanding dissent in its specific historical context illuminates major aspects of American life and culture.
An examination of the process by which the 13 English colonies became an independent and united nation, with emphasis on political thought. This course traces social and economic change, and cultural development. Attention will be paid to the impact of the American Revolution on women, Blacks, and Indians as well as on white males.

An overview of European exploration and colonization in North America, life on different colonial-Indian frontiers, and territorial expansion by the United States. Topics include the ideological and material frameworks of expansionism, the political and social dimensions of interethnic and imperial rivalry, and the formation of U.S. Indian and land policies. Themes of human migration, commercial development, and environmental change are emphasized.

History of the American South from the sixteenth century to the early nineteenth century with an emphasis on intercultural relations. Topics include colonization of the region by Spain, England, France, and the United States, American Indian adaptation and resistance, the evolution of slavery, African American relations with European and Indians, and the role of racial ideology and ethnic identity in the formation of the South as a distinct section of the United States.

An analysis of the factors leading up to the breakup of the Union, the impact of the war in North and South, and the problems of restoration and reconstruction of the seceded states.

America was born in the country and moved to the city. This course examines the transformation of America from a rural to a rapidly urbanizing society and culture, from the first European settlements to the era of the Civil War. It is also a history of the city itself, as a human community, as a crucible of cultural contact and change.

America was born in the country and moved to the city. This course examines the transformation of America from the urbanizing society and culture of the mid-nineteenth century to the thoroughly metropolitan nation of the present (and near future). It is also a history of the city itself, as a human community, a crucible of cultural contact and change, and a focus of public policy.

Introductory course on African-Americans from 1619 to 1865. Emphasis will be on life in bondage, the free black communities, and racism. Other topics include African cultural heritage, the slave trade, religion, the family, and the black freedom struggle.

An examination of American society in the context of capitalist development, and of capitalism as a social phenomenon. The transformation of pre-industrial colonies into an industrializing nation; the development of social classes; the emerging ethos of free enterprise.

[HIST 337 Entrepreneurialism and Organization in the Age of the Corporation: Capitalism and Society in Modern America, 1840–2000 (also AM ST 337)] Spring. 4 credits. S. Blumin.

An examination of American society in the context of capitalist development and of capitalism as a social phenomenon. The rise of corporate capitalism, class, "mass", and the ethos of enterprise in twentieth-century American society.

Topics include the Sacco-Vanzetti case; radicalism and reform in the New Deal; Franklin Roosevelt and World War II; the Holocaust and the atomic age; the Cold War and civil liberties; individualism and conformity in the 1950s.

Topics include the Supreme Court and civil rights; Kennedy, Johnson, and social reform; the Vietnam War and Watergate; politics and the presidency from Carter to Clinton; and class, race, and ethnicity in modern America.

[HIST 345 The Intellectual and Cultural Life of Nineteenth-Century Americans (also AM ST 345 and RELST 345)]# Spring. 4 credits. R. L. Moore.

An examination of the development of cultural and intellectual diversity in the United States. Particular emphasis will be placed on religious pluralism.

American thought and culture from 1890 to the present. Emphasizes the intellectual impact of major political and economic events and the adaptation of social ideas and values to new conditions.

[HIST 359 American Families in Historical Perspective (also AM ST 359, HD 359, and WOMNS 357)] Spring. 3 credits. Prerequisite: HD 150 or one 200-level social science or history course. S-U grades optional. Human ecology students must register for HD 359. Not offered 2000–2001. J. Brunberg.

For description, see HD 359.

For description, see ILRCB 385.

For description, see ILRCB 386.

Topic for 2002: Gender and Sexuality in America. A colloquium course, limited to 20 students. Students will read and discuss some of the new scholarly work on gender and sexuality in American history. They will also prepare several written and oral presentations based on their analyses of primary sources in the Cornell Human Sexuality collection and elsewhere.

[HIST 411 Undergraduate Seminar in American Political History (also AM ST 411)] Fall and spring. 4 credits. Prerequisite: permission of instructor. J. Silbey.

[HIST 412 The Immigrant City 1900–2000 (also S HUM 406, AM ST 406, LSP 406)] Fall. 4 credits. M. C. Garcia.

The role of the city in the immigrant imagination. The course compares the experiences of various immigrant groups in the United States and Canada, their reasons for settlement in specific cities, and the different responses to the urban setting as witnessed particularly in immigrant novels and memoirs, art, photography, and film.

[HIST 414 Motivations of American Foreign Policy] Fall. 4 credits. Prerequisite: permission of instructor. W. LaFeber.

Topic for fall 2000: The era of Willard and Dorothy Straight—in Ithaca, China, and New York City.

[HIST 419 Seminar in American Social History (also AM ST 419)] Spring. 4 credits. S. Blumin.

[HIST 421 Undergraduate Seminar in Cultural History (also AM ST 421)]
M. Kammen.
Topic: for spring 2000: the annual cycle of the seasons in nature and in Western culture, with psychological connections between the human life cycle and the seasons; and the more recent impact of industrialization as well as urbanization on societal feelings about the seasons. Emphasis upon the United States and its seasonal implications for the history of consumerism. Sources will include art, literature, the writings of eminent naturalists, and materials concerning festivals and holidays. A mix of primary and secondary source readings.

[HIST 426 Undergraduate Seminar in Early American History]

[HIST 428 Comparative History of Colonial North America]
D. Usner.
This seminar will consider ways of comparing how different European empires, especially Spain, France, and England, colonized North America from the sixteenth through the eighteenth centuries. Settlement patterns, labor systems, trans-Atlantic connections, and Indian relations will be examined for similarities and differences across imperial boundaries. Borders between colonial and frontier regions, where empires came face-to-face, will also be explored. Problems and opportunities for comparative study, found in old and new scholarship on early America, will be critically discussed.

[HIST 429 Undergraduate Seminar in Indians of Eastern North America (also AIS 429)]
A seminar examining the history of Native Americans in the eastern woodlands from colonial times to the present. The cultural and economic participation of Indians in the evolution of frontier societies will be examined. Major topics include fur-trade networks, political relations, removal, and the persistence of Indian communities in eastern states.

[HIST 430 America in the Camera's Eye (also AM ST 430.2)]
Fall. 4 credits. R. L. Moore.
Photographs and films have become archives for historical research. From the era of Matthew Brady's Civil War images, the United States has been recorded by documentary photographers who have called attention to the country's progress and its poverty. Hollywood filmmakers have also recorded landscapes of the American landscape and placed against that landscape fictionalized accounts of the country's history and its social problems. What is the relation between these images? What is their relation to written texts and to other documents that tell us about the past? How truthful is Hollywood? One key text will be James Agee's and Walker Evans' _Let Us Now Praise Famous Men_. The seminar will meet once each week for discussion and periodically during the semester to view films.

[HIST 432 The City in History: Europe and America]
S. Blumin.
Reading and discussion of significant interpretations of the rise, role, and character of cities in medieval and early modern Europe, and in nineteenth-century Europe and America. Individual research projects.

[HIST 440 Undergraduate Seminar in Recent Asian History (also AM ST 440)]
Fall. 4 credits. Prerequisite: permission of instructor. R. Polenberg.
Topic: freedom of speech, censorship, and the Supreme Court.

[HIST 442 Religion and Politics in American History: From J. Winthrop to R. Reed (also AM ST 442 and RELST 442)]
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2000–2001.
R. L. Moore.
A reading and research seminar concerned with popular culture in nineteenth-century America (publications, performances, and audiences).

[HIST 456 Female Adolescence in Historical Perspective (also WOMNS 438 and HD 417)]
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: permission of instructor. J. Brumberg.
For description, see HD 417.

[HIST 484 Seminar in the History of American Labor: Race, Work, and the City (also ILR 304)]
Fall. 4 credits. Open to juniors and seniors only with the permission of the instructor. Not offered 2000–2001. N. Salvatore.
For description, see ILR 304.

[HIST 486 Seminar on the 1960s (also AM ST 486)]
Fall. 4 credits. T. Borstelmann.
This course will explore the issues and developments of the most turbulent and significant decade in recent U.S. history. Major topics will include the civil rights movement, the Kennedy and Johnson administrations, the Vietnam War, the anti-war movement, the counterculture, the women's liberation movement, and the Nixon administration. A substantial research paper will be required.

[HIST 497 Spanish Borders and French Frontiers in American History (also S HUM 417)]
For description see S HUM 417.

[HIST 500 Undergraduate Research Seminar (also AM ST 500)]
Fall and spring. 8 credits each term. S. Blumin and others.
Offered in Cornell-in-Washington Program. An intensive research and writing experience utilizing the extensive resources of Washington, D.C.

[HIST 521 Seminar in American Cultural Studies (also AM ST 521)]
M. Kammen.
The focus will be the relationship between government and culture in historical perspective. After three contextual sessions devoted to nineteenth-century background, we will mainly be concerned with the period from the 1930s to the present. Several comparative sessions will be devoted to government as a part of culture in other societies. A research paper is required.

[HIST 607 Writing Seminar on African-American Women]
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2000–2001.
M. Washington.
This course is designed for students actively engaged in a writing project on African-American women's history. Students must have already done the research and most of the reading for their papers prior to enrollment. Reading and class discussion will focus on style, methodology, and theory. An extensive research paper is due at the end of the semester.

[HIST 608 African-American Women]
M. Washington.
A reading and discussion course focusing on the experiences of African-American women in nineteenth-century America, including the Caribbean. Topics include women and labor, abolitionism, women's rights, sexuality and race relations, education and racial uplift. Black women's literature, marriage and family.

[HIST 610 Afro-American Historiography]
Fall. 4 credits. Letter only. M. Washington.
Reading and discussion course focusing on the way historians write and interpret the Black experience in America. Students will be concerned with individual historians, various schools of thought, and historical approaches.

[HIST 613 Seminar on American Diplomatic History]
Fall. 4 credits. T. Borstelmann.
A reading and research seminar in twentieth-century American diplomatic history, emphasizing the Cold War period and interpretative approaches to U.S. foreign policy. A research paper is required.

[HIST 617 Seminar in American Cultural History]

[HIST 618 Seminar in American Cultural History]
R. L. Moore.
A reading and research seminar concerning selected topics in nineteenth century America.

[HIST 621 Graduate Seminar in American Cultural History]
Fall. 4 credits. M. Kammen.

[HIST 624 Graduate Seminar in American Indian History (also AIS 624)]
D. Usner.
This seminar examines, through a selected series of major topics and problems, the historical study of North American Indians. Various approaches in history—together with anthropology, political science, folklore, and other disciplines—are explored. Emphasis is placed on current interpretations and directions.
[HIST 626 Graduate Seminar in the History of American Women (also WOMNS 626)]
A reading and research seminar intended primarily for graduate students. Major works in American women's history will be carefully scrutinized, and each student will prepare a lengthy research paper.

[HIST 627 Graduate Seminar in Early American History]

[HIST 633 Seminar in Nineteenth-Century American History]

[HIST 634 Seminar in Nineteenth-Century American History]
A research seminar intended primarily for graduate students exploring society, culture, and politics of the United States between 1815 and 1896.

[HIST 640 Graduate Seminar in Recent American History]
A graduate research seminar that will examine American legal and constitutional history.

[HIST 682 Seminar in American Labor History (also ILRCB 783)]
Fall. 3 credits. Prerequisites: graduate students only. Not offered 2000–2001. N. Salvatore.
For description, see ILRCB 783.

[HIST 710 Colloquium in American History]
Spring. 4 credits. Required of all first-year graduate students in United States history. M. Kammen.
Examination of major approaches, periods, issues, and modes of interpreting American history. Readings include recent "classics" of American scholarship from diverse subfields and genres.

Latin American History

[HIST 295 Colonial Latin America @ #]
Fall. 4 credits. J. Kinsbruner.
Survey of Spanish America from the rise of pre-Columbian civilizations through the European conquest, the establishment and development of colonial societies, imperial rivalries in the New World, the background of the independence movements, and the achievement of political independence.

[HIST 296 Modern Spanish America @]
Spring. 4 credits. Staff.
Survey of the Latin American nations from independence to the present. Major themes include the persistence of neocolonial economic and social institutions, the development of nationalist and populist politics, revolutionary movements of the twentieth century, and United States–Latin American relations.

[HIST 413 Cities: Crisis and Transformation (also S HUM 416)]
This seminar explores the dynamics of crisis and transformation in cities as diverse as Medellin, Los Angeles, Tijuana, Belfast, and Belgrade. How is identity re-imagined and performed when traditional urban territorial boundaries are reconfigured by violence, exile, and unprecedented flows of capital, bodies, ideas, and trends?

[HIST 424 Art and Politics in Twentieth-Century Latin America]
This seminar will examine how the intersection of art and politics shaped culture, ideology, and identity in Latin America from the Mexican Revolution to the dictatorships of the late twentieth century. Topics may include muralism and the Mexican Revolution, the artist as muse and activist (Frida Kahlo); working class and immigrant culture in Argentina and the tango; samba as social and political protest in Brazil; gender and politics in exiled women's literature; the appropriation of public spaces as artistic forum and means of communication under authoritarian regimes.

[HIST 445 Prostitutes and Patriots: Urban Culture and the Construction of Citizenship in Latin America, 1880–1950 (also HIST 645)]
Fall. 4 credits. Prerequisites: History 295 and/or 296 suggested. Permission of instructor required. Enrollment limited to 15. M. Roldan.
Unprecedented demographic and economic changes gave rise to debates by the late nineteenth century regarding the definition of citizenship and the limits of individual participation in Latin American societies. These debates centered on the city—the symbol of both "progress" and "disorder". Rising tensions were expressed through the trope of the "prostitute" (disease and loss of control) and the "patriot" (science, statesmanship, and order). The course examines changing notions of the private/public; the regulation of sexuality and gender; popular mobilization; and the construction of the nation.

[HIST 649 Seminar in Latin American History]
Fall. 4 credits. M. Roldan.
A graduate-level seminar focusing on changing topics in Latin American history (politics, labor, race/ethnicity; violence; social movements; agrarian society, etc.). In addition to weekly mandatory readings, students will be expected to conduct original research culminating in a final 25- to 30-page paper.

African History

[HIST 255 Cultures and Ecology in Precolonial Africa @ #]
This course will examine the history of Africa, from the origins of humankind up to 1800 by focusing on a number of controversial issues about the African past. Why did humanoid emerge in Africa? Who were the ancient Egyptians? What "race" were they and is this important anyway? If so, why? How did the ecological environments of the past shape African cultures and their histories? What role did women play in early African societies and what can this information tell us about how human societies have operated from time immemorial? What role did the slave trade play in influencing the current economic position of Africa and race relations in the U.S. today?

[HIST 391 Riot and Revolution in Nineteenth-Century Africa: The Birth of the Modern @]
Spring. 4 credits. S. E. Greene.
The beginning of the nineteenth century witnessed the rapid and often times forceful expansion of Islam in West Africa, the end of the Atlantic slave trade, the transformation of the Zulu from a small, inconsequential people to the largest and most powerful ethnic group in South Africa, and the wild fire spread of Swahili as a lingua franca in east and central Africa. This course explores these revolutionary changes and the upheavals that accompanied them as Africa remade itself to face the modern era. Lectures, readings and discussions will focus on the causes and consequences of these events and their significance for understanding contemporary Africa.

[HIST 407 The Colonial Encounter @]
Spring. 4 credits. Prerequisite: permission of instructor. S. Greene.
The course examines the way colonizers and colonized influenced the culture, history, and identity of the other. Emphasis is on exploring the colonial encounter as a phenomenon in itself as well as both sides of the unequal equation that linked specific European countries (for example, France, England, Germany, Netherlands) with the states they colonized in Africa and Asia. This linkage challenged, at different times in different places, pre-existing understandings of self, country, and culture, as well as notions about the other.

[HIST 434 Gender and Sexuality in the Social History of Africa (also Women's Studies 477)]

[HIST 443 The European as Other @]

Asian History

[HIST 190 Introduction to Asian Civilizations @]
Spring. 4 credits. D. Wyatt and J. Pigott.
An introduction to the distinctive cultures of China, India, Japan, and Southeast Asia that features an intensive examination of selected topics and periods of particular significance in the history of each.

[HIST 191 Introduction to Modern Asian History (also ASIAN 191)]
Fall. 4 credits. S. Cochran and T. Loos.
The history of Asia-Pacific from the nineteenth century to the present, focusing on relations of China, Japan, and Southeast Asia with each other and with the West.

[HIST 203 War and Diplomacy in Korea]
Korea's challenging location between great powers, its long struggle between independence and outside control, and its tragic division, all make for a singular case study in the history of war and diplomacy. This course will examine that history with particular focus on the Imjin War (1592-1598) and the Korean War (1950-1953). Topics include military tactics, and strategy on the Korean peninsula; Admiral Yi Sun-Shin as strategist and tactician, the effect of war on Korean society; and the pattern of Korean relations with China, Japan, Russia (and other northern Asian powers), and the United States.

**HIST 207** The Occidental Tourist: Travel Writing and Orientalism in Southeast Asia (also ASIAN 206 and HIST 507)

*Spring.* 4 credits. Letter grade only. T. Loos.

Students read travel literature about Southeast Asia in the nineteenth and early twentieth centuries and travel accounts written by Southeast Asians living abroad. The seminar emphasizes themes of race, orientalism, transnationality, and tactician; the effect of war on Korean society; and the pattern of Korean relations with China, Japan, Russia (and other northern Asian powers), and the United States.

**HIST 218** Introduction to Korea (also ASIAN 218)

*Fall.* 3 credits. Staff.

For description see Asian Studies 218.

**HIST 230 Seminar in History and Memory: The Asia-Pacific War**

This seminar will examine what is at stake when the fighting between Japan and its former enemies in the Pacific during World War II was recorded, memorialized, and (re)constructed as historical narrative by Japanese, Americans, and others. By exploring the legacies of such events and processes as the Rape of Nanking, live testing of biological and chemical weapons, sexual slavery, and incendiary bombings of Hiroshima and Nagasaki, the seminar will offer an opportunity to reflect in a more general way on the politics of historical representation and memory.

**HIST 236 History and Culture of Korea to the Late Nineteenth Century**

*Spring.* 4 credits. M. Deuchler.

This course is designed to provide wide-ranging coverage of Korea's political, economic, social, and intellectual history. The first half of the course briefly reviews Korea's political history and establishes the chronological framework. In the second half, the discussion turns to a topical approach and investigates the development of uniquely Korean sociopolitical and intellectual institutions. A detailed study of the Korean literary classics will be studied in isolation, due consideration will be given to its adaptation of Chinese values and its role in transmitting cultural impulses to Japan.

**HIST 243 Seminar: China and the West before Modernism**

*Spring.* 3 credits. Seminar designed for undergraduates but open to all students. Enrollment limited to 15 students. Prerequisite: permission of instructor. C. Peterson.

What accounts for the first great passion for things Chinese in the West (from the sixteenth to the nineteenth centuries) followed by the hostility characteristic of imperialism? This seminar explores this question relying heavily on original sources to trace the Chinese vogue in thought, literature, and art and comparing the Western image with the realities of China of that day.

**HIST 244 Seminar: History of Siam and Thailand**

*Fall.* 4 credits. Seminar designed for undergraduates but open to all students. Enrollment limited to 15 students. Prerequisite: permission of instructor. Not offered 2000-2001. D. Wyatt.

An examination of the long history of the central position of the Indochina Peninsula, based on close reading of the primary sources (in translation). This course will cover the samurai through 1600.1

**HIST 284 Southeast Asia in the World System: Capitalism and Incorporation, 1500-Present**

*Fall.* 4 credits. E. Tagliacozzo.

This course examines the history of Southeast Asia in conjunction with what theorists have called the emerging “World System.” The expanding reach of capitalism is traced through the region’s Early Modern “Age of Commerce,” through the age of great European merchant companies; through the coercive capitalism of the imperial age; and into our own times. Throughout, attention is paid to similar (or dissimilar) trends in the rest of global history, spanning Europe, Africa, Middle East, and the Americas. Open to students with an interest in Southeast Asian history, as well as the shaping forces of capitalism on the modern world.

**HIST 289 The U.S. Vietnam War (also ASIAN 298)**

This course surveys events in Vietnam, the United States, and elsewhere related to the U.S. policy of intervention in Vietnam between 1954 and 1975. Readings will include historical narratives, memoirs, and literature. The course will evaluate the standard winner (Hanoi) and loser (U.S.) narratives and how they have silenced southern Vietnamese voices.

**HIST 293 History of China up to Modern Times**

*Fall.* 4 credits. C. A. Peterson.

A survey of the principal developments in the history of China from the earliest times to the eighteenth century that also undertakes a topical introduction to Chinese culture and civilization, from the rise of China from the eighteenth century, and the twentieth-century efforts to achieve social mobilization, political unity, and commercial expansion.

**HIST 297 Japan Before 1600**

*Fall.* 4 credits. J. Piggott.

This course explores Japan before 1600 from a variety of perspectives. Analysis of primary sources, including literary and archaeological artifacts, is emphasized. History 297 is a good introduction to issues of premordial historical study and to the study of East Asia. (Graduate students or more advanced undergraduates who would like to do a research project should register for History 522 after consultation with the instructor.)

**HIST 322 History of the Samurai II**

We will continue study of themes and issues introduced in History 322, wherein we raced the origins of the samurai from eight-century roots through the era of the first warrior government during early medieval times. This course will cover the samurai through 1600.

**HIST 328 State, Society, and Culture in Modern Japan**

*Spring.* 4 credits. J. V. Koschmann.

A survey of Japan from early-nineteenth century to the present, which attempts to connect the political, socio-economic, and imaginative realms of modern Japanese life so as to achieve a complex view of modern Japanese society. Pays particular attention to the changing situation of women and women's movements, Japan's relations with Asia and the United States, and problems of historical representation and consciousness. Readings will include Japanese works in translation as well as secondary sources.

**HIST 360 Early Warfare, East and West**

*Spring.* 4 credits. C. A. Peterson.

For description see Comparative History.

**HIST 388 Vietnamese Histories (also ASIAN 388/685)**

For description see Asian Studies 385.

**HIST 393 Images of Humanity in Medieval China (also ASIAN 393)**

**HIST 395 Southeast Asia to the Eighteenth Century (also HIST 695)**

A survey of the earlier history of Southeast Asia, concentrating on regional movements of economic, social, cultural, and political change and using, to the extent possible, readings in translated primary sources.
HIST 396 Southeast Asian History from the Eighth to the Nineteenth Century (also HIST 696 and ASIAN 396)  
Spring. 4 credits. S-U option. T. Loos and E. Tagliacozzo.
Surveys the modern history of Southeast Asia with special attention to its colonialism, the Chinese diaspora, and socio-cultural institutions. Considers global transformations that brought "the West" into people's lives in Southeast Asia. Focuses on the development of the modern nation-state, but also questions the narrative by incorporating groups that are typically excluded. Assigns primary texts in translation.

[HIST 416 Undergraduate Seminar on Gender and Sexuality in Southeast Asia (also ASIAN 416 and WOMNS 416)]
Students consider the relationships among colonialism and gender and sexual identity formation in Southeast Asia. Using material from a wide range of fields including anthropology and literature, the course compiles a simplistic East/West male/female binary.

HIST 420 Japan in the Year 1000: The Tale of Genji in Historical Perspective  
Fall. 4 credits. Prerequisites: permission of instructor. J. Piggott.
The Tale of Genji is a classic of premodern Japanese literature that provides readers a broad view into Japan's courtly society at a time when many of the elements of Japan's classical tradition were taking form. Those interested in premodern Japan, Comparative Literature, and courtly societies will find the seminar of great interest. Previous study of premodern Japan is advised.

[HIST 448 Family and Gender Relations in Premodern Japan #]
An inquiry into structures of family and gender relations in the classical and medieval periods. There will be inclusion kurumado family organization, state formation, and gender construction. Those interested in comparative perspectives are encouraged to enroll. "Breadth" reading, primary source materials, and comparative reading placing Japan in an East Asian context will be emphasized. Previous study of premodern Japan and East Asia is recommended.

HIST 449 Peddlers, Pirates, and Prostitutes: Subaltern Histories of Southeast Asia, 1800-1900  
Spring. 4 credits. E. Tagliacozzo.
This course will examine Southeast Asian history "from below" over the course of a single century, 1800–1900. Laboring histories, the history of piracy and prostitution, and the nuts of people usually considered "marginal" to the state will all be under consideration. How do we look for clues to these peoples' lives? Were there similarities in experience across disparate geographies? What did it mean to be an outlaw, "deviant," or poor in colonial Southeast Asia? This course attempts to answer some of these questions.

HIST 451 Crime and Diaspora in Southeast Asia: Subaltern Knowledge, Identity, 1750-1950  
Fall. 4 credits. E. Tagliacozzo.
During the last two centuries, the mass movement of human beings in Southeast Asia has increased to an unparalleled scale. This course examines the diasporas of various Asian peoples in this time frame, and asks how these movements have intersected with notions (and actions) of "criminality" in the region. Historical sources, period literature, and anthropological writings are used to analyze the growth of migration, smuggling syndicates, and "illicit" behavior in Southeast Asia. Open to students with an interest in Southeast Asian history and the region's links to the wider Asian orbit.

[HIST 466 Kings and Shoguns: the Taiheiki Age @]
The turn of the fourteenth century witnessed epochal changes in Japan as structures of monarchy, court-Bakufu relations, landholding, judiciary, international relations, and popular culture affected by the failure of Go-Daigo Tenno's royal restoration. Core readings of the seminar will include portions of the martial epic, the Taiheiki, and other materials from which insights into these transformations can be drawn. Previous study of Japanese history, especially History 322, is highly recommended.

HIST 480 Senior Seminar: Gender Adjudicated (also WOMNS 480 and ASIAN 482)  
Fall. 4 credits. Letter grade only. Limited to 15 students. T. Loos.
Students explore the intersections among jurisprudence, religious codes, gender, family, and national identity in Southeast Asia from the colonial period to the present.

HIST 485 Topics in the Social History of Choson Korea  
Spring. 4 credits. M. Deuchler.
During the seminar, topics pertaining to the social and intellectual history of Choson Korea will be discussed, and appropriate texts in English, Chinese, and Korean will be read.

HIST 489 Seminar in Modern Japanese History @
Fall. 4 credits. Prerequisites. History 294 or equivalent knowledge of modern Japanese history. J. V. Koschmann.

[HIST 490 Tales of the Heike]
Fall. 4 credits. Prerequisite: History 298, participate in a special weekly colloquium. Barbara Ruch, has called the Heike "Japan's first national epic," because listening to it, ever done before. Investigate the narrative by incorporating groups that are typically excluded. Assigns primary texts in translation.

[HIST 492 Undergraduate Seminar in Medieval Chinese History @]
Fall. 4 credits. Prerequisite: History 190, 293, 360, or permission of instructor. C. A. Peterson.
Topic for Fall 2000: The World of Marco Polo, an in-depth examination of the famous traveler's history and the problems of cultural interaction.

[HIST 493 Problems in Modern Chinese History (also HIST 693)]  
Fall. 4 credits. Prerequisite: History 294 or permission of instructor. Not offered 2000–2001. S. Cochran.
Conflicting interpretations of Chinese history during the late imperial period and the first half of the twentieth century.

HIST 495 Kings and States: Asian Models @
Spring. 4 credits. Prerequisite: previous coursework in East Asian history and permission of instructor. J. Piggott.
The seminar will explore the modern state formation in comparative perspective. In addition to participating in discussions focused on core readings, seminar members will undertake research projects targeting a society of their choice. Students interested in the history of preindustrial societies, political and cultural anthropology, political science, and religion will find the seminar of interest.

HIST 497 Colloquium in Premodern Japanese History @
Fall. 4 credits. For advanced undergraduates or graduates. J. Piggott.
This colloquium examines the premodern civilization of Japan from a variety of historical perspectives. Students must attend History 297 lectures and participate in a special weekly colloquium.

HIST 499 Problems in Modern Chinese History (also HIST 694)  
Spring. 4 credits. Prerequisite: History 294 or permission of instructor. S. Cochran.
This course gives each student an opportunity to select one research topic and work on it throughout the semester. Knowledge of Chinese is not required, but background in Chinese studies is needed.

HIST 507 Graduate Seminar: The Occidental Tourist  
Spring. 4 credits. T. Loos.
For description see History 207.

[HIST 588 Proseminar in Modern Korean History  
Designed primarily for graduate students in East Asian Studies who specialize in Chinese and/or Japanese history but need for comparative or other purposes to develop a familiarity with the main problems and contours of modern Korean history. Readings will be selected primarily from English-language works on Korea from the 1870s through the post–World War II era, including Japanese colonial and modernist perspectives, and/or the Republic of Korea."

[HIST 598 Colloquium in Modern Japanese History  
For graduate students only. Students will attend lectures and do the reading for History 298, participate in a special weekly colloquium, and write a seminar paper.]
Japanese studies has been institutionalized. The course will provide both a historical and critical analysis of the constitution of modern Japan studies as a "field" of postwar academic inquiry. While reading texts particularly influential in the early and contemporary formation of the field, we will consider such questions as the domestic and international contexts in which Japanese studies has been institutionalized and maintained, and the relationship between "Japan" as object of area studies discourse and "Japan" as represented in American journalism, popular culture, and politics. Interdisciplinary and team-taught, the course will aim to introduce students to a range of methodological and approaches developed in historical and critical works, problematizing assumptions in each case. Possibilities for cross-disciplinary research (along lines recently undertaken in areas such as feminist criticism and cultural studies, for example), will also be explored.

[HIST 691 Chinese Historiography and Source Materials Fall. 4 credits. Prerequisite: permission of instructor. C. Peterson.]

[HIST 693 Problems in Modern Chinese History (also HIST 493) Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2000–2001. S. Cochran. Conflicting interpretations of Chinese history during the late imperial period and the first half of the twentieth century.]

[HIST 694 Problems in Modern Chinese History (also HIST 499) Spring. 4 credits. Prerequisite: permission of instructor. S. Cochran. For description, see HIST 499.]

[HIST 696 Modern Southeast Asia: Graduate Proseminar (also HIST 396) Spring. 4 credits. T. Loos and E. Tagliacozzo. Introduction to the modern history of Southeast Asia for graduate students. Students will be expected to attend the lectures and complete the readings for History 396, and they will meet separately as a group to further explore selected topics.]

[HIST 791 Seminar in Medieval Chinese History Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2000–2001. C. A. Peterson.]

[HIST 792 Seminar in Medieval Chinese History Spring. 4 credits. Prerequisite: permission of instructor. C. A. Peterson.]

[HIST 795 Seminar in Modern Southeast Asian History Fall. 4 credits. Permission of the instructor. Not offered 2000–2001.]

[HIST 796 Seminar in Southeast Asian History Spring. 4 credits. Prerequisite: reading knowledge of relevant languages. D. Wyatt.]

[HIST 797 Readings in Modern Japanese Thought Fall. 4 credits. Prerequisite: reading knowledge of Japanese and permission of instructor. Not offered 2000–2001. J. V. Koschmann.]

Near Eastern History

[HIST 254 Islamic History: 600-1258 (also NES 257 and RELST 257) @ # Fall. 3 credits. Not offered 2000–2001. D. Powers. For description, see NES 257.]

[HIST 299 Introduction to Christian History (also NES 295, JWST 295, RELST 295) Spring. 3 credits. K. Haines-Eitzen. This course offers an introduction to the history of Christianity from the apostle Paul through the seventh century, with an emphasis on the diversity of Christian traditions, beliefs, and practices. We will explore the origins of Christianity in the eastern Mediterranean world, the spread of Christianity, the development of ecclesiastical institutions, the rise and establishment of monasticism, and the various controversies that occupied the church throughout its history. This course will draw upon primary literary sources (from biblical literature to council proceedings, monastic rules, sermons, theological treatises, and biographies) as well as Christian art, inscriptions, music, and manuscripts.]

[HIST 372 Law, Society and Culture in the Middle East, 1200-1500 (also HIST 652, NES 351/651, RELST 350) @ # Fall. 4 credits. Enrollment is limited to 25 students. D. Powers. For description, see NES 351.]

[HIST 461 Seminar in Islamic History 600-750 (also HIST 671, NES 451 and 650, and RELST 451) @ # Spring. 4 credits. Enrollment is limited to 25 students. Not offered 2000–2001. D. Powers. For description, see NES 451.]

[HIST 652 Introduction to Islamic Law (also HIST 372, NES 351/651, RELST 350) Fall. 4 credits. Enrollment is limited to 25 students. D. Powers. For description, see NES 351.]

Ancient European History

[HIST 151 Introduction to Western Civilization # Summer and Fall. 4 credits. S. Pohl. A survey of European history from Antiquity to the Renaissance and Reformation. Important themes will include the influence of ancient culture on medieval society, the development of and conflict between secular and ecclesiastical governments, European encounters with the non-Europeans, the culture and role of minority groups within European society, and the roles of women.]

[HIST 220 War and Peace in Greece and Rome Fall. 4 credits. No prerequisites. Open to freshmen. B. Strauss. In ancient Greece and Rome, government did little besides wage war and raise taxes; culture focused on war, warriors gloried in battle, and civilians tried to get out of the way. This course surveys the impact of war and the rarity of peace in the ancient world. Topics include: Why war?; the face of battle; leadership, strategy, operations, and tactics; women and war; intelligence and information gathering; diplomacy and peace-making; militarism, war and slavery; and the archaeology of warfare. Readings in translation include selections from Homer, Herodotus, Thucydides, Xenophon, Caesar, Livy, Tacitus, Josephus, and Ammianus Marcellinus.]

[HIST 232 Seminar: Eyewitness to War in the Ancient World Fall. 3 credits. Not offered 2000–2001. B. Strauss. A study of ancient soldier-history writers who participated in the campaigns about which they later wrote. Topics include historiography, autobiography, propaganda, prose style. Readings include selections from Thucydides, Xenophon, Julius Caesar. Josephus. Ammianus Marcellinus as well as, for comparative purposes, modern soldier-historians.]

[HIST 265 Ancient Greece from Homer to Alexander the Great # Spring. 4 credits. Open to freshmen. Not offered 2000–2001. B. Strauss. A survey of Greece from the earliest times to the end of the Classical period in the late fourth century B.C. The course focuses on the Greek genius: its causes, its greatness, its defects, and its legacy. The Heroic Age, the city-state, ancient democracy, and the intellectual ferment of the Greek Enlightenment are the main topics of study. Readings in translation from Homer, Xenophon, Sophocles, Herodotus, Thucydides, Plato, Aristotle, and from the evidence of ancient inscriptions, coins, art, and architecture.]
HIST 268 A History of Rome from Republic to Principate (also CLASS 268)  
Summer and spring. 4 credits. Open to freshmen. J. Ginsburg.
A survey of Rome and its empire. This course will examine the foundation of Rome’s Mediterranean empire and its political, social, and economic consequences; the constitutional and social struggles of the late Republic; the transition from Republic to Principate; society and the Caesars; the nature and limits of governing a world empire; the interaction of pagans, Christians, and Jews in the Roman world.

HIST 334 Byzantine Theocracy: Church and State from the Fourth to Eighth Centuries, A.D. (also CLASS 335, NES 340 and RELST 340)  
Fall. 3 credits. S. Wessel.
From its origins in the fourth century A.D., Byzantine state and society was dominated by two competing yet complimentary sources of power on the emperor, the Emperor, Imperial Court, and administrative apparatus (imperium), and on the other, the immense ecclesiastical organization (sacerdotium) under the jurisdiction of the Patriarch of Constantinople and the four additional Patriarchs of the great ecclesiastical sees (Alexandria, Antioch, Jerusalem, and Rome). This course proposes to study the multifaceted interrelationship between these two institutions throughout the first five centuries of Byzantine Empire; and aims to examine the impact that these institutions had on the formation of Byzantine society, culture, and religion. A variety of literary sources will be considered, including ecclesiastical histories, secular historiography, acts of conciliar proceedings, letters, and theological treatises, as well as material sources, such as coins and images.

HIST 367 Representations of Women in Ancient Greece and Rome (also CLASS 363 and WOMNS 363)  
For description, see Class 363.1

HIST 422 War, Citizenship, and Identity in the Greco-Roman City-State (also S HUM 421)  
Spring. 4 credits. B. Strauss.
The city-states of Greece and Rome are famous and infamous for their bellicosity. This seminar examines the influence of war on ancient citizenship and identity. We will focus on three sets of questions: (1) To what extent were such ancient ideal types as the citizen-soldier and farmer-soldier real, to what extent are they myths? (2) Did such military institutions as the phalanx, legion, and galley promote equality and egalitarianism? If so, did they also promote liberty, whether in democracies or oligarchic republics? Or did they promote tyranny and Caesarianism? (3) To what extent did the military shape male and female identity? What are we to make of myths such as the Amazons? We will focus on the various forms of political activity in ancient Rome, including the role of women in Roman political life; what role does gender have in Roman political discourse and ideology? Why do issues such as family, marriage, and sexuality become subjects of political debate and legislation?

HIST 450 The Peloponnesian War (also HIST 450 and CLASS 450/653)  
Fall. 4 credits. Prerequisites: History 265, Classics 211 or 217, or written permission of instructor. B. Strauss.
Famous as the subject matter of one of the most important books ever written about war—Thucydides’ history—the Peloponnesian War (431–404 B.C.) remains today the focus of study by historians, classicists, and political scientists. This course looks at the results of intensive and ongoing study by ancient historians and considers areas of future research. Topics include strategy, operations, and tactics; battle on land and sea; alliance politics, war and psychology; if the Peloponnesian War was really a historic turning point; war and ethics; Thucydides as a historian; and sources other than Thucydides. Graduate students should enroll in History 650.

HIST 452 The Tragedy of Classical Athens, 462–404 B.C.  
The nature of Athenian democracy, society, and culture in the “golden age” of Athens. The course will examine the influence of Athenian political life on the great tragedians of the age and the influence of tragedy on the Athenians’ conception of their character and history. Readings from Herodotus, Thucydides, Aeschylus, Sophocles, Euripides, Aristophanes, Plato, Aristotle, and Plutarch.

HIST 453 Crisis of the Greek City-State, 415–336 B.C.  
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2000–2001. B. Strauss.
The fortunes of the city-state and citizen in an age of uncertainty. The focus is on Athens with some attention paid to the wider Greek world. Topics include the nature of Athenian politics, Athenian society, cultural change, and war between the city-states, crisis as a historical concept, and anthropology and ancient Greek translation. Readings include Thucydides, Sophocles, Euripides, Aristophanes, Plato, Aristotle, Demosthenes, and Xenophon.

HIST 463 Gender and Politics in the Roman World (also CLASS 463 and WOMNS 464)  
Spring. 4 credits. Prerequisite: History 268, Classics 212, or permission of the instructor, J. Ginsburg.
This course will examine the relationship between gender and politics in the late Roman Republic and early Empire. Among the questions we will address are: Was politics the exclusive domain of men in Roman society (as is generally assumed) or does a broader definition of politics and an understanding of the various forms of political activity in ancient Rome might take allow a place for women in Roman political life? What role does gender have in Roman political discourse and ideology? Why do issues such as family, marriage, and sexuality become subjects of political debate and legislation?

HIST 465 Equality and Inequality in Ancient Greece (also CLASS 466)  
Fall. 4 credits. Prerequisite: History 265, Classics 211 or 217, or written permission of the instructor. Not offered 2000–2001. B. Strauss.
We will examine equality and inequality in Archaic and Classical Greek city-states ca. 650–400 B.C., with an eye toward politics, society and economics, culture, and gender relations. The course will focus on concepts and institutions such as ancient democracy, tyranny, oligarchy, “middling” ideology, and slavery, as well as theories of equality. All readings in English.

HIST 473 Roman Society and Politics under the Julio-Claudians (also CLASS 480)  
For description, see Classics 480.

HIST 630 Topics in Ancient History (also CLASS 632)  
Fall. 4 credits. B. Strauss.

HIST 151 Introduction to Western Civilization  
Fall. 4 credits. S. Pohl.
For description see Ancient European History.

HIST 152 Introduction to Western Civilization  
Summer and spring. 4 credits. R. Weil and P. Holquist.
For description see Modern European History.

HIST 204 Seminar: Age of Atlantic Revolution  
Fall. 4 credits. Seminar designed for underclassmen but open to all students. Enrollment limited to 15 students. Prerequisite: permission of instructor. Not offered 2000–2001. R. Weil.
"All the Atlantic Mountains shook," wrote the poet William Blake of the revolutions which toppled regimes across Europe and the Americas at the end of the eighteenth century. This course will explore the ideas, outcomes, and connections among events in America, France, Haiti, and Britain, through literary and philosophical texts: Wordsworth, Rousseau, Jefferson, Paine, Burke, Godwin, Tocqueville, and even Jane Austen.

HIST 211 Specters, Demons, and the Dead in European Society, 1200–1800  
Premodern Europeans believed that they could interact with supernatural apparitions in a variety of ways. The dead could return to admonish the living, demons might possess men and women, houses could be haunted by specters and poltergeists. What can we learn from a study of these beliefs about the ways in which Europeans regarded sin, punishment, the afterlife, and the role of the devil in their lives? What was the impact of the Reformation or the scientific revolution on these beliefs?

HIST 233 Seminar: The Politics of Religion in Early Modern Europe  
We will look at the impact of the reformation, counter-reformation and wars of religion on aspects of political, social, and cultural life in sixteenth-and seventeenth-century Europe, exploring shifts in gender relations, the problem of social control, the effect of religious conflict on the power of the state and its contested boundaries with the church, the relationship of elite and popular religion,
and the encounter of European missionaries with other cultures. Students will engage with primary sources.

[HIST 234 Seminar: Gender in Early Modern Europe (also WOMNS 234)]
Spring. 4 credits. Seminar designed for underclassmen but open to all students. Prerequisite: permission of instructor. Not offered 2000–2001. R. Weil.
An inquiry into how masculinity and femininity were defined in early modern Europe. Questions to be explored include: What purpose did gender distinctions serve in this particular society? To what extent were men and women able to shape and redefine the meaning of their gender? How was their ability to do so affected by such events as the Reformation and the French Revolution?

[HIST 257 English History from Anglo-Saxon Times to 1485]
A lecture course examining the political, cultural, and social transformations during the Reformation era through an exploration of aspects of state formation and ecclesiastical order, social and religious protest, and deviant behavior. Special attention will be paid to the interaction of differing kinds of historiography and the historian's understanding of literature and its use as a primary source. Lectures and class discussions.

[HIST 275 Authority and Resistance in Europe, 1400–1600]#
Spring. 4 credits. S. Pohl.
A lecture course looking at the political, cultural, and social transformations during the Reformation era through an exploration of aspects of state formation and ecclesiastical order, social and religious protest, and deviant behavior. Special attention will be paid to the interaction of differing kinds of historiography and the historian's understanding of literature and its use as a primary source. Lectures and class discussions.

[HIST 285 The Crusades]
Fall. 4 credits. P. Hyams.
A lecture course examining the Crusading Movement and the States it produced from the eleventh century to the fall of the mainland Kingdom of Jerusalem in 1299. The historical themes this generates are almost unlimited. The course treats the Christianity and Chivalry of the Medieval West, the confrontation of this culture with those of the Mediterranean and Islam, and what is perhaps the cradle of Western Colonialism. The very concept of “Crusade” itself is problematic today and will continue to cast its shadow on U.S. dealings with the Middle East. Sometimes spectacular readings allow students to choose from a very wide range of paper topics, and enjoy an excellent introduction to every aspect of the long-gone world of the Middle Ages.

[HIST 262 The Middle Ages: Introduction and Sampler (also RELST 269)]#
Spring. 4 credits. P. Hyams.
As a single-semester introduction to the period, this survey aims to convey what was significant in that area of the “West” that was to become Europe, between the end of the Roman Empire and the Renaissance, from 395 to 1400. It thus takes a critical look at a formative period of Western Civilization. The course is organized into modules, the first of which surveys in five weeks the major public developments in Political and Church History over the period. Other modules focus in some depth on select aspects, such as technology, music, material resources, and religions. Prerequisite: permission of instructor. Not offered 2000–2001. J. Najemy.

[HIST 263 The Earlier Middle Ages (also RELST 263)]#
A survey of medieval civilization from ca. 300 to ca. 1100 dealing with religious, intellectual, political, and economic developments in Western Europe.

[HIST 264 The High Middle Ages]#
A survey of medieval civilization 1100–1400, dealing with political, economic, religious, and intellectual developments in Western Europe. Special attention will be paid to the interaction of different kinds of historiography and the historian's understanding of literature and its use as a primary source. Lectures and class discussions.

[HIST 305 Britain, 1660–1815]#
Fall. 4 credits. R. Weil.
The British Isles from the Restoration of Charles II through the Napoleonic Wars. We will consider the domestic effects of war and Empire, luxury, commerce, and the public sphere; continuing conflicts over religious toleration, popular politics, and the relation of England to Ireland and Scotland. Readings include works by John Locke, Jonathan Swift, Adam Smith, Thomas Paine, Edmund Burke, and Jane Austen.

[HIST 349 Early Modern England]#
This course will explore the crises of political, religious, and cultural authority that plagued England in the sixteenth and seventeenth centuries. We will examine the political and cultural impact of the Protestant Reformation, the nature of Tudor despotism and Stuart absolutism, the construction of a rhetoric of political dissent around issues of sexuality and corruption, competing understandings of the social order and social control, the Puritan Revolution, and the invention of liberalism. Emphasis on close reading of contemporary sources, from autobiography and drama to political theory.

[HIST 350 The Italian Renaissance (also ITALL 221)]#
Spring. 4 credits. J. Najemy.
An exploration of intellectual, cultural, religious, and political developments in Italy from the political thought of Dante and Marsilius in the age of the communes, through the several stages of Humanism from Petrarch to Alberti to Pico, down to the crisis of Italian liberty in the generation of Machiavelli, Guicciardini, and Castiglione. The course will seek to problematize the notion of a “Renaissance” in the period's ambivalent attitudes toward history, politics, learning, culture, gender, language, and the role of intellectuals in politics and society. Emphasis will be placed on the close reading of primary sources and on issues of interpretation.

[HIST 351 Machiavelli (also ITALL 351)]#
This course will present Machiavelli in a variety of historical and interpretive contexts: European and Italian politics in the early sixteenth century; the decline of the Florentine republic and the rise of the Medicean principate; Machiavelli's own career in government and his, and the republic's, crisis in 1512–13; the intellectual traditions of Renaissance humanism, political thought, and the revival of antiquity; vernacular literary currents and popular culture; and the remarkable generation of political figures, writers, and theorists with whom Machiavelli associated and corresponded. Emphasis will be placed on a close reading of major works (including the letters, The Prince, the Discourses, Mandragola, and selections from The Art of War and the Florentine Histories, all in translation) and a critical examination, in the light of that reading, of some major modern interpretations of Machiavelli.

[HIST 361 The Culture of the Renaissance I (also ART H 350 and COM L 361)]#
For description, see COM L 362.

[HIST 364 The Culture of the Renaissance II (also COM L 362, ENGL 325, RELST 362, MUSIC 390)]#

[HIST 365 Medieval Culture, 400–1150 (also RELST 365)]#
Fall. 4 credits. Prerequisite: History 263 or permission of instructor. Not offered 2000–2001. J. J. John.
Intellectual and cultural developments in the age of monasticism, from St. Augustine and St. Benedict to St. Anselm and St. Bernard of Clairvaux.

[HIST 366 Medieval Culture, 1100–1300 (also RELST 366)]#
Fall. 4 credits. Prerequisite: History 264 or permission of instructor. Not offered 2000–2001. J. J. John.
The origin and development of the universities will be studied as background for a consideration of the scholastic mentality and its influence on the art, literature, philosophy, science, script, and theology of the period. Readings from Abelard, Hugh of St. Victor, Bonaventure, Thomas Aquinas, Dante, and others.

[HIST 368 Marriage and Sexuality in Medieval Europe (also RELST 368, WOMNS 368)]#
Few topics generate heat so readily as gender relations and sexuality. Behind the current controversies lie decisions made in the first Christian centuries, and formed up in the course of the Middle Ages, these still affect all of us, believers and unbelievers alike. This course studies Western attempts to deal with the problem of sexuality up to about 1500. The class will first clarify the church's normative rules of law and theology. Armed
with this framework, it will then turn to more specific topics, including homosexuality, prostitution, rape/abduction, and sexuality in medieval literature. The goal is to be able to compare the ideal model with the reality, and thus to assess the product the medieval church's pattern had on us and ourselves. No formal prerequisite, though some prior knowledge of medieval European history is desirable.

HIST 369 The History of Florence in the Time of the Republic, 1250-1530  
Fall. 4 credits. J. Najemy.
Florentine politics and society from the communal period through the age of Dante, the rise and decline of the guild republic, the age of civic humanism, and the rise of the Medici, to the crisis of the republic in the time of Machiavelli. Social classes and conflicts, the elite, economic structures, the working classes, guilds, family history, women, and political and historical ideas are considered in the context of the emergence and transformation of republican government.

HIST 405 Population and History  
For description, see Comparative History.

HIST 408 Feudalism and Chivalry: Secular Culture in Medieval France, 1000-300  
Fall. 4 credits. No prerequisites; History 262, 263 or 264 would help. P. Hyams.
An upper-level seminar on the main currents of noble lay culture in France, which led European fashions in love, warfare, entertainment, and environment through most of the period. There will be heavy emphasis on contemporary sources (in English), including lively and complete readings from epic literature (the Song of Roland), lives, and chronicles.

HIST 409 Seminar on Work in Europe and America  
For description see Comparative History.

HIST 427 Power and Society in Early Medieval Europe and Japan  
Spring. 4 credits. Prerequisite: a course in medieval European or Japanese historical studies, or permission of instructor. Not offered 2000-2001. P. Hyams and J. Piggott.
This seminar will focus on structures, processes, and practices of society in early medieval Europe and Japan. It will provide a forum for discussion of the ways in which, in some very different societies, Europeans and Japanese handled power. We will also be interested in comparing historiographical methodologies employed and issues considered by historians of these societies.

HIST 444 Seminar: Witchcraft, Magic, and the Occult in Europe, 1400-1700  
Spring. 4 credits. Enrollment limited to 15 students. Prerequisite: permission of instructor. S. Pohl.
A study of attitudes toward magic, witchcraft, astrology, specters, and demons in late medieval and early modern Europe and what they reveal to us about religious beliefs, concepts of community, and gender relations. Special attention will be given to the role the Church played in defining the occult: which aspects it legitimated and which it condemned. Other topics include the influence of humanism, the Reformation, and the Scientific Revolution on attitudes toward the occult. We shall also undertake an analysis of the historiographical model which opposes "elite" to "popular" ideas. The course emphasizes close analyses of primary works, including literary and visual sources.

HIST 446 Law, Crime and Society in Europe, 1400-1700  
Spring. 4 credits. Prerequisite: permission of instructor. Not offered 2000-2001. S. Pohl.
This comparative study focuses on Germany, England, France, Italy and centers on the social and legal treatment of crimes of violence. Throughout the course, we shall consider the differences and similarities between English common law and continental legal systems. Major issues to be covered include the role of criminal justice, the fate of customary methods of conflict resolution in a time of increasing legal centralization, and the relationship between cultural and legal change. We shall approach these issues by examining, among other things, the development of criminal procedure, the role of lawyers, contested notions of criminal responsibility, and the self-presentation of defendants. The course emphasizes close readings of primary works, including trial documents and literary sources.

HIST 447 Crusaders and Chroniclers  
An intensive reading seminar offering a natural progression from History 259 The Crusades. It will examine contemporary accounts of the crusading movement in English translations. The twin goals are to follow select themes of crusading history to a deeper level than is possible in History 259 and to study medieval historiography through whole chronicles and other primary sources.

HIST 451 Lord and Peasant in Europe: A Seminar in Social History  

HIST 464 Murder, Warfare, and the State: Violence in Europe, 1300-1800  
Fall. 4 credits. Permission of instructor. S. Pohl.
An inquiry into forms of and attitudes toward violence in late medieval and early modern Europe. Questions to be explored include: How violent was premodern Europe compared to modern Europe? How did the various cultural legitimations of violence change over time? We will examine these questions by analyzing forms of interpersonal violence as well as violence orchestrated by the state, such as warfare and capital punishment.

HIST 468 Love and Sex in the Italian Renaissance (also ITALL 468)  
Fall. 4 credits. J. Najemy.
An exploration of the representation of love, sex, and eros in Italian Renaissance literature and the attempts by secular governments and the Church to manage, discipline, and punish sexual transgression. Primary texts include Boccaccio's Decameron, Fifteenth-Century Italian文献, plays by Machiavelli (Mandragra, Clizia) and Bibbiena (Calandria), and Aretino's Dialogues. Secondary readings include studies of sexual crime, love across social boundaries, prostitution, homosexuality, and lesbianism.

HIST 472 Politics and Culture in Eighteenth-Century England  
Between 1660 and 1800 England experienced imperial and economic expansion, the Enlightenment, and a revolution abroad and at home. How in this context did people interpret and imagine the nature of the social order, political authority, and the family? We will consider the changing and fiercely contested notions of property, politeness, crime and punishment, sexuality, Empire, slavery, and the market.

HIST 479 Patronage and the Medici (also ART H 446)  
Spring. 4 credits. J. Najemy and S. Reiss.
Between the early fifteenth and sixteenth centuries, the Medici family of Florence rose from the ranks of the city's merchant bankers to become virtual rulers of the republic, cardinals and popes in Rome, and eventually hereditary grand dukes of Tuscany. Much of
the family’s power and fame derived from two kinds of patronage: the social and political patronage that established their political influence; and the artistic and cultural patronage central to the fashioning of their image and the realization of their princely ambitions. This seminar will explore the connections between the two kinds of patronage with a focus on primary sources, works of art and architecture, and recent historical and art historical scholarship.

HIST 481 The English Revolution #
Fall. 4 credits. R. Weil. Between 1640 and 1660, England experienced two decades of civil war and revolution and embarked on a fascinating series of attempts to reorganize political and religious life. Women and the lower classes emerged as actors on the political stage, radical religious sects flourished, and the nature of authority was questioned in both the family and the state. This course will explore the political, cultural, religious, and social dimensions of the English Revolution, using mostly primary sources.

[HIST 496 Theorizing the Public Sphere (also COM L 496 and GERST 496)]
Fall. 4 credits. Not offered 2000–2001. P. Hohendahl. For description, see GERST 496.

[HIST 651 Old English Literature in Its Historical Context (also ENGL 710)] #
Spring. 4 credits. Not offered 2000–2001. P. Hyams, T. D. Hill. This graduate course, cross-listed with English 710, might equally be known as "Anglo-Saxon England: History and Literary Context." It studies the written sources for major questions of Anglo-Saxon history in their literary and cultural context. It concentrates on important texts extant in both Latin and Old English. Comparison can illuminate the resources and intentions of writers, compilers, and copyists, the literary and linguistic culture of England, and the ways in which historians might most fruitfully study such texts. Bede’s Ecclesiastical History and Battle of Maldon, Aelfric’s Collequies, selections from the Anglo-Saxon chronicle, Beowulf, laws, homilies, and wisdom literature are all likely to come under scrutiny. One goal is to reclaim for European religious history a corpus of material that historians neglect because it is in Old English.

HIST 653 England—Britain—Europe in the Middle Ages #
Spring. 4 credits. P. Hyams. This graduate seminar tentatively explores the coming move from the study of medieval English history to that of the British Isles and its inhabitants within the wider context of Europe and Western Christendom. Readings will mostly be representative original sources. The precise texts and topics studied will depend on the interests (and especially future teaching plans) of participants, but will certainly allow for a critical examination of existing literature on the general and cultural history of England, Scotland, Ireland, and Wales.

[HIST 663 Graduate Seminar in Renaissance History]

HIST 664-665 Seminar in Latin Paleography
664, fall; 665, spring. 4 credits each term. Hours TBA. J. J. John.

[HIST 666 Seminar in Medieval History]

[HIST 669 Politics, Power, and Culture in Early Modern England]
Fall. 4 credits. Not offered 2000–2001. R. Weil. An inquiry into how the ruling class ruled, and what that meant to and for everyone else. Topics include the invention of the "state," the relationship of central and local power; clientage and corruption; the construction of categories of "public" and "private," representations of monarchy, hegemony, and resistance; court culture, and the social interpretations of the English Revolution and their critics. Focus is on historiography and methodology, with some engagement with primary sources.

Modern European History

HIST 152 Introduction to Western Civilization (1600 to the End of World War II) #
Spring. 4 credits. P. Holquist and R. Weil. This course offers a comparative perspective on the development of nation-states, societies, and cultures in Europe and North America. Religious and scientific revolutions in early modern Europe; European expansion and conquest; Enlightenment and revolution; liberalism, capitalism, and communism; the politics of race, slavery, and the new imperialism; the World Wars and the Holocaust; the Cold War; the modern and the post-modern in European and American culture.

[HIST 220 The French Experience: An Introduction (also FRLIT 224)]
Fall. 3 credits. Not offered 2000–2001. S. Kaplan and M. Greenberg. An examination of French society culture and institutions. What has made French culture so distinctive? Its literature and its revolutions, its gastronomy and fashion, its painting, cathedrals, and cinemas? Looking attentively at texts, images, and contexts from selected moments in the seventeenth, eighteenth, nineteenth, and twentieth centuries, we will attempt to unravel some of the defining enigmas of the French experience. Two lectures/week in English and one section (one section conducted in English, one in French). Readings available both in French and English translation.

[HIST 267 History of Zionism and the Birth of Israel (also JWST 290, NES 290)]
Spring. 4 credits. Not offered 2000–2001. V. Caron. This course will examine the history of Zionism as an ideology and political movement from its origins in the nineteenth century to the present. Attention will be paid to situating Zionism within the context of modern Jewish, European, and Middle Eastern History. Topics will include: the ideological foundations of Zionism; the role of Theodor Herzl and the rise of political Zionism; the Balfour Declaration; the development of the Yishuv; Zionism as a cultural identity for Diaspora Jewry, the British mandate, the Arab-Zionist encounter; Zionist responses to the Holocaust; and Zionism and contemporary Israeli society.

[HIST 283 Europe in the Technological Age]
Spring. 4 credits. Not offered 2000–2001. J. Weiss. An introduction to politics, culture, and technology in contemporary Europe. In the sections on politics a survey of party systems, their interactions with social movements is followed by examinations of post-Communist constitution and political structures, the New Germany, and the European Union. The section on European culture pays special attention to the European press and electronic media as shapers and reflectors of cultural values. A section on the struggle over the control of the past deals with tensions and conflicts in European national memories. In the section on nationalism and ethnicity, political and cultural approaches are combined in consideration of the wars in former Yugoslavia as well as less violent conflicts between nationalists and members of ethnic minorities elsewhere in Europe. The section on technology deals with the design of products and processes as a cultural phenomenon, making cross-national comparisons of some of the social, cultural, and institutional influences on engineering performance.

[HIST 285 From Medievalism to Modernity: The History of Jews in Early Modern Europe, 1492–1789 (also NES 245, JWST 253)]
Fall. 4 credits. Not offered 2000–2001. V. Caron. This course will examine the history of European Jewry during the centuries of transition from the Middle Ages to the Modern Era. We will examine the extent to which traditional Jewish life began to break down during this period and thus paved the way for the emergence of modern Jewry. Topics will include the impact of the Spanish Expulsion of 1492; religious, intellectual, and socioeconomic dimensions of the Marrano dispersion, including Lurianic Kabbalah and the Jewish movement of Shabbetai Zevi; the establishment of Jewish communities in the West; the end of the "Golden Age" of Polish Jewry and the rise of Hasidism; the changing economic and political role of Jews in the seventeenth and eighteenth centuries; and the impact of the Enlightenment.

HIST 290 Twentieth-Century Russia and the Soviet Union
Spring. 4 credits. P. Holquist. An introductory lecture course spanning the lifetime of the USSR (1917–1991), but covering the last years of the Russian Empire and the first years of the post-communist present as well. Geographically, it focuses on the Russian heartland and the non-Russian areas of the Soviet Union. The course will explore the roots and consequences of the Russian Revolution, the nature and evolution of Leninism, Stalinism, and Soviet communism; the entrenchment of reform of the post-Stalinist system; and the legacy of communism for the region’s new regimes. Students are introduced to a wide variety of historical materials, including documents, essays, memoirs, literature, and film.

[HIST 291 Modern European Jewish History, 1789–1948 (also JWST 252)]
Jewish life in Europe experienced a profound transformation as a result of the process of Jewish emancipation which began at the end of the eighteenth century. While emancipation offered Jews unprecedented social, economic, and political opportunities, it also posed serious challenges to traditional Jewish life and values by providing new avenues of integration. This course will examine the ways in which Jewish and non-Jewish society responded to these new developments from the eighteenth century Enlightenment to the post-World War II era. Topics will include Jewish responses to emancipation, including assimilation and new varieties of religious accommodation; the development of modern antisemitism; the rise of Zionism and the creation of the state of Israel; the modernization of Eastern European Jewry; the impact of mass immigration; and the Nazi era. 

[HIST 355] The Old Regime: France in the Seventeenth and Eighteenth Centuries #
Fall. 4 credits. Not offered 2000-2001. S. Kaplan. A systematic examination of the social structure, economic life, political organization, and collective mentalities of a society that eclipsed all others in its time and then, brutally and irreversibly, began to age. France, in European perspective, from the wars of religion through the age of Voltaire.

[HIST 356] The Era of the French Revolution and Napoleon #
Spring. 4 credits. Not offered 2000-2001. S. Kaplan. A study of the failure of the traditional system, its destruction and its replacement in France, and the international consequences. Focus will be on the meaning of the revolutionary experience, the tension between the desires to destroy and to create, and the implications of the Revolution for the modern world.

[HIST 357] Survey of German History, 1648-1890 #
Fall. 4 credits. Open to freshmen with permission of instructor. Not offered 2000-2001. Next offered fall 2002. I. Hull. An examination of the social, political, intellectual, and diplomatic history of the German states from the devastation of the Thirty Years' War, through absolutism, the bourgeois revolutions of 1848, the struggle for unification, to the beginning of the modern industrial state.

[HIST 358] Survey of German History, 1890 to the Present #

[HIST 362] European Cultural History, 1750-1870 (also COM L 352) #
Fall. 4 credits. M. Steinberg. This course will focus on the making of middle-class culture, society, and imagination from the Enlightenment through the French Second Empire. There will be three units with national and thematic focus: Germany in the period of Enlightenment, emancipation, and the burgeoning of national consciousness, questions of law, property, gender, and sexuality in early-nineteenth-century England; modernism and urbanism in Second Empire France. Primary readings (including novels, paintings, and operas) will be considered along with contemporary historical and theoretical readings.

[HIST 363] European Cultural History, 1870-1945 (also COM L 353) #
Spring. 4 credits. M. Steinberg. This course will focus on the meanings of modernity, identity, and ideology in comparative European contexts. We will address the politics and culture of German nationalism, French urbanism and religious revival, the cultural origins of Expressionism, technological culture (including film), and the cultural origins and dynamics of fascism. As in 362, primary materials (including Wagner, Nietzsche, George Eliot, Freud, Benjamin, and Alfred Hitchcock) will be considered along with recent theoretical work.

[HIST 370] History of the Holocaust (also JWST 353) #
Spring. 4 credits. Each student must enroll in a section. Not offered 2000-2001. V. Caron. This course will analyze the meaning of the Holocaust from three vantage points: that of European history, that of Jewish history, and that of those states and religious institutions that shared responsibility by having stood by in silence. Topics include: the evolution of modern anti-semitism; the role of anti-semitism in the Nazi ideology and program; the bureaucratization of death; Jewish life in ghettos and concentration camps; the fate of Jews in occupied Europe and the question of collaboration; Jewish political behavior under duress; the responses of the Western allies and the Churches; contemporary interpretations of the Holocaust and the meaning of evil.

[HIST 371] World War II in Europe #
Fall or summer. 4 credits. J. Weiss. The Second World War remains the single most important set of events shaping the contemporary world. The course deals with both the events of World War II as they shaped European and world history and the way those events were remembered and commemorated in postwar years. Lectures, screenings, and readings examine: the dynamics and diplomacy of fascism, the re-invention of liberal-democratic and Communist culture, the end of colonial empires in the West, opposition movements in Eastern Europe, and the general upheaval of 1968.

[HIST 372] Europe in the Twentieth Century: 1968-1990 #
Spring. 4 credits. Not offered 2000-2001. J. Weiss. The major political developments in Europe between the upheavals of 1968 and the collapse of Communist regimes. Topics will include the effects of economic downturn in 1973-1974; the response to terrorism; regionalist movements; new ethnic minorities in their oppositions; Socialist governments in southern Europe; the arrival of democracy in Spain, Portugal, and Greece; new dynamics in the European Community; the rise of Thatcherism; the war scare of the 1980s; and the final phase of the Cold War.

[HIST 405] Population and History #

[HIST 406] The People in the French Revolution #
Fall. 4 credits. Not offered 2000-2001. S. Kaplan. The Revolution was nothing if not a mass event. Mass action played a critical part in shaping its course. The "re-invention" of France affected the population down to each village and demanded decisions from virtually every adult. This course will focus on the people as actors: their collective memory, their ideologies, their repertoire of intervention, the formation of a popular political culture. It will examine the encounters between the people (in their multiple incarnations) and the government, sites who sought to articulate and appropriate the Revolution. A major theme will be the tension of violence, and the emergence of millennial visions of the future.
HIST 674 Graduate Seminar in German History, 1770-1918

HIST 675 After the Divide: German Critical Theory of the Seventies and Eighties (also COM L 675 and GERST 675)
For description, see GERST 675.

HIST 678 Seminar in Modern European Social History

HIST 750 European History Colloquium
Fall and spring. 4 credits, each term. Kaplan, Holquist (fall); Steinberg, staff (spring).
A research colloquium designed for European history graduate students. The colloquium will offer a forum for students to present papers and to discuss the work of visiting scholars.

HIST 709 Introduction to the Graduate Study of History
Fall. 4 credits. Required of all first-year graduate students. S. Cochran and R. L. Moore.
The course is designed to introduce entering graduate students to crucial issues and problems in historical methodology that cut across various areas of specialization.

HISTORY OF ART
The Department of the History of Art provides a broad range of introductory and advanced courses in Western art (European and North American) and non-Western art (East and Southeast Asian, African), from antiquity to the present.

The Major
Department majors acquire a broad understanding of the history of art in several chronological and geographical areas: ancient, medieval, Renaissance, modern (Europe and North America), Southeast Asia, China, Japan, and Africa. Additionally, majors practice a range of art historical methods and interpretive strategies, including connoisseurship, dendrochronology, feminism, iconography, semiotics, and social history. Majors are encouraged to locate the history of art within allied humanities fields and the applied arts by taking courses in history, literature, history of architecture, and fine arts. The study of foreign languages is encouraged strongly.

Requirements for the Major
Prospective majors should consult the director of undergraduate studies. Students wishing to declare a major in the history of art should complete two courses at Cornell in the department by the end of their sophomore year. These courses should reflect the diversity of the departmental offerings. One must be at the 200 level, and one—but not both—must emphasize material either predominantly before 1800 or outside Europe/North America. These two courses are prerequisites for the major and a grade of C or above is required for admission; courses must be taken for a letter grade. These courses do count toward the total 44 credits. The major in the history of art requires 44 credits, 30 at the 300 level or above. The core requirements: proseminar, one 400-level area seminar, two courses in art outside Europe/North America; three courses in art predating 1800 (ancient, medieval, or Renaissance/Baroque). Majors must choose at least two courses from different categories. In addition to the 44 credits, majors are required to take two courses, approved by their advisers, in areas related to the history of art.

Honors
To become a candidate for the degree of Bachelor of Arts with honors in the history of art, a student must have a cumulative average of B+ for all courses taken in the department and in all arts and sciences courses. Application to write an honors thesis should be made to the director of undergraduate studies during the second term of the junior year. The application must include a summary of the proposed project, an endorsement by a faculty sponsor, and a copy of the student's transcript. In the senior year the honors candidate will include in his/her course load, History of Art 600 and 601. These courses address the research and writing of the senior thesis under the direction of the student's project adviser.

Course Numbering System
100-level courses are freshman writing seminars.
200-level courses are introductions to the major subdivisions of Western art and art outside the West.
300-level courses are intermediate courses addressing more specialized topics or epochs.
400-level courses are seminars primarily for advanced undergraduates and graduate students.
500-level courses are seminars primarily for graduate students.

First-Year Writing Seminars
For First-Year Writing Seminar offerings in the History of Art, see the John S. Knight Writing Program brochure. These courses may be used as freshman electives but not to satisfy the distribution requirement.

Courses
ART H 200 Art, Archaeology, and Analysis (also ARCH 285, MS&E 285, ENGR 185, GEOG 200, PHYS 200)
Fall. 4 credits. Staff.
For description see Geology 200.

ART H 202 Survey of European Art: Renaissance to Modern #
Summer only. 3 credits. Staff.
The major traditions and movements in western European art from the Renaissance to the modern period. Painting, sculpture, and architecture with an emphasis on painting.

ART H 220 Introduction to Art History: The Classical World (also CLASS 220) #
Fall. 4 credits. Each student must enroll in a section. J. Rife.
An overview of the art and archaeology of the Greek and Roman world. The sculpture, vase painting, and architecture of the ancient Greeks from the Geometric period through the Hellenistic, and the art of the Romans from the early Republic to the time of Constantine the Great.

ART H 221 Minoan-Mycenaean Art and Archaeology (also CLASS 221 and ARKEO 221) #
Spring. 3 credits. J. Coleman.
For description, see Classics 221.

[ART H 224 Archaeology in Action I (also CLASS 232 and ARKEO 232) #

[ART H 225 Archaeology in Action II (also CLASS 233 and ARKEO 233) #
Objects from the Classical, Hellenistic, and Roman periods are "dug" out of Cornell basements, identified, cleaned, restored, catalogued, and photographed and are...
considered in their appropriate historic, artistic, and cultural contexts.]

**ART H 230 Introduction to Art History: Monuments of Medieval Art (also RELST 230)** #

Spring. 4 credits. Each student must enroll in a section. C. Lazaro.

An introduction to the approaches to art history through a study of selected works of art from the Middle Ages: architecture, sculpture, painting, manuscript illumination, metalwork, and ivory.

**ART H 245 Introduction to Art History: Renaissance and Baroque Art #**

Fall. 4 credits. Each student must enroll in a section. C. Lazaro.

A survey of major works of European painting, sculpture, and architecture from 1400 to 1700. The focus is on preeminent artists, workshop methods, style, meaning, patronage, and the function of art in a range of social contexts. The course also covers the methods of art history currently practiced in Renaissance and Baroque studies. Weekly section meetings are required.

**ART H 260 Introduction to Art History: The Middle Ages #**

Spring. 4 credits. Not open to students who have taken History of Art 261. Each student must enroll in a section.

J. E. Bernstock.

A discussion of the most important developments in art from 1780 to the present. The emphasis is on major movements and artists such as Romanticism (Delacroix), Realism (Courbet), Impressionism (Monet), Post-Impressionism (van Gogh), Cubism (Picasso), Fauvism (Matisse), Surrealism (Miró), Abstract Expressionism (Pollock), and Pop Art (Warhol).

**ART H 261 Introduction to Art History: Modern Art**

An introduction to early modern art as it developed between the French Revolution and World War I. Both European and American movements are examined, including Romanticism, Impressionism, and Cubism. Units are organized around central figures such as Goya, Picasso, Matisse, Kandinsky, and Warhol. Lectures are supplemented with discussions of methods of inquiry, including social history and feminism, fundamental to interpreting works of art.

**ART H 270 Mapping America (also AM ST 270)**

Fall. 4 credits. Each student must enroll into a section. L. Meixner.

An introduction to American art from colonial mercantilism through the Great Depression. Through a variety of sources including maps, paintings, street festivals, political cartoons, photographs, and advertisements, we will explore the social and economic factors that shaped American identities. Emphasis on the representation of race, class, and ethnicity.

**ART H 280 Introduction to Art History: Approaches to Asian Art @ #**

Arranged according to selective focus and emphasis rather than broad chronological survey, this course introduces students to the varied responses of the Asian artist in diverse social, geographical, and historical contexts. Indian miniature paintings, Japanese prints, high-fired ceramics from Thailand and Vietnam, Indonesian textiles and jewelry, Javanese shadow-puppet theater, and Balinese ritual and performance traditions will be explored. A number of class sessions will meet in the Herbert F. Johnson Museum of Art.

**ART H 309 Dendrochronology of the Aegean (also CLASS 309 and ARKEO 309)**

Fall and spring. 4 credits. Prerequisite: permission of instructor. Limited to 10 students. P. I. Kuniholm.

Participation in a research project of dating modern and ancient tree-ring samples from the Aegean and Mediterranean. Supervised reading and laboratory work. A possibility exists for summer fieldwork in Greece and Turkey.

**ART H 319 Art in the Daily Life of Greece and Rome (also CLASS 319)** #

Classical art is well reflected in the small items of daily life that are neglected frequently in the standard histories. This course looks at the making and decorating of household items in Greece and Rome in a variety of materials from clay to metal. The links between the commissions of the state and the tastes of the people are examined through their material culture.

**ART H 320 The Archaeology of Classical Greece (also CLASS 320)** #

**ART H 321 Mycenaean and Homer (also CLASS 321 and ARKEO 321)**

For description, see CLASS 321.

**ART H 322 Arts of the Roman Empire (also CLASS 350)** #

Fall. 4 credits. A. Ramage.

The visual arts in the service of the first world state. The course starts with the architecture, painting, and sculpture of the Etruscan and Republican periods and continues on to the monuments of the Imperial era in Italy and the provinces until the time of Constantine. Art made for private patrons is considered, along with the official presentations of the emperors.

**ART H 323 Painting in the Greek and Roman World (also CLASS 323)** #

**ART H 325 Greek Vase Painting (also CLASS 325)** #

Fall. 4 credits. A. Ramage.

A stylistic and iconographic approach to an art in which the Greeks excelled. The course will be arranged chronologically from the early (eleventh century B.C.), anonymous beginnings to the “personal” hands of identifiable masters of the fifth and fourth centuries B.C. Styles of cities other than Athens will be stressed.

**ART H 326 Greek Cities and Towns (also CLASS 326)** #

**ART H 332 Architecture in the Middle Ages (also ARCH 382, RELST 332)** #

A survey of medieval architecture from the Early Christian period to the Late Gothic (A.D. 300–1500). Considerable emphasis will be placed on the development of structural systems and on the form, function, and meaning of important medieval buildings.

**ART H 333 Early Medieval Art and Architecture #**

Sculpture, painting, and architecture in the period from the late antique through the Carolingian era (A.D. 300–900). The evolution of the early Byzantine tradition will also be considered.

**ART H 335 Gothic Art and Architecture (also RELST 335)** #

An examination of Italian art, beginning with twelfth-century Sicily, and with emphasis on thirteenth- and fourteenth-century sculpture, painting, and to a lesser extent, architecture, which includes the works of Duccio, Giotto, the Pisani, and Lorenzetti as the prelude to the Italian Renaissance.
ART H 337 The Medieval Illuminated Book (also RELST 337) #
G. Calkins.
A study of selected major examples of medieval illuminated manuscripts from between A. D. 300 and 1500. Facsimiles of major manuscripts such as the Lindisfarne Gospels, the Book of Kells, and the Hours of Mary of Burgundy will be examined. Students will write a research paper on a manuscript of their choice. Two lectures, plus a session each week in the Rare Book Room.]

ART H 341 Flemish Painting (also RELST 342) #
G. Calkins.
An examination of Flemish painting in the fifteenth century, with emphasis on the works of Robert Campin, Jan van Eyck, Roger van der Weyden, Hugo van der Goes, Hans Memling, and ending with Jerome Bosch. Issues of the social, economic, and devotional context will be discussed as they pertain to the particular development of Northern Realism and Symbolism during this century.

ART H 343 Italian Renaissance of the Fifteenth Century #
C. Lazzaro.
This course examines the artistic production of the fifteenth century in its social and cultural context. The new style, which was developed in Florence in the early century and spread to other city-states in Italy, is examined in the context of the new educated class, the increased wealth of the mercantile, urban class, and the new role of family in society.

ART H 344 Italian Renaissance of the Sixteenth Century: Leonardo, Michelangelo, and Raphael #
C. Lazzaro.
This course focuses on the three great artists of the late fifteenth and sixteenth centuries, Leonardo, Michelangelo, and Raphael. It examines each as a thinker as well as an artist, through their own writings together with their work of painting, sculpture, and architecture. It also analyses the contemporary constructions of the artist as genius and as courtier in the biographies and other writings about them.

ART H 345 Rome, Florence, and Venice in the Sixteenth Century #
C. Lazzaro.
This course examines the distinctive cultural identities of Rome, Florence, and Venice, and how art, architecture, and urban planning served to create the myths and self-images of these cities, their rulers, and society. Topics include the centers of power, relationship of church and state, and private patronage and collections.

ART H 348 Renaissance Art in Northern Europe: The Sixteenth Century #
Spring. 4 credits. S. Hassan.
This course will examine the painting, graphic arts, and sculpture of Northern Europe in the sixteenth century. Principal emphasis will be on art produced in the Netherlands and Germany. Topics to be considered include patronage and audiences in different regions of Northern Europe, the importance of fifteenth-century traditions, the impact of Italian art, and the development of specifically northern forms of artistic expression in religious and secular art, including landscape, portraiture, and genre painting. Among the themes we will explore are constructions of gender and representations of women in Northern Renaissance art. The artistically rich towns and the urban lower classes, the impact of the Protestant Reformation and iconoclasm, and the development of the art market in the North. Artists to be considered include Bosch, Bruegel, Dürer, and Grünewald.

ART H 350 The Culture of the Renaissance I (also HIST 361 and COM L 361) #

ART H 351 The Culture of the Renaissance II (also COM L 362, HIST 364, MUSIC 390, RELST 362, ENGL 325) #
W. J. Kennedy, C. Kaske.
For description, see COM L 362.

ART H 353 Art and Death in Europe: 1250–1600 #
S. Reiss.
This course will explore the cultural, religious, and political contexts in which the visual arts and the developed arts and ideas of the funerary and mortuary rituals of Europe from the thirteenth through the sixteenth centuries. Topics to be considered include the expression of death in the art forms of sculpture, painting, and architecture, the symbolic and physical nature of the art and its relationship to the processions, rituals, and ceremonies of mourning and commemoration, the political and religious implications of the art, and the changing cultural attitudes towards death, the relation between death and eroticism, funerary rituals, and especially, tomb sculpture and mortuary structures in Italy, France, the Netherlands, Germany, England, and Spain.

ART H 360 Painting and Everyday Life in Nineteenth-Century America (also AM ST 360) #
L. L. Meixner.
Nineteenth-century American painters often constructed images of "exceptionalism," DeToqueville's term for the social harmony and material abundance he considered unique to the New World. Embedded in these icons of national cohesion, however, were signs of race, class, and political conflict that we will decode through interdisciplinary methods. We will explore England and the United States as "exceptional" in the context of European and world history. Topics will include portraiture and commodity, Hudson River landscape and corporate (railroad) patronage, images of African-Americans and Reconstruction, images of Native Americans, the West, and humanitarianism. Through these, we will challenge the assumption that American art celebrated democracy, and consider more conflicted attitudes. Our key artists include John S. Copley, George Caleb Bingham, Winslow Homer, Mary Cassatt, and Thomas Eakins. Our readings include art historical texts and others by Poe, Emerson, and Whitman.

ART H 362 Impressionism in Society #
L. L. Meixner.
This course discusses French Impressionist images as the products of a century-long public life. By relating Impressionism to the state culture of the Third Republic, including universal expositions, we will trace subversive themes such as criminality, cafe and brothel societies, class-conscious prostitution, and class-regulated leisure. Alongside the "Haussmannization" of Paris and urban commodity culture, we will consider French agrarian identity, landscape, and utopia.

ART H 365 U.S. Art From FDR to Reagan (also AM ST 355)
Fall. 4 credits.
J. E. Bernstock.
Major artists and movements in the United States since 1940, beginning with Jackson Pollock and Abstract Expressionism, and continuing through recent developments in art. Attention is devoted to the critical reception that artists have received and to artists' statements themselves.

ART H 370 Visual Culture and Social Theory (also GOVT 375 and COM L 368)
Fall. 4 credits.
S. Buck-Morss.
For description, see Government 375.

ART H 371 Architectural History of Washington, D.C. #
Fall or spring. Variable credit. Only for students in the Cornell-in-Washington program. Only for non-architects. P. Scott. A historical and critical survey of the architecture of Washington. Attention will be given to the periods, styles, architects, and clients—public and private—of the notable buildings and to the urban space of the nation's capital. The vocabulary of architectural analysis and criticism will be taught. Field trips required.

ART H 377 African American Art (also AS&R C 304)
Spring. 3 credits.
S. Hassan.
For description, see AS&RC 304.

ART H 378 Art in African Culture and Society (also AS&R C 310) @
Fall. 3 credits.
S. Hassan.
For description, see AS&RC 310.

ART H 380 Introduction to the Arts of China (also ARKEO 380 and ASIAN 383) @
Fall. 4 credits.
A. Pan.
This course offers a survey of the art and culture of China, from the Neolithic period to the twentieth century. We begin with an inquiry into the meaning of national boundaries and the controversy of the Han Chinese people, which will help us identify the scope of Chinese culture. Our main concern (for prehistoric Chinese culture will be presented through both legends about the origins of the Chinese and scientifically excavated artifacts. Art of the dynastic and modern period will be presented in light of contemporaneous social, political, geographical, philosophical and religious contexts. Students will work directly with objects in the Herbert F. Johnson Museum of Art.

ART H 384 Introduction to the Arts of Japan @
Spring. 4 credits.
A. Pan.
A civilization more deeply a part of the Asian continent, Japan developed a unique culture that reflects both continental and indigenous characteristics. This course examines pre-and post-contact with continental culture and the process of artistic acculturation and assimilation in successive periods of Japanese art history.

ART H 385 Representation and Meaning in Chinese Painting (also ASIAN 384)
A. Pan.
Using major monuments of art, this course introduces various aspects of Chinese painting through socio-political and religious history. The focus is on understanding the aesthetic criteria, artistic movements, stylistic transformations, and agendas of different social
classes. Weekly sections will meet at the Herbert F. Johnson Museum so that students can gain first-hand experience examining and handling Chinese paintings.)

**ART H 395 The House and the World:** Architecture of Asia (also ASIAN 394)  
Spring. 4 credits. K. McGowan.  
In many Asian societies, houses are regarded as having a life force or a vitality of their own. This course will examine the role of the house as a living organism in Asia, a symbol of the cosmos encapsulated. Houses also function in many societies as storehouses for material and immaterial wealth; artifacts such as textiles, jewelry, sculptures, and masks function within the house as ancestral heirlooms, conveying their own currents of life force, the power from which serving to blend with the vitality of the house. This accumulation of energy can be conferred on the inhabitants, or it may exist as a quiet reservoir of power, distinct from its occupants. The indigenous architectural traditions of India, Vietnam, Thailand, Indonesia, and the Philippines will be examined. By studying the inhabited spaces of others, divining their technologies of construction and their applied symbologies, students will be provided with powerful tools for examining the visual skills and sensibilities of other cultures. “The House and the World” will serve as the metaphor for these discover.

**ART H 396 The Arts of Southeast Asia  (also ART H 396)  
The arts of Southeast Asia will be studied in their social context, since art plays a role in most of the salient occasions in life in traditional societies. Special emphasis will be devoted to developments in Indonesia, Thailand, and Cambodia. Among topics covered will be the shadow puppet theater of Java, textiles, architecture, sculpture, and Bali’s performance tradition.

**Seminars**

Courses at the 400 and 500 level are open to upperclass students, majors, and graduate students. All seminars involve the writing and presentation of research papers. Enrollment is limited to 15 students, and permission of the instructor is required. Students may repeat courses that cover a different topic each semester.

**ART H 400 Proseminar for Art History Majors: The History and Practice of Art History**  
Fall. 4 credits. Prerequisite: History of Art majors only. Enrollment is limited. C. Lazzaro.  
This seminar examines the history of the discipline of art history and focuses on the various approaches and methods of its practitioners. We begin with the early history of the discipline, but concentrate on the twentieth century and the concerns with style, iconography, social history, and the post-structuralist theories of the last decades.

**ART H 401 Independent Study**  
Fall or spring. 2–4 credits. May be repeated for credit. Prerequisite: permission of a department faculty member. Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.

**ART H 402 Independent Study**  
Fall or spring. 2–4 credits. May be repeated for credit. Prerequisite: permission of a department faculty member. Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.

**ART H 403 Ritual, Play, Spectacle, Act: Performing Culture (also THEATR 403 and 603)**  
Fall. 4 credits. R. Schneider.  
For description, see Theatre 403.

**ART H 407 The Museum and the Object**  
Fall. 4 credits. Prerequisite: permission of instructor. All classes will meet in the Johnson Art Museum Study Gallery. L. Meixner.  
This seminar gives advanced Art History majors the opportunity to work directly with original objects from collections in the Herbert F. Johnson Museum. The course focuses on art and connoisseurship by questioning the ways quality is determined in works of art. Topics include methods of attribution, fakes and forgeries, technical analysis and theory, conservation, art education and theories of perception. Session leaders include the curatorial staff of the art museum.

**ART H 417 The Vertical City (S HUM 417)**  
Fall. 4 credits. P. Saint-Amour.  
During the mid-nineteenth century, ballooning and photography made possible a new kind of image: the aerial photograph. This seminar will investigate the cultural, political, and ethical deployments of aerial perspective before and after the advent of aerial photography, particularly in relation to the bird’s eye view of the city. Focal texts may include writings by Lesage, Dickens, Mayhew, Nadar, Conrad, Wells, Marinetti, Stein, Joyce, Woolf, Jolas, Waugh, Benjamin, and de Certeau; images by Nadar, Picasso, Picabia, Ernst, and Mondrian; and films by Clair and Vertov.

**ART H 423 Ceramics (also CLASS 423 and ARKEO 423)**  
Bronze Age, Greek, and Roman pottery specimens from Near-East and Mediterranean will be used to provide direct experience of one of the basic prerequisites of archaeological excavation—the identification and dating of pottery types. Reports, delivered in class, will concern ancient ceramic materials or particular types and periods of ceramics. Practical experience in making and decorating pottery will be encouraged.

**ART H 424 Sardis and the Cities of Asia Minor (also ARKEO 423 and CLASS 432)**  

**ART H 425 Seminar on the Bronze Age Architecture of the Near East (also CLASS 430 and ARKEO 425)**  
Spring. 4 credits. Prerequisite: permission of instructor. P. I. Kuniholm.  
The course will cover major architectural building programs of the Neolithic Catal Hüyük, Beycesultan, to the final phases of Troy and Hittite Bogazköy. The art and archaeology of these civilizations will be taken into account when relevant. Reading knowledge of German useful.

**ART H 427 Seminar on Roman Art and Archaeology (also CLASS 435 and ARKEO 435)**  

**ART H 430 America in the Camera’s Eye (also HIST 430 and AM ST 430.2)**  
Fall. 4 credits. R. L. Moore.  
For description see History 430.

**ART H 434 The Rise of Classical Greece (also ARKEO 434 and CLASS 434)**  
The art and archaeology of the Greek dark ages. Topics include: site reports, pottery, metalworking, the introduction of the alphabet, the beginnings of coinage, and links with Anatolia and the Near East.

**ART H 444 Early Medieval Jerusalem**  
Spring. 4 credits. L. Jones.  
This course explores the development of Jerusalem from Herod to al-Hakim, under Roman, Byzantine, and Islamic domination. Students will examine the evolution of the physical and the symbolic city and will investigate the visual expression of religious, cultural, and ethnic identity in art and architecture.

**ART H 446 Renaissance Patronage and the Medicis (also HIST 479)**  
Spring. 4 credits. S. Reiss and J. Najemy.  
Between the early fifteenth and later sixteenth centuries, the Medici family of Florence rose from the ranks of the city's merchant bankers to become virtual rulers of the republic, cardinals and popes in Rome, and, eventually, hereditary grand dukes of Tuscany. Much of the family's power and fame derived from two kinds of patronage: the social and political patronage that first established their faction and party and then enabled them to maintain control, and the artistic and cultural patronage that was central both to the fashioning of the family's image and to the realization of its princely ambitions. This interdisciplinary seminar will explore the connections between the two types of patronage employed so effectively by the Medici. We will focus on primary source materials, on works of art and architecture, and on recent historical and art historical scholarship concerned with the Medici and with patronage in Renaissance Italy.

**ART H 448 Studies in Sixteenth-Century European Art**  
Topic: Constructing the Self in the Sixteenth Century. This seminar examines portraits, self-portraits, autobiographies, and biographies, as well as treatises on etiquette and behavior. In this society, "civility," the mark of class and education, was conveyed through bearing, gesture, manners, and speech, as well as social organization and artistic interests, all of which are evident in visual and verbal representations of individuals.

**ART H 450 Women in Italian Renaissance Art (also WOMNS 451)**  
This seminar examines representations of the Madonna and Child from the fourteenth and fifteenth centuries, the narrative scenes painted on chests and other domestic furniture, biblical and historical heroines such as Judith and Roxelana, portraits of patrician women and courtesans, and violence to furniture, biblical and historical heroines such as Judith and Lucretia, portraits of patrician painted on chests and other domestic especially with how visual images are and gender roles in society that inform these representations. We will discuss the existing critical frameworks for interpreting them in feminist art history and theory (particularly in Renaissance studies). We will be concerned particularly with how visual images are encoded with meaning, what kind of relationship can be established with their historical context, and how they convey social constructs as ideology.

This seminar has several aims: to introduce students to prints—the techniques, styles, and issues of connoisseurship—and to the major printmakers of the period, including Mantegna, Rosso Fiorentino, Dürer, and Rembrandt; to give students first-hand experience with works of art in the Herbert F. Johnson Museum; and to consider the social and cultural issues raised in the medium of prints and through their unique visual language. These issues include the social hierarchies of class and gender (including witches), moral concerns and religious devotion, the construction and transmission of notions of antiquity and classicism, and the representation of the urban and rural environment. Students will give brief presentations on prints in the collection and longer ones of their own research projects on these and related topics.]

[ART H 461 Art and Social Histories (also COM L 461) # Spring. 4 credits. Prerequisite: permission of instructor. Auditing is not permitted. L. L. Meixner.

Topic for spring 2001: Landscape as Ideology. This seminar considers images of land as cosmos, empire, fantasy, memory, and marvel. We will approach this issue—land and capital—via Old and New World encounters, the political picturesque, rural enclosure, the Grand Tour and the tourist sublime, colonial and post-colonial spaces, the “greening of capitalism,” the feminization of nature, and the transparency of utopia. In addition to art historical texts, our readings include the diaries of artist-explorers, discovery and conquest narratives, nature writing, and ecocriticism. Daisyрю, Thomas, S. J. Gould, and Greenblatt number among our authors. Traversing boundaries, we will discuss illuminated manuscripts, early modern pastoralists (Europe and England), images of the frontier (United States and Russia), the body as map, earth art, national parks, the Land of Oz, and Eurodisney.

Topic for spring 2001: Early Modernism in America. Using the Armory Show (1913) as its center, this interdisciplinary seminar examines the varied expressions of American modernism prior to World War II. Against the backdrop of post-World War I social politics and the Jazz Age, we will examine: the machine aesthetic and kinetic poetry, icons such as the Brooklyn Bridge by O’Keeffe, Steiglitz, and the rise of photography at "291," American Dada, the Harlem Renaissance, and the introduction of homoerotic imagery. Aside from major artists, key figures include Gertrude Stein, Dos Passos, Hart Crane, and Ernest Hemingway.]

[ART H 463 Studies in Modern Art Fall. 4 credits. Prerequisite: permission of instructor. J. E. Bernstock.

Topic for fall 2000: An Analysis of Abstract Art in Europe (1910–1920). Various reasons have been cited for the emergence of abstract art in Europe between 1910 and 1920. This seminar will consider the historical context, the philosophical literature, and the developments in art criticism that had a bearing on the evolution of abstract art in the Netherlands, Germany, and Russia.

[ART H 464 Studies in Modern Art Spring. 4 credits. Prerequisite: Art History 365 and permission of instructor. Auditing is not permitted. J. E. Bernstock.

Topic for spring 2001: Subjectivism in Art of the 1980s. This seminar examines the tendency toward a subjective form of art in the United States and in Germany during the 1980s, and the reasons for its international impact. The political and economic circumstances in the two countries as well as related art criticism will be studied.]

This seminar will be devoted to a study of the work of women artists from antiquity to the present. The works of the most prominent women artists from each period will be studied in relation to the changing roles of women in society. The artists to be studied include Jennifer Bartlett, Artemisia Gentileschi, Georgia O'Keeffe, Louise Nevelson, Joan Mitchell, Judy Chicago, and Barbara Kruger.]

[ART H 471 Flanerie, Postcolony, Publics (also S HUM 410) Fall. 4 credits. H. N. Mustafa.

For description, see S HUM 410.]

[ART H 478 African Cinema (also AS&RC 435) # Fall. 4 credits. S. Hassan.

For description, see AS&RC 435.]

[ART H 480 Three Friends of the Cold # Fall. 4 credits. A. Pan.

Plants have traditionally been imbued with special meanings in Chinese culture, and with the spread of Confucianism, many noble characteristics associated with plants were introduced to Korea and Japan. The "three friends of the cold," pine, bamboo, and plum blossom, have appeared in art and literature throughout the centuries in these three East Asian countries. Using the collection at the Herbert F. Johnson Museum, this course offers an opportunity for students to learn methods of organizing an exhibition on this specific theme. Using hands-on experience, students will help plan, select objects, conduct research, and write wall labels for the exhibition.

[ART H 481 Art of the Tang Dynasty (618–907) (also ASIAN 479) # Spring. 4 credits. Prerequisite: ART H 383 or a course in Chinese history or Chinese literature and permission of instructor required. A. Pan.

This seminar explores art and culture of the Tang dynasty, China's "golden age," by focusing on new discoveries and museum objects representing court, secular, and Buddhist art. We will examine how imperial taste, patronage, and aesthetics influenced painting, calligraphy, gold and silver wares, ceramics, and important architectural and cave-temple sites.

This seminar surveys arts of the Song dynasty, a period of introversion and high refinement. Through reading, viewings, and visits to the Herbert F. Johnson Museum of Art, students will gain knowledge of painting (landscape, figure, horse, flower-and-bird, literati traditions, and theories), calligraphy, Song antiquarianism, imperial patronage, religious art (painting, sculpture, and temples), and ceramics.]

[ART H 490 Art and Collecting: East and West (also ASIAN 491) # Spring. 4 credits. K. McGowan.

This course examines the social life of things, focusing in particular on the collection as an organizing metaphor for cross-cultural exploration. By examining biographies of objects, and the extent of their influence, it will be possible to observe the transformation of gifts or heirlooms into commodities and vice versa as constellations of cultures appropriate objects and ideas across vast distances, East and West. India, Europe, China, America, Japan, and Mainland and Island Southeast Asia will be examined at different points from the spread of Confucianism, the spread of Buddhist art, the introduction of homoerotic imagery, and the spread of the spread of Confucianism, the spread of the spread of Confucianism, the spread of Buddhist art, the introduction of homoerotic imagery, and the spread of Buddhist art.]

[ART H 520 Seminar in Classical Archaeology (also CLASS 630 and ARKEO 520) Fall. 4 credits. Prerequisite: permission of instructor. J. Coleman.

For description, see Classics 630.]

[ART H 531 Problems in Medieval Art and Architecture (also RELST 531) Spring. 4 credits. Prerequisite: permission of instructor. R. G. Calkins.

Topic for spring 2001: Narrative and Miniatures in Medieval Illuminated Manuscripts. An investigation of how narrative, Biblical and secular, is illustrated in medieval manuscripts. The relationship of these miniatures to the physical structure of the book, to the context of the text, and to other similar cycles of illustrations will be examined using facsimiles of relevant manuscripts and the manuscripts themselves.]

ART H 601 Honors Work
Fall or spring. 8 credits. Prerequisite: History of Art 600.
The student under faculty direction will prepare a senior thesis.

HUNGARIAN
See Departments of Linguistics and Russian.

INDONESIAN
See Department of Asian Studies.

FALCON PROGRAM (INDONESIAN)
See Department of Asian Studies.

ITALIAN
See Department of Romance Studies.

LINGUISTICS
A. Cohn, chair (204 Morrill Hall); D. Zec, director of graduate studies (219 Morrill Hall); W. Harbert, director of undergraduate studies (210 Morrill Hall); D. Abusch, J. Bowers, W. Browne, C. Collins, M. Diesing, S. Hertz, S. McConnell-Ginet, A. Nussbaum, M. Rooth, C. Rosen, M. Suiter, M. Weiss, J. Whitman, J. Wolff.

Linguistics, the systematic study of human language, lies at the crossroads of the humanities and the social sciences, and much of its appeal derives from the special combination of intuition and rigor that the analysis of language demands. The interests of the members of the Department of Linguistics and linguistic colleagues in other departments span most of the major subfields of linguistics: phonetics and phonology, the study of speech sounds; syntax, the study of how words are combined; semantics, the study of meaning; historical linguistics, the study of language change over time; sociolinguistics, the study of language’s role in social and cultural interactions; and applied linguistics, which relates the results of linguistic research to problems of bilingual education, second-language learning, and teaching.

Studying linguistics is not a matter of studying many languages. Linguistics is a theoretical discipline with ties to such areas as cognitive psychology, philosophy, logic, computer science, and anthropology. Nonetheless, knowing particular languages (e.g., Spanish or Japanese) in some depth can enhance understanding of the general properties of human language. Not surprisingly, then, many students of linguistics have an interest in a period of exposure to a foreign language, and those who come to linguistics by some other route find their knowledge about languages enriched and are often stimulated to embark on further foreign language study.

Students interested in learning more about linguistics and its relationship to other disciplines in the humanities and social sciences are encouraged to take Linguistics 101, a general overview, which is a prerequisite for most other courses in the field, or one of the first-year writing seminars offered in linguistics (on topics such as metaphor and the science of language). Linguistics 101 and other introductory courses fulfill the social science distribution requirement. Most 100- and 200-level courses have no prerequisites and cover various topics in linguistics (e.g., LING 170, Introduction to Cognitive Science; LING 285, Linguistic Theory and Poetic Structure) or focus on the linguistics of a particular geographic region or historical development of particular languages (e.g., LING 217, History of the English Language; LING 239, The Celtic Languages). Some of these courses also fulfill the breadth requirements.

Talks and discussions about linguistics are offered through the Undergraduate Linguistics Forum and the Cornell Linguistic Circle. These meetings are open to the university public and anyone wishing to learn more about linguistics is most welcome to attend.

The Major
For questions regarding the linguistics major, contact Professor Wayne Harbert (210 Morrill Hall, 255-8441, weh2@cornell.edu).

The prerequisite for a major in linguistics is the completion of Linguistics 101 and either Linguistics 201 or 203. The major has its own language requirement, which should be completed as early as possible: qualification in two languages other than English (one of which must be either non-European or non-Indo-European). With approval of the department’s director of undergraduate studies, this requirement may be waived (i.e., reduced to the normal arts college language
The other standard requirements for the linguistics major are as follows:

1) Linguistics 201 (Introduction to Phonetics and Phonology) or Linguistics 203 (Introduction to Syntax and Semantics), whichever one was not taken as a prerequisite to the major

2) Linguistics 314 (Historical)

3) Three of the following five courses, one of which must be either Phonology I or Syntax I:
   - Linguistics 301 (Phonology I)
   - Linguistics 303 (Syntactic I)
   - Linguistics 309 (Morphology)
   - Linguistics 319 (Phonetics I)
   - Linguistics 421 (Semantics I)

4) A course at or beyond the 300 level in the structure of English or some other language, or a typological or comparative structure course such as Linguistics 401 or Field Methods (Linguistics 300)

5) One additional linguistics course for at least four credit hours, which may be a course with significant linguistic content in a related field.

Some substitutions to these standard requirements are possible after consultation with your adviser and approval by the DUS.

Honors

Applications for honors should be made during the junior year or by the start of fall term of the senior year. Candidates for admission must have a 3.0 (B) average overall and should have a 3.2 average in linguistics courses. In addition to the regular requirements of the major, the candidate for honors will complete an honors thesis and take a final oral examination in defense of it. The thesis is usually written during the senior year but may be started in the second term of the junior year when the student's program so warrants. The oral examination will be conducted by the honors committee, consisting of the thesis adviser and at least one other faculty member in linguistics. Members of other departments may serve as additional members if the topic makes this advisable. Linguistics 493 and 494 may be taken in conjunction with thesis research and writing but are not required.

Courses

First-Year Writing Seminars

LING 100 Language, Thought, and Reality
For descriptions, see freshman writing seminar brochure.

LING 101 Introduction to Linguistics
Fall or spring. 4 credits each term. Fall, W. Harbert. 
Spring. 3 credits. W. Harbert. 
D. Dressing.

An introductory course designed to provide an overview of the science of language, especially its theoretical underpinnings, methodology, and major findings. The course focuses on the basic analytic methods of several subfields of linguistics including phonetics, phonology, morphology, syntax, semantics, language variation, language change, and psycholinguistics.

LING 109 English Words: Histories and Mysteries (also CLASS 109) @ # 
Fall. 3 credits. M. Weiss.
Where do the words we use come from? This course will survey the history and structure of the English vocabulary from its distant Indo-European roots to the latest in technical jargon and slang. Topics to be discussed include formal and semantic change, taboo and euphemism, borrowing, new words from Old "learned" English, loans from Greek and Latin, slang, and society.

LING 131-132 Elementary Sanskrit (also CLASS 131-132 and SANSK 131-132)
For description, see SANSK 131-132.

LING 170 Introduction to Cognitive Science (also COGST 101, COM S 101, PHIL 191, and PSYCH 102)
For description, see COGST 101.

LING 201 Introduction to Phonetics and Phonology
Spring. 4 credits. Prerequisite: LING 101 or equivalent or permission of instructor.

An introduction to the study of human speech sounds and how they pattern in languages. The first part of the course will focus on phonetics: the production, acoustics, and perception of speech, with attention to both the common and the less common sounds of the world's languages. The second part of the course will focus on phonology: how human speech sounds pattern within and across languages, with an emphasis on the rules that govern these patterns and their possible representation.

LING 203 Introduction to Syntax and Semantics
Fall. 4 credits. Prerequisite: LING 101 or equivalent or permission of instructor. S. McConnell-Ginet.
This course focuses on language as a system of knowledge that enables native speakers to create and interpret the structures of their language. Part of the course will consider issues of syntactic structure, such as the order of constituents, the hierarchical organization of grammars, and syntactic universals. The other part of the course will focus on meaning and interpretation, addressing such issues as the role of context, how information is structured, and how it is encoded in the syntax.

LING 212 Language and Culture
We often assume that there is a close relationship between differences in language and cultural variation. This course focuses on that relationship, beginning with an examination of the linguistic relativity hypothesis, which posits a link between basic properties of languages and crosscultural differences in human knowledge. We also examine potential cultural determinants of variation in language: pronouns and honorific systems, systems of ritual and taboo in language, and the impact of narrative organization on grammar. Special attention is paid to extreme forms of language: invented languages from Esperanto to Klingon, glossolalia and trance languages, language games and secret languages.

LING 215/715 Psychology of Language (also PSYCH 215)
For description, see PSYCH 215.

LING 216 Mathematical Linguistics
The course is an introduction to the mathematical concepts and techniques most frequently used in theoretical linguistics.

LING 217 History of the English Language (also ENGL 217) @
This course explores the development of the English language from its Indo-European beginnings to the present. Topics covered include changes in sound, vocabulary and grammatical structure, external influences, Old English, Middle English, Standard English, dialects, and World Englishes.

LING 220 Introduction to Southeast Asian Languages and Linguistics @
Fall. 3-4 credits variable. For nonmajors or majors. Not offered 2000-2001. A. Cohn, J. Wolff.
This is a survey of the languages of Southeast Asia. The goal of this course is to expose students to Southeast Asia as a linguistic area and introduce them to the linguistic diversity of the region. It includes three main parts: (1) sociolinguistic and ethnolinguistic issues of language and politics, language and culture, and language use; (2) language structures and typological patterns of the area's languages; (3) historical linguistics, genetic relations between languages, as well as the linguistic effects of language contact and linguistic evidence for prehistory.

LING 226 Introduction to Gaelic
This course is an introduction to the history, structure, and current status of the Scottish Gaelic language, oriented around elementary Gaelic texts.

LING 227 The Germanic Languages
This course surveys the history, structure, and use of the modern Germanic languages (English, German, Dutch, Afrikaans, Swedish, Danish, Icelandic, Norwegian, Faroese, and Yiddish).

LING 228 Introduction to Welsh
This course surveys the history, structure, cultural, and political situation of the Welsh language. It includes several sessions of elementary language instruction and a brief introduction to Welsh literature.

LING 239/539 The Celtic Languages
This course surveys the history, structure, and political and social situation of the Celtic languages (Welsh, Scottish Gaelic, Irish Gaelic, Breton, Cornish, and Manx). The course includes a few days of introductory language instruction in some of these languages.

LING 241 Yiddish Linguistics (also JWST 271)
Fall. 3 credits variable. Prerequisite: LING 101 or permission of instructor. Not offered 2000-2001. M. Diesing.
This course will cover a wide variety of topics relating to the Yiddish language and Yiddish culture, including the structure of Yiddish, the
history of the Yiddish language, Yiddish in America (the Yiddish revival, the role of the Yiddish press, etc.), Yiddish as a minority/duying language, and the influence of Yiddish on present-day American English. No previous knowledge of Yiddish required."

**LING 242 Diversity in American English** (also ENGL 242)

This course is a basic introduction to the regional dialects of English spoken in the United States. It is linguistically oriented, introducing the relevant aspects of phonetics, phonology, morphology, and syntax where appropriate. There is an emphasis on the students discovering what features characterize their own dialects (if they speak American English). The class is also of use as an introduction to American English dialects for nonnative speakers of English.

**LING 244 Language and Gender (also WOMNS 244)**
Spring. 4 credits. For nonmajors or majors. S. McCarthy.

This course explores connections between language (use) and gender/sex systems, addressing such questions as the following: How do sex and gender affect the ways we speak, the ways we interpret and evaluate spoken language? How does gender/sex affect our language use, their relation to language change? What is meant by sexist language? How does conversation structure the social worlds of women and men? Readings draw from work in linguistics, anthropology, philosophy, psychology, literature, and general women's studies and feminist theory.

**LING 246/546 Minority Languages and Linguistics**

This course examines minority languages from linguistic, social, and political perspectives. Topics discussed include language death, sociocultural differences in women's and men's roles affect their language use, their relation to language change? What is meant by sexist language? How does conversation structure the social worlds of women and men? Readings draw from work in linguistics, anthropology, philosophy, psychology, literature, and general women's studies and feminist theory.

**LING 251–252 Intermediate Sanskrit** (also CLASS 251–252 and SANSK 251–252)
Spring. 4 credits. For nonmajors or majors. D. Zee.

For description, see SANSK 251–252.

**LING 264 Language, Mind, and Brain** (also COGST 264)
Spring. 4 credits. For nonmajors or majors. Prerequisite: a basic course in linguistics and/or psychology is desirable. J. Bowers.

An introductory course that emphasizes the formal structure of natural language and its biological basis. The following topics are covered: the formal representation of linguistic knowledge, principles and parameters of universal grammar, the basic biology of language, mechanisms of linguistic performance, the modularity hypothesis, and language and cognition. This course is especially suited for majors in fields such as psychology, philosophy, computer science, and linguistics (and also for those enrolled in the concentration in cognitive studies) who want to take a one-semester introduction to linguistics that concentrates on the formal principles that govern linguistic knowledge, along with some discussion of their biological realization and their use in perception and production.

**LING 270 Truth and Interpretation (also COGST 270 and PHIL 270)**
Spring. 4 credits. For description, see PHIL 270.

**LING 285/585 Linguistic Theory and Poetic Structure (also ENGL 285/585)**
Spring. 4 credits. Graduate students register under LING 585. J. Bowers. Poems are among the most highly structured linguistic objects that human beings produce. While some of the devices used in poetry are arbitrary and purely conventional, most are natural extensions of structural properties inherent in natural language itself. The aim of this course is to reveal the ways poetry is structured at every level, from rhyme to metaphor, and to show how certain results of modern linguistics can usefully be applied to the analysis and poetry. After introducing some of the basic concepts of modern phonology, syntax, and semantics, it will be shown how literary notions such as rhyme, meter, enjambment, and metaphor can be formally defined in linguistic terms. These results will then be applied to the analysis of particular poems and shown to yield novel and interesting insights into both their structure and interpretation.

**LING 300 Field Methods**
Spring. 4 credits. Prerequisites: LING 203 or permission of instructor. A. Cohn; Wolf.

Elaboration of techniques of elicitation, recording, and analysis of data from a native speaker of a non-Western language not generally known to students.

**LING 301–302 Phonology I, II**
301, fall; 302, spring. 4 credits each term. Prerequisites: for LING 301, LING 203 or permission of instructor. Fall; A. Cohn; spring, D. Zee.

301 provides a basic introduction to phonological theory. The first half of the course focuses on basic principles of phonology, patterns of sounds, and their representations. In the second half, the nature of syllable structure and feature representations are explored. 302 provides further refinement of the issues investigated in 301, focusing in particular on metrical theory. Lexical Phonology, autosegmental phonology, and Prosodic Morphology.

**LING 303–304 Syntax I, II**
303, fall; 304, spring. 4 credits each term. Prerequisites: for LING 303, LING 203; for LING 304, LING 303 or permission of instructor. Fall, J. Bowers; spring, M. Diesing.

303 is an introduction to syntactic theory, with emphasis on the classical theory of transformational grammar. 304 is an advanced course, surveying current syntactic models and dealing with such issues as the nature of syntactic representation, levels of representation, principles of universal grammar, and the relation of syntax and semantics.

**LING 309 Morphology**
Fall. 4 credits. Prerequisite: LING 101 or equivalent or permission of instructor. D. Zee.

This course addresses the basic issues in the study of words and their structures. It will provide an introduction to different types of morphological structures with examples from a wide range of languages. Special emphasis will be given to current theoretical approaches to morphological theory.

**LING 311 The Structure of English: Demystifying English Grammar (also ENGL 311)**
Fall. 4 credits. M. Suter.

Do you suffer from grammatical insecurity? In foreign language classes you developed the habit of not questioning yourself at a loss because you don't know how grammatical terminology applies to English? This course will make English grammar accessible and comprehensible to native speakers who want to understand how the language they use so easily works. In addition to standard grammatical notions, the course will consider dialectal variation, matters of style, how sentence structure conveys viewpoint, and other discourse phenomena.

**LING 314 Introduction to Historical Linguistics**
Spring. 4 credits. Prerequisite: LING 201 or permission of instructor. M. Weiss.

A survey of the basic mechanisms of linguistic change, with examples from a variety of languages.

**LING 315–316 Old Norse**
315, fall; 316, spring. 4 credits each term. E. Johannesson.

Old Norse is a collective term for the earliest North Germanic literary languages: Old Icelandic, Old Norwegian, Old Danish, and Old Swedish. The richly documented Old Icelandic will be the center of attention, and the purpose is twofold: the student will gain (a) knowledge of an ancient North Germanic language, important from a linguistic point of view, as well as (b) access to the medieval Icelandic (and Scandinavian) literature. 315: The structure of Old Norse (Old Icelandic), phonology, and morphology, with reading of selections from the Prose-Edda, a thirteenth-century narrative based on the Eddic poetry. 316: Extensive reading of Old Norse texts, along with them selections from some of the major Icelandic family sagas: Njals saga, Grettis saga, and Egils saga, as well as the whole Hrafnskets saga.

**LING 319 Phonetics I**
Spring. 4 credits. Prerequisite: LING 201 or permission of instructor. Staff.

This course provides a basic introduction to the study of phonetics. Topics to be covered include anatomy and physiology of the speech production apparatus, transcription and production of some of the world's sounds, basic acoustics, computerized methods of speech analysis, acoustic characteristics of sounds, speech perception, speech synthesis, and stress and intonation.

**LING 320 Phonetics II**
Spring. 4 credits. Prerequisite: LING 319.

This course is a continuation of Phonetics I and provides a detailed survey of some areas in acoustic and articulatory phonetics. Topics include feature theory, vocal tract acoustics, quantal theory, speaker normalization, theories of speech perception, coarticulation, theories of speech production, and prosody. In addition, a number of "hands-on" projects will be part of the course.
LING 321-322 History of the Romance Languages (also ROMS 321-322) 321. Fall, 322, spring. 4 credits each term. Prerequisites: LING 101 or equivalent and qualification in any Romance language. Offered alternate years. C. Rosen.

LING 323-324 Comparative Romance Syntax (also ROMS 323-324) 323, fall, 324, spring. 4 credits. Prerequisites: LING 101, or equivalent or qualification in any Romance language. Offered alternate years. Not offered 2000-2001. C. Rosen.

Concise survey of romance syntax, covering the principal constructions in six languages with equal attention to their historical evolution and their current state. Grammatical innovation and divergence in a typological perspective.

LING 332 Problems in Semantics (also PHIL 333 and COGST 333) Spring. 4 credits. Prerequisite: logic or semantics course or permission of instructor. S. McConnell-Ginet, Z. Gendler Szabó.

This course looks at problems in the semantic analysis of natural languages, critically examining work in linguistics and philosophy on particular topics of current interest. For spring 2001, the focus will be on quantification. Languages offer a variety of resources for expressing generalizations: some, every, no, many, and other quantifying expressions that appear inside noun phrases, always, never, occasionally, and other adverbial quantifying expressions not associated with particular nominals; constructional resources of various kinds (e.g., English free relatives like whoever she cooked). How different are these resources and what might they imply about basic cognitive and linguistic capacities?

LING 347 Topics in the History of English Spring. 4 credits. Prerequisite: LING 217, 314, a course in Old or Middle English, or permission of instructor. W. Harbert.

The course covers specific topics in the linguistic history of the English language, selected on the basis of the particular interests of the students and the instructor. The topic area for 2000-2001 will be morphological and syntactic change during the Early Middle English period—a period crucial to the development of the distinctive syntactic properties of Modern English.

LING 355 Languages in Contact Fall. 4 credits. Prerequisite: LING 101. J. Wolff.

A principal cause of language change is contact with another language—that is, when some speakers of the community speak another or several other languages. This course examines issues of how languages and also dialects in contact influence each other: what kind of changes they undergo and the social factors which determine the kind, direction, and degree of change. We will study issues of morphosyntax and its social correlates, code-switching, issues of language mixture (pidginization and creolization, language interwining), language maintenance and language death. Finally, we will look at how issues of language in contact shape our understanding of traditional historical linguistics—that is, where languages that are now spoken in the world came from and how they came to be the way they are.

LING 366 Spanish in the United States (also SPANR 366 and LSP 366) Fall. 4 credits. Prerequisite: some knowledge of Spanish. M. Suter.

Examination of major Spanish dialects in the United States from a linguistic perspective. Contrast with the standard language. Borrowing, interference, and code switching. Syntactic, morphological, and phonological characteristics.

LING 390 Independent Study in Linguistics Fall or spring. 1-4 credits variable. Prerequisite: LING 101 or permission of instructor. S. McConnell-Ginet.

An introduction to the study of such topics as speech acts, presupposition, deixis, implicatures, and conversational strategies.

LING 401 Language Typology Spring. 4 credits. Prerequisite: LING 101 or equivalent. C. Rosen.

Study of a basic question of contemporary linguistics: in what ways do languages differ, and in what ways are they all alike? Efforts to formalize universals of syntax and to characterize the total repertory of constructions available to natural languages. Common morphological devices and their syntactic correlates. Emphasis on systems of case, agreement, and voice.

LING 403 Applied Linguistics and Second Language Learning Fall. 4 credits. Prerequisite: at least one course in applied linguistics, linguistics, psychology, anthropology, communication, cognitive studies, education, or literary analysis, or permission of instructor. Not offered 2000-2001. J. Wolff.

This course is an introduction to the field of applied linguistics with a focus on different domains of language research as they come to bear on the matter of second language learning. Thus, topics include developmental and experimental psycholinguistics of language, textual and discourse analysis, literacy, cognitive consequences of bilingualism, corpora and language teaching, and contact between first and second language communities.

LING 404 Linguistic Structure of Japanese (also ASIAN 412) Fall. 4 credits. Prerequisites: Japanese 102 or permission of instructor and LING 101 or equivalent introductory course in linguistics. Offered alternate years. Not offered 2000-2001.

Y. Shirai.

Introduction to the linguistic study of Japanese, with an emphasis on morphology and syntax.

LING 405 Sociolinguistics Fall. 4 credits. Prerequisite: LING 101 or permission of instructor. Not offered 2000-2001. J. Wolff.

The principal work of linguistics is to describe, analyze, and understand the regularities of language systems. How, then, are we to deal with irregularities and variability when they are observed in language? This course will introduce and discuss the most significant issues in the study of language variation, and it will examine some of the methodologies that have been developed to study variation in language use. We will consider the observable interactions between linguistic variables and social factors (e.g., age, sex, ethnicity) and review the main generalizations about these factors that sociolinguistics has arrived at in the last three decades. Some of the problems associated with the quantification and measurement of nonlinguistic variables will be discussed and we will evaluate the various ways researchers have dealt with these problems.

This course will be an introduction to the study of pidgin and creole languages and the issues surrounding them both in and beyond linguistics. Topics covered will include: genesis of pidgins and creoles; classification of pidgins and creoles; and language universals; creoles and sociolinguistic variation; a module on Saramaccan Creole English; educational and language planning issues; sociolinguistic issues; Black English.

LING 407 Grammatical Structure of Spanish I (also SPANR 407) Spring. 4 credits. Prerequisite: proficiency in Spanish or permission of instructor. Not offered 2000-2001. M. Suter.

This course seeks to equip the advanced student or the future language professional with practical insights into problem areas for foreign language learners with the aid of linguistic descriptions. The intent is to narrow the gap known to exist between the knowledge that a native speaker has and the incomplete one that a foreign language learner possesses.

LING 408 Grammatical Structure of Spanish II (also SPANR 408) Spring. 4 credits. Prerequisites: LING 101 and proficiency in Spanish or permission of instructor. Offered alternate years. Not offered 2000-2001. M. Suter.

Survey of Spanish morpho-syntax using contemporary theoretical models to highlight hidden patterns and generalizations. Topics may vary according to students' interests, but may include major clause types, word order possibilities, negation, agreement, and null categories.

LING 409 Structure of Italian Fall. 4 credits. Prerequisites: LING 101 or equivalent and qualification in any Romance language. Offered alternate years. Not offered 2000-2001. C. Rosen.

Survey of Italian syntax, using simple theoretical tools to bring hidden regularities to light. Topics include auxiliaries, modals, clitics, reflexive constructions, agreement, impersonal constructions, causatives.

LING 410 History of the Italian Language 3 Spring. 4 credits. Prerequisites: LING 321 and either Italian 201, 203, or equivalent. Offered alternate years. Not offered 2000-2001. C. Rosen.
Phonological, morphological, and syntactic developments from Old Russian to modern Russian.

[LING 420 Approaches to Discourse (also ASIAN 419 and COM L 421)] Spring. 4 credits. Prerequisite: at least 1 course in applied linguistics, linguistics, psychology, anthropology, or literary analysis, or permission of instructor. Not offered 2000–2001. H. Tao.

An overview of the history of the Japanese language followed by intensive examination of issues of interest to the participants. Students should have a reading knowledge of Japanese.

[LING 421–422 Semantics I, II] 421, spring; 422, fall. 4 credits each term. Prerequisites: for LING 421, LING 203; for LING 422, LING 421 or permission of instructor. Fall, S. McConnell-Ginet; spring, M. Diesing.

A survey of the quantitative and qualitative research literature on the acquisition of second and additional languages among the adult population. Research carried out in both experimental and natural settings will be considered. Topics include: learner errors and errors analysis; contrastive analysis hypothesis; developmental and variability patterns in the acquisition of syntax, phonology and morphology; including the potential effects of typological Universals; grammatics and discourse; the lexicon, social and cognitive factors in acquisition, communication, and learning strategies; theories of second language acquisition.

[LING 425 Corpora and Applied Linguistics (also ASIAN 425)] Fall. 4 credits. Prerequisite: at least 1 course in applied linguistics, linguistics, psychology, sociology, anthropology, or literary analysis, or permission of instructor. Not offered 2000–2001. H. Tao.

This course introduces the foundations of studies of language based on large quantities of natural language data, the utility of large corpora for language learning and teaching, and the computational skills needed to carry out applied linguistics research based on language corpora. It will be conducted in both lecture and lab session formats. Topics include: the creation of corpora, coding and tagging of corpora, monolingual vs. parallel corpora, native vs. learner corpora, corpora and language pedagogy, corpora and discourse pragmatics, special issues in East Asian language corpora, corpora and lexicon and grammar.
LING 437 Celtic Linguistic Structures
Spring. 4 credits. Prerequisite: LING 303.
This course will treat selected topics in the syntax and morphology of the modern Celtic languages.

LING 441 Introduction to Germanic Linguistics (also GERST 441)
Fall. 4 credits. Prerequisite: LING 101 or permission of instructor. Not offered 2000–2001. W. Habbert.
Survey of major issues in historical Germanic linguistics.

LING 443-444 Linguistic Structure of Russian (also RUSSA 403-404)
443, fall; 444, spring. 4 credits each term.
Prerequisites: for LING 443, LING 101 and permission of instructor; for LING 444, LING 443 or equivalent. Offered alternate years.
A synchronic analysis of the structure of modern Russian. LING 443 deals primarily with morphology and its relation to syntax and 444 with syntax and word order. Topics covered include case theory, the functions of word order, voice, agreement, impersonal constructions, negation, nonuniversal categories, and the relation between morphology and syntax.

LING 450 Lab Course: Language Development (also COGST 450 and PSYCH 437)
Spring. 2 credits. Prerequisite: COGST/HD/LING/PSYCH 436. B. Lust.
This laboratory course will provide undergraduates with an introduction to hands-on research experience in the Cognitive Studies research labs and will meet once a week in group format. It will include several structured modules dealing with topics covered in the survey course, COGST/HD/LING/PSYCH 436, Language Development. They will include training in how to study and analyze original child language data, including the use of selected portions of a large database of child language data from many languages in the Cornell Language Acquisition Lab (CLAL), and training in how to collect and analyze new child language data. Emphasis will be placed on developing research methods in order to test hypotheses.

LING 451 Greek Comparative Grammar (also CLASS 421)
Fall. 4 credits. Prerequisite: thorough familiarity with classical Greek morphology. Not offered 2000–2001. A. Nussbaum. The prehistory and evolution of the sounds and forms of ancient Greek as reconstructed by comparison with the other Indo-European languages.

LING 452 Latin Comparative Grammar (also CLASS 422)
Fall. 4 credits. Prerequisite: thorough familiarity with classical Latin morphology. Not offered 2000–2001. A. Nussbaum. The prehistory and evolution of the sounds and forms of classical Latin as reconstructed by comparison with the other Indo-European languages.

LING 454 Italic Dialects (also CLASS 424)
Fall. 4 credits. Prerequisite: thorough familiarity with classical Latin morphology. Not offered 2000–2001. A. Nussbaum. The phonology and morphology of Faliscan, Oscan, and Umbrian studied through the reading of epigraphical texts. Attention to the relations of these languages to Latin and the question of proto-Italic.

LING 455 Greek Dialects (also CLASS 425)
Fall. 4 credits. Prerequisite: basic familiarity with classical Greek morphology.
A. Nussbaum.
A survey of the dialects of ancient Greek through the reading and analysis of representative epigraphical and literary texts.

LING 456 Archais Latin (also CLASS 426)
Reading of epigraphic and literary preclassical texts with special attention to archaic and dialectal features. The position of Latin among the Indo-European languages of ancient Italy, the rudiments of Latin historical grammar, and aspects of the development of the literary language.

LING 457 Homeric Philology (also CLASS 427)
The language of the Homeric epics: dialect background, archaisms, modernizations. The notion of a Kunstsprache: its constitution, use, and internal consistency. The phonological and morphological aspects of epic compositional technique.

LING 459 Mycenaean Greek (also CLASS 429)

LING 460 Sanskrit Comparative Grammar

LING 493 Honors Thesis Research
Fall. 4 credits. Staff. May be taken before or after LING 494, or may be taken independently.

LING 494 Honors Thesis Research
Spring. 4 credits. Staff. May be taken as a continuation of, or before, LING 493.

LING 601 Topics in Phonological Theory
Fall. 4 credits. Prerequisites: LING 301 and 1 higher-level course in phonology.
D. Zec.
Selected topics in current phonological theory.

LING 602 Topics in Morphology
Fall. 4 credits. Prerequisites: LING 301 or 303 or permission of instructor. Not offered 2000–2001. D. Zec.
Selected topics in current morphological theory.

LING 604 Research Workshop
Fall. 2 credits. S-U grade only. Required of third-year linguistics graduate students. A. Cohn.
This course provides a forum for presentation and discussion of ongoing research, and development of professional skills. Participants must enroll in a concurrent independent study with a special committee member, or a relevant workshop.

LING 608 Discourse Analysis (also COM L 618)
Linguistic theory applied to relationships beyond the sentence.

LING 609 SLA and the Asian Languages (also ASIAN 610)
Fall. 4 credits. Prerequisite: LING 414–415 or permission of instructor. Not offered 2000–2001. Y. Shirai.
This course will survey the literature on the acquisition of Asian languages both in first and second language. We will mainly focus on Japanese, Korean, Chinese (Mandarin, Cantonese), but other languages (Thai, Malay, Vietnamese, Burmese, Tagalog, etc.) may be dealt with, depending on faculty/student interest.

LING 616 Topics in Syntactic Theory
Fall. 4 credits. Prerequisite: LING 304 or permission of instructor. J. Bowers.
An examination of recent developments in syntactic theory, including "minimalist" approaches to phrase structure, derivations/representations and the nature of economy conditions, and parametric differences.

LING 617-618 Hittite
617, fall; 618, spring. 4 credits each term. Prerequisites for LING 617, permission of instructor, for LING 618, LING 617 or permission of instructor. Not offered 2000–2001. Staff.
An introduction to the cuneiform writing system and the grammar of Hittite, followed by the reading of selected texts.

LING 619 Rigveda
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2000–2001. C. Minkowski.
Reading and linguistic analysis of selected Vedic hymns.

LING 621 Avestan and Old Persian (also NES 621)
Fall. 4 credits. Prerequisite: a basic knowledge of Sanskrit forms and morphology syntax. M. Weiss.
Linguistically-oriented readings of Old Persian and Avestan.

LING 623-624 Old Irish I, II
623, fall; 624, spring. 4 credits each term. Prerequisite for LING 624, LING 623 or permission of instructor. Not offered 2000–2001. Staff.
An introduction to "classical" Old Irish for students with no previous experience with the language.
LING 625 Middle Welsh
Fall. 4 credits. Prerequisite: permission of instructor. W. Harbert. Students develop a reading knowledge of Middle Welsh through translating selections from prose and poetry. Emphasis is on the prose tales, including the Mabinogi. No familiarity with Welsh is assumed.

LING 627 Advanced Old Irish
LING 631 Comparative Indo-European Linguistics

LING 633 Seminar in First-Language Acquisition: Cross-Linguistic Studies (also COGST 633 and HD 633)
Fall. 1-4 credits. Prerequisite: LING 436 or equivalent or permission of instructor. B. Lust. This seminar will review and critique current theoretical and experimental studies of first-language acquisition, with a concentration on insights gained by cross-linguistic study of this area. Attention will also be given to the development of research proposals.

LING 635-636 Indo-European Workshop
635. Fall. 636. Spring. 4 credits each term. Prerequisite: permission of instructor. Not offered 2000–2001. Staff. An assortment of subjects intended for students with previous training in Indo-European linguistics; problems in the reconstruction of Proto-Indo-European, topics in the historical grammars of the various IE languages, reading and historical linguistic analysis of texts, and grammatical sketches of "minor" IE languages.

LING 643 Topics in Historical Germanic Phonology #
Spring. 4 credits. Prerequisite: LING 441. Not offered 2000–2001. W. Harbert. The development of the sound system from Proto-Germanic to its daughter languages.

LING 644 Topics in Historical Germanic Syntax #

LING 645 Gothic

LING 646 Old High German, Old Saxon (also GERST 656)
Spring. 4 credits. Prerequisite: LING 101. Offered alternate years. W. Harbert. This course combines a survey of the linguistic history and structure of Old High German and Old Saxon with extensive readings from the major documents in which they are recorded. Reading knowledge of Modern German is highly recommended.

LING 468 Speech Synthesis by Rule
Spring. 4 credits. Prerequisite: LING 301, 319, or permission of instructor. Offered alternate years. Not offered 2000–2001. S. Hertz. Investigates the nature of the acoustic structure of speech synthesis, using speech as a tool for exploring this structure. A particular acoustic model will be proposed, developed, and motivated by considering the relationship between phonological and acoustic structure, speech timing, phonetic universals, coarticulation, and speech perception. The primary tool for investigation will be the Delta System, a powerful software system for investigating phonology and phonetics through speech synthesis. The course is meant for graduate students and advanced undergraduate students in linguistics, but may also be of interest to students in psychology/psycholinguistics, computer science, and cognitive studies.

LING 649 Structure of Old English

LING 653-654 Seminar in Southeast Asian Linguistics
653. Fall. 654. Spring. 4 credits each term. Prerequisite: LING 565 or permission of instructor. LING 653 is not a prerequisite for 654. Not offered 2000–2001. J. Wolff. Languages of mainland Southeast Asia. Topics, chosen according to student interests, may include description, dialectology, typology, comparative reconstruction, and historical studies.

LING 655-656 Seminar in Austronesian Linguistics

LING 659 Seminar in Vedic Philology (also ASIAN 659 and CLASS 659)

LING 661 Old Church Slavonic (also RUSSA 601)
Fall. 4 credits. This course is prerequisite to LING 662. Offered alternate years. Not offered 2000–2001. W. Browne. Grammar and reading of basic texts.

LING 662 Old Russian Texts (also RUSSA 602)

LING 671-672 Comparative Slavic Linguistics (also RUSSA 651-652)
671. Fall; 672. Spring. 4 credits each term. Prerequisites: for LING 672, LING 661 taken previously or simultaneously or permission of instructor. Offered alternate years. W. Browne. Sounds and forms of the Slavic languages and of prehistoric common Slavic; main historical developments leading to the modern languages.

LING 700 Seminar
Fall or spring, according to demand. Credit to be arranged. Seminars are offered according to faculty interest and student demand. Topics in recent years have included subject and topic, Montague grammar, speech synthesis, lexicography, classical and autonomous phonology, Japanese sociolinguistics, relational grammar, semantics and semiotics, and others.

LING 701-702 Directed Research
701, fall; 702, spring. 1–4 credits. Hours to be arranged. Staff.

LING 773-774 Proseminar in Cognitive Studies I, II (also COGST 773-774, PSYCH 773-774)
Fall. R grade; spring. S-U only. 4 credits. Staff. This year-long seminar is intended to provide graduate students with an interdisciplinary introduction to the study of knowledge, its representation, acquisition, and use.

MATHEMATICS

Mathematics is the language of modern science, basic training in the discipline is essential for those who want to understand, as well as for those who want to take part in, the important scientific developments of our time. Acquaintance with mathematics is also extremely useful for students in the social sciences and valuable for anyone interested in the full range of human culture and the ways of knowing the universe in which we live.

The Department of Mathematics faculty has strong groups specializing in algebra, number theory, real and complex analysis, Lie groups, topology and geometry, logic, probability and statistics, mathematical physics, and applied mathematics. Related departments at Cornell have specialists in computer science, operations research, linear programming, and game theory, and courses in these topics can be integrated readily into the mathematics major.

The department offers a rich variety of undergraduate courses, and many of its beginning graduate courses are suitable for advanced undergraduates as well. Under some conditions, a student may carry out an independent reading and research project for college credit under the supervision of a faculty member.

Members of the department are available to discuss with students the appropriate course for their levels of ability and interest, and students are urged to avail themselves of this help.
Students who want to take any of the courses numbered 300 or above are invited to confer, before registering, with the instructor concerned. The level of a course is indicated by the first digit of the course number: roughly, 1, 2, indicate undergraduate courses; 3, 4, upperclass courses; 5, professional level and mathematics education courses; 6, 7, graduate courses. The subject matter of courses is often indicated by the second digit: 0, general; 1, 2, analysis; 3, 4, algebra and combinatorics; 5, 6, topology and geometry; 7, probability and statistics; 8, logic; 9, other.

Midterm grades, when required, will be S or U only, except in special circumstances. In courses with numbers below 700, students will receive letter grades, with the exception of nonmathematics majors who have requested an S-U grade.

**Advanced Placement**

Secondary school students are strongly urged to take one of the two advanced placement examinations of the College Entrance Examination Board in their senior year. Freshmen who have had some calculus but who have not taken an advanced placement examination should take the placement examination in mathematics offered at Cornell just before the beginning of classes in the fall. It is most important that anyone with any knowledge of calculus carefully read "Advanced Placement," p. 5.

**The Major**

The mathematics major adapts to a number of purposes. It can emphasize the theoretical or the applied. It can be appropriate for professionals and nonprofessionals alike, and can be broad or narrow. It can also be combined easily with serious study in another subject in the physical, biological, or social sciences by means of a double major and/or concentration. For example, a double major in mathematics and computer science is facilitated by the concentration in computer science (4b) described below. This concentration permits a student to use certain computer science courses to satisfy the requirements of both majors. Questions concerning the major should be brought to a departmental representative.

**Prerequisites:** the traditional prerequisites are Mathematics 221–222, 223–224, or 225–226. A unit on infinite series is required. Such a unit is offered in Mathematics 112, 122 and 192. Normally students will be admitted to the major only when they have grades of B– or better in all 200-level mathematics courses they have taken. Alternative prerequisites are Mathematics 213 and 231, normally with grades of B+ or better.

**Requirements**

There are five requirements for the major:

1. Computer Science 100. Students are urged to take this course before the end of the sophomore year.
2. Two courses in algebra. Eligible courses are Mathematics 431 or 433, 432 or 434 or 332, 336 or 456.
3. Two courses in analysis. Eligible courses are Mathematics 321 or 420, 411 or 415, 414, 418, 422, 423, 425, 427, 428.
4. Further high-level mathematical courses. Any one of (a)–(c) below is sufficient:
   - a) Four additional Mathematics courses numbered 300 or above
   - b) (Concentration in Computer Science) Five additional courses from (i) and (ii) below, of which at least one is from (i) and three are from (ii)
     - i) Mathematics courses numbered 300 or above
     - ii) Computer Science courses numbered 300 or above
   - c) (Concentration in Operations Research) Five additional courses from (iii) and (iv) below, of which at least one is from (iii) and three are from (iv)
     - iii) Mathematics courses numbered 300 or above
     - iv) Courses in Operations Research and Industrial Engineering, typically out of 320–361 (excluding 350) and/or out of 431–472
   - d) (Concentration in Economics) Five additional courses from (v), (vi), and (vii) below, as follows: one course from (v), three courses from (vi), and a fifth course from any of (v), (vi), or (vii) Mathematics 472 and Economics 319 cannot both be used to satisfy these requirements.
     - v) Mathematics courses numbered 300 or above
     - vi) Economics courses with significant mathematical content. Eligible courses are Economics 518, 519, 520, 416, 418, 450 (also ARME 450), 477, 478, 479, 480
   - vii) Courses in Operations Research with significant mathematical content and dealing with material of interest in economics, e.g. OR&IE 320, 323, 431, 531, 631, sequence 475–476.

   However, the student may, with the adviser's approval, select an OR&IE course that satisfies the basic intent of the major program but is not in this list.

   e) (Concentration in Mathematical Physics) Five additional courses from (viii) and (ix) below, of which at least one is from (viii) and three are from (ix)
     - viii) Mathematics courses at the highest undergraduate level in analysis, geometry, algebra and combinatorics, probability and statistics, and mathematical logic. Eligible courses are Math 401, 411 or 413, 414, 415, 418 or 422, 423, 424, 425, 427, 428, 431 or 433, 432 or 434, 436, 441, 442, 451, 452, 453, 454, 455, 471, 472, 474, 481, 482, 483, 486.
     - ix) Physics courses which make significant use of advanced mathematics. Eligible courses are Physics 316, 317, 318, 327, 341, 443, 444, 454, 455, 480.

   These five alternatives do not exhaust the possibilities. A mathematics major interested in a concentration in a subject different from those above may develop a suitable individual program in consultation with the major adviser.

   5) One course dealing with mathematical models. Any course from outside mathematics with serious mathematical content and dealing with scientific matters, provided the course has not been used toward satisfying the previous requirement. Eligible courses include Physics 208, 213, or 217 (but not 112 or 207), even if the Mathematical Physics concentration has been selected, and Computer Science 211 provided the Computer Science concentration has not been selected. Students may also consider courses from biology, chemistry, economics, and other fields, they should consult their adviser.

   A course may be counted toward the mathematics major only if a grade of C− or better is received for that course.

   Major advisers can alter these requirements on request of an advisee, provided the intent of the requirements is met.

**Honors Program**

The Department of Mathematics awards honors (cum laude) and high honors (magna cum laude and summa cum laude) to graduating mathematics majors who have demonstrated outstanding ability in the major program.

The awards are determined by the Mathematics Major Committee in the last part of the semester prior to graduation. Normally, one requirement for honors is participation in the Honors Seminar (Math 401) for one semester, or independent study at a high performance level. The committee will also be looking for excellent performance in mathematics courses, particularly in challenging courses at the 400-level or beyond. Students interested in honors should consult their major advisers concerning suitable courses.

To be considered for high honors, a student usually will be expected to write a Senior Thesis and present it orally. This project is carried out during the senior year under the supervision of a member of the Mathematics Department faculty. Students interested in high honors should consult their major advisers and the chair of the department's Mathematics Major Committee during the second semester of their junior year.

**Studying Mathematics Outside the Major**

The College of Arts and Sciences and the Department of Mathematics offer no minor in mathematics; however, some other scientific departments in the college offer, within their own majors, concentrations in mathematics and mathematics-related fields. A student interested in such a concentration should consult the Director of Undergraduate Studies of his/her major department.

The Engineering College offers a minor in applied mathematics that is open to any undergraduate in that college. The minor is sponsored jointly by the Department of Mathematics and the Departments of Theoretical and Applied Mechanics, and is administered by the latter department.
students interested in this minor should contact Professor Richard Rand of the Department of Theoretical and Applied Mechanics (255-7145; rhr2@cornell.edu). Information about the minor is also available on the Mathematics Department's web site at www.math.cornell.edu.

The Mathematics Department welcomes into its upper-level courses students from all colleges, schools, and departments at Cornell. In particular, undergraduates who wish to pursue serious study of mathematics, whether within or to complement their own major fields, are encouraged to consult with the department. The department's Director of Undergraduate Studies and other faculty can provide assistance in selecting appropriate areas of study and individual courses.

Teacher Education in Mathematics

Students at Cornell may pursue teaching credentials in biology, chemistry, earth science, general science, mathematics, and physics. TEAMS (Teacher Education in Agriculture, Mathematics, and Science) is a university program jointly conducted by the Departments of Education and Mathematics. Although TEAMS offers options for undergraduate and graduate study, most students enroll in a five-year program, which combines an undergraduate major in mathematics or one of the sciences with a one-year Master of Arts in Teaching (MAT). Students from any college at Cornell are eligible to apply to the program as undergraduates. Students completing the graduate program will earn the master's degree required for permanent certification in New York and most other states.

For more information, contact the TEAMS Student Support Specialist (Leah Schwager (255-9875), 107 Kennedy Hall) or one of the program coordinators, W. Carlens (Education, 255-3108), A. Solomon (Mathematics, 255–3894), or D. Henderson (Mathematics, 255–3523).

Distribution Requirement

Virtually all mathematics courses can be used to satisfy the Quantitative and Formal Reasoning part of the Distribution Requirements. Explicit exceptions are noted in the beginning of the Arts and Sciences section of the Courses of Study.

Basic Sequences

Precalculus

<table>
<thead>
<tr>
<th>Description</th>

</tr>
</thead>
<tbody>
<tr>
<td>1) Algebra and trigonometry to prepare students for calculus</td>
<td>MATH 109* or EDUC 005*</td>
</tr>
<tr>
<td>2) Algebra, analytic geometry, elements of calculus</td>
<td>EDUC 115**</td>
</tr>
</tbody>
</table>

*MATH 109 and EDUC 005 do not carry credit for graduation.

**Students who want a second semester of mathematics after EDUC 115 may take MATH 105 or, if they need more calculus, MATH 111.

Courses with Overlapping Content

Because the department offers many courses with overlapping content, students must choose their courses carefully to ensure that they will receive credit for each course they take. Listed below are groups of courses with similar content. Students will receive credit for only one of the courses in each group.

106, 111, 121, 190, 191
112, 122, 192
213, 222, 224, 293
221, 223, 231, 294
332 and 432
36 and 436
321 and 420
411 and 413
431 and 433
452 and 454

Calculus

<tr>
<td>1) Finite mathematics and calculus for life and social science majors</td>
<td>105–106</td>
</tr>
<tr>
<td>2) Other possible finite mathematics and calculus sequence</td>
<td>105–111</td>
</tr>
</tbody>
</table>

Students who want to take two semesters of calculus are advised to take the first two semesters of one of the three calculus sequences. It is also possible to follow Mathematics 106 with 112 or 122.

Switching between calculus sequences is often difficult, especially at the 200 level. Students should not attempt such a switch without consulting the Director of Undergraduate Studies.

Fees

In some courses there may be a small fee for computer lab use or for photocopying materials to be handed out to students.

Summer Courses

A list of mathematics courses usually offered every summer can be found in the School of Continuing Education and Summer Sessions section of this catalog. Students interested in taking summer courses in mathematics should consult the Mathematics Department (255–4013). A tentative summer listing may be available as early as October.

Undergraduate Course Offerings

Please visit the department web site (www.math.cornell.edu) for further information and up-to-the-minute corrections.

Foundation courses: 105, 106, 109, 111, 112, 121, 122, 190, 191, 192, 213, 221, 222, 223, 224, 231, 293, 294

Mathematics Education: 408, 451

History of Mathematics: 403

General and Liberal Arts Courses: 103, 150, 171, 401, 402, 408, 490

Analysis: 411, 413, 414, 418

Algebra and Number Theory: 332, 336, 431, 432, 433, 434, 436

Combinatorics: 441, 442

Geometry and Topology: 150, 356, 451, 452, 453, 454, 455

Probability and Statistics: 171, 471, 472, 474

Mathematical Logic: 281, 384, 481, 482, 483, 486

MATH 103 Mathematical Explorations

Fall, spring. 3 credits. This course may be used to satisfy the distribution requirement in mathematics.

This course is for students who wish to experience how mathematical ideas naturally evolve. The homework will consist of the students actively investigating mathematical ideas. The course will emphasize ideas and imagination as opposed to techniques and calculations. Topics will vary depending on the instructor, and will be announced on the department's web site (www.math.cornell.edu) several weeks before the semester begins. Some assessment will be done through writing assignments.

MATH 105 Finite Mathematics for the Life and Social Sciences

Fall. 3 credits. Prerequisite: 3 years of high school mathematics, including trigonometry and logarithms. Mathematical modeling, sets, functions, and graphing. Transformations to linearize data (including use of log and semi-log paper). Probability (with some applications to genetics), Matrices, systems of linear equations, and Markov chains. Examples from biology and the social sciences are used.

MATH 106 Calculus for the Life and Social Sciences

Spring. 3 credits. Prerequisite: readiness for calculus, such as can be obtained from 3 years of high school mathematics (including trigonometry and logarithms) or any of the following Cornell courses: MATH 105, MATH 109, or EDUC 115.
Mathematics 111, rather than 106, is recommended for those planning to take 112.
Introduction to differential and integral calculus, partial derivatives, elementary differential equations. Examples from biology and the social sciences are used.

MATH 109 Precalculus Mathematics
Summer. 3 transcript credits only; cannot be used toward graduation.
This course is designed to prepare students for Mathematics 111, trigonometry, logarithms, and exponentials are reviewed.

MATH 111-112 Calculus
Calculus is the study of functions and processes from the point of view of how they are changing. What can we know of a function from the rate at which it changes? What is the cumulative effect of infinitely many infinitesimal changes?
Mathematics 111 and 112 aim to provide, to students with little or no prior exposure to calculus, the knowledge that calculus is useful, in that its applications to the physical, biological, and social sciences have shaped our world, and beautiful, in that it represents a breathtaking attempt of the human mind to capture the infinitely large and the infinitely small.
These courses seek to provide basic understanding, technical skills, and sample applications in various fields for the very broad range of students who take them. Topics are studied (as appropriate) by analytic, numerical, and graphical methods. These courses sometimes offer one or more sections with small-group projects. (See the Supplement to the Course and Room Roster.)

MATH 111 Calculus
Fall, spring. 4 credits. Prerequisite: Mathematics 109 or 3 years of high school mathematics, including trigonometry and logarithms.*
Functions and graphs, limits and continuity, differentiation and integration of algebraic, trigonometric, inverse trig, logarithmic, and exponential functions. Applications of differentiation, including graphing, max-min problems, tangent line approximation, implicit differentiation, and applications to the sciences. The mean value theorem, Antiderivatives for definite integrals, the fundamental theorem of calculus, substitution in integration, the area under a curve. Graphing calculators will be used, and their pitfalls will be discussed, as applicable to the above topics.
Mathematics 111 can serve as a one-semester introduction to calculus or as part of a two-semester sequence in which it is followed by Mathematics 112 or 122.

MATH 112 Calculus
Fall, spring. 4 credits. Prerequisite: Mathematics 111 with a grade of C or better or excellent performance in Mathematics 106. Those who do well in Mathematics 111 and expect to major in mathematics or a strongly mathematics-related field should take 112 instead of 111.*
Integration: applications, including volumes and arc length; techniques of integration, approximate integration with error estimates

MATH 121 Honors Calculus
Fall. 4 credits. Prerequisite: 3 years of high school mathematics with average grade of A- or better, or permission of the department.
This is a first-semester course in calculus intended for students who have been quite successful in their previous mathematics courses. The syllabus for the course is quite similar to that of Mathematics 111; however, the approach is more theoretical and the material will be covered in greater depth.

MATH 122 Honors Calculus
Fall, spring. 4 credits. Prerequisite: 1 semester of calculus with a high performance or permission of the department.
Students planning to continue with Mathematics 213 are advised to take 112 instead of this course.
Differentiation and integration of elementary transcendental functions, techniques of integration, applications, polar coordinates, infinite series, and complex numbers, as well as an introduction to proving theorems. The approach is more theoretical than in Mathematics 112.

MATH 150 From Space to Geometry
Over the centuries mathematicians have interpreted the concept of “space” in numerous ways. This course will survey some of these approaches from the time of Euclid to the later perspective of non-Euclidean systems. We will evaluate the impact of these viewpoints on such concepts as distance, angle measurement, straightness and curvature, dimension, and surface. We will make and analyze models to get a feel for the concepts and to assess the relevance of various approaches to geometry.

MATH 171 Statistical Theory and Application in the Real World
Fall, spring. 4 credits. Prerequisite: high school mathematics. This introductory statistics course will discuss techniques for analyzing data occurring in the real world and the mathematical and philosophical justification for these techniques. Topics include population and sample distributions, central limit theorem, statistical theories of point estimation, confidence intervals, testing hypotheses, the linear model, and the least squares estimator. The course concludes with a discussion of tests and estimates for regression and analysis of variance (if time permits). The computer will be used to demonstrate some aspects of the theory, such as sampling distributions and the Central Limit Theorem. In the lab portion of the course, students will learn and use computer-based programs implementing the statistical methodology presented in the lectures. (No previous familiarity with computers is presumed.)

MATH 190 Calculus for Engineers
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry and logarithms.*

MATH 191 Calculus for Engineers
Fall, spring. 4 credits. Prerequisite: 3 years of high school mathematics including trigonometry and logarithms, plus some knowledge of calculus.
Plane analytic geometry, differential and integral calculus, and applications. Mathematics 191 covers essentially the same topics as 190, but is designed for students with some previous successful experience with calculus.

MATH 213 Calculus
Fall, spring. 4 credits. Prerequisite: Mathematics 112, 122, or 192.*
Vectors and vector-valued functions. Multivariable and vector calculus including multiple and line integrals. First- and second-order differential equations with applications, systems of differential equations. Elementary partial differential equations. This course is designed for students who wish to master the basic techniques of calculus, but whose major will not require a substantial amount of mathematics. The course may emphasize different topics in the syllabus in different semesters.

MATH 221 Linear Algebra and Calculus
Fall, spring. 4 credits. Prerequisite: 2 semesters of calculus with high performance or permission of the department.* Linear algebra and differential equations. Topics include vector algebra, linear transformations, matrices, and linear differential equations, as well as an introduction to proving theorems. This course is especially recommended for students who plan to major in mathematics or in a strongly related field.

MATH 222 Calculus
Fall, spring. 4 credits. Prerequisite: Mathematics 221.*
Multivariable and vector differential and integral calculus, including multiple, line, and surface integrals. This course is especially recommended for students who plan to major in mathematics or in a strongly related field.

MATH 223 Honors Linear Algebra and Calculus
Fall. 4 credits. Prerequisite: 2 semesters of calculus with a grade of A- or better, or permission of instructor.*
Vectors, matrices, and linear transformations, differential calculus of functions of several variables; inverse and implicit function theorems; quadratic forms, extrema, and manifolds; multiple and iterated integrals
Mathematics 223–224 provides an integrated treatment of linear algebra and multivariable calculus designed for students who have been highly successful in their previous calculus courses.

*See the list of courses with overlapping content at the end of the introduction.
MATH 224 Honors Linear Algebra and Calculus
Spring. 4 credits. Prerequisite: Mathematics 223.
Vector fields; line integrals; differential forms and exterior derivative; work, flux, and density forms; integration of forms over parametrized domains; Green’s, Stoke’s, and divergence theorems.

MATH 231 Linear Algebra
Spring. 3 credits. Prerequisite: Mathematics 111 or equivalent.
Vectors, matrices, and linear transformations, affine and Euclidean spaces, transformation of matrices, and eigenvalues.

MATH 281 Deductive Logic (also PHIL 331)
Fall. 4 credits.
For description, see PHIL 331.

MATH 293 Engineering Mathematics
Fall, spring. 4 credits. Prerequisite: Mathematics 192.

MATH 294 Engineering Mathematics
Fall, spring. 4 credits. Prerequisite: Mathematics 192.

MATH 321 Applicable Analysis
Fall. 4 credits. Prerequisites: Mathematics 221-222, 223-224, 293-294, or 231 and 231.
A survey of some of the mathematical techniques that are of use in applications to the physical sciences and engineering. The primary mathematical tool explored is harmonic analysis, including Fourier Series and Legendre and Bessel expansions. The applications will be principally to boundary value problems for ordinary and partial differential equations. Particular emphasis will be made in developing a strong geometric intuition to help illuminate the frequently extensive computations. Much of the formal mathematical material missing in applied courses (e.g., uniform convergence, dominated convergence, complete orthonormal sets) will be thoroughly explained.

MATH 332 Algebra and Number Theory
Fall. 4 credits. Prerequisite: Mathematics 221, 223, 231 or 294.
Various topics from number theory and modern algebra, usually including most of the following: Primes and factorization, Diophantine equations, congruences, quadratic reciprocity, continued fractions, rings and fields, finite groups, introduction to arithmetic of the Gaussian integers and quadratic fields. Motivation and examples for the concepts of abstract algebra are derived primarily from number theory and geometry.

MATH 336 Applicable Algebra
Spring. 4 credits. Prerequisite: Mathematics 221, 223, 231 or 294.
An introduction to the concepts and methods of abstract algebra and number theory that are of interest in applications. Basic theory of groups, rings and fields and their applications to such areas as public-key cryptography, error-correcting codes, parallel computing, and experimental designs. Elementary number theory, Euclidean algorithm, prime factorization, congruences, theorems of Fermat and Euler, elementary group theory, the remainder theorem, factorization in the ring of polynomials, classification of finite fields. Applications include the RSA cryptosystem and use of finite fields to construct error-correcting codes and Latin squares.

MATH 356 Groups and Geometry
Spring. 4 credits. Prerequisite: Mathematics 221, 223, 231 or 294.
Groups were introduced in the nineteenth century as the set of symmetries of an algebraic or geometric object, and this viewpoint is a central one in modern mathematics. This course studies the geometry of the planes and of patterns in the plane in terms of the group of symmetries ("isometries") of the plane. Prior knowledge of groups is not a prerequisite. One aim is to give students experience in modern algebra and geometry (unlike geometry of complex numbers) and a sense of the unity of mathematics before they take the 400-level courses. Special care is given to initiate the student into the writing of proofs and the language of modern mathematics. Groups of transformations. Subgroups and cosets. Homomorphisms and isomorphisms. Orbits over fixed points. Frieze groups, wallpaper groups ("2-dimensional crystallographic groups") and the associated tesselations of the Euclidean plane.

MATH 384 Foundations of Mathematics (also PHIL 434)
Fall. 4 credits. Prerequisite: 1 course in logic or permission of instructor. Not offered 2000-2001.
For description, see PHIL 434.

MATH 401 Honors Seminar: Topics in Modern Mathematics
Spring. 4 credits. Prerequisite: 2 courses in mathematics numbered 300 or higher or permission of instructor.
This course is a participatory seminar primarily aimed at introducing senior and junior mathematics majors to some of the challenging problems and areas of modern mathematics. The seminar will help students develop research and expository skills in mathematics, which is important for careers in any field that makes significant use of the mathematical sciences (e.g., pure or applied mathematics, physical or biological sciences, business and industry, medicine). The content will vary from year to year.

MATH 402 Smorgasbord Seminar
Fall. 1 credit. Prerequisite: 2 courses in mathematics numbered 300 or higher. S-U only. Recommended for mathematics majors. A student may only receive credit for this course once.
A lecture series by members of the Mathematics Department about current research topics, to give students a little taste of many different areas in mathematics. This course will be valuable for students looking for a topic for a senior thesis and for students thinking about graduate work in the mathematical sciences.

MATH 403 History of Mathematics #
Spring. 4 credits. Prerequisite: 2 courses in mathematics above 300, or permission of instructor.
Survey of the development of mathematics from antiquity to the present, with an emphasis on the achievements, problems, and mathematical viewpoints of each historical period and the evolution of such basic concepts as number, geometry, construction, and proof. Readings from original sources in translation. Students will be required to give oral and written reports.

MATH 408 Mathematics in Perspective
Spring. 4 credits. Prerequisite: consent of instructor (intended for senior mathematics majors and other students with strong mathematics backgrounds).
The purpose of this course is for students to step back and form an overview of the mathematics they have learned.

MATH 411 Introduction to Analysis
Fall. 4 credits. Prerequisite: Mathematics 221-222, 223-224 or 293-294. Students who need measure theory and Lebesgue integration for advanced probability courses should take Mathematics 413-414 or audit the first few weeks of Mathematics 621. Undergraduates who plan to attend graduate school in mathematics should take 413-414.
An introduction to the theory of functions of real variables, stressing concepts and a logical development of the subject rather than applications. Topics include Euclidean spaces, the real number system, continuous and differentiable functions, uniform convergence and approximation theorems, and the Riemann integral. Students who wish to continue study of theoretical analysis upon completion of Mathematics 411 may take, for example, Mathematics 418.

MATH 413-414 Honors Introduction to Analysis
413, fall, 414, spring. 4 credits each. Prerequisite for 413: a high level of performance in Mathematics 221-222, 223-224 or 293-294. Prerequisite for Mathematics 414: Mathematics 413.
This sequence, designed for honors students, provides an introduction to the theory of functions of real variables, stressing a rigorous logical development of the subject rather than applications. Topics include metric spaces, the real number system, continuous and differentiable functions, uniform convergence and approximation theorems, Fourier series, Riemann and Lebesgue integrals, calculus in several variables, and differential forms.

MATH 418 Introduction to the Theory of Functions of One Complex Variable
Spring. 4 credits. Prerequisite: Mathematics 221-222, 293-294, or 213.
A rigorous introduction to complex variable theory. Complex numbers. Differential and integral calculus for functions of a complex variable, including Cauchy’s theorem and the calculus of residues. Elements of conformal mapping.

MATH 420 Differential Equations and Dynamical Systems
Fall, spring. 4 credits. Prerequisite: high level of performance in Mathematics 293-294, 221-222, 223-224, or permission of instructor. Graduate students who need mathematics extensively in their work and who have had solid courses in calculus and complex variables should consider

See the list of courses with overlapping content at the end of the introduction.
appropriate graduate-level courses in analysis.*

Ordinary differential equations in one and higher dimensions: qualitative, analytic, and numerical methods. Emphasis on differential equations as models and the implications of the theory for the behavior of the system being modeled. Introduction to bifurcations.

MATH 422 Applied Complex Analysis
Fall. 4 credits. Prerequisite: Mathematics 221–222, 223–224, 293–294, or 213 and 231. Complex variables, Fourier transforms, Laplace transforms. Applications to partial differential equations. Additional topics may include an introduction to generalized functions.

[MATH 423 Applicable Analysis III
Spring. 4 credits. Prerequisite: Mathematics 221–222, 223–224, 293–294, or 213 and 231. May not be offered again.]

MATH 424 Wavelets and Fourier Series
Spring. 4 credits. Prerequisite: Mathematics 221–222, 223–224, 293–294, or permission of instructor.

Both Fourier series and wavelets provide methods to approximate general functions in terms of simple building blocks. Such representations have important consequences, both for pure mathematics and for applications. Fourier series use \textit{natural} sinusoidal building blocks and may be used to help solve differential equations. Wavelets use \textit{artificial} building blocks that have the advantage of localization in space.

A full understanding of both topics requires a background involving Lebesgue integration theory and functional analysis. This course will present as much as possible on both topics without such formidable prerequisites. The emphasis will be on clear statements of results and key ideas of proofs, working out examples, and applications. Related topics that may be included in the course: Fourier transforms, Heisenberg uncertainty principle, Shannon sampling theorem, and Poisson summation formula.

MATH 425 Numerical Solutions of Differential Equations
Spring. 4 credits. Prerequisite: Mathematics 221–222, 223–224, or 293–294 and one course numbered 300 or higher in mathematics, or permission of instructor.

MATH 427 Introduction to Ordinary Differential Equations
Fall. 4 credits. Prerequisite: Mathematics 221–222, 223–224, or 293–294 or permission of instructor.

Covers the basic existence, uniqueness, and stability theory together with methods of solution and methods of approximation. Topics include singular points, series solutions, Sturm-Liouville theory, transform methods, approximation methods, and application to physical problems.

MATH 429 Introduction to Partial Differential Equations
Spring. 4 credits. Prerequisite: Mathematics 221–222, 223–224, or 293–294 or permission of instructor.

Topics selected from first-order quasilinear equations, classification of second-order equations, with emphasis on maximum principles, existence, uniqueness, stability. Fourier series methods, approximation methods.

MATH 431-432 Introduction to Algebra
Fall, spring. 4 credits each. Prerequisite: Mathematics 221, 223, 234, or 294. Prerequisite for Mathematics 432: Mathematics 431 or 433, or permission of instructor. Undergraduates who plan to attend graduate school in mathematics should take 433–434.*

431: An introduction to linear algebra, including the study of vector spaces, linear transformations, matrices, and systems of linear equations; quadratic forms and inner product spaces; canonical forms for various classes of matrices and linear transformations; determinants. 432: an introduction to various topics in abstract algebra, including groups, rings, fields, factorization of polynomials and integers, congruences, and the structure of finitely generated Abelian groups. Examples of algebraic domains with application to canonical forms of matrices.

MATH 433-434 Honors Introduction to Algebra
Fall, spring. 4 credits each. Prerequisite: Mathematics 221, 223, 234, or 294. Prerequisite for Mathematics 434: Mathematics 433 or permission of instructor.*

Honors version of Mathematics 431–432. Mathematics 433–434 will be more theoretical and rigorous than 431–432 and will include additional material such as multilinear and exterior algebra.

MATH 436 Applications of Abstract Algebra
Spring. 4 credits. Prerequisite: Mathematics 421, 223, 231, or 294 or higher. Prerequisite for Mathematics 432: Mathematics 336 or the equivalent.

The course is intended for students who would like to learn modern algebra and its applications outside of mathematics. There will be at least as much emphasis on applications as the relevant modern algebra. Frequently the applications involve or were made possible by the invention of computers. Students who already know the modern algebra covered in the course may still find the applications to be of interest. Specific topics will be chosen by the instructor. The course may include topics drawn from: elementary number theory, polynomials and ring theory, monoids and group theory, real closed fields, algebraic combinatorics, Groebner bases, algebraic geometry, and field theory. Some applications and related topics typically include items drawn from: complexity theory, coding theory, encryption, discrete and fast Fourier transform, primality testing, factoring integers and polynomials, root counting and isolation, solving systems of polynomial equations, formal language theory, and automata.

MATH 436 and 437 may overlap in choice of material. When they overlap, the coverage in MATH 436 will be of greater depth appropriate to a 400-level course. Students cannot get credit for both MATH 336 and MATH 436.

[MATH 441 Introduction to Combinatorics

MATH 442 Introduction to Combinatorics
Spring. 4 credits. Prerequisite: Mathematics 221, 223, 231, or 294.

MATH 451 Euclidean and Spherical Geometry
Fall. 4 credits. Prerequisite: Mathematics 221, 223, 231, or 294, or permission of instructor.

Topics from Euclidean and spherical (non-Euclidean) geometry. A nonlecture, seminar-style course organized around student participation.

MATH 452 Classical Geometries
Spring. 4 credits. Prerequisite: Mathematics 221, 223, 231, or 294, or permission of instructor.

This is an introduction to hyperbolic, spherical, and projective geometry—the classical geometries that developed as Euclidean geometry was better understood. For example, the historical problem of the independence of Euclid's fifth postulate is understood when the existence of the hyperbolic plane is realized. Straightedge (and compass) constructions and stereographic projection in Euclidean geometry can be understood within the structure of projective geometry. Topics in hyperbolic geometry include models of the hyperbolic plane and relations to spherical geometry. Topics in projective geometry include homogeneous coordinates and the classical theorems about conics and configurations of points and lines. Optional topics include principles of perspective drawing, finite projective planes, orthogonal Latin squares, and the cross ratio.

*See the list of courses with overlapping content at the end of the introduction.

*See the list of courses with overlapping content at the end of the introduction.
MATH 453 Introduction to Topology
Fall. 4 credits. Prerequisite: Mathematics 411 or 413, or permission of instructor.
Basic point set topology, connectedness, compactness, metric spaces, fundamental group. Application of these concepts to surfaces such as the torus, the Klein bottle, the Moebius band.

MATH 454 Introduction to Differential Geometry
Spring. 4 credits. Prerequisite: Mathematics 221-222, 223-224, or 293-294, plus at least one mathematics course numbered 300 or above. Mathematics 453 is not a prerequisite. Differential geometry of curves and surfaces. Curvature, geodesics, differential forms. Introduction to n-dimensional Riemannian manifolds. This material provides some background for the study of general relativity; connections with the latter will be indicated.

MATH 455 Applicable Geometry
Fall. 4 credits. Prerequisite: A good introduction to linear algebra (such as in Math 221, 223, 231, or 294) or permission of the instructor. It will not be assumed that you know what any of the words in the following paragraphs mean. Not offered 2000–2001.
An introduction to the theory of n-dimensional convex polytopes and polyhedra and some of its applications, with an in-depth treatment of the case of 3-dimensional polytopes. We will discuss both combinatorial properties (such as face counts) as well as metric properties (such as rigidity). Theorems of Euler, Cauchy, and Steinitz, Voronoi diagrams and triangulations, convex hulls, cyclic polytopes, shellability and the upper-bound theorem. We relate these ideas to applications in tiling, linear inequalities and linear programming, structural rigidity, computational geometry, hyperplane arrangements and zonotopes.

MATH 471 Basic Probability
Fall. 4 credits. Prerequisite: Mathematics 221, 223, 231, or 294. May be used as a terminal course in basic probability. Topics include combinations, important probability laws, expectations, moments, moment-generating functions, limit theorems. Emphasis is on diverse applications and on development of use in statistical applications. See also the description of Mathematics 671.

MATH 472 Statistics
Spring. 4 credits. Prerequisite: Mathematics 471 and knowledge of linear algebra such as taught in Mathematics 221. Some knowledge of multivariable calculus helpful but not necessary.
Classical and recently developed statistical procedures will be treated in a framework that emphasizes the basic principles of statistical inference and the rationale underlying the choice of these procedures in various settings. These settings include problems of estimation, hypothesis testing, large sample theory.

MATH 473 Basic Stochastic Processes
Spring. 4 credits. Prerequisite: Mathematics 471 or equivalent and knowledge of linear algebra such as taught in Mathematics 221. Not offered 2000–2001.
This is a second-semester undergraduate course on probability. It covers topics from renewal theory, martingales, discrete and continuous time Markov chains, Brownian motion and related diffusion processes, and applications to queuing theory and finance.

Theoretical as well as applied aspects of the subject will be emphasized.

MATH 481 Mathematical Logic (also PHIL 431)
Spring. 4 credits. Prerequisite: 1 logic course from the Mathematics Department at the 200 level or higher, 1 logic course from the Philosophy Department at the 300 level or higher, or permission of the instructor.
For description, see PHIL 432.

MATH 482 Topics in Logic (also PHIL 432)
Spring. 4 credits. Prerequisite: 1 logic course from the Mathematics Department at the 200 level or higher, 1 logic course from the Philosophy Department at the 200 level or higher, or permission of the instructor.
For description, see PHIL 432.

MATH 483 Intensional Logic (also PHIL 436)
Spring. 4 credits. Prerequisite: Mathematics 221-222, 223-224, or 293-294; Computer Science 280 or equivalent (such as Mathematics 332, 336, 432, 434, 436, or 481); and some additional course in mathematics or theoretical computer science.
Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

MATH 490 Supervised Reading and Research
Fall, spring. 1–6 credits.
Supervised reading and research by arrangement with individual professors. Not for material currently available in regularly scheduled courses.

Professional Level and Mathematics Education Courses

MATH 500 College Teaching
Fall, weeks 1–6. 1 credit.
Among the topics covered: basic topics about teaching, such as how to plan recitations, how to prepare lesson plans for lectures, exam design and grading, syllabus planning. Also discussed: the structure of colleges and universities, jobs and tenure, professionalism, alternative teaching strategies.

MATH 505 Educational Issues in Undergraduate Mathematics
Fall. 4 credits. Prerequisite: graduate standing or permission of the instructor. Not offered 2000–2001.
This course will examine various educational issues in undergraduate mathematics and the relationship of these issues to the mathematics itself. The precise choice of topics will vary, but the intent is that a balance of different views be presented and discussed. There will be extensive readings in the course and occasional guest lectures. Possible topics include: nature of proof and how and when to teach it, calculus "reform," teaching mathematics to school teachers, using writing, using history, alternative assessments, alternatives to lecturing, equity issues, effective uses of technology, what is mathematical understanding and how do we recognize it, what should every mathematics major know, research in undergraduate mathematics.

MATH 507 Teaching Secondary Mathematics: Theory and Practices
This course will provide direct experience of new approaches, curricula and standards in mathematics education. Discussion of articles, activities for the secondary classroom and videotape of classroom teaching will be tied to in-class exploration of math problems. Experience in the computer lab, examining software environments and their use in the mathematics classroom will be included.
Participants will be expected to write short papers, share ideas in class and present their opinions on issues.

MATH 508 Mathematics for Secondary School Teachers
Fall. 4 credits. Prerequisite: secondary school mathematics teacher, graduate standing, or permission of instructor. May not be taught every semester.
An examination of the principles underlying the content of the secondary school mathematics curriculum, including connections with the history of mathematics and current mathematics research.

Graduate Courses

Students interested in taking graduate courses in mathematics should consult the department for further details, times, and possible changes in the courses described below.

MATH 611-612 Real and Complex Analysis
Fall, 611; spring, 612. 4 credits each.
611: measure and integration, functional analysis. 612: complex analysis, Fourier analysis, and distribution theory.

MATH 613-614 Topics in Analysis

MATH 615-616 Mathematical Methods in Physics
Fall, 615; spring, 616. 4 credits each.
Intended for graduate students in physics or related fields who have had a strong advanced calculus course and at least 2 years of general physics. A knowledge of the elements of finite dimensional vector space theory, complex variables, separation of variables in partial differential equations, and Fourier series will be assumed. Undergraduates will be admitted only with permission of instructor.
Mathematics 615 is a prerequisite for 616.

Topics designed to give a working knowledge of the principal mathematical methods used in advanced physics. 615: Hilbert space, generalized functions, Fourier transform, Summability of problem in ODE; Green's functions, asymptotic expansions. 616: Linear operators. Differential operators and integral operators, the equations and eigenvalue problems connected with them and the special functions arising from them. Elements of group theory. "The rotation group and its representations."

**MATH 617 Dynamical Systems**

**MATH 618 Smooth Ergodic Theory**

Spring. 4 credits.

**MATH 619-620 Partial Differential Equations**

Basic theory of partial differential equations.

**MATH 621 Measure Theory and Lebesgue Integration**

Fall. 4 credits.

Measure theory, integration, and Lp spaces.

**MATH 622 Applied Functional Analysis**

Basic theory of Hilbert and Banach spaces and operations on them. Applications.

**MATH 628 Complex Dynamical Systems**

Fall. 4 credits. Prerequisite: Mathematics 418.

Various topics in the dynamics of analytic mappings in one complex variable, such as: Julia and Fatou sets, the Mandelbrot set, Mane-Sad-Sullivan's theorem on structural stability. Local theory, including repulsive cycles and the Yoccoz inequality, parabolic points and Fatou disks. Siegel disks and Yoccoz's proof of the Siegel-Brjuno theorem. Quasi-conformal mappings and surgery: Sullivan's theorem on non-wandering domains, polynomial-like mappings and renormalization. Shishikura's construction of Herman rings. Puzzles, tableaux, and local connectivity problems. Thurston's topological characterization of rational functions, the spider algorithm, and mating of polynomials.

**MATH 631-632 (634) Algebra**

631, Fall; 632, Spring; 634, Spring. 4 credits each. Not offered 2000-2001.

631: finite groups, field extensions, Galois theory, rings and algebras, and exterior algebra. 632: Wedderburn structure theorem, Bruer group, Galois cohomology. 634: Dedekind domains, primary decomposition, Hilbert basis theorem, local rings.

**MATH 649 Lie Algebras**

Fall. 4 credits.

**MATH 651 Introductory Algebraic Topology**

Spring. 4 credits.

Fundamental group and covering spaces. Homotopy theories for complexes and spaces.

**MATH 652-653 Differentiable Manifolds**

652, Fall; 653, Spring. 4 credits each.

Prerequisites: advanced calculus, linear algebra (Mathematics 431), point set topology (Mathematics 453). This is an introduction to differential geometry and differential topology at the level of the beginning graduate student. Topological manifolds. Smooth manifolds, immersions and embeddings, tangent bundles, fiber bundles, vector fields and dynamical systems, Froebenius' theorem. Lie groups. Integration on manifolds, differential forms. Stokes theorem. Connections, Riemannian manifolds, geodesics, curvature, Gauss-Bonnet theorem. Tubular neighborhoods, transversality and cobordism.

**MATH 661 Geometric Topology**

Fall. 4 credits.

An introduction to some of the more geometric aspects of topology and its connections with group theory. Possible topics: surface theory, 3-manifolds, knot theory, geometric and combinatorial group theory, hyperbolic groups, hyperbolic manifolds.

**MATH 662 Riemannian Geometry**

Linear connections, Riemannian metrics and parallel translation. Covariant differentiation and curvature tensors. The exponential map, the Gauss Lemma and completeness of the metric. Isometries and space forms, Jacobi fields and the theorem of Cartan-Hadamard. The first and second variation formulas. The index form of Morse and the theorem of Bonnet-Myers. The Rauch, Hessian, and Laplacian comparison theorems. The Morse index theorem. The conjugate and cut loci. Submanifolds and the Second Fundamental Form.

**MATH 671-672 Probability Theory**

671, Fall; 672, Spring. 4 credits each.

Prerequisite: a knowledge of Lebesgue integration theory, at least on the real line. Students can learn this material by taking parts of Mathematics 413-414 or 621.

Prerequisite for Mathematics 672: Mathematics 671.

Properties and examples of probability spaces.

**MATH 711-712 Seminar in Analysis**

711, Fall; 712, Spring. 4 credits each. Not offered 2000-2001.

**MATH 713 Functional Analysis**

Spring. 4 credits.

Topological vector spaces, Banach and Hilbert spaces, Banach algebras. Additional topics to be selected by instructor.

**MATH 715 Fourier Analysis**

**MATH 717 Applied Dynamical Systems**

Fall. 4 credits. Prerequisite: T&AM 675, Mathematics 617, or equivalent. Not offered 2000-2001.

Review of planar (single-degree-of-freedom) systems. Local and global analysis. Structural stability and bifurcations in planar systems. Center manifolds and normal forms. The averaging theorem and perturbation methods. Melnikov's method. Discrete dynamical systems, maps and difference equations, homoclinic and heteroclinic motions, the Smale Horseshoe and other complex invariant sets. Global bifurcations, strange attractors, and chaos in free and forced oscillatory systems. Applications to problems in solid and fluid mechanics.

**MATH 722 Topics in Complex Analysis**

Selections of advanced topics from complex analysis, such as Riemann surfaces, complex dynamics, and conformal and quasiconformal mapping. Course content varies.

**MATH 728 Seminar in Partial Differential Equations**

Fall. 4 credits.

**MATH 731-732 Seminar in Algebra**

731, Fall; 732, Spring. 4 credits each.

**MATH 735 Topics in Algebra**

Fall. 4 credits.

**MATH 736 Topics in Topology**

Spring. 4 credits.

**MATH 744 Introduction to Mathematical Statistics**

Spring. 4 credits. Prerequisites: Mathematics 671 and OR&IE 670 or permission of instructor.

Topics include an introduction to the theory of point estimation, hypothesis testing and confidence intervals, consistency, efficiency, sufficiency, and the method of maximum likelihood. Basic concepts of decision theory are discussed; asymptotic methods are introduced and developed in detail. The course is coordinated with OR&IE 670 to form the second part of a one-year course in mathematical statistics.

**MATH 768 Logic**

Spring. 4 credits.

Basic topics in mathematical logic, including propositional and predicate calculus; formal number theory and recursive functions; completeness and incompleteness theorems. Other topics as time permits.

**MATH 771-772 Seminar in Analysis**

771, Fall; 772, Spring. 4 credits each. Not offered 2000-2001.

**MATH 775 Topics in Applied Mathematics**

**MATH 776 Topics in Analysis**

**MATH 781 Logic**

Spring. 4 credits.

Basic topics in mathematical logic, including propositional and predicate calculus; formal number theory and recursive functions; completeness and incompleteness theorems. Other topics as time permits.

**MATH 784 Introduction to Mathematical Statistics**

Spring. 4 credits. Prerequisites: Mathematics 671 and OR&IE 670 or permission of instructor.

Topics include an introduction to the theory of point estimation, hypothesis testing and confidence intervals, consistency, efficiency, sufficiency, and the method of maximum likelihood. Basic concepts of decision theory are discussed; asymptotic methods are introduced and developed in detail. The course is coordinated with OR&IE 670 to form the second part of a one-year course in mathematical statistics.

**MATH 788 Logic**

Spring. 4 credits.

Basic topics in mathematical logic, including propositional and predicate calculus; formal number theory and recursive functions; completeness and incompleteness theorems. Other topics as time permits.

**MATH 791 Seminar in Algebra**

Selection of advanced topics from algebra, algebraic number theory, and algebraic geometry. Course content varies.

MATH 737  Algebraic Number Theory  
Spring. 4 credits.

MATH 739  Topics in Algebra  
Fall. 4 credits.  
Selection of advanced topics from algebra, algebraic number theory, and algebraic geometry. Course content varies.

MATH 740  Homological Algebra  
Spring. 4 credits.

MATH 751-752  Seminar in Topology  
751. fall, 752, spring. 4 credits each.

MATH 753-754  Algebraic Topology  
753. fall, 754, spring. 4 credits.  
The continuation of 651. Cohomology, cup products, Poincare duality, higher homotopy groups, fiber bundles, fibrations, vector bundles, characteristic classes, K-theory, spectral sequences, cohomology operations.

MATH 757-758  Topics in Topology  
757: fall, 758, spring. 4 credits each.  
Selection of advanced topics from modern algebraic, differential, and geometric topology. Course content varies.

MATH 761-762  Seminar in Geometry  
761. fall; 762, spring. 4 credits each.

MATH 767  Algebraic Geometry  
Fall. 4 credits.

MATH 771-772  Seminar in Probability and Statistics  
771. fall; 772, spring. 4 credits each.

MATH 774  Asymptotic Statistics  
Fall. 4 credits.  
Prerequisites: probability theory (Math 671-672 or equivalent), containing stochastic processes) and statistics (Math 472 or Math 674).  
Introduction to asymptotic statistical decision theory and to empirical stochastic processes. The notion of experiment, reduction by sufficiency, equivalence classes, the Le Cam delta distance, local asymptotic normality and minimaxity, optimal rates of convergence, white noise models, the Pinsker bound, and Gaussian approximation of nonparametric experiments. Topics in empirical processes include coupling theorems, some probability metrics, entropy conditions, functional limit theorems, and Hungarian constructions.

MATH 777-778  Stochastic Processes  
777. fall; 778, spring. 4 credits each.

MATH 781-782  Seminar in Logic  
781. fall; 782, spring. 4 credits each.

MATH 783  Model Theory  
Spring. 4 credits.  

MATH 784  Recursion Theory  
Spring. 4 credits.  

MATH 787  Set Theory  
Fall. 4 credits.

MATH 788  Topics in Applied Logic  
Fall. 4 credits.  
This course covers applications of the results and methods of mathematical logic to other areas of mathematics and science. Topics vary each year; some recent examples are: automatic theorem proving, formal semantics of programming and specification languages, linear logic, constructivism (intuitionism), nonstandard analysis. The student is expected to be familiar with the standard results in graduate level mathematical logic.

MATH 789  Supervised Reading and Research  
Fall, spring. 1–6 credits.

MATH 901-902  Oliver Club Seminar  

MATH 903-904  Olivetti Club Seminar  

MATH 905-906  Occasional Seminar on Undergraduate Education  

MATH 907-908  Educational Issues in Undergraduate Mathematics  

MATH 911-912  Seminar in Analysis  

MATH 913-914  Seminar in Dynamics and Geometry  

MATH 949-950  Seminar in Lie Groups  

MATH 951-952  Topics in Topology and Geometry  

MATH 967-968  Seminar in Combinatorial and Algebraic Geometry  

MUSIC  
M. Scatterday, chair; S. Tucker, director of undergraduate studies (233 Lincoln Hall, 255-4097).

The Department of Music and the Faculty of Arts and Sciences offer a wide variety of musical experiences, including the Cornell Glee Club, Cornell University Chorus, Cornell University Wind Symphony, Cornell Symphony Orchestra, Cornell Jazz Ensembles, Cornell Chorale, Cornell Chamber Singers, Cornell Chamber Orchestra, Cornell University Chamber Winds, Cornell University Symphony Band, Cornell University Wind Ensemble, and Cornell University Wind Symphony. Information about requirements, rehearsal hours, and conditions for academic credit can be found in the following listings for the Department of Music. Announcements of auditions are posted during registration each fall term and, where appropriate, each spring term as well.

The university is also home to many student-run musical organizations, including the Big Red Marching Band and Big Red Pep Band, the Cornell Savoyards, and several a cappella groups. Information about these groups, too, is available through the Department of Music office, 101 Lincoln Hall (255-4097).

The Department of Music and the Faculty Committee on Music sponsor more than 100 formal and informal concerts each year by Cornell's ensembles, faculty, and students and by distinguished visiting artists. The great majority of concerts are free and open to the public. Lectures and concerts are listed on the web (www.arts.cornell.edu/music/).

Additional information is available through the events office (255-4760).

Nonmajors  
In addition to its performing, instructional, and concert activities, the department offers numerous courses for nonmajors, many of which carry no prerequisites and presuppose no previous formal training in music. Consult the following course listings, and for further information consult the department office, 101 Lincoln Hall (255-4097), or the director of undergraduate studies (255-3423).

The Major  
Two options are available for the student planning to major in music. Each carries the study of music to an advanced level through the integration of performance, music theory, and music history. Option I is a general course, not necessarily oriented toward eventual graduate or professional work in music. Option II is a more specialized and concentrated program, suitable for students who want to prepare for graduate or professional work in music.

All students contemplating a major in music under either option should arrange for placement examinations and advising in the department as early as possible, usually during the freshman orientation period. Information is available from the director of undergraduate studies. All students are expected to have chosen an adviser from among the department faculty at the time of application for major status.

Option I presupposes some musical background before entering Cornell. Prerequisites for admission to the major are completion of Music 152 and 154, at the latest by the end of the sophomore year (the freshman year is preferable), with an overall grade of B- or better in each course. For further information, consult the director of undergraduate studies.

The requirements for the Bachelor of Arts degree with a major in music under Option I comprise the following:

1) in music theory: Music 251, 252, 253, 254, 351, 353, and one of the following: Music 451, 452, 453, 454, 455, 456.

2) in music history: 16 credits in courses numbered 381 or above listed under Music History Courses for Majors. At least three of these courses must be drawn...
from the four-course sequence Music 381–384.

3) in performance: four semesters of participation in a musical organization or ensemble sponsored by the Department of Music (Music 331 through 346 and 421 through 448).

Option II presupposes considerable musical study before entering Cornell. Prerequisites for admission into the Option II program are previous acceptance as an Option I major and satisfactory completion of Music 252 and 254, normally by the end of the sophomore year. Students must apply to the department for formal acceptance as an Option II major. An Option II major concentrates in one of the three areas listed below. For Option II in performance, exceptional promise must be demonstrated, in part by a successful solo recital before the end of the sophomore year.

The requirements for the Bachelor of Arts degree with a major in music under Option II are:

1) completion of all the requirements for Option I, except as noted below, and

2) in addition:

a) in performance:

(1) the requirement for four semesters of participation in a musical organization or ensemble is waived (but such students are expected to participate actively in chamber and other ensembles sponsored by the department);

(2) 16 credits in individual instruction in the student's major instrument, or voice, earned by taking Music 323–334 throughout the junior and senior years.

b) in theory and composition or in history: 12 additional credits in this area of concentration at the 300 level or above, of which either four may be earned in Music 301 or 302 when taken only for four credits or eight may be earned in Music 401–402.

Honors. The honors program in music is intended to provide special distinction for the department's ablest undergraduate majors. Qualified students are invited to become candidates by the faculty early in the second semester of their junior year. As soon as possible thereafter, the student forms a committee of three or more faculty members to guide and evaluate the honors work. Senior year candidates enroll in Music 401–402 with the chair of the honors committee as instructor. Candidates will be encouraged to formulate programs that allow them to demonstrate their musical and scholarly abilities, culminating in an honors thesis, composition, or recital, to be presented not later than April 1 of the senior year. A comprehensive examination administered by the candidate's committee is held not later than May 1. The level of honors conferred is based primarily on the candidate's performance in them, and secondarily on the candidate's overall record in departmental courses and activities.

Distribution Requirement

College of Arts and Sciences students may apply either one or two Music Department courses toward the distribution requirement in Group 4 (humanities and the arts). Neither freshman seminar nor advanced placement credit count toward this requirement.

If one music course is counted for distribution, it must carry at least three credits, and it may not be in musical performance (Music 321–322, 323–324) or in organizations and ensembles (Music 331 through 346 and 421 through 448).

If two music courses are counted for distribution, they must total at least six credits, and at least one of the courses must be academic, not performance-oriented. The second "course," however, may comprise either up to four credits earned in performance (Music 321–322, 323–324) or up to four credits earned in organizations and ensembles (Music 331 through 346 and 421 through 448), but not both.

Facilities

Music Library. The Music Library in Lincoln Hall has an excellent collection of standard research tools consisting of approximately 120,000 books, periodicals, and scores and 45,000 sound and video recordings. Particularly noteworthy are the collections of opera from all periods; twentieth-century scores and recordings; a large microfilm collection of Renaissance sources, both theoretical and musical; and a collection of eighteenth-century chamber music. In addition, the Department of Rare Books, in the Kroch Library, houses a collection of early printed books on music and musical manuscripts.

Concert Halls. The Department of Music sponsors more than 100 concerts annually. Cornell's principal concert halls are Bailey Hall Auditorium (about 2,000), Alice Statler Auditorium (about 900), Sage Chapel (about 800) and Barnes Hall Auditorium (about 280).

Rehearsal Spaces. The orchestras and bands rehearse in Lincoln Hall, Bailey Hall, Barnes Hall, and Barton Hall; the Jazz Ensembles, Gamelan, and Chamber Ensembles rehearse in Lincoln Hall; and the choral ensembles are quartered in practice studios in Lincoln Hall. All rehearsal spaces in Cornell Hall are available for individual practice by pianists, vocalists, and instrumentalists.

Thirty grand pianos and 21 upright or studio pianos are housed in Cornell's offices, classrooms, and rehearsal spaces. In addition, our Center for Keyboard Studies includes two concert grand pianos (Steinway and Mason & Hamlin), two eighteenth-century fortepiano replicas (copies of Johann Andreas Stein and Anton Walter), an original Broadwood grand piano from 1827, an 1850 Conrad Graf fortepiano replica chapel. Practice studios in Lincoln Hall are available for individuals with pianist, vocalists, and instrumentalists.

Digital/Electronic Equipment. A Macintosh studio master is available for individual study (Music 100). Also, occasional independent study use. The software used is Performer, Mosaic, Finale, and several Opcode patch editor/librarians. The instruments include a Yamaha KX88 MIDI Controller keyboard, a Yamaha TX802 FM synthesizer, an E-Mu Proteus XR, an Ensoniq TZ10 sampler, and various other synthesizers. In addition, there are two MIDI work stations with additional instruments, including a Korg M1 synthesizer and an Akai S900 sampler.

Introductory Courses

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

MUSIC 100 Elements of Musical Notation
Fall or spring, weeks 2-5. 1 credit. Prerequisite: concurrent enrollment in any 3-credit course in music and permission of instructor. D. Conn. This four-week course, given at the beginning of each term, will help the student fulfill the requirement of basic pitch and rhythm and reading skills needed for some introductory courses and 200-level courses with prerequisites. The material covered in this course is no longer part of Music 105.

MUSIC 101 Popular Music in America: A Historical Survey (also AM ST 105) #
Spring. 3 credits. 1-hour disc TBA. S. Pond. A survey of the history and diverse streams of popular music in America. Elementary vocabulary and techniques for describing, analyzing, and evaluating music. Relationships between mainstream musics, tributaries, and side-streams, and between folk, art, and popular music.

MUSIC 103 Intro to World Music I: Africa and the Americas (also LSP 100) @
Fall. 3 credits. 1-hour disc TBA. No previous training in music required. S. Pond. Exploration of folk, popular, and traditional musical genres of the Western Hemisphere, particularly the African diaspora. The course examines both the elements of musical styles and the features of society that influence music. Listening assignments are major components of the course.

MUSIC 104 Intro to World Music II: Asia
Spring. 3 credits. 1-hour disc to be arranged. No previous training in music required. M. Hatch and A. Warde. Exploration of folk, popular, and traditional musical genres from South, Southeast, and East Asia. The course examines both the elements of musical styles and the features of society that influence music. Listening assignments are major components of the course.

MUSIC 105 Introduction to Music Theory
Fall, spring, or summer. 3 credits. Plus 2 hours TBA. Experience in reading music is recommended. D. Conn. An elementary, self-contained introduction to music theory emphasizing fundamental musical techniques, theoretical concepts, and their application. Intervals, scales, triads, basic concepts of tonality; extensive listening to music in various styles; analysis of representative works of Bach, Mozart, Haydn, and Beethoven.

MUSIC 107 Hildegard to Handel
Fall. 3 credits. Prerequisite: ability to read music or concurrent enrollment in Music 100. N. Zaslaw. The music of Western Europe from the Middle Ages through the Baroque period. Starting from Gregorian chant and the monophonic works of Hildegard von Bingen, this course will survey composers and repertoires such as the troubadors, the Notre Dame School, Renaissance sacred polyphony, madrigals, the dance suite, concertos, cantatas, and will end
in the early eighteenth century with works by Vivaldi, Bach, and Handel.

**MUSIC 108 Mozart to Minimalism**
Spring. 3 credits. Prerequisite: ability to read music or concurrent enrollment in Music 100. N. Zaslav.
A survey of Western art music in many genres from the second half of the eighteenth century to the present. Composers whose music will be studied include Haydn, Mozart, Beethoven, Schumann, Mendelssohn, Berlioz, Chopin, Wagner, Verdi, Liszt, Brahms, Mahler, Debussy, Strauss, Stravinsky, Bartók, Ives, Webern, Messiaen, Copland, Bernstein, Carter, Stucky, and Sierra.

*[MUSIC 201 Diction for Oral Presentation]*
Fall or spring. 1 credit. Prerequisite: permission of instructor. Not offered 2000-2001. J. Kellogg.
Introduction to the uses of the International Phonetic Alphabet for pronunciation of English, French, German, and Italian. Open to singers and nonsingers. Assignments will vary according to musical experience. Singing students will be expected to perform their assignments. Students taking voice lessons for credit (321a-322a) must take Music 201 by the end of the third semester of lessons.

**Music Theory**

Students contemplating the music major are strongly advised to take Music 151, 152, 153, and 154 in the freshman year, in any case Music 152 and 154 must be completed no later than the end of the sophomore year. Students contemplating Option II must complete Music 252 and 254 by the end of the sophomore year.

**MUSIC 151 Tonal Theory I**
Fall. 3 credits. Prerequisites: admission by departmental placement exam and concurrent enrollment in or previous credit for Music 153, or equivalent. Intended for students considering major in music and other qualified students. A. Richards.
Detailed study of the fundamental elements of tonal music: rhythm, scales, intervals, triads; melodic principles and 2-part counterpoint; diatonic harmony and 4-part voice leading in root position and first inversion; analysis of phrase and period structure.

**MUSIC 152 Tonal Theory II**
Spring. 3 credits. Prerequisites: Music 151 and 153 or equivalent, and concurrent enrollment in or previous credit for Music 154. Intended for students expecting to major in music and other qualified students. A grade of B- or better in Music 152 is required for admission to the music major. A. Richards.
Continued study of voice leading and harmonic progression, including diatonic modulation; analysis of binary and ternary forms.

**MUSIC 153 Musicianship I**
Fall. 2 credits. Prerequisite: concurrent enrollment in or previous credit for Music 151. Intended for students expecting to major in music and other qualified students. 3 hrs. TBA. A. Richards.

**MUSIC 154 Musicianship II**
Spring. 2 credits. Prerequisite: concurrent enrollment in or previous credit for Music 152. Intended for students expecting to major in music and other qualified students. A grade of B- or better in Music 154, and failure in none of the individual musicianship components of the course, are required for admission to the music major. 3 hrs. TBA A. Richards.

*[MUSIC 239 Introduction to Improvisational Theory]*
Spring. 2 credits. Prerequisite: permission of instructor. Intended for performers in “jazz” and related styles. Not offered 2000-2001. Staff.
Tonal, modal, and blues harmonic resources, and the formal structures in which they are embodied. Development of improvisational skills and creation of spontaneous compositions.

**MUSIC 251 Tonal Theory III**
Fall. 3 credits. Prerequisites: Music 152 and 154 or equivalent, and concurrent enrollment in Music 254. Staff.
Continuation of diatonic and introduction to chromatic harmony; species counterpoint; composition in small forms.

**MUSIC 252 Tonal Theory IV**
Spring. 3 credits. Prerequisites: Music 251 and 253 or equivalent, and concurrent enrollment in Music 254. Staff.
Study of and composition in larger forms, including sonata form; systematic study of chromatic harmony, voice-leading, and modulation; composition in chromatic style.

**MUSIC 253 Musicianship III**
Fall. 2 credits. Prerequisite: concurrent enrollment in or previous credit for Music 251. 2 hours TBA. Staff.

**MUSIC 254 Musicianship IV**
Spring. 2 credits. Prerequisite: concurrent enrollment in or previous credit for Music 252. 2 hours TBA. Staff.
Music in History and Culture

MUSIC 221 History of Rock Music (also AM ST 223)  
Spring. 3 credits. No previous training in music required. Prerequisites: Music 152-153, 154.  
This course examines the development and cultural significance of rock music from its origins in blues, gospel, and Tin Pan Alley up to present-day genres of alternative rock and hip hop.

MUSIC 222 A Survey of Jazz (also AM ST 222)  
Fall. 3 credits. Enrollment limited. S. Pond.  
This course addresses jazz from two perspectives: the various sounds of jazz, as well as the historical streams—musical and cultural—which have contributed to its development. The historical focus on jazz locates it as an expression of culture. We will investigate how jazz affects and is affected by notions of ethnicity, class, nationalism, gender, art, and genre. We will examine what has changed over time and try to understand why. Throughout we will focus our inquiry through listening to recordings, studying writings about music by musicians and nonmusicians, learning to listen with new ears, experiencing jazz hands-on, and collaborating to add to the body of literature on jazz.

MUSIC 245 Gamelan in Indonesian History and Cultures  
Fall or spring. 3 credits. Permission of instructor. No previous knowledge of musical notation or performance experience necessary. M. Hatch.  
An introduction to Indonesia through its art. Elementary techniques of performance on the Javanese gamelan; a general introduction to Indonesian history and culture, and the socio-cultural contexts of the arts there. Several short papers and one longer research report are required.

[MUSIC 261 Bach and Handel #  
Fall. 3 credits. Prerequisite: any 3-credit course in music or permission of instructor. Not offered 2000–2001. D. Yeansly.]

[MUSIC 262 Haydn and Mozart #  
Fall. 3 credits. Prerequisite: any 3-credit course in music or permission of instructor. Not offered 2000–2001. N. Zaslaw. Music for courts, theaters, churches, concerts, dancing, marching, public and private ceremonies, and domestic use by two extraordinarily different musical personalities who were friends, explored in its historical and socio-cultural contexts.]

MUSIC 263 Beethoven #  
Spring. 3 credits. Prerequisite: any 3-credit course in music or permission of instructor. J. Webster.  
A survey of Beethoven's life, works, and influence. While the primary focus will be his musical style and its development, the course will also cover social-cultural factors and the psychology and reception of genius.

[MUSIC 264 Musical Romantics #  
Spring. 3 credits. Prerequisite: any 3-credit course in music or permission of instructor. Not offered 2000–2001. D. Rosen. This survey of music from 1815 to 1900 will be divided into five segments focusing on five composers (Schubert, Berlioz, Verdi, Wagner, and Mahler) and two or three segments on broader topics, such as musical nationalism in Russia, fin de siècle Vienna, the art song, and the history of the piano and its music.]

MUSIC 274 Opera #  
Fall. 3 credits. R. Harris-Warrick.  
An introduction to major works of the operatic repertory, with discussion of texts and theatrical performances as well as music. Video recordings will be an integral part of the course; trips to live performances will be scheduled where possible.

[MUSIC 275 Choral Sounds #  
Spring. 3 credits. Prerequisite: ability to read music, or concurrent enrollment in Music 100. Not offered 2000–2001. R. Harris-Warrick. This course examines representative works composed for group singing, primarily from the Western choral tradition, but also including folk and popular styles, from the Middle Ages to the twentieth century. Class will include discussion of performance practices as well as historical and stylistic issues, and will be integrated with local concert offerings.]

MUSIC 276 The Orchestra and Its Music #  
Fall. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. N. Zaslaw. The music of, and the social structures supporting, large instrumental ensembles in the Western world, including Italian court festivals of the sixteenth century, string bands of the seventeenth century, Lully's ascendency at Paris and Versailles; and music of Purcell, Corelli, Vivaldi, Bach, Handel, Haydn, Mozart, Beethoven, Schubert, Schumann, Mendelssohn, Berlioz, Liszt, Wagner, Brahms, Tchaikovsky, Bruckner, Mahler, Strauss, Stravinsky, Schoenberg, Webern, Bartók, Shostakovich, Messiaen, Copland, Carter, Tower, Stucky, Sierra, and others.

MUSIC 277 The Piano and Its Music  
Fall or spring. 3 credits. Prerequisite: 1 semester of music theory (Music 105, an equivalent course, or equivalent experience) or permission of the instructors. D. Rosen and M. Bilson. Representative masterpieces of the piano repertoire from J. S. Bach to the present, placed in the context of the instruments for which they were written and the social structures mediating their production. Thus three different historical approaches will be interwoven: (1) the history of music written for the piano and its predecessors, the harpsichord and clavichord; (2) the development of the piano from these predecessors, through Mozart's Stein piano, the pianos of Beethoven, Chopin, Liszt, and Brahms, up to today's Steinway; and (3) the social history of the piano.

MUSIC 372 Mind and Memory (also ENGL 301, S HUM 301, and THETR 301)  
Spring. 4 credits. J. Morgenroth. See S HUM 301 for description.

Music History Courses for Majors and Qualified NonMajors

Prerequisite: Music 152 or permission of instructor. Intended primarily for music majors, these courses investigate selected topics and repertoires from each period in some detail. Each course includes readings, investigations, oral and written papers, and analyses.

MUSIC 374 Opera and Culture (also GERST 374 and ITAL 374)  
Spring. 4 credits. Prerequisite: any 3-credit music course or proficiency in German or Italian. A. Groos. See GERST 374 for description.

[MUSIC 381 Music in Western Europe to 1700 #  
Fall. 4 credits. Not offered 2000–2001. J. Peraino. Western European music from the Middle Ages to the early Baroque, including Gregorian chant, secular monophony, the development of polyphony, the birth of opera, and the rise of independent instrumental music.]

[MUSIC 382 Music of the Eighteenth Century #  

[MUSIC 383 Music of the Nineteenth Century #  
Fall. 4 credits. D. Rosen. A chronological survey of nineteenth-century music from Beethoven through Puccini including reference to its cultural and historical context.

[MUSIC 384 Music of the Twentieth Century  
Spring. 4 credits. S. Stucky. Movements, schools, and styles in "classical" music from the turn of the century to the present. Extensive listening and reading assignments for historical breadth; detailed attention to representative works for analytical depth.

[MUSIC 388 Historical Performance Practicum #  

[MUSIC 390 Culture of Renaissance II (also COM L 362, ENGL 325, HIST 364 ART H 351)  

MUSIC 398-399 Independent Study in Music History  
Fall. 999. Spring. 4 credits. Prerequisite: Music 152 and permission of instructor. Staff. Advanced study of various topics in music history. Students enrolling in Music 398–399 participate in, but do not register for, an approved 200-level music history course and, in addition, pursue independent research and writing projects.

MUSIC 414 Anticipating the Unexpected: Musical Models as Foundations for Compositions  
Fall. 4 credits. Prerequisite: Music 153–154 or permission of instructor. A. Ward. How have Western composers used scientific, mathematical, and linguistic models to venture
into unfamiliar yet compelling musical territory? Through listening, analysis, and composition, we will investigate approaches ranging from Medieval European ideas of number and proportion to high-speed computation of sound.

[MUSIC 489 African American Music Innovators (also AS&RC 488) Fall. 4 credits. Permission of instructor. Not offered 2000–2001.]

[MUSIC 490 American Musical Theatre (also ENGL 454) Spring. 4 credits. S. McMillin. See English 454 for description.]

[MUSIC 491 American Popular Song Fall. 4 credits. Not offered 2000–2001. A historical and analytical study of American popular song (primarily from the 1920s and 1950s), emphasizing Kern, Berlin, Rodgers and Hart, Porter, Gershwin, and Harold Arlen, and including others such as Ellington. The interaction of music, lyrics, and performance will be among the topics considered. Live as well as recorded performances will be featured.]

[MUSIC 492 Music and Queer Identity Spring. 4 credits. Prerequisite: Music 152 or permission of instructor. J. Peraino. Throughout history music has been associated with "otherness" in Western cultures. Appropriately, lesbian and gay individuals and communities have turned to music as a means of expressing and negotiating their "queer" identity within status-quo culture. This course examines how and why music encodes "queerness" by focusing on various musical genres (such as opera, disco, women's music, country) and composer/musicians (such as Franz Schubert, Judy Garland, David Bowie) that have become significant for various lesbian and gay communities. The course will also examine the reasons behind the general popularity of queer-coded but "straight-identified" performers such as Elvis Presley, Prince, and Michael Jackson.]

[MUSIC 493 Women and Music (also WOMNS 496) Spring. 4 credits. Prerequisite: Music 152 or permission of instructor. Not offered 2000–2001. J. Peraino. This course introduces the students to a critical examination of women's participation in Western European and American musical traditions. The course will focus on the various subject positions and critical perspectives that women hold in examples of music and writings about music. Of primary importance will be the concepts of "objective" vs. "subjective" approaches to the topic of the week. Topics will include approaches to history and criticism, women composers, women performers, women as objects, women's music, drag and androgyny, and women as listeners. Students will be asked to keep a journal of their reactions to the readings, listening assignments, and class discussions, and to write "objective" and "subjective" formal papers.]

[MUSIC 494 Love, Sex, and Song in Medieval France (also WOMNS 402) Spring. 4 credits. Not offered 2000–2001. J. Peraino. This course explores the cult of courtly love and its inextricable relationship with singing. We will focus on secular music and poetry and relevant tales of Southern and Northern France from the twelfth and thirteenth centuries, and consider issues such as constructions of gender and gender relations, music and sexuality in the Middle Ages, medieval misogyny, women's voices in courtly love lyric, the relationship of words and music, performance context, and reconstruction.]

[Independent Study MUSIC 301-302 Independent Study in Music 301, fall; 302, spring. Credit TBA. Prerequisite: departmental approval. Presupposes experience in the proposed area of study. Staff.]

[Honors Program MUSIC 401-402 Honors in Music 401, fall; 402, spring. 4 credits each term. Limited to honors candidates in their senior year. Staff.]

[Digital Music and New Media MUSIC 120 Learning Music through Digital Technology Fall or spring. 3 credits. Enrollment limited. Prerequisite: permission of instructor. D. Borden. This course uses selected commercially available technological resources to produce live music. The student is expected to master the Macintosh computer, several music software programs, and several synthesizers using MIDI. The ability to read music is helpful but not necessary. There are no paper forms, available in the Music Department during the term. These scholarships are intended only for lessons in the student's intended primary performing medium. Scholarship forms, available in the Music Department office, are to be returned to the office within the first three weeks of classes.]

[MUSIC 320 Scoring the Moving Image Using Digital Technology Spring. 4 credits. Prerequisite: Music 120 with a grade of B or higher. D. Borden and A. Warde. Students will learn sound design and music composition using MIDI and Digital Audio to enhance images in motion. The course will be at least partially collaborative, involving students taking courses in computer animation, film, and dance. In addition, to learn techniques involving synchronizing sound to image, film clips from various sources will be used as practice exercises. The final project will be a public showing of film computer animation and/or dance performance using the sounds and music provided by the students in this course.]

[MUSIC 391 Media Arts Studio I (also THETR 391, ART 391, ARCH 391) Fall. 3 credits. Permission of instructor. See THETR 391 for description.]

[MUSIC 392 Media Arts Studio II (also THETR 392, ART 392, ARCH 392) Spring. 3 credits. Permission of instructor. See THETR 392 for description.]

[MUSIC 420 Introduction to MIDI Techniques Spring. 4 credits. Permission of instructor. Not offered 2000–2001. D. Borden. This course is an introduction to MIDI for students who are already at an advanced level in music composition. Three composition projects will be completed in collaboration with film, dance, and computer animation students.]

Musical Performance

Cornell faculty members offer individual instruction in voice, organ, harpsichord, piano and fortepiano, violin, viola, cello, and some brass and woodwind instruments to those students advanced enough to do college-level work in these instruments. Lessons are available by audition only. They may be taken either without credit or, through Music 321–322, with credit. Other instruments may sometimes be studied for credit outside Cornell, but also by audition only (see Music 321h–322h).

Lessons for beginners. The Music Department can recommend outside teachers for those who wish to begin studying voice or an instrument. No credit is available for beginning instruction.

Auditions. Auditions are held at the beginning of each term for lessons for advanced students. Contact the Department of Music office (104 Lincoln Hall) for information.

Fees. The fee for a one-half hour lesson weekly, without credit, is $150 per term. For a one-hour lesson (or two half-hour lessons) weekly, without credit, the fee is $300. The fee in Music 321–322 for a one-hour lesson (or two half-hour lessons) for credit is $225 per term. All fees are nonrefundable once lessons begin, even if the course is subsequently dropped.

Scholarships. Music majors receive a scholarship equal to the lesson fee listed above. Members of department-sponsored organizations and ensembles may, with the permission of the director of the organization, receive a scholarship of up to $150 of the Cornell fee for the type of lessons chosen during the term. These scholarships are intended only for lessons in the student's primary performing medium. Scholarship forms, available in the Music Department office, are to be returned to the office within the first three weeks of classes.
Practice rooms: Practice-room fees for 12-hour weekly are $50 per term and six hours are $40 per term for a room with a piano. Practice-room fees for 12-hour weekly are $25 per term and for six hours weekly are $15 per term for a room without a piano. The fee for the use of the pipe organ is $50 for 12 hours weekly and $40 for six hours weekly. All fees are nonrefundable.

Earning credit: For every four credits earned in Music 321–322, the student must have earned, or currently be earning, at least three credits in another music course (excluding freshman seminars, Music 321–322, 323–324, 351–353, or 421 through 448). These three credits must be earned prior to, or simultaneously with, the first two credits in 321–322. They cannot be applied retroactively. Transfer credit for appropriate music courses already taken elsewhere may be used to satisfy this requirement with the approval of the department chair.

Lessons taken outside Cornell: Under certain conditions, advanced students may earn credit for lessons taken outside Cornell. An audition is required, and no credit can be granted for beginning instruction. For further information, read the description of Music 321h–322h and contact the Music Department office.

MUSIC 321–322 Individual Instruction

MUSIC 321b–322b Individual Instruction in Voice

Prerequisite: successful audition. M. Bilson.

MUSIC 321c–322c Individual Instruction in Harpsichord

Prerequisite: successful audition. B. Bryski and staff.

MUSIC 321d–322d Individual Instruction in Violin or Viola

Prerequisite: successful audition. K. Tan.

MUSIC 321e–322e Individual Instruction in Cello

Prerequisite: successful audition. H. Hoffman.

MUSIC 321g–322g Individual Instruction in Brass

Prerequisite: successful audition. M. Scatterday.

MUSIC 321h–322h Individual Instruction Outside Cornell

Prerequisite: successful audition. Coordinator: D. Conn.

A. Richards.

MUSIC 321i–322i Individual Instruction in Woodwinds

Prerequisite: successful audition. D. Conn.

MUSIC 323–324 Advanced Individual Instruction

Prerequisite: successful audition. D. Conn.

MUSIC 321l–322l Individual Instruction in Violin or Viola

Prerequisite: successful audition. K. Tan.

MUSIC 331–332 Sage Chapel Choir

Prerequisite: successful audition. K. Riley.

MUSIC 333–334 Cornell Chorus

Prerequisite: successful audition. K. Hester.

MUSIC 336–337 Cornell University Glee Club

Prerequisite: successful audition. M. B. Hersh.

MUSIC 338 Symphonic Band

Prerequisite: successful audition. M. B. Hersh.

MUSIC 339–340 Cornell Jazz Ensembles

Prerequisite: successful audition. M. B. Hersh.

MUSIC 342 Wind Ensemble

Prerequisite: successful audition. M. B. Hersh.

MUSIC 343–344 Cornell Symphony Orchestra

Prerequisite: successful audition. M. B. Hersh.

MUSIC 345–346 Introduction to the Gamelan

Prerequisite: successful audition. M. B. Hersh.

MUSIC 421–422 Cornell Chamber Orchestra

Prerequisite: successful audition. M. B. Hersh.

MUSIC 437–438 Chamber Winds

Prerequisite: successful audition. M. B. Hersh.

MUSIC 439–440 Experimental Lab Ensemble

Prerequisite: successful audition. M. B. Hersh.

MUSIC 439–440 Experimental Lab Ensemble
MUSIC 441-442 Chamber Music Ensemble
441, fall; 442, spring. 1 credit. Prerequisite: permission of instructor. J. Hsu. Study and perform chamber music: works from duos to octets for pianists, string, and woodwind players.

MUSIC 443-444 Chorale
443, fall; 444, spring. 1 credit each term. Prerequisite: permission of instructor. F 4:30-6:15 p.m., J. Day-O'Connell. Study and performance of selected choral music for selected voices.

MUSIC 445-446 Cornell Gamelan Ensemble
445, fall; 446, spring. 1 credit each term. Enrollment limited. Prerequisite: permission of instructor. M. Hatch. Advanced performance on the Javanese gamelan. Tape recordings of gamelan and elementary number notation are provided. Some instruction by Indonesian musicians is offered in most years.

MUSIC 447-448 Chamber Singers
447, fall; 448, spring. 1 credit each term. Prerequisite: permission of instructor. Plus 2 hours TBA. D. Shapovalov. A mixed-voice chamber choir specializing in Renaissance and twentieth-century music.

Graduate Courses
Open to qualified undergraduates with permission of instructor.

MUSIC 601 Introduction to Bibliography and Research
Fall. 4 credits. M 1:25-4, L. Coral. This course explores the nature of the discipline and introduces the many types of bibliographic tools, both printed and electronic, needed to pursue research in music.

[MUSIC 602 Analytical Technique

[MUSIC 603 Editorial Practice
Spring. 4 credits. Not offered 2000–2001.]

[MUSIC 604 Ethnomusicology: Areas of Study and Methods of Analysis
Fall. 4 credits. Open to graduate students in anthropology, linguistics, psychology, sociology, and other cognate fields with permission of instructor. M. Hatch. Major aspects of research into musical cultures of the world. Problems, theories, and methods, especially those affecting analytical terminology, transcription and analysis of sound events, and fieldwork.

[MUSIC 622 Historical Performance Practice
Spring. 4 credits. M. Bilson. The study of eighteenth- and nineteenth-century instrumental performance practices, with special emphasis on the string quartets of Haydn and the piano trios of Schubert. Open to qualified performers.

[MUSIC 654 Topics in Tonal Theory and Analysis
Spring. 4 credits. Not offered 2000–2001.] J. Webster. (Both courses chosen to fulfill the major is selected in consultation with the student's adviser. All majors must satisfy the following requirements: no course may be used to satisfy two requirements; S-U options not permitted.)

[MUSIC 657-658 Composition
657, fall; 658, spring. 4 credits each term, F. 1:25–4:00 p.m. plus 1 hour TBA. R. Sierra, S. Stucky.]

[MUSIC 674 German Opera (also GERST 672)
Spring. 4 credits. Not offered 2000–2001.] A. Groos. (See German Studies for description.)

[MUSIC 677 Mozart: His Life, Works, and Times (also GERST 757)

[MUSIC 680 Topics in Ethnomusicology
Spring. 4 credits. S. Pond. Topic: Herbie Hancock.

[MUSIC 681 Seminar in Medieval Music

[MUSIC 683 Music and Postmodern Critical Theory
Fall. 4 credits. Not offered 2000–2001.] J. Peraino. This course surveys the many critical theories that have been included under the umbrella of "postmodernism," and that have fueled the debate between "old" and "new" styles of musicology. Readings will focus on structuralism and poststructuralism, feminism, literary criticism, queer theory, and postmodern and postcolonialism, and their application in musicology and ethnomusicology. A broad spectrum of music will be examined along with the readings.

[MUSIC 684 Seminar in Renaissance Music
Fall. 4 credits. R. Harris-Warrick. Topic: Josquin.

[MUSIC 686 Seminar in Baroque Music
Spring. 4 credits. D. Yeo.

[MUSIC 688 Seminar in Classical Music
Spring. 4 credits. J. Webster. Topic: Haydn.

[MUSIC 689 Seminar in Music of the Romantic Era

[MUSIC 690 Seminar in Music of the Twentieth Century
Fall. 4 credits. S. Stucky. Topic: Bartok.

[MUSIC 691-692 Historical Performance Practice
691, fall; 692, spring. 4 credits each term. Prerequisite: permission of instructor. Hours TBA. M. Bilson. Lessons on the major instrument with supplementary study and research on related subjects.

[MUSIC 693 Seminar in Performance Practice
Spring. 4 credits. N. Zaslaw. String, woodwind, chamber, and orchestral repertories in Paris and Versailles in the eighteenth century and their dissemination in Western Europe. Special emphasis on the music and prefaces of Georg Muffat.

[MUSIC 697-698 Independent Study and Research
697, fall; 698, spring. Credit TBA. Staff.

[MUSIC 785-786 History of Music Theory
785, fall; 786, spring. 4 credits each term. Not offered 2000–2001.]

[MUSIC 787 History and Criticism

[MUSIC 789 Liturgical Chant in the West
Spring. 4 credits. Not offered 2000–2001.]

[MUSIC 901-902 Thesis Research
901, fall; 902, spring. Up to 6 credits each term, TBA. Offered for S-U only. Limited to doctoral students in music who have passed the Admission-to-Candidacy Exam.

NEAR EASTERN STUDIES
R. Brann, chair; E. Alfonso, M. Bloom, K. Haines-Eitzen (director of Undergraduate Studies), L. Jones, D. McKenzie, D. R. Owen (director of the Program of Jewish Studies), D. Powers, G. Rendsburg (director of Graduate Studies), N. Scharf, S. Shroer, S. Toorawa, S. Wessel, M. Yones, J. Zorn Joint Faculty: M. Bernal

The Department
The Department of Near Eastern Studies (360 Rockefeller Hall, 255–6275) offers courses in the Near Eastern civilization including archaeology, history, religions, languages, and literatures. Students are encouraged to take an interdisciplinary approach to the development of the Near East from the dawn of history to the present and emphasize methods of historical, cultural, and literary analysis.

Distribution Requirements
Any two Near Eastern Studies history or archaeology courses at the 200, 300, or 400 level that form a reasonable sequence or combination satisfy the distribution requirement in the social sciences/history. Any two Near Eastern Studies civilization or literature courses at the 200, 300, or 400 level that form a reasonable sequence or combination satisfy the distribution requirement in humanities. NES 197, 198, or NES 251 plus any other Near Eastern Studies course will constitute a sequence to fulfill the distribution requirement in either social sciences/history or humanities, depending on the second course used in combination with 197, 198, or 251. All 200- or 300-level language courses may fulfill the humanities requirement.

The Major
The precise sequence and combination of courses chosen to fulfill the major is selected in consultation with the student's adviser. All majors must satisfy the following requirements: no course may be used to fulfill two requirements; S-U options not permitted:

A. Qualification in two Near Eastern languages or proficiency in one.

B. Nine three- or four-credit NES courses, which must include the following:
1. NES 197, 198 or 251.
2. Two 200-level NES survey courses, one whose chronological parameters fall within the period 3000 B.C. E. to 600 C.E., and one whose chronological parameters fall within the period 600 C.E. to the present. The following are examples (a complete list can be obtained in the department office):
4. 3000 B.C.E to 600 C.E.

NES 223, Introduction to the Hebrew Bible
NES 261, Ancient Seafaring
NES 229, Introduction to the New Testament
600 C.E. to the present

NES 234, Arabs and Jews: Cultures in Confluence and Conflict
NES 250, Muhammad and Mystics in the Literatures of the Islamic World
NES 258, Islamic History 1258-1914
NES 294, Modern History of the Near East

3. At least two NES courses at the 300 level or above (one of which may be NES 301, 302, 311, or 312).

Prospective majors should discuss their plans with the director of undergraduate studies before formally enrolling in the department. To qualify as a major, a cumulative grade average of C or better is required.

Honor: Candidates for the degree of Bachelor of Arts with honors in Near Eastern Studies must fulfill the requirements of the appropriate major study and enroll in the honors course, NES 499, in the fall and spring semesters of their senior year. For admission to the honors program, candidates must have a cumulative average of B+ or better and have demonstrated superior performance overall in Near Eastern Studies courses. After consulting their major adviser, candidates should submit an outline of their proposed honors work to the department during the second semester of their junior year.

Study abroad. Near Eastern Studies majors may choose to study in the Near East during their junior year. There are various academic programs in the countries of the Near East that are recognized by the Department of Near Eastern Studies and that allow for the transfer of credit. Archaeological field work on Cornell-sponsored projects in the Near East may also qualify for course credit.

Freshman Seminar

NES 128 The Book of Job and Human Suffering
Spring. 3 credits. Enrollment limited to 17. G. Serene.

The biblical book of Job chronicles one person's struggle to understand and cope with tremendous suffering and personal loss. Students in this course will study the book of Job in English translation, and will reflect on the perspective on suffering found in the book, what other ancient and modern authors have said about it, and how it fits or does not fit with their own personal beliefs and experiences.

NES 150 Discovering Islam

D. Powers.

Against the backdrop of Western stereotypes, we will explore Islamic society and culture from within, with special attention to prophecy and revelation, ritual practice, criminal law, the status of women, and the Islamic understanding of death and resurrection.

NES 163 Things the Prophets Never Told You: Archaeology and the Religion of Ancient Israel (also JWST 163)
Fall. 3 credits. Enrollment limited to 15 students. J. Zorn.

A critical reading of the Hebrew Scriptures might lead one to believe that the normative religion of the Israelites was that spelled out in the Torah and Prophets. However, a more critical appraisal of the Biblical texts, along with an analysis of extra-Biblical texts and archaeological materials, demonstrates that the Israelites were often closer to their pagan neighbors than to modern Judaism or Christianity. Students will explore these similarities and differences in their essays. Topics may include: cult prostitution, magic, funerary rites, temple ritual, Hebrew mythology, etc. Readings will be from the Hebrew Bible, translations of extra-biblical texts, articles on archaeology, and modern synthetic treatments of Israelite cult.

NES 190 Catholic Social Action (also RELST 190)

D. McKenzie.

This course will focus on the history and development of Catholic Social Teaching, which calls on Catholics to work to eliminate injustice and build a compassionate world. Attention will be given to several themes including the economy (the rights of workers and owners, the rights to private property and its limitations, economic rights and initiative, debt and development), peace-making, capital punishment, option for the poor, and global solidarity. The class will analyze critically major encyclicals, papal letters, and bishops' statements, as well as attend to selected grassroots movements that inspired this teaching. The course is designed as a comprehensive introduction to the study of Catholic Social teaching in the twentieth century. Participants will assess the strengths and weaknesses of Catholic Social Teaching and evaluate its contributions to human rights discourse.

Language Courses

NES 101-102 Elementary Modern Hebrew I and II (also JWST 105-106)
101, fall; 102, spring. 6 credits each term. Prerequisite for NES 102: 101 or permission of instructor. Satisfactory completion of NES 102 fulfills the qualification portion of the language requirement. Enrollment limited to 17 students in each section. S. Shoer.

Intended for beginners. This course provides a thorough grounding in reading, writing, grammar, oral comprehension, and speaking. Students who complete the course will be able to function in basic situations in a Hebrew-speaking environment.

NES 111-112 Elementary Arabic I and II
111, fall; 112, spring. Enrollment limited to 17 in each session. 6 credits each term. Prerequisite for Arabic 112: Arabic 111 or permission of instructor. M. Younes.

The course provides a thorough grounding in all language skills: listening, speaking, reading, and writing. It starts with spoken Arabic and gradually progresses to Standard Arabic in the form of listening and reading texts. Emphasis will be on learning the language through using it in meaningful contexts. The student who successfully completes the two-semester sequence will be able to: (1) understand and actively participate in simple conversations involving basic practical and social situations (introductions, greetings, school, home and family, work, simple instructions, etc.); (2) read Arabic material of limited complexity and variety (simple narrative and descriptive texts, directions, etc.); (3) write notes and short letters describing an event or a personal experience. An important objective of the course is to familiarize students with basic facts about the geography, history, and culture of the Arab world.

NES 117-118 Elementary Turkish I & II
117, fall; 118, spring. 4 credits each term. Prerequisite for NES 118 is NES 117 or permission of instructor. Enrollment limited to 17 students. Not offered 2000-2001.

Staff.

Intended for beginners. This course is designed to develop students' proficiency and communication in modern Turkish in the four basic language skills: speaking, listening, reading, and writing. Facts about the geography, history, and culture of Turkey are built into the course, which will provide a base for the broader understanding of the language-culture relationship. The teaching/learning process emphasizes the functional use of the language and contextual communication in the four skills. In the spring term, the course will continue to help students acquire the basic vocabulary and fundamental structures of Turkish. Students who succeed in using the major points of Turkish grammar, conduct oral (informal conversation and structured situations) and written practice, and advance their reading skills. The course will place increased emphasis on the development of conversational, reading, and writing skills while focusing on communicative drills and activities that involve student interaction.

NES 123-124 Elementary Biblical Hebrew I & II (also JWST 123-124, RELST 123-124)
123, fall; 124, spring. 3 credits each term. Enrollment limited to 17 students. Not offered 2000-2001.

Staff.

The course is intended to develop basic proficiency in reading the Hebrew Bible. The first semester will emphasize introductory grammar and vocabulary. The second semester will focus on reading selected passages in the Hebrew Bible, with further development of vocabulary and grammar.

NES 133-134 Qur'anic and Classical Arabic
133, fall; 134, spring. 4 credits each semester. Not offered 2000-2001.

Staff.

This course is designed for students who are interested in reading the language of the Qur'an and Hadiths (Sayings of the Prophet) with accuracy and understanding. Authentic texts in the form of chapters from the Qur'an and Hadiths will be presented and analyzed.
and basic grammatical structures will be discussed, explained, and practiced systematically. Interested students will be encouraged to memorize excerpts from the texts. At the end of the two-semester sequence, the successful student will have mastered a working vocabulary of over 1,000 words, correct pronunciation, and the most commonly used grammar. In addition, the course will provide the student with a firm foundation on which to build an advanced study of Classical Arabic.

**NES 201-202 Intermediate Modern Hebrew I and II (also JWST 201-202)**
201, fall; 202®, spring. Enrollment limited to 15 students in each section. 4 credits each term. Prerequisite for NES 201: 102 or permission of instructor; for NES 202, 201 or permission of instructor. N. Scharf.
A sequel to NES 111-112. Continued development of reading, writing, grammar, oral comprehension, and speaking skills. The course introduces Hebrew literature and Israeli culture through the use of texts and audio-visual materials.

**NES 211-212 Intermediate Arabic I and II**
211, fall; 212®, spring. Enrollment limited to 15 students in each section. 4 credits each term. Prerequisite: for NES 211, one year of Arabic or permission of instructor; for NES 212, 211 or permission of instructor. M. Younes.
A sequel to NES 111-112. Continued development of the four language skills through extensive use of graded materials on a wide variety of topics. Increasing attention will be given to developing native-like pronunciation and grammatical accuracy, but the main focus will be on developing communication skills. The student who successfully completes 212 will be able to: (1) understand and express himself or herself in Arabic in situations beyond the basic needs, (2) read and comprehend written texts of average difficulty; (3) write a letter, a summary of a report, or a reading selection. An appreciation of Arabic literature and culture will be sought through the use of authentic materials.

**NES 301-302 Advanced Modern Hebrew I and II (also JWST 301-302)**
301, fall; 302, spring. Limited to 15 students. 4 credits each term. Prerequisite for NES 301: 302 or equivalent, with permission of instructor. Prerequisite for NES 302: 301 or equivalent, with permission of instructor. This sequence may be used to fulfill the humanities distribution requirement in literature. Limited to 15 students. N. Scharf.
Advanced study of Hebrew through the analysis of literary texts and expository prose. This course employs a double perspective: language is viewed through literature and literature through language. Students will develop composition skills by studying language structures, idioms, and various registers of style.

**NES 311 Advanced Arabic I**
Fall. 4 credits. Prerequisite: NES 212 or permission of instructor. Limited to 15 students. S. Toorawa.
Students will be introduced to authentic, unrestricted language materials ranging from poems, short stories, and plays to newspapers, articles dealing with social, political, and cultural issues. Emphasis will be on developing fluency in oral expression through discussions of issues presented in the reading selections. A primary objective of this course is the development of writing skills through free composition exercises in topics of interest to individual students.

**NES 312 Advanced Arabic II**
Spring. 4 credits. Limited to 15 students. Prerequisite: NES 311, or permission of instructor. S. Toorawa.
This course is a continuation of NES 311, using similar but more challenging materials. There will be more focus on the writing skills, the development of native-like pronunciation, and accurate use of grammatical structures than in NES 311. Each student will be required to make an oral presentation in Arabic on a topic of his/her choice and submit a written version of the presentation.

**NES 330-331 Hieroglyphic Egyptian I and II**
330 fall; 331 spring. 4 credits. G. Kadish.
An introduction to the language of ancient Egypt and its hieroglyphic writing system. Students will begin by learning the signs, vocabulary, and grammar of hieroglyphic Egyptian through reading, writing, and translation exercises. We will then move on to reading authentic literary and historical texts.

**NES 333-334 Elementary Akkadian I & II (also NES 633-634)**
333, fall; 334, spring. 4 credits each term. Prerequisite for NES 334: 333 or permission of instructor. Prerequisite for NES 634: 633 or permission of instructor. Not offered 2000–2001. D. I. Owen.
An introduction to the Semitic language of the Akkadians and Babylonians of ancient Mesopotamia. Utilizing the inductive method, students are rapidly introduced to the grammar and the cuneiform writing system of Akkadian through selected readings in the Code of Hammurapi, the Descent of Ishtar, and the Annals of Sennacherib. Secondary readings in comparative Semitic linguistics, the position of Akkadian in the family of Semitic languages and on the history and culture of Mesopotamia provide a background for study of the language. Knowledge of another Semitic language is helpful but not essential.

**NES 337-338 Ugaritic I & II (also NES 637-638)**
337, fall; 338, spring. 4 credits each term. Prerequisite for NES 338: 337 or equivalent, with permission of instructor. This sequence may be used to fulfill the humanities distribution requirement in literature. Limited to 15 students. N. Scharf.
Study of the language and literature of ancient Ugarit, an important site in northern Canaan. Special attention is paid to the relationships between Ugaritic and Hebrew and between Canaanite literature and the Bible.

**NES 416 Structure of the Arabic Language (also LING 416)**

**NES 420 Readings in Biblical Hebrew Prose (also JWST 420, RELST 420)**
Spring. 4 credits. Prerequisite: one year of Hebrew, Biblical or modern. Course may be repeated for credit. G. Rendsburg.
An advanced course in reading selected portions of the Hebrew Bible. Emphasis will be placed on a philological method, with attention to literary, historical, and comparative concerns.

**NES 433 Introductory Sumerian I (also NES 631)**
This course will consist of an introduction to the Sumerian cuneiform script and grammar of the third millennium B.C.E. Readings selected Sumerian economic, legal, and historical inscriptions, a basic introduction to Sumerian grammar and script, linguistic connections, and a survey and discussion of Sumerian civilization and culture. Students who have taken or plan to take Akkadian, Hebrew, or Hittite linguistics or are otherwise interested in the history of language should consider this course.

**NES 434 Introductory Sumerian II (also NES 632)**
Continued study of Sumerian grammar and syntax; further readings in selected Sumerian economic, legal, and historical inscriptions of the late third millennium B.C.E.; additional discussion of Sumerian civilization and culture.

**NES 435 Aramaic I**
Fall. 4 credits. Prerequisite: knowledge of Hebrew. Enrollment limited to 15 students.
G. Rendsburg.
A panoply of Aramaic materials is read during the course, including selections from ancient Aramaic inscriptions, the biblical books of Ezra and Daniel, Qumran texts, and the Targumim. Explanations of grammar, syntax, and vocabulary will be based on the linguistic data which occur in the readings.

**NES 621 Avestan and Old Persian (also LING 621)**
For description see Linguistics 621.

**NES 631 Introductory Sumerian I (also NES 433)**
For description, see NES 433 under Near Eastern Languages.

**NES 632 Introductory Sumerian II (also NES 434)**
For description, see NES 434 under Near Eastern Languages.

**NES 633-634 Elementary Akkadian I & II (also NES 633-634)**
An introduction to the Semitic language of the Akkadians and Babylonians of ancient Mesopotamia. Utilizing the inductive method, students are rapidly introduced to the grammar and the cuneiform writing system of Akkadian through selected readings in the Code of Hammurapi, the Descent of Ishtar, and the Annals of Sennacherib. Secondary readings in comparative Semitic linguistics, the position of Akkadian in the family of Semitic languages and on the history and culture of Mesopotamia provide a background for study of the language. Knowledge of another Semitic language is helpful but not essential.

**NES 637-638 Ugaritic I & II (also NES 637-638)**
Study of the language and literature of ancient Ugarit, an important site in northern Canaan. Special attention is paid to the relationships between Ugaritic and Hebrew and between Canaanite literature and the Bible.

**NES 639 Structure of the Arabic Language (also LING 639)**

**NES 640 Readings in Biblical Hebrew Prose (also JWST 640, RELST 640)**
Spring. 4 credits. Prerequisite: one year of Hebrew, Biblical or modern. Course may be repeated for credit. G. Rendsburg.
An advanced course in reading selected portions of the Hebrew Bible. Emphasis will be placed on a philological method, with attention to literary, historical, and comparative concerns.
A survey of the history and development of Aryan, and Hebrew and between Ugaritic and Hebrew and between Canaanite literature and the Bible.

Archaeology

[NES 261 Ancient Seafaring [also ARKEO 275, JWST 261] @ #
Fall. 3 credits. Enrollment limited to 80.
This course focuses on the development of Judaism as a religion and as a civilization in antiquity. Particular emphasis is placed on theological development culminating in monotheism, the role of the covenant, law and society, sacrifice and prayer as modes of worship, and similar topics. Jewish civilization is placed within the context of ancient civilizations (Canaan, Egypt, Babylon, Persia, Greece, Rome). Texts to be studied include selections from the Bible, the Apocrypha, the Dead Sea Scrolls, Josephus, and the Mishnah.

NEST 251 Judaism, Christianity, and Islam [also JWST 251, RELST 251] @ #
Fall. 3 credits. B. Rann and K. Haines-Eitzen.
This course explores the ways in which communities of Jews, Christians, and Muslims came to define and expand those outside their religious community through the production and subsequent interpretation of "authoritative texts," including the Hebrew Bible, the Christian Bible, and the Arabic Qur'an.

NEST 281 Gender & Society in the Muslim Middle East [also RELST 281, WOMNS 281] @ #
Spring. 3 credits. M. Bloom.
This course examines conceptions of gender in traditional Muslim society and the ways they have affected the experiences of Muslim women and men. Topics to be covered include the position of women in the religious law of Islam, female seclusion and the harem, sexuality, and social hierarchies and family structure. Although attention will be given to gender issues in the contemporary Near East, the course focuses on the historical roots of present-day social configurations.

Civilization

[NES 244 Introduction to Ancient Judaism [also JWST 244 and RELST 244] @ #

NEST 248 Introduction to Islamic Civilization [also HIST 253, RELST 255] @ #

NEST 283 Gender & Society in the Muslim Middle East [also RELST 281, WOMNS 281] @ #
Spring. 3 credits. M. Bloom.
This course examines conceptions of gender in traditional Muslim society and the ways they have affected the experiences of Muslim women and men. Topics to be covered include the position of women in the religious law of Islam, female seclusion and the harem, sexuality, and social hierarchies and family structure. Although attention will be given to gender issues in the contemporary Near East, the course focuses on the historical roots of present-day social configurations.
challenges ideological bases of conventional thinking regarding the social, political, and cultural identity of medieval "Spain." Among other things, the class investigates the origins of lyric poetry, the relationships among the various confessional and ethnic communities in al-Andalus and the Jewish communities involved in Mozarabic Christian and Andalusi Jewish subcultural adaptations of Andalusi Arabo-Islamic culture.

NES 351 Law, Society, and Culture in the Middle East, 1200-1500 (also NES 651, RELST 350, HIST 372/652) @ # Fall. 4 credits. Enrollment limited to 25 staff.

After surveying the historical development of Islamic law, the seminar will focus on the structure and function of the Islamic legal system in the thirteenth, fourteenth, and fifteenth centuries, using legal documents, judicial opinions, and court cases (all in English translation) to elicit major themes and issues, (e.g., the Marital regime, women and property, social hierarchies, law, and the public sphere).

NES 357 Islamic Law and Society (also RELST 356) @ # Spring. 4 credits. Not offered 2000–2001.

D. Powers.
The Shari'ah, or sacred law of Islam, embodies the totality of God's commands that regulate the life of every Muslim in all its aspects. The Shari'ah establishes a system on equal basis ordinances regarding worship and ritual as well as political and, in Western terms, strictly legal rules. This course examines the relationship between the Shari'ah and the major social, political and religious institutions of Islamic society. Topics to be discussed will include the status of women, slaves, and non-Muslims; attitudes toward the economy and the arts, the significance of jihad (holy war), the nature of the Muslim city, and the relationship between the religious establishment and the government. Attention will be given to the function of the Shari'ah in the modern world, with special reference to the problems and challenges of legal reform.

NES 358 Islamic Law and the Ancient Near East (also JWST 363) @ # Fall. 4 credits. Not offered 2000–2001.

This course will study early Near Eastern law codes from Mesopotamia, the Hittite world, and Israel. We will consider what legal and ethical norms can be derived from these laws, as well as exploring the issue of the social realities the laws addressed. Our main sources will be the ancient law codes themselves, but we will also read contemporaneous judicial proceedings, contracts, and narratives that shed light on the actual practice of law.

NES 370 Power, Piety, and Medieval Art (also ART H 330, RELST 330) @ # Fall. 4 credits. L. Jones.

For description, see Art History 330.

The Jewish encounter with Islamic civilization (ten through thirteenth centuries) reshaped the conditions of Jewish existence in Mediterranean lands and redefined the culture and worldview of rabbinic Judaism. The seminar will study these transformations by learning how to read travelers accounts and documentary materials (personal correspondence, court records, economic and communal registers) preserved in the so-called "Cairo Genizah." We will also examine selected texts produced by and for the benefit of Jewish literary and religious intellectuals, such as Saadiah Gaon, Solomon ibn Gaone, Judah Halevi, and Moses Maimonides.

NES 390 Catholic Social Action (also RELST 390) Spring. 3 credits. D. McKenzie.

This course is a comprehensive introduction to Catholicism and its social teaching. The focus is on the history and development of Catholic social teaching from the Council of Trent through the Second Vatican Council. We will also examine selected texts produced by and for the benefit of Jewish literary and religious intellectuals, such as Saadiah Gaon, Solomon ibn Gaone, Judah Halevi, and Moses Maimonides.

NES 444 Early Medieval Jerusalem (also ART H 444) Spring. 4 credits. L. Jones.

For description, see Art History 444.

NES 464 The Herodotean Moment (also GOVT 454, HIST 454) @ # Spring. 4 credits. Not offered 2000–2001.

M. Bernal.
The main premise of the seminar is that the concept of "Western civilization" is a problematic one in need of critical and historical analysis. The course will examine the evolution and transformation of this concept from antiquity to the twentieth century by focusing on selected moments (and texts in which they are represented) of actual and/or perceptual encounters with other civilizations. It will also inquire into the political uses and abuses of the idea of the West, and theologico-political and anthropological dimensions of the idea's history.

NES 494 Modern Medicine and the Catholic Church (also RELST 494) Spring. 4 credits. D. McKenzie.

This course is designed to help students develop an understanding of ethical approaches to contemporary health care which are based on the Catholic tradition in all of its breadth and diversity. Catholic tradition and medicine through critical analysis of relevant teachings and church statements are explored. Principle based approaches are considered as a conversation partner to examine the significance of a faith-based approach. The goal of this course is to help students think analytically and passionately about health care ethics. The ability to appreciate complexities and tolerate legitimate differences in moral methods and choices is an important framework for this class, as well as an interest in Catholic tradition. Consideration of what constitutes just health care and the Church's longstanding commitment to medicine will provide a lens to examine critical issues such as: allocation of healthcare resources, the healing relationship and structure of medical care, autonomy and relationships in decision making, life and death treatment decisions, organ donation, abortion, new reproductive technologies, genetics, and euthanasia. Attention will be given to contemporary Roman Catholic scholars who offer feminist and liberation perspectives.

NES 497 Thomas Merton: Monk and Author (also RELST 497)
Fall. 4 credits. D. Powers.

Thomas Merton (1915–1968), a major Catholic figure of the twentieth century, enjoys a wide popularity based on his books, letters, journals, and poetry. In his writings he grappled with a wide variety of social problems and developed a contemporary spirituality. From the hermitage where he lived as a Trappist monk at the Abbey of Gethsemane near Bardstown, Kentucky, he contributed significantly to International discourse and social movements on pacifism, social justice, a Buddhist-Christian dialogue, and issues relating to religion and the environment. His life as a contemplative informed his writings on spirituality. Major themes include his rejection as recounted in The Seven Story Mountain, his spirituality (Bread in the Wilderness, Contemplation in a World of Action), his commitment to pacifism (Conjectures of a GUILTY Bystander, Faith and Violence: Christian Tradition and Christian Practice, Passion for Peace: The Social Essays), his contributions to social justice (selections from letters, as well as At Home in the World, his correspondence with feminist theologian Rosemary Radford Reuther, and (selections from Collected Poems), his concern for the environment (selections from letters and journals), and his participation in the Buddhist-Christian dialogue (Zen and the Birds Appetite). Given the Catholic Studies Department and English Department will explore Merton's contributions from their respective disciplines.

NES 639 Islamic Spain: Culture and Society (also NES 339, JWST 339, COM L 334, RELST 334, SPAN L 334) @ # Fall. 4 credits. Not offered 2000–2001.

R. Brann.
This course examines the culture and society of al-Andalus (Islamic Spain) from 711, when Islamic forces arrived in the Iberian Peninsula, and 1492, the year of the fall of the demised of Nasrid Granada. Through extensive discussion and analysis of Arabic, Latin, and Hebrew primary documents and literary texts of various genres (in translation), the course challenges ideological bases of conventional thinking regarding the social, political, and cultural identity of medieval "Spain." Among other things, the class investigates the origins of lyric poetry, the relationships among the various confessional and ethnic communities in al-Andalus and the importance of the fall of the Muslim regimes to International Catholic Church efforts to eliminate injustice and build a just and tolerant society and of the Jewish communities involved in Mozarabic Christian and Andalusi Jewish subcultural adaptations of Andalusi Arabo-Islamic culture.

NES 651 Law, Society and Culture in the Middle East, 1200–1500 (also NES 351, RELST 350, HIST 372/652) Spring. 4 credits. Limited to 25 students. D. Powers.

For description, see NES 351.

L. Adelson.
Since the West German and Turkish government signed a labor recruitment agreement in 1961, the Turkish population in the Federal Republic has become the largest group of "foreigners" to reside permanently in
Germany. While Turks have borne the brunt of restriction (and hostility) only in a country that may soon grant them citizenship, a lesser known fact is that Turkish-German authors of several generations have been producing German literature for over two decades. Departing from the sociological model that usually interpret this minority literature as a plea for German compassion or intercultural dialogue, this course juxtaposes prose fiction about Turkish-German contact and critical theories that occupied the church throughout its history. The course will draw on primary literary sources (from biblical literature to council proceedings, monastic rules, sermons, theological treatises, and biographies) as well as Christian art, inscriptions, music, and manuscripts.

In this course we will explore the varieties of Christian thought and practice from the first through the fourth centuries. In its earliest centuries, Christianity consisted of a diverse range of movements, each of which was considered "heretical" by its opponents, one of which can be to dominate all the others and so earned for itself the designation "orthodoxy." The "heresies" we will study include Adoptionism, Marcionism, Gnosticism, Montanism, Ariantism, and Donatism. Consideration will also be given to the ways in which "heretics" were persecuted and how they responded with competing views about women in the early Church, the relationship between Judaism and Christianity, the construction of authority, and the content, function, and sacredness of early Christian books.

[NES 340 Byzantine Theocracy: Church and State from the Fourth to Eighth Centuries A.D. (also CLASS 335, RELST 340, HIST 334) @] Fall. 3 credits. S. Wessel.

For description, see Classes 335. 

[NES 351 Law, Society, and Culture in the Middle East, 1200-1500 (also NES 351, RELST 350, HIST 372/375) @] Fall. 4 credits. Enrollment limited to 25 students. D. Powers.

After surveying the historical development of Islamic Law, the seminar will focus on the structure and function of the Islamic legal system in the thirteenth, fourteenth, and fifteenth centuries, using legal documents, judicial opinions, and court cases (all in English translation) to elicit major themes and issues; e.g., the writers' views of women and property, social hierarchies, law, and the public sphere).

This is an advanced class on conflict and conflict resolution focusing on the Arab Israeli case. Some additional cases of conflict in the Middle East will be used for comparison. The class will discuss issues of nationalism, nation building, migration, and military strategies. The class will further discuss Zionism and post-Zionist debates and include different perspectives on the Arab Israeli Conflict. Students will be expected to use primary and secondary source materials.

NES 651 Law, Society, and Culture in the Middle East, 1200-1500 (also NES 351, RELST 350, HIST 372/652)
Fall. 4 credits. Enrollment limited to 25 students. D. Powers
For description, see NES 351.

Literature

[NES 223 Introduction to the Hebrew Bible I (also JWST 223, RELST 223)] @
G. Rendsburg
This is the first course of a two-semester sequence. The main goal is to introduce students to the literature of the Hebrew Bible, which is accomplished by concentrating on the material in Joshua through Samuel, that is, the material which covers the period from Israel's origins through King David. Emphasis is placed on literary, historical, and theological matters. Special use is made of the numerous archaeological discoveries that have advanced our knowledge of ancient Near Eastern literature, history, religion, mythology, and law.

[NES 224 Introduction to the Hebrew Bible II (also JWST 224, RELST 224)] @
Fall. 3 credits. G. Rendsburg
This is the second of a two-semester sequence, but one does not need to take NES 223 in order to take this course. The main goal is to introduce students to the literature of the Hebrew Bible. This is accomplished by concentrating on the historical material in Kings, the books of the Prophets, and the book of Job, that is, the material which covers the period from King Solomon through the end of the biblical era. Emphasis is placed on literary, historical, and theological matters. Special use is made of the numerous archaeological discoveries that have advanced our knowledge of ancient Israel. As such, the Bible is studied against the backdrop of ancient Near Eastern literature, history, religion, mythology, and law.

[NES 229 Introduction to the New Testament (also RELST 229 and JWST 229)] @
Fall. 3 credits. K. Haines-Eitzen
This course provides a literary and historical introduction to the earliest Christian writings, most of which eventually came to be included in the New Testament. Through the lens of the gospel narratives and earliest Christian letters, especially those of Paul, the course will explore the rich diversity of the early Christian movement. For example, we will examine the role of the book of Revelation in the development and spread of early Christianity and beyond. Careful consideration will be given to the political, economic, social, cultural, and religious circumstances that gave rise to the Gospel movement, as well as those that facilitated the emergence of various manifestations of early Christianity. Students will be expected to use primary and secondary source materials.

[NES 236 Israelite: Literature and Society (also JWST 236, COM L 246)] @
K. Haines-Eitzen
A series of Israeli literary narratives in English translation will be read closely. The Life of Yehoshua A Yizkor Yehoshua in the Land of Israel, by O. Z. and selected short stories by contemporary authors of various ethnic backgrounds. We will analyze these texts both as literary artifacts and as attempts to represent a panorama of Israeli society.

[NES 239 Cultural History of the Jews of Spain (also JWST 239, COM L 299, RELST 239, SPAN L 239)] @
Fall. 3 credits. E. Alfonso
For description, see NES 239 under Near Eastern History.

[NES 250 Muhammed and Mystics in the Literatures of the Islamic World (also RELST 250)]
Spring. 3 credits. S. Toorawa
The life of the Prophet Muhammad and the teachings of Muslim mystics (sufis) have provided material and inspiration for numerous writers of the Islamic world. We will use our readings in English translation, of works in Arabic, Malay, Panjabi, Persian, Swahili, Turkish, and Urdu, to help us interrogate the ways in which Muhammad, mystics, and mysticism have shaped religion, literature, and society.

[NES 299 Hebrew Bible and Arabic Qur'an in Comparative Perspective (also RELST 299, COM L 299, JWST 299)] @
R. Brann
This course examines (in translation) the Hebrew Bible and Arabic Qur'an as foundational documents of their respective religious traditions and as the texts by which their corresponding religious communities came to constitute and define themselves. The approach in this course will be comparative, analyzing literary aspects of the parallel narrative traditions on Creation, the Noah story, Abraham/Ibrahim and his sons, the Joseph/Yusuf cycle, as well as postbiblical and Islamic elaborations of the Solomon/Sheba material. The class will also discuss the concepts of revelation, prophethood, community, and of the role of the eschatology, and apocalypticism in the history of the Hebrew Bible and Arabic Qur'an. The problematic nature of revealed scripture in monotheistic religion and the limited relevance of the idea of 'influence' in the Near Eastern context will also be studied.

[NES 313 Classical Arabic Texts (also RELST 313)] @
Fall. 4 credits. Prerequisite: NES 134 or NES 121 or equivalent. D. Powers
This course will be an advanced study of classical Arabic thought, including tracing of selected chapters of the Qur'an, together with the Qur'anic commentary (tafsir) and other relevant literature. Special attention will be given to grammar, syntax, and lexicography.

[NES 319 Crime and Conflict in the Modern Arabic Novel (also COM L 318)] @
Fall. 4 credits. S. Toorawa
In this course we will read seven modern Arabic novels in translation in which the themes of crime and conflict are uppermost, including Nobel Laureate Naguib Mahfouz's The Thief and the Dogs, Nawal El Saadawi's Woman at Point Zero, and Rachid El Dail's Dear Mother Kawabata. We will complement the readings with three films.

[NES 320 Women in the Hebrew Bible (also JWST 320, WOMNS 322)] @
Spring. 3 credits.
This course features stories about women in the Hebrew Bible. Through literary readings of these texts we attempt to understand the portrayal of women (characters and roles assigned by male writers), the social reality represented, and the role of narrative in the promotion of ideologies. All texts in English translation. Hebrew texts optional.

There is a one-credit option for students who wish to meet 1 hour/week to read the texts in the Hebrew original (NES 326).

[NES 323 Reinventing Biblical Narrative (also JWST 323, RELST 323)]
Spring. 4 credits. K. Haines-Eitzen
Narratives, particularly sacred narratives, are not static or fixed but rather infinitely flexible and malleable. Subject to multiple retellings—elaborations, modifications, and deletions—narratives take on lives of their own even after they come to be written down. What happens to sacred stories when they are heard and read by different communities of interpreters? This is the broad question at the heart of this course, which will explore the diverse interpretations of biblical narrative—especially the stories and characters in the book of Genesis—found Jewish and Christian literature from the second century B.C.E. through the third century C.E. Writers like the Hebrew author of the Dead Sea Scrolls, Philo judaeus, and the Jewish historian Josephus, bodies of literature like Jewish and Christian pseudepigrapha and apocrypha, the New Testament, gnostic literature, early rabbinic literature, and patristic writers are sources we will investigate in this class.

[NES 325 Introduction to the Hebrew Bible—Seminar (also JWST 325, RELST 318)]
Fall. 1 credit. G. Rendsburg
This is a one-credit option for students who wish to meet one day each week to read the texts covered in class in the original Hebrew. Must be concurrently enrolled in NES 223 or NES 224.

[NES 326 Women in the Hebrew Bible—Seminar (also JWST 326, WOMNS 326)]
Spring. 1 credit. G. Rendsburg
This is a one-credit option for students who wish to meet one hour each week to read the texts in the Hebrew original. Must be concurrently enrolled in NES 320.
Nes 328: Gnosticism and Early Christianity (also JWST 326, RELST 330)  
An in-depth exploration of early Christian Gnosticism—its literatures, beliefs, and practices. Early Christian Gnosticism came to be considered heretical by early proto-orthodox Church Fathers. In this course, however, we will not simply read the condemnations written by the opponents of gnostic thought; rather, we will focus our attention on reading (in English translation) substantial portions of the texts written by the Gnostics themselves and found at Nag Hammadi, Egypt, in 1945. We will explore gnostic ideas about the world, creation, salvation, God, humanity, and the human body, while also attending to issues of gender, asceticism, and scriptural interpretation as they intersect with gnostic thought. To set gnostic literature within a socio-historical context, we will discuss other relevant ancient texts and scholarly theories about the Jewish and Hellenistic roots of early Christian Gnosticism.

Nes 329: Introduction to the New Testament Seminar (also JWST 329, RELST 329)  
Fall. 1 credit. Prerequisite: concurrent enrollment (or past enrollment) in NES 229 and 1 year of ancient Greek. K. Haines-Eitzen. 
A weekly seminar that may be taken in addition to NES 229. The seminar will provide an opportunity to read portions of the New Testament and other early Christian writings in Greek. We will work on grammatical and textual issues as well as other problems related to translations.

Nes 339: Islamic Spain: Culture and Society (also JWST 339, COM L 334, RELST 334, SPAN L 339/699)  
For description, see NES Civilization.

Nes 394: Gender, Sexuality, and the Body in Early Christianity (also RELST 298, WOMNS 298)  
Beliefs about gender, sexuality, and the human body were remarkably interwoven with political, religious, and cultural disputes in early Christianity. In this course we will explore the construction and representation of gender, sexuality, and the body in various forms of Christianity from the first century through the fourth. Asceticism and celibacy, veiling and unveiling, cross-dressing and Gnostic androgyny, marriage and childbirth, and homosexuality will be among the topics considered, and our sources will range from the New Testament and early Christian apocrypha, martyrologies, and patristic writings to Greek medical texts, Jewish midrash, Roman inscriptions, and Egyptian erotic and magical spells. Current interdisciplinary and theoretical studies on gender, ideology, sexuality, and power will aid us in developing our analytical approaches to the ancient materials.

Nes 400: Seminar in Advanced Hebrew (also JWST 400)  
Fall. 4 credits. Prerequisite: NES 302/JWST 302 or permission of instructor. Enrollment limited to 15 students. N. Scharf. 
Continuation of work done in NES/JWST 302, with less emphasis on the study of grammar. We will read and discuss texts of cultural relevance, using articles published in Israeli newspapers and works by authors in each of the three principal genres: poetry, theater, and novels. The course may be repeated for credit with permission of instructor.

Nes 420: Readings in Biblical Hebrew Prose (also JWST 420 and RELST 420)  
Spring. 4 credits. Prerequisite: 1 year of biblical or modern Hebrew. Course may be repeated for credit. G. Rendsburg. 
An advanced course in reading selected portions of the Hebrew Bible. Emphasis will be placed on the philological method, with attention to literary, historical, and comparative concerns.

Nes 421: Readings in Biblical Hebrew Poetry (also JWST 421, RELST 421)  
Fall. 4 credits. Prerequisite for NES 421: 1 year of biblical or modern Hebrew. Course may be repeated for credit. Not offered 2000–2001. G. Rendsburg. 
Advanced course in reading selected poems of the Hebrew Bible. Chapters to be studied include various Psalms, parts of the Book of Job, various prophetic speeches, and early compositions such as Genesis 49 and Judges 5. Emphasis will be placed on the philological method, with attention to literary, historical, and comparative concerns as well.

Nes 639: Islamic Spain: Culture and Society (also NES 339, JWST 339, COM L 334, RELST 334, SPAN L 339/699)  
This course examines the culture and society of al-Andalus (Islamic Spain) from 711, when Islam arrived in Iberia, until 1492 and the demise of Nasrid Granada. Through extensive discussion and analysis of Arabic, Latin, and Hebrew primary documents and literary texts of various genres (in translation), the course challenges ideological bases of conventional thinking regarding the social, political, and cultural identity of medieval Spain. Among other things, the class investigates the origins of lyric poetry, the formation of Andalusi Jewish cultural identity, the social, political, and cultural identity of the Andalusis, and the problems involved in Mozarabic Christian and Andalusi Jewish cultural identity.

Nes 491-492: Independent Study, Undergraduate Level  
Fall and spring. Variable credit. Prerequisite: permission of instructor. Staff.

Nes 499: Independent Study, Honors  
Fall and spring. Variable credit. Prerequisite: permission of instructor. Staff.

Nes 691-692: Independent Study, Graduate Level  
Fall and spring. Variable credit. Prerequisite: permission of instructor. Staff.

The Program of Jewish Studies  
The Program of Jewish Studies encompasses a broad spectrum of disciplines that includes civilization, history, language, literature, philology, archaeology, and religion. The program offers students the opportunity to take a wide variety of courses in Jewish Studies whose subjects are not represented in the Department of Near Eastern Studies. Students interested in planning a program in Jewish Studies should consult with the director, Professor David I. Owen.
NEPALI
See Department of Asian Studies.

PACIFIC
See Department of Asian Studies.

PHILOSOPHY

Emeritus: C. A. Ginet.

The study of philosophy provides students with an opportunity to become familiar with some of the ideas and texts in the history of thought while developing analytical skills that are valuable in practical as well as academic affairs. It affords the excitement and satisfaction that come from understanding and working toward solutions of intellectual problems. The curriculum includes offerings in the history of philosophy, logic, philosophy of science, ethics, social and political philosophy, metaphysics, and theory of knowledge. Any philosophy course numbered in the 100s or 200s is suitable for beginning study in the field. Sections of Philosophy 100 are part of the freshman writing seminar program; they are taught by various members of the staff on a variety of philosophical topics, and because of their small size (seventeen students at most) they provide ample opportunity for discussion. Students who want a broad introduction to philosophy may take Philosophy 101, but many students with special interests may find that the best introduction to philosophy is a 200-level course in some particular area of philosophy; such courses have no prerequisites and are usually open to first-year students.

The Major
Students expecting to major in philosophy should begin their study of it in their freshman or sophomore year. Admission to the major is granted by the director of undergraduate studies of the department on the basis of a student’s work during the first two years. Normally the student must have completed two philosophy courses with grades of B or better. Eight philosophy courses are required for the major. They must include at least one course in ancient philosophy (Philosophy 210 or 211, or a course on Plato or Aristotle), at least one course in classical modern metaphysics and epistemology (Philosophy 212 or a course on the empiricists, the rationalists, or Kant), and a minimum of three courses numbered above 200. Students admitted to the major after fall 1996 will be required to take a minimum of six philosophy courses numbered above 200, and may not count more than one section of Philosophy 100 toward the major. A course in formal logic (e.g., Philosophy 231), while not required, is especially recommended for majors or prospective majors. Courses numbered 191–199 do not count toward the major.

Philosophy majors must also complete at least eight credits of course work in related subjects approved by their major advisers. Occasionally majors may serve as teaching or research aides, working with faculty members familiar with their work.

HONORS. A candidate for honors in philosophy must be a philosophy major with an average of B- or better for all work in the College of Arts and Sciences and an average of B+ or better for all work in philosophy. In either or both terms of the senior year a candidate for honors enrolls in Philosophy 490 and undertakes research leading to the writing of an honors essay by the end of the final term. Honor students normally need to take Philosophy 490 both terms of their senior year in order to write a satisfactory honors essay. Philosophy 490 does not count toward the eight philosophy courses required for the major. Prospective candidates should apply at the philosophy department office, 218 Goldwin Smith Hall.

FEES
In some courses there may be a small fee for photocopying materials to be handed out to students.

Introductory Courses
These courses have no prerequisites; all are open to freshmen.

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PHIL 100 Freshman Writing Seminars in Philosophy
Fall and spring. 3 credits. Consult the brochure listing freshman writing seminars prepared by the John S. Knight Writing Program.

PHIL 101 Introduction to Philosophy

Fall: The course offers a first glance at a number of central areas in philosophy. We will read a number of classic and contemporary texts about the nature of belief, explanation, perception, consciousness, freedom, morality, and justice. Here are a few questions we will be discussing: What distinguishes knowledge from reasonable opinion, firm conviction, or true belief? Can we fully describe the human mind from a third-person perspective? Could there be free will in a deterministic world? What is the force of a moral law? The course has no prerequisites.

Spring: This class will introduce students to various approaches in modern and twentieth-century philosophy. We will look at important historical works as well as current philosophical debates. We will consider issues about knowledge, freedom, and morality, as well as how philosophy relates to other disciplines. This approach will give some taste of the different types of things that philosophy can be. All of these topics will require that the student: be able to understand complex arguments; be able to give fair summaries of views with which the student disagrees; and when that happens, be able to explain clearly why the author under consideration is mistaken.

Summer: An introduction to several central philosophical questions. Is there knowledge...
PHIL 131 Logic, Evidence and Argument

PHIL 142 Appropriation and Alienation
Spring. 3 credits. This course is intended for freshmen. T R 11:40-12:55. B. Berry. This course will investigate the justification of property rights. We will start the course by watching a film, The Field, in which two different conceptions of what justifies ownership come into conflict. Should things belong to those who make them? Or shouldn't labor be the primary justification of property rights? We will spend the first half of the course investigating how the philosopher John Locke handles this issue in his classic defense of private property. In the second half, we will consider Kantian objections to Locke's defense of private property.

PHIL 145 Contemporary Moral Issues
Summer. 3 credits. Examine some of the central moral questions in American politics today. Some of the questions may include: At what point, if any, is abortion wrong, and in what circumstances should it be legal? What should be done to reduce economic, racial, and sexual inequalities? For example, is there a moral justification for affirmative-action programs? For welfare programs? What are the limits of the right to free speech? Do they protect pornography? Racist speech? When is it right to go to war? What obligations do U.S. citizens have to help people in poor countries? What restrictions on immigration are justifiable? We analyze the arguments of major moral philosophers, political leaders, and judges through lectures and discussion sections.

PHIL 181 Introduction to the Philosophy of Science
Spring. 3 credits. T R 11:40-12:55. N. Sethi. This course is an introductory survey of contemporary philosophy of science. We will attempt to answer such central questions as: What reasons do scientists have for accepting current scientific theories? How can scientists test theories about unobservable entities? Is science a search for truth? Do scientists discover or construct facts about nature? Are scientific claims immune to cultural, social, and subjective influences? The last part of the course will focus on the moral issues that scientific and technological developments force us to face.

PHIL 181 Introduction to Cognitive and Language Sciences (COGST 101 and PSYCH 102)
Fall. T R 11:40-12:55. M. Spivey. This course surveys the study of how the mind/brain works. We will examine how information-processing can arise from biological and artificial systems. The course draws primarily from five disciplines that make major contributions to cognitive science: philosophy, psychology, neuroscience, linguistics, and computer science. The first part of the course will introduce the roles played by these disciplines in cognitive science. The second part of the course will focus on how each of these disciplines contributes to the study of five topics in cognitive science: language, vision, learning and memory, action, and artificial intelligence. Does not count toward the Philosophy major or toward the Humanities Distribution Requirement in Philosophy.

PHIL 193 Inequality, Diversity, & Justice (also CRP 293, GOVT 293, SOC 293)
Fall. 4 credits. No prerequisites: intended for freshmen and sophomores. M W F 2:30-3:20. (The class will meet as a whole, for a lecture F, 8:45, thereafter, lectures will be given M, W, F, discussion sections will be F.) R. Miller. An interdisciplinary discussion of the nature and moral significance of social inequality, diversity, and poverty and of the search for just responses to them. How unequal are economic opportunities? What are the causes of poverty? To what extent is greater equality a demand of justice? Are traditional welfare programs an appropriate response to poverty? What special significance have race and gender as sources of inequality? Do they merit special remedies such as affirmative action? How does membership in an ethnic group shape people's lives, and how should it? How should governments deal with racial, economic, and sexual differences in ultimate values? For example, should abortion statutes be neutral toward rival views of the importance of potential human life? What are the causes of poverty and inequality? To what extent do people in per-capita rich countries have a duty to help the foreign poor? Moral argument, investigations of social causes, and legal reasoning interact in the search for answers to these questions. To provide these resources, the course will be taught by leading faculty researchers in philosophy, political theory, the social sciences, and law.

PHIL 194 Global Thinking (also GOVT 294)

PHIL 210 Ancient Thought #

PHIL 211 Ancient Philosophy (also CLASS 231)
Fall. 4 credits. This course has no prerequisites. It is open to freshmen. T R 1:25-2:40. G. Pine. This course examines the origin and development of Western philosophy in Ancient Greece and Rome. We will study some of the central ideas of the Pre-Socratics, Socrates, Plato, Aristotle, and the Hellenistic philosophers (Epicureans, Stoics, and Skeptics). Questions to be considered include: What are the nature and limits of knowledge? Is knowledge even possible? How reliable is perception? What are the basic entities in the universe: atoms, Platonic Forms, or Aristotelian substances? Is moral knowledge possible? What is the nature of happiness and what sort of life will make people happy? Do human beings have free will? Ought we to fear death? One of the fundamental works we will read is Plato's Republic.

PHIL 212 Early Modern Philosophy #
Spring. 4 credits. No prerequisites. M W F 10:10-11:00. L. Becker. This course is about the rise of modern philosophical thought in the seventeenth and eighteenth centuries in Europe. We will be focusing on four philosophers: Descartes, Berkeley, Leibniz, and Hume. Our main interest will be the theory of ideas and the way this theory underlies metaphysics. What are ideas and how do we come to have them? Why are ideas meaningful for knowledge about the external world? What is the connection between the structure of ideas and the structure of reality? This course emphasizes close reading of original texts (or translations of original texts) and critical assessment of philosophical arguments.

PHIL 213 Existentialism
Fall. 4 credits. T R 2:55-4:10. W. Bracken. This course will provide an introduction to the philosophy of existentialism as exemplified in literary and philosophical texts to be drawn from among the following authors: Kierkegaard, Nietzsche, Camus, Beckett, Tolstoy, Heidegger, Sartre, and Beauvoir. We will explore topics such as the nature of human freedom, the role of desire and feeling in the constitution of the self, the possibility of an ethics of authenticity, religious commitment, nihilism, bad faith and self-deception, the role that relations to others play in the constitution of the self, as well as the use that the aforementioned authors make of different forms of writing and argumentation in their exploration of such themes.

PHIL 214 Philosophical Issues in Christian Theology #

PHIL 219 Marx #
Fall. 4 credits. T R 10:10-11:25. F. Neuhouser. A survey of Marx's central theoretical writings aimed at understanding his analysis and critique of capitalism. Topics include: alienation, the nature of class, historical materialism, commodity fetishism, and the laws of capitalist development. Background readings from Smith, Hegel, and Feuerbach. Open to students at all levels, no previous philosophy in philosophy presupposed.

PHIL 231 Introduction to Deductive Logic
Spring. 4 credits. No prerequisites. M W F 11:15-12:05. Z. Szabó. The course covers the basics of propositional and first-order logic with a special emphasis on the problem of translating English sentences into the formal language of these logics.

PHIL 241 Ethics (by petition for breadth requirement)
Fall. 4 credits. M W F 1:25-2:15. T. Irwin. Introduction to the philosophicoanalytic study of major moral questions. For example: Are all values relative, or are some objective moral values? Have we ever any good reason to care about the interests of other people? What sacrifices are required by our moral duties? What is the nature and basis of our moral duties? For example, why is it wrong to lie and is it always wrong to lie? Do people have rights with which governments should not interfere, even to advance the general welfare? What inequalities are unjust? The course discusses general issues in moral philosophy, together with some of the intentions of particular moral controversies, such as the debates over abortion, reverse discrimination, and policies reducing economic inequality. Readings from major philosophers of the past, as well as contemporary sources.

PHIL 242 Social and Political Philosophy (also GOVT 260)
An introduction to the foundational texts of modern political theory, including Hobbes, Locke, Rousseau, and Rawls. Topics include the source of political legitimacy, why individuals are obligated to obey just laws, the limits of legitimate political authority, and the nature of human freedom. Special attention will be paid to the justifications role the social contract plays in political philosophy.

**PHIL 243 Aesthetics**  

**PHIL 244 Philosophy and Literature**  

**Phil 245 Ethics and Health Care**  
Fall. 4 credits. T R 1:25–2:40. L. Becker. This class looks at selected issues in medical ethics, considering arguments from each side of a debate and evaluating them in the light of traditional ethical frameworks. Students will be expected to analyze extended arguments and to make and respond to extended arguments.

**PHIL 246 Ethics and the World Environment**  
Spring. 4 credits. T R 10:10–11:25. H. Shue. Critical philosophical analysis of the conceptual frameworks in which policies affecting the environment are formulated and judged. The course is an extended case-study of the global environmental issue of rapid climate change, focusing on the ethical issues at the heart of the debates about the Kyoto Protocol to the Framework Convention on Climate Change. The key issues include alternative grounds for assigning responsibility for making necessary sacrifices between industrialized and developing nations, alternative principles for handling risks to future generations when outcomes are uncertain, and what kind of concern with alleged over-consumption in wealthy nations and alleged over-population in poor nations.

**PHIL 247 Ethics and Public Life**  
Fall. 4 credits. T R 10:10–11:25. M. Moody-Adams. This course will examine the ethical dimensions of our lives as citizens of complex social and political communities. We will discuss four questions of central interest in this area, with attention to a variety of attempts by philosophers, social theorists, theologians, and others to help us answer them. (1) What are the obligations of people such as politicians and journalists whose professions involve service to the public? For instance, may politicians violate "private morality" (of truth-telling and trustworthiness) in service of a public good? (2) What do we, as citizens of complex social and political communities, owe to others with whom we share that life? What are the demands, for instance, of distributive justice within a single political community, and do the moral rules that stop at the border of one's national community? (3) How should we draw the boundaries between public and private life in such matters as family structure, sexuality, and reproduction? (4) When, if ever, is it morally permissible to opt out of the demands of public, political life? What might justify civil disobedience, for instance, and are there morally important reasons to care about the future of public education at the primary and secondary levels?

**PHIL 248 Feminism and Philosophy**  
(also WOMNS 248)  

**PHIL 249 Knowledge and Reality**  

**PHIL 251 Modern Empiricism #**  
Fall. 4 credits. Prerequisite: 1 previous course in philosophy. T R 1:25–2:40. S. Shoemaker. The course will be on the epistemological and metaphysical views of David Hume and Thomas Reid. Topics will include sense perception and perceptual experience, our concepts of ourselves and external things, the status of our beliefs about external things, skepticism vs. common sense, personal identity, and causation.

**PHIL 262 Philosophy of Mind**  
Fall. 4 credits. T R 11:40–12:55. B. Hellige. We will discuss a number of issues about the mind. For instance, do we think and talk about the mind at all? Is the mind identical to the body, or is it something else? How does the mind come to represent the world? Is a person's mind, as one might think, available for knowledge to that person in a way it is not available to other people? Can a person change his mind at will?

**PHIL 263 Religion and Reason**  
Spring. 4 credits. M W F 1:25–2:15. S. MacDonald. What must (or could) God be like, and what reasons do we have for thinking that a being of that sort actually exists? What difference would (or could) the existence of God make to our lives? This course examines the ideas, common to several major world religions, that God must be an absolutely perfect being. What attributes must a perfect being have? Must it have a mind, be a person, care for human beings? Is the concept of a perfect being coherent? Is the existence of a perfect being compatible with the presence of evil in the world and the existence of human freedom? Does human morality depend in any important way on the nature or will of a perfect being? Is a perfect being among the things that actually inhabit our universe? The course approaches these questions with the tools and methods of philosophical reason. Through readings drawn from both classic texts and contemporary philosophical discussion.

**PHIL 270 Truth and Interpretation (also LING 270/COGST 270)**  

**PHIL 271 Deductive Logic (also MATH 281)**  
Spring. 4 credits. M W F 10:10–11:00. R. Boyd. This course develops out of Kant's transcendental idealism. Some knowledge of Kant's Critique of Pure Reason is presupposed.

**PHIL 272 Intermediate or Advanced Courses**

Some of these courses have prerequisites.

**PHIL 309 Plato (also CLASS 339)**  
Spring. 4 credits. Prerequisite: at least 1 previous philosophy course. T R 11:40–12:55. C. Brittain. Topic TBA.

**PHIL 310 Aristotle**  

**PHIL 311 The Rationalists #**  
4 credits. Spring. Prerequisite: at least 1 previous course in philosophy. T R 2:55–4:10. G. Fine. We will consider the metaphysics and epistemology of Descartes, Spinoza, and Leibniz. Topics to be considered include: the nature of substance, proofs for the existence of God, free will, determinism, and causation; scepticism; the nature and limits of knowledge; the nature and value of sense perception; mind and body.

**PHIL 312 Modern Empiricism #**  
Fall. 4 credits. Prerequisite: 1 previous course in philosophy. T R 1:25–2:40. S. Shoemaker. The course will be on the epistemological and metaphysical views of David Hume and Thomas Reid. Topics will include sense perception and perceptual experience, our concepts of ourselves and external things, the status of our beliefs about external things, skepticism vs. common sense, personal identity, and causation.

**PHIL 317 Kant #**  
Spring. 4 credits. T R 10:10–11:25. F. Neuhouser. An introduction to the major themes of Hegel's philosophy, with an emphasis on his social and political thought. Topics include Hegel's critique of Kant, the possibility of metaphysics, the master-slave dialectic, and the role of freedom in Hegel's account of rational social institutions. Readings from Fichte will help to explain how Hegel's project develops out of Kant's transcendental idealism. Some knowledge of Kant's Critique of Pure Reason is presupposed.

**PHIL 318 Origins of Twentieth-Century Philosophy**  

**PHIL 319 Philosophy in the Middle Twentieth Century**  
Fall. 4 credits. M W F 2:30–3:20. H. Hodges. Philosophical writing on logic, language, mathematics, the nature of reality, and the basis of our knowledge and beliefs. Philosophers to be considered will be among these: B. Russell, A. N. Whitehead, L. Wittgenstein, H. H. Price, members of the Vienna Circle (especially R. Carnap), and H. Reichenbach.

**PHIL 331 Deductive Logic (also MATH 281)**  
Fall. 4 credits. Prerequisite: Philosophy 231 or equivalent or permission of instructor. M W F 1:25–2:15. H. Hodges. Review of derivations and truth-in-a-model; function-constants and identity; truth in non–fully distinguished models; very basic set-theory; sets as the only mathematical objects; mathematical induction; soundness; completeness.

**PHIL 332 Philosophy of Language**  

**PHIL 333 Problems in Semantics (also LING 333 and COGST 333)**  
Spring. 4 credits. Prerequisites: a previous course in formal semantics (e.g., LING 421) or logic (e.g., PHIL 231) or permission of instructor. M W F 2:55–4:10. Z. Szabó (co­taught with S. A. Kripke). This course looks at problems in the semantic analysis of natural languages, critically examining work in linguistics and philosophy on particular topics of current interest. For spring 2001, the focus will be on quantifica-
This course will cover (1) some recent work on the problem of skepticism, and (2) the problem of externalism and self-knowledge. The responses to skepticism will include semantic and epistemic externalism, relevant alternatives theory, contextualism, etc. The second part of the course will focus on the alleged incompatibility of semantic externalism and authoritative self-knowledge.

PHIL 362 Philosophy of Mind
Spring. 4 credits. Prerequisite: 2 previous courses in philosophy. T R 11:40-12:55. S. Shoemaker.
The course will be on self-knowledge. Topics will include the nature of introspective awareness, the nature of first-person thought and reference, the nature of the "special authority" we are thought to have about our own mental states, and the question of how (and whether) this special authority can be reconciled with externalist views of content.

PHIL 363 Topics in the Philosophy of Religion

PHIL 364 Metaphysics
Spring. 4 credits. M W F 11:15-12:05. B. Hellen.
Some or all of the following issues pertaining to very general questions about material objects will be covered. (1) The various puzzles of material constitution (the Dior/Thom puzzle, the Ship of Theseus, the Problem of the Many) may be taken to indicate that our concept of a material object is incoherent. Can the concept be made coherent, or must we accept the council of despair and accept that almost no material object is larger than a nanometer in any dimension? (2) Skepticism about the large derives from other sources as well: e.g., whether something composite could play any causal role "over and above" that played by its parts. Could it? If not, so what? (3) Various puzzles (the problem of temporary intrinsics, puzzles about vagueness) may be taken to indicate that, strictly speaking, nothing exists for more than an instant. What is the issue here, and what is the truth on this issue? (4) We think that some material objects have qualitative properties like colors. What is a color? Is it a disposition to influence us, or an "objective" property? How does the answer to this question affect the answer to the question whether anything is colored?

PHIL 365 Global Climate and Global Justice (also GOVT 368)

PHIL 366 Limiting War (also GOVT 469)

PHIL 381 Philosophy of Science: Knowledge and Objectivity (also S&TS 381)
Fall. 4 credits. W 7:30-10:00. R. Boyd.
An examination of central epistemological and metaphysical issues raised by scientific theorizing: the nature of evidence; scientific objectivity; the nature of theories, models, and paradigms; and the character of scientific revolutions.

PHIL 382 Philosophy and Psychology

PHIL 383 Choice, Chance, and Reason

PHIL 384 Philosophy of Physics

PHIL 387 Philosophy of Mathematics

PHIL 389 Philosophy of Science: Evidence and Explanation

PHIL 390 Informal Study
Fall or spring. Credit TBA.

Advanced Courses and Seminars

These courses are offered primarily for majors and graduate students.

PHIL 395 Majors Seminar

PHIL 409 German Philosophical Texts

PHIL 410 Latin Philosophical Texts
Fall and spring. Variable credit. Prerequisites: knowledge of Latin and permission of instructor. Hours TBA. S. MacDonald.

PHIL 411 Greek Philosophical Texts (also CLASS 311)
Fall and spring. Variable credit. Prerequisites: knowledge of Greek and permission of instructor. Hours TBA. T. Irwin, C. Britain.

PHIL 412 Medieval Philosophy

PHIL 413 Topics in Ancient Philosophy (also Society for the Humanities 402 and 403)

PHIL 414 German Philosophy after Kant
A close reading of Heidegger's Being and Time with attention to recent interpretive debates in English-language Heidegger scholarship. Undergraduates with a substantial background in philosophy are welcome.

PHIL 415 Special Topics in the History of Philosophy
Fall. 4 credits. W 10:10-12:05. F. Neuhauser.
A study of the moral, social, and political significance of pride and self-love, as understood by Hobbes, Rousseau, Kant, and other thinkers. [Undergraduates with a substantial background in philosophy are welcome.]

PHIL 416 Modern Philosophy

PHIL 431 Mathematical Logic (also MATH 481)
Spring. 4 credits. TBA.
For description, see Math 481.

PHIL 432 Topics in Logic (also MATH 482)
Topic: TBA.

PHIL 433 Philosophy of Logic
This is a class on the interpretation of quantum mechanics. We will look at what PHIL 481 Problems in the Philosophy of Science (also S HUM 409) 4 credits. Not offered 2000–2001.

PHIL 446 Topics in Social and Political Philosophy (also GOVT 474) Spring. 4 credits. M W 2:55–4:10. R. Miller. Topic for 2001: Community, Nation, and Morality. We will investigate the moral status of ties to a nationality, state, community, religion, or ethnic group, in order to shed light on general questions about justice and moral obligation, and specific problems of social policy. Does the proper valuing of loyalty to these groups reflect universalist moral principles of equal concern or respect for all, or does it expose the limitations of universalism? Do ties of nationality or community undermine traditional liberal goals of freedom and equality, or provide more adequate foundations for them? What duties of justice should govern economic relations between nations, and how do they differ from duties toward compatriots? To what extent is identification with one’s own particular group life-enhancing or self-limiting? What rights do minority cultures have to government support or protection? Do these rights extend to cultures that pose special obstacles to autonomy, e.g., barriers to women’s self-development? Readings will include work by Taylor, Kymlicka, Waldron, David Miller, MacIntyre, Nagel, Guinier, DuBois, and Nussbaum. The course will have a seminar format. It is intended for both advanced undergraduates and graduate students.

PHIL 484 Philosophy of Physics Fall. 4 credits. T R 10:10–11:25. L. Becker. This is a class on the interpretation of quantum mechanics. We will look at what makes the theory so difficult to interpret. We will consider several attempts to give interpretations to the mathematical formalism and look at the particular issue of what the theory says about action at a distance. There are no specific prerequisites, but it should be understood that this is difficult material; students may come in with a variety of different backgrounds and will have to work to get caught up with any area for which they are not prepared.

PHIL 490 Special Studies in Philosophy Fall and spring. 4 credits. Open only to honors students in their senior year. See Honors description at front of Philosophy section.

PHIL 633 Philosophy of Language Fall and spring. 4 credits. Fall, R 4:30–6:30. Z. Szabo; spring, W 4:30–6:30. P. Ludlow. Fall: The course will focus on propositions and events. Both of these are entities that play a major role in semantic theorizing and the metaphysical debates surrounding them are strongly influenced by arguments from the philosophy of language. Whether we should believe in propositions or events depends largely on how we should think about the interpretation of nominalization, the progressive aspect, that-clauses, and a number of other complex linguistic phenomena. At the same time, a case can be made that one cannot make real progress in the semantic analysis of these issues without keeping in mind that we want an ontology that meshes well with the best scientific theories we have. So, in theorizations and and events we need to pay attention to both language and the world. This will be our central aim.

Spring: This seminar will provide an in depth look at the theory of descriptions and its application (in extension to) descriptive theories of names and descriptive (E-type) pronouns. We’ll begin with a brief review of classic literature (Russell-Kripke) and then move on to current work on this topic.

PHIL 662 Philosophy of Mind Fall. 4 credits. T 4:30–6:30. B. Hellie. We will discuss a number of issues in the philosophy of mind. For instance: What is the content of the hated sense-data theory? Are there any good arguments for or against it? What is an intentional theory of perception? How does perception generate knowledge, if it does? Why does perception occur conscious? What is the problem of qualia? Can it, whatever it is, be solved? Is there a problem about acquaintance? What would something have to be like in order for it to be colored? Is anything this way?

PHIL 700 Informal Study Fall or spring. Credit TBA. To be taken by graduate students only in exceptional circumstances and by arrangement made by the student with his or her Special Committee and the faculty member who has agreed to direct the study.

PHIL 773 Proseminar in Cognitive Studies (also COGST 777, LING 773, and COM S 773) Fall. 2 credits. Fall: R grade. For description, see COGST 773.

PHIL 774 Proseminar in Cognitive Studies (also LING 774 and COGST 774) For description, see COGST 774.

PHYSICS

The Department of Physics offers a full range of university-level work in physics, from general education courses for nonscientists to doctoral-level independent research. Major research facilities are operated by two component organizations: the Laboratory of Atomic and Solid State Physics (LASSP) and the Laboratory of Nuclear Studies (LNS). LASSP carries out extensive research efforts in condensed-matter physics and in low-temperature physics. LNS operates a major high-energy particle physics research facility at Wilson Laboratory, the Cornell electron–positron storage ring (CESR). Theoretical work is carried out on many fields of physics, including astrophysics. There is a full schedule of weekly research-oriented seminars and colloquia. Students will find many opportuni-
ties for research participation and summer employment.

Introductory physics sequences are: 101–102, 207–208, and 112–213–214, or its honors version 116–217–218. In addition, there is a group of general-education courses, Physics 200–205, 209, 210. Physics 101–102, a self-paced autotutorial course, is designed for students who do not intend to take further physics courses and who do not have preparation in calculus. Physics 112 and 207 both require calculus (Mathematics 191, 193, or 111), and additional mathematics is required for subsequent courses in the sequence. Physics 101–102 or 207–208 may be taken as terminal physics sequences. The three-term sequence 112–213–214 or its honors version, 116–217–218, is recommended for students who have had contact with introductory physics. The prerequisites for subsequent courses in the sequence, Physics 214 and 218, are placing an increasing emphasis on use of the computer for homework, laboratory exercises, and projects; some knowledge about computing, perhaps at the level of Computer Science 99 or 100, is desirable.

Courses beyond the introductory level that might be of interest to nonmajors include: Physics 316 (Modern Physics I); Physics 330 (Modern Experimental Optics); and Physics 360 (Electronic Circuits).

Advanced placement and credit are offered as outlined in “Advanced Placement of Freshmen,” or students may consult the director of undergraduate studies, as should students requesting transfer credit for physics courses taken at another college.

The Major

The major program is constructed to accommodate students who wish to prepare for professional or graduate work in physics as well as those who wish to complete their major program in the field of physics but have other post-graduation goals.

Students who wish to major in physics are advised to start the physics sequence in the first term of their freshman year. (Note that students who have had contact with introductory calculus may take Physics 112 with coregistration in Mathematics 191 or 193.) The major program can still be completed within a second-term start, but flexibility in future course scheduling is reduced.

Prospective majors are urged to make an early appointment at the physics office for advice in program planning. Acceptance into the major program is normally granted upon completion of a year of physics and mathematics courses at Cornell with all course grades at the B-level or higher. The department office will give advice in the matter of selecting a major faculty adviser. Details of the major course program are worked out in consultation between the student and major faculty adviser.

Physics Core

Common to all major programs is a requirement to complete a core of physics courses. In addition to the three-term introductory sequence (Physics 112–213–214 or Physics 116–217–218), the core includes five upper-level courses—a two-course sequence in modern physics (Physics 316–317), (b) at least three semester hours of laboratory work selected from Physics 310, 350, 360, 410, Astronomy 410, (c) an intermediate course in classical mechanics, and (d) an intermediate course in electromagnetism.

Accompanying these physics courses should be work in mathematics through at least Mathematics 222 or 294. Students following the professional/graduate school channel are expected to complete at least one additional year of applicable mathematics (Applied and Engineering Physics 321–322 or Mathematics 321–420–422).

In addition to the core, each physics major must complete 15 semester hours of credit in an area of concentration which has been agreed on by the student and major faculty adviser.

Concentration within Physics

A student who wishes to pursue professional or graduate work in physics or a closely related field should follow a concentration within the field of physics. For those students with a strong secondary school preparation, the sequence Physics 116–217–218 is encouraged. Students are strongly encouraged to start the sequence with Physics 116, even if they qualify for advanced placement credit for Physics 112. Core courses in mechanics and electromagnetism will normally be Physics 318 and Physics 327, respectively. The minimum 15 hours beyond the core must be composed of physics courses with numbers greater than 300 and must include the senior laboratory course Physics 410. This means a physics concentration needs a minimum of 7 credit hours of laboratory work to complete the requirements. The accompanying table shows several typical course sequences by means of which the major requirements may be completed. The primary distinction among students who may follow the different sequences is the amount and level of pre-college work in calculus and in physics. Changes in these typical patterns will be common, as agreed on between student and major faculty adviser. Research work is encouraged of all majors. If this work is done as an independent project, Physics 490, up to eight credits can be applied to the concentration.

Concentration outside Physics

The concentration will reflect the student's interest in some area related to physics. The array of courses that comprise the concentration must have internal coherence. The array will normally be worked out in conference with the major faculty adviser and must be approved by the adviser. Of the required 15 hours credit beyond the core, at least eight credits must be in courses numbered above 300. Students have chosen to concentrate in such topics as chemical physics, astrophysics, natural sciences, history and philosophy of science, computer science, meteorology, or econometrics. A combined biology-chemistry concentration is appropriate for pre-medical students or those who wish to prepare for work in biophysics. Students interested in a career in the teaching of science should consider the Teacher Education in Science and Mathematics (TESM) Program, which is administered by the Departments of Education and Mathematics and is described in detail in the College of Arts and Sciences section of this catalog. A concentration in "science education" would then typically include Education 402 and 403, both part of TESM, and two or more courses designed to broaden the student's background in general science and mathematics.

For students with concentrations outside physics, the core requirements in mechanics and electromagnetism can be appropriately met with Physics 314 and Physics 323, respectively.

---

Students with an astronomy concentration who might continue in that field in graduate school should use Astronomy 410, 431, 432 as part of the concentration; they are encouraged to use Physics 318 and 327 to satisfy the core requirements in mechanics and electromagnetism.

Honors
A student may be granted honors in physics upon the recommendation of the Physics Advisers Committee of the physics faculty. There is no particular course structure or thesis requirement for honors.

Double Majors
Double majors including physics are possible and not at all uncommon. It should be noted, however, that any course used to satisfy a requirement of another major may be used in satisfaction of physics major requirements only if the student's concentration is within physics.

Courses with Overlapping Content
Because the department offers several courses with overlapping content, students should select courses carefully to meet the needs of their academic programs and to ensure credit for each course they take. Listed below are groups of courses with largely similar content. In general, students may receive credit for only one of the courses in each group.

Physics 101, 112, 116, 207
Physics 102, 208, 213, 217
Physics 214, 218
Physics 314, 318
Physics 325, 327
Physics 116, 216

Course Prerequisites
Prerequisites are specified in physics course descriptions to illustrate the materials that students should have mastered. Students who wish to plan programs different from those suggested by the prerequisite ordering are urged to discuss their preparation and background with a physics adviser or with the instructor in the course. In many cases an appropriate individual program can be worked out without exact adherence to the stated prerequisites.

Courses
Listed days and times are not definite but are unlikely to change. Days and times will not be listed for 600-level courses.

PHYS 101 General Physics 1
Fall, summer 4-week or 6-week session. 4 credits. General introductory physics for non-physics majors. Prerequisites: 3 years of high school mathematics, including some trigonometry. A student without high school physics should allow extra time for PHYS 101. Physics 101 is not appropriate for students majoring in pre-engineering. It is primarily for students majoring in the life sciences. Lectures and discussions: M-F 10:00-11:15; laboratories M W 2:00-5:00. Basic principles treated quantitatively but without calculus. Kinematics: forces and fields; momentum, angular momentum, and energy; thermal physics and fluid mechanics; sound waves. Text at the level of Physics, 4th edition, by Cutnell and Johnson.

PHYS 102 General Physics II
Spring, summer 4-week or 8-week session. 4 credits. Prerequisite for Physics 102: PHYS 101 or 112 or 207. Includes less mathematical analysis than Physics 208, but more than Physics 200–206, 209, 210. Enrollment may be limited. Spring introductory lec, M Jan. 24, 7:30 P.M. Staff. Physics 101–102 emphasizes quantitative and conceptual understanding of the topics of introductory physics developed without use of calculus. The course is mostly self-paced in a mastery-oriented format including eight subject units and a final retention (review) unit. Most instruction occurs in the learning center using video-taped lectures, personal tutoring by staff, assigned laboratory exercises, and solutions of sample test questions at our web site. Unit testing is designed to measure mastery with a limit of three test tries taken at the time of the student's choice. Major topics for 101: kinematics, forces and dynamics, momentum, energy, fluid mechanics, waves and sound, thermal physics, kinetic theory, and thermodynamics. At the level of Physics by Cutnell and Johnson.

PHYS 103 General Physics
Summer. 4 credits. Prerequisite: 3 years of high school mathematics, including some trigonometry. A student without high school physics should allow extra time for Physics 103. Physics 103 is a more traditional version of Physics 101. Physics 103 is not appropriate for students majoring in pre-engineering. It is primarily for students majoring in the life sciences. Lectures and discussions: M-F 10:00-11:15; laboratories M W 2:00-5:00. Basic principles treated quantitatively but without calculus. Kinematics: forces and fields; momentum, angular momentum, and energy; thermal physics and fluid mechanics; sound waves. Text at the level of Physics, 4th edition, by Cutnell and Johnson.

PHYS 112 Physics I: Mechanics
Fall, spring, summer 6-week session. 4 credits. Primarily for students of engineering and for prospective physics majors. Prerequisite: coregistration in Mathematics 192 (or 194 or 112), or substantial previous contact with introductory calculus combined with coregistration in Mathematics 110 or 111; 10:00-11:00 or 12.20-1:10. Two rec. and one lab/cooperative learning session each week. Evening exams. Fall, A. LeClair; spring, staff.

PHYS 116 Physics I: Mechanics and Special Relativity
Fall, spring. 4 credits. More analytic than Physics 112, intended for students who will be comfortable with a deeper, somewhat more abstract approach.

Intended mainly but not exclusively for prospective physics majors. Prerequisites: a good secondary school physics course and familiarity with basic calculus. Corrective transfers between Physics 116 and Physics 112 (in either direction) are encouraged during the first few weeks of instruction. Lec, M W F 10:10-11:00. Fall, V. Elser; spring, R. Patterson.

A more rigorous version of Physics 112, covering similar topics at the level of An Introduction to Mechanics, by Kleppner and Kolenkow.

PHYS 117 Concepts of Modern Physics
Fall. 1 credit. S-U only. Enrollment may be limited. Coregistration in Physics 112 or 116 or 213 or 217 is required. For freshmen who plan to major in physics, applied and engineering physics, or astronomy. Lec, W 1:55-2:55 P.M. A. Sadoff.

This course is intended for freshmen who plan to major in physics or a closely related field (i.e., applied and engineering physics or astronomy) and would like to learn about the concepts of modern physics in the context of their physics education. Possible topics of discussion are methodology, symmetry and conservation laws, quantum theory, the unification of forces and matter, and big-bang cosmology.

PHYS 190 Supplemental Introductory Laboratory
Fall, spring. 1 credit. Times by arrangement with instructor. S-U only. Enrollment limited to students who have all of the following: (1) 3 transfer credits for introductory physics lecture material; (2) a degree requirement in one laboratory component of that introductory course; (3) approval of the director of undergraduate studies; and (4) permission of the instructor of that course at Cornell. Enrollment limited.

A Physics 190 Permission Form must be filed in 121 Clark Hall with the physics department course coordinator. Students perform the laboratory component of one of the introductory courses (Physics 112, 213, 214) to complement the lecture-related course credit acquired elsewhere. Those wishing to take the equivalent of one of these introductory courses at another institution should receive prior approval from the director of undergraduate studies.

PHYS 200 Art, Archaeology, and Analysis (also GEOL 200, ENGR 185, MSAE 285, ARKEO 285, and ART 372)
For description, see GEOI, 200.

PHYS 201 Why the Sky Is Blue: Aspects of the Physical World
Fall. 3 credits. Lec, T R 8:55-10:40; rec, W 2:30-3:20 or W 3:35-4:25. A. Sadoff.

This is a descriptive physics course aimed specifically at the nonscience student. There is an emphasis on the ideas of modern physics while the approach is both historical and thematic. The methodology of science and the nature of evidence is emphasized. An overriding theme is the character of physical laws as shown through the great principles of symmetry and conservation. While there are a few computational problems assigned, the purpose is to help students understand the concepts rather than to master problem-solving techniques. At the level of Physics for Poets by March.
PHYS 202 The World According to Physics—The Way Things Work
Summer-3 week session. 3 credits.
Prerequisite: 3 years of high school mathematics, including some trigonometry. M-F 10:00-12:00; laboratories 2 afternoons per week. TBA. R. Lieberman.
Intended to provide students majoring in fields outside the sciences with an appreciation for the familiar physical world surrounding them. Which falls faster, a pound of gold or a pound of lead? What trajectory does a launched rocket follow? Why are the curves on highways banked? What actually keeps a satellite circling the earth—why doesn't it just fall down or fly away? Can you build a ship that runs off the heat found in the ocean? With an emphasis on problem solving, the course helps the student develop skills transferable to other areas. Topics include Newton's basic laws of motion, trajectories, satellites, space travel, and the concepts of energy.

PHYS 203 Physics of the Heavens and the Earth—A Synthesis
Spring. 3 credits. Prerequisite: high school algebra. Intended for nonscientists. Topics are several core ideas of physics together with algebra at the high school level. Readings will be from the scientific press at the level of Scientific American.

PHYS 204 Physics of Musical Sound
Spring. 3 credits. Intended for nonscientists; does not serve as a prerequisite for further science courses. Assumes no serious attempt to select Physics 217. Prerequisites: Physics 207 or 116 or Astronomy 106. Prerequisites: Physics 112 or Astronomy 106. Prerequisites: Physics 112 or Astronomy 106. Prerequisites: Physics 112 or Mathematics 111 or 191, or substantial previous contact with introductory calculus, combined with coregistration in a mathematics course approved by instructor. Lec, M W F 9:05-9:55 or 11:15-12:05; two rec. and one lab each week. Evening exams. R. Thorne. Physics 207-208 is a two-semester introduction to physics, intended for students majoring in an analytically oriented biological science, a physical science, or mathematics, or with an emphasis on applications and on quantitative tools generally applicable to the sciences. Mechanics, conservation laws, waves, and topics from thermal physics, fluids, acoustics, and properties of matter. At the level of Fundamentals of Physics, Vol. 1, 5th edition, by Halliday, Resnick, and Walker.

PHYS 208 Fundamentals of Physics II
Spring. 4 credits. Prerequisites for Physics 208: Physics 112 or 111 and at least coregistration in Mathematics 111 or 191. Physics 207-208 is a two-semester introduction to physics with emphasis on tools generally applicable in the sciences, intended for coregistration in a physical science, mathematics, or an analytically oriented biological science. Lec, M W F 9:05-9:55 or 11:15-12:05; two rec. and one lab each week. Evening exams. Staff. Electricity and magnetism, and topics from physical and geometrical optics, quantum and nuclear physics. At the level of Fundamentals of Physics, Vol 2, 5th edition, by Halliday, Resnick, and Walker.

PHYS 209 Relativity and Chaos
Spring. 3 credits. Intended for nonscientists, does not serve as a prerequisite for further science courses. Assumes no serious attempt to select Physics 217. Prerequisites: Physics 207 or 116 or Astronomy 106. Prerequisites: Physics 112 or Astronomy 106. Prerequisites: Physics 112 or Mathematics 111 or 191, or substantial previous contact with introductory calculus, combined with coregistration in a mathematics course approved by instructor. Lec, M W F 9:05-9:55 or 11:15-12:05; two rec. and one lab each week. Evening exams. Staff. Electricity and magnetism, and topics from physical and geometrical optics, quantum and nuclear physics. At the level of Fundamentals of Physics, Vol 2, 5th edition, by Halliday, Resnick, and Walker.

PHYS 217 Physics II: Electricity and Magnetism (also A&EP 217)
Fall, spring. 4 credits. Prerequisite may be limited. Intended for students who have done very well in Physics 112 or 116 and in mathematics and who desire a more analytic treatment than that of Physics 213. Prospective physics majors are encouraged to select Physics 217. Prerequisites:
approval of student's adviser and permission from the instructor. A placement quiz may be given early in the semester, permitting those students who find Physics 217 too abstract or analytical to transfer into Physics 213, which they can do without difficulty at that time. Vector calculus will be taught in this course, but previous contact, especially with the operations $grad$, $div$, and $curl$, is helpful. It is assumed the student has seen Special Relativity at the level of Physics 110 or is currently enrolled in Physics 216. It is also assumed that the student has covered most of the material of Mathematics 192 and is co-registered in Mathematics 293 or the equivalent. Lec, M W F 10:10–11:00. Fall, A. Sievers; spring, R. Buhman.

At the level of Electricity and Magnetism, by Purcell (Vol. 2, Berkeley Physics Series).

PHYS 218 Physics III: Waves and Thermodynamics
Fall, spring, 4 credits. Enrollment may be limited. Intended for students who have done very well in Physics 116 and 217 and in mathematics, and who desire a more analytic treatment than that of Physics 214. Prospective physics majors are encouraged to select Physics 218. Prerequisites: Physics 217 (with a grade of B or higher) and completion of a course in differential equations or permission of instructor. A placement quiz may be given early in the semester so that students who find Physics 218 too demanding can transfer into Physics 214. Lec, M W F 11:15–12:05. Fall, N. Ashcroft; spring, R. Thorne.

Topics covered in recent years have included: oscillators, mechanical waves, electromagnetic waves, physical and geometrical optics, and the first and second laws of thermodynamics. Evening exams may be scheduled. At the level of Electromagnetic Vibrations, Waves, and Radiation by Bekefi and Barrett.

PHYS 310 Intermediate Experimental Physics
Spring. 3 credits. Enrollment may be limited. Prerequisite: Physics 208 or 213. Labs T R 1:25–4:25

Students select from a variety of experiments. An individualized approach is encouraged. Facilities of the Physics 410 lab are available for some experiments.

PHYS 314 Intermediate Mechanics
Spring. 4 credits. Prerequisites: Physics 208 or 214 (or equivalent) and Math 294 (or equivalent); Applied and Engineering Physics 322 or coregistration in Mathematics 420/421 recommended. Intended for physics majors with concentration outside of physics or astronomy; Physics 318 covers similar material at a more analytical level. Lec, M W F 10:10–11:00, rec, F 1:25–2:15. C. Franck.

Includes Newtonian mechanics, Lagrange and Hamilton formulations, central forces, rigid body motion, and small oscillations. At the level of Classical Mechanics by D. E. Berg and O. Osnos.

PHYS 316 Modern Physics I
Fall, spring, 3 credits. Prerequisites: Physics 214 or 218 and coregistration in at least Mathematics 294 or equivalent. It is assumed that majors registering in Physics 316 will continue with Physics 317. Lec, M W F 9:05–9:55; rec, R 3:55–4:25. S. Teukolsky.

PHYS 317 Modern Physics II

Investigation of quantum phenomena, classical and quantum statistical mechanics, molecules, solid state physics, nuclear physics and radioactivity, elementary particle physics. At the level of Modern Physics by Serway.

PHYS 318 Analytical Mechanics
Spring. 4 credits. Prerequisites: Physics 116 or permission of instructor; Applied and Engineering Physics 321 or Mathematics 420. Intended for junior physics majors concentrating in physics or astronomy. Physics 314 covers similar material at a less demanding level. Lec, M W F 10:10–11:00, rec, F 2:30–3:20. M. Neubert.

Newtonian mechanics and systems of particles, including rigid bodies; oscillating systems; gravitation and planetary motion; moving coordinate systems; Euler's equations; Lagrange and Hamilton formulations; normal modes and small vibrations; introduction to chaos. At the level of Classical Dynamics by Marion and Thornton and Analytical Mechanics by H. Frisch and Finch. Supplementary reading will be assigned.

PHYS 323 Intermediate Electricity and Magnetism
Fall. 4 credits. Prerequisites: Physics 208 or 213/214 (or equivalent) and Math 293/294 (or equivalent); coregistration in Applied and Engineering Physics 321 or Math 420 recommended. Intended for physics majors with a concentration outside of physics or astronomy. Physics 327 covers similar material at a more analytical level. Lec, M W F 11:15–12:05, rec, F 2:30–3:20. R. Talman.

Includes electro/magneto-statics, boundary value problems, electromagnetic waves, Maxwell's Equations, electromagnetic waves, and sources of electromagnetic radiation. At the level of Introduction to Electrodynamics by Griffiths.

PHYS 327 Advanced Electricity and Magnetism
Fall. 4 credits. Prerequisites: Physics 217/218 or permission of instructor; coregistration in Applied and Engineering Physics 321 or Mathematics 420. Intended for physics majors concentrating in physics or astronomy. Physics 323 covers similar material at a less demanding level. N. B. Physics 327 assumes knowledge of the material at the level of Physics 217 Lec, M W F 11:15–12:05, rec, F 2:30–3:20.

L. Gibbons
Electro/magneto-statics, vector and scalar potentials, Laplace's Equation and boundary value problems, multipole radiation-solutions to Maxwell's Equations, energy-momentum of radiation; electronic and particle media; special relativity-translations, four vectors, particle kinematics and dynamics, relativistic electrodynamics. At the level of Classical Electromagnetic Radiation, by Heald and Marion.

PHYS 330 Modern Experimental Optics (also A&EP 330)

A practical laboratory course in basic and modern optics. The seven projects cover a wide range of topics from geometrical optics to classical wave phenomena, interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laser techniques currently employed in physics, chemistry, biology, and engineering. The students will also be introduced to digital imaging and image processing techniques. At the level of Optics by Hecht.

PHYS 341 Thermodynamics and Statistical Physics
Fall. 4 credits. Prerequisites: Physics 214, Physics 316, and Mathematics 294. Lec, M W F 10:10–11:00, rec, R 2:30–3:20. V. Ambegaokar.

Statistical physics, developing both thermodynamics and statistical mechanics simultaneously. Concepts of temperature, laws of thermodynamics, entropy, thermodynamic relations, free energy. Applications to phase equilibrium, multicomponent systems, chemical reactions, quantum statistics, and transport theory. At the level of Statistical Physics by Reif, or Introduction to Statistical Mechanics by Betts.

PHYS 360 Electronic Circuits (also A&EP 363)
Fall, spring. 4 credits. Prerequisites: Physics 208 or 213 or permission of the instructor. No previous experience with electronics assumed; however, the course moves quickly through some introductory topics such as basic DC circuits. Fall term is usually less crowded. Lec, M 2:30–4:25; labs, T R or W F 1:25–4:25 (also evening labs) M W F 7:30–10:30. Fall, E. Kirkland; spring, R. Thorne.

Analyze, design, build, and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators); digital circuits: combinatorial (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging. At the level of Art of Electronics by Horowitz and Hill.

PHYS 400 Informal Advanced Laboratory
Fall, spring. (Summer, 6 week session.) Variable to 2 credits. (Credit not available in summer.) Prerequisite: 2 years of physics or permission of instructor. Lab T W 1:25–4:25. Fall, L. Hand; spring, D. Hartill.

Experiments of widely varying difficulty in one or more areas, as listed under Physics 410, may be done to fill the student's special requirements.
PHYS 410 Advanced Experimental Physics
Fall, spring. 4 credits. Limited to seniors except by special permission. Prerequisites: Physics 241 or 301 or 360 plus 348 and 327, or permission of instructor. Lect, M 2:30–3:20, lab T 1:25–4:25. Fall, L. Hand, spring, D. Harriott.
Selected topics in experimental concepts and techniques. About 60 different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics and ionics, magnetic resonance, X-rays, low temperature, solid state, and nuclear physics. The student performs three to six diverse experiments, depending on difficulty, selected to meet individual needs and interests. Independent work is stressed. Lectures are on experimental techniques used in experiments in the laboratory and on current research topics.

PHYS 443 Introductory Quantum Mechanics
Spring. 4 credits. Prerequisites: Physics 327 or 323, and Physics 316 and Applied and Engineering Physics 321 or Mathematics 420. Prerequisite: Physics 314 or 318, or permission of instructor. Lect, M W F 9:05–9:55, rec, R 3:35–4:25. S. Teukolsky. Introduction to concepts and techniques of quantum mechanics, at the level of An Introduction to Quantum Mechanics, by Griffiths.

PHYS 444 Nuclear and High-Energy Particle Physics

PHYS 451 Classical Mechanics, Nonlinear Dynamics, and Chaos (also PHYS 551)
Spring. 3 credits. Only students with a strong performance in PHYS 318 or the equivalent will be admitted to the course. Biweekly seminar to be scheduled. Lect, T R 10:10-11:25. Next offered spring 2002. L. Hand.
This course provides an introduction to advanced topics in modern classical mechanics, methods of formulating both discrete and continuum Hamiltonian dynamics, classical field theory, canonical transformations, action-angle variables, the Hamilton-Jacobi equation, connection between classical and quantum mechanics, solvable, integrable, and nonintegrable systems, and KAM tori. Analytic techniques in nonlinear dynamics with examples chosen from a variety of systems of physical interest, phase-locking and fractional order bifurcations, classification of bifurcations. Dissipative and Hamiltonian chaos: logistic and standard maps, renormalization, KAM theorem, and quantum chaos. Some fluid dynamics and Sturm-Liouville theory will be included if time permits. The first part of the course will be at the level of Theoretical Mechanics of Particles and Continua, by Fetter and Walecka; the second part at the level of Regular and Chaotic Dynamics, 2nd edition, by Lichtenberg and Lieberman.

PHYS 454 Introductory Solid-State Physics (also A&E&P 450)
An introduction to modern solid-state physics, including crystals, crystal lattice, lattice vibrations, electron theory of metals and semiconductors, and selected topics from magnetic properties, optical properties, superconductivity, and defects. At the level of Introduction to Solid State Physics, by Kittel, and Solid State Physics, by Ashcroft and Mermin.

PHYS 455 Geometrical Concepts in Physics
Spring. 4 credits. Prerequisite: Physics 323 or equivalent and at least coregistration in Physics 318 or permission of instructor. Usually offered every other spring. Lect, T R 10:10–11:25. R. Talman.
Geometrical methods are an essential tool in modern theoretical physics and also provide deep insights into classical physics. This course will introduce basic concepts from differential geometry, the role of synchrotron radiation, calculational methods and illustrating their utility by drawing examples from mechanics, electrodynamics, and crystal diffraction. Tensors, differential forms, covariant and Lie derivatives, Lie algebra, and group invariance will be developed and employed. At the level of Geometric Mechanics by Talman.

PHYS 456 Introduction to Accelerator Physics and Technology (also PHYS 656)
Fundamental physical principles of particle accelerators and enabling technologies, with a focus on circular high energy colliders, such as the Cornell Electron Storage Ring (CESR). Includes beam optical design, the single-particle dynamics of transverse and longitudinal motion, coupling, and radiative effects. Physics of some of the required technologies (radio frequency cavity systems, vacuum systems, and magnets) will be covered in seminars conducted by experts. At the level of Introduction to the Physics of High Energy Accelerators by Edwards and Syphers.

PHYS 457 The Storage Ring as a Source of Synchrotron Radiation (also PHYS 657)
Spring. 3 credits. Prerequisites: Intermediate level mechanics (PHYS 314 or 327) and E&M (PHYS 323 or 327) or permission of instructor. Previous completion of PHYS 456/656 is not required. Lect, T R 11:40–12:55. Not offered 2000–2001. S. Gruner and R. Talman.
Physics of synchrotron radiation with a focus on characteristics of radiation from dipole magnets, electron beam properties that influence radiation characteristics, issues of flux, brightness, emittance, brilliance, beam stability, and beam lifetime. Regular lectures will alternate with visitor lectures on specialized topics on radiation from insertion devices (i.e., wigglers and undulators), x-ray optics, coupling to optical systems, and coherence in x-ray beams. There will be special emphasis on understanding the requirements of experimentaltal x-ray applications and hands-on opportunities for doing synchrotron radiation experiments. Course notes will be available on a web site.

PHYS 480 Computational Physics (also PHYS 680 and ASTRO 690)
Spring. 3 credits. S–U only. The course assumes familiarity with the standard mathematical methods for the physical sciences and engineering, differential equations and linear algebra in particular and with computer programming (e.g., Fortran or C). Lect, T R 8:40–9:55. T. Arias.
This course covers numerical methods for ordinary and partial differential equations, linear algebra and eigenvalue problems, nonlinear equations, and fast Fourier transforms from the hands-on perspective of how they are used in modern computational research in the era of open software and the web. The computer assignments which teach the material are designed also to achieve a larger goal. In the end, each student will have developed his or her own working ad initio computer program for calculating the properties of molecules and materials with the methods which won Walter Kohn and John Pople the Nobel prize in Chemistry in 1998.

PHYS 481 Quantum Information Processing (also PHYS 681 and COM S 454)
Fall. 2 credits. S–U only. Lect, T R 1:25–2:15. N. David Mermin.
This course is intended both for physicists unfamiliar with computational complexity theory and computer scientists and mathematicians unfamiliar with the principles of quantum mechanics. The only essential prerequisite is a familiarity with the theory of vector spaces over the complex numbers. A technology firmly grounded on fundamental principles of quantum physics can spectacularly alter both the nature of computation and the means available for the transmission of information. Though implementation may be extremely difficult to achieve, the theory of quantum computation offers striking new perspectives on computation and information, as well as on the quantum theory itself. These topics are likely to include an introduction to the relevant principles of quantum physics, quantum cryptography, quantum bit commitment, teleportation, Shor’s factoring algorithm, Grover’s search algorithm, quantum circuits, quantum error correction, proposals for quantum hardware, and implications for the interpretation of quantum mechanics.

PHYS 487 Selected Topics in Accelerator Technology (also PHYS 687)
Fall. 3 credits. S–U only. Prerequisites: Intermediate E&M (PHYS 323 or 327). Lect, T R 11:40–12:55. Staff.
New special topics seminar for fall 2000. Fundamentals of accelerator technology. This course will consist of a series of topical seminars covering the principal elements of accelerator technology. Each seminar will consist of two to four lectures. The topics to be covered will include magnet technology (normal, superconducting, and ceramic), particle sources (both electrons and ions), rf technology (normal and superconducting), power conversion, vacuum technology (both warm and cold vacuum systems), feedback systems, general internal systems, and survey and alignment.
PHYS 480 Independent Study in Physics
Fall or spring. Variable to 4 credits.
Students can apply a maximum of eight credits to the physics major. Prerequisite: permission required of professor who will direct proposed work. A copy of the Request for Independent Study form must be filed with Physics department course coordinator, 121 Clark Hall. Individual project work (reading or laboratory) in any branch of physics.

PHYS 500 Informal Graduate Laboratory
Fall, spring, summer. Variable to 2 credits. By permission of instructor. Experiments of widely varying difficulty in one or more areas, as listed under Physics 510, may be done to fill student’s special requirements.

PHYS 510 Advanced Experimental Physics
Fall, spring, summer. 3 credits. Lab, T, W 1:25-4:25. Fall, L. Hand; spring, D. Hartill. About 60 different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics, magnetism, mass spectroscopy, X-rays, low temperature, solid state, cosmic rays, and nuclear physics. Students perform four to eight experiments selected to meet individual needs. Independent work is stressed. An optional lecture associated with this course is also offered. M 2:30-4:25 is available. It includes lectures on techniques used in experiments in the advanced laboratory and on current research topics.

PHYS 520 Projects in Experimental Physics
Fall, spring, summer. Variable to 3 credits. To be supervised by the member. Students must advise department course coordinator of faculty member responsible for their project. Prerequisite: Physics 510. Projects of modern topical interest that involve some independent development work by student. Opportunity for more initiative in experimental work than is possible in Physics 510.

PHYS 525 Physics of Black Holes, White Dwarfs, and Neutron Stars (also ASTRO 511)
Spring. 4 credits. No astronomy or general relativity prerequisites. D. Lai. The formation of compact objects: neutrino and gravitational radiation from supernova collapse and neutron stars. Equilibrium configurations, equations of state, stability criteria, and mass limits. The influence of rotation and magnetic fields. Pulsar phenomena. Mass flow in binary systems; spherical and disk accretion; high-temperature radiation processes. Compact X-ray sources and X-ray bursts. Emphasis will be on the application of fundamental physical principles to compact objects. Topics in diverse areas of physics will be discussed: solid-state physics, nuclear physics, relativity, fluid dynamics, high-energy physics, etc.

PHYS 551 Classical Mechanics, Nonlinear Dynamics, and Chaos (also PHYS 451)
Spring. 3 credits. For description, see PHYS 451.

PHYS 553-554 General Relativity (also ASTRO 509-510)
553, fall; 554, spring. 4 credits. Prerequisite: knowledge of special relativity at the level of Classical Mechanics, by Goldstein. Lec, T R 1:25-2:40. E. Flanagan. Physics 553 is a systematic introduction to Einstein’s theory, with emphasis on modern coordinate-free methods of computation. Topics include review of special relativity, modern differential geometry, foundations of general relativity, and applications in the presence of a gravitational field, experimental tests of gravitational theories. At the level of "Gravitation," by Misner, Thorne, and Wheeler. Physics 554 is a continuation of 553 that emphasizes application to astrophysics and cosmology. Topics include relativistic stars, gravitational collapse and black holes, gravitational waves, cosmology.

PHYS 561 Classical Electrodynamics
Fall. 3 credits. Lec, T R 8:30-9:55. Sec M 2:30-3:20. T-M. Yan. Maxwell’s equations, electromagnetic potentials, electrodynamics of continuous media (selected topics), special relativity, radiation theory. At the level of Classical Electrodynamics, by Jackson.

PHYS 562 Statistical Physics
Spring. 4 credits. Primarily for graduate students. Prerequisites: a good knowledge of quantum mechanics (at the level of Merzbacher), classical mechanics (at the level of Marion), and statistical mechanics (at the level of Reif). Lec, M M W F 9:05-9:55. N. Ashcroft. Macroscopic vs. thermodynamic concepts including the laws of thermodynamics, thermodynamic functions, thermodynamic stability, and the thermodynamics of phase equilibria. Microscopic concepts including 1-, 2-, and N-particle quantum states; the microcanonical, canonical and grand-canonical distributions. Bose-Einstein, Fermi-Dirac, and Boltzmann statistics; the density-matrix. The microscopic-macroscopic connection. Applications include spin systems—the Ising and related models; strongly correlated fluids, and lattice-gases, and the density-matrix correlation functions, thermodynamic perturbation theory and introduction to critical phenomena and the renormalization group; dense Fermi- and Bose- systems; linear response of quantum and classical systems; transport properties and the Boltzmann equation. At the level of Statistical Mechanics (2nd edition) by Pathria and Statistical Mechanics of Phase Transition by Yeomans.

PHYS 572 Quantum Mechanics I
Fall. 4 credits. Lec, M M W F 11:15-12:05. P. Drell. General principles of quantum mechanics, formulated in the language of Dirac. Systems with few degrees of freedom: hydrogen atom, including fine and hyperfine structure; the deuteron, and atomic transitions. Theory of angular momentum, symmetries, perturbations and collisions will be developed to analyze phenomena displayed by these systems. At the level of Modern Quantum Mechanics by Sakurai. A knowledge of the subject at the level of PHYS 443 will be assumed, but the course will be self-contained.

PHYS 574 Quantum Mechanics II

PHYS 579 Cosmology (also ASTRO 599)
For description, see ASTRO 599.

PHYS 635 Solid-State Physics I
Fall. 3 credits. Prerequisites: a good undergraduate solid-state physics course, such as Physics 454. D. Ralph. A survey of the basic properties of solids: crystal structure, x-ray diffraction, phonons, and electrons. Selected topics from semiconductors, magnetism, superconductivity, disordered materials, dielectric and optical properties and mesoscopic physics. At level of Solid State Physics by Ashcroft and Mermin.

PHYS 636 Solid-State Physics II
Spring. 3 credits. Prerequisite: Physics 635. P. Brouwer. A continuation of Physics 635; magnetism, superconductivity, broken symmetries, elementary excitations, and other topics in quantum condensed matter physics not covered in Solid State Physics by Ashcroft and Mermin, such as topological defects, superfluids, the quantum Hall effect, mesoscopic quantum transport theory, disordered systems, Anderson localization, and other metal insulator transitions.

PHYS 645 High-Energy Particle Physics

PHYS 646 High-Energy Particle Physics
Spring. 3 credits. Staff. Topics of current interest, such as high-energy electron and neutrino interactions, electron positron annihilation, and high-energy hadronic reactions. Lectures and reading material are at the level of Introduction to High Energy Physics, by Perkins, and Elementary Particles Physics by Griffiths.

Note: Only S-U grades will be given in courses numbered 650 or above.

PHYS 651 Relativistic Quantum Field Theory I
Fall. 3 credits. S-U grades only. M. Neubert. Topics to be covered include consequences of causality and Lorentz invariance, field quantization, perturbation theory, calculation of cross sections and decay rates, and an introduction to radiative corrections and renormalization with applications to electromagnetic and weak interactions.

PHYS 652 Relativistic Quantum Field Theory II
Spring. 3 credits. S-U grades only. H. Tye. This course is a continuation of Physics 651 and introduces modern methods and concepts in quantum field theory. Topics include functional integral methods, quantization of non-abelian gauge theories, the renormalization group, and spontaneous symmetry breaking. Topics in cosmology, supersymmetry or superstring may be introduced. Applications to the electroweak theory and quantum chromodynamics are emphasized. At the level of An Introduction to Quantum Field Theory by Peskin and Schroeder.
PHYS 653 Statistical Physics
Fall. 3 credits. Normally taken by graduate students in their second or later years. Prerequisites: competence in the basic principles of quantum mechanics, statistical physics at the level of Physics 562, and thermodynamics. S-U grades only. A. C. Henley. Survey of topics in modern statistical physics: Dynamical statistical physics (kinetic theory, Boltzmann equation, hydrodynamics); theory of simple fluids; scaling theories and the renormalization group; phase transitions in disordered systems; pattern formation in nonlinear systems, percolation theory.

PHYS 654 Theory of Many-Particle Systems
Spring. 3 credits. Prerequisites: Physics 562, 574, 635, 636, and 653 or permission of instructor. S-U grades only. Staff. Equilibrium and transport properties of microscopic systems of many particles studied at zero and finite temperatures. Formalisms such as thermodynamic Green's functions are introduced and applied to such topics as normal and superconducting Fermi systems, superfluidity, magnetism, insulating crystals.

PHYS 655 Introduction to Accelerator Physics and Technology (also PHYS 456)

PHYS 657 The Storage Ring as a Source of Synchrotron Radiation (also PHYS 457)

PHYS 661 Advanced Topics in High Energy Particle Theory
Fall. 3 credits. Prerequisites: Physics 652. S-U grades only. Not offered 2000–2001. This course will present advanced topics of current research interest. Subject matter will vary from year to year. Some likely topics are two-dimensional conformal field theory with applications to string theory and condensed matter physics, applications of the electroweak theory, lattice gauge theory, mathematical methods (e.g. group theory), perturbative quantum chromodynamics, anomalies and geometry, supersymmetry, current algebra, heavy quark physics, heavy quark symmetry and phenomenological issues beyond the standard model.

PHYS 667 Theory of Stellar Structure and Evolution (also ASTRO 560)
For description, see ASTRO 560.

PHYS 670 Instrumentation Seminar

PHYS 680 Computational Physics (also PHYS 480 and ASTRO 690)
For description, see PHYS 480.

PHYS 681–689 Special Topics
Offerings are announced each term. Typical topics are group theory, analyticity in particle physics, weak interactions, superfluids, stellar evolution, surface physics, Monte Carlo methods, low-temperature physics, magnetic resonance, phase transitions, and the renormalization group.

New special topics seminar for fall 2000:
PHYS 681 Quantum Information Processing (also PHYS 481 and COM S 454)
See PHYS 481 for description.

PHYS 687 Selected Topics in Accelerator Technology (also PHYS 487)
See PHYS 487 for description.

PHYS 690 Independent Study in Physics
Fall or spring. Variable to 4 credits. Students must advise department course coordinator, 121 Clark Hall, of faculty member responsible for grading their project. S-U grades only. Special graduate study in some branch of physics, either theoretical or experimental, under the direction of any professorial member of the staff.

POLISH
See Department of Russian.

PORTUGUESE
See Department of Romance Studies.

PSYCHOLOGY

The major areas of psychology represented in the department are perceptual and cognitive psychology, biopsychology, and personality and social psychology. These areas are very broadly defined, and the courses are quite diverse. Biopsychology includes such things as animal learning, neuropsychology, interactions between hormones, other biochemical processes, and behavior. Perceptual and cognitive psychology includes such courses as cognition, perception, memory, and psycholinguistics. Personality and social psychology is represented by courses in social psychology and personality (such as Psychology and Law, Judgment and Decision Making, and Social Construction of Gender), as well as courses in fieldwork and psychopathology. In addition to the three major areas mentioned above, the department also emphasizes the statistical and logical analysis of psychological data and problems.

The Major
Admission to the major is usually granted to any student in good standing in the college who has passed three or more psychology courses with grades of C+ or better. Provisional admission requires two such courses. To apply to the major and receive an adviser, a major application form may be obtained from the department office (211 Uris Hall) and should be completed and taken to one of the faculty members whose name is listed on the form.

Requirements for the major are:
1) a total of 40 credits in psychology (including prerequisites), from which students majoring in psychology are expected to choose, in consultation with their advisers, a range of courses that covers the basic processes in psychology (laboratory and/or field experience is recommended); and
2) demonstration of proficiency in statistics before the beginning of the senior year. (See the section below on the statistics requirement.)

Normally it is expected that all undergraduate psychology majors will take at least one course in each of the following three areas of psychology:
1) Perceptual and cognitive psychology
2) Biopsychology
3) Social, personality, and abnormal psychology

The following classification of Department of Psychology offerings is intended to help students and their advisers choose courses that will ensure that such breadth is achieved.

1) Perceptual and cognitive psychology:

2) Biopsychology:

3) Social, personality, and abnormal psychology:
   Psychology 224, 238, 255, 277, 280, 281, 325, 327, 328, 402, 404, 450, 481, 489, 491.

4) Other courses:
   Psychology 101, 199, 347, 350, 410, 440, 441, 470, 471, 472, 473, 475, 478, 479. The major adviser determines to which group, if any, these courses may be applied.

With the permission of the adviser, courses in other departments may be accepted toward the major requirements.

Fieldwork, independent study, and teaching. The department requires students to observe the following limits on fieldwork, independent study, and teaching.

1) Undergraduates may not serve as teaching assistants for psychology courses if they are serving as teaching assistants for any other course during the same semester.
2) An undergraduate psychology major cannot apply more than 12 of the credits earned in independent study (including honors work) and fieldwork toward the 40 credits required by the major.

Statistics requirement. Proficiency in statistics can be demonstrated in any one of the several ways listed below.
1) Passing Psychology 350
2) Passing an approved course or course sequence in statistics in some other department at Cornell. The approved list of courses and sequences may change. It has usually included Sociology 301 and Industrial and Labor Relations 210 and 211. Requests that a particular course be added to this list should be made to Professor Gilovich.
3) Passing a course or course sequence in statistics at some other college, university,
or college-level summer school. The course or sequence must be equivalent to at least six semester credits. The description of the course from the college catalog and the title and author of the textbook submitted to Professor Gilovich for approval.

4) Passing an exemption examination. This examination can be given at virtually any time during the academic year if the student gives notice at least one week before. Students who have completed a theoretical minor in a department of mathematics or other academic fields should consider a project that the student carries out in close collaboration with a faculty member in the student's field of psychology. It is assumed that most qualified students will do so while enrolled in Psychology 470 (Undergraduate Research in Psychology). A written report of the research is to be given to the chair of the honors committee (currently Professor Johnson) toward the end of the last semester of the student's senior year. An oral defense of the thesis is then given before a committee of three faculty members, and the student presents his or her work in a public forum. Final honors standing (summa cum laude, magna cum laude, cum laude) is indicated on the student's diploma. The T. A. Ryan Award, accompanied by a cash prize, is awarded to the student who conducts the best honors project in a given year.

A student may formally apply to the honors program at any time during the senior year, provided that she or he is actively engaged in independent research. However, students must do so by the second week of November. Applications should be given to Professor Johnson and should be made directly by the student.

**Distribution Requirement**
The distribution requirement in the social sciences is satisfied by any two courses in psychology with the exception of Psychology 225, 307, 320, 325, 363, 381, 410, 420, 422, 424, 425, 429, 431, 432, 441, 470, 471, 472, 473, 475, 478, 479, 491, 492.

Note: The Department of Psychology has listed all days and times for each course that we offer. If there should be changes in the days, times, or semester that a course is offered, we will post the necessary changes throughout the department and in the supplements of the Course and Time and Course and Room Rosters. Changes are also available on the web site, comp9.psych.cornell.edu.

**Courses**

**PSYCH 101 Introduction to Psychology: The Frontiers of Psychological Inquiry**
Fall. 3 credits. Students who would like to take a discussion seminar should also enroll in Psychology 110. J. B. Maas. The study of human behavior. Topics include brain functioning and mind control, psychophysiology of sleep and dreaming, psychological testing, perception, learning, cognition, memory, language, motivation, personality, abnormal behavior, psychotherapy, social psychology, and other aspects of applied psychology. Emphasis is on developing skills to critically evaluate claims made about human behavior.

**PSYCH 102 Introduction to Cognitive Science**
Fall. 3 or 4 credits (the four-credit option is limited to 24 students. Disc and demos, M W 11:15–12:05; lab, M W 1:25–3:25, plus additional hours to be arranged. Uris Hall 259. Fall. B. Halpern and staff; spring, O. Field and staff. Introduction to Cognitive Science is suggested but not required. Knowledge of programming languages is not assumed. Limited to 24 students. Introduction to the scientific frontiers of the next century. This course will enable students with little scientific background from any college or major to appreciate the excitement of the scientific enterprise. What are fascinating and important questions? How are researchers trying to answer them? What are they discovering? Why did the brain evolve this remarkable capacity?

**PSYCH 103 Introductory Psychology Seminars**
Fall. 1 credit. Limited to 300 students. Prerequisite: concurrent enrollment in Psychology 101. J. B. Maas and staff. A weekly seminar that may be taken in addition to Psychology 101 to provide an in-depth exploration of selected areas in the field of psychology. Involves extensive discussion and a term paper related to the seminar topic. Choice of seminar topics and meeting times will be available at the second lecture of Psychology 101.

**PSYCH 111 Brain, Mind, and Behavior**
(also BI0N 111 and COGST 111)
Spring. 3 credits. M W F 9:05. 2 lectures in the same space and in the days, times, or semester that a course is offered, we will post the necessary changes throughout the department and in the supplements of the Course and Time and Course and Room Rosters. Changes are also available on the web site, comp9.psych.cornell.edu.

**Seminars**

**PSYCH 535**
brief sensory inputs on subsequent decisions, computer-based natural language recognition and processing, use of "neural networks," and personal and group transportation vehicles and systems. Students are expected to come to each discussion meeting having read and thought about assigned materials, and to come to scheduled laboratory meetings fully prepared to perform the laboratory exercises. Laboratory facilities will be available to students at all times so that statistical analysis of data, preparation of laboratory reports, and collection of experimental data will be facilitated. URL for Fall info: courseinfo.cit.cornell.edu/courses/csic201.

**PSYCH 205 Perception**
Spring. 3 credits. Open to first-year students. Credit not available to Psychology 605. T R 11:40-12:55. J. E. Cutting.
One of four introductory courses in cognitive psychology. Basic perceptual concepts and phenomena are discussed with emphasis on stimulus variables and sensory mechanisms. All sensory modalities are considered. Visual and auditory perception are discussed in detail.

**PSYCH 209 Developmental Psychology**
Spring. 4 credits. Graduate students, see Psychology 709. T R 2:55-4:10. S. Johnson.
One of four introductory courses in cognition and perception. A comprehensive introduction to research and theory in the area of developmental psychology that approaches problems primarily from a cognitive perspective. The course focuses on the development of perception, action, cognition, emotion, personality, social understanding, language, and moral reasoning.

**PSYCH 214 Issues in Cognitive Psychology (also COGST 214)**
Fall. 3 credits. Sophomore standing required. Limited to 150 students. Graduate students, see Psychology 614. M W F 11:15. S. Edelman.
Various approaches to the study of cognition will be discussed. Basic concepts in how humans process different kinds of information such as visual, auditory, and symbolic will be introduced. These concepts will then be used to explore topics such as attention and consciousness, concept formation and representation, memory processes and systems, imagery and cognitive maps, problem solving and reasoning, judgment and choice, language and language learning, emotion, intelligence and creativity, and social cognition.

**PSYCH 215 Psychology of Language (also LING 215)**
Spring. 3 or 4 credits (4-credit option involves term paper). Graduate students, see Psychology 715. M W F 11:15. Not offered 2000–2001. Staff.
One of four introductory courses in cognitive psychology. Introduction to the psychological study of language. Covers research in spoken language comprehension and production, reading, and (oral) language acquisition.

Introductory courses in social and personality psychology. Each of the following four courses (265, 275, 277, 280) provides an introduction to a major area of study within social and personality psychology. These depend on one another, and none have any prerequisites. Students may take any one of the courses or any combination of them (including all four). Courses may be taken in any order or simultaneously.

**PSYCH 216 Cognitive Psychology Lab**
If you've ever wondered how language can represent the real world, why telephone numbers are seven digits long, why imagery works as a mnemonic device, why certain things are better remembered than others, whether bilinguals are disadvantaged relative to monolinguals, how children acquire knowledge of the world, how people make decisions—this laboratory is for you! A weekly lab meeting that encourages students to discover the scientist in themselves through the study of cognition. Much of cognitive research takes place in the laboratory and this course allows students to become familiar with the "how-to" of such research. Students will be given six to eight basic experiments to explore and tinker with. They will be encouraged to pose questions and eventually test them. The course promotes independent thinking. problem solving in an experimental setting, proposing and testing of one's own hypotheses, relating laboratory cognition to the real world, and communication of scientific ideas through informal and formal writing and oral assignments. Be prepared for an interesting learning experience.

**PSYCH 223 Introduction to Biopsychology**
Fall. 3 credits. T R 10:10. No prerequisites. Can be used to satisfy the psychology major breadth requirement and as an alternative prerequisite for upper-level biopsychology courses. M. J. O'wen.
An introduction to psychology from a biological perspective, including both evolutionary and physiological approaches to behavior. Topics include the structure and function of the nervous system, genetic and biochemical models of behavior, hormones and behavior, the development of learning, cognition, communication, and language, and the ecology and evolution of social organization and social development.

**PSYCH 265 Psychology and Law**
Fall. 3 credits. M W F 1:25. D. A. Dunning.
This course examines the implications of psychological theory and methods for law and the criminal justice system. We concentrate on psychological research on legal topics (e.g., confession, eyewitness testimony, jury decision making, homicide, aggression, the prison system), social issues (e.g., death penalty, affirmative action), as well as on psychologists as participants in the legal system (e.g., assessing insanity and dangerousness and for expert testimony).

**PSYCH 275 Introduction to Personality Psychology (also HD 260)**
Spring. 3 credits. Recommended: introductory course in psychology or human development. T R 1:25–2:40. C. Hazan.
This course is designed as an introduction to theory and research in the area of personality psychology: with special emphasis on personality development. It covers the major influences including genetic, environmental, and gene-environment interactions, and involves in-depth study of the major theories. The assumptions and models of human behavior that form the basis of each theoretical orientation will be examined and compared, and the relevant empirical evidence reviewed and evaluated. In addition, basic psychometric concepts and the methods for measuring and assessing personality will be covered, as well as the major related debates and controversies.

**PSYCH 277 Social Construction of Gender (also WOMNS 277)**
Fall. 3 credits. Limited to 180 students. T R 2:55–4:10. S. L. Bem.
Psychology/Women's Studies 277 is an interdisciplinary course that addresses two broad questions: (1) how an individual's gender and sexuality are constructed; and (2) how hidden assumptions or "lenses" embedded in our social institutions, cultural discourses, and individual psyches perpetuate male power and oppress women and sexual minorities. Three lenses in particular are emphasized: androcentrism, gender polarization, and biological essentialism. A fundamental assumption of the course is that social science has worried about the proper concentration of difference per se and too little about how even our most neutral-looking institutions invisibly transform difference into disadvantage. Although some attention is given to biological perspectives, the course emphasizes the cultural and psychological processes whereby the historically contingent comes to appear as the natural. Among some of the many topics discussed are the importance of looking at biology in context, the parental "instinct," androcentrism in law, sexual orientation cross-culturally, egalitarian relationships, gender-liberated child-rearing, and homophobia.

**PSYCH 280 Introduction to Social Psychology**
An introduction to research and theory in social psychology. Topics include social influence, persuasion, and attitude change; social interaction and group phenomena; altruism and aggression, stereotyping and prejudice, and everyday reasoning and judgment.

**PSYCH 281 The Helping Relationship**
Fall. 3 credits. Limited to 60 students. C. Maxwell Miller.
This course provides an introduction to the theoretical and practical aspects of some basic elements of counseling. Students will develop an understanding of the most current research on the elements of counseling and basic theoretical foundations underlying different approaches. Students will be expected to acquire and demonstrate elementary helping skills. Through role-play, observation of videos, and in-class demonstrations, students will learn such skills as attending and active listening; they will also develop a capacity to recognize internal and interpersonal distortions as well as the similarities between intra-psychic and interpersonal processes. Other topics include issues of transference and counter transference, the multi-axial dimensions of the counseling process, and strategies as they appear in the DSMIV and ethical considerations and practice. While this course provides an introduction to the applied aspects of psychology, it does not prepare students to provide treatment of any sort.

**PSYCH 282 Community Outreach (also HD 282)**
Fall. 2 credits. Prerequisites: Psychology 101 or HD 115. Students may not
This course provides students with information and perspectives essential to volunteer field work with human and social service programs in the community. To gain a practical understanding of what mental health professionals do in the workplace, students will examine problems that emerge in fieldwork settings which raise ethical, methodological, theoretical, and practical issues in the observation or treatment of clients or patients. Although students are not required to volunteer at a local agency, the instructor will assist students in finding sites that may provide appropriate learning opportunities. A paper, relating current research issues relevant to community mental health, is due at the end of the course.

**PSYCH 292 Intelligence**

Spring. 4 credits. Prerequisites: one 200-level course in psychology. M W TBA.

Section meetings on Friday. U. Neisser.

A scientific overview of the controversial issues that surround intelligence tests and what they measure. Topics include the history of testing, correlates of test scores, alternative approaches to mental ability, genetic and environmental contributions to diversity in intelligence, effects of schooling, worldwide IQ gains, cultural factors, and group differences.

**PSYCH 305 Visual Perception**

Fall. 4 credits. Limited to 25 students.

A detailed examination of pictures and their comparison to the real world. Linear perspective in Renaissance art, photography, cinema and video will be discussed in light of contemporary research in perception and cognition.

**PSYCH 307 Chemosensory Perception**

Fall. 3 or 4 credits; the optional (or fourth) credit is for an independent research project. Graduate students, see Psychology 607. Not offered 2000–2001. T R 9:05.

B. P. Halpern.

An examination of basic theory, data, and processes for perception of the chemosensory environment. A very brief (about two weeks) lecture survey of the anatomy and physiology of human taste and olfaction, the remainder of the course uses the Socratic method, in which the instructor asks questions of the students, to cover topics such as chemosensory psychophysics, saliva, chemosensory bases for the tastes of foods, taste-smell interactions, chemosensory function in neonates and in the aged, temporal aspects of tasting, sweetness, effects of pollution on the chemosensory environment, and interactions between body state and chemosensory stimuli. At the level of *Smell and Taste in Health and Disease*, edited by T.V. Getchell et al., *Sensory Science Theory and Applications in Foods*, edited by H. T. Lawless and B. Kleinc; *Sensory Analysis of Foods*, 2nd edition, edited by J. R. Pigott.

**PSYCH 311 Introduction to Human Memory**

Spring. 3 credits. Limited to 40 students.

This course offers an overview of experimental findings and theoretical issues in the study of human memory. Coverage includes topics such as the nature of memory, various memory systems, coding and retrieval processes, practice and habit acquisition, organizational strategies, age and memory, interference and forgetting, models of memory, memory dysfunction and its relation to normal memory.

**PSYCH 316 Auditory Perception**

Fall. 3 or 4 credits; the 4-credit option involves a laboratory project or paper. Prerequisite: Psychology 205, 209, 214, or 215 (other statistics, or biology courses could serve as prerequisite with permission of the instructor). Limited to 30 students. Graduate students, see Psychology 716. T R 10:10–11:25.

C. L. Krumhansl.

A course that covers the major topics in auditory perception: physics of sound; structure and function of the auditory system; perception of loudness, pitch, and spatial location, with applications to speech production and perception; and music and environmental sounds.

**PSYCH 322 Hormones and Behavior (also BION 322)**

Spring. 3 credits. Two lectures plus a section in which students will read and discuss original papers in the field, give an oral presentation, prepare a term paper. Limited to juniors and seniors. Prerequisites: any one of the following: (a) Psychology 223, (b) BION 221, or (c) BION 222, or (d) one year of introductory biology plus a course in psychology or S-U grades optional. Graduate students see Psychology 722. M W F 11:15. E. Atkins Regan.

A major focus of the course will be comparative and evolutionary approaches to the study of the relationship between reproductive hormones and sexual behavior in vertebrates, including humans. Also included will be hormonal contributions to parental behavior, aggression, stress, learning and memory, and biological rhythms.

**PSYCH 324 Biopsychology Laboratory (also BION 324)**

Fall. 4 credits. Limited to 20 juniors and seniors. Prerequisites: Psychology 223 or BION 221 or 222, and permission of instructor. T R 1:25–4:25. T. J. DeVogel.

Experiments designed to provide experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included.

**PSYCH 325 Psychopathology (also HD 370)**

Spring. 3 credits. Limited to sophomores, juniors, and seniors. Prerequisites: Psychology 101, HD 115, or Education 110; a course in statistics (e.g., PSYCH 350, SOC 301, EDUC 352 or 355, AG EC 310 or equivalent). Limited to 150 students.

C. Maxwell Miller.

A research-based survey of the cognitive, emotional, and biological aspects of psychopathology across the life span. The major mental illnesses will be covered, including schizophrenia, affective disorders, and personality disorders as well as psychopathological disorders of childhood. Emphasis will be placed on the development of psychopathology, current theories and models of etiology, and intervention strategies. This course is intended to be a rigorous introduction to the scientific study of psychopathology and psychopathological development, minimal attention to psychotherapy.

**PSYCH 326 Evolution of Human Behavior**

Fall. 4 credits. Prerequisite: Psychology 223, or an introductory biology course, or an introductory psychology course. Graduate students, see Psychology 626. T R 2:55–4:10. R. E. Johnston.

A broad comparative approach to the behavior of animals and humans with special emphasis on the evolution of the human condition. Topics covered will vary but will include some of the following: human evolution, evolutionary and sociobiological theory, animal communication, nonverbal communication, language, cognitive capacities, social behavior and organization, cooperation and altruism, sexual behavior, mating and marriage systems, aggression, warfare.

**PSYCH 327 Field Practicum I (also HD 327)**

Fall only. 3 credits. Prerequisites: Psychology 225 or HD 370 (or taken concurrently), and permission of instructor. No S-U grades. Enrollment is limited to 30 students. Fee: $25 each semester. Enrolled students must commit to joining Psychology 328 in the spring semester. No S-U option. M W 8:40–9:50. H. Segal.

This course is composed of three components which form an intensive undergraduate field practicum. First, students spend three to six hours a week at local mental health agencies, schools, or nursing facilities working directly with children, adolescents, or adults; supervision is provided by host agency staff. Second, Cornell faculty provide additional weekly educational supervision for each student. Third, seminar meetings cover issues of adult and developmental psychopathology, clinical technique, case studies, and current research issues. Students write two short papers, two final take-home exams, and present an account of their field experience in class.

**PSYCH 328 Field Practicum II (also HD 328)**

Spring. 3 credits. Prerequisites: Psychology 327 taken the previous term, Psychology 325 or HD 370 (or taken concurrently), permission of instructor. No S-U grades. Enrollment is limited to 30 students. Fee: $25 each semester. M W 8:40–9:50. H. Segal.

This course continues the field practicum experience from PSYCH 327. Students spend three to six hours a week at local mental health agencies, schools, or skilled nursing facilities working directly with children, adolescents, or adults; supervision is provided by host agency staff.

**PSYCH 332 Biopsychology of Learning and Memory (also BION 328)**

Spring. 3 credits. Prerequisite: 1 year of biology and either a biology course or BION 222. Limited to 60 students. Graduate students, see Psychology 652. M W F 11:15. T. J. DeVogel.

This course will survey the approaches that have been or are currently being used in order to understand the biological bases for learning and memory. Topics will include invertebrate, "simple system" approaches,
imprinting, avian song learning, hippocampal and cerebellar function, and human pathology. Many of the readings will be from primary literature.

PSYCH 342 Human Perception: Applications to Computer Graphics, Art, and Visual Display (also COGST 342)
Fall. 3 or 4 credits. The 4-credit option involves a term paper. Prerequisite: Psychology 101 or permission of instructor. Psychology 205 strongly recommended. Graduate students, see Psychology 442. T R 11:10-12:25. J. P. Pilet.

Our present technology allows us to transmit and display information through a variety of media. To make the most of these media channels, it is important to consider the limitations and abilities of the human observer. The course will consider a number of applied aspects of human perception with an emphasis on the display of visual information. Topics to be covered include: three-dimensional figures, color theory, spatial and temporal limitations of the visual systems, attempts at subliminal communication, and "visual" effects in film and television.

PSYCH 347 Psychology of Visual Communications
Spring. 3 credits. Limited to 15 students. Prerequisites: Psychology 101 and permission of instructor. R 10:10-12:05. J. B. Maas.

An exploration of theories of education, communication, perception, attitude, and behavior change. Emphasis will be placed on the effectiveness of visually based communication systems. Emphasis is on the use of photography and computer graphics to deliver educational messages.

PSYCH 350 Statistics and Research Design

Acquaints the student with the elements of statistical description (measures of average, variation, correlation, etc.) and, more important, develops an understanding of statistical inference. Emphasis is placed on those statistical methods of principal relevance to psychology and related behavioral sciences.

PSYCH 361 Biopsychology of Normal and Abnormal Behavior (also NS 361)
Fall. 3 credits. Limited to 50 students in psychology and 50 students in nutritional sciences. Prerequisites: an introductory biology course and an introductory psychology course, or permission of instructor. S/U grades optional. Juniors and seniors only. M W F 9:05-9:55. J. Strupp.

A critical evaluation of factors thought to underlie normal and abnormal behavior and/or cognitive functioning. Psychological, biological, and societal influences will be integrated. Topics include: (1) the psychobiology of learning and memory, (2) nutritional influences on behavior/cognition (e.g., sugar, food additives, choline); (3) cognitive dysfunction (e.g., anemia, Alzheimer's disease); (4) developmental exposure to environmental toxins and drugs of abuse; and (5) psychiatric disorders (depression, eating disorders).

PSYCH 396 Introduction to Sensory Systems (also BIONB 396)
Spring. 4 credits. Limited to 25 students. Prerequisites: an introductory course in biology or biopsychology, plus a second course in behavior, biopsychology, cognitive science, neuroscience, or perception. Students are expected to have a knowledge of elementary physics, chemistry, and behavior. S/U grades optional. Offered alternate years. Not offered in spring 2001. Class meetings, M W F 10:10-11:00. B. P. Halpern.

This course covers both those characteristics of sensory systems that are common across living organisms and those sensory properties that represent adaptations of animals to particular habitats, environments, or niches. The principles and limitations of major methods used to examine sensory systems will be considered. Emphasis will be on somesthetic, visual, and auditory systems.

PSYCH 401 Theoretical Approaches to Psychopathology and Treatment

This course is designed to provide students with an overview of theoretical approaches to psychopathology and psychotherapy. It also aims to develop students' capacities to think in theoretical terms about psychological practice. We will examine the theoretical and pragmatic features of major contemporary models of psychotherapy and explore the conceptual traditions on which they draw. Observation of the work of children and adolescents, audio-visual demonstrations, case presentations and discussions will be included to advance students' understanding of the application of theory to practice. At the end of the course, students should be prepared to take a particular case and discuss the theoretical, practical, and research issues it raises, including intervention strategies. This course is designed for upperclassmen, simply with an understanding of methods. It is organized around theory, research, and practice relevant to the treatment of several of the Disorders of Infancy and Childhood as well as specific disorders of adults on Axis I and Axis II of DSM IV.

Special attention will be given to the work of: 1) Daniel Stern, M.D. and Otto Kernberg, M.D.—Psychodynamic revisionists

PSYCH 402 Current Research on Psychopathology: Depression

Current research and theory on the nature and etiology of depression. Approaches from various perspectives (biological, psychological, socio-cultural) are considered. Minimal attention to psychotherapy and symptomatology.

PSYCH 404 Psychopathology and the Family

This course will explore familial influences on the development of abnormal behavior. It will examine how psychological, biological, and cultural factors in a family might contribute to such disorders as depression, mania, paranoia, schizophrenia, sexual abuse, psychopathy, and psychosomatic illnesses. Emphasis will be placed on early childhood experiences in the family and their impact on the development of later psychopathology. The course will also discuss how the evolution of family structures in more recent times (e.g., the rise in day care and divorce) influences the individual. Family therapy approaches and techniques will also be examined.

PSYCH 410 Undergraduate Seminar in Psychology
Fall or spring. 2 credits. Nonmajors may be admitted, but psychology majors are given priority. Hours TBA. Staff.

Information on specific sections for each term, including instructor, prerequisites, and time and place, may be obtained from the Department of Psychology Office, 211 Ursil Hall.

PSYCH 412 Laboratory in Cognition and Perception

A laboratory course is designed to introduce students to experimental methods in perception and cognitive psychology. Students will take part in a number of classic experiments and develop at least one independent project. Computers will be available and used in many of the experiments, but computer literacy is not required. Projects will be selected from the areas of visual perception, pattern recognition, memory, and concept learning.

PSYCH 413 Information Processing: Conscious and Nonconscious
Spring. 4 credits. Prerequisites: at least 1 course in human experimental and permission of instructor. Psychology 350 or equivalent will be useful for evaluating empirical articles. R 10:10-12:15. Not offered 2000-2001. Staff.

In the past decade, a not-so-quiet revolution has been taking place in the field of cognition regarding the problem of conscious mental
computation. Data have come from patients with striking neuropsychological syndromes, i.e., the phenomenon of "blindsight" in which patients can respond to visual stimuli without the conscious experience of vision or the "amnesic" syndrome in which patients show interact learning and memory without the awareness of the learning encounters. This signature of independent mental computations has also been amply demonstrated in normal individuals in laboratory settings. We will critically evaluate the theoretical worth and empirical justification of the distinction between "conscious" and "nonconscious" mental computation, intentionally, show how concept and category learning, memory, and abstract thinking similar to that of humans; the role of social cognition in the evolution of intelligence; and whether animals are conscious or self-aware. Evidence from socially complex sensory information gets processed. This course will cover perception and cognition. We will explore how complex sensory information gets processed. [PSYCH 417 The Origins of Thought and Knowledge] Fall. 4 credits. Prerequisites: Psychology 205, 209, 214, or 215, or permission of instructor. Graduate students, see Psychology 616. M W F. M. Spivey. An in-depth analysis of current theories concerning the growth of thought and knowledge in childhood. Several controversies will be discussed, including: Are mental abilities pre-wired into local domains or modules that have their own patterns of development, or is cognitive development a more general process? Do comparative studies with other species and evolutionary models provide any useful insights into cognitive development in humans? Are there qualitative or continuous differences? What restrictions should these developmental considerations place on models of thought and knowledge in adults? [PSYCH 418 Psychology of Music] Spring. 3 or 4 credits, depending on whether student elects to do an independent project. The course is intended for upper-level students in music, psychology, engineering, computer science, linguistics, physics, anthropology, biology, and related disciplines. Some basic knowledge of music acoustics and synthesis, and extending the course will focus on issues in cognitive neuroscience: mechanisms of perception, particularly vision, and the neuropsychology of everyday acts involving complex cognitive skills such as recognition of individuals, navigation in the world, language, memory, and social interaction. [PSYCH 429 Olfaction and Taste: Structure and Function (also BIONB 429)] Fall or Spring. 3 or 4 credits (4-credit option requires a term paper or research project. The research project can, but does not need to, study nonhuman vertebrates). Preference given to junior and senior psychology and biology majors and graduate students. Prerequisite: one 300-level course in biopsychology or equivalent. Graduate model real nervous systems. Students will complete weekly lab reports and develop one independent project demonstrating the application of a neural network to a problem discussed in the course. [PSYCH 422 Developmental Biopsychology] Fall. 4 credits. Prerequisites: a course in introductory biology and a course in biopsychology or neurobiology (such as PSYCH 223 or BIONB 221). Graduate students, see Psychology 622. M W F 9:05-9:55. B. L. Finlay. We will discuss the relationship of the development and evolution of the brain to the development of behavior. Topics include how neurons are generated, finding targets, and establishing connections; the emergence of reflexive and complex behavior; how experience affects the developing brain; evolutionary perspectives on the development of animal behavior; and applications of neural networks to problems in neuroethology, including: mechanisms of behavior in insects and in vertebrates; and their underlying neural systems. In addition, the course will focus on issues in cognitive neuroscience: mechanisms of perception, particularly vision, and the neuropsychology of everyday acts involving complex cognitive skills such as recognition of individuals, navigation in the world, language, memory, and social interaction.
students, see Psychology 629. T R 9:05.
The structural and functional characteristics of olfaction and taste will be explored by reading and discussing current literature in these areas. Structure will be examined at the light levels of electron microscopes as well as at the molecular level. Function will be primarily neurophysiologically and chemosensory aspects. The emphasis will be on vertebrates, especially air-breathing vertebrates in the case of olfaction, but there will be some coverage of invertebrate forms. At the level of Smell and Taste in Evolution, edited by T. V. Getchell, R. L. Doty, L. M. Bartoshuk, and J. B. Snow; The Neurobiology of Taste and Smell, edited by T. E. Finger and W. L. Silver.]  

**PSYCH 431 Effects of Aging on Sensory and Perceptual Systems (also BIONB 421)**
Fall. 3 or 4 credits. The 4-credit option involves a term paper or creation of a relevant web site. Limited to 25 students. Prerequisites: an introductory course in biology or psychology, plus a second course in perception, neurobiology, cognitive sciences, or biopsychology. T R 10:10–11:25. B. P. Halpern.
A literature-based examination of post-maturation changes in the perceptual, structural, and physiological characteristics of ose, visual, auditory, and chemosensory systems. Emphasis will be on human data, with nonhuman information included when especially relevant. Quality of Life issues will be included. Current developments in human sensory devices, and in regeneration or replacement of receptor structures or organs will be examined. Brief written statements by electronic mail of questions and problems related to each set of assigned readings will be required in advance of each class meeting and will be automatically distributed to all members of the class.
This course will be taught using the Socratic Method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class discussions from original literature dealing with the subject matter of the course. Readings will be from the Course Info site courseinfo.cit.cornell.edu/courses/psych431/ or from Internet sites, from a course packet, or from materials on reserve. Students are expected to come to each class having already done and thought about the assigned readings, and to take an active part in every class. All examinations will be take-home.

**PSYCH 436 Language Development (also COGST ST 436, HD 436, and LING 436)**
Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll under HD 633/LING 700/PSYCH 600, a supplemental graduate seminar. Prerequisites: at least 1 course in developmental psychology, cognitive psychology, cognitive development, neurobiology, biology, or linguistics. S-U grades optional. T R 2:55–4:10. B. Lust.
This course surveys methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimential studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental issues of relationships between language and thought are discussed, as are the fundamental linguistic issues of Universal Grammar and the biological foundations for language acquisition. The acquisition of communication systems in nonhuman species such as chimpanzees and orangutans major emphasis is on the child. An optional lab course supplement is available. (See COGST 450/LING 450 and PSYCH 437.)

**PSYCH 437 Lab Course: Language Development (also COGST 450, HD 437, and LING 450) (in conjunction with COGST/LING/LING, Language Development)**
Spring. 2 credits. B. Lust.
This laboratory course will provide undergraduates with an introduction to hands-on research experience in the Cognitive Studies Research Labs. This course is partially funded by a new National Science Foundation grant to Cornell's Cognitive Studies program, "Interdisciplinary Approaches to the Scientific Study of Language Knowledge and Acquisition." This project is intended to involve undergraduates in active research and to coordinate related subfields of several disciplines in a unified, laboratory-supported curriculum.
This course will include several structured modules designed around the survey course, COGST/HD/LING/PSYCH 436, Language Development. They will include training in how to study and analyze original child language data, including the use of selected portions of a large database of child language data from many languages in the Cornell Language Acquisition Lab (CLAL), and training necessary to the collection and analysis of new child language data. Emphasis will be placed on developing research methods in order to test hypotheses. The course will meet once a week in group format. In addition, students will be given access to a research lab environment for independent work on assigned modules, and independent research, throughout the week, and throughout the term.

**PSYCH 440 The Brain and Sleep**
Fall. 4 credits. Prerequisites: at least Psychology 223 or BIONB 221. An additional course in biopsychology or neurobiology is recommended. S-U grades optional. Graduate students, see Psychology 640. M W 2:55–4:10. H. S. Porter.
Taking a comparative evolutionary perspective, this course examines the neural events that instigate, maintain, and disturb the states of sleep and sleep-related rhythms. Using computerized data analysis, students will complete weekly laboratory reports and a collaborative term project. Sleep research will be reviewed during the day or evening when possible. In addition, overnight recording sessions are required.

**PSYCH 450 The Lenses of Gender (also WOMNS 450)**
Spring. 4 credits. Limited to 15 seniors and graduate students. Prerequisites: (1) senior or graduate standing, with preference given to psychology majors and nonmajors' studies majors; (2) both a course related to gender and/or sexuality and a course related to clinical and/or personality psychology. Permission of instructor required. No preregistration. Interested students should attend first class. Letter grade only. Graduate students, see Psychology 650/Women's Studies 650. F 2:30–4:25. Not offered 2000–2001. S. L. Benn.
The focus of this seminar is the intersection of gender and clinical psychology. Rather than surveying a broader array of topics more superficially or studying a single topic in very great depth, the seminar will take up several gender- and sexuality-related issues in moderate depth over the course of several weeks. Possible topics include depression, eating disorders, recovery of false memories, transgender, and the needs of lesbian and gay clients. Course requirements will likely include a final essay examination and a term paper or a class presentation.

**PSYCH 470 Undergraduate Research in Psychology**
Fall or spring. 1–4 credits. S-U grades optional. Written permission from the staff member who will supervise the work and assign the grade must be included with the course enrollment material. Students should enroll in the section listed for that staff member. A section list is available from the Department of Psychology. Hours TBA. Staff.
Practice in planning, conducting, and reporting independent laboratory, field, and/or library research.

**PSYCH 471 Advanced Undergraduate Research in Psychology**
Fall or spring. 1–4 credits. S-U grades optional. Written permission of the staff member who will supervise the work and assign the grade must be included with the course enrollment material. Students should enroll in the section listed for that staff member. A section list is available from the Department of Psychology. Hours TBA. Staff.
Advanced experience in planning, conducting, and reporting independent laboratory, field, and/or library research. Students will be assigned the work, and the grade must be included with the course enrollment material. Students should enroll in the section listed for that staff member. A section list is available from the Department of Psychology. Hours TBA. Staff.
Advanced experience in planning, conducting, and reporting independent laboratory, field, and/or library research. Students will be assigned the work, and the grade must be included with the course enrollment material. Students should enroll in the section listed for that staff member. A section list is available from the Department of Psychology. Hours TBA. Staff.

**PSYCH 472 Multiple Regression**
Spring, weeks 1–7. 2 credits. Prerequisite: 1 solid semester of introductory statistics. Analysis of variance and ANOVA are helpful but not required. M W F 10:10. R. B. Darlington.
Uses and pitfalls of multiple regression in causal analysis, path analysis, and prediction. Emphasis on analyzing data collected under uncontrolled conditions. Includes linearity, indicator variables, sets, adjusted and shrunken R², suppressors, hierarchical
Very little hand computation; uses MYSTAT for multiple tests, diagnostic methods. Emphasizes MYSTAT and Minitab.

Cluster analysis, multidimensional scaling, nesting, power analysis, influence analysis, logistic regression, log-linear models, and other topics. Students vote on topics to cover, choosing PSYCH 475 Multivariate Analysis of topics before vote. First class sketches all these statistical methods relevant to the use of PSYCH 475.

Students vote on topics to cover, choosing among nonparametric methods, time series, cluster analysis, multidimensional scaling, component analysis, factor analysis, MANOVA, canonical correlation, repeated measures, logistic regression, log-linear models, corrections for unreliability in regression, nesting, power analysis, and other topics. First class sketches all these topics before vote.

[PSYCH 478 Psychometric Theory]

[PSYCH 479 Multisample Secondary Analysis]
Fall. 2 credits. Prerequisite: Psychology 473 or permission of instructor. R 10:10–12:05. R. B. Darlington.

Statistical methods relevant to the use, construction, and evaluation of psychological tests.

[PSYCH 480 The Cornell Westchester/NY Hosp. Field Placements]
Fall. 7 credits. Spring through summer and fall. Prerequisites: PSYCH 325 or PSYCH 281 (for PSYCH), Biology or Chemistry with Lab (Pre-med). Sophomores or juniors only. C. Maxwell Miller. The Cornell-Westchester/Payne Whitney field placement program makes available eight-week research/clinical internships for Cornell-thaca undergraduates who are pre-professional in psychology, neurobiology, psychiatry, or medicine. Each student is matched with a M.D. Ph.D. mentor at the Cornell-Westchester or Payne Whitney hospital. Students work on one rotation throughout the summer and assist the researcher with his/her work. Students’ work includes, but is not limited to, reading, reporting, observing, writing literature reviews, learning grant-writing, assisting in the conducting of experiments and planning their own experiments.

Most placements involve a clinical component as well. Under the supervision of the mentor, students work in therapy groups with patients, participate in testing, and assist in psychologi-cal rehabilitative activities. The patient populations with whom students work are diverse with regard to age and diagnosis as well as race, culture, ethnicity, and national background.

PSYCH 481 Advanced Social Psychology
Fall. 4 credits. Limited to 20 students, by application. Senior psychology majors have priority. Graduate students, see Psychology 681. T R 10:10–11:25. D. T. Regan.

Selected topics in social psychology are examined in depth with an emphasis on the relationship between experimental research and the development of theory. Readings will be mostly primary sources. Among the theoretical approaches to social behavior we may discuss are social comparison theory, cognitive dissonance, attribution processes, and social judgment, dramaturgy, and impression management, and evolutionary perspectives.

PSYCH 489 Seminar: Beliefs, Attitudes, and Ideologies
Fall. 4 credits. Prerequisites: admission is by application during the fall preregistration period. Corequisite priority. M 2:55–4:10. D. J. Bem.

The seminar examines fundamental properties of beliefs and attitudes: how they are formed and changed, what psychological functions they serve for the individual, and how they coalesce into belief systems or ideologies. Several specific ideologies are examined in detail: for example, the political ideologies of the American public, gender, sexual orientation, the ideological factors that produce anorexia in a society, the contrasting worldviews of “pro-choice” and “pro-life” activists, the ideologies of psychology and science, and more. Participants write weekly commentaries on the readings in addition to a term paper examining a particular ideology.

PSYCH 491 Research Methods in Psychology
Spring. 4 credits. Enrollment limited to 15 students. Recommended: permission of instructor, Psychology 350, experience in upper-division psychology courses, or graduate standing. Corequisite priority. First class sketches all these topics before vote. The course in addition, will cover test construction, survey methods, and “quasi experiments.” Students will concentrate on completing a small research project in which they conduct an experiment, interpret its data, and write up the results.

PSYCH 492 Sensory Function (also BION 482)
Spring. 4 credits. Limited to 25 students. Prerequisite: Psychology 300-level course in biopsychology, or BION 222 or BIOAP 311, or equivalent. Students are expected to have a knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Offered alternate years. Graduate students, see Psychology 692. M W F 10:10. B. P. Halpern and H. C. Howland.

In general, this course has covered classical topics in sensory function such as vision, hearing, touch, and balance, as well as some more modern topics like sensory processing, location of stimulus sources in space, the development of sensory system, and nonclassical topics such as electric touch and internal chemoreceptors. Both human and nonhuman systems have been discussed. In all cases the chemical, physical, and neu-rophysiological bases of sensory information have been treated, and the processing of this information has followed into the central nervous system. courseinfo.cit.cornell.edu/courses/psyc_nh492/ A more specific description of the course for spring 2001 will be available in fall 2000.

PSYCH 495 Olfaction, Pheromones, and Behavior
Spring. 4 credits. Prerequisites: an introduction course in biology and one in NBBB or biopsychology or a 300-level course in biopsychology or permission of instructor. R. Johnston. This course will cover chemical signals, olfaction, and behavior in vertebrates (including humans), as well as the neurobiology of olfaction and odor-mediated behaviors. Behavioral topics may vary from year to year but will include evaluation and advertisement for mates, aggregation and territorial behavior, parent-young interactions, social recognition (species, sex, individual, kin reproductive state, status), memory for odors, odor and endocrine interactions, imprinting, homing and navigation, etc. Basic aspects of the structure and function of the olfactory system will also be covered, including the molecular biology of chemo-reception, olfactory coding, and higher-order processing in the central nervous system. The format will involve lectures, discussions, and student presentations.

Advanced Courses and Seminars
Advanced seminars are primarily for graduate students, but with the permission of the instructor they may be taken by qualified undergraduates. The selection of seminars to be offered each term is determined by the needs of the students.

A supplement describing these advanced seminars is available at the beginning of each semester and can be obtained from the department office (211 Uris Hall). The following courses may be offered either term and carry four credits unless otherwise indicated.

PSYCH 510–511 Perception
PSYCH 512–514 Visual Perception
PSYCH 518 Topics in Psycholinguistics
PSYCH 519–520 Cognition
PSYCH 521 Psychobiology (Developmental Seminar)
PSYCH 522 Topics in Perception and Cognition
PSYCH 523 Hormones and Behavior

[PSYCH 524 Sex Differences in Brain and Behavior (also BION 626)]

A survey of the newly discovered animal models for sex differences in the brain. Topics include the role of sex hormones in brain development, whether hormones can modify the structure of the adult brain, and the consequences of such sex differences in anatomy for behavior.
PSYCH 527 Topics in Biopsychology

PSYCH 530 Representation of Structure in Vision and Language (also COGST 530 and LING 530)
Spring. 4 credits. S. Edelman.

The seminar will concentrate on the nature of the representation of visual objects and scenes in the brain and compare it with the structural framework that serves as the main explanatory tool in current theories of language processing. Data and ideas will be drawn from visual psychophysics, neurophysiology, psycholinguistics, computational vision and linguistics, and philosophy. Students will present published research papers and preprints, which will then be discussed and critiqued.

PSYCH 535 Evolutionary Perspectives on Behavior

PSYCH 541 Statistics in Current Psychological Research

PSYCH 550 Special Topics in Cognitive Science

PSYCH 580 Experimental Social Psychology

PSYCH 600 General Research Seminar

Fall or spring. No credit.

[PSYCH 601 Computational Models of Language

This seminar will involve in-depth discussion of a range of computational approaches to language representation, processing, and acquisition. We will cover phrase-structure grammars, context-free grammars, connectionist models, statistical natural language processing, and dynamical systems, to name just a few. There will also be some hands-on experience writing models in a computer lab using the MATLAB programming environment.

PSYCH 605 Perception (also PSYCH 205)

Spring. 4 credits. Non-arts graduate students only. T R 11:40–12:55.
J. E. Cutting

[PSYCH 607 Chemosensory Perception (also PSYCH 332)

[PSYCH 611 Introduction to Human Memory (also PSYCH 311)

[PSYCH 612 Laboratory in Cognition and Perception (also PSYCH 412)

PSYCH 613 Obesity and the Regulation of Body Weight (also NS 315)

Spring. 3 credits. Limited to 30 students. Prerequisites: 1 course in psychology and 1 course in nutrition. Undergraduate students may register with permission of instructor. S-U grades optional. Offered alternate years. T R 11:25–3:20.
D. A. Levitsky.

This course is a multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, the genetics of obesity, the role of activity and energy metabolism, psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.

PSYCH 614 Issues in Cognitive Psychology (also PSYCH 214)

Fall. 4 credits. M W F 10:10. S. Edelman.

PSYCH 615 Concepts, Categories, and Word Meaning (also PSYCH 415)

PSYCH 616 Modeling Perception and Cognition (also PSYCH 416 and COGST 416)

Spring. 4 credits.

PSYCH 618 Psychology of Music (also PSYCH 418)

C. Krumhansl.

PSYCH 619 Neural Networks Laboratory (also PSYCH 419)

PSYCH 622 Developmental Biopsychology (also PSYCH 422)

Fall. 4 credits. M W F 9:05–9:55.
B. L. Finlay.

PSYCH 625 Cognitive Neuroscience (also PSYCH 425)

PSYCH 626 Evolution of Human Behavior (also PSYCH 326)

Fall. 4 credits. T R 2:55–4:10.
R. E. Johnston.

PSYCH 629 Offaction and Taste: Structure and Function (also PSYCH 429 and BIONB 429)

B. P. Halpern.

PSYCH 631 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 431 and BIONB 421)

Fall. 4 credits. T R 10:10–11:25.
B. P. Halpern.

PSYCH 632 Biopsychology of Learning and Memory (also PSYCH 332 and BIONB 329)

Spring. 4 credits. M W F 11:15.
T. J. DeVoogd.

PSYCH 640 The Brain and Sleep (also PSYCH 440)

Fall. 4 credits. M W 2:55–4:10.
H. S. Porte.

PSYCH 641 Laboratory in Sleep Research (also PSYCH 441)

Spring. 4 credits. W 7:50–10:50.
H. S. Porte.

PSYCH 642 Human Perception: Applications to Computer Graphics, Art, and Visual Display (also PSYCH 342 and COGST 342)

T R 11:40–12:55.
D. J. Field.

PSYCH 650 The Lenses of Gender (also PSYCH 450 and WOMNS 450 and 650)

S. L. Bern.

PSYCH 681 Advanced Social Psychology (also PSYCH 491)

Fall. 4 credits. T R 10:10–11:25.
D. T. Regan.

PSYCH 689 Seminar: Beliefs, Attitudes, and Ideologies (also PSYCH 489)

Fall. 4 credits. M W 2:55–4:10.
D. J. Bern.

PSYCH 691 Research Methods in Psychology (also PSYCH 491)

Spring. 4 credits. T R 10:10–11:25.
D. A. Dunning.

PSYCH 692 Sensory Function (also PSYCH 492 and BIONB 492)

Spring. 4 credits. M W 10:10.
B. P. Halpern and H. C. Howland.

PSYCH 696 Introduction to Sensory Systems (also PSYCH 396 and BIONB 396)

PSYCH 700 Research in Biopsychology

PSYCH 709 Developmental Psychology (also PSYCH 209)

Spring. 4 credits. T R 2:55–4:10.
S. Johnson.

PSYCH 710 Research in Human Experimental Psychology

PSYCH 713 Information Processing: Conscious and Nonconscious (also PSYCH 413)

Spring. 4 credits. R 10:10–12:35. Staff.

PSYCH 714 Comparative Cognition (also PSYCH 414 and COGST 414)

Spring. 4 credits. T R 11:40–12:55.
M. J. Owren.

PSYCH 715 Psychology of Language (also PSYCH 215)

PSYCH 716 Auditory Perception (also PSYCH 316)

Fall. 4 credits. T R 10:10–11:25.
C. L. Krumhansl.

PSYCH 717 The Origins of Thought and Knowledge (also PSYCH 417)

Fall. 4 credits. M 1:25–4:25.
S. Johnson.

PSYCH 720 Research in Social Psychology and Personality

PSYCH 722 Hormones and Behavior (also PSYCH 322 and BIONB 322)

Spring. 3 credits. M W F 11:15–12:05.
E. A. Regan.

PSYCH 773–774 Proseminar in Cognitive Studies I and II (also COGST 773/774, PHIL 773/774, LING 773/774, and COMS 773/774)

Fall: R. grade. Spring: S-U only. 4 credits. The Cognitive Studies Proseminar consists of two semesters of meetings with the graduate faculty in the field of Cognitive Studies. The proseminar will consist of a general introduction to the field of Cognitive Studies including an introduction to each of the major disciplines that make up the minor: i.e., computer science, linguistics, philosophy, and psychology. In each of these disciplines, faculty members from the field will introduce the theoretical and methodological issues that underlie the field and its relation to Cognitive Studies; in addition, they will introduce various labs in which active research is being conducted in their field at Cornell.

The proseminar will include suggestions from each faculty in each field for further advanced interdisciplinary research that can be pursued at Cornell during a Cognitive Studies minor. It will conclude (end of second term) with individual student presentations in which students initiate a critique of some interdisciplinary research, after consultation with a
RELIGIOUS STUDIES MAJOR

See "Special Programs and Interdisciplinary Studies."

ROMANCE STUDIES

The Department of Romance Studies (Mitchell Greenberg, chair) offers courses in the following areas: French, Italian, and Spanish literature; French, Italian, Portuguese, Quechua, and Spanish language; Francophone, Italian, and Hispanic culture; linguistics and semiotics. Through its course offerings and opportunities for independent study, the department seeks to encourage study of the interactions of the Romance literatures among themselves, with other literatures, and with other fields of inquiry.

French

The Major

The major in French is divided into three options: French Area Studies, French linguistics, and French literature. While prospective majors should try to plan their programs as far ahead as possible, especially if they intend to study abroad, no student will be refused admission merely because of a late start. In view of the ongoing curriculum changes that will be implemented in 2000-2001, please see Professor Jacques Béreauté, the director of undergraduate studies. This consultation is especially important for finding out what sequence of courses will follow the current choices of courses.

The French Linguistics Option

The major in French linguistics is designed to give students proficiency in oral and written language and to develop skills in the linguistic analysis of French. To be admitted to the major, students should have completed Linguistics 101 and French 200, 203, or 213 (or their equivalents) by the end of the sophomore year. It is expected that all students in the major will also take either French 220, 221, or 222, preferably by the end of the sophomore year. To complete the major, a student must:

1) Acquire a sound degree of competence in French. This competence is demonstrated by the successful completion of French 312 (or its equivalent) or by passing a special examination. Typically, students in the major will have taken 312 by the end of their junior year.

2) Take six courses in French, Romance, and general linguistics (in addition to Linguistics 101). These courses will include at least one course concerning the history of French (e.g., Romance Linguistics 321). The awarding of honors is determined by the student's grades in the major and the quality of the honors essay.

The Literature Option

The major in French, literature option, is designed to give students proficiency in the oral and written language and to acquaint them with French literature and culture, and to develop skills in literary analysis.

Admission

To be admitted to the major, students should have completed FRLIT 220, or 221 plus 222 and FRROM 213 or its equivalent by the end of their sophomore year.

For completion of the major, a student must:

1) acquire a sound degree of competence in French language. This competence is demonstrated by the successful completion of French 301-312 or their equivalents, such as pass an Accredited study abroad or the passing of a special language test (the CASE examination) or the permission of the adviser (this option applies only to 312).

2) take six courses in French literature or civilization at the 300 level or above. These courses, selected in consultation with the student's major adviser, will include at least two pre-nineteenth-century courses and at least one 400-level course.

3) take two connected courses in one of the following related areas: literature, linguistics, comparative literature, history, history of art, music, government, or another relevant discipline with a significant French component. Students who are double majors are exempted from this last requirement.

The French Area Studies option

Admission

To be admitted to the major, students should have completed French Literature 220, 221, or
For completion of the major, a student must:

1. acquire a sound degree of competence in the French language. This competence is demonstrated by successful completion of French 301-312 or their equivalents, such as properly accredited study abroad or the passing of a special language test (the CASE examination) or the permission of the adviser (this option applies only to 312).

2. take two courses in Romance Studies (literature or civilization) at the 300 level or above.

3. take six courses at the 300 level or above in no more than three areas of interest such as, but not limited to, Africana studies, anthropology, comparative literature, French literature, economics, government, history, history of art, linguistics, music, theater arts, or women's studies. Each area must be represented by at least two courses, and each course must have a significant French component. At least one of these six courses should be at the 400 level.

Administration of French Area Studies

Students are admitted to the major by the director of undergraduate studies in the French section of the Department of Romance Studies but will be guided by their individual advisers. A copy of each student's program will be given to the director of undergraduate studies for approval and safe-keeping.

Study Abroad in France

French majors or other interested students may study in France for one or two semesters during their junior year. Opting for one of several study-abroad plans recognized by the Departments of Romance Studies and Linguistics facilitates the transfer of credits. Information about these plans is available from the director of undergraduate studies.

Students must be Cornell undergraduates with a strong academic record. The minimum French preparation is the completion of FRROM 213 or its equivalent in advanced course placement by the Cornell CASE examination. The taking of FRROM 301 and/or 312 is, however, strongly recommended.

Students interested in studying in France are encouraged to consider the special benefits offered by EDUCO, the program in Paris cosponsored by Cornell and by Duke University. EDUCO offers advanced students a challenging course of study and the experience of total immersion in French life and culture in Paris. Participants in this program spend the year or semester as fully matriculated students at the University of Paris VII and other institutions of higher learning in Paris, including the Institut d'Etudes Politiques (Sciences Po), selecting courses in many fields from the regular university course offerings. Study begins the academic year with an intensive three-week orientation in French history, society, and daily life. While it is possible to enroll in the EDUCO Program for one semester, admission will be given first to students planning to study abroad for the full academic year.

EDUCO maintains a center in Paris with appropriate support staff. The resident director, chosen annually from the Cornell and Duke faculties, teaches a special seminar each semester, provides academic advice, and helps ensure the quality of the courses. The center, which includes a small library and word-processing facilities, is regularly used by students for special tutorials, seminars, and lectures, as well as informal gatherings.

Admissions. The honors program encourages well-qualified students majoring in French literature and culture to do independent work in French outside the structure of courses. The preparation of the senior honors essay, generally spread over two terms, provides a unique learning opportunity, since it allows for wide reading and extensive rewriting to a degree not possible in the case of course papers.

No special seminars or courses are required of honors students, but they will have regular meetings with the faculty advisers who have agreed to supervise their work. They may receive course credit by enrolling in French 429-430, but these independent study courses must be taken in addition to the courses that meet the minimum requirements for the major. At the end of the senior year, each honors student will write an honors essay by a jury consisting of his or her faculty adviser and two other faculty members. The awarding of honors is determined by the student's grades in the major and the quality of the honors essay.

Language

All language courses are offered by the Department of Romance Studies and French linguistics courses are offered by the Department of Linguistics.

Note: Students placed in the 200-level courses have the option of taking language and/or literature courses; see listings under "Literature" for descriptions of the literature courses, some of which may be taken concurrently with French Language 200, 203, 211, or 213 or Hotel Administration 266.

FRROM 121 Elementary French
Fall only. (No longer offered in spring.) 4 credits. No prerequisites. Students who have studied French for 2 or more years must take a placement test (LPF). Intended for beginning students or those placed by examination. Recommended course after French 121: French 122.

FRROM 122 Elementary French
Fall or spring. 4 credits. Prerequisite: French 121, LPF score 37-44, or SAT II 370-480. Students who receive an LPF score of 56 after French 122 attain qualification and may take either French 200 or French 203. Otherwise, satisfactory completion of French 123 is required for qualification. Fall, S. Tun and staff; spring, C. Sparfel and staff.

FRROM 123 Continuing French
Fall or spring. 4 credits. Prerequisite: French 122, LPF score 45-55 or SAT II 490-590. Satisfactory completion of French 123 fulfills the qualification portion of the language requirement. Recommended courses after French 123: French 200 or 203, C. Waldron and staff.

FRROM 200 Intermediate Reading and Writing
Fall or spring. 3 credits. Prerequisite: qualification in French (French 123, LPF score 56-64, or SAT II 600-680). Satisfactory completion of French 200 fulfills the proficiency portion of the language requirement. Conducted in French. Recommended courses after French 200: French 211, French 213, French 220, or French 221. French 213 may be taken concurrently with either French 220 or French 221. Fall, S. LoBello, spring, C. Sparfel.

FRROM 203 Intermediate Composition and Conversation I
Fall, spring, or summer. 3 credits. Prerequisite: qualification in French (French 123, LPF score 56-64, or SAT II 600-680). Satisfactory completion of French 203 fulfills the proficiency portion of the language requirement. Recommended courses after French 203: French 211 or French 213, French 220 or French 221. French 211 or French 213 may be taken concurrently with either French 220 or French 221. I. Daly and staff.

FRROM 211 Intermediate Grammar, Reading, and Composition
Fall or spring. 3 credits. Prerequisite: proficiency in French (French 200 or French 203), or permission of instructor, or placement by Cornell Advanced Standing Examination (CASE). For admission to the Cornell Abroad Program, students are required to take either this course, or French 213, or have completed an equivalent level of study. Taught in French. Recommended courses after French 211: French 220, French 221, French 301, or French 305 (220 or 221 may be taken concurrently with either French 301 or 305). French 211 may be taken concurrently with either French 220 or French 221. N. Furman.

FRROM 212 Intermediate French
Fall or spring. 4 credits. Prerequisite: French 122, LPF score 37-44, or SAT II 370-480. Students who receive an LPF score of 56 after French 122 attain qualification and may take either French 200 or French 203. Otherwise, satisfactory completion of French 123 is required for qualification. Fall, S. Tun and staff; spring, C. Sparfel and staff.

FRROM 213 Continuing French
Fall or spring. 4 credits. Prerequisite: French 122, LPF score 45-55 or SAT II 490-590. Satisfactory completion of French 123 fulfills the qualification portion of the language requirement. Recommended courses after French 123: French 200 or 203, C. Waldron and staff.

FRROM 220 Intermediate Reading and Writing
Fall or spring. 3 credits. Prerequisite: qualification in French (French 123, LPF score 56-64, or SAT II 600-680). Satisfactory completion of French 200 fulfills the proficiency portion of the language requirement. Conducted in French. Recommended courses after French 200: French 211, French 213, French 220, or French 221. French 213 may be taken concurrently with either French 220 or French 221. Fall, S. LoBello, spring, C. Sparfel.

FRROM 221 Intermediate Grammar, Reading, and Composition
Fall or spring. 3 credits. Prerequisite: proficiency in French (French 200 or French 203), or permission of instructor, or placement by Cornell Advanced Standing Examination (CASE). For admission to the Cornell Abroad Program, students are required to take either this course, or French 213, or have completed an equivalent level of study. Taught in French. Recommended courses after French 211: French 220, French 221, French 301, or French 305 (220 or 221 may be taken concurrently with either French 301 or 305). French 211 may be taken concurrently with either French 220 or French 221. N. Furman.

FRROM 222 Intermediate French
Fall or spring. 4 credits. Prerequisite: French 122, LPF score 37-44, or SAT II 370-480. Students who receive an LPF score of 56 after French 122 attain qualification and may take either French 200 or French 203. Otherwise, satisfactory completion of French 123 is required for qualification. Fall, S. Tun and staff; spring, C. Sparfel and staff.

FRROM 211 Intermediate Grammar, Reading, and Composition
Fall or spring. 3 credits. Prerequisite: proficiency in French (French 200 or French 203), or permission of instructor, or placement by Cornell Advanced Standing Examination (CASE). For admission to the Cornell Abroad Program, students are required to take either this course, or French 213, or have completed an equivalent level of study. Taught in French. Recommended courses after French 211: French 220, French 221, French 301, or French 305 (220 or 221 may be taken concurrently with either French 301 or 305). French 211 may be taken concurrently with either French 220 or French 221. N. Furman.

FRROM 222 Intermediate French
Fall or spring. 4 credits. Prerequisite: French 122, LPF score 37-44, or SAT II 370-480. Students who receive an LPF score of 56 after French 122 attain qualification and may take either French 200 or French 203. Otherwise, satisfactory completion of French 123 is required for qualification. Fall, S. Tun and staff; spring, C. Sparfel and staff.

FRROM 211 Intermediate Grammar, Reading, and Composition
Fall or spring. 3 credits. Prerequisite: proficiency in French (French 200 or French 203), or permission of instructor, or placement by Cornell Advanced Standing Examination (CASE). For admission to the Cornell Abroad Program, students are required to take either this course, or French 213, or have completed an equivalent level of study. Taught in French. Recommended courses after French 211: French 220, French 221, French 301, or French 305 (220 or 221 may be taken concurrently with either French 301 or 305). French 211 may be taken concurrently with either French 220 or French 221. N. Furman.
FRROM 213 *Intermediate Composition* and *Conversation II*

Fall or spring. 3 credits. Prerequisite: proficiency in French (French 200 or 203), or permission of instructor. Taught on a specialized basis to address particular student needs. Themes and emphases may vary from section to section.

FRROM 300 *Directed Studies*

Fall or spring. 1–4 credits variable. Prerequisites: permission of instructor. Staff. Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

FRROM 301 *Advanced French I*

Fall or spring. 4 credits. Prerequisite: French 211 or 213, or Q++ on the Cornell Advanced Standing Examination (CASE). Recommended courses after French 301: French 312, French 220, or French 221 may be taken concurrently with 301. Fall. J. Béreaud and S. LoBello, spring. S. LoBello and staff.

Class discussions based on reading contemporary texts: half will be short stories, half will be articles on current events taken from French magazines or newspapers. All texts are chosen for their thematic or cultural interest and linguistic quality and will be given to accuracy in French through grammar review and weekly papers (essays or translations). Each student will give one or more oral presentations in class. Course required of French majors.

FRROM 305 *French through Film*

Fall or spring. 4 credits. Prerequisite: French 211 or 213, or Q++ on the Cornell Advanced Standing Examination (CASE). Recommended courses after French 305: French 301, French 312 (with the permission of the instructor). French 220, or French 221. French 220 or French 221 may also be taken concurrently with French 305. C. Waldron.

Analysis of French contemporary films and related readings. Used as a means of studying the language. Particular emphasis on the culture and historical context as it relates to French contemporary society. Additionally, guest speakers will provide enrichment on selected topics.

FRROM 312 *Advanced French II*

Fall or spring. 4 credits. Limited to 15 students. Prerequisite: French 301 or permission of the Cornell Advanced Standing Examination (CASE). J. Bereaud, M. C. Vallois; spring, M. C. Vallois and staff.

Completion of work done in French 301. The objective of French 301 is to teach students to speak and write correct French; in French 312 students will be expected to have a richer, more idiomatic and hopefully elegant command of the language. Formal study of grammar will be discontinued, and more attention will be devoted to the examination of texts and to oral presentations by students. Weekly papers as in French 301.

FRROM 630 *French for Reading—Graduate Students*

Spring only. 3 credits. Limited to graduate students. J. Ngaté.

Designed for those with little or no background in French, this course’s primary aim is to develop skill in reading French. Grammar basics, extensive vocabulary, and strategies for reading in a foreign language are covered. Some flexibility in selecting texts according to fields of interest is offered.

Literature

FRLIT 220 *French and Francophone Culture @*

Spring. 3 credits. Prerequisite: SAT II score of 640 and above, or LFF score of 60, or FRROM 200 or 203. Conducted in French. J. Ngaté.

This course serves as an introduction to French Acre Studies. It provides an overview of Francophone culture and society from 1945 to the present, with some attention given to accuracy in French through grammar. Some flexibility in selecting texts dealing with issues of current concern in France; works by French and Maghrebi or African writers; poetry or drama; two films will also be discussed.

FRLIT 221 *Modern French Literature #*

Fall or spring. 3 credits. Prerequisites: SAT II score of 640 and above, or LFF score of 60, or FRROM 200 or 203. Conducted in French. Fall. J. Ngaté and staff; spring. J. Bereaud and staff.

This course, divided into small sections, is intended as an introduction to French literature of the modern period. Texts have been chosen both as a function of their centrality to the traditional literary canon and with an eye to experimentation. The course considers literary genres (poetry, drama, the novel) as well as a temporal frame, alternating unevenly, at different speeds, with diverse claims on our attention. The course is designed to satisfy a general interest in modern French literature as well as to prepare students to pursue a French major in literature. Readings will include works by Baudelaire, Mallarme, Beckett, Satre, Froast, and Duras.

FRLIT 222 *Early Modern French Literature #*

Spring. 3 credits. Prerequisite: FRLIT 220, 221, or permission of the instructor. Conducted in French. M. C. Vallois.* Study of the classical literature of seventeenth-century France (Corneille, Racine, Molière, Mme de Lafayette, La Fontaine) and of eighteenth-century Enlightenment literature (Voltaire, Rousseau, Diderot, Beaumarchais). Special attention will be given to poems and plays in which these various works represent or deal with the shift from an aristocratic cultural code of values to modern bourgeois ideology and aesthetics. The course will also invite reflection on the status and centrality of female characters in classical and neo-classical French literature; it will attempt to trace the evolution from the classical tragic heroine to more modern (but no less problematic) representations of women.

FRLIT 224 *The French Experience*

Fall. 3 credits. Conducted in English. Readings available both in French and in English translation. A. Berger.

We look ethnographically at the relations between culture and society as they are reflected in French society, and we look at views from France, from America, and other places. As we emphasize differences, the French experience emerges.

Note: Prerequisite for all 300-level courses in French literature: FRLIT 220, 221, or the equivalent.

FRLIT 321 *French Civilization I: History, Culture, and Cinema*

Fall. 4 credits. Conducted in French. J. Bereaud.

This course will investigate the past as it has shaped the present, focusing on some salient episodes which span 20 centuries of French history from the Roman occupation of Gaul to the events of May, 1968. Three types of materials will be studied: a history textbook, documents of cultural significance (literature, art, popular culture), and a few films to help bring the present to life. Students will select topics of personal interest for research and oral presentation in class; these topics could range from the investigation of historic figures such as Joan of Arc, Louis XIV, or Napoleon to the effects of recent wars on the national psyche; from the art of the stained glass windows of the medieval cathedrals to the technological revolution that prepared the way for the first flight of the Supersonic Concorde in 1969.

FRLIT 322 *French Songs*

Spring. 4 credits. Prerequisite: FRROM 213. Conducted in French. J. Bereaud.

"Everything in France ends in a song." The course will examine the truth of this old adage and study French songs as a reflection of the French experience. Various approaches will include: an overview of traditional folkloric songs (typically pre-Revolutionary); a study of certain genres: the "realist" and the "poetic" traditions, love songs, protest songs, drinking songs, children's songs, etc.; and a study of a few artists who have had a major influence in France after WWII, such as E. Piaf, G. Brassens, L. Ferré, J. Brel. Students will be expected to give oral presentations on artists of their own choosing and to write one short paper and one research paper on a major figure or a particular genre or period (sea shanties, songs of the "Front Populaire" or of World War II, French rap songs, etc.).

FRLIT 330 *Francophone African Literature @*

Fall. 3 credits. J. Ngaté.

Introduction to the works of representative poets, dramatists, novelists, and short-story writers from sub-Saharan Africa and Maghreb: L. S. Senghor, C. Laye, F. Oyono, L. S. Senghor, S. Diop Senghor, S. L. Tamsi, and the Afro-Caribbean Aimé Césaire will be among the writers whose works will be read. The focus will be on the twentieth century and the nature of these writers' relationships with both the West and with Africa.

FRLIT 334 *The Novel as Masterwork (also FRLIT 684)*

Spring. 4 credits. Conducted in French. Prerequisite: French 221 or permission of the instructor. N. Furman.

This course traces the evolution of the nineteenth-century French novel. Readings
include novels by Sembach, Balzac, Flaubert, and Zola.

**FRLIT 336 French Film**

Spring. 4 credits. T. Murray.

A survey of major films, directors, and trends in French film. Beginning with classic French films by directors such as Bresson, Clair, Carné, Gance, Vigo, Ophuls, Cocteau, Duvivier, Jean Renoir, and Tati, we will consider the development of the New Wave (Truffaut, Godard, Rohmer, Rivette), the Left Bank (Marker, Varda, Resnais), and trends in post-68 cinema. We will also consider the impact of these movements on the evolution of France as a nation and a culture, as well as the ongoing debate over the status of the French language as a national and international language, and intellectual trends informing them, with particular emphasis on French film theory since the Cahiers du Cinéma. Weekly screenings will be held in French with English subtitles, and class conducted in English; papers either in French or English.

**FRLIT 356 Renaissance France**

Spring. 4 credits. Conducted in French. K. Long.

This course will trace the importance of a number of movements/crises/events for the general history of the lyric in France. Special emphasis will be placed on the importance of the Wars of Religion and the development of new voices in the repertoire. Works by well-known authors such as Camus, Robbe-Grillet, and Duras will be accompanied by works of female writers, including de Stael, George Sand, Flora Tristan, Rachilde, and others. This course will also consider the development of the New Wave (Truffaut, Godard, Rohmer, Rivette), the Left Bank (Marker, Varda, Resnais), and trends in post-68 cinema. We will also consider the impact of these movements on the evolution of France as a nation and a culture, as well as the ongoing debate over the status of the French language as a national and international language, and intellectual trends informing them, with particular emphasis on French film theory since the Cahiers du Cinéma. Weekly screenings will be held in French with English subtitles, and class conducted in English; papers either in French or English.

**FRLIT 381 Nineteenth-Century French Women Writers**

Fall. 4 credits. Conducted in French. M. C. Vallais.

While situating the works read within their specific historical and literary context, this course will attempt to address two sets of questions: (1) How does the inscription of literature as a Public Institution within a phallocentric culture order affect women authors' status and writing strategies? (2) To what extent and at what levels does being a woman inform or shape the text produced? In what ways is literary writing concerned with sexual difference? Writers will include Mme. de Staël, George Sand, Flora Tristan, Rachilde, and others.

**FRLIT 387 Symbolist Poetry**

Fall. 4 credits. R. Klein.

This course will examine the Symbolist movement in France, from Baudelaire to Valéry, including the work of Verlaine, Rimbaud, Mallarmé, Louise Michel, and others. It will consist mainly in the close reading of selected texts, and it will seek as well to situate Symbolist poetry within the more general history of the lyric in France. Special attention will be paid to Symbolist poetics, i.e., to theories of poetic practice and composition.

**FRLIT 395 Camus and His Contemporaries**

Fall. 4 credits. Prerequisite: French 221 or permission of instructor. Conducted in French. S. Tarrow.

The course will examine Camus's major works of fiction together with selections from the work of such writers as J. P. Sartre, Simone de Beauvoir, Alain Robbe-Grillet, Albert Memmi, Mohammed Dib, Assia Djebar, and others. In the context of a historical period marked by war—World War II, the Algerian War of Independence—we will discuss some of the debates that sparked among his contemporaries in France and North Africa, and examine the ways in which these debates continue to resonate among French intellectuals. Issues to be addressed will include the question of political commitment in literature; colonialism, racism, and their expression in literature; and problems of identity, existentialism, and audience.

**FRLIT 396 The Contemporary French Novel: 1950 to the Present**

Spring. 4 credits. Prerequisite: French 221 or permission of instructor. S. Tarrow.

The course will attempt to address two sets of questions: (1) How does the inscription of the "New World," and its various textual and visual representations, affect women's writing? (2) To what extent and at what levels does being a woman inform or shape the text produced? In what ways is literary writing concerned with sexual difference? Writers will include Mme. de Stael, George Sand, Flora Tristan, Rachilde, and others. This course will also consider the development of the New Wave (Truffaut, Godard, Rohmer, Rivette), the Left Bank (Marker, Varda, Resnais), and trends in post-68 cinema. We will also consider the impact of these movements on the evolution of France as a nation and a culture, as well as the ongoing debate over the status of the French language as a national and international language, and intellectual trends informing them, with particular emphasis on French film theory since the Cahiers du Cinéma. Weekly screenings will be held in French with English subtitles, and class conducted in English; papers either in French or English.

**FRLIT 417 The Vertical City (also S HUM 417)**

Spring. 4 credits. P. Saint-Amour.

For description see S HUM 417.

**FRLIT 419-420 Special Topics in French Literature**

419, fall; 420, spring. 2-4 credits each term. Prerequisite: permission of instructor. Staff. Guided independent study of special topics.

**FRLIT 429-430 Honors Work in French**

429, fall; 430, spring. 8 credits year-long course. R grade fall semester, letter grade spring semester, with permission of adviser. Open to juniors and seniors. Consult the director of the honors program for further information.

**FRLIT 436 Francophone African Literature**

Spring. 4 credits. J. Ngaté.

A critical look at the conditions of possibility, the nature and the status of the African novel in French from the 1920s to the early 1980s. How successful has it been in contributing to the invention (or perhaps the reinvention) of Africa in French? What can be said about the

**FRLIT 437 Poetry and Rhetoric (also COM L 467/467L, ENGL 483/483S, and FRLIT 437)**

Fall. 4 credits. C. Chase.

In present-day common usage, "poetry" means emotion or beauty, and "rhetoric" means deceptive decorative language. These incompatible meanings cover a history of close connection between poetry and rhetoric. Historically, if poetry and rhetoric at times have been seen as opposite, incompatible kinds of language, they also have been identified with each other and strongly distinguished from philosophy and science. Where rhetoric belongs turns out to raise issues of politics and philosophy, not only of literary history and language. Such questions and issues have been intensely pursued in modern poetry beginning with the Romantics.

This course will examine the works of such writers as J. P. Sartre, Simone de Beauvoir, Alain Robbe-Grillet, Albert Memmi, Mohammed Dib, Assia Djebar, and others. In the context of a historical period marked by war—World War II, the Algerian War of Independence—we will discuss some of the debates that sparked among his contemporaries in France and North Africa, and examine the ways in which these debates continue to resonate among French intellectuals. Issues to be addressed will include the question of political commitment in literature; colonialism, racism, and their expression in literature; and problems of identity, existentialism, and audience.

**FRLIT 447 Medieval Literature #**

Spring. 4 credits. Prerequisite: French 221 or permission of the instructor. Conducted in French. A. Colby-Hall.

This course is designed to give students facility in reading Old French and an appreciation of two major genres of medieval French literature: the epic and the theater.

**FRLIT 454 Montaigne #**

Fall. 4 credits. Conducted in French. K. P. Long.

This course will examine Montaigne's Essais in the context of the Wars of Religion and the rise of skepticism, with particular attention to questions of epistemology (subjectivity and the self), ethics (personal and governmental responsibility in times of crisis), and historical and literary method. We will compare Essais to a number of texts by Cicero, Sextus Empiricus, and Ovid, among others.

**FRLIT 475 Eroticism & Eroticism:**

Figures of the Other in the French Enlightenment

Fall. 4 credits. Conducted in French. A. Berger.

"To study man, it is necessary to learn how to see into the distance; it is necessary to observe differences in order to discover common properties," (Rousseau, *Essai sur l'Origine des Langues*). Imagined or theorized, the exotic experiment helped shape modern and contemporary discourses on the cultural and political community, on universalism and particularism, on diversity and identity. Good savages or bad giants, oriental women or despots. Indians, Zoroastrians, Tahitians, Americans (etc.) through these figures of otherness thinkers and writers of the Enlightenment grasped at the foreign in the familiar, the same in the different, and the desirable in the estranged. For exoticism is always eroticized (or the erotic is orientalized). The other may be nearer or farther than one thinks. How can one be a Persian (wo)man? (Works studied include
Montesquieu, Rousseau, Diderot, and de Saint-Pierre).

FRLIT 482 Decadence, Degeneration, and the Nineteenth-Century Imaginary (also COM L 463)
Spring. 4 credits.

This course, through critical reading of French, British, and German prose fiction as well as examples of medical, anthropological, and philosophical thought, will examine the social significance of discourses of disease, decadence, and degeneration from the late-eighteenth century to the early twentieth. How are questions of bodily pathology related to the construction of "national" bodies? How does perversion emerge at the core of theories of beauty and normativity in Europe's colonial scenes? What is the relationship between symptoms and texts, between sickness and subversion, in the relationship between symptoms and texts, between sickness and subversion, in the relationship between symptoms and texts, between sickness and subversion, in the relationship between symptoms and texts, between sickness and subversion, in the relationship between symptoms and texts, between sickness and subversion, in the relationship between symptoms and texts.

FRLIT 486 Anthropology and Genealogy (also FRLIT 666)
Fall. 4 credits. T. McNulty.

This course will serve to provide an overview of twentieth-century French thought through the themes of anthropology and genealogy. We will begin by reading Lévi-Strauss and Mauss on the problems of gift, exchange, and sacrifice and then explore the influence of these anthropological topics on philosophy and cultural theory through the problems of the death drive, the anti-economies of expenditure and hospitality, nomad thought, violence, and the supplement. Nietzsche's Genealogy of Morals will then serve as a jumping off point for an exploration of one of the most interesting features of modern French thought, its fascination with genealogy: the invention of a genealogy for one's own thought, the primal scene of culture of the gap in genealogy, the genealogy of the simulacrum, the Freudian genealogy of the fantasy. We will explore the importance of counter-genealogy or "marginal" thought, examining the fascination of twentieth-century theory with the forgotten, the schizophrenics, simulacra, and the dismembered god. Dionysus. Readings will include works by Nietzsche, Freud, Lévi-Strauss, Mauss, Bataille, Lacan, Foucault, Deleuze, Derrida, and Durand. All texts will be available in English.

FRLIT 488 Baudelaire in Context (also FRLIT 665, COM L 480/680)
Spring. 4 credits. Prerequisite: one 300-level course in French literature or permission of instructor. Conducted in French. J. Culler.

A study of Les Fleurs du mal in the context of various nineteenth and twentieth-century discourses. The Romantic lyric (Hugo, Lamartine, Desbordes-Valmore), Romantic Satanism, debates about prostitution, and twentieth-century accounts of Baudelaire as the founder of modern poetry or the poet of the city.

FRLIT 490 The Roots of Modernism
Spring. 4 credits. Prerequisite: French 221. Conducted in French. R. Klein.

The Modernist era in art, which is associated with movements like Cubism, Surrealism, and Dada, has its roots in "the Banquet Years," the effervescence fin de siècle in Europe that lasted until 1913. In France, the period includes writers like Jarry, Apollinaire, Gide, Valéry, Cocteau, Tzara, and Proust. Composers such as Satie, Stravinsky, artists like Cézanne and Rousseau. In this course, individual works will be examined with an eye to their role as precursors of more familiar modern forms of artistic expression.

FRLIT 492 French Feminisms (also WOMNS 493)
Fall. 4 credits. Conducted in English. N. Furman.

This course will examine the political, theoretical, and literary concerns of contemporary French feminists. We will consider the most important figure in contemporary French letters, Simone de Beauvoir, as well as other women writers like Jarry, Apollinaire, Gide, Valéry, Cocteau, Tzara, and Proust. Composers such as Satie, Stravinsky, artists like Cézanne and Rousseau. In this course, individual works will be examined with an eye to their role as precursors of more familiar modern forms of artistic expression.

FRLIT 497 Jean Genet
Fall. 4 credits. R. Klein.

This course will focus on the work of a writer, homosexual, and thief that many distinguished critics and theorists consider the most important figure in contemporary French letters. His plays and novels will be read in conjunction with selected critical writings, in order to better appreciate the complexity and lyricism of his language and to gauge the owner of his corrosive imagination.

FRLIT 607-608 Proseminar
607, fall; 608, spring. 2-4 credits each term. M. Greenberg.

Meeting every two weeks, the pro-seminar will be the place for sustained exchanges among students. Guided independent study for graduate students.

FRLIT 632 Forget Paris, Forget the USA: Francophone Fictions of Decolonization in the 'New World'
Fall. 4 credits. J. Penney.

Francophone fiction written in the Americas since the end of the second World War has grappled with this fundamental problem: how does a distinct French-language literary culture emerge and survive in the context of the continued hegemony of France in the Francophone world, and the ever-increasing cultural and economic domination of the United States on the North American continent and across the globe? Given the collective memory of the historical traumas of the British conquest of northern North America and the slavery trade, language has been used strategically as a means of evoking the particular historical and psychical experiences of Francophone and Creoleophone constituencies in the Americas.

In this course we will read recent novels written in French that grapple with this problem of nation and culture building in spaces plagued by the forces of lingering and new colonialisms. After a brief historical introduction to the history of the French colonial presence in American space, we will begin our literary study with two cultural manifestoes—Aimé Césaire's Discourse on Colonialism and Paul-Emile Borduas' Refus global. Novels will be selected from the following authors: Bernette Junier, Hubert Aquin, Edouard Glissant, Nicole Brossard, Maryse Condé, Jacques Godbout, Marie-Claire Blais, Patrick Chamoiseau, and Dany Laferrière.

This course will be of interest to students in the following fields: postcolonial studies, critical race theory, gender studies, and queer theory.

FRLIT 634 Frantz Fanon, Postcolonial Psychoanalysis and the Promise of Revolution
Spring. 4 credits. J. Penney.

Few writers have had as significant an influence on the development of contemporary postcolonial theory as Frantz Fanon. Born in Martinique and trained as a psychiatrist, Fanon first rose to prominence as a theorist of the psychology of the colonial relation, subsequently moving on to a concern with the politics of anticolonial struggle and the relation between decolonization and the European and world economics. The object of this course will be to trace the movement in Fanon's thought from its original psychoanalytic interest in race relations in the French Antilles to its later materialist concern with the question of anticolonial struggle, in particular as it relates to the moment of Algerian independence. We will consider Fanon's oeuvre as a particular postcolonial articulation of the characteristicpost war theoretical project to hybridize the work of Marx and Freud—to delineate, in other words, the relations between unconscious desire and social struggle, more specifically in the historical context of the decline of the modern European imperial era.

In addition to the works of Fanon, we will also read other works on psychoanalysis and colonialism, including Octave Mannoni's Psychologie de la colonisation, Wulf Sachs' Black Hamlet, and Marie-Cécile and Edmond Ortuiges' Oedipe africain. We will also screen Isaac Julien's film on Fanon. This course will be of interest to students in the following fields: postcolonial theory, psychoanalytic theory, and Marxist approaches to culture.

FRLIT 637 Poetry and Rhetoric (also COM L 487/687, ENGL 493/683, and FRLIT 437)
Fall. 4 credits. C. Chase.

For description, see FRLIT 437.

FRLIT 639-640 Special Topics in French Literature
639, fall; 640, spring. 2-4 credits each term. C. Chase.

Guided independent study for graduate students.

FRLIT 682 French Literature after the Death of God: In and around the Collège de Sociologie
Spring. 4 credits. T. McNulty.

This course will examine novels by Georges Bataille, Pierre Klossowski, Michel Leiris, and Roger Caillois, against the background of the formation of the Collège de sociologie and publication of the journal Acéphale in the 1930s. Our particular focus will be the thesis that the death of God results in a dissolution of the "grammatical fiction of the I," with profound implications for literature and subjectivity alike.

FRLIT 684 The Novel as Masterwork (also FRLIT 466)
Spring. 4 credits. N. Furman.

For description, see French Literature 334.

FRLIT 686 Anthropology and Genealogy (also FRLIT 666)
Fall. 4 credits. T. McNulty.

For description, see French Literature 486.
ITALA 121-122 Elementary Italian
121, Fall; 122, spring. 4 credits each term. Prerequisite: for Italian 122, Italian 121 or equivalent. Intended for beginners or students placed by examination. At the end of Italian 122, students who score 56 or higher on the LPI attainment qualification and may enter the 200-level sequence; otherwise Italian 123 is required for qualification. Evening prelims. T. Alkire and staff.

ITALA 123 Continuing Italian
Fall or spring. 4 credits. Limited to students who have previously studied Italian and have an LPI score of 45-55 or an SAT II score of 460-580. Satisfactory completion of Italian 123 fulfills the qualification portion of the language requirement. K. Battig von Wittelsbach.

ITALA 120 Intermediate Composition and Conversation I
Fall or spring. 4 credits. Prerequisite: Italian 121. Fall, F. Cervesi-McCobb or P. Swenson; spring, K. Battig von Wittelsbach.

ITALA 204 Intermediate Composition and Conversation II
Spring. 3 credits. Prerequisite: Italian 203 or equivalent. S. Stewart-Steinberg.

ITALA 216-217 Introduction to Italian Literature
Fall. 216, spring. 217. 3 credits. Prerequisite: permission of instructor. ITALL 216 is not prerequisite to ITALL 217. Conducted in Italian. T. Campbell.

ITALA 313 Advanced Italian Language in Italian Culture
Fall. 4 credits. Prerequisite: Italian 204 or equivalent, or permission of instructor. P. Swenson.

ITALA 300 Directed Studies
Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

ITALA 305 Advanced Italian Literature
Fall. 4 credits. Prerequisite: permission of instructor.
We will devote special attention to two A study of the discourses about reading and old French, and Latin sources? All readings sexual difference found in literary, historical, and philosophical material drawn from Italian, early nineteenth century through the rise of fascism. We will study the movement for national unification (the Risorgimento), the drive to “make Italians,” the rise and fall of liberalism, and the coming to power of the fascist dictatorship through a variety of cultural products, such as literature, opera, and film.

ITAL 300 Italian Practicum
Fall or spring. 1 credit. T. Campbell, M. Migiel, and S. Stewart-Steinberg. Students enrolled in an Italian literature or culture course that is conducted in English (e.g., ITALL 223, 369, 445, 450, 455, and 468) may opt to take this one-credit Practicum in Italian, provided that they have already attained proficiency in the language. Students in the Practicum will spend one class hour per week discussing selected issues or texts in Italian; they will also complete an appropriate amount of written work in Italian.

ITAL 369 History of Florence (also HIST 369)
Fall. 4 credits. J. Najemy. For description, see HIST 369.

ITAL 389 Modern Italian Novel (also ITALL 689)
Fall. 4 credits. Prerequisite: permission of instructor. Conducted in Italian. M. Migiel. In this course, we will read novels by representative twentieth-century novelists such as Moravia, Vittorini, Calvino, and Morante, and in particular, we will consider how the modern novel explores the issues of moral truth, fiction-making, history, and ethical responsibility.

ITAL 419-420 Special Topics in Italian Literature
419, fall; 420, spring. 2–4 credits each term. Prerequisite: permission of instructor. T. Campbell and M. Migiel. Guided independent study of specific topics.

ITAL 429-430 Honors in Italian Literature
429, fall; 430, spring. 8 credits year-long course. R fall semester, letter grade for spring semester. Limited to seniors. Prerequisite: permission of instructor. M. Migiel.

ITAL 445 Boccaccio: Gender, Power, and the Medieval Text (also COM L 456, WOMNS 448, ITALL 464)
Spring. 4 credits. Conducted in English. M. Migiel. A study of the discourses about reading and sexual difference in Boccaccio’s Decameron. We will devote special attention to two questions: (1) What does it mean to carry out a feminist reading of a male-authored text? (2) How do the narrators of the Decameron network earlier discourses about reading and sexual difference found in literary, historical, and philosophical material drawn from Italian, Old French, and Latin sources? All readings will be done in English translation; students who command the pertinent foreign languages may read texts in the original language. An extra hour-long discussion section will be organized for students who read and speak Italian.

ITAL 450 Renaissance Poetry (also COM L 450/650, ENGL 422/622, and ITALL 650)

ITAL 455 Poetry in the Radio Age: Data Retrieval and Twentieth-Century Italian Lyric (also ITALL 655)
Fall. 4 credits. T. Campbell. Focusing on the modern Italian lyric, this seminar will consider the relation among transmission media in the first 30 years of the last century. The course will be divided into two parts. In the first, we will broadly conceive an archaeology of radio, paying particular attention to the media's mythic, prophetic, and feedback loops that link poets with typing hands, stenographers, and voice storage media. In the second, we will ask how modern Italian poetry registers the interplay of information and entropy. Texts include F. T. Marinetti’s futurist manifestos and various wireless messages from Campana (Orbic Songs), d’Annunzio (Nocturne), Palazzeschi (The Man of Smoke), Saba (The Dark of the Sun, Songbook), and Ungaretti (The Buried Harbour). Pound’s Guide to Kulchur and some German Dada will provide the necessary comparative approach. The class will be conducted in English, and all texts will be available in English translation.

ITAL 466 Representing War and Modernity
Spring. 4 credits. Conducted in Italian. T. Campbell. This course will examine a selection of modern Italian war narratives within the context of contemporary theorizations on trauma. We will begin with war in the trenches. In the second half, we will shift our attention to the war in Ethiopia, World War II. Questions to be addressed include: how literature approximates the trauma of war; the relation among media, subjectivity, and getting people to die for you; and how modern narratives measure and commemorate their distance from combat. Authors include Flaiano, Primo Levi, Revelli, Salsa, and Tobino.

ITAL 468 Love and Sex in the Italian Renaissance (also HIST 468)
Fall. 4 credits. J. Najemy. For description, see HIST 468.

ITAL 639-640 Special Topics in Italian Literature
639, fall; 640, spring. 4 credits each term. Prerequisite: permission of instructor. T. Campbell and M. Migiel.

ITAL 645 Boccaccio: Gender, Power, and the Medieval Text (also COM L 456, WOMNS 448, and ITALL 445)
Spring. 4 credits. M. Migiel. For description, see ITALL 445.

ITAL 650 Renaissance Poetry (also ITALL 450, COM L 450/650, and ENGL 422/622)
Spring. 4 credits. W. Kennedy. For description, see ITALL 450.

ITAL 655 Poetry in the Radio Age: Data Retrieval and Twentieth-Century Italian Lyric (also ITALL 455)
Fall. 4 credits. T. Campbell. For description, see ITALL 455.

ITAL 689 Modern Italian Novel (also ITALL 389)
Fall. 4 credits. M. Migiel. For description, see ITALL 389.

Portuguese
Faculty: J. Oliveira

PORT 121-122 Elementary Portuguese
121, fall; 122, spring. 4 credits each term. Intended for beginners. Students may attain qualification on completion of 122 by achieving a satisfactory score on a special examination. A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

PORT 203-204 Intermediate Composition and Conversation
203, fall; 204, spring. 3 credits each term. Prerequisites: for Portuguese 203, Portuguese 122 or permission of instructor; for Portuguese 204, Portuguese 203 or permission of instructor J. Oliveira. Conversational grammar review with special attention to pronunciation and the development of accurate and idiomatic oral expression. Includes readings in contemporary Portuguese and Brazilian prose and writing practice.

PORT 319 Readings in Luso-Brazilian Literature
Fall or spring. 4 credits. Prerequisite: Portuguese 204 and permission of instructor. J. Oliveira. This course will take a broad approach to selective writings of representative Luso-Brazilian authors from the nineteenth century to the present: Machado de Assis, Eca de Queirzos, Aluisio de Azevedo, Graciliano Ramos, Fernando Pesoa, Jorge Amado, and others.

Quechua
Faculty: L. Morató-Peña

QUECH 131-132 Elementary Quechua
131, fall; 132, spring. 3 credits each term. Prerequisite: qualification in Spanish. This language series (131-132) cannot be used to satisfy the language requirement. L. Morató-Peña. A beginning conversation course in the Cuzco dialect of Quechua.

QUECH 133-134 Continuing Quechua
133, fall; 134, spring. 3 credits each term. Prerequisites: for Quechua 133, Quechua 131 or equivalent; for Quechua 134, Quechua 133 or equivalent. Satisfactory completion of Quechua 134 fulfills the qualification portion of the language requirement. L. Morató-Peña. An intermediate conversation and reading course. Study of the Huarochiri manuscript.

QUECH 136 Quechua Writing Lab
Spring. 1 credit. Prerequisite: concurrent enrollment in Quechua 132 or instructor’s approval. Letter grade only. L. Morató-Peña. Computer-assisted drill and writing instruction in elementary Quechua.

QUECH 300 Directed Studies
Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. L. Morató-Peña.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

Romance Studies

ROM S 321 History of the Romance Languages (also LING 321)  
Fall. 4 credits. Prerequisites: Linguistics 101 or equivalent and qualification in any Romance Language. C. Rosen.  

ROM S 322 History of the Romance Languages (also LING 322)  
Spring. 4 credits. Prerequisites: Linguistics 101 or equivalent and qualification in any Romance Language. C. Rosen.  
French, Italian, and Spanish from 850 to 1250 arranged with instructor. Times will be combined with another discipline may also allow a student to undertake preprofessional training for graduate school in law or medicine. Students interested in a Spanish major are encouraged to seek faculty advice as early as possible. For acceptance into the major, students should consult Prof. Debbie Castillo, dac9@cornell.edu, Director of Undergraduate Studies, who will admit them to the major, and choose an adviser from the Spanish faculty. Spanish majors will then work out a plan of study in consultation with their advisers. Previous training and interests as well as vocational goals will be taken into account when the student's program of courses is determined.

All tracks include the following core:

1. **SPANL 311 and 312.**
2. **SPANL 316, 318, and 319 (formerly 315)** (not necessarily in that order)

The Spanish literature option normally includes at least 20 credits of Spanish literature beyond the core courses. Literature majors are strongly urged to include in their programs courses in all the major periods of Hispanic literature.

**Spanish Language Option**  
A combination of literature and linguistics.

Area Studies Option (Spanish, Latin American, or U.S. Latino Studies):  
At least 20 credits of courses at the 300 level and above in any of these focus areas beyond the core, all courses to be approved through consultation with the major adviser. Courses should reflect interdisciplinary interests in the area and may include up to three other academic fields of interest. For example, a student interested in Latin American studies may want to include courses in such fields as Latin American history, government, rural sociology, and economics. Students who want to specialize in U.S. Latino issues may want to include such topics as sociology of Latinos, Latino history, and Latino medical issues in addition to further studies in literature. Students planning on spending a year or semester in Spain (but not exclusively such students) frequently plan their coursework to emphasize Spanish history, art, political economy, and other related fields, such as courses on Islam and Moorish Spain.

All students are encouraged to enrich the major program by including a variety of courses from related fields or by combining Spanish with related fields such as history, philosophy, sociology, anthropology, art, music, classics, English, comparative literature, and other foreign languages and literatures. The interdepartmental programs in Latin American Studies and Latino Studies sponsor relevant courses in a variety of areas.

The J. G. White Prize and Scholarships are available annually to students who achieve excellence in their studies.

**Study Abroad in Spanish.** Cornell, the University of Michigan, and the University of Pennsylvania cosponsor an academic year in Spain program. Students enrolled in this program spend the first month before the fall semester begins in an orientation session at the University of Seville, where they take coursework in Spanish language and culture and take advantage of special lectures and field trips in Andalucia. The College of Arts and Sciences awards three credits for orientation. Once the semester begins, students enroll in regular classes at the University of Seville and at the program's center facility. Center courses are designed for the program and include a seminar offered by the resident director from the faculty of either Cornell, Michigan, or Pennsylvania. Other center courses typically include history of art, history of the Mediterranean region, a literature course, and Spanish composition and syntax. In Seville, students live in private homes and a rich array of cultural activities and excursions are organized every semester. Applicants are expected to have completed at least SPANR 219 (formerly 204) prior to departure. Students are strongly encouraged to study abroad for the entire year rather than one semester. Students interested in the study abroad program should visit Cornell Abroad in 474 Uris (www.einaudi.cornell.edu/cuabroad).

**Study Abroad in Bolivia:** The Summer program in Cochabamba, Bolivia is sponsored by the Latin American Studies Program and accepts both undergraduate and graduate students. Students live with Bolivian families and normally take two courses with Cornell faculty who participate in this program. In addition to course work in Bolivian culture, politics, and social movements, the program features the opportunity to do intensive study in Quechua, the native language spoken by many Bolivians, as well as Spanish, and to participate in research and internships with grass-roots communities, government offices, and businesses.

Honors. Honors in Spanish may be achieved by superior students who want to undertake guided independent research and writing in an area of their choice. Students in the senior year select a member of the Spanish faculty to supervise their work and direct the writing of their honors essay (see Spanish 429–430).

**Language**  
All language courses are offered by the Department of Romance Studies, and Spanish linguistics courses are offered by the Department of Linguistics.

**SPANR 112 Elementary Spanish: Review and Continuation**  
Fall. 4 credits. Prerequisite: LPS score 37–44. M. Rice.  
This course is designed for students who have taken Spanish and who have a placement score of 37–44 or SAT II 370–450. It provides a basic review and then moves on to cover new material for the remainder of the term. Students who have taken Spanish 121 may enroll for this course. As part of the final exam, students take the LPS and, according to their score, may place into Spanish 123 (score below 56) or receive qualification (56 or above), and placement into the 200-level courses.

**SPANR 121–122 Elementary Spanish**  
121, fall and summer; 122, spring. 4 credits each term. Prerequisite: for Spanish 122, Spanish 121. Z. Iguina and staff.  
This course is intended for students with no experience in Spanish. (Students who have previously studied two or more years of Spanish are not eligible for 121 unless they have an LPS score lower than 37 or SAT II lower than 370.) The course provides a thorough grounding in all language skills. Language practice in small groups. Lectures cover grammar, reading, and cultural information. Evening prelims.

**SPANR 123 Continuing Spanish**  
Fall, spring, or summer. 4 credits. Prerequisite: Spanish 112, Spanish 122, or an LPS score 45–55 or SAT II 460–580. M. Rice.  
An all-skills course which requires daily preparation before class and active student participation in class. Includes researching cultural topics of the student's choice, oral presentation, grammar review, audio tapes, video, journal and essay writing, speaking in small groups and authentic readings. Satisfactory completion of Spanish 123 fulfills
the qualification portion of the language requirement. After this course, the student may take 207 of 209.

SPANR 200 Spanish for English/ Spanish Bilinguals (also LSP 202)
Fall or spring. 3 credits. Prerequisite: LPS score 56 or higher, SAT II 590 or higher, CASE placement, or permission of instructor. N. Maldonado-Méndez. A course designed to expand bilingual students' knowledge of Spanish by providing them with ample opportunities to develop and improve each of the basic language skills. Not available to students who have taken Spanish 207 (formerly 213) or 209 (formerly 203).

SPANR 207 Intermediate Spanish for the Medical and Health Professions (formerly 212)
Fall or spring. 3 credits. Prerequisite: qualification in Spanish (Spanish 123, LPS score 56-64, or SAT II 590-680) or permission of instructor. Students who have taken Spanish 209 (formerly 203) or 200 should speak to the instructor. A. Stratakos-Tidó. Conversational grammar review, with dialogues, debates, compositions, and readings on health-related themes. Special attention is given to relevant cultural differences. Fulfills proficiency requirement.

SPANR 209 Intermediate Composition and Conversation I (formerly 203)
Fall or spring. 3 credits. Prerequisite: Spanish 123, LPS score 56-64, or SAT II 590-680. Not available to students who have taken Spanish 207 (formerly 213). Fall, J. Routier-Pucci and staff; spring, M. Rice and staff. Conversational grammar review with special attention to the development of accurate and idiomatic oral and written expression. Includes composition-writing, the reading of Spanish and Spanish American short stories and poetry, and the viewing of several films.

SPANR 218 Introduction to Hispanic Literature @
Fall or spring. 3 credits. Prerequisite: Spanish 200, 207 (formerly 213), or 209 (formerly 203), or CASE Q++ or permission of instructor. This course, or its equivalent, is required for admission to the Cornell Abroad program. E. Dozier and staff. An advanced-intermediate course designed for students who want to go beyond the basic language requirement and further broaden their knowledge of the language and related cultures, as well as improve their comprehension and communication skills. This course guides students to take greater command of their own language-learning process to optimize their continued progress. Includes a strategic focus on specific problems in listening and reading comprehension, and in accurate writing and speaking.

SPANL 218 Introduction to Hispanic Literature @
Fall or spring. 3 credits. Prerequisite: Spanish 200, 207 (formerly 213), or 209 (formerly 203) or CASE Q+. The course is divided into small sections and is taught mainly in Spanish. The literature course that normally follows SPANL 218 is either 316 or 318.) C. Lawless and staff. An intermediate course designed to improve reading, writing, speaking, and comprehension skills in Spanish through the reading and discussion of contemporary literary works of various genres (narrative prose, drama, poetry) from Spain and Spanish America. Emphasis is placed on the development of fluency in reading and of critical and analytical abilities. The cultural, sociological, and aesthetic implications of texts by authors such as Borges, Cortázar, Fuentes, García Márquez, García Lorca, and Cela are considered.

SPANL 239 Cultural History of the Jews of Spain (also NES 239)
Fall. 4 credits. E. Alfonso. For description see NES 239.
SPANL 318 Readings in Modern Spanish American Literature @ Fall or spring. 4 credits. Conducted in Spanish. Prerequisite: Spanish 218, 219 (formerly 204), or CASE Q++, or permission of instructor. Fall. R. Gallo, M. Stycos and E. Sanchez-Blate; spring, R. Gallo and J. Paz Soldán.

Readings and discussion of representative texts of the nineteenth and twentieth centuries from various regions of Spanish America. Among the authors to be considered are Dario, Borges, Garcia Marquez, Camus, the gendered violence of a male-dominated society, and contemporary challenges to this hegemonic structure. Although we will focus on novels, we will also see poems, essays, and short stories. Authors to be studied include: Matté, Alcides and José María Arguedas, Icaza, Vargas Llosa, Bayly. Study-trip to Puerto Rico (see SPANL 416) explore the emergence of modern indigenista cultural and political movements in rural or urban Andean settings. Students must complete one credit for research on a theme related to our study-trip. Early registration for the course and study-trip is recommended.

SPANL 373 Contemporary Spanish Theater @ Fall. 4 credits. Conducted in Spanish. C. Karageorgou-Bastea.

In this course we will approach the specific features of theatrical production during the late nineteenth- and twentieth-century Spain. Authors include: Echegaray, Galdós, Valle-Inclán, Benavente, Lorca, Alberti, and Fernandez-Gomez, among others, we will trace the relationship between discourse, dramatic space, and the audience, and history. We will analyze the specificity of the dramatic genre, the structure of its double textuality, and its implications for readers, spectators, and critics in different works of Spanish playwrights.

SPANL 403 The City as Text (also S HUM 403 and 407) @ Fall. 4 credits. J. Resina.

This seminar will discuss the concept and conventions of 'reading the city', especially in reference to one of the privileged literary
moments in the textual life of the city—modernism. In addition to primary literary texts, readings will deal with the concept of space and the constitution of urban spaces; the space of memory, spaces of contestation, modernity's space, as well as the rise of specifically urban perceptions and experiences.

SPANL 416 Study-Trip to Peru
Spring. 1 credit. Concurrent registration in SPANL 350/450 or SPANL 395 needed. M. A. Garcés and J. Paz Soldán.
A 10-day study-trip to Peru planned around the readings designed for SPANL 350/450 (Literatures of the Conquest) and/or SPANL 395 (Andean Literatures). The course will be team-taught by Professors María Antonia Garcés and José Eduardo Paz-Soldán. Students may choose to examine the vestiges of Inka culture in Cuzco and Machu Picchu, study the Conquest of Peru in situ, or explore the emergence of modern indigenista cultural and political movements in rural or urban Andean settings. Students taking both SPANL 350/450 and SPANL 395 may choose to do their field research for one of these courses only. Lodgings in Lima and Cuzco will be chosen from hotels and boarding houses with special group rates. Discount round-trip air-fares from New York City or Miami should be available for less than $1,000. Applications and information can be obtained from Latin American Studies Program, 190 Uris Hall, tel 255-3545; and from Professors María Antonia Garcés or José Eduardo Paz-Soldán, Department of Romance Studies, Cornell University, Morrill Hall, tel 5-4264, 5-1376 and 5-4766; e-mail: Garcés, mg443@cornell.edu; and Paz-Soldán, jep29@cornell.edu.

SPANL 419-420 Special Topics in Hispanic Literature
419, fall; 420, spring. 2-4 credits each term. Prerequisite: permission of instructor. Staff. Guided independent study of specific topics. For undergraduates interested in special problems not covered in courses.

SPANL 424 Spain's Generation of 1927
Spring. 4 credits. C. Karageorgevic-Bastačević. In this course we will analyze the relations between two literary movements, Spain's Generation of 1927 and the Mexican Contemporaneidad. Working with pairs of poets (Rafael Alberti and Gilberto Owen, Jorge Guillén and José Gorostiza, Federico García Lorca and Xavier Villaurrutia) we will explore the different ways in which they conceive the lyric genre, avant-garde phenomena, and the historical and artistic processes of their societies. The course will start by establishing a historical frame for these two generations, in addition to their poetry.

SPANL 429-430 Honors Work in Hispanic Literature
429, fall; 430, spring. 8 credits. Year-long course, R grade fall semester, letter grade spring semester. Limited to seniors with a superior academic record. Prerequisite: permission of instructor. M. A. Garcés.

SPANL 450 Literature of Conquest
Spring. 4 credits. M. A. Garcés. For description, see SPANL 350.

SPANL 455 Cervantes: Don Quijote (also SPANL 355)
Fall. 4 credits. M. A. Garcés. For description, see SPANL 355.

SPANL 468 Poetry of the Golden Age #
Spring. 4 credits. Conducted in Spanish. C. Armengol. Readings from Garcilaso to Quevedo. Reflection on Petrarchism, Neo-Platonism, Canto, Conceptism, Classic stereotypes and originality. Poetry and poetic theory; the emergence of the professional writer in Europe.

SPANL 639-640 Special Topics in Hispanic Literature
639, fall; 640, spring. 2-4 credits each term. Staff.

SPANL 650 Modern Barcelona
Spring. 4 credits. J. R. Resina. Like other European cities, Barcelona expanded beyond its historical perimeter in the middle of the nineteenth century. Since that moment modernization as an ideology has accompanied the city's self-image until the present. Modernity, however, has been claimed by different social players in often agonistic forms. The seminar will review the origins of the literary awareness of modern Barcelona and trace a line of development in the formation of its urban images. Contextual detail will be supplied by inroads into concomitant areas, such as architecture, art history, sociology, and history.

SPANL 692 Borderwork (also COM L 691)
Fall. 4 credits. D. Castillo. This course looks at literary works that emphasize geographical, cultural, and linguistic borders between a Spanish-speaking and a non-Hispanic culture. Emphasis in the class will be on works written from the Spanish side of the divide: writers like René Marqués, Ana Lydia Vega, José Emilio Pacheco, and Mario Vargas Llosa may be included. We will, however, also look at books written in English, and may include works by writers such as Robert Heilman, Emiraldo Santiago, D. H. Lawrence, or José Antonio Burciaga who reflect on a border experience from different racial, geographical, social class, and linguistic backgrounds.

RUSSIAN
P. Carden, director of undergraduate studies [literature], 235 Goldwin Smith Hall, 255-8350; E. W. Browne, L. Paperno, S. Paperno, N. Pollak, S. Senderovich, G. Shapiro, V. Tsimberov.

The Russian Major
Russian majors study Russian language, literature, and linguistics, and emphasize their specific interests. It is desirable, although not necessary, for prospective majors to complete Russian 121-122; 201-202, and 203-204 as freshmen and sophomores, since these courses are prerequisites to most of the junior and senior courses that count toward the major. Students may be admitted to the major upon satisfactory completion of Russian 122 or the equivalent. Students who elect to major in Russian should consult Professor Carden as soon as possible. For a major in Russian, students will be required to complete (1) Russian 301-302 or 303-304 or the equivalent, and (2) 18 credits from 300- and 400-level literature and linguistics courses, of which 12 credits must be in literature in the original Russian.

Certain courses may, with the permission of the instructor, be taken for one additional hour's credit. Such courses will involve a one-hour section each week with work in the Russian language. These courses count one hour each of credit toward the 12 courses of Russian literature in the original language required for the major.

Study Abroad
Cornell is an affiliated institution with the Council on International Educational Exchange program for Russian language study at St. Petersburg State University. Cornell students also frequently attend the American Council of Teachers of Russian program in Moscow and other Russian language programs. Opportunities for study during the summer, a single semester, or the full year are available for students taking honors in Russian. Further information is available from W. Browne, in the Department of Linguistics.

Honors. Students taking honors in Russian undertake individual reading and research and write and honors essay.

Fees. Depending on the course, a small fee may be charged for photocopied texts for course work.

Freshman writing seminar requirement. The following course will satisfy the freshman writing seminar requirement: Russian 104.

Russian Language
For details on all Russian language courses, see: russian.dmll.cornell.edu.

RUSSA 103-104 Conversation Practice
103, fall, 104, spring. 2 credits each term. Must enroll in one section of 103 and one section of 121 in the fall; and one section of 104 and one section of 122 in the spring. L. Paperno.

RUSSA 121-122 Elementary Russian through Film
121, fall or summer; 122, spring or summer. 4 credits each term. May be taken alone and qualification will be achieved with satisfactory completion of 121-122; or may be taken concurrently with 103-104 and qualification will be achieved at completion of 122-104. L. Paperno, S. Paperno, V. Tsimberov, and staff.

A thorough grounding is given in all the language skills: listening, speaking, reading, and writing. Course materials include clips from original Russian films and TV programs.

RUSSA 123 Continuing Russian
Fall. 4 credits. Limited to students who have previously studied Russian or been placed by department. Satisfactory completion of Russian 123 fulfills the qualification portion of the language requirements. L. Paperno, S. Paperno, V. Tsimberov.

A course designed to prepare students for study at the 200 level. Authentic Russian materials are used: TV, books, etc.

RUSSA 203-204 Intermediate Composition and Conversation
203, fall or summer; 204, spring or summer. 3 credits each term. Prerequisites: for Russian 203, qualification in Russian (Russian 123 or placement by department); for Russian 204, Russian 203 or equivalent. Includes a guest lecture by Prof. Gabriell Shapiro. L. Paperno, S. Paperno, V. Tsimberov.
Guided conversation, composition, reading, pronunciation, and grammar review, emphasizing the development of accurate and idiomatic expression in the language. Course materials include video clips from an original Russian feature film and work with Russian web sites.

**RUSSA 205-206  Reading Russian Press**

205, fall; 206, spring. 2 credits each term.
Prerequisite: qualification in Russian (RUSSA 204 or placement by department).
Both semesters must be taken in order to satisfy the proficiency level for the language requirement. This course cannot be used to satisfy the humanities requirement.
L. Paperno, S. Paperno, V. Tsimberov.
Reading unabridged articles on a variety of topics from current Russian periodicals and web pages.

Note: Students placed in the 200-level courses also have the option of taking courses in traditional literary form (Russian 207-208) or separate courses under RUSSA 201 and 202 for descriptions of these courses, any of which may be taken concurrently with the 203-204 and 205-206 language courses described above.

**RUSSA 300 Directed Studies**

Fall or spring. 1-4 credits variable.
Prerequisite: permission of instructor. Staff. Thought on a specialized basis to address particular student needs including native speakers of Russian. Times will be arranged with instructor.

**RUSSA 303-304 Advanced Composition and Conversation**

303, fall; 304, spring. 4 credits each term.
Prerequisites: for Russian 303, Russian 204 or equivalent; for Russian 304, Russian 303 or equivalent L. Paperno, S. Paperno, V. Tsimberov.
Writing, reading, and conversation: viewing and reading authentic language materials; current Russian films (feature and documentary), newspapers, TV programs, Russian web sites, and other materials are used.

**RUSSA 305-306 Directed Individual Study**

305, fall; 306, spring. 2 credits each term.
Prerequisite: placement by the department.

This course is intended for students with special needs (e.g., children of Russian immigrants who speak Russian at home but have not learned to read or write Russian) that cannot be met by any other Russian course.

**RUSSA 309-310 Advanced Reading**

309, fall; 310, spring. 4 credits each term.
Prerequisites: Development of Russian 309, Russian 204; for Russian 310, Russian 309 or equivalent. L. Paperno.
The purpose of the course is to teach advanced reading skills. The weekly reading assignment is 20-40 pages of unabridged Russian prose, mostly non-fiction. The discussion of the reading is conducted entirely in Russian and is centered around the content of the assigned selection.

**RUSSA 401-402 History of the Russian Language (also LING 417-418)**

401, spring; 402, fall. 4 credits each term.
Prerequisites: for Russian 401, permission of instructor; for Russian 402, Russian 401 or equivalent. Offered alternate years. 402 not offered 2000-2001. W. Browne.
Phonological, morphological, and syntactic developments from Old Russian to modern Russian.

**RUSSA 403-404 Linguistic Structure of Russian (also LING 443-444)**

403, fall; 404, spring. 4 credits each term.
Prerequisites: for Russian 403, Linguistics 101 and permission of instructor, for Russian 404, Russian 403 or equivalent. Offered alternate years. 404 not offered 2000-2001. W. Browne.
A synchronic analysis of the structure of modern Russian. Russian 403 deals primarily with morphology and its relation to syntax and 404 with syntax and word order. Topics covered include case theory, the functions of word order, voice, agreement, impersonal constructions, negation, nonuniversal categories, and the relation between morphology and syntax.

**RUSSA 413-414 Advanced Conversation and Stylistics**

413, fall; 414, spring. 2 credits each term.
Prerequisites: for Russian 413, Russian 302-304 or the equivalent, for Russian 414, Russian 413 or equivalent. V. Tsimberov.
Discussion of authentic unabridged Russian texts and films (feature and documentary) in a variety of nonliterary styles and genres.

**RUSSA 415 Old Church Slavic**

Fall. 4 credits. This course is prerequisite to Russian 602. Offered alternate years. Not offered 2000-2001. W. Browne.
Grammar and reading of basic texts.

**RUSSA 601 Old Russian Texts**

Grammatical analysis and close reading of Old Russian texts.

**RUSSA 602 Russian for Russian Specialists**

633, fall; 634, spring. 1-4 credits variable.
Prerequisite: 4 years of college Russian. For graduate and advanced undergraduate students. L. Paperno, S. Paperno.
The course is designed for students who specialize in an area of Russian studies requiring fine active control of the language. Fine points of syntax, usage, and style are discussed.

**RUSSA 651-652 Comparative Slavic Linguistics (also LING 671-672)**

651, fall; 652, spring. 2 credits each term.
Prerequisites: for Russian 651, Russian 601 taken previously or simultaneously or permission of instructor, for Russian 652, Russian 651 or permission of instructor. Offered alternate years. Not offered 2000-2001. W. Browne.
Sounds and forms of the Slavic languages and of prehistoric common Slavic; main historical developments leading to the modern languages.

**RUSSA 700 Seminar in Slavic Linguistics**

Topics chosen according to the interests of staff and students.

**Russian Literature**

There are a variety of courses: some with readings in English translation, others in the original Russian, or both. The connection between Russian history, society, and literature is particularly close, so instruction and discussion in class often include a variety of topics, such as culture and intellectual history, as well as literature. Several courses are interdisciplinary, sponsored by the departments of History, Economics, Government, Comparative Literature, etc.

**RUSSL 103 Freshman Writing Seminar: Classics of Russian Thought and Literature**

Russian society has always seen its literature as having a mission important to the development of the nation. In this course we will examine Russian literature as it participates in the debate: Who is Russian? We will look in particular at the conflict between the Slavophiles, those who thought Russia had its own unique destiny, and the Westernizers, those who thought Russia should look to the West as a model for its development. We will be reading such Russian authors as Turgeniev, Dostoievsky, Herzen, and Solzhenitsyn in English translation. The course will examine the rhetorical means each author uses to make his argument. All reading is in English translation.

**RUSSL 104 Freshman Writing Seminar: Nineteenth-Century Russian Literary Masterpieces**

Fall. 3 credits. P. Carden.
This course will introduce students to a broad selection of the major short works of the Russian literary tradition. Our emphasis will be on what makes each work interesting as writing, what themes have been particularly interesting to Russians, and how we recognize the distinctive voice of each of the writers we are studying. Among the authors read are Pushkin, Gogol, Turgeniev, and Chekhov.
All reading is in English translation.

**RUSSL 105 Freshman Writing Seminar: Twentieth-Century Russian Literary Masterpieces**

Fall or spring. 3 credits. D. Galloway.
We will read and write about a selection of works from the major Russian literary movements of the twentieth century. The course will concentrate in part on important literary responses to the first Russian Revolution and the Russian Civil War. Authors to be read include Zamyatin, Olesha, Zoshchenko, and Vladimir. Readings in English translation.

**RUSSL 201-202 Readings in Russian Literature**

Fall or spring. 3 credits. Prerequisites: qualification in Russian. Open to freshmen. Fall. 201, N. Pollak; spring. 202, G. Shapiro.
201 is prerequisite to 202. Open to freshmen. Separate sections for native and nonnative speakers of Russian, each co-taught by language and literature faculty. For the native speaker section, proficiency in Russian is required. Proficiency is achieved by completing RUSSLA 203 or passing a placement test that is always given a few days before the beginning of the semester and is usually announced on the web site.

**RUSSL 103 Freshman Writing Seminar: Classics of Russian Thought and Literature**

Russian society has always seen its literature as having a mission important to the development of the nation. In this course we will examine Russian literature as it participates in the debate: Who is Russian? We will look in particular at the conflict between the Slavophiles, those who thought Russia had its own unique destiny, and the Westernizers, those who thought Russia should look to the West as a model for its development. We will be reading such Russian authors as Turgeniev, Dostoievsky, Herzen, and Solzhenitsyn in English translation. The course will examine the rhetorical means each author uses to make his argument. All reading is in English translation.
Pushkin, Lermontov, Turgenev, Fet, Tolstoy, Chekhov, and others.

This course is based on lectures, discussions, and audiovisual presentations (slides, tapes, films). Included within its scope are various aspects of Russian culture such as literature, art, music, religion, philosophy, and social thought from its very beginning through the eighteenth century. The course is designed to give undergraduates a broad familiarity with the cultural traditions of the country that plays a major role in the world today. Russian culture will be presented as part of Western civilization with attention given to its distinctive character. The basic texts are literary works of moderate length in English translation.

[RUSSL 208 Themes from Russian Culture] Spring. 3 credits. G. Shapiro.
This course is based on lectures, discussions, and audiovisual presentations (slides, tapes, films). Included within its scope are various aspects of Russian culture such as literature, art, music, religion, philosophy, and social thought from its very beginning through the eighteenth century. The course is designed to give undergraduates a broad familiarity with the cultural traditions of the country that plays a major role in the world today. Russian culture will be presented as part of Western civilization with attention given to its distinctive character. The basic texts are literary works of moderate length in English translation.

[RUSSL 279 The Russian Connection, 1830-1867 (also COM L 279)] Fall. 3 credits. P. Carden.
As Russian prose began to find its voice, it responded with enthusiasm to the European prose tradition. One line of development in the Russian novel began with Rousseau’s division between the needs of individual growth, nourished by solitude and introspection, and the demands of society. Tolstoy’s War and Peace can be read as a summary and testing of the novelistic tradition that grew out of the work of Rousseau, in both European and Russian literature. We will follow the line that leads from Tolstoy’s multifaceted inquiry, beginning with two short novels that set the tone for the introspective novel in the two traditions, Constant’s Adolphe and Lermontov’s Hero of Our Time. Looking at relevant excerpts from a range of European prose writers Rousseau, Musset, Goethe, Stendhal, Thackeray among others, we will think about the possibilities and limitations of the introspective novel as a form, especially as manifested in one of the monuments of the genre, War and Peace.

[RUSSL 280 The Russian Connection, 1870-1960 (also COM L 280)] Spring. 3 credits. P. Carden.
The European novel of introspection developed a second line of inquiry, in some respects counter to the tradition that grew out of the writings of Rousseau. Diderot’s “Rameau’s Nephew” may be taken as emblematic of a novel that goes beyond the European novel of introspection of the writings of Rousseau. Diderot’s “Rameau’s Nephew” may be taken as a summary and testing of the novelistic tradition that grew out of the work of Rousseau, in both European and Russian literature. We will follow the line that leads from Tolstoy’s multifaceted inquiry, beginning with two short novels that set the tone for the introspective novel in the two traditions, Constant’s Adolphe and Lermontov’s Hero of Our Time. Looking at relevant excerpts from a range of European prose writers Rousseau, Musset, Goethe, Stendhal, Thackeray among others, we will think about the possibilities and limitations of the introspective novel as a form, especially as manifested in one of the monuments of the genre, War and Peace.

We will follow up the tradition as Dostoevsky’s influence returns the line to Europe in the works of writers like Camus and Sartre.

An interdisciplinary inquiry into Russian society and its history, designed as an introduction for students not majoring in Russian studies. This course also acts as a synthesis for those who are studying various aspects of Russia in separate disciplines, and is organized into a variety of approaches to Russian language, culture, history, and literature. It aims to teach both basic information and different ways of interpreting that information. Topics will include: the land and the people; doing business in Russia; literary traditions and revolts; Russian national identity; nationalism; persistent cultural traits; religion, history, politics and government; relations with other nations, inside Russia and outside; Jews and Russians, folklore; social matters, customs, values, position of women; education; music, architecture, agriculture and industry, Russian maximalism, regionalism, the ecology; film, TV, theatre, journalism.

[RUSSL 331 Introduction to Russian Poetry #] Fall. 4 credits. Prerequisites: Russian 202 or equivalent and permission of instructor.
This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major.

S. Senderovich.
A survey of Russian poetry with primary emphasis on the analysis of individual poems by major poets.

Selected topics. Discussion of a number of the most representative Russian plays of the nineteenth and twentieth centuries in chronology with the historical period, cultural atmosphere, literary trends, and crucial moments in the history of the Russian theater will be especially emphasized. Among the works we will be studying are Chekhov’s Inspector General, Ostrovsky’s The Storm, and Chekhov’s The Cherry Orchard. All readings will be in English translation. Additional assignments in critical literature will be made for graduate students.

Close readings of lyrics by major twentieth-century poets. All reading is in Russian. Geared towards undergraduates.

[RUSSL 334 The Russian Short Story] Fall. 4 credits. Prerequisites: Russian 202 or equivalent and permission of instructor.
This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. Also open to graduate students. Not offered 2000–2001. N. Pollak.
A survey of two centuries of Russian story telling. Emphasis on the analysis of individual stories by major writers, on narrative structure, and on related landmarks of Russian literary criticism.

[RUSSL 335 Gogol] Fall. 4 credits. G. Shapiro.
Selected works of Gogol read closely and viewed in relation to his life and to the literature of his time. Readings in English translation.

War and Peace, and Dr. Zhivago are well-known American films relating to Russian literature of the nineteenth and twentieth centuries. Russian literature has been a matter of great interest both in the West and East. A clear cut practice of cultural translation is presented by film versions of Russian literary masterpieces. We will perform a comparative analysis of these films, which will provide an excellent opportunity for discussing problems of translation between various media and of cultural translation.

A major philosophical tradition has conceived of education as encompassing the whole of our lives. What we should do or be is seen as the result of every choice we make. The whole of our human context is understood as a school in which we form ourselves. This all-encompassing vision of education has been embodied in the works of the great philosopher-fantasts who use the forms of fiction to explore fundamental issues of education. In this course we will examine several key philosophical fantasies, among them Plato’s Republic, Rousseau’s Emile, and Tolstoy’s War and Peace. Our aim will be to understand how the discourse on education became a central part of our Western tradition.

[RUSSL 367 The Russian Novel (also COM L 367)] # Fall. 4 credits. Special discussion section section for students who read Russian. N. Poliak.
S. Senderovich.
Spring. 4 credits. Special discussion section section for students who read Russian. N. Poliak.
Spring. 4 credits. Special discussion section section for students who read Russian. N. Poliak.
Staff.

A major philosophical tradition has conceived of education as encompassing the whole of our lives. What we should do or be is seen as the result of every choice we make. The whole of our human context is understood as a school in which we form ourselves. This all-encompassing vision of education has been embodied in the works of the great philosopher-fantasts who use the forms of fiction to explore fundamental issues of education. In this course we will examine several key philosophical fantasies, among them Plato’s Republic, Rousseau’s Emile, and Tolstoy’s War and Peace. Our aim will be to understand how the discourse on education became a central part of our Western tradition.

[RUSSL 368 Russian Literature from 1917 to the Present] Spring. 4 credits. Also open to graduate students. No prerequisites. There will be a special section for students who read Russian. Not offered 2000–2001. Staff.
In translation. A survey of Russian literature focusing on the most important writers. Among the themes to be explored will be Russian Modernism, social command, socialist realism, the Thaw, dissident and emigre literature, post-modernism. Writers include Blok, Mayakovsky, Babel, Olesha, Platonov, Pasternak, Nabokov, Solzhenitsyn, the two Erofeevs, and contemporary women poets and short story writers.

S. Senderovich.
A major philosophical tradition has conceived of education as encompassing the whole of our lives. What we should do or be is seen as the result of every choice we make. The whole of our human context is understood as a school in which we form ourselves. This all-encompassing vision of education has been embodied in the works of the great philosopher-fantasts who use the forms of fiction to explore fundamental issues of education. Our aim will be to understand how the discourse on education became a central part of our Western tradition.

S. Senderovich.
Reading and discussion of Anton Chekhov’s short stories in the context of the European art
of the short story and painting of that era. The course is designed for nonspecialists as well as literature majors. All reading is in English translation.

RUSSL 385 Reading Nabokov (also COM L 385 and ENGL 379)
Fall. 4 credits. G. Shapiro.
This course offers an exciting trip to the interior world of Nabokovian fiction. After establishing himself in Europe as a distinguished Russian writer, Nabokov, at the outbreak of the Second World War, fled to the United States where he reestablished himself, this time as an American writer of world renown. In our analysis of the Nabokovian artistic universe, we shall focus on two splendid achievements as a Russian writer, The Defense (1930) and Despair (1934) (both in their English form), and then examine the two widely read novels that he wrote in Ithaca while teaching literature at Cornell—Lolita (1955) and Pnin (1957).

RUSSL 393 Honors Essay Tutorial
Fall and spring. 8 credits. Most be taken in two consecutive semesters in senior year. Credit for the first semester will be awarded upon completion of second semester. For information, please see Director of Undergraduate Studies.

RUSSL 409 Russian Stylistics
Spring. 4 credits. Also open to graduate students. Prerequisite: 3 years of Russian. S. Senderovich.
A few steps beyond normative grammar. Introduction to the subtleties of idiomatic Russian on the levels of morphology, syntax, vocabulary, and phraseology. Introduction to the genres of live colloquial and written language. Development of writing skills through short assignments and their analyses. First notions of literary stylistics and their practical application.

RUSSL 415 Post-Symbolist Russian Poetry
We will examine works by three poets in the first quarter of the century: Innokentij Aizenstock, the Symbolist whom the Acmeists considered their mentor, Ossip Mandelstam, a founding Acmeist, and Boris Pasternak, associated, at least for a time, with the Futurists. Through close readings of their verse and also critical prose and manifestoes, we will attempt to determine some of the general features that link poets of such diverse orientations in the years following the crisis of Symbolism. We will also outline the features that distinguish them as representative of their respective movements.

RUSSL 425 Vladimir Nabokov vs. Jean-Paul Sartre (also COM L 445)
Jean-Paul Sartre reviewed Nabokov’s Despair in 1938. Ten years later Nabokov returned the favor in his review of the French translation of Sartre’s La Naiss. The apparent tension between the two celebrated men of European letters of the twentieth century allows us to look at the works of both through the eyes of the other. To go into the problems of Existentialist philosophy, into Nabokov’s brand of it, and into responses to Sartre in Nabokov’s works. The latter gives an excellent yet unexplored approach to the poetic world of Vladimir Nabokov. Nabokov’s major response to Sartre occurred in the novel Pnin written in Ithaca and largely about Cornell.

RUSSL 427 Russian Formalism (also COM L 427)
This is a course on Russian Formalism, a trend in literary interpretation that flourished in the 1910s and the first part of the 1920s. We will read the writings of such scholars as Tynjanov, El’kin, Scheklovsky, and Jakobson, as well as to works they studied. The course provides a historical examination of a school that gave rise to some of the most important movements in twentieth-century Western criticism—and in other disciplines, such as linguistics and anthropology. The course also provides both a look at classics of Russian prose and an approach to literature that has something to offer readers today. No knowledge of Russian is required.

RUSSL 430 Practice in Translation
Spring. 4 credits. Prerequisites: proficiency in Russian on the levels of morphology, syntax, vocabulary, and phraseology. Translation of mostly from Russian to English, partly from English to Russian. Attention to problems and development of skills.

RUSSL 431 Contemporary Russian Prose
Spring. 4 credits. Prerequisites: Russian 301–302 or 303–304, and permission of instructor. The course counted towards the 12 credits of Russian literature in the original language for the Russian major. Graduate students may audit the course. Not offered 2000–2001. Staff.
This course is designed to acquaint students with the way Russian prose has developed during the past 40 years. Although the emphasis will be on comprehension of the text, we will also discuss literary structure, modern literary history, social and political problems, and the ways in which life in Russia is reflected in its literature. Authors to be read include Viktor Nekrasov, Yuri Kazakov, Alexander Solzhenitsyn, Varlam Shalamov, Aihmet Tursun, Svetlana Aksyonov, and Tatiana Tolstaya. This course is specifically intended for third- and fourth-year Russian majors.

RUSSL 432 Pushkin #
Fall. 4 credits. Prerequisites: Russian 202 or equivalent, and permission of instructor. This course may be counted towards the 12 credits of Russian literature in the original language for the Russian major. Not offered 2000–2001. S. Senderovich.
Reading in the original language and discussion of selected works by Pushkin: lyrics, narrative poems, and Eugene Onegin.

RUSSL 441 Bakhtin as Reader (also RUSSL 641; COM L 641)
The course will investigate the literary and cultural theories of Mikhail Bakhtin, focusing in particular on his interpretations of literary texts. We will read a representative selection of works by Bakhtin covering the chronological development of his ideas. Each member of the class will select one or more of the literary texts commented on by Bakhtin as an occasion for independent work. A reading knowledge of Russian is not required although Russian readers may have alternate assignments in the language.

RUSSL 445 Batiashvishvili and Pasternak
Fall. 4 credits. Prerequisites: at least one 300-level course in Russian literature in the original, or permission of the instructor. Not offered 2000–2001. N. Pollak.
A study of the works of Konstantin Batiashvishvili (b. 1787) and Boris Pasternak (b. 1890), two poets who have been described as innovators in Russian poetic language. We will examine the poetry (and prose) of these poets and some of their contemporaries, with a view to exploring their parallel roles in two ages of poetry a century apart.

RUSSL 460 Short Works of Tolstoy and Dostoevsky
Readings in Russian and in translation. Open to graduate students.

RUSSL 491 Reading Course: Russian Literature in the Original Language
Fall or spring. 1–4 credit each term. Prerequisite: permission of instructor. Staff.
This course is to be taken in conjunction with any Russian literature course in English translation. Students will receive one credit for reading and discussing works in Russian in addition to their normal course work.

RUSSL 492 Supervised Reading in Russian Literature
Fall or spring. 1–4 credits each term. Prerequisite: permission of instructor. Staff.

RUSSL 499 The Avant-Garde in Russian Literature and the Arts
Spring. 4 credits. Open to any student who has completed a second-year course in Russian, or who has equivalent reading skills in Russian. May be used in satisfaction of the 12 hours of reading required for the Russian major. P. Carden.
The first decades of the twentieth century was perhaps the richest period ever in Russian literature and the arts. It begins with the brilliant experimentation in poetry and prose of Andrei Bely, Blok, Remizov, and others. It continues with the breakthroughs in painting and sculpture of Malevich, Goncharova, Tatlin, etc. In the second decade the rambunctious Futurists take over in literature and establish a compact with theater and the visual arts in which all the art forms break down the barriers to produce a new kind of art. During this period Russian artists in every medium were on the cutting edge of the European art scene. After the Revolution Russian artists and writers of the avant-garde continued their dominance for a time, now including the developing medium of film.

In this course we will be open to representative Russian texts by the major authors of the period and we will also investigate developments in the theater and visual arts.

Graduate Seminars

RUSSL 640 Graduate Seminar: Neglected Masterpieces of Short Russian Prose
Nineteenth- and twentieth-century works chosen according to the needs of the students enrolled. Stress on skills useful in teaching Russian literature.

RUSSL 611 Supervised Reading and Research
Fall or spring. 2-4 credits. Prerequisite: permission of the department. Staff.

RUSSL 617-618 Russian Stylistics I and II

RUSSL 619 Seventeenth-Century Russian Literature
G. Shapiro.
Seventeenth-century Russian literature is often studied together with Medieval literature. Is such an arrangement justified, or does seventeenth-century literature have its own problematic that makes it worthy studying separately? In scholarship the seventeenth century is referred to as the Age of Baroque. Did Muscovite Russia experience its own Baroque, and, if so, what are its unique features? These and other important issues will be addressed in the seminar. In the course of the seminar a variety of texts, genres, and themes characteristic for the epoch will be discussed. We will read the works of such authors as Simeon Polotsky, Silvestre Medvedev, Karion Istromin, and the archpriest Avvakum.

RUSSL 620 Twentieth-Century Russian Poetry
An in-depth study of the writings of selected twentieth-century poets. Authors may include Blok, Mandelstam, Pasternak, Tsvetayeva, and Khlebnikov.

RUSSL 621 Old Russian Literature
S. Senderovich.
A survey.

RUSSL 622 Eighteenth-Century Literature
S. Senderovich.

RUSSL 624 Russian Romanticism
A survey of concepts, themes, genres, and main individual contributions in Russian literature of the Age of Romanticism. The Age of Romanticism encompasses the first four decades of the nineteenth century. Zhukovsky, Batiushkov, Pushkin, Baratynsky, Gogol, and Lermontov are the major representatives of this style and the most important period of Russian literature. The emphasis is on poetry, its historical and theoretical problems. It was, above all, the golden age of Russian poetry, which prepared and deeply influenced the following age of great Russian prose. Turgeney, Tolstoy, Dostoevsky, and Chekhov are full of allusions to the texts of the golden age and cannot be properly understood without it.

RUSSL 625 Russian Realism
P. Carden.
A study of the development of psychological realism in Russian prose of the nineteenth century, with some attention to the poetic tradition. In addition to reading representative works, we will pay attention to the historical background of the period. We will approach the works through the critical writings of several important theorists, in particular those of Lyudmila Ginzburg.

RUSSL 626 The Tradition of Russian Poetry
N. Pollak.
This course will examine a selection of poems that have been particularly important for the tradition of Russian literature in the nineteenth and twentieth centuries. Our focus will include critical and literary responses to these poems as well as close readings.

RUSSL 627 Russian Formalism (also COM L 627)
N. Pollak.
See RUSSL 427 for course description.

RUSSL 630 Gogol
G. Shapiro.
Gogol's artistic career from his "Ukrainian" cycles to Dead Souls. We will examine representative works from each of the major divisions of Gogol's early work, in particular from his cycles Evenings on a Farm near Dibanka and Mirgorod, and will trace the writer's development toward his magnum opus, Dead Souls. Although some of the readings will be done in English to enable the class to cover a significant amount of material, the class work will be focused on close analysis of the Russian text.

RUSSL 641 Bakhtin as Reader (also COM L 641)
P. Carden.

RUSSL 650 Russian Intellectual History
S. Senderovich.
Nineteenth- and twentieth-century selected topics. Taught mostly in English.

RUSSL 669 Dostoievsky
Study of representative works from various periods of Dostoievsky's life, including some articles, speeches, and parts of The Diary of a Writer, against the context of nineteenth-century Western European and Russian literature. A variety of critical and scholarly approaches (from Russian Formalists to recent Western scholars) will be sampled and evaluated.

RUSSL 671 Seminar in Nineteenth-Century Russian Literature
P. Carden.
Topic: War and Peace.

RUSSL 672 Seminar in Twentieth-Century Russian Literature
Staff.

RUSSL 673 The Russian Nabokov
Fall. 4 credits. Also open to advanced undergraduates. Not offered 2000-2001.
G. Shapiro.
Vladimir Nabokov wrote much verse, several plays, numerous short stories, and nine novels in Russian before switching to English. He is a major Russian writer of the twentieth century. This seminar will examine his work in the context of modern Russian literature, concentrating in particular on the novels. Knowledge of Russian is highly desirable, but all the works discussed also exist in English translation.

RUSSL 675 Russian Literature, 1917-1945
This semester will focus on the achievements of Russian prose between the two World Wars. Among the authors whose works will be closely read and discussed, there are Babel, Olesha, Zoshchenko, Ilf and Petrov, Bulgakov, and Nabokov.

RUSSL 676 Russian Literature, 1945-Present

RUSSL 698 Russian Symbolism
P. Carden.
Around 1886 the trends in French culture represented by Baudelaire and Mallarme crystallized into a new cultural movement, called in some of its aspects the Decadence and in others Symbolism. The new sentiments about the nature of art spread throughout Europe, drawing in England, the Scandinavian countries, Germany, and Russia. The first stirrings of Symbolism were in the ascendant in Russian cultural life and it remained the dominant force until 1910. Our task will be to study the phenomenon of Symbolism as it touched the arts in Russia, including not only literature, but dance, theater, and the visual arts. Because Symbolism was a movement that cut across national boundaries, we will study the seminal works of European art that created the climate in which Russian Symbolism was conceived and came to maturity.

RUSSL 699 Russian Modernism
P. Carden.
We will be investigating the rich and innovative period of the avant-garde in Russia from 1910 to 1925. In addition to examining outstanding works in a variety of forms, we will look at the movements, social context, and ties to the European avant-garde. Among the writers whose works we will examine are Blok, Bely, Mayakovsky, Khlebnikov, Pilnyak, and Babel. We will examine theater through the Futurist performance piece, "Victory Over the Sun," through Meyerhold's productions of Mayakovsky's plays and other experimental pieces, and through mass spectacles. We will discuss the film theories of Eisenstein and Dziga Vertov and see several of their films. In the visual arts we will be examining the experiments of Larionov and Goncharova, Malevich, Kandinsky, and Tatlin. We will also look at the photomontage of Rodchenko.

SCIENCE & TECHNOLOGY STUDIES

The major in Science & Technology Studies offers students the opportunity to pursue careers in such fields as law, public policy, health care, journalism, or management. Students who select the major develop an appreciation of the place of science and technology in society. The curriculum provides a strong foundation in the historical, social, political, and ethical aspects of science and technology and prepares students to participate effectively in policy debates and decision making. Students are organized into three areas: history, philosophy, and social studies of science and technology.

Themes of the Major

Students in the S&TS major develop a program individually tailored to their particular interests. To give their coursework a coherent focus, students select a theme that draws together a group of related courses. Available themes include:

1. Science, Technology, and Public Policy

Many of the most important policy issues of our time involve science and technology. This theme offers students an opportunity to gain a deep appreciation of the problems this situation raises in democratic societies. Through courses that survey the place of science in American politics and through courses that focus on such substantive issues as national technology policy or the politics of genetic engineering, this theme explores the tensions between expertise and democracy, the uses of scientific knowledge in making and legitimating policy, social movements that question technology and science, and contemporary debates over economics, innovation, and technology policy.

2. Technology, Culture, and Society

Students interested in this theme may examine the connections between technology and society by studying the manifold ways in which social groups (scientists, engineers, inventors, corporations, government agencies, and consumers) interact to construct technological artifacts and systems, and how the use of these artifacts and systems is related to social and cultural change. Areas of particular interest are: computers and society, the military and technological change, gender and technology, biotechnology and society, and telecommunications policy.

3. Environment, Science, and Society

By focusing on the relationship between scientific knowledge and political power, this theme offers unique insights into the making and implementation of environmental policy. Courses are available on such topics as American environmental politics, international environmental policy, science and the law, the history of agricultural science, and environmental communication. Students explore the causes and consequences of environmental controversies, the nature of risk and uncertainty in environmental issues, the roles of experts and the public in environmental decisions, and the challenges of global environmental policy.

4. History and Philosophy of Science and Technology

This theme provides students with an appreciation of science and technology in historical perspective and with an understanding of the philosophical problems posed by scientific knowledge. Courses available range from broad surveys to intensive studies of focused subjects. Students in this theme...
address such topics as the emergence of modern science; gender and science; the goal of achieving valid knowledge and the philosophical and institutional problems that this entails; the issues for history and philosophy of science raised by the new sociology of scientific knowledge; the relationship between knowledge, technology, and ethics; and the impact of major institutions—such as religion, medicine, the military, and the modern consumer economy—on the development of the sciences.

Beyond the four themes described above, S&TS majors may also create their own themes, carefully tailored to their particular interests. Examples might include "Computers, Innovation, and Society" or "Science, Technology, and Globalization."

**Admission to the Major**

Students intending to major in Science & Technology Studies should submit an application during their sophomore year. Juniors are considered on a case-by-case basis. The application includes (1) a one-page statement explaining the student's intellectual interests and why the major is consistent with the student's academic interests and goals; (2) the theme the student wishes to pursue in the major; (3) a tentative plan of courses fulfilling S&TS requirements; and (4) an up-to-date transcript of work completed at Cornell University (and elsewhere, if applicable).

Acceptance into the major requires completion of the following prerequisites: (a) two introductory courses chosen from some combination of history, philosophy, sociology, or government; (b) the science requirement of the College of Arts and Sciences; and (c) mathematics or computer science courses in fulfillment of the Arts College Group Two distribution requirement. Sophomores in the process of completing these prerequisites may be admitted to the major on a provisional basis. Further information and application materials are available at 275 Clark Hall (255-6047).

**Requirements**

S&TS majors must complete the following requirements:

1. Core courses: Science & Technology Studies majors will be required to take:
   (a) one of the following: S&TS 233 (Agriculture, History, and Society), S&TS 250 (Technology in Society), S&TS 281 (Science in Western Civilization), S&TS 282 (Science in Western Civilization), or S&TS 283 (The Sciences in the Twentieth Century); and
   (b) S&TS 261 (Philosophy of Science: Knowledge and Objectivity), or S&TS 269 (Philosophy of Science: Evidence and Explanation), or S&TS 201 (What is Science? An Introduction to Social Studies of Science and Technology); and
   (c) S&TS 390 (Science in the American Past, 1800-1950), S&TS 391 (Science in the American Polity: 1950-Now), or S&TS 442 (Sociology of Science).

2. Additional Science and Technology Studies courses: Science and Technology Studies majors will be required to complete at least 21 credit hours of additional courses in Science and Technology Studies, subject to the following restrictions:
   (a) Breadth requirement: at least one course beyond the core courses in each of the three areas of concentration established by philosophy and social studies of science and technology;
   (b) Depth requirement: at least two courses in one area beyond the core courses and intended for advanced undergraduates or graduate students.

3. Science Requirement: in addition to the science requirement of the College of Arts and Sciences, Science and Technology Studies majors are required to take an additional two semesters of a natural science or engineering (including computer science). Mathematics sufficient to follow the additional science requirement should be completed before undertaking that requirement. Choice of these courses should be made in consultation with the student’s major adviser and should be related to the theme selected by the student.

**The Honors Program**

The honors program is designed to provide independent research opportunities for academically talented S&TS majors. Students who enroll in the honors program are expected to do independent study and research, with faculty guidance, on issues in science and technology studies. Students who participate in the program should find the experience stimulating and rewarding whether or not they intend to pursue a research career. S&TS majors are considered for entry into the honors program at the end of the second semester of the junior year. More information on the honors program is available from the S&TS undergraduate office at 275 Clark Hall (255-6047).

**The Biology & Society Major**

The Department of Science & Technology Studies also offers the Biology & Society major, which includes faculty from throughout the university. The Biology & Society major is designed for students who wish to combine the study of biology with exposure to perspectives from the social sciences and humanities. In addition to providing a foundation in biology, biology and society students obtain background in the social dimensions of modern biology and in the biological dimensions of contemporary social issues.

The Biology & Society major is offered to students enrolled in the College of Arts and Sciences, the College of Human Ecology, and the College of Agriculture and Life Sciences. The major is coordinated for students in all colleges through the Biology & Society Office. Students can get information, specific course requirements, and application procedures for the major from the office in 275 Clark Hall, 255-6047.

A full description of the Biology & Society major can be found in the Courses of Study section entitled Special Programs and Interdisciplinary Studies.
biles, outbreaks of rare diseases, and nuclear waste disposal.

**History**

[S&T 233 Agriculture, History, and Society: From Squanto to Biotechnology](Fall. 3 credits. M. W. Rossiter.)

This course will survey the major themes in the development of agriculture and agribusiness in the United States in the nineteenth and twentieth centuries. These include particular individuals (such as Liberty Hyde Bailey, Luther Burbank, G. W. Carver, Henry A. Wallace, and Norman Borlaug), the rise of government support and institutions (including U.S.D.A. and Cornell), transformative events (the Dust Bowl, World War II, and the environmental movement), and the achievements of the recent Green and “Gene” Revolutions.

[S&T 250 Technology in Society (also ELE E 250 and HIST 250)]

For description, see ENGRG 250.

[S&T 281 Science in Western Civilization (also HIST 261)]

For description, see HIST 281.

[S&T 282 Science in Western Civilization (also HIST 282)]

Fall. 4 credits. M. Dennis.

For description, see HIST 282.

[S&T 283 The Sciences in the Twentieth-Century (also HIST 280)]

Spring. 4 credits. M. Dennis.

Science emerged as a powerful source of social, economic, and political power during the twentieth century. Through an examination of the development of the sciences—physical and biomedical—during the twentieth century students will learn about the reciprocal relations between science and society. Topics covered may include: the rise and development of quantum mechanics; the emergence of Big Science; the history of the sciences in totalitarian nations, especially the former Soviet Union, Nazi Germany, and Communist China; the evolutionary synthesis; the rise and fall of molecular biology; the multiple forms of eugenics; the transformation of the social sciences; the role of new technologies in scientific change, especially computer and communication technology; the growth of science as a profession; and the development of science in non-western cultures.

[S&T 287 Evolution (also HIST 287)]

Fall. 4 credits. W. Provine.

For description, see BIO G 207.

[S&T 292 Inventing an Information Society (also ELE E 298 and ENGRG 298 and HIST 292)]

For description, see ENGRG 298.

[S&T 355 Computers: From Babbage to Gates]

Computers have not always been the ubiquitous beige boxes gracing our desktops: in Victorian London, Charles Babbage attempted to build his analytical engine using brass gears and steel rods, and during World War II the Allied governments used sophisticated electronic and electronic "brains" to break Axis codes. Machines that once occupied entire rooms now travel in knapsacks. How did this technology, once considered esoteric and useful to only technical specialists, colonize industry, academia, the military, the federal government, and the home? Using primary historical materials, including novels, films, archival documents, and other texts we will follow computers from Babbage's Victorian dream of an analytical engine to the visions of contemporary moguls like Bill Gates whose goal is "information at your fingertips." We will explore not only how computer technology affects society, but how culture and politics enable and sustain the development of the machine. This is a course in the history and sociology of computers, a background in computer science is not required. (No technical knowledge of computer use is presumed or required.)

[S&T 423 Technology, Colonialism, and Development #]

One time offering fall 2000. 4 credits. K. Oslund.

This seminar will explore the role of technology in the history of European colonialism. Many have argued that the technological advances made by Western Europeans during the Industrial Revolution paved the way for imperialism and colonialism overseas, as these developments assured the military superiority of Europeans over non-Europeans. Other scholars have found this argument overly deterministic, and stress the importance of nonmilitary technologies in the process of colonialism. We will examine an early-modern account of a European relationship with technology in a non-European setting, move on to examine various perspectives of historians of technology, and explore the connections between an earlier colonialism and the post-World War II discussion of development.

[S&T 424 A Natural History of the Ice, Polar Exploration from the Eighteenth to the Twentieth Century #]

One time offering spring 2001. 4 credits. K. Oslund.

This seminar will trace the history of polar exploration from the eighteenth-century Danish missionaries settling in Greenland, to the search for the Northwest Passage, the race for the North and South Poles, and the Cook- Peary dispute over the claim for the North Pole: What have been the motivations for polar exploration over the centuries? How were costly expeditions launched with the aim of finding something as economically "useless" as the North and South Poles justified? Were there "national" styles of polar exploration? How does the story of polar exploration illuminate issues of nationalism and national identity? These questions and others will be discussed.

[S&T 444 Historical Issues of Gender and Science (also WOMNS 444)]

One-semester survey of women's role in science and engineering from antiquity to the 1980s, with special emphasis on the United States in the twentieth century. Readings will include biographies and autobiographies of prominent women scientists, educational writings and other primary sources, and recent historical and sociological studies. By the end of the semester, we will have a broad view of the problems that have faced women entering science and those that still remain.

[S&T 447 Seminar in the History of Agriculture Sciences]

Fall. 4 credits. M. Rossiter.

This course is a one-semester survey of the general topic of the history of scientific agriculture, broadly defined, worldwide. It seeks to cover some of the best of the more recent literature on this topic. Depending on the interests of the students, topics may include Amish culture, the Hoover Dam, the Green Revolution, farm women and technology, particular scientists or crops, innovations, and epidemics.

[S&T 525 Seminar in the History of Technology (also HIST 525)]

Exploration of the history of technology in Europe and the United States from the eighteenth century to the present. Typical topics include the industrial revolution in Britain, the emergence of engineering as a profession, military support of technological change, labor and technology, the "incorporation" of science and engineering, technological utopias, cultural myths of engineers and inventors, social aspects of urbanization in the city and on the farm, post-war consumerism, and gender and technology. The interests of students and recent literature in the field will be considered in selecting the topics for the seminar.

[S&T 616 Enlightened Science (also HIST 616)]

For description, see HIST 616.

[S&T 644 Topics in the History of Women in Science (also WOMNS 644)]

Spring. 4 credits. M. W. Rossiter.

This is a one-semester graduate seminar on selected topics in the history of women and gender in science and technology, covering mostly the U.S. in the 20th century but broadly defined to include earlier periods and other countries. It seeks to acquaint advanced students with some of the best recent literature on this topic and to identify and explore possible new topics. Weekly readings and a research paper.
confirmation of Einstein’s theory of relativity, another week we may hear about crop circles and parapsychology.

Throughout, we will be looking at the changing nature of science and technology—"help that scientists, engineers, and their textbooks take for granted. No particular science or arts requirements are needed for this course. The materials are chosen so as to be understandable by all. We will use a variety of media, including still images, video, and computer simulations.

S&T 285 Communication in the Life Sciences (also COMM 285)
Spring. 3 credits. B. Lewenstein
For description, see COMM 285.

[S&T 311 Sociology of Medicine
Staff.
This course provides an introduction to the ways in which medical practice, biomedical technology, and the medical profession are embedded in society and shaped by social phenomena. Accountability to patients and the public, and struggles over the control of medical practice in a world where medicine is connected to gender, class, race, and personal autonomy are important overarching themes. We will examine the structure of the medical profession, medical training and professional socialization, the social organization of the hospital, and doctor-patient interactions. The course will also explore how biomedical knowledge and technology get produced, assessed, and introduced into clinical practice. Topics may include the intensive care unit, the training of surgeons, the regulation of pharmaceuticals, AIDS and breast cancer activism, genetic testing, and priority setting in biomedical science.

S&T 324 Environment and Society (also R SOC 324 and SOC 324)
Spring. 3 credits. L. Glenn
For description, see R SOC 324.

S&T 350 Atomic Consequences: The Incorporation of Nuclear Weapons in Postwar America (also GOVT 305, AM ST 350)
Spring. 4 credits. M. Dennis.
This course will explicate the development of atomic weapons from early twentieth-century ruminations about super bombs in science fiction through the Manhattan Project, the postwar development of thermonuclear weapons and civil defense, and more recent plans for strategic defense. Our focus will expand to cover the lives of researchers at such institutions as Los Alamos during and after World War II, and the problems posed by the classification of technical knowledge. We will seek to understand how the bomb became part of American culture through the use of literature and film, as well as readings in primary historical documents and secondary analyses. In addition to class meetings, there is also a required screening session on W 7–10 p.m. in Uris media room b. Films will generally last less than two hours, but some are longer. Viewing the movies is an essential part of the course.

Social Studies of Science

S&T 201 What is Science? An Introduction to the Social Studies of Science and Technology (also SOC 22 210)
Spring. 3 credits. J. Reppy.
This course is not a science or engineering course. It is not an introduction to science and technology. It is a course that allows both science and non-science majors to reflect a little on the nature of science and technology as activities. Why is science so successful? Has it always been that way? How different really is science from other activities? How does a new invention come about?
In order to understand better what science is we will also look at what it is not. We will look at episodes of mainstream science, along with science from the X-Files. One week students may study what went on in the
judgments in legal and legislative settings, intellectual property considerations in science and medicine, and legal and political oversight of scientific research. The final part of the course examines social processes and practices in legal institutions, and relates these to specific cases of scientific and technological controversy. Lectures and assignments are designed to acquaint students with relevant ideas about the relationship between legal, political, and scientific institutions, and to encourage independent thought and research about specific problems covered in the course.

In this seminar, we will treat music and sound and the ways they are produced and consumed as objects of historical and cultural study. We will be concerned to investigate specifically the way that music and sound are related to technology and how such technologies and sounds have been shaped by and have in turn shaped the wider society and culture of which they are a part. We will look at the history of sound technologies like the phonograph, the electronic music synthesizer, samplers, and the Sony walkman. Our perspective will be drawn from cultural studies of science and technology. Students will be encouraged to carry out a small original research project on their own favorite sound technology.

Should the human genome be treated as private property or a public resource? How should copyright be managed in the digital environment of the Internet? Is music "sampling" high-tech theft or artistic expression? Does bioprospecting represent an enlightened strategy for preserving biodiversity or a post-colonial means for transforming the wider societies from the developing world to the North? Debate about the nature and scope of intellectual property is an increasingly salient feature of contemporary politics. This course examines the ownership of knowledge and technology, exploring fundamental tensions that intellectual property systems express and incompletely reconcile. Perspectives from science and technology studies, sociology, law, and economics will inform the course. Case studies will explore the construction of property in contexts ranging from the early history of copyright to the ownership of life forms, airwaves, algorithms, artistic content, electronic databases, and the personal identities of celebrities.

[S&T 427 Politics of Environmental Protection in America (also GOVT 427)] Fall. 4 credits. Not offered 2000–2001. Staff.

An introduction to the distinctive feature of environmental politics in America, focusing particularly on the role of law, science, and citizen activism in public policymaking. Readings from law, political science, and policy analysis will examine the changing role of expert agencies, courts, public interest groups, Congress, and the states in environmental politics since the late 1960s. Case studies of specific environmental controversies (nuclear power, siting, pesticides, endangered species) will be used to explore dominant public conceptions of risk and safety, regulatory costs and benefits, and the goals and instruments of environmental policy.

[S&T 438 Minds, Machines, and Intelligence (also COGST 438)] Spring. 4 credits. H. Mialot.

Do machines think? Do they have minds? Are they intelligent? What can humans do that machines can't do and vice versa? How do humans use machines and how do machines use humans? In this course we will focus on how philosophers such as Turing, Searle, Dreyfus, etc. have dealt with these questions. At the same time, however, we will also be concerned with trying to rethnk the themes raised by these thinkers in light of social scientists who have studied how people and machines interact in specific (local) contexts, as for example, in a plane's cockpit or on the Internet. Topics may also include virtual surgery, speech recognition, and expert systems in medicine.

[S&T 442 The Sociology of Science (also CRP 442, B & SO 342, and SOC 342)] Fall. 4 credits. H. Mialot.

A view of science less as an autonomous activity than as a social institution. We will discuss such issues as controversies in science, analysis of scientific text, gender, and the social shaping of scientific knowledge.

Who are those who produce science? Rational, deliberative minds or brilliant, intuitive iconoclasts? Individuals or groups? Geniuses or ordinary practitioners? Human beings or assemblages of instruments? This course will explore the question of where scientific intelligence resides. The mythical figure of the lone genius stands in sharp contrast to recent work in the social history and sociology of science that analyzes how scientific knowledge is produced in collectivities that weave together humans and nonhumans. We will examine the process through which scientific competencies emerge from, and are incorporated into, "collective bodies" (e.g., Callon and Latour's "actor-networks," or Haraway's "cyborgs"). The tensions between the human and the nonhuman and the individual and the collective will run throughout the course and will inform our analysis of the place, the role, and the representation of the body—or bodies—of the scientists.

[S&T 466 Public Communication of Science and Technology] Fall. 4 credits. Limited to 15. B. Lewenstein.

For description, see COMM 466.

[S&T 467 Innovation: Theory and Policy] Fall. 4 credits. Open to upper-level undergraduates and interested graduate students. Prerequisite: Economics 102 or permission of the instructor. J. Reppy.

In this course we will study the innovation process (that is, the introduction of new technology into practice) through the critical analysis of selected theories of innovation and supporting empirical evidence. Economic theories will be contrasted to the insights to be found in science and technology studies. The focus will be on the context of interests and ideology in which the various theories have been framed and their differing implications for technology policy. Authors to be covered include Schumpeter, Solow, Scherer, Nelson and Winter, and Bijker and Pinch.

For description, see BIO G 469.

For description, see GOVT 483.

Recent scandals over scientific fraud, debates about financial conflicts of interest, disputes about the use of human and animal subjects, and tensions over ownership of data have raised concern about integrity in science. In addition, changes in the American research system—from the emergence of new university-industry relationships to the growth of electronic communication—pose new questions about who owns and controls research. The course addresses practices that present problems of integrity in research (e.g., fraud, secrecy, commercialization). It also examines how scientific practices affect the structural integrity of science as an institution. Through these complementary concepts of integrity, the course explores the connections between the conduct of science and its cultural authority.

This course will cover a variety of possible interactions between the disciplines of economics and science and technology studies. Economists (at least some economists) are interested in science and technology as important components in economic growth, while scholars in science studies often appeal to economic motives and institutions to explain behavior in the production of scientific and technological knowledge. We will explore ways in which economics can provide new questions and theoretical approaches for science and technology studies. From another perspective, economics, as the most "scientific" of the social sciences, is itself a subject for study. Internal critiques by economists will be compared to external analyses in the science studies literature. Readings will include works on the epistemology and use of rhetoric in economics and on the "new economics of science," and examples of the use of economic analysis in the science studies literature.
Rather than analyze the social impact of technology on society, in this course we will investigate how society gets inside technol-

gy. In this sense, visualization refers to the practices and technologies through which scientists and designers develop images, graphs, models, and other representations. Discourse refers, broadly, to practical uses of language. In this course, discourse and visualization will be treated as important aspects of the production of scientific data and technological artifacts. The course will focus mainly on historical and ethnographic studies that pay close attention to the material practices and linguistic repertoires through which scientific and technological innovations are made visible, palpable, and intersubjectively accountable.

**S&TS 625 Visualization and Discourse in Science**

Fall. 4 credits. M. Lynch.

This seminar covers two interrelated areas of science and technology studies: visualization and discourse. Visualization refers to the practices and technologies through which scientists and designers develop images, graphs, models, and other representations. Discourse refers, broadly, to practical uses of language. In this course, discourse and visualization will be treated as important aspects of the production of scientific data and technological artifacts. The course will focus mainly on historical and ethnographic studies that pay close attention to the material practices and linguistic repertoires through which scientific and technological innovations are made visible, palpable, and intersubjectively accountable.

**S&TS 631 Qualitative Research Methods for Studying Science (also SOC 631)**

Fall. 4 credits. T. J. Pinch.

This seminar covers two interrelated areas of science and technology studies: visualization and discourse. Visualization refers to the practices and technologies through which scientists and designers develop images, graphs, models, and other representations. Discourse refers, broadly, to practical uses of language. In this course, discourse and visualization will be treated as important aspects of the production of scientific data and technological artifacts. The course will focus mainly on historical and ethnographic studies that pay close attention to the material practices and linguistic repertoires through which scientific and technological innovations are made visible, palpable, and intersubjectively accountable.

**S&TS 645 Genetics: Politics & Society in Comparative Perspective (also GOVT 634)**

Hilgartner

Contemporary genetics and biotechnology are highly controversial, creating high hopes for some and deep anxieties for others. This course will trace the conflicts and power struggles over genetic engineering, using it as a case study to examine some crucial issues in the relationships among science, technology, and politics. In particular, the course will focus on three themes—the politics of property, the politics of identity, and the politics of risk—as they pertain to genetics. Topics may include the social shaping of biological research; eugenics and genetics; genetics and medicine; the regulation of risks; the growth of commercial biotechnology; university-industry relationships; Green parties and social movements; North-South issues and biotech-

**S&TS 664 Constructionism in Social Science**

M. Lynch.

Constructionist approaches have become commonplace in many fields of social and cultural study. The very words 'social construction' often provoke heated arguments, but exactly what these words mean or imply is seldom made clear. This course examines philosophical arguments, counterarguments, and empirical case studies associated with constructionism. The main focus will be on how and why scientific and technological knowledge is constructed to the material practices and linguistic repertoires through which scientific and technological innovations are made visible, palpable, and intersubjectively accountable.

**S&TS 700 Special Topic 1: Science Studies and the Politics of Science**

Fall. 4 credits. Prerequisites: S&TS 711 or permission of the instructor. Not offered 2000–2001.

Theoretical developments in science and technology studies have called attention to the contingent and socially embedded character of both knowledge claims and technological systems. Drawing on literature from several disciplines, this seminar explores the consequences of these findings for social and political studies of science. Issues and problems to be considered include trust and skepticism, political and legal agency, reflexive identity, and the sociology of science and technology, science and norms, and the co-production of knowledge and social order.

**S&TS 700 Special Topic 2: Technology Transfer Issues**

J. Reppy.

The goal of this course is to develop a coherent analytical framework for analyzing technology transfer, using insights from economics, sociology, history, and science and technology studies and to employ that framework to evaluate current policy issues. We will study technology transfer in different contexts, ranging from intra-firm and intra-industry to technology transfer between civil and military sectors and between industrialized countries and LDCs. The readings will include a mix of theoretical writings and case studies.

**S&TS 711 Introduction to Science and Technology Studies (also HIST 711)**

Fall. 4 credits. H. Milet.

This introductory course will provide students with a foundation in the field of science and technology studies. Using classic works as well as contemporary exemplars, seminar participants will chart the terrain of this new field. Topics for discussion include, but are not limited to: historiography of science and technology; and their relation to social studies of science and technology; laboratory studies; intellectual properties; science and the state; the role of instruments; fieldwork; politics and technical knowledge; philosophy of science; sociological approaches of science and technology; and popularization.

**Independent Study**

S&TS 399 Undergraduate Independent Study

Fall or spring. 1–4 credits.

Please apply in 275 Clark Hall.

S&TS 498–499 Honors Project I & II

Fall and spring. 3–5 credits each term.

Open only to Science & Technology Studies students in their senior year by permission of the department. Please apply in 275 Clark Hall.

Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research and the completed work should be of wider scope and greater originality than is normal for an upper-level course.

Students may take three to five credits per semester up to a maximum of eight credits in S&TS 498 & 499, Honors Projects I & II.

Students should note that these courses are to be taken in addition to those courses that meet the regular major requirements. The student and the project supervisor must reach clear agreement at the outset as to what sort of work will need to be completed during the first semester. Minimally, an honors thesis outline and bibliography should be accomplished. At the end of S&TS 498, Honors Project I, a letter grade will be assigned and the advisers, in consultation with the Director of Undergraduate Studies, will evaluate whether or not the student should continue working on an honors project. S&T&S students who do continue in the honors program for the second semester will receive a letter grade at the end of their final term whether or not they complete a thesis and whether or not they are recommended for honors.

Applications and information are available in the Science & Technology Studies Office, 275 Clark Hall.

S&TS 699 Graduate Independent Study

Fall or spring. 2–4 credits.

Please apply in 275 Clark Hall.

S&TS 700 Special Topics

Spring. 3–4 credits.

**SINHALA (SINHALESE)**

See Department of Asian Studies.

**SOCIOLoGY**

The subject matter of sociology is human social organization and institutions. The Department of Sociology offers courses in social organization that include (among other issues) examination of inequality on the basis of race, ethnicity, income, and occupation; political behavior and public policy; social psychology and group processes; and contemporary social movements for change.
Courses that analyze institutions include the family, politics, and issues of public policy, the analysis of voluntary organizations, and the study of the networks of political and organizational action.

The Department of Sociology offers the opportunity to develop fundamental theoretical insight and advanced research skills appropriate for the study of social behavior and institutions. Graduates of the department take up careers in government, business and in law, management, architecture, and other professions seeking men and women who demonstrate a disciplined understanding of society and social issues.

Sociology Courses for Nonmajors
Sociology provides students with particularly effective ways to understand the complexities of modern life. For many students, the undergraduate years are a last opportunity to gain the insights these fields have to offer. The Department of Sociology is continuing to design an array of beginning and advanced courses that convey a broad understanding of the methods and insights of sociological analysis—courses that will be of particular interest to undergraduates who may not major in sociology. First- and second-year students should note that the introductory courses (101, 103, 105, 115, 150) provide substantial focus on the sociological analysis of major issues of public life. A wide selection of general education courses is available at the 200 level. Advanced undergraduates who are majors in other fields should also see, in particular, the descriptions of Sociology 303, 310, 354, 370, 380, for which there are no prerequisites other than junior or senior status.

Related Courses in Other Departments
Students interested in sociology should consult the course lists of the other social science departments in the College of Arts and Sciences (Anthropology, Economics, Government, and Psychology) and of these other departments: Organizational Behavior (College of Industrial and Labor Relations), Human Development and Family Studies (College of Agriculture), and Rural Sociology (College of Agriculture and Life Sciences).

The Major
Requirements for general sociology: (1) 101 and any other 100-level or 200-level course (excluding Freshman Writing Seminar) with a 2.5 minimum grade-point average; (2) no later than the junior year; the 301 and 303 methods courses; (3) one course in the department at the 400 level or higher (491 is recommended); and (4) 20 additional credits in sociology, of which six may be taken in related departments. Students are encouraged to take courses in the concentration. Honors students take Sociology 495–496 during their senior year. Graduation with honors requires a cumulative average of at least B+ in all sociology courses and the successful completion of an oral defense of the honors thesis. Interested students should consult the director of undergraduate studies no later than the second semester of their junior year.

Supervised research. Qualified sociology majors are invited to participate with faculty members in conducting research. Such projects are usually initiated in one of two ways: the student may offer to assist the faculty member in an ongoing project, or the student may request that the faculty member supervise the execution of a project conceived by the student. In either case the student should enroll in Sociology 491. Interested students may direct inquiries to any faculty member.

Business and Organizational Studies Concentration
Majors who wish to prepare for postgraduate study in professional schools (business, management, or law) or a career in business or nonprofit organizations may elect to acquire a concentration in Economic and Organizational Sociology. This program provides Cornell students with training in economic sociology and organizational stucture, and comparative societal analysis useful in a world increasingly shaped by economic and social forces of a truly global dimension. The required core courses in the concentration are: SOC 105, SOC 215, and a research-oriented honors seminar to be fulfilled as an independent study course (SOC 491) with faculty members affiliated with the concentration. Affiliated faculty include: P. Becker, M. C. Brionton, M. Clarkberg, M. M. Macy, V. Nee, P. Tolbert, R. Stern, and D. Strang. In addition to the required courses, students must take four elective courses from the following list: SOC 217, SOC 220, SOC 311, SOC 314/315, SOC 315, SOC 322, SOC 326/327, SOC 370/370, SOC 373, SOC 421, and SOC 427. Students completing the concentration receive a letter of recommendation from the chair based on the cumulative academic record in the concentration. Please contact Heather Gowe, Undergraduate Program Coordinator, or Szelenyi Szonja, DUS, for additional information on the Business and Organizational Studies concentration.

Introductory Courses

**SOC 101 Introduction to Sociology (also R SOC 101)**
Fall, spring, or summer. 3 credits. Fall, M. Macy; spring, S. Szelenyi.
This course provides an introduction to theory and research in sociology. It demonstrates how the insights, theories, and methods of sociological analysis can be brought to bear on major issues of social life. A primary goal is to convey a sense of the manner in which sociologists formulate theories and the collection and analysis of data are used to evaluate those theories. The course will provide "hands-on" experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

**SOC 103 Self and Society (also R SOC 103)**
An introduction to microsociology, focusing on social processes within small groups, including the family. Emphasis is on leadership, conformity, social influence, cooperation and competition, distributive justice, and micro analyses of interaction.

**SOC 105 Introduction to Economic Sociology (also R SOC 105)**
Fall. 3 credits. C. Leuenberger.
Modern social thought arose out of attempts to explain the relationship between economic development and the social transformations that gave rise to the contemporary world. Classical theorists from Karl Marx and Max Weber to Karl Polanyi focused their writings on emergent capitalist economies and societies. Contemporary social theorists likewise have sought to understand the interaction between capitalism and the social forces reacting against and emerging from modern economic development. From exchange and rational choice theories to network analysis and institutional theory, a central theme in contemporary social thought has been the relationship between the economy and society, economic action and social structure, rationality and fundamental social processes. This course provides an introduction to social thought and research seeking to understand and explain the relationship between economy and society in the modern era.

**SOC 115 Utopia in Theory and Practice**
Becker, T. Strange.
People have always sought to imagine and realize a better sort of society, with both inspiring and disastrous results. In this course we discuss the literary utopias of More, Morris, and Bellamy, and also the dystopias of Huxley, Orwell, and Zamitain. We also examine real social experiments, including nineteenth-century intentional communities, twentieth-century socialism and religious cults, and modern ecological, political, and millenial movements. Throughout, the emphasis is on two sociological questions. What kinds of social relationships appear as ideal? How can we tell societies that might work from those that cannot?

**SOC 151 Families and the Life Course (also HD 151)**
Spring. 3 credits. T. Mitran. For description, see HD 151.

**General Education Courses**

**SOC 200 Social Problems (also R SOC 200)**
T. Hirsch.
For course description, see R SOC 200.

**SOC 201 Religion and Family in the U.S. (also R SOC 202 and RELST 203)**
P. Becker.
This course will examine how two fundamental social institutions—religion and the family—are interlinked in American society. As recently as the 1950s, religious institutions were organized around the needs of one dominant family form, the male-breadwinner family with a stay-at-home mother. But since the 1950s, that family form is no longer statistically dominant or culturally normative.
How have religious institutions adapted to new family forms? How do religious beliefs influence behavior within families? For example, the raising of children? How do religious groups foster ideals of family life or influence our beliefs about what are “good” families? How do people’s family experiences and family values influence their participation in organized religion? What models of family life are religious groups organized around? We will begin to answer these questions by drawing on readings that explore the religious—family link in a variety of religious, ethnic, and social class contexts within the contemporary United States.

SOC 202 Population Dynamics (also R SOC 201) Spring. 3 credits. L. Williams.
For course description, see R SOC 201.

W. Burkard.
Home and family life often is portrayed in the popular media as a haven away from the harsh realities of public life, suggesting that work and family constitute separate and distinct spheres. By contrast, many sociologists contend that there is a link between work and family, and that this link has different consequences for men and women. It will highlight the responses of individuals, employers and governments, both in the United States and internationally, to the dilemmas posed by the interface between work and family.

D. Heckathorn.
This course focuses on race and ethnic relations in contemporary perspective. It examines the social and behavioral implications of attributions of race and ethnicity in small group interaction, the world of work, and the larger society. Topics include social processes in income and employment, affirmative action, ethnic political mobilization, patterns of marriage, and family formation.

SOC 206 International Development (also R SOC 205) Spring. 3 credits. L. Michael.
For course description, see R SOC 205.

[SOC 207 Problems in Contemporary Society] Fall. 3 credits. D. Heckathorn.
This course examines contemporary social problems, with a focus on their sources in the organization of society. Modern societies are based on three fundamental types of institutions—social norms, hierarchies, and markets. Each is subject to distinctive types of failures resulting in problems that include poverty, prejudice and discrimination, intolerance and hate, alcohol and drug abuse, physical and mental illness, crime and delinquency, and urban problems. In analyzing these problems we emphasize the institution through which they are created and perpetuated, and the form of institutional change required to address them.

SOC 208 Social Inequality Spring. 3 credits. D. Grusky.
This course examines contemporary approaches to understanding the distribution of valued goods and the social processes by which such inequality comes to be seen as legitimate, natural, or desirable. We address questions of the following kind: What are the major forms of stratification in human history? Is inequality and poverty an inevitable feature of human life? How many social classes are there in advanced industrialism? Is there a “ruled class”? Are lifestyles, attitudes, and personalities shaped fundamentally by class membership? Can individuals born into poverty readily escape their class origins and move upward in the class structure? Is there much countervailing downward mobility? Are social contacts and “lucky” important forces in matching individuals to jobs and class positions? What types of social processes serve to maintain and alter racial, ethnic, and gender discrimination in labor markets? Is there an “underclass”? Will stratification systems take on new and distinctive forms in the future? These and other questions are addressed in light of classical and contemporary theory and research.

D. Heckathorn.
Course description is TBD.

This is an introductory course in the study of organizations. We will start by taking a look at various examples of organizing, including a street gang in a Boston neighborhood, a minority community, industrial corporations, modern universities, Silicon Valley and Route 128, and more, a sampler. These brief glimpses serve as exercises in looking behind and beyond diverse rhetoric for common patterns in organizational phenomena. The focus of the course is on research scholarship, not the training of managers. Nonetheless, the analytical skills you will acquire are applicable to work in firms, government agencies, and nonprofit organizations.

SOC 217 Embedded Markets Fall. 3 credits. S. Goell.
This is a course designed for a wide range of students who are generally interested in organization perspectives on markets and businesses. The primary focus of the course is on modes of organizing. In particular, we will look at the ways in which market-like actions are played out in social settings. Basic conceptual frameworks will be provided. Yet the course will extensively use, and ask you to come up with, contemporary and local problems to illustrate the core issues.

P. Becker.
How do the organizations we belong to shape us? What is organizational identity and how does it come about? How do cultural beliefs shape organizations? What kinds of organizations strike us as legitimate and effective, and why? Organizations may be goal-directed problem solvers, but they’re also locations for culture and they’re played out in social settings. Basic conceptual frameworks will be provided. Yet the course will extensively use, and ask you to come up with, contemporary and local problems to illustrate the core issues.

D. Heckathorn.
Introduces the development of three central kinds of social policy: those concerned with delivering medical care, schooling the young, and providing resources for the economically vulnerable. The course treats the historical development of large-scale public programs, regulatory systems, or attempts to provide action; political struggles over social rights and the allocation of resources; and the organizations that are constructed to carry out policy. The focus is on American policy, but with considerable comparative attention to the health, education, and welfare programs of other nations.

SOC 246 Drugs and Society Fall. 3 credits. D. Heckathorn.
The course focuses on drug use and abuse as a social—rather than as a medical or psychopathological—phenomenon. Specifically, the course deals with the history of drug use and regulatory attempts in the United States and around the world; the relationship between drug use and racism/class conflict; and the promotion and condemnation of drug activities in the mass media.

P. Becker.
This course explores how religion provides a basis for moral critique, political mobilization, and social identity in a modern society. The first part introduces basic issues—definitions of religion, the sociological approach to the study of religion, and religion and modernity. In the main body of the course, we will read studies of specific religious groups and organizations in the contemporary United States—examining such questions as: How do religious organizations provide a basis for gender, identity and gender norms? What religious groups and discourses contribute to public debate on issues ranging from economic justice to abortion? How do religious leaders mobilize citizens for social action in their communities?

SOC 265 Latinos in the U.S. (also LSP 201 and R SOC 265) Spring. 3 credits (4-credit option available).
H. Velez.
Exploration and analysis of the Hispanic experience in the United States. An examination of sociohistorical background and economic, psychological, and political factors that converge to shape a Latino group identity in the United States. Perspectives are suggested and developed for understanding Hispanic migrations, the plight of Latinos in urban and rural areas, and the unique problems faced by the diverse Latino groups. Groups studied include Mexican Americans, Dominicans, Cubans, and Puerto Ricans.
This course uses contemporary social issues to introduce students to sociological reasoning, explanation, and analysis. Topics include race, gender, and performance differences in face-to-face groups; gender and double standards; the question of government and inequality, and crime and deviance. Students will complete guided research problems that require the analysis of existing data. Classroom instruction will give students all the skills necessary to complete the research exercises.

The focus of this course is on the relationship between the individual and the social group. It will examine the way in which the individual shapes "society," and in turn, how society influences individual behavior. Topics include formation of self, influence and conformity, and the emergence of racial and gender differences in status and power.

### Methods and Statistics Courses

**SOC 293 Inequality, Diversity, and Justice (also CRP 293, GOVT 293, PHIL 193, SOC 293)**
Fall. 4 credits. No prerequisites. intended for freshmen and sophomores. R. Miller.
An interdisciplinary discussion of the nature and moral significance of social inequality, diversity, and poverty and of the search for just responses to them. How unequal are economic opportunities? What are the causes of poverty? To what extent is greater equality a demand of justice? Are traditional welfare programs an appropriate response to poverty? What special significance have race and gender as sources of inequality? Do they merit special remedies such as affirmative action? How should governments deal with religious diversity and other differences in ultimate values? For example, should abortion statutes have a duty to help the foreign poor? Moral argument, investigations of social causes, and legal reasoning interact in the search for answers to these questions. To provide these resources, the course will be taught by leading faculty researchers in philosophy, political theory, the social sciences, and law.

**SOC 301 Evaluating Statistical Evidence**
Fall. 3 credits. M. Clarkberg.
A first course in statistical evidence in the social sciences, with emphasis on statistical inference and multiple regression models. Theory is supplemented with numerous applications.

**SOC 303 Design and Measurement**
Spring. 4 credits. Prerequisite: a course in sociology. S. Caldwell.
Foundations of sociological analysis; issues associated with using humans as data sources; the quality of our primary data; methods of its collection; research designs in wide use and their limitations; pragmatic considerations in doing research on humans, organizations, communities, and nations.

**SOC 304 Modeling Social Processes**
Fall. 3 credits. D. Strang.
How do groups self-segregate? What leads fashions to rise and fall? How do rumors spread? How do communities form and police themselves on the Internet? This course examines these kinds of issues through the study of face-to-face situations like fads, exchange, diffusion, and group formation. We focus on models that can be explored through computer simulation and improved through observation.

### Intermediate Courses

**SOC 309 The Sociology of Marriage (also SOC 508)**
Spring. 3 credits. M. Clarkberg.
Contemporary debate on the nature of the family in the United States often assumes a simplistic decay of the "traditional marriage." This course unpacks the myths and facts that undergird this model. We will overview the historical patterns of marriage in the United States, examine data on contemporary union formation and dissolution and their consequences, and explore various theoretical models of marriage and its decline.

**SOC 311 Group Solidarity**
Fall. 4 credits. M. Mary.
What is the most important group that you belong to? What makes it important? What holds the group together, and how might it fall apart? How does the group recruit new members? Select leaders? Make and enforce rules? Do some members end up doing most of the work while others get a free ride? We will explore these questions from an interdisciplinary perspective, drawing on sociological, economics, and social psychology, as we apply alternative theories of group solidarity to a series of case studies, such as urban gangs, spiritual communes, the civil rights movement, pro-life activists, athletic teams, work groups, and college fraternities.

**SOC 316 Gender Inequality**
Fall. 3 credits. D. Strang.
This course offers a comprehensive overview of historical and contemporary patterns of gender stratification. The first few weeks will be devoted to the examination of different ideas (biological, functionalist, feminist) about gender inequality, and the unique doctrine of Mao Tsetung. The course will involve both theoretical analyses and empirical investigations of four substantive areas: the historical development of gender stratification, the nature of gender inequality in contemporary cross-national comparison of gender inequality, and strategies for social change. Specific topics will include: division of labor between men and women; relationship between social class and gender; dynamics of gender segregation; gender differences in social mobility, masculinization, and sexualized attainment; and racial and cross-national variations in gender inequality. Each section will contain examination of key theoretical debates and a survey of recent feminist research that is relevant to those debates.

**SOC 322 Organizations and Social Inequality (also ILR 325)**
Spring. 3 credits. P. Tolbert.
For course description, see ILR 325.

**SOC 324 Environment and Society (also S&TS 324 and R SOC 324)**
Spring. 3 credits. M. Pfeiffer.
For course description, see R SOC 324.

**SOC 325 Socialist Societies**
Fall. 3 credits. S. Szelényi.
This course begins by surveying the idea of socialism from the Romantic tradition of William Morris to the scientific theory of Karl Marx and the unique doctrine of Mao Tsetung. These visions are contrasted to the realities of actually existing socialist societies—especially those of Eastern Europe. Some of the themes that will be examined include: the problems of centrally managed economies, the extent and dynamics of social inequalities, dissent and opposition under socialism, and strategies for economic reform. The course concludes by evaluating a number of alternative views on the nature of these societies and by discussing their post-communist transformation.

**SOC 326 Social Policy (also SOC 526)**
Fall. 4 credits. S. B. Caldwell.
The dramatic growth of the policy research sector as an institutional and intellectual force signals a changing relationship of social science to social policy in the United States. With an eye on that relationship, this course examines the development of social policy in selected areas, among them welfare, poverty, housing, crime, and health. The policy research sector itself—people, values, and institutions—is also surveyed.

**SOC 333 Primate Societies**
Fall. 3 credits. R. Grannis.
All primates (including humans) share a common social and cultural, as well as biological, heritage which was bequeathed to us by our common ancestors. This shared inheritance is even more pronounced between humans and their closest nonhuman relatives, chimpanzees and gorillas. This course will survey the social behaviors and cultural forms of our primate cousins with a special focus on baboons, chimpanzees, and gorillas. We will begin by reviewing the diversity of primates and then look at primate socioecology including demography,
hunting and gathering, and kinship. Next, we will examine the politics, economics, communication, and culture of some of our more closely related primate cousins. In addition to sharing a common past, all primates (except for some recent humans) are hunter-gatherers with similar ecological capacities and needs who have solved similar socioecological problems. We will end the course by considering the implications of these findings for our lives as human primates.

**SOC 336 Segregation**

Spring. 3 credits. R. Grannis.

Over seven decades ago, Robert Park noted that "physical distances frequently are the indices of social distances. As we near the beginning of a new millennium, very little has changed. Segregation may have disappeared from our public discourse, but it is a very present reality in our cities. This course will survey residential segregation by asking some very basic questions: What does it mean to be segregated? How has segregation been different in different times and places? What are the consequences of segregation? Why does segregation occur? How can illegal segregation persist? What can be done about segregation?"

**SOC 340 Health, Behavior, and Health Policy**

Spring. 3 credits. S. B. Caldwell.

This course examines the social contexts of physical and mental health, illness and medical care; its purpose is to explore the contributions of social science to health promotion and health policy. Topic areas include: social context of health, disease and illness; social organization of health services; use of health services; health and illness as a social phenomenon; health service use; health promotion and disease prevention; and national health care policies.

**SOC 341 Modern Euro Society and Politics (also GOVT 341)**

Fall. 3 credits. J. Pontusson and D. Schirmer.

For course description, see GOVT 341.

**SOC 346 Schooling and Society**

Spring. 3 credits. S. L. Morgan.

After reviewing alternative theories of the development and changing function of educational institutions in society, this course examines explanations for why individuals obtain educational training, how an individual's family background and race affect his or her trajectory through the educational system, and how and why society confers advantages on educated individuals. Following a review of recent empirical research on effective schools, the course concludes with an examination of current policy debates in the United States, focusing primarily on school choice, vouchers, and financial aid for a college education.

**SOC 350 Comparative Revolutions**

For description, see GOVT 350.

**SOC 355 Knowledge and Society**

Spring. 3 credits. C. Leuenberger.

This course will focus on the historical evolution of the sociology of knowledge as a theoretical paradigm and an empirical research field. We will examine the phenomenological origins of the sociology of knowledge and many of its central texts. We will study how it has been applied to such areas as personhood, interaction, religion, identity, and the emotions. We will also consider epistemological questions that arise and will cover various theoretical and empirical approaches that have been influenced by the sociology of knowledge such as ethnomethodology, conversation analysis, and the sociology of science and technology.

**SOC 354 Law and the Social Order**

Fall. 4 credits. W. Burkard.

In what ways, if any, do laws and legal institutions make a difference to people who have disputes? How did lawyering come to be a modern profession? How do business organizations deal with legal ambiguity in constructing symbols of compliance with laws? How do networks of interpreters constitute the authority of law? By exploring selected topics such as these, we seek to understand the distinctive contributions of sociology to the study of law and the social order.

**SOC 356 Law in Society (also SOC 556)**

The phrase "law and society" misleadingly suggests that we are speaking of two discrete entities: 'law' and 'society.' But law is itself part of society, its basic processes are social processes, and it contains within its own internal workings social dimensions worthy of study by the sociologist.

In this course we will examine law in society. The 'classical' sociological models of law—those of Marx, Weber, and Durkheim—are well-represented. The works of several significant American and European critical legal theorists—those of the American Legal Realists, the Frankfurt School, Michel Foucault, Roberto Unger, Duncan Kennedy, and Jurgen Habermas—are also well-represented, not only to facilitate an understanding of the bases for the attacks on the liberal Rule of Law, but also to facilitate an understanding of the relationship between law and politics and the potential for revitalizing the Rule of Law through democracy. The major themes in 'classical' and contemporary legal anthropology (e.g., hegemony v. resistance, rule-centered v. processual v. interpretive paradigms) are reviewed. We also consider the extent to which the various perspectives on law in society have been appropriated internationally.

**SOC 358 Modes of Institutional Analysis (also SOC 558)**

Much social theory treats individual behavior as occurring within and shaped by institutions. For example, discussions of American health care policy emphasize not only the preferences of physicians, businesses, and consumers, but also the institutional structure of American medicine. This course introduces the various perspectives on law and society that provide multiple veto points and makes broad cross-class coalitions difficult to build. This course will examine the main types of institutional analysis active in contemporary social science.

**SOC 370 Careers (also SOC 570)**

Fall. 4 credits. D. Schirmer.

By examining various career paths, we will consider the implications of career as a continuous process or as a sequence of positions. We will explore the differences and similarities among different career paths and lay out the patterns and structures of the career formation from a sociological point of view. We will also discuss the settings in which the career development takes place, giving some comparative attention to the ways of organizing careers in other societies.

**SOC 371 Comparative Social Stratification (also R SOC 370)**

Fall. 3 credits. S. Feldman.

For course description, see R SOC 370.

**SOC 373 Organizational Behavior Simulations**

Fall. 3 credits. Prerequisites: ILROB 170 and 171 or equivalent. Limited enrollment. R. Stern.

See ILROB 373 for course description.

**[SOC 375 Classical Theory**

Introduces students to major macro-sociological paradigms and encourages them to participate in "cross-paradigm" debates. The three main theorists of sociology (i.e., Marx, Durkheim, and Weber) are compared with respect to their approaches to the social sciences, their visions of human history, their conceptions of capitalist society, and their ideas on social change. The assigned reading focus on the original writings of these theorists, while the lectures provide the requisite socio-historical context.

**[SOC 380 Gender, Ideology, and Culture (also WOMNS 380)**

This course will explore representations of women in popular culture, including images, narratives, and religious practices. We will examine the relationship between popular culture and ideology, and look at how women "read" popular culture. The aim of the course is to enable students to think critically and analyze the effects of ideological representations of difference on personal identity construction, status, and power relationships. Readings are drawn mostly from sociology of culture and cultural studies; most texts deal with popular culture and gender in the nineteenth- and twentieth-century United States.

**SOC 393 Sociology of War & Peace**

Fall. 4 credits. R. M. Williams, Jr. and J. Reppy.

Every human group, community, or society presents many examples of altruism, helping, cooperation, agreement, and social harmony. Each grouping or society also manifests numerous examples of competition, rivalry, opposition, disagreement, conflict, and violence. Both conflict and cooperation are permanent and common aspects of the human condition. Collective conflicts, especially wars and revolutions, are frequent and dramatic events. "Peace" is equally an active social process, not passive happenings. This course describes various commonly accepted but erroneous notions of the causes and consequences of war and deterrence. It deals with the major themes concerning the sources of war in international and intranational social systems. The last half of the course analyzes the modes, techniques, and outcomes of efforts to restrict, regulate, and resolve international conflicts.

**Advanced Courses**

The following courses are intended for advanced undergraduates with substantial
SOC 402 Doctors and Lawyers
Spring. 4 credits. W. Burkard.
This seminar will examine sociological and historical materials on the education and training of physicians and attorneys and the practice of medicine and law. Students will use these materials to develop projects, e.g., the effects of managed care on medical practice, the role of clinical training in legal education, and will present their works-in-progress during the last half of the course. This course may interest upper-level students considering careers as physicians or attorneys, as well as potential sociologists of medicine, law, or the professions.

SOC 403 The Economic Sociology of Earnings
Spring. 3 credits. S. Morgan.
Framed by recent changes in earnings inequality in the United States and by theoretical literature on the equity and efficiency of meritocracy and exploitation, this course examines sociological and economic explanations for earnings differentials in the labor market. Teaching tasks, jobs, and professions as sometimes distinct structural positions in the economy, the course examines empirical research on the roles of skills, credentials, promotion opportunities, labor market institutions, and global economic trends as determinants of the level of earnings inequality within organizations, between organizations, and for society as a whole.

SOC 404 Economy and Family—
Interrelationships over the Life Course (also SOC 504)
M. Clarkberg.
While sociologists have often argued that the modern family has shed most of its "productive" functions, economic models have never been more central in the study of the family. This course covers the emerging dialogue between economists and family scholars along two related dimensions. First, we examine the reciprocal relationship between the structure of the economy (including income, careers, and workplace characteristics and policies) and family structure and outcomes. Second, we weigh the contribution of economic or "rational actor" models to the study of the family behaviors. These related economic processes will be used to examine marriage and divorce, time use and the division of labor within families, population growth, and the dynamics of health and aging.

SOC 408 Qualitative Methods (also SOC 508)
P. Becker.
This course is designed to introduce students to qualitative research. We will focus on interviewing, document review, and participant observation, although we will also talk about validity, reliability, ethics, and research involvement, issues that are applicable to qualitative research more broadly. Each student will design and carry out a semester-length research project, keep a field journal, and do a final research report.

SOC 421 Regulating the Corporation
(also ILROB 421)
Spring. 4 credits. R. Stern.
See ILROB 421 for course description.

SOC 427 The Professions: Organization and Control (also ILROB 427)
Fall. 3 credits. Prerequisite: permission of the instructor. P. Tolbert.
See ILROB 427 for course description.

SOC 429 Culture and Agency (also SOC 520)
P. Becker.
This course will look at the development of sociological theory on questions of culture and agency. Starting with various reflection or materialist approaches to culture that decenter the theoretical literature on the equity and efficiency of meritocracy and exploitation, this course will then follow the development of theories that explicitly link culture to actors and events in an attempt to account for both social reproduction and social change. The readings will cover a broad time span and a variety of intellectual approaches, including critical theory and cultural studies, but will center on the sociology of culture.

SOC 430 Social Organization of Economic Action (also SOC 530)
Spring. 4 credits. Staff.
See SOC 530 for course description.

SOC 437 Social Demography (also R SOC 438)
Fall. 3 credits. D. Gurak.
For course description, see R SOC 438.

SOC 438 Immigration and Ethnic Identity
V. G. Nee.
Immigration has been a central process in the peopling of American society. The early immigration to the United States involved primarily the migration and settlement of European national groups. Since 1965, the mix of immigration has shifted to include an increasing diversity of ethnic groups, especially from Latin America and Asia. As American society moves into an era of increasing ethnic diversity, the issue of ethnic boundaries and identity become increasingly complex and problematic. This course seeks to examine some of the causes of international migration, the dynamics of immigrant incorporation into American society, and the making of new ethnic groups and identities.

SOC 444 Contemporary Research in Social Stratification
R. L. Breiger.
Stratification and mobility as paired concepts, requiring mutual articulation. The interplay of structure (occupational groups, labor markets, organizational demographics, social classes) and process (tracking, career trajectories, socioeconomic attainment). Recently formulated log-linear models of mobility and structure provide a central focus of the course.

SOC 457 Health and Social Behavior
(also HD 457)
Fall. 3 credits. Prerequisites: HD 150, HSS 201, SOC 101, or SOC 101 and one course in statistics. Letter grades only.
E. Wethington.
See HD 457 for course description.

SOC 480/580 Identity and Interest in Collective Action
M. Macy.
This seminar examines the problem of collective action from an alternative theoretical perspective, one centered on shared interests; the other on common identities. The former claims that groups are held together because the members are interdependent and thus benefit from cooperating in a common endeavor. Others argue that effective mobilization may depend on affective ties among participants who share a salient demarcation. We will explore this debate, and its possible resolution, through an examination of formal theoretical studies (especially computer simulation) as well as empirical research using experimentation and comparative case analysis. Key concepts addressed in the social dilemmas (and game-theoretic analysis), the free-rider problem, rational choice theory, formal and informal social control, social identity theory, and the role of networks and institutions as mechanisms for reconciling the tension between individual self-interest and collective obligations.

SOC 491 Independent Study
Fall or spring. 1–4 credits. For undergraduates who wish to obtain research experience or to do extensive reading on a special topic. Permission to enroll for independent study will be granted only to students who present an acceptable prospectus and secure agreement of a faculty member to serve as supervisor for the project throughout the term. Graduate students should enroll in 891–892.

SOC 495 Honors Research
Fall or spring. 4 credits. Limited to sociology majors in their senior year.
Prerequisite: permission of instructor.

SOC 496 Honors Thesis: Senior Year
Fall or spring. 4 credits. Prerequisite: Sociology 495.

Graduate Core Courses

These courses are primarily for graduate students in sociology but may be taken by other graduate students with permission of the instructor. Graduate students in sociology will normally take each of the five courses listed below, but with the concurrence of their special committees other arrangements may be made.

SOC 501 Basic Problems in Sociology I
Fall. 4 credits. D. Strang.
Analysis of theory shaping current sociological research. Examination of several central problems in sociological inquiry provides an occasion for understanding tensions and continuities between classical and contemporary approaches, for indicating the prospects for unifying microsociological and macrosociological orientations, and for developing a critical appreciation of efforts to integrate theory and research.

SOC 502 Basic Problems in Sociology II
Spring. 4 credits. D. Heckathorn.
Continuation of Sociology 501. Emphasis is on the logical analysis of theoretical perspectives, theories, and theoretical research programs shaping current sociological research. The course includes an introduction to basic concepts used in the logical analysis of theories and examines their application to
specific theories and theoretical research programs. Strategies include functionalism, social exchange, and interactionism.

[SOC 504 Economy and Family (also SOC 404)]
For course description, see SOC 404.

[SOC 505 Research Methods I: Logic of Social Inference]
Fall. 4 credits. Prerequisite: a first course in statistics and probability. M. Clarkberg.
This course is an introduction to techniques of social inference. We will cover research methods, sources of evidence, model design, and questions of empirical validity.

[SOC 506 Research Methods in Sociology II]
Spring. 4 credits. Prerequisite: Sociology 505 or equivalent. D. Grusky.
Introduction to the general linear model for discrete and continuous variables. Discussion of principles of estimation, model selection, coefficient interpretation, specification error, and fit assessment. The linear regression model is covered in depth and then generalized to the cases of logistic regression, probit, log-linear, log-multiplicative, latent class, and related models. Although the statistical theory underlying these models is reviewed, issues of interpretation and estimation typically take precedence. Emphasis is accordingly placed on the analytic and stylistic issues that arise in writing research papers based on the general linear model.

[SOC 507 Research Methods in Sociology III]
Fall. 4 credits. Prerequisite: Sociology 506. R. Granov
Models and methods for the quantitative and formal analysis of social dynamics. The course focuses on event history analysis in the case of discrete outcomes and pooled cross-sections, and in the formal analysis in the case of continuous outcomes.

Graduate Seminars

These seminars are primarily for graduate students but may be taken by qualified advanced undergraduates who have permission of the instructor. Which seminars are to be offered any term is determined in part by the interests of the students, but it is unlikely that any seminar will be offered more frequently than every other year. The list below indicates seminars that are likely to be offered, but others may be added and some may be deleted. Students should check with the department before each term.

[SOC 508 Qualitative Methods (also SOC 408)]
This course is designed to introduce students to qualitative research. We will focus on interviewing, document review, and participant observation, although we will also talk about validity, reliability, ethics, and research involvement, issues that are applicable to qualitative research more broadly. Each student will design and carry out a semester-length research project, keep a field journal, and do a final research report.

[SOC 509 The Sociology of Marriage (also SOC 309)]
Spring. 3 credits. M. Clarkberg.
For course description, see SOC 309.

[SOC 510 Seminar on Comparative Societal Analysis]
Fall and spring. 3 credits. Open to advanced graduate students throughout the social sciences, with permission of instructor. M. Brinot.
This seminar is intended for advanced graduate students interested in comparative methods and research in the social sciences. It is offered in conjunction with the Comparative Societal Analysis program in the Einaudi Center for International Studies. Students enrolled for credit write critiques of papers presented at the seminar by faculty members and other graduate students, and take responsibility for presenting their own ongoing research at one meeting per semester. Some weeks are devoted to collective reading and analysis of background work. Students may enroll for more than one semester.

[SOC 513 Social Networks and Social Structure (also SOC 313)]
Staff.

[SOC 526 Social Policy (also SOC 326)]
Fall. 4 credits. S. B. Caldwell.

[SOC 527 Artificial Social Life]
Spring. 4 credits. M. Macy.
An introduction to computer simulation seminar will survey the history of social simulation and introduce students to complexity theory, game theory, and evolutionary models of social change. The remainder of the course (nine weeks) will teach students to program in Delphi and give them simulation programs to modify as a class project.

[SOC 529 Culture and Agency (also SOC 429)]
For description, see SOC 429.

[SOC 530 Social Organization of Economic Action (also SOC 430)]
The issue of organizational boundary has been a central concern for both organizational sociology and economic sociology. The seminar approaches the issue, although it covers many other relevant literatures, mainly by playing two lines of argument against each other: transaction cost economics and transfer pricing problem. Meta-analytic techniques are also introduced, which are to be used for the final team project reviewing the empirical research on vertical integration.

[SOC 531 Group Conflict and the Nation-State]
Spring. 4 credits. D. Strange.
The growth of nationalism and conflict over what groups control the state form a central dynamic in the global political order. Such conflicts appear particularly virulent today, when internal aggression and ethnic cleansing are a larger threat than inter-state war. We will examine nationalism, group conflict, and the process of group formation. Questions include: Why and when do groups struggle for national independence? What leads some multiethnic societies to be stable and others not? How are high levels of conflict over ethnic/religious makeup of the state related to the expanding reach of the global market? In what ways are national issues comparable with group formation and other settings, like neighborhoods and academic disciplines?

[SOC 556 Law In Society (also SOC 356)]
For course description, see SOC 556.

[SOC 558 Modes of Institutional Analysis (also SOC 358)]

[SOC 575 Seminar in Institutions and Rationality]
This year-long seminar examines the theoretical logic and assumptions of the new institutionalism in sociology and other social sciences. Understanding the part played by informal constraints of social norms and networks and by formal institutional arrangements (i.e., contracts, property rights, laws, regulations, and the state) encompass the domain of study. The seminar will focus on comparative analysis and case studies illuminating and explaining the part played by institutions in structuring the economic and social transactions of society and specifying the causal mechanisms shaping path dependent institutional change.

[SOC 580 Simulating Social Dilemmas (also SOC 480)]

[SOC 583 Transitions to Market Economies in China and Eastern Europe]
This course examines the problems and prospects of transitions to markets in China and Eastern Europe. It introduces concepts for understanding the state socialist economy that is being transformed and analyzes important social and economic developments since 1988. Topics include privatization, joint ventures, new capital markets, entrepreneurship, and labor relations in these changing economies.

[SOC 591 Special Seminars in Sociology]
Fall and spring. 2–4 credits.
These graduate seminars will be offered irregularly. Topics, credit, and instructors will vary from semester to semester. Students should look at the sociology department bulletin board at the beginning of each semester for possible offerings.

[SOC 606–607 Sociology Colloquium]
Fall and spring. No credit. Required of all sociology graduate students.
A series of talks representative of current research interests in sociology, given by distinguished visitors and faculty members.

[SOC 608 Proseminar in Sociology]
Fall. 1 credit. Enrollment restricted to first-semester sociology graduate students.
Discussions on the current state of sociology and on the research interests of the members of the field, given by members of the field.

[SOC 660 Social Movements]
For description, see GOVT 660.
TAMIL
See Department of Asian Studies.

THAI
See Department of Asian Studies.

THEATRE, FILM & DANCE

D. Batrich, chair; R. Archer, S. Brookhouse, J. Chu, S. Cole, D. Feldshuh, A. Fogelsanger, (coordinator, dance program); D. Fredericksen, (director of film studies); J. E. Gainor, (director of graduate studies); K. Goetz, D. Hall, E. Inemiann, J. Johnson, J. Kovar, B. Levitt, P. Lillard, J. Morgenroth (on leave fall 2000), C. Orr Brookhouse, M. Rivchin, R. Schneider (on leave spring 2001); J. Self, B. Suber, A. Van Dyke, (director of undergraduate studies); A. Villarejo (on leave spring 2001)

Through its courses and production laboratories, the department provides students with a wide range of opportunities in theatre, film, and dance. It offers a theatre arts major with concentration in theatre or film and a major in dance. These majors educate students in accordance with the general liberal arts ethic of the college. The programs in dance and film and the advanced undergraduate theatre program give some measure of professional preparation in those arts as well. The department encourages academic and studio participation by students from all disciplines and also provides the Cornell community with an opportunity to take part in its productions on an extracurricular basis.

Theatre Arts Major

Theatre Concentration

The theatre concentration offers studies in the history of theatre, dramatic theory and criticism, playwriting, acting, directing, design/technology, and stage management. Students interested in the Theatre Arts major should consult with Alison Van Dyke (Director of Undergraduate Studies, Theatre, Film & Dance).

Course requirements for theatre concentration:

1) THETR 240 and THETR 241 (two-semester introduction to theatre) 8
THETR 250 Introduction to Theatre Design and Technology 4
THETR 280 Introduction to Acting 3

2) Four laboratory courses distributed as follows: Credits
THETR 151 Production Lab I 1–3
THETR 153, THETR 253, or THETR 353 Stage Management Lab I, II, or III 1–3
THETR 155 Rehearsal and Performance or THETR 151 in a different area 1–3
THETR 251 or THETR 351 Production Lab II or III 1–4

3) Four courses in the area of Theatre Studies (see Theatre Studies section of theatre courses) chosen in the following manner:

one course must be at 300 level
one course must be at 400 level
two additional courses at the 300 or above level
one of the four courses must be pre-twentieth century

4) Three courses (at least 9 credits) in other Theatre courses chosen in consultation with the faculty adviser. Course taken to qualify for admission to the Advanced Undergraduate Theatre Program (described below) may also be used to fulfill this requirement.

5) Courses in which a student receives a grade below "C" cannot be used to fulfill the requirements for a Theatre Arts major.

Honors

The Theatre Arts honors program is for majors who have demonstrated exceptional ability in the major and who wish to explore branches of their subject not represented in the regular curriculum or to gain experience in original research. To be part of the honors program the student must maintain a GPA of 3.5 in classes for the theatre major and an average of 3.0 in all courses. Students must consult with their advisers in the spring of their junior year in order to enroll in the honors programs.

The Advanced Undergraduate Theatre Program

The department offers advanced study in directing, playwriting, design/technology, and stage management to students who qualify on the basis of outstanding achievement in course work. Admission to the AUTP is by invitation of the area faculty supervisor and the completion of a recommended "track" of courses or equivalent experience. (For recommended courses of study please see listing of courses at end of departmental listings.) Approval process will include a portfolio review and/or interview. The program provides students with intensive study in theatre as well as the opportunity to collaborate with professional faculty and guest artists.

Film

The study of film began in this department in the 1930s and continues to be based here. In the interim years, however, it has also spread into a significant number of other departments in the college: Africana studies, anthropology, Asian studies, comparative literature, English, German studies, history, psychology, romance studies, and women's studies. This proliferation of courses has been accompanied by a comparable proliferation of perspectives and faculty concerns, e.g., the relationship of national cinemas to national literatures and specific cultures, film's relationships to myth and ideology, the use of film as historical evidence, film's efficacy as a rhetorical medium, and film's contribution to perennial issues in aesthetics, the history of the arts, and studies in cognition. In addition, courses in film production and the history and theory of film as an art are centered in this department.

This richness of courses and perspectives is matched by the ways in which students may make film the focus of their undergraduate studies. The four ways currently being used are as follows: (1) majoring in film within the...
Department of Theatre, Film & Dance; (2) constructing an individually tailored Independent Major in film (including the possibility of placing film in tandem with another medium or discipline); and (3) focusing on film as a College Scholar. Students interested in options 2 or 3 should consult Don Fredericksen (Director, Film & Dance) and Lynne Abel (Director, College Scholar and Independent Major programs). Students interested in the first option should consult Don Fredericksen (Director of the undergraduate program in Film). In addition, students should be aware that the college has just approved a five-course concentration in visual studies, which can be taken independently of, or in conjunction with, a major in film. Students interested in the visual studies concentration should contact David Bathrick, its acting director.

**Film Major Requirements**

The department's film major requires a total of 90 credits in film and related courses. Students should note that a number of film courses—including two required "core" courses: Theatre Arts 375 and 376—are offered in alternating years, during the fall semester. This means that students cannot fulfill the requirements for the major in less than two years; and that they should plan accordingly, in consultation with their major adviser. In particular, students must plan to be in residence at Cornell during both their junior and senior year fall semesters. Within the "core" required courses, Theatre Arts 274, Introduction to Film Analysis, should be taken during the sophomore year.

Majors wishing to use the production courses in a substantial manner must plan carefully and work within certain limits. These courses are: Theatre Arts 277, 377, 383, 413, 477, 478, 493 and 653. Enrollment in each of these courses is limited by the nature of the work and by facilities. Enrollment in Theatre Arts 477, 478, and 493 depends on the quality of previous work in Theatre Arts 277, 377, 383 and/or 413; enrollment is not guaranteed. Majors without a strong interest in production can complete the production requirement with one course: Theatre Arts 277. Majors with a strong interest in production should begin instead with Theatre Arts 377, after they have taken Theatre Arts 274 in their sophomore year. The total credits in production courses cannot exceed 20 hours; this limit is strictly enforced.

1. A core of **four** film courses:

   - **THETR 274** Introduction to Film Analysis (offered every fall semester)
   - **THETR 375** History and Theory of Commercial Narrative Film (offered alternate fall semesters; offered 2000–2001)
   - **THETR 376** History and Theory of Documentary and Experimental Film (offered alternate fall semesters; offered 2001–2002)
   - **THETR 277** Video Production I (offered alternate spring semesters, and some summers; offered spring 2001)
   - **OR**
   - **THETR 377** Fundamentals of 16mm Filmmaking (offered three semesters in every four; offered fall 2000 and 2001, and spring 2002)

2. One of the following theatre courses:

   - **THETR 250** Fundamentals of Theatre Design/Technology
   - **THETR 280** Introduction to Acting
   - **THETR 398** Directing I (prerequisite: permission)

3. **Four courses** (15–16 credits) in film offered by Theatre, Film & Dance as below, or by other departments (with consent of adviser):

   - **THETR 264** Interpreting Hitchcock (offered every fall semester)
   - **THETR 275** Introduction to Film Theory (offered occasionally; not offered 2000–2001)
   - **THETR 277** Video Production I (offered alternate spring semesters; offered spring 2001)
   - **THETR 291** Filming Other Cultures (offered spring 2000)
   - **THETR 369** Studies in Film Analysis (offered every spring semester; topics vary)
   - **THETR 378** Soviet Film of 20s and French Film of 60s (offered every fourth year; offered spring 2003)
   - **THETR 379** Modern Documentary Film (offered alternate spring semesters; offered spring 2002)
   - **THETR 383** Screenwriting (offered every spring semester)
   - **THETR 386** Third Cinema (offered alternate spring semesters; offered spring 2002)
   - **THETR 391** Media Arts Studio I (tentatively scheduled for fall semester 2000)
   - **THETR 392** Media Arts Studio II (tentatively scheduled for spring semester 2001)
   - **THETR 395** Video: Art, Theory, Politics (offered every fall semester)
   - **THETR 396** German Film (offered occasionally; not offered 2000–2001)
   - **THETR 413** Film and Performance (offered occasionally; not offered 2000–2001)
   - **AS&RC 435** African Cinema
   - **THETR 450** Rescreening the Holocaust (offered spring 2001)
   - **THETR 455** History of Post-WWII Polish Cinema (offered every fourth year; offered spring semester 2001)
   - **THETR 473** Film and Spiritual Questions (offered alternate spring semesters; offered spring 2001)
   - **THETR 474** Jung, Film, and the Process of Self-Knowledge (offered alternate spring semesters; offered spring 2002)

   **THETR 475** Seminar in the Cinema I (offered every fall semester; topic varies; may be repeated for credit; topic for fall 2000: cognitive film theory)

   - **THETR 476** Seminar in the Cinema II (offered occasionally; offered spring semester 2001)
   - **THETR 477** Intermediate Film and Video Projects I (offered fall semester 2000)
   - **THETR 478** Intermediate Film and Video Projects II (offered spring 2001)
   - **THETR 493** Advanced Film and Video Projects (not offered 2000–2001)
   - **THETR 653** Myth on Film

4. 15 credits of related coursework inside or outside of the Department of Theatre, Film & Dance (as approved by your major adviser). The courses chosen to fulfill this requirement should reinforce your particular interest in film, and will not necessarily be film courses per se. For example, a student interested in the psychology of film, or in ethnographic film, or in film vis-a-vis intellectual or social history, will be encouraged to choose "related course work" in those areas.

5. With a grade of less than C, a course cannot be used toward the concentration.

6. Course work in production cannot exceed 20 credit hours.

**Honors**

Students who have maintained a GPA of 3.5 in their film major courses, and an average of 3.0 in all courses, may elect to work for honors in film during their senior year. They must consult with their adviser in the spring of their junior year about the honors program in film. Honors projects are possible in filmmaking, screen writing, and film scholarship.

**The Advanced Undergraduate Filmmaking Program**

The department offers advanced study in filmmaking to students who qualify on the basis of outstanding achievement in film studies and film production courses. Acceptance to the AUPP and admission to the advanced film production course (THETR 493) will be determined by a committee of film faculty in December of each year, based on applications from students who have a proposal (script or treatment) for a film or video project. Up to four such students will also be selected to receive the Melville Shavelson Award to help fund their advanced film projects.

**Film Study Abroad**

The College of Arts and Sciences, through this department and in consort with a number of other American colleges and universities, offers up to a full year of study at the Paris Center for Critical Studies. The center's program is theoretical, critical, and historical. It is most useful to students whose major interest is in the academic study of film and serves as an intensive supplement to Cornell's film courses. Fluency in French is required. Theatre Arts 274 or 275 and 375 are prerequisites. Inquiries should be addressed to Professor Fredericksen, Cornell's liaison with the center.

Film majors may also complement their film studies with work in the Advanced Film and Television Program of the British American
The Dance Program

The dance program offers courses in dance technique, improvisation, composition, performance, anatomical analysis of movement, dance technology, and the history, theory, and criticism of dance. Technique courses include introductory dance technique, modern dance at three levels, and ballet at three levels. Other dance forms, such as Japanese Noh, Indian dance, and Javanese dance, are offered on a rotating basis. Courses in African and ballet dance, taken through the Physical Education program, supplement these offerings. Technique courses develop strength, flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with clarity of rhythm, body technique, one exercise. The more advanced courses require the ability to perform complex phrases in various styles. Students may earn up to eight academic credits (one each semester) in technique courses. Students may also satisfy the physical education requirement by taking dance technique courses in the dance program. Students taking technique for academic credit must also register through their own colleges. Students who wish to enroll in nonintroduction level dance technique courses must attend a placement class. Placement classes are offered in April and November for enrollment the following semester. The schedule for all dance technique courses and placement classes is available in the main office of the Center for Theatre Arts.

The faculty offer rehearsal and performance workshops in which they choreograph and rehearse original dances, performed in public concert. Admission to rehearsal and performance courses is by permission. Students may receive credit for these offerings. The more advanced courses require the ability to perform complex phrases in various styles. Students may earn up to eight academic credits (one each semester) in technique courses. Students may also satisfy the physical education requirement by taking dance technique courses in the dance program. Students taking technique for academic credit must also register through their own colleges. Students who wish to enroll in nonintroduction level dance technique courses must attend a placement class. Placement classes are offered in April and November for enrollment the following semester. The schedule for all dance technique courses and placement classes is available in the main office of the Center for Theatre Arts.

To be admitted to the major, students must have completed two technique courses in modern dance or ballet at level II or above. THETR 210 (Beginning Dance Composition and one semester of THETR 212 (Music Resources for Dance Composition), concurrently with THETR 210. It is recommended that THETR 201 (Dance Improvisation), THETR 250 (Fundamentals of Theatre Dance Design and Technology), and Music 105 (Introduction to Music Theory) be taken before the junior year. It is also strongly recommended, but not required, that dance majors take THETR 253 (Explorations in Movement and Performance). The following requirements are expected of the major.

Prerequisites for the Major:

THETR 210 Beginning Dance Composition and Music Resources

THETR 212 Music Resources for Dance Composition concurrently with THETR 210

Two technique courses in modern dance or ballet at level II or above

Requirements for the Major:

MUSIC 105 Introduction to Music Theory (or substitute at the appropriate level)

ONE course in a non-western form, folk dance, or ballet class 0-3

TWO semesters each of ballet and modern dance (in addition to the prerequisite) 4

THETR 155 Rehearsal and Performance 1

THETR 201 Dance Improvisation 3

THETR 212 Music Resources twice (in addition to prerequisite), concurrently with 310, 311 2

THETR 250 Fundamentals of Design and Technology 4

THETR 310-311 Intermediate Dance Composition 6

THETR 312 Physical Analysis of Movement 3

THETR 314-315 Western Dance History 8

THETR 418 Seminar in History of Dance (or other 400-level academic dance course) 4

THETR 491 Senior Project 6

Total 44-47

Students will be expected to perform in at least two concerts and to present at least two of their own dances, in addition to the senior project.

Honors

Students who have maintained a GPA of 3.5 in classes for the dance major and an average of 3.0 in all courses may elect to work for honors in dance during their senior year. They must consult with their adviser in the spring of their junior year about the honors program in dance.

Department Courses:

See individual sections for: Freshman Writing Seminars; General Survey Courses; Theatre Studies; Acting; Directing; Playwriting; Design; Technology; Stage Management; Independent Study; Internships and Honors; Film; Dance.

First-Year Writing Seminars

THETR 121 FWS: Theatre of the Absurd

Fall. 3 credits. M. Romanska.

Both the Theatre of the Absurd and Existentialism were born out of the post WWI atmosphere of disillusionment and skepticism. While Existentialism attempted to argue "about the absurdity of the human condition," the Theatre of the Absurd "merely presented it in its being." The purpose of the class will be to introduce students to major works of the Absurdist Theatre within the Existentialist context. We will read works by Beckett, Ionesco, and Genet, and selections from Nietzsche, Beauvoir, Sartre, and Camus. The class will be supplemented by viewing video productions of the plays. Students will be encouraged to write their own scenes, which will be read in the classroom.

THETR 131 FWS: The Suspense Film

Fall. 3 credits. H. Young. This course explores the striking, surprising, and incredibly popular resurrection of the suspense film in the 1990s. It uses films in conjunction with relevant theoretical texts to understand what gives the suspense film its distinctive pace, look, and feel. Specifically, this course studies the distinction between mystery and suspense, investigates the literary roots of the suspense film, and seeks to understand how and why the suspense film managed to become popular. Writing assignments will include examinations of these topics as well as film reviews. Representative film texts will include Basic Instinct, The Usual Suspects, The Game, and The Matrix. Weekly film screenings will be required.

THETR 181 FWS: Stages of Desiring

Spring. 3 credits. D. Matson.

Is gay theater its own art? Is theater a gay art? This course is a sampling of English and American drama dealing with or written by lesbians, gays, bisexuals, and transgendered persons, or more simply, queers. Using Oscar Wilde's The Importance of Being Earnest as our point of departure, we'll work our way to the present, visiting such playwrights as Tennessee Williams, Edward Albee, Carol Churchill, Holly Hughes, and Larry Kramer before finishing out the course with Tony Kushner's epic Angels in America. Through reaction papers, class discussion, and possibly even the writing of a one-act play, students will be expected to confront candidly questions of queerness and theater, need there be any distinction between queer theater and straight theater? and just what is it about the theater that offers queerness a sanctuary? These questions will inevitably lead us to issues of stereotyping, stigmatizing, performing, gender, and dressing in drag.

General Survey Courses

THETR 230 Creating Theatre

Spring. 3 credits. Limited to 25 students. D. Hall and faculty.

An introduction to theatrical production for the nonmajor. Students will develop a new critical perspective of the performing arts by examining the creation of theatre on stage and backstage through lectures, demonstrations, discussions with various faculty and staff at the Center for Theatre Arts, and by attending department productions. Some writing is required.

THETR 301 Mind and Memory: Explorations of Creativity in the Arts and Sciences (also ENGL 301 and MUSIC 372)

Spring. 4 credits. Limited to 40 students. For description, see English 301.

THETR 430 Introduction to Theatre Management

Fall. 4 credits. Limited to 15 students. J. E. Rainor.

This class is designed to introduce students to the profession of theatre management. The class will be a project-oriented study of components of the field, such as marketing, fundraising, contracts, organizational structures, personnel management, accounting, and box office.

Theatre Studies Courses

THETR 223 The Comic Theater (also COM L223 and CLASS 223) #

Spring. 3 credits. J. Rusten.

For description, see Classics 223.
A study of the roots of theatrical representation around the world from ritual practice to classical Greek and Roman theatre as well as Indian, Chinese, Japanese, African, and native performances. On the formation of major developments in the theatre—playwriting, acting, staging, architecture—through the seventeenth century.

**THETR 240 Introduction to World Theatre I**

Fall. 4 credits. R. Schneider.
A survey of the roots of theatrical representation around the world from ritual practice to classical Greek and Roman theatre as well as Indian, Chinese, Japanese, African, and native performances. On the formation of major developments in the theatre—playwriting, acting, staging, architecture—through the seventeenth century.

**THETR 241 Introduction to World Theatre II**

Spring. 4 credits. H. Young.
A survey of the major developments and innovations in world theatre since 1642, exploring the evolution of naturalism, the birth of the director, as well as the emergence of the avant-garde in the West and its supposed demise today. This course will examine the impact of colonialism on theatre practices around the world.

**THETR 320 Queer Theatre (also ENGL 352 and WOMNS 320)**

What is Queer Theatre and did it exist before the politicization of Queer Identity? Starting with the Renaissance in England, we will examine dramatic, critical, historical, and other writing as we pose questions about spectatorship, visibility and professionalism. Evening film screenings will be required.

**THETR 322 Russian Drama and Theatre (also RUSS L 332)**

See Russian Literature 322 for description.

**THETR 332 Medieval and Renaissance Theatre (also COM L 332)**

Spring. 4 credits. Prerequisites: THETR 240 or permission of instructor. Not offered 2000-2001. J. E. Gainor.
Besides the discussion of representative plays from these periods, this class may focus on questions such as the staging of medieval drama, the relations between the church and the community, and the ways in which historians and critics have interpreted the Renaissance, especially in light of class, race, and gender on stage as well as in the audience.

**THETR 333 European Drama 1600-1900: Molieres to Ibeau (also ENGL 335 and COM L 336)**

See English 335 for description.

**THETR 335 The Modern and Contemporary Theatre (also COM L 335)**

Fall. 4 credits. Prerequisites: THETR 240 or permission of instructor. Not offered 2000-2001. R. Schneider.
A study of the drama and its cultural contexts from the late nineteenth century to the present. This course will raise questions about modern as well as postmodern theories of performance and the role of theatre in society. It may also examine western style theatre in non-western settings.

**THETR 336 American Drama and Theatre (also ENGL 336)**

A survey of American theatre from 1900-1960. Emphasis will be placed on the relationship among theatre, culture, and history.

**THETR 339 Theories and Techniques of Twentieth-Century Western Theatre**

Fall. 4 credits. Prerequisite: permission of instructor. Limited to 15 students. Not offered 2000-2001. R. Schneider.
A look at Western performance across the twentieth century emphasizing theatre theory and directing technique rather than drama. Beginning with symbolism, naturalism, and the avant-garde we'll move on to explore Meyerhold, dada, Brecht, Artaud, Happenings and performance art, Boal, theatre images, feminist theatre, multicultural theatre, theatre of AIDS, and other theatre issues and innovations. Students will engage in performance projects.

**THETR 345 The Tragic Theater (also CLASS 345 and COM L 344)**

See Classics 345 for description.

**THETR 372 English Drama to 1700 (also ENGL 372)**

Fall. 4 credits. S. McMillin.
See English 372 for description.

**THETR 373 English Drama from 1700 to the Present (also ENGL 373)**

Spring. 4 credits. S. McMillin.
See English 373 for description.

**THETR 403 Ritual, Play, Spectacle, Act: Performing Culture (also THETR 403)**

Fall. 4 credits. R. Schneider.
Taking a broad spectrum approach to performance, this course will include anthropological texts on ritual and play, sociological texts on performances in everyday life, literary studies texts on "performatives" in speech and writing, folklore studies on parades and reenactments, psychological and philosophical studies on the role of performance in the formation of identity, as well as standard texts of the theater. We will consider the distinctions between play, ritual, spectacle, festival, theater, and the "visual" arts. We will explore the differences between spectating and witnessing and examine studies on audience behavior. At the base of our inquiry will be the broad issue of the role of representational practices within culture and among cultures.

**THETR 405 Operatic Contacts (also S HUM 405, GERST 404, COM L 408)**

Fall. 4 credits. Prerequisite: permission of instructor. Limited to 15 students. Not offered 2000-2001. A. Groos.
See Society for the Humanities for complete description.

**THETR 420 Brecht, Artaud, Mueller, Wilson (also GERST 430 and COM L 430)**

Fall. 4 credits. D. Bathrick.
See German Studies 430 for description.

**THETR 424 Elizabethan and Jacobean Drama (also ENGL 428)**

See English 425 for a complete description.

**THETR 425 Introduction to Dramaturgy and Dramatic Criticism**

Fall. 4 credits. J. E. Gainor.
This seminar will explore a number of artistic, political, and social movements emanating from Greenwich Village in the 'teens and 'twenties, and explore their impact on the evolution of American drama. The Provincetown Players, the theatre company that first showcased O'Neill, Glaspell, Millay, and other important American writers, will be the focus of our analysis. The seminar is designed as a case study in the critical practice of cultural studies.

**THETR 431 Theory of the Theatre and Drama (also COM L 433)**

Spring. 4 credits. Prerequisite: some theatre history and dramatic literature work at the 300 level or permission of instructor.
A survey of dramatic theory and theories of theatrical representation from Aristotle to the present.

**THETR 433 Dramaturgy: Play and Period (also ENGL 433)**

**THETR 435 Special Topics: The Victorian and Edwardian Theatre (also ENGL 422)**

Fall. 4 credits. Limited to 15 students. Prerequisite: permission of instructor. Not offered 2000-2001. J. E. Gainor.
An in-depth exploration of theatre and drama in England from the mid-nineteenth through early twentieth centuries. Topics will include melodrama, the social problem play, the popular stage, the conditions of theatrical production, and the impact of European theatre. Representative authors include Roberts, Pinero, Shaw, Wilde, Robins, Galsworthy, and St. John.
[THETR 438] East and West German Drama (also GERST 438 and THETR 648)
D. Bathrick.
Major historical and textual developments in German theatre from the end of World War II to the present. Leading dramatists from West and East Germany, Switzerland, and Austria (Brecht, Frisch, Durrenmatt, Weiss, Hochhuth, Müller, Benn, Kroep, Handke, and others) will be treated in the light of the political events and aesthetic-dramaturgical traditions from which they emerge and with which they are taking issue.

[THETR 439] Theatre of Commodities: Advertising, TV, and Performance (also ENGL 411)
R. Schneider and A. Villarejo.
This course will explore the employment of bodies and objects as representational emblems of value and desire in late capitalism. We will analyze the ways in which desire circulates through print advertising, television, and the avant-garde. We will examine socio-cultural constructions of the relationship between screen bodies and live bodies, especially as it involves advertising and audience. We will explore conceptual and culturally inscribed spaces between notions of desire, fulfillment, deferral, and value coding. Throughout, feminist analyses of gender construction and deployment in the realms of the market, popular culture, and "high" art will frame our inquiry. Finally we will ask questions about the problematic of interventionalist tactics in art and popular culture relative to world. Through intervention in various forms and objects of desire, we will explore the ways in which desire is constructed and conveyed through various media and objects.

[THETR 445] Text Analysis for Production: How to Get from the Text onto the Stage
Fall. 4 credits.
Prerequisite: THETR 240 or THETR 281 or THETR 250 or THETR 398, and permission of instructor. Limited to 15 students. B. Levitt.
This course examines the play as the central, essential source for production decisions made by the actor, the director, the designer, and the dramaturg. Students "present" their conclusions about the performance of studied texts through project work as either an actor, director, designer, or dramaturg, as well as through two or three papers.

[THETR 454] American Musical Theatre (also ENGL 454)
Spring. 4 credits.
Prerequisite: ENGL 272 or THETR 240 and 241 and ability to read music at the level of MUSIC 105. S. McMillin.
See English 454 for description.

[THETR 459] Contemporary British Drama (also ENGL 459)
See English 459 for a complete description.

[THETR 470] The Japanese Noh Theater and Modern Dramatists (also ASIAN 470 and COM L 470) @
For description, see Asian Studies 470.

[THETR 471] Japanese Theatre (also ASIAN 471) @
Fall. 4 credits. K. Brazell.
For description, see Asian Studies 471.

[THETR 483] Seminar in Comparative Twentieth-Century Anglophone Drama (also ENGL 483)
Fall. 4 credits. Some knowledge of classical and avant-garde theories of drama and theatre would be useful, but is not a prerequisite. T. 2:30–4:25. B. Jeyifo.
The course will explore twentieth-century Anglophone drama in diverse areas of the English-speaking world. The term "Anglophone" includes Irish, African, Caribbean, and U.S. playwrights such as Frail, Soyinka, Fugard, Walcott, and Shange. The seminar will be organized around two principal issues: the use of folk, ritual, vernacular, and carnivalesque performance idioms to transform the received genre of Western literary drama and themes of empire, colony, and postcoloniality in the making of the modern world.

[THETR 600] Proseminar in Theatre Studies
Spring. 4 credits. Limited to Theatre Arts graduate students. B. Levitt.
An introduction to the theory and methods involved in the study of the theatre. Attention will focus on pedagogy and the profession in Part I. Part II will explore current scholarly trends.

[THETR 637] Seminar in Dramatic Theory (also COM L 638)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2000–2001. R. Schneider.
Topic varies each semester.

[THETR 648] East and West German Drama: Post-1945 (also THETR 438 and GERST 438)
D. Bathrick.

[THETR 660] Visual Ideology (also COM L 660 and GERST 660)
G. Waite.
For description, see German Studies 660.

[THETR 679] Bertolt Brecht in Context (also GERST 679 and COM L 679)
See German Studies 679 for description.

[THETR 703] Theorizing Film (also ENGL 703 and FRLIT 695)
T. Murray.
See English 703 for description.

[THETR 155] Rehearsal and Performance
Fall or spring. 1–2 credits. 1 credit per production experience per semester up to 2 credits per semester. Students must register for the course in the term in which credit is earned; requests for retroactive credit will not be honored. Limited to students who are assigned roles after tryouts at the department's scheduled auditions. Students should add this course only after they have been assigned roles. S-U grades only.
The study, development, and performance of roles in departmental theatre or dance productions or the study and practice of directing as experienced in assisting faculty and guest directors.

[THETR 205] Rehearsal Workshop
Fall or spring. 2 credits. Limited to 30 students.
Prerequisites: participation in a particular department production; and by permission Staff.
This course will enable students participating in a particular production to gain expertise and/or knowledge to contribute to that production. The focus of the class will depend on the needs of a particular production (history, choreography, textwork, dramaturgy, etc).

[THETR 280] Introduction to Acting
Fall or spring. 3 credits. Each section is limited to 16 students.
Prerequisites: participation in a particular department production; and by permission Staff.
An introduction to the actor's technique and performance skills, exploring the elements necessary to begin training as an actor, i.e., observation, concentration, and imagination. Focus will be on physical and vocal exercises, improvisation, and text and character. There is required play reading, play attendance, and some scene study.

[THETR 281] Acting I
Fall or spring. 3 credits. Each section is limited to 14 students.
Prerequisites: THETR 280 and audition. Registration only through roster in the department office, Center for Theatre Arts Staff.
An introduction to the actor's craft through improvisation and exercises in physical and psychological action. Scene study using the plays of Williams, Inge, and Miller.

[THETR 282] Standard American Stage Speech
Fall. 3 credits. Prerequisites: THETR 280 and permission of instructor. A. Van Dyke.
An introduction to Standard American Stage Speech. We will study various regional American accents and Standard American Stage Speech using the International Phonetic Alphabet (IPA) as a way to designate the vowel, diphthong, and consonant sounds of spoken English. The purpose of this course is to learn speech for use in performance.

[THETR 283] Voice and Speech for Performance
2 credits. Limited to 12 students. Primarily for department majors.
Registration only through department roster in the main office of the Center for Theatre Arts. Development of the speaking voice with additional emphasis on dramatic interpretation.

**THETR 284 Speech and Dialects for Performance**
Spring. 3 credits. Limited to 12 students. Primarily for department majors or advance undergraduate training program candidates. Prerequisites: THETR 281 and permission of instructor. A. Van Dyke. Development of speech and dialects in dramatic text.

**THETR 287 Summer Acting Workshop**
Summer. 3 credits. Limited to 16 students in a section. B. Levitt and staff. An introduction to the processes of acting. Practice in training techniques, rehearsal procedures, and methodology.

**THETR 380 Acting II**
Fall. 3 credits. Prerequisite: THETR 281 and audition. Limited to 12 students. S. Cole. A continuation of Acting I. Special consideration will be given to a physical approach to characterization using the plays of Chekhov and Ibsen.

**THETR 381 Acting III: Advanced Scene Study**
Spring. 3 credits. Prerequisite: THETR 380 and audition. Limited to 10 students. B. Levitt. This course focuses on advanced problems in language and period style (movement, bows, curtsies, and period dances). Monologues and scenes will be drawn from these playwrights: Shakespeare and Moliere.

**THETR 385 Advanced Studies in Acting Techniques**
Spring. 3 credits. Prerequisites: THETR 281, audition, and permission of instructor. Limited to 10 students. Topic varies each semester. May be repeated for credit. S. Cole.

**THETR 387 Movement for the Actor**
Fall. 3 credits. Prerequisite: THETR 281 and permission of instructor. Limited to 10 students. Not offered 2000–2001. Staff. Physical skills for the actor will be developed through work with LeCoeq-based Neutral Mask corporeal mime, and physical acting techniques.

**THETR 415 The History of Acting**
Spring. 3 credits. Limited to 10 students. Prerequisites: THETR 380 and permission of instructor. Not offered 2000–2001. S. Cole. A study of the art of acting in its historical and cultural context from the Greeks to the early twentieth century, with an emphasis on an analytical understanding of acting methodology in relation to social context. Lectures and film showings, with student papers and presentations required.

**Design, Technology, and Stage Management**

**THETR 250 Fundamentals of Theatre Design and Technology**
Fall and spring. 4 credits. Not open to first-year freshmen. Limited to 12 students. Registration only through department roster in CTA 225. A minimum of one credit of Production Lab (THETR 151 or 251) is strongly recommended concurrently. K. Goetz, R. Katcher, J. Johnson, C. Hatcher, and E. Intemann. An introduction to design and technology in the theatre. Lectures, discussion, and project work introduce the principles of designing scenery, costumes, lighting and sound, and the technical process of realizing designs on stage. Students are required to purchase materials, which the instructors will specify (approximate cost, $40).

**THETR 263 CAD Studio for the Theatre**
Spring. 3 credits. Limited to 8 students. Prerequisite: permission of instructor. K. Goetz and selected theatre production faculty and staff. Students will use commercially available 3-D modeling and rendering software to explore the process of designing scenery and lighting for the live theatre. Vectorworks and Photoshop will be the primary applications used. Former theatre experience is helpful but not essential.

**THETR 319 Music, Dance, and Light**
Fall. 3 credits. Attendance at dance concerts and music concerts is required E. Intemann and A. Fogelanger. Artistic values, parameters, and concerns of music (sound design), dance, and lighting design are compared and contrasted, and the combination of design elements is analyzed in contemporary dance: Includes writing in response to readings, audio and video recordings, and performances. Some classes devoted to creating sound, movement, and lighting.

**THETR 343 Costume History: From Fig Leaf to Vanity**
Fall. 3 credits. Attendance at dance concerts and music concerts is required. E. Intemann. Costume History will offer an overview of the history of clothing from the first signs of clothing to the early twentieth century. It will investigate personal, social, religious, political, and regional reasons for why and how clothing evolved.

**THETR 362 Lighting Design Studio I: Lighting in Performing Arts**
Fall. 4 credits. Prerequisite: THETR 250 or permission of instructor. Limited to 6 students. E. Intemann. The theory and practice of lighting design as a medium for artistic expression. This course will explore the aesthetic and mechanical aspects of light and their application in the theatre. Artistic style and viewpoint will also be covered.

**THETR 364 Scenic Design Studio**
Fall. 3 credits. Limited to 10 students. Prerequisite: THETR 250 and 340 or permission of instructor. Students are required to purchase materials which the instructor will specify (approximate cost, $50.00). K. Goetz.
An exploration of the process of designing scenery for the live theatre. Projects will employ various media to explore dramatic use of architecture, the scenic space, and elements of interior design. Experience in theatre production and graphic skills is helpful but not essential.

**THTER 366 Costume Design Studio**
Spring. 3 credits. Students are required to purchase materials which the instructor will specify (approximate cost $50). Limited to 6 students. J. Johnson.

Design of costumes for the theatre, concentrating on script and character analysis, period research, design elements, figure drawing and rendering skills, and an understanding of production style. May be repeated for credit.

**THTER 368 Sound Design Studio**
Spring. 3 credits. Limited to 6 students. Prerequisite: THTER 250 or 252 or permission of instructor. Students are required to purchase supplies (approximate cost $20). C. Hatcher.

The use of sound as a medium of design for the theatre; concentration on the creation of the theatrical sound score, digital recording and basic audio engineering techniques with projects in post production studio engineering and live recording. Emphasis is on producing viable sound designs for live theatre events.

**THTER 369 Digital Audio Studio**
Fall. 3 credits. Limited to 6 students. By permission of instructor only. C. Hatcher.

A project oriented course focusing on current techniques in digital audio recording, editing and processing for theatre, and video production. Students will explore Digidesign's Pro Tools multi-track environment, MOTU's Digital Performer including basic MIDI operation and methods of synthesizing audio to video. Some experience with audio recording, music, or video production is helpful but not necessary.

**THTER 462 Lighting Design Studio II**
Spring. 4 credits. Prerequisite: THTER 362 or permission of instructor. Limited to 6 students. E. Intemann.

This course concentrates on designing lighting for different genres in various venues, developing the lighting designer as a versatile artist. Personal style and artistic commitment will be stressed.

**THTER 464 Scene Design Studio II**
Spring. 3 credits. Prerequisite: THTER 364 or permission of instructor. Students are required to purchase materials which the instructor will specify (approximate cost $50). K. Goetz.

Projects and activities will be tailored to the creative and developmental needs of the individual student with emphasis on developing professional standards and practices that would prepare the student for a major design assignment.

**Technology**

**THTER 252 Technical Production Studio I**
Fall. 3 credits. Limited to 6 students. D. Hall and J. Zomow.

Stage Lighting and Sound Technology: the practical aspects of lighting and sound technology including equipment setup, engineering, organization, recording techniques, and production paperwork will be explored through projects, lectures, and class discussions. In addition to twice-weekly class meetings the course requires a laboratory commitment of 50 hours for the semester.

**THTER 256 Technical Production Studio II**
Spring. 3 credits. Limited to 6 students. Students are required to purchase materials, which the instructor will specify (approximate cost $50). Prerequisite: THTER 250 or permission of instructor. Additional hands-on time in prop and paint shops required, to be discussed. T. Honesty and A. Mansfield.

**Scene Painting**
Introduction to the basic techniques of painting scenery, including but not limited to the layout and painting of bricks, marble, stone, and wood grain for the theatre. Individual projects in scene painting and participation on paint crew for productions are included. Stage Properties: introduction to the processes of propmaking, including furniture construction and upholstery techniques, use of shop tools and materials, period research, and painting and finishing.

**THTER 340 Theatrical Drafting and Technical Drawing Studio**
Fall. 3 credits. Limited to 6 students. Prerequisite: THTER 250 or permission of instructor. S. Brookhouse.

Implementation of the fundamentals of drafting and technical drawing. Introduction of the concept of an individual style in the approach to drafting for the theatre. A series of projects to familiarize students with the convention and process of visualization and drafting.

**THTER 352 Themed Entertainment: The Technical Perspective**
Fall. 3 credits. Limited to 12 students. R. Archer.

Exposition into the integration of art and science in today's theme parks and interactive entertainment attractions. Papers, projects, and discussions will deal with planning and development aspects of large-scale entertainment projects including architecture, engineering, construction, and attraction installation. Focus will be on the specialized entertainment technologies that make these attractions work: audio and lighting design, ride and show control systems, and special effects.

**THTER 354 Stagecraft Studio**
Fall. 3 credits. A minimum of 1 credit of production laboratory (THTER 151 or 251) is strongly recommended concurrently. Prerequisite: THTER 250 or permission of instructor. R. Archer.

An exploration of the techniques and practice of theatre operation, scenic construction, stage mechanics, rigging, painting, and model building.

**THTER 355 Costume Construction Studio**
Spring. 3 credits. A minimum of 1 credit of production laboratory (THTER 151 or 251) is strongly recommended concurrently. Prerequisite: THTER 250 or permission of instructor. Lab fee of $25 to be paid in class. C. Orr Brookhouse.

A project/lecture/discussion class in costume research, patterning, cutting, construction, and fitting.

**THTER 360 Costumes: Special Projects**
Fall. 3 credits. Prerequisite: THTER 250 and 280 or permission of instructor. C. Hall.

This course is designed for students who have completed a basic construction class (in THTER, TXA, or other) and are interested in acquiring skills beyond the basic techniques. The objectives are two-fold: (1) to introduce students to areas of costuming that are not taught presently, such as millinery, corsetry, wig-styling, and underpinning-skills, that will make a costume more marketable after graduation; and (2) to give students the opportunity (and satisfaction) of seeing their work on stage in an actual theatre production at Cornell. Areas of focus for each semester will be determined by the particular production needs. For example, if we would produce a Commedia play, students would explore masks (history and construction). Along with the pieces constructed, students will be asked to research and record their findings.

**Stage Management**

**THTER 153 Stage Management Production Laboratory**
Fall and spring. 1-2 credits. May be repeated for credit. Before registering, students must attend an orientation meeting in the Proscenium Theatre at the Center for Theatre Arts at 7:30 P.M. on the first Tuesday of classes. Prerequisite: permission of instructor. P. Lillard.

Practical experience in theatrical production as assistant stage manager for a dance theatre concert or as a stage manager for readings, Black Box lab productions, or S.L.T.C. under the supervision of the faculty production manager. THTER 370 complements this course.

**THTER 253 Stage Management Laboratory II**
Fall and spring. 1-4 credits. May be repeated for credit. Before registering, students must attend an orientation meeting in the Proscenium Theatre at the Center for Theatre Arts at 7:30 P.M. on the first Tuesday of classes. Prerequisite: permission of instructor. P. Lillard.

Practical experience in theatrical production as assistant stage manager for a season production under the supervision of the faculty production manager. THTER 370 complements this course.

**THTER 353 Stage Management Laboratory III**
Fall and spring. 1-4 credits. May be repeated for credit. Before registering, students must attend an orientation meeting in the Proscenium Theatre at the Center for Theatre Arts at 7:30 P.M. on the first Tuesday of classes. Prerequisite: permission of the instructor. P. Lillard.

Practical experience in theatrical production as stage manager for a dance theatre concert or an AUTP production under the supervision of the faculty production manager. THTER 370 complements this course.

**THTER 370 Stage Management Studio**
Fall. 2 credits. Prerequisite: THTER 250 or 280 or permission of instructor. P. Lillard.

Introduction to the concepts and techniques of stage management as they relate to specific areas of production. Development of relevant communication skills and an understanding of the production process as experienced by a working stage manager or assistant stage manager. THTER 153, 253, and 353 complement this course.
THETR 453 Stage Management Laboratory IV
Fall and spring. 1-5 credits. May be repeated for credit. Prerequisite: admission to Advanced Undergraduate Theatre Program. P. Lillard.

Practical experience in theatrical production as stage manager for a season production under the supervision of the faculty production manager.

Production Laboratories

THETR 151 Production Laboratory I
Fall and spring. 1-3 credits. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the CTA Proscenium Theatre. P. Lillard, S. Brookhouse, J. Zornow, C. Orr Brookhouse.

This course provides practical experiences in theatrical production. Students can work on scenery, costumes, properties, lighting, or stage crew. No prerequisites or experience required.

THETR 251 Production Laboratory II
Fall and spring. 1-3 credits. Prerequisite: permission of instructor. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the CTA Proscenium Theatre. P. Lillard, S. Brookhouse, D. Hall, C. Orr Brookhouse, J. Zornow.

Practical experience in theatrical production, as a light board operator, sound board operator, sound technician, head dresser or scenery/props special project.

THETR 351 Production Laboratory III
Fall and spring. 1-3 credits. Prerequisite: permission of instructor. P. Lillard, R. Archer, S. Brookhouse, K. Goetz, D. Hall, E. Intemann, J. Zornow, J. Johnson, C. Orr Brookhouse.

Practical experience in theatrical production as a master electrician, assistant technical director, assistant costume shop manager, or assistant to a faculty or guest director or designer.

THETR 451 Production Laboratory IV
Fall and spring. 1-4 credits. May be repeated for credit. Prerequisite: admission to Advanced Undergraduate Theatre Program. P. Lillard, R. Archer, S. Brookhouse, K. Goetz, D. Hall, J. Johnson, E. Intemann, C. Orr Brookhouse.

Practical experience in theatrical production, in the position of designer, shop manager, technical director or sound engineer.

Independent Study, Internships and Honors

THETR 300 Independent Study
Summer, fall, or spring. 1-4 credits. Independent Study in the theatre allows students the opportunity to pursue special interests not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the course, must approve the student's program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study which is available in 225 CTA.

THETR 485 Undergraduate Internship
Fall, spring, or summer. 1-3 credits. To be eligible to enroll and receive credit for an internship, students must either be majors or be concentrators in the department. Students are responsible for arranging their own internships in consultation with the faculty in their area of choice prior to prerequisites for the semester in which the internship is planned to take place. To receive credit within this course, the internship must be unpaid. Students must follow the rules and procedures stated in the departmental internship form.

THETR 495 Honors Research Tutorial
Fall or spring. 4 credits. Limited to Honors students in Theatre, Film and Dance. This course is the second of a two-semester sequence (the first is THETR 496) for seniors engaged in an honors project.

THETR 496 Honors Research Tutorial
Fall or spring. 4 credits. Limited to Honors students in Theatre, Film and Dance. This course is the second of a two-semester sequence (the first is THETR 495) for students engaged in an honors project.

Film

THETR 264 Interpreting Hitchcock (also ENGL 263)
Fall. 4 credits. Limited to 75 students. L. Bogel.

See English 263 for complete description.

THETR 274 Introduction to Film Analysis: Meaning and Value
Fall. 4 credits. Limited to 40 students.
D. Fredericksen.

An intensive consideration of the ways films generate meaning and of the ways we attribute meaning and value to films. Discussion ranges over commercial narrative, documentary, and personal film modes. Prospective film majors should enroll in their sophomore year.

THETR 275 Introduction to Film Theory

This course provides an introduction to critical and theoretical approaches to film over the past century. It surveys questions of form, genre, aesthetics, narrative, spectatorship, industry, authorship, and apparatus through readings and weekly screenings of films key to these theoretical and critical formulations. The second half of the course will be devoted to the major theoretical trajectories of the past few decades in the humanities more generally and in their specific relations to cinema: structuralism and semiotics, Marxism, psychoanalysis, feminist theory, poststructuralism, postcolonial theory and queer theory.

THETR 277 Video Production I
Spring, alternate years and occasionally in summer. 3 credits. Limited to 12 students.

Permission of instructor. Open to sophomores, juniors, and seniors. M. Rivchin.

A hands-on, beginning video production course using Super-VHS cameras and editing equipment. Students will learn camera, lighting, sound recording, editing, and digital effects through a series of technical exercises. Students will develop two short, original video projects to be shown publicly at the end of the semester. A $100 equipment maintenance fee per student will be collected in class. Cost for videotape approximately $50-100.

THETR 291 Filming Other Cultures (also THETR 691 and ANTHR 291/691)
Spring. 4 credits. Limited to 20 students, with preference given to those who have taken either Anthropology 102 or Theatre Arts 274. Fee for screening and maintenance, $35. R. Ascher.

THETR 291 meets simultaneously with THETR 691/ANTHR 291/691. For topics and issues addressed, please see the description under Anthropology 291. Additionally, all graduate students review widely distributed films of general interest, for example, Werner Herzog's Where the Green Ants Dream, and, in consultation with the instructor, review films related to their special interests and major field of study.

THETR 329 Political Theory and Cinema (also GERST 330, COM L 330 and GOVT 370)

For description, see German Studies 330.

THETR 341 French Film (also FRLIT 336)
Spring. 4 credits. T. Murray.

A survey of major films, directors, and trends in French film. Beginning with classic French films by directors such as Bresson, Clair, Carné, Gance, Vigo, Ophuls, Cocteau, Duvivier, Jean Renoir, and Tati, we will consider the development of the New Wave (Truffaut, Godard, Rohmer, Rivette), the Left Bank ( Marker, Varda, Resnais) and trends in post-68 cinema from feminist ( Akerman, Duras), cinema of the look in the 80s (Beineix, Besson), and recent trends in cinema, video, and new media (Assayas, Oston, Djebar, Kuntzel). Discussions of films will be informed by consideration of the major critical and intellectual trends informing them, with particular emphasis on French film theory since the Cahiers du Cinéma. Weekly screenings will be in French with English subtitles; classes will be conducted in English; papers either in French or English. Requirements: midterm, two papers, final.

THETR 369 Studies in Film Analysis (also ENGL 369)
Spring. 4 credits. L. Bogel.

THETR 375 History and Theory of the Commercial Narrative Film
Fall. 4 credits. Fee for screening expenses, $10 (paid in class). Offered alternate years. Prerequisite for film majors THETR 274. A. Villarejo.

Consideration of the broad patterns of narration in the history of the commercial narrative film. Emphasizes placed on the early articulation of a cinematic means of narration, realism as an artistic style, the nature and functions of popular film, and the modes of modernist and post-modernist "art cinema" narration.

THETR 376 History and Theory of Documentary and Experimental Film
Fall. 4 credits. Fee for screening expenses, $10 (paid in class). Prerequisite: THETR 274 is strongly recommended, but not required. Not offered 2000-2001. A. Villarejo.
First, the history and theory of documentary film up to the end of World War II. Second, the history and theory of the experimental and personal film forms in Europe and the United States.

**THETR 377 Fundamentals of 16mm Filmmaking**

Fall. 4 credits. Limited to 12 students. Intended for juniors and seniors (who may need to sign up a year or more in advance) with priority given to film majors. Critical exploration of THETR 274 (or higher-level film studies course) and permission of instructor. Equipment fee, $100 (paid in class). The average cost to each student for materials and processing is $400.

A hands-on course in the basics of 16mm filmmaking techniques, requiring no prior production experience, emphasizing creative development of filmic ideas through critical discussion. Students may explore narrative, experimental, documentary, animation, and abstract genres, producing short exercises and a final sound film project (8-12 minutes) to be screened publicly.

**THETR 378 Soviet Film of the 1920s and French Film of the 1960s**

Spring. 4 credits. Fee for screening expenses, $50 (paid in class). Prerequisite: THETR 375 is strongly recommended, but not required. Offered every fourth year; offered 2003. D. Fredericksen.

An intensive treatment of two distinct periods of radical innovation in film theory and history. Emphasis on the animated relationship between theory and filmmaking during these two decades. Major figures include Eisenstein, Pudovkin, Vertov, Kuleshov, Dovzhenko, and Ross, in the Soviet 1920s; Godard, Truffaut, Resnais, Rohmer, Tati, Roux, Pras, and Bazin in the French 1960s.

**THETR 379 Modern Documentary Film**

Spring. 4 credits. Prerequisite: THETR 376 is strongly recommended but not required. Fee for screening expenses, $10 (paid in class). Offered alternate spring semesters; next offered spring 2002. D. Fredericksen.

An intensive consideration of canonical documentary films from 1945 to the present. Emphasizes on the documentary film as an artistic form with a distinct history and set of theoretical questions, as a sociopolitical force, as an ethnographic medium within and without a filmmaker’s culture, and as a televised medium of persuasion and expression.

**THETR 383 Screenwriting**

Spring. 3 credits. Prerequisites: THETR 274 and 377, and permission of instructor. Limited to 12 students. Off. Experiences in various genres of screenwriting will be explored: the commercial narrative, documentary, experimental, and abstract. Note: this class is an intensive writing experience that will demand a great deal of outside work.

**THETR 386 Third Cinema**

Spring. 4 credits. Prerequisite: previous course in film history or analysis, though not mandatory. Offered alternate years. Not offered 2000–2001. A. Villarejo.

This course explores postcolonial film and video through the medium of "third cinema." We will investigate the diverse historical, national, political, and global commitments of films from Africa, South Asia, Latin America, the United States and the United Kingdom (Sembene, Ray, Brocka, et al.). Readings in film and postcolonial theory will guide our critical analyses of the films.

**THETR 391 Media Arts Studio I (also ART 391, ARCH 391, MUSIC 391)**

Fall (tentative). 3 credits. Prerequisite: permission of instructor and junior-level standing required, minimum THETR 277 or 279, or dance studio courses. $50 equipment fee (to be paid in class).

A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, dance, film, and video. Group projects and discussions will also investigate the artistic and interactive potential of a high-speed internet connecting arts spaces on campus, including virtual and performative events.

**THETR 392 Media Arts Studio II (also ART 392, ARCH 392, MUSIC 392)**

Spring (tentative). 3 credits. Preference given to those who completed Media Arts Studio I. See THETR 391 for prerequisites. $50 equipment fee (paid in class).

A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, dance, film, and video. Group projects and discussions will also investigate the artistic and interactive potential of high-speed internet connecting arts spaces on campus, including virtual and performative events.

**THETR 395 Video: Art, Theory, Politics (also ENGL 395)**

Fall. 4 credits. T. Murray.

For description, see English 395.

**THETR 396 German Film (also COM L 396 and GERST 396)**

This course will explore German film from the Weimar and Nazi periods to the present in relation to the cultural and sociopolitical context of which it was a part. Readings and lectures will be devoted to formal and cultural developments historically as well as interpretive analysis of selected individual films.

**THETR 413 Film and Performance**

Spring. 4 credits. Prerequisite: at least one production course in 16mm film or video, and/or at least one 300-level course in acting or directing. Permission of the instructors. Limited to 12 students. $50 maintenance fee (paid in class).

**THETR 450 Rescreening the Holocaust (also COM L 453 and GERST 449)**

Spring. 4 credits. D. Batrick.

Rescreening the Holocaust will offer a survey of the major films dealing with the Holocaust beginning with Night and Fog (1955) and including such works as the TV film Holocaust, Schindler's List, Life Is Beautiful, Sophie's Choice, Jacob the Liar, The Diary of Anne Frank, Kapo, My Mothers Courage, and others. The course will focus on major issues of debate around the possibilities and limits of representing the Holocaust cinematically as well as questions critically concerning commercialization, fictionalization, trivialization, documentation, visualization, and narrativization in the making and distributing of films about this event. What are the concerns that rise over the years concerning the dangers of aestheticizing the Holocaust in works of literature and the visual arts? Is it possible to employ a comedic narrative to deal with such a topic, and, if so, what are the benefits and downsides of such an approach? Is the very treatment of such a topic within the framework of the Hollywood entertainment industry itself a violation of respect for those who perished? The title of the course suggests a methodological approach which emphasizes the notion that screenings of the Holocaust are at the same time often re-screenings, to the extent that they are built on, presuppose, or even explicitly cite or take issue with earlier cinematic renditions.

**THETR 455 History of Modern Polish Film**

Spring. 4 credits. Prerequisite: some previous film analysis coursework. Offered every fourth year; offered 2001. D. Fredericksen.

Analysis of Polish film from 1945 to the present, within the context of Poland's postwar history. Topics will include the period of socialist realism, the so-called "Polish School" (1956-1962), the cinema of moral anxiety, Solidarity cinema, and the Polish documentary tradition. Key directors to be considered include Wajda, Munk, Zarrussi, Polanski, Slominski, Kieslowski, and Lozinski. Some attention to the development of Polish film theory. The extra-filmic context will be set by such works as Norman Davies Heart of Europe, Czeslaw Milosz' The Captive Mind, and Eva Hoffman's Exit into History.

**THETR 473 Film and Spiritual Questions (also RELST 473 and College Scholar Seminar)**

Spring. 4 credits. Limited to 20 students. Offered alternate spring semesters; next offered fall 2002. D. Fredericksen.

The use of film as a medium for the expression of spiritual questions has a long and rich history, although little attention is given to this fact in contemporary film studies. This seminar will examine films and writings by filmmakers who are so inclined. Special attention will be given to the work of Andrey Tarkovsky, the Russian film director and theorist.

**THETR 474 Jung, Film, and the Process of Self-Knowledge (also College Scholar Seminar)**

Fall. 4 credits. Limited to 20 students. Offered alternate spring semesters; next offered 2001-2002. D. Fredericksen.

"Know thyself" is one of the oldest and most enduring imperatives of the human spirit, and a raison d''etre for liberal studies. This seminar will trace the Jungian approach to this imperative and test its critical capacities with respect to films by Fellini (8 ½, 12), Bergman (Persona), and Bergman (Wild Strawberries).

**THETR 475 Seminar in the Cinema I**

Fall. 4 credits. Prerequisite: some analytic film studies coursework for fall 2000. Cognitive film theory. An intensive study of Hugo Munsterberg's The Film: A Psychological Study (1916), Joseph
THETR 476 Seminar in the Cinema II
Spring. 4 credits. Limited to 20 students.
Permission of instructor and some analytic film studies. Y. Spielmann. (Society for Humanities Fellow).
Topical for spring 2000: Concepts of Visual Representation and Virtual Selves. Taking as a starting point the apparent modes of interchangeable selves and characters, figures and figurations in recent films (Terminator II and other films), the seminar explores how these are created through the use of multiple layers, morphing, and other digital devices of imaging, we may ask to what extent our understanding of visual orientation through established features of dimensional film—of cinematography, lighting, sync-sound exercise is in coordination with Directing II class; cinematography, lighting, sync-sound, and editing techniques; working with labs and sound booths, digital video camera; and nonlinear (AVID) editing.

THETR 478 Intermediate Film and Video Projects: Narrative Workshop
Spring. 4 credits. Limited to 8 students. Prerequisites: THETR 377 or 277 as minimum production; preference given to those who have taken THETR 376 (History and Theory of Documentary and Experimental Film), 379 (Modern Documentary Film), 386 (Third Cinema), or 291/691 (Filming Other Cultures); and permission of instructor based on project proposals. Equipment fee: $100 (paid in class). Film project costs: $500-1,000; video $100-200. M. Rivchin.

THETR 479 Advanced Film and Video Projects
Spring. 4 credits. Limited to 4-6 students, those selected to the Advanced Undergraduate Film Program by application in December. Prerequisite: THETR 377 or 277. Equipment fee: $100. Project costs: $500-2,000. Not offered 2000-2001. M. Rivchin.

THETR 483 Experimental Workshop
Spring. 4 credits. Limited to 8 students. Prerequisites: THETR 377 or 277 as minimum production; preference given to those who have taken THETR 376 (History and Theory of Documentary and Experimental Film), 379 (Modern Documentary Film), 386 (Third Cinema), or 291/691 (Filming Other Cultures); and permission of instructor based on project proposals. Equipment fee: $100 (paid in class). Film project costs: $500-1,000; video $100-200. M. Rivchin.

THETR 563 Myth onto Film
Spring. 4 credits. R. Ascher.

THETR 569 German Film Theory (also GERST 699, 700)

THETR 610 Sexuality and the Politics of Representation (also WOMNS 610)
Fall. 4 credits. A. Villarejo.

THETR 653 Feminism and Film (also ENGL 660 and COM L 662)

THETR 674 Introduction to Film Analysis: Meaning and Value
Fall. 4 credits. Limited to 10 graduate students. D. Fredericksen.

THETR 691 Filming Other Cultures (also ENGL 506)
Spring. 4 credits. Fee for film screening and maintenance. $35. R. Ascher.

THETR 476 Seminar in the Cinema II
Spring. 4 credits. Limited to 20 students.
Permission of instructor and some analytic film studies. Y. Spielmann. (Society for Humanities Fellow).
Topical for spring 2000: Concepts of Visual Representation and Virtual Selves. Taking as a starting point the apparent modes of interchangeable selves and characters, figures and figurations in recent films (Terminator II and other films), the seminar explores how these are created through the use of multiple layers, morphing, and other digital devices of imaging, we may ask to what extent our understanding of visual orientation through established features of dimensional film—of cinematography, lighting, sync-sound exercise is in coordination with Directing II class; cinematography, lighting, sync-sound, and editing techniques; working with labs and sound booths, digital video camera; and nonlinear (AVID) editing.

THETR 478 Intermediate Film and Video Projects: Narrative Workshop
Spring. 4 credits. Limited to 8 students. Prerequisites: THETR 377 or 277 as minimum production; preference given to those who have taken THETR 376 (History and Theory of Documentary and Experimental Film), 379 (Modern Documentary Film), 386 (Third Cinema), or 291/691 (Filming Other Cultures); and permission of instructor based on project proposals. Equipment fee: $100 (paid in class). Film project costs: $500-1,000; video $100-200. M. Rivchin.

THETR 479 Advanced Film and Video Projects
Spring. 4 credits. Limited to 4-6 students, those selected to the Advanced Undergraduate Film Program by application in December. Prerequisite: THETR 377 or 277. Equipment fee: $100. Project costs: $500-2,000. Not offered 2000-2001. M. Rivchin.

THETR 483 Experimental Workshop
Spring. 4 credits. Limited to 8 students. Prerequisites: THETR 377 or 277 as minimum production; preference given to those who have taken THETR 376 (History and Theory of Documentary and Experimental Film), 379 (Modern Documentary Film), 386 (Third Cinema), or 291/691 (Filming Other Cultures); and permission of instructor based on project proposals. Equipment fee: $100 (paid in class). Film project costs: $500-1,000; video $100-200. M. Rivchin.

THETR 563 Myth onto Film
Spring. 4 credits. R. Ascher.

THETR 569 German Film Theory (also GERST 699, 700)

THETR 610 Sexuality and the Politics of Representation (also WOMNS 610)
Fall. 4 credits. A. Villarejo.

THETR 653 Feminism and Film (also ENGL 660 and COM L 662)

THETR 674 Introduction to Film Analysis: Meaning and Value
Fall. 4 credits. Limited to 10 graduate students. D. Fredericksen.

THETR 691 Filming Other Cultures (also ENGL 506)
Spring. 4 credits. Fee for film screening and maintenance. $35. R. Ascher.

THETR 691 meets simultaneously with THETR 291/ANTRO 291/691. For topics and issues addressed, please see the description under Anthropology 291. Additionally, all graduate students review widely varied films of general interest, for example, Werner Herzog's Where the Green Ants Dream, and, in consultation with the instructor, review films related to their special interests and major field of study.

THETR 699 German Film Theory (also GERST 699, 700)

THETR 674 Introduction to Film Analysis: Meaning and Value
Fall. 4 credits. Limited to 10 graduate students. D. Fredericksen.

THETR 691 Filming Other Cultures (also ENGL 506)
Spring. 4 credits. Fee for film screening and maintenance. $35. R. Ascher.

THETR 691 meets simultaneously with THETR 291/ANTRO 291/691. For topics and issues addressed, please see the description under Anthropology 291. Additionally, all graduate students review widely varied films of general interest, for example, Werner Herzog's Where the Green Ants Dream, and, in consultation with the instructor, review films related to their special interests and major field of study.

THETR 122 Dance Technique I (also PE 160)
Fall and spring. 0 to 1 credit. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. Fall. J. Chu and B. Suber; spring. J. Chu and J. Kovar. Entry level class. The fundamentals of elementary dance training. Movement sequences focusing on rhythm, placement, and vitality of performance through an anatomically sound dance technique.

THETR 125 Introduction to Tap Dancing (also PE 170)
Fall. 0 to 1 credit. Satisfies the PE requirement if taken as PE. This introduction to tap dancing will be designed for beginners who have no previous experience with the genre. We will begin with basic heel, toe, and ball work before progressing logically to the shuffle, the flap, and their concomitant variations. As one of our goals in tap dancing will be to realize (just a few of the) body's percussive possibilities, uninhibited ankles and a sense of rhythm are strongly recommended.
THETR 231 Dance Technique II/Ballet (also PE 161)
Spring. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. Not offered 2000–2001. Staff.
Beginning Ballet technique intended for students with some dance training. Includes all basic barre and center work focusing on presence and presentation.

THETR 232 Dance Technique II/Modern (also PE 162)
Fall and spring. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. J. Kovar.
Beginning Modern technique intended for students with some dance training. Material covered includes specific spinal and center work with attention to rhythm, design, and movement expression.

THETR 303 Dance Technique Workshop (also PE 167)
Fall. 0 to 1 credit. By placement only: no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. J. Self.
This class goes beyond the conventional modern dance class and looks into the very nature of technical training for dancers by studying and investigating a variety of movement forms including yoga, improvisation, classical, and modern western dance.

THETR 304 Dance Technique III/Ballet (also PE 163)
Spring. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. B. Suber.
Intermediate Ballet technique. Work is done on strengthening the body through a movement technique emphasizing presence and musicality based on harmonic muscular control.

THETR 306 Dance Technique III/Modern (also PE 164)
Fall and spring. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. Fall. B. Suber, spring. J. Chu.
Intermediate modern technique focusing on rhythm, placement, and phrasing for students who are prepared to refine the skills of dancing. Students will be challenged by complex phrases and musicality.

THETR 308 Dance Technique IV/Modern (also Physical Education 166)
Fall and spring. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. Fall. J. Chu, spring. J. Self.
Advanced and pre-professional Modern technique. A continuation of and supplement to THETR 306.

THETR 309 Dance Technique IV/Ballet (also PE 165)
Fall and spring. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. B. Suber.
Advanced and pre-professional Ballet technique. A continuation of and supplement to THETR 304.

THETR 155 Rehearsal and Performance
Fall and/or spring. 1-2 credits. 1 credit per production experience per semester up to 2 credits per semester. Students must register for the course in the term in which the credit is earned; requests for retroactive credit will not be honored. Limited to students who are assigned roles after tryouts at the dance program’s auditions. Students may add this course only after they have been assigned roles. 3-4 grades only.
The study, development, and performance of roles in departmental dance productions.

THETR 201 Dance Improvisation
Spring. 3 credits. Limited to 12 students. Concurrent enrollment in a dance technique class at the appropriate level is required. Attendance at dance concerts is required. J. Self.
When the body knows where, and how to move without prior direction, we call that improvisation. This course offers the possibility of "training" one’s movement instincts to respond with focus, humor, and spontaneity. Live musical accomp. Includes some dance history.

THETR 210 Beginning Dance Composition
Fall and spring. 3 credits. Concurrent enrollment in THETR 212 and a dance technique class at the appropriate level is required. Attendance at dance concerts is required. Fall. J. Self; spring. J. Chu.
Weekly assignments in basic elements of composition. Students compose and present short studies that are discussed and reworked. Problems are defined and explored through class improvisations. Informal showing at end of semester.

THETR 211 Dance Movement Workshop
Summer. 3 credits. Limited to 15 students. For students with varied levels of training, including those with no experience. J. Kovar.
Students explore new ways of moving and creating dances and prepare short studies each week based on material covered in class. Modern dance technique, improvisation, and composition are covered. Students observe and discuss the main concerns of contemporary performance from the artist's/performer's perspective. Viewings of films, videotapes, and live performances.

THETR 212 Music Resources for Dance Composition
Fall and spring. 1 credit. MUSIC 105 is recommended as a prerequisite but not required. Students may register in successive semesters, for a maximum of 4 credits. Attendance at dance concerts and music concerts is required. A. Fogelsanger.
Intended to expand choreographers’ music vocabulary and skills through a survey of contemporary music for dance, the study of music and dance relation, and rhythm studies. Includes discussing and writing about concerts, recordings, and videotapes. May include rehearsing and performing music or dance. Syllabus varies depending on the students’ experience.

THETR 233 Explorations in Movement and Performance (also PE 168)
Fall. 0 or 1 credit. Limited to 16 students. Satisfies PE requirement if taken as PE. Attendance at dance concerts is required. J. Self.
A physically demanding exploration into various movement realms. Specific subjects covered are gendered movement, erotic power, spiritual power, ritual, and performance. Techniques include extensive use of breath, animal movement, improvisation, and group games. This course requires an eagerness to investigate the nature of performance and explore unfamiliar territory in movement.

THETR 310 Intermediate Dance Composition I
Fall and spring. 3 credits. Prerequisite: THETR 210. Concurrent enrollment in THETR 212 and a technique class at the appropriate level is required. Fall. J. Chu; spring. J. Morgenroth.
Intermediate choreographic projects will be critiqued in progress by faculty and peers. Consideration of design problems in costuming and lighting.

THETR 311 Intermediate Dance Composition II
Fall and spring. 3 credits. Prerequisite: THETR 310. Attendance at dance concerts is required. Concurrent enrollment in THETR 212 and a technique class at the appropriate level is required. Fall. J. Chu; spring. J. Morgenroth.
A continuation of THETR 310.

THETR 410 Advanced Dance Composition I
Fall and spring. 3 credits. Prerequisite: THETR 311. Concurrent enrollment in THETR 212 and in a technique class at the appropriate level is required. Fall. J. Chu; spring. J. Morgenroth.
Students work on advanced choreographic problems, to be presented in performance. Work in progress will be critiqued by faculty on a regular basis.

THETR 411 Advanced Dance Composition II
Fall and spring. 3 credits. Prerequisite: THETR 410. Concurrent enrollment in THETR 212 and in a technique class at the appropriate level. Attendance at dance concerts is required. Fall. J. Chu; spring. J. Morgenroth.
A continuation of THETR 410.

THETR 491 Senior Project In Dance
Fall and spring. 3 credits per semester. Prerequisite: THETR 311. This course is limited to senior dance majors only. Students who take this course will create a project in choreography and performance, dance, film or video, dance pedagogy, or other appropriate area agreed on with a member of the dance faculty. In addition, there will be a 1- to 4-page paper which will expand their work in a theoretical or historical context.

History, Criticism, and Theory
THETR 307 Asian Dance and Dance Drama (also PE 427) @
This course is designed to give the student a practical working knowledge of Indian classical dance, specifically in the indigenous style of Odissi known as Odissi. The technique strengthens the body and develops grace, rhythmic expression, and dexterity that can benefit all forms of dance.

**THETR 312 Physical Analysis of Movement**

This course is an examination of human movement with particular attention to dance movement. Readings in texts on human anatomy, physiology, and kinesiology and in Sveggard’s *Human Movement Potential*. Guest lectures by experts in anatomy and health areas. Practical and laboratory work. Demonstration of dissection.

**THETR 314 Western Dance History I: Classical Ballet History as a Reflection of Western Ideology**

Fall. 4 credits. Attendance at dance concerts is required. Not offered 2000–2001. B. Saber.

A critical survey of the history of classical ballet defining elements of classicism and determining why ballet is defined as classical. Through texts, videotapes, and live performances the class will explore how ballet has perpetuated or confronted social issues of race, class, gender, sexuality, the body, and abuse.

**THETR 315 Western Dance History II: History of Modern Dance**

This class will study the course of modern dance in the twentieth-century United States. We will examine each generation of dancers, starting with Isadora Duncan and ending with performers emerging today. Issues of gender, cultural identity, elitism, and democracy will be discussed.

**THETR 317 Asian Dance II**

0, 1, or 3 credits. Prerequisite: THETR 307 or previous training in Odissi Classical Dance. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. Not offered 2000–2001. The continuation of THETR 307, Odissi Classical Dance. Emphasis is mainly on choreography as well as continuing to refine and perfect the basic movements learned in the preliminary course. Meets twice weekly for movement classes; an extra class will be arranged to learn the art of makeup.

**THETR 319 Music, Dance, and Light**

Fall. 3 credits. Attendance at dance concerts and music concerts is required. E. Intemann, A. Fogelsanger.

Artistic values, parameters, and concerns of music (sound design), dance, and lighting design are compared and contrasted, and the combination of design elements is analyzed in contemporary dance. Includes writing in response to readings, audio and video recordings, and performances. Some classes devoted to creating sound, movement, and lighting.

**THETR 418 Seminar in History of Dance**

Spring. 4 credits. J. Self.

Topic for 2001: Ritual, Performance, and Dance. Through lectures, video tapes, films, readings, and live events students will be able to trace the histories and cultural impact of movement ritual from all parts of the world including our own backyard. Contemporary and traditional healing rituals, rites of passage, and other evolving forms will be explored.

**THETR 490 Senior Paper in Dance**

Spring. 4 credits. Prerequisite: THETR 418, senior standing. Attendance at dance concerts is required.

Under faculty direction, the student will write a senior paper in dance history, criticism, or theory.

**Tracks toward admission into the advanced undergraduate theatre program**

**Design, Technology, and Stage Management**

Recommended for individuals interested in a Design, Technology, or Stage Management track:

**THETR 250 Fundamentals of Theatre Design and Technology**

THETR 151 and 251 Production Lab I and II (at least one credit of each)

Recommended for Scenic Design emphasis:

**THETR 340 Theatrical Drafting and Technical Drawing Studio**

**THETR 351 Production Lab III (as Design Assistant)**

**THETR 354 Stagecraft Studio**

**THETR 364 Scene Design Studio**

Upon admission to the program: **THETR 451 Production Lab IV (at least 1 credit)**

Recommended for costume design or costume shop management emphasis:

**THETR 351 Production Lab III (as Design Assistant)**

**THETR 356 Costume Construction Studio**

**THETR 366 Costume Design Studio I**

Upon admission to the program: **THETR 451 Production Lab IV (at least 1 credit)**

Recommended for Lighting Design or costume shop management emphasis:

**THETR 252 Technical Production Studio I**

**THETR 351 Production Lab III (as Student Electrician)**

**THETR 351 Production Lab III (as Design Assistant)**

**THETR 362 Lighting Design Studio I**

Upon admission to the program: **THETR 451 Production Lab IV (at least 1 credit)**

Recommended for Sound Design emphasis:

**THETR 251 Production Lab II (as Student Sound Technician)**

**THETR 252 Technical Production Studio I**

**THETR 351 Production Lab III (as Design Assistant)**

**THETR 368 Sound Design Studio**

Upon admission to the program: **THETR 451 Production Lab IV (at least 1 credit)**

Recommended for Technical Direction emphasis:

**THETR 252 Technical Production Studio I**

**THETR 256 Technical Production Studio II**

**THETR 340 Theatrical Drafting and Technical Drawing Studio**

**THETR 351 Production Lab III (as Assistant Technical Director)**

**THETR 354 Stagecraft Studio**

Upon admission to the program: **THETR 451 Production Lab IV (at least 1 credit)**

Recommended for Stage Management emphasis:

**THETR 253 or 353 Stage Management Lab II or III—two assignments**

**THETR 280 Introduction to Acting**

**THETR 370 Stage Management Studio**

**THETR 398 Fundamentals of Directing I**

Upon admission to the program: **THETR 453 Stage Management Lab IV**

**Directing**

Recommended for individuals interested in a directing track:

**THETR 351 and THETR 251 Production Lab I and II (at least 2 combined credits)**

**THETR 240/THETR 241 Introduction to Western Theatre (1 Semester ONLY)**

**THETR 250 Fundamentals of Design and Technology**

**THETR 280 Introduction to Acting**

**THETR 348 Playwriting**

**THETR 349 Advanced Playwriting**

Students in the advanced undergraduate theatre program may also elect to take THETR 485 (Undergraduate Internship) in addition to or in place of one production assignment.

**UKRAINIAN**

See Department of Near Eastern Studies.
Africana Studies and Research Center

The Africana Studies and Research Center is concerned with the examination of the history, culture, intellectual development, and social organization of Black people and cultures in the Americas, Africa, and the Caribbean. Its program is structured from an interdisciplinary and comparative perspective and presents a variety of subjects in focal areas of history, literature, social sciences, and African languages. African languages such as Swahili are consistently offered, while other languages, e.g., Mandarin and Yoruba are occasionally offered. African languages are also taught during summer/winter sessions.

The center offers a unique and specialized program of study that leads to an undergraduate degree through the College of Arts and Sciences and a graduate degree, the Master of Professional Studies (African and African-American), through the university’s Graduate School. A student may major in Africana studies, however, another attractive alternative is the center’s joint major program. This program enables the student to complete a major in any of the other disciplines represented in the college while at the same time fulfilling requirements for a major in Africana Studies. This requires only a few more credits than is usually the case when one completes a single major course of study. Courses offered by the center are open to both majors and nonmajors and may be used to meet a number of college distribution requirements, including historical/temporal breadth (@) and geographical breadth (@) requirements, such as freshman writing seminars, language (Swahili), expressive arts, humanities, social sciences, and history.

The center also brings distinguished visitors to the campus, sponsors a colloquium series, and houses its own library.

The Africana Major

The undergraduate major offers interdisciplinary study of the fundamental dimensions of the African-American and African experiences. Because of the comprehensive nature of the program, it is to the students’ advantage to declare themselves Africana majors as early as possible. The following are prerequisites for admission to the major:

Students should submit:
1) a statement of why they want to be an Africana studies major;
2) a tentative outline of the area of study they are considering (African or African-American) for the undergraduate concentration; and
3) a full transcript of courses taken and grades received.

The center’s undergraduate faculty representative will review the applications and notify students within two weeks of the status of their request.

After acceptance as a major in the Africana Center, a student must maintain a C+ cumulative average in the center’s courses while completing the major program. The Africana major must complete 36 credits in courses offered by the center, which include the following four core courses: AS&RC 205, 231, 290, and 422. Beyond the core courses, the student must take eight credits in center courses numbered 200 or above and 15 credits numbered 300 or above. The program of an undergraduate major may have a specifically Afro-American focus or a specifically African focus.

Joint Majors

The center encourages joint majors in the College of Arts and Sciences and in other colleges. Joint majors are individualized programs that must be worked out between the departments concerned. The center’s undergraduate faculty representative, Professor Bekerie, will assist students in the design and coordination of joint major programs. However, in any joint major program, the center will require at least 16 credits be taken in Africana studies courses, including AS&RC 290.

Double Majors

In the case of double majors (as distinct from joint majors) students undertake to carry the full load of stipulated requirements for a major in each of the two departments they have selected.

Certificate in African Studies

In conjunction with the Institute for African Development, the Africana Studies and Research Center administers an undergraduate Certificate in African Studies program. The certificate is offered as a minor concentration; and

Certificate in African Studies

Certificate program, the center will require at least 16 credit hours, including the core courses. Students interested in the certificate program should be filed with the student’s faculty adviser will be responsible for determining completion of the certificate requirements.

Honor’s.

The honors program offers students the opportunity to complete a library research thesis, a field project in conjunction with a report on the field experience, or a project or experiment designed by the student. The requirements for admission to the honors program for all students—regular majors, joint majors, and double majors—are a B-cumulative average in all courses and a B+ cumulative average in the center’s courses. Each student accepted into the honors program will have an honors faculty committee consisting of the student’s adviser and one additional faculty member, which is responsible for final evaluation of the student’s work. The honors committee must approve the thesis or project before May 1 of the student’s senior year. The completed thesis or project should be filed with the student’s faculty committee by May 10 of the senior year.

Language Requirement

Courses in Swahili may be used to satisfy the College of Arts and Sciences language requirement. In Swahili, successful completion of AS&RC 131, 132, 133, and 134 provides proficiency, and the addition of 202 provides proficiency. AS&RC majors are not required to take an African language, but the center recommends the study of Swahili to complete the language requirement.

AS&RC 131 Swahili

Fall. 4 credits. Prerequisite: AS&RC 131.

AS&RC 132 Swahili

Spring. 4 credits. Prerequisite: AS&RC 131.

AS&RC 134 Swahili

Spring. 4 credits. Prerequisite: AS&RC 133.

AS&RC 171 Black Families and the Socialization of Black Children

Fall. 3 credits. Faculty.

This course provides an examination of the evolution of the Black family from its roots in Africa, the evolution of family forms, the impact of social policy, and a consideration of the literature stressing family and child well-being. Among the major topics considered will be male/female relationships, childbearing and parental roles, the extended family, and economic and health issues. The component of the course focusing on youth will primarily cover child and adolescent development.

AS&RC 172 The Education of Black Americans: Historical and Contemporary Issues

Spring. 3 credits. Faculty.

This course will be devoted to the history of educating Black Americans. Considerable attention will be given to contemporary issues. The major topics of focus will include an examination of the debates concerning the
type of the education needed, public and private schooling efforts, the Africana Studies movement, race issues, busing, affirmative action, resegregation debates and new initiatives in education including vouchers, and charter schools.

AS&RC 191 Africa: The Continent and Its People
Fall. 3 credits. L. Edmondson.
An introductory interdisciplinary course focusing on Africa's geographical, ecological, and demographic characteristics; indigenous institutions and values; the triple cultural heritage of Africanity, Islam, and Western civilization; main historical developments and transitions; contemporary political, economic, social, and cultural change. Africa's ties with the United States (from trans-Atlantic slavery to the present), its impact on the emerging world order, and its contribution to world civilization will also be explored.

AS&RC 202 Swahili Literature
Fall. 4 credits. Prerequisite: Swahili 134. A. Nanyi.
Students gain mastery over spoken Swahili and are introduced to the predominant Swahili literary forms.

AS&RC 204 History and Politics of Racialization: A Comparative Study
Spring. 4 credits. A. Benerke.
The primary focus of this course will be on the historical and contemporary significance of racialization in the United States and South Africa with regard to societal development and inter-relations. It will include an analysis of the historical development of racialized barriers as an instrument of power and privilege. The ways with which racialization is used as an instrument of ideology to social status, cultural hierarchy and economic positions will also be examined. Particular emphasis will be given to the development and perpetuation of scientific racism in both places. The apparent success against Jim Crow form of racism in the United States and apartheid in South Africa appears to transform racism into a "scientific" sphere. This transformation and its continued impact in perpetuating social inequality will be further analyzed.

AS&RC 205 African Culture and Civilization
Spring. 3 credits. D. Ohadikhe.
This course is concerned with the peoples of Africa and the development of African cultures and civilizations from the earliest times to the present day. It focuses on the near modern civilizations of Africa south of the Sahara, and the ancient civilizations of Egypt and the Nile Valley, together with their contributions to the development of the major world civilizations. The course also deals with the socio-political organization of African societies, their kinship systems, cross-cutting ties, rites of passage, gender relations, arts (including music, dance, folklore, architecture, sculpture, painting, and body decoration).

AS&RC 210 Major Works of Black Writing
Fall. 3 credits. A. Adams.
This course surveys classic texts by African American, Caribbean, and African writers. The focus is on literary texts by authors such as Langston Hughes, Toni Morrison, James Baldwin, Maryse Conde, and Chinua Achebe, with a view toward analyzing common experiences, references, themes, and literary strategies across the Black world. The works of fiction, poetry, and drama that constitute the central material of the course are supplemented by essays and biographies from other authors who have influenced the creative vision and the movement of the peoples of Africa and the Diaspora, e.g., W.E.B. DuBois and Marcus Garvey, Nelson and Winnie Mandela.

AS&RC 231 African-American Social and Political Thought
Spring. 3 credits. J. Turner.
This is an introductory course that will review and analyze the major theoretical and ideological formulations developed and espoused by African-Americans in the struggle for liberation. This semester we will focus specifically on the political philosophy and historical significance of Malcolm X, and the work and movement of Marcus Garvey, as the prime movers of nationalism and pan-Africanism among Black people in this century. Such themes as slave resistance, nationalism, Pan-Africanism, emigration, anti-imperialism, socialism and internal colonialism, and the political and social views of Black women will be discussed. Black political thought will be viewed in its development as responses to concrete conditions of oppression and expression.

AS&RC 285 African American Literature in the Twentieth Century
Fall. 3 credits. Not offered 2000-2001. Faculty.
This course provides an overview to major works in African American literature from 1900 to the 1980s. Focusing on significant moments in the tradition, the readings highlight literary movements, their advocates, and their detractors. Divided into four units, the literary works come from the Post-Reconstruction period, Harlem Renaissance, Socialism, Realism, and Modernists of the 1950s and 1940s, the Black Arts Movement of the 1960s and 1970s, and the W 'I in this critiques from the mid 1970s through the 1980s. In addition to a range of periods and styles, this course includes a range of genres, such as the autobiography, poetry, essay, short story, drama, and novel.

AS&RC 271 Introduction to African Development (also CRP and GOVT 271)
For description, see CRP 271.

AS&RC 280 Race, Power, and Privilege in the United States (formerly Racialism in American Society)
Fall. 3 credits. D. Barr and J. Turner.
This course will be a topical treatment of the history and theory of racism in the United States. The course will begin with an examination of basic concepts and theories of racism. From there we will examine the history of racial thought in America—African Americans, Native Americans, Asian Americans, and the Hispanic groups. Particular attention will be paid to the political economy of racism and the sociological and psychological aspects of race relations in America, with specific reference to the differences and intersections of race, class, gender, and ethnicity.

AS&RC 283 History of Resistance Movements in Africa and the Diaspora
Fall. 3 credits. D. Ohadikhe.
This course deals with the history of resistance and liberation movements in Africa, Brazil, the Caribbean, and the United States. It is concerned with the dialectical relationships between European domination and Black resistance. It examines the methods, strength, and complexity of Black resistance and liberation, together with the rise of revolutionary classes in Africa and the Diaspora. It draws attention to the importance of unity and organization in resistance and shows similarities, connections, and continuities in Black resistance. Finally, it demonstrates that African background helped shape the nature of struggles for independence and civil liberties in the Caribbean, Brazil, and the United States.

AS&RC 290 The Sociology of the African-American Experience
Fall. 3 credits. J. Turner.
This is an introductory course to the field of Africana Studies. It examines sociological, historical, and anthropological approaches to the emergence and development of the African-American experience. The course surveys the African traditions of human kind and the classical role of Black people in world civilization and the making of early culture. The course treats the issues in the humanities, sociology, and political science. This course is required for all undergraduate students majoring at the Africana Center.

AS&RC 304 African American Art
Spring. 3 credits. S. Hassan.
This course investigates the different forms of African-American visual artistic traditions in relation to their historical origins and socio-cultural context from the early days of slavery to the present time. The course will start with an overview of African art and the experiences of the Middle Passage and slavery in relation to African-American traditions in the decorative arts including: pottery, architecture, ironwork, quilting, basketry. This is followed by a fine art survey starting with the eighteenth and nineteenth centuries, continuing through the early twentieth-century Harlem Renaissance up to the present. Certain issues related to African-American arts and creativity such as "improvisation," "Black Aesthetic," and "Pan Africanism" will also be explored. Slides, films, and film strips will be used extensively to illustrate the topics discussed. Visits to museums and relevant current exhibitions may be arranged.

AS&RC 310 Art in African Culture and Society
Fall. 3 credits. S. Hassan.
This course is a survey of the visual art and material cultural traditions of sub-Saharan Africa. It aims at investigating the different forms of visual artistic traditions in relation to their historical and sociocultural context. The symbolism and complexity of traditional African art will be explored through the analysis of myth, ritual, cosmology. In-depth analysis of particular African societies will be used to examine the relationship of the arts to indigenous concepts of time, space, color, form, and sociopolitical order. New and contemporary art forms associated with major socioeconomic changes and processes of assimilation and acculturation will also be explored. These include tourist art, popular art, and elite art.

AS&RC 311 Government and Politics in Africa
Fall. 3 credits. Not offered fall 2000. A. Mazrui.
Power and political participation in Africa. The colonial background and its political
forces and structured by differences in cultural tendency in African political culture. From the continent, the Caribbean, and Black America.

movements, past and present, in their international relations, this course will be informed by an exploration of the racial factor as observe, read, and write critical commentary on contemporary Black performance. Performance is broadly defined to include performance of the self in every day life as well as formally staged productions. Thus, students will have the opportunity to observe performance of identity in a range of Black social settings. Blending analysis and practice, we begin with everyday life performances and end with staged presentations of scenes from the African-American theatrical repertoire.

AS&RC 435 African Cinema (also S HUM 435)

Fall. 4 credits. S. Hassan.

This course offers an overview of African cinema and filmmaking. It surveys historically the evolution of African cinema from its early days to the present. Through screening of selected African films, different trends within African cinema will be explored, such as "Return to the Sources" and the rediscovery of the pre-colonial past, the "Social Realist" narrative and critique of post-independence Africa, reconstructing the story of colonialism from the perspective of the colonized; and the entertainment genre. Techniques, styles, and aesthetics of African cinema will also be discussed. The course offers an unique opportunity of looking at African culture and society, and at issues of social change, gender, class, tradition, and modernization through African eyes.

AS&RC 451 Politics and Social Change in the Caribbean

Fall. 4 credits. A. Adams.

A study of the historical, geostategic, political, economic, and social (including racial and cultural) forces affecting the domestic and international experiences of Caribbean societies. Special attention will be given to conflicting definitions and perceptions of the Caribbean; debating theories of Caribbean social structure and models of development; the continuing salience of struggles for change and transformation; processes of regional integration; and Caribbean challenges to the global system, especially with regard to the region's relations with the United States and the region's position in the Third World in the context of the North-South cleavage.

AS&RC 455 Caribbean Literature

Fall. 4 credits. A. Adams.

This course will examine the prose literature of the Caribbean islands. Through the reading of several novels and short stories from the various languages and cultural strains that comprise the Caribbean, students will study the points of commonality and the diversity within this body of literature. The recurrence of certain historical, social, and cultural issues that have formed the multi-ethnic Caribbean will be analyzed in their varying manifestations across the linguistic and other boundaries to uncover the underlying shared experience.

AS&RC 459 Education in Africa and the Diaspora

Fall. 4 credits. N. Assiê-Lumumba.

This course deals with educational innovations geared to promoting development based on gender, race, and class in Africa and the African diaspora. After an introduction on the concepts of education and innovations and
the states of innovation as planned change, the course will focus on concrete historical and contemporary cases of educational innovations. The case studies in the United States include the creation and expansion of historically black institutions such as Lincoln University, Spelman College, Tuskegee Institute (now Tuskegee University), and other schools in the South, and the Westside Preparatory School in Chicago. The African cases to be studied include African languages for instruction with a focus on a Nigerian case, Ujamaa and education for self-reliance in Tanzania, and the case of Cote d’Ivoire which adopted television as a medium of instruction.

AS&RC 468-469 Honors Thesis
Hours TBA. 468, fall; 469, spring. African center faculty.
For senior Africana Studies majors working on honors theses, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty. Permission of the AS&RC director of undergraduate studies is required.

AS&RC 475 Black Leaders and Movements in African-American History
Fall. 4 credits. R. Harris. Analyzes the personalities, ideas, and activities of the African-American struggle for African-American liberation from the eighteenth century to the present. Examines theories of leadership and the structure of protest movements with the goal of understanding current leadership needs and trends among African Americans.

AS&RC 478 Family and Society in Africa
Fall. 4 credits. N. Assié-Lumumba. The family as a social institution is structured according to socio-economic, historical, political, and cultural specificities. This is the frame in which the family in Africa and the African diaspora must be analyzed. The topics to be discussed in this course include the concepts of nuclear and extended family, the place and role of different age groups and generations in the family, marriage and its related issues, parenthood, childrearing, gender roles, class differences, and “family planning.” This course also deals with the impact of westernization, urbanization, and modern economy on the structure of the family in Africa as well as the legacy of African family values in the African diaspora with a focus on the African-American case.

AS&RC 479 Women and Gender Issues in Africa
Spring. 4 credits. N. Assié-Lumumba. There are two contrasting views of the status and role of women in Africa. One view portrays Africa as a continent where dominated and exploited by men. According to another view, women have a favorable social position in Africa: indigenous ideologies consider women to be the foundation of society, they are economically self-sufficient and independent and they have an identity independent of men. In this seminar we will discuss the status and role of women in Africa historically as well as in the contemporary period. Among the topics to be covered are: women in non-westernized/pre-colonial societies; the impact of colonial policies on the status of women; gender and access to schooling, participation in the economy and politics; women and the law; women and gender issues in southern Africa; womanism and feminism; the United Nations Decade of Women; and the four World Conferences on Women (Mexico 1975, Copenhagen 1986, Nairobi 1985, and Beijing 1995).

AS&RC 483 History of African Political Thought
Fall. 4 credits. D. Ohadikhe. The purpose of this course is to provide students with a thorough knowledge of the history of African political thought and ideologies, from ancient times to the present. This course is divided into two broad sections. The first section looks at the history of African political thought and institutions in ancient and near modern times and explains the functioning of traditionalism. It then goes on to show how western political thought in the nineteenth and early twentieth centuries instigated the revival of such ideas as Uhuru, Negritude, and African Humanism.

The second section examines the history of anti-colonial political thought. It explains why the colonial intelligentsia and radical African nationalists developed such political ideologies as African socialism, Lumumbism, and Nkrumatism. The course also looks at socio-political thought in African literature, and explores the possibilities of African political thought (like Kimbanguism and Tokoism) to the development of African political culture. Among the works of the major African political thinkers to be studied are those of Casey Hayford, Leopold Sedar Senghor, Simon Kimbangu, Amilcar Cabral, Frantz Fanon, Kwame Nkrumah, Patrice Lumumba, Nnamdi Azikwe, Julius Nyerere, Jomo Kenyatta, Nelson Mandela, and Steve Biko.

AS&RC 484 Politics and Social Change in Southern Africa
Spring. 4 credits. L. Edmondson. This course focuses on the legacies of apartheid and the challenges of transformation toward a post-apartheid society in South Africa. Topical emphases include: the rise and decline of apartheid, the historical continuity of Black resistance and government, under, against, and after apartheid, South Africa’s relations with its neighbors: geopolitical, economic, and racial dimensions of the American connection; politics of negotiation and transition; prospects for stability, democracy, and equality; South Africa’s new role in the African continental and global arenas. Instructor’s lectures will be supplemented by films and class discussions.

AS&RC 498-499 Independent Study
498, fall; 499, spring. Hours TBA. Africana Center faculty. For students working on special topics, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty.

AS&RC 501 Global Africa: Comparative Black Experience
Spring. 4 credits. A. Mazrui. This seminar will address two diasporas in the Black experience. The diaspora of enslavement concerns slaves and descendants of slaves in both the Western and Eastern Diaspora. The diaspora of colonization concerns those deportees disposed as a result of colonialism. The majority of African-Americans are part of the Diaspora of Enslavement. Recent African immigrants into France are part of the Diaspora of Colonization. Recent Jamaicans and Trinidadians in Britain are part of a double diaspora—products of both enslavement and colonialism. The course will address these areas of Black comparison: Comparative Slavery—A Triple Heritage: Race and Race Mixture in Four Traditions; Comparative Emancipation from Slavery; Comparative Liberation from Colonialism; Comparative Struggles for Rights. The Gender Question in Global Africa: Comparative Quest for Global Equality.

AS&RC 502 Education and Development in Africa
Spring. 4 credits. N. Assié-Lumumba. In the 1950s and 1960s, the human capital theory that emphasized the importance of formal education for achievement of full productive potential of individuals and countries enjoyed a renewed popularity. African countries promoted educational expansion with the expectation that it would lead to socio-economic development. The initial euphoria, however, was followed by skepticism and then disillusion. Education began to be perceived even as a hindrance to development. This course will address the relationship between formal education and individual and national development. In this seminar, different paradigms of development including modernization and dependency theories and Third World Forum are presented with an emphasis on the received and actual roles of education in individual and national development.

AS&RC 503 African Aesthetics
Fall. 4 credits. S. Hassan. The goal of this course is to investigate in depth the principles of aesthetics and philosophy of African visual arts. The course will offer a critical survey of the different writings and the growing body of research on this relatively new area of inquiry. The objectives of the course are to review how African aesthetics have been studied to date, to provide a critical analysis of the different approaches to the subject and related issues, and to suggest future directions of research. In-depth analysis of particular African societies will be used to examine the relationship of arts and aesthetics to indigenous concept of time, space, color, form, and sociopolitical order. In addition, issues related to African aesthetics and arts such as style, gender, class, and social change will also be explored.

AS&RC 504 Political Change in Africa
Fall. 4 credits. A. Mazrui. The study of Africa can be approached either dialectically (focusing on the tension between opposing forces) or thematically (focusing on themes as chapters of experience). This course will borrow from both those approaches. In their class assignments and examinations students are free to use either approach. The first approach will explore the dialectic between continuity and change; tradition and modernity; dependency and liberation; foreign and indigenous influences; anarchy and order; political decay and political development, democracy and authoritarianism; socialism and capitalism. The thematic approach will examine African Nationalism; race consciousness and Pan-Africanism; political parties and interest groups; executive power; ethnicity in politics; class-formation, social relations; economic and cultural dependency; sub-regional and continental Pan-Africanism; crisis of the African state; and Africa in World Politics.
ASARC 510 Historiography and Sources: The Development of African-American History
Spring. 4 credits. Prerequisite: upperclass or graduate standing or permission of instructor. R. Harris.
Studies the way Black historians in particular have explained the African-American past. Examines the development of writing African-American history during the twentieth century. Seeks to determine the principles for interpreting African-American history. Acquaints participants with the methodologies and sources central to understanding the African-American experience.

ASARC 530 Womanist Writing in Africa and the Caribbean
Spring. 4 credits. A. Adams.
Theoretical essays on the nature, relevance, and articulation of feminist thought from African and Caribbean writers will complement literary texts. Gender issues, as manifested both at the level of the individual and in emergent situations abroad will be examined in texts by such writers as Sister-Sistren, Conde, Danquah, Bade, Aidoor, Warner-Veyya, Ba, Emecheta, Kincaid, and W. Mandela. (Francophone works may be read in the original by individuals who so desire.)

ASARC 598-599 Independent Study
598-fall; 599-spring. Variable credit. For all graduate students.

ASARC 601-602 Africana Studies Graduate Seminar
601, fall; 602, spring. 4 credits. Africana Studies faculty.
This course, which will be conducted as a seminar, is designed for first-year AS&R graduate students. It will be coordinated and supervised by one professor but team-taught by three or four faculty per semester. Each participating faculty will be responsible for a topographical segment of the course related to her/his areas of specialization or an area of interest pertaining to theory and methodology of Africana Studies.

ASARC 698-699 Thesis
698, fall; 699, spring. Limited to Africana Studies and Research Center graduate students.

Agriculture, Food, and Society Concentration
Agriculture, Food, and Society is an interdisciplinary concentration that is designed to introduce students to the study of agricultural and food issues from diverse perspectives within the liberal arts. The Agriculture, Food, and Society concentration seeks to make available to students a coherent program of study in which the role of agriculture in modern or prehistorical-historical and developed or developing societies can be understood in biological, social, scientific, and humanistic perspectives. The concentration draws on courses in several colleges—in particular, the Colleges of Arts and Sciences, Agriculture and Life Sciences, and Human Ecology.
The concentration is administered by a committee, the members of which are drawn from the faculty associated with the concentration. The members of this committee include faculty from each of the major colleges from which courses in the concentration are drawn. The work of the committee is supported administratively through the Biology and Society Major. The office of the Biology and Society Major (275 Clark Hall) also provides a central location for students to receive information about relevant course offerings, upcoming seminars and presentations, faculty interests, and so on.

Basic Requirements
The requirements for the Agriculture, Food, and Society concentration are designed to ensure a broad background in the biological, socioeconomic, and humanistic dimensions of agricultural and food issues. These requirements include 1) foundation courses in biology: the Senior Seminar B&SOC/BIO G/S&TS 469, Food, Agriculture, and Society; plus a minimum of five electives totaling 15 credits drawn from the courses offerings.

Students enrolling in the Agriculture, Food, and Society concentration should take the following foundation courses in biology to prepare themselves for course work in agricultural science: a two-semester introductory biology sequence selected from Biological Sciences 109/110, 105/106, or 101-104. (Agricultural Science 101, offered during the eight-week Cornell summer session, also satisfies the biological sciences requirement.) These courses may be used to meet group 1 (physical or biological sciences) distribution sequence requirements in the College of Arts and Sciences.

It is recommended (but not required) that students in the Agriculture, Food, and Society concentration elect one or more freshman writing seminars with agriculturally related content to meet the requirement for graduation. The electives for the concentration, from which a minimum of five courses and 15 credits must be taken, are organized into three groups: agricultural and nutritional science, humanities, and social science/humanities. Students must select one agricultural and nutritional science course, one humanities course, and three social science or history courses. A maximum of six of the 15 credits may be earned in 100-level courses.

In addition, students are required to take the senior seminar, B&SOC/BIO G/S&TS 469, Food, Agriculture and Society. Adjustments to these and other requirement of the concentration may be made with the approval of the Agriculture, Food, Society and Food faculty adviser.

American Studies

The Major
The major in American Studies, appropriate for a wide array of future professions, began as a program of coordinated study in the history, literature, and politics of the United States. These remain the core elements, but American Studies can be inclusive in its subject matter. Given the nation's diverse population and cultures, the program wants its majors to examine American experience in broad terms, drawing on the materials and methods of a variety of disciplines.
The prerequisites are two courses from the following: American Studies 101, American Studies 102, American Studies 109, American Studies 110, American Studies 240, English 262, English 265, English 275, English 268, Government 111, History 101, History 102, History 260, History 261. In addition, majors normally complete the prerequisite courses by the end of their sophomore year, but they may sign up for the major while enrolled in one of the courses. Students with a score of 5 on the AP exam in American history may use that credit to satisfy History 102.

Students who contemplate becoming an American Studies major are encouraged to speak with the program director as early as possible to arrange for a major adviser. In consultation with their advisers, American Studies majors elect, in addition to the prerequisites, nine courses chosen from the American Studies course list (these courses are usually crosslisted with another department). Their work must include courses in all of the three large periods into which the nation's development can be divided (colonial, nineteenth century, and twentieth century). Students must take no fewer than four courses before 1900. At least one of these courses must be in the period before 1800. Each student must also take one of American Studies 430 seminars or, with the approval of the adviser, an appropriate substitute seminar at the 400 level. (American Studies 500 taught in Washington, DC, does not fulfill the seminar requirement.) Students are given considerable freedom in creating a balanced program, but no more than five courses may be in any one department.

Beyond the basic core requirements for the major, two courses of work in the history or literature of a culture outside the United States are required. Students who study abroad for one semester usually satisfy this requirement.
Students may find courses relevant to American experience that they wish to take but that are not on the American Studies course list. With their adviser's approval, students may count two such courses towards fulfilling the major.

Honors
Candidates for honors must maintain an average of B+ in courses pertinent to the major. Normally, at the end of the junior year students who wish to write a senior honors essay must approach a member of the American Studies Program faculty and discuss their ideas for a project. With approval from...
the faculty member students may then register in the fall of their senior year for American Studies 493, the honors essay tutorial. At the end of the fall semester, honors candidates will meet with their adviser and a second member of the American Studies faculty to discuss their progress. If satisfactory, honors students will complete their honors essays in the spring by enrolling in American Studies 494.

Prerequisite Courses (see also under appropriate departments)

[AM ST 101] Introduction to American Studies: History and Literature, the Nineteenth Century 
G. Altschuler and D. McCall.

In this interdisciplinary course we will analyze American values and behavior as the intersection of culture, politics, literature, and society. We will do so by examining eight "great" or classic texts written between 1776–1900. The historical context of these texts will be explored in lecture and they will be treated as literature and historical-cultural documents. Texts include Common Sense by Thomas Paine; The Blithedale Romance by Nathaniel Hawthorne; The Lincoln-Douglas Debates; Henry James' The Bostonians; Mark Twain's Huckleberry Finn; and William Dean Howells' The Rise of Silas Lapham.

[AM ST 102] Introduction American Studies: History and Literature, the Twentieth Century 
G. Altschuler and D. McCall.

In this interdisciplinary course we will analyze American values and behavior as the intersection of culture, politics, literature, and society. We will do so by examining eight "great" or classic texts written between 1900 and the present. Texts include: Ernest Hemingway's A Farewell to Arms; F. Scott Fitzgerald's The Great Gatsby; William Faulkner's Sound and the Fury; Richard Wright's Black Boy; John Updike's Rabbit Run; and Philip Roth's American Pastoral.

American Studies 101 is not a prerequisite of American Studies 102.

[AM ST 109] Introduction to American Studies: Approaches to Understanding American Diversity, the Nineteenth Century 
J. Goldsby and N. Salvatore.

This course examines the first century-and-one-half of American national life and asks a series of interrelated questions about the changing meaning of national identity during this time. What did it mean to become an American, a process often urged on new immigrants, in light of the values and perceptions immigrants brought with them? What did democracy, a core element of becoming that American, mean if one were African or Native American? Irish or German? Jewish or Chinese? In what ways did racial and ethnic perceptions help structure political and cultural life during this period, and how does understanding the diverse historical reactions to these perceptions aid us in understanding the complexity of American life? This is a team-taught, interdisciplinary course in which students will analyze historical, literary, and cultural evidence in exploring these and other issues.

AM ST 110 Introduction to American Studies: New Approaches to Understanding American Diversity, the Twentieth Century 
Fall 4 credits. M. C. Garcia and S. Wong.
This course examines American national life in the twentieth century and asks questions about the changing meaning of national identity. What does it mean to be an American in the twentieth century? What does it mean to assimilate: Can one assimilate structurally and yet maintain a distinct cultural identity? In what ways do racial and ethnic perceptions structure political, economic, and cultural life? This is a team-taught interdisciplinary course in which students will analyze historical, literary, and cultural evidence in exploring these and other issues.

American Studies 430 Seminars

Section One: The Politics of the American Civil War (also GOVT 408)
Spring 4 credits. R. Bensel.
The Civil War, along with the founding of the nation in the late eighteen century, is one of the two most important influences on the course of American Political development. A serious of "great" or classic texts written between 1900 and the present. Texts include: Common Sense by Thomas Paine; The Blithedale Romance by Nathaniel Hawthorne; The Lincoln-Douglas Debates; Henry James' The Bostonians; Mark Twain's Huckleberry Finn; and William Dean Howells' The Rise of Silas Lapham.

Prerequisite Courses (see also under appropriate departments)

[AM ST 150] Introduction to American Religion (also SOC 150 and RELST 150) 
For description, see SOC 150.

[AM ST 203] Religion and Family in the U.S. (also SOC 201, R SOC 202, RELST 203) 
For description, see SOC 201.

[AM ST 221] Anthropological Representation: Ethnographies of Latino Culture (also ANTH 221 and LSP 221) 
Spring 3 credits. V. Santiago-Irizarry.
For description, see ANTHRO 221.

[AM ST 222] American Economic History (also ECON 323) 
Spring 4 credits. P. McClelland.
For description, see ECON 323.

[AM ST 277] The United States (also ANTHR 377 and LSP 377) 
For description, see ANTHRO 377.

[AM ST 380] Gender, Ideology, and Culture (also SOC 380 and WOMNS 380) 
For description, see SOC 380.

[AM ST 426] History of American Enterprise (also ECON 426) 
For description, see ECON 426.
Literature and Theatre Arts

AM ST 215 Comparative American Literature (also COM L 215)
Fall. 4 credits. B. Maxwell
For description, see COM L 215.

[AM ST 240 Survey in U.S. Latino Literature (also ENGL 240)]
M. P. Brady
For description, see ENGL 240.

AM ST 252 Twentieth-Century Women Novelists (also ENGL 251)
Spring. 4 credits. K. McCullough
For description, see ENGL 251.

[AMST 280 Introduction to American Indian Literature (also ENGL 260)]
R. Warrior
For description, see ENGL 260.

[AM ST 262 Asian American Literature (also ENGL 262, AAS 262)]
S. Wong
For description, see ENGL 262.

[AM ST 265 Introduction to African American Literature (also ENGL 265)]
J. Goldsby
For description, see ENGL 265.

[AM ST 267 American Literary Identities: Nineteenth Century (also ENGL 267)]

AM ST 268 The Culture of the 1960s (also ENGL 268)
Spring. 4 credits. P. Sawyer.
This course argues that the 1960s helps define the 1990s, but that as we look back, the 1990s helps define the 1960s. Were the sixties a time of dangerous experimentation with drugs, sex, and alternative lifestyles on the part of a pampered generation that gradually learned to straighten up and join the mainstream? Or was it a time of revolutionary hopefulness, when the civil rights movement and the Vietnam War stimulated an impassioned critique that changed American society? What can the experiences of young “boomers” contribute to a later generation, the last of the twentieth century? The course explores these and other questions by focusing on the topics of racial justice, war, the counterculture, the New Left, and the woman’s movement. Texts will include The Autobiography of Malcolm X, The Electric Kool-Aid Acid Test, Dispatches, the poems of Allen Ginsberg and Adrienne Rich, films, music, speeches, manifestoes, and memoirs. The term paper will explore students’ special interests.

AM ST 275 The American Literary Tradition (also ENGL 275)
Fall. 4 credits. J. Ashton.
The problem of an American national literature is explored through the reading, discussion, and close analysis of texts across the range of American literary history. Not a survey, this course focuses on the relations of the texts to each other, the shaping of national identities in those relationships, and the assumptions about history, language, and the self that underlie them.

[AM ST 276 Literature in the Cold War Culture (also ENGL 276)]
B. Maxwell
For description, see ENGL 276.

AM ST 291 American 1920s: Literature and Culture (also ENGL 291)
Fall. 4 credits. B. Maxwell
For description, see ENGL 291.

[AM ST 318 Queer Theatre (also THETR 320)]
E. Gainor
For description, see THETR 320.

[AM ST 334 American Drama and Theatre (also THETR 336 and ENGL 336)]
E. Gainor
For description, see THETR 336.

[AM ST 335 Contemporary American Theatre (also THETR 337 and ENGL 337)]
E. Gainor
For description, see THETR 337.

[AM ST 338 American Indians and Film (also THETR 338)]
L. Black
For description, see THETR 338.

AM ST 361 Early American Literature (also ENGL 361)
Fall. 4 credits. J. Porte.
For description, see ENGL 361.

[AM ST 362 The American Renaissance (also ENGL 362)]
J. Porte.
For description, see ENGL 362.

[AM ST 363 The Age of Realism and Naturalism (also ENGL 363)]
J. Goldsby.
For description, see ENGL 363.

[AM ST 364 American Literature between Wars (also ENGL 364)]
D. McClure.
For description, see ENGL 364.

[AM ST 365 American Literature Since 1945 (also ENGL 365)]
B. Maxwell.
For description, see ENGL 365.

AM ST 366 The Nineteenth-Century American Novel (also ENGL 366)
Spring. 4 credits. D. McClure.
For description, see ENGL 366.

[AM ST 367 The Modern American Novel (also ENGL 367)]

[AM ST 369 Survey of African American Literature to 1917 (also ENGL 375)]
J. Goldsby.
For description, see ENGL 375.

AM ST 370 Survey in African American Literature: 1918 to Present (also ENGL 376)
Spring. 4 credits. H. Spillers.
For description, see ENGL 376.

[AM ST 371 American Poetry to 1950 (also ENGL 371)]
R. Gilbert.
For description, see ENGL 371.

[AM ST 372 American Poetry Since 1950 (also ENGL 378)]
R. Gilbert.
For description, see ENGL 378.

[AM ST 374 Nineteenth-Century American Women Writers (also ENGL 374 and WOMNS 378)]
Staff.
For description, see ENGL 374.

[AM ST 394 Topics in American Indian Literature: Native Cultural Studies (also ENGL 394)]
For description, see ENGL 394.

AM ST 395 Policing and Prisons in American Culture (also ENGL 397)
Spring. 4 credits. B. Maxwell.
For description, see ENGL 397.

AM ST 403 Studies in American Poetry: Great Books, 1855-1926 (also ENGL 403)
Fall. 4 credits. R. Gilbert.
For description, see ENGL 403.

[AM ST 465 Proseminar in American Studies (also ENGL 465)]
J. Porte.
For description, see ENGL 465.

[AM ST 467 Studies in American Fiction: 1870-1915 (also ENGL 467)]

[AM ST 469 William Faulkner (also ENGL 469)]
H. Spillers.
For description, see ENGL 469.

[AM ST 470 Studies in the Novel: Hemingway, Fitzgerald, Faulkner (also ENGL 470)]
D. McClure.
For description, see ENGL 470.

[AM ST 471 American Indian Women's Literature (also ENGL 471)]
For description, see ENGL 471.

[AM ST 473 American Indian Autobiography (also ENGL 473)]
D. McClure.
For description, see ENGL 473.

[AM ST 474 Contemporary African American Poetry (also ENGL 474)]
K. McClure.
For description, see ENGL 474.

[AM ST 479 Jewish-American Writing (also ENGL 479 and JWST 478)]
J. Porte.
For description, see ENGL 479.

[AM ST 485 American Modernist Writing (also ENGL 485)]

Government and Public Policy

GOVT 111 Introduction to American Government and Politics
Fall. 3 credits. T. J. Lowi.
An introduction to government through the American experience. Concentration on analysis of the institutions of government and politics as mechanisms of social control.

588 ARTS AND SCIENCES - 2000-2001
[AM ST 302] Social Movement in American Politics (also GOVT 302)
Fall. 4 credits. M. E. Sanders.
For description, see GOVT 302.

[AM ST 305] Public Opinion and Political Participation (also GOVT 304)
Fall. 4 credits. J. Cowden.
For description, see GOVT 305.

[AM ST 306] Latino Politics in the United States (also GOVT 306)
For description, see GOVT 306.

[AM ST 310] Civil Liberties in the United States (also GOVT 337)
For description, see GOVT 327.

[AM ST 315] Prisons (also GOVT 314)
M. Katzenstein.
For description, see GOVT 314.

[AM ST 316] The American Presidency (also GOVT 316)
Fall. 4 credits. M. E. Sanders.
For description, see GOVT 316.

[AM ST 319] The American Congress (also GOVT 319)
Spring. 4 credits. M. Shefter.
For description, see GOVT 319.

[AM ST 328] Constitutional Politics: The United States Supreme Court (also GOVT 328)
For description, see GOVT 328.

[AM ST 350] Atomic Consequences: The Incorporation of Nuclear Weapons in Postwar America (also S&TS 350, GOVT 305)
Spring. 4 credits. M. Dennis.
For description, see S&TS 350.

[AM ST 353] Feminism Movements and the State (also GOVT 353, WOMNS 353)
M. Katzenstein.
For description, see GOVT 353.

[AM ST 376] American Political Thought from Madison to Malcolm X (also GOVT 366 and HIST 316)
Fall. 4 credits. I. Kramnick.
For description, see GOVT 366.

[AM ST 388] Science in the American Polity, 1800-1960 (also S&TS 390, GOVT 308)
Fall. 4 credits. M. Dennis.
For description, see S&TS 390.

[AM ST 389] Science in the American Polity, 1960-Now (also S&TS 391, GOVT 309)
M. Dennis.
For description, see S&TS 391.

[AM ST 409] Racial Prejudice and Political Intolerance (also GOVT 409)
J. Cowden.
For description, see GOVT 409.

[AM ST 418] The Politics of Scandal (also GOVT 418)
Spring. 4 credits. M. Shefter and J. Rabkin.
For description, see GOVT 419.

[AM ST 428] Government and Public Policy: An Introduction to Analysis and Criticism (also GOVT 428)
Fall. 4 credits. T. Lowi.
For description, see GOVT 428.

[AM ST 429] Government and Public Policy: An Introduction to Analysis and Criticism (also GOVT 429)
Spring. 4 credits. T. Lowi.
For description, see GOVT 429.

History

[AM ST 103] Introduction to American History (also HIST 101)
Fall. 4 credits. S. Blumin.
A survey of American history from the beginning through the Civil War. Topics include cultural encounters in the age of Columbus, European colonization, the American Revolution, the early republic, antebellum reform movements, and the coming of the Civil War.

[AM ST 104] Introduction to American History (also HIST 102)
Spring. 4 credits. T. Borstelmann.
An introductory survey of the development of the United States since the Civil War.

[AM ST 200] Popular Culture in the United States, 1900-1945
Fall. 4 credits. G. Altschuler.
American Studies 200 will deal with American popular culture in the period between 1900 and the end of World War II. As we examine best-sellers, films, sports and television, radio, ads, newspapers, magazines, and music, we will try to better understand the ways in which popular culture as "contested terrain," the place where social classes, racial and ethnic groups, women and men, the powerful and the less powerful, seek to "control" images and themes. Topics for 201 include: Advertising in an Age of Consumption; Gangsters and G-Men; Jackie Robinson and the American Dilemma.

[AM ST 202] Popular Culture in the United States, 1945-Present
Spring. 4 credits. G. Altschuler.
American Studies 202 will treat the period from 1945 to the present. As we examine best-sellers, films, sports and television, radio, ads, newspapers, magazines, and music, we will try to better understand the ways in which popular culture shapes and/or reflects American values. The course will also depict popular culture as "contested terrain," the place where social classes, racial and ethnic groups, women and men, the powerful and less powerful, seek to "control" images and themes. Topics for 202 include: The "Honeymothers" and 1950s Television, soap operas, "Gross-out" movies; Elvis; The Beatles, and Guns 'n Roses; Gothic Romances; People Magazine and USA Today.

[AM ST 204] Comparative Migration in the Americas (also HIST 204)
Spring. 4 credits. M. C. Garcia.
For description, see HIST 202.

[AM ST 206] Seminar: Eras-Franklin D. Roosevelt (also HIST 206)
R. Polesen.
For description, see History 208.

Fall. 4 credits. N. Salavatore.
In this seminar we will read a variety of texts that will underscore the fierce struggle to define the meaning of civil rights in American society during this era. We will explore from multiple perspectives through readings of historical, legal, political, theological, and literary readings.

[AM ST 211] African American Women: Twentieth Century (also HIST 212 and WOMNS 212)
For description, see HIST 212.

[AM ST 214] Seminar on American Foreign Policy (also HIST 214)
W. LaFeber.
For description, see HIST 214.

[AM ST 241] History of Childhood in the United States (also HD 241 and HIST 271)
Spring. 4 credits. J. Brumberg.
For description, see HD 241.

[AM ST 251] Black Religious Traditions from Slavery to Freedom (also HIST 251 and RELST 251)
Fall. 4 credits. M. Washington.
For description, see HIST 251.

[AM ST 258] Historical Development of Women as Professionals, 1800 to Present (also HD 258, HIST 230, WOMNS 238)
J. Brumberg.
For description, see HD 258.

[AM ST 259] Introduction to U.S. Latino History, Part I (also HIST 260, LSP 260)
M. C. Garcia.
For description, see HIST 260.

[AM ST 261] Introduction to U.S. Latino History, Part II (also HIST 261, LSP 261)
M. C. Garcia.
For description, see HIST 261.

[AM ST 272] American Indian History, 1500-1600 (also HIST 276)
Fall. 4 credits. D. Usner.
For description, see HIST 276.

[AM ST 273] Women in American Society, Past and Present (also HIST 273)
M. B. Norton.
For description, see HIST 273.

[AM ST 277] American Indian History Since 1830 (also HIST 277)
Spring. 4 credits. D. Usner.
For description, see HIST 277.

[AM ST 303] African American Women in Slavery and Freedom (also HIST 303)
For description, see HIST 303.

[AM ST 304] American Culture in Historical Perspective, 1880-1980 (also HIST 304)
Spring. 4 credits. M. Kammen.
For description, see HIST 304.
AM ST 311 Structure of American Political History (also HIST 311)  
Fall. 4 credits. J. Silbey.
For description, see HIST 311.

AM ST 312 Structure of American Political History (also HIST 312)  
Spring. 4 credits. J. Silbey.
For description, see HIST 312.

AM ST 314 History of American Foreign Policy, 1912 to the Present (also HIST 314)  
Spring. 4 credits. T. Borstelmann.
For description, see HIST 314.

AM ST 317 American Constitutional Development (also HIST 316)  
Fall. 4 credits. B. Polenberg.
For description, see HIST 318.

AM ST 320 Understanding Work in America, 1800-1990 (also HIST 315)  

N. Salvatore.
This course examines both the experience and the perception of work in American life in the century framed by two fundamental formations: the emergence of a system of industrial capitalism largely nationalistic in its orientation and the development of a more international economic system in more recent times. Among the topics considered will be the effects of technological change; its impact on the experience of work across numerous occupational categories, and the changing perceptions of work as reflected in contemporary cultural expression, literature, and commentary across the century.

AM ST 321 Colonial North America to 1763 (also HIST 321)  
M. B. Norton.
For description, see HIST 321.

AM ST 322 Age of the American Revolution, 1763-1815 (also HIST 325)  
M. B. Norton.
For description, see HIST 325.

AM ST 324 Varieties of American Dissent, 1880-1990 (also HIST 324)  
N. Salvatore.
The idea of dissent in American society raises a variety of images. Civil rights activists, striking workers, and student radicals of the 1960s are familiar enough symbols of dissent. But what might we understand a Pentecostal believer, filled with the spirit of his or her God in critiquing contemporary society, as an example of American dissent? This course will explore the varieties of economic, political, and cultural dissent in American between 1880 and 1990, and will examine how understanding dissent in its specific historical context illuminates major aspects of American life and culture.

AM ST 327 American Frontier History before 1850 (also HIST 327)  
D. Usner.
For description, see HIST 327.

AM ST 330 The Age of Jackson, 1813-1850 (also HIST 330)  
For description, see HIST 330.

AM ST 331 American Civil War and Reconstruction, 1850-1877 (also HIST 331)  
J. Silbey.
For description, see HIST 331.

AM ST 332 The Urbanization of American Society, 1600 to 1860 (also HIST 332)  
S. Blumin.
For description, see HIST 332.

AM ST 333 The Urbanization of American Society, 1860-2000 (also HIST 333)  
S. Blumin.
For description, see HIST 333.

AM ST 336 Capitalism and Society in Developing America, 1607-1877 (also HIST 336)  
S. Blumin.
For description, see HIST 336.

AM ST 337 Entrepreneurialism and Organization in the Age of the Corporation: Capitalism and Society in Modern America, 1840-2000 (also HIST 337)  
Spring. 4 credits. S. Blumin.
For description, see HIST 337.

AM ST 340 Recent American History, 1925-1960 (also HIST 340)  
Spring. 4 credits. R. Polenberg.
For description, see HIST 340.

AM ST 341 Recent American History, 1960-Present (also HIST 341)  
R. Polenberg.
For description, see HIST 341.

AM ST 345 Intellectual/Cultural Life of Nineteenth-Century Americans (also HIST 345 and RELST 345)  
Spring. 4 credits. R. L. Moore.
For description, see HIST 345.

AM ST 346 Modernization of the American Mind (also HIST 346)  
R. L. Moore.
For description, see HIST 346.

AM ST 359 American Families in Historical Perspective (also HD 359 and WOMNS 359)  
J. Brumberg.
For description, see HD 359.

AM ST 378 Topics in U.S. Women’s History (also HIST 378 and WOMNS 378)  
J. Brumberg.
For description, see HIST 378.

AM ST 406 The Immigrant City 1990-2000 (also S HUM 406, LSP 406, and HIST 412)  
Fall. 4 credits. M. C. Garcia.
For description, see S HUM 406.

AM ST 411 Seminar: American Political History (also HIST 411)  
Fall and spring. 4 credits. J. Silbey.
For description, see HIST 411.

AM ST 417 History of Female Adolescence (also HD 417, HIST 458, WOMNS 458)  
Spring. 4 credits. J. Brumberg.
For description, see HD 417.

AM ST 419 Seminar in American Social History (also HIST 419)  
Spring. 4 credits. Taught in Washington, D.C. by S. Blumin.
For description, see HIST 419.

AM ST 421 Undergraduate Seminar in American Cultural History (also HIST 421)  
M. Kammen.
For description, see HIST 421.

AM ST 440 Undergraduate Seminar in Recent American History (also HIST 440)  
Fall. 4 credits. R. Polenberg.
For description, see HIST 440.

AM ST 442 Religion and Politics in American History from J. Winthrop to R. Reed (also HIST 442 and RELST 442)  
R. L. Moore.
For description, see HIST 442.

AM ST 486 Seminar on the 1960s (also HIST 486)  
Fall. 4 credits. T. Borstelmann.
For description, see HIST 486.

AM ST 500 Research Seminar in American Studies (also HIST 500)  
Fall or spring. Offered in Cornell-in-Washington Program only. S. Blumin and others.
For description, see HIST 500.

Music and Visual Studies

AM ST 105 Popular Music in America: 1850-1985 (also MUSIC 101)  
Spring. 3 credits. S. Pond.
For description, see MUSIC 101.

AM ST 222 A Survey of Jazz (also MUSIC 222)  
Fall. 3 credits. S. Pond.
For description, see MUSIC 222.

AM ST 223 History of Rock Music (also MUSIC 221)  
Spring. 3 credits. J. Peraino.
For description, see MUSIC 221.

AM ST 243 Inside Out: The American Everyday Interior (also DEA 243, WOMNS 243)  
Spring. 3 credits. J. Jennings.
For description, see DEA 243.

AM ST 270 Mapping American (also ART H 270)  
Fall. 4 credits. L. L. Meixner.
For description, see ART H 270.

AM ST 282 The American Landscape (also LA 282)  
Fall. 3 credits. H. Gottfried.
For description, see LA 282.

AM ST 355 U.S. Art from FDR to Reagan (also HIST 355)  
L. L. Meixner.
For description, see ART H 355.

AM ST 360 Painting and Everyday Life in Nineteenth-Century America (also ART H 360)  
L. L. Meixner.

Honors
Please see description of major for information about registration in these courses.

AM ST 493-494 Honors Essay Tutorial
493, fall; 494, spring. Up to 4 credits each semester. See R. L. Moore for proper advice.

Center for Applied Mathematics

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. This program is based on a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the Director of Graduate Studies of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

A listing of selected graduate courses in applied mathematics can be found in the description of the center in "Interdisciplinary Centers, Programs, and Studies."

Archaeology Program

Archaeology is an interdisciplinary field at Cornell, which is one of the few universities in the United States to offer a separate archaeology major. Program faculty members, affiliated with several departments, coordinate course offerings and help students identify opportunities for fieldwork, graduate study, and professional positions.

The Major
Prospective majors must complete Archaeology 100 or one of the basic courses as defined below before they will be admitted to the major. This initial course will not be counted toward the major requirements.

Because the major draws on the teaching and research interests of faculty from many departments to present a broad view of the archaeological process, interest students should discuss their course of study with a participating faculty member as early as possible. In some areas of specialization, intensive language training should be coordinated with other studies as early as the freshman year.

Once admitted to the major, students must take at least 32 additional credits from the courses listed below, or from related fields selected in consultation with a major adviser of their choosing. The courses chosen should provide exposure to a broad range of cultures known through archaeology and the methods of uncovering and interpreting them. Sixteen of the credit hours should be at the 300 level or above. At least two courses must be taken from each of the following categories: B. Anthropological Archaeology; C. Classical, Near Eastern, and Medieval Archaeology; and D. Methodology and Technology.

Either ARKEO 481 or ARKEO 482 (Honors Thesis, fall and spring) can count toward the major, but not both. In addition to ARKEO 481 or 482, only four credits of ARKEO 500 (Individual Study) or other supervised study can count towards the major.

Courses basic to the discipline of archaeology are marked with the word "Basic" after the number of credit hours. It is recommended that majors who are planning to pursue graduate studies in archaeology take at least two of the basic courses in each category. Further courses in languages and geology are also recommended.

Honors
Honors in archaeology are awarded on the basis of the quality of an honors essay and the student's overall academic record. Prospective honors students should have at least a 3.5 grade point average in the major and a 3.0 grade point overall. They should consult with the director of undergraduate studies before the beginning of the senior year. The honors essay is normally prepared over two semesters in consultation with a faculty adviser during the senior year; students may enroll in Archaeology 481 (fall) or Archaeology 482 (spring) for this purpose.

Fieldwork
Every student should gain some practical experience in archaeological fieldwork on a project authorized by his or her adviser. This requirement may be waived in exceptional circumstances. The Jacob and Hedwig Hirsch bequest provides support for a limited number of students to work at excavations sponsored by Cornell and other approved institutions.

The Concentration
Students in Cornell schools and colleges other than Arts and Sciences may elect a concentration in archaeology. To concentrate in archaeology, the student must complete five courses, all with a grade of C or better. The five courses must consist of either (1) Archaeology 100 and four other courses from categories B-D (described above), at least three of which must be basic courses, or (2) five courses from categories B-D, at least four of which must be basic courses. Concentrators are encouraged to gain some fieldwork experience. They are eligible for Hirsch Scholarships in support of fieldwork on the same basis as majors.

First-Year Writing Seminars
For course descriptions, see the first-year writing seminar brochure.

A. Introductory Courses and Independent Study Courses

ARKEO 100 Introduction to Archaeology (also ANTHR 100)
A broad introduction to archaeology—the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societies and illustrate the varied methods and interpretive frameworks in which archaeologists use to reconstruct them. This course can serve as a platform for both Archaeology and Anthropology undergraduate majors.

ARKEO 201 Lost Tribes and Sunken Continents (also ANTHR 201)
3 credits. Basic. D. Evett.
An examination of popular theories about past histories, differences among them, and the kinds of explanations offered by archaeologists. Emphasis is on the ways archaeologists interpret the past. Case studies include Atlantis, Stonehenge, Egyptian and Mexican pyramids, and the history of contacts between the Old World and the Americas.

ARKEO 300 Individual Study in Archaeology and Related Fields
Fall and spring. Credit THA. Prerequisite: Archaeology 100 or permission of instructor.
Students pursue topics of particular interest with the guidance of a faculty member.

ARKEO 481-482 Honors Thesis
481, fall; 482, spring. 4 (V) credits. S-U only. Prerequisite: admission to Honors Program.
The student, under faculty direction, will prepare a senior thesis.

ARKEO 600 Special Topics in Archaeology
Fall and spring. 4 (V) credits.
Students pursue advanced topics of particular interest under the guidance of a faculty member(s).

ARKEO 681-682 Master's Thesis
681, fall; 682, spring. 4 (V) credits. S-U only. Limited to students admitted to Master's Program in Archaeology.
Students, working individually with faculty member(s), prepare a Master's Thesis in Archaeology.
B. Anthropological Archaeology

[ARKEO 202 Interpretive Archaeology (also ANTHR 202)]
T. P. Volman.
For description, see ANTHR 202.

[ARKEO 203 Early People: The Archaeological and Fossil Record (also ARKEO 203)]

[ARKEO 204 Ancient Civilizations (also ANTHR 204)]

[ARKEO 215 Stone Age Art (also ANTHR 215)]
For description, see ANTHR 215.

ARKEO 255 Great Empires of the Andes (also ANTHR 255)
Summer only. 3 credits. M. Malpass.
The Andes region of South America, stretching from northern Colombia to Tierra del Fuego, saw the rise and fall of some of the world's most spectacular societies, from the Moche of the north Peruvian coast to the Incas. Not only were the cultures of this area highly developed, but many of the technologies—metallurgy, textiles, ceramics, and stonemasonry, to name just four—were unusually sophisticated. The Andean region saw the indigenous domestication of plants and animals as well as the rise of state-level societies. This course will introduce you to the cultural developments of this fascinating area, from the earliest times to the fall of the Incas in AD 1543.

[ARKEO 317 Stone Age Archaeology (also ANTHR 317)]
T. P. Volman.
For description, see ANTHR 317.

ARKEO 355 Ancient Mexico and Central America (also ANTHR 355)
Spring. 4 credits. Basic. J. Henderson.
For description, see ANTHR 355.

[ARKEO 409 Approaches to Archaeology (also ARKEO 409 and ANTHR 409/409)]
Fall. 4 credits. Basic. Prerequisite: permission of instructor. Not offered 2000-2001.
R. N. Russell.
For description, see ANTHR 409.

ARKEO 459 Archaeology of the Household (also ARKEO 459 and ANTHR 459/659)
Fall. 4 credits. J. Henderson and N. Russell.
For description, see ANTHR 459.

ARKEO 466 Humans and Animals (also ARKEO 466 and ANTHR 466/666)
Fall. 4 credits. N. Russell.
For description, see ANTHR 466.

[ARKEO 469 Gender and Age in Archaeology (also ARKEO 469 and ANTHR 469/669)]
Spring. 4 credits. Prerequisite: permission of instructor. Not offered 2000-2001.
N. Russell.
For description, see ANTHR 469.

[ARKEO 493 Seminar in Archaeology (also ANTHR 493)]

[ARKEO 494 Seminar in Archaeology: The Archaeology of Human Origins (also ANTHR 494)]
T. P. Volman.
For description, see ANTHR 494.

[ARKEO 609 Approaches to Archaeology (also ARKEO 609 and ANTHR 609/609)]
Fall. 4 credits. Basic. Prerequisite: permission of instructor. Not offered 2000-2001.
N. Russell.
For description, see ANTHR 609.

ARKEO 659 Archaeology of the Household (also ARKEO 459 and ANTHR 459/659)
Fall. 4 credits. J. Henderson and N. Russell.
For description, see ANTHR 459.

ARKEO 666 Humans and Animals (also ARKEO 466 and ANTHR 466/666)
Fall. 4 credits. N. Russell.
For description, see ANTHR 466.

[ARKEO 669 Gender and Age in Archaeology (also ARKEO 469 and ANTHR 469/669)]
N. Russell.
For description, see ANTHR 469.

[ANTHR 456 Mesoamerican Religion, Science, and History]

LA 260 Preindustrial Cities and Towns of North America (also CRP 260)
Fall. 5 credits. S. Baughan.
For description, see LA 260.

C. Classical, Near Eastern, and Medieval Archaeology

ARKEO 221 Minoan-Mycenaean Art and Archaeology (also CLASS 221 and ART H 221)
Fall. 3 credits. Basic. J. Coleman.
For description, see CLASS 221.

ARKEO 233 Archaeology in Action II (also ART H 225 and CLASS 233)
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2000-2001.
P. I. Kuniholm.
For description, see ART H 225.

ARKEO 240 Old World Prehistory (also ANTHR 240)
N. Russell.
For description, see ANTHR 240.

ARKEO 263 Introduction to Biblical History and Archaeology (also NES 263, JWST 263, and RELST 264)
Spring. 3 credits. J. Zorn.
For description, see NES 263.

[ARKEO 275 Ancient Seafaring (also JWST 261 and NES 261)]
D. I. Owen.
For description, see NES 261.

[ARKEO 321 Mycenaean and Homer (also CLASS 321 and ART H 321)]
Fall. 4 credits. Prerequisite: at least 1 previous course in Archaeology, Classics, or History of Art. Not offered 2000-2001.
J. Coleman.
Study of the relationship between the Mycenaean period of Greece (known primarily from archaeology) and the Homeric [Iliad] and Odyssey. Topics include Mycenaean architecture, burial customs, kinship, and military activities; the reasons for the collapse of the Bronze Age palatial economies; the archaeological evidence for society in the "Dark Ages" that followed; the writing systems of Mycenaean Greece (Linear B) and the Iron Age (the Semitic/Greek alphabet); the nature of the Homeric poems and their value as historical sources.

ARKEO 366 The History and Archaeology of the Ancient Near East (also JWST 366 and NES 366)
D. I. Owen.
For description, see NES 366.

ARKEO 380 Introduction to the Arts of China (also ART H 380)
Fall. 4 credits. A. Fan.
For description, see ART H 380.

ARKEO 417 Early Medieval Archaeology and Literature (also ARKEO 417, ENGL 417 and 617)
Fall. 4 credits. Prerequisite: permission of instructor. Enrollment limited to 15 students. This course may be used as one of the three pre-1800 courses required of English majors. R. T. Farrell.
For description, see ENGL 417.

ARKEO 425 Seminar on the Bronze Age Architecture of Asia Minor (also ART H 425 and CLASS 430)
Spring. 4 credits. Prerequisite: permission of instructor. P. I. Kuniholm.

ARKEO 432 Sardis and the Cities of Asia Minor (ART H 424 and CLASS 432)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2000-2001.
A. Ramage.

ARKEO 434 The Rise of Classical Greece (also ART H 434 and CLASS 434)
Fall. 4 credits. Recommended: Classics 220 or 221 or History of Art 220 or 221, or permission of instructor. Not offered 2000-2001. P. I. Kuniholm.
For description, see ART H 434.

ARKEO 435 Seminar on Roman Art and Archaeology (also CLASS 435 and ART H 427)
Spring. 4 credits. Prerequisite: permission of instructor. Not offered 2000-2001.
A. Ramage.
For description, see ART H 427.

ARKEO 520 Seminar in Classical Archaeology (also ART H 520 and CLASS 630)
Fall. 4 credits. J. E. Coleman.
For description, see CLASS 630.

ARKEO 617 Early Medieval Archaeology and Literature (also ARKEO 417, ENGL 417 and 617)
Fall. 4 credits. R. T. Farrell.
For description, see ENGL 417.

ARKEO 629 The Prehistoric Aegean (also CLASS 629)
4 credits. For graduate students and advanced undergraduates with permission of instructor. Not offered 2000-2001.
J. E. Coleman.
For description, see CLASS 629.
CLASS 220 Introduction to Art History: The Classical World (also ART H 220) Fall. 4 credits. J. Rife. For description, see CLASS 220.

CLASS 322 Greeks and Barbarians (also ART H 328) Fall. 4 credits. Prerequisite: Classics 220 or 221, or permission of instructor. J. Coleman. For description, see CLASS 322.

CLASS 333 Greek and Roman Mystery Cults and Early Christianity (also RELST 333) Fall. 4 credits. A previous course in Classics (civilization or language) or Religious Studies 101 is recommended. Not offered 2000–2001. K. Clinton. For description, see CLASS 333.

ART H 322 Arts of the Roman Empire (also CLASS 350) Fall. 4 credits. A. Ramage. For description, see ART H 322.

ART H 325 Greek Vase Painting (also CLASS 325) Fall. 4 credits. A. Ramage. For description, see ART H 325.

ART H 327 Greek and Roman Coins (also CLASS 327) Fall. 4 credits. Not offered 2000–2001. A. Ramage. For description, see ART H 327.

LA 292 Creating a Second Nature Fall. 3 credits. Prerequisites: none. Anthropology 100, Archaeology 100, or Classics/History of Art 220 recommended. K. Gleason. For description, see LA 292.

D. Methodology and Technology

ARKEO 256 Practical Archaeology (also CLASS 256) Spring. 3 credits. J. Coleman. For description, see Classics 256.

ARKEO 262 Laboratory in Landscape Archaeology (also LA 262) Spring. 3 credits. S. Baugher. For description, see LA 262.

ARKEO 285 Art, Archaeology, and Analysis (also ART H 372, ENGR 185, GEO 200, NS&E 285, ART H 200, NS&E 285, and PHYS 200) Spring. 3 credits. 3 lecs. Does not meet liberal studies distribution requirements. Staff. For description, see GEO 200.

ARKEO 299 Dendrochronology of the Aegean (also ART H 309 and CLASS 309) Fall and spring. 4 credits. Limited to 10 students. Prerequisite: permission of instructor P. I. Kuniholm. For description, see ART H 309.

ARKEO 300 Environmental Archaeology (also ARKEO 670 and ANTHR 370 and 670) Spring. 4 credits. Prerequisite: 2 previous courses in archaeology or permission of instructor. T. P. Volman. For description, see ANTHR 370.

ARKEO 323 Ceramics (also ART H 423 and CLASS 423) Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2000–2001. A. Ramage. For description, see ART H 423.

ARKEO 325 Environmental Archaeology (also ARKEO 658 and ANTHR 458/658) Spring. 4 credits. Prerequisite: 1 course in archaeology or permission of instructor. Enrollment limited to 15 students. Not offered 2000–2001. J. S. Henderson. For description, see ANTHR 458.

ARKEO 393 Zooarchaeological Method (also ANTHR 463) Fall. 5 credits. Not offered 2000–2001. N. Russell. For description, see ANTHR 463.

ARKEO 601 Graduate Colloquium in Archaeology 4 credits. Open to graduate students and advanced undergraduates by permission of instructor. Not offered 2000–2001. Staff. Faculty members of the Program in Archaeology and invited speakers will present summaries of the different aspects of archaeological analysis. Topics may include: lithics, ceramic typology, petrographic and neutron activation analysis, dendrochronology and other chronological techniques, settlement patterns, inscriptions, human and animal bones.

ARKEO 670 Environmental Archaeology (also ARKEO 370 and ANTHR 370 and 670) Spring. 4 credits. Prerequisite: 2 previous courses in archaeology or permission of instructor. T. P. Volman. For description, see ANTHR 370.

ANTHR 371 Human Paleontology (also BIOES 371) Fall. 4 credits. Prerequisite: 1 year of introductory biology, Anthropology 101, or permission of instructor. Not offered 2000–2001. K. A. R. Kennedy.

For description, see ANTHR 371.

[ANTHR 474 Laboratory and Field Methods in Human Biology (also BIOES 474) 5 credits. Prerequisite: 1 year of introductory biology, Anthropology 101, or permission of instructor. Not offered 2000–2001. K. A. R. Kennedy.]

BIO ES 671 Paleoanthropology of South Asia (also ANTHR 671 and ASIAN 620) Fall. 3 credits. K. A. R. Kennedy. For description, see BIO ES 671.

LA 261 Urban Archaeology (also CRP 261) Fall. 3 credits. S. Baugher. For description, see LA 261.

LA 569 Archaeology in Preservation Planning and Design (also CRP 569) Spring. 3 credits. S. Baugher. For description, see LA 569.

Asian American Studies Program

The Asian American Studies Program is a university-wide academic program housed administratively within the College of Arts and Sciences. Its aim is to promote teaching, research, and educational activities related to Asian Americans and to serve as a resource to the campus and regional communities. The program's undergraduate courses, offered within the program and cross-listed with departments in various colleges, meet distribution requirements and count toward a concentration in Asian American Studies. The program does not offer a graduate course of study, but students can undertake graduate work in Asian American Studies within selected disciplines of the university.

Undergraduate Concentration

The program's undergraduate concentration affords students an opportunity to develop a multidisciplinary approach to the study of Asians in America. The course of study stresses developments within the United States, but also underscores the transnational and comparative contexts of Asian America and the field's connections with African American, American Indian, Latino, and Women's Studies. Students must work with a faculty adviser from among the program's affiliated faculty and must complete at least 15 units of credits as follows: (a) AAS 110 and two additional courses in Asian American Studies; (b) one course in Africanana, American Indian, Latino Studies, or Women's Studies; and (c) one course in East Asian, South Asian, or Southeast Asian Studies. * These courses must be approved by the student's faculty adviser, and they should address issues of race, gender, or the histories and cultures of Asian peoples. Students must file an application for the concentration with the Asian American Studies Program.

Resource Center

The program's Asian American Studies Resource Center provides meeting space for the more than 35 undergraduate student organizations of the Cornell Asian Pacific Student Union and the graduate student Asian Pacific American Graduate Association. It also holds a modest print collection of books, periodicals, and newspapers; a current news...
Asian American experience.

Research

The program encourages faculty and student research on Asian Americans by sponsoring guest lectures, conferences, film festivals, readings, and exhibits. It also funds research projects and student travel to conferences and research sites. The Asian American Studies Workshop is the program’s principal research initiative, engaging Cornell’s faculty and students with invited faculty from other universities in a year-long intensive study of selected themes.

Affiliated Faculty

T. Chaloemtiarana (Southeast Asia Program), B. de Bary (Asian studies), P. Y. Kaayestha (Kroch Library), J. V. Koschmann (history), L. C. Lee (human development), V. Munasinghe (Caribbean Studies), V. Nee (sociology), R. E. Ripple (education), N. Sakai (Asian studies), A. Smith (government), K. W. Taylor (Asian studies), B. Tien (Gannett Health Center), S. Wong, director (English), D. Yeh (vice president student/academic services)

Courses

AAS 110 Introduction to Asian American Studies

Spring. 3 credits. This course can be used to satisfy either a social science or humanities distribution requirement. Interdisciplinary, cross-cultural introduction to Asian American Studies focusing on contemporary issues. Major themes include: identity and stereotypes, gender, family, community, education, migration and labor, and anti-Asianism. Coverage will be given to both Hawaii and the U.S. mainland, and to Asian Indians, Chinese, Filipinos, Hawaiians, Japanese, Koreans, and Southeast Asians.

AAS 213 Asian American History

Spring or fall. 4 credits. For description, see HIST 213.

AAS 302 Asians in the Americas: A Comparative Perspective (also ANTH 200-302)

Fall. 4 credits. The common perception of ethnicity is that this is a "natural" and an inevitable consequence of cultural difference. "Asians" overseas, in particular, have won repute as a people who cling tenaciously to their culture and refuse to assimilate into their host societies and cultures. But, who are the "Asians"? On what basis can we label Asians an ethnic group? Although there is a significant Asian presence in the Caribbean, the category "Asian" itself does not exist in the Caribbean. What does this say about the nature of categories that label and demarcate groups of people on the basis of alleged cultural and phenotypical characteristics? This course will examine the dynamics behind group identity, namely ethnicity, by comparing and contrasting the multicultural experiences of Asians in the Caribbean and the United States. Ethnographic case studies will focus on the East Indian and Chinese experiences in the Caribbean and the Chinese, Korean, Japanese, Filipino, and Indian experiences in the United States.

AAS 262 Asian American Literature

For description, see ENGL 262.

AAS 412 Undergraduate Seminar in Asian American History (also HIST 412)

Spring. 4 credits. For description, see HIST 412. A reading and research seminar that will cover various topics in Asian American history.

AAS 438 Immigration and Ethnic Identity

AAS 478 Self and Nation in Asian-American Literature (also English 478)

4 credits. A study of the ways in which Asian American writers have constructed discourses of self and nation. Topics will include nationalism, feminism, identity politics, and theories of minority discourse. In our reading of selected works of prose, poetry, and drama by Chinese American, Filipino American, Japanese American, and Korean American writers, we will be asking questions about the relation of these works to the moment of their production and reception, and the manner in which these textual representations engage with shifting cultural and political struggles. Writers under discussion may include: Carlos Bulosan, Vincent Y. Li, Frank Chin, Jessica Hagedorn, David Henry Hwang, Maxine Hong Kingston, Joy Kogawa, David Mura.

AAS 492 Twentieth-Century Women Writers of Color

Spring. 4 credits. This course will explore a range of writing—novels, stories, poems, essays—by American women writers of color in the twentieth century. We will look at how these writings articulate concerns with language, home, mobility, and memory, and at how the work is informed by the specificities of gender, race, region, and class. Readings may include works by Joy Harjo, Claudia Rankine, Sandra Silveira, Sandra Cisneros, Gloria Anzaldúa, Theresa Hak Kyung Cha, Sigrid Nunez, Jamaica Kincaid, Maxine Hong Kingston, and Gwendolyn Brooks.

AAS 495 Independent Study

Fall or spring. 1–4 credits. Topic and credit hours to be mutually arranged between faculty and student. Independent Study Forms must be approved by Asian American Studies Program Office.

Biology & Society Major

The Biology & Society major is suited for students who wish to combine training in biology with exposure to the social sciences and humanities on the social, political, and ethical aspects of modern biology. In addition to providing a foundation in biology, Biology & Society students obtain background in the social dimensions of modern biology and in the biological dimensions of contemporary social issues.

The Biology & Society major, which involves faculty from throughout the university, is offered by the Department of Science & Technology Studies. Students in the College of Biology & Society, the College of Human Ecology, and the College of Agriculture and Life Sciences are eligible for the major. The major is coordinated for students in all colleges through the Biology & Society Office. Students can get individual course requirements, and application procedures for the major from the Biology & Society office in 257 Clark Hall, 255–6047.

Because the major is multidisciplinary, students must attain a basic understanding of the several disciplines it comprises. The curriculum includes courses in ethics, mathematics, statistics, history, philosophy, and social and cultural studies of science and biology, and basic biology (e.g., genetics and development; biochemistry and molecular-cell biology; ecology; evolutionary biology), as well as introductory courses offered through Biology & Society. In addition, majors are required to take a core course and must develop a theme: an intellectually coherent grouping of courses representative of their special interest in biology and society. Recommended themes in the Biology & Society major include biology, behavior, and society; biology and human population; biology and public policy; environment and society; food agriculture and society; and health and society. Majors may also develop their own individually tailored themes (which in recent years have included topics such as biotechnology and society and agriculture, environment, and society). In consultation with their faculty advisor, students select courses that meet the foundation and core course requirements so as to build a coherent theme. Sample curricula for the recommended themes and for several student-developed themes are available in the Biology & Society Office.

There are student advisers and faculty available (according to posted office hours or by appointment) in the Biology & Society Offices, 275 Clark Hall or 278 Clark Hall, to answer questions and to provide assistance.

Admission to the Major

All students should have completed a year of college-level biology before submitting an application during their sophomore year. Juniors are considered on a case-by-case basis. Upper-division applicants should realize the difficulties of completing the major requirements in fewer than two years. Freshmen admitted to the Colleges of Agriculture and Life Sciences and Human Ecology as Biology & Society majors are considered to have been admitted to the major on a provisional basis, contingent on successful completion of the course sequence.
in introductory biology. The application includes (1) a one-page statement explaining the student's intellectual interests in the Biology & Society major and why the major is consistent with the student's academic goals and interests; (2) the theme the student wishes to pursue in the major; (3) a tentative plan of courses fulfilling Biology & Society requirements (including those the student plans to take); and (4) a transcript of work completed at Cornell University and elsewhere, if applicable, current as of the date of application.

Acceptance into the major requires completion of the course sequence in introductory biology. Sophomores in the process of completing this prerequisite may be admitted to the major on a provisional basis. It is the student's responsibility to assure that final acceptance is granted upon satisfactory completion of the introductory biology sequence. Although only introductory biological science is a prerequisite for acceptance, students will find it useful to have completed some of the other requirements (listed below) by the end of their sophomore year, preferably by the end of the first semester. Students who are considering the major may also find it beneficial to take "S&TS 201, What is Science?" in their freshman or sophomore year. Human Ecology students should also consult the current Human Ecology Guide and meet with the college advising coordinator, Nancy Breen, 287A Martha Van Rensselaer Hall, 255-1928.

Major Requirements

No single course may satisfy more than one major requirement.

1) Basic courses

A. Biological sciences 101–104 or 105–106 or 107–108 (prerequisite for admission to Biology and Society).

B. College calculus (one course):* Math 106, 111, 112 or any higher level calculus.

Recommended but not required:

- General chemistry (one year sequence) (prerequisite to biochemistry and other chemistry courses): Chemistry 103–104, 207–208, or 215–216.

2) Foundation Courses (should be completed by end of junior year).

These courses must be above the 100-level, at least three credit hours, and taken for a letter grade

A. Ethics: one course; B&SOC 205 (also S&TS 205) or B&SOC 206 (also S&TS 206).**

B. Social sciences/humanities foundation: two courses; one from any two of the following subject areas: History of Science; Philosophy of Science; Sociology of Science; Politics of Science; and Science Communication.**

C. Biology foundation (breadth requirements): one each from three of the following subject areas: Ecology (BIO ES 261); Evolutionary Biology (BIO ES 278); Biochemistry, Molecular and Cell Biology (BIO BM or NS 220, 330 or 331 or 333); Microbiology (BIO MJ 260); Genetics and Development (BIO GD 281 or 282 or Plant Breeding 225); Neurobiology and Behavior (BIO NB 221 or 222); Botany (BIO PL 241); and Anatomy and Physiology (BIO AP 311 or NS 341 but NOT BIO AP 212).**

D. Biology foundation (Depth requirement): one biology course for which one of the above (2C) is a prerequisite.

E. Statistics: one course selected from: MATH 171, IIR 210, BTRY 215; AG EC 310, EDUC 355, SOC 301, PSYCH 350, ECON 319, ORIE 370, BTRY 601, CRP 320.

3) Core Course*** (one course). Should be completed by end of junior year.

B&SOC 301 Biology and Society: The Social Construction of Life (also S&TS 401); or PHIL 286 Science and Human Nature (also S&TS 286).

4) Theme (five courses that correspond to the theme selected by the student). These courses must be above the 100-level, at least three credit hours, and taken for a letter grade. Choose these courses as follows:

A. Natural Science Issues/Biology Elective (two courses). Select from the list of B&SOC approved Natural Science Issues courses or choose course(s) with introductory biology as a prerequisite from: AIS, AN SC, BIOSCI, ENTRIO, FOOD, HD, NS, NTRES, PL BR, PL PA, PSYCH, VTEAM.

B. Humanities/social sciences electives** (two courses). Courses from the list of Senior Seminars may be used as theme electives if not used to meet another requirement.

C. Senior Seminar** (One course taken senior year). Courses change yearly.

- Students may petition to take a second statistics course (an advanced course, in sequence with the statistics course taken in the foundation) in place of the calculus requirement.

- Among the courses taken to meet the social sciences and humanities requirements (2.A, 2.B, 3, and 4.C), a minimum of two social science courses and two humanities courses must be chosen.

- History philosophy of science courses may be counted toward the humanities requirement for the major.

Independent Study

Projects under the direction of a Biology & Society faculty member are encouraged as part of the program of study in the student's theme area. Applications for research projects are accepted by individual faculty members. Students may enroll for 1–4 credits in Biology & Society 375 (Independent Study) with written permission of the faculty supervisor and may elect either the letter grade or the S-U option. Applications and information on faculty research, scholarly activities, and undergraduate research opportunities are available in the Biology & Society Office, 257 Clark Hall. Independent study credits may not be used in completion of the major requirements.

The Honors Program

The honors program is designed to provide independent research opportunities for academically talented undergraduate students whose major is Biology & Society (B&SOC). Students who enroll in the honors program are expected, with faculty guidance, to do independent study and research dealing with issues in biology and society. Participants in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career.

Biology & Society majors are considered for entry into the honors program at the end of the second semester of the junior year. Application forms for the honors program are available in the Biology & Society Office, 275 Clark Hall. The honors program is available to Biology & Society majors from the College of Arts and Sciences. Biology & Society majors in the Colleges of Human Ecology and Agriculture and Life Sciences must be selected by an honors committee within their college. To qualify for the Biology & Society honors program, students must have an overall Cornell cumulative grade-point average of at least 3.3, have formulated a research topic, and have found a project supervisor (with a Cornell appointment) and a Biology & Society faculty member willing to serve as their advisor. Applications for the honors program will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the honors program only by permission of the department. Students must enroll for two semesters and may take three to five credits per semester up to a maximum of eight credits in B&SOC 498 and 499, Honors Project I and II. More information on the honors program is available in the Biology & Society Office, 275 Clark Hall (255-6047).

I. First-Year Writing Seminars

[B&SOC 103 In the Company of Animals Spring. 3 credits. Not offered 2000–2001.]

II. Foundation Courses

A. Ethics (one course)

B&SOC 205 Ethical Issues in Health and Medicine (also S&TS 205) Fall. 4 credits. Limited to 150 students. Open to sophomores, juniors, and seniors. Prerequisites: none. E. Toon.

In today's rapidly changing world of health and medicine, complex ethical issues arise in many contexts—from the private, interpersonal interactions between doctor and patient to the broad, mass-mediated controversies that make medicine into headline news. This course examines ethical problems and policy issues that arise in contemporary medicine, health care, and biomedical research. Tools for ethical analysis are applied to a variety of cases and fundamental questions in bioethics. Perspectives from social science, history, and law will also inform the course. We will explore ethical questions that arise in a number of substantive contexts, including the doctor-patient relationship, medical decision making near the end of life, human experimentation, genetics and reproduction, public health, and the allocation of scarce resources.

B&SOC 206 Ethics and the Environment (also S&TS 206) Spring. 4 credits. Limited to 60 students. Open to all undergraduates; permission of...
instructor required for freshmen. N. Sethi. We address how ethical analysis helps shape our responses to environmental problems. Case studies will help guide our assessments. You will be challenged to develop ethical solutions or approaches on your own and in groups. Major aims include: articulating the relationships between knowledge and values; exploring the ethical implications of different conceptions of "nature"; and distinguishing between ethics and economics, ecology, ideology, politics, and prudence or wisdom. A background in basic ecology OR environmental issues OR ethics is helpful.

B. Social Sciences/Humanities Foundation (two courses, one from any two areas)

1. History of Science

S&TS 287 Evolution (also BIOG 207 and HIST 287)
Fall or summer. 3 credits. May not be taken for credit after BIOES 278.
W. B. Provine.
For description, see BIOG 207.

S&TS 282 Science in Western Civilization (also HIST 282) #
Fall. 4 credits. M. Dennis.
For description, see HIST 282.

S&TS 233 Agriculture, History, and Society: From Squanto to Biotechnology
Fall. 5 credits. M. Rossiter.
For description, see S&TS 233.

S&TS 283 The Sciences in the Twentieth Century (also HIST 280)
Spring. 4 credits. M. Dennis.
For description, see S&TS 283.

[S&TS 355 Computers: From Babbage to Gates
M. Rossiter.
For description, see S&TS 355.]

S&TS 390 Science in the American Polity: 1800–1960 (also GOVT 308, AM ST 388)
Fall. 4 credits. M. Dennis.
For description, see S&TS 390.

[S&TS 433 Comparative History of Science
M. Rossiter.
For description, see S&TS 433.]

[S&TS 444 Historical Issues of Gender and Science (also WOMNS 444)
M. Rossiter.
For description, see S&TS 444.]

2. Philosophy of Science

S&TS 201 What is Science? An Introduction to the Social Studies of Science and Technology (also SOC 210)
Spring. 3 credits. J. Reppy.
For description, see S&TS 201.

S&TS 286 Science and Human Nature (also PHIL 286)
Spring. 4 credits. May be used to meet the philosophy of science requirement if not used to meet the core course requirement.
For description, see PHIL 286.

S&TS 381 Philosophy of Science: Knowledge and Objectivity (also PHIL 381)
Fall. 4 credits. R. B. Boyd.
For description, see PHIL 381.

3. Sociology of Science

B&SOC 301 Biology and Society: The Social Construction of Life (also S&TS 401)
Fall. 4 credits. May be used to meet the sociology of science requirement if not used to meet the core course requirement.
M. Lynch.
See Core Courses for description.

B&SOC 342 Sociology of Science (also S&TS 442, SOC 442, and CRP 442)
Fall. 4 credits. H. Mietel.
For description, see S&TS 442.

[PAM 201 Determinants of Behavior
For description, see PAM 201.]

[R SOC 208 Technology and Society
For description, see R SOC 208.]

S&TS 201 What Is Science? An Introduction to the Social Studies of Science and Technology (also SOC 210)
Spring. 3 credits. J. Reppy.
For description, see S&TS 201.

[S&TS 311 The Sociology of Medicine
Staff.
For description, see S&TS 311.]

4. Politics of Science

[B&SOC 406 Biotechnology and Law (also S&TS 406)
Staff.
For description, see S&TS 406.]

B&SOC 407 Law, Science, and Public Values (also GOVT 407 and S&TS 407)
Spring. 4 credits. M. Lynch.
For description, see S&TS 407.

[S&TS 391 Science in the American Polity: 1960–Now (also GOVT 309, AM ST 389)
M. Dennis.
For description, see S&TS 391.]

[S&TS 427 Politics of Environmental Protection in America (also GOVT 427)
For description, see S&TS 427.]

5. Science Communication

COMM 260 Scientific Writing for Public Information
Fall or spring. 3 credits. L. Cowdery.
For description, see COMM 260.

S&TS 285 Communication in the Life Sciences (also COMM 285)
Spring. 3 credits. B. Lewenstein.
For description, see COMM 285.

S&TS 352 Science Writing for the Mass Media (also COMM 352)
Fall. 3 credits. B. Lewenstein.
For description, see COMM 352.

COMM 421 Communication and the Environment
Spring. 3 credits. J. Shanahan.
For description, see COMM 421.

COMM 466 Communication of Science and Technology
Fall. 3 credits. B. Lewenstein.
For description, see COMM 466.

C. Biology foundation (breadth requirement): Three courses from three of the following subject areas.

1. Biochemistry, Molecular and Cell Biology

BIOBM 330 Principles of Biochemistry, Individual Instruction
Fall or spring. 4 credits.
For description, see BIOBM 330.

BIOBM 331 Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. May not be taken for credit after BIOBM 350 or 355.
For description, see BIOBM 331.

NS 262 The Cell and the External World
Fall or spring. 4 credits.
For description, see NS 262.

NS 320 Introduction to Human Biochemistry
Fall. 4 credits. W. Arion and P. Stover.
For description, see NS 320.

2. Ecology

BIOES 261 Ecology and the Environment
Fall or summer. 4 credits.
For description, see BIOES 261.

3. Genetics and Development

BIOGD 261 Genetics
Fall, spring, or summer. 5 credits.
For description, see BIOGD 261.

BIOGD 282 Human Genetics
Spring. 2 or 3 credits. M. Goldberg.
For description, see BIOGD 282.

4. Evolutionary Biology

BIOES 278 Evolutionary Biology
Fall or spring. 3 or 4 credits.
For description, see BIOES 278.

5. Microbiology

BIOMI 290 General Microbiology
Lectures
Fall, spring, or summer. 2 or 3 credits.
For description, see BIOMI 290.

6. Neurobiology and Behavior

BIONB 221 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3, 4, or 5 credits.
For description, see BIONB 221.

BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits.
For description, see BIONB 222.

7. Botany

BIOPL 241 Introductory Botany
Fall. 3 credits. K. J. Niklas.
For description, see BIOPL 241.

8. Physiology and Anatomy

BIOAP 311 Introductory Animal Physiology, Lectures (also VET MED 346)
Fall. 3 credits. E. Loew or staff.
For description, see BIOAP 311.

NS 341 Human Anatomy and Physiology
Spring. 4 credits.
For description, see NS 341.
D. Biology foundation (depth requirement): one course for which one of the above breadth requirement courses (2C) is a prerequisite.

E. Statistics (one course)

ARME 210 Introductory Statistics
Fall. 4 credits. C. VanEs.
For description, see ARME 210.

BTRY 261/601 Statistical Methods I
Fall. 4 credits.
For description, see BTRY 201/601.

CRP 223 Introduction to Statistical Reasoning for Urban and Regional Analysis
Fall. 3 credits.
For description, see CRP 223.

ECON 319 Introduction to Statistics and Probability
Fall. 4 credits. Y. Hong.
For description, see ECON 319.

ILRST 210 Statistics: Statistical Reasoning
Fall, spring, and summer. 3 credits.
For description, see ILRST 210.

MATH 171 Statistical Theory and Application in the Real World
Fall, spring. 4 credits.
For description, see MATH 171.

PSYCH 350 Statistics and Research Design
Fall. 4 credits.
For description, see PSYCH 350.

[SOC 301 Evaluating Statistical Evidence
For description, see SOC 301.

III. Core Courses

B&SOC 301 Biology and Society: The Social Construction of Life (also S&TS 401)
Fall. 4 credits. Prerequisite: 2 semesters of social science or humanities and 1 year of introductory biology or permission of instructor. Limited to 75 students. M. Lynch.
Critical thinking about the diverse influences shaping the life sciences. Topics include evolution and natural selection, heredity and genetic determinism, biotechnology, and reproductive interventions. We interpret episodes, past and present, in biology in light of scientists' historical location, economic and political interests, use of language, and ideas about causality and responsibility. Readings, class activities, and written assignments are designed so that students develop interpretive skills and explore their own intellectual and practical responses to controversies in biology and society.

S&TS 286 Science and Human Nature (also PHIL 286)
Spring. 4 credits. R. Boyd.
For description, see PHIL 286.

B&SOC 214 Biological Basis of Sex Differences (also BIOAP 214 and WOMNS 214)
For description, see BIOAP 214.

BIOES 275 Human Biology and Evolution (also ANTHR 275 and NS 275)
For description, see BIOES 275.

BIOL 247 Ethnobiology
Fall. 3 credits. D. M. Bates.
For description, see BIOL 247.

HD 266 Emotional Functions of the Brain
Fall. 3 credits. R. Depue.
For description, see HD 266.

HD 344 Infant Behavior and Development
Fall. 3 credits. S. Robertson.
For description, see HD 344.

B&SOC 347 Human Growth and Development: Biological and Behavioral Interactions (also HD 347 and NS 347)
Spring. 3 credits.
For description, see HD 347.

HD 370 Experimental Psychopathology
Spring. 3 credits.
For description, see HD 370.

NS 222 Maternal and Child Nutrition
Spring. 3 credits.
For description, see NS 222.

NS 361 Biology of Normal and Abnormal Behavior (also PSYCH 361)
Fall. 3 credits.
For description, see NS 361.

NTRES 201 Environmental Conservation
Spring. 3 credits. T. Fahey.
For description, see NTRES 201.

PSYCH 326 Evolution of Human Behavior
Fall. 4 credits. R. Johnston.
For description, see PSYCH 326.

Examples of biology electives

AN SCI 300 Animal Reproduction and Development
Spring. 3 credits.
For description, see AN SCI 300.

HD 366 Psychobiology of Temperament and Personality
Spring. 3 credits.
For description, see HD 366.

NS 331 Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits.
For description, see NS 331.

B. Humanities/Social Science elective (two courses)
Courses listed earlier as social science/humanities foundation courses (2B) are particularly appropriate as social science/humanities electives. However, a single course cannot be used to meet both requirements. Additional courses that are recommended as social science or humanities electives are:

Examples of social science electives

ARME 464 Economics of Agricultural Development
Spring. 3 credits. R. Christy.
For description, see ARME 464.

ANTHRO 211 Nature and Culture
Spring. 3 credits.
For description, see ANTHR 211.

BIOES 673 Human Evolution: Concepts, History, and Theory (also ANTHR 673)
For description, see BIOES 673.

CRP 380 Environmental Politics
Fall. 4 credits. R. S. Booth.
For description, see CRP 380.

CRP 451/551 Environmental Law
Fall. 4 credits. R. S. Booth.
For description, see CRP 451/551.

HD 241 History of Childhood in the United States
Spring. 3 credits.
For description, see HD 241.

[HD 258 The Historical Development of Women as Professionals, 1800 to the Present (also WOMNS 238 and HIST 238)
For description, see HD 258.

PAM 303 Ecology and Epidemiology of Health
Fall. 3 credits. E. Rodriguez.
For description, see PAM 303.

PAM 350 Contemporary Issues in Women's Health
Fall. 3 credits. A. Parrot.
For description, see PAM 350.

PAM 380 Human Sexuality
Spring. 3 credits.
For description, see PAM 380.

PAM 381 Health Care Services and the Consumer
For description, see PAM 381.

PAM 435 U.S. Health Care System
Fall. 3 credits. R. Battistella.
For description, see PAM 435.

PAM 668 Long-Term Care and the Aged: Alternative Health and Social Service Delivery Systems
For description, see PAM 668.

NS 450 Public Health Nutrition
Spring. 3 credits.
For description, see NS 450.

NTRES 400 International Environmental Issues
Fall. 4 credits.
For description, see NTRES 400.

R SOC 201 Population Dynamics (also SOC 202)
Spring. 3 credits.
For description, see R SOC 201.

R SOC 205 Rural Sociology and International Development (also SOC 206)
Spring. 3 credits.
For description, see R SOC 205.

R SOC 220 Sociology of Health and Ethnic Minorities (also LSP 220)
Fall. 3 credits. P. Parra.
For description, see R SOC 220.

S&TS 324 Environment and Society (also R SOC 324 and SOC 324)
Spring. 3 credits. L. Glenna.
For description, see R SOC 324.
| ARTS AND SCIENCES - 2000-2001 |

- **[R SOC 490 Society and Survival](Fall. 3 credits. Not offered 2000-2001)**
  For description, see R SOC 490.

- **Examples of humanities electives**

- **NTRES 407 Religion, Ethics, and the Environment**
  Fall. 4 credits. R. Buer. For description, see NTRES 407.

- **PHIL 241 Ethics (by petition for breadth requirement)**
  Spring. 4 credits. For description, see PHIL 241.

- **PHIL 368 Global Climate and Global Justice (also GOVT 458)**
  Fall. 4 credits. Not offered 2000-2001. For description, see PHIL 368.

- **S&TS 681 Philosophy of Science (also PHIL 681)**
  Spring. 4 credits. R. Boyd. For description, see PHIL 681.

- **C. Senior Seminars**

  - **[B&SOC 404 Human Fertility in Developing Nations (also R SOC 408)](Spring. 3 credits. Not offered 2000-2001)**
    For description, see R SOC 408.

  - **[B&SOC 406 Biotechnology and the Law (also S&TS 408)](Fall. 4 credits. Not offered 2000-2001. Staff. For description, see S&TS 406.)**

  - **[B&SOC 427 Politics of Environmental Protection in America (also S&TS 427 and GOVT 427)](Fall. 4 credits. Not offered 2000-2001. S. Yearley. For description, see S&TS 427)**

  - **[B&SOC 447 Seminar in the History of Biology (also BIOG 467, HIST 415, and S&TS 447)](Summer (6-week session). 4 credits. W. Provine. For description, see BIO G 467)**

  - **[B&SOC 461 Environmental Policy (also BIOES 661 and ALS 661)](Fall or spring. 3 credits each term. D. Pimentel. For description, see BIOES 661)**

  - **[B&SOC 469 Food, Agriculture, and Society (also BIOG 469 and S&TS 469)](Spring. 3 credits. Not offered 2000-2001; next offered spring 2002. For description, see BIOG 469)**

  - **[HD 366 Psychobiology of Temperament and Personality](Fall. 3 credits. Not offered 2000-2001; next offered spring 2002. For description, see HD 366)**

  - **HD 418 Psychology of Aging**
    Spring. 3 credits. For description, see HD 418.

  - **HD 610 Processes in Human Development**
    Fall. 3 credits. Not offered 2000-2001. For description, see HD 610.

  - **HD 660 Social Development**
    Spring. 3 credits. Not offered 2000-2001. For description, see HD 660.

  - **PAM 575 Housing and Long Term Care for the Elderly**
    Fall. 3 credits. Not offered 2000-2001. For description, see PAM 575.

- **PAM 652 Health Care Services: Consumer and Ethical Perspectives**
  Fall. 3 credits. A. Parrott. If using this course as a senior seminar, B&SOC majors must take it for four credits by writing a major paper. For description, see PAM 652.

- **PAM 656 Managed Health Delivery Systems: Primary-Ambulatory Care**
  Spring. 3 credits. For description, see PAM 656.

- **[PHIL 368 Global Climate and Global Justice (also GOVT 458)](Fall. 4 credits. Not offered 2000-2001. For description, see PAM 656.)**

- **[R SOC 410 Population and Environment](Spring. 3 credits. Not offered 2000-2001. For description, see R SOC 410.)**

- **[R SOC 418 Population Policy (also B&SOC 414)](Spring. 3 credits. Not offered 2000-2001. For description, see R SOC 418.)**

- **[R SOC 495 Population, Development, and Environment in Sub-Saharan Africa](Fall. 4 credits. P. Eloundou-Enyegue. For description, see R SOC 495.)**

- **[S&TS 490 Integrity of Scientific Practice](Fall. 4 credits. S. Hilgarter. Not offered 2000-2001. For description, see S&TS 490.)**

- **V. Other Courses**

  - **[B&SOC 375 Independent Study](Fall or spring. 1-4 credits. Prerequisite: must have written permission of faculty supervisor and Biology & Society major projects under the direction of a Biology & Society faculty member are encouraged as part of the program of study within the student's concentration area. Applications for research projects are accepted by individual faculty members. Students may enroll for 1-4 credits in Biology & Society 375 (Independent Study) with written permission of the faculty supervisor and may elect either the letter grade or the S-U option. Students may elect to do an independent study project as an alternative to, or in advance of, an honors project. Applications and information on faculty research, scholarly activities, and undergraduate opportunities are available in the Biology & Society Office, 275 Clark Hall. Independent study credits may not be used in completion of the major requirements.)**

  - **[B&SOC 400 Undergraduate Seminar](Fall or spring. Variable credit. May be repeated for credit. From time to time different seminars on topics of interest to undergraduates are offered. Topics and instructors are listed in the Biology & Society supplement issued at the beginning of each semester.)**

  - **[B&SOC 498/499 Honors Project I & II](Fall and spring. 3-5 credits each term. Open only to Biology & Society students in their senior year by permission of the department. Please apply in 275 Clark Hall. Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research and the completed work should be of wider scope and greater originality than is normal for an upper-level course. Students may take three to five credits per semester up to a maximum of eight credits in B&SOC 498 & 499. Honors Projects I & II. Students should note that these courses are to be taken in addition to those courses that meet the regular major requirements. The student and the project supervisor must reach clear agreement at the outset as to what sort of work will need to be completed during the first semester. Minimally, an honors thesis outline and bibliography should be accomplished. At the end of B&SOC 498, Honors Project I, a letter grade will be assigned and the advisers, in consultation with the Director of Undergraduate Studies, will evaluate whether or not the student should continue working on an honors project. Biology & Society students who do continue in the honors program for the second semester will receive a letter grade at the end of their final term whether or not they complete a thesis and whether or not they are recommended for honors. Applications and information are available in the Biology & Society Office, 275 Clark Hall.)**

- **Cognitive Studies Program**
and Education (College of Agriculture and Life Sciences), and the Johnson Graduate School of Management.

The issues addressed in cognitive studies arise at several levels. At the broadest level are problems of fundamental, basic principles that underlie the mind, such as the parts of the brain that mediate each kind of mental activity. At a more specific level are the processes that constitute these components. These processes concern the organization and behavior of the components and how they are biologically represented in the brain. At the most specific level are questions about the properties of the elementary computational structures and processes that constitute these components.

Important insights into issues of this kind have been achieved in recent years as a result of the various cognitive studies disciplines converging in their theoretical and methodological approaches. Such convergence, in fact, warrants grouping the disciplines together under the single term "cognitive studies." Even greater progress can be expected in the future as a consequence of increasing cooperation among the disciplines.

Undergraduate Concentration

An interdisciplinary undergraduate concentration in Cognitive Studies is available to Cornell University undergraduates in the College of Arts and Sciences. Students from other colleges who seek such a concentration should discuss such possibilities with the Cognitive Studies Office, which will provide information and contacts concerning such concentrations.

The undergraduate concentration in Cognitive Studies is designed to enable students to engage in a structured program directly related to the scientific study of cognition and the mind. The concentration provides a framework for the design of structured, supervised programs of study in this growing interdisciplinary field. Such programs of study serve as complements to coursework in a single discipline as represented by an individual department. It is considered crucial that students gain a strong background in their major, independent of their work in the concentration. Independent majors and college scholars may also apply. Colleges vary in their procedures for formal recognition of this concentration (contact the Cognitive Studies Office for details). The Cognitive Studies Program faculty have designed five structured "tracks" that offer students different ways of satisfying the concentration. In addition, students are always able to construct their own programs of study subject to approval by their concentration advisor. The courses listed under each track are program suggestions. The student should consult with his/her Cognitive Studies adviser to develop a more customized curriculum. In some cases, students may want to combine or cross tracks.

In general, it is expected that students in the concentration will take COGST 101, a lab course such as COGST 201, and three courses at the 300 or 400 level in at least two departments. Even though only five courses are required to complete the concentration, we expect that students interested in cognitive studies will often end up taking more, and we encourage them to do an independent research project (COGST 470) and a research workshop such as COGST 471.

The five typical tracks are as follows. The first track involves a particular approach to the study of cognition. The other four tracks are structured around specific content domains and consist of sets of suggested course clusters. Please note that many of these courses have substantial prerequisites.

Foundational issues in cognitive science are intimately relevant to real world settings. The Cognitive Studies in Context track offers students the opportunity to learn and independently explore how theory and research on the mind can help us better understand how we use information in much of our daily activities, whether it be the workplace, the classroom, or any other aspect of everyday life. Students will come to better understand the cognitive ergonomics of such diverse settings as an aircraft cockpit, a quality control station on an assembly line, or an anesthetia station in a surgical suite. They will come to better understand the perceptual constraints that help tailor the nature of visual communication systems, or the linguistic constraints that help tailor text-based communication. They will come to see how the functional architecture of human memory guides the presentation and use of information in a wide array of settings. They will also learn how design constraints on computer hardware and software interact with human capacities and biases.

COGST 101/COM S 101/LING 170/PHIL 191/PSYCH 102, Introduction to Cognitive Science

COGST 201/COM S 201/PSYCH 201, Cognitive Science in Context Laboratory

In addition, three more upper-level approved courses in Cognitive Studies areas will normally be expected.

2. Perception and Cognition

This track focuses on psychological, computational, and neurobiological approaches to the interface between perception and cognition. Students will develop a grasp of the continuum between sensory impressions and complex thought.

COGST 101/COM S 101/LING 170/PHIL 191/PSYCH 102, Introduction to Cognitive Science

COGST 201/COM S 201/PSYCH 201, Cognitive Science in Context Laboratory

COGST 450/HD 437/LING 450/PSYCH 437, Lab Course: Language Development

BIONB 326, The Visual System

PSYCH 305, Visual Perception

PSYCH 316, Auditory Perception

PSYCH 412, Laboratory in Cognition and Perception

PSYCH 416/COGST 416, Modeling Perception and Cognition

PSYCH 418, Psychology of Music

PSYCH 419, Neural Networks Laboratory

3. Language and Cognition

This track focuses on the representation, processing, and acquisition and learning of language, as well as its role in cognition and culture. Students will acquire skills and knowledge in formal and applied linguistic theory, psycholinguistic experimentation, and computational modeling techniques.

COGST 101/COM S 101/LING 170/PHIL 191/PSYCH 102, Introduction to Cognitive Science

COGST 201/COM S 201/PSYCH 201, Cognitive Science in Context Laboratory

COGST 450/HD 437/LING 450/PSYCH 437, Lab Course: Language Development

COM S 411, Programming Languages and Logic

LING 203, Introduction to Syntax and Semantics

LING/PHIL/COGST 270, Truth and Interpretation

LING 301–302, Phonology I & II

LING 303–304, Syntax I & II

LING 309, Morphology

LING 319–320, Phonetics I & II

LING 325, Pragmatics

LING 403, Introduction to Applied Linguistics

LING 421–422, Semantics I & II

PHIL 332, Philosophy of Language

PSYCH 215/LING 215, Psychology of Language

PSYCH 415, Concepts, Categories, and Word Meanings

PSYCH 416/COGST 416, Modeling Perception and Cognition

PSYCH 436/LING 436/HD 436/COGST 436, Language Development

4. Cognition and Information Processing

This track focuses on how the mind (or a computer) can encode, represent, and store information. Students will develop an understanding of concepts, categories, memory, and the nature of information itself.

COGST 101/COM S 101/LING 170/PHIL 191/PSYCH 102, Introduction to Cognitive Science

COGST 201/COM S 201/PSYCH 201, Cognitive Science in Context Laboratory

COGST 450/HD 437/LING 450/PSYCH 437, Lab Course: Language Development

COM S 211, Computers and Programming

COM S 212, Structure and Interpretation of Computer Programs

COM S 472, Foundations of Artificial Intelligence

COM S 573, Practicum in Artificial Intelligence

PHIL 262, Philosophy of Mind

PHIL 362, Philosophy of Mind

PSYCH 311, Introduction to Human Memory

PSYCH 412, Laboratory in Cognition and Perception

PSYCH 413, Information Processing: Conscious and Nonconscious

PSYCH 414/COGST 414, Comparative Cognition

PSYCH 415, Concepts, Categories, and Word Meanings

PSYCH 416/COGST 416, Modeling Perception and Cognition

5. Cognition in Complex Systems

This track focuses on the study of cognition in diverse contexts. Students will develop an understanding of the complex systems that underlie cognitive processing, including neural, social, and ecological contexts.

COGST 101/COM S 101/LING 170/PHIL 191/PSYCH 102, Introduction to Cognitive Science

COGST 201/COM S 201/PSYCH 201, Cognitive Science in Context Laboratory

COGST 450/HD 437/LING 450/PSYCH 437, Lab Course: Language Development

COM S 211, Computers and Programming

COM S 212, Structure and Interpretation of Computer Programs

COM S 472, Foundations of Artificial Intelligence

COM S 573, Practicum in Artificial Intelligence

PHIL 262, Philosophy of Mind

PHIL 362, Philosophy of Mind

PSYCH 311, Introduction to Human Memory

PSYCH 412, Laboratory in Cognition and Perception

PSYCH 413, Information Processing: Conscious and Nonconscious

PSYCH 414/COGST 414, Comparative Cognition

PSYCH 415, Concepts, Categories, and Word Meanings

PSYCH 416/COGST 416, Modeling Perception and Cognition

6. Cognition in Complex Systems

This track focuses on the study of cognition in diverse contexts. Students will develop an understanding of the complex systems that underlie cognitive processing, including neural, social, and ecological contexts.

COGST 101/COM S 101/LING 170/PHIL 191/PSYCH 102, Introduction to Cognitive Science

COGST 201/COM S 201/PSYCH 201, Cognitive Science in Context Laboratory

COGST 450/HD 437/LING 450/PSYCH 437, Lab Course: Language Development

COM S 211, Computers and Programming

COM S 212, Structure and Interpretation of Computer Programs

COM S 472, Foundations of Artificial Intelligence

COM S 573, Practicum in Artificial Intelligence

PHIL 262, Philosophy of Mind

PHIL 362, Philosophy of Mind

PSYCH 311, Introduction to Human Memory

PSYCH 412, Laboratory in Cognition and Perception

PSYCH 413, Information Processing: Conscious and Nonconscious

PSYCH 414/COGST 414, Comparative Cognition

PSYCH 415, Concepts, Categories, and Word Meanings

PSYCH 416/COGST 416, Modeling Perception and Cognition
PSYCH 417. The Origins of Thought and Knowledge

5. Cognitive Neuroscience

This track focuses on neurobiological and computational approaches to understanding how perception and cognition emerge in the human brain. Students will acquire knowledge of what neural structures subserve what perceptual/cognitive processes, and how they interact.

COGST 101/COM S 101/LING 170/PHIL 191/PSYCH 102, Introduction to Cognitive Science

COGST 201/COM S 201/PSYCH 201, Cognitive Science in Context Laboratory

COM S 401, Programming Languages and Software Engineering

PSYCH 352/BIONB 328, Biopsychology of Learning and Memory

PSYCH 396/BIONB 396, Introduction to Sensory Systems

PSYCH 416/COGST 416, Modeling Perception and Cognition

PSYCH 419, Neural Networks Laboratory

PSYCH 425/CSC 111, Cognitive Neuroscience

PSYCH 440, The Brain and Sleep

A Cognitive Studies undergraduate laboratory and computer facility is available for all students in a Cognitive Studies concentration. This facility will help link resources from different laboratories across the Cornell campus as well as providing a central location for developing and conducting experimental research in cognitive studies.

Students who complete the concentration requirements will have their concentration in Cognitive Studies officially represented on their transcript. In addition, students who have made very substantial progress towards completing the requirements for the concentration will be eligible for enrollment in the Graduate Proseminar in Cognitive Studies during their senior year (COGST 775-777).

Concentration Application Procedures.

Initial inquiries concerning the undergraduate concentration should be made to the Cognitive Studies Program coordinator, Linda LeVan, cogst@cornell.edu, 255-6431, who will provide application materials and set up a meeting with a relevant member of the Undergraduate Concentration Committee. This Committee will assist the student with selection of a concentration adviser with expertise in the student's main area of interest.

To formally initiate the concentration in Cognitive Studies, a student must gain approval for a selection of courses from a concentration adviser (one of the program faculty). The courses selected must form a coherent cluster that makes sense to both the adviser and the student. To be admitted to the concentration, the student must submit this plan of study to the Cognitive Studies undergraduate faculty committee for final approval.

In addition to assisting in and approving the student's selection of courses, the concentration adviser serves as a general source of information about the field of cognitive studies, relevant resources around the university, and job and graduate school opportunities. Often, the adviser can help the student develop independent research experience.

Independent Research. The concentration encourages each student to be involved in independent research that bears on research issues in cognitive studies, if possible. COGST 470 is available for this purpose. It is recommended that students report on their research activities in an annual undergraduate forum. The Undergraduate Concentration Committee is committed to helping students find an appropriate research placement when needed.

The Committee for Undergraduate Concentration in Cognitive Studies consists of: Bart Selman, computer science, 5-5643, 4144 Upson Hall, selman@cs.cornell.edu; Draga Zec, linguistics, 5-0728, 217 Morrill Hall, DZ278@cornell.edu; Zoltan Szabo, philosophy, 5-6824, 218 Goldwin Smith, ZS15@cornell.edu; Michael Owren, psychology, 5-3835, 224 Uris Hall, MJO9@cornell.edu. The current Director of Undergraduate Studies is Draga Zec.

Graduate Minor

For information, consult the program office (282 Uris Hall, 255-6431, cogst@cornell.edu) or the directors of graduate studies, Joe Halpern and Ron Hoy, 255-9562 or 254-4318; halpern@cs.cornell.edu or rhh3@cornell.edu.

Courses

Cognitive Studies

COGST 101 Introduction to Cognitive Science (also COM S 101, LING 170, PHIL 191, and PSYCH 102)

Fall. 3 or 4 credits (the 4-credit option involves a writing section instead of taking exams). M. Spivey.

This course surveys the study of how the mind/brain works. We will examine how intelligent information processing can arise from biological and artificial systems. The course draws primarily from five disciplines that make major contributions to cognitive science: philosophy, psychology, neuroscience, linguistics, and computer science.

The first part of the course will introduce the roles played by these disciplines in cognitive science. The second part of the course will focus on how each of these disciplines contributes to the study of five topics in cognitive science: language, vision, learning and memory, action, and artificial intelligence.

COGST 111 Brain, Mind, and Behavior (also BIONB 111 and PSYCH 111)

Spring. 3 credits. 2 lectures and 1 required discussion meeting each week. No prerequisites. Psychology and biology majors may not use the course for credit toward the major. E. Adkins Regan and R. Hoy.

Understanding how the brain creates complex human behavior and mental life is a great scientific frontier. This course will enable students with little scientific background from any college or major to appreciate this excitement. What are the interesting and important questions? How are researchers trying to answer them? What are they discovering? Why did the brain evolve to make people like you? What were the major events in the evolution of the brain?

COGST 201 Cognitive Science in Context Laboratory (also COM S 201 and PSYCH 201)

Fall or spring. 4 credits. Concurrent or prior registration recommended. Introduction to "Cognitive Science" PSYCH 102/COGST 101/COM S 101/LING 170/PHIL 191 is suggested but not required. Knowledge of programming languages is not assumed.

Limited to 24 students. Fall, B. Halpern and staff; spring, D. Field and staff.

A laboratory course that explores the theories of cognitive science and provides direct experience with the techniques of cognitive science, in relation to the full range of both present and anticipated future activities in the workplace, the classroom, and in everyday life. Discussions of laboratory exercise results, supplementation of laboratory topics, and analyses of challenging primary research literature are done in meetings of the entire class.

Laboratory exercises, which are done on an individual or small group basis, include both pre-planned investigations and student-developed experiments. Use of digital computers as well as the Internet, electronic mail, and web sites are integral components of the course.

Modern computing, display (visual, auditory, and other perceptual/sensory systems), digital communication, and simulation approaches are applied to the study of cognitive science and provide direct experience with the techniques of cognitive science. In relation to the full range of both present and anticipated future activities in the workplace, the classroom, and in everyday life.

Discussions of laboratory exercise results, supplementation of laboratory topics, and analyses of challenging primary research literature are done in meetings of the entire class. Laboratory exercises, which are done on an individual or small group basis, include both pre-planned investigations and student-developed experiments. Use of digital computers as well as the Internet, electronic mail, and web sites are integral components of the course.

Students are expected to come to each discussion meeting having read and thought about assigned materials, and to come to scheduled laboratory meetings fully prepared to perform the laboratory exercises. Laboratory facilities will be available to students at all times so that statistical analysis of data, preparation of laboratory reports, and collection of experimental data will be facilitated. URL for fall information: courseinfo.cit.cornell.edu/courses/csic 201.

COGST 214 Issues in Cognitive Psychology (also PSYCH 214 and 614)

Fall. 3 credits. S. Edelman.

Various approaches to the study of cognition will be discussed. Basic concepts in how humans process different kinds of information such as visual, auditory, and symbolic will be introduced. These concepts will then be used to explore topics such as attention and consciousness, concept formation and representation, memory processes and systems, imagery and cognitive maps, problem solving and reasoning, judgment and choice, language acquisition and comprehension, intelligence and creativity, and social cognition.

COGST 264 Language, Mind, and Brain (also LING 264)

Spring. 4 credits. J. Bowers.

An introductory course that emphasizes the formal structure of natural language in the Minimalist framework. The following topics are covered: the formalism of linguistic knowledge, principles, and parameters of Universal Grammar, the basic biology of language, mechanisms of linguistic performance, the modularity hypothesis, and language and cognitive science.

This course is especially suited for majors in fields such as psychology, philosophy, computer science,
and linguistics (and also for those enrolled in the Cornell's Cognitive Studies program, "Interdisciplinary Approaches to the Scientific Study of Language Knowledge and Acquisition." This project is intended to involve undergraduates in active research and to coordinate related subfields of several disciplines in a unified, laboratory-supported curriculum.

The course will include several structured modules dealing with topics covered in the survey course, COGST/HD/LING/PSYCH 436, Language Development. They will include training in how to study and analyze original child language data, including the use of selected portions of a large database of child language data from many languages in the Cornell Language Acquisition Lab (CLAL), and training necessary to the collection and analysis of new child language data. Emphasis will be placed on developing research methods to test hypotheses.

The lab course will meet once a week in group format. In addition, students will be given access to a research lab environment for independent work on assigned modules and independent research throughout the week and throughout the term.

**COGST 450 Lab Course: Language Development**

This laboratory course will provide undergraduates with an introduction to hands-on research experience in the Cognitive Studies Research Labs. This course is partially funded by a National Science Foundation grant to Cornell's Cognitive Studies program, "Interdisciplinary Approaches to the Scientific Study of Language Knowledge and Acquisition." This project is intended to involve undergraduates in active research and to coordinate related subfields of several disciplines in a unified, laboratory-supported curriculum.

The course will include several structured modules dealing with topics covered in the survey course, COGST/HD/LING/PSYCH 436, Language Development. They will include training in how to study and analyze original child language data, including the use of selected portions of a large database of child language data from many languages in the Cornell Language Acquisition Lab (CLAL), and training necessary to the collection and analysis of new child language data. Emphasis will be placed on developing research methods to test hypotheses.

The lab course will meet once a week in group format. In addition, students will be given access to a research lab environment for independent work on assigned modules and independent research throughout the week and throughout the term.

**COGST 470 Undergraduate Research in Cognitive Studies**

Fall or spring. 1–4 credits. S-U grades optional. Prerequisite: permission of major adviser; written permission of Cognitive Studies faculty member who will supervise the research and assign the grade. Hours TBA. Cognitive Studies faculty.

Experience in planning, conducting, and reporting independent laboratory, field, and/or library research in an interdisciplinary area relevant to cognitive studies.

**COGST 471 Cognitive Studies Research Workshop**

Fall or spring. Credits variable. Prerequisites: student must be enrolled in an independent research course (either in Cognitive Studies, e.g., COGST 470, or in a related department), or in honors thesis research in one of the departments relevant to Cognitive Studies. Staff. (Interdisciplinary faculty from Cognitive Studies Program).

This course will provide a research workshop in which undergraduate students who are engaged in research in a particular area relevant to cognitive science can meet across disciplines to learn and practice the essentials of research, using interdisciplinary approaches. In this workshop, students critique and discuss the existing literature in a field of inquiry, individual students present their research designs, methods, and results from their independent research studies, debate the interpretation of their research results, and participate in the generation of new research hypotheses and designs, in a peer group of other undergraduate students involved in related research.
HD 362 Human Bonding
Fall. 3 credits.

HD 347 Human Growth and Development
Fall or spring. 4 credits. Fall, B. Halpern and staff; spring, D. Field and staff.

HD 436 Language Development (also COGST 436, LING 436, and PSYCH 436)
Spring. 4 credits. B. Lust.

HD 437 Lab Course: Language Development (also COGST 450, LING 450, and PSYCH 437)
Spring. 2 credits. In conjunction with COGST/HD/LING/PSYCH 436, Language Development. B. Lust.

HD 438 Thinking and Reasoning
Fall. 3 credits. B. Koslowski.

HD 439 Cognitive Development: Infancy through Adolescence
Spring. 3 credits. B. Koslowski.

Linguistics

LING 101 Introduction to Linguistics
Fall or spring. 4 credits. Fall, W. Harbert; spring, M. Diesing.

LING 170 Introduction to Cognitive Science (also COGST 101, COM S 101, PHIL 191, and PSYCH 102)
Fall. 3 or 4 credits. M. Spivey.

LING 201 Introduction to Phonetics and Phonology
Spring. 4 credits.

LING 203 Introduction to Syntax and Semantics
Fall. 4 credits.

LING 206 Language, Mind, and Brain (also COGST 264)
Spring. 4 credits. J. Bowers.

LING 270 Truth and Interpretation (also COGST 270 and PHIL 270)

LING 301-302 Phonology I, II
Fall and spring. 4 credits each term. Fall, A. Cohn; spring, D. Zee.

LING 303-304 Syntax I, II
Fall and spring. 4 credits each term. Fall, J. Bowers; spring, M. Diesing.

LING 309 Morphology
Spring. 4 credits. D. Zec.

LING 319 Phonetics I
Fall. 4 credits.

LING 320 Phonetics II
Spring. 4 credits.

LING 325 Pragmatics
Fall. 4 credits. S. McConnell-Ginet.

LING 333 Problems in Semantics— Quantification in Natural Language (also COGST 333 and PHIL 333)
Spring. 4 credits. S. McConnell-Ginet and Z. Szabó.

LING 401 Language Typology
Spring. 4 credits. C. Rosen.

LING 414 Second Language Acquisition I (also ASIAN 414)

LING 421 Semantics I
Spring. 4 credits.

LING 422 Semantics II
Fall. 4 credits.

LING 425 Corpora and Applied Linguistics (also ASIAN 425)

LING 436 Language Development (also COGST 436, HD 436, and PSYCH 436)
Spring. 4 credits. B. Lust.

LING 450 Lab Course: Language Development (also COGST 450, HD 437, and PSYCH 437)
Spring. 2 credits. In conjunction with COGST/HD/LING/PSYCH 436, Language Development. B. Lust.

Mathematics

MATH 281 Deductive Logic (also PHIL 331)
Fall. 4 credits. H. Hodes.

MATH 384 Foundations of Mathematics (also PHIL 434)

MATH 481 Mathematical Logic (also PHIL 431)
Spring. 4 credits.

MATH 482 Topics in Logic (also PHIL 432)
Fall. 4 credits. H. Hodes.

MATH 483 Intensional Logic (also PHIL 436)
Spring. 4 credits.

MATH 486 Applied Logic (also COM S 486)
Spring. 4 credits.

Neurobiology and Behavior

BIONB 111 Brain, Mind, and Behavior (also COGST 111 and PSYCH 111)
Spring. 3 credits. No prerequisites. Psychology and biology majors may not use the course for credit toward the major. E. Adams, E. R. H. K. Hoy.

BIONB 221 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3, 4, or 5 credits. H. K. Reeve.

BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits.

BIONB 326 The Visual System

BIONB 328 Biopsychology of Learning and Memory (also PSYCH 332)
Spring. 3 credits. T. DeVoogd.

BIONB 392 Drugs and the Brain
Spring. 4 credits. R. Harris-Warrick.

BIONB 396 Introduction to Sensory Systems (also PSYCH 396)

BIONB 421 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 431 and 631)
Fall. 3 or 4 credits. B. Halpern.

BIONB 424 Neuroethology (also PSYCH 424)

BIONB 492 Sensory Function (also PSYCH 492)  Spring. 3 or 4 credits. B. Halpem and H. Howland.

Philosophy

PHIL 191 Introduction to Cognitive Science (also COGST 101, COM S 101, LING 170, and PSYCH 102)  Fall. 3 or 4 credits. M. Spivey.

PHIL 231 Introduction to Deductive Logic  Fall. 4 credits.

PHIL 286 Science and Human Nature (also S&T'S 286)  Spring. 4 credits. R. Boyd.

PHIL 332 Philosophy of Language  Fall. 4 credits.

PHIL 333 Problems in Semantics—Quantification in Natural Language (also COGST 333 and LING 333)  Spring. 4 credits. S. McConnell-Ginet and Z. Szabo.

PHIL 361 Metaphysics and Epistemology  Spring. 4 credits.

PHIL 362 Philosophy of Mind  Fall. 4 credits. S. Shoemaker.

PHIL 381 Philosophy of Science: Knowledge and Objectivity (also S&T'S 381)  Fall. 4 credits. R. Boyd.

PHIL 431 Mathematical Logic (also MATH 481)  Spring. 4 credits.

PHIL 432 Topics in Logic (also MATH 482)  Fall. 4 credits. H. Hodes.

PHIL 433 Philosophy of Logic  Spring. 4 credits.

PHIL 436 Intensional Logic (also MATH 483)  Spring. 4 credits.

PHIL 437 Problems in the Philosophy of Language  Spring. 4 credits.

PHIL 461 Metaphysics  Spring. 4 credits.

Psychology

PSYCH 111 Brain, Mind, and Behavior (also BIONB 111 and COGST 111)  Spring. 3 or 4 credits. No prerequisites. Psychology and biology majors may not use the course for credit toward the major. E. Adkins-Regan and R. Hoy.

PSYCH 201 Cognitive Science in Context Laboratory (also COGST 201 and COM S 201)  Fall or spring. 4 credits. Fall, B. Halpem and staff; spring, D. Field and staff.

PSYCH 205 Perception (also PSYCH 605)  Spring. 3 credits. J. Cutting.

PSYCH 209 Development (also PSYCH 709)  Spring. 4 credits. S. Johnson.

PSYCH 214 Issues in Cognitive Psychology (also COGST 214 and PSYCH 614)  Fall. 3 credits. S. Edelman.

PSYCH 223 Introduction to Biopsychology  Fall. 3 credits. M. Owren.

PSYCH 316 Auditory Perception (also PSYCH 716)  Fall. 3 or 4 credits. C. Krumhansl.

PSYCH 326 Evolution of Human Behavior (also PSYCH 626)  Fall. 4 credits. R. Johnston.

PSYCH 332 Biopsychology of Learning and Memory (also BIONB 328 and PSYCH 632)  Spring. 3 credits. T. DeVoogel.

PSYCH 342 Human Perception: Applications to Computer Graphics, Art, and Visual Display (also COGST 342 and PSYCH 642)  Fall. 3 or 4 credits. D. Field.

PSYCH 361 Biopsychology of Normal and Abnormal Behavior (also NS 361)  Fall. 3 credits. B. Strupp.

PSYCH 414 Comparative Cognition (also COGST 414 and PSYCH 714)  Spring. 3 credits. M. Owren.

PSYCH 416 Modeling Perception and Cognition (also COGST 416 and PSYCH 616)  Spring. 4 credits. M. Spivey.

PSYCH 417 The Origins of Thought and Knowledge (also PSYCH 717)  Fall. 4 credits. S. Johnson.

PSYCH 418 Psychology of Music (also PSYCH 618)  Spring. 3 or 4 credits. C. Krumhansl.

PSYCH 431 Effects of Aging on Sensory and Perceptual Systems (also BIONB 421 and PSYCH 631)  Fall. 3 or 4 credits. B. Halpem.

PSYCH 436 Language Development (also COGST 436, HD 436, and LING 436)  Spring. 4 credits. B. Lust.

PSYCH 437 Lab Course: Language Development (also COGST 450, HD 437, and LING 450)  Spring. 2 credits. In conjunction with COGST/HD/LING/PSYCH 436, Language Development. B. Lust.

PSYCH 492 Sensory Function (also BIONB 492 and PSYCH 692)  Spring. 4 credits. B. Halpem and H. Howland.

Sociology

Graduate Courses and Seminars

The following courses and seminars are generally for graduate students only. However, some may be appropriate for advanced undergraduates. The director of the concentration must approve an advanced undergraduate’s use of any of these for satisfying the concentration requirements.

COGST 530 Representation of Structure in Vision and Language (also LING 530 and PSYCH 530)  Spring. 4 credits. S. Edelman.

The seminar will concentrate on the nature of the representation of visual objects and scenes in the brain and compare it with the structural framework that serves as the main explanatory tool in current theories of language processing. Data and ideas will be drawn from visual psychophysics, neurophysiology, psycholinguistics, computational vision and linguistics, and philosophy. Students will present published research papers and preprints, which will then be discussed and critiqued.
COGST 773-774 Proseminar in Cognitive Studies I and II (also COM S 773/774, LING 773/774, PHIL 773/774, and PSYCH 773/774)
Fall: R grade; spring: S-U only. 4 credits. C. Cardie.
The Cognitive Studies Proseminar consists of two semesters of meetings with the graduate faculty in the field of Cognitive Studies. The proseminar will provide a general introduction to the field of Cognitive Studies including an introduction to each of the major disciplines that comprise the minor: i.e., computer science, linguistics, philosophy, and psychology. In each of these disciplines, faculty from the field will introduce theoretical and methodological issues that underlie the field and its relation to Cognitive Studies; in addition, they will introduce various labs in which active research is being conducted in their field at Cornell, and current issues of interdisciplinary interest.
The proseminar will include suggestions from faculty in each field for further advanced interdisciplinary research that can be pursued at Cornell during a Cognitive Studies minor. It will conclude (end of second term) with individual student presentations in which students initiate a critique of some interdisciplinary research after consultation with a faculty member of their choice.
Although suitable to entering graduate students, the proseminar is also open to graduate students beyond their first year. Advanced undergraduates with a Cognitive Studies concentration may also be admitted. This is a year-long lecture and discussion course. The year-long commitment is mandatory. An “R” grade will be assigned in the fall semester, and an S-U grade will only be assigned in the spring semester.
COM S 664 Machine Vision
Spring. 4 credits.
COM S 672 Advanced Artificial Intelligence
Spring. 4 credits. Prerequisite: COM S 472 recommended.
COM S 674 Natural Language Processing
Spring. 4 credits. Prerequisite: COM S 472 recommended.
COM S 676 Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Not offered every year. J. Y. Halpern.
COM S 677 Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Not offered every year. J. Y. Halpern.
COM S 772 Seminar in Artificial Intelligence
Fall and spring. 2 credits.
COM S 775 Seminar in Natural Language Understanding
Fall and spring. 2 credits.
EDUC 611 Educational Psychology
Fall. 3 credits. Undergraduates admitted with permission from instructor. R. Ripple.
EDUC 614 Epistemological Development and Reflective Thought
Fall. 3 credits. D. Schrader.
EDUC 714 Moral Development and Education
Spring. 3 credits. D. Schrader.
HD 600/700 Graduate Seminars
LING 530 Representation of Structure in Vision and Language (also COGST 530 and PSYCH 530)
Spring. 4 credits. S. Edelman.
LING 700 Graduate Seminars
MATH 681 Logic
Spring. 4 credits.
MATH 781-782 Seminar in Logic
Fall and spring. 4 credits each.
MATH 788 Topics in Applied Logic
Fall. 4 credits.
PHIL 633 Philosophy of Language—Propositions and Events
Fall. 4 credits. Z. Szabó.
PHIL 662 Philosophy of Mind—Sense-Data Theories and Intentionalism Views on Perception
Fall. 4 credits.
PHIL 700 Graduate Seminars
PSYCH 530 Representation of Structure in Vision and Language (also COGST 530 and LING 530)
Spring. 4 credits. S. Edelman.
PSYCH 601 Computational Models of Language
PSYCH 614 Issues in Cognitive Psychology (also COGST 214 and PSYCH 214)
Fall. 3 credits. S. Edelman.
PSYCH 616 Modeling Perception and Cognition (also COGST 416 and PSYCH 416)
Spring. 4 credits. M. Spivey.
PSYCH 631 Effects of Aging on Sensory and Perceptual Systems (also BIONB 421 and PSYCH 431)
Fall. 3 or 4 credits. B. Halpern.
PSYCH 714 Comparative Cognition (also COGST 414 and PSYCH 414)
Spring. 3 credits. M. Owren.

College Scholar Program
L. Abel, director, 172 Goldwin Smith Hall, 255–3586.
The College Scholar Program is described in the introductory section of Arts and Sciences.
COLLS 397 Independent Study
Fall or spring. 1–4 credits. Prerequisite: permission of program office.
COLLS 499 Honors Research
Fall or spring. 1–8 credits; a maximum of 8 credits may be earned for honors research. Prerequisite: permission of program director. Each participant must submit a brief proposal approved by the honors committee.

East Asia Program
140 Uris Hall
The East Asia Program draws together faculty from departments and fields throughout the university who participate in a program of research and teaching on the civilizations and cultures of East Asia. Courses are offered through departments in the humanities and social sciences, as well as in the fields of business, city and regional planning, international and comparative labor relations, and rural sociology. The Department of Asian Studies offers language courses in Mandarin, Cantonese, Korean, and Japanese, in addition to the Full-year Asian Language Concentration (FALCON) in Japanese and Mandarin. Undergraduates major in the Department of Asian Studies and concentrate on the language and culture of one East Asian country, while graduate students may work toward an M.A. in East Asian studies, a dual M.B.A./M.A. degree, or an M.A./Ph.D. degree in a discipline such as agricultural economics, anthropology, city and regional planning, government, history, history of art, linguistics, literature, rural sociology, or sociology.
Graduate students concentrating on East Asia may apply for a variety of East Asian program fellowships and travel grants offered by the East Asia programs. The formal program of study is enriched by numerous events and extracurricular activities, including films, workshops, art exhibits, lectures, symposia, and cultural and artistic performances on East Asia. With a half million holdings in Chinese, Japanese, Korean, and western languages, the Wason Collection in Kroch Library is a major national resource for research on East Asia. A 5,000 piece collection representing the full range of Chinese, Japanese, and Korean art may be seen at the George and Mary Rockwell Galleries in the Herbert F. Johnson Museum of Art.

First-Year Writing Seminars
For information about the requirements for first-year writing seminars and descriptions of seminar offerings, see the John S. Knight Writing Program section, and consult the John S. Knight Writing Program brochure, available from college registrars in August for the fall term and in late October for the spring term.

Human Biology Program
J. Haas (nutritional sciences), director, 127 Savage Hall, 255–8001, B. Finlay (psychology), J. Fortune (physiology/women’s studies), E. Frongillo (nutritional sciences), R. Johnston (psychology), K. A. R. Kennedy (ecology and systematics/anthropology), D. Levitsky
Human biology integrates the methods and theories of many disciplines, such as biological anthropology, nutrition, neurobiology, physiology, psychology, demography, ecology, genetics, and paleontology into a comprehensive study of biological diversity in Homo sapiens. A central focus of this interdisciplinary approach to the study of the human organism is an understanding of evolutionary processes that explain our biological variation through space and time. The program of study seeks to educate future biological scientists to address the concerns of a society that is becoming more demanding of the scientific community to place its specialized biological knowledge in a broad context.

The human biology curriculum is of particular relevance to undergraduate students in premedical and preprofessional programs. It is a biological anthropology, nutrition, human development, ecology and systematics, psychology, physiology, genetics, and the health-related sciences. It serves to bring together students with a common interest in human biology, defined from these diverse fields and to provide a forum for student-faculty interaction on various topics relating to human evolution and biological diversity. Human biology is not a major but a curriculum of study that provides majors in various departments with a program for selecting elective courses that deal with the biology of the human species. Students in their junior year may develop a program of study in human biology while majoring in a number of different departmental fields.

### Basic Requirements

The requirements for a program of study in human biology are designed to ensure sufficient background in physical sciences and mathematics to enable the student to pursue a wide range of interests in the fields of modern biological sciences, anthropology, and fields related to the evolution and physical diversity of the human species. Adjustments may be made in these requirements, depending on the student's academic background and affiliation with colleges and schools within the university.

The basic requirements are one year of introductory biology (Biological Sciences 101–103 plus 102–104 or 105–106 or Biological Sciences 107–108 offered during the eight-week Cornell Summer Session); one year of general chemistry (Chemistry 207–208 or 215–216); one year of college mathematics (Mathematics 111–112 or 105–106 or 111–105); one course in genetics (Biological Sciences 281 or 282); one course in biochemistry (Biological Sciences 330, 331, 332, or 333 or Nutritional Sciences 320). It is recommended that students planning graduate study in biological anthropology, psychology, and related fields in the medical and nutritional sciences take a course in statistics. Students should consult their faculty adviser in human biology for help in selecting appropriate courses.

Elective courses should be taken that will enable the student to acquire breadth in the subject matter of human biology outside of their departmental major. Therefore only 6 of the 15 human biology elective credits may also fulfill requirements for the major. Courses should be selected that also provide sufficient exposure to the integration of basic anatomical and physiological sciences with the behavior of individuals and groups within the context of evolutionary theory and ecology. The courses listed below are representative of the offerings in human biology and are included to assist the student in organizing a curriculum of study. They are organized into three groups that reflect the three levels of integration noted above: (1) human anatomy and physiology, (2) human behavior, and (3) human evolution and ecology. Students should choose at least one course from each of these areas of integration. It is anticipated that the student will include in a program of study at least one of the laboratory courses offered. It is expected that a student will take a minimum of 15 credits from among these courses.

There is no foreign language requirement for human biology beyond what is dictated by specific departmental requirements and colleges. The requirements for the human biology curriculum are set alongside requirements of the undergraduate majors as these are defined by different departments. Students with independent majors may design their own program of study under the guidelines provided by their college. Although a student may indicate an interest in human biology in the freshman year and be able to obtain early guidance from a faculty adviser representing the curriculum of study, it is more usual for students to establish their course programs in the first semester of the junior year. The student may request one of the faculty advisers in his or her department who is listed as faculty in human biology to be their principal adviser, or he or she may have an adviser in the department of the major and seek the advice of a human biology faculty adviser in matters pertaining to satisfaction of the requirements. In certain cases a faculty adviser may represent both the major and the curriculum of study in human biology.

#### Human Behavior

- ANTHR 390 Primate Behavior and Ecology
- Spring. 4 credits.
- ANTHR 490 Primates and Evolution
- Spring. 4 credits.
- B&SOC 301 Biology and Society I: The Social Construction of Life (also S&TS 401)
- Fall. 4 credits.
- BIO NB 421 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 431 and 631)
- Fall. 3 or 4 credits.
- BIO NB 427 Animal Social Behavior
- Fall. 4 credits.
- HD 344 Infant Behavior and Development
- Fall. 3 credits.
- PAM 380 Human Sexuality
- Spring. 3 credits.
- NS 245 Social Science Perspectives of Food and Nutrition
- Fall. 3 credits.
- NS 347 Human Growth and Development: Biological and Behavioral Interactions (also HD 347 and B&SOC 347)
- Spring. 3 credits.
- NS 361 Biology of Normal and Abnormal Behavior
- Spring. 3 credits.
- PSYCH 326 Evolution of Human Behavior
- Fall. 4 credits.
- PSYCH 425 Cognitive Neuroscience
- Fall. 3 or 4 credits.
- R SOC 408 Human Fertility in Developing Nations
- Spring. 3 credits.
- R SOC 438 Social Demography
- Fall. 3 credits.
Human Evolution and Ecology
ANTHR 101 Introduction to Anthropology: Biological Perspectives on the Evolution of Humankind
Fall. 3 credits.

ANTHR 203 Early People: The Archaeological and Fossil Record (also ARKEO 203)
Spring. 3 credits.

ANTHR 390 Primate Behavior and Ecology
Spring. 4 credits.

ANTHR 391 The Evolution of the Human Life Cycle
Spring. 3 credits.

ANTHR 490 Primates and Evolution
Spring. 4 credits.

BIO ES 261 Ecology and the Environment
Fall or summer. 4 credits.

BIO ES 272 Functional Ecology of Vertebrates
Spring. 4 credits.

BIO ES 275 Human Biology and Evolution (also ANTHR 275 and NS 275)
Fall. 3 credits.

BIO ES 278 Evolutionary Biology
Fall or spring. 3 or 4 credits.

BIO ES 371 Human Paleontology (also ANTHR 371)
Fall. 4 credits.

BIO ES 461 Population and Evolutionary Ecology
Spring. 4 credits.

BIO ES 464 Macroevolution
Spring. 4 credits.

BIO ES 471 Mammalogy
Fall. 4 credits.

BIO ES 673 Human Evolution: Concepts, History, and Theory (also ANTHR 673)
Fall. 3 credits.

BIO G 207 Evolution (also HIST 287, and S&T.ST 237)
Fall or summer. 3 credits.

BIO GD 481 Population Genetics
Fall. 4 credits.

BIO GD 482 Human Genetics and Society
Fall. 3 credits.

BIO GD 484 Molecular Evolution
Spring. 3 credits.

B&SOC 447 Seminar in the History of Biology (also HIST 415)
Fall. 4 credits.

NS 306 Nutritional Problems of Developing Nations
Fall. 3 credits.

NS 451 Epidemiology and Health of Human Communities
Fall. 3 credits.

PAM 303 Ecology and Epidemiology of Health
Spring. 3 credits.

PSYCH 326 Evolution of Human Behavior
Fall. 4 credits.

R SOC 201 Population Dynamics
Spring. 3 credits.

VET MI 431 Medical Parasitology
Fall. 2 credits.

VET PMP 664 Introduction to Epidemiology (enroll in VET CS 664)
Fall. 3 credits.

Independent Major Program
L. Abel, director, 172 Goldwin Smith Hall, 255-3386.

The Independent Major Program is described in the introductory section of Arts and Sciences.

IM 351 Independent Study
Fall or spring. 1–4 credits. Prerequisite: permission of the program office.

IM 499 Honors Research
Fall or spring. 1–8 credits; a maximum of 8 credits may be earned for honors research. Prerequisite: permission of program director. Each participant must submit a brief proposal approved by the honors committee.

International Relations Concentration
Matthew Evangelista, director (mae10@cornell.edu)

Integral to international relations is a focus on global issues and processes and an understanding of their impact on particular countries or geographic regions. Cornell's several undergraduate colleges and many departments offer courses that provide a strong grounding in the field as well as an opportunity to study more than 60 languages.

The concentration in international relations provides a curricular structure for undergraduate students with an interest in international law, economics, agriculture, trade, banking, organizations, and government service, and in cross-cultural affairs or education. Students can major in just about anything and in addition "concentrate" in international relations. They can major in a field that the concentration in international relations closely complements (for example, history, government, economics, or anthropology) or they can major in some very different subject, including the sciences, and use the concentration to develop a separate expertise.

Course Requirements:
These requirements are designed to expose students to a broad range of perspectives in international relations while allowing them to tailor their course selections to specific interests. Courses throughout the university are grouped into four subject areas: (1) International Economics and Development; (2) World Politics and Foreign Policy; (3) Transnational Processes and Policies; and (4) Cultural Studies. Within these four subject areas, courses are also identified as "core" or "elective." Students must complete eight courses selected from the four groups according to one of two strategies. Option A emphasizes the politics and economics of international relations. Option B puts greater stress on culture. In choosing either option, students should ensure that they acquire familiarity with more than one geographic region or country.

Option A:
- One core course from Groups 1, 2, 3, and 4
- One elective from Groups 1, 2, 3, and 4

Option B:
- One core course from Groups 1, 2, 3, and 4
- One elective from either Group 1 or Group 2
- One elective from Group 3 and Group 4, and one additional elective from either Group 3 or Group 4

Students should take note that some courses have prerequisites. The list of courses here (for fall 2000 only) is representative but not exhaustive. Many other courses throughout the university can qualify for the IR Concentration. For further information, contact the administrative coordinator or the director of the IRC (address below).

Course List Fall 2000
(For Course List Spring 2001, contact IRC program in fall of 2000)

Group 1: International Economics and Development
Core:
ECON 361 International Trade Theory (prerequisites: Econ 101–102–313)

Electives:
ECON 371 Economic Development
ECON 425 Economic History of Latin America
ECON 457/ WOMNS 446 Women in the Economy
ECON 460/ ECON 460 Economic Analysis of
IRLLE 642 Welfare State
ECON 471 Economy of Former USSR & Central Europe
ECON 472 Comparative Economic System: East & West
ECON 475 Economic Problems of India
GOVT 400 America and the World Economy
GOVT 433 Politics of Economic Liberalization in the Developing World
H ADM 524 International Financial Management
IRHR 401IHR 401 Human Resource Economics and Public Policy
IRHR 698 International Human Resource Policies and Institutions
IRLIC 335/ IRLIC 335 Western Europe, U.S., and Japan (open to juniors and seniors)
IRLIC 630/ GOVT 630 Labor, Free Trade, and Economic Integration in the Americas (open to juniors and seniors by permission only)
## Group 2: World Politics and Foreign Policy

**Core:**
- GOVT 181 Introduction to International Relations
- GOVT 385 American Foreign Policy

**Electives:**
- AS&RC 380 African History: Early Times to 1800
- AS&RC 451 Political and Social Change in Caribbean
- CRP 371 Cuba: The Search for Development Alternatives
- GOVT 332 Modern European Politics
- GOVT 336 Postcommunist Transitions
- GOVT 342 United Germany in New Europe
- GOVT 346 Modern Japanese Politics
- GOVT 347 Government and Politics of China
- GOVT 390 International Relations and Film Theory
- GOVT 391 Chinese Foreign Policy
- GOVT 400 European Nationalism
- GOVT 437 Contemporary Chinese Society and Politics
- GOVT 478 Decision Making
- GOVT 481 Democracies in the International System
- GOVT 486 Gender, Nationalism, and Conflict
- HIST 191 Introduction to Modern Asian History
- HIST 284 Southeast Asia and the World System
- HIST 295 Colonial Latin America
- HIST 305 Britain, 1660–1815
- HIST 313 U.S. Foreign Relations 1750–1912
- HIST 348 History of Brazil
- HIST 379 The First World War (open to first years with permission of instructor)
- HIST 395 Southeast Asia to the Eighteenth Century
- HIST 414 Motivations of U.S. Foreign Policy (permission of instructor, limited to 15 students)
- HIST 428 Comparative History of Colonial North America (permission of instructor, limited to 15 students)
- HIST 481 The English Revolution (limited to 15 students)
- HIST 489 Seminar in Modern Japanese History (permission of instructor or introductory Modern Japanese course)

## Group 3: Transnational Processes and Policies

**Core:** (no core course offered this semester)

**Electives:**
- ASIAN 407 Religion and Human Rights
- CRP 453 Environmental Aspects of International Planning (open to advanced undergraduates)
- COMM 424 Communication in the Developing Nations (open to juniors and seniors)
- COMM 466/S&TS 466 Public Communication of Science
- ELE E 298/S&TS 292/ENGRG 298 Society
- ENTON 370/TOX 370 Pesticides, the Environment, and Human Health (prerequisites: BIO G 101, 102, or equivalent)
- FOOD 447 International Postharvest Food Systems (prerequisite: freshman chemistry)
- ILRHR 469 Immigration and the American Labor Force
- INTAG 300 Perspectives in International Agricultural and Rural Development
- INTAG 402 Agriculture in Developing Nations I (open to upper class undergraduates)
- R SOC 261 Sociology of Sustainable Development
- SCAS 457 Atmospheric Air Pollution
- SOC 437/R SOC 438 Social Demography
- S&TS 411 Knowledge, Technology, and Property

## Group 4: Cultural Studies

**Core:**
- ANTHR 200 Cultural Diversity and Contemporary Issue
- ANTHR 321/WOMNS 321 Sex and Gender: Cross Disciplines
- ANTHR 621 Cultural Perspective
- ANTHR 324 Anthropology amongst Disciplines

**Electives:**
- ANTHR 337 Gender, Identity, and Exchange in Melanesia
- ANTHR 362 Democratizing Society
- ANTHR 422 Anthropology and the Environment (limited to 15 students)
- ARCH 342 Architecture as a Cultural System
- ASIAN 211 Introduction to Japan
- ASIAN 215 Introduction to South Asian Civilization
- ASIAN 482/ENGLISH 480 Seminar: Gender Adjudicated
- COM L 404/NAS/N 619 Nazism and the Literary Imagination
- COM L 474/ENGLISH 474 Topics in Modern European Intellectual and Cultural History
- FRLIT 224 The French Experience
- HIST 151 Introduction to Western Civilization
- HIST 259 The Crusades

## Language Requirement

IR Concentrators are expected to complete additional language study beyond the College of Arts and Sciences degree requirement. This study can be accomplished in one of two ways:

1. Two years of one foreign language (proficiency plus one course)
2. Two foreign languages at proficiency

## Study Abroad

IR Concentrators are strongly encouraged to study abroad to bring a practical dimension to their expertise in international issues. Those who choose this option will find the requirements for the concentration highly compatible with study abroad.

All courses used to fulfill the concentration requirements must be taken for a letter grade. Transcripts will reflect successful completion of the requirements for the concentration. In addition, students will receive a special certificate signed by both the director of the Mario Einaudi Center for International Studies and the director of the international relations concentration. To enroll and for further information, contact the administrative coordinator, IRC at the Mario Einaudi Center for International Studies, 156 Uris Hall, 254-5004, or contact the director, Prof. Mathew Evangelista (Government), (255-8672/mae10@cornell.edu).

## Center for International Studies

See Interdisciplinary Centers, Programs, and Studies.
Program of Jewish Studies

D. I. Owen, director (Ancient Near Eastern and Biblical History and Archaeology), L. Adelson (German-Jewish Literature and Culture), G. Altschuler (American-Jewish History and Culture), R. Brann (Judeo-Arabic Studies), S. Burstyn (Israelai Music), V. Caron (Modern French and European-Jewish History), M. Diesing (Yiddish Language and Linguistics), N. Furman (French Holocaust Literature), K. Haines-Eitzen (New Testament and Early Christianity), R. Hoffmann (Holocaust Studies), P. Hyams (Middle Eastern Jewish History), D. LaCapra (Holocaust Studies), M. Levine (Modern Middle Eastern History and Political Science), M. Migiel (Italian Literature), R. Polenberg (American-Jewish History), J. Porte (American-Jewish Writers), D. S. Powers (Arabic and Islamic Studies), G. Rendburg (Biblical and Semitic Studies), E. Rosenberg (Holocaust Studies), N. Scharf (Hebrew Language), D. Schwartz (Anglo-Jewish Literature), G. Shapiro (Russian-Jewish Literature), S. Shoer (Hebrew Language), M. Steinberg (German-Jewish History and Culture), Y. Szekely (Judaica Bibliography), J. Zorn (Biblical Archaeology)

The Program of Jewish Studies was founded as an extension of the Department of Semitic Languages and Literatures, now the Department of Near Eastern Studies, in 1973 and attained status as an intercollegiate program in 1976.

The program has grown out of the conviction that judaic civilization merits its own comprehensive and thorough treatment and that proper understanding of any culture is inconceivable without adequate knowledge of the language, literature, and history of the people that created it. Accordingly, the offerings in the areas of Jewish languages and literatures have been considerably expanded, and courses in ancient, medieval, and especially modern Jewish history and culture have been added to the program.

It is a broadly based, interdisciplinary program, bringing together faculty from various Cornell departments and colleges.

The Program of Jewish Studies supports teaching and research in the many areas of Jewish Studies. It is a secular, academic program, whose interests are diverse and cross-cultural. The program recognizes its special relationship to teaching and research in classical Judaica and Hebraica pursued by the members of the Department of Near Eastern Studies.

It presently enables students to obtain basic instruction and specialization in the fields of Semitic languages, the Hebrew Bible, medieval and modern Hebrew literature; ancient, medieval, and modern European and Middle Eastern Jewish history, and Holocaust studies. In some of these fields students may take courses on both graduate and undergraduate levels. Faculty throughout the university provide breadth to the program by offering courses in related areas of study.

Courses Offered

**JWST 101-102 Elementary Modern Hebrew I and II (also NES 101-102)**
105 fall; 100 spring. 6 credits. S. Shoer. For description, see NES 101-102.

**JWST 163 Things the Prophets Never Told You: Archaeology and the Religion of Ancient Israel (also NES 163)**
Fall. 3 credits. J. Zorn. For description, see NES 163.

**JWST 201-202 Intermediate Modern Hebrew I and II (also NES 201-202)**
201, fall; 202, spring. 4 credits. N. Scharf. For description, see NES 201-202.

**JWST 224 Introduction to the Bible II (also NES 224)**
Fall. 3 credits. G. Rendburg. For description, see NES 224.

**JWST 229 Introduction to the New Testament (also NES 229, RELST 229)**
Fall. 3 credits. K. Haines-Eitzen. For description, see NES 229.

**JWST 239 Cultural History of the Jews of Spain (also NES 239, COM L 239, RELST 239, SPAN L 239)**
Fall. 3 credits. E. Alfonso. For description, see NES 239.

**JWST 251 Judaism, Christianity, and Islam (also NES 251, RELST 251)**
Fall. 3 credits. R. Brann and K. Haines-Eitzen. For description, see NES 251.

**JWST 263 Introduction to Biblical History and Archaeology (also RELST 263, ARKEO 263, and NES 263)**
Spring. 3 credits. J. Zorn. For description, see NES 263.

**JWST 294 Modern History of the Near East: Changing Politics, Society, and Ideas (also NES 294, GOVT 358)**
Spring. 4 credits. M. Bloom. For description, see GOVT 358.

**JWST 295 Introduction to Christian History (also NES 295, RELST 295, HIST 295)**
Spring. 3 credits. K. Haines-Eitzen. For description, see NES 295.

**JWST 301-302 Advanced Modern Hebrew I and II (also NES 301-302)**
Fall and spring. 4 credits. N. Scharf. For description, see NES 301-302.

**JWST 320 Women in the Hebrew Bible (also NES 320, WOMNS 322)**
Spring. 3 credits. G. Rendburg. For description, see NES 320.

**JWST 323 Reinventing Biblical Narrative Apocrypha & Pseudepigrapha (also NES 323, RELST 323)**
Spring. 4 credits. K. Haines-Eitzen. For description, see NES 323.

**JWST 325 Introduction to the Bible—Seminar (also NES 325, RELST 318)**
Fall. 1 credit. G. Rendburg. For description, see NES 325.

**JWST 326 Women in the Hebrew Bible—Seminar (also NES 326, WOMNS 236)**
Spring. 1 credit. G. Rendburg. For description, see NES 326.

**JWST 329 Intro to the New Testament—Seminar (also NES 329, RELST 329)**
Fall. 1 credit. K. Haines-Eitzen. For description, see NES 329.

**JWST 371 A Mediterranean Society and its Culture: The Jews under Classical Islam (also NES 371, RELST 371, COM L 371)**
Spring. 4 credits. R. Brann. For description, see NES 371.

**JWST 397 Arab Israeli Conflict (also NES 397)**
Spring. 4 credits. M. Bloom. For description, see NES 397.

**JWST 400 Seminar in Advanced Hebrew (also NES 400)**
Fall. 4 credits. Enrollment limited to 15 students. N. Scharf. For description, see NES 400.

**JWST 414 History into Fiction: Nazis and the Literary Imagination (also ENGL 404, COM L 404, GERST 414)**
Fall. 4 credits. E. Rosenzweig. For description, see ENGL 404.

**JWST 420 Biblical Hebrew Prose (also NES 420, RELST 420)**
Fall. 4 credits. G. Rendburg. For description, see NES 420.

**JWST 435 Aramaic (also NES 435)**
Fall. 4 credits. G. Rendburg. For description, see NES 435.

**JWST 449 Rescreening the Holocaust (also GERST 449, COML 453, THETR 450)**
Spring. 4 credits. D. Bathrick. For description, see GERST 449.

**JWST 458 Imaging the Holocaust (also JWST 458, ENGL 458/658, GERST 457/857)**
Spring. 4 credits. D. Schwartz. For description, see ENGL 458.

**JWST 491-492 Independent Study—Undergraduate**
Fall and spring. Variable credit. Staff.

**JWST 499 Independent Study—Honors**
Fall and spring. Variable credit. Staff.

**JWST 658 Imaging the Holocaust (also JWST 458, ENGL 458/658)**
Spring. 4 credits. D. Schwartz. For description, see ENGL 458/658.

**JWST 694 Joyce's Ulysses (also ENGL 670)**
Fall. 4 credits. D. Schwartz. For description, see ENGL 670.

**JWST 197 Introduction to the Near Eastern Civilization (also NES 197 and RELST 197)**

**JWST 223 Introduction to the Bible (also NES 223 and RELST 223)**

**JWST 227 Introduction to the Prophets (also NES 227 and RELST 227)**

**JWST 236 Israeli Literature and Society (also NES 236)**

**JWST 244 Introduction to Ancient Judaism (also NES 244, RELST 244)**

**JWST 248 Introduction to Classical Jewish History (also RELST 248 and NES 248)**

**JWST 255 Modern European Jewish History, 1789–1948 (also HIST 291)**

**JWST 256 From Medievalism to Modernity: The History of Jews in Early Modern Europe, 1492–1789 (also NES 245, HIST 285)**
SPECIAL PROGRAMS AND INTERDISCIPLINARY STUDIES 609

M. Gilliland (writing workshop), K. Hjortshøj (writing workshop), B. LeGendre (writing workshop), J. Martin (writing workshop), J. Pierpoint (writing workshop), E. Shapiro, (writing workshop).

The John S. Knight Writing Program helps to coordinate the teaching of writing for undergraduates in six of the university's schools and colleges (the School of Industrial and Labor Relations and the colleges of Agriculture and Life Sciences, Architecture, Art, and Planning; Arts and Sciences; Engineering; and Human Ecology). The program administers writing seminars for first-year and upperclass students, tutorial writing classes, and seminars in the teaching of writing. More than thirty academic departments and programs participate in the program.

Advanced Writing Seminars

For upperclass students, the program collaborates with the Department of English in offering English 325, "Comparative Expository Writing." This course helps students write with more confidence and skill in all disciplines, while provoking inquiry into particular areas of study, forms or uses of writing, or topics intimately related to the written medium. Students may choose among a variety of sections focusing on such themes as "Writing about the Social World," "Writing in the Humanities," "Issues and Audiences," "Understanding the News," and "The Languages of Science."

First-Year Writing Seminars

For first-year students the program offers the first-year writing seminars—more than 125 different courses in the humanities, social sciences, expressive arts, and sciences. Through introductory work in a particular field of study, seminars help students write good English expository prose—prose that, at its best, is characterized by clarity, coherence, intellectual force, and stylistic control. All seminars pursue their common aim through small classes, with a maximum of 17 students, and adherence to a program-wide set of guidelines:

- Seminars require at least six— and at most 12—formal essays on new topics. (While these assignments should total about 30 pages, some of the 30-page total may include major drafts which receive commentary from the instructor and are later significantly revised.) Assignments form a logical sequence.
- At least three of the 6-12 required essays are developed through several stages of revise publish under the instructor’s guidance. Guidance may include, in addition to written commentary on drafts, individual conferences, in-class group work, peer commentary, reading responses, journals, and so on.
- Appropriate classroom time is spent on work directly related to writing.
- Reading assignments in the course subject are kept under 75 pages per week to permit regular, concentrated work on writing.
- All students meet in at least two individual conferences with the instructor. Offerings change from semester to semester. Each term’s first-year writing seminars are described in a brochure available from college registrars.

To ensure that students will enjoy the benefits of small writing classes, first-year writing seminars are limited to no more than 17 students. Instead of offering large lecture writing courses, students request placement in one of five writing seminars by filling out ballots available from their college registrars. Over 90 percent receive one of their top three choices. Students may take their writing seminars each semester at the First-Year Writing Seminar Exchange. Changes can also be made at special First-Year Writing Seminar add/drop sessions held during the first two weeks of each semester.

The colleges and the school served by the program accept first-year writing seminars in fulfillment of their individual graduation requirements in categories referred to variously as "first-year writing," "oral and written expression," and the like. The program does not decide whether students may graduate; it makes the credits available. Individual colleges and schools administer their own graduation requirements.

Currently, most undergraduate students are required to take two first-year writing seminars. Architecture majors, however, need only one. Hotel students fulfill their requirement through Hotel Administration 265, which should be taken with Hotel Administration 266 during the first two semesters at Cornell. Agriculture and Life Sciences students can take first-year writing seminars or choose from among a variety of other courses to fulfill their requirement.

All students who score "4" or "5" on the Princeton Advanced Placement Examination in English receive three credits. Such credits are awarded automatically; no application to the John S. Knight Writing Program or the Department of English is necessary. How these credits may be applied to first-year writing or other distribution requirements depends on the student’s college and score. All students who score "5," except Architecture majors, may apply their three credits towards the writing requirements of their college. Students who score "4," only Agriculture and Life Sciences students and Industrial and Labor Relations students may apply their three credits toward the writing requirements of their college. Of students who score "4," only Agriculture and Life Sciences students may apply their three credits toward the writing requirements of their college. Students should always consult their college registrars to be certain that they understand their writing requirements.

Students who have already taken a first-year writing seminar, or who score "4" or "5" on the Princeton AP exam, or "700" or better on the English Composition or CEEB tests, may enroll, space permitting, in the following upper-level first-year writing seminars: English 270, 271, or 272.

Although there are no exemptions from college writing requirements, some students may fulfill all or part of their college’s writing requirement through transfer credits or writing-course substitutions.

For work done at other institutions to be accepted as equivalent to first-year writing seminars, students should demonstrate that they have done a reasonably equivalent amount of writing in a formal course. (It is not sufficient to write, for example, one 30-page term paper.) Students in the College of Engineering and the College of Arts and
Teaching Writing

Each summer and fall, the program offers instruction in the teaching of writing to new staff members in the first-year writing seminars and other interested instructors. Teaching Writing, offered in the summer or fall, is primarily a course for graduate students. The program also sponsors a summer apprentice-ship program for a limited number of graduate students, and a summer seminar for faculty members interested in the teaching of writing.

WRIT 700 Teaching Writing

Summer and fall, 1 credit. S-U grade only. Teaching Writing introduces new instructors of Cornell's First-Year Writing Seminars to the challenges of teaching writing in courses that both introduce students to particular fields of study and develop the sophisticated writing skills students will need throughout their undergraduate careers and beyond. An overview of methodologies involved in the teaching of writing within a disciplinary context is provided by readings representing a range of pedagogical theories and practices, seminar discussions, and presentations of faculty, visiting scholars in the field, and experienced TAs. Participants in the course prepare written assignments designed to prepare them for the actual work of their First-Year Writing Seminars. In addition, written critiques and explanatory rationales of those assignments provide an opportunity for reflection on the methods chosen and on the principles underlying them.

Writing Workshop

The John S. Knight Writing Program offers "An Introduction to Writing in the University" for first-year students (or transfer students needing writing credit) through the Writing Workshop. This course is designed for students who have had little training in composition or who have serious difficulty with writing assignments.

Writing 137 and 138 are graded S-U only, and students receiving a grade of S are granted credit toward their college writing requirements. Students who think this course might be appropriate, including non-native speakers of English scoring less than 600 on the Test of English as a Foreign Language (TOEFL), should attend the assessment sessions offered by the Writing Workshop during orientation week each fall. The Workshop also offers a Walk-In Service (see below) to help students succeed in writing workshops. The director is Joe Martin, senior lecturer in the Writing Workshop. The Workshop offices are in 174 Rockefeller Hall, 255-6349.

The Walk-In Service

Through the Walk-In Service, the Writing Workshop offers tutoring assistance in writing to any student who needs help with a writing project. The Walk-In Service has tutors available during the academic year in 174 Rockefeller and north- and west-campus residential areas. The director is Mary Gilliland. For information contact the Writing Workshop, 174 Rockefeller Hall, 255-6349.

WRIT 137-138, 134 An Introduction to Writing in the University

137: fall, 138: spring, 134: summer. 3 credits each term. Each section limited to 12 students in the fall and spring, 6 students in the summer. S-U grades only. Prerequisite: permission of instructor. This writing seminar is designed for students who need more focused attention to master the expectations of academic writing. The course emphasizes the analytic and argumentative writing and critical reading essential for university-level work. With small classes and weekly student-led conferences, each section is shaped to respond to the needs of students in that particular class.

WRIT 139-239 Special Topics in Writing

Fall, spring, 139, undergraduate students only; 239, graduate students only. 3 credits. S-U grades only. Cannot fulfill any writing or distribution requirements. Prerequisite: permission of instructor. These courses allow students the opportunity to resolve significant writing challenges that have interfered with their academic progress. Students must have ongoing writing projects on which to work. Instruction is in weekly tutorials. Interested students should come to 174 Rockefeller for more information.

Latin American Studies

The Latin American Studies Program encourages and coordinates faculty and student interests in Latin America. A variety of special lectures, films, and seminars supplement the regular course offerings. Graduate students may pursue a minor in Latin American Studies, while majoring in the field of their choice.

Undergraduate Concentration

Undergraduate students may fulfill a Latin American Studies concentration by completing a minimum of 15 credits in Latin American Studies courses combined with language proficiency in Quechua, Spanish, or Portuguese. Latin American courses are offered in the College of Agriculture and Life Sciences, the College of Architecture, Art, and Planning; the College of Arts and Sciences, the College of Human Ecology, the School of Hotel Administration, and the School of Industrial and Labor Relations.

For further information and a current course listing, students should contact the program office at 255-3345, or visit 190 Uris Hall.

Latin American Studies Core Courses

It is strongly recommended that undergraduate concentrators take the interdisciplinary core course, SPAN 320/LASP 301 Perspectives on Latin America.

Particular attention is drawn to the following courses that students have taken in the past to complete requirements for the undergraduate concentration or the graduate minor. Other courses may be substituted with the approval of the adviser.

SPECIAL PROGRAMS AND INTERDISCIPLINARY STUDIES 611

The Latino Studies Program is an interdisciplinary academic program that focuses on the contributions, concerns, and welfare of those persons of Latino origin who reside in the United States. It includes support for historical, linguistic, literary, social, economic, and political studies of this diverse group of Americans. To this end the program objectives are (1) to expand the available course curriculum by providing both undergraduate and graduate courses pertaining to Latino subject matters; (2) to enlarge the size of the Latino faculty at Cornell through permanent appointments and visiting appointments; and (3) to enhance the Latino academic environment on campus through support of such activities as lectures, conferences, seminars, exhibits, and research activities.

Undergraduate Concentration

The Latino Studies Program offers an undergraduate concentration in Latino Studies which consists of an interdisciplinary course of study primarily in history, sociology, anthropology, literature and language. To complete the concentration, students must take at least five courses (minimum total of 15 credits) in Latino Studies, including "Latinos in the United States" (LSP 201/SOC 265) offered each spring semester. Students are required to include at least two courses at the 300 or 400 levels. Students who are interested in the concentration must meet with the LSP adviser, senior lecturer Loretta Carrillo, and file an application with the Latino Studies Program office by the beginning of their junior year. A maximum of one independent study, which requires the approval of the LSP adviser, will be accepted to fulfill the requirements of the concentration. The FWS does not count towards fulfilling concentration requirements.

Library

The Latino Studies Program Resource Center in 432 Rockefeller Hall serves Cornell students, faculty, staff, and the wider local community. The Resource Center maintains print and media material pertinent to U.S. Latino issues and also provides a meeting space for more than 25 Latino student organizations.

Courses

LSP 100 Introduction to World Music: Africa and the Americas (also MUSIC 103)
3 credits. M W 10:10-11:00. 1 hour discussion to be arranged. S. Pond. Exploration of folk, popular, and traditional genres of the Western Hemisphere, particularly the African diaspora. The course examines both the elements of musical styles and the features of society that influence music. Listening assignments are major components of the course.

LSP 110 Introduction to American Studies: New Approaches to Understanding American Diversity: The Twentieth Century (also AM ST 110 And HIST 111)
Spring. 4 credits. Time TBA. M. C. Garcia and S. S. Wong. This course examines American national life in the twentieth century and asks questions about the changing meaning of national identity. What does it mean to be an American
in the twentieth century? What does it mean to assimilate? Can on assimilate structurally and yet maintain a distinct cultural identity? In what ways do racial and ethnic perceptions structure political, economic, and cultural life? This is a team-taught interdisciplinary course in which students will analyze historical, literary, and cultural evidence in exploring these and other issues.

LSP 201 Latinos in the United States (also SOC 265)  
Exploration and analysis of the Hispanic experience in the United States. An examination of sociopolitical background and economic, psychological, and political factors that converge to shape a Latino group identity in the United States. Perspectives are suggested and developed for understanding Hispanic migrations, the plight of Latinos in urban and rural areas, and the unique problems faced by the diverse Latino groups. Groups studied include Mexican Americans, Dominicans, Cubans, and Puerto Ricans.

LSP 202 Spanish for English/Spanish Bilinguals (also SPAND 200)  
Fall and spring. 3 credits. T-R 11:40-12:55. N. Maldonado-Mendez.  
A course designed to expand bilingual students' knowledge of Spanish providing them with ample opportunities to develop and improve each of the basic language skills.

LSP 203 Comparative Migration to the Americas (also HIST 202 and AM ST 204)  
This seminar examines migration both within and to the Americas in the nineteenth and twentieth centuries. Topics to be discussed are the reasons for population movements; immigration policies, social, economic, and political accommodation; nativist and restrictionist responses; women and migration, remittances and transnationalism. Among the immigrant-receiving nations studied are Argentina, Brazil, Canada, Cuba, Mexico, and the United States.

LSP 220 Sociology of Health and Ethnic Minorities (also SOC 220)  
Fall. 3 credits. T-R 10:10-11:25. P. Parra. Discusses the health status of minorities in the United States. Specifically, it will explore intragroup diversity such as migration, economic status, and the influence of culture and the environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

LSP 221 Anthropological Representation: Ethnographies on Latino/a Cultures (also AM ST 221, ANTHRO 221)  
Fall. 3 credits. T-R 11:40-12:55. F. Santiago-Iñizarry.  
Representation has been central to anthropology. In translating cultures, anthropologists produce authoritative representations of and about other people's lives. In this course, we will examine with a critical eye, the production of research is a team-taught interdisciplinary course in which students will analyze historical, literary, and cultural evidence in exploring these and other issues.

LSP 240 Survey in U.S. Latino Literature (also ENGL 240)  
It is estimated that by the year 2000, the Latino/a population in the United States will be the largest "minority group" in the country. This course seeks to introduce students to the growing body of literature (both fiction and poetry) by the various U.S. Latino/a communities. We will consider cultural production that results from intercultural crossings between Mexico, Cuba, Guatemala, Dominican Republic, El Salvador, and Los Angeles, New York, and Miami. How do Latino/a literatures converge and diverge as they explore issues of "race," ethnicity, gender, sexuality, class, national identity, and diversity, at a time when the American profile is increasingly becoming "latinized." Authors examined may include Tomas Rivera, Cherrie Moraga, Jesus Colon, Miguel Pinero, Nicolasa Mohr, Cristina Garcia, Julia deVez, Juan Diaz, Loida Maritza Perez, Sandra Benitez, Martín Espada, Lorna Dee Cervantes, Frances Negron-Muntaner, Luz Maria Uppmire, and Hector Tohur.

LSP 246 Contemporary Narratives by Latina Writers (also SPANL 246, WO 246)  
Fall. 3 credits. T-Th 1:25-2:40. L. Carrillo.  
This course offers a survey of narratives by representative Latina writers of various Latino ethnic groups in the United States including Chicana, Cuban, Dominican, and Puerto Rican. We will investigate the parallel development of a Latina perspective on personal, social, and cultural issues alongside that of the U.S. ethnic liberation/revitalization movements of the 1960s through to contemporary feminist activism and women's color movements. We will investigate these works as artistic attempts to deal with such issues as culture, language and bilingualism, family, gender, sexuality, and domesticity. We will account for similarities and contributions. Readings will include works by Julia Alvarez, Gloria Anzaldua, Elena Castedo, Ana Cattillo, Denise Chavez, Sandra Cisneros, Judith Ortiz Cofer, Cristina Garcia, Nora Glickman, Mariela Mohr, Cherrie Moraga, Achy Obejas, Esmeralda Santiago, Ana Lydia Vega, and Helena Maria Virramontes.

LSP 250 Latino Politics in the United States (also GOVT 306)  
The opening section examines the evolution of Latino/a political identity and the ongoing debate on whether Latinos constitute a homogeneous ethnical/racial population with common political interests, values, and aspirations. We examine how Latinx engaged in electoral struggles to gain access to the political system and the national, state, and local levels. We will then analyze how "Latina/o" as a salient, ever-changing political, social, and cultural category is being constructed, and, thus, provides us a window onto the interplay between theory and history.

LSP 260 Introduction to U.S. Latino History, Part I (also HIST/AM ST 260)  
This course introduces students to the history of Latinos in the United States. We will focus specifically on the history of Chicanos (Mexican Americans) and Central Americans. Part II of this course LSP HIST/AM ST 261 focuses on the history of Puerto Ricans, Cubans, and Dominicans in the United States. Among the topics that will be addressed are: historical immigration patterns and the "push/pull" factors that compelled migration to the United States; the social and political events that shaped the evolution of these Latino communities; the role of cultural identity, race, class, and gender in shaping experience; the role of foreign policy in formulating immigration policy.
Borrowing, interference, and code switching. Syntactic, morphological, and phonological characteristics.

**[LSP 377 The United States (also ANTHR/AM ST 377)]**

V. Santiago-izrray.

The anthropological inquiry into one’s culture is never a neutral exercise. This course will explore issues in the cultural construction of the United States as a “pluralistic” society. We will look at the ideological context for the production of a cultural profile predicated upon ideas that are intrinsic to American images of identity such as individualism, freedom, and equality and the way these are applied in practice. The course readings will include historic documents and accounts, popular writings, and recent ethnographies on the United States.

**[LSP 396 Modern Latino Prose Fiction (also SPANL 396)]**

D. Castillo.

A detailed examination of representative twentieth-century fictional works (novels, short stories, plays) by Hispanic American authors. Discussion will be centered on such issues as the social and political concerns raised by the fiction and the authors’ needs to struggle with a dominant linguistic and cultural tradition. Authors include Nicholasa Mohr, Piri Thomas, Rolando Hinojosa-Smith, Alejandro Morales, Tomás Rivera, Ron Arias, Raymond Barrio, and Luis Valdez.

**[LSP 400 Border Cultures]**

This course will center “the border” as a physical, spatial, and cultural entity, taking as its starting point the belief that it is “not just a place on the map,” as Adrienne Rich has suggested, but also “a place in history.” In examining this “place,” we will focus on exploring the border as a site of transformative possibilities, one which opens up, complicates, and makes visible certain social tensions and intercultural exchanges.

Throughout the semester we will investigate several different aspects and moments of this exchange, beginning with a set of theoretical and conceptual readings that outline the themes guiding our approach to “the border.” Primary emphasis will be given to works that examine these issues in historical time and space.

**[LSP 420/421 Independent Study Fall and spring. 2–4 credits. Permission of instructor. Guided independent study. ]**

**[LSP 462 Between Aztlán and Queens: Latina Culture in the Making of Space (also ENGL 462)]**

How do cultural practices like music and film produce space? What do freeways, zoning laws, advertising codes, and hiking trails have to do with literature? How have changing urban demographic theories and immigration shaped, even “Latinoized,” cities, and how have these changes been reflected or restricted in Latino cultural production? How does paying attention to space change our reading practices? This interdisciplinary course will examine these questions and explore how place and space shape Latina cultures and how Latina cultures shape place and space. We will draw from scholarship in fields such as urban planning, law, architecture, geography, anthropology, literature, and history. Students should plan to do extensive reading, write two to three papers, and produce a longish research paper.

**[LSP 660 Latino Languages, Ideology, and Practice (also ANTHR 660)]**

Cultural identity and citizenship in the United States have often been organized around linguistic difference and the issues this raises in an English-dominant society. Drawing from anthropological theories on language, this course will look at the place of language as a signifying practice in the United States by focusing on the experience of Latino communities. Topics to be explored include linguistic diversity and change, accommodation and resistance, language maintenance and shift, linguistic ideologies, the production of language hierarchies, and institutional applications of language.

**Law and Society**

M. Fineman, co-director, 208 Myron Taylor Hall, 255–2622, fineman@law.mail.cornell.edu; Mary Katzenstein, co-director, M105 McGraw Hall, 255–8965, mk2@cornell.edu, R. Breiger (sociology), C. Carmichael (comparative literature), D. A. Dunning (psychology), G. Hay (economics), P. Hyams (history), R. Lieberwitz (ILR), R. Miller (philosophy), M. B. Norton (history), R. Poilenberg (history), D. Powers (Near Eastern studies), J. Rabkin (government), V. Santiago-Izrray (anthropology), H. Shue (ethics and public life)

The Law and Society Program offers an interdisciplinary concentration for undergraduates who are interested in the law from the perspectives of the social sciences and the humanities: anthropology, comparative literature, economics, government, history, philosophy, psychology, science and technology studies, and sociology. Students who wish to graduate with a concentration in law and society should consult the director of the program or one of the advisers listed above to plan a coherent program of study.

**LSP 420/421 Independent Study Fall and spring. 2–4 credits. Permission of instructor. Guided independent study.**

**LSP 462 Between Aztlán and Queens: Latina Culture in the Making of Space (also ENGL 462)**

How do cultural practices like music and film produce space? What do freeways, zoning laws, advertising codes, and hiking trails have to do with literature? How have changing urban demographic theories and immigration shaped, even "Latinoized," cities, and how have these changes been reflected or restricted in Latino cultural production? How does paying attention to space change our reading practices? This interdisciplinary course will examine these questions and explore how place and space shape Latina cultures and how Latina cultures shape place and space. We will draw from scholarship in fields such as urban planning, law, architecture, geography, anthropology, literature, and history. **Lesbian, Bisexual, and Gay Studies**

E. Hanson, director, undergraduate studies;
B. Martin, director, graduate studies;

The field of Lesbian, Bisexual, and Gay Studies is devoted to the interdisciplinary study of the social construction of sexuality. LBGS is founded on the premise that the social organization of sexuality is best studied from the perspectives offered by those positions that have been excluded from established cultural norms.

In addition to offering a graduate minor, the field of LBGS studies now offers an undergraduate program within the auspices of the Women's Studies Program and which consists of four courses from the list below. Although most of the courses in LBGS studies (including those on men) will probably fall under the aegis of the Women's Studies Program and hence be crosslisted with it, not all of the courses in LBGS studies are sufficiently focused on the social construction of sexuality to be part of the LBGS Studies concentration.

Undergraduate Study in Medieval Studies
The "middle" in "Middle Ages" comes from its position between late antiquity and the early modern period, a conception created for European and Western conditions. Our concentration, however, is more properly inclusive and treats a time span from roughly the fifth century into the sixteenth and ranges from Western Europe and the Mediterranean to China and Japan. To discover the vibrant state of medieval studies today, one need only look at the extraordinary range of scholarly, but accessible, web sites that have sprung up all over the Internet. Cornell possesses a wealth of faculty and library resources to introduce students to every corner of the field.

While this concentration provides strong interdisciplinary breadth to majors in classics, any of the modern languages, history, music, philosophy, etc., and is excellent preparation for graduate study in a medieval field, it could complement a science major as well. Many students feel bound to choose their majors with an eye to future careers and earning potential. The program provides encouragement, guidance, and an avenue for intelligent enjoyment of an important part of our pasts.

This concentration offers something different from Western Europe and the Mediterranean conditions. Our students feel bound to choose their majors with an eye to future careers and earning potential. The program provides encouragement, guidance, and an avenue for intelligent enjoyment of an important part of our pasts.

SPECIAL PROGRAMS AND INTERDISCIPLINARY STUDIES 615

Medieval Languages
Medieval texts (like all others) become most lively and informative when read in the original, and Cornell fortunately offers many courses for students interested in acquiring the relevant skills: Classical Arabic, Medieval Hebrew, Medieval Latin, Classical Chinese, Historical Sino-Japanese (Kambun) 700–1300 and Historical Sino-Japanese 1300–1600, Old English, Middle English, Gothic, Old Saxon, Old High German, Middle High German, Old Norse-Icelandic, Old Irish, Middle Welsh, Old Occitan (Provençal), Old French, Medieval Spanish, Medieval Italian, Old Russian, and Old Church Slavonic.

Some medieval languages require study of a modern language (e.g., French for Old Occitan and Old French) or a classical language (Classical Latin for Medieval Latin) as background. Students interested in a concentration in Medieval Studies should begin the study of a medieval language as early as possible, so that they may be able to study texts in the original before they graduate. Students are advised to consult the sponsoring departments for information about the prerequisites for various medieval languages.

Graduate Study
The Medieval Studies Program offers both an interdisciplinary and a literary comparative Ph.D. in Medieval Studies. Disciplinary fields of concentration offered within the Field of Medieval Studies are: Medieval Archaeology, Medieval History, Medieval History of Art, Medieval Literature, Medieval Music, Medieval Philology and Linguistics, and Medieval Philosophy. Information about the graduate program in Medieval Studies is contained in the catalog of the Graduate School, in a brochure on Medieval Studies available from the field coordinator, and at "Cornucopia," the program's web site, www.arts.cornell.edu/medieval.
Medieval Studies Courses: Graduate and Undergraduate

Courses in various aspects of Medieval Studies are offered every year in several cooperating departments, including Asian Studies, Classics, Comparative Literature, English, German Studies, History, History of Art, Linguistics, Music, Near Eastern Studies, Philosophy, Romance Studies, Russian Literature, and by the Society for the Humanities. The current year’s offerings are:

*ART H 230 Monuments of Medieval Art (also RELST 230) # Spring. 4 credits. R. G. Calkins.

*ART H 330 Power, Piety, and Medieval Art (also NES 370) # Fall. 4 credits. L. Jones.

ART H 444 Early Medieval Jerusalem (also NES 444) Spring. 4 credits. L. Jones.

*ART H 531 Problems in Medieval Art and Architecture: Narrative in Medieval Illuminated Manuscripts (also RELST 531) Spring. 4 credits. R. G. Calkins.

ASIAN 471 Japanese Theatre (also ITHER 471) Fall. 4 credits. K. Brazell.

CHLIT 213 Classical Chinese # Fall. 5 credits. R. McNear.

CHLIT 300 Reading from the Early Masters Fall. 4 credits. R. McNear.

CLASS 331 Goths, Vandals, Franks, and Romans # Fall. 4 credits. D. R. Shanzer.

*CLASS 335 Byzantine Theocracy: Church and State from the Fourth to Eighth Centuries (also NES 340) # Fall. 5 credits. S. Wessel.

CLASS 363 Intensive Medieval Latin Summer. 4 credits. D. R. Shanzer.

CLASS 403 Independent Study—Sanskrit Fall. Variable credit. C. Minkowski.

CLASS 603 Later Latin Literature: Late Antique and Medieval Hagiography Spring. 4 credits. D. R. Shanzer.

ENGL 319 Chaucer # Fall. 4 credits. R. Farrell.

ENGL 321 Spenser and Malory # Spring. 4 credits. C. Kaske.

*ENGL 417/617 Early Medieval Archaeology and Literature Fall. 4 credits. R. Farrell.

ENGL 619 Chaucer Spring. 4 credits. W. Wetherbee.

FLRLIT 447 Medieval Literature # Spring. 4 credits. A. Colby-Hall.

*GERST 405-406 Introduction to Medieval German Literature # 405, fall; 406, spring. 4 credits each term. A. Groos.

HIST 190 Introduction to Asian Civilizations @ # Spring. 4 credits. J. Piggott and D. Wyatt.

*HIST 259 The Crusades @ # Fall. 4 credits. P. Hyams.

*HIST 297/497 Japan before 1600 @ # Fall. 4 credits. J. Piggott.

HIST 369 The History of Florence in the Time of the Republic, 1250-1530 (also ITALL 369) # Fall. 4 credits. J. Najemy.

*HIST 408 Secular Culture in Medieval France @ # Fall. 4 credits. P. Hyams.

HIST 420 Tale of Genji in Historical Perspective @ # Fall. 4 credits. J. Piggott.

*HIST 468 Love and Sex in the Italian Renaissance @ # Fall. 4 credits. J. Najemy.

HIST 492 Undergraduate Seminar: Medieval Chinese History @ # Fall. 4 credits. C. A. Peterson.

HIST 495 Kings and States: Asian Models @ # Spring. 4 credits. J. Piggott.

HIST 664-665 Seminar in Latin Paleography 664, fall; 665, spring. 4 credits each term. J. J. John.

ITAL 220 Medieval Italy Spring. 3 credits. W. J. Kennedy.

JPLIT 611 Seminar in Classical Japanese Literature Fall. 4 credits. K. Brazell.

LING 315-316 Old Norse 315, fall; 316, spring. 4 credits each term. E. Johannsson.

LING 625 Middle Welsh Fall. 4 credits. W. Harbert.

LING 646 Old High German/Old Saxon Fall. 4 credits. W. Harbert.

NES 133-134 Qur’anic and Classical Arabic 133: fall; 134, spring. 4 credits each term. Staff.

*NES 239 Cultural History of the Jews of Spain @ # Fall. 3 credits. E. Alfonso.

NES 251 Judaism, Christianity, and Islam @ # Fall. 3 credits. R. Brann and K. Haines-Eitzen.

NES 313 Classical Arabic Texts (also RELST 313) @ # Fall. 4 credits. D. Powers.

*NES 351 Law, Society, & Culture in the Middle East, 1200-1500 (also HIST 372, RELST 350) # Fall. 4 credits. D. Powers.

PHIL 410 Latin Philosophical Texts # Fall and spring. Variable credit. S. MacDonald.

PHIL 612 Seminar: Medieval Philosophy Spring. 4 credits. S. MacDonald.

RUSSA 651 Comparative Slavic Linguistics Spring. 4 credits. E. W. Browne.

SANSK 251 Intermediate Sanskrit (also CLASS 251-252, LING 251-252) @ # 251, fall; 252, spring. 3 credits each term. C. Minkowski.

S HUM 403 Urban Archaeology of the Manuscript (also ENGL 400/600) Spring. 4 credits. A. Galloway.

S HUM 409 Medieval Writers and the City (also ENGL 415/615) Fall. 4 credits. A. Galloway.

SNLIT 467 Readings in Sanskrit Literature @ # Fall. 3 credits. C. Minkowski.

Approved "core courses" for the undergraduate concentration are marked with an asterisk (*). Fuller descriptions of all courses are available in this catalog under the listings for the relevant departments. Even more detailed information can be found on the web at www.archives.cornell.edu/medieval/coursesdesc.html.

Modern European Studies Concentration

Susan Tarrow, coordinator

Students from any college may choose an undergraduate concentration in Modern European Studies to complement any major in any college. The purpose of the concentration is to provide a coherent structure for students with an interest in interdisciplinary study in the field of European studies.

The concentration has three tracks: European politics, economics, and society; modern European history; and European culture. The requirements for the concentration are:

1) Competence in at least one modern European language; Romance, Germanic, or Slavic (i.e., completion of a 300-level course or equivalent with a grade of at least B-, or demonstration of an advanced level of competence in an oral proficiency interview test where available).

2) Completion of two interdisciplinary core courses:

   Comparative Literature 311/Russian Literature 311/French Literature 315: Modern European Literature and Culture Fall 1999. 4 credits. G. Gibian.

   Under certain conditions, students may be permitted to substitute other courses for those listed above.

3) Completion of one course in modern (post-1789) European history.

4) Two additional courses in any of the three areas, which may include a senior seminar (400 level).
The Religious Studies Program is designed to meet the needs of three classes of students: (1) students planning to pursue advanced degrees in the academic study of religion or allied disciplines or subdisciplines; (2) students seeking courses in topics related to religion to fulfill distribution requirements; and (3) those students desiring a more systematic exposure to the academic study of religion as a significant component of their liberal arts education. To all students, our program offers an excellent opportunity to develop a deeper understanding and appreciation of the complex ways in which religious traditions, with their individual, communal, and doctrinal dimensions inform human thought and behavior. The courses offered through our program are built on the established scholarly tradition of the study of religion as an academic, as opposed to confessional, pursuit. Religious traditions are explored in all of their complexity through comparative, contextual (in specific historical or cultural contexts), and thematic studies. The program also hosts lecture series, conferences, symposia, and periodic social gatherings for faculty and students throughout the academic year to foster a sense of intellectual community among our students and faculty.

The Major in Religious Studies

Signing into the Major: To sign into the major in Religious Studies, a student must have completed at least one course in Religious Studies prior to scheduling an appointment with the program director. Here is the process:

1. Schedule an appointment with Professor Jane-Marie Law, Director of Religious Studies; please contact her by e-mail: jmll6@cornell.edu

2. In addition to a copy of your current Cornell transcript (the informal one you regularly receive is acceptable), please bring to your meeting with Professor Law all of these forms, which are available in the Religious Studies office:
   a) a completed Religious Studies Major Application Form (available in Rockefeller 182)
   b) a proposed "Course of Study," which will be used as a guide in your conversation with the director and revised for formal submission to the program upon your entrance as a major
   c) a College of Arts & Sciences Adviser/Major form which will be signed by your adviser.

Advising in the Religious Studies Program:

Upon entering the major in Religious Studies, a student is assigned a faculty adviser whose area of expertise most closely matches the proposed interest of the student. An up-to-date approved adviser list is available in the Religious Studies office. Working closely with one's advising courses is an important component of this program, enabling students to fulfill the requirements for the major while creating an integrated and coherent course of study out of our large number of multidisciplinary course offerings.

To graduate as a major in Religious Studies, a student must (1) complete with letter grades the program's three core courses, Religious Studies 250, Intro to Asian Religions, RELST 251, Intro to Judaism, Christianity, and Islam, and Religious Studies 449, History and Methods of the Academic Study of Religion. (These three core courses can not be waived; and (2) complete with letter grades seven additional courses approved for the major, at least four of them at the 300 level or above. The following specifications of this second requirement are designed to promote breadth (2a) and depth (2b) of study.

(2a) At least four of a major's seven additional courses are to be selected to ensure some familiarity with (or more in special cases) different religious traditions or phenomena. These courses may be at the introductory or advanced levels, though depth work at the 300 level is desired. For example, "Introduction to Asian Religions" (Religious Studies 250) might lead a student to take "Japanese Religions" (Religious Studies 355), and then combine these with two courses on Judaism, "Introduction to Ancient Judaism" (Religious Studies 244) and "Cultural History of Jews of Spain" (Religious Studies 239).

(2b) At least two of these seven additional courses are to be selected to ensure depth of coverage in one religion or one group of closely related religious traditions or phenomena. In the first illustrative case described above, the student might combine "Introduction to Asian Religions" with one or more courses dealing with Buddhism, such as "Chinese Buddhism" (Religious Studies 357) or "Indian Devotional Poetry" (Religious Studies 348) to acquire a measure of strength in the religions of India. Alternatively, the student might combine "Introduction to Asian Religions" with one or more courses dealing with Buddhism, such as "Chinese Buddhism" (Religious Studies 357) or "Indian Devotional Poetry" (Religious Studies 348) or "Tibetan Buddhism" (Religious Studies 400), to achieve appropriate depth along a different dimension. No more than one of the courses chosen to meet requirement (2a) may be used to satisfy requirement (2b). Routinely, survey courses (which in our program at the 200 level) should be combined with tradition on geographically specific offerings at the 300 and 400 level to satisfy this aspect of the requirements.

To engage in the kind of focused study envisioned under (2b), a student will be expected to attain proficiency in a language other than English to gain access to relevant sources, primary or secondary. For example, a knowledge of Greek or Latin may be required for the study of Christianity (as well as Greek or Roman religions), of Hebrew or Aramaic for Judaism; of Arabic for Islam, of Sanskrit or Hindi for Hinduism; or of Sanskrit, Pali, Chinese, or Japanese for Buddhism. In certain cases, nonclassical European languages can be used to fulfill this requirement. Religious phenomena like shamanism or totemism, though less firmly rooted in literary traditions, have generated substantial bodies of important scholarship in French and German, and an understanding of certain aspects of religious traditions in this area of Religious Studies should be equipped to make independent use of such material. Courses used to satisfy this foreign language proficiency requirement may not be applied to the course requirements described under (2a) and (2b). Choice of language to fulfill this requirement is determined by the student in consultation with
his or her adviser and is decided at the time the student enters the major.

Most courses approved for the major are offered by cooperating departments within the College of Arts and Sciences; a comprehensive up-to-date list of these courses is maintained at the office of the Religious Studies Program, 182 Rockefeller Hall.

**Graduating with Honors in Religious Studies:**

**GENERAL INFORMATION**

1. **Eligibility.** A 3.0 cumulative average and 3.5 average inside the major with no grade in the major below B-. Program Director notifies eligible candidates during the spring semester of the junior year, or prior to commencement of final year.

2. **Honors Courses.** Candidates must sign into RELST 495 (Senior Honors Essay) for up to eight credits (two courses) for two semesters. This two-semester sequence is required. After the first term, an R in the transcript indicates that this course (usually for 8 credits) is a yearlong course. When the project is completed at the end of the second semester, the grade recorded counts for all eight credits. (The eight-credit limit is the result of the conviction/belief that earning more than eight credits for a single "piece" of your undergraduate education is unwise.)

You submit your honors proposal (with and according to the program's instruction/cover sheet) to the Religious Studies administrator before the end of the spring term of your junior year, or not later than Sept. 15 of the final year. She/he then approves your signing into the honors courses.

3. **Honors Committee—three faculty members.** While you are required to have three faculty members on your committee at the time of the submission of the final draft, we only require that two of them be identified when you submit your proposal. The three members should be:
   a. The professor who has agreed to work closely with you over the year and to be the supervisor/grader of your project is chair of the committee.
   b. Another knowledgeable faculty member
   c. Your Religious Studies major adviser sometimes your adviser is the supervisor/grader. If that is the case, you need two additional knowledgeable professors for your committee of three.

**Courses Approved for the Major Sponsored by Religious Studies**

RELST 350 Law, Society, and Culture (also NES 351/651, HIST 372/672) Fall. 4 credits. D. Powers.

RELST 357 Chinese Buddhism (also ASIAN 356) Fall. 4 credits. D. Boucher. For description, see ASIAN 356.

RELST 359 Japanese Buddhism (also ASIAN 359) Spring. 4 credits. J. M. Law.

RELST 368 Marriage and Sexuality in Medieval Europe (also HIST 368, WOMNS 368) Spring. 4 credits. Not offered 2000–2001. P. Hyams. For description, see HIST 368.

RELST 371 A Mediterranean Society and Its Culture: The Jews under Classical Islam (also COM L 371, HIST 371, JWST 371) Spring. 4 credits. R. Brann. For description, see HIST 371.

RELST 395 Classical Indian Philosophical Systems (also ASIAN 395, CLASS 395) @ Fall. 4 credits. C. Minkowski.

RELST 397 The Bardo Thosig (also ASIAN 397, COM L 397) Fall. 4 credits. D. McKenzie. For description, see ASIAN 397.

RELST 398 Tibetan Buddhism (also ASIAN 400) @ Fall. 4 credits. Enrollment limited to 20 students and instructor consent. J. M. Law. For description, see ASIAN 400.

RELST 420 Readings in Biblical Hebrew Prose (also NES 420, JWST 420) Spring. 4 credits. G. Rendsburg. For description, see NES 420.

RELST 421 Readings in Biblical Hebrew Poetry (also NES 421, JWST 421) @ Fall. 4 credits. Prerequisite: one year of Biblical or Modern Hebrew. Not offered 2000–2001. G. Rendsburg. For description, see NES 421.

RELST 425 Buddhist Monasticism and Renunciant Traditions (also ASIAN 427) Fall. 4 credits. D. Boucher.

RELST 427 Biblical Seminar (also COM L 428) Fall. 4 credits. C. Carmichael. For description, see COM L 428.

RELST 441 Mahayana Buddhism (also ASIAN 441) Spring. 4 credits. D. Boucher.

RELST 443 Religion and Ritual in Chinese Society and Culture (also ANTHR 443, JOIN 443) @ Fall. 4 credits. Not offered 2000–2001. S. Sangren.

RELST 449 History and Methods of the Academic Study of Religion (also ASIAN 449) @ Spring. 4 credits. Required of Religious Studies majors. J. M. Law. For description, see ASIAN 449.

RELST 473 Film and Spiritual Questions (also THETR 473) Spring. 4 credits. D. Fredericksen.

RELST 490-491 Directed Study 490, 491, spring. 2–4 credits each term. For majors in Religious Studies, permission of director required. Staff.

RELST 494 Modern Medicine and the Catholic Tradition (also NES 494) Spring. 4 credits. D. McKenzie. For description, see NES 494.

RELST 495 Senior Honors Essay Fall and spring. 8 credits. Required for honors in Religious Studies. Staff.
RELST 497 Thomas Morten: Monk and Author (also NES 497)
Fall. 4 credits. D. McKenzie.
For description, see NES 497.
RELST 531 Problems in Medieval Art and Architecture (also ART H 531)
Spring. 4 credits. R. G. Calkins.
For description, see ART H 531.

Additional courses offered by cooperating departments may also be approved through petition for Religious Studies. For details see the program director, Jane Marie Law, 125 Rockefeller Hall or e-mail her at jm16@cornell.edu.

Science of Earth Systems
The full faculty of the Department of Earth and Atmospheric Sciences (see page 441)plus the following: W. Brutsaert (civil and environmental engineering); L. Hedin, R. Howarth (ecology and evolutionary biology); P. Gierasch (astronomy); M. Kelley (electrical engineering); J.-Y. Parlange (agricultural and biological engineering); J. Yavitt (natural resources).

The Science of Earth Systems (SES) is the study of the interactions among the atmosphere, oceans, biosphere, and solid Earth; these dynamic interactions control the global environment. The interdisciplinary, basic science approach of SES incorporates major components of geology, ocean and atmospheric sciences, terrestrial hydrology, biogeochemistry, and ecology into an integrated study of Earth as a complex system. Earth System science presents one of the outstanding intellectual challenges in modern science and is the primary foundation for the future management of our home planet.

The Major
The major in Science of Earth Systems emphasizes a rigorous, objective study of the Earth and its systems with broad preparation in basic sciences and mathematics, followed by the choice of an area of concentration for study in greater depth. The Science of Earth Systems program is designed to train students in a strong set of fundamental skills that will allow them to approach with quantitative rigor a wide range of questions about the Earth and its environment, and to adapt those skills rapidly to new areas of inquiry as they arise. The major in Science of Earth Systems is by nature interdisciplinary, and involves faculty from the College of Arts and Sciences, the College of Engineering, and the College of Agriculture and Life Sciences. In the College of Arts and Sciences, the program is administered by the Department of Earth and Atmospheric Sciences in collaboration with the Departments of Astronomy, and Ecology and Evolutionary Biology.

The SES curriculum begins with a series of courses designed to provide broad preparation in fundamental science and mathematics necessary for a rigorous study of Earth Systems. This preparation is followed by three SES core courses providing breadth and integration. An additional set of four intermediate to advanced courses is selected to provide depth and a degree of specialization. Students in the College of Arts and Sciences choosing to pursue the Science of Earth Systems major are required to take the following courses: PHYS 207–208 (or 112–213), CHEM 207–208, BIOSCI 101/102–104 (or 109–110), and MATH 111–112 (or 121–122, or 191–192). Three additional 3–4 credit hour courses in mathematics, physics, chemistry, or biology are required; these additional courses must be selected from four different areas of concentration. The full faculty of the SES is available to advise students choosing areas of specialization.

The three required SES core courses include the following:
- EAS 331/ASTRO 331 Climate Dynamics
- EAS 302 Evolution of the Earth System
- EAS 321/NATRES 321 Introduction to Biogeochemistry

Four additional 3–4 credit hours are required from 300–400 level courses, approved for an SES concentration, are required. These courses must be chosen from among the following:
- EAS 301 Introduction to the Earth System
- EAS 320 Evolution of the Earth System
- EAS 321/NATRES 321 Introduction to Biogeochemistry

Additional courses must require one or more of the basic courses listed above as a prerequisite. One of the courses must be either EAS 201 or BIOES 261. Both EAS 201 and BIOES 261 can be chosen. Mathematics at the level of MATH 221 or 293 is strongly recommended for all SES students, and those choosing areas of concentration in Atmospheric Sciences, Environmental Geophysics, or Hydrology should take MATH 222 or 224.

Society for the Humanities
Dominick LaCapra. Director
Fellows for 2000-2001
Priscilla Archibald (Northwestern University)
Theodore Bestor (Cornell University)
Andrew Galloway (Cornell University)
Maria Cristina Garcia (Cornell University)
Federic Gleach (Cornell University)
Nell Hertz (Johns Hopkins University)
Simon Jarvis (University of Cambridge)
Francois Jullien (Université de Paris VII)
Huda Mustafa (Harvard University)
Joan Ramon Resina (Cornell University)
Mary Roldan (Cornell University)
Paul Saint-Amour (Pomona College)
Gregory Shaya (University of Michigan)
Yvonne Spielmann (Universität von Siegen)
Barry Strauss (Cornell University)
Gordon Teskey (Cornell University)
Mary Woods (Cornell University)

The Society annually awards fellowships for research in the humanities. The Fellows offer, in line with their research, informal seminars intended to be exploratory or interdisciplinary. These seminars are open to graduate students, faculty members, undergraduates, and interested auditors. Students who want credit for a seminar should formally register in their own college. Persons other than those officially enrolled may attend as visitors with permission of the Fellow. The theme for 2000-2001 is Cities.

S HUM 401 Alternative Modernities: The Latin American City
Fall. 4 credits. Limited to 15 students. Permission of instructor. R. 12:20–2:15.
P. Archibald.

This course will focus on the evolution of the city throughout Latin American history. Covering the colonial, republican, and modern periods, we will examine historical, cultural, and literary texts devoted to the theme of cosmopolitanism. Though a great deal of the course will emphasize the Andes, material will not be restricted to this region. Different case studies will especially be introduced through student presentations.

We will discuss how the Latin American city compares, diverges, or deviates from various European models. Different nations have greatly influenced the form and very notion of what the city is in Latin America. Spanish influence was of course dominant in the
colonial period, and its viceregal air still persists in certain quarters; French and English influences were very dominant in the nineteenth century, and the cultural style of the United States has made an unmistakable imprint throughout the twentieth century. Each of these cultural styles corresponds to a larger socio-economic project. Rather than derivative, it might be more productive to characterize the colonial reality as essentially cosmopolitan—dismantling a eurocentric understanding of globalization.

Issues of ethnicity are central to the definition of cosmopolitanism in Latin America. The Indian has traditionally been regarded as a fundamentally rural subject. Indeed, once the Indian entered the city, he supposedly left his own identity and "authentic" culture behind. We will examine the spurious conqueror, new ingratified belief, what ideological purpose it has served, and will consider cultural examples which counter it. In particular, we will examine the figure of the mestizo, not as a romantic homogeneous subject nor as a suspicious anti-hero, but rather as a hybrid actor that questions many conceptual commonplaces—especially the "inauthenticity" of cosmopolitanism. One might regard the mestizo as the vanguard of a specifically Latin American modernity. It is, however, only too easy to entertain a wholly celebratory attitude toward hybridity, when this often entails not only creativity and self-invention, but poverty, loss, displacement. This course will aim for a theoretically balanced approach to the processes which have given shape to the modern Latin American city.

Ethnicity intersects in complex ways with gender in Latin America. While in the past investigations have emphasized factors such as the subjugation of indigenous women in rural areas by the Spanish conqueror, new attention is being directed toward the overlap of gender and ethnicity in urban centers. Feminist critics have shown how inter-racial concubinage and other extra-familiar relationships were at the core of and colonized by a newly emerging colonial urban society. Studies have also focused on the way that the transition from a provincial city to the modern liberal urban center displaced women from positions of power. The complexity of the colonial heritages of the cities in Latin America has had far-reaching consequences for the construction of New York City as a modern metropolis. This seminar focuses on the remarkable group of women photographers and filmmakers (Alice Austen, Frances Benjamin Johnston, Jessie Tarbox Beals, Margaret Bourke-White, Berenice Abbott, Helen Levitt, Lisette Model, Shirley Clarke, Louise Dahl-Wolfe, and Diane Arbus). While they depicted women in the modern metropolis through the new media of still and moving images, these artists also created a sense of place and identity for themselves before the rise of feminism and New York's decline in the 1970s. The problems of gender, sexuality, and the city will be examined. Readings from histories and theories of architecture, urbanism, and photography and writings by Edith Wharton, Marianne Moore, Dorothy Parker, and Dawn Powell. Screenings of popular and avant-garde films and field trips to the Johnson Museum, the George Eastman House, and New York City museums and galleries.

...
in phenomenology. The two authors will set forth other themes. Adorno's *Meditations on Metaphysics*, the final section of his Negative Dialectic, will be read over six sessions, paying attention above all to their significance in the context of Kantian and Hegelian idealism. Michel Henry's work will be introduced in the final four sessions. Although the course's focus is designedly particular, its argumentative range will be much wider: among other topics we shall be interested in deconstructive (de Man) and fundamental (Heidegger) engagements or failures of engagement with materialism; in the consequences of a rethought materialism for the notions of 'ideology' and 'ideology-critique'; in the difficulties presented by a rethought materialism to notions of 'cultural' and 'historical' materialism, together with a reassessment of the fate of the concept of nature; in a reinterpretation of supposed key points in the history of western metaphysics, especially the work of Descartes and Kant.

**S HUM 418 Dangers and Delights of the City**
Spring. 4 credits. Limited to 15 students. Permission of instructor. W 2:30-4:25.
G. Shaya.
This course explores dreams and nightmares of the modern European city in the great era of urbanization, from the 1830s to the 1930s. Topics include: the social geography of the city, contagion and hygiene, crime and the underworld, urban mass culture, and the city in film and literature.

**S HUM 419 Tourism in Cuba and Puerto Rico**
Spring. 4 credits. Limited to 15 students. Permission of instructor. W 2:30-4:25.
F. Gleach.
Tourism creates a space in which many representatives from at least two different cultures come together and participate in exchanges of ideas, experiences, commodities, and money. It is thus a productive context for the representation and reconstruction of identities, particularly in colonial contexts where it provided colonized people an opportunity to speak and perform directly to visitors from the colonizing culture. Because of the centrality of Havana and San Juan in the tourist experience of Cuba and Puerto Rico, much of this takes place in these urban centers, even while referencing traditional/rural themes.

This seminar will begin by examining the ways anthropologists and other scholars have characterized tourism, and the variety of forms it can take, with an emphasis on the development of ethnic tourism. What kinds of experiences do tourists desire, and how do they pursue them? How do local settings develop and market themselves to attract tourists? How do issues of identity-construction, representation, and maintenance articulate with tourism?

We will then consider the specific histories of U.S. relations with Cuba and Puerto Rico, and the development of the tourist industries there. These two nations were allowed to develop different political systems and ties to the United States, but certain kinds of control were maintained. What are the differences and similarities in their experiences of this developed form of colonialism? How might these differences differ from "classic" colonialism? What are the relationships between tourism and development in these cases? How do themes drawn from the traditional rural and agricultural life become transformed and represented in the urban environment?

Finally we will consider the situation today, with a developed tourist industry in Puerto Rico, and another in Cuba that is legally isolated from the United States. Historically Cuba has been seen as the more glamorous destination, and its isolation has contributed further to that. Several times a year one reads in travel magazines and newspaper columns of the exotic appeal of Cuba, of Americans who find their way there, of what awaits the opening of Cuba to U.S. trade. Both Cuba and Puerto Rico have been developing tourism as one of their main industries. What lies in store?

**S HUM 420 Visual Re-Presentation & Virtuosity (ART 476)**
Spring. 4 credits. Limited to 15 students. Permission of instructor. M 2:30-4:25.
Y. Spielmann.
Taking as a starting point the apparent modes of interchangeable selves and characters, figures and figurations in recent films (*Terminator II* and *Matrix*) as prominently exemplified through the use of multiple layers, horror, and further digital devices of imaging, we ask to what extent our understanding of visual orientation through established features of dimension and direction—in short: temporal-spatial coordinates—undergoes a severe shift. Where are the boundaries between the new media, such as the hybrid and further tools of paradoxical structure are inserted into the imagery, which for that particular reason can no longer be considered a frame, a moving or still image, but a hybrid, on what grounds can we speak of representation and topography? The seminar discusses examples in film and other media (depending on the materials available) that give insight into the interrelationship and convergence between older media, such as cinema, and new media, such as hypermedia forms of virtual reality.

**S HUM 421 War, Citizenship, and Identity in the Greco-Roman City-State (also HIST 422)**
Spring. 4 credits. Limited to 15 students. Permission of instructor. T 2:30-4:25.
F. Strausse.
The city-states of Greece and Rome are famous and infamous for their bellicosity. This seminar examines the influence of war on ancient citizenship and identity. We will focus on three sets of questions: (1) To what extent were such ancient ideal types as the citizen-soldier and farmer-soldier real, to what extent are they myths? (2) Did such military institutions as the phalanx, legion, and galley promote equality and egalitarianism? If so, did they also promote liberty, whether in democracies or oligarchic republics? Or did they promote tyranny and Caesarism? (3) To what extent did the military shape identity? What are we to make of myths such as the Amazonomachy? We will focus on the Greek city-states of Athens and Sparta but will cast an eye as well on the Roman republic and early empire, and will also look at modern use and abuse of the ancient city-state. Readings in political philosophy, history, and literary studies as well as history and classics.

**S HUM 422 Miami: New Deal to the Millennium (also ARCH 690)**
Spring. 4 credits. Limited to 15 students. Permission of instructor. F 10:10-12:05.
M. Woods.
Miami's modern design heritage is the focus for examining its paradoxical yet vibrant landscapes: the well known mecca for upper and middle class tourists, the more obscure New South agribusiness center for laborers of color, and now a transnational, multiracial, and multicultural gateway city. The origins of today's Miami are in the New Deal era when government programs resuscitated the industrial sector but also stimulated a post-industrial economy of leisure and tourism. While Art Deco hotels, restaurants, and racetracks along with New Deal projects like the Orange Bowl and Miami–Key West Highway are Miami's public face, migrant camps, juke joints, produce fields and factories, and racially segregated communities are less familiar but equally significant landscapes. After World War II, Morris Lapidus's "too much is never enough" aesthetic and Miami's sensated and violent paradise built on this legacy of the 1930s and 1940s. The seminar draws on the built
environment, historic preservation, public and private development, photography, film, and literature to explore Miami's many faces from the New Deal to the New Millennium.

**S HUM 423** Photography and the City

Spring. 4 credits. Limited to 15 students. Permission of instructor. W 2:30-4:25.

N. Hertz.

From the earliest daguerreotypes of Paris in the 1830s through contemporary urban stereoscopes, photography has been entwined with that of the modern city. This seminar will study some of these ways in which two histories have affected one another. Readings in urban history and theory, views of works by, among others, Marville, Atget, Brassai, Riis, Hine, Strand, Abbott, Evans, Levitt, Frank, Friedlander.

**S HUM 495** Democracy and the City: East and West, Old and New

F. Jullien.

Appraising the subject as a philosopher and a sinologist, I shall deal primarily with Greece and Ancient China. In adopting this dual approach, the seminar will illustrate the difference between the town and the city, and lead to an examination of what constitutes the essence of the city in the West and of the strong link between the city, the form of democracy, and the ideal of liberty. It will conclude with a consideration of the contemporary obliteration of the city—as instanced in today's East Asian megalopolises—and, in light of this, will pose the question of the future of democracy itself.

**Southeast Asia Program**

The Southeast Asia Program coordinates research, teaching, and special campus events relating to Bangladesh, India, Pakistan, Nepal, and Sri Lanka. The program faculty include members from a variety of disciplines, including agricultural economics, agricultural engineering, anthropology, architecture, art, city, and regional planning, comparative religion, ecology and systematics, economics, English, geology, government, history, history of art, human ecology, industrial and labor relations, international agriculture, linguistics, literature, and rural sociology. Undergraduates with a special interest in the region may major in Asian Studies with a Southeast Asia concentration, or complete a Southeast Asia concentration with any other major. Graduate students may pursue the M.A. degree in Southeast Asian studies with a concentration in South Asia

Languages offered are Bengali, Hindi, Nepali, Sinhala, and Sanskrit. Foreign Language and Area Studies scholarships are available to graduate students who are U.S. citizens or permanent residents. Cornell is a member of the American Institutes of Bangladesh, Indian, Pakistani, and Sin Lankan studies. For details on the major, see the Department of Asian Studies listing in this volume. For courses available in South Asian studies, or for further information on research opportunities, direct questions to the South Asia Program Office, 170 Uris Hall.

### Southeast Asia Program

Southeast Asia studies at Cornell is included within the framework of the Department of Asian Studies. Seventeen core faculty members in the colleges of Arts and Sciences, Business, and the Johnson Graduate School of Management, the School of Industrial and Labor Relations, and Agriculture and Life Sciences participate in an interdisciplinary program of teaching and research on the history, culture, and societies of the region stretching from Burma through the Philippines. Courses are offered in such fields as anthropology, Asian studies, economics, finance, government, history, history of art, labor relations, linguistics, music, and rural sociology. Instruction is also offered in a wide variety of Southeast Asian languages, Burmese, Cambodian (Khmer), Cebuano (Bisayan), Indonesian, Javanese, Tagalog, Thai, and Vietnamese, for which Foreign Language Area Studies Fellowships are available to U.S. citizens. In addition, faculty from other disciplines also provide area instruction on Southeast Asia. The formal program of study is enriched by a diverse range of extracurricular activities, including an informal weekly brown bag seminar, art exhibits at the Johnson Museum, and concerts of the Gamelan Ensemble. The George M. C. Kahin Center for Advanced Research on Southeast Asia is the site for public lectures as well as publication and outreach programs of the Center. The Kahin Center is also the site for public lectures as well as publication and outreach programs of the Center. The Kahin Center is also the site for public lectures as well as publication and outreach programs of the Center. The Kahin Center is also the site for public lectures as well as publication and outreach programs of the Center. The Kahin Center is also the site for public lectures as well as publication and outreach programs of the Center. The Kahin Center is also the site for public lectures as well as publication and outreach programs of the Center. The Kahin Center is also the site for public lectures as well as publication and outreach programs of the Center. The Kahin Center is also the site for public lectures as well as publication and outreach programs of the Center.

Undergraduates may major in Asian studies with a focus on Southeast Asia and its languages, or they may elect to take a concentration in Southeast Asian studies with any other major by completing 18 credits of coursework. Graduate students may work toward an M.A. degree in Southeast Asian studies or pursue a Master of Professional Studies in a related discipline. Streams of concentration in Southeast Asian studies. Ph.D. students specializing in Southeast Asia receive a doctorate in a discipline such as history, history of art, anthropology, government, music, economics, or city and regional planning.

For courses available in Southeast Asian studies and details on the major, see the Department of Asian Studies listing in this volume. Additional information is available on the Internet at: www.einaudi.cornell.edu/southeastasia. For further information should be directed to the program office, 180 Uris Hall, (607) 255-2578 or SEAP@cornell.edu.
The course will provide a broad introduction to illuminated books to digital art); and (4) the critical skills necessary to appreciate how and analytic vocabularies of the visual.

**Women’s Studies Program**

**Introduction to the Program**

Women's Studies is an interdisciplinary program that seeks to deepen understanding of women's lives, culture, and history, in all their complex multiplicities. Transformative as well as additive, women's studies challenges us to re-examine much of what we think we already know by providing an intellectual — and critical — feminist framework through which to view the many interconnections among gender, knowledge, and power. Thus, central to the curriculum in women's studies are such overarching notions as these:

(a) that definitions of gender — including those that privilege exclusive heterosexuality — are not natural or universal but are instead social constructions that vary across time and place, serve political ends, and have ideological underpinnings.

(b) that systems of gender inequality interact with other social inequalities, including those of class, race, ethnicity, sexual preference, and Western vs. non-Western cultures; and

(c) that even the most current knowledge derived from the humanities, social sciences, and natural sciences is not as impartial, objective, or neutral as has traditionally been thought but instead emerges out of particular historical and political contexts.

Although all Women's Studies courses except writing seminars count toward the major, they do not all satisfy distribution requirements or count toward the total hours required in Arts and Sciences; if a course is not cross-listed with another Arts and Sciences department, be sure to check with college offices about whether it will satisfy distribution or our requirements for Arts and Sciences.

**Program Offerings**

The Women's Studies Program offers an undergraduate major, an undergraduate concentration, and a graduate minor. Undergraduate students in the College of Arts and Sciences who want to major in women's studies can apply directly to the program. Undergraduate students in other colleges at Cornell will need to work out special arrangements and should speak to the Director of Undergraduate Studies (DUS) in Women's Studies.

**The Undergraduate Major**

The questions posed by feminist inquiry cannot be answered from within any single discipline or even from a simple combination of two or more disciplines. For that reason, the women's studies major provides students with a basic groundwork in the interdisciplinary field of women's studies and then requires each student to construct an advanced and individually tailored program of study on a topic, in a discipline, or in a combination of disciplines of special interest to the student alone.

Rather than specifying a particular sequence of required courses for each and every student, the women's studies major gives students a starting point in women's studies, an active advisory structure to help them shape a curriculum, and an ongoing impetus to reflection about their entire program of undergraduate study.

In designing their major, students should keep in mind that there are not many graduate programs offering a degree in women's studies itself. Accordingly, undergraduates wishing to major in women's studies should talk at length with a faculty member about how to design a program of study that will best qualify them for entry into either a job or a postgraduate degree program when they leave Cornell. To give one example of what needs to be considered in designing a major: Undergraduates who might want to do graduate study within a discipline will need to develop a certain level of disciplinary specialization at the undergraduate level. This can be done either by supplementing the women's studies major with a carefully selected cluster of courses in that discipline or by pursuing a double major.

**Requirements for a Women’s Studies Major**

1. **Prerequisite courses:** before applying to the major, the student must complete any two Women's Studies courses with a grade of B- or better. Some suggested entry-level courses for 2000-2001 include: 206, 211, 244, and 277. These courses would count both as prerequisites and as part of the women's studies major. First-Year writing seminars, in contrast, would count as prerequisite courses but not as part of the major.

2. **Required course work:**
   
   a. A minimum of 36 credits in women's studies is required for the major. No course in which the student has earned less than a C- can count toward these 36 credits. Although there is no single women's studies course that is required of all students, every major must complete a program of study that is both graduated in difficulty and interdisciplinary in scope, a program in other words, that reflects both the breadth and the depth of women's studies scholarship. This program of study must be developed in consultation with the director of undergraduate studies and must include advanced seminars at the 300 level or above.
   
   b. Students may count up to three courses outside women's studies toward the
The Women's Studies Concentration

Undergraduate students in any college at Cornell can concentrate in Women's Studies in conjunction with a major defined elsewhere in the university. The concentration consists of four courses in Women's Studies completed with a grade of C- or above, no more than two of which can come from a single discipline and none of which should overlap with the major. In rare cases, the DUS may allow one class from within a student's major to count toward the requirements for the concentration. Students should not assume the waiver will be granted, and they must petition the DUS with this request before the beginning of their junior year or very early in the fall semester of their senior year. For more information about the Honors Program, see WOMNS 400 and the "Guidelines For a Senior Honors Thesis" available in the Women's Studies Program office.

The Women's Studies Concentration

Undergraduate students in any college at Cornell can concentrate in Women's Studies in conjunction with a major defined elsewhere in the university. The concentration consists of four courses in Women's Studies completed with a grade of C- or above, no more than two of which can come from a single discipline and none of which should overlap with the major. In rare cases, the DUS may allow one class from within a student's major to count toward the requirements for the concentration. Students should not assume the waiver will be granted, and they must petition the DUS with this request before the beginning of their junior year or very early in the fall semester of their senior year. For more information about the Honors Program, see WOMNS 400 and the "Guidelines For a Senior Honors Thesis" available in the Women's Studies Program office.

I. First-Year Writing Seminars

**WOMNS 109 FWS: Gendered Imaginations in African History and Literature (also HIST 108)**

**WOMNS 157 FWS: Close Encounters: Race and Sex in Anthropology and Science Fiction (also ANTHR 157)**

**WOMNS 178 FWS: Desire (also ENGL 178 and THETR 178)**
Spring. 3 credits. E. Hanson. For description, see ENGL 178.

II. Courses

**WOMNS 203 Work and Family (also SOC 206)**
Fall. 3 credits. W. Burkard. For description, see SOC 203.

**WOMNS 206 Gender and Society (also SOC 206)**
Spring. 3 credits. B. Wejnert.

**WOMNS 210 Introduction to Feminist Theory**

This course introduces students to critical approaches in feminist scholarship to the cultural, socioeconomic, and political situation(s) of women. Particular attention will be paid to the conceptual challenges and dangers posed by attempts to study women without taking account of relations between race, class, and gender in ideological and social formations. Readings will draw on work in various disciplines and will include literary texts and visual images.

**WOMNS 211 Introduction to Women's Studies**
Spring. 3 credits. K. McCullough.

Introduction to Women's Studies is a multidisciplinary approach to understanding the experiences, historical conditions, and concerns of women both in the present and the past. As the academic manifestation of feminism, women's studies offers a range of perspectives (from liberal to radical) but focuses, in general, on understanding the sources of women's oppression in order to eliminate these sources.

**WOMNS 212 African American Women: Twentieth Century (also HIST 212 and AM ST 212)**

For description, see HIST 212.

**WOMNS 214 Biological Basis of Sex Differences (also BIOAP 214 and B&SOC 214)**
Spring. 3 credits. J. Fortune.

For description, see BIOAP 214.

**WOMNS 234/434 Gender in Early Modern Europe (also HIST 234/434)**

**WOMNS 243 Inside-Out: The American Everyday Interior (also DEA 243)**
Spring. 3 credits. J. Jennings.

For description, see DEA 243.

**WOMNS 244 Language and Gender Relations (also LING 244)**
Spring. 4 credits. S. McConnell-Ginet.

For description, see LING 244.

**WOMNS 246 Contemporary Narratives by Latina Writers (also SPANL 246 and LSP 246)**
Fall. 3 credits. L. Carrillo.

For description, see SPANL 246.

**WOMNS 269 Introduction to Feminist Political Thought (also GOVT 369)**
Fall. 4 credits. N. Hirschmann.

For description, see GOVT 369.

**WOMNS 273 Women in American Society, Past and Present (also HIST 273)**

**WOMNS 277 Social Construction of Gender (also PSYCH 277)**
Fall. 3 credits. S. Bem.

For description, see PSYCH 277.

**WOMNS 279 Queer Fiction (also ENGL 279)**
Spring. 4 credits. E. Hanson.

For description, see ENGL 279.

**WOMNS 280 Lesbian Novel (also ENGL 279)**

**WOMNS 285 Introduction to Sexual Minorities (also HD 284)**

**WOMNS 300 Latina Activism and Feminist Theory (also LSP 300)**
Spring. 4 credits. D. Cohen.

For description see LSP 300.

For description, see HIST 303.

**WOMNS 309/509 The Sociology of Marriage (also SOC 309/509)**
Spring. 3 credits. M. Clarkberg.

For description, see SOC 309/509.

**WOMNS 314/514 Gender and Work (also SOC 314/514)**

**WOMNS 320 Queer Theater (also THETR 320)**
Fall. 4 credits. T. Hope.

For description, see COM L 318.

**WOMNS 320 Queer Theater (also THETR 320)**
[WOMNS 465] Feminist Theory/Lesbian Theory (also COM L 465 and GERST 465)
A. Villarejo.
This seminar will explore developments in feminist theory, primarily in the United States from the 1950s through the mid-1990s. We will also trace the changing status of "lesbianism" in feminist theories and examine its status in current constructions of "queer theory." What happens to the relationship between feminist theory and lesbian thought when "queer theory" emerges? The purpose of the course is to encourage critical, historically informed readings of what could be considered canonical texts and crucial junctures in Second Wave feminist thought, many of which remain unfamiliar even to Women's Studies students.

[WOMNS 466] Feminism and Gender Discrimination (also GOVT 466 and LAW 468)
K. Abrams.

[WOMNS 467] Sexual Minorities and Human Development (also HD 464)
Spring. 3 credits. R. Savin-Williams.
For description, see HD 464.

[WOMNS 468] Radical Democratic Feminisms (also GOVT 467)
A. M. Smith.

[WOMNS 476] Global Women's Literature: (En) Gendering Space (also ENGL 476)
Spring. 4 credits. E. Deloughrey.
For description, see ENGL 476.

[WOMNS 478] Family and Society in Africa (also AS&RC 478)
Fall. 4 credits. N. Assie-Lumumba.
For description, see AS&RC 478.

[WOMNS 479] Women and Gender Issues in Africa (also AS&RC 479)
Spring. 4 credits. N. Assie-Lumumba.
For description, see AS&RC 479.

[WOMNS 480] Gender Adjudicated (also HIST 480)
Fall. 4 credits. T. Loos.
For description, see HIST 480.

[WOMNS 481] Latin American Women Writers (also SPANL 492 and COM L 482)
Spring. 4 credits. D. Castillo.
For description, see SPANL 492.

[WOMNS 485] Encountering Women's Studies: Perspectives from the Disciplines
S. Samuels.
What impact has women's studies had on pre-existing ways of thinking and knowing in such disciplines as history, psychology, sociology, and linguistics? Readings and discussions will analyze the role of women's studies as it has challenged the disciplines and has in turn been challenged by scholars and nonscholars alike.

[WOMNS 487] Gender, Nationalism, and Conflict (also GOVT 486)
Fall. 4 credits. M. Katzenstein and M. Evangelista.
For description, see GOVT 486.

[WOMNS 488/489] Beliefs, Attitudes, and Ideologies (also PSYCH 488/489)
Fall. 4 credits. D. Bem.
For description, see PSYCH 489.

[WOMNS 491] Honors Seminar I: Experimental Novels by Women (also ENGL 491)
Fall. 4 credits. M. Hite.
For description, see ENGL 491.

[WOMNS 492] French Feminisms (also FRIT 493)
Fall. 4 credits. N. Furman.
For description, see FRIT 493.

[WOMNS 496] Women and Music (also MUSIC 493)
J. Peraino.

[WOMNS 499] Directed Study
Fall and spring. Variable credit. Prerequisites: 1 course in women's studies and permission of a faculty member of the Women's Studies Program Board. Staff.

[WOMNS 502] Education and Development in Africa (also AS&RC 502)
Spring. 4 credits. N. Assie-Lumumba.
For description, see AS&RC 502.

[WOMNS 530] Womanist Writing in Africa and the Caribbean (also AS&RC 530)
A. Adams.

[WOMNS 600] Special Topics in Feminist Theory: An Interdisciplinary Graduate Course in Women's Studies
Fall. 4 credits. This course is open to graduate students and undergraduate seniors who have obtained permission of instructor. Staff.
The purpose of this course is to expose graduate students to interdisciplinary approaches in Women's Studies and feminist theory to a variety of topics or questions. While many of our graduate courses train students in highly specialized areas of feminist theory, this course aims to teach students how to find common intellectual ground around a single topic from interdisciplinary perspectives without sacrificing the complexity of any disciplinary approach. The course is designed for graduate minors in Women's Studies and students with a specialized interest in feminist theory. Although it is not required, the course is strongly recommended for students obtaining a graduate minor in Women's Studies.

[WOMNS 608] African-American Women (also HIST 608)
M. Washington.

[WOMNS 610] Sexuality and the Politics of Representation
Fall. 4 credits. A. Villarejo.
The seminar will explore contexts for critical work on sexuality and film/video. Beginning with the texts of Foucault, Freud, Lacan, Jacqueline Rose, and Jeffrey Weeks, the course examines the uses and abuses of psychoanalytic theory, as well as the regulation of sexuality in the past century. "Sexuality" is not, however, a simple abstraction, and its coherence is put to the test through the dual lenses of Marxism and poststructuralism throughout the second half of the course, with readings from Gramsci, Deleuze and Guattari, Lyotard, and others. Films include Blonde Venus, Trash, The Night Porter, Ali: Fear Eats the Soul, Written on the Wind, and others.

[WOMNS 612] Population and Development in Asia (also R SOC 612)
L. Williams.

[WOMNS 614] Gender and International Development (also CRP 614)
L. Beneria.

[WOMNS 626] Graduate Seminar in the History of American Women (also HIST 626)
M. B. Norton.

[WOMNS 636] Comparative History of Women and Work (also ILRCB 636)
Spring. 4 credits. I. Devault.
For description, see ILRCB 636.

[WOMNS 644] Topics in the History of Women in Science (also S&T 644)
Spring. 4 credits. M. Rossiter.
For description, see S&T 644.

[WOMNS 654] Queer Theory (also ENGL 654 and COM L 654)
E. Hanson.

[WOMNS 655] Decadence (also ENGL 655 and COM L 655)
E. Hanson.

[WOMNS 661] Kinematic Desire (also ENGL 660 and AM ST 662)
E. Hanson.

[WOMNS 670] Feminist Political Theory (Graduate Seminar) (also GOVT 671)
N. Hirschmann.

[WOMNS 671] Feminist Methods (also R SOC 671)
S. Feldman.

[WOMNS 692] Hispanic Feminisms (also SPANL 690)
D. Castillo.

[WOMNS 699] Topics in Women's Studies
Fall and spring. Variable credits. Staff. Independent reading course for graduate students on topics not covered in regularly scheduled courses. Students develop a course of readings in consultation with a faculty member in the field of Women's Studies who has agreed to supervise the course work.

[WOMNS 733] Literary Anti-Feminism (also ENGL 733)
L. Brown.

It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, sexual orientation, age, or handicap. The university is committed to the maintenance of affirmative action programs that will assure the continuation of such equality of opportunity. Sexual harassment is an act of discrimination and, as such, will not be tolerated. Inquiries concerning the application of Title IX may be referred to Cornell’s Title IX coordinator (assistant director, gender equity) at the Office of Workforce Diversity, Equity and Life Quality, Cornell University, 160 Day Hall, Ithaca, New York 14853-2801 (telephone: 607-255-4970; TDD: 607-255-7656).

For Cornell University directory information or general information, call 607-255-2000 or 607-254-INFO. The web page for 2000-2001 Courses of Study has been made available at cuinfo.cornell.edu/Academic/Courses/.

To obtain a copy of this catalog, please follow these guidelines:

If you are a prospective undergraduate student and don’t have web access, please contact the Undergraduate Admissions Office, Cornell University, 410 Thurston Ave., Ithaca, NY 14850-2488, 607-255-5241.

If you are a prospective graduate student, please consult the listing of the course catalog on the web (see above for address).

If you are a currently enrolled student, please contact your college registrar.

All others please contact the Office of the University Registrar, Cornell University, B07 Day Hall, Ithaca, NY 14853-2801, 607-255-1200, e-mail: ubreg@cornell.edu
