## Cornell University Calendar

### Fall Semester
- Residence halls open
- Freshman orientation begins
- New-student orientation begins
- Registration-course exchange
- Instruction begins
- Physical education classes begin
- Fall break; instruction suspended
- Instruction resumes
- Pre-course enrollment for spring
- Family Weekend
- Homecoming
- Thanksgiving recess; instruction suspended, 11:10 p.m.
- Instruction resumes
- Study period
- Final examinations begin
- Final examinations end
- Residence halls close

### Winter Session Period Begins
- Three-week classes begin
- Winter session period ends

### Spring Semester
- Residence halls open
- Registration-course exchange
- Instruction begins
- Physical education classes begin
- Spring break; instruction suspended
- Instruction resumes
- Pre-course enrollment for fall
- Instruction ends
- Study period
- Final examinations begin
- Final examinations end
- Residence halls close

### Summer Session
- Three-week session
- Eight-week session
- Six-week session

The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

This catalog was produced by Media and Technology Services at Cornell University.

INTRODUCTION

Courses of study (cuinfo.cornell.edu/Academic/Courses/), a catalogue of Cornell University’s many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings, and procedures. Additionally, a student handbook, distributed to all incoming students, describes life at Cornell. The Policy Notebook (www.univco.cornell.edu/policy/library.html), also distributed to each new student, summarizes pertinent university policies, including the campus Code of Conduct and the Code of Academic Integrity. Students should consult with their college’s advising office for specific information on their college’s academic policies and procedures, degree programs, and requirements.

All these publications are also available for viewing on CUINFO the university’s electronic information system, and in print at the various university libraries, the Office of the Dean of Students, the Office of the Dean of the University Faculty, the Office of University Counsel, the Office of the Judicial Administrator, and the college offices.

Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City.

The following are offices and sources of information about admission to Cornell University.

Medical College and Graduate School of Medical Sciences. Office of Admissions, 1300 York Avenue, New York, NY 10021, 212–746–1067.

CUINFO ON THE WEB

It is not possible to keep this single-volume course list completely up-to-date. The most current information regarding course schedules, sections, rooms, credits, and registration procedures may be found on CUINFO, Cornell’s electronic information source, and in the Course and Time Roster and the Course and Room Roster, published each semester by the Office of the University Registrar. You may access CUINFO through the web. The URL is: www.cornell.edu.

Students are also advised to consult individual college and department offices for up-to-date course information.

EXPLANATION OF COURSE NUMBERING SYSTEMS

The course levels have been assigned as follows:

100-level course—introductory course, no prerequisites, open to all qualified students

200-level course—lower-division course, open to freshmen and sophomores, may have prerequisites

300-level course—upper-division course, open to juniors and seniors, prerequisites

400-level course—upper-division course, open to seniors and graduate students, 200- and 300-level course prerequisites or equivalent

500-level course—professional level (e.g., management, law, veterinary medicine)

600-level course—graduate-level course, open to upper-division students

700-level course—graduate-level course

800-level course—master’s level, thesis, research

900-level course—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate- and graduate-level courses

Agriculture and Life Sciences

Architecture, Art, and Planning

Arts and Sciences

Engineering

Hotel Administration

Human Ecology

Industrial and Labor Relations

Nutritional Sciences

Officer Education

Group 2: Graduate professional divisions

Law

Management

Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses, 0–999 are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

ACCREDITATION

Cornell University is accredited by the Middle States Association of Colleges and Schools. A copy of the most recent reaffirmation of Cornell’s accreditation can be found at www.spc.cornell.edu/Accreditation/Status. Requests to review additional documentation supporting Cornell’s accreditation should be addressed to Michael Matier, Director, Institutional Research and Planning, Cornell University, 440 Day Hall, Ithaca, NY 14853–2801, mmw5@cornell.edu.

Advanced Placement

CREDIT FOR ADVANCED PLACEMENT

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen. Students may use credit they receive for advanced placement to satisfy degree requirements only as specified by the individual college at Cornell. Although such credit counts toward the bachelor’s degree, its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their undergraduate curricula.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from one of the following:

a. Achieving the requisite score from the Advanced Placement Examinations (AP exams) from the College Entrance Examination Board (CEEB) in Princeton, NJ. The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on page 7. Some departments at Cornell offer departmental exams (usually during orientation), for placement and advanced placement credit.

b. Passing a regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.

c. See below for international credentials.

Please note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work. Students who have taken such courses may, however, earn credit by taking an appropriate exam as described in paragraph a above.
DETERMINATION OF CREDIT AND PLACEMENT

The table on page 7 provides information on how credit and placement are determined for the most subjects. Supplementary information for subjects requiring additional explanation is provided below.

Biological Sciences
Any student who earns a score of 5 on the CEEB Advanced Placement Examination in biology may elect to receive eight credits and be exempted from all introductory biology courses.

Students not majoring in biological sciences who score a 4 or 5 may earn, respectively, six or eight advanced placement credits. This will satisfy the distribution requirement in biological sciences for students in the College of Human Ecology and a portion of the group B distribution requirement for students in the College of Agriculture and Life Sciences. For students in the College of Arts and Sciences, credits may be applied toward distribution in science and quantitative reasoning as stipulated by the college.

Biological sciences majors who receive a score of 5 may receive eight credits and be exempt from all introductory biology courses or elect to receive four credits and select one of the options allowed for majors with a score of 4. The student receiving a score of 4 must fulfill the introductory biology requirement by taking BIO G 101-102, 101/103, 102/104, or 103-104 or 105 or 106 (Biological Sciences, Lectures and Laboratory). These students should consult information available in the BIO G 101-104 course (1140 Comstock Hall) and in the Office of Undergraduate Biology (216 Stimson Hall) to determine which semester to complete the introductory biology requirement. For students in doubt, BIO G 101/103 is advised. These students will receive a total of eight introductory biology credits (four advanced placement credits plus four course credits).

Chemistry
The Department of Chemistry offers two sequences that satisfy prerequisites for further work in the department. Chemistry 207-208, an eight-credit sequence that includes qualitative analysis, and Chemistry 215-216, a nine-credit sequence that includes qualitative and quantitative analysis. Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination in chemistry or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to four credits. A student may earn four or eight credits by suitable performance on the departmental examination. To take the departmental examination, students must sign up beforehand in the Undergraduate Office, 303 Upson Hall.

Students who receive scores of 700 or better on the CEEB SAT II examination in English composition, 700 or better on the CEEB SAT II examination in literature, or 4 or 5 on the CEEB Advanced Placement Examination in English are eligible to enroll, space permitting, in the following English freshman writing seminars: 270, 271, 272.

Advanced placement credits may not be used to fulfill requirements of the English major or distribution requirements of the College of Arts and Sciences.

Mathematics and Statistics
The Cornell calculus sequences discussed below are described under "Basic Sequences" in the Department of Mathematics section of this catalog.

The regular freshman calculus courses at Cornell do not differ substantially from calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary school students who have had the equivalent of at least one semester of

†Cornell Advanced Standing Examination. Contact Callean Hile, 303 Morrill Hall, for French, Italian, and Spanish. Contact Marguerite Mizelle, 183 Goldwin Smith Hall, for German.
analytic geometry and calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (calculus AB or calculus BC) during their senior year. Students who have been awarded Advanced Placement credit by their colleges for calculus or statistics may not also receive academic credit at Cornell for similar courses. In particular, students who have been awarded AP credit for a semester of calculus (4 academic credits) may not also receive academic credit for any first-semester calculus course (Math 106, 111, 121, 191, 193). Students who have been awarded AP credit for 2 semesters of calculus (8 academic credits) may not also receive academic credit for any first-semester calculus course (Math 106, 111, 121, 191, 193) or any second-semester calculus course (Math 112, 122, 192). Finally, students who have been awarded AP credit for statistics (3 academic credits) may not also receive academic credit for any of the introductory statistics courses Biometry 200, ILRST 210, or Math 171.

The following rules apply to students being admitted to all colleges except the College of Engineering.

Students with a grade of 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 213, 221, 223 or 293), but students entering Mathematics 293 may have to make up some material on vectors and multivariable calculus. Students with a 2 or 3 on the BC examination or a 3, 4, or 5 on the AB examination may take the appropriate second-semester course (Mathematics 112, 122, or 192). However, students who receive the borderline passing scores of 2 on the BC examination or 3 on the AB examination are strongly advised to take Math 112 rather than the more demanding courses 122 or 192. Advanced placement credit will be awarded appropriately; however, no credit will be granted for a grade of 1 on the BC or 1 or 2 on the AB examination. A placement examination in mathematics is offered at Cornell only during orientation week and should be taken by students who

1) have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination,

2) believe that the placement assigned on the strength of the CEEB Advanced Placement Examination is not high enough in their case.

Students are strongly urged to take the departmental placement test even if they feel that their grasp of the material is uncertain. The grade on this test does not become part of a student's record. No advance registration for the departmental examination is necessary. For the policies of the College of Engineering regarding advanced placement and credit, please consult the college's section of this catalog.

Modern Languages
Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See "Placement Tests" and "Advanced Placement credit" under "Foreign Language Requirements" in the Arts and Sciences section of this catalog. Students who have had a year of formal study or substantial informal study since they last took a placement test should take the examination again during orientation week if they plan to continue course work.

Advanced standing credit may be entered on a student's record as follows:

1) Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB, earn three credits, and are eligible to take Cornell's Advanced Placement Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.

2) Students who achieve a minimum score of 65 on the Cornell language placement test given during orientation week are eligible to take Cornell's Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.

3) For formal language work at an accredited college, credit is considered by the department on submission of a transcript and may be entered on the student's Cornell record.

4) Native speakers of languages other than English may, on examination by the appropriate professor, be granted a maximum of three credits if they can demonstrate proficiency equivalent to course work on the 200 level or above at Cornell. Additional credit will be considered only for those who pursue advanced work in their native language. Students may not receive both advanced placement credit for competence in their native language and Cornell credit for English as a second language.

Information about times and places to take placement tests is available in the orientation booklet and from Academic and Career Counseling Services on the web at dml.cornell.edu/html/place/testschedule.html. For more information, see the College of Arts and Sciences section on language course placement, or contact Callicae Hile, 303 Morrill Hall for French, Italian, and Spanish; Marguerite Mizelle, 183 Goldwin Smith Hall, for German; Jenka Fyfe, Morrill Hall, for Russian; Kim Robinson, 388 Rockefeller Hall, for Asian languages.

Music
Advanced placement and credit are awarded only in music theory and only on the basis of a comprehensive examination administered by the Department of Music, normally during orientation week. If special arrangements are made, the examination may be administered at other times during the academic year. Inquiries may be directed to the Department of Music (telephone: 607-255-4097).

**Physics**
Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (Physics B or Physics C), certain international examinations, or the departmental examination (which may be taken during orientation week or at other times as arranged). For information about the departmental examination, students should consult the director of undergraduate studies, 101 Clark Hall, or the department chair, 109 Clark Hall.

Physics B: Students earning a score of 4 or 5 may receive eight credits for noncalculus-based Physics 101 and 102. Those earning a score of 5 in physics B and a score of 4 or 5 in calculus BC may choose to accept four credits in calculus-based Physics 112 or 207 instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

Physics C—Mechanics: Students earning a score of 4 or 5 may receive four credits for Physics 112 or 207, or placement into Physics 116, a first-semester honors course, with no AP credit.

Physics C—Electricity and Magnetism: Students earning a score of 5 may receive four credits for Physics 213.

A student planning a major in Physics or Applied and Engineering Physics and who is eligible for AP credit should consult with his/her adviser or the department representative.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrollment. To qualify for advanced placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from the director of undergraduate studies, 101 Clark Hall, or from the Department of Physics, 109 Clark Hall.

**ADVANCED PLACEMENT AND CREDIT FOR INTERNATIONAL CREDENTIALS**
Following are the policies currently in effect for G.C.E. "A" Level Examinations and International Baccalaureate Higher Level Examinations. Students may submit results of the French Baccalauréat or German Abitur for possible credit depending on the stream or specialization followed. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during orientation week.

**General Certificate of Education (GCE) Advanced ("A") Level Examination** exchanges are awarded advanced standing and credit. Students must present the original or a certified copy of their examination certificate in order to receive credit.

Following is a list of subjects and the marks for which credit will be awarded:

*Consult the college office for special considerations and requirements.

AUDITING COURSES

Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

LEAVES AND WITHDRAWALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume coursework. Students should inform their college of intent to return.

A student may withdraw from the university at the student’s discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave. Medical leaves are granted and processed through University Health Services.

Internal Transfer Division

Students may not always be satisfied with the original Cornell school or college into which they’ve been admitted. They may decide to transfer from one college to another, within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division’s director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and

University Registration

University registration is the official recognition of a student’s relationship with the university and is the basic authorization for a student’s access to services and education. Completion of registration is essential to student’s access to services and education.

To become a registered student at Cornell University, a person must:

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State health requirements;
- have no holds from the college, the office of the Judicial Administrator, Gannett Clinic, or the Bursar.

Individuals must become registered students by the end of the third week of the semester. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

COURSE ENROLLMENT

Pre-course enrollment for each semester at Cornell takes place partway through the preceding semester. Dates are announced in advance and are posted in school and college offices. Students are expected to meet with their advisors during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. A form is completed by the student and signed by both the student’s advisor and an appropriate representative of the department offering the course (an instructor, department staff member, or college registrar, depending on the college). The completed and signed form must be returned to the student’s college office to be processed. Professional schools, Continuing Education and Summer Sessions, and the Department of Physical Education and Athletics have different course enrollment and add-drop policies. See the chart below for their course add/drop/change fees.

New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

Students may not always be satisfied with the original Cornell school or college into which they’ve been admitted. They may decide to transfer from one college to another, within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division’s director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and
essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Although sponsorship does not guarantee admission to the Internal Transfer Division, it is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division. For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-4386).

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.

**Residency status is determined at the time of admission by the college. Change in residency status is determined by the bursar.**

**Fees and Expenses**

Undergraduate applicants to Cornell pay a nonrefundable $65 application fee when submitting an application for admission. The graduate application fee is $65. Application to the Johnson Graduate School of Management costs $90 (domestic), $120 (international).

**Tuition Refund Policy**

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. Previously matriculated students who terminate their registration with the university during a fall or spring semester in this manner will be charged tuition from the university registration day through the date of their request as follows:

- first six days of the semester (including university registration day), no charge;
- seventh day of the semester, 10 percent; second week, 20 percent; third week, 30 percent; fourth week, 40 percent; fifth week, 60 percent; sixth week, 80 percent; seventh week to the end of the semester, 100 percent.

First-time matriculants will be charged tuition from the university registration day through the date of their request as follows:

- first six days of the semester (including university registration day), no charge;
- seventh day of the semester, 10 percent; second and third weeks, 20 percent; fourth week, 30 percent; fifth and sixth weeks, 40 percent; seventh week, 50 percent; eighth and ninth weeks, 60 percent; tenth week to the end of the semester, 100 percent.

Repayment policy. Students receiving financial aid from the university who withdraw during a term will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. A partial semester will generally count as one of the eight semesters of financial aid eligibility normally allowed a student.

**BILLING AND PAYMENT**

**Billing**

Tuition and room and board charges will be billed in July and December and must be paid prior to registration. The due date for these semester bills will normally be five to ten working days prior to registration day. All other charges, credits, and payments will appear on monthly statements mailed before the twenty-fifth of every month. It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.

All bills are due by the date stated on the bill; all payments must be received by that date to avoid finance charges. Payments are not processed by postmark.

Please inform the Office of the Bursar of any change in billing address. Address changes made at other offices will not change the billing address. The address initially used on billing statements will be the home address as listed on each student's application for admission.

**Payments**

An individual who has outstanding indebtedness to the university will not be allowed to register* or reregister in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. University policy precludes the use of any current financial aid for payment of past-due charges. The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student's bill by several departments and offices of the university. Since the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.

For further information, students should contact the Office of the Bursar, Cornell University, 220 Day Hall, Ithaca, New York 14853-2801 (telephone: 607-255-2336; fax: 607-255-6442). E-mail: UCO-Bursar@cornell.edu

**STUDENT HEALTH INSURANCE**

Because of the high cost of medical care, it is Cornell University policy that every full-time registered student (including students registered in absentia and nondegree students) must have health insurance coverage. You have two options.
1. enroll in the Student Health Insurance Plan (SHIP), or
2. waive the SHIP if you have comparable health insurance that meets Cornell's requirements.

The Student Health Insurance Plan is developed especially for Cornell students and provides extensive coverage at a reasonable cost for most on- or off-campus medical care. Complete and current details of the SHIP, its cost, and an enrollment/waiver form will be mailed to each student with the July bursar bill.

To ensure that you are covered by an active and adequate health insurance plan, each year you will be enrolled automatically in the SHIP unless you submit a waiver form that affirms you have comparable insurance in place, from the day you become a registered student, and agree to maintain that coverage while a student at Cornell. If you have adequate health insurance coverage and plan to waive the Student Health Insurance Plan, you must submit the waiver form each year by the deadline to avoid a charge.

Fall enrollees: you will receive an enrollment/waiver form for the SHIP with your July bursar bill that you must return by 8/25/00.

Spring enrollees: you will receive the form after you arrive at Cornell; deadline is 2/23/01.

Late registrants: the form is due no later than 30 days after the initial bill for the insurance charge.

The Student Health Insurance Plan provides coverage 24 hours a day, 365 days a year, anywhere in the world. Students graduating mid-year may be eligible to purchase a five-month plan. Students enrolled in the SHIP may enroll their eligible dependents for an additional cost (fall deadline: September 29). Graduates and professional students who prefer to pay monthly must enroll in the installment payment plan no later than September 29. Because of policy restrictions, the plan is nonrefundable (except for dependents who no longer meet eligibility requirements and students who withdraw from Cornell within the first 30 days of the academic year).

Class Attendance, Meeting Times, and Examinations

CLASS ATTENDANCE AND ABSENCES

Students are expected to be present throughout each term at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

Absences because of religious beliefs. In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up examinations, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

No classes or laboratory exercises are to be held between the hours of 4:25 p.m. and 7:30 p.m. Monday through Thursday, after 4:25 p.m. on Friday, after 12:20 p.m. on Saturday, and all day Sunday.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 p.m. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each term.

Evening academic activities commencing at 7:30 p.m. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (athletic, musical, theatrical, employment, etc.).

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

FINAL EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available in the Course and Time Roster and the Course and Room Roster, both of which are published through the Office of the University Registrar each semester. Examinations not listed in the registrar’s examination schedule will be arranged by the professor in charge and must fall within the announced examination period, except by permission of the dean of the faculty in accordance with existing faculty legislation.

General Rules Governing Final Examinations

Legislation of the university faculty governing study periods and examinations is as follows:
1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the university registrar's office without prior written permission of the dean of the faculty.

2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.

3. Permission will be given by the dean of the faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.

4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.

5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.

6. Faculty can require students to submit papers during the week preceding the study period.

7. Take-home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period.

The university policies governing study period and final examinations are:

a) Each course should require that a final examination or some equivalent exercise (for example, term paper, project report, final critique, oral presentation, or conference) be conducted or due during the period set aside for final examinations.

b) Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, i.e., illness, death in the family, etc.

c) Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following term, to afford students such right of review.

---

**EVENING PRELIMINARY EXAMINATIONS**

The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m.

An alternative time to take the examination must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

---

**Grading Guidelines**

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D-; F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a year-long course. The grades of INC and R do not have quality-point equivalents. These are the quality-point equivalents:

- A+ = 4.5
- A = 4.0
- A- = 3.7
- B+ = 3.3
- B = 3.0
- B- = 2.7
- C+ = 2.3
- C = 2.0
- C- = 1.7
- D+ = 1.3
- D = 1.0
- D- = 0.7
- F = 0.0

This is how a term average is computed:

- **Course**
- **Grade**
- **Points**
- **Credits**
- **Product**

<table>
<thead>
<tr>
<th>Course</th>
<th>Grade</th>
<th>Points</th>
<th>Credits</th>
<th>Product</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chemistry 105</td>
<td>B+</td>
<td>3.3</td>
<td>3</td>
<td>9.9</td>
</tr>
<tr>
<td>English 151</td>
<td>C</td>
<td>1.7</td>
<td>3</td>
<td>5.1</td>
</tr>
<tr>
<td>DEA 145</td>
<td>B</td>
<td>3.0</td>
<td>4</td>
<td>12.0</td>
</tr>
<tr>
<td>CEH 100</td>
<td>B</td>
<td>3.0</td>
<td>3</td>
<td>9.0</td>
</tr>
<tr>
<td>DEA 111</td>
<td>C</td>
<td>2.0</td>
<td>3</td>
<td>6.0</td>
</tr>
</tbody>
</table>

**Total**: 16 42.0

To arrive at the term average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more terms) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

---

**S-U GRADES**

On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

- **Resolved, that:**
  - A. the S-U system have symbol equivalents which are uniform within the university: "S" means C- or above; "U" means D+, D, D-, or failure.
  - B. S-U options be chosen by the student during the first three weeks of the term.
  - C. the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U.
  - Any change in grading options must be announced by the instructor within the first two weeks of the term.
  - D. course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades.

The rules for the S-U option are further defined by each of the academic units. They are as follows:

**Agriculture and Life Sciences.**

- (a) Must have 100 credit hours with A, B, C, D grades.
- (b) The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (c) Freshmen may not exercise the S-U option.

**Architecture, Art, and Planning.**

- (a) All courses specifically required for a degree or certificate. Various departments may designate specific required courses where S-U will be permitted. (b) In a course so designated as S or U, the entire class is so graded. The instructor must announce this decision within the first two weeks of the time. (c) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of class. (d) The option must be made by the end of the first three weeks of class. (e) The option must be used for the final grade.

**Arts and Sciences.**

- (a) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (b) Permission of instructor. (c) A minimum of 80 of the 120 hours required for the A.B. degree must be in courses for which the student has received letter grades.

---

---
courses (not counting PE) may be counted towards degree requirements during a student's college career.

**Industrial and Labor Relations.** (a) This option may be elected, if available in I&LR electives, or in out-of-college electives but not including directed studies. (b) Degree requirements include a minimum of 105 letter grade (A to D-) credits. (c) Student must also be in good academic standing. (d) A "U" is considered the equivalent of an "F" in determining a student's academic status. (e) Limited to two courses per term, not to exceed four hours in any one course.

**Internal Transfer.** (a) S-U grades permitted only when it is the only option or (b) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

**Veterinary Medicine.** (a) There are four courses in the veterinary core curriculum that are offered on an S-U basis only. All other required core courses must be taken for a letter grade. (b) Elective courses for veterinary students may be offered on an S-U basis at the option of the professor.

### INCOMPLETE

The grade of incomplete is appropriate only when two basic conditions are met:

1. The student has a substantial equity at a passing level in the course with respect to work completed, and
2. The student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be selected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up within the deadline and that the grade has been properly recorded with the student's college registrar.

### CHANGES IN GRADES

Changes in a grade may be made only if the instructor made an error in assigning the original grade.

### OFFICIAL TRANSCRIPTS

An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts can be obtained through the Office of the University Registrar, B7 Day Hall.

### University Requirements for Graduation

The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student's college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

### PHYSICAL EDUCATION

#### Classes

All undergraduate students must complete two terms of work in physical education unless exempted from this requirement for medical or other special reasons for advanced standing on admission. For transfer students the requirement is reduced by the number of terms satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each term, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding 20 hours a week). The Garnett Health Center can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

#### Swim Test

The University Faculty Committee on Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. Students will receive a grade of incomplete in Physical Education until they have passed the swim test or fulfilled the requirement by satisfactory attendance in two terms of Basic Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the University Faculty Committee on Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

### STUDENT RESPONSIBILITIES

Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

### Student Records Policy

Under the Family Educational Rights and Privacy Act of 1974 (FERPA), Cornell University is required to advise students of their rights concerning their education records. Education records include records directly related to a student and maintained by an educational institution or party acting on its behalf. The law gives students the right to:

a) inspect and review their education records;

b) challenge contents of education records;

c) a hearing if the challenge is unsatisfactory;

d) include an explanatory statement in the education records if the outcome of the hearing is unsatisfactory;

e) prevent disclosure of personally identifiable information*;

f) secure a copy of the institutional policy which includes the location of all education records**; and

g) file complaints with the Department of Education concerning institutional failure to comply with the act.

*Directory information is a category of personally identifiable information that includes name, home address, local address, local telephone listing, dates of attendance at Cornell, major field of study and college attended, previous educational agency or institution attended, participation in officially recognized activities (in athletics, the weight and height of members of athletic teams), degrees earned, and awards. Directory information may be released unless the student indicates otherwise at the time of registration. Students who wish no release of their directory information must inform the office of the university registrar in writing within 10 days of the date of official university registration. Students may rescind their no release request at any time in writing to the office of the university registrar.

**Cornell University Policy on Access to and Release of Student Education Records* is available on the web at URL: WWW.UNIVCO.CORNELL.EDU/policy/ASI.html.
POLICY ON POSTING OF STUDENT INFORMATION

In compliance with the university’s policy on student educational records, and the U.S. Department of Education’s Family Educational Rights and Privacy Act of 1974 (FERPA), restricted student information may not be posted.

Accordingly, the following student information is considered restricted and therefore may not be posted:

- Student social security number
- Student identification number
- Courses elected
- Grades earned
- Grade point average
- Class rank
- Date of birth
- Place of birth
- Home telephone listing
- Academic and disciplinary actions
- Student or administrative committees
- The most recent student educational records from previous educational agency or institution
- Financial arrangements between the student and the university
- Any other education record containing personally identifiable information

For further information, please refer to the revised Policy on Access to and Release of Student Education Records on the web at www.univco.cornell.edu/policy/asi.html.

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty for the fraudulent act by a student to advance his or her academic status merits a severe penalty for the fraudulent act by a student to advance his or her academic status merits a severe penalty.

PROTECTION OF HUMAN SUBJECTS IN RESEARCH

The University Committee on Human Subjects is the official review board of all university projects that use humans as research subjects. Projects affected by this restriction include, but are not limited to, surveys, questionnaires, studies of existing data, documents, records in which there are no identifiers, as well as mental and physical tests of human subjects. Requests for student information must be submitted in writing to the Assistant Vice President for Academic Programs and Campus Affairs, 311 Day Hall. All proposals involving human subjects in any category must be submitted to the committee for review.

Inquiries, communications, and requests for guidelines should be directed to the committee’s Executive Secretary, 120 Day Hall (255-2945). The guidelines are also available at the web address www.osp.cornell.edu.

USE OF ANIMALS FOR COURSES

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered.

Guidelines for Faculty and Students with Respect to the Use of Animals in Instruction

Background: On December 8, 1987, the Cornell University Institutional Animal Care and Use Committee approved a series of guidelines recommended to them by the University Animal Welfare Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

Guidelines:

1. For demonstrating certain principles and procedures the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.
2. For courses in which vertebrate animals are to be used in dissection, surgery, or in other experimental procedures, the course description that appears in the Announcement “Courses of Study” should alert students to this fact.
3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor of each course.
4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.
5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor in the course.
6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.
7. When students object on ethical or other valid grounds, to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives, for learning the same material.
8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the Director of the Cornell Center for Research Animal Resources (253-3520).

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE
PROFESSORS-AT-LARGE

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Professors-at-Large engage in a variety of activities including public lectures, participation in ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. Professors-at-Large serve for a six-year term and are full members of the faculty when in residence.

Term Ending in 2001

Pingree, David, historian of science

Term Ending in 2002

Chartier, Roger, cultural historian
Ernst, Richard R., physical chemist
Goodall, Jane, primatologist
Tobias, Phillip V., paleoanthropologist

Term Ending in 2003

Morrison, Toni, novelist
Rabinovich, Ilmar, historian of the Middle East, diplomat

Term Ending in 2004

Bal, Mieke, cultural analyst
Cleese, John, writer and actor
MacDonald, David W., mammalogist and behavioral ecologist
Siljakzic, Haris, political leader, historian of the Middle East

Term Ending in 2005

Jemison, Mae, astronaut
McDonough, William, architect
O’Brien, Stephen J., geneticist
Schechner, Richard, director of performance studies

Term Ending in 2006

Andy Goldsworthy, sculptor
Oliver Sacks, physician and writer

Center for Applied Mathematics

The Center for Applied Mathematics administers a broadly based interdisciplinary graduate program that provides opportunities for study and research over a wide range of
Numerical Mathematics and Operations
Research
CS 522 Software for Scientific Computing
CS 521 Matrix Computations
CS 622 Numerical Optimization and Nonlinear Algebraic Equations
CS 624 Numerical Methods for Differential Equations

CORNELL CENTER FOR THE ENVIRONMENT

Rice Hall (255–7535)

The Cornell Center for the Environment (CCE) coordinates interdisciplinary research, teaching, and outreach programs on environmental issues. CCE's overarching goal is to continuously advance an intellectual community for the environment at Cornell University,
with the objective of promoting a sustainable future. To meet this goal CIE:

- initiates environmental courses and curricula at both the graduate and undergraduate levels;
- coordinates outreach programs that assist federal, state, and local government, international agencies, private organizations, businesses, and individuals in analyzing and solving environmental problems;
- organizes environmental events, lectures, festivals, and seminars; and
- serves as a clearinghouse for environmental information.

The CIE web page (www.cie.cornell.edu) is the principal source of environmental information for the Cornell students, faculty, and staff. Check it frequently for the latest updates on funding, seminars, courses, lectures, events, research opportunities, and new educational programs.

EDUCATION

Undergraduates and graduates can study the environment through programs in Cornell departments, centers, and institutes. Cornell has a strong tradition in environmental studies, with over 200 faculty across campus from the natural, biological, and social sciences working on various environmental issues.

Undergraduate Education

For undergraduate students, a listing of environmental course offerings is posted on the CIE web page (www.cie.cornell.edu) along with a listing of majors for students interested in the environment. Students are also encouraged to review the Courses of Study section on "Cornell's Undergraduate Environmental Programs."

Graduate Study

Graduate level environmental concentrations are found in many of Cornell's "Major Fields of Study," from Agricultural and Biological Engineering to Zoology. Similarly, there are opportunities for further study through several graduate minors. The Center for the Environment administers several graduate programs, including the Master of Professional Studies—Environmental Management Concentration, the Master of Science in Environmental Toxicology Graduate Field, and the Conservation and Sustainable Development Minor.

Master of Professional Studies—Environmental Management Program (MPS-EM)

Resolving complex environmental problems requires more than technological solutions and technical expertise. Environmental professionals also need broad-based administrative, analytical, and managerial skills to make cost effective decisions, perform impact analyses, effectively engage stakeholders, and work in a fluctuating legal, political, and regulatory arena. The MPS-EM Concentration is organized with these demands in mind. The program prepares graduates to work as multidisciplinary team members in the environmental management professions.

Students take common core courses including:

- Science and Technology of Environmental Management (ABEN 425);
- Managing Local Environmental Systems: Social Perspectives and Research Bases (Rural Sociology 560);
- Legal Aspects of Environmental Management (GRIP 551 or NTRES 408); and Environmental and Resource Economics (ARME 651). An interdisciplinary problem-solving project and 15-18 additional credit hours round out the program. For more information, contact CIE's education coordinator (607-255-7535 or cufc@cornell.edu).

Environmental Toxicology. CIE is the administrative home of the Environmental Toxicology Graduate Field. The field offers a multidisciplinary science program leading to an M.S. or Ph.D. degree. The three major areas of concentration in the program are: cellular and molecular toxicology; food and nutritional toxicology; and ecotoxicology and environmental chemistry. The graduate program prepares students for professional opportunities in academia, industry, private research institutes, and governmental agencies.

Conservation and Sustainable Development Minor (CSD). The minor was formed in response to the challenges facing society to provide for the health, safety, and welfare of people while maintaining the ecological integrity of natural ecosystems and the long-term sustainability of food, forage, and fiber production systems. Solutions to today's conservation and sustainable development problems will continue to elude a single disciplinary approach. These challenges must be met by a new kind of specialist that has holistic perspectives and is capable of working on interdisciplinary research and development teams. Hence, the Conservation and Sustainable Development Minor is oriented to graduate students desiring interdisciplinary approaches to real world problems.

Requirements for the minor include: (1) the CSD core course, Critical Issues in Conservation and Sustainable Development (NTRES 618); (2) at least two electives in subject areas outside the student's primary academic focus; and (3) an interdisciplinary problem-solving research or development project. Elective courses are chosen in consultation with the student's graduate committee that includes one representative from the CSD minor.

BEYOND THE CLASSROOM

Students interested in the environment will find many organizations, resources, and activities beyond the classroom setting, both on campus and in the regional area. CIE sponsors guest lectures and co-hosts conferences with groups from across the campus. In addition, CIE organizes the annual Cornell Environmental Film Festival and the Jill and Ken Iscol Distinguished Environmental Lectures.

RESEARCH AND OUTREACH

CIE is home for several environmental institutes offering students opportunities for study, project work, research, and outreach. These programs are focused on a variety of issues from watershed management to sustainable economic development to environmental risks. CIE programs include:

- Water Resources Institute (WRI)
- Institute for Comparative and Environmental Toxicology (ICET)
- Waste Management Institute (WMI)
- Institute for Resource Information Systems (Cornell IRIS)
- Program for Environment and Community (PEC)
- Program on Breast Cancer and Environmental Risk Factors in New York State (BCERF)
- Work and Environment Initiative (WEI)
- Environmental Inquiry (EI)
- Environmental Risk Analysis Program (ERAP)
- CIE Watersheds Program.

Several other programs affiliated with the Center include:

- Superfund Basic Research and Education Program (SBREP)
- Ocean Resources and Ecosystems Program (OREP)
- Cornell Institute for Research in Chemical Ecology (CIRCE)
- Program in Biochemistry and Environmental Change (PBEC)
- Environmental Outreach Council.

THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES

170 Uris Hall (255-6370)

The Mario Einaudi Center for International Studies, established in 1961 to encourage and support comparative and interdisciplinary research on international subjects, is one of the largest and most diverse centers of its kind in the United States. Currently, it includes four U.S. Department of Education Title VI National Resource Centers and 18 other area, development, topical, and educational programs. More than 500 faculty members voluntarily collaborate in the center's programs with well over 500 graduate students involved directly in its international programs. Undergraduate students may choose concentrations in International Relations, Latin American Studies, Modern European Studies, South Asian Studies, or Southeast Asian Studies. (See also Africana Studies and Research Center, Asian Studies, and International Agriculture for related majors and concentrations.)

As the world changes, Cornell's international programs are poised to anticipate and respond to those developments. While some programs offer study of geographic regions, others focus on such topics as international agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. As programs gain momentum and recognition to attract their own resources, the center applies its resources to new pilot

...
activities that bring faculty and students together across traditional disciplines and departmental boundaries.

Each year the center brings an eminent world leader to campus as the Henry E. and Nancy Horton Bartels World Affairs Fellow to deliver a public lecture, meet with classes, and interact informally with faculty and students. Together with the Peace Studies Program, the center hosts a Current Events Roundtable each June that attracts a large number of Cornell alumni to join faculty in discussion of key world events.

Besides the educational and research opportunities the center makes available on the Ithaca campus, it also provides foreign study options for undergraduate students through the Cornell Abroad Program and encourages graduate students' overseas field research by hosting an annual competition for travel grants and administering the Fulbright fellowship program. The center also is the administrative home of the International Students and Scholars Office, the principal campus resource serving Cornell’s large international community.

Cornell is committed to the study of the global community in all its complexity—through a faculty of preeminent scholars and teachers, outstanding research facilities, instruction in more than 40 languages, and a library system with 2,500,000 volumes related to international and comparative studies.

COGNITIVE STUDIES

282 Uris Hall (255–6431) (cogst@cornell.edu)

Cognitive Studies focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Studies draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of cognitive studies is primarily represented by faculty in the following departments: Communication, Computer Science, Design and Environmental Analysis, Economics, Education, Human Development, Linguistics, Mathematics, Neurobiology and Behavior, Philosophy, Psychology, and Sociology, as well as the Johnson Graduate School of Management.

Undergraduate Programs

An undergraduate concentration in cognitive studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented by faculty in an individual department. For further information on the undergraduate program, see “Cognitive Studies Concentration” in the College of Arts and Sciences section. Contact Linda LeVan (255–6431 or cogst@cornell.edu).

Graduate Programs

Cornell offers a graduate field minor in cognitive studies. Cornell’s unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in cognitive studies to combine faculty members from such fields as Philosophy, Computer Science, Linguistics, Psychology, or Neurobiology and Behavior on common committees. For further information on the graduate Field of Cognitive Studies, contact Joe Halpern and Ron Hoy, directors of graduate studies, (255–9562 or 254–4318, halpern.cs.cornell.edu or rrh3@cornell.edu), or Linda LeVan, executive staff assistant, 282 Uris Hall, Office of Cognitive Studies (255–6431, cogst@cornell.edu).

Courses

Courses from across the university that are relevant to the Cognitive Studies program are listed in this catalog under Arts and Sciences in the section “Special Programs and Interdisciplinary Studies.”

CORNELL ABROAD

474 Uris Hall 607/255–6224, fax 607/255–8700, e-mail: CUAbroad@cornell.edu
web homepage: www.einaudi.cornell.edu/cuabroad

Study abroad is an integral part of a Cornell education. We live in an increasingly global society in which knowledge, resources, and authority transcend national and regional boundaries. To help students develop the knowledge, skills, and attitudes necessary for global citizenship in the twenty-first century, Cornell Abroad offers a wide range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree.

Qualified students study abroad through programs administered by Cornell and other American institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisers. In all cases, students must apply through Cornell Abroad, whose staff services the planning and application process.

LOCATIONS ABROAD

Cornell students majoring in a broad array of fields in all seven undergraduate colleges regularly study in more than 40 countries. The
following list includes programs chosen frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by Cornell.

AFRICA
Botswana, Cameroon, Kenya, Madagascar, Tanzania, Uganda: School for International Training;
Ghana: University of Ghana (through the Council of International Educational Exchange, CIEE);
Kenya: Wildlife Management (School for Field Studies);
South Africa: Universities of Cape Town and Natal

ASIA
China: Chinese University of Hong Kong; Inter-University Program for Chinese Language Studies at Tsinghua University; Peking, and Nanjing Universities (CIEE); International Chinese Language Program at National Taiwan University; IES Beijing
India: School for International Training;
Indonesia: Institut Keguruan Dan Ilmu Pendidikan (IKIP) in Malang (CIEE);
Japan: *Kyoto Center for Japanese Studies; various universities enjoy admissions, advising, and counseling services, as well as an array of cultural activities, provided by the Cornell-Brown-Penn UK Centre.
Korea: Yonsei University;
Nepal: *Cornell-Nepal Study Program (Samyukta Adhyayan Karkam Nepal) at Tribhuvan University;
Thailand: Khon Kaen University (CIEE);
Vietnam: University of Hanoi (CIEE);

AUSTRALIA AND NEW ZEALAND
Australian National University, Canberra; University of Sydney; University of Melbourne; University of New South Wales, Sydney; University of New England, Armidale; University of Queensland, Brisbane; University of Western Australia, Perth; School for International Training; Sydney Internship (Boston University); Otago and Lincoln Universities in New Zealand;

EUROPE
Denmark: *Denmark's International Study Program (DIS);
France: *EDUCO (Cornell, Duke, and Emory in Paris) at Universite de Paris VII, Paris I, Institut d’Etudes Politiques de Paris (*Sciences Po*); Critical Studies Program at the University of Paris (CIEE); Paris Internship (Boston University); IES Dijon Business Program
Germany: Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg;
Greece: College Year in Athens;
Ireland: Trinity College Dublin and University Colleges of Dublin, Galway, and Cork;

Italy: Cornell College of Art, Architecture, and Planning Program in Rome; Bologna Cooperative Studies Program; Intercollegiate Center for Classical Studies in Rome; Syracuse University program in Florence;
Netherlands: Leiden University, University of Utrecht, Center for European Studies;
Russia: St. Petersburg University (CIEE); Moscow International University and other universities (American Council of Teachers of Russian);
Spain: *Cornell-Michigan-Penn program at the University of Seville; various language and culture programs;
Sweden: *Swedish Child Care and Family Policy Internship at the University of Göteborg; The Swedish Program at the University of Stockholm;
United Kingdom: *Direct enrollment at: University of Bristol; Cambridge University; University of East Anglia; University of Edinburgh, University of Glasgow; University of Manchester; University of Nottingham; Oxford University; University of Reading; University of St. Andrews; University of Sussex; University of Warwick; University of London: King’s College, University College (including the School of Slavonic and East European Studies), Imperial College of Science and Technology, and the London School of Economics and Political Science, School of Oriental and African Studies.
Students studying at these 17 British universities enjoy admissions, advising, and counseling services, as well as an array of cultural activities, provided by the Cornell-Brown-Penn UK Centre. Externally sponsored programs in the UK include the British American Drama Academy, the Beaver College, Boston, and Rochester University internships, and the Marymount College Program at the London College of Fashion.

LATIN AMERICA, CENTRAL AMERICA, AND THE CARIBBEAN
Argentina and Chile: various university-based study abroad programs, such as COPA, through Butler University and the University of Illinois;
Belize, Brazil, Chile, Ecuador: School for International Training;
Costa Rica: Organization for Tropical Studies (OTS) Undergraduate Semester Abroad in tropical biology; School for Field Study; Universidad National (Heredica);
Ecuador and Jamaica: Partnership for Service Learning;
Honduras: Escuela Agricola Panamericana (Zamorano);
Mexico: Instituto Tecnologico y de Estudios Superiores de Monterrey (ITESM); Universidad de las Americas-Puebla (UDLA); Universidad Iberoamericana; School for Field Studies in Baja California;

MIDDLE EAST AND NORTH AFRICA
Egypt: American University in Cairo;
Israel: Ben-Gurion University; Haifa University; Hebrew University of Jerusalem; Tel Aviv University;
Morocco: School for International Training

Other Locations
Cornell students are by no means limited to the locations listed above. In recent years, they have also studied in Austria, Czech Republic, Dominican Republic, Finland, the Philippines, Poland, Portugal, Switzerland, Turkey, Venezuela, and elsewhere.

Who Studies Abroad
Students from all seven undergraduate colleges and from all major fields study abroad; they are generally expected to have a cumulative grade point average of 3.0 or above. More than 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least 40 hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count study abroad credit toward their Cornell degree.

When Students Study Abroad and for How Long
Students may study abroad their sophomore, junior, or senior year. Junior year is the traditional choice, but second semester sophomore year or first semester senior year is increasingly popular. To ensure preparation, it is important to begin planning for study abroad in the freshman year. Although semester-long programs are usually available, academic year programs are highly recommended.

Application Process
Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions—are available at Cornell Abroad, 474 Uris Hall, where students are encouraged to consult the library of study abroad materials, talk with staff, and attend information meetings. The Cornell Abroad web site is a good place to browse through program offerings and to explore links to universities and programs worldwide. Students meet with the study abroad advisers in their colleges to choose programs that fit the needs of their degree programs. Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both the faculty adviser and the college study abroad adviser. Arts and Sciences, Human Ecology, and Industrial and Labor Relations students submit applications to their college for forwarding to Cornell Abroad. Agriculture and Life Sciences, Architecture, Art, and Planning, Engineering and Hotel Administration students submit applications directly to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities as necessary. All students who wish to receive academic credit for study abroad must apply through Cornell Abroad and their undergraduate college.

The application deadline for study abroad in the fall 2001 semester and the 2001–2002 academic year is February 15, 2001, for all programs except Oxford and Cambridge, for
which the deadline to study at those universities for the full year in 2001–2002 is November 1. Many universities and programs admit on a rolling basis and before and after these dates. Students planning to study abroad in the spring semester should initiate the application process during the preceding spring. Early application may improve your chances of admission. In all cases, it is a good idea to check with Cornell Abroad.

Registration, Credit Transfer, and Grades

Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enrolled for full load of courses abroad, according to the college policy; this applies to all programs, whether run directly by Cornell or not. Students who have transferred into Cornell with 60 or more credit hours are not likely to receive aid for study abroad assuming they would thereby need more than eight semesters to earn the undergraduate degree. Some programs abroad offer need-based and merit-based scholarships.

Security Abroad and Related Issues

The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff stay in regular contact with representatives abroad and receive information regarding rapidly changing political situations through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the Department does not restrict travel by U.S. citizens, Cornell Abroad does not recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately if they should be at risk when official travel restrictions are issued. Nothing is as important as student security and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee that students who withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about those institutions’ policies regarding the completion of academic work and the potential financial implications of a premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the appropriate number of credits to be awarded will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Responsibility for determining that study abroad programs strive to facilitate student completion of academic programs even under unusual circumstances and have tuition refund policies based on pro-rated formulas.

Sources of Information and Advice Concerning Study Abroad

Cornell Abroad (474 Uris Hall): Richard Gaulton Ph.D., director; Beatrice B. Szekely Ph.D., associate director; Libby Okihiro, student services coordinator; Kathy Lynch, financial services coordinator. The Cornell Abroad library contains an extensive collection of university catalogs and study abroad program brochures, files of course syllabi and evaluations, books, videotapes, and some information on travel, summer study, and work abroad. Comprehensive information is provided on the Cornell Abroad web site which incorporates linkages to universities, programs, and resources worldwide. In the early weeks of every semester, faculty, staff, and student staff discuss programs in a series of information meetings announced in the Cornell Daily Sun and on the Cornell Abroad web homepage (www.einaudi.cornell.edu/cuabroad).

College Study Abroad Advisers

CORNELL-IN-WASHINGTON PROGRAM

311 Caldwell Hall (225-4090)

Cornell-in-Washington is a program that offers students from all colleges in the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. The aim of the program is to give students a chance to take advantage of the rich resources of the national capital. Washington, as the center of much of the nation's political energy, is an ideal place to study American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington's rich collection of libraries, museums, theaters, and art galleries, offers an opportunity to explore American history, literature, art, and the full range of the American humanistic tradition. The Cornell-in-Washington Program offers two study options: (1) studies in the American experience, and (2) studies in the American experience. Students take courses from Cornell faculty, conduct individual research projects, and work as externs in the Washington community.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, D.C. 20037. The academic and administrative space is located on the first floor and 27 residential units for approximately 60 students and faculty are on the upper floors.

The Cornell-in-Washington program is open to qualified juniors and seniors from all colleges, schools, and divisions of the university. Students enroll in one core course, which involves a major research project often carried out in conjunction with an externship. Students also select one or two other seminars from such fields as government, history, economics, history of art, and social policy. All seminars are taught by Cornell faculty and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements. In addition, students work as externs with congressional committee offices, executive-branch agencies, interest groups, arts and research institutions, and other organizations involved in public policy and American culture.
Tuition
Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

Housing
Apartments are rented at the Cornell Center during the academic year. All are fully furnished (except for dishes, cookware, towels and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and three to each one-bedroom apartment. Because of the limited number of spaces and the need for accurate planning, a non-refundable deposit of $150 is required to reserve a space. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the Center and street parking is not available.

Applications
Application forms are available from the Cornell-in-Washington office at 311 Caldwell Hall. Applications should be submitted the semester prior to participation.

Information
The Cornell-in-Washington website is located at ciw.cornell.edu. Regular information meetings are held on campus in early October and March. These meetings are advertised in the Cornell Daily Sun and on campus bulletin boards. Additional information concerning externships, courses, housing and other features of the program may be obtained at either the Cornell-in-Washington office at 311 Caldwell Hall (607) 255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, (202) 466-2184.

CORNELL INSTITUTE FOR PUBLIC AFFAIRS
473 Hollister Hall (255-8018)
The Cornell Institute for Public Affairs (CIPA) is a university-wide institute that offers a two-year graduate professional program leading to a Master of Public Administration. Our mission is to develop professionals who can be effective, ethical, and creative leaders in government and in the private sector's interface with government.

CIPA emphasizes the interactions between public and private interests for the benefit of all sectors of society. At CIPA, we utilize Cornell's cutting-edge strengths as a major research university to understand rapidly evolving public interests, technological opportunities, ecological constraints, individual aspirations, and political possibilities. Examples of Cornell's extraordinary breadth of policy-related specialties include science and technology; health, education; and social services administration, agricultural, food, and nutrition policy; international development; environmental studies; peace studies; labor relations; city and regional planning; and ethics in public life. These areas of expertise provide a diverse base for the CIPA Fellows (our students) to pursue the study of public affairs. Thus, CIPA Fellows take courses and work with faculty from all of Cornell's Colleges as well as the Cornell Law School, with whom a joint M.P.A.-J.D. degree is offered, and the Johnson Graduate School of Management.

The CIPA program has been developed to offer both a sound foundation in the principles, tools and techniques for a career and leadership in public policy either in the public or private sector. CIPA also offers the flexibility to accommodate and encourage the specialized policy-related interests of our students.

The two-year curriculum is structured into three parts: five interdisciplinary core courses taken by all CIPA Fellows; "competency" area requirements to develop the wide variety of skills and professional perspectives necessary for the practice of public policy; and sectoral specialization through additional courses and the completion of a thesis in the area of the fellow's policy focus.

The Core Courses
These courses have been developed especially for CIPA Fellows to provide a common, hands-on experience in employing the latest analytical tools to guide the formulation of programs, their supporting institutions, and their effective administration. They will also provide strategies for implementing change in complex heterogeneous societies.

CIPA I: Quantitative Techniques for Policy Analysis and Program Management (CRP 621)
Provides students with the basic management tools essential for the contemporary career in public affairs. It includes hands-on practice with formal management techniques, including investment analysis and linear and dynamic programming.

CIPA II: Public Political Economy (ECON 539)
Uses techniques of economic analysis to understand the need for various public programs, to estimate the value of new programs and policies, to forge desirable institutional structures for service delivery, and to anticipate and evaluate outcomes.

CIPA III: Administration, Politics, and Public Affairs (GOVT 621)
Explores the processes and institutional context of public affairs and analyzes the political and administrative structure and dynamics of policy development and implementation.

CIPA IV: Social Policy (526)
Integrates a variety of analytic methods, especially statistics and simulation models, to explore the structure of public programs and to assess their direct and indirect consequences.

CIPA V: Models and Quantitative Methods (CRP 528)
Demonstrates the use and limits of models and quantitative techniques in forming and administering policy.

The Area Requirements
In addition to the five core courses, fellows must also complete satisfactorily a series of foundation subject or "competency" area requirements that are essential to the training of public policy professionals. These competency areas are: administration, politics, and policy; economics; math and statistics; finance, regulation; and ethics and public law.

The Sectoral Specialty
At least three courses taken by individual fellows will be in their sectoral specialty or "concentrations." These are widely divergent and depend on the unique interests and background of the individual student.

The CIPA Thesis
Each fellow must complete a thesis, which applies the conceptual tools, theories, and analytical techniques to a problem in the fellow's area of sectoral expertise. As the culmination of each M.P.A. course of study, this thesis must be both critical and creative, reflecting the fellow's ability to identify, analyze, and generate supportable solutions to important public policy questions.

Additional Requirements
All M.P.A. candidates must spend four semesters in residence to complete the degree.

The Faculty
In addition to our five core faculty members (Richard E. Schuler, director, economics and civil and environmental engineering; Steven Caldwell, sociology; Arch Dotson, government; David Lewis, city and regional planning; and Peter Stein, physics) who offer the five core courses and advise the fellows in the development of their programs of study, over 100 faculty members at Cornell participate in the graduate field of public affairs and policy. All faculty members are available to supervise the theses of individual Fellows whose policy interests coincide with faculty expertise.

Special Programs
The combined four-year M.P.A./J.D. and M.P.A./M.B.A. degree programs are available for interested applicants. For selected Cornell undergraduates who are accepted by the end of their junior year, a combined five-year bachelor's/M.P.A. program can be arranged.

Student Organization
The Cornell Public Affairs Society, governed by the fellows, conducts a weekly colloquium with guest speakers, a bi-weekly television program, "Point-Of-View," aired on the local public access channel, and publishes, edits, and sponsors student authors for its annual public policy journal, "The Current," as well as arranging regular social events.

Application
Applicants are required to submit GRE general test scores. CIPA has a policy of rolling admissions. Students requesting aid, however, must submit applications by February 15 for consideration. For an application or more information, contact Cornell Institute for Public Affairs, 472 Hollister Hall (phone: 607 255-8018; fax: 607 255-5240; e-mail: cipa@cornell.edu, web site: www.cipa.cornell.edu).

Financial Support
As a professional program, the financial aid resources of CIPA are extremely limited. Students of unusual merit and documented need will be considered for support, but CIPA is unable to provide any one student full support. Therefore, applicants are encouraged to explore and take advantage of all available sources of external funding.

For an application or more information, contact Cornell Institute for Public Affairs, 472 Hollister Hall (phone: 607 255-8018; fax: 607 255-5240; e-mail: cipa@cornell.edu).
A one-credit seminar series (HORT 480) is offered each fall; noncredit classes and workshops (for publications, and class brochures (for assists and gardeners.* Maps, information, vegetables, international crops, rock garden plants, peonies, poisonous plants, ground covers, rhododendrons, wildflowers, and a winter garden.

Students are encouraged to volunteer as photographers, authors, tour guides, computer assistants and gardeners.* Maps, information, publications, and class brochures (for noncredit classes and workshops) are available in the Garden Gift Shop in the Lewis Headquarters Building at the botanical garden. Noncredit courses in horticulture, landscape design, botanical arts, and natural history are offered throughout the year. A one-credit seminar series (HORT 480) is offered each fall; a three-credit Public Garden Management course, (HORT 485) is offered every other spring semester. A number of student internships are also offered each summer.

PROGRAM IN REAL ESTATE
114 West Sibley Hall (255–7110)

The two-year Master of Professional Studies (M.P.S.) degree in Real Estate is an interdisciplinary degree program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial to early stages of their careers. Two entities provide support for the degree program. The Program in Real Estate exists at Cornell University to serve as the integrating organizational unit for financial management and administration of academic real estate activities on and off campus. The Field of Real Estate is a committee of faculty members from several different colleges that is directly involved in the design and administration of the real estate curriculum.

The professional study of real estate is concerned with the finance, exchange, development, management, marketing, and many other aspects of the real estate business. Real estate professionals also bring an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work needed to earn the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Students take core courses in principles of real estate, real estate development process, advanced real estate, managerial finance, residential development, real estate law, construction planning and operations, and real estate marketing and management, along with elective courses in their chosen areas of concentration. Many concentration options are possible and may be structured from the hundreds of related courses taught at Cornell University (e.g., an international real estate concentration).

Admissions
Admissions procedures for the M.P.S. (Real Estate) program are supervised by the Graduate School and Real Estate Field. Applicants to the program must have completed a bachelor's degree with a good academic record. They must achieve Graduate Management Admission Test (GMAT) or Graduate Record Examination (GRE) scores that are at the level required in other Cornell graduate professional degree programs; and at least two letters of recommendation from undergraduate college faculty members (and if appropriate, from employers) familiar with the student's academic and professional work must be submitted. There is no work experience requirement for admission (although work experience is preferred). Foreign students, for whom English is a second language, will need to achieve acceptable TOEFL scores. For more information, contact C. Bradley Olson, director of the Program in Real Estate (607–255–7110) or Professor Matthew Drennan, director of graduate studies (607–255–7426) or e-mail real_estate@cornell.edu.
SCIENCE OF EARTH SYSTEMS: AN INTERCOLLEGE MAJOR

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. In this program, Cornell's strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

Graduates of Cornell's SES program are well prepared for several career and advanced study options:

- Graduate work leading to the M.S. and/or Ph.D. in any of the earth science sub-disciplines (e.g., atmospheric science, geology/geophysics, bio-geochemistry, hydrology, oceanography).
- Employment in environmentally-oriented careers in both the private and public sector at the B.S. or B.A. level.
- Advanced degree in environmental law or policy. These fields value students with an understanding of the science behind legal and policy decisions.
- Advanced degree in teaching, for example, earth science at the middle or high school level.
- Medical school. The emphasis on basic sciences in the SES curriculum makes the SES major a suitable springboard for a career in medicine.

The SES major is available for students in the College of Agriculture and Life Sciences and the College of Arts and Sciences. In the College of Engineering, the SES curriculum may be completed by choosing the SES option in the Department of Earth and Atmospheric Sciences. The SES major has its home in the Department of Earth and Atmospheric Sciences, but relies on the collaboration of several departments across the university.

The SES Curriculum

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The requirements for the major are as follows:

1. Basic Math and Sciences
   - MATH 111 and 112, or MATH 191 and 192, or MATH 190 and 192
   - PHYSICS 207 and 208, or PHYSICS 112 and 213, if PHYSICS 214 will also be taken (see below)
   - CHEM 207 and 208
   - BIOLOGY 101/103 and 102/104 (or 105–106) or BIOLOGY 109 and 110
   - THREE ADDITIONAL 3–4 credit courses in basic science and math, generally 100- and 200-level classes. At least one of the following must be included in the selection:
     - EAS 201 Physics and Chemistry of the Earth
     - BIOIDS 61 Ecology and the Environment
   - Other examples are MATH 293 and MATH 294, biochemistry, organic chemistry, PHYS 214, and introductory statistics. With the exception of an introductory statistics course, the additional basic courses should require at least one of the classes listed in a–d above as a prerequisite.

2. Science of Earth Systems Core Courses
   - EAS 302 Evolution of the Earth System
   - EAS 351/ASTRO 331 Climate Dynamics
   - EAS 321/NATURES 321 Introduction to Biogeochemistry

3. Concentration Courses
   - Four intermediate to advanced-level courses (900-level and up) that build on the core courses and have prerequisites in the "Basic Math and Sciences" courses listed.
   - These classes build depth and provide the student with a specific expertise in some facet of earth system science. Possible areas of concentration include Climate Dynamics, Biogeochemistry, Ecological Systems, Environmental Geology, Ocean Sciences, Environmental Biophysics, Hydrological Systems, and Soil Science

For more information contact Professor Kerry H. Cook, Department of Earth and Atmospheric Sciences, kkc6@cornell.edu and visit the web site: www.geo.cornell.edu/ses/

DEPARTMENT OF STATISTICAL SCIENCE

301 Malott Hall (255-8066)

The university-wide Department of Statistical Science at Cornell coordinates activities in statistics and probability at the undergraduate, graduate, and research levels.

Students interested in graduate study in statistics and probability can apply to the Graduate Field of Statistics or to one of the other graduate fields of study that offer related course work. Students in the Field of Statistics plan their graduate program with the assistance of their Special Committee. For detailed information on opportunities for graduate study, students should contact the Director of Graduate Studies, 301 Malott Hall.

The department also offers an undergraduate program through the Biometrics Unit in the College of Agriculture and Life Sciences and an Engineering Statistics minor in the College of Engineering. Undergraduate majors and certificate programs are currently under development for other colleges. For information, contact the Undergraduate Coordinator, (301 Malott Hall, 255–8066). Statistics courses offered by the departments listed below will fill distribution requirements in many of the colleges.

A free consulting service is offered through the Biometrics Unit in the College of Agriculture and Life Sciences. Statistical computing consulting is available through the Office of Statistical Consulting, B21 Savage Hall, 255–1926.

The department is organized into four units: Biometrics, Engineering Statistics, Mathematical Statistics and Probability, and Social Statistics. The areas covered include agricultural statistics, biostatistics, economic and social statistics, epidemiology, manufacturing statistics, quality control and reliability, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

Course designations

The following course identifiers are used to designate the courses offered by the separate units: Biometrics Unit (CALS), BTRY, Engineering Statistics Unit (ENGR), STENG; Mathematical Statistics Unit (ARTS), STMATH; Social Statistics Unit (ILR), STSOC. To enroll in one of the courses, see the listing for the appropriate college.

Descriptions of undergraduate and graduate courses are listed below.

Department of Statistical Science

ST 501–502 Applied Statistical Analysis

This is the two-semester core course for students in the Master of Professional Studies (M.P.S.) degree program in applied statistics in the Department of Statistical Science. Enrollment is limited to students enrolled in the M.P.S. program. The course consists of a series of modules on various topics in applied statistics. Some modules will include guest lectures from practitioners. Parallel with the course, students complete a year-long, in-depth data analysis project.

ST 501: Applied Statistical Analysis

Letter only. Topics include, but are not limited to: statistical computing systems, statistical software packages, data management, statistical graphics, and simulation methods and algorithms.

ST 502: Applied Statistical Analysis

Letter only. Topics include, but are not limited to: sample surveys and questionnaire design, data sources, experimental design, and data mining.

Biometrics Unit

BTRY 100 Statistics and the World We Live In (enroll in BTRY 100)

BTRY 261 Statistical Methods I (enroll in BTRY 261)

The Cornell Program in Comparative and Environmental Toxicology is a broadly based inter-college program facilitated by the Institute for Comparative and Environmental Toxicology (ICET). ICET serves as a focal point for all research, teaching, and cooperative extension activities in the broad interdisciplinary area of environmental toxicology at Cornell and encourages the development of collaborative programs between faculty members in many university departments.

### Graduate Studies

The graduate field of Environmental Toxicology provides training leading to the M.S. or Ph.D. degrees. There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Concentrations include cellular and molecular toxicology, nutritional and food toxicology, ecotoxicology and environmental chemistry; and a minor concentration of risk assessment, management, and public policy. Required by that concentration associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated.

### Courses

Courses in environmental toxicology are cosponsored by the university’s academic departments and are open to all graduate students and to undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below. Details of course content are provided in the catalog under the listings of the cosponsoring department. Further information concerning the program and the development of new courses may be obtained through the director of graduate studies, 213 Rice Hall, telephone: 255-8008, e-mail: envtox@cornell.edu; www.cfe.cornell.edu/cfe/education.

#### College of Agriculture and Life Sciences

- **Agricultural and Biological Engineering** offers environmental study opportunities through a combination of engineering sciences, biology, and applications courses. In the ABEN major, there are several concentrations including, among others, environmental systems engineering and environmental systems technology.

- **Atmospheric sciences** is a major offered through the Department of Earth and Atmospheric Sciences. In this program, students study weather and climate, forecasting, and analysis of atmospheric behavior.

- **Biometry and Statistics** majors learn to use quantitative methods to solve problems in the biological, physical, and social sciences.

- **Communication** offers a curriculum for communication in the life sciences that deals with the effect of communication on environmental, health, science, and agricultural issues and with public perceptions of risk.

- **Crop and Soil Sciences** provides instruction in four specializations: agronomy, crop science, science of earth systems (see multi-college opportunities below), and soil science. The department also has strong programs in the environmental information sciences including geographic information systems and remote sensing.

- **Entomology** provides students with a basic background in biological and environmental sciences, with a special emphasis on the study of insects.

- **Environmental Science** is a new major being approved for the College of Agriculture and Life Sciences. For more information about this new major, contact the Center for the Environment (cufe@cornell.edu or 607-255-7535).

- **Landscape Architecture** focuses on the art of landscape design as an expression of cultural values combined with the natural processes of the ambient environment. The program promotes interaction among the areas of horticulture, architecture, and city and regional planning.

- **Natural Resources** has four concentrations that focus on systems that yield renewable natural resources such as wildlife, forests, fish, and water.

- **Plant Sciences** students can specialize in plant biology, plant genetics and breeding, plant pathology, plant protection, or horticultural sciences including floriculture and ornamental horticulture, and fruit and vegetable science.

- **Rural Sociology** is a major that includes interrelated foci: (1) development sociology; (2) population, environment, and society; and (3) applied social data analysis.

- **General Studies** provides opportunities for motivated students—with their faculty adviser—to plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by existing programs.

### Office of Undergraduate Study in Biological Sciences

- **Biology** majors are enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Students can concentrate in a number of areas including biochemistry, ecology and evolutionary biology, marine biology and oceanography, general biology, microbiology, plant biology, plant biotechnology, and systemsatics and biotic diversity. Students can also enroll in the interdisciplinary biology and society major (see "Multi-College Majors" below).

### College of Architecture, Art, and Planning

- **Urban and Regional Studies** is offered by the Department of City and Regional Planning and is focused on the problems of human communities and regions.

### College of Arts and Sciences

- **Chemistry and Chemical Biology** offers a full range of courses in physical, organic, inorganic, analytical, theoretical, bioorganic, and biophysical chemistry.

- **Geological Sciences** is an interdisciplinary major that prepares students for advanced study in geology, geophysics, geochemistry, geobiology, and for careers in mineral and petroleum exploration or environmental geology.

- **Science and Technology Studies** is a major that focuses on the important roles of science and technology in society.
Students select a concentration that draws together a group of related courses. Current concentrations include science, technology, and public policy; technology, culture, and society; environment, science, and society; and history and philosophy of science. Science and Technology Studies also offers the biology and society major (see “Multi-Collage Majors” below).

College of Engineering
- Civil and Environmental Engineering offers an accredited undergraduate program in civil engineering and permits students to pursue one of two options, leading to a Bachelor of Science degree, one of which is environmental engineering. This option emphasizes study of environmental engineering, water resource systems, and fluid mechanics and hydrology.

College of Human Ecology
- Design and Environmental Analysis is concerned with planning, designing, and managing interior environments to satisfy human needs. The department offers concentrations in interior design, facility planning and management, and human factors and ergonomics.

Multi-College Majors
- Science of Earth Systems is designed to educate students across the breadth of the earth sciences without sacrificing the depth of understanding that is needed to face the environmental challenges of the twenty-first century. Students can focus on environmental science, climate dynamics, oceanography, hydrological science, geophysics, and environmental biophysics. The Science of Earth Systems major is open to students in the Colleges of Agriculture and Life Sciences, Engineering, and Arts and Sciences.
- Biology and Society is offered as a major by both the College of Arts and Sciences and the College of Human Ecology. Additionally, students in the College of Agriculture and Life Sciences can develop an approved sequence of courses under the college’s general studies option.
- Students in the biology and society major combine training in biology with exposure to perspectives from the social sciences and humanities on the social, political, and ethical aspects of modern biology.

Extramural Opportunities
At Cornell environmental experiences are not limited to classroom work or studies in a major field. There are many other ways to learn about the environment including formal experiences like the Undergraduate Research Programs or environmental courses such as the annual Seminar on Sustainable Development. Another course, Environmental Stewardship in the Cornell Community, was organized by undergraduate students to address new strategies for improving the university’s overall environmental performance.

Students can also study abroad in over 40 countries or gain valuable public policy experience by spending a semester in the Cornell-in-Washington program. To enhance their learning experience, students can connect with a variety of campus resources including Cornell Plantations, Laboratory of Ornithology, Agricultural Experiment Station, Center for the Environment, Ecology Research, or the Center for Religion, Ethics, and Social Policy.

Opportunities to associate with like-minded student colleagues can be found in many student-run organizations with environmental themes including the Cornell Greens, Cornell Students for Camel Breeding, Dilimun Hill Organic Farm, United Progressives, Entomaniacs, Cornell Rockhill Association, Wildlife Society, and the International Association of Camel Breeders. Students also publish Ursus, a magazine forum for environmental issues at Cornell.

Environmental lectures, seminars, and conferences are a Cornell specialty. At Cornell a student might hear a lecture by one of the university’s notable A. D. White Professors-at-Large, which include among others Jane Goodall, international expert on African primates, and William McDonough, a TIME Magazine “Hero for the Planet.” Also, in April each year, the Jill and Ken Iscol Distinguished Environmental Lecture features a prominent scientist or policymaker.

The surrounding Ithaca community offers Cornellians a range of environmental activities—anything from outdoor recreation to an organic farmers market to local activism—which most college towns cannot match. Local organizations like EcoVillage at Ithaca, Finger Lakes Land Trust, Cayuga Lake Watershed Network, and the various Finger Lakes State Parks are terrific local resources for the environmentally inclined. The area’s unique natural beauty is a haven for outdoor enthusiasts and casual observers of nature.

For more information on Cornell’s environmental programs contact Center for the Environment Attn: Education Coordinator 200 Rice Hall Ithaca, NY 14853 Tel: 607-255-7535 Fax: 607-255-0238 E-mail: csce@cornell.edu www.cfe.cornell.edu

Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Undergraduate preparation for business is found in many schools and colleges at Cornell. Students most frequently take courses in more than one area, as well as in related fields, to construct a program to suit their interests and career objectives. Each of the following areas provides a different focus for application and use of business study and training, and students should consider carefully the implications of each program when making a choice. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields following each of the undergraduate options.)

The areas most often pursued include applied economics and business management (College of Agriculture and Life Sciences), economics (College of Arts and Sciences), engineering, hotel administration, policy analysis and management (College of Human Ecology), industrial and labor relations, and sociology.

Applied economics and business management. This program is designed to prepare students for a career in public service. Emphasis is placed on the application of economic theory and management principles. Graduates of this program typically choose careers in investment banking or finance or with firms offering opportunities in sales, marketing, and consulting. Areas of specialization include business management and marketing, food industry management, agribusiness management, and farm business management and finance.

Economics. This program provides a broad view of that social science concerned with the description and analysis of the production, distribution, and consumption of goods and services, the understanding of monetary systems, and the comprehension of economic theories and models. It is viewed more often as professional than as training for immediate practice in business or economics.

Engineering. This area provides much of the management personnel of modern industry. Engineers frequently climb the ladders of technological management that lead to more general management responsibilities; more than half of the management level personnel of major corporations such as General Electric, Xerox, IBM, and Du Pont have engineering degrees. In addition to becoming managers by being effective technical supervisors, many students enter engineering explicitly anticipating graduate business education, judging that an engineering background is particularly appropriate for management in a technology-oriented society.

Hotel administration. The undergraduate program in hotel administration prepares individuals to be mid- to upper-level managers and entrepreneurs for the hospitality industry (lodging, food service, and travel) and allied fields. Instruction is provided in the areas of administration and general management, human resources management, accounting and financial management, food and beverage management, law, properties management, communication, science and technology, economics, and marketing.

Policy analysis and management. Study in the department develops an understanding of the market economy from both buyers’ and sellers’ perspectives. The focus is on the economic behavior and welfare of consumers in the private, public, and mixed sectors of the economy. An understanding of economics, sociology, and government policy provides the basis for an analysis of consumers’ rights and responsibilities.

Industrial and labor relations focuses on the interactions among human beings, organizations, and institutions. It encompasses not only the relationships between employer and employee but the political, economic, social, and psychological factors that affect those relationships. It includes the study of the hiring, training, and motivating of individual workers; negotiation and conflict resolution; and the economic and technological changes that affect the jobs the people perform. Finally, it embraces the many regulations and regulatory agencies created by our society to protect and help both employer and employee.
Sociology. The program provides disciplined understanding of society and social issues. The insights and analytical skills you will acquire are applicable to corporate, government, and nonprofit settings, and the department's focus on social organization and institutions will prepare you well for graduate or professional programs in business schools. (Also see the description of the Society and Economy Concentration in the Department of Sociology section of Arts and Sciences.)

Related Areas
Courses in areas directly related to these business programs are found in many of the university departments. For example, quantitative methods may be studied in the departments of Mathematics and Computer Science, and courses in public administration are found in the departments of government and City and Regional Planning. There are additional programs that allow students with an interest in business to focus on a particular geographic area. Examples are the Latin American Studies Program, the South Asia Program, and the Africana Studies and Research Center. Such interdisciplinary programs as the Program on Science, Technology, and Society and the various programs in international agriculture provide additional opportunities for study of interest to business students.

Combined Degree Programs
Because Cornell has the Samuel Curtis Johnson Graduate School of Management, special opportunities exist for highly qualified undergraduates to combine their undergraduate programs with graduate study in that school. Students in the double-registrar program generally receive a bachelor's degree after four years of study and a Master of Business Administration (M.B.A.) degree after the fifth year of study, rather than the usual sixth year. Students in all Cornell undergraduates colleges and schools are eligible to explore this option. There is also a program with the College of Engineering that allows qualified students to earn a B.S., M.B.A., and Master of Engineering degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the work in the two schools.

PRELAW STUDY

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.

2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. Freshman writing seminars, required of nearly all Cornell freshmen, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence. Psychology and human development lead to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as physics, biology, and engineering, and recommended and will prove of practical value to the lawyer in general practice in the modern world.

3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.

4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind, to develop the ability to think logically and analytically, and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the Bachelor of Arts degree, including 92 credits of course work in the College of Arts and Sciences. It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to arrange to enter the Law School after three years. The College of Human Ecology offers a program in which students spend their fourth year at the Law School. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as Nature, Functions, and Limits of Law, which are open to all undergraduates.

PREMEDICAL STUDY

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that a particular selection of undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, physics, and a year of English composition (or a freshman writing seminar). In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

There is no major program that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them. Therefore it is not required that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student's other interests.

Exceptionally qualified students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology may apply for acceptance to the Medical College through a double registration procedure arranged between Cornell University and Cornell's Weill Medical College in New York City. This procedure allows registered students to save one year in pursuit of the bachelor's and M.D. degrees. This is not a traditional "seven year program": separate application to the Medical College is required. Further information about this procedure is available from the Health Careers Program office, 103 Barnes Hall, Ithaca, New York, 14853-1601.

PREVETERINARY STUDY

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major area of study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several allied science majors, including animal science, that can lead to related careers if the student does not go to
veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, Admissions Information, obtained by writing to the Office of DVM Admissions, College of Veterinary Medicine, Cornell University, S2-009 Schurman Hall, Ithaca, New York 14853-6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York 14853-1601.

"Arbitrary and Capricious" describes actions which have no sound basis in law, facto, or reason are grounded solely in bad faith or personal desires. A determination is arbitrary and capricious only if it is one no reasonable mind could reach.

"Clear and convincing" as a standard of proof refers to a quantum of evidence beyond a mere preponderance but below that characterized as "beyond a reasonable doubt" and such that it will produce in the mind of the trier of fact a firm belief as to the facts sought to be established.

See the definition at section II.B.4.c.
ADMINISTRATION
Susan A. Heny, dean
Brian F. Chabot, associate dean
Michael P. Riley, acting assistant dean for public affairs
H. Dean Sutphin, associate dean and director of academic programs
Donald R. Viands, associate director of academic programs
W. Ronnie Coffman, associate dean and director of research
Anthony M. Shelton, associate director of research
Daniel J. Decker, associate director of research
D. Merrill Ewert, associate dean and director of research
Edward D. Harwood, associate director of cooperative extension
Margaret E. Smith Elinarson, associate director of cooperative extension
Theodore L. Hullar, director of the Center for the Environment
Norman T. Uphoff, director of international agriculture
James E. Haldeman, associate director of international agriculture

Office of Academic Programs Staff
Counseling and advising: Lisa Ryan, Bonnie Shelley
Registrar: Randy Stewart, Mary Milks, Patricia Austic
Admissions: Jason Locke, Ann LaFave
Career development: William Alberta, Amy Benedict-Martin, Laurie Gillespie
Minority programs: Catherine Thompson

Department Chairs
Agricultural and biological engineering: M. F. Walter, Riley-Robb Hall
Agricultural, resource, and managerial economics: A. M. Novakovic, Warren Hall
Animal science: A. W. Bell, Morrison Hall
Atmospheric science unit (part of earth and atmospheric sciences): S. J. Rihu, Bradfield Hall
Biometrics: N. S. Altman, Warren Hall
Communication: R. E. Ostman, Kennedy Hall
Crop and soil sciences: S. D. DeGloria, Emerson Hall
Ecology and evolutionary biology: R. G. Harrison, Corson Hall
Entomology: D. A. Rutz, Comstock Hall
Food science: D. Miller, Stocking Hall
Horticultural science: H. C. Wien, Plant Science Building
Landscape architecture: H. W. Gottfried, Kennedy Hall
Microbiology: S. H. Zinder, Wing Hall
Molecular biology and genetics: D. I. Shalloway, Biotechnology Building
Natural resources: J. P. Lassoie, Femow Hall
Neurobiology and behavior: C. Walcott, S. G. Mudd Hall
Plant breeding: E. D. Earle, Emerson Hall
Plant pathology: R. Loria, Plant Science Building
Rural sociology: P. D. McMichael, Warren Hall
Biometry: G. Casella, Warren Hall
Biometrics: B. W. Turnbull, Mallott Hall

College Focus
The College of Agriculture and Life Sciences provides educational programs that prepare men and women with technical, management, and leadership skills.

Facilities
The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm.

Mann Library, with its extensive collections of materials in the agricultural and biological sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, in Riley-Robb Hall, and in Mann Library.

DEGREE PROGRAMS
The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy. Professional degrees include the Master of Professional Studies and the Master of Arts in Teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Board and is linked with the national Higher Education General Information Survey (HEGIS) codes for federal and state reporting.

Graduate Degrees
Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed.

Agriculture [M.P.S. (Agr.)]: H. D. Sutphin, Roberts Hall
Agricultural and Biological Engineering: D. J. Aneshansley, Riley-Robb Hall
Agricultural Economics: R. N. Boisvert, Warren Hall
Animal Breeding: E. J. Pollak, Morrison Hall
Animal Science: R. L. Quaas, Morrison Hall
Biochemistry, Molecular, and Cell Biology: W. J. Brown, Biotechnology Building
Biometry: G. Casella, Warren Hall
Communication: M. A. Shapiro, Kennedy Hall
Crop and Soil Sciences: S. J. Colucci, Bradfield Hall
Development Sociology: C. C. Geisler, Warren Hall
Earth and Atmospheric Sciences: S. J. Colucci, Bradfield Hall
Ecology and Evolutionary Biology: D. W. Winkler, Corson Hall
Education [also M.A.T.]: D. J. Trumbull, Kennedy Hall
Entomology: E. Shields, Comstock Hall
Environmental Toxicology: A. Yen, Rice Hall
Floriculture and Ornamental Horticulture: N. L. Bassuk, Plant Science Building

**Bachelor of Science Degree**

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in 19 major programs. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations in the major field.

**Agricultural and Biological Engineering:** Jim Bartsch, 314 Riley-Robb Hall

**Agricultural, Resource, and Managerial Economics:** Dale Grossman, 204 Warren Hall

**Animal Sciences:** E. John Pollak, B-47

**Bradford Hall**

**Atmospheric Sciences:** Dan Wilks, 1113

**Bradford Hall**

**Biological Sciences:** Jeff Doyle, 200 Stanmore Hall; Bonnie Comella, 216 Stimson

**Biological and Society:** Judith Reppy, 130A Uris Hall

Biometry and Statistics: Steve Schwager, 424 Warren Hall

**Communication:** Brian Earle, 332 Kennedy Hall

Crop and Soil Sciences: Ray Bryant, 705

Bradfield Hall

Education: George Posner, 416 Kennedy Hall

Entomology: Quentin Wheeler, 3136

Comstock Hall

Floriculture and Ornamental Horticulture: Ken Mudge, 20 Plant Science Building

Food Science: Janice Brown, 101 Stocking Hall

Landscape Architecture: Herb Gottfried, 443 Kennedy Hall

Natural Resources: Jim Fabey, 12 Fernow Hall

Nutrition, Food, and Agriculture: Carole Bisogni, 334 MVR Hall

Plant Science Units (Plant Biology, Genetics and Breeding, Pathology/Protection, Pomology, Vegetable Crops): George Hudler, 315 Plant Science Building

Rural Sociology: Linda Williams, 220 Warren Hall

Science of Earth Systems: Kerry Cook, 3114 Sneel Hall

Special Programs in Agriculture and Life Sciences: Lisa Ryan, 140 Roberts Hall

**Summary of Basic College Requirements for Graduation**

1. **Credit Hours**
   a. Minimum: 120

   **Exception:** Credit for tutorial courses (Math 109, EDUC 003, and 00 level) **increase** the number of credits required for graduation by the number of credits in the course. The credits do not count toward the minimum 12 credits for full-time status.

   b. Minimum at Cornell: 60; **maximum** transferred in (C- or higher) 60

   c. Minimum from College of Agriculture and Life Sciences: 55 (includes credit used in the distribution and appropriate transfer credit)

   d. Maximum from endowed colleges (Arts and Sciences; Architecture; Art, and Planning; Engineering; and Hotel School) without additional charge: 55 (includes credit used in the distribution AND failed courses)

   e. Minimum with letter grade: 100; **maximum** with S-U grade based on 120 credits: 20 (pro-rated for transfer students) with maximum of one course per semester

   f. Maximum independent study, teaching experience, internships based on 120 credits: 15 (pro-rated for transfer students)

   g. Credit for physical education does not count toward the **minimum** 12 credits or the minimum 12 credits for full-time status (see #6).

   **2. Residence**

   a. Students are entitled to enroll eight full-time semesters (prorated for transfer students). A full-time semester requires a minimum of 12 credits per semester, not counting physical education. **Tutorial courses (see #1A) are counted.**

   b. A minimum of seven semesters is required, with a GPA of 2.0 or greater.

   c. International transfer students must be enrolled in CALS for at least two semesters, **not including** residency in Internal Transfer Division.

   d. The final semester before graduation must be in residence at Cornell as a full-time student in good academic standing (see #3 B).

   **Exception:** Students with eight or fewer credits remaining for graduation and with circumstances that prevent full-time study may petition for approval to complete remaining credits at another institution or part-time in CALS.

   **3. Grade-point Average (GPA)**

   a. Cumulative GPA: 1.70 or above must be maintained. Includes only grades earned at Cornell after matriculating into the college.

   b. Final semester: 1.70 or above based on a minimum of 12 credits, or 2.00 or above if graduating in seven semesters.

   **4. Distribution**

   The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical sciences, students develop quantitative and analytic skills based on an understanding of the physical laws governing the universe and through study of the biological sciences, they gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will affect their work and role in society.

   Through development of written and oral expression skills, students master the essentials of effective communication.

   Credits received for independent study, field, teaching, work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be remedial in the discipline, such as Education 005, will not be counted.

   **Group A: Physical Sciences.** 9 credits of 100- or 200-level courses, in at least two disciplines, including at least one course in chemistry or physics.

   **Chemistry**

   **Physics**

   •Mathematics (excluding Education 005, Mathematics 101 and 109)

   Education 115

   Earth and Atmospheric Sciences (SCAS) 131, 260

   Crop and Soil Sciences (SCAS) 260

   Astronomy

   Geology

   Statistics and Biometry (including ARME 210, ILRST 210)

   The college mathematics requirement is described below.

   **Group B: Biological Sciences.** 9 credits, to include 6 of introductory biological science (introductory courses include BIO G 101-104, 105, 106, 109, 110.)
Biological Sciences (excluding 160, 200) (unless permission of the director of Undergraduate Biology is obtained), 209, or 367)
Animal Sciences 100, 221, 300, 301
Entomology 212
Nutritional Sciences 262
Plant Breeding 201, 225
Plant Pathology 309, 401

**Group C: Social Sciences and Humanities.** 12 credits (6 in each of the following two categories):
Social Sciences. 100- through 400-level courses in the following departments (excluding Freshman Seminars):
- American Indian Studies 401
- Anthropology
- Archaeology
- ARME 100, 416
- CEH 110/CEH 111 (cannot receive credit for these courses and Econ 101/Econ 102)
- Communication 116, 120, 410, 418, 420, 422
- Economics (excluding all ARME courses)
- Education 271, 311, 317, 370, 378
- Government
- HD 150 (cannot receive credit for this course and Soc 245)
- LA/CRP 261, 360, 363
- Psychology
- S & TS 324, 350, 390, 391, 400, 401, 402, 406, 407, 412, 425, 427, 431, 442, 467, 482
- Sociology (includes Rural Sociology except RS 100, 175, 318, 442)

Humarties. 100- through 400-level courses in the following departments (excluding Freshman Seminars and language courses):
- Africana Studies (literature and history)
- Asian American Studies
- Asian and Near Eastern Studies (literature and history)
- Classics (literature and history)
- Comparative Literature
- English (literature only)
- French, German, Italian, Russian, and Spanish (literature only)
- History
- History of Art/History of Architecture
- LA 282
- Music and Theatre Arts (theory, literature, and history only)
- Natural Resources 407, 411
- Philosophy
- Religious Studies
- Rural Sociology 100, 175, 318, 442
- WO/MNS/S&TS 442

**Group D: Written and Oral Expression.** 9 credits, of which at least 6 must be in written expression, selected from the following:
- Freshman Seminars
- Communication 117, 201, 350, 352, 260 (was 360), 263 (was 363), 365
- English 280-281, 288-289, 382-385, 388-389

Students scoring 4 or 5 on the English advanced placement exam may be awarded three credits and are exempt from one freshman seminar course.

5. **Math Requirement**

Faculty legislation requires minimum competency in mathematics to complete a degree in the College of Agriculture and Life Sciences. As a measure of competency in mathematics, all entering undergraduates, including those with advanced placement or transfer credit in calculus, must take the college math proficiency exam (administered during orientation). The exam score determines the college math graduation requirement, and provides placement information.

The exam has two components. Cutoff scores divide students into three groups, each with specific graduation requirements.

**Mathematics requirements and placement suggestions:**

- **Group I Students in this group are considered proficient in math for college graduation requirements.** If further math is needed for the major, placement score suggests calculus skill level (e.g., Math 111, 191, 193).
- **Group II Students in this group MUST complete a math course at Cornell.* Placement score suggests pre-calculus skill level (e.g., EDUC 115, Math 105, Biometry 101).
- **Group III Students in this group must take EDUC 005, basic review math in their first semester. Students must ALSO complete an additional math course at Cornell.* Transfer and AP math credit (up to six) will be recorded in Group A of the college distribution requirements. Additional transfer credit in math will be recorded as general electives. Students scoring in Group II or Group III of the college math proficiency exam must take a math course at Cornell*, regardless of transfer or AP math credit.

*Math courses at Cornell that may be used to fulfill math requirement:*

All courses in the Mathematics department (except 101 and 109)
EDUC 115
Biometry 101

6. **Physical Education**

- **a.** Pass a required swim test, administered during orientation.
- **b.** Two courses with a satisfactory grade (courses do not count toward 120 credits for graduation or the minimum 12 credits for full-time study).
- **c.** Students are expected to complete the physical education requirement in their first two semesters at Cornell.
- **d.** Transfer students are credited with one course of physical education for each semester previously enrolled full-time (12 or more credits) at another college.

**Faculty Advising**

- **a.** Each student is assigned to a faculty adviser soon after being admitted to the college. The faculty adviser will help the student plan a program of study of courses appropriate to the degree programs offered by the college.
- **b.** Course enrollment each semester should be planned in consultation with the faculty adviser. Students pre-enroll for courses by computer through CoursEnroll, under courses, classes, and exams on the Bear Access menu. Pre-enrollment by computer is not valid until the student's individual code is entered. This code, or adviser key, is provided to the student by the faculty adviser after approval of the choice of courses.
- **c.** All academic plans, such as acceleration and graduate study, should be made in consultation with the student's faculty adviser. Support of the adviser is essential if a student petitions for an exception to any of the requirements of the college.

**Progress toward the Degree**

- a. The progress of each student toward meeting the degree requirements is recorded each term in the college registrar's office on a Summary of Record form.
- b. Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are entitled to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters, but must notify the College Registrar of their intent to return for the eighth semester. A student who wishes to continue study after graduation must apply for admission as a special student through the college admissions office, 177 Roberts Hall.
- c. Application to graduate. Students who are planning to graduate must complete an "Application to Graduate" by February 15th (for May graduates) or September 15th (for January graduates). The adviser signs the application after verifying that the requirements for the major have been completed. The college registrar signs after verifying that the college requirements will be fulfilled after successful completion of the student's final semester.

**Credit Earned While in High School**

Transfer credit will not be accepted for the Syracuse Project Advance Program and similar programs. If a student is enrolled in a college/university course during his/her high school years, transfer credit will be given only if certain criteria are met:

- 1. Course must be a standard course taught at the offering college.
- 2. High school must be a satellite location, as defined by a post-secondary institution.
- 3. Course must be a standard course taught at the offering college.
- 4. Application to graduate. Students who are planning to graduate must complete an "Application to Graduate" by February 15th (for May graduates) or September 15th (for January graduates). The adviser signs the application after verifying that the requirements for the major have been completed. The college registrar signs after verifying that the college requirements will be fulfilled after successful completion of the student's final semester.

**STUDENTS**

Undergraduate enrollment is approximately 3,100, with about 56 percent in the upper division. Each year about 850 students are graduated, while 635 freshmen and 250 new transfer students are enrolled. Members of the faculty of the college serve as chairs of the special committees of roughly 1,100 graduate students.
Admission
The College Admissions Committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Most students come from New York State, but about 30 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 22 percent are identified as members of minority ethnic groups.

Transfer Students
Approximately 18 to 20 percent of the ALS undergraduate students are transfers who have taken part of their collegiate work at community colleges, agricultural and technical colleges, or other four-year institutions. Many of them hold an associate degree.

A Cornell student in good standing may apply for intra-university transfer to pursue a course of study unavailable in his or her current college. Guidelines are available in the Admissions Office of the College of Agriculture and Life Sciences, 177 Roberts Hall. The procedure includes filing a transfer request, meeting with a faculty member in the proposed area of study and submitting a letter explaining reasons for the transfer.

Consideration is given to students who have demonstrated an interest in their intended field of study, by taking appropriate prerequisite courses and courses within this area of study. Academic achievement is also considered. Students are seldom allowed to transfer during their freshman year. In some cases a student may be referred to the Internal Transfer Division to study for one semester before entering the college. A second semester is considered under unusual circumstances. During this trial semester the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

Special Students
A limited number of non-degree candidates who want to take selected courses in the college are admitted each year. Applicants should submit the standard Cornell application, a resume of their work experience, and a list of the courses they want to take. For more information and guidelines, students should contact the Admissions Office, 177 Roberts Hall.

Off-Campus Students
Programs in which students study off campus but enroll for credit in the College of Agriculture and Life Sciences include the Sea Semester, field study in human ecology or industrial and labor relations, Albany programs, Cornell-in-Washington, student teaching, IPM internship, and clinical microbiology internship. Students intending to receive Cornell credit for work done off campus should inform the college registrar at the time of enrolling for courses to ensure that proper registration will occur.

Off-Campus Courses
Students in CALS must be registered for at least 12 credits of course work each semester. It is expected that students will not be enrolled in course work at another institution while they are enrolled at CALS.

Two exceptions to enrollment elsewhere while being a full-time student at Cornell would be the joint enrollment agreements between Cornell and Ithaca College and Wells College. Other exceptions must be reviewed by the Committee on Academic Achievement and Petitions. Students must petition before enrolling for a course elsewhere. The committee may approve such petitions only when there are compelling circumstances such as severe scheduling problems or no equivalent course available at Cornell. Enrolling in a course at another college to avoid taking it at Cornell is not permitted.

Leave of Absence
A student wishing a break from studies in a future semester, or those who find it necessary to leave the university before the end of a semester, should submit a written petition for a leave of absence. Such action is necessary to clear the record for the semester and if not taken may affect the student's subsequent readmission to the university.

An approved leave is considered a voluntary interruption in study and holds the student's place in the college without reapplication to the university. Voluntary leaves are issued two ways: restricted for students in good academic standing (no restrictions placed on length of leave, activities pursued, and simple notification by student of intent to return), and restricted (length of leave and activities pursued may be specified, and a petition to return must be approved by the Petitions Committee).

A database is maintained by the Counseling and Advising Office to assist participation in pre-course enrollment the semester before a student's return.

Information and petition forms are available in the Counseling and Advising Office, 140 Roberts Hall.

Withdrawal
A student who wishes to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good academic standing. Students who have withdrawn and who later decide to return must apply to the Admissions Office.

Graduation and Diplomas
Graduating seniors must complete the Application to Graduate (see the details in Part C of "Progress toward the Degree"). Diplomas are distributed to those who have completed the degree requirements and have been approved by the college faculty. After the commencement ceremony at Schoellkopf Field in May, graduates return to the Ag Quad to obtain their diplomas. For January and August graduates, diplomas are mailed.

ADVISING AND COUNSELING SERVICES
Faculty members in the College of Agriculture and Life Sciences recognize that students need information and advice to make intelligent decisions while in college. They believe that personal contact is the best way to provide information and advice on both academic and personal matters; they consider advising to be an important and integral part of the undergraduate program. Each student enrolled in the college is assigned to a faculty adviser in his or her major field of study to assist and guide in developing a program of study, and to enhance the student's academic experience.

The Counseling and Advising Office coordinates the faculty advising program, serves as the college's central undergraduate advising office, and offers personal counseling. Academic advising is available for students who are interested in international study, need to file petitions to waive college academic regulations, have disability concerns, are experiencing academic difficulties, or have requests for tutoring. The staff coordinates new student orientation, commencement activities, and the activities of Ho-Nun-De-Kah, the college's honor society. Students seek counseling and advising on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management.

Two counselors provide short-term counseling with an expertise in college policies and guidelines. Counseling is framed as appropriate to each student's academic circumstances. The staff is available on a walk-in basis, as well as by appointment.

The Office of Minority Programs serves to recruit, admit, monitor, and influence policy on behalf of all minority students in the College of Agriculture and Life Sciences.

The College Admissions Committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Most students come from New York State, but about 30 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 22 percent are identified as members of minority ethnic groups.

The duties of the Office of Minority Programs are primarily carried out by the director, assistant director, and 12 peer advisers. Together, the staff acts as a major advocacy and advising group, as well as informational and referral center. Its constituency includes students, faculty, and the public.

Given the college's policy on non-exclusionary programming, the Office of Minority Programs is also responsible for some functions that serve the college's entire population. Presently, that includes reviewing non-minority applicant folders, serving as the Prehealth Program adviser and liaison, and...
providing ongoing support at all levels for the Office of Counseling and Advising.

The Office of Career Development offers a variety of helpful services in a friendly environment to all students and alumni of the college. Career development includes self-assessment, career exploration, decision making, and transition to employment or further study. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of 500 college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as resume writing, cover letter writing, and interview skills are presented throughout the semester and are available on videotape. An active on-campus recruiting program brings more than 80 employers to campus each year to interview students for full-time and summer jobs. Additionally, the office provides information on hundreds of internships.

The office, in conjunction with a network of college faculty members, assists students throughout their undergraduate years and beyond. For further information, students should contact Bill Alberta and the staff in 177 Roberts Hall.

Financial aid is administered through the university office in Day Hall. Endowment funds and annual donations provide supplemental aid for students in the college who are eligible for financial aid. Information about these college grants is available from the Office of Academic Programs in Roberts Hall for students who have their financial aid package established through the university office in Day Hall. Grants are processed through the university’s Office of Financial Aid.

Academic Integrity Policy

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings: students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student’s failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code:

1) Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.
2) Students are guilty of violating the code if they
   • knowingly represent the work of others as their own
   • use or obtain unauthorized assistance in any academic work
   • give fraudulent assistance to another student
   • fabricate data in support of laboratory or field work
   • forge a signature to certify completion or approval
   • submit the same work for two different courses without advance permission
   • knowingly deprive other students of library resources, laboratory equipment, computer programs, and similar aids
   • in any other manner violate the principle of absolute integrity
3) Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline
4) Faculty members fulfill their responsibility to
   • maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor
   • make clear the conditions under which examinations are to be given
   • make clear the consequences of violating any aspects of the code
   • provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently
   • state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials
   • approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course
   • monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students’ submitted work must be their own and no one else’s

Cornell’s Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides informal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a non-voting record keeper. Professor Dale Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board.

General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising Office, 140 Roberts Hall.

ACADEMIC POLICIES AND PROCEDURES

Records

The college registrar maintains for each student a complete record of academic achievement. A permanent record is maintained for each matriculated student and updated as new information becomes available. The director of enrollment management and student records, registrar, and associate registrar are available to consult with students regarding the assignment of credit toward meeting distribution and elective requirements as listed on the Summary of Record form.

Registration Procedures

All students must register with the university and “check-in” with this college at the beginning of each semester. Check-in materials are available in 140 Roberts Hall as announced each term by the university registrar.

Course Enrollment Procedures

To enroll in courses, students will receive information from the university registrar; plan a schedule in consultation with their adviser; and pre-enroll by computer, through CoursEnroll in “Just the Facts” on the Bear Access menu. Pre-enrollment is not valid until the student enters the adviser key code into the computer. Adviser key codes are provided by faculty advisers after a discussion of selections and requirements takes place. The adviser key code changes each semester to ensure ongoing contact between student and faculty adviser.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the college Registrar’s Office, 140 Roberts Hall. Students who will be studying off campus should notify the Registrar’s Office to ensure that proper registration will occur.

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their GPA. If a student retakes a course in which a passing grade was earned, the second time will be for no credit. Students must not enroll again for a course in which they received an incomplete or NG. Instead, work for that course should be completed without further enrollment. The instructor files a manual grade form to the college registrar when a grade has been assigned. An incomplete not made up by the end of two successive semesters of residence reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation. Students enrolled in a two-semester course will receive an R at the end of the first
Students may add courses during the first three weeks of the term and change grading options or credit hours where applicable and may drop courses until the end of the seventh week. Students wishing to withdraw from a course after the end of the seventh week must petition to the college Committee on Academic Achievement and Petitions (also see Petitions Procedures below). Petition forms are available in Counseling and Advising, 140 Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total work load, and scheduling prior to the end of the seventh week of the semester. If a petition to drop a course is approved after the end of the seventh week of classes, the course remains on the student's record and a W (for "withdrawal") is recorded on the transcript.

Petitions Procedures
The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee

• reviews, at the end of each semester and at other times as shall seem appropriate to
the committee, the progress of students toward meeting graduation requirements
• receives and acts upon petitions from individual students asking for exceptions from
particular academic regulations or requirements of the college, or for
reconsideration of action previously taken by the committee
• acts upon readmission requests from persons whose previous enrollment was
terminated by the committee
• notifies the petitioner in writing of the action taken by the committee

A petition for exemption from a college academic requirement or regulation may be filed by any student who has grounds for exemption. Forms are available in the Counseling and Advising Office, 140 Roberts Hall. Counselors are available to assist with the process. A petition is usually prepared with the assistance of a student's faculty adviser, whose signature is required. The adviser's recommendation is helpful to the committee. The committee reviews the written petition and determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action. Petitions for withdrawing from a course are discussed above.

Academic Deficiency Policies
At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing them on probation, granting them leaves of absence, advising them to withdraw, suspension, or expulsion.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:
• semester GPA of at least 1.7
• cumulative GPA of at least 1.7
• satisfactory completion of 12 or more credits per semester
• reasonable progress toward completion of distribution requirements
• appropriate completion of college and university requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C- (1.7) or higher are prima facie evidence of satisfactory progress and good academic standing.

Grade Reports
Grade reports for the fall semester are available on "Just the Facts" in January; grade reports for the spring semester are mailed by the Office of the University Registrar to students at their home address. If alternative addresses are reported to the college or university registrar by mid-May.

ACADEMIC HONORS
The college encourages high academic achievement and recognizes outstanding students in several ways:

Dean's List. Each semester, students are recognized for academic excellence by inclusion in the Dean's List. Eligibility for the Dean's List in the College of Agriculture and Life Sciences is determined by the following criteria:
1) a minimum course load for the semester of 12 letter-graded credits;
2) achievement of a semester GPA of at least 3.50; and
3) achievement of a "S" grade, or a "C" or better grade in each course (including physical education), with no Incompletes. Dean's List will be granted retroactively if students meet all the requirements after successful course completion to make up INC grades.

Bachelor of Science with Honors. Students receiving a cumulative GPA of 4.0 or greater (based on the last four full-time semesters of Cornell credits in residence, with a minimum of 48 letter graded credits) will graduate "summa cum laude."

Students receiving a cumulative GPA of greater than or equal to 3.75 and less than 4.0 (based on the last four full-time semesters of Cornell credits in residence, with a minimum of 48 letter graded credits) will graduate "magna cum laude."

Bachelor of Science with Distinction in Research. Students will graduate with a bachelor of science degree with distinction in research when, in addition to having completed all the graduation requirements, they have satisfactorily completed the research honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Distinction in Research Honors Program.

Gamma Sigma Delta is an honor society of faculty and students in the Colleges of Agriculture and Life Sciences, Human Ecology, and Veterinary Medicine. The common bond is promotion of excellence in work related to the quality of our environment and life as it relates to agriculture and the related sciences. The Cornell chapter recognizes the academic achievements of students, faculty, and alumni of those colleges with nominations for membership and with special awards. To be eligible, seniors must be in the upper 15 percent of their major. Five juniors with the highest grade point average in the college are also nominated. Gamma Sigma Delta also promotes academic excellence through sponsorship of special programs in the three colleges.

Golden Key is a National Honor Society that recognizes and encourages scholastic achievement and excellence in all undergraduate fields of study. Juniors and seniors with a cumulative GPA of 3.60 or higher are eligible. Visit Golden Key's web site at gknhs.gsu.edu/

DISTINCTION IN RESEARCH HONORS PROGRAM
The Bachelor of Science degree with distinction in research will be conferred upon those students who, in addition to having completed the requirements for the degree of Bachelor of Science, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area.

An undergraduate wishing to enroll in the honors program must have completed at least
55 credits, at least 30 of the 55 at Cornell. Also, the student must have attained a cumulative GPA of at least 3.0 (unless otherwise noted by a particular program) at the time of entry.

Interested students must make written application no later than the end of the sixth week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. An application form is available from the college registrar, 140 Roberts Hall, or from the area committee chair. (Biological sciences students should get applications at 200 Stimson Hall.)

Written approval of the faculty member who will direct the research and of the research program committee in the area is required. After the college registrar verifies the student’s GPA, the student will be officially enrolled in the honors program.

Academic credit may also be earned by enrolling in an appropriate independent study course. When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds to cover some of the costs the student incurs in doing the research.

The distinction in research honors committee for each area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with distinction in research.

Unless otherwise indicated in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the research program committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the distinction in research program must be accepted in one of the program areas approved by the faculty.

Students are not eligible for distinction in research by participating in a program offered by another college or administrative unit.

**Animal Sciences**

Faculty committee: W. B. Currie, chair; Y. R. Boisclair, S. M. Quirk, P. A. Johnson

The objective of the animal sciences distinction in research honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing a distinction in research project should consult with their faculty advisers early in their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential research honors project sponsor (i.e., a faculty member working in the animal sciences) and secure the candidate’s member’s commitment to sponsor the student in the research project. This should be accomplished early in the second semester of the junior year.
- Preregister during the spring semester for AS 496, Animal Sciences Honors Seminar, which is offered in the fall semester.
- Register for AS 499, Undergraduate Research.
- Participate in AS 402, Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results (see exceptions under particular program areas).
- Submit a written thesis to the distinction in research honors committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the distinction in research committee for a short oral defense of the thesis following a review of the thesis by the student’s sponsor and the research committee.

Details pertaining to the specific requirements of the program can be obtained from the office of the committee chair, 434 Morrison Hall.

**Biological Sciences**

Students interested in the distinction in research honors program in the biological sciences should consult with their faculty advisers and with potential faculty research sponsors early in their junior year. See “Independent Research and Honors Program” in the Biological Sciences section of this catalog for complete details. Information on faculty research, applications, and program requirements may be obtained from the Office of Undergraduate Biology, 216 Stimson Hall.

**Biology & Society**

Faculty committee: D. Pimentel, chair

The distinction in research honors program in Biology & Society is designed to provide independent research opportunities for academically talented undergraduate students in Biology & Society. Students who enroll in this program are expected, with faculty guidance, to do independent study and research dealing with issues in biology and society. Students participating in the program should find the intellectually stimulating and rewarding whether or not they intend to pursue a research career.

Biology & Society students are considered for entry into the research honors program at the end of the second semester of the junior year. Application forms for the program are available in the Biology & Society Office, 275 Clark Hall. To qualify for the Biology & Society distinction in research honors program, a student must have an overall Cornell cumulative GPA of at least 3.3, have formulated a research topic, and have found a project supervisor (with a Cornell academic appointment) and a Biology & Society faculty member willing to serve as his/her adviser. The director of undergraduate studies will appoint a third reader of the completed research applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the distinction in research honors program only by permission of the Biology & Society program. Students must enroll for two semesters and may take three to five credits per semester up to a maximum of eight credits in B&SoS 498 and 499, Honors Project I and II. More information on the distinction in research honors program is available in the Biology and Society Office, 275 Clark Hall (255-6047).

**Important Deadlines**

(NOTE: If the following dates fall on a weekend, the deadline is the prior Friday).

- Last week of second semester of the junior year: Application for distinction in research honors program submitted to 275 Clark Hall.
- April 15: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
- April 29: Thesis defense accomplished.
- May 13: Two bound copies of completed and defended thesis submitted to director of undergraduate studies.

**Entomology**

Faculty committee: B. L. Peckarsky, chair

A distinction in research honors program in the area of entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences (see the requirements at the beginning of this section). The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for study in a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral and biological diversity provide the raw material for research honors study. Cornell’s diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for research honors study.

The research honors committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

- Discuss the matter with his or her academic adviser, preferably in the junior year, so that a research project can be carefully planned. The possibility of conducting some research during the junior year and/or summer should be discussed.
- Discuss the project with an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. The faculty adviser will be of assistance in determining which faculty entomologist might be the best supervisor, the decision being based primarily on available faculty members’ areas of expertise.
- Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objectives or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
- Present a completed application to the chair of the entomology research honors committee no later than the end of the sixth week of the first semester of the senior year. Earlier submission is encouraged.
Submit a brief progress report, approved by the project supervisor, to the entomology research honors committee by midterm of the semester in which the student will complete his or her graduation requirements.

Present a formal seminar reporting the significant findings of the research to the Department of Entomology (preferably as a Jugatae seminar) in the last semester of the senior year.

Submit two copies of the final project report (honors thesis) to the chair of the entomology area research honors committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee selected by the chair of the honors committee. Referees will return the thesis to the student one week before the last day of classes. Changes indicate that changes must be made, the revised thesis should be submitted to the chair no later than the last day of classes.

**Natural Resources**

Faculty committee: J. B. Yavitt, chair; B. A. Knuth, J. P. Lassoie, E. L. Mills

The research honors program in natural resources provides an opportunity for undergraduates to pursue supervised independent research in the areas of (1) ecology and management of landscapes; (2) fish and wildlife biology and management; and (3) resource policy, management, human dimensions, and environmental education. The subject matter and nature of the research experience may be quite varied, but requires the guidance and supervision of a faculty member with substantial interest and expertise in the subject area chosen.

In addition to meeting requirements of the college, the student is expected to do the following:

- Register for the research honors program in the junior year or earlier.
- Select a faculty adviser who will help identify and formulate a research problem.
- Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
- Describe and summarize the work in the format of a conventional master's thesis or scientific paper ready for journal publication. About half of the theses have been published.
- Work closely with at least two faculty or staff members who will agree to serve as readers for the thesis. Provide readers with a copy of the guidelines for evaluation of research honors theses available from the department's honors program committee.
- Take the lead role for meeting each of the above expectations.

**Nutritional Sciences**

Faculty committee: M. N. Kazarianoff

The research honors program offers students a research experience structured to give them the opportunity to choose a research project, search the literature relevant to it, plan and execute the research, and write it up in the form of a thesis. As in other types of research available to undergraduates, each student is guided by a faculty mentor. The honors project is designed to be spread over both semesters of the junior and senior years. Students who consider this option should be aware that it involves a number of deadlines and considerable time commitment. Before signing on for research honors, students need to consult with their academic advisers to make sure that honors will not interfere with other academic objectives, such as preparation for admission to medical school or making the dean's list. Although honors research credits for spring semester junior year and both semesters senior year are designated LET, individual mentors may choose the R grade for work in progress until the project has been fully completed. An outline of activities for both years is given below. Letters of invitation are sent to upcoming juniors during the summer.

**Junior Year**

- Fall Semester Course No: NS 398 (1 credit, S-U): Students are oriented to the program, and provided material that summarizes the range of research activities in DNS. Students begin making arrangements with faculty members. When these arrangements have been completed, students will begin a literature search that focuses on their research problems.
- Spring Semester Students register for NS 498 (1 credit, section 1). Additional faculty presentations of research opportunities are made, as well as orientation to supportive services available through DNS. Placements with faculty mentors should be completed by spring break. Each student may also register under the number NS 499 for 2-4 credits to work on a convenient number of credits, to be determined in consultation with the chosen adviser. Work carried out will have two objectives:
  1. Become familiar with literature and/or research methods appropriate to the problem for the honors research.
  2. Develop a research proposal.

The semester outcome will be written reports/discussions of the method(s) or literature searches and a short research proposal, evaluated by the research adviser.

**Senior Year**

- Fall Semester Students register under the number NS 499 (2-4 credits, LET, by arrangement with their mentors). They may begin their research earlier than fall, e.g., during the summer, or even earlier, but should be prepared to begin research early in the fall semester. The objective for the semester will be to conclude most of the hands-on research/data acquisition.
- Spring Semester Students will again register under course number NS 499 for 2-4 credits LET, by arrangement with their research mentors. Much of the allotted time will be spent on data analysis and on writing the honors thesis.

Several important deadlines should be noted:

1. Last week in March: The names of thesis readers are to be in the hands of the research honors committee.
2. Third to fourth week of April: A final draft of the thesis is handed to the readers.
3. First to second week of May: Scheduled seminars for oral presentations of each student's research.
4. Last day of classes: Final form of the thesis is handed to the research honors chairman.

To help students meet these deadlines, students register for NS 498 (1 credit, section 2) class sessions will be held before spring break for guidance in thesis writing and/or informal reporting of preliminary data. After spring break the group will meet once or twice (depending on number of students) to practice oral presentations of completed research.

*Grade is determined by each student's mentor.

**Two readers knowledgeable in the area of the student's research topic to be chosen by the research honors committee and faculty advisers.

**Physical Sciences**

Faculty committee: S. Colucci, chair; J.-Y. Parmange, S. S. H. Rizvi

The research honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the departments of Agricultural and Biological Engineering, Food Science, Earth and Atmospheric Sciences, or Biometrics.

In addition to meeting the requirements of the college, the student is expected to:

- Identify a thesis adviser and thesis topic before the end of junior year.
- Working with the thesis adviser, prepare a budget and application form (due by the sixth week of senior year).
- Enroll in the program for a minimum of two semesters.
- Enroll in the appropriate departmental undergraduate research course for a total of at least six credits.
- Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).
- Submit a draft of the thesis to the thesis adviser with sufficient lead-time for a revision to be prepared.
- Submit three copies of the thesis and names of recommended reviewers to the chair of the honors committee by three weeks before the end of classes in the semester in which graduation is expected.

There is no required format but the thesis is usually written in the form of a research journal article or a master's thesis. Further details of the program can be obtained from the chair of the physical sciences research honors committee.

**Plant Sciences**

Faculty committee: R. L. Obendorf, chair; I. A. Merwin, E. B. Nelson, F. S. Rossi

Students perform independent scientific research under the guidance of faculty members in fields of horticultural, agronomic, and soil sciences; plant biology; plant genetics...
and breeding, and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Honors Committee a proposal project (two to three pages) which includes a title; a brief background to the problem (justification and literature review); a clear statement of object(s) and hypothesis to be tested; methodology and experimental plan, necessary space, equipment and supplies, and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and that its completion within the remainder of the student's undergraduate tenure is feasible.

Successful completion of the research honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptable report must have been reviewed and corrected according to recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the honors committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor evaluating the research and, if appropriate, recommending graduation with distinction in research. The research honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the associate director of academic programs and to the college registrar that the student be graduated with distinction in research. One copy of the accepted report will be returned to the student with review comments from the committee.

Social Sciences

Faculty committee: R. F. Osmanski, S. Feldman, J. M. Conrad.

Students are accepted into the social sciences research honors program of the College of Agriculture and Life Sciences after meeting all the criteria described above. After evaluation of the student's written application, and on approval of a detailed thesis proposal. The application and proposal are due no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis adviser during the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty adviser. Second, the Honors Committee reviews the proposal to determine whether it is consistent with honors thesis requirements, and to make suggestions for improvement.

The proposal should be 5 to 10 typed, double-spaced pages and include the following sections:

- Research Topic: State the problem to be studied or the topic of interest. Review the relevant literature and the background of the problem or topic; include a more extensive bibliography.

- Research Questions/Empirical Hypotheses: Specify the questions to be answered or hypotheses to be empirically tested via collection of data and some mode of analysis accepted in the social sciences.

- Research Methods: Discuss the models to be constructed, data collection procedures (including survey instruments or experiments, if appropriate), and methods of analysis.

- Expected Significance: State what new knowledge or information is likely to be forthcoming and why it is important. Faculty advisers must be members of the graduate faculty. Exceptions to this rule will be granted for persons with special expertise who are deemed capable of thesis supervision; exceptions will be granted pending petition to the social science honors committee. Students may register for honors credit directed by the faculty adviser in conjunction with a research honors project.

Distinction in research is awarded upon approval of the research honors thesis by the social science honors committee. The research should deal with a substantive issue in one of the fields in the social sciences. Both the results of the research and the methodology (or the argument by which the results were achieved) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient to count as research. Honors theses should be written according to the form of any standard journal within the appropriate fields. Three copies of the thesis must be submitted to the chair of the social science committee no later than three weeks before the last day of classes of the semester for which the degree is sought. A supporting letter from the faculty member supervising the work also must be submitted. Approval of the thesis requires a majority vote of the honors committee.

The Division of Nutritional Sciences is an intercollege unit affiliated with the College of Human Ecology and the College of Agriculture and Life Sciences. The nutrition, food, and agriculture major offers students in the College of Agriculture and Life Sciences the opportunity to focus their studies in human nutrition while obtaining a strong background in courses related to agriculture and the life sciences. Students in the biological sciences major may also concentrate in nutrition. Courses offered by the Division of Nutritional Sciences support many undergraduate programs in the College of Agriculture and Life Sciences including animal science, biological sciences, communication, food science, international agriculture, plant sciences, and rural sociology. Nutritional sciences courses count toward the undergraduate degree requirement for 55 credit hours of courses in Agriculture and Life Sciences.

The American Indian Program (AIP) is a multidisciplinary intercollege program consisting of academic, research, extension, and student support components. Course work is intended to enhance students' understanding of the unique heritage of North American Indians and their relationship to other peoples in the United States and Canada. Students are challenged by such topics as the sovereignty of Indian nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses that focus on American Indian life from precontact times to the present, and feature the perspectives of Native American people.

Research areas among faculty active in the program include Indian education, social and economic development, agriculture, environmental issues, history, sociology, language, literature and the arts, and cultural preservation. Extension and outreach efforts in the program seek to develop solutions to problems identified by Indian communities and to facilitate the application of institutional resources, research, and expertise to community needs.

The American Indian Program's Akwe:kon Press publishes Native Voices, a multidisciplinary journal that covers issues across the western hemisphere and sponsors conferences, guest lectures, and forums on important local, national, and international issues. Akwe:kon, the American Indian residence house, offers undergraduate students a living environment that promotes intercultural exchange.
The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration will be earned upon completion of five courses: American Indian Studies 100 (Indian America to 1890) and American Indian Studies 175 (Contemporary American Indian Issues), plus three other courses selected from the American Indian Studies course listing, for a total of at least 15 credits. Students choosing a concentration in American Indian Studies should obtain application materials from the AIP office in 450 Caldwell.

AIP also offers a graduate minor. Students interested in choosing the minor should contact Daniel Usner, American Indian Program, 255-8402.

Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. Within this program, Cornell's strengths across a broad range of earth and environmental sciences have been brought together to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

The major is available to students in the College of Agriculture and Life Sciences as well as students in the Colleges of Arts and Sciences and as an option, Engineering. The SES major has its home in the Department of Earth and Atmospheric Sciences, which spans all three colleges, but relies on the collaboration of several departments across the university.

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or inter-disciplinary courses that build on the basic sequences. Graduates of Cornell's SES program are well prepared for career and advanced study options in the earth and environmental sciences.

See the Science of Earth Systems listing in the section on "Major Fields of Study" for complete information about the SES curriculum. For more information contact Professor Kerry H. Cook, Department of Earth and Atmospheric Sciences, kc6@cornell.edu and visit the web site: www.geo.cornell.edu/SES/

The Comparative and Environmental Toxicology Program is an interdisciplinary intercollege program with research, teaching, and cooperative extension components coordinated by the Institute for Comparative and Environmental Toxicology (ICET). Courses are cosponsored by academic departments in several colleges of the university. A description of the program and general information is available from the director of the program through the ICET office, 213 Rice Hall or at www.bio.cornell.edu/icet. See also the Interdisciplinary Centers, Programs, and Studies section at the front of this catalog.

The Cornell Institute for Resource Information Systems (Cornell IRIS) is an interdisciplinary, inter-college unit affiliated with the Center for the Environment. The mission of Cornell IRIS is to advance the development and use of spectral and spatial information technology to benefit the environment. The Institute is comprised of three program areas in environmental resource inventory, remote sensing, and geographic information systems. A description of the program and general information is available from the Institute director through the Cornell IRIS office in 302 Rice Hall.

OFF-CAMPUS STUDY PROGRAMS

Study off campus is of two types. (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser.

Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Formed opportunities are available. The Assembly Intern Program is offered in the spring semester and provides a placement with a staff member of the New York State Assembly. The Senate Assistants Program also occurs during the spring semester and has placements with New York State senators and selected staff. The Albany Semester Program is available during the spring, summer, and fall semesters and provides experience with a state agency such as the Libraries of Environmental Conservation, Education, or Labor. Each program has an academic component as well. Check the individual folders in the internship files in the ALS Career Development Office, 177 Roberts Hall.

Applications are collected and processed by the ALS Career Development Office, 177 Roberts Hall, in the term prior to assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least 12 credits must be carried to meet the residence requirement. Students should note that their last term average must be 1.7 or above. To receive academic credit for the internship, students enroll in ALS 400, for an S/U grade only.

Information and applications are available in the ALS Career Development Office, 177 Roberts Hall.

Cornell-in-Washington

The Cornell-in-Washington Program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Cornell-in-Washington Program offers two study options: (1) studies in public policy, and (2) studies in the American experience. Students take part in a public policy or humanities seminar which requires them to serve as externs in federal agencies, congressional offices, or nongovernmental organizations and to carry out individual research projects under the supervision of Cornell faculty. The required externships and all course enrollments are arranged through, and approved by, the Cornell-in-Washington Program. Students in the College of Agriculture and Life Sciences must register for ALS 500 and cannot receive credit for the externship experience alone. For further information, see program material at 150 Gander, 407-255-4090, or visit the Cornell-in-Washington web site at cwi.cornell.edu.

SEA Semester

The Sea Education Association is a nonprofit educational institution offering ocean-focused academic opportunities: field study, live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is 12 weeks in length. Six weeks are spent in Woods Hole, the following six weeks are spent on either one of SEA's two sailing vessels: the R/V Westward or the R/V Corwin Cramer. For more information, students should contact the Cornell Marine Programs office, G14 Stimson Hall (607-255-3717). SEA students should file the intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on the 95-acre Appledore Island off the coast of Portsmouth, New Hampshire, in the Gulf of Maine. SML offers undergraduate, beginning graduate and interested adults a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to "Courses in Marine Science," under the section on the Office of Undergraduate Biology, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 607-255-3717.

Internships

Several departments in the college offer supervised internships for academic credit. Arrangements should be made with the offering department for assignment of a faculty member who will be responsible for planning the program of work and for evaluating student performance.

For internships not governed by an established internship course, the student must enroll in a 497 course for the number of credits to be assigned. If the work is done during the summer, the student must enroll in the Cornell summer session for the agreed-upon credits.

In cases where the work is not done at Cornell, the awarding of credits depends upon a prior contractual arrangement between a Cornell professor and the student. Specific terms for receiving credit and a grade should be recorded, using the Independent Study, Research, Teaching, or Internship form, available in the Registrar's Office, 140 Roberts Hall.

A maximum of 15 (pro-rated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. No more than 6 of the
Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet minimum distribution requirements of the college.

**Agricultural and Biological Engineering**

The Department of Agricultural and Biological Engineering is at the focus of three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of increasing world population, protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering program in the Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, applications courses, and liberal studies. The program leads to a Bachelor of Science degree, which is awarded jointly by the Colleges of Engineering and Agriculture and Life Sciences and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Three concentrations in agricultural and biological engineering are offered: environmental engineering, biological engineering, and food production and process engineering. Students take courses in mathematics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. Students select upper-level courses in the department in areas that include bioprocessing, soil and water management, bioenvironmental and facilities engineering, and environmental engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students select other courses in the College of Engineering that strengthen their program, such as environmental engineering or biomedical engineering. Students planning for medical school also take courses in the College of Arts and Sciences.

The living world is all around us and within us. The biological revolution continues and it has given rise to a growing demand for engineers who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, who are sensitive to the needs of people, and who are interested in the challenges facing society. The Department of Agricultural and Biological Engineering is educating the next generation of engineers to meet these challenges.

Specific course requirements for the Accredited Engineering Programs are found in the College of Engineering section of this book. Specific course distribution requirements for the academic programs in environmental systems technology and agricultural systems technology include:

**A. Basic Subjects**

1. Calculus 8
2. Chemistry 6
3. Physics 8
4. Introductory biological sciences 6
5. Computer applications 4
6. Statistics or probability 3
7. Written and oral expression 9

**B. Advanced and Applied Subjects**

1. Five courses in the environmental, agricultural, or biological sciences 15
2. Five engineering or technology courses at the 500 level or above; at least 9 credits in agricultural and biological engineering 15

**C. Electives**

Additional courses to complete college requirements

**D. Total (minimum)** 120
For further details on the Agricultural and Biological Engineering and Technology Programs (including SES), see the department’s Undergraduate Programs brochure, available at 207 Riley-Robb Hall; contact the advising coordinator, Professor Jim Bartsch, at 255–2600; or visit the department’s web site at www.aben.cornell.edu.

Animal Sciences
The animal sciences program area offers a coordinated group of courses dealing with the principles of animal breeding, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Animal Science Department has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals at a campus location.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisers. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences to graduate, veterinary, or professional study following graduation.

Dairy management is a popular program among students who may be preparing to manage a dairy farm or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. These are examples of the flexibility within these programs that can be developed to meet a student’s career interest related to animals. It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Underclass students whose academic records warrant it may, by arrangement with individual faculty members, engage in research (either for credit or for Honors) or assist with teaching (for credit). The Dairy Management Fellows Program offers an equally challenging but different type of experience for a highly select group of students.

Applied Economics and Business Management
The undergraduate program in applied economics and business management is based on principles of economic and managerial economics, courses in agricultural, resource, and managerial economics are supplemented with others in related areas such as computer science, economics, sociology, history, government, industrial and labor relations, hotel administration, consumer economics, animal sciences, plant sciences, natural resources, mathematics, and statistics.

Six areas of specialization are offered:
Agribusiness management is designed for students who have a special interest in the economics and management of businesses that provide services for the agricultural sector of the economy.

Agricultural and applied economics provides a general program in the economics of the agricultural sector and of resource use. It is an appropriate major for those students who (1) are interested in applied economics; (2) want to survey offerings in agricultural, resource, and managerial economics, such as management, marketing, economic development, policy, and environmental and resource economics; and (3) want to prepare for graduate work in agricultural economics. It is an appropriate option for those interested in the application of the principles of economics to problems in both the public and private sectors.

Business management and marketing applies the principles of economics and the tools of management to prepare students for careers in business. Special emphasis is given to developing decision-making skills and to the study of the structure and practices of business institutions. This prepares students for careers in market analysis, sales, banking, merchandising, production management, and general business management.

Environmental and resource economics provides training for students interested in applying economic concepts to problems of the environment and resource use. This specialization is a good option for those wishing to take positions as analysts with agencies that have environmental responsibility or face environmental regulations.

Farm business management and finance is intended for students with farm experience, who are interested in farming, farm management, or farm finance careers, in such positions as agricultural lenders, extension specialists, or consultants.

Food-industry management is designed for students interested in management or sales positions with the processing, manufacturing, or distribution segments of the food industry.

All of these areas of specialization can provide a strong foundation for graduate work. In planning a course schedule, students must work closely with their faculty adviser. Each area of specialization has its own set of requirements; recommended courses, yet all the areas have enough flexibility to satisfy the interests and abilities of individual students.

Atmospheric Science
Atmospheric Science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. All students are required to complete a minimum of three semesters of calculus, two semesters of physics, and a semester each of chemistry, computer science, and statistics.

Atmospheric science courses are offered through the Department of Earth and Atmospheric Sciences (EAS). There are two options for the B.S. in Atmospheric Science through the College of Agriculture and Life Sciences:

Option A
1. Mathematics, Computer Science, and Statistics:
   a. Math 190/191, 192, 293, or Math 111, 112, 213
   b. Computer Sci. 100, or EAS 150
   c. ARME 210 or BTRY 215 or equivalent
   d. Math 294 or EAS 435
2. Basic Physical Sciences:
   a. Physics 207, 208, or Physics 112, 213, 214
   b. Chem 103, 207, or 211
3. Atmospheric Science:
   a. EAS 131, 250, 341, 342, 352, 447, 451
   b. At least two atmospheric science electives

Option B
1. Mathematics, Computer Science, and Statistics:
   a. Math 190/191, 192, 293, 294, or Math 111, 112, 221, 222
   b. Computer Sci. 100, or EAS 150
   c. ARME 210, BTRY 215, or equivalent
   d. Math 321, Math 420, or T&AM 410
2. Basic Physical Sciences:
   a. Physics 112, 213, 214
   b. Chem 207 or 211
3. Atmospheric Science:
   a. EAS 341, 342, 352, 451

Option A is intended to meet the needs of students whose primary interests are in forecasting and operational meteorology. Upon graduation, a student who has completed Option A will have satisfied both the curricular guidelines of the American Meteorological Society and the educational requirements of the National Weather Service for employment as a meteorologist. They will also be well qualified for positions in private-sector forecasting, environmental consulting firms, and in broadcast meteorology. In addition, Option A provides good preparation for graduate work in atmospheric science and closely related fields.

Option B is designed to focus on preparation for graduate study in atmospheric science as well as other sciences, and includes somewhat stronger coursework in mathematics and physics than does Option A. The minimum coursework in Option B does not satisfy the National Weather Service requirements or American Meteorological Society guidelines for employment in operational meteorology, but may be more appropriate for students with academic or research career goals. It can also be an attractive option for students transferring into the program as juniors.
Biological Sciences

Biology is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The Office of Undergraduate Biology provides student services which are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and biological processes, studies in a specific area of biology. Programs of study include animal physiology, biochemistry, ecology and evolutionary biology, general biology, genetics and development, molecular and cell biology, microbiology, neurobiology and behavior, nutrition, plant biology, and systematics and biotic diversity. Students interested in the marine sciences may consult the Shulls Marine Laboratory Office, G14 Simpson Hall, 255-3717, for academic advice and career counseling. For more details about the biology curriculum see the section in this catalog on Biological Sciences.

Biology & Society

The Biology & Society program area is designed for students who wish to combine the study of biology with exposure to perspectives from the social sciences and humanities. Many of the most critical social issues of our time, from the implications of genetic engineering to the impact of global climate change, have biological processes at their core. At the same time these issues are inherently social, involving complex relationships among people, institutions, laws, and beliefs. The Biology & Society field of study provides the skills and perspectives to systematically confront problems with biological, social, and ethical dimensions. In consultation with a faculty member, students are expected to select their courses in the field to meet their own goals and interests. For a description of the Biology & Society requirements and courses, see the section on Biology and Society under "Special Programs and Interdisciplinary Study" in this publication or visit the web site at biosoc.sts.cornell.edu.

Students who elect Biology & Society as their major field of study leave Cornell with well-developed writing and analytical skills and a knowledge base that can lead to employment in a variety of fields. Many graduates have accepted positions as health counselors, writers, or policy analysts and researchers for government organizations, medical institutions, consumer or environmental groups, or scientific research institutes. Students have found that Biology & Society is also excellent preparation for professional training in medicine, law, and health services administration and for graduate programs in such fields as genetic counseling, nutrition, clinical psychology, public health, environmental studies, anthropology, sociology, and other related fields.

Admissions

Students must have completed a year of college-level biology and submit an application during their sophomore year. Students in the College of Agricultural and Life Sciences may be admitted directly into the field of study when they apply to the college; as with all students admitted prior to completing the biology prerequisite, the admission is provisional. It is the student's responsibility to assure that final acceptance is granted upon completion of the introductory biology sequence. Although only introductory biology is a prerequisite for acceptance, students will find it useful to have completed some of the requirements (obtain course checklist in 275 Clark Hall) by the end of their sophomore year. Juniors are considered on a case-by-case basis. Upper-division applicants should realize the difficulties of completing the biology and society requirements in less than two years.

The application includes:

- A one- to two-page statement explaining your intellectual interests in Biology & Society and why it is consistent with your academic goals and interests
- A selected theme
- A tentative plan of courses fulfilling Biology & Society requirements, including courses you have taken and those you plan to take
- A transcript of work taken at Cornell University, current as of the date of application.

The faculty admissions committee reviews applications twice a year, once each during the fall and spring semesters. A faculty adviser is assigned on admittance to the field. Approximately 50 faculty members from five colleges serve as advisers to Biology & Society students. The major program is coordinated for students in all colleges through the Biology and Society Office, 275 Clark Hall, where students can get information, specific course requirements, and application forms. Faculty and student advisers are available to discuss the Biology & Society requirements with you.

Requirements for the program are listed below. A full description and listings of courses that satisfy the requirements can be obtained in 275 Clark Hall or on the web site at biosoc.sts.cornell.edu. Also refer to the section on biology and society under 'Special Programs and Interdisciplinary Study' in this publication.

Biology and Society Requirements:

- Introductory biology (one year)
- College calculus (one course)
- Ethics (one course)
- Two social sciences/humanities foundation courses
- Three biology foundation courses
- One biology depth course
- Statistics (one course)
- Core course
- Five theme courses (a coherent group of five courses relevant to the student's special interest in Biology & Society, including a senior seminar that serves as a capstone course for the program).

Students should develop their theme and select their courses in consultation with a member of the Biology & Society faculty. A list of faculty is available in 275 Clark Hall. Further information may be obtained by calling (607) 255-6047 or sending an e-mail message to msw8@cornell.edu.

I. First-Year Writing Seminars

Check the current FWS pamphlet for information.

II. Foundation Courses

A. Ethics (select one)

B&SOC 205 Ethical Issues in Health and Medicine (also S&TS 205)

Fall. 4 credits. Limited to 150 students. Staff.

For description, see B&SOC 205.

B&SOC 206 Ethics and the Environment (also S&TS 206)

Spring. 4 credits. Limited to 60 students. Staff.

For description, see B&SOC 206.

B. Social Sciences/Humanities Foundation

(2 courses, 1 from any 2 areas)

1. History of Science

BIOG 207 Evolution (also S&TS 287 and HIST 287)

Fall or summer. 3 credits. W. Provine.

For description, see BIOG 207.

S&T S 233 Agriculture, History, and Society: From Squanto to Biotechnology

Fall. 3 credits. M. Rossiter.

For description, see S&T S 233.

S&T S 282 Science in Western Civilization (also HIST 282)

Fall. 4 credits. M. Dennis.

For description, see HIST 282.

S&T S 283 The Sciences in the Twentieth Century (also HIST 280)

Spring. 4 credits. M. Dennis.

For description, see S&T S 283.

[S&T S 355 Computers: From Babbage to Gates

For description, see S&T S 355.

S&T S 390 Science in the American Polity: 1800-1960 (also GOVT 308, AM ST 386)

Fall. 4 credits. M. Dennis.

For description, see S&T S 390.

[S&T S 433 Comparative History of Science

For description, see S&T S 433.

[S&T S 444 Historical Issues of Gender and Science (also WOMNS 444)

For description, see S&T S 444.

2. Philosophy of Science

S&T S 201 What is Science? An Introduction to the Social Studies of Science and Technology

Spring. 3 credits. J. Beppy.

For description, see S&T S 201.
S&TS 286 Science and Human Nature (also PHIL 286)
Spring. 4 credits. May be used to meet the philosophy of science requirement if not used to meet the core course requirement. For description, see PHIL 286.

S&TS 381 Philosophy of Science: Knowledge and Objectivity (also PHIL 381)
Fall. 4 credits. Limited to 30 students. R. Boyd.
For description, see PHIL 381.

3. Sociology of Science
B&SOC 301 Biology and Society: The Social Construction of Life (also S&TS 401)
Fall. 4 credits. Limited to 75 students. May be used to meet the sociology of science requirement if not used to meet the core course requirement. M. Lynch.
For description and prerequisites, see B&SOC 301.

B&SOC 342 Sociology of Science (also S&TS 442 and B&SOC 442)
Fall. 4 credits. H. Mialet.
For description, see S&TS 442.

[RAM 201 Determinants of Behavior
For description, see RAM 201.]

[R SOC 208 Technology and Society
For description, see R SOC 208.]

S&TS 201 What Is Science? An Introduction to the Social Studies of Science and Technology (also SOC 210)
Spring. 3 credits. J. Reppy.
For description, see S&TS 201.

S&TS 311 The Sociology of Medicine
Spring. 4 credits. Staff.
For description, see S&TS 311.

S&TS 411 Knowledge, Technology, and Property
Fall. 4 credits. Staff.
For description, see S&TS 411.

[SOC 434 The Sociology of Reproduction (also WOMNS 435)

4. Politics of Science
[B&SOC 406 Biotechnology and the Law (also S&TS 406)
For description, see S&TS 406.]

B&SOC 407 Law, Science, and Public Values (also GOVT 407 and S&TS 407)
Spring. 4 credits. M. Lynch.
For description, see S&TS 407.

[S&TS 391 Science in the American Polity: 1960-Now (also GOVT 309 and AM ST 389)
For description, see S&TS 391.]

[S&TS 427 Politics of Environmental Protection in America (also GOVT 427)
For description, see S&TS 427.]

5. Science Communication
COMM 260 Scientific Writing for Public Information
Fall or spring. 3 credits. Limited to 25 non-freshman or graduate students per section. For description and prerequisites, see COMM 260.

COMM 421 Communication and the Environment
Spring. 3 credits. May be used in the foundation only if not taken as a senior seminar. J. Shannahon.
For description, see COMM 421.

S&TS 285 Communication in the Life Sciences (also COMM 285)
Spring. 3 credits. B. Lewenstein.
For description and prerequisites, see COMM 285.

S&TS 352 Science Writing for the Mass Media (also COMM 352)
Fall. 3 credits. Not open to freshmen. Limited to 25 students. B. Lewenstein.
For description and prerequisites, see COMM 352.

S&TS 466 Communication of Science and Technology (also COMM 466)
Fall. 3 credits. May be used in the foundation only if not taken as a senior seminar. Limited to 15 students. Offered even fall semesters. B. Lewenstein.
For description and prerequisites, see COMM 466.

C. Biology Foundation (breadth requirement): Three courses: one from three of the following subject areas:

1. Biochemistry, Molecular and Cell Biology
BIOBM 330 Principles of Biochemistry, Individual Instruction
Fall or spring. 4 credits. Staff.
For description and prerequisites, see BIOBM 330.

BIOBM 331 Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. G. Feigenson.
For description and prerequisites, see BIOBM 331.

BIOBM 333 Principles of Biochemistry, Lecture
Summer. 4 credits. H. T. Nivison.
For description and prerequisites, see BIOBM 333.

NS 262 The Cell and the External World
Spring. 3 credits. N. Noy.
For description and prerequisites, see NS 262.

NS 320 Introduction to Human Biochemistry
Fall. 4 credits. W. Anion and P. Stover.
For description and prerequisites, see NS 320.

2. Ecology
BIOES 261 Ecology and the Environment
Fall or summer. 4 credits. Not open to freshmen.
For description and prerequisites, see BIOES 261.

3. Genetics and Development
BIOGD 281 Genetics
Fall, spring, or summer. 5 credits. Not open to freshmen fall semester. Limited to 200 students.
For description and prerequisites, see BIOGD 281.

BIOGD 282 Human Genetics
Spring. 3 credits (2 cr. if taken after BIOGD 281). Limited to 25 per discussion group. M. L. Goldberg.
For description and prerequisites, see BIOGD 282.

4. Evolutionary Biology
BIOES 278 Evolutionary Biology
Fall or spring. 3 or 4 credits. Limited to 300 students. M. A. Geber.
For description, see BIOES 278.

5. Microbiology
BIOMI 290 General Microbiology Lectures
Fall, spring, or summer. 2 or 3 credits (2 credits if taken after BIOMI 192). Staff.
For description and prerequisites, see BIOMI 290.

6. Neurobiology and Behavior
BION 221 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3, 4, or 5 credits. Not open to freshmen. H. K. Reeve.
For description and prerequisites, see BION 221.

BION 222 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits. Not open to freshmen. Each discussion limited to 20 students. R. Booker/Staff.
For description and prerequisites, see BION 222.

7. Botany
BIOPL 241 Introductory Botany
Fall. 3 credits. K. J. Niklas.
For description, see BIOPL 241.

8. Physiology and Anatomy
BIOAP 311 Introductory Animal Physiology, Lectures (also VETMED 346)
Fall. 3 credits. E. Locw and staff.
For description and prerequisites, see BIOAP 311.

NS 341 Human Anatomy and Physiology
Spring. 4 credits. Permission only. Must preregister for lab in 309 MVR during CourseEnroll. V. Utermohlen.
For description and prerequisites, see NS 341.

D. Biology Foundation (depth requirement): one course for which one of the above breadth requirement courses (2C) is a prerequisite.

E. Statistics (select one)
ARME 210 Introductory Statistics
Fall. 4 credits. C. van Es.
For description and prerequisites, see ARME 210.

BTRY 261/601 Statistical Methods I
Fall or summer. 4 credits. Note: BTRY 261 is limited to undergraduates. BTRY 601 is limited to graduate students and others by permission. Staff.
For description and prerequisites, see BTRY 261/601.

CRP 223 Introduction to Statistical Reasoning for Urban and Regional Analysis
Fall. 3 credits. Bhutta.
For description, see CRP 223.
ECON 319 Introduction to Statistics and Probability  
Fall. 4 credits. Y. Hong.  
For description and prerequisites, see ECON 319.

ILRST 210 Statistical Reasoning I  
Fall, spring, or summer. 3 credits. J. Angellotti.  
For description, see ILRST 210.

MATH 171 Statistical Theory and Application in the Real World  
Fall, spring, or summer. 4 credits. Staff.  
For description and prerequisites, see MATH 171.

PSYCH 350 Statistics and Research Design  
Fall. 4 credits. For description, see PSYCH 350.

[SOC 301 Evaluating Statistical Evidence  
For description, see SOC 301.

III. Core Courses

B&SOC 301 Biology and Society: The Social Construction of Life (also SATS 401)  
Fall. 4 credits. Limited to 75 students. M. Lynch.  
For description and prerequisites, see B&SOC 301.

SATS 286 Science and Human Nature (also PHIL 286)  
Spring. 4 credits. R. Boyd and N. Sturgeon.  
For description, see SATS 286.

IV. Themes

A. Natural Sciences Issues/Biology Elective  
Select from the following list of B&SOC approved Natural Science Issues courses or choose course(s) with intro biology as a prerequisite.

[B&SOC 314 Biological Basis of Sex Differences (also BIOAP 214 and WOMNS 214)]  
For description, see BIOAP 214.

B&SOC 347 Human Growth and Development: Biological and Behavioral Interactions (also HD 347 and NS 347)  
Spring. 3 credits. Offered alternate years. J. Haas and S. Robertson.  
For description and prerequisites, see HD 347.

[BIOS 275 Human Biology and Evolution (also ANTHR 275 and NS 275)]  
For description, see BIOS 275.

[BIOS 673 Human Evolution: Concepts, History, and Theory (also ANTHR 673)]  
Fall. 3 credits. Offered alternate years.  
For description, see BIOS 673.

BIOPL 247 Ethnobiology  
Fall. 3 credits. D. M. Bates.  
For description, see BIOPL 247.

HD 266 Emotional Functions of the Brain  
Fall. 3 credits. R. DePue.  
For description, see HD 266.

HD 344 Infant Behavior and Development  
Fall. 3 credits. Not open to freshmen. S. Roberson.  
For description and prerequisites, see HD 344.

HD 370 Experimental Psychopathology  
Spring. 3 credits. Limited to sophomores, juniors, and seniors. C. Maxwell-Miller.  
For description and prerequisites, see HD 370.

HD 436 Language Development (also LING 436, PSYCH 436, and COGST 436)  
Spring. 4 credits. B. Lust.  
For description, see HD 436.

NS 222 Maternal and Child Nutrition  
Spring. 3 credits. Limited to 20. C. Garza.  
For description and prerequisites, see NS 222.

NS 331 Physiological and Biochemical Bases of Human Nutrition  
Spring. 4 credits. May be used to fulfill the Biology Depth requirement. M. Stipanuk.  
For description and prerequisites, see NS 331.

[NS 361 Biology of Normal and Abnormal Behavior (also PSYCH 361)]  
For description and prerequisites, see NS 361.

NS 475 Molecular Nutrition and Development  
Spring. 4 credits. May be used to fulfill the Biology Depth course requirement. P. Stower and D. Noden.  
For description and prerequisites, see NS 475.

NTRES 201 Environmental Conservation  
Spring. 3 credits. T. Fahey.  
For description, see NTRES 201.

PSYCH 326 Evolution of Human Behavior  
Fall. 4 credits. R. E. Johnston.  
For description and prerequisites, see PSYCH 326.

Examples of biology electives

AN SCI 300 Animal Reproduction and Development  
Spring. 3 credits.  
For description, see AN SCI 300.

HD 366 Psychobiology of Temperament and Personality  
Spring. 3 credits.  
For description, see HD 366.

B. Humanities/Social Sciences Elective (two courses)

Courses listed earlier as social science/humanities foundation courses (2.B.) are particularly appropriate as social science/humanities electives. A single course, however, cannot be used to meet both requirements.

Additional courses that are recommended as social science or humanities electives are:

Examples of humanities/social sciences electives

ARME 464 Economics of Agricultural Development  
Spring. 3 credits. For description, see ARME 464.

ANTHR 211 Nature and Culture @  
Spring. 3 credits. For description, see ANTHR 211.

CRP 380 Environmental Politics  
Fall or spring. 4 credits.  
For description, see CRP 380.

CRP 451/551 Environmental Law  
Fall. 4 credits. For description, see CRP 451/551.

[HD 241 History of Childhood in the United States  
Spring. 3 credits. Not offered 2000–2001. For description, see HD 241.]

HD 251 Social Gerontology  
Spring. 3 credits. For description, see HD 251.

[HD 258 The Historical Development of Women as Professionals 1800 to Present (also AM ST 258, HIST 238, and WOMNS 238)]  
Fall. 3 credits. Not offered 2000–2001. For description, see HD 258.

NS 421 Nutrition and Exercise  
Spring. 3 credits. For description, see NS 421.

NS 450 Public Health Nutrition  
Spring. 3 credits. For description, see NS 450.

NS 650 Food and Nutrition Assessment in a Social Context  
Fall. 3 credits. For description, see NS 650.

NS 651 Food and Nutrition Assessment in a Social Context  
Spring. 3 credits. For description, see NS 651.

[NTRES 400 International Environmental Issues  
Fall. 4 credits. Not offered 2000–2001. For description, see NTRES 400.]

NTRES 407 Religion, Ethics, and the Environment  
Fall. 4 credits. R. Baer.  
For description, see NTRES 407.

PAM 303 Ecology and Epidemiology of Health  
Fall. 3 credits.  
For description, see PAM 303.

PAM 350 Contemporary Issues in Women's Health  
Fall. 3 credits.  
For description, see PAM 350.

PAM 380 Human Sexuality  
Spring. 3 credits.  
For description, see PAM 380.

[PAM 381 Health Care Services and the Consumer  
Fall. 3 credits. Offered alternate years. Not offered 2000–2001. For description, see PAM 381.]

PAM 435 U.S. Health Care Systems  
Spring. 3 credits.  
For description, see PAM 435.

[PAM 668 Long-Term Care and the Aged: Alternative Health and Social Service Delivery Systems  
Fall. 3 credits. Not offered 2000–2001. For description, see PAM 668.]

PHIL 241 Ethics (by petition for breadth requirement)  
Spring. 4 credits.  
For description, see PHIL 241.

[PHIL 368 Global Climate and Global Justice (also GOVT 468)  
Fall. 4 credits. Not offered 2000–2001. For description, see PHIL 368.]
S&TS 681 Philosophy of Science (also PHIL 681)
Spring. 4 credits. R. Boyd.
For description, see PHIL 681.

R SOC 201 Population Dynamics (also SOC 202)
Spring. 3 credits.
For description, see R SOC 201.

R SOC 205 International Development (also SOC 206)
Spring. 3 credits.
For description, see R SOC 205.

R SOC 220 Sociology of Health of Latinos and Ethnic Minorities (also LSP 220)
Fall. 3 credits.
For description, see R SOC 220.

S&TS 324 Environment and Society (also R SOC 324 and SOC 324)
Fall or summer. 3 credits.
For description, see R SOC 324.

[R SOC 490 Society and Survival
For description, see R SOC 490.

[S&TS 453 Reflections on Scientific Persons: Visibility and Invisibility of the Body
Spring. 4 credits. H. Mialer.
For description, see S&TS 453.

SOC 340 Health, Behavior, and Policy
Spring. 4 credits.
For description, see SOC 340.

C. Senior Seminars

[BIOPL 442 Current Topics in Ethnobiology
Fall. 2 or 4 credits. Must be taken for 4 credits to fulfill Biology & Society requirement. Offered alternate years. E. Rodriguez and D. M. Bates.
For description and prerequisites, see BIOPL 442.

[B&SOC 404 Human Fertility in Developing Nations (also R SOC 408)
For description and prerequisites, see R SOC 408.

[B&SOC 406 Biotechnology and the Law (also S&TS 406)
For description, see S&TS 406.

B&SOC 407 Law, Science, and Public Values (also GOVT 407 and S&TS 407)
Spring. 4 credits. M. Lynch.
For description, see S&TS 407.

[B&SOC 414 Population Policy (also R SOC 418)
For description, see R SOC 418.

[B&SOC 427 Politics of Environmental Protection (also GOVT 427 and S&TS 427)
For description, see S&TS 427.

B&SOC 422 Seminar in the History of Biology (also BIO G 467, HIST 415, and S&TS 447)
Summer (6-week session). 4 credits. Limited to 18 students. W. Provine.
For description, see BIO G 467.

B&SOC 461 Environmental Policy (also BIOES 661 and S&TS 661)
Fall and spring. 3 credits each term. Limited to 12 students. (Students must register for 6 credits each term since an "R" grade is given at the end of the fall term). D. Pimentel.
For description, see BIOES 661.

[B&SOC 469 Food, Agriculture, and Society (also BIO G 469 and S&T S 447)
For description, see BIO G 469.

COMM 421 Communication and the Environment
Spring. 3 credits. J. Shannah.
For description, see COMM 421.

S&TS 466 Public Communication of Science and Technology (also COMM 466)
Fall. 3 credits. Limited to 15 students.
B. Lewenstein.
For description and prerequisites, see COMM 466.

[HD 366 Psychobiology of Temperament and Personality
For description and prerequisites, see HD 366.

HD 418 Psychology of Aging
Spring. 3 credits. S. Cornellus.
For description, see HD 418.

[HD 610 Processes in Human Development
For description and prerequisites, see HD 610.

[HD 660 Social Development
For description, see HD 660.

[PAM 575 Housing and Long Term Care for the Elderly
For description and prerequisites, see PAM 575.

PAM 652 Health Care Services: Consumer and Ethical Perspectives
Fall. 3-4 credits. If using this course as a senior seminar, Biology & Society majors must take it for 4 credits. Enrollment limited; preference given to PAM students. A. Parrot.
For description and prerequisites, see PAM 652.

PAM 656 Managed Health Delivery Systems: Primary-Ambulatory Care
Spring. 3 credits. For undergraduate seniors only by permission of instructor. R. Battistella.
For description and prerequisites, see PAM 656.

PAM 659 Epidemiology, Clinical Medicine, and Management of Infectious Diseases
Spring. 3 credits. E. Rodriguez.
For description, see PAM 659.

[S&TS 645 Genetics: Politics and Society (also GOVT 634)
For description, see S&TS 645.

V. Other Courses

B&SOC 375 Independent Study
Fall or spring. 1–4 credits.
For description and prerequisites, see B&SOC 375.

[B&SOC 400 Undergraduate Seminar
Fall or spring. Variable credit. May be repeated for credit. Not offered 2000-2001.
For description, see B&SOC 400.

B&SOC 498 Honors Project I
Fall or spring. 3–5 credits. Staff.
For description and requirements, see B&SOC 498.

B&SOC 499 Honors Project II
Fall or spring. 3–5 credits. Staff.
For description and requirements, see B&SOC 499.

Biometry and Statistics

Biometry is the application of mathematical and statistical techniques to the life sciences. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and drawing conclusions based on probability statements. Students with ability in mathematics and an interest in its applications will find this a rewarding and challenging major.
The work of a statistician or biometrician can encompass research, teaching, consulting, and computing in almost any mix and in a wide variety of applications. Opportunities for employment are abundant in universities, government, and businesses ranging from large corporations to small consulting firms; salaries are usually excellent.

While satisfying course requirements for a major in biometry and statistics, students can also take a wide variety of courses in other disciplines. In fact, students are encouraged to take courses in applied disciplines such as agriculture, biology, economics, and the social sciences that involve numerical data and their interpretation.

Students majoring in this area are required to take a computer science course (e.g., Computer Science 100), mathematics courses (at least three semesters of calculus), Biometry and Statistics 101, 102, 408-409, 417, 601-602, Industrial and Labor Relations 310, and Operations Research and Industrial Engineering 270. Experience gained through summer employment or work as an undergraduate teaching assistant is highly recommended. Students should consult Professor Steven J. Schwager for information.

**Communication**

The single most important thing for you to learn in college is how to assess and manage constantly changing information. No longer are skills and knowledge enough. The amount of information the public receives and is expected to understand is increasing exponentially. Communication is taking a more central role in science, technology, business, and public policy. Increasingly, government, industry, and special interest groups rely on communication specialists to aid in managing information—collecting, sorting, interpreting or reinterpreting, summarizing, and making information understandable and accessible to the general public, to interest groups, and to decision makers in organizations. Effective information management requires a thorough understanding of the communication process.

When you graduate from our department, you will be better at the basic communication skills of speaking, writing, and listening. Equally important, as a communication major you will also understand:

- communication processes, such as how communication influences attitudes, opinions, and behaviors
- how communication systems work in our society and in others
- how to apply your understanding of communication to solving problems in science, government, industry, health, and education.

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice. Required freshman courses are:

**Fall semester:**
Comm 120 Contemporary Mass Communication
Comm 121 Investigating Communication

**Spring semester:**
Comm 116 Communication in Social Relationships
Comm 117 Writing about Communication

This set of courses will provide you with a basic understanding of communication and the communication process. These courses also provide an opportunity to link practical application (such as writing and critical analysis) with up-to-date research and knowledge about communication.

During the sophomore year, you will take:

**Fall semester:**
Comm 201 Oral Communication
Comm 282 Communication Industry Research

**Spring semester:**
Comm 230 Visual Communication

After completing the courses in the core curriculum, all majors take an additional 12 credits in communication. You can choose to concentrate your advanced study in one of three focus areas:

- Communication in the Life Sciences. (Studies of the impact of communication on environmental, health, science, and agricultural issues, as well as public perceptions of risk.)
- Communication Planning and Evaluation. (Development of communication plans to solve problems for individuals or for organizations and evaluating the success of these plans.)
- Communication Systems and Technology. (Principles of how we use communication technologies and how we are influenced by these technologies.)

Detailed information on the distribution of courses is available from the department.

In designing the communication major, the faculty of the department has kept in mind the need for students to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and in society at large. Both are critical to successful careers and enlightened citizenship in the twenty-first century.

**Crop and Soil Sciences**

The Department of Crop and Soil Sciences provides instruction in three specializations: agronomy, crop science, and soil science. Employment opportunities are increased with practical experience, and the faculty of the department and the Career Development Office of the college are glad to help students search for relevant summer jobs and internship opportunities. Professional certification can also be obtained in these specializations.

**Agronomy** combines the study of crop production and soil management. It provides the student with a broad array of career opportunities after completion of the B.S. degree, including agricultural business, extension service, and farming. Graduate school is also possible after a well-planned program. Students should take at least 12 credits of crops and 12 credits of soils and design the remainder of their curriculum to meet specific interests and goals. Some students pursue a major in agronomy with a concentration in international agriculture.

**Crop science** is the application of basic biological and ecological science to the improvement and management of the world's main field crops used for human food and livestock feed. Courses required include 18 credits of crops, 12 credits of plant biology, and 6 credits of soil science. Students who anticipate a career in agricultural production or service after completion of the B.S. degree should take additional courses in economics, communication, plant pathology, entomology, and nutrition. Students planning graduate or professional study beyond the bachelor's degree should take advanced course work in organic chemistry and biochemistry, calculus, physics, and statistics.

**Soil science** is a basic discipline important in ecology, engineering, agriculture, and conservation. The curriculum in soil science combines physical and biological training to address critical issues in environmental and agriculture management related to soils. Students take 18 credits in soil science, including four courses in the introductory course. In addition, chemistry, mathematics, physics, and microbiology are required, as well as six credits of crop science to satisfy the major.

**Education**

The focus of the Department of Education is on the improvement of teaching and learning in school and other settings, as well as on the role of education in society. Students study concepts and develop skills necessary to analyze educational situations critically and to plan, implement, and evaluate educational programs. Study at the undergraduate level is structured around a core curriculum:

- An introductory course in current educational issues (Education 101) (3 credits)
- Course work in the social, philosophical, psychological, and social foundations of education (e.g., Education 271, 311, 317, 370, 378, 472, 477) (12 credits)
- Supervised field experience (e.g., Education 240 for non-majors and Education 420 for majors) (1-4 credits)
- A capstone course to integrate the students' undergraduate experience (Education 495) (2 credits)

Three specializations and three certification programs are available within the department.

**Agricultural, extension, and adult education** Agricultural, extension, and adult education is a program that combines preparation in both the agricultural and social sciences. The program prepares students for teaching careers in agriculture, science, and technology in public schools, the Cooperative Extension service, and extension and adult programs of agricultural businesses, government agencies, and a variety of private and not-for-profit organizations. The specialization involves courses in education and in a technical area of agriculture/biotechnology, community/economic development, natural resources, human ecology, or communication. Education courses prepare students to succeed as educators in a broad range of careers. Courses are selected to develop professional leadership and teaching competence. Students may elect to focus their study on agricultural education, extension education, and/or adult education. As an alternative, students may elect to major in one of the college's technical departments and develop a complementary program of study in one or more of the three areas of agricultural, extension, and adult education.
education. Further information is available from the agricultural, extension, and adult education coordinator, Kennedy Hall (Tel: 607-255-7381).

**Educational psychology** Studies in educational psychology have traditionally focused on teaching and learning in schools, but schools are only one location in which learning and teaching take place. An undergraduate emphasis in educational psychology at Cornell applies principles of teaching and learning to educational enterprises broadly defined.

Although graduate study is required for many careers in psychology, an undergraduate emphasis in educational psychology provides excellent preparation for graduate work or for many post-baccalaureate positions. Educational psychologists develop or supervise training programs in business, industry, the military, and government; design and evaluate curriculum and instructional materials; develop tests for educational and professional associations; evaluate social programs; work in human resource management; and conduct applied research for educational research organizations.

Students interested in concentrating their studies in educational psychology complete a total of 20 to 25 hours in educational psychology and related courses. Working with a faculty advisor, a student may design a program in one of a variety of applied areas: Instructional Systems Design and Development; Human Relations; Individual and Social Development; or the Educational Psychology of Human Learning Development.

Students interested in careers in educational psychology should apply for admission to the Department of Education. For more information regarding a concentration in educational psychology, contact: Coordinator, Educational Psychology Program, Education Department, Kennedy Hall (Tel: 607-255-0515).

**General education** The concentration in general education is appropriate for students seeking a solid foundation in the disciplines underlying the education professions. Students take courses in areas such as the art of teaching, philosophy of education, social foundations, and curriculum studies. Graduates of the concentration in general education may continue their studies at the graduate level or pursue careers in educational and human resource areas in business and industry, the human services, or government agencies. Further information about the general undergraduate education is available from the undergraduate coordinator (Tel: 607-255-9269).

**Teacher Education** Students at Cornell may pursue middle or secondary school teaching credentials in agricultural education, mathematics, biology, chemistry, physics, earth science, and general science.

**Agriculture.** Students completing the registered program as undergraduates in agriculture are eligible to teach agricultural subjects, introduction to occupations, occupational science or math, and introductory technology for grades 7 and 8. Passing scores on the National Teacher Examination (NTE) or New York State Teacher Certification Exam (NYSTCE) and one year of agricultural work experience are required for provisional certification, which is valid for five years. The master's degree required for permanent certification is offered through graduate study at Cornell. Students who complete the required course work may also be dual-certified to teach selected science subjects and work as a work experience coordinator through direct application to the State Education Department. For more information, contact the faculty adviser, the program option, and the certification coordinator (Tel: 607-255-9573).

**Science and Mathematics.** Students completing the registered program in science and mathematics may pursue secondary teaching credentials in biology, chemistry, earth science, general science, mathematics, and physics. Students can begin the program as Cornell juniors or seniors by completing an undergraduate minor in a scientific field and up to five courses in education. Students from all Cornell colleges may apply. In a year of graduate study, students take additional math and/or science courses and a supervised student-teaching experience. Students may also begin their certification studies as graduate students and complete a Master of Arts in Teaching (M.A.T.) degree, typically in three semesters. Students who choose to earn certification and do a research project can complete a Master of Science degree (M.S.) in a minimum of four semesters. Either the M.A.T. or the M.S. can be used to satisfy state requirements for certification. Students who complete either graduate program option and pass the New York State Teacher Certification Exam (NYSTCE) are eligible for New York State certification.

Students interested in careers in educational psychology should apply for admission to the Department of Education. For more information regarding a concentration in educational psychology, contact: Coordinator, Educational Psychology Program, Education Department, Kennedy Hall (Tel: 607-255-0515).

**Administrator Certification** Graduate students at Cornell can pursue New York State certification as a school administrator. This certificate is normally required of all candidates for a district-level position as a school administrator (e.g., superintendent, curriculum director, etc.). The certificate also enables building-level positions as principal and vice principal. New York State certification as a school administrator is usually recognized in other states.

Cornell's certification program is unique in that it is specifically designed to prepare administrators for small and rural school districts. Course work, the internship, and the doctoral dissertation or Master of Professional Studies project are all oriented toward addressing the practical problems that characterize such districts and preparing candidates to assume a leadership position in them. To earn certification, students complete at least one year of full-time, on-campus study followed by a one-year, half-time administration internship in a cooperating school district. To be eligible for the program, students should possess the equivalent of a master's degree and have a satisfactory graduate and undergraduate record and three years of teaching experience. For more information, contact the faculty adviser, the program option, and the certification coordinator (Tel: 607-255-9573).

**Entomology** The entomology curriculum provides students with a basic background in biological and environment systems, with special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology including integrated pest management, insect pathology, environmental assessment, medical or veterinary entomology, insect toxicology, apiculture, insect systematics, or insect ecology. Because of the diversity of career options, the major includes a common core of requirement allowing flexibility in electives selected by students in consultation with their advisers.

**Specific requirements**

**Basic Sciences**

- One year of college mathematics, including a course in calculus, may substitute statistics and biometry
- One semester of physics
- Chemistry 206–208 or 207–208 (General Chemistry)
- Chemistry 257 (Organic and Biological Chemistry)

**General Biology**

- Introductory Biology
- Biological Sciences 281 (Genetics)
- Biological Sciences 278 (Evolutionary Biology)
- A choice of one: Biological Sciences 261 (Ecology and the Environment) or Biological Sciences 350 or 351 (Principles of Biochemistry)

**Entomology**

- Entomology 212 (Insect Biology)
- A choice of two:
  - Entomology 322 (Insect Morphology)
  - Entomology 331 (Insect Systematics)
  - Entomology 483 (Insect Physiology)

Students must also enroll in at least two additional entomology courses offered at the 300–400 level on more specialized topics.

**Food Science**

The mission of the Food Science Program is to educate students for careers in food science and technology. Graduates are prepared for entry level positions in industry, government, and research organizations or for advanced study in food science and related disciplines. Food scientists qualify for satisfying careers which focus on ensuring the sustainable availability of a safe, nutritious, affordable, and high quality food supply for people throughout New York State, the nation, and the world.

Students choose one of five specialization options: (1) Basic Food Science, (2) Food Engineering, (3) Food Processing, (4) Food Industry Operations and Management, and (5) Food Biotechnology. The first three options meet minimum curriculum standards set by the Institute of Food Technologists, the premier professional society for food scientists. Students choose an option based on individual interests and career goals.

The first two years of the program are focused on establishing a solid background in the physical and biological sciences, math, and communication. Required courses include chemistry (intro and organic), biology, microbiology, calculus, physics, freshman seminar, food science, and nutrition. The second two years emphasize the application of basic science and technology to the processing, storage, distribution, marketing, and final preparation of foods. Required courses include Food Engineering Principles,

Students are strongly encouraged to participate in research supervised by a faculty member and/or to work as an intern in a food company during summer breaks. Most faculty in the department have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for faculty-directed undergraduate research. Many food companies recruit on campus for their summer internship programs. These internships are excellent opportunities for students to gain experience and establish contacts for future employment.

A state-of-the-art food processing and development laboratory, a full-scale dairy plant, and extensive laboratory facilities are available for training, research, and employment.

**Landscape Architecture**

Landscape Architecture focuses on the art of landscape design as an expression of cultural values combined with the natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of horticulture, environmental science, architecture, and city and regional planning.

The course of study prepares students intellectually, technically, artistically, and ethically for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction and engineering technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects range from garden design, parks, housing, historic preservation, environmental rehabilitation, and urban design.

Landscape Architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences; a three-year Master of Landscape Architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of several parts: core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program administered through the Graduate School, for those with accredited degrees in Landscape Architecture or Architecture. The two-year program entails core courses in the discipline and the development of a concentration in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

In addition, an undergraduate concentration in the American Cultural Landscape is available for nonmajors.

**Dual Degree Options**

Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

**Study Abroad**

The faculty encourages study abroad and has two formally structured programs. The Denmark International Study (DIS) program is available primarily to senior undergraduates and third year graduates in the fall semester and is administered through Cornell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

**Bachelor of Science Landscape Architecture Degree Sequence** (Please note that each semester the studio classes require a supply and field trip fee and all landscape architecture majors are required to pay an annual technology fee.)

Requirements of the three-year M.L.A. curriculum include 90 credits, six resident units of satisfactory completion of the core curriculum courses, and a thesis or a capstone studio. (Please note that each semester the studio classes require a supply and field trip fee and all landscape architecture majors are required to pay an annual technology fee.)

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work, as approved by the members of their graduate committee. For landscape architects, this must include at least two advanced studios, a graduate seminar, a concentration, and a thesis. For architects the curriculum requires three advanced studios, two courses in plants and planting design, two courses in the history of landscape, two courses in engineering, a seminar in design theory, a course in professional practice, a concentration, and electives.

**Undergraduate Concentration for Nonmajors**

Students outside the professional program may choose the undergraduate concentration in the American Cultural Landscape to complement their major. The courses center on the landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society and its relationship to natural systems and diverse cultures. The cultural landscape includes its visible elements as well as perceptions and cultural ideas and values. The concentration consists of four courses, two required and two electives. Students may petition to substitute one course in the electives list. Direct inquiries to professors H. Gottfried or S. Baugher.

**Required.**

**Visual Studies (choose one):**

- Arch 11 Introduction to Architectural Design (4 cr)
- Art 121 Introduction to Painting (3 cr)
- Art 141 Introduction to Sculpture (3 cr)
- Art 151 Introduction to Drawing (3 cr)
- Art 158 Conceptual Drawing (3 cr)
- Art 159 Life and Still-Life (3 cr)
- Art 161 Photography I (3 cr)
- DEA 101 Design I: Fundamentals (3 cr)
- DEA 114 Drawing (3 cr)
- LA 141 Grounding in Landscape Architecture (3 cr)

**The Landscape**

- LA 282 The American Landscape (3 cr)

**Electives (choose two):**

- Arch 300 American Architecture and Building I (3 cr)
- Arch 391 American Architecture and Building II (3 cr)
- LA 260 Pre-Industrial Cities and Towns of North America (3 cr) offered alternate years
- LA 261 Urban Archaeology (3 cr)
- LA 262 Laboratory in Landscape Archaeology
- LA 263 American Indians, Planners, and Public Policy (3 cr)
- LANAR 525 History of American Landscape Architecture (3 cr)
- LA 569 Archeology in Preservation Planning and Design (3 cr) offered alternate years
- Distribution Elective

**Natural Resources**

The undergraduate curriculum in natural resources provides students with an integrated, broadly-based approach to understanding the relationships of organisms to their environment, and the ways in which humans affect those relationships. Natural resources are construed in the broad sense to include both the more traditional topics of renewable natural resources (e.g., wildlife, fisheries, forests) and the Earth's ecosystems of which those and other natural resources are a part. Students are encouraged to understand the scientific, ethical, and societal basis for protection and management of natural resources and environments through the application of ecological principles and knowledge of societal needs. Students who wish to do so may specialize further in natural resource ecology and management (including wildlife, fishery, forest, and aquatic sciences), or natural resource policy, management, and human dimensions. The department has a limited number of faculty who also advise students in the area of environmental studies. For details about core curricula in the Department of Natural Resources, consult our web site at www.dnr.cornell.edu. This information is also available in the department's Undergraduate Program Office in 12 Fennow Hall.

Opportunities for field-oriented studies in natural resources are available nearby at Cornell's Arnot Teaching and Research Forest, the Cornell Biological Field Station on Oneida Lake near Syracuse, as well as at numerous natural areas near campus. A research honors program is available for qualified students. Students should seek relevant work experience to complement their academic studies.

**Nutrition, Food, and Agriculture**

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments. The program in nutrition, food, and agriculture provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships of human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work together with specialists in areas such as agricultural economics, food production, and rural sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism. Nutrition, food, and agriculture majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 115 Nutrition and Health: Concepts and Controversy.
Plant sciences students can specialize in plant biology, plant genetics and breeding, plant pathology, plant protection, or horticultural sciences, including horticulture and ornamental horticulture, fruit science, or vegetable science. Students with well-defined interests upon arrival at Cornell can specialize in one of these programs in their freshman year. Others may prefer to start in the general plant sciences curriculum and specialize after exploring the program offerings.

Plant sciences is a multidisciplinary program, sponsored by the Department of Plant Breeding in Emerson and Bradfield Halls, and the Departments of Floriculture and Ornamental Horticulture, Fruit and Vegetable Science, Plant Pathology, and Plant Biology, all located in the Plant Science Building.

General plant science is intended for students who are interested in studying plants but has not yet centered on any one of the specialization areas within the major. Students may continue with this option throughout their undergraduate years, particularly if they are likely to be interested in and qualified for advanced studies beyond the bachelor’s degree. Students who plan to seek employment upon graduation may prefer to specialize. There are, however, excellent opportunities for general plant science graduates at the bachelor's degree level in the service and supply industries, as Cooperative Extension educators, as teachers, and as research technicians.

More than one hundred courses are offered that deal directly with some area of plant science. Other courses relating to plant science are offered in other departments. In addition, an interest in plant science may be combined with another specialization, such as agricultural and biological engineering, education, statistics, international agriculture, food science, or agricultural, resource, and business management.

Undergraduates are encouraged to obtain practical experience, which may involve internship and/or research under the direction of a faculty member or work in a commercial industry, research institute, botanical garden or arboretum, nursery, greenhouse, or farm operation. Departments will assist students in finding positions that will provide useful experience.

Fioriculture and ornamental horticulture applies principles of plant science, business management, and many other disciplines to the production and marketing of greenhouse, nursery, and turfgrass crops, as well as to the selection and management of plants in both indoor and outdoor landscapes. Programs prepare students for careers at the professional and managerial levels in horticultural business, landscape gardens and arboretums, research, teaching, communication, and extension. Students wishing to pursue graduate study may develop a program in basic sciences and their application in horticultural science. Lists of recommended courses for the areas of specialization are available from student advisers and from the undergraduate program coordinator.

Working with a faculty adviser, each student will tailor a program to achieve individual educational objectives in production horticulture, landscape horticulture, horticultural business management, or general horticultural science. A core of management courses also is strongly recommended for students planning horticultural business careers. Students are also encouraged to take courses in these areas: agricultural and biological engineering, soil science, computer science, ecology, entomology, geography, plant breeding, plant pathology, plant physiology, oral and written expression, plant taxonomy, and weeding science. Use of electives to pursue study in the humanities and in other areas of special interest to the student is encouraged.

Numerous opportunities to become familiar with the horticultural industries and professions are provided through field trips, guest lectures, undergraduate seminars, independent or small-group study, and work-experience programs. Questions concerning the undergraduate curriculum, advising, and related manners...
Courses include chemistry, mathematics, introductory biology, basic plant physiology, and introductory plant pathology. Additional plant pathology courses and other relevant courses from other fields are selected according to the particular interests of the student. Ornamental horticulture, plant breeding, pomology, vegetable crops, floriculture and ornamental horticulture, crop and soil sciences, and atmospheric sciences.

Plant protection is offered for students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. This concentration can prepare students for careers in agrichemistry, the agrichemical industry, Cooperative Extension, pest management consulting, state and federal regulatory work, and a variety of other technical positions. Although designed as a terminal program for students desiring a practical preparation in general plant protection, this specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

The following subjects are considered essential to the plant protection specialization: botany and plant physiology, general ecology, soils, crop science, and microbial ecology. Additional courses in introductory entomology, introductory plant pathology, plant disease control, weed science, and integrated pest management are recommended.

In addition, a number of other subjects pertinent to plant protection are recommended, depending on the student's interests: agricultural economics, agricultural and biological engineering, crop and soil sciences, atmospheric sciences, biochemistry, communication, pathology, entomology, general physics, genetics, meteorology, mycology, pesticides in the environment, and plant anatomy. Employment involving practical experience in plant protection between the junior and senior years is encouraged. The job may be on a farm, at an experimental station, with an agrichemical company, or with a regulatory agency.

Pomology (the science of fruit growing) provides students with knowledge of the scientific technology and the influence of environmental factors on the production, handling, and storage of deciduous fruit crops. New York is a national leader in fruit production.

Courses are selected by students in consultation with a faculty adviser. Flexibility in programs makes it possible to establish a course of study to fit the desired goals of individual students. The diverse pomology curriculum, complemented by courses in basic sciences and arts and electives in a student's area of interest, prepares pomology majors for a career in fruit production, agricultural business related to the fruit industry, storage and merchandising, or professional pomology. Job opportunities for graduates can be found in fruit production, marketing, sales and service, research, teaching, and extension.

Vegetable crops is offered for students with an interest in either applied or basic aspects of vegetable production. The high value of vegetables and their importance in the human diet makes them a major research area for trained personnel in all aspects of vegetable technology. A flexible curriculum is provided to prepare undergraduates for careers in a diversity of fields, including horticultural research, teaching, extension, production, processing, and marketing. A faculty adviser assists individual students in the selection of courses, which usually include: general horticulture, soils, plant recognizable types and identification, vegetable production, and post-harvest handling or marketing. Additional course work depends upon the interest of the student, and may include: vegetable physiology, plant breeding, entomology, plant pathology, weed science, ecology, crop and soil sciences, atmospheric sciences, nutritional science, agricultural economics, international agriculture, and agricultural and biological engineering.

The vegetable industry is an economically important component of agriculture in New York and in the United States. Recently, there has been increased interest in growing vegetables in tropical countries. Exciting challenges are facing the industry. Greater awareness of environmental and health issues is driving farming practices to depend less on agricultural chemicals. New technologies are being developed and implemented to help growers make this change while remaining profitable. Among these technologies are integrated pest management, genetic engineering, breeding for insect and disease resistance, low-input and organic cropping systems, and cultural practices that improve production efficiency and conserve agricultural resources.

The Department of Fruit and Vegetable Science has on-campus greenhouses and laboratories as well as two research farms in the Ithaca area that support our teaching program. Students are encouraged to gain hands-on experience growing vegetables and to pursue their individual interests through course work and by taking advantage of the many resources available in the College of Agriculture and Life Sciences.

Rural Sociology

Technological, economic, demographic, and environmental changes are social processes, and each has major impacts on individuals, social groups, societies, and the international order. At Cornell, rural sociology students study these and other facets of social change in both domestic and international settings. Among the topic areas in which faculty members in the Department of Rural Sociology specialize are international agricultural and rural development, community and regional development and changes in the United States, environmental sociology, aging and the life course, sociology of agriculture, rural industrialization and labor markets, technology and social change, population and development, political economy, women in development, race and ethnic relations, and research methodology. Most courses provide background in both domestic and international aspects of the subject matter. Normally, students will develop a specialization with either a domestic or international emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology, and how to apply both to research and policy in their subject areas.

Recognizing that students are concerned with future career opportunities, the undergraduate program emphasizes acquisition of skills as
well as general knowledge in preparation for jobs or further study upon graduation. Accordingly, students are expected to become involved in the application of theory, methodology, principles, and concepts in the analysis of practical problems.

Rural sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., M.P.S., or Ph.D.). These programs are offered through the Department of Rural Sociology and the Graduate Field of Development Sociology, both of which are located in Warren Hall. For many years, the department and graduate field have been recognized as among the top programs in the country, and both are known for providing orientations. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and other topics. Faculty members in this department are committed to both quality instruction and research programs. Being located in a college of agriculture, the department maintains strong ties to the technical fields within the college as well as with the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Rural Development Institute, the Gender and Global Change Program, the Life Course Institute, the Rural Development Program, the Hispanic Studies Program, the Program on Science, Technology and Society, and the Center for International Studies. Nearly half of the department faculty are associated with one or more area studies programs (the Southeast Asia Program, Latin American Studies Program, East Asia Program, or the Institute for African Development). Department members also maintain working relations with faculty in the Department of Sociology and other social science units located in other colleges at Cornell. Students are encouraged to supplement their course work by electing courses in this other departments and programs, thereby rounding out their educations with different perspectives.

The courses offered in rural sociology can be grouped into three broad categories: development sociology, population, environment and rural development policy, and social data and policy analysis. All students majoring in rural sociology are required to take five core courses: an introductory course (R SOC 101), methods (R SOC 213), theory (R SOC 301), social stratification (R SOC 370), and a course in statistics. Four elective Rural Sociology courses are also required of all majors.

The focus area in development sociology provides an understanding of the processes and policies that influence social and economic development in rural settings in North America and low-income countries in the developing world. Courses provide background in the sociology of development in both the advanced and developing countries. Students normally select a set of elective courses that represent either a domestic or international development is emphasized. These courses provide background in several aspects of development sociology, including (1) an understanding of the processes of socioeconomic change in low-income or Third World countries and training in the formulation of strategies to enhance the socioeconomic well-being of citizens of those countries, (2) analysis of the social structures and processes for development in nonmetropolitan settings in the United States, (3) analysis of the processes of agricultural change and development in industrialized and low-income countries, and (4) an understanding of the processes of technological development and change in agriculture and other rural industries in developed and developing countries.

Students are encouraged to complement courses in the department with course work in the history and economics of development, area studies, and the policy sciences.

Courses in the population, environment, and society focus area provide an understanding of (1) the causes and consequences of the major components of population change—fertility, mortality, and migration; (2) the major patterns of population distribution and population characteristics in the United States and the developing world; (3) the relationships between social structure and the biophysical environment; (4) the relationships between population change and natural resource utilization in development; and (5) impacts of public policy interventions on population size and composition or on natural resource availability and environmental quality. Students normally select the elective courses for the major so as to stress either population studies or sociological aspects of natural resources and the environment.

Students are encouraged to complement courses in the department with course work in demographic methods, household analysis, ecology and evolution, environmental studies, natural resources, and policy sciences.

Courses in the social data and policy analysis focus area provide (1) knowledge of research methodology, statistics, and computer applications, (2) an understanding of social, economic, political, and historical concepts essential for conducting meaningful analyses of practical problems and issues faced by organized regions, groups, states, and (3) knowledge and practice in policy analysis. Students ordinarily select electives in order to specialize in either policy analysis or in a particular area of public policy (international development policy, domestic rural development policy, environmental policy, or population policy, etc.).

Students are encouraged to complement courses in the department with course work in data collection and research design, evaluation research, computing, and advanced statistics.

Science of Earth Systems (SES)

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained knowledge and insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The SES major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Cornell's strengths across a broad range of earth and environmental sciences have been fused to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

The SES major has its home in the Department of Earth and Atmospheric Sciences, but relies on the collaboration of several departments across the university.

The SES curriculum includes a strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. During the junior and senior years, students complete the SES core sequence, studying such topics as climate dynamics, chemical kinetics, geophysical oceanography, and biogeochemistry. These classes emphasize the interconnectedness of the Earth system, and are team-taught by professors from different traditional disciplines. The selection of upper-level, "concentration" courses allows the student to develop an area of expertise that complements the breadth of the introductory and SES core courses. Possible areas of concentration include climate dynamics, biogeochemistry, geophysical oceanography, environmental geology, ocean sciences, environmental biophysics, hydrological system, and soil science.

The SES major provides a strong preparation for graduate school in any one of the Earth system sciences, such as atmospheric sciences, geology/geophysics, oceanography, hydrology, ecology, and biogeochemistry. Students seeking employment with the B.S. degree will have many options in a wide variety of environmentally oriented careers in both the private sector and government. Students with the strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy. In addition, the emphasis on basic science makes the SES major excellent preparation for medical school.

The requirements for the major are as follows:

1. Basic Math and Sciences

   This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.

   a. MATH 191 or 193, and MATH 192 (or MATH 111, 112)

   b. PHYSICS 207 and 208 (or PHYSICS 112, 213)

   c. CHEM 207 and 208

   d. BIOLOGY 101/103−102/104 (or 105−106) or BIOLOGY 109/110

   e. Three additional 3–4 credit courses in basic science and math, generally 100 and 200-level classes. At least one of the following courses must be included in the selection

   GEOL 201 Physics and Chemistry of the Earth
   BIOES 261 Ecology and the Environment

   Other examples are MATH 293 and MATH 294, biochemistry, organic chemistry, PHYS 214, introductory
Three 4-credit courses that emphasize the interconnectedness of the Earth system are required. These classes are founded on the sciences and mathematics courses. These courses and have prerequisites in the basic (300-level and up) that build on the core sciences. The concentration should be chosen before the junior year in consultation with an SES adviser whose interests match those of the student.

For more information contact Professor Kerry H. Cook, Department of Earth and Atmospheric Science. kkc6@cornell.edu and visit the web site: www.geo.cornell.edu/ ses/

Special Programs in Agriculture and Life Sciences

General Studies. The opportunity to develop an independent major in General Studies is available for students interested in pursuing a general education in Agriculture and Life Sciences. In consultation with a faculty adviser, students may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university.

Students completing this major are often placed in careers in agriculturally related food and service enterprises. Many of the fast-growing occupations require the broad perspective, the scientific and technical skills, the attitudes and the analytical ability that a general education fosters.

General Studies includes production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology concerns deal with aspects of agriculture, especially plants, crops, and ecosystems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural sciences is essential in this rapidly growing field. Students should plan basic course work in the major areas of study in the college—animal sciences, plant sciences, entomology, technology, agronomic sciences, biological sciences, and social sciences. Advanced courses may be selected in these and other areas of individual interest or career aspiration. A course of study for a special program must be planned with and approved by a college faculty adviser. Information on the options and names of faculty advisers prepared to advise in special programs are available in the Counseling and Advising Office, 140 Roberts Hall.

International Agriculture provides students with an understanding of the special problems of applying basic knowledge to the precepts of agricultural development in low-income countries. The student typically specializes in a particular subject and works with an adviser to plan a program oriented toward international agriculture. The courses in International Agriculture are designed to acquaint students with the socioeconomic factors in agricultural development, with the physical and biological nature of tropical crops and animals, and the various world views by which study programs exist. Study of a foreign language is required.

In addition to the college distribution requirements, students in International Agriculture must take a minimum of 30 credits toward the major. A minimum of seven credits in International Agriculture and eight credits in a modern foreign language are required. The other courses recommended are drawn from a wide range of disciplines. The objective is to familiarize students with the many facets of agricultural development in low-income countries. Students are encouraged to take additional specialized courses in one of the other program areas of the college.

**DESCRIPTION OF COURSES**

Undergraduate and graduate courses in the college are offered through the academic departments and units and also through the Biological Sciences undergraduate program and the Division of Nutritional Sciences.

Descriptions of undergraduate and graduate courses are arranged by department, in alphabetical order.

Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Guide of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.

**INTERDEPARTMENTAL/INTERCOLLEGE COURSES**

**American Indian Studies**

American Indian Studies is the instructional component of the American Indian Program. It is a multidisciplinary program offering course work that enhances students' understanding of the pre-contact lives of North American Indians and their relationship to other peoples in the United States and Canada. Students are challenged by such topics as the sovereignty rights of Indian nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses that focus on American Indian life from pre-contact times to the present and feature the perspectives of Native American people.

The American Indian Program offers a concentration in American Indian studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration will be earned upon completion of five courses: American Indian Studies 100 and American Indian Studies 175, plus three other courses selected from the American Indian studies course listing, for a total of at least 15 credits. Students choosing a concentration in American Indian studies should obtain application materials from the AIS office in 450 Caldwell. AIS also offers a graduate minor.

Students interested in choosing the minor should contact Daniel Usner, American Indian Program, 255-8402.

**AIS 100 Indian America to 1890 (also R SOC 100)**

Fall. 3 credits. W 7:30-10 P.M. plus sections. R. W. Venables.

Slide lectures survey the rich cultures and complex histories of the Indian nations north of Mexico. Indian arts and philosophies are compared and contrasted with those of Europe, Asia, Africa, Canada, and the United States. The origins of today's major legal issues involving American Indians are also discussed. The course begins with a survey of Indian America before Columbus and ends at Wounded Knee in 1890, the event which marks the end of the conquest of Indian America. Guest lecturers, including American Indian leaders, provide additional perspectives.

**AIS 110 Images of American Indians: Myths and Realities**

Images of American Indians juxtapose myth and reality. Whether real or unreal, they have touched the lives of American Indians in profound ways. What are the origins of American Indian images and why do they continue to proliferate in American culture? Were the images designed to justify American colonialism or to facilitate the assimilation of American Indians? To what extent, in both negative and positive ways, have popular images affected the culture and identity of American Indians?

**AIS 111 Communicating with Our Ancestors**

Spring. 3 credits. Prerequisite: none. Letter grades only. Lec, TBA, M. Dexter.

The concept of ancestors and future generations is an important part of contemporary indigenous cultures. What did the ancestors want their future generations to know? What do contemporary generations want their future generations to know? Indigenous is the study of sacred texts, narrative history, songs, stories, paintings, and writings that are used by cultures to transmit tribal memory. We will explore Eastern Woodlands indigenous geography by studying the audio, visual, textual, and graphic signs and symbols that are used to communicate within the same culture.

**AIS 175 Indian America in the Twentieth Century (also R SOC 175)**

Spring. 3 credits. W 10:10-11:00 plus sections. B. Baker.

This course addresses major U.S. policies affecting American Indians in the twentieth century, and ways in which American Indians pursued strategies to sway the process of social change. American Indian political,
interdepartmental/intercollege courses 53

economic, and cultural issues are examined through history, literature, art, and film. The approach of this course is interdisciplinary and an emphasis is placed on the study of American Indians as living cultures. Current trends are discussed, and the implications for American Indians. First-year students of U.S. Indian policy and the experiences of Indian people through the removal era will receive close attention.

AIS 277 American Indian History since 1850 (also HIST 277)
Spring. 4 credits. M W 10:10–11:00 plus sections. D. H. Usner
A historical study of American Indians in the United States and Canada from the mid-nineteenth century to the present. The active and complex role played by Indian people in their responses to government policies and to societal changes will be emphasized. Challenges faced and initiatives taken by Indians will be traced from the early reservation years to the current era of self-determination. Cultural change and continuity in Indian communities will be closely examined.

AIS 318 Ethnohistory of the Northern Iroquois (also R SOC 318)
Spring. 3 credits. Enrollment limited to 20. M 7:30–10:30. R. W. Venables. The development of Iroquois (Haudenosaunee) history and culture is traced to the present day.

AIS 329 Indians, Settlers, and Slaves in the Early South (also HIST 329)

AIS 429 Undergraduate Seminar in American Indians of Eastern North America (also R SOC 429)
4 credits. Not offered 2000–2001. D. H. Usner. A seminar examining the history of Native Americans in the eastern woodlands from colonial times to the present and the cultural and economic participation of Indians in the evolution of frontier societies will be examined. Major topics include fur-trade networks, political relations, removal, and the persistence of Indian communities in eastern states.

AIS 367 American Indian Politics and Policy (also R SOC 367)
Fall. 3 credits. Enrollment limited to 20. T R 2:55–4:10. B. Baker. This course addresses the Constitutional basis of the Federal-Indian relationship through an examination of treaties, land cessions, federal court decisions, and congressional law-policy. The effects of European and American forms of governance on traditional American Indian political structures are detailed and contrasted with contemporary tribal governments and political organizations. Issues relating to sovereignty and self-governance with respect to American Indian tribes are addressed relative to state and federal governments.

AIS 394 Topics in American Indian Literature (also ENGL 394)

AIS 401 Anthropological Linguistics
Spring. 4 credits. Prerequisite: permission of instructor. S 2:30–4:25. K. Connelly. We will investigate by linguistic comparison, core human differences in worldview, perception, and identity. This course focuses on Iroquoian thought and worldview as evidenced in culturally central forms of language use. We will focus on a published, native-language, text version of an epic oral narrative.

AIS 440 The Social Impact of Resource Development (also R SOC 440)

AIS 442 American Indian Philosophies: Selected Topics (also R SOC 442)
Spring. 3 credits. Prerequisite: permission of instructor. Enrollment limited to 15. W 7:30–10:30. R. W. Venables. This course provides an opportunity for students to read and discuss a wide range of American Indian philosophies.
AIS 600 American Indian Studies
Spring. 4 credits. Prerequisite: permission of instructor. S-U grades optional. Lec, TBA. Staff.
This seminar surveys the field of American Indian Studies across different academic disciplines. Designed specifically for students considering the graduate minor in American Indian Studies, it offers some common intellectual ground beyond the more specialized avenues of scholarship. Various areas of study will be explored, with an emphasis on current methods, theories, and problems involved in researching Indian topics in Canada and the United States.

[AIL 624 Graduate Seminar in American Indian History (also HIST 624)]
D. H. Usner.
This seminar examines, through a selected series of major topics and problems, the historical study of North American Indians. Emphasis is placed on current interpretations and directions.

[AIL 665 Native American Contributions to Anthropological Thought (also ANTHR 665)]
B. Lambert.

Department of Statistical Science
The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the "Interdisciplinary Centers, Studies, and Programs" section at the front of this catalog (see p. 22).

NONDEPARTMENTAL COURSES

ALS 191 Transition and Success in Cornell
Fall. 1 credit. Prerequisites: must be an entering student in CALS. Letter grade only. B. O. Earle (assisted by W. N. Alberta).
Discussion oriented course to enable all new CALS students to enjoy their experience at and transition to Cornell. Lecture, discussion, guest speakers, and assignments that explore Cornell's history, services, and organizations will be used. Emphasis on role of Agriculture and Life Sciences in future of all related careers.

ALS 134 Emergency Medical Technician
Fall and spring. 3 credits. S-U grades optional. Prerequisite: none—but basic and advanced first aid recommended. Lec, M 1:30-5:00, lab, W 1:30-5:00.
G. J. Coemman and A. F. Garnett. E.M.T. is an intensive 140-hour course taught throughout the fall and spring semesters. Enrollment, therefore, will occur for the fall term only. Course includes training in C.P.R. for the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, patient assessment, spinal immobilization, medical antishock trousers, and defibrillation. Students will qualify for the New York State E.M.T. Certification Exam upon successful completion of the course. Classes will be conducted in the Teagle Hall second-floor classroom.

ALS 400 Internship
Fall, spring, or summer. 6 credits maximum. Not open to students who have earned internship credits elsewhere or in previous terms. S-U grades only.
Students may register only for internships in the New York State Assembly Intern Program, the New York State Senate Senate Internship Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s), stating conditions of the work assignment, supervision, and reporting. Participation is required in any structured learning activities associated with the internship.

ALS 402 Agricultural Study Tour to Burgundy, France
Spring. 2 credits. Prerequisite: a registered CALS student. S-U grades optional.
L. A. Weston and P. Durand.
A two-week study tour held in the month of May in Burgundy, France. Students will experience French agriculture, history, and cuisine. Tour will include wine, fruit, vegetable, cheese dairy, beef and poultry production, and French university research facilities featuring modern agricultural research. Ten- to twenty-page paper requirement. Students will travel throughout Burgundy and Eastern France with Pascal Durand, professor at ENSEAD in Dijon France.

ALS 403 Internship Opportunities in Burgundy, France
Spring. Variable. 4 credits. Prerequisites: enrollment in the Agricultural Study Tour of Burgundy, France. Some French language experience preferred. S-U grades optional.
L. A. Weston and P. Durand.
Six- to eight-week internship experiences in Burgundy, France in agriculturally related subject areas including viticulture, agribusiness, agronomy, food science, and biotechnology. Final paper documenting internship experience required.

ALS 477 Environmental Stewardship in the Great Lakes
Fall and spring. 2-4 variable credits. T R 11:40-1:10. J. M. Regenstein plus a faculty adviser.
Each student will undertake an original project to improve the environment at Cornell while working with a faculty adviser and the Cornell infrastructure (generally campus life and/or facilities). Through seminar discussions and presentations on environmental activism, students will learn how to be more effective at developing environmental programs in the future, both during and after college. The final written report will also be presented orally at a public forum. (Note: If students prefer to take one or two credits of independent research, enroll in the Cornell College of Agriculture, this can be arranged. Assistance in finding a faculty adviser will be provided. This course may be taken more than once.)

ALS 480 Global Seminar: Sustainability of Environment and Food Systems
Spring. 1-3 credits. Letter grade. Lec, R 9:00-1:05. Lec, T 9:00-9:55, H. D. Suphan, P. A. Arneson, and D. Lee.
A distance learning course involving Cornell and seven universities in Europe, Central America, India, and Australia. This seminar provides students the opportunity to explore and learn about the dynamic linkages between sustainable development, food security, population, the environment, and socio-economic progress from a global perspective. Students across the various sites interact via Internet, satellite, and telecommunication technologies to analyze a series of inter-disciplinary case studies related to global sustainable development. At the end of the semester, international student teams prepare and present term projects using videoconferencing technologies.

ALS 500 Politics and Policy: Theory, Research, and Practice (also HSS 404 and GOVT 500)
Students in the College of Agriculture and Life Sciences must register for ALS 500. S. Jackson and staff.
This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell-in-Washington Program. The central course objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student development of individual research papers or projects. All three components interrelate to provide students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Applications are made through the Cornell-in-Washington office, 311 Caldwell Hall.

ALS 661 Environmental Policy (also Biology and Society 461 and BIOES 461)
Fall and spring. 3 credits each term. (Students must register for 6 credits each term; an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem R 2:30-4:30 P.M. D. Pimentel.
This course uses an interdisciplinary approach to focus on environmental and policy issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience.

AGRICULTURAL AND BIOLOGICAL ENGINEERING

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

ABEN 102 Introduction to Microcomputer Applications
Fall or spring. 3 credits. S-U grades optional. PC or Mac labs available. All students, including those pre-enrolled, must attend the first lecture to guarantee admittance and to select a laboratory section. Lec, fall: T R 12:20-1:10, spring: M 12:20-1:10, labs, M 1:25-4:25 or 7:30-
The third module uses presentation graphics and word processing to create effective visual and written documents for professional presentations.

Module 01 Matlab (weeks 1 to 5 of the spring semester)

Tentative coverage to include matrix/vector manipulation, basic math functions, graphing of 2-D and 3-D plots, file I/O, string and numerical manipulation, problem solving of linear and nonlinear algebraic functions and ordinary differential integration, curve fitting, and data analysis and statistics. In lab, the students will learn Matlab through examples. Grading based on completion of lab assignments, lecture quizzes, and lecture attendance.

Module 02 Spreadsheets (weeks 6 to 10 of the spring semester)

Using Microsoft Excel to include built-in functions, lookup tables, graphs, Visual Basic macros, whether advantages and disadvantages compared to a programming language. Grading based on completion of lab assignments, lecture quizzes, and lecture attendance.

Module 03 Presentation tools for the Professional Engineer (weeks 11 to 14 of the spring semester)

Using Microsoft Word to create a written report and Microsoft PowerPoint to create slides for an oral presentation of engineering projects for professional presentations. Special attention will be given to the execution of quality presentations. Grading based on lab assignments, lecture participation, and an oral PowerPoint presentation and written report to be submitted as the final exam.

ABEN 200 The ABEN Experience

Spring. 1 credit. S-U grades optional. Prerequisite: nonmajors by permission of instructor. Lect., T 1:25. J. A. Bartsch. A required course for majors in Agricultural and Biological Engineering. A forum to discuss the career opportunities for engineering students and the activities and curricula that will lead to these opportunities. A series of sessions by practitioners, Cornell faculty members, alumni, staff from Cornell career offices, and students. Students develop personalized written career plans, do a web search for jobs and internships, and select future courses to meet their career goals.

ABEN 250 Engineering Applications in Biological Systems (also Engineering Distribution 250)

Fall. 3 credits. Prerequisite: enrollment in an engineering curriculum. MATH 293 (coregistration permissible). Recommended for the sophomore year. Lect., M W F 12:20. B. A. Ahner. Case studies of engineering problems in agricultural, biological and environmental systems, including bioremediation, crop production, environmental controls, energy, biomedicine, and food engineering. Emphasis is on the application of mathematics, physics, and the engineering sciences to energy and mass balances in biological systems.

ABEN 299 Sustainable Development: A Web-Based Course

Spring. 3 credits. Prerequisite: sophomore standing and above. S-U grades optional. N. R. Scott. Sustainable development is the dominant economic, environmental, and social issue of the twenty-first century. This web-based course will develop the concepts of sustainable development as an evolutionary process, demanding the integration of the physical sciences and engineering with the biological and social sciences for design of systems. Topics include nature of ecosystems, global processes, sustainable communities, and industrial ecology and life cycle analysis.

ABEN 300 Career Development

Spring. 1 credit. S-U option. Prerequisites: ABEN 200 or permission of instructors. Lect., T 2:30–3:20. Staff. Career development for juniors who are thinking about jobs, graduate or professional school, or anything else. Students will work on planning their options after graduation. Development of resumes and cover letters, contacts with potential employers or graduate schools, job and school searches on the web, professional engineering registration, entrepreneurial opportunities, career offices at Cornell, and practice interviews. Students are active participants. ABEN 300 sessions, attendance at four sessions of ABEN 200, selected by each student, is required.

ABEN 301 Renewable Energy Systems

Spring. 3 credits. Prerequisite: college physics. Lect., T R 10:10-11:25. L. D. Albright. Introduction to energy systems with emphasis on protecting costs and designing renewable energy systems to convert environmental inputs into useful forms of energy. Course will cover solar energy, small-scale hydropower, wind, bio-conversion processes, house energy balances; and the public input of alternatives. Use of spreadsheet will be extensive.

ABEN 305 Principles of Navigation (also NAV 301)

Fall. 4 credits. 4 classes each week (lecture-recitation-project work). Lects., M W F 8:00-8:50; lab, R 8:00 or 9:05. J.-Y. Parlane. An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. The course covers coordinate systems, chart projections, navigational aids, instrumental observations, time, star identification, use of the nautical almanac, tides and currents. Electronic navigation systems are also briefly discussed. This course does not satisfy ABEN technical electives.

ABEN 310 Advanced Metal Fabrication Techniques

Spring. 1 credit (2-credit option available). Prerequisite: ABEN 110 or permission of instructor. Lab, F 1:25–3:40. T. J. Cook. Principles and practices extending beyond the scope of ABEN 110. To include out-of-position, high carbon steel and cast iron welding. Soldering and brazing of aluminum, high surfacing, both tungsten (TIG) and metallic (MIG) inert gas welding, plasma-arc hard surfacing, both tungsten (TIG) and metal arc (MMA) welding, MIC, and arc welding.

ABEN 350 Biological and Environmental Transport Processes

Fall. 3 credits. Prerequisites: MATH 294 and fluid mechanics (co-registration permissible). Lects., M W F 11:15-12:05; disc, W 2:30-3:50. 2 evening prelims. K. G. Grehemelchin.
Understanding the principles of heat and mass transfer in the context of biological and environmental processes. Emphasis is on physical understanding of transport processes and simple reaction rates with application examples from plant, animal and human biology, the environment (soil/water/air), and industrial processing of food and biomaterials.

**ABEN 365 Properties of Biological Materials**

Mechanical and structural properties of biological materials. Mechanical testing of animal, plant, and food products. Laboratory exercises in quasi-static and dynamic testing of materials and interpretation of test results. Experimental techniques for determining engineering properties of these materials.

**ABEN 367 Introduction to Biological Engineering**
Fall. 3 credits. Prerequisites: one year each calculus and introductory biology, minimum one term each college chemistry and physics. Not open to freshmen. S–U and grade optional. Lec, T R 10:10; Lab M or T 1:25–4:25. J. B. Hunter.

Explores the use of engineering principles to solve biological problems in the context of laboratory experiments. Topics may include artificial organs, genetic engineering, mass transfer in fermentation, enzyme kinetics, mechanics of plant or animal tissue, and DNA transfer. Many topics relate to ongoing research at Cornell. Appropriate for engineering and life science students. Field trips, demonstrations, and readings in current scientific literature.

**ABEN 371 Hydrology and the Environment (also GEOL 204)**
Spring. 3 credits. Prerequisite: one course in calculus. 2 lecs, 1 lab. Lec, T R 9:05; lab, T, R 2:30–4:25. T. S. Steenhuis and L. Cathles.

Introduction to hydrology: the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, ground water, surface runoff, river meandering, flooding, and drought studies. Short field trips, and laboratories foster an understanding of concepts and principles of hydrologic processes.

**ABEN 411 Biomass Processing: Modeling and Analysis**

This course is designed to introduce students to how basic concepts from physical chemistry, enzyme and microbial kinetics, and transport phenomena are used to model biomass conversion and degradation processes. Examples of different agricultural and environmental processes are used to explore model development, solutions, and validation. There is a strong emphasis on the use of differential equations to model process dynamics.

**ABEN 418 Introduction to Biotechnology**
Fall. 3 credits. Prerequisites: ABEN 350 (co-registration allowed), biochemistry, microbiology, fluid mechanics, or permission of instructor. Lec, T R 8:40–9:55; Disc (8 weeks) M 3:35–4:25; Lab (6 weeks) M 9:30–10:20; T 4:30–5:25 or M 7:30–10:30. A. J. Baeumner.

This course will provide the students with an understanding of the scientific and engineering principles of biotechnology and their applications in agricultural, environmental and consumer protection, manufacturing, and processing. Topics include microbial synthesis, production and degradation, genetic engineering, immobilization, biosensor techniques, up- and down-stream processing, and fermentation techniques.

**ABEN 425 Science and Technology of Environmental Engineering**
Fall. 3 credits. Prerequisite: graduate or senior. Letter only. Lec, T R 2:55–4:10. W. J. Jewell.

Quantitative description of decline in environmental quality due to human activities, and exploration of science and technology solutions to pollution and their limits. Tools used by engineers and scientists to understand the environment will be used to focus on water quality problems (two-thirds), air quality (one-sixth) and land quality (one-sixth).

**ABEN 427 Water Sampling and Measurement**
Fall. 3 credits. Prerequisites: fluids or a hydrology course and MATH 191. Lec, T 10:10–11:00; Lab, T 1:25–4:25. D. D. Steenhuis.

Get your feet wet and your hands busy with this course on water sampling methods where science and engineering technologies are integrated to quantity, characterize, and analyze environmental engineering problems. This field-based laboratory course focuses on quantification of surface and subsurface flow and quality, and includes sampling techniques of soils, sediment, and biological waste products. Quality assurance and control protocols and evaluation of watershed loading of contaminants will be addressed.

**ABEN 435 Principles of Aquaculture**

An in-depth treatment of the principles of aquaculture: fish biology, waste treatment, engineering design, fish health, nutrition, processing, etc. This course is intended to build upon the undergraduate's previous course background and interests. Supervised "hands-on" laboratory experiences.

**ABEN 450 Bioinstrumentation**
Fall. 4 credits. Prerequisites: MATH 294, ABEN 151, PHYS 213, or permission of instructor. Lec, M W F 8:40–9:50; Lab, M or T 2:30–4:25. Not offered 2000–2001. D. Aneshansley.

Biological and biomedical applications are emphasized in this laboratory-based course. The electronic instrument from sensor to computer is considered. Static and dynamic characteristics of components and systems are determined theoretically and empirically. General analog and digital signal condition circuits are designed, constructed, and tested. Course satisfies the capstone design requirement.

**ABEN 453 Computer-Aided Engineering: Applications to Biomedical and Food Processes**
Spring. 3 credits. Prerequisite: computer programming (ABEN 151 or CS 100) and heat and mass transfer (ABEN 350 or equivalent). Lec, T 12:20–1:10; lab F 11:15. Computation disc/lab: F 11:15. A. K. Dutta.

Introduction to simulation-based design as an alternative to prototype-based design. Analysis and optimization of complex real-life processes using an industry-standard physics-based computational software on a supercomputer or high end personal computers. Biomedical processes and industrial food processing applications of heat and mass transfer are covered. Computational topics introduce the finite-element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own term project, which is the major part of the course (no final exam). The course satisfies the College of Engineering upper-level computing application requirement. It also satisfies the capstone design experience requirement for ABEN students.

**ABEN 454 Physiological Engineering**

Engineering analysis and design in the physiology of animals and humans. Use of engineering principles to study how animals work in nature and to intervene in physiological functions. The two major engineering themes are: signal processing as related to neural conduction, sound processing, vision, and image processing; and systematics as applied to cardiovascular and respiratory systems, bioenergetics, and bird flight. Laboratories involve experiments, computing applications, field trips, and live animal demonstrations.

**ABEN 456 Biomechanics of Plants**
Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology and one year each calculus, or permission of instructor. S–U or letter grade optional. Lec, T R 11:15–12:05; disc, W 2:30–3:20. J. R. Cooke and K. J. Niklas.

An engineering approach is taken to plant form and function following the text, Plant Biomechanics. Topics include: mechanical behavior of materials, effect of geometry on mechanical behavior, plant-water relations, plant cell walls, mechanical behavior of tissues, mechanical attributes of organs, the plant body, fluid mechanics and biomechanics and plant evolution.

**ABEN 471 Geohydrology (also Civil and Environmental Engineering 431 and Geology 445)**
Fall. 3 credits. Prerequisites: Mathematics 294 and Engr 202, 2 lecs, 1 disc, lecture, field trip, W. B. Brutsaert, L. M. Cathles, J.-Y. Parlangue, T. S. Steenhuis. Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

**ABEN 473 Watershed Engineering**
Fall. 3 credits. Prerequisite: fluid mechanics or hydrology. Lec, T R 9:05; disc, R 1:25–4:30. M. F. Walter.

Engineering principles are applied to the design of soil and water management.
technologies aimed at solving natural resource problems in the context of watersheds. Emphasis will be placed on rural and countryside engineering and small-scale design for water conveyance, soil erosion control, flood damage control, earthen dams, ponds, moisture conservation, drainage, and water supplies for the capstone design experience requirement.

ABEN 474 Drainage and Irrigation Design
Spring. 3 credits. Prerequisites: Fluid mechanics or hydraulics, Lecs, M W F 12:20. T. S. Steenhuis and L. D. Geobring. This course will focus on design of drainage and irrigation systems for agriculture and nonagricultural purposes. The course will also briefly cover design for rural water supply and sanitation systems. Emphasis is placed on problem solving with actual situations used wherever possible. One major design project is required of each student. This course satisfies the capstone design experience requirement.

ABEN 475 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: Matlab and 2 years of calculus. Lecs, M W F 10:10–11:00. L. F. Walker. System analysis and its use in environmental quality management. Emphasis is on modeling of environmental problems, translation of models into efficient computational algorithms, and use of computer simulation and optimization procedures (search techniques, linear programming, and dynamic programming) to evaluate management alternatives. Applications include water quality management, air pollution control, solid waste management, and industrial ecology.

ABEN 476 Solid Waste Engineering
Spring. 3 credits. Prerequisites: 1 semester of physics and chemistry. Lecs, T R 11:40–12:55. D. A. Haith. Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction; collection and transport systems; waste-to-energy combustion, sanitary landfills; composting; recycling and materials recovery facilities; and hazardous waste management. Emphasis on quantitative analyses.

ABEN 478 Ecological Engineering
Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent. Lecs, T R 2:30–3:45. W. J. Jewell. Natural waste treatment systems are sustainable, driven by solar power, and generate useful and valuable by-products. Constructed wetlands, hydroponic applications of plants, wastewater farming, sludge and industrial residue application to land, soil restoration, bioremediation of toxics, and biofilters for air purification are examples of pollution control systems that depend on natural processes. Pollution control mechanisms in soils and plants are defined and used to design innovative treatment systems for agriculture, municipalities, and industry. This course satisfies the capstone design experience requirement.

ABEN 481 LRFD-Based Engineering of Wood Structures
Spring. 3 credits. Prerequisite: ENG 202. Lecs, M W F 12:20 (Hollister Hall). K. G. Gebrechewchin. Two evening prelms. Computer-aided and manual computation procedures of Load and Resistance Factor Design (LRFD)-based engineering wood structures. Topics include national design codes and standards; estimation of design loads (dead, live, wind, snow, and seismic loads); determination of factored resistance and stiffness values; mechanical properties of wood and wood products; designs of beams, columns, trusses, frames, arches, bridges, and diaphragms; connections, and special wood structural members and systems. Engineering design judgment is also discussed as an integral component of the quantitative design procedure. ABEN students who wish to take the course to satisfy the capstone design requirement (optional) must sign up for an additional one credit hour of ABEN 496.

ABEN 482 Biothermal Engineering
Spring. 3 credits. Prerequisites: ABEN 250 and 350, or equivalent. Lecs, T R 11:15; lab, W 1:25–4:25. N. R. Scott. Analysis and design of the thermal and aerial environments of plants, animals, and humans. Thermal environmental requirements dictate the design of buildings to act as buffers between biological systems and weather. Heat flow, air flow, psychrometrics, energy balances, thermal biology, animal and plant models, thermal modeling, mechanical and natural ventilation, solar energy, and weather phenomena. This course satisfies the capstone design experience requirement.

ABEN 493 Technical Writing for Engineers
Fall. 1 credit. Prerequisites: co-registration with ABEN 454 or ABEN 473. Lecs, M 7:30–9:25 (5 evenings in first half of semester). Staff. This course meets the College of Engineering technical writing requirement when taken concurrently with ABEN 454 or ABEN 473. Class meets for five evening sessions during the fall semester and includes writing skills such as technical project reports, outlining, style, audience, and general writing mechanics.

ABEN 494 Special Topics in Agricultural and Biological Engineering
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

ABEN 496 Senior Design in Agricultural and Biological Engineering
Fall and spring. 3 credits. Prerequisite: senior standing in ABEN engineering program or permission of instructor. Note: completing an independent study form is required to register. Hours TBA. Staff. Involves capstone design experience, including a team project, incorporating analysis, design, evaluation, synthesis, and a written report of the end-product. This course may be taken in conjunction with an approved ABEN 496 course. (For approved ABEN course, see ABEN Undergraduate Program publication).

ABEN 497 Individual Study in Agricultural and Biological Engineering
Fall and spring. 1–4 credits. S-U option. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. Students must register with an independent study form (available in 140 Roberts Hall). Hours TBA. Staff. Special work in any area of agricultural and biological engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

ABEN 498 Undergraduate Teaching
Fall and spring. 1–3 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class. Emphasis on teaching techniques, preparing course materials, teaching techniques, and regularly discussing objectives and techniques with the faculty member in charge of the course.

ABEN 499 Undergraduate Research
Fall and spring. 1–3 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class. Emphasis on research techniques, preparing course materials, grades assignments, and regularly discussing objectives and techniques with the faculty member in charge of the course. A comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

ABEN 551-552 Agricultural and Biological Engineering Design Project
Fall and spring. 3–6 credits. Prerequisites: admission to the M.Eng. (Agr.) degree program. Hours TBA. ABEN graduate faculty. Comprehensive design projects dealing with existing engineering problems in the field. Emphasis is on the formulation of alternative design proposals that include consideration of economics, nontraditional factors, engineering analysis, and complete design for the best design solution. Projects are supervised by faculty members on an individual basis. However, there is a formal orientation during the first four weeks of the semester. A formal report and public presentation of the results of the design project are required for completion of the course(s). A minimum of 3 to a maximum of 12 credits of 551–552 is required for the Master of Engineering degree. Students should register for 551 their first semester and complete any additional design project credits with 552. If more than six design project credits are desired in one semester, both 551 and 552 may be taken.
will evaluate the benefits as well as the potential risks of releasing them into the environment.

[ABEN 652 Instrumentation: Sensors and Transducers]
Application of instrumentation concepts and systems to the measurement of environmental, biological, and agricultural phenomena. Construction and characterization of electronic sensors and transducers will be emphasized. Image processing techniques will be introduced. A final project is required.

[ABEN 655 Thermodynamics and Its Applications]
Spring. 3 credits. Prerequisite: Mathematics 293 or equivalent. Lecs, R 2:30-4:30.
J.-Y. Parlange.
Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, structure of organisms).

[ABEN 671 Analysis of the Flow of Water and Chemicals in Soils]
Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics. Lecs, R 3:55-4:50 (first meeting—TBA after that). J.-Y. Parlange.
The course encompasses a full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Current analytical, semi-analytical, and computer-based techniques are discussed. Both homogeneous and heterogenous soils are analyzed. Offered alternately with Civil and Environmental Engineering 653—a complementary, but not identical, course.

[ABEN 672 Drainage]
Spring. 4 credits. Prerequisites: ABEN 471 or ABEN 473; S-U grades optional. Offered alternate years. Lecs, M W F 12:20; lab, T 1:25-4:25. T. S. Steenhuis and L. D. Gehring.
Theory of water and solute flow in aquifers, hillslopes, and the vadose zone as it relates to artificial drainage is discussed. Drainage design as it relates to agricultural land, landfills, and land application sites will be critically reviewed. The importance of preferential flow on water quality of drainage waters is examined. Laboratory is used for hands-on experience with measuring soil parameters and for actual drainage design. This course satisfies the capstone design experience requirement.

[ABEN 673 Sustainable Development Seminar (also NBA 573)]
Spring. 1-3 credits. Prerequisites: upper division undergraduate and graduate students or permission of instructor. Lecs, F 1:30-3:30. N. R. Scott.
Sustainable development is the most positive concept to come out of the environmental movement in years. However, the concept of a sustainable world is not a constant. There are many aspects of sustainability involving economics, environment, and political, social, scientific, and technological developments. This seminar will explore topics such as energy, agricultural and food systems, green buildings and ecological design, corporate sustainability, and other contemporary issues.

[ABEN 678 Nonpoint Source Models]
Spring. 3 credits. Prerequisites: computer programming and calculus. Lecs, T R 8:40-9:55. D. A. Haith.
Development and programming of simulation models for management of water pollution from runoff and percolation. Emphasis is on prediction of water and chemical inputs to surface waters and groundwater. Applications include watershed hydrology and sediment yield, urban and rural runoff, lake eutrophication, waste disposal sites, and pesticides, nutrients, and salts in drainage.

[ABEN 685 Biological Engineering Analysis]
Spring. 4 credits. Prerequisites: T&M AM 310 or permission of instructor. Lecs, M W F 11:15. J. R. Cooke.
Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of results. The student's knowledge of fundamental principles is used extensively.

[ABEN 694 Graduate Special Topics in Agricultural and Biological Engineering]
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. ABEN graduate faculty.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be notified by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

[ABEN 697 Graduate Individual Study in Agricultural and Biological Engineering]
Fall or spring. 1-6 credits. Prerequisite: permission of instructor; S-U grades optional. Hours to be arranged. ABEN graduate faculty.
Topics are arranged by the staff at the beginning of the term.

[ABEN 700 General Seminar]
Fall. 1 credit. S-U grades only. Staff.
Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

[ABEN 754 Watershed Management]
Spring. 2-3 credits. Prerequisite: graduate standing or permission of instructors. Lecs, M 12:20-2:40. T. S. Steenhuis and M. J. Pfeffer.
Traditional top-down approaches to watershed management have been challenged by advocates of public participation. These challenges have raised questions about how to effectively integrate science, policy, and public participation. In this course we will review different management approaches and evaluate their usefulness in dealing with different watershed management problems.

[ABEN 771 Soil and Water Engineering Seminar]
Fall and spring. 1-3 credits. Prerequisite: graduate status or permission of instructor. S-U grades only. TBA. Staff.
Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

[ABEN 781 Structures and Related Topics Seminar]
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. TBA. Staff.
The interactions of engineering and biology, especially the environmental aspects of plant, animal, and human physiology, are examined in order to improve communication between engineers and biologists.

[ABEN 900 Master's-Level Thesis Research]
Fall and spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty.

[ABEN 900 Graduate-Level Thesis Research]
Fall and spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty. Variable credit for Ph.D. research before the "A" exam is passed.

[ABEN 901 Doctoral-Level Thesis Research]
Fall and spring. 1-15 credits. Prerequisite: passing of Admission Candidacy Exam and permission of adviser. S-U grades. ABEN graduate faculty.
ARME 210 Introduction to Business Management
Spring. 3 credits. Priority given to CALS majors. Lecs. M W F 10:10-11:00.
J. M. Hagen
This course provides an overview of management and business. Human resources, marketing, finance, and strategy concerns are addressed with consideration paid to current issues such as globalization, ethics, quality, and strategic alliances. Case studies and guest executives are an important part of the course.

ARME 221 Financial Accounting
2 evening prelims and a comprehensive final, weekly homework assignments, and 1 written case study and one project using an electronic spreadsheet. J. S. Hopkins
A comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, and the underlying theory of GAAP, and statements interpretation. Elements examined include inventory, depreciation, internal control of assets, time value of money, notes, stocks, bonds, and the statement of cash flows. Limited use of a financial data base of publicly held companies, introduction to financial information on the web.

ARME 230 International Trade and Finance (also ECON 230)
Spring. 3 credits. Prerequisites: ECON 101 or equivalent required; ECON 102 or equivalent recommended. Lecs. T R 1:25-2:40; 1 homework assignment to be arranged. 1 evening prelim. D. R. Lee
This course provides a one-semester introduction to international economic principles and issues. The course first surveys key topics such as the balance of trade, comparative advantage, tariff and non-tariff barriers, and multilateral institutions. The second part of the course treats selected topics in international finance, including exchange rates, balance of payments, and capital markets. Current issues such as the effects of trade liberalization, trade and economic growth, and instability in international capital markets are discussed throughout. This course is designed as an introduction to the concepts developed at a more advanced level in ARME 450 and ECON 361-362.

ARME 240 Marketing
Fall. 3 credits. No adds after first week of class. Lecs. M W F 10:10-11. M. G. Meloy
This course provides a broad introduction to the fundamentals of marketing. We explore the components of an organization's strategic marketing program, including how to price, promote, and distribute goods and services to people. Industry guest lectures and current marketing applications from various companies are presented and analyzed. In order to provide hands-on experience, students will work in teams with local not-for-profit organizations.

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

ARME 100 Economics for Business in a Global Economy
Fall. 3 credits. Priority given to CALS majors. There are no restrictions to non-CAL S enrollments—pre-enrollment does not guarantee admission to the course. Prerequisite: past or concurrent enrollment in Economics 101, or the equivalent, required. Lecs. M W F 11:15-12:05. Labs TBA. Not offered fall 2000. Staff. Understanding individual markets and the world economy is critical for business success. This course focuses on understanding economic theories to help formulate business strategy, such as highly competitive markets, asset markets functioning, market power, government regulation, environmental policy, international trade, and macroeconomic policy. Students participate in eight laboratory market experiments.

ARME 210 Introductory Statistics
An introduction to statistical methods. Topics to be covered include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Applications from business, economics, and other disciplines are used to illustrate the methods covered in the course.

ARME 250 Environmental Economics
Spring. 3 credits. Lecs. T R 2:55-4:10. D. Chapman
Concepts and methods used in the public and private analysis of environmental resources. Subjects include valuation, benefit-cost analysis, and ecological economics. Major current economic problems such as economic incentives in environmental policy, endangered species protection, forestry, energy use, world petroleum resources, and global warming. The growing world trade in resource-intensive manufactured products and the impact on income distribution, employment, and pollution. Comparative resource use and environmental protection in industrialized and developing countries.

ARME 320 Business Law I (also NBA 560)
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Lecs. M W F 9:05-9:55; sec. W or R 1:25-4:25. On days farms are visited, the section period is 1:25-6:00.
W. A. Knoblauch
An intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and acquisition, organization, and management of capital, labor, land, buildings, and machinery.

ARME 321 Business Law II (also NBA 561)
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: a course in business law or permission of instructor. Lecs. T R 8:40-9:55. D. A. Grossman
The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion of the course will review selected topics in business law, like employment discrimination, debtor/creditor relations, product liability, unfair competition, e-commerce law, and international business law.

ARME 323 Managerial Accounting
Fall. 3 credits. Priority given to CALS majors. Prerequisite: ARME 221 or equivalent. Lecs. M W 12:20-1:10; secs. R 10:10-12:05, 12:20-2:15 (2 secs), or 2:30-4:25 (2 secs); or F 10:10-12:05 or 12:20-2:15 (2 secs). 2 evening prelims, a third exam, weekly homework, one written case study, and one project using an electronic spreadsheet. J. S. Hopkins
An introduction to cost accounting that emphasizes the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, inventory control, variance analysis, measuring divisional performance, and cost control in the manufacturing environment. Use of electronic spreadsheets is required.
ARME 324 Financial Management
This course focuses on managerial, financial, and economic decisions, corporate financial policy, risk management, and investments. Topics include the time value of money, capital budgeting decisions, financing alternatives, short-term financial policy, the cost of capital and the capital structure decision, distribution policy, mergers and acquisitions, options, forward and futures contracts, market efficiency and market anomalies, and personal financial considerations. ARME 325 Personal Enterprise and Small Business Management
Spring. 4 credits. Limited to juniors and seniors. Prerequisites: ARME 220 and 221 or permission of instructor. Absolutely no adds or drops after second class meeting. Term project in amount to approximately $100 per team. Lecs., T R 12:20–1:10; sec, W 2:30–4:25. Two additional hours to be arranged. D. Streeter.
Course is focused on the activities involved in planning and running a business, including the exploration of strategic dimensions, performance of marketing research, and planning of financial aspects related to the new company. Lectures and hands-on clinics include visits by real world entrepreneurs who discuss the start-up process and the challenges of managing growth in a small business. Term project is the development of a business plan, completed in teams no fewer than three.
ARME 326 Human Resource Management in Small Businesses
Fall. 3 credits. Prerequisite: ARME 220 or ARME 302 or equivalent. S-U grades optional. Lecs., T R 10:10–11:25 or 11:40–12:55 or 2:55–4:10. 1 evening prelim. R. A. Milligan.
An introduction to the management of human resource in small businesses. The focus is on developing and using all of the capabilities of all small business personnel including owners, family members, and employees. Topics include recruitment, selection, compensation, training, empowerment, team building, leadership, performance management, and conflict resolution. Student involvement and active learning experiences are emphasized. ARME 327 Accounting for Entrepreneurs
Spring. 3 credits. This course is intended for non-ARME majors. Students may not receive credit for this course in addition to credit for ARME 221 and/or ARME 323.
This course provides an introduction to the principles of accounting used by entrepreneurs who plan, direct, and control, and make decisions about critical business activities in their companies. This course will provide future entrepreneurs with the requisite technical skills to accumulate, record, and communicate financial information about their businesses to internal and external parties of the firm. We will explore the principles of financial accounting (accounts receivable, inventory, fixed assets, liabilities, time value of money, investments, owners equity) and managerial accounting (budgeting, product costing, inventory management, break-even analysis) as they apply to small businesses. Use of accounting software and the Internet will be required and intended for students who have no prior accounting courses and who are preparing for an entrepreneurial career path.
ARME 328 Innovation and Dynamic Management (also H ADM 418)
Spring. 3 credits. Limited to juniors and seniors. Priority given to CALS juniors and seniors, then out of college seniors.
W. H. Lesser.
The focus of the course is on the use of futures and options as risk management tools. Commodities, exchange rate, and interest rate options, and commodity and interest rate derivatives are analyzed from the perspective of the hedger, but those interested in arbitrage and speculation will get some insights as well. Students will participate in a simulated trading exercise in which they will use price and market information and input from industry experts to manage a hedge position.
ARME 344 Consumer Behavior
Fall. 3 credits. Prerequisite: ARME 240 or equivalent. Limited to 45 juniors and seniors. Priority given to CALS students.
This course introduces students to the psychological, sociological, and cultural theories of buyer behavior, with specific attention to consumer information processing and decision making. Course participation is expected as topics will be illustrated and explained. Student participation is emphasized. If a student has already taken NHA 626, they are not permitted to enroll in ARME 344. Students elected to both PAM 323 and ARME 344 or HADM 347 and ARME 344 due to overlap.
ARME 346 Dairy Markets and Policy
Spring, weeks 1–7. 1 credit. Limited to juniors and seniors. Prerequisites: ECON 101 or equivalent. S-U grades optional. Lecs., R 2:30–2:45. M. Stephenson.
An introduction to dairy markets and policy. Major topics include: milk pricing, marketing channels, dairy prices and demographics, world trade for dairy products, and policy issues. Class participation is expected as topics and new literature are explored.
ARME 347 Strategic Marketing for Horticulturists and Farmers
Spring. 1 credit. Prerequisite: ARME 240.
This course will emphasize applications in strategic marketing. Lectures focus on practical aspects of the planning, implementation, and control phases of the strategic marketing process. Students will develop a long-range marketing plan for a fruit, vegetable, greenhouse, nursery, winery, or related horticultural firm.
ARME 380 Independent Honors Research in Social Science
Fall or spring. 1 credit. Limited to students who have met the requirements for the honors program. See "Honors Program" in CALS section of this catalog. Provides qualified students an opportunity to conduct original research under supervision. Information available in ARME undergrad program office in Warren Hall.
ARME 402 Seminar in Farm Business Planning and Managerial Problem Solving
Fall. 3 credits. 4 half-day field trips. One day or half day trip. On days field trips are taken, class ens. F 12:30–1:20; or R 1:25–2:15. Not offered fall 2000. Staff.
A capstone seminar/workshop designed for juniors and seniors who plan to return to the family business or home farm or to take positions in banking, credit, or agribusiness, as well as those who wish to establish entrepreneurial businesses. The objective of the course is to pull together interdisciplinary knowledge and apply it in a problem-solving, critical-thinking management context. Topics include managerial analysis and strategic planning, human resource management, and business and family arrangements.
ARME 403 Farm Management Study Trip
Spring. 1 credit. Prerequisite: ARME 302. Open by application only. Secs. arranged. W. A. Knoblauch.
A special program to study production and management systems in diverse agricultural regions of the United States. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. A paper, selected by the student, which further explores an aspect of the trip, is a requirement for completing the course.
ARME 404 Advanced Agricultural Finance Seminar
Spring. 2 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. Open by application prior to March 1 of the year before the course is offered. W 2:30–4:25. E. L. LaDue.
A special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Northeast Farm Credit offices, one week in Farm Credit Association offices, a one-day program on FSA financing during fall term, a two- to four-day trip to financial institutions in New York City, and an actual farm consulting and credit analysis experience in the spring term.
ARME 405 Farm Finance
The principles and practices used in financing farm businesses, from the perspectives of the farmer and the farm lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.
ARME 406 Farm and Rural Real Estate Appraisal
Fall. 3 credits. Limited to 40 students. Prerequisites: ARME 302 or equivalent and permission of instructor. Lect, R 11:15–12:05; sec, R 1:25–4:25. 5 half-day field trips, 1 all-day field trip. On days field trips are taken, class ends at 6:00. Not offered spring 2001. Staff. The basic concepts and principles involved in appraisal. Factors governing the price of farms and rural real estate and methods of valuation are studied. Projects include appraising farms and other rural properties.

ARME 410 Business Statistics
Spring. 3 credits. Prerequisite: ARME 210 or equivalent. Lec, M W F 11:15–12:05. 2 evening prelins. C. van Es. This course focuses on four major topics used to analyze data from marketing research, business, and economics. Topics studied are: survey sampling procedures, contingency table analysis, time series and forecasting, and experimental design and ANOVA. A brief introduction to nonparametric methods is also included. The course introduces a research project designed to give experience in collecting and interpreting data.

ARME 411 Introduction to Econometrics
Fall. 3 credits. Prerequisite: ARME 210 and either ECON 313 or PAM 200, or equivalents. Lecs, T R 1:25–2:40. Optional section TBA. C. Barrett. The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression are discussed and simulated. Regression models, simulation, and forecasting techniques are introduced.

ARME 412 Introduction to Mathematical Programming
Fall. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: ARME 210 or equivalent. Lecs, T R 11:40–12:55; sec, 1:25–2:40. F/W 2:15–4:15. J. E. Pratt. This is a course in applied mathematical programming. The emphasis will be on formulation, specification, and interpretation of solutions to mathematical models of problems in business. Standard problems such as blending, resource allocation, capital budgeting, transportation and financial planning, and inventory management will be studied. Integer and nonlinear programming will be introduced.

ARME 415 Price Analysis (also ECON 415)
Fall. 3 credits. Prerequisites: ARME 210 or equivalent. ECON 313 or PAM 200 or equivalent. Lecs, T R 8:40–9:55. C. Chung. The focus of this course is on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Special attention is paid to empirical analysis. Institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions are included.

ARME 416 Demographic Analysis in Business and Government (also R SOC 331)
Fall. 3 credits. Prerequisite: ARME 210 or equivalent. Lec, W F 1:25–2:15; sec, M 12:20–1:10 or M 1:25–2:15. W. Brown. For description, see R SOC 331.

ARME 417 Decision Models for Small and Large Businesses
Spring. 3 credits. Limited to juniors and seniors. Preference given to ARME majors. Prerequisites: ARME 210 or equivalent. Lecs, M W 2:30–3:20; lab W 7:30–9:25 or R 12:20–2:15 or R 2:30–4:25. C. L. van Es. This course examines the economic principles underlying business decision models and the relationship between business decisions. The course will illustrate the application of mathematical models to problems in the real world. Economic principles will be used to help students understand the structure of the decision, incorporate subjective probabilities as a way to portray risk, measure outcomes in a way that is consistent with attitudes toward risk, and understand the value of information. The importance of sensitivity analysis will be emphasized, as well as the need to combine both quantitative and qualitative considerations in decision making. Cases will be drawn from small business scenarios, the public policy debate, and modern comput­ ers. Implementing decision models with computers will be the focus of lab sessions.

ARME 422 Estate Planning (also NBA 562)
Fall. 1 credit. Limited to juniors, seniors, and graduate students. S-U grades only. Lecs, M. Groszmann. Fourteen sessions on the various aspects of estate-planning techniques. The law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures are covered.

ARME 424 Strategic Management
Fall. 3 credits. Limited to seniors majoring in business management and marketing. T R 8:40–9:55, 10:10–11:25 or 1:25–2:40. B. L. Anderson. This is a capstone course designed to integrate what students have learned in other ARME courses with an emphasis on strategic decision making. Issues will be approached from the standpoint of the board of directors, chief executive officer, and business unit managers. What should be considered and how strategic decisions should be made are the focus of the course. While the primary focus is on public corporations, not-for-profits, cooperatives, and small business, strategic decisions will also be included. The course is built around several high-level guest executives and a series of case studies. Improving oral and written communication skills in a business context is emphasized.

ARME 425 Small Business Management Workshop
Fall. 4 credits. Limited to seniors. Prerequisite: ARME 252 or MBA 300 and permission of instructor. Term project work will amount to approximately $100 per team. TBA. D. Streeter. Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. They learn to employ business principles to an existing business and the constraints of limited resources. The course is offered spring 2001. Staff.

ARME 426 Cooperative Management and Strategies
Spring. 3 credits. Recommended: ARME 220 or equivalent. Estimated cost of field trip, $80. Lecs, M W F 12:20–1:10. 2-day field trip required. B. L. Anderson. This course examines the economic principles underlying cooperative enterprises, cooperation, and not-for-profit organizations. The focus is on operating cooperatives in agriculture, although alternative types of cooperative organizations are discussed, such as credit unions, insurance cooperatives, employee stock ownership plans, housing cooperatives, flexible manufacturing networks, consumer cooperatives, and membership organizations.

ARME 427 Advanced Agribusiness Management
Fall. 3 credits. Prerequisites: ARME 220 or ARME 302. Lecs, T R 1:25–2:40. B. A. Gloy. The course is intended for students with an interest in agribusiness and is designed to integrate previous coursework and enhance problem identification and solving skills. The focus is on the evaluation, formulation, and implementation of strategy designed to create and sustain competitive advantage for agribusiness firms. The course covers industry analysis, firm analysis, market analysis, strategy formulation, risk analysis, strategy development, organizational design and structure, and leadership for agribusiness firms. This course is designed as a capstone course for the agribusiness management specialization.

ARME 430 International Trade Policy
Spring. 3 credits. Prerequisites: ECON 101–102 or equivalents and intermediate microeconomics. Recommended: ARME 230. Lecs, T R 1:25–2:40. Optional section TBA. N. Chau. This course examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries are also emphasized.

ARME 431 Food and Agricultural Policies
Spring. 3 credits. Prerequisite: intermediate microeconomics. Lecs, T R 11:40–12:55; sec, R 2:30–3:20 or 3:35–4:25. D. de Gorter. The course deals broadly with how food and agricultural policies, including price support and storage or reserve policies, agricultural protection, soil conservation programs, the structure of agriculture, domestic food subsidy programs, environmental issues; and food safety. The important trade and agricultural policies in other countries is emphasized.

ARME 433 Devolution, Privatization, and the New Public Management (also CRP 412)
Fall. 3 credits. S-U grades optional. Lec, T 10:10–12:55. M. E. Warner. For description, see CRP 412.
ARME 443 Food-Industry Management
Fall. 4 credits. Limited to juniors and seniors majoring in business management and marketing or food industry management and grad students. Prerequisite: ARME 240 or 448 or permission of instructor. Lect, T R 11:40-12:55; sec T 1:25-2:40. D. J. Pernasio. A case-study approach is used to examine the application of management principles and concepts to marketing and distribution problems of the food industry. Cases covering new product introductions, merchandising strategies, and investment decisions are included. Guest speakers from the food industry present case-study solutions at the Tuesday afternoon section.

ARME 444 Food Marketing Colloquium
Fall. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of the instructor. S-U grades only. R 3:35-4:25. D. J. Pernasio. ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken. Students will participate in research topics on various aspects of the food industry.

ARME 447 Food Marketing Colloquium
Spring. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of instructor. S-U grades only. R 1:25-2:15. D. J. Pernasio. ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken. Students will participate in research topics on various aspects of the food industry.

ARME 448 Food Merchandising
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: ARME 240. Lect, T R 11:40-12:55. D. J. Pernasio. Merchandising principles and practices as they apply to food industry situations. The various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy are examined in this course. The consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers are considered.

ARME 449 Global Marketing Strategy
Spring. 3 credits. Prerequisite: previous marketing course. Limited to junior, senior, and graduate students. M W 2:55-4:10. J. M. Hagen. This course examines opportunities and challenges in the rapidly changing global marketplace. The seminar will cover the decision to serve a foreign market, alternative strategies for entry into foreign markets (such as exporting or establishing a local subsidiary), and issues in implementing those strategies. The course includes case analysis and discussion.

ARME 450 Resource Economics (also ECON 450)
Fall. 3 credits. Prerequisites: MATH 111, ECON 313, and a familiarity with EXCEL. Lecs, M W F 2:30-3:20. J. M. Conrad. Dynamic models of renewable, nonrenewable, and environmental resources will be constructed to examine market allocation and optimal resource management.

ARME 451 Environmental Economics and Policy (also ECON 409)
Spring. 3 credits. Prerequisites: ECON 313, or intermediate microeconomics course, and calculus. Limited to undergraduate students. S-U grades optional. Lecs, T R 1:25-2:40. Not offered spring 2001. G. L. Poe. This course explores the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasis is placed on the welfare economic approach for allocating public goods, with specific emphasis on market failure, externalities, benefit-cost analysis, and the use of nonmarket valuation techniques. Policy choices such as regulatory and property rights, institutional perspectives and ecological economic concepts will also be examined.

ARME 464 Economics of Agricultural Development (also ECON 464)
Spring. 3 credits. Prerequisites: ECON 101-102, or permission of instructor. Lecs, T R 11:40-12:55. R. P. Berk. This course is designed to provide an understanding of the economics of the agricultural sector in low-income countries. In addition, more general issues of economic development beyond the agricultural sector will be covered to provide the necessary context for an understanding of rural problems. Among the areas covered are the nature of development and technical change, welfare and income distribution, land reform, and the role of international institutions. Examples from a wide variety of developing countries will be used to illustrate the basis for economic analysis.

ARME 494 Undergraduate Special Topics in Agricultural, Resource, and Managerial Economics
Fall or spring. 4 credits maximum. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department.

ARME 497 Individual Study in Agricultural, Resource, and Managerial Economics
Fall or spring. Variable credit. S-U grades optional. Staff. To be used for special projects designed by faculty members.

ARME 498 Supervised Teaching Experience
Fall or spring. 1–4 credits. Total of 4 credits maximum during undergraduate program. Students must register with an Independent Study form (available in 154 Warren Hall). Staff. Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students are expected to teach at least one hour per week for each credit hour. Students cannot receive both pay and credit for the same hours of preparation and teaching.

ARME 499 Undergraduate Research
Fall, spring, or summer. 1–4 credits. Limited to students with GPAs of at least 2.7. Students must register with an Independent Study form (available in 154 Warren Hall). S-U grades optional. Staff. Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

ARME 605 Agricultural Finance
Fall. 3 credits. Prerequisite: ARME 324 or 405 or equivalent. T R 8:40-9:55. B. A. Gloy. Advanced topics on agricultural finance. Topics include investment analysis, capital budgeting under uncertainty, decision analysis, risk management, capital structure, and financial intermediaries.

ARME 608 Production Economics (also ECON 408)
Fall. 3 credits. Recommended: ECON 313 and MATH 111 or equivalents. Lect, M W F 10:10-11:10. L. W. Tauer. The theory of production economics with emphasis on applications to agriculture and natural resources. Topics include the derivation, estimation, and use of production, cost, profit, demand, and supply functions. Production response over time and under risk is introduced.

ARME 630 Policy Analysis: Welfare Theory, Agriculture, and Trade (also ECON 430)
Spring. 4 credits. Prerequisites: ARME 608 or CE&H 603, ECON 313, or equivalent intermediate micro theory incorporating calculus. Lect, M W 12:20-2:25. H. de Gorter. The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optima. The second half of the course focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

ARME 633 Devolution, Privatization, and the New Public Management (also CRP 612)
Fall. 3 credits. S-U grades optional. Lec, T 10:10-12:35. M. F. Warnier. For description, see CRP 612.
This course focuses on the unique features of speculation, and public-policy issues. A foundation for a discussion of hedging, futures contracts. Emphasis is placed on the evaluation of price behavior including marketing margins and imperfect competition. Empirical tools to evaluate market characteristics will also be covered.

ARME 641 Commodity Futures Markets (also ECON 441)
Spring, weeks 8-14 (starts Mar. 13). 2 credits. Prerequisites: ARME 411 and 415 or equivalent. Lecs, T R 12:00-1:15. W. G. Tomek. This course is about markets for agricultural futures contracts. Emphasis is placed on models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public-policy issues.

ARME 651 Environmental and Resource Economics
Spring, 4 credits. Limited to graduate students. Lecs, T R 10:10-11:25. L. D. Chapman. A review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Techniques for measuring benefits and costs—including property value and wage hedonic approaches, travel cost models, and contingent valuation—are covered. Survey/data collection methods are described in detail. Explore innovative market mechanisms for resolving public good, common property, and externality problems. Students will be required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem. Open to graduate students outside of economics. ARME 651 is a core course for the Environmental Management concentration/option.

ARME 652 Land Economics Problems (co-listed with CEE 529)
Fall or spring. 1 or more credits. Limited to graduate students. Prerequisite: permission of instructor. S-U grades optional. Lecs, W 7:30-9:25 p.m. D. J. Allerman. Special work on any subject in the field of land and resource economics.

ARME 665 Food and Nutrition Policy (also NS 685)
Spring. 3 credits. Prerequisites: introductory microeconomics and intermediate statistics (e.g., through multiple regression), or permission of instructor. S-U grades optional. Lecs, M W 2:55-4:10. D. Sahn. For description, see NS 685.

ARME 666 Economics of Development (also ECON 466)
Spring, 3 credits. Prerequisites: ECON 313 and 314 or permission of instructor. S-U grades optional. Lecs, T R 11:40-12:55. Not offered spring 2001. S. C. Kyle. The course is designed as an introduction to the economics of development at the graduate level. The course will be split into two major sections, the first dealing with the microeconomics of households in developing countries and the second covering macroeconomic strategy and performance. A principal goal will be to illuminate the particular features of interest in which are important to economic analysis and policy. Special attention will be given to issues facing countries with important agricultural and resource sectors.

ARME 667 Topics in Economic Development (also ECON 770)
Spring, 3 credits. Prerequisite: basic first-year course in ECON or ARME, or instructor's permission. S-U grades optional. Lecs, T R 1:25-2:40. R. Kanbur. This course is targeted to second-year graduate students. Topics covered will vary from year to year and may include: poverty, inequality, intra-household allocation, structural adjustment, and debt. Examination will be by term paper.

ARME 670 Economics of Consumer Demand (also PAM 608)
Fall. 3 credits. Prerequisites: ECON 311 or 313 and 2 semesters of calculus. S-U grades optional. Lecs, T R 8:40-9:55. C. K. Ranyenyi. A graduate level introduction to theory and empirical research on household demand, consumption, and saving. Emphasis is on the use of the theory in empirical research. Topics include neo-classical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. As time allows, Becker and Lancaster models of demand will be introduced.

ARME 694 Graduate Special Topics in Agricultural, Resource, and Managerial Economics
Fall or spring. 4 credits maximum. S-U grades optional. Staff. The department teaches "trial" courses under the department. Topics (risk, supply response, and household production functions) based on student interest.

ARME 695 M.P.S. Research
Fall or spring. Limited to graduate students. S-U grades optional. Credit, class hours, and other details arranged with a faculty member. Staff. This course is used to develop special projects designed by faculty members. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered. The section number is provided by the instructor.

ARME 708 Advanced Production Economics
Fall. 3 credits. Prerequisite: ARME 608, 710, or equivalent; ECON 609 is highly recommended. Offered alternate years. Not offered fall 2001 and 2002. Next offered fall 2003. Hours TBA. R. N. Boisvert. Theoretical and mathematical developments in production economics, with emphasis on estimating production relationships, scale economies, technical change, factor substitution. Developments in flexible functional forms, duality, and dynamic adjustment models are emphasized. Discussions of other topics (risk, supply response, and household production functions) based on student interest.

ARME 710 Econometrics I
Spring. 4 credits. Prerequisites: matrix algebra and statistics at the level of BTRY 311 or BTRY 409 and 417 or ECON 619 preferred. Undergraduates must have permission of instructor. Lecs, M W F 8:40-9:55. T. D. Mount. This course together with ARME 711 provides a Ph.D.-level sequence in applied econometrics. 710 covers selected statistical models and associated estimators, including dynamic and other stochastic regressor models, seemingly unrelated regression and simultaneous equation models, and models with nonspherical error terms and specification errors.

ARME 711 Econometrics II
Fall. 4 credits. Prerequisite: ARME 710 or equivalent. BTRY 417 recommended. Lecs, M W 10:10-12:05. T. D. Mount. Coverage beyond that of ARME 710 of linear regression models, including alternative methods of incorporating nonsample information and testing restrictions, diagnostic techniques for collinearity and influential observations, pooling data, stochastic coefficients, limited dependent variables, and latent variables.

ARME 712 Quantitative Methods I
Fall. 4 credits. Prerequisite: some formal training in matrix algebra. A course at the level of BTRY 417 is highly recommended. Lecs, M W F 8:40-9:55. R. N. Boisvert. A comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics in nonlinear programming, including separable, spatial equilibrium and risk programming models. Input-output models and their role in social accounting matrices and computable general equilibrium models are discussed. Applications are made to agricultural, resource, and regional economic problems.
ARME 713 Quantitative Methods II
This course is concerned with the analysis and optimization of dynamic systems. Course objectives are to (1) present the basic theory of dynamical systems and dynamic optimization, (2) introduce associated methods of optimization and numerical analysis, (3) review some applications of dynamic analysis from various subfields in economics, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

ARME 714 Experimental Economics
The course will survey both experimental economics methods and research as an approach to theory. Students will participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics covered include experimental methods, decisions and games, markets (testing auction institutions); market power (monopoly, oligopoly); bargaining, compensation and performance; public goods; externalities, and voting; information and uncertainty; anomalies. Students must design and write a paper describing their own experiment.

ARME 717 Research Methods in Agricultural Economics
Spring. 2 credits. Limited to graduate students. M 2:30-4:25. R. N. Boisvert.
Discussion of the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester each student develops a research proposal that may be associated with his or her thesis.

ARME 730 Seminar on International Trade Policy: Agriculture, Resources and Development
This course explores selected topics in the international trade policy literature. The seminar will cover topics in the relationship between the domestic market and world prices, the relationship between different agricultural systems and international trade, and the political economy issues related to international trade policy.

ARME 735 Public Finance: Resource Allocation and Fiscal Policy (also ECON 735)
Spring. 4 credits. Time TBA. R. Kanbur.
For description, see ECON 735.

ARME 740 Agricultural Markets and Public Policy
Spring, weeks 1–7. 2 credits. Limited to graduate students. Prerequisite: familiarity with multiple regression techniques at the ARME 411 level or higher. Recommended: ARME 610. T R 12:20–2:15. W. H. Lesser.
Develops the concepts and methodology for applying and analyzing the effects of public-policy directives to the improvement of performance in the U.S. food marketing system. Prospective topics include a survey of industrial organization principles, antitrust and other legal controls, and coordination systems in agriculture. Topics can be adjusted to students' interests.

ARME 750 Resource Economics
Fall. 3 credits. Prerequisites: ECON 609 and 618, or ARME 713. Lect. M W F 9:05-9:55. J. M. Conrad.
Optimal control and other methods of dynamic optimization will be used to study the allocation and management of natural resources.

ARME 751 Environmental Economics
Economic theory will be applied to the problems of managing environmental quality. Static and dynamic models of externality, decisions to preserve or develop natural environments, and methods of valuation will be presented.

ARME 762 Microeconomics of International Development
Fall. 3 credits. Prerequisite: completion of first year Ph.D. course sequence in ARME or ECON, or instructor's permission. S-U grades optional. Lect. T R 11:40-12:55. C. B. Barrett.
This course focuses on models of individual, household, firm, firm, and market behavior in low- and middle-income developing economies. Topics covered include agricultural land, labor and financial institutions, technology adoption, food security and nutrition, risk management, intra-household analysis, reciprocity networks, and product-market policies. Empirical investigation is emphasized.

ARME 763 Macro Policy in Developing Countries
Spring. 3 credits. Prerequisites: ECON 609, 610, 613 (may be taken concurrently), or permission of instructor. Offered alternate years. Not offered spring 2001 and 2003; next offered spring 2002. Lect. T 2:00-2:55. S. C. Kyle.
This course examines macroeconomic policies in developing countries and their interaction with economic growth, development, and stability. Theoretical models useful for analysis of macro policies will be covered as well as an examination of empirical studies. Emphasis will be on research topics of current interest to students and professionals in the field, particularly the role of the interaction of macro policy with micro and sectoral analysis.

ARME 800 Master's-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty.
For students admitted specifically to a master's program.

ARME 900 Graduate-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty.
For students in a Ph.D. program only before the "A" exam has been passed.

AN SC 100 Domestic Animal Biology I
An introduction to the biology of economically important species (morphology, anatomy, and physiology) and its application to the management of animals in major livestock industries. Topics covered include fundamentals of genetic selection and relevant biometry, anatomy, quantitative cell biology, regulatory mechanisms, and genetic databases, major life support systems, and digestion. Students undertake the care and management of a large colony of Japanese quail and conduct a genetic selection experiment. Nonselected birds are culled and used by students in laboratory exercises examining aspects of growth and development. In other laboratories, living farm animals are used noninvasively and fresh organs from dead animals are examined.

AN SC 105 Contemporary Perspectives of Animal Science
Spring. 1 credit. Limited to freshmen, sophomores, and first-year transfers. T 1:25 or W 12:20. R. C. Gorewit and D. J. Cherry.
A forum to discuss the students' career planning and the contemporary and future role of animals in relation to human needs.

AN SC 120 Animal Domestication and Behavior
Fall. 3 credits. T R 8:40-9:55. E. A. Oltenacu.
This Freshman Writing Seminar will explore the relationship between humans and domestic animals. Students will study the role of animal behavior in the domestication process, both historically and in modern attempts to domesticate new species, and in finding solutions to current issues related to animal welfare.

AN SC 150 Domestic Animal Biology II
Second of a two-semester sequence (100/150) applying the basic biology of growth, defense mechanisms, reproduction, and lactation to aspects of the production and care of domestic animals. Fresh tissues and organs from dead animals along with preserved specimens will be used in laboratories, exercises, and demonstrations.
AN SC 212 Animal Nutrition
Fall. 4 credits. Prerequisite: CHEM 208 or equivalent. Recommended: AN SC 100 and 150. Lecs, M W F 10:10; lab, M T W R or F 1:25-4:25. A. W. Bell and D. J. R. Cherry. An introduction to animal nutrition, including digestive physiology and metabolism of domestic animals and other species; nutrient properties and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and a nutritional experiment performed on a laboratory or farm animal species.

AN SC 213 Nutrition of the Dog

AN SC 214 Nutrition of Exotic Animals

AN SC 215 Exotic Avian Husbandry and Propagation
Spring. 2 credits. Limited to 100 students. Prerequisites: AN SC 100, 150 or one year of introductory biology. Lec, M 2:30-4:30. J. Parks and D. Muscarella. Natural history, care, management, health, and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Lectures, demonstrations, and local field trips.

AN SC 216 Nutrition of the Cat

AN SC 221 Introductory Animal Genetics
Spring. 3 credits. Prerequisite: a year of college biology. Lecs, T R 9:05; sec, T W R or F 2:45-4:25. E. J. Pollak. An examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

AN SC 222 Introduction to Canine
Summer. 1 credit. Prerequisites: introductory biology or permission of instructor. E. J. Pollak and P. A. Oltenacu. Introduction to basic Mendelian genetics and single-inbred strain genetics in the dog. This distance-education course delivered by CD and web interaction for residents and nonresidents consists of lectures on basic genetic principles, probabilities, linkage and genetic testing, and seminars on genome mapping, inherited sexual disorders, breeding disorders, and eye defects. This course should not be taken for credit by students who have successfully completed AN SC 221.

AN SC 250 Dairy Cattle Principles
Fall. 3 credits. S-U grade optional. Lecs, T R 10:10; lab, T 1:25-4:25, D. M. Galton and T. Batchelder. Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques. This course is a prerequisite for AN SC 251, 351, and AN SC 355.

AN SC 251 Dairy Cattle Selection
Fall. 2 credits. Prerequisite: AN SC 250 or equivalent. S-U grades optional. Lec, W 1:25-2:15; disc, W 2:15-4:25. D. M. Galton. Application of scientific principles of genetic programs in herds with different breeding programs. Emphasis on economical traits to be used to improve genetic progress and herd profitability.

AN SC 265 Horses
Fall. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U grades optional. Lecs, T R 9:05; lab, R 1:25-4:25. C. Collyer. Selection, management, feeding, breeding, and training of light horses.

AN SC 280 Molecular Biology in Agriculture and Medicine
Fall. 2 credits. Prerequisite: one year of introductory biology. Lec, T R 10:10. S. M. Quirk. The applications of molecular biology to animal research, animal agriculture, industry, and medicine are discussed. An introduction of basic recombinant DNA techniques is followed by topics such as transgenic animal production, mammalian cloning, genome projects, gene therapy, and genetic screening. Ethical issues raised by use of these techniques will be discussed.

AN SC 290 Meat Science (also FOOD 290)
Fall. 2 or 3 credits. Lecs, T R 11:15; lab, M or R 12:20-3:20. Lecture only, 2 credits; lecture plus lab, 3 credits. Lab cannot be taken without lecture. An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, inspection, grading, curing, sausage manufacture, and quality control. An all-day field trip to commercial meat plant may be taken.

AN SC 300 Animal Reproduction and Development
Spring. 3 credits. Prerequisite: AN SC 100-150 or equivalent and 1 year of introductory biology. Lecs, M W F 10:10. J. F. Parks. Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals. Fertilization through embryonic development, pregnancy, and development to sexual maturity. Emphasis on physiological mechanisms and application to fertility regulation. Separate laboratory offered to demonstrate fundamental aspects of reproduction and reproductive technology.

AN SC 301 Animal Reproduction and Development Lab
Spring. 1 credit. Prerequisite: AN SC 100-150 or equivalent. Concurrent enrollment in or completion of AN SC 300 required to register. Labs, M W or F 1:25-4:25. Each lab limited to 30 students. J. E. Parks. Demonstration of fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of domestic animals will be used in some demonstrations. Dissection and examination of tissues from vertebrate animals will be included in selected laboratories.

AN SC 305 Farm Animal Behavior (also BIOAP 312)
Spring. 2 credits. Prerequisites: introductory animal physiology (AN SC 100 and 150 or equivalent); at least 1 animal production course or equivalent experience is recommended. S-U grades optional. Lec, T R 11:15. E. A. Oltenacu and K. A. Holm. The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

AN SC 314 Practice in Critical Thinking in the Biological Sciences
Fall. 1 credit. M 12:20. A. van Tienhoven. The course will consist of four or five presentations by the instructor of the "scientific method." Each week the students will critically review a published paper in the biological sciences as if it were a manuscript and submit their typed review. Each week a different student will be designated to collate these reviews and write an evaluation to the "editor-in-chief." This evaluation will be reported verbally and in writing. Students thus will learn to think, write, and speak critically. Enrollment is limited to 10 juniors and seniors. Preference will be given to transfer students.

AN SC 321 Applied Animal Genetics Seminar
Fall. 2 credits. Prerequisite: AN SC 221 or equivalent. S-U grades only. Lec, M 12:20; disc, M 1:25. P. A. Oltenacu and E. J. Pollak. Topics of interest related to the genetic definition and control of qualitative and quantitative traits in various species of animals are presented. Genetic conservation programs and current animal improvement strategies as well as challenges presented by new developments in reproductive biology and molecular genetics are addressed in a lecture discussion-type format.

AN SC 322 Equine Genetics Seminar
Fall. 1 credit. Prerequisite: AN SC 221 or equivalent. S-U grades only. Disc, T 1:25-2:15. P. A. Oltenacu and staff. Topics of equine genetics will be presented and discussed. Independent library research, a short written paper, and an oral presentation will be important parts of this course. Lecture topics may include the genetic aspects of color, abnormalities, metabolic diseases, unsoundness, and performance.
The course focuses on anatomy and physiology of various organs of poultry. Principles of poultry nutrition, breeding and embryology are discussed with an emphasis on their practical application. The student becomes familiar with the concept of least-cost feed formulation for poultry. The course also is designed to provide an understanding of current technology involved in commercial poultry production.

AN SC 341 Biology of Lactation

A comprehensive survey of the biology of the mammary gland. Lectures cover: (1) basic aspects such as anatomy and development of the mammary gland, biochemistry and hormone regulation of milk synthesis and regulation of gene expression in the mammary cells; (2) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Lactation in the dairy cow provides the primary context to the course, but examples from other mammals including humans will be used.

AN SC 351 Dairy Herd Management

Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical application in analyses of alternatives, decision making, field trips, and discussion.

AN SC 355 Dairy Nutrition and Health
Spring. 3 credits. Prerequisite: AN SC 250 and permission of instructor. Letter only. Lec, T R 10:10; lab, W 1:25-4:25. D. M. Galton, L. E. Chase and T. L. Batchelder.

Application of scientific principles to practical herd management with components of nutrition and herd health. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

AN SC 360 Beef Cattle

Emphasis is on the management of reproduction, nutrition, and selection in beef cattle enterprises. A cattle growth model is studied. Laboratories acquaint students with management skills through computerized simulations and working directly with cattle. Students spend several days during the semester feeding and caring for cows and their newborn calves.

AN SC 365 Equine Nutrition
Fall. 3 credits. Prerequisites: AN SC 100, 212, and 265 or equivalent. S-U grades optional. Lec, M W F 9:05-9:55. H. F. Hinchcliff.

The principles of nutrition for horses will be presented. Digestive physiology, sources of nutrients, feeding programs for various classes of horses and interactions of nutrition and diseases will be discussed.

AN SC 370 Swine Nutrition and Management

This course focuses on swine nutrition, feeding, and management. Lectures are integrated basic nutrition and swine system including pig biology, digestive and metabolic development, nutritional biochemistry and physiology, and nutrition on environment, use of pig model in medicine, and current swine nutrition and biotechnology. Laboratory practice, animal projects, and problem troubleshooting are offered.

AN SC 380 Sheep

Emphasis is on the breeding, feeding, management, and selection of sheep from a production-system approach. Lectures and laboratories are designed to give students a practical knowledge of sheep production as well as the scientific background for improved management practices. Students work directly with sheep during laboratories and spend several days during the semester feeding and caring for ewes and their newborn lambs.

AN SC 400 Tropical Livestock Production

An analysis of constraints on livestock production in developing countries of the tropics, economic objectives and risk, and production methods. Emphasis is on strategic use of animal and plant resources, animal performance with inputs restricted, decision making, and alternative systems of production. Principles, real examples, independent study projects, and classroom interactions will aid problem-solving efforts to improve food security.

AN SC 401 Dairy Production Seminar
Spring. 1 credit. Limited to juniors and seniors. Disc, M 7:30 P.M. D. E. Bauman and T. L. Batchelder.

Capstone course where students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral or written report on their topic with emphasis on integrating theory and practice.

AN SC 402 Seminar in Animal Sciences
Spring. 1 credit. Limited to juniors and seniors. May be repeated. S-U grades optional. Lec, M 4:30. W. B. Currie. Review of literature pertinent to topics of animal science, undergraduate research and Honors projects. Students present oral reports of their work for class discussion in addition to written reports.

AN SC 403 Tropical Forages

An overview of tropical grasslands, seeded pastures, and crop residues as feed resources; grass and legume characteristics; establishment and management of pastures; determination of feeding value of forages and crop residues; physiology of digestion of ruminants that affects feeding behavior; the problems of chemical inhibitors in plants; and preservation of tropical forages as hay or silage.

AN SC 410 Nutritional Physiology and Metabolism
Fall. 3 credits. Prerequisites: biochemistry and physiology. M W F 11:15. R. E. Austic and D. E. Bauman.

A fundamental approach to nutrition focusing on the metabolic fate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to increase understanding of metabolism and metabolic behavior through an integration of nutrition, biochemistry, and physiology.

AN SC 411 Applied Cattle Nutrition
Fall. 4 credits. Prerequisites: AN SC 100 and 212 (or equivalent); AN SC 355 is encouraged. Lec, M W F 10:10; lab, M 12:25-4:25. M. E. Van Amburgh.

An applied approach to predicting nutrient requirements and feed utilization to meet requirements with wide variations in cattle type, feed composition, and environmental conditions. Dairy cattle are emphasized. Nutrient management to minimize cost of production and environmental effects is discussed. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to apply the information presented in lectures and make evaluations of feeding programs on case study farms. Course is designed for juniors, seniors, and entering graduate students.

AN SC 412 Livestock and the Environment
Spring. 2 or 4 credits. No prerequisite for 2 credits (weeks 1-7). Students who have taken AN SC 411 (formerly 512) can sign up for 4 credits (full semester) for completing an independent project on whole-farm environmental planning. Lec, T R 11:15-12:05. D. G. Fox.

This course will explore controversial issues surrounding livestock and the environment, including competition with humans for food resources, impact of animal products on human health, and impact of livestock farms on environmental problems, including odor, pathogens, and excess nutrient effects on water quality. Those taking two additional credits will use computer software tools to evaluate aspects of whole-farm nutrient and environmental management on case study farms, with data collection and analysis continuing throughout the semester.

AN SC 414 Ethics and Animal Science
Fall. 2 credits. Enrollment limited to 20 students, juniors and seniors only. Lec, M 12:20, disc, T 12:20-1:10. One Saturday morning, required farm tour. D. J. R. Cherney.
AN SC 420 Quantitative Animal Genetics
Spring. 2 credits. Prerequisite: AN SC 221 or equivalent. Limited to 30 students. Lecs, M W F 9:05. J. A. Peterson. The course covers the fundamentals of quantitative genetics, emphasizing the use of mathematics and statistical techniques in animal science research. The course includes an introduction to the theory of genetics, genetic variation, and the quantitative analysis of genetic data. 

AN SC 425 Gamete Physiology and Fertilization
Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years. Lecs, T 12:20-1:10. W. B. Currie. This course focuses on the structure and function of gametes, fertilization, and early embryonic development. Students will gain a understanding of the integration and regulation of endocrine and metabolic processes. 

AN SC 427 Fundamentals of Endocrinology
Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor. Lecs, M W F 9:05. P. A. Johnson. Physiology and regulation of endocrine secretions. Neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology are emphasized. Examples are selected from many animals, including humans. 

AN SC 456 Dairy Management Fellowship
Spring. 2 credits. Limited to seniors. Prerequisite: AN SC 351 and 355, and permission of instructor. S-U grades only. Hours TBA. D. M. Galton and T. Batchelder. The program is designed for undergraduates who have a sincere interest in dairy farm management. Objectives are to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries. 

AN SC 494 Special Topics in Animal Science
Fall or spring. 4 credits maximum. Prerequisite: undergraduate standing. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

AN SC 496 Introduction to Research
Fall. 1 credit. S-U grades only. Required of students undertaking Honors in Animal Science. Open to Honors students in other programs and those planning to pursue research, by permission of the instructor. Lecs, M 12:20-1:10. W. B. Currie. An exposure to the world of scientific research; identifying problems, devising hypotheses, realistic research plans; scientific writings and other forms of communication, including the publicizing of science; finding and managing reference materials; cost of research, funding, and beneficiaries; obligations imposed by society and regulatory agencies; responsibilities and freedom in science; ethical issues that affect scientists—interactions between sponsors, investigators, professors, trainees, and others. Students make oral presentations and prepare brief items of technical writing.

AN SC 497 Individual Study in Animal Science
Fall or spring. 1-3 credits; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff. May include individual tutorial study or a lecture topic selected by a professor. Since topics may change, the course may be repeated for credit.

AN SC 498 Undergraduate Teaching
Fall or spring. 1, 2, or 3 credits; limited to 2 experiences during undergraduate career. Limited to students with a GPA of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with the student's education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

AN SC 499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Limited to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with a GPA of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

AN SC 501 Amino Acids (also NS 601)
Spring. 2 credits. Prerequisites: physiology, biochemistry, and nutrition. Lecs, W F 12:20. Offered alternate years. Next offered spring 2002. S-U grades only. R. E. Armstrong. A course emphasizing the dynamic aspects of protein digestion and absorption, amino acid transport and amino acid and nitrogen metabolism, and their relationships to the nutritional requirements for amino acids.

AN SC 603 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 603)
Fall. 2 credits. Prerequisites: biochemistry, physiology, and nutrition. Lecs T 2:20-4:25. Offered alternate years. Next offered fall 2000, 2002; not offered fall 2001. X. G. Lei and G. F. Combs Jr. This course focuses on the metabolic roles and environmental impacts of mineral nutrition in animal, human, and food systems. Team-taught lectures include general biochemical and physiological aspects of mineral metabolism and specific mechanisms of gene expression, regulation, and mammal health disorders associated with individual elements.

AN SC 604 Vitamins (also NS 604)
Fall. 2 credits. Lecs, T R 10:10. G. F. Combs, Jr. Text-based discussion sessions on nutritional aspects of the vitamins, including recent developments in nutritional and biochemical interrelationships with other nutrients and metabolites.

AN SC 606 Ruminant Nutrition: Microbial Ecology and Forage Chemistry

AN SC 610 Seminar
Fall and spring. 1 credit. S-U grades only. Students attend a weekly seminar on topics related to animal science. The requirement for an S grade is to regularly attend seminars during the semester. 

AN SC 619 Field of Nutrition Seminar
Fall and spring. No credit. No grades given. Lectures on current research in nutrition. 

AN SC 620 Seminar in Animal Breeding
Fall and spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only. Hours TBA. 

AN SC 621 Seminar: Endo/Reprod Biology
Fall and spring. 1 credit. Prerequisites: permission of instructor. Registration limited to graduate students. S-U grades only. Lecs, W 4:00. W. R. Butler and staff. Current research in reproductive physiology is presented by staff members, graduate students, and visitors. 

AN SC 625 Nutritional Toxicology (also TOX 625)
Spring. 2 credits. Prerequisites: biochemistry and nutrition courses. S-U grades optional. Lecs, M W F 1:25-2:15; lab/disc, W 2:30-4:25. D. J. Brown. Exploration of toxicological principles and a selective survey of natural food and feed toxicants. At the end of this course, students will understand relationships between nutrition and toxicology; be prepared to conduct research concerning the effects of naturally occurring toxicants; and be able to use multimedia to present their understanding.
of a class of toxicants. Occasionally, the class will take walking field trips. In addition, students will read printed and electronic communications and create STELLA simulation models and a list of web pages related to a specific family of toxicants.

**AN SC 630 Bioenergetics/Nutritional Physiology**

An integrated systems approach to the nutritional physiology and energy metabolism of productive animals. Emphasis on extracellular regulation of tissue and organ metabolism of specific nutrients in relation to pregnancy, lactation, and growth. Critical discussion of techniques and approaches to the study of animal bioenergetics.

**AN SC 640 Individual Study in Animal Science**
Fall or spring. 1 or more credits. S-U grades optional. Hours TBA. Staff.

Study of topics in animal science more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

**AN SC 650 Molecular Techniques for Animal Biologists**

A laboratory course designed for students with little or no experience with techniques in molecular biology. Emphasis will be on modern techniques used in conducting research in animal-related sciences such as nutrition, physiology, pharmacology, and immunology (e.g., subcloning, mutagenesis of DNA, RT-PCR, analysis of gene expression, protein expression). Lectures will introduce laboratory exercises and supplement laboratory topics. Students will perform an independent project requiring time outside scheduled laboratories and will give a scientific presentation.

**AN SC 694 Special Topics in Animal Science**
Fall or spring. 4 credits maximum. Prerequisite: graduate standing. S-U grades optional.

The department teaches "trial" courses under the same course will not be offered more than twice during the same academic year. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the course name will not be offered more than twice under this number.

**AN SC 720 Advanced Quantitative Genetics**

This course covers statistical methods used in a variety of problems in the quantitative genetics of animal populations. The initial focus is the estimation of breeding values for purposes of ranking animals for selection. The core of the course is the mixed linear model; linear estimators and predictors are treated extensively. The importance of appropriate modeling is emphasized. Generalizations to nonlinear models, via Bayesian principles, are made, i.e., inferences from posterior distributions."

**AN SC 800 Master's-Level Thesis Research**
Fall or spring. Credit TBA. maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students admitted specifically to a Master's program.

**AN SC 900 Graduate-Level Thesis Research**
Fall or spring. Credit TBA. maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students in a Ph.D. program only before the "A" exam has been passed.

**AN SC 901 Doctoral-Level Thesis Research**
Fall or spring. Credit to be arranged. maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students admitted to candidacy after the "A" exam has been passed.

**BIOLOGICAL SCIENCES**

The program of study in biology is offered by the Office of Undergraduate Biology. For course descriptions, see the section on Biological Sciences.

**BIOLOGY & SOCIETY**

The undergraduate major field of study in biology and society is offered through the Department of Science and Technology Studies. For a full description of courses which fulfill field requirements, go to the Biology and Society listing under 'Special Programs and Interdisciplinary Studies' in this publication.

**BIOMETRY AND STATISTICS**

N. S. Alman, chair, G. Casella, C. Castillo-Chavez, M. Contreras, R. Lloyd, R. Nielsen, S. J. Schwager

The Department of Biometrics in Statistical Science offers the following courses in Biometry and Statistics. Students need to register under Course Listings: College of Agriculture and Life Sciences—Biometry and Statistics.

**BTRY 90 Introductory to Biomathematics**
Spring. 1 credit. S-U grades optional. Prerequisite: 1 year of college-preparatory high school algebra.

An introductory course on the use of mathematics, computing, probability, and statistics in the biological sciences. Through the course, biological samples are used to develop quantitative ideas. Topics, which may change from semester to semester, will be selected from those covered in Biomtry 101. Each semester, a selection of topics from a list that includes basic statistics and probability, curve fitting, elementary matrix algebra, differentiation, integration, and difference and differential equations, will be taught. The course will meet twice a week for 50 minutes. Each class will be followed by a computer laboratory for an hour and fifteen minutes, where the students will use Mathematica, a symbolic mathematics and graphics package, to illustrate and expand the concepts covered in class.

**BTRY 100 Statistics and the World We Live In (also STBTRY 100)**
Fall. 3 credits.

Major concepts and approaches of statistics are presented at an introductory level. Three broad areas are covered: collecting data, organizing data, and drawing conclusions from data. Topics include sampling, statistical experimentation and design, measurement, tables, graphs, measures of center and spread, probability, the normal curve, confidence intervals, and statistical tests.

**BTRY 101 Introduction to Biometry I**
Spring. 4 credits. S-U grades optional.

Prerequisites: pre-calculus.

An introductory survey course in the use of mathematics, computing, and probability and statistics in the biological sciences. Case studies are used to develop the ideas of statistics, curve fitting, elementary matrix algebra, basic probability, and differentiation. Selected topics in differential and difference equations and integration will also be covered. A symbolic mathematics and graphics package (e.g., Maple or Mathematica) will be taught and used throughout the course.

**BTRY 102 Introduction to Biometry II**
Fall. 4 credits. S-U grades optional.

Prerequisite: BTRY 101 or 2 semesters of calculus.

This course is the continuation of Biometry 101. It provides a more in-depth view of the use of mathematics, computing, and probability and statistics in the biological sciences. Topics covered include discrete and continuous models, applications of differential and integral calculus, optimization methods, matrix algebra, and Markov models.

**BTRY 261 Statistical Methods I (also STBTRY 261)**
Fall. 4 credits. Letter only. Prerequisite: BTRY 100 (formerly 200) or prior experience in data collection and interpretation. Limited to undergraduates.

Statistical methods are introduced and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single
population, comparisons between two populations, one- and two-way analysis of variance, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques. The lectures may cover topics with BTRY 401, sections, homeworks, and exams are administered separately.

**BTRY 302 Statistical Methods II (also STBTRY 302)**

Spring. 4 credits. Letter only. Prerequisite: BTRY 261 or BTRY 601. Limited to undergraduates.

A continuation of BTRY 261. Emphasis is on the use of multiple regression analysis, analysis of variance and related techniques to analyze data in a variety of situations. Topics include least squares estimation, multiple regression, model selection techniques, detection of influential points, goodness-of-fit criteria, principles of experimental design, analysis of variance for a number of designs including multway factorial, nested, and split plot designs, comparing two or more regression lines, and an overview of covariance. Emphasis is on the appropriate design of studies prior to data collection and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the SAS statistical package. The lectures co-meet with BTRY 602. Homeworks and exams are administered separately.

**BTRY 400 Biometry Seminar (also STBTRY 400)**

Fall and spring 1 credit. S-U grades only. Prerequisite: BTRY 402, OR 409, or 602, or permission of instructor.

Students will attend a weekly seminar, the Biometrics Unit Discussion Series. Can be taken concurrently with BTRY 600 only with permission of instructor. Students can only take course twice.

**BTRY 408 Theory of Probability (also STBTRY 408)**

Fall. 4 credits. Prerequisite: MATH 112, 122, or 192, or permission of instructor.

An introduction to probability theory: foundations, combinatorics, random variables and their probability distributions, expectations, generating functions, and limit theory. Biological and statistical applications are the focus. Can serve as either a one-semester introduction to probability or a foundation for a course in the theory of statistics.

**BTRY 409 Theory of Statistics (also STBTRY 409)**

Spring. 4 credits. Prerequisite: BTRY 408 or equivalent.

The concepts developed in BTRY 408 are applied to provide an introduction to the classical theory of parametric statistical inference. Topics include sampling distributions, parameter estimation, hypothesis testing, and linear regression.

**BTRY 421 Matrix Computation**

Spring. 4 credits. Letter only. Prerequisite: pre-calculus. M. Contreras.

Introductory course in matrix computations that reviews linear algebra (vector spaces, linear independence) and emphasizes a matrix approach to solving systems (LU-factorization, QR-decomposition, SVD, Schur complements) and the role of the condition number of a matrix. Positive definite matrices, eigenvalues, and their applications in modeling will be discussed. Weekly homework assignments and a course project design to teach numerical and statistical simulations in Matlab using the theory of matrices are required.

**BTRY 451 Mathematical Modeling of Populations**

Fall. 3 credits. S-U grades optional. Prerequisites: MATH 112, BTRY 408, or equivalent. Offered alternate years. Not offered 2000-2001.

This course will emphasize stochastic and deterministic models relevant to population genetics and population biology. Computer simulations and use of mathematical packages will be an integral part of the course.

**BTRY 494 Undergraduate Special Topics in Biometry and Statistics (also STBTRY 494)**

Fall or spring. 1-3 credits. S-U grades optional.

A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 495 Statistical Consulting (also STBTRY 495)**

Spring. 2 credits. S-U grades only. Limited to undergraduates. Prerequisites or corequisites: BTRY 302 or 602 and 409 and permission of instructor.

Participation in the Department of Biometrics consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered during previous weeks.

**BTRY 497 Undergraduate Individual Study in Biometry and Statistics (also STBTRY 497)**

Fall and spring. 1-3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 498 Undergraduate Supervised Teaching (also STBTRY 498)**

Fall and spring. 2 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

**BTRY 499 Undergraduate Research (also STBTRY 499)**

Fall or spring. 1-3 credits. S-U grades optional. Limited to statistics and biometry undergraduates. Prerequisite: permission of faculty member directing research.

Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

**BTRY 500 Statistics Seminar (also STBTRY 500)**

Fall and spring. 4 credits. Limited to graduate students; others by permission of instructor. Prerequisite: BTRY 601 or equivalent.

A continuation of BTRY 601. Emphasis is on the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques, least squares estimation, multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on appropriate design of studies prior to data collection, and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the MINITAB and SAS statistical packages.

**BTRY 603 Statistical Methods III (also STBTRY 603)**

Spring. 3 credits. Prerequisite: BTRY 601 and 602 or permission of instructor.

Offered alternate years. Not offered spring 2002.

Categorical data analysis, including logistic regression, loglinear models, stratified tables, matched pairs analysis, polytomous response and ordinal data. Applications in biomedical and social sciences.

**BTRY 604 Statistical Methods IV: Applied Design (also STBTRY 604)**

Spring. 3 credits. Prerequisites: BTRY 601 and 602 or permission of instructor.

Offered alternate years. Not offered spring 2002.

Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factors. Use of the computer for both design and analysis will be stressed, with emphasis on solutions of real data problems.

**BTRY 639 Epidemiology Seminar (also STBTRY 639)**

This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

**BTRY 662 Mathematical Ecology (also STBTRY 662)**

Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis, deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, and simulation and analytical techniques.

**BTRY 672 Topics in Environmental Statistics (also STBTRY 672)**
Fall and spring. 2 credits. S-U grades optional. Prerequisite: BTRY 601 or permission of the instructor.
This course is a discussion group focusing on statistical problems arising in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

**BTRY 682 Statistical Methods for Molecular Biology (also STBTRY 682)**
Fall. 2 credits. S-U only. Prerequisite: permission of instructor. Not offered 2000–2001.
Statistical and mathematical topics of current interest in molecular biology: genetic mapping, physical mapping, DNA sequence analysis, phylogenetic inference, population modeling. Topics may vary.

**BTRY 694 Graduate Special Topics in Biometry and Statistics (also STBTRY 694)**
Fall or spring. 1–3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 697 Individual Graduate Study in Biometry and Statistics (also STBTRY 697)**
Fall, spring, or summer. 1–3 credits. S-U grades optional. Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 717 Linear and Generalized Linear Models (also STBTRY 717)**
Statistical modeling and inference using linear models and generalized linear models. Estimation by least squares, maximum likelihood, quasi-likelihood and generalized estimating equations. The use of link functions and generalized linear models to accommodate nonlinear models and non-normally distributed data. The use of random effects to accommodate correlation structures in both linear mixed models and generalized linear mixed models and to model longitudinal data. Some use of software packages and illustrative examples.

**BTRY 795 Statistical Consulting (also STBTRY 795)**
Spring. 2 credits. S-U grades only. Limited to graduate students. Prerequisite or corequisite: BTRY 402 and BTRY 409 or equivalent.
Participation in the Department of Biometrics consulting service: faculty supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the services during previous weeks. Since consultations usually change from semester to semester, the course may be repeated for credit.
COMM 230 Visual Communication
An introduction to visual communication theory. Course examines how visuals influence our attention, perspectives, and understanding. Examples of visuals drawn from advertising, TV news, documentaries, entertainment movies, print and interactive media are used to develop a theoretical framework for becoming more visually aware and for thinking more critically about how visuals influence us.

COMM 240 Communication Systems and Technology
A. P. Chan.
An exploration of the nature of communication systems and technologies. Topics include a brief history of communication and information technologies, descriptions of the uses, and impacts of technologies within the social system, and an introduction to electronic message design and construction.

COMM 250 Newswriting for Newspapers
Fall. 3 credits. Limited to 25 students.
Writing and analyzing news stories. A study of the elements that make news, sources of news, interviewing, writing style and structure, press problems, and press-society relations. Concentration on newswriting as practiced by newspapers in the United States. Two writing assignments each week, one done in class, one done out of class.

COMM 260 Science Writing for Public Information
Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman or graduate students per section. Prerequisite: one college-level writing course. Lecs. M W 9:05-9:55; Lec. 02, M W F 10:10-11:00; Spring: Lec 01, M W F 9:05-9:55 or Lec 02, M W F 1:25-2:15. L. Cowdery.
An intensive course in simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include instructions, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Audience analysis will be emphasized. Not oriented to the mass media.

COMM 263 Organizational Writing
Fall, spring, or summer. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: any college-level writing course. Lec. 01, M W F 10:10-11:00, Lec 02, M W F 11:15-12:05. L. VanBuskirk and staff.
Students write as members of different organizations, and as representatives of business, government, community, and other interests. Emphasis is on adapting tone to the audience and to the purpose of the message. Writing assignments include reports, memoranda, proposals, and letters. Assignments are based on cases developed from current web sites.

COMM 272 Principles of Public Relations and Advertising
Summer. 3 credits. Not open to freshmen. Staff.
Survey of the fields of public relations and advertising. Descriptions of organizations, jobs, and functions in the industry. The roles of public relations and advertising in society, the economic system, and organizations. Psychological and sociological principles as bases for appeals. Strategies for media selection and message execution. Introduction to research and regulation.

COMM 282 Communication Industry Research
Fall. 3 credits. Prerequisite: COMM 116, 120, 121. Lec., M W 12:20-1:10; labs, F 9:05-11:00, F 12:20-2:15, or R 9:05-11:00. D. Scheufele.
Public opinion polls, readership/viewership studies, audience segmentation techniques, and media and message effect evaluation are all widely used in communication industries. This course covers the use of basic research design, measurement, sampling, and simple descriptive statistics in conducting these studies.

COMM 284 Sex, Gender, and Communication
Fall. 3 credits. Not open to freshmen. T R 2:55-4:10. L. VanBuskirk.
The course explores the personal, career, social, and economic implications of gender categories. Topics considered include theories of gender construction, social structures, personal relationships, and gender concerns in the workplace.

COMM 285 Communication in Life Sciences (also S&TS 285)
Spring. 3 credits. M W F 10:10-11:05.
B. Lewenstein.
Environmental problems, public health issues, scientific research—in each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the web, communication helps define social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

COMM 289 Business and Professional Speaking
Fall, spring, or summer. 3 credits. Prerequisite: COMM 201. Limited to second term sophomores, juniors, and seniors during fall and spring. Lec. M W 11:15-12:05; sec, T 2:20-4:25; W 1:25-3:20; R 10:10-12:05. B. Earle.
The study and practice of written and oral communication skills used in formal and informal organizations, including interviews, informative and persuasive speeches, reports, and discussions. Students exercise and enhance the organizational, analytical, and presentation skills needed in particular settings suited to their own business and professional careers.

COMM 303 Speech and Debate Practicum
Fall and spring. 2 credits. Limited to 10-15 Program in Speech and Debate members only; permission of instructor and completion of 1-year trial basis. Hours TBA. P. Sterzing.
Students will learn preparation for practice in CEDA (Cross Examination Debate Association) debate, Lincoln Douglas debate, or individual speaking events. The class will be divided into four groups according to level of experience, therefore it may be repeated to a maximum of eight credits.

COMM 330 Communication Technologies and Management of Information
Fall. 3 credits. Prerequisite: COMM 240.
Appropriate use of communication and information technologies can facilitate the coordination, control, and management of information. This course surveys existing theories and practice of information management, integrating insights cutting across communication, economics, management science, and sociology.

COMM 350 Writing for Magazines
Fall. 3 credits. Prerequisite: any college-level writing course. Limited to 25 juniors, seniors, and graduate students, or others with permission of instructor. Not offered 2000-2001. Extended out-of-class writing assignments. Fall: M 1:25-4:25; W 12:20-2:15; Staff.
A course in nonfiction freelance writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine.

COMM 352 Science Writing for the Mass Media (also S&TS 352)
Fall. 3 credits. Not open to freshmen. Limited to 24 students. Prerequisite: 1 college-level writing course. Lecs. M W 9:05, lab, W 12:20-2:15; B. Lewenstein.
How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

COMM 353 Science Writing Practicum
Spring. 1 credit. Prerequisite: COMM 260, COMM/S&TS 352, ENG. 350 or permission of instructor. Hours TBA. Offered even-numbered years. B. Lewenstein.
Students will cover the annual meeting of the American Association for the Advancement of Science, held in February each year. Before the meeting, students will review science writing techniques and issues. At the meeting, students will meet with science writers and attend press conferences and scientific sessions. Students will write at least two stories. Students responsible for all costs of travel, lodging, and meals.

COMM 368 Text Editing and Management
Fall. 3 credits. Limited to 25 junior, sophomore, or graduate students. Prerequisite: COMM 250, 260, 263, 350 or 352; M W 12:20-1:10. L. Cowdery.
How to guide a manuscript from draft to presentation. Topics include production, copy editing and design, and editorial decision making. Publications include books, magazines, newsletters, and promotional and educational materials for...
internal and external use. Appropriate for those who will oversee publications as part of their work.

COMM 376 Planning Communication Campaigns
Spring. 3 credits. Prerequisites: COMM 282 or equivalent social research course (may be taken concurrently). T R 10:10-11:25.
D. Scheufele.
Overviews theories that guide and influence social change efforts. Research techniques and communication tools used in communication planning and campaign design are reviewed. Class discussion focuses on social change efforts in nutrition and health, rural development, marketing, and the environment. Students work closely with a client in designing a communication campaign.

COMM 380 Independent Honors Research in Social Science
Fall or spring. 1-6 credits. Limited to undergraduates who have met the requirements for the honors program. R. Ostman and C. Scherer.

COMM 388 Issues in Teaching Communication
Fall credit. Prerequisite: must be past or current undergraduate teaching assistant for COMM 201, 204, or 301. Alternate M 7:30-9:10 p.m. K. Berggren.
This seminar brings together novice educators to discuss ideas, experiences, and practice. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, we will examine new ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 405 Community Service Practicum
Fall and spring. 2 credits. May be repeated for credit. Limited to 10-15 Program in Speech and Debate members; permission of instructor required. Hours TBA. P. Stepp.
Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

COMM 410 Organizational Behavior and Communication
Fall. 3 credits. Labs limited to 15 junior, senior, or graduate students. Prerequisite: COMM 116 or equivalent.LEC, M W F 11:15-12:05. Sec 04, T 12:20-1:10; Sec 05, F 12:20-1:15. M. Campo.
Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational context. Case studies analyzed in lab.

COMM 411 Leadership from a Communication Perspective
Spring. 3 credits. Limited to 30 students. Lec, T 1:25-2:15. P. Repo.
Leadership is a product of human communication. Leadership competency can be increased by increasing communication competence. Leadership theories, particularly transformational leadership, will be studied, and gender/ethnic group differences will be stressed. Practical application will include leadership exercises and observation of leaders.

COMM 412 Communication Leadership Lab
Spring. 1 credit. Concurrent enrollment in COMM 411 required. Hours TBA. P. Stepp.
This course will provide laboratory experience in leadership and the methods used to analyze leadership in an organization. Students will take turns serving as a group leader of six to eight students in applying leadership theories to study leadership styles, leader-follower relations, organizational culture, and leadership competencies in an organization.

COMM 418 Communication and Persuasion
Spring. 3 credits. Limited to juniors and seniors only. Prerequisite: COMM 116 and 120 or introductory psychology or social psychology. T R 10:10-11:40. M. Campo.
The course focuses on theories of communication's influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 618: graduate students should enroll in COMM 618.

COMM 420 Public Opinion and Social Processes
Fall. 3 credits. Limited to juniors and seniors only. Lec, T R 10:10-11:25. M. Campo.
The course provides an overview of the theoretical and applied literature related to the concept, "public opinion." Students investigate how public opinion is perceived and acted upon by society by studying relations between public opinion, communication, and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues. Lectures concurrent with COMM 620: graduate students should enroll in COMM 620.

COMM 421 Communication and the Environment
Students will investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus will be mass media's impact in public perceptions of the environment, how the media portrays the environment, and discussion of the implications of public consumption of environmental content.

COMM 422 Psychology of Television
Fall. 3 credits. Prerequisites: introductory psychology or COMM 120. M W F 12:20-1:10 (one evening mid-semester prelab). M. Shapiro.
A survey of knowledge about the psychological influence of television and other audiovisual communication technologies. Topics may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 622; graduate students should enroll in COMM 622.

COMM 424 Communication in the Developing Nations
Fall. 3 credits. Limited to juniors and seniors. Lec, T 1:25-2:35; lab, T 2:35-4:25.
R. Colle.
The role of communication in development programs, particularly in the Third World. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for reaching low-income rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 624; graduate students should enroll in COMM 624.

COMM 426 Impact of Communication Technologies
B. Lewenstein.
Examine emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television. Meets with COMM 626; graduate students should enroll in COMM 626.

COMM 428 Communication Law
Spring. 3 credits. Offered even-numbered years. Limited to junior, senior, and graduate students; others by permission of the instructor. Lec, M W 11:15-12:05. D. Grossman.
A practical survey of the law governing mass media, primarily for those working in the field. Coverage includes restraints on news gathering and publication, privacy, defamation, copyright, broadcast and cable regulation, access, electronic media, and other issues of current interest.

COMM 429 Legal Issues in Business and Electronic Communication
The increase in commercial use of the Internet and new types of interactive electronic media in business create unique contexts for applying traditional principles of law. This course will examine the rights and responsibilities of parties involved in electronic communication, including information security (guaranteeing confidentiality and effective record-keeping), electronic contracts and EDI, rights in information (copyrights, trade secrets, trademarks, and patents), regulation of information content (pornography and advertising) and regulation of on-line conduct (criminal liability and civil exposure).

COMM 439 Interactive Multimedia: Design and Research Issues
Fall. 3 credits. Prerequisite: permission of instructor. Lec, T 11:40-12:55; lab 01, T 1:25-2:15; lab 02, R 1:25-2:15. G. Gay.
COMM 440 Computer-Mediated Communication: Theory and Practice
Spring. 3 credits. Permission of instructor.
Letter grade only. Lec. T. 12:20-2:15, lab 01, T. 11:15-12:05; lab 02, R. 11:15-12:05.
G. Gay.
Course will focus on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues. Lectures concurrent with COMM 640; graduate students should enroll in COMM 650.

COMM 446 Public Communication of Science and Technology (also S&TS 446)
Fall. 3 credits. Limited to 15 students. Prerequisite: COMM 352 or 360, or Engineering 350, or permission of instructor. Offered even numbered years.
Explore the structure, meanings, and implications of "public communication of science and technology" (PCST). Examine the contexts in which PCST occurs, look at motivations and constraints of those involved in producing information about science for nonprofessional audiences, analyze the functions of "PCST." TIE existing ideas about PCST to general communication research, and learn how to develop new knowledge about PCST. Course format is primarily seminar/discussion.

COMM 476 Communication Fellows Program
Spring. 2 credits. M 2:55-4:10. Prerequisites: permission of instructor; limited to communication seniors selected based on goals and academic preparation.
B. O. Earle.
A series of lectures, seminars and guest speakers exploring the planning, evaluation and policy-making process. Includes a three-day trip to a metropolitan area to visit corporate leaders, administrative agencies, and policymakers. Fee charged.

COMM 486 Risk Communication
Spring. 3 credits. T R 1:25-2:40. C. Scherer.
An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior, and studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors will be examined. Emphasis will be placed on understanding and developing theories of risk communication. Lectures concurrent with COMM 686; graduate students should enroll in COMM 686.

COMM 490 Senior Thesis in Communication
Fall. Spring. 3 credits; may be repeated for a total of 6 credits. Communication majors only. Staff.
Seniors conduct research based on a thesis proposal. Supervision provided by a member of the Communication graduate faculty. Thesis will be reviewed by faculty readers before approval.

COMM 494 Special Topics in Communication
Fall, spring, or summer. 1-3 credits variable. S-U grades optional. Prerequisite: permission of instructor.
Study of topics in communication not otherwise provided by department course and determined by the interest of the faculty and students.

COMM 496 Internship
Fall, spring, summer, and intersession. 1-3 credits. Students must apply no later than the spring pre-course enrollment period for a fall internship, or the fall pre-course enrollment period for a spring or summer internship.
Prerequisites: limited to communication juniors or seniors, 3.0 average in communication courses, and approval of academic advisor. S-U grades only.
Structured, on-the-job learning experience under supervision of communication professionals in a cooperating organization. Maximum of six credits total may be earned; no more than three per internship but flexibility allows six for one credit each, three for two credits each, or two for three credits each. Internships must be approved in advance by the student's academic advisor and must be supervised by a communication professional in fields of public relations, advertising, publishing, or broadcasting. Minimum of 60 on-the-job hours per credit required.

COMM 497 Individual Study in Communication
Fall or spring. 1-3 credits; may be repeated for a total of 6 credits with different courses.
Prerequisite: permission of instructor. Not available to seniors.
Individual study under faculty supervision. Course will focus on theories and practical applications.

COMM 498 Communication Teaching Experience
Fall or spring. 1-3 credits; may be repeated for a total of 6 credits with different courses.
Prerequisite: permission of instructor. Limited to Juniors and Seniors.
Undergraduate students desiring classroom teaching experience. Prerequisite: 3.0 cumulative average (2.7 if teaching assistant for a skill development course) and permission of the faculty member who will supervise the work and assign the grade. Students must register with an Independent Study form (available in 140 Roberts Hall). Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

COMM 499 Independent Research
Fall or spring. 1-3 credits; may be repeated for a total of 6 credits. Limited to seniors and graduate students. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall). Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

COMM 510 Organizational Behavior and Communication
Fall. 3 credits. Lec. M W 10:10-11:00; sec. TBA. D. Kriskorian.
Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational context. Case studies analyzed in lab. Lectures concurrent with COMM 410; graduate students should enroll in COMM 510.

COMM 410 Seminar in Organizational Communication
Spring. 3 credits. Prerequisites: COMM 410/510 or one course in organizational behavior or permission of instructor. Not offered 2000-2001: Lec. M W 11:15-12:05; Lab F 10-11:40, D. Kriskorian.
Examination of contemporary research on the social psychology of interpersonal communication in organizations including supervisor-employee relations, leadership style, work motivation, organizational socialization, and formal and informal communication networks.

COMM 618 Communication and Persuasion
Spring. 3 credits. Prerequisite: introductory research methods course and introductory psychology or social psychology course.
T R 10-11:40, D. Kriskorian.
The course focuses on theories of communication influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Theories also will be applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 418; graduate students should enroll in COMM 618.

COMM 620 Public Opinion and Social Processes
The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication, and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues. Lectures concurrent with COMM 420; graduate students should enroll in COMM 620.
COMM 622 Psychology of Television
Fall. 3 credits. Prerequisites: introductory psychology or social psychology and introductory research-methods course.
M. W. Shapiro.
A survey of knowledge about the psychological influence of television and other audiovisual communication technologies. Topics may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 422; graduate students should enroll in COMM 622.

COMM 624 Communication in the Developing Nations
Fall. 3 credits. Open to juniors, seniors, and graduate students. Lec, T 12:20-2:15; lab, T 11:15-12:05; lab 02, R 12:20-1:15. G. Gay.
The role of communication in development programs, particularly in Third World nations. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on the design of communication strategies for reaching low-income rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 424; graduate students should enroll in COMM 624.

COMM 626 Impact of Communication Technologies
Examines emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television. Meets with COMM 426; graduate students enroll in COMM 626.

COMM 639 Interactive Multimedia: Design Issues
Fall. 3 credits. Prerequisite: permission of instructor. Lec, T 11:40-12:55; lab 01, T 1:25-2:15; lab 02, R 1:25-2:15. G. Gay.
An overview of multimedia technologies (video, CD-ROM, digital video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representations, and information processing. Course will also emphasize interactive multimedia design, application, and evaluation. Lectures concurrent with COMM 439; graduate students should enroll in COMM 639.

COMM 640 Computer Mediated Communication: Theory and Practice
Spring. 3 credits. Prerequisite: permission of instructor. Lec, T 12:20-2:15; lab 01, T 11:15-12:05; lab 02, R 11:15-12:05. G. Gay.
Course will focus on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designers that "needs drive design" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design concepts, and cultural and social issues. Lectures concurrent with COMM 440; graduate students should enroll in COMM 640.

COMM 641 Human-Computer Interaction
An examination of how people relate to, think about, and think with new communication technologies in schools, homes, and the workplace. Using assigned readings from multiple disciplines, class exercises, field studies, and case studies, students will study and critique aspects of human-computer interaction, social psychology, and other issues that shape the process and effectiveness of designing, implementing, and using computer systems.

COMM 676 Communication Planning for Social and Behavioral Change
Overview theories that guide and influence social change efforts. Research techniques and communication tools used in communication planning and campaign techniques and communication planning and campaign design are reviewed. Course seeks to integrate classical and contemporary theories, and design processes into an integrated communication plan.

COMM 680 Studies in Communication
Fall. 3 credits. Limited to graduate students in communication; others by permission of instructor. M W 8:40-9:55. J. Shanahan.
A review of classical and contemporary readings in communication, including key concepts and areas of investigation. An exploration of the scope of the field, the interrelationships of its various branches, and an examination of the role of theory in the research process.

COMM 681 Advanced Communication Theory
Spring. 4 credits. Prerequisite: COMM 680 or graduate standing and permission of instructor. M W 2:55-4:10 with additional meetings TBA. Staff.
Development of, and contemporary issues in communication theory. Discussion will include the interaction between communication and society, social groupings, and mental processing.

COMM 682 Methods of Communication Research
An analysis of the methods used in communication research. Emphasis on understanding the rationale for survey, textual, experimental, and ethnographic research methods. Development of class research project from research question to final report. Computer use of Statistical Package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.

COMM 683 Quantitative Research Methods in Communication
Spring. 3 credits. Prerequisite: COMM 682 or equivalent. Lectures M 6:00-9:00 p.m. Not offered 2000-2001. Staff.
Experience in quantitative research techniques. The course provides an introduction to inter- and multi-disciplinary research through examination of the procedures, techniques, and assumptions associated with particular techniques of design and measurement, data collection, data preparation, data analysis, and hypothesis testing. Readings include a variety of fields and disciplines in the social and natural sciences.

COMM 685 Training and Development: Theory and Practice (also International Agriculture 685 and EDUC 685)
Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Design for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

COMM 686 Risk Communication
Spring. 3 credits. T R 1:25-2:40. C. Scherer.
An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors will be examined. Emphasis will be placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 466; graduate students should enroll in COMM 686.

COMM 691 Seminar: Topics in Communication
Fall and spring. No credit. S-U grades only. Hours TBA. R. Ostman and A. Chan.
Some weeks scholars from a wide variety of fields will present varied topics in theory or research as it relates to communication; other weeks graduate students will present thesis (project) proposals to faculty and peers.

COMM 694 Special Topics in Communication
Fall, spring, or summer. 1-3 credits variable. S-U grades optional. Prerequisite: permission of instructor. Hours TBA. Staff. Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 700 MPS Project Research
Fall or spring. 1-6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair.
Project research for Master of Professional Studies (Communication) students.

COMM 781 Seminar in Psychology of Communication
Spring. 3 credits. Letter grade. Offered odd-numbered years. Prerequisite: COMM 680 and 681 or equivalent graduate level theory in psychology or social psychology. Hours TBA. Not offered 2000-2001. M. Shapiro.
Discussion and analysis of selected current issues in the psychology of communication. Students will discuss and synthesize current research and theory in the mental processing of communication.
Courses by Subject

**COMM 794 Seminar in Communication Issues**
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: permission of instructor.
Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

**COMM 797 Graduate Independent Study**
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: permission of instructor.
Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

**COMM 798 Communication Teaching Laboratory**
Fall and spring. 1–3 credits each semester. Letter grade only. May be repeated once. Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Graduate faculty.
Designated primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

**COMM 799 Graduate Research**
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: appropriate communication graduate course work or permission of instructor.
Small group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

**COMM 800 Master's-Level Thesis Research**
Fall or spring. 1–6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair.
Thesis research for Master of Science (Communication) students.

**COMM 901 Doctoral-Level Dissertation Research**
Fall or spring. 1–9 credits. May be repeated for a maximum of 9 credits. S-U grades only. Prerequisite: completion of "A" exam, permission of committee chair.
Dissertation research for doctoral candidates.

**CROP AND SOIL SCIENCES**

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

**CSS 798 Communication Teaching Laboratory**
Fall and spring. 1–3 credits each semester. Letter grade only. May be repeated once. Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Graduate faculty.
Designated primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

**CSS 799 Graduate Research**
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: appropriate communication graduate course work or permission of instructor.
Small group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

**CSS 800 Master's-Level Thesis Research**
Fall or spring. 1–6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair.
Thesis research for Master of Science (Communication) students.

**CSS 901 Doctoral-Level Dissertation Research**
Fall or spring. 1–9 credits. May be repeated for a maximum of 9 credits. S-U grades only. Prerequisite: completion of "A" exam, permission of committee chair.
Dissertation research for doctoral candidates.

**Courses by Subject**

**CSS 190 Sustainable Agriculture**
This course is designed to be an enjoyable introduction to basic food production resource needs (soils, crops, and climates), and it emphasizes scientific principles of management that conserve or renew those resources for continuing benefit to society. The information is of general value for nonmajors and students new to the field. Laboratories include several field trips and stress hands-on experience with soils, crops, and descriptive climatology. Written assignments are prepared for the web. An extra credit can be earned by participation in team preparation and delivery of a lesson in sustainable agriculture.

**CSS 494 Special Topics in Crop and Soil Sciences (undergraduate level)**
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**CSS 497 Individual Study in Crop and Soil Sciences**
Fall or spring. 1–6 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).
The topics in soil science or crop science or atmospheric science are arranged at the beginning of the term for individual study or for group discussions.

**CSS 498 Teaching Experience in Crop and Soil Sciences**
Fall or spring. 1–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
Teaching experience in soil science or crop science is obtained by assisting in the instruction of a departmental course.

**CSS 499 Undergraduate Research**
Fall or spring. Credited TBA. Students must register with an Independent Study form (available in 140 Roberts Hall).
Independent research on current problems selected from any phase of crop science or soil science.

**CSS 695 Planning and Reporting Research**
Spring. 2 credits. First meeting the first T of the semester in 102 Bradford. G. W. Fick.
New graduate students and students starting to write their theses have found this course very helpful. Topics covered include scientific writing, reviewing, seminar presentations, and poster presentations. The nature of science and the scientific method are also discussed along with professional ethics in the conduct and communication of science.

**CSS 696 Seminar in Crop and Soil Sciences**
Fall and spring. 1 credit. S-U grades only. Lect., T 3:30–4:30. Staff.
Current research and selected topics in the crop and soil sciences and related fields.

**Crop Science**

**CSS 311 Grains and Nutriculticals**
Fall. 4 credits. Prerequisite: CSS 260 or BIOL 241. Lecs., M W F 10:10; lab, M 1:25–4:25, 1 or 2 field trips during lab periods (until 5 P.M. or on weekends). R. L. Obendorf.
Globally, ten crops provide 75 percent of the caloric and protein needs of mankind by direct consumption or indirectly through animal and microbial products. Seed crops for starch, protein, oil, fiber, sugar, nutriculticals, pharmaceutical, and industrial uses are emphasized, including adaptation, growth and development, environmental stress, optimization of yield and quality, and genetic improvement in the context of food systems for improved health. Laboratory uses living plants, extensive crop garden, and computer simulation.

**CSS 312 Forage Crops**
Spring. 4 credits. Prerequisites: introductory course in crop and/or soil science. Recommended: course in animal nutrition. Lecs., M W F 11:15; lab, T or W 1:25–4:25. G. W. Fick.
The production and management of crops used for livestock feed are considered in terms of establishment, growth, maintenance, harvesting, and preservation. Forage grasses, forage legumes, and corn are emphasized. Consideration is given to their value as livestock feed in terms of energy, protein, and other nutritional components.

**CSS 314 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also INTAG 314)**
Fall. 3 credits. Prerequisite: an introductory course in crop science or soil science or biology or permission of instructor. Lect., T R 8:40–9:55. E. C. Fernandes.
Characterization and discussion of traditional shifting cultivation, lowland rice-based systems, upland cereal-based systems, smallholder mixed farming including root crops and livestock, plantation fruit and oil crop systems, and agroforestry. In addition to species diversity and adaptation, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. The impact of tropical cropping systems on the environment are evaluated.

**CSS 315 Weed Science**
Fall. 4 credits. Prerequisite: introductory course in biology or botany. Lecs., T R 10:10–11:25; lab, T or W 2:45–4:25. A. DiTommaso.
Principles of weed science are examined. Emphasis is on (a) weed biology and ecology, (b) chemistry of herbicides in relation to effects on plant growth and the environment, and (c) current management strategies that are...
relevant to both crop and noncrop ecosystems. Hands-on laboratory sessions cover seed identification and ecology, and herbicide selectivity and symptomology.

[CSS 317 Seed Science and Technology]

The principles and practices covered in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.

[CSS 415 Principles and Practices of Agroforestry—Laboratory (also NTRES 415 and HORT 415)]

Fall. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option. Lec, M W F 11:10-11:55. Lab, T 1:25-4:25. Offered alternate years. Offered fall 2000.

T. L. Setter. Techniques for field appraisal of the status of water in plants and soil, including methods used in physical laboratory studies, such as the psychrometer, pressure chamber, gas exchange analyzer, and abscisic acid analysis with ELISA.

[CSS 610 Physiology of Environmental Stresses]

Spring. 3 credits. Prerequisite: plant physiology. R 8:30-9:55. R. L. Obendorf. This course in seed biology describes the molecular, biochemical, physiological, environmental, and genetic regulation of seed development, maturation, and germination events including the deposition and mobilization of seed illustrations from the world's major food and feed seeds. Illustrations extend the principles to practical situations, industrial uses, and food systems for improved health.

[CSS 612 Seed Physiology and Biotechnology]

Spring. 3 credits. Prerequisite: plant physiology. T R 8:30-9:55. R. L. Obendorf. This course allows students to understand seed physiology and its regulation at the genetic and cellular level.

[CSS 613 Physiology and Ecology of Yield]

[CSS 614 Weed Ecology and Management]

Spring. 3 credits. Prerequisite: CSS 515 or equivalent. Lec, T 10:10-11:25. Offered alternate years. Offered spring 2001. A. DiTommaso. An examination of plant ecological principles governing weed population dynamics and weed-crop interactions in different crop and noncrop ecosystems. Application of these fundamentals for the development and implementation of environmentally sound and sustainable integrated weed management strategies is explored. Topics include weed biology and seedbank dynamics, weed demography and spatial variation, weed-crop interferences, bio-economic weed thresholds, and site-specific weed management.

[CSS 642 Plant Mineral Nutrition (ALSO BIO PL 642)]

A detailed study of the processes by which plants acquire and utilize mineral nutrients from the soil. Topics will include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements will be emphasized to illustrate the above topics.

[CSS 691 Special Topics in Crop Science]

Fall or spring. 1-6 credits. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master's program.

[CSS 790 Graduate-Level Thesis Research in Crop Science]

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students in a Ph.D. program only after the "A" exam has been passed.

[CSS 921 Doctoral-Level Dissertation Research in Crop Science]

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students admitted for candidacy after the "A" exam has been passed.

Environmental Information Science

[CSS 389 Environmental Microbiology]

Fall. 3 credits. Prerequisite: BIOES 261 or BIOMI 290 or CSS 255 or permission of instructor. Lecs. M W F 10:10. W. C. Gihares.

The biology, behavior, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

[CSS 411 Resource Inventory Methods (also CEE 411)]

Spring. 3 credits. Prerequisite: permission of instructor. Lec, M W 9:05-9:55; lab, M R 1:25-2:25. S. D. DeGloria.

A survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aerial photography to discrimi-
CROP AND SOIL SCIENCES

CSS 420 Geographic Information Systems
Fall. 4 credits. Prerequisite: CSS (SCAS) 411 or permission of instructor. Lect., T R 9:05-9:55; lab, M W F 1:25-4:25. S. D. DeGloria. Principles and applications of geographic information systems for the characterization and assessment of agronomic and environmental resources. Methods for accessing, updating, analyzing, and mapping spatial data and information are emphasized. Needs assessment, coordinate systems, database design and maintenance, data transformations, and map accuracy assessment are considered.

CSS 465 Global Positioning System
Fall and spring. 1 credit. Prerequisite: CSS (SCAS) 411 or equivalent, or consent of instructor. Lect., F 9:05-12:05. S. D. DeGloria. Introduction to navigation-grade GPS instruments used in agricultural and environmental science. Topics include instrument familiarization; field-data collection and processing; real-time and post-differential correction; and GPS-GIS integration.

CSS 620 Spatial Modeling and Analysis
Spring. 3 credits. Prerequisites: CSS (SCAS) 420, CSS (SCAS) 461, or permission of instructor. Lect., T R 9:05-9:55; lab, T W 1:25-4:25. S. D. DeGloria. Theory and practice in the development, integration, and visualization of spatial data for resource inventory, environmental process modeling, land classification and evaluation. Application and evaluation of advanced spatial analytical methods applied to environmental systems and databases of interest to the student are emphasized.

CSS 660 Remote Sensing Fundamentals (also CEE 610)
Fall. 3 credits. Prerequisite: permission of instructor. Lect., M W 12:20-1:10; lab, T 2:30-4:25. Staff. An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

CSS 675 Modeling the Soil-Plant-Atmosphere System (also EAS 675)
Spring. 3 credits. Prerequisite: CSS (SCAS) 483 or equivalent. Offered alternate years. Not offered spring 2001. Lect., T R 8:40-9:55. S. J. Riha. Introduction to the structure and use of soil-plant-atmosphere models. Topics covered will include modeling plant physiology, morphology, and development; potential crop production; and crop production limited by moisture and nutrient availability, plant-plant competition; and land surface processes as well as model data requirements, validation and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation will be discussed.

CSS 694 Special Topics in Environmental Information Science
Fall or spring. 1–6 credits. S-U grades optional. Hours TBA. Staff. Study of topics in environmental science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

CSS 860 Master's-Level Thesis Research in Environmental Information Science
Fall or spring. Credit by arrangement. S-U grades only. Graduate faculty. Limited to students specifically in a master's program.

CSS 960 Graduate-Level Dissertation Research in Environmental Information Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students in a Ph.D. program only before the "A" exam has been passed.

CSS 961 Doctoral-Level Dissertation Research in Environmental Information Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy after the "A" exam has been passed.

Soil Science

CSS 269 Soil Science (also EAS 260)
Fall. 4 credits. S-U grades optional. Lect., M W F 9:05, lab, M W T R 1:25. S. Riha. Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective. This course is divided into three units. A soil characterization unit introduces students to soil characterizing, testing, mapping, classification, GIS, and land evaluation. A soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. The unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs will initially be field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs will focus on accessing, interpreting and applying soil information.

CSS 321 Soil and Water Management
Spring. 4 credits. Prerequisite: CSS (SCAS) 260 or equivalent. Lect., M W T R 9:05-11:25; lab, R 2:30-4:30. Offered alternate years. Next offered fall 2001. H. M. van Es. Course introduces students to the principles of soil and water interaction and to the effects of human intervention on these processes. Aspects of soil and water management, including hydrology, soil erosion and conservation, water management, contaminant movement, tillage, soil compaction, and water quality are examined. Case studies and policy approaches from both the United States and abroad are discussed.

CSS 326 Soil Morphology
Fall. 1 credit. Undergraduates only. Recommended for sophomores and juniors. R 1:25-4:25, all day field trip required. The principles for field identification of soil properties, profiles, and landscapes are presented. A series of soil pits are examined, described, classified, and interpreted in the field.

CSS 363 Soil Genesis, Classification, and Survey
Spring. 4 credits. Prerequisite: CSS (SCAS) 260. Lect., M W F 11:15; lab, W 1:25-4:25. R. H. Bryant. Factors and processes of soil formation on which soil survey is based are discussed. Principles of field identification, classification, and survey, and interpretation are practiced in a field setting. An overview of soil databases, their content, development, and use for site evaluation and land classification is provided.

CSS 365 Environmental Chemistry: Soil, Air, and Water
Spring. 3 credits. Prerequisites: CHEM 207–208. Lect., M W F 10:10-11:00. M. B. McBride. An overview of the chemical processes that control the concentrations and bioavailability of nutrients and pollutants in soil, air, and water. Particular attention is given to soil's function as a filter for contaminants. The history of environmental contamination and its impact on agricultural soils and ecosystems is described.

CSS 366 The Soil Ecosystem
Spring. 3 or 4 credits. Lecture only, 3 credits; lecture plus lab, 4 credits; lab cannot be taken without lecture. Prerequisite: BIOES 261 or BIOMI 290, or equivalent, or permission of instructor. Lect., T R 10:10-11:25; lab, W 1:25-4:25. J. E. Thies. Activities of the soil biota are crucial for the continued functioning and renewal of soil ecosystems. Through study of the soil as an ecosystem, students will gain an understanding of the diversity of soil organisms and the critical roles that microbial activities and interactions have in agricultural production and environmental protection. Through a small research project, students will also gain competencies in developing research questions and formulating hypotheses, planning appropriate methods for gathering and interpreting data, and summarizing research work.

CSS 372 Soil Fertility Management
Spring. 3 credits. Prerequisite: CSS (SCAS) 260 or permission of instructor. Lect., T R 8:40-9:55; lab, R 1:25-4:25. Staff. An integrated discussion of soil crop yield relationships, with emphasis on the soil as a source of mineral nutrients for crops and the role of fertilizers and organic nutrient sources in crop production.

CSS 471 Properties and Appraisal of Soils of the Tropics
Spring. 3 credits. Prerequisite: CSS (SCAS) 260 or equivalent. S-U grades optional. Hours by arrangement. R. B. Bryant. The course examines the conditions in which soils form, and considers ecological, geological, and vegetational factors that produce the diversity that exists among them. The main kinds of soils are recognized, their management properties described, and methods to alleviate the constraints to crop production and the preservation of the environment examined. Topics include the identification of soils, and their functions in sustaining traditional farming systems and advanced technological packages. The course pursues these themes reviewing the most recent sources of information generated in tropical countries and published in Latin-American,
French, and English journals. The last part of the course gives special attention to salt-cropping systems.

A detailed study of measurement processes and of the hydrostastics of aqueous solutions in soils and porous media, with emphasis on fundamental principles. Examination of the molecular aspects of water-solid interactions, including shrink-swell phenomena and the properties of absorbed water. Analysis of equilibrium water adsorption from thermodynamic and mechanistic (molecular) standpoints. Mechanical and thermodynamical analysis of the equilibrium status of aqueous solutions in deformable soils. Formal lectures are complemented by tutorial sessions.

CSS 669 Organic Matter—Soils, Sediments, and Waters
Spring. 3 credits. Prerequisites: CSS (SCAS) 260 and CHEM 357-358 or equivalent. T R 11:15–12:30. J. M. Duxbury. A discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Interaction with anthropogenic organics and effects of anthropogenic activities on natural organics are considered.

CSS 671 Soil Chemistry
Fall. 3 credits. Prerequisite: CSS (SCAS) 260 or equivalent. M. B. McBride. A detailed examination of the structure and chemical nature, dynamics, and properties of solid phases common to soils. Ion exchange, mineral-surface chemistry of colloidal particles and natural organics are considered.

CSS 693 Special Topics in Soil Science
Fall or spring. 1–6 credits. S-U grades optional. Study of topics in soil science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

CSS 680 Master's-Level Thesis Research in Soil Science
Fall or spring. Credit by arrangement. Graduate faculty.

CSS 802 Graduate-Level Dissertation Research in Soil Science
Fall or spring. Credit by arrangement. Graduated program. Limited to students specifically in a master's program.

CSS 981 Doctoral-Level Dissertation Research in Soil Science
Fall or spring. Credit by arrangement. Graduated program. Limited to students admitted to candidacy after the "A" exam has been passed.

EAS 101 Introductory Geological Sciences
Fall, spring, or summer. 3 credits. Fall, staff; spring, J. M. Bird; summer, W. Brice. Designed to enhance an appreciation of the physical world. Natural environments, surface temperatures, dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems are emphasized. Interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth System Science). Water, mineral, and fuel resources; environmental concerns. Field trips in the Ithaca region.

EAS 102 Evolution of the Earth and Life
also BIO G 170

EAS 104 The Sea: An Introduction to Oceanography
also BIO ES 154
Spring. 3 credits (4 credits with lab section). Spring, C. H. Greene, W. M. White; summer, J. Chiment. A survey of the physics, chemistry, geology, and biology of the oceans for both science and nonscience majors. Topics include: sea-floor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate change, ocean ecology, coastal processes, marine pollution, and marine resources.

EAS 105 Writing on Rocks

EAS 106 Vertebrate Fossil Preparation
Spring. 1 credit. Prerequisites: 1 introductory geology course or concurrent enrollment, class size is limited. J. Chiment. A laboratory-oriented course that will expose students to techniques of vertebrate fossil preparation. Roughing-out and fine prepartation of large specimens in solid matrix will be covered, as well as screen washing and microscope techniques for the recovery of micro-vertebrate remains. Specialized scanning techniques will be discussed. The class will meet for one hour each week for the first six weeks of the semester. Students will be assigned to an individual or group project requiring two hours of participation each week for the remainder of the semester.
EAS 107 How the Earth Works
Fall. 1 credit. J. L. Cane.
A user-friendly introduction to the workings and interactions of Earth, ocean, atmosphere, and life as they relate to understanding ongoing global change.

EAS 109 Dinosaurs
Fall. 1 credit. J. L. Cane.
An introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

EAS 111 To Know the Earth
Fall. 3 credits. J. M. Bird.

EAS 122 Earthquake! (also ENGRI 122)
Fall. 3 credits. L. D. Brown.
The science of natural hazards and strategic resources is explored. Techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the Earth’s interior to search for strategic minerals; and the historical importance of such resources. Seismic experiments on campus to probe for groundwater, the new critical environmental resource.

EAS 131 Basic Principles of Meteorology (previously SCAS)
Fall. 3 credits. Lec. T R 11:15; lab, T W or R 1:25–4:25 and M W 7:00–9:30 p.m.
M. W. Wysocki.
A simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and secondary circulations; air masses, fronts, atmosphere: heat balance of the Earth; general and secondary circulations; air masses, fronts, tornadoes, severe storms, wildfires, and meteor impacts. Applications of the science to complex to natural hazards: fractals, chaos, and self-organized criticality.

EAS 203 Natural Hazards and the Science of Complexity
Fall. 3 credits. Prerequisites: 1 calculus course. Not offered 2000–2001.
D. L. Turcotte.
Studies of natural hazards, earthquakes, volcanic eruptions, floods, hurricanes, tornadoes, severe storms, wildfires, and meteor impacts. Applications of the science to complex to natural hazards: fractals, chaos, and self-organized criticality.

EAS 204 Ocean Sciences Laboratory
Spring. 3 credits. Prerequisite or co-requisite: ENGRI 123/EAS 104.
C. H. Greene, B. W. Monger.
A laboratory course investigating the physics, chemistry, geology, and biology of the oceans. This course is intended for science majors to supplement theoretical ocean courses in BIO ES 154/EAS 104. The course includes a discussion session and laboratory each week.

EAS 210 Introduction to Field Methods in Geological Sciences
1 lec. Saturday field trips. 3 credits.
Prerequisite: GEOG 161 (or 201) or permission of instructor. S. M. Kay.
The methods by which rocks are used as a geological database. Field methods used in the construction of geologic maps and cross sections; systematic description of stratigraphic sections. Field and laboratory sessions on Saturdays until Thanksgiving. One additional lecture during most of these weeks. One weekend field trip to eastern New York.

EAS 212 Caribbean Field Trip
Spring. 2 credits. Prerequisite: permission of instructor. Enrollment limited to 15.
Approximate cost $1,100. L. D. Brown.
A multidisciplinary look at earth science and environmental issues represented in the Yucatan Peninsula of Mexico. Base for operations will be the Centro Ecologico Akumal, located on the Caribbean coast south of Cancun. This coast and its associated reef epitomizes the conflict between ecological preservation and economic development on an international scale. Excursions may include visits to Merida, a historic Spanish town which lies above the Yucatan plateau structure that many believe resulted in the death of the dinosaurs; ruins at Chichen Itza, Mayapan, Coba, and Tulum associated with the rise and fall of Mayan culture; and wildlife (monkeys, jaguars, crocodiles, and monkeys). Interpretive staff will lead a comprehensive introduction to soil science for credit.

EAS 215 Introduction to Fortran Programming (previously SCAS)
Fall. 3 credits. Lec., T R 12:20–1:10; lab T 1:25–3:32. M. W. Wysocki.
An introduction to the elements of computer programming using Fortran. Exercises involve mainly meteorological problems.

EAS 220 Art, Archaeology, and Analysis (also ARKEO 285, ARTH 200, ENGRI 185, PHYS 209)
Spring. 3 credits. R. W. Kay.
An interdisciplinary course on the use of techniques of science and engineering in cultural research. Applications of physical and physiological principles to the study of archaeological artifacts and works of art. Historical and technical aspects of artistic creation. Analyses by modern methods to deduce geographic origins, and for exploration, dating, and authentication of cultural objects. Does not meet liberal studies distribution requirement for engineering.

EAS 250 Meteorological Observations and Instruments (previously SCAS)
Spring. 3 credits.
Prerequisite: EAS 131.
M. W. Wysocki.
Methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Instrument siting, mounting, and protection. Instrument response characteristics, calibration, and standardization. Recorders and data logging systems. Laboratory exercises in observation and data analysis. Intended to serve as preparation for Observers Examination.

EAS 260 Soil Science (also CSS 260) (previously SCAS)
Fall. 4 credits. S-U grades only.
Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective, this course is divided into three units. A unit on soil information introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. A soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. The unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs will be field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs will focus on accessing, interpreting, and applying soil information.

EAS 296 Forecast Competition (previously SCAS)
Fall and spring. 1 credit. S-U grades only.
Prerequisites: sophomore undergraduate standing in atmospheric science, or permission of instructor. Time TBA.
D. S. Wilks.
This two-semester course provides daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully. Enroll for two consecutive semesters, with credit awarded after the second semester. May be repeated for credit.

EAS 302 Evolution of the Earth System (also SES 302)
Spring. 4 credits.
Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. Lecs and disc, TBA. B. L. Isacks and staff.
Co-evolution of life and the Earth system: Earth’s early history; plate tectonics, continental drift, and climate changes during the past billion years; mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting information preserved in the rock record.
EAS 315 Geomorphology  
Fall. 4 credits. Prerequisite: 1 of the following: a 3-credit EAS or SES course, or EAS 260. T. F. Jordan and B. L. Isacks.  
A study of the processes that sculpt the Earth's landscapes (above and below sea level) and the nature of those landforms. Landforms constructed by Earth's internal processes are the point of departure, as we examine their modification by physical interaction with the atmosphere and oceans. Also treated are depositional landforms that are generated by accumulations of grains or sediment. Laboratory exercises include both field examination of landforms of the Finger Lakes area and computer analysis of satellite images and Digital Elevation Models of examples from around the globe. Two Saturday field trips.

EAS 321 Introduction to Biogeochemistry (also SES 321, NTRES 321)  
Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus a course in biology and/or geology. L. A. Derry, J. Yavitt.  
Control and function of the Earth's global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

EAS 326 Structural Geology  
Spring. 4 credits. Prerequisite: MATH 112, EAS 101 or 201, or permission of instructor. R. W. Allmendinger.  
Nature and origin of deformed rocks at microscopic and macroscopic scales, with emphasis on structural geometry and kinematics. Topics include stress, strain, rheology, deformation mechanisms, minor structures, faulting, folding, and structural families.

EAS 331 Climate Dynamics (also ASTRO 331) (previously SCAS)  
Fall. 4 credits. Prerequisites: MATH 112 or 192 or equivalent. Lecs, M W F 1:25-2:25; disc, W 2:30. K. H. Cook and P. J. Gierasch.  
Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

EAS 334 Micrometeorology  
The relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.

EAS 341 Atmospheric Thermodynamics and Hydrostatics (previously SCAS)  
Fall. 3 credits. Prerequisites: 1 year of calculus and 1 semester of physics. M W F 9:05-9:55, W. W. Knapp.  
Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics covered include thermodynamic processes of dry air, water vapor and moist air, and concepts of hydrostatics and stability.

EAS 342 Atmospheric Dynamics (previously SCAS)  
Spring. 3 credits. Prerequisites: 1 year each of calculus and physics. K. H. Cook.  
Introduction to atmospheric dynamics and to the methods of description and quantitative analysis used in meteorology. Topics considered include equations of atmospheric motion, motion in the free atmosphere, vertical variations of wind and pressure fields, mathematical representation and characteristics of fronts, mechanisms of pressure change, concepts of circulation and vorticity, and effects of friction on atmospheric motion.

EAS 352 Synoptic Meteorology I (previously SCAS)  
Weather map analysis and forecasting techniques are studied by applying the principles of fluid flow and heat flow. This course will strengthen previously introduced meteorological concepts which will be applied to forecasting midlatitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

EAS 355 Mineralogy  
Fall. 4 credits. Prerequisite: EAS 101 or 201 and CHEM 207 or permission of instructor. S. Mahlburg Kay.  
Examination of minerals by hand-specimen properties and optical microscopy. Geological setting, classification, crystal structures, phase relations, chemical properties, and physical properties of minerals. X-ray diffraction is introduced. Independent research project.

EAS 356 Petrology and Geochemistry  
Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay.  
Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. The petrological evolution of the planets.

EAS 375 Sedimentology and Stratigraphy  
Fall. 4 credits. Prerequisite: EAS 101 or 201 and CHEM 207 or permission of instructor. D. S. Wilks.  

EAS 388 Geophysics and Geoteconics  
Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. B. L. Isacks.  
Global tectonics and the deep structure of the solid earth as revealed by investigations of

EAS 411 Satellite Remote Sensing in Geosciences  
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 2000–2001. B. L. Isacks.  
Introduction in satellite remote sensing, image processing, geographic information systems (GIS), and analysis or digital elevation models using advanced computer workstations via participation in current research on earthquakes, glaciers, and tectonics.

EAS 417 Field Mapping in Argentina  
Summer. 3 credits. Prerequisites: EAS 210 and 326; Spanish desirable, but not required. S. Mahlburg Kay.  
Modern techniques of geological mapping applied in the region of San Juan, Argentina, including folded and faulted sedimentary rock units of the Andean Precordillera (San Juan River section), intensely deformed Precambrian metamorphic rocks of the Pampean Ranges (Pie de Palo), and shallow-level silicic intrusives (Cerro Blanco-Ulluo).

EAS 423 Petroleum Geology  
Introduction to hydrocarbon exploration and development. Exploration techniques, including well logs, fluid pressures, seismic-reflection methods, gravity, and magnetic measurements to map subsurface structures and stratigraphy. Petroleum origin and migration. Dispersal systems and depositional patterns of petroleum reservoirs. Economics of exploration, leasing, drilling, and production. Estimates of petroleum reserves, including tar sands and oil shales.

EAS 434 Reflection Seismology  
Fundamentals of seismic imaging by multichannel seismic reflection techniques as used in oil exploration and geophysical investigations. Covers survey design, acquisition, analysis, processing, and interpretation in both 2-D and 3-D. Includes discussion of related techniques such as seismic refraction analysis, tomographic inversion, vertical seismic profiling, shear wave exploration, and ground penetrating radar. Lab is keyed to state-of-the-art seismic processing, modeling, and interpretation software from LandMark.

EAS 435 Statistical Methods in Meteorology (previously SCAS)  
Fall. 3 credits. Prerequisites: 1 introductory course each in statistics (e.g., BTRY 215 or ARFM 210) and calculus. T R 10:10–11:25. D. S. Wilks.  
Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Some statistical characteristics of meteorological data including probability distributions and correlation structures. Operational forecasts derived from multiple regression models including the MOS system. Forecast verification techniques and scoring rules. Time series analysis, EOFs, and other research topics as time permits.
EAS 437 Geophysical Field Methods
Fall. 3 credits. Prerequisites: PHYS 213 or 208, or permission of instructor. L. D. Brown. Introduction to field methods of geophysical exploration, especially as applied to environmental issues. Emphasis on seismic, ground penetrating radar, gravity, and magnetic techniques. Field surveys carried out at the beginning of the semester are analyzed and interpreted. A field companion to EAS 436, which is recommended but not required prior to this course.

EAS 444 Tropical Meteorology (previously SCAS)

EAS 445 Geohydrology (also ABEN 471 and CEE 431)

EAS 447 Physical Meteorology (previously SCAS)
Fall. 3 credits. Prerequisite: 1 year each of calculus and physics. M W F 10:10. Offered alternate years. Next offered 2001–2002. W. W. Knapp. Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, solar and terrestrial radiation, and principles of radar probing of the atmosphere.

EAS 451 Synoptic Meteorology II (previously SCAS)
Fall. 3 credits. Prerequisites: EAS 341 and 342. Lecs, T R 9:05; lab, M 1:25–3:20. S. J. Colucci. Structure and dynamics of large-scale midlatitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes and precipitation. Laboratory sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to selected large-scale midlatitude weather events.

EAS 453 Advanced Petrology
Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years. R. W. Kay. Magmas and metamorphism in the context of plate tectonics. Major and trace element chemistry of magmas and petrology as monitors of the creation and modification of igneous rocks. Temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems.

EAS 454 Advanced Mineralogy
Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. Not offered 2000–2001. W. A. Bassett. Crystallography and crystal chemistry of minerals and the methods of their study. X-ray diffraction, optical methods, and computer simulation of crystal structures. Emphasis on effects of high pressures and temperatures with implications for understanding the Earth's interior.

EAS 455 Geochemistry
Fall. 4 credits. Prerequisites: GHEM 207 and MATH 192 or equivalent. Recommended: EAS 356. Offered alternate years. Next offered 2001–2002. W. M. White. The Earth from a chemical perspective. Formation of the elements, cosmochemistry, chemical evidence regarding the formation of the Earth and solar system; trace-element geochemistry; isotope geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemistry of rivers and the oceans; hydrothermal systems; and ore deposition.

EAS 456 Mesoscale Meteorology (previously SCAS)
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. T R 11:40–12:55. Offered alternate years. Next offered 2001–2002. S. J. Colucci. Structure and dynamics of midlatitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms.

EAS 457 Atmospheric Air Pollution (previously SCAS)
Fall. 3 credits. Prerequisites: EAS 341 or 1 course in thermodynamics, and 1 semester of chemistry, or permission of instructor. M W F 11:15–12:05. Offered alternate years. M. W. Wysocki. Course will examine sources, effects, transport, measurement, and controls of air pollution. The basic principles in each area will be discussed with an emphasis on their local, regional, and global impacts.

EAS 458 Volcanology

EAS 462 Marine Ecological Processes (also BIOES 452)
Spring. 3 credits. Limited to 75 students. Prerequisite: EAS 436. Offered alternate years. C. D. Harvell and C. H. Greene. Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

EAS 475 Special Topics in Oceanography
Spring, summer. 2–5 var. credits. Prerequisites: EAS 104 or BIOES 154, and permission of instructor. T. E. Jordan. Undergraduate instruction and participation in advanced areas of oceanographic research. Topics will change from term to term. Contact instructor for further information.

EAS 476 Sedimentary Basins: Tectonics and Mechanics
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. T. E. Jordan. Subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Interactions of subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences. Stratigraphic characteristics of active-margin, passive-margin, and cratonic basins. Geophysical and stratigraphic modeling; sequence stratigraphy. Modern and ancient examples.

EAS 478 Advanced Stratigraphy
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. Next offered 2001–2002. T. E. Jordan. Modern improvements on traditional methods of study of ages and of genetic relationships among sedimentary rocks, emphasizing 3-D relationships. Techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Physical correlation, dating techniques, and time resolution in sedimentary rocks. Stratigraphic control on the stratigraphic record. Numerical modeling.

EAS 479 Paleobiology (also BIOES 479)
Fall. 4 credits. Prerequisites: 1 year of introductory biology for majors and either BIOES 274, 373, EAS 375, or permission of instructor. W. Allmon. A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of Earth and atmospheric science students concerning the nature and significance of the fossil record for their respective studies.

EAS 481 Senior Survey of Earth Systems
Fall. 3 credits. Limited to seniors majoring in geological science. J. M. Bird. Survey course that integrates undergraduate course work, intended to enhance overall understanding of geological sciences. Emphasis on current models of Earth's dynamic systems (e.g., global climate change; mantle evolution). Guest lecturers; synthesis and review literature; scientific literature readings; discussions; student presentations.

EAS 483 Environmental Biophysics (also CSS 483) (previously SCAS)
Spring. 3 credits. Offered alternate years. Prerequisites: EAS/CSS 260 or equivalent, or permission of instructor: M W F 11:15. S. J. Riha. Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum will be covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problem sets.
EAS 491-492 Undergraduate Research
Fall, spring. 1-4 credits. Staff.
Introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with, and guided by, a staff member. A short written report is required, and outstanding projects are prepared for publication.

EAS 494 Special Topics in Atmospheric Science (undergraduate level)
Fall or spring. 8 credits maximum. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. The same course is not offered more than twice as EAS 494.

EAS 496 Internship experience
Fall or spring. 1-2 credits. S-U grades only. Staff.

EAS 497 Individual Study in Atmospheric Science
Fall or spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form. Staff.
Topics are arranged at the beginning of the term for individual study or for group discussions.

EAS 498 Teaching Experience in Atmospheric Science
Fall or spring. 1-5 credits. S-U grades optional. Students must register with an Independent Study form. Staff.
Teaching experience is obtained by assisting in the instruction of an atmospheric science course.

EAS 499 Undergraduate Research in Atmospheric Science
Fall or spring. Credit by arrangement. Students must register with an Independent Study form. Staff.
Independent research on current problems in atmospheric science.

EAS 500 Design Project in Geohydrology
Fall, spring. 3-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over 2 or more semesters. M. Cathles.
The project may address one of the many aspects of groundwater flow and contamination, and must involve a significant geological component and lead to concrete recommendations or conclusions of an engineering nature. Results are presented orally and in a professional report.

EAS 502 Case Histories in Groundwater Analysis
Spring. 4 credits. L. M. Cathles.
Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report. Results are presented in a half-day seminar at the end of the term.

EAS 622 Advanced Structural Geology I
Spring. 3 credits. Prerequisites: EAS 325 and permission of instructor. Offered alternate years. Next offered 2001-2002. W. Allmendinger.
Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement, microstructure, preferred orientation, and TFM analysis of solution and cleavage development, and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.

EAS 624 Advanced Structural Geology II
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.

EAS 628 Geology of Organic Belts
Spring. 3 credits. Prerequisite: permission of instructor. J. M. Bird.
A seminar course in which students study specific geologic evidence for an organic belt selected for study during the term. The course is intended to complement EAS 681.

EAS 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics
Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. Next offered 2001-2002. D. L. Turcotte.
Definitions of fractal sets and statistical fractals, scale invariance, self-affine fractals, multifractals, applications to fragmentation, seismicity and tectonics, petroleum distribution and reserves, ore grade and tonnage, drainage networks and landforms, and floods and droughts. Definitions of chaos and self-organized criticality, renormalization groups, diffusion limited aggregation and percolation clusters, wavelet transforms, applications to mantle convection, the Earth's dynamo, and distributed seismicity.

EAS 635 Advanced Statistical Meteorology (previously SCAS)
Lectures and topics concurrent with EAS 435, plus an extra 30-minute session per week in which selected topics from EAS 435 are treated in more depth, and additional topics are covered which may vary from year to year according to student interest. Term project required. Not open to students who have taken EAS 435 for credit.

EAS 636 Advanced Geophysics II: Quantitative Geodynamics
Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. D. L. Turcotte.
Stress and strain in the Earth, elasticity and plasticity, heat transfer, gravity, fluid mechanics, rock rheology, faulting, chemical geodynamics, flow in porous media.

EAS 641 Analysis of Biogeochemical Systems
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. Next offered 2001-2002. L. A. Derry.
Dynamics of biogeochemical systems. Kinetic treatment of biogeochemical cycles. Box models, residence time, response time. Analytical and numerical solutions of model systems. Eigen-analysis of linear systems. Feedback and nonlinear cases, problems of uncertainty in natural systems. Modeling software such as Stella II and Matlab; applications to current research of participants or recent literature.

EAS 651 Advanced Atmospheric Thermodynamics (previously ASTRO 651)
Fall. 3 credits. Prerequisites: a good background in undergraduate calculus and physics is required. Offered alternate years. K. H. Cook, P. J. Gierasch, S. J. Colucci.
A survey of the fundamental physical processes in atmospheres. Topics include thermodynamics of atmospheric gases, moist effects, hydrostatics, convective instability, atmospheric radiation and radiative heating, radiative-convective equilibrium, clouds, cloud microphysics, and precipitation processes. Thermal structure and greenhouse effects on the Earth and other planets will be discussed. The course will be taught at the level of Fundamentals of Atmospheric Physics by Salby.

EAS 652 Advanced Atmospheric Dynamics (also ASTRO 652) (previously SCAS)
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. T R 11:40-12:55. Offered alternate years. S. J. Colucci, K. H. Cook, P. J. Gierasch.
Quasigeostrophic theory, atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

EAS 656 Isotope Geochemistry
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years. Next offered 2001-2002. W. M. White.
Nucleosynthetic processes and the isotopic abundance of the elements. Geochronology and cosmochemistry using radiocative decay schemes, including U-Ph, Rb-Sr, Sm-Nd, K-Ar, U-series isotopes, and cosmogenic isotopes such as 10Be and 26Al. Use of radiogenic and stable isotopes in petrology and their application to study of the evolution of the crust and mantle. Isotopic evidence regarding the formation of the Earth and the solar system. Stable isotopes and their use in paleotemperatures, paleontology, and the global climate system.

EAS 675 Modeling the Soil-Plant-Atmosphere System (also CSS 675) (previously SCAS)
Introduction to the structure and use of soil-plant-atmosphere models. Models covered will include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and human surface processes as well as model data requirements, validation, and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation will be discussed.
EAS 681 Geotectonics
Fall. 3 credits. Prerequisite: permission of instructor. J. M. Bird.

EAS 692 Special Topics in Atmospheric Science (previously SCAS)
Fall or spring. 1–6 credits. S–U grades optional. Staff.
Study of topics in atmospheric science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

EAS 695 Computer Methods in Geological Sciences
Fall, spring. 3 credits. L. Brown and B. L. Isacks.
Independent research projects using modern computational resources in the Department of Earth and Atmospheric Sciences. Possibilities include: image and seismic processing, seismic and geomechanical modeling, GIS, use of interpretational workshops for 3-D seismic and satellite imagery; modeling fluid flow through complex media.

EAS 700–799 Seminars and Special Work
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.
Advanced work on original investigations in earth and atmospheric sciences. Topics change from term to term. Contact appropriate professor for more information.

EAS 722 Advanced Topics in Structural Geology
R. W. Allmendinger.

EAS 731 Plate Tectonics and Geology
J. M. Bird.

EAS 733 Fractals and Chaos—Independent Studies
D. L. Turcotte.

EAS 751 Petrology and Geochemistry
S. Mahlburg Kay and R. W. Kay.

EAS 753 Advanced Topics in Mineral Physics
W. A. Bassett.

EAS 755 Advanced Topics in Petrology and Tectonics
J. M. Bird and W. A. Bassett.

EAS 757 Current Research in Petrology
S. Mahlburg Kay and R. W. Kay.

EAS 762 Advanced Topics in Petroleum Exploration
Fall. W. B. Travers.

EAS 771 Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

EAS 773 Paleobiology
J. L. Csine.

EAS 775 Advanced Topics in Oceanography
Spring. C. H. Greene.

EAS 780 Earthquake Record Reading
Fall. M. Barzangi.

EAS 781 Geophysics, Exploration Seismology
L. D. Brown.

EAS 783 Advanced Topics in Geophysics
B. L. Isacks.

EAS 789 Lithospheric Seismology (COCORP Seminar)
L. D. Brown.

EAS 793 Andes-Himalaya Seminar

EAS 795 Low Temperature Geochemistry
L. A. Derry.

EAS 796 Geochemistry of the Solid Earth
W. M. White.

EAS 797 Fluid-Rock Interactions
L. M. Cathles.

EAS 799 Soil, Water, and Geology Seminar
L. M. Cathles and T. S. Steenhuis.

EAS 850 Master’s-Level Thesis Research in Atmospheric Science (previously SCAS)
Fall or spring. Credit by arrangement. S–U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in the master's program in atmospheric science.

EAS 950 Graduate-Level Dissertation Research in Atmospheric Science (previously SCAS)
Fall or spring. Credit by arrangement. S–U grades optional. Hours by arrangement. Graduate faculty. Limited to students in the atmospheric science Ph.D. program only before the "A" exam has been passed.

EAS 951 Doctoral-Level Dissertation Research in Atmospheric Science (previously SCAS)
Fall or spring. Credit by arrangement. S–U grades optional. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy in the atmospheric science Ph.D. program after the "A" exam has been passed.

EDUCATION

EDUC 005 Basic Review Mathematics
Fall. 3 credits (this credit is not counted toward the 120 credits required for the degree). Lect., M W F 8:00 or 9:05. J. J. Lo. Review of concepts necessary for success in basic mathematics and statistics courses. Topics include algebra, problem solving, graphing, basic algebra skills, linear and quadratic functions, polynomial equations, exponents and logarithms, and trigonometry. Considerable emphasis is placed on learning mathematics for understanding and solving word problems.

EDUC 101 Introduction to Education
Fall. 3 credits. T R 11:40–12:55. C. A. Conroy.
An introduction to the field of education that is structured around an examination of three contemporary policy issues. The issues are chosen to help students understand important aspects of formal schooling systems (e.g., the public schools, colleges, and universities) as well as nonformal educational activities (e.g., adult education, extension education, and community education). The course is team-taught by two members of the faculty and is designed for students seeking a self-contained introduction to education that can also lead to additional study in the field.

EDUC 115 Introductory College Mathematics
Designed for students wishing to fulfill distribution requirements and/or prepare for study in calculus. This course offers a multi-representational approach to college-level precalculus mathematics, stressing conceptual understanding, problem solving, and applications in a technology-enhanced environment. Considerable emphasis is placed on numerical, graphical, and symbolic representations of functions and their transformations. Students will use graphing calculators in a collaborative lab setting.

EDUC 120 Education for Empowerment
Common themes running through the modules include human learning, teaching strategies, political/social/economic factors affecting education. The course provides an opportunity to sample different areas of study and to gain knowledge and awareness of one's own educational processes.

EDUC 210 Psychology of Learning and Memory
This course focuses with contemporary theories of learning, issues in the study of learning, and application of the principles of learning to the management of teaching and learning. Practical applications of research findings will be emphasized. One or more experimental projects and the use of microcomputers will be required.

EDUC 212 Psychological Foundations of Education
Spring and fall. 3 credits. S–U option available. Prerequisite: introductory psychology. W 2–4:25 plus times TBA. J. A. Dunn.
A lecture/discussion survey of the psychological foundations of educational practice. Topics include the selective contributions of developmental, social, and experimental psychology, including instructional technology, to American education.

EDUC 220 Community Learning and Service Partnership
Students learn to be self-directed learners, to integrate theory, and to be critical observers of their own experiential learning, issues of diversity and empowerment, interpersonal communication, and critical analysis. Concepts and skills are learned through participation in a campus-based adult education program, the
EDUC 240 The Art of Teaching

This course is designed for all students interested in finding out more about teaching. Students engage in field experiences to find out what teaching involves. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to nontraditional educational settings such as schools with a focus on secondary education.

EDUC 317 Sociology of Education

An introduction to the sociological study of schooling and education. Topics include the effects of social factors on educational achievement, the norms and values learned as part of the process of schooling, the relations between students and teachers, and the school's relations to the economic and political systems. All levels of education, relation to elementary school to the university, are considered.

EDUC 311 Educational Psychology

This course applies psychological concepts to educational settings such as schools with a focus on understanding the interaction between people, context, and knowledge in schools and other learning environments. It examines education as a social, moral, and interpersonal enterprise that respects differences between individuals. This course is designed to foster effective teaching and learning across the life span, but with a focus on secondary education.

EDUC 317 Psychology of Adolescence
Spring. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W 11:15-12:05. Friday morning section TBA. D. E. Schrader.

This course surveys the nature of adolescent cognitive, social, moral, and self-development. Theories of adolescence are examined in the context of real-life experiences of adolescents using case analysis as a methodological tool. Educational implications will be discussed for both formal and informal settings.

EDUC 331 Careers in Agriculture, Extension, and Adult Education
Fall. 1-3 credits. Letter grade only. M 2:00-4:25. D. E. Foster and G. J. Applebee.

This course will offer modules in three areas of teaching: Adult Education, Cooperative Extension, and Agricultural Education. Each module will offer one hour of credit, and students may take one or more of the modules. The course will provide a historical perspective and an introduction to the organization and scope of programs for each module. Students will examine career opportunities and job characteristics of the professions addressed by each module. Course activities include field observations and experiences during arranged times.

EDUC 332 Instructional Methods in AgriScience Education
Spring. 1-3 credits. Prerequisite: enrollment in a Cornell teacher education program or permission of instructor. R 2:00-4:25. C. A. Conroy.

Selection, practice, and evaluation of methods in AgriScience education will be stressed. This course offers a modular approach to focus on teaching strategies and methodology unique to educational settings such as schools with a focus on secondary education. Credit will include field programs for each module. Students will include field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to nontraditional educational settings such as schools with a focus on secondary education.

EDUC 335 Youth Organizations

An examination of selected policy issues in current education. Included are such topics as equality of educational opportunity; student, parent, and teacher rights; and educational politics. Issues are treated from legal, sociological, and economic perspectives. mission oriented. Examination of educational policy is required for students who plan on participating in field experiences at arranged times.

EDUC 378 Political Economy of Education

A policy oriented examination of educational systems with emphasis on political and economic perspectives. Attention will be paid to both external and internal aspects of educational activities. Specific topics will include the changing contributions of education to earnings, school-community relations, power within educational organizations, the impact of technology in the workplace and in classrooms, and the sources and impact of educational costs. A variety of education settings will be examined including higher education and non-formal education.

EDUC 380 Independent Honors Research in Social Science
Fall or spring. 1-6 credits. Limited to students who have met requirements for honors program. S-U grades optional. A maximum of 6 credits may be earned in the honors program. Staff.

EDUC 401 Our Physical Environment
Fall. 3 credits. Prerequisite: permission of instructor. Charge for laboratory supplies, approximately $7. T 1:25-4:25. V. N. Rockcastle.

A practical, relatively nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science. Attention is paid to analysis for understanding and techniques for teaching. An individual research project is included. Useful for teachers, environmental educators, and those for whom physical science seems difficult or uninviting.

EDUC 402 Knowing and Learning in Science, Mathematics, and Agriscience
Fall. 4 credits. Prerequisite: enrollment in a Cornell teacher education program or permission of the instructor. M W 2:30-4:20. D. E. Schrader.

Students examine both current situations in the history and philosophy of science that explain how knowledge within a discipline develops and current theory and research that examines the individual's acquisition of knowledge. This material serves as a basis for students' individual research projects investigating neophytes' knowledge of science and mathematics concepts. All students enrolled must complete fieldwork. Fieldwork will comprise a minimum of three hours per week in an appropriate educational setting.

EDUC 403 Observing and Teaching Science, Mathematics, and Agriscience
Spring. 4 credits. Prerequisite: enrollment in a Cornell teacher education program or permission of the instructor. C. A. Conroy.

Designed for prospective secondary teachers, this course provides a multiple-perspective orientation to the culture of schools and the work of teaching science and mathematics. Students spend six to eight hours each week observing in area schools. Students also plan and teach innovative lessons in the scheduled teaching laboratory. Readings and discussions include preparation, delivery, and evaluation of instruction classroom management, and other issues such as equity, tracking, and classroom language.

EDUC 413 Psychology of Human Interaction
Fall. 3 credits. Enrollment limited. Prerequisite: permission of instructor. T R 10-12:05. D. E. Hedlund and staff.

Designed to develop an understanding of, effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources.

EDUC 414 Counseling Psychology
Spring. 4 credits. Prerequisites: introductory psychology and personality psychology. T R 10-12:05. D. E. Hedlund and staff.

The processes of counseling are examined from various theoretical perspectives. Typical counseling issues are examined, and implications are drawn for counseling strategies, including psychological assessment, establishing therapeutic goals, intervention strategies, and evaluation of outcomes.

EDUC 420 Field Experience
Fall or spring. 1-4 credits. S-U grades optional. Undergraduate students must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade. Staff.
Students may engage in planned, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action, individualized purposes, and procedures and arranges with a faculty member to supervise and evaluate their field experience.

**EDUC 445 Curriculum Design Workshop**  
Summer. 3 credits. G. J. Posner.  
A general practical approach to course planning. Readings, group discussions, workshops, and individual conferences centering on each student's project. This project consists of designing a course in a subject area for an age level and an institutional setting of the student's choosing.

**EDUC 447 Curriculum Design Laboratory: A Technology-Intensive Course**  
Spring or summer. 3 credits. W. S. Carlsen.  
A project-focused introduction to course design, from needs assessment, through materials development, to the evaluation of student outcomes. The course involves the creation and implementation of an actual curriculum, and the nature of the project will vary from year to year. Students are expected to make extensive use of computer software writing, design, management, and communications. The summer section of 447 will be small and we anticipate that, rather than working on a single class project, students will undertake curriculum development projects of their own design.

**EDUC 472 Philosophy of Education**  
Fall. 3 credits. T 2:30-4:25. K. A. Strike.  
A study of central issues in the philosophy of education. Questions of ethics, political philosophy, and the theory of knowledge are examined and linked to current educational issues.

**EDUC 477 Law and Educational Policy**  
Fall. 3 credits. M 2:30-4:25. K. A. Strike.  
A study of recent federal court decisions concerning education. Emphasis on examining legal issues against a background of related educational issues and in terms of the consequences of legal decisions for the development and operation of educational institutions.

**EDUC 483 Comparative Studies in Adult Education**  
Spring. 3 credits. S-U grades optional. T R 3:35-5:00. Staff.  
Focuses on the variety of adult-education programs in countries around the world. Literature on comparative adult education, international conferences on adult education, UNESCO adult-education publications, and international community development are analyzed in relationship to each student's exploration of adult education in two countries. Description of adult education in other countries is shared by international students.

**EDUC 484 Special Topics in Education**  
Fall or spring. 4 credits maximum. S-U grades optional. Hours TBA. Staff.  
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**EDUC 495 Senior Seminar**  
Spring. 2 credits. Education majors or permission of instructors. S-U only. TBA. Undergraduate coordinator for the department.  
This seminar focuses in depth on two or three significant educational issues, which may vary from year-to-year depending on the interests and background of students and faculty. The seminar attempts to help students relate the knowledge gained in their particular concentrations to a set of broad issues in education. While education faculty will be involved in selecting the issues and providing guidance for the seminar, it is expected to provide the initiative and leadership in the classroom.

**EDUC 497 Individual Study in Education**  
Fall or spring. 1-3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours TBA. Staff.  
A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

**EDUC 498 Undergraduate Teaching**  
Fall or spring. 1 or 2 credits; 4 credits maximum toward graduate career. Limited to students with GPA of at least 2.7. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours TBA. Staff.  
Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

**EDUC 499 Undergraduate Research**  
Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate credits elsewhere in the college. Limited to juniors and seniors with GPAs of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours TBA. Staff.  
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

**EDUC 501 Communication Workshop**  
Summer and intersession. 2 credits. S-U grades optional. M. D. Gock.  
The course focuses on skills enabling individuals to cope with such concerns as motivation, dealing with difficult people, productive criticism, improving comprehension, adjusting to different learning styles, and communicating with the public. Practice is coordinated with theory and research findings. The ongoing dynamics of the course necessitate intense participation over a period of time, not provided by regularly scheduled 50-minute class periods. Additional auto-tutorial lab time is scheduled. Appropriate for anyone who works with people.

**EDUC 507 Environmental Inquiry (also NTRES 507)**  
Summer. 1-3 credits (V). S-U grades optional. Prerequisite: lifetime preservice or inservice secondary science teachers. Permission of one of the instructors required. W. S. Carlsen and M. E. Krasny.  
Exploration of selected topics in environmental science and environmental science education at the secondary school level. The subject-matter focus will vary from year to year, and will track ongoing research and development conducted through Cornell's Environmental Inquiry project, a collaboration between the Departments of Education and Natural Resources and the Center for the Environment. Current work centers on watershed dynamics, biodegradation, environmental toxicology, and invasive species.

**EDUC 513 Interpersonal Interaction**  
Designed to develop skills for an understanding of effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources. A workshop design is required for the second credit. Participants must bring a tape recorder to class.

**EDUC 523 Food and Fiber Across the Curriculum**  
Summer. 0-3 credits. J. Hawkens.  
An intensive five-day course designed to help New York State elementary teachers and administrators implement the New York Agriculture in the Classroom Program and understand the complexity of New York's leading industry. Participants learn how to incorporate instructional materials and experiences with our food-fiber system can be used to teach students language arts, mathematics, science, and social studies. One credit is earned by class attendance and participation. Two credits require one additional project. Three credits require two additional projects.

**EDUC 548 Effective College Teaching**  
Spring. 1-3 credits. S-U grade option. T 5:00-7:00. D. Way.  
This course is designed to help participants become more effective college teachers. It will examine the basic principle of learning, identify different learning styles, and explore a variety of teaching techniques, methods, and technologies. Participants will also learn how to design a course and improve their effectiveness as teachers.

**EDUC 578 International TA Training Course: Cross-Cultural Classroom Dynamics, Pronunciation and Language, Video Teaching Practicum**  
Fall and spring. 2 credits. S-U only. T. Amsden, E. Burns, G. Wolfe, D. Mendelson.  
Designed for first-time international teaching assistants from countries in which English is not the primary language. The ITATP course focuses on three areas: cross-cultural classroom dynamics, video-tutorial lab time is scheduled. Appropriate for anyone who works with people.
EDUC 601 Secondary Agriculture, Science, and Mathematics Teaching Practicum
Fall or spring. 6 credits. Prerequisite: permission of instructor. Letter grades only. For graduate students enrolled in the Teacher Education in Science and Mathematics Program. M T W R F 9:00–10:00. W. S. Carlsen and staff.
Supervised student teaching in science or mathematics at the secondary level. Program includes teaching in a local school for ten weeks.

EDUC 602 Teaching Agriculture, Science/Mathematics: Methods, Materials, Practice
Fall or spring. 9 credits. Prerequisite: concurrent enrollment in EDUC 601 or permission of instructor. M T W R F 9:00–10:00. W. S. Carlsen and staff.
The course begins with full day sessions of intensive consideration of theoretical frameworks relevant to all aspects of student teaching. Assignments and a weekly seminar during the semester allow students to use those theories to develop and evaluate teaching materials and practices. Students will complete an extensive portfolio documenting their work.

[EDUC 606 Seminar in Science and Mathematics Education]
Explores topics in science and mathematics education. The focus of the seminar changes each year.

EDUC 609 Methods for Interpretive Research
Spring. 3 credits. Prerequisite: course in research methods or measurement or permission of instructor. T R 2:55–4:10.
D. J. Trumbull.
This course examines some of the methods of educational interpretive research. An interpretive research perspective attends to the complex interactions between researcher, researched, and contexts and accepts the centrality of interpretation in the conduct of human affairs. This perspective imposes some unique demands on researchers wishing to justify the quality of their projects. In the class, students will practice methods for gathering and interpreting data by conducting a small project using methods as they relate to the aims and assumptions of interpretive research.

EDUC 611 Educational Psychology
A basic survey course for graduate students (selected undergraduates admitted with permission). Emphasis on psychological factors involved in human learning and the educational process. Set in a broad-based conceptual model of any behavioral setting for learning. A life-span developmental approach is used, appropriate for those seeking an introduction to educational psychology or a refresher course in contemporary educational psychology.

EDUC 614 Epistemological Development and Reflective Thought
Fall. 3 credits. S-U grades optional. M T W R F 12:20–2:15. J. B. Schrader
Insight into how individuals make sense of knowledge is essential to teaching and learning. This course examines theories of intellectual development and their implications for educating students of various age groups, particularly college students. The role of reflection on thinking (metacognition) and its impact on development of thought is explored.

[EDUC 615 Self and Interpersonal Development and Education]
D. E. Schrader
Interpersonal interactions affect teaching and learning. This course takes a life-span perspective as it explores constructive-developmental theories of self and others, and how such theories explain students’ understanding of their own and others’ actions in educational contexts.

EDUC 620 Internship in Education
Fall or spring. 1–6 credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work.
Staff.
An opportunity for practical experience in educational professions development.

EDUC 621 Work-Experience Coordinator Certification Course I
Summer. 3 credits. S-U grades optional. D. E. Foster.
The first of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. The course focuses on the history and philosophy, types, operation, and evaluation of work-experience programs including articulation with JPTA and VESID. Field interviews are required. A prerequisite for Course II, EDUC 622.

EDUC 622 Work-Experience Coordinator Certification Course II
Summer. 3 credits. Prerequisite: EDUC 621 Work-Experience Certification Course I. D. E. Foster.
The second course for certification as a diversified cooperative work experience coordinator combines course work and directed field experience leading to the planning, development, and approval of a work-experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval required.

EDUC 630 Special Problems in Agricultural, Extension, and Adult Education
Fall or spring; may also be offered in summer. 1–3 credits. S-U grades optional. Hours TBA. Staff.
The course provides an opportunity for graduate-level study of individually selected problems and issues in agricultural, extension, and adult education.

EDUC 632 Teaching Agricultural, Extension, and Adult Education
Summer. 3 credits. Prerequisite: an introductory course in teaching methods or permission of instructor. Hours TBA. C. A. Conroy.
The focus of the course is on the selection, use, and evaluation of methods and materials for teaching. Methods for group and informal instruction are covered. Opportunity is provided for students to develop teaching competence based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the development of instructional materials is required.

EDUC 633 Program Planning in Agricultural, Extension, and Adult Education
Current social and economic conditions affecting agriculture, extension, and adult education are examined. Principles, objectives, strategies, and sources of information are applied to program planning. Participants have an opportunity to observe ongoing programs in agriculture, extension, and adult education, and to pursue individual interests in program development and improvement.

EDUC 635 Experiential Learning
Staff.
Participants will explore various dimensions of scholar and practitioner thinking about the understanding and practice of experiential learning. Theoretical perspectives on experiential education, reflective practice, and a critical learning systems perspective will be explored through readings and applied assignments. The instructor will introduce methods of facilitation designed to encourage inquiry and dialogue for improvement of both nonformal and formal learning activities. The course process is intended to engage participants in reflective dialogue—nurturing emergence of learning community elements.

EDUC 644 Curriculum Theory and Analysis
An examination of the elements involved in making curriculum decisions and an analysis of current approaches to curriculum. The course focuses on the assumptions underlying any curriculum. The major task of each student is to choose and conduct an in-depth analysis of a curriculum. This course is the basic graduate course in curriculum.

EDUC 661 Administration of Educational Organizations
Fall. 3 credits. R 3:35–6:00. J. W. Sipple.
Perspectives on the administration of educational organizations. Consideration of social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of educational organizations.

EDUC 664 Educational Finance
Fall. 3 credits. S-U grades optional. W 3:35–6:00. Staff.
An analysis of the distribution and use of public and private resources for educational
EDUC 665 Administrative Decision Making  
Spring. 3 credits. S-U grades optional. W 2:35–6:00. Staff.  
An introduction to decision-making theory and its relevance to the field of educational administration. Specific applications will be made to the study and improvement of productivity in educational systems. A wide variety of educational settings will be considered, including higher education and nonformal education.

EDUC 680 Foundations of Extension Adult Education  
An analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Definitions, conceptual controversies, philosophical issues, and current research directions will be examined through a seminar approach.

EDUC 682 Community Education and Development  
Fall. 3 credits. Limited to 25 students.  
An examination of the concept of community; changes in community life; the analysis of community; alternative strategies for community development; patterns of response to community by universities, colleges, schools, cooperative extension, and government service agencies; and the functional dimensions of community education programming as participatory decision making, volunteers, leadership development, council formation and function, interagency coordination, and change-agents roles.

EDUC 685 Training and Development: Theory and Practice (also COMM 685, INTAG 685)  
Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

EDUC 694 Special Topics in Education  
Fall, spring, or summer. 1–3 credits.  
Prerequisite: permission of instructor. S-U grades optional. Hours TBA. Staff.  
Topics to be announced.

EDUC 711 Contemporary Issues in Educational Psychology  
Fall and spring. Variable. 3 credits. S-U grades optional. TBA. Educ psych staff.  
This is a graduate-level seminar dealing with key issues in contemporary psychology having implications for educational practice and research. Topics will vary from semester to semester. Students may take the course more than once.

EDUC 714 Moral Development and Education  
This seminar focuses on current topics in moral development research as related to the educational process. Topics include the question of the development of moral reasoning, gender differences, the relationship between moral judgment and moral action, questions related to moral education in secondary schools and university settings, and professional ethics in educational settings. This course takes a life-span perspective; however, special emphasis will be placed on development from adolescence through adulthood.

EDUC 718 Adult Learning and Development  
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 2:00–4:25. R. E. Ripple and A. Wilson.  
Deals with adult development and learning behavior from points of view of educational psychology and adult education. Inferences are drawn from theory and research to the practice of adult continuing education. Appropriate for graduate students in educational psychology, extension and continuing education, and community service education, and for others interested in adult learning and development.

EDUC 730 Seminar in Agricultural, Extension, and Adult Education  
Spring. 2 credits. S-U grades optional. R 8:00–9:55. S. Peters.  
Emphasis on current problems and research in agricultural, extension, and adult education. Includes discussion and analysis of student and staff research.

EDUC 745 Seminar in Curriculum Theory and Research  
Theoretical issues in curriculum and appropriate areas for curriculum research are discussed. Two current topics of interest are the hidden curriculum and school reform. Both topics serve to uncover the relation between ideology and research.

EDUC 760 Practicum Seminar in Educational Administration  
Fall, spring, and summer. 2 credits. S-U only. Hours TBA. J. W. Sipple and K. A. Strike.  
The practicum seminar is taken in conjunction with the administrative internship and serves to tie together previous coursework, current policy issues, and the concurrent internship. It involves two elements. First, current interns will meet regularly during the semester to bring their knowledge base (developed in the program) to bear on their current duties and problems and will collaboratively problem solve with faculty and other interns. Second, interns will participate in special topics seminars as needed in order to supplement coursework in critical areas. Examples of special topics are AIDS, sexual harassment in the workplace, child abuse, and substance abuse recognition.
ENTOMOLOGY

Courses by Subject

Apiculture: 260, 264
Behavior: 215, 325, 471, 662
Ecology: 452, 455, 456, 470, 471, 672
Introductory courses: 201, 212, 215
Medical entomology and veterinary entomology: 352
Morphology: 322
Pathology: 463
Pest management: 241, 277, 441, 443, 444, 477, 644
Physiology, development, and toxicology: 370, 400, 483, 490, 685
Systematics: 331, 453, 631, 632, 634, 635
Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

[ENTOM 201 Alien Empire: Bizarre Biology of Bugs]
Insects are the most abundant and diverse animals on earth. This course will explore the bizarre biology of insects by examining their evolutionary history, anatomy, development, feeding habits, life-history strategies, behavior, and their interactions with humans (both positive and negative) through history. Optional field trips and one open lab will provide hands-on opportunities for examining these amazing animals.

[ENTOM 212 Insect Biology]
Fall. 4 credits. Prerequisites: BIO G 101–102 or equivalent. Lecs, W F 10:10–11:00, labs T W or R 1:25–4:25. Lab fee $35.
Q. D. Wheeler.
Introduces the science of entomology by focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. A collection emphasizing ecological, behavioral, and taxonomic categories is required.

[ENTOM 215 Spider Biology: Life on a Silken Thread]
Fall. 2 credits. Prerequisite: introductory biology or permission of instructor. S-U grades optional. Lecs, W F 1:25–2:15.
J. Ewer.
An introduction to the fascinating world of spiders. Evolution, ecology, behavior, and physiology of spiders and their close kin will be explored from a modern perspective. Topics include identification of major spider families, spiders' unique use of silk, risky courtship, predatory behavior, diverse life styles, social spiders, and potential use in IPM insect behavior, to the behavioral dynamics of foraging, courtship, parental care, and social behavior. Topics include insect learning, perception, chemoreception, feeding strategies, predation, pollination, and examination of current issues in insect behavior.

[ENTOM 241 Applied Entomology]
Spring. 3 credits. Prerequisites: BIO G 101–102 or equivalent. Lecs, T R 10:10; lab/disc, T or W 12:20–3:15. W. M. Tingley.
Introduction to major pest species and tactics for their management. Discussions of insect pest management requirements on farms, gardens, forests, and urban environments, along with descriptions of control methods, materials, and equipment.

[ENTOM 260 Introductory Beekeeping]
Fall. 2 credits. Lecs, T R 11:15. Staff.
Introduces the fundamentals of practical beekeeping, including the life history, physiology, and behavior of honey bees. The classical experiments on the dance language and the role of pheromones are reviewed. Some lectures are devoted to pollination of agricultural crops and the production of honey and beeswax.

[ENTOM 264 Practical Beekeeping]
Fall. 1 credit. Limited to 20 students. Prerequisite: ENTO 260 (may be taken concurrently). Lab, R 2–4:25. Staff.
This course consists of 14 laboratory sessions to acquaint students with practical methods of colony management. Laboratories involve actual work with honey bee colonies and equipment. Some of the topics covered are management of bees and the use of apple pollination, honey harvesting and processing, and disease identification and control.

[ENTOM 277 Natural Enemies Managing Pests: An Introduction to Biological Control]
Spring. 2 credits. S-U grades optional. Lecs, T R 1:25–2:15; lab demonstration, optional field trip. Offered alternate years. A. E. Hajek.
An introduction to the dynamic field of biological control. What is it and when should it be used? This course covers a diversity of types of biological control including use of parasitoids, predators, pathogens, and competitors as well as plant breeding to control pests from microbes to weeds to invertebrates and vertebrates. This course is intended for students curious about safely controlling pests.

[ENTOM 322 Comparative Insect Morphology]
Spring. 5 credits. Prerequisites: ENTO 212 or equivalent. Lecs, M W F 9:05; labs, M W 1:25–4:25. Offered alternate years.
B. N. Danforth.
This course provides a detailed introduction to the external and internal anatomy of insects. Lectures introduce basic concepts in insect morphology, such as the organization of the insect body plan and organ systems, functional morphology, homology, phylology, modularity, and development. The laboratory portion of the course introduces students to the basic methods of insect microdissection, specimen preparation, and scientific illustration. High-quality, publishable illustrations are produced based on student art-work.

[ENTOM 325 Insect Behavior]
Spring. 3 credits. Prerequisites: introductory biology or introductory entomology or permission of instructor. Lecs, M W F 12:20. Offered alternate years. L. S. Rayor.
Insects are the most diverse organisms on earth, with equally diverse behavior. This course will explore the behavior of insects, ranging from the individual sensory and physiological mechanisms that are the basis of insect behavior, to the behavioral dynamics of foraging, courtship, parental care, and social behavior. Topics include insect learning, perception, chemoreception, feeding strategies, predation, pollination, and examination of current issues in insect behavior.

[ENTOM 331 Introductory Insect Systematics]
An introduction to the classification, evolutionary history, and distribution of the insects. Laboratory practice in the identification of orders, families, and representative genera of insects; methods of collection, preservation, and study. Lectures on theory and practice of insect systematics and major features of insect evolution. Insect collections are required.

[ENTOM 352 Medical and Veterinary Entomology]
The ecology of arthropods and their veterinary importance in temperate and tropical regions of the world will be emphasized in the role they play in causation or transmission of disease. The laboratory involves two field trips, techniques of collection and identification, dissections, methods of transmission, means of identification of a blood pathogen, and the source of a blood meal.

[ENTOM 370 Pesticides, the Environment, and Human Health (also TOX 370)]
Fall. 2 credits. Prerequisites: BIO G 101–102 or equivalent. Lecs, T R 9:05. Offered alternate years. J. G. Scott.
A survey of the different types of pesticides, their uses, properties, and effects on the environment. Discussion of the risks, benefits, regulation, politics, and current controversies associated with pesticide use.

[ENTOM 400 Insect Development (also BIOGD 402)]
The course will emphasize the mechanisms that underlie embryonic and post-embryonic developmental processes of insects. The portion of the course on embryonic development will lean heavily on knowledge obtained from Drosophila, but will also cover more classical studies as well as recent advances exploring the molecular basis for the evolution of body plan. The postembryonic development portion will cover the control of growth, molting, and metamorphosis. The laboratory will use modern techniques to illustrate developmental events at the organismal and cellular level. The discussion section will involve the analysis and presentation of primary research papers.]
ENTOMOLOGY 89

[ENTOM 441 Seminar in Insect Pest Management] Spring. 1 credit. Limited to 15 students. Prerequisite: ENTOM 241 or 444 or permission of instructor. S-U grades only. Hours TBA. Offered alternate years. Not offered spring 2001; next offered spring 2002. M. W. Lees and A. M. Shelton. Discussion and analysis of current topics in insect pest management.

ENTOM 443 Entomology and Pathology of Trees and Shrubs (also PL PA 443) Fall. 4 credits. Prerequisites: ENTOM 212 or equivalent and PL PA 241 or equivalent. S-U grades optional. Evening labs. Lecs, M W F 11:15; lab, F 1:25—4:25. Offered alternate years. P. A. Weston and G. W. Hudler. For students preparing for careers in horticulture, urban forestry, pest management, and natural history/science education. Deals with the nature, diagnosis, assessment, and management of insect and disease pests on trees and shrubs in forests, urban landscapes, Christmas tree plantations, and other sites where intensive pest management is practiced.

ENTOM 444 Integrated Pest Management (also PL PA 444) Fall. 4 credits. Prerequisites: BIOES 261, ENTOM 212 or 241, and PL PA 241 or their equivalents or permission of instructor. Lecs, M W F 9:05; labs, M 1:25—4:25. P. Arneson and J. Losey. Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest control principles and techniques and the application of computer technology to management problems.

ENTOM 452 Herbivores and Plants: Chemical Ecology and Coevolution (also BIOES 452) Spring. 3 credits. Prerequisites: 1 year of introductory organic chemistry, BIOES 261, CHEM 257 or 375/385 and 251 or 301; or permission of instructor. Lecs, M W F 11:15. Offered alternate years. P. P. Feeny. Significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; implications for human food and agriculture.

[ENTOM 453 Principles and Practice of Historical Biogeography (also BIOPL 453)] Fall. 3 credits. Prerequisite: a course in systematics or permission of instructors. S-U grades optional. Lecs, T R 10:10, lab T 1:25—4:30. Offered alternate years. Not offered fall 2000; next offered fall 2001. J. K. Liebherr and M. Luckow. A survey of techniques in historical biogeography and the development of modern biogeography; history in the context of classical, ecological, and phylogenetic analytical methods. Geological and paleontological aspects of biogeography will be presented, and the application of biogeographic patterns discussed. Laboratories will focus on computer applications and discussion of controversial issues.

[ENTOM 455 Insect Ecology (also BIOES 455)] Fall. 3 credits. Prerequisites: BIOES 261 or equivalent and ENTOM 212 or equivalent knowledge of another taxon. S-U grades optional. Lecs, M W F 11:15. Offered alternate years. Not offered fall 2000; next offered fall 2001. R. B. Root. Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

ENTOM 456 Stream Ecology (also BIOES 456 and NTRRES 456) Spring. 4 credits. Limited to 60 students. Recommended: BIOES 261. S-U grades optional. Lecs, T R 9:05, labs, T W or R 1:25—4:25. Offered alternate years. B. L. Peckarsky. Lecture: adds the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, plant, invertebrate, and fish community structure, nutrient cycling, trophic dynamics, colonization and succession, community dynamics, conservation, and the impacts of disturbances. Lab: a field project includes descriptive and experimental techniques and hypothesis testing related to environmental assessment.

[ENTOM 463 Invertebrate Pathology] Spring. 4 credits. Prerequisites: one year of introductory biology. S-U grades optional. Lecs, M W F 9:05, lab, W 1:25—4:25. Offered alternate years. Not offered spring 2001; next offered spring 2002. A. E. Hajek. Lecture presents principles of pathology as applied to invertebrates. Topics explored include noninfectious and infectious diseases caused by viruses, bacteria, fungi, protozoa, and nematodes, epizoicophy of insect diseases, and methods for control. Laboratory involves a diversity of pathogens and hosts using techniques such as microweometry, electrophoresis, immunocassay, density gradient centrifugation, soil extraction, and computer simulation.

[ENTOM 470 Ecological Genetics] Spring. 3 credits. Prerequisites: BIOES 278 or permission of instructor. S-U grades optional. Lecs, T R 10:10, disc, 1 hr/week TBA. Offered alternate years. Not offered spring 2001; next offered spring 2002. M. C. Cailiaud. A study of the genetic basis and evolution of ecologically important traits. Blending theory with an experimental approach to study evolution in nature, the course includes methods for measuring genetic variation and natural selection and the molecular analysis of genetic architecture; constraints and limits on evolution in natural populations; genetic aspects of coevolution, phenotypic plasticity, and conservation of endangered species. Examples are taken from studies of animals and plants.

[ENTOM 477 Biological Control] Fall. 5 credits. Prerequisites: ENTOM 212, BIOES 261, and permission of instructor. Lecs, T R 9:05; lab T 1:25—4:15. Offered alternate years. Not offered fall 2000; next offered fall 2001. Staff. Approach and procedures in biological control of arthropod pests and weeds. Demonstrations focus on using parasitoids and predators. Discussions focus on case histories.

ENTOM 483 Insect Physiology (also TOX 483) Spring. 4 credits. Prerequisite: ENTOM 212 or permission of instructor. Lecs, M W F 11:15; lab T 1:25—4:25 and a disc, TBA. Offered alternate years. J. G. Scott. An introduction to the often unique ways in which insects have met their basic needs. Each organ system is examined with emphasis on basic principles and specific examples. The student will also be introduced to some common methods used in physiological research and to the critical reading of scientific literature.

ENTOM 490 Toxicology of Insecticides (also TOX 490) Spring. 4 credits. Prerequisites: general chemistry. S-U grades optional. Lecs, M W F 9:05; disc 1:25—2:15, day TBA. Offered alternate years. J. G. Scott. The history, metabolism, and mechanism of action of synthetic and naturally occurring insecticides. Mechanisms of insecticide resistance, evaluation of insecticide toxicity, and new approaches to insect management and control with biotechnology will be discussed.

ENTOM 494 Special Topics in Entomology Fall or spring. 4 credits maximum. S-U grades optional. Hours TBA. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

ENTOM 497 Individual Study in Entomology Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

ENTOM 498 Undergraduate Teaching Fall or spring. Credit TBA. Prerequisite: permission of instructor. Undergraduate teaching assistantship in an entomology course by agreement with the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Participating students assist in teaching a course allied with their education and experience. Students are expected to meet...
regularly with a discussion or laboratory session, to gain teaching experience, and to creatively test teaching objectives, techniques, and subject matter with the professor in charge.

[ENTOM 631] Systematics of the Coleoptera
Summer. 3 credits. Limited to 18 students. 3 week summer session. Prerequisites: an introductory course in insect taxonomy, and permission of instructor. Labs. M T W R F 9-4; Saturday field trips. Offered alternate years. Not offered 2000-2001. Q. D. Wheeler. A comprehensive review of the comparative morphological phylogenetic relationships, classification, natural history, and distribution of the Coleoptera, including adult and immature stages. Laboratory practice in identification and methods for collection and study of beetles. A collection is required.

[ENTOM 632] Advanced Coleopterology
Summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Lab. TBA. Offered alternate years. Not offered 2000-2001. Q. D. Wheeler. An advanced course on the phylogeny and classification of selected subfamilies of Coleoptera; exercises in identification of beetles, generally to the level of genus or beyond. Taught by authority on taxon of interest, frequently including a visiting scholar. Can be repeated for credit.

[ENTOM 634] Special Topics in Systematic Entomology
Fall or spring, taught on demand. 2-4 credits. Prerequisite: permission of instructor. Staff. Lectures on the classification, evolution, and biomics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

[ENTOM 635] Insect Molecular Systematics
Spring. 2 credits. Prerequisites: permission of instructor. Offered alternate years. Not offered spring 2001. M. W. F 10:10. Coordinator: Jugatae. Analysis of DNA sequence variation can provide a powerful tool for resolving problems in insect systematics, from species level taxonomic decisions to higher level (ordinal) relationships. This course will introduce students to the basic methods of insect molecular systematics, including DNA extraction, gel electrophoresis, PCR, DNA purification, and DNA sequencing (manual and automated). Results will be analyzed using available computer programs. Students are encouraged to collect preliminary data for thesis or post-doctoral research.

[ENTOM 644] Advanced IPM: Theory and Implementation
Spring. 1-4 credits. S-U grades optional. Lec. M, W, F 10:10. Coordinator: J. E. Losey. This advanced course in integrated pest management (IPM) will be comprised of a rotating series of four-week intensive modules on specialized topics. Topics will range from basic ecology and genetics of pests and their natural enemies to specific strategies for pest management implementation. The course is designed to provide advanced IPM instruction for graduate and upper-level undergraduate students with intermediate backgrounds in IPM. In special cases, students with little or no background in IPM seeking intensive instruction on a specialized topic may enroll with permission of the instructor. Each module is a unique unit and students may take any or all modules each time the course is offered. Prerequisites and grading procedures will be determined by instructors(s) of each module. Potential modules include: Insecticide resistance and resistance management—J. Scott: Entomology (Ithaca); Crop protection decision making—J. Nyrop: Entomology (Geneva); Genetics of managed ecosystems—M. C. Caiaud: Entomology (Ithaca); Turf-grass insect IPM—M. Villani: Entomology (Geneva); Insect vectors of plant pathogens—Staff; IPM of soil-dwelling arthropods—M. Villani: Entomology (Geneva); Integrated weed and insect pest management—C. Mohlicl: Ecology & Evolutionary Biology; IPM implementation and extension—M. Hoffmann, J. Sanderson: Entomology (Ithaca); Plant resistance—Staff: Entomology. Plant Breeding, Integrated Pest Management in Tropical Agriculture—P. Arenson: Plant Pathology (also PL PA 655); IPM of natural systems—B. Blossey: Natural Resources; Sustainable strategies for pest management—Staff.

[ENTOM 682] Insect Behavior Seminar
Spring, 2 credits. Prerequisites: permission of instructor and ENTOM 212 and BIONB 221 or equivalents. S-U grades optional. Offered alternate years. Hours TBA. Staff. A seminar conducted by Jugatae, the insect behavior seminar. Students will develop the ability to design research on insect behavior and learn to communicate their results to others. They will also have an opportunity to practice their presentation skills. Students will present their research at the annual Jugatae Seminar, usually held in the fall semester.

[ENTOM 683] Seminar in Insect Physiology
Spring. 1 credit. Prerequisites: permission of instructor or either ENTOM 456, 471, or BIOES 261, 462. S-U grades optional. Hours TBA. Offered alternate years. B. L. Peckarsky. Discussion and analysis of current topics in the ecology of streams, lakes, and marine ecosystems, including student-generated synthesis of key papers in the literature.

[ENTOM 685] Seminar in Insect Toxicology
Spring. 1 credit. S-U grades optional. Prerequisite: permission of instructor. Offered alternate years. Not offered spring 2001; next offered spring 2002. Hours TBA. C. Gilbert. A seminar conducted by Jugatae, the insect toxicology seminar. Students will develop the ability to design research on insect toxicology and learn to communicate their results to others. They will also have an opportunity to practice their presentation skills. Students will present their research at the annual Jugatae Seminar, usually held in the fall semester.

[ENTOM 709] Teaching Entomology
Credit TBA. Teaching entomology or for extension training.

[ENTOM 800] Master's-Level Thesis Research
Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Staff. A seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

FOOD SCIENCE

[FOOD 101] Science and Technology of Foods
Fall. 1 credit. S-U grades only. M 1:25-2:15. J. H. Hotchkiss and staff. This course provides Cornell students with the knowledge needed to make healthy food choices. A systematic approach to food production, processing, distribution, and consumption will be presented. Each student will analyze the nutritional quality of his or her personal diet using a computer diet analysis program. Topics include relationships between diet and health, food processing, food safety, and discussions of contemporary issues relating to food quality, safety, and nutrition.
FOOD 200 Introductory Food Science
Fall. 3 credits. Prerequisite: college level courses in chemistry and biology. M W F 11:15-12:05. J. H. Hotchkiss.
A comprehensive introduction to the principles and practice of food science and technology. Topics include: chemistry of foods; nutrition; food formulation, preservation, and processing; microbiology and fermentations; composition and processing of food commodities; and contemporary issues including food safety, regulation, and world trade needs. Interrelationships between the chemical, physical, nutritional, and quality properties of foods as affected by formulation, processing, and packaging are stressed.

FOOD 210 Food Analysis
Spring. 3 credits. Prerequisite: CHEM 208 or equivalent. Lecs, W F 1:25-2:15, lab, M 12:20-3:20. R. H. Liu.
Introduces basic analytical techniques for food analysis and other biological analysis. Emphasizes fundamental principles of analytical chemistry, basic laboratory techniques, and modern instrumental methods. Gravitric, volumetric, and spectrophotometric methods, gas chromatography (GC), high-performance liquid chromatography (HPLC), infrared spectra (IR), and atomic absorption spectrometry are discussed.

FOOD 250 Kosher and Halal Food Regulations
A comprehensive introduction to kosher and halal foods in the American food industry with some coverage of home practices. The kosher food laws, their origin, and their application in modern food processing will be examined. The nature of the kosher supervision industry in America will be described. Halal laws will also be examined and the interactions between the two communities explored. Current food-related issues in both communities will be reviewed, including recent court decisions. Some aspects of ethnic foods will also be considered.

FOOD 290 Meat Science (also AN SC 290)
Fall. 2 or 3 credits. Lecs, T R 11:15; lab or R 12:20-2:20. D. E. Shaw.
An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat plants is taken.

FOOD 311 Milk and Frozen Desserts
Fall. 2 credits. Prerequisite: FOOD 322 or permission of instructor. R 12:20-4:25. J. M. Regenstein.
Introduces the engineering principles underlying food processes and equipment. Topics covered include thermodynamics, mass and energy balance, fluid mechanics, and heat and mass transport.

FOOD 321 Food Engineering Principles
Fall. 3 credits. Prerequisites: FOOD 200 and introductory physics. M W F 9:05-9:55. S. S. H. Rizvi.
Introduces the engineering principles underlying food processes and equipment. Topics covered include thermodynamics, mass and energy balance, fluid mechanics, and heat and mass transport.

FOOD 322 Food Engineering Laboratory
Spring. 2 credits. Prerequisite: FOOD 321. Lab, T or R 1:25-4:10; lec, T 12:20. S. K. Sharma and S. S. H. Rizvi. Limited to 10 students in each lab session.
Provides hands-on experience with food engineering processes and measurements. Topics covered include mass and energy balances, rheology, fluid mechanics, heat transfer, refrigeration and psychrometry.

FOOD 351 Milk Quality
Fall. 1 credit. Prerequisite: AN SCI 250 or equivalent or permission of instructor. F 12:20. D. K. Bandler and D. P. Brown.
Focuses on the role of farm sanitation and milk handling as they affect milk flavor and quality. The course is an overview of quality control tests, basic microbiology, cleaning and sanitizing, and specially engineered processing and marketing fresh and storable dairy products.

FOOD 384 Applied and Food Microbiology (also BIOMI 394)
Fall. 2-3 credits. Prerequisites: BIOM 290-291. M W F 12:20-1:10. C. A. Batt.
Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course will present a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. Issues related to the biochemistry, genetics, and physiology of microorganisms important in these processes will be reviewed. A two-credit core section on food microbiology is complemented by a one-credit section on industrial/biotechnology applications.

FOOD 395 Food Microbiology Laboratory
Fall. 2 credits. Prerequisite: BIOMI 291 or equivalent. M W F 12:20-4:25. J. M. Regenstein.
Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and special methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods, or addressing safety issues of food.

FOOD 396 Food Safety Assurance
Spring. 2 credits. Prerequisite: MICRO 290 or permission of instructor. T 9:05-9:55. Offered alternate years.
This course provides information on processes to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on the Hazard Analysis Critical Control Point (HACCP) concept, good manufacturing practices, prerequisite programs, and the application of current technologies in reducing the risk of foodborne illnesses. Case studies and exercises will be used to demonstrate and apply the key principles that are discussed.

FOOD 400 Senior Seminar in Food Science and Technology
Fall. 1 credit. Limited to seniors. M 5:00-5:50. D. K. Bandler.

Students prepare and present a seminar on a topic of current interest in food science and technology.

FOOD 401 Concepts of Product Development
J. H. Hotchkiss.
A discussion of the sequence of events in developing and marketing new food products. Topics include food formulation, packaging, and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

FOOD 405 Managing Food Waste without Trashing the Environment
Spring. 2 credits. Prerequisite: FOOD 200 or equivalent. Lec, 12:30-2:15, lab, M 2:30-4:25, Offered alternate years. Next offered spring 2001. J. M. Regenstein.
A look at the various waste streams generated by food plants, institutional feeders, supermarkets, and restaurants. What is the role of waste minimization? What technologies can control or remediate the problem? What are the disposal, composting, and recycling options? What are the legal requirements locally, statewide, and nationally related to food waste processes? This course will serve as a general introduction to available waste management technologies and to policy issues faced by a wide range of businesses and production plants.

[FOOD 406 Dairy and Food Fermentations]
This is a lecture course covering the basic principles of fermentation, the microbiology of food fermentations (including the physiology and genetics of fermentative microorganisms), starter cultures and their preparations and applications as well as specific examples of food fermentations. Selected textbook readings will be supplemented with papers from peer-reviewed journals. Significant parts of class will focus on discussion and critical analysis of the assigned reading materials, questions and hot topics.

[FOOD 410 Sensory Evaluation of Food]
Topics include the sensory evaluation methods used to test the flavor, appearance, and texture of foods by quantitative description and simple difference testing, consumer testing for product acceptability, sensory tests in quality control, strategic product research, and product development. The psychological principles in sensory testing and statistical methods for sensory data analysis are presented. The laboratory provides first-hand experience in organizing and conducting sensory tests and an introduction to online data collection and analysis. Undergraduate Food Science majors are required to take both the lecture and the laboratory.

[FOOD 415 Principles of Food Packaging]
The chemical and physical properties and manufacture of the basic materials used to construct packaging are discussed.
influence of packaging on shelf life is presented. Emphasis is on newer packaging technologies and materials. Economics, design, and regulation of food packaging are briefly presented.

**FOOD 417-418 Food Chemistry I and II**
Spring 417; fall 418. 3 credits first semester, 2 credits second semester. Prerequisites: BIOBM 330 or 331. S-U or letter grade. FOOD 417. M W F 9:05; FOOD 418, M W 9:05. Both courses will be offered in 2001. J. W. Brady.
A course on the chemistry of food and food ingredients. Chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components are discussed in the context of their interactions and functional roles in foods. The effects of chemical changes during processing and storage on quality and nutritional aspects of several food commodity groups (milk, meat, fruits and vegetables, cereals and legumes) are described.

**FOOD 419 Food Chemistry Laboratory**
A laboratory course emphasizing fundamental chemical principles and laboratory techniques necessary for an understanding of the chemistry of foods. Relationships between chemical composition and functional, nutritional, and organoleptic properties of foods are stressed. Many of the laboratory techniques involved are common to those used in biochemistry laboratories (e.g., electrophoresis, chromatography, enzyme assays) but are applied to specific foods or beverages.

**FOOD 423 Unit Operations in Food Manufacturing**
Fall. 4 credits. Intended for seniors and food science majors. Loc. T R 11:15-12:05, recitation, T 12:20; lab, 12:54-2:54 T or TBA, S. J. Mulvany and S. K. Sharma. An integrated approach to understanding food manufacturing operations. Topics include major unit operations used for thermalization, freezing, and dehydration of foods. Emphasis is placed on the interplay between engineering design of processes and the physical and chemical traits that occur as food is produced from various commodities. The impact of process conditions on product safety, overall quality, and storage stability are also considered.

**FOOD 430 Understanding Wine**
Spring. 3 credits. Prerequisites: introductory biology and chemistry or permission of instructor. Students must be 21 years old by the first day of class (Jan. 23, 2001) to enroll. S-U grades optional. T R 1:25-3:20. H. T. Lawless. An introduction to wine appreciation through the study of fermentation biology, wine composition, and sensory perception. Samples of wines will be used to illustrate the sensory properties, microbiological processes, and chemical components that determine wine quality. Students will learn to recognize the major features of wine that determine sensory quality and know the processes that produced them. Topics will include the psychology and chemistry of bouquet, taste, and aroma, the microbiology of fermentation and spoilage, and the sensory properties of wines from different grape varieties, viticultural practices, and wine-making techniques.

**FOOD 447 International Postharvest Food Systems**
Fall. 2 or 3 credits. Prerequisite: freshman chemistry, S-U or letter grade. T R 10:10-11:00. M. C. Bourne and staff. An interdisciplinary course designed for all undergraduate and graduate students. Describes postharvest food losses and methods to reduce the losses. Topics include storage and care of unprocessed and minimally processed foods such as cereal grains, fruits, vegetables, tubers, and fish; biology and control of fungi, insects, and parasites in foods; chemical causes of quality loss; effects of climate; and economic and social factors affecting food preservation and storage. Emphasis is given to the problems in developing countries. The third credit requires a written case study of a country or commodity.

**FOOD 450 Fundamentals of Food Law**
Spring. 2 credits. Offered alternate years. Next offered spring 2002, not offered spring 2001 or 2003. J. M. Regenstein. Introduction to the complex array of federal and state statutes and regulations that control the processes of food labeling, and distribution of food, including aspects of safety, nutrition, quality, and trade. Emphasis will be on the law and Drug Administration and U.S. Department of Agriculture regulations, but the course will also refer to other regulatory agencies. Emphasis will be placed on how a food or agricultural professional interacts with this legal system during legislative action, regulatory rule making, and with respect to compliance.

**FOOD 456 Advanced Concepts in Sensory Evaluation**
Spring. 2 credits. Prerequisite: FOOD 410. S-U grades optional. Offered alternate years. Next offered spring 2001. F 1:25-3:20. H. T. Lawless. Readings and discussions of primary source materials on sensory evaluation. Recent advances in sensory methods, historical materials in sensory evaluation, including research on recent advances in sensory methods, historical perspectives, psychophysics, perceptual biases, and multivariate statistical approaches. Topics include sensory properties of various milk constituents. Emphasis will be on the legal system during legislative action, regulatory rule making, and with respect to compliance.

**FOOD 494 Special Topics in Food Science**
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offered alternate years. Next offered fall 2000. J. W. Brady.

**FOOD 497 Individual Study in Food Science**
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study Form (available in 140 Roberts Hall). S-U grades optional.

**FOOD 499 Undergraduate Research in Food Science**
Fall or spring. 4 credits maximum. S-U grades optional. Required of all food science graduate students. T 4:00-5:00.

A weekly seminar series on contemporary topics and issues in the Food Field of Food Science and Technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in the Field of Food Science and Technology may use the forum to present their research. Seminar is required of all graduate students in the Field of Food Science and Technology. Strongly recommended for graduate students minoring in Food Science and Technology.

**FOOD 604 Chemistry of Dairy Products**
Fall. 2 credits. Limited to 16 students. Prerequisites: organic chemistry, biochemistry, knowledge of dairy products, and permission of instructor. F 1:25-3:30. Offered alternate years. Next offered fall 2000. D. M. Barbano.
A detailed study of milk constituents and their properties. Properties of various milk constituents are related to observed physical and chemical changes that occur in dairy products during and after processing. This course will emphasize current research in dairy chemistry.

**FOOD 605 Physical Chemistry of Food Components**
Fall. 3 credits. Prerequisite: an undergraduate course in physical chemistry. M W 10:10. Offered alternate years. Not offered fall 2000. J. W. Brady. This course will cover the physical properties of food molecules. Emphasis will be placed on the molecular basis of structural characteristics, colloidal properties, molecular interactions, foams, gels, and water binding of foods.

**FOOD 607 Advanced Food Microbiology**
This two-credit course explores advanced topics in food microbiology. A major emphasis is placed on critical evaluation of current literature and on microbial concepts that affect food microbiology. Specific areas that will be covered include microbial ecology of foods, rapid detection and typing methods for foodborne pathogens.
microbial modeling, pathogenesis of foodborne diseases, and food applications of genetic engineering. Some guest lectures may be arranged to provide an introduction to other advanced food microbiology topics (e.g., risk assessment.)

**FOOD 668 Chemometric Methods in Food Science**

Food science applications using multivariate statistical methods (chemometrics) include extracting information from large data sets, modeling molecular and product properties, optimizing analytical methods and processing operations, discerning relationships between product composition and sensory properties, identifying cultivars or species, and detecting adulteration. The techniques covered are also applicable to many other problems in biology and chemistry.

**[FOOD 616 Flavors—Analysis and Applications]**

**[FOOD 620 Food Carbohydrates (also NS 620)]**

Spring. 2 credits. Limited to qualified seniors and graduate students. Prerequisite: HOBM 330 or equivalent. T R 10:10. Offered alternate years. Next offered spring 2002; not offered spring 2001. H. T. Lawless and T. E. Acree. An advanced course in food chemistry and functionality in food systems and the changes occurring during food processing and storage.

An consideration of the chemistry of carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasis is on the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.

**[FOOD 621 Food Lipids]**

Fall. 2 credits. Letter grade. Prerequisites: FOOD 409 and a Biochemistry course. Offered alternate years. Next offered fall 2001; not offered fall 2000. R. J. Liu.

An advanced course in food lipids. Describes the physical, chemical, biochemical, and functional properties of lipids. Emphasis is on lipid oxidation, emulsions, functional foods associated with lipids, and modern analytical methodology of lipids.

**[FOOD 665 Engineering Properties of Foods]**

Theories and methods of measurement and prediction of rheological, thermal, and mass transport properties of foods and biomaterial systems. Emphasis is on physical-mathematical basis of measurement as well as the prediction processes. Examples of appropriate use of these properties in engineering design and analysis of food processes will also be provided.

**FOOD 694 Special Topics in Food Science**

Fall or spring. 4 credits maximum. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**FOOD 695 Current Readings in Food Science**

Fall and spring. 1 credit. Prerequisite: 300-to 400-level course relevant to the chosen topic. S-U grades only. Lec., by arrangement/1 hour per week. Staff.

A seminar series on current topics chosen by participating faculty and students on a rotating basis. Format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading. Multiple sections focusing on different topics may be taught in a given semester. Topics include (but are not limited to) Food Microbiology and Food Safety; Food Chemistry; Packaging; Food Engineering. This course can be taken multiple times. Graduate students in Food Science are strongly encouraged to enroll in this course. Interested students should contact the designated instructor(s) for each term.

**FOOD 698 Graduate Teaching Experience**

Fall and spring. 1 to 3 credits. S-U grades only. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

**FOOD 800 Masters-Level Thesis Research**

Fall or spring. Credit TBA. Maximum credit, 12. Prerequisite: limited to master's candidates; permission of Special Committee Chair. S-U grades only. Graduate faculty.

**FOOD 900 Graduate-Level Thesis Research**

Fall or spring. Credit TBA. Maximum credit, 12. Prerequisite: limited to doctoral students who have not passed the "A" exam; permission of Special Committee Chair. S-U grades only. Graduate faculty.

**FOOD 901 Doctoral-Level Thesis Research**

Fall or spring. Credit TBA. Maximum credit, 12. Prerequisite: limited to doctoral students who have passed the "A" exam; permission of Special Committee Chair. S-U grades only. Graduate faculty.

FREEHAND DRAWING AND SCIENTIFIC ILLUSTRATION

Freehand Drawing is a program in the Department of Horticulture. Other courses offered by the department are listed under Horticulture.

**[FR DR 109 Nature Drawing]**

A beginning course with emphasis on the drawing of natural forms: plants, animals, and landscapes. Of particular interest to students in floriculture and ornamental horticulture, landscape architecture, biological sciences, nature education, or similar fields. Outside field notebook assignments.

**[FR DR 211 Freehand Drawing and Illustration]**

Fall. 2 credits. Prerequisite: FR DR 109 or equivalent. S-U grades optional. 6 studio hours scheduled in 2 or 3 hour units between 9:05 and 12:05 M T W R. Not offered fall 2000. R. J. Lambert. Progression to the organization of complete illustrations. Subject matter largely from sketchbooks, still life, and imagination. Composition, perspective, and ways of rendering in different media are considered.

**[FR DR 214 Watercolor]**

Spring. 2 credits. S-U grades optional. 4 studio hours scheduled in 2 hour units between 9:05 and 12:05 and 2 hours outside sketching, T R. R. J. Lambert.

A survey of watercolor techniques. Subject matter largely still life, sketchbook, and on-the-spot outdoor painting.

**[FR DR 316 Advanced Drawing]**

Fall. 2 credits. Prerequisite: FR DR 109, 211 or permission of instructor. S-U grades optional. 4 hours TBA. M R 9:05--12:05, 2 hours outside sketching. R. J. Lambert.

For students who want to attain proficiency in a particular type of illustration or technique.

**[FR DR 417 Scientific Illustration]**

Fall. 2 credits. Prerequisite: FR DR 211 or 316 or equivalent. S-U grades optional for graduate students only. Not offered fall 2000. R. J. Lambert.

A survey of methods of illustration. Training in techniques of accurate representation in media suitable for reproduction processes, including pen and ink, scratchboard, wash, and mixed media.
COURSES BY SUBJECT:

General horticulture: 100, 101, 102
Public garden management: 485
Crop production:
Agroforestry: 415
Fruit: 200, 442, 444, 445, 450
Greenhouse and controlled environments: 400, 410
Nursery: 400, 420
Turfgrass: 330, 475
Vegetable: 225, 456, 460
Extension education: 476, 629
Horticultural physiology: 400, 450, 455, 456, 460, 462, 615, 620
Independent study, research, and teaching:
Plant materials: 243, 300, 301, 491, 492
Postharvest physiology: 325, 475, 625, 630
Seminars: 600, 630
Special topics: 470, 493, 494, 496, 497, 498, 499, 500, 605, 700, 800, 900
Intensives: 496
Landscape horticulture: 301, 435, 440, 485, 491, 492
Plant materials: 243, 300, 301, 491, 492
Plant propagation: 400
Postharvest physiology: 325, 625, 630
Seminars: 600, 630
Special topics: 470, 493, 494, 496, 629, 630, 635, 694
Turfgrass management: 330, 475
Vegetable types and varieties: 220, 465

Note: class meeting times are accurate at the time of publication. Changes are necessary, the department will provide new information as soon as possible.

HORT 100 History of Horticulture
Fall. 2 credits. Lec, T 2-4:25. C. F. Gortzig.
A survey of the history and development of horticulture as a science, art, and profession. Discussions cover, from pre-historic to the present with emphasis on the 1700's to present. Field trips to historic sites taken during some class sessions.

HORT 101 Introduction to Horticulture
Fall. 3 credits. Lec, M W T 10:10; lab, T 12:25–4:25. Staff.
Introduction to the technology and career opportunities in horticulture and ornamental horticulture. Exploration of private and/or public sector activities: production (greenhouse, nursery, and sod), sales (retail and wholesale), landscape management (landscape management, recreational turfgrass management, urban horticulture) related professional and commercial fields. The role of science and technology in the continuing development of horticultural practice. Field trips to horticultural farms and demonstration sites.

HORT 102 General Horticulture
Spring. 4 credits. Each lab limited to 25 students. Lec, M W T 10:10; lab, M T W 2–4:25. L. D. Topoleski.
The subject matter of this course acquaints the student with the applied and basic science of horticulture. Open to all students who want a general knowledge of the subject or who want to specialize in horticulture but have a limited background in practical experience or training in plant science. Includes fruit, flower, and vegetable growing and gardening techniques.

HORT 200 Introductory Pomology
A general introduction to pomology—the science and art of fruit growing. Lectures and discussions emphasize the natural history, ecology, botany, physiology, integrated pest management, and diverse production systems for fruits grown in temperate climate areas. Lab sessions and field trips involve fruit anatomy and morphology, clonal selection and propagation, and postharvest handling and storage, environmental and sustainability issues, web-based information on fruit growing, and hands-on practice in local orchards and vineyards.

HORT 220 Vegetable Types and Identification
Fall 2 credits. Lec, T 2–4:25. L. Topoleski.
The subject matter of this course acquaints students with the species of vegetables grown in the Northeast and the pests and disorders encountered in their production. Subjects covered include identification of economically destructive weeds, diseases, and insects of vegetables, identification of vegetable and weed seeds, nutrient deficiencies, vegetable judging, and potato grade defects.

HORT 225 Vegetable Production
Fall. 4 credits. Lec, M W F 11:15; lab, W 2–4:25; 1 S field trip and 3 field trips (September), W 11:15–6:00. L. A. Ellerbrock.
Intended for those interested in the production, processing, and marketing of vegetables. Topics include are techniques, problems, and trends in the culture, harvesting, and storage of the major vegetable crops. Field trips to conventional and organic farms and hands-on experience in growing vegetables in the greenhouse are included.

HORT 243 Taxonomy of Cultivated Plants (also BIOPL 243)
Fall. 3 credits. Prerequisite: 1 year of introductory botany or written permission of instructor. May not be taken for credit after BIOPL 248. Lec, M W T R 10:10–11:00; lab, M W 200–4:25. Offered every other year. M. A. Luckow.
A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

HORT 300 Herbaceous Plant Materials
Fall. 3 credits. Fee for lecture-laboratory manual: $35. Lec, T R 10:10; lab, T 2–4:25. W. B. Miller.
Identification, use, characteristics, and garden cultural requirements of annual and herbaceous perennial plants, especially those used in northern climates for special gardening experiences at selected campus locations. Field trips to nearby specialty nurseries. Garden planting design is not a component of the course.

HORT 310 Plants for Interiors
Study of plants for interiors: identification, design characteristics, and cultural requirements; the interior landscape industry (organization, bidding, installation, maintenance), use of plants as elements of planting designs (trees, shrubs, groundcovers, and accent plants including potted flowering plants and cut flowers). Required three-day field trip, estimated cost, $150.

HORT 325 Practical Aspects of Postharvest Handling of Horticultural Crops
A study of changes that occur in horticultural crops between harvest and consumer. Practices that affect the rate of change and the final effect on quality of the commodity are discussed. Maturity-quality indices, preharvest treatments, and harvesting/handling practices and storage/transportation requirements of selected horticultural crops are covered.

HORT 330 Turfgrass Management
Fall. 3 credits. Prerequisite: SCAS 260. Lecs, M W T R 10:10; lab, F 10:10–12:05. Offered every other year. A. M. Petrovic.
Study of the scientific principles involved in the management of golf courses, athletic fields, parks and industrial grounds, and commercial sod production. Considerations given to principles of establishment, mowing, irrigation, growth and development, species selection, and nutrition in the management of turfgrass sites.

HORT 400 Principles of Plant Propagation
Fall. 3 credits. Prerequisites: BIOL 242 and 244 or another course in plant physiology. Lecs, T R 9:05; lab, B 12:25–4:25. K. W. Mudge.
Sexual (seed) propagation and asexual (vegetative) propagation including cutage, graftage, tissue culture, layering, and specialized vegetative reproductive structures. Physiological, environmental, anatomical principles, and industry applications are stressed in lecture and hands-on skills laboratories. Examples include both temperate as well as tropical horticultural, agronomic, and forestry crops.

HORT 401 The Now, When and Why of Grafting—A Distance Learning Approach
Spring. 2 credits. Lec: autotutorial (web, cd); Lab: greenhouse/autotutorial. Discussion: e-mail. 1 introductory face-to-face meeting TBA. K. W. Mudge.
A six-week, web-based autotutorial approach to the principles and practices of grafting and budding as applied to plant propagation. Emphasis will be on the role of grafting in modern horticultural practice and on student development of hands on grafting skills. Instruction will involve micro web-based asynchronous presentation of lecture materials (web, cd-rom), assignment discussion (e-mail), and hands-on, autotutorial greenhouse laboratory exercises.

HORT 410 Production and Marketing of Crops Grown in Controlled Environments
Spring. 3 credits. Letter grade only. Offered odd years. Lecs, M W T R 10:10; lab, T 2–4:25. T. C. Weiler and staff.
Basics of establishing and managing agricultural production in environmentally optimized facilities; technology basics, systems and practices, structures, systems and equipment, materials handling, heating and cooling, lighting, fumigation and irrigation, environmental stewardship, integrated pest management, business management, world centers of production; production of cut, pot, bedding, vegetable, and fruit crops in controlled environments emphasizing predictive harvesting through environmental, physical, and chemical management of growth and development. Each student will grow one or more crops. Required: three-day field trip, estimated cost, $130.

[HORT 415 Principles and Practices of Agroforestry (also NTRES 415 and CSS [SCAS] 415)]

Fall. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option. Lect., M W F 10:10-11:00. Optimal laboratory, HORT 416 (also NTRES 416 and CSS [SCAS] 416). Offered fall 2001. J. Lassoe, E. Fernandes, K. Mudge, L. Buck.

An introduction to modern and traditional agroforestry systems, an overview of the practice and its potential, emphasizing the relationship of human and natural resources on sustainable production through temporal integration of multipurpose woody plants (trees or shrubs) with annual or perennial crops or with livestock. Interactions between woody and nonwoody components of agroforestry systems are considered, based on above and belowground processes. The sustainability of agroforestry systems will be critically examined from biophysical, socioeconomic, and policy perspectives.

[HORT 416 Principles and Practices of Agroforestry—Laboratory (also NTRES 416 and CSS [SCAS] 416)]

Fall. 1 credit. Optional lab component of HORT 415 (also NTRES and CSS [SCAS]). S-U grades optional. Prerequisites: junior, senior, or graduate standing or permission of instructor; prior or concurrent enrollment in HORT 415. W 12:30-4:25. Offered fall 2001. J. Lassoe, K. Mudge, E. Fernandes, L. Buck.

An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management skills applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, use of computer-based sources of information, and practical skills with woody plants including identification, propagation, pruning, and measurement.

[HORT 420 Principles of Nursery-Crop Production]

Fall. 4 credits. Prerequisite: HORT 400. Lect., M W F 9:05; lab, M 2-4:25. Field trips. Fall, weeks 1-7. 2 credits. Prerequisites: HORT 230 or 335. Lecs, M W F 9:05; lab, M 2:00-4:25. Offered even years. G. L. Good.

A study of the practices involved in the maintenance of woody ornamental plants in the landscape. The major emphasis will be on post-planting techniques, including water and fertilization management, weed management, pruning, and general tree care. Labs have a hands-on focus.

[HORT 440 Restoration Ecology]

Fall. Weeks 1–10. 3 credits. Prerequisite: upper division or graduate standing. Letter grade only. Lecs, T R 10:10; lab, F 1:25–4:25. Offered odd years, 2001. T. H. Whittaker.

An inquiry based treatment of the principles and methods of ecology, conservation biology, soil science and related disciplines applied to the restoration of degraded terrestrial habitats. Weekly labs, four weekend field trips, and a semester-long project may provide many opportunities for experiential learning. Substantial commitment outside of the classroom is expected.

[HORT 442 Berry Crops: Culture and Management]

A study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other minor small fruit crops. The influence of production systems that influence productivity, fruit quality, and pest damage. Marketing and economics will be considered, and alternative production practices for both commercial and home gardeners will be examined. Frequent field trips enhance classroom activities.

[HORT 444 Applied Viticulture]

Grape production and pre-production practices with emphasis on the Great Lakes and Finger Lakes regions. We will examine grape variety selection and vineyard management as affected by geography, meteorology, and vine anatomy/physiology. Protection of vines and grapes from injury by cultural, chemical, and natural means will also be explored. Laboratory exercises and field trips will develop hands-on experience in vineyard practices, marketing, and processing.

[HORT 445 Orchard Management]

The science and technology of deciduous tree-fruit production. Topics include tree-free and fruit physiology, orchard renovation and design systems, nutrition, irrigation and freeze protection practices, tree pruning and training, post-harvest fruit storage, marketing and economic spreadsheet models, monitoring and decision systems for integrated pest management, and efficient use of orchard equipment. Emphasis is on the agroecology of perennial crop systems, with labs providing hands-on experience in orchard management. Previous coursework in pomology and other plant sciences is suggested, but not a prerequisite.

[HORT 450 Soil Management and Nutrition of Perennial Crops]

Fundamentals of mineral nutrition and soil management for perennial horticultural crops. Soil management effects on crop performance, nutrient relationships, and interaction with other components of crop production systems are emphasized. Interpretation and critical review of precision aspects deal with diagnostic techniques, interpretation of tissue and soil analyses, and nutrient requirements for optimizing crop performance.

[HORT 455 Mineral Nutrition of Crops and Landscape Plants (also CSS [SCAS] 455)]

Spring. 3-5 credits. Prerequisites: CSS 260 and BIOL 242, or equivalent. Lects., M W F 9:05; lab, R 1:50–4:00. Not offered spring 2001, next offered spring 2002. H. C. Wien and staff.

A modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on agronomic crops, vegetables, floriculture, and fruit crops. Each module carries one credit; a minimum of three credits must be taken in one semester. By the end of the course, students should understand the principles of mineral nutrient function in crop plants; should be able to diagnose deficiencies by symptoms and tissue tests and devise organic and conventional nutrient management schemes that yield produce and improve crop yield and mineral quality.

[HORT 460 Plant-Plant Interactions]

Spring. 3 credits. Prerequisite: any crop production on plant ecology course or permission of instructor. Lects., T R 9:05; lab/disc, M 2–4:25. Next offered spring 2002. D. W. Wolfe.

Mechanisms by which plants interfere or positively interact in the context of environmental conditions such as light, temperature, and fertility. Competitive and chemical interactions are considered between weeds and crops, among crops in polyculture, and between individuals in monoculture. Most examples will be taken from temperate and tropical monoculture and intercropping systems, but implications for natural ecosystems will also be considered.

[HORT 462 Vegetable Crop Physiology]

Study of the physiological processes that determine the timing, quantity, and quality of vegetable crop yields. Processes of flower induction, fruit set, fruit growth, and the relationships between vegetative and reproductive growth are covered. The course emphasizes practical hands-on greenhouse experiments and small group discussions.

[HORT 465 Vegetable Varieties and Their Evaluation]

Principles of vegetable variety evaluation and selection of techniques in relation to program objectives. Morphology, yield, and quality of selected crops will be studied in the field. The seed industry will be briefly discussed.

[HORT 470 Special Topics in Pomology]

Spring. 3 credits. Open to undergraduates by permission. Hours TBA. Staff.

Selected topics are considered with respect to the current literature, experimental techniques, or applied technologies. Topics change from one year to another and reflect the expertise and research interests of the professors who teach. Staff.
Hortic. 475 Golf Course Management
An advanced study of the management of golf course operations including selection of root zone materials, fertilization practices, integrated pest management practices, irrigation systems, environmental based decision making, personnel management, and financial operations. Analysis of a central New York golf course will provide the basis for discussion.

Hortic. 476 Practical Problem Solving in Horticulture
Fall. 2 credits. Prerequisite: permission of instructor. Lec/disc. W 1:25-4:25.
C. P. Mazza.
Foundation for extension or similar career oriented students. Application of horticultural science principles to practical situations faced primarily by home gardeners. Techniques of synthesizing information from various scientific disciplines. Classes led by staff in several departments. Topics are interdisciplinary, drawing from expertise in horticultural science, landscape and food, entomology, plant pathology, natural resources, and Cornell Plantations.

Hortic. 480 Plantations Seminar Series
Fall. 1 credit. S-U grade only. W 7:30 P.M.
D. A. Rakow.
A 10-week series of seminars given by prominent speakers on a variety of horticultural, natural sciences, and human cultural themes.

Hortic. 485 Public Garden Management
Spring. 3 credits. Prerequisites: HORT 300 or HORT 301. HORT 230 or HORT 335. Lec, T R 10:10-11:00, lab, T R 11:15-12:05.
Two-and-a-half-day field trip to visit other botanical gardens and arboreta. Offered odd years. 2001. D. A. Rakow.
The course will explore the history of public gardens, types of contemporary public gardens, and the operation of botanical gardens and arboreta. Included will be separate units on: collections curation, design of collections, management of landscapes and natural areas, educational programming, interpretive programs, research, financial management, and staffing.

Hortic. 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 491)
Fall. 4 credits. Prerequisites: major in horticulture or landscape architecture or permission of instructor. Lec, T R 12:20-1:10, lab, T R 1:25-4:25. N. L. Bassuk and J. P. Trowbridge.
This course will focus on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, we will be able to critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details will be produced to implement these practices. A two-semester-long project where students will implement what they have learned by creating a new landscape will serve to integrate theory principles and practices.

Hortic. 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 491)
Spring. 4 credits. Prerequisite: a passing grade in HORT/LA 491. Attendance limited to horticulture and landscape architecture majors or permission of the instructors. Lec, T R 12:20-1:10, lab, T R 1:25-4:25.
N. L. Bassuk and P. J. Trowbridge.
This course will focus on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, we will be able to critically assess potential planting site, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details will be produced to implement these practices. A two-semester-long project where students will implement what they have learned by creating a new landscape will serve to integrate theory principles and practices.

Hortic. 494 Special Topics in Horticulture
Fall or spring. 4 credits maximum. S-U grades optional.
In Sections 01 and 02, the departments teach "trial" courses under this number. Offerings may vary by semester, and will be advertised by the departments. Courses offered under the number will be approved by the department curriculum committees, and the same course will not be offered more than twice under this number.

Section 01, Fruit and Vegetable Science
Section 02, Floriculture and Ornamental Horticulture

Hortic. 495 Undergraduate Seminar—Current Topics in Horticulture
Fall and spring. 1 credit. S-U grade only. W 4:00. A. Rangarajan, C. Watkins, and L. A. Weston.
Weekly seminars consist of graduate student research project reports, faculty research topics, as well as guest speakers from other universitites and/or industry. Required of graduate students majoring or minoring in horticulture. Undergraduate students register under HORT 495.

Hortic. 496 Internship in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional.
Prerequisite: permission of student's advisor in advance of participa­tion in internship programs. Students must register with an Independent Study form (available in 140 Roberts Hall) signed by the faculty member who will supervise their study and assign their grade. Hours TBA. Staff.

Hortic. 497 Independent Study in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional.
Prerequisite: permission of instructor(s). Students must register with an Independent Study form (available in 140 Roberts Hall). Independent study in horticultural science under HORT 495.

Hortic. 498 Undergraduate Teaching Experience
Fall or spring. Credit variable. S-U grades optional.
Prerequisites: previous enroll­ment in course to be taught or equivalent, and written permission of the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours TBA. Staff.
Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. This experience may include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

Hortic. 499 Undergraduate Research
Fall or spring. Credit variable. S-U grades optional.
Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours TBA. Staff.
Undergraduate research projects in horticultural sciences.

Hortic. 500 Master of Professional Studies (Agriculture) Project
Fall or spring. 1-6 credits. (6 credits maximum toward M.P.S. (Agriculture) degree). S-U grades optional.
A comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations. Required of Master of Professional Studies (Agriculture) candidates in the respective graduate fields of horticulture.

Hortic. 600 Seminar in Horticulture
Fall and spring. 1 credit. S-U grades only. W 4:00. A. Rangarajan, C. Watkins, and L. A. Weston.
Weekly seminars consist of graduate student research project reports, faculty research topics, as well as guest speakers from other universities and/or industry. Required of graduate students majoring or minoring in horticulture. Undergraduate students register under HORT 495.

Hortic. 615 Quantitative Methods in Horticultural Research
Advantages and limitations of conventional experimental designs and analyses of greenhouse and field (including-on-farm) experiments. Use and interpretation of plant growth analysis techniques. Discussions will include critical analysis of published data and research in progress.

Hortic. 620 Woody Plant Physiology
Spring. 4 credits. BIOP 301, BIOM 331, CHEM 357, or equivalent, or permission of instructor. Letter grade only. Lec, T R 8:40-9:55. Lab, T 1:25-4:25. Offered odd years. 2001. T. H. Whitlow.
An examination of physiological processes in woody plants emphasizing whole plant integration and how these processes affect plant growth under both natural and cropping systems. Topics include photosynthesis, the woody plant form, structure and function of the root and shoot, growth periodicity, dormancy, growth analysis, carbon balance and allocation, root symbioses, and physiological responses to abiotic and biotic stress. Faculty from Geneva and Fruit and Vegetable Science collaborate in teaching.
Topics relate to extension in other countries. The department teaches "trial" courses under departmental faculty members. The experience through involvement in planning and the same course will not be offered more than twice under this number. Offerings vary by semester, and the course will not be offered more than twice under this number.

INTERNATIONAL AGRICULTURE

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

INTAG 300 Perspectives in International Agriculture and Rural Development
Fall. 2 credits. F 1:25-5:20. R. W. Everett. A forum to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

INTAG 314 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also CSS 314)
Fall. 5 credits. Prerequisites: an introductory course in crop science, soil science, or biology or permission of instructor. Lee, T R 8:40-9:55, F. C. Fernandez. Characterization and discussion of traditional shifting cultivation, lowland rice-based systems, upland cereal-based systems, smallholder mixed farming including root crops and livestock, plantation fruit and oil crop systems, and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. The effect of tropical cropping systems on the environment is evaluated.

INTAG 402 Agriculture in the Developing Nations I
Fall. 2 credits. Prerequisite: International Agriculture 300. F 1:25-5:20. P. A. Arneson and staff. The goal of this course is to acquaint students with the major issues and problems in international agriculture and rural development and to show how problems in development are being addressed by international, government, and nongovernment agencies. The lectures, discussions, and assignments deal with the major issues and problems in international agriculture and rural development. Students will be able to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

INTAG 403 Traditional Agriculture in Developing Countries
Fall. 3 credits. S-U grades only. T 8-8:50. H. D. Thurston, D. Bates, R. Blake, J. Lassoie, A. Power, E. Fernandez, T. Steinhaus. Today, perhaps over half of the world's arable land is farmed by traditional farmers. They developed sustainable agriculture practices which allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten in developed countries but are still used by many traditional, subsistence, or partially subsistence farmers in developing countries. The course will examine traditional systems from several disciplinary points of view.

INTAG 497 Independent Study in INTAG
Fall and spring. 1-3 credits. S-U or letter grade. Prerequisites: permission of instructor and signed Independent Study Form. Staff. Independent Study in INTAG allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the direction of a faculty member.

INTAG 599 International Development M.P.S. Project Paper
Fall and spring. 1-6 credits. (A maximum of 6 credits may be applied toward M.P.S. degree requirements). Limited to M.P.S. candidates in the Field of International Development (ID). S-U grades only. N. Uphoff. A problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international development.

INTAG 599 International Agriculture and Rural Development M.P.S. Project Paper
Fall and spring. 1-6 credits. (A maximum of 6 credits may be applied toward M.P.S. degree requirements). Limited to M.P.S. candidates in the Field of International Agriculture and Rural Development (IARD). S-U grades only. R. Blake. A problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international agriculture and rural development.

INTAG 602 Agriculture in the Developing Nations II
Spring. 3 credits. Prerequisites: INTAG 300 or equivalent, INTAG 402, and permission of instructor. Cost of field-study trip includes air fare and approximately $450 for lodging, meals, and personal expenses. T 8-8:50-4:25 until midterm only. R. W. Blake and staff.

INTAG 603 Administration of Agricultural and Rural Development (also GOVT 692)
Spring. 4 credits. M 2:30-5:30. N. T. Uphoff and T. W. Tucker. An intercollege course designed to provide graduate students with a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students in agricultural or social sciences who may have administrative responsibilities.
during their professional careers.

[Intag 685 Training and Development: Theory and Practice (also COMM 685, EDUC 685 and ILR 658)]

Analysis, design, and administration of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy as nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

[Intag 694 Graduate Special Topics in Intag]

Fall or spring. 1-4 credits. S-U or letter option. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

[Intag 694.1 Special Topics: Fallow Management in the Tropics]

Fall. 1-3 credits. Prerequisite: permission of instructor required. S-U or letter option. E. Fernandes and L. Fisher.

A discussion course developed in conjunction with the Cornell International Institute for Food, Agriculture and Development (CIIFAD). Students study traditional and introduced fallow practices in Asia, Africa, and Latin America, participate in the development of on-line fallow systems and species databases, test participatory methodologies adapted by the class for studying fallow management, and in most cases plan and carry out individual field studies. The course focuses upon fallow management practices of primarily resource-limited farmers in the broader rural context.

[Intag 697 International Development M.P.S. Seminar]

Fall. 1 credit. U only. N. Uphoff.

A seminar for M.P.S. students to discuss important issues in international development and to prepare them to write their project papers. Specific content varies.

[Intag 698 International Development M.P.S. Seminar]

Spring. 1 credit. S-U only. N. Uphoff.

A seminar for M.P.S. students to discuss important issues in international development and to prepare them to write their project papers. Specific content varies.

[Intag 699 International Agriculture and Rural Development M.P.S. Project Seminar]

Spring. 1 credit. S-U grade only. Required for, and limited to, M.P.S. IARD students or with permission of instructor. R. Blake.

The seminar provides students with the opportunity to develop and present their special projects. It also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

Introduction to the representation and design of landscapes and to working in a studio setting. Freehand drawing, measured drawings, and model making are used to understand design principles of the changing landscape.

[La 141 Grounding in Landscape Architecture]

Fall. 4 credits. Limited to 15 students. Letter grade only. Cost of drafting supplies, about $200.

Introduction to the representation and design of landscapes and to working in a studio setting. Freehand drawing, measured drawings, and model making are used to understand design principles of the changing landscape.

[La 142 Grounding in Landscape Architecture]

Spring. 4 credits. Limited to approximately 20 students; freshman landscape architecture majors or permission of instructor. Cost of basic drafting equipment, fees, and supplies, about $250.

Fundamentals of landscape design applied to small-scale site-planning projects. Work in the studio introduces course participant to the design process, design principles, construction materials, planting design, and graphics.

[La 201 Medium of the Landscape]

Fall. 5 credits. Limited to landscape architecture majors. Cost of basic drafting equipment, supplies, and fees, about $200; expenses for field trip, about $250.

This studio course emphasizes the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthform, water, and vegetation.

[La 202 Medium of the Landscape]

Spring. 5 credits. Prerequisite: LA 201 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.

This course will focus upon the role of materials in design, design theory, and design vocabulary associated with landscape architectural projects.

[La 260 Pre-Industrial Cities and Towns of North America (also CRP 360 and CRP 666 and LA 666)]

Fall. 5 credits. Offered alternate years. Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture has altered the landscape in their own unique way as they created their own built environments.

[La 261 Urban Archaeology (also CRP 261)]

Fall. 3 credits. Urban archaeologists study American Indian, colonial, and nineteenth-century sites which now lie within the boundaries of modern cities. This course explores how urban centers evolve: what lies beneath today's cities, and how various cultures have altered the urban landscape. Students will participate in a local archaeological excavation.

[La 262 Laboratory in Landscape Archaeology (also ARKEO 262)]

Spring. 3 credits. Required for LA 261 or CRP 261 or permission of instructor. Various American Indian civilizations and European cultures have all altered the landscape to meet the needs of their cultures. Students will learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

[La 263/547 American Indians, Planners, and Public Policy (also CRP 363/547)]

Spring. 3 credits. Offered in alternate years. Not offered spring 2001.

Decisions made by public agencies and private enterprise too often lead to the
flooding, polluting, strip-mining, or other destruction of American Indian reservations, archaeological sites, and burial grounds. The central focus of the course is how to address urban and regional problems without imperiling the cultural survival of minorities.

**LA 282 The American Landscape**

Fall. 3 credits.

An interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature.

**LA 292 Creating a Second Nature**

Spring. 3 credits. Prerequisites: none, but ARKK 100, ANTHR 100, or CLASSICS/HISTORY OF ART 220 recommended.

Offered alternate years.

What can archaeological investigation tell us about the landscape of cultures that spent much of their civic and private lives out of doors? This course seeks the evidence for the markets, parks, gardens, fields, and burial places central to daily life in the ancient Near East and Classical Worlds and formative of our current ideas of these landscapes.

**LA 301 Integrating Theory and Practice I**

Fall. 5 credits. Prerequisite: LA 202 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.

Course participants will be engaged in the art and science of site-scaled design. This includes relating construction and planting details to concepts and program.

**LA 302 Urban Design in Virtual Space**

Spring. 5 credits. Cost of supplies and fees, about $250; basic expenses for field trip, about $250.

A sequence of projects introducing students to advanced skills in large-scale urban design, including 3-D computer modeling and digital design media as tools for shaping the form of the city.

**LA 315 Site Engineering I**

Spring. 2 credits. Prerequisite: permission of instructor.

Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

**LA 316 Site Engineering II**

Fall. 2 credits. Prerequisite: LA 315 or permission of instructor.

Lectures and studio projects dealing with earthwork estimating; storm water management, site surveys, site layout, and horizontal and vertical road alignment.

**LA 318 Site Construction**

Spring. 5 credits. Prerequisite: permission of instructor.

Detail design and use of landscape materials used in project implementation. Exploration of construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the foci for this course. The course includes lectures, studio problems, and development of drawings leading to construction documentation for a comprehensive project. Students will develop a process of self criticism related to measured drawings specific to the comprehensive project. Course participants will fabricate material prototypes in wood and metal.

**LA 402 Integrating Theory and Practice**

Spring. 5 credits. Prerequisite: LA 301 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.

The studio will engage course participants in service-oriented community design projects. Theories of place-making, community and participatory design and planning, and sustainability will be explored through practice-based learning. Students will be expected to work independently and collaboratively on team projects in the community. One class period per week will be designated for community field work. Studio theme for 2000-2001. TBA.

**LA 410 Computer Applications in Landscape Architecture**

Fall or spring. 3 credits. Offered to landscape architecture students only. Limited to 15 students.

This course is designed to develop a working knowledge of various computer software applications with emphasis on Autocad. The course will explore other applications relative to land-use planning and the profession of Landscape Architecture.

**LA 412 Professional Practice**

Spring. 1 credit.

Presents the student with a comprehensive understanding of the role of the professional landscape architect and the problems and opportunities one may encounter in an office or other professional situations. Topics discussed include practice diversity, marketing professional services, office and project management, construction management, computers in the profession, and ethics.

**LA 483 Design Criticism**

Fall. 5 credits.

Writing design criticism: Emphasis on analytical descriptions and interpretations or works and on the role of criticism in design discourse.

**LA 486 Community Design Workshop**

This class will offer hands-on learning of the design process through the designing and building of service-oriented community projects (parks, public spaces, school gardens, downtown revitalization). This course will enable students to both study and experience design and implementation skills at all levels of the design process. Students will learn and practice skills related to community design primarily through work on the participating design and planning phase of the project.

**LA 487 Experiential Community Design**

This class will offer the opportunity to learn, hands-on, the design process through the designing and building of service-oriented community projects (parks, public spaces, school gardens, downtown revitalization). This course will enable students to both study and experience design and implementation skills at all levels of the design process. Students will be engaged in the community-build phase of a community design project initiated the previous spring semester.

**LA 490 Rome Wasn't Built in a Day**

Spring. 3 credits.

In this electronic course, students will learn about how the form and spatial structure of the city of Rome has evolved through time. Using the interactive CD-ROM "Layers of Rome" as a digital text, the course will engage participants in the investigations of urban design in Rome both as a case study and as a vehicle for exploring concepts applicable to many contemporary cities worldwide. The material focuses on the intersection between historical studies of urban space, architectural geography, urban landscape formation, and the design of cities. Tutorials, readings and exercises will be developed using the Layers of Rome CD, web searches, digital networking, and various interactive learning technologies geared toward urban analysis and visual design media.

**LA 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 491)**

Fall. 4 credits. Prerequisites: major in horticulture or landscape architecture or permission of instructor. Cost of supplies, about $50; expenses for field trips, about $50.

This course will focus on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, we will be able to critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment, Design followed by written specifications and graphic details will be produced to implement these practices.

**LA 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 492)**

Spring. 4 credits. Prerequisites: a passing grade in HORT/LA 491. Attendance limited to horticulture and landscape architecture majors or permission of the instructors.

This course will focus on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, we will be able to critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details will be produced to implement these practices. A two-semester-long project where students will implement what they have learned by creating a new landscape will serve to integrate theory principles and practices. Together, HORT/LA 491 and 492 constitute an integrated course. 492 may not be taken for credit unless the student has a passing grade in HORT 491.

**LA 494 Special Topics in Landscape Architecture**

Fall or spring. 1-3 credits; may be repeated for credit. S/U grades optional.

Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

**LA 495 Green Cities: The Future of Urban Ecology (also CRP 495)**

Fall. 4 credits.
Explores the history and future of the ecology of cities and their role in solving the present global ecological crisis. The politics, design, and economics of "green cities" are examined in terms of transportation, renewable energy, solid waste and recycling, land use, and the built environment.

**LA 497 Individual Study in Landscape Architecture**
Fall or spring, 1-5 credits; may be repeated for credit. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Work on special topics by individuals or small groups.

**LA 498 Undergraduate Teaching**
Fall or spring, 1-2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall).

Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty.

**LA 501 Composition and Theory**
Fall, 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250. Field trip about $250.
Basic principles of natural and cultural processes that form "places" in the landscape. Projects focused on design applied to the practice of landscape architecture: particularly the relationship between measurement, process, experience, and form at multiple scales of intervention.

**LA 502 Composition and Theory**
Spring, 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250; expenses for field trip, about $250.

The studio will focus on the spatial design of project-scale site development. Students will develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.

**LA 505 Landscape Representation I**
Fall, 3 credits. Prerequisites: concurrent enrollment in LA 501 or permission of instructor.

This class introduces students to both conventional and unconventional modes of landscape architectural design representation. Drafting, orthographic drawing, axonometric project, lettering, analysis and concept drawing will be taught alongside more expressive modes of direct site study and representation.

**LA 506 Graphic Communication II**
Spring, 3 credits. Prerequisites: LA 505 and concurrent enrollment in LA 502 or permission of instructor.

An intermediate level course focused on modes of landscape representation from ideation to presentation. Representation modes may include freehand, process drawing, analysis and orthographic drawing, concept modeling, composite drawings; and visual books.

**LAMAR 524 History of European Landscape Architecture**
Spring, 3 credits. Offered through the College of Architecture, Art, and Planning.

**LAMAR 525 History of American Landscape Architecture**
Fall, 3 credits. Offered through the College of Architecture, Art, and Planning.

**LA 545 The Parks and Fora of Imperial Rome**
Spring, 3 credits. Prerequisites: advanced standing in a design field, classics or history of art, or by permission of the instructor.

This advanced seminar is seeking students in classics, art history, archaeology, landscape architecture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design, or computer modeling to a collaborative study of the ancient fora and public parks depicted on the Severan Marble plan of Rome.

**LA 569 Archaeology in Preservation Planning and Site Design (also CRP 569)**
Spring, 3 credits. Offered alternate years. Students develop the research skills needed to complete environmental review projects and historic landscape plans.

**LA 582 The American Landscape**
Fall, 3 credits.

An interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature. At the graduate course level, students will be required to complete additional outside work and to attend an additional class session.

**LA 590 Theory Seminar**
Spring, 3 credits.

Seminar in contemporary landscape design theory. For graduate students and seniors.

**LA 598 Graduate Teaching**
Fall or spring, 1-3 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form.

Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in desk critiques, and preparing lectures. There will be assigned readings and discussion sessions on education theory and practice throughout the term. (Credit hours are determined by: 2 hours per week = 1 credit hour).

**LA 601 Integrating Theory and Practice I**
Fall, 5 credits. Limited to graduate students. Cost of supplies and fees, about $250; expenses for field trip, about $250.

The studio will focus on site-scaled projects that engage cultural and natural systems. Theories of place-making, sustainable design, and landscape representation will be critically explored through design projects that derive from and affirm a sense of site and place. The integration of site knowledge and site construction aims to support a deepening level of correspondence between design and site.

**LA 602 Integrating Theory and Practice II**
Spring, 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250; expenses for field trip, about $250.

The studio will build upon your prior course work with an expectation that course participants can creatively manipulate the program and conditions of a site with increased emphasis placed on how things are constructed and contemporary technology. This course will focus on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationship to site design and planning will be critically explored through theory and practice in this studio.

**LA 615 Site Engineering I**
Spring, 2 credits. Prerequisite: permission of instructor.

Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

**LA 616 Site Engineering II**
Fall, 2 credits. Prerequisite: LA 615 or permission of instructor.

Lectures and studio projects dealing with earthwork estimations, soil water management, site surveys, site layout, and horizontal and vertical road alignment.

**LA 618 Site Construction**
Spring, 5 credits. Prerequisite: permission of instructor.

Detail design and use of landscape materials used in project implementation. Exploration of materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the focus for this course. The course includes lectures, short studio problems, and the development of drawings leading to construction documentation for a comprehensive project. Students will develop a process of self-criticism related to measured drawings specific to the comprehensive project. Course participants will fabricate material prototypes in wood and metal.

**LA 619 Advanced Site Grading**
Grading skills and knowledge applied as a design component of site planning projects.

**LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)**
Fall, 3 credits. Offered alternate years. Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture altered the landscape in their own unique way as they created their own built environments.

**LA 680 Graduate Seminar in Landscape Architecture**
Fall or spring, 1-3 credits. May be repeated for credit. Limited to graduate students. S-U grades optional.

Topical subjects in landscape architectural design, theory, history, or technology. Seminar topics and group study not considered in other courses.

**LA 694 Special Topics in Landscape Architecture**
Fall or spring, 1-3 credits; may be repeated for credit. S-U grades optional.
Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

**Natural Resources**

**NTRES 201 Introductory Field Biology**
Fall. 4 credits. Limited to 90 students. Open to sophomores and juniors with an adviser in Natural Resources or by permission of instructor. Prerequisites: BIO G 101 and 102 or equivalent. 2 overnight weekend field trips required. Cost of field trips, approximately $12. Lee, W 9:05; labs, M W 1:25–4:25 or T R 1:25–4:25. T. Gavvin and C. Smith.

Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn the taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 species of woody plants. Selected aspects of current ecological theory are stressed. The interaction of students with biological events in the field and accurate recording of those events are emphasized.

**NTRES 270 Conservation of Birds**
Spring or summer. 2 credits. Prerequisite: NTRES 210 or permission of instructor. Offered alternate years. Next offered spring 2002. C. R. Smith.

A course for majors and nonmajors, focusing on science-based bird conservation and management at the organism, population, community, and landscape levels. Current resource management issues relevant to birds will be explored in the context of agricultural practices, habitat management, tropical deforestation, the design and management of natural preserves, endangered species management, global climate change, and the economic importance of bird study as an outdoor recreational activity.

**NTRES 271 Conservation of Birds Laboratory**

A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs and calls, and habitat cues. Topics covered will include the choice and effective use of field guides, binoculars, and other tools for bird identification, procedures for taking and organizing field notes; the relationships of birds to their habitats and to other birds; and methods and procedures for censusing and surveying songbird populations.

**NTRES 301 Forest Ecology**
Fall. 3 credits. Prerequisite: introductory biology. M W F 11:15. T. J. Fahey.

A comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include paleoecology of forests, ecophysiology of forest trees, disturbance, succession and community analysis, primary productivity, and nutrient cycling.

**NTRES 302 Forest Ecology Laboratory**

Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and White Mountains, New Hampshire. Group research projects in local forests.

**NTRES 305 Wildlife Ecology**
Fall. 3 credits. Letter grade only. Prerequisite site: NTRES 210 and background in biology or ecology strongly recommended: completion or concurrent enrollment in CALS math requirement. M W F 9:05–9:55. E. Cochoo.

An in-depth analysis of the ecological factors influencing the natural fluctuation and regulation of animal population numbers. The course will examine in detail models of single species and multi-species dynamics, with emphasis on understanding the relationship between ecological processes at the individual and population level. Computer-based simulations will be used to reinforce concepts presented in lecture.

**NTRES 306 Coastal and Oceanic Law and Policy**
Summer. 2 credits. July 3–10. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), approximately $1,000.

Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

**NTRES 308 Natural Resources Management**

Focus is on fish, wildlife, forest, and water resources. Concepts emphasized include the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.

**NTRES 309 Sovereign Tribes and Environments**
Summer. 1 credit. Prerequisite: none; recommended: one course each in Natural Resources and American Indian Program. Consult Cornell University Summer Session catalog for scheduling information. S. M. Penningroth.
Under federal law, Native American tribes possess significant attributes of sovereignty. This course introduces American Indian territories as a policy arena where tribal jurisdiction and traditions merge with the goals of economic development and cultural survival to shape resource management decisions. Lectures, class discussions, case studies, and a mandatory field trip to an Iroquois territory.

NTRES 321 Introduction to Biogeochemistry (also GEOL 321, SES 321)
Fall. 4 credits. Prerequisites: college-level chemistry, plus a course in biology and/or geology. Lec, T R 12:20-1:10; lab, T or R 2:30-4:25. J. B. Yavitt and L. A. Derry. Control and function of the Earth's global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

NTRES 340 Quantitative Population Analysis
Spring. 3 credits. Letter grade only. Prerequisites: college-level course in statistics or mathematics recommended. M W F 9:05-9:55. P. J. Sullivan. The dynamics and demographics of aquatic and terrestrial populations are examined using statistical techniques and computer modeling. The course will emphasize (1) estimation of population abundance using statistical surveys, mark-recapture methods, cohort analysis, and other sampling techniques, and (2) analysis of population growth dynamics through mathematical and statistical models representing the fundamental processes of birth, death, growth, and movement. Topics will include applications to aquatic and terrestrial populations of resource and conservation interest.

NTRES 350 Global Ecology and Management
Spring. 3 credits. Prerequisites: college-level courses in biology and chemistry. M W F 12:20-1:10, disc sec. M or W 1:25-2:15. J. B. Yavitt. Human accelerated environmental changes threaten the integrity of nature. This course explains the ecological principles that comprise this threat. Topics include increasing air and water concentrations of carbon dioxide and other gases, and pollution. Discussions explore the likely future behavior of nature given different global change scenarios.

NTRES 400 International Environmental Issues
Fall. 4 credits. Prerequisite: junior standing or above. T R 10:10-12:05. J. Schelhas. Current international environmental issues are analyzed from an interdisciplinary perspective, with an emphasis on understanding the complex relationships between humans and the environment that underlie environmental problems and their solutions. Topics covered include conceptualization of environmental issues, population, property rights, human behavior, environmental values, environmental education, international policies, international organizations, globalization, conservation, and community-based conservation, and social conflict and unrest. Environmental issues covered include endangered species, biodiversity, tropical forests, global climate change, protected areas, indigenous peoples, and ocean fisheries. Emphasis on systematic analysis of environmental issues, written and oral presentations.

NTRES 402 Natural Resources Policy, Planning, and Politics
Spring. 3 credits. Prerequisites: junior standing; special application process, and course fee (approx. $35). Lec, January two-week intersession; two 2-hour orientation sessions in fall semester and four 2-hour sessions in February and March. Completed applications due by October 23. Applications are available by contacting map10@cornell.edu or at www.dnr.cornell.edu/courses/course.html.
An introduction to the environmental policy process and its conceptual framework. Recognizing phenomena identified as natural resources or environmental problems and issues; aggregating interests; formulating and selecting alternative solutions; implementation and evaluation stages; roles of citizens, lobbyists, government actors. Case studies; presentations by and discussions with about twenty prominent Washington policy makers appearing as guest lecturers. Required interviews, term paper, oral reports. Several meetings in Ithaca before and after intensive January session in Washington.

NTRES 406 Ecology Risk Assessment (also TOX 406)
Spring. 3 credits. Prerequisites: BIOES 261 or equivalent; permission of instructor if not an advanced student in natural sciences of engineering. M W F 11:15-12:05. Offered alternate odd years. J. W. Gillett. This course strives to develop understanding of and competence in the different types of ecological (nonhuman health) risk assessments. Focus is on cases for chemical, physical, and vector organisms in a variety of circumstances. The proposed USEPA approach under development will serve as the working model.

NTRES 407 Religion, Ethics, and the Environment
Fall. 4 credits. For juniors, seniors, and graduate students; others by permission only. S-U grades optional. S-U option. W 10:10-11:00. L. Buck, E. Fernandes, J. Lassioie, K. Mudge.
An in-depth analysis of the ecological and ethical dimensions of some of society's greatest problems and conflicts between exploitation and protection and stresses a practical understanding of how public and private values, economic considerations, and constitutional limitations affect management methods and objectives.

NTRES 410 Quantitative Methods in Wildlife Management
Spring. 3 credits. Letter grade only. Prerequisites: NTRES 210 and NTRES 305. Lec, T R 11:15-12:05; lab, R 2:30-4:25.
An in-depth analysis of the ecological and quantitative dimensions for decision making in modern wildlife management. This includes population and system modeling for evaluation of management decisions, and quantitative methods for adaptive management. Afternoon lab sessions will use computer-based approaches to reinforce concepts presented in lecture.

NTRES 411 Seminar in Environmental Ethics
Fall. 3 credits. For seniors, juniors and graduate students. S-U grades optional. W 1:25-4:50. J. W. Gillett. Moral concerns relative to the natural environment and agriculture. In successive years, the seminar will focus on such topics as (1) animal rights vs. ecosystem concerns, (2) natural resource management and the concept of the public interest, (3) applying environmental ethics in a democratic and pluralistic society, and (4) land use ethics.

NTRES 415 Principles and Practices of Agroforestry (also HORT 415 and CSS [SCAS] 415)
Fall. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option. M, W F 10:10-11:00. L. Buck, E. Fernandes, J. Lassioie, K. Mudge.
An introduction to modern and traditional agroforestry systems which involves spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and non-woody components of agroforestry systems are considered, based on above and below ground processes. The sustainability of agroforestry systems will be critically examined from biophysical, socioeconomic, and policy perspectives. Optional laboratory, NTRES 416 (also CSS and HORT).

NTRES 416 Principles and Practices of Agroforestry—Laboratory (also HORT 416 and CSS [SCAS] 416)
Fall. 1 credit. Optional lab component of NTRES 415 (also HORT and CSS [SCAS]). S-U grades optional. Prerequisites: junior, senior, or graduate standing or permission of instructor; prior or concurrent enrollment in NTRES 415. W 1:25-4:25. J. Lassioie, K. Mudge, E. Fernandes, L. Buck.
An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management skills applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, use of computer-based sources of information, and practical skills.
with woody plants including identification, propagation, planting, pruning, and measurement.

NTRES 417 Wetland Resources
Summer. 2 credits. Prerequisite: 1 year of college biology. June 25-July 5. A special 1-week course at Cornell's Shallows Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,000.
An examination of coastal and adjacent freshwater wetlands from historical, disturbance, and preservation perspectives, including fresh and salt water-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

NTRES 418 Wetland Ecology and Management-Lecture
Fall. 3 credits. T R 1:25-2:40. B. L. Bedford. Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on principles required to understand how human impacts affect wetlands. Current regulations, protection programs, and management strategies are considered.

NTRES 419 Wetland Ecology and Management-Laboratory
Fall. 1 credit. Optional. Concurrent enrollment in NTRES 418 is required. W or R 10:10-11:15. 1 weekend field trip required. An integrated set of laboratory field exercises designed to expose students to: (a) the diversity of wetland ecosystems; (b) the vegetation, soils, water chemistry, and hydrology of wetlands in the region; (c) methods of sampling wetlands vegetation, soils, and water; and (d) methods of wetland identification and delineation.

NTRES 420 Ecological Management of Water Resources
Spring. 3 credits. Prerequisites: introductory ecology and introductory chemistry or permission of instructor. MWF 9:05-9:55. R. Schneider. In-depth analysis of those ecological and biological principles relevant to the management of fresh and marine water resources, with emphasis on the effects of water management on community ecology. Lectures and discussion will integrate scientific literature with current management issues. Topics include: linkages between hydrologic variability and groundwater-surface connections, flow paths for dispersal, patchily distributed water resources, and water quality controls on organisms.

NTRES 428 Landscape Impact Analysis
Spring. 3 credits. Prerequisites: 1 introductory and 1 advanced course in ecology or the equivalents, and junior standing. T R 1:25-2:40. B. L. Bedford. This course presents ecological concepts and analytical tools needed to evaluate environmental impacts to natural resources and ecosystems within an integrated context that incorporates the land use in which these resources occur. It explores diverse conceptual frameworks for landscape impact analysis and exposes students to modern tools for evaluating landscapes.

NTRES 438 Fishery Management
Introduction to management as an adaptive process that focuses on achievement of goals. Coverage includes sport and commercial fisheries and species restoration. Topics include setting goals and objectives, regulations, habitat management, population control, stocking, and management of trout, reservoirs, the Great Lakes and Pacific halibut. Ecological, social, political, and economic aspects of those topics are discussed.

NTRES 442 Techniques in Fishery Science
Fall. 5 credits. Limited to 15 upperclass and graduate fishery students. Cost of field trips, no more than $30. Offered alternate years. T R 1:25-4:25, 2 or more weekend field trips and 1 mid-week field trip. C. C. Krueger. Emphasis is on methods for collecting and analyzing data from fish populations and their habitats. Topics include passive and active fish-capture methods, tagging and marking, and physical-chemistry and habitat measurements. Assumptions and limitations inherent in data sets, research planning, and scientific report writing are also discussed. Several field trips provide hands-on experience in data collection on streams and lakes.

NTRES 450 Conservation Biology
Fall. 3 credits. Prerequisite: a reasonable biology background. Limited to first 30 seniors, plus graduate students. Lec, T 10:10-12:05, disc, R 10:10 or 11:15. T. A. Gavin. Emphasis will be on biological topics that are important to the maintenance of biological diversity. Examples include population viability analysis, and the analysis of the demography and genetics of small populations as they are affected by habitat fragmentation and isolation. Students will gain thorough familiarity with these concepts and their potential application through lectures, discussion, and use of computer models. This course is intended primarily for students with a background in college biology. Students with no college biology background should enroll in BIOS 257.

NTRES 456 Stream Ecology (also ENTOM 456, BIOES 456)
Spring. 4 credits. Limited to 60 students. Prerequisites: none; BIOES 261 recommended. Offered alternate years. Lec T R 9:05-9:55, lab T W or R 1:25-4:25. B. Peckarsky.
Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, and habitat formation. Fish community structure, nutrient cycling, trophic dynamics, colonization and succession, community dynamics, conservation and the impacts of disturbances. Lab: A project includes descriptive analytical techniques and hypothesis-testing related to environmental assessment.

NTRES 458 Human Dimensions of Natural Resource Management
Spring. 3 credits. S-U grades optional. Limited to juniors and seniors. Lec, T R 11:40-12:55. B. L. Bedford. This course focuses on how a social science-based understanding of human attitudes, values, and behaviors can be incorporated in natural resource management decisions and actions. Examples from federal, state, and nongovernmental fish, wildlife, and forest management programs are used to illustrate the importance of social-economic considerations in problem solving and decision making.

NTRES 459 Techniques for Demographic Analysis of Wildlife Population
Fall. 3 credits. Letter grade only. Prerequisites: CAI210 or permission of instructor. Lec, T R 11:25-12:15 P.M., lab, W 1:25-4:25 P.M. Next offered fall 2001. E. Cooch.
This course will explore the theory and application of a variety of statistical techniques in the study of population dynamics. We will cover the use of capture-recapture and recovery analysis to estimate survival probability, abundance (and density), immigration, emigration, population change (lambda), and sensitivity analysis using open and closed population models. We will also examine inference methods including covariate analysis and model selection.

NTRES 460 Quantitative Ecology of Fisheries Resources
Spring. 3 credits. S-U grades optional. Prerequisites: NTRES 442 recommended or permission of instructor. MWF 10:10-11:00. Offered alternate even years. Next offered spring 2002. P. J. Sullivan. The dynamics of marine and freshwater fisheries resources are examined with a view towards observation, analysis, and decision making within a quantitative framework. Growing pressure on fisheries resources, habitat modification, and increased uncertainty about the nature of biological systems are at the center of many fisheries' issues. Quantitative models are useful for integrating information needed by decision makers in addressing these issues. The course develops analytical methods to assess population dynamics and status of fisheries' resources and then demonstrates how the information may be transformed into useful information for decision makers.

NTRES 471 Management of Terrestrial Habitats
Spring or summer. 2 credits. Prerequisites: NTRES 210, 305, recommended; junior standing or above. Lec/lab, W 1:25-4:25. Offered alternate odd years. C. R. Smith.
A landscape ecological approach will be used to introduce students to habitat concept and to methods of inventorying, measuring, monitoring, describing, classifying, and restoring terrestrial habitats at a variety of temporal and spatial scales. Field trips will be taken to areas managed by both public and private land management organizations. An introduction to use of the Global Positioning System (GPS) is included.

NTRES 493 Individual Study in Resource Policy, Management, and Human Dimensions
Fall, spring, or winter. Credit TBA. S-U grades optional. Prerequisite: permission of instructor. R. A. Baer, T. Brown, L. E. Buck, D. J. Decker, J. Gillett, R. Knauf, R. McNeil, J. Schelhas. Topics in environmental and natural resource policy, management, and human dimensions are arranged depending on the interests of students and availability of staff. Students must
register with an Independent Study form (available in 140 Roberts Hall).

**NTRES 494 Special Topics in Natural Resources**

Topics in fish and wildlife biology and management are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

**NTRES 496 Individual Study in Fish and Wildlife Biology and Management**

Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of instructor. B. Bedford, B. Blosser, T. Fahey, M. Krasny, J. Lassoie, R. Schneider, R. Sherman, P. Smullldge, J. Yavitt.

Topics in ecology and management of landscapes are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

**NTRES 498 Teaching in Natural Resources**

Fall and spring. 1–4 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Course designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students will gain insight into the organization, preparation, and execution of course plans through application and discussions with instructor.

**NTRES 500 Professional Projects—M.P.S.**

Fall and spring. Credit TBA. Limited to graduates students working on professional master's projects. S-U grades only.

**NTRES 507 Environmental Inquiry (also EDUC 507)**

Summer. 1–3 credits (V). S-U grades optional. Prerequisite: limited to preservice or inservice secondary science teachers. Permission of one of the instructors required. W. Carlsen and M. E. Krasny.

Exploration of selected topics in environmental science and environmental science education at the secondary school level. The subject-matter focus will vary from year to year, and will track ongoing research and development conducted through Cornell's Environmental Inquiry project, a collaboration between the Departments of Education and Natural Resources and the Center for the Environment. Current work centers on watershed dynamics, biodegradation, environmental toxicology, and invasive species.

**NTRES 601 Seminar on Selected Topics in Natural Resources**

Fall or spring. 1 credit. S-U grades only. T 3:35–4:25; disc sec. T 4:30–5:00. Selected readings and discussions of research and/or current problems in natural resources.

**NTRES 604 Seminar on Selected Topics in Resource Policy and Management**

Fall. 2 credits. S-U grades only. M 3:00–4:30. Not offered in 2000–2001. Primarily for graduate students with a major or minor in resource policy and management and upper level undergraduates with a strong interest in resource policy analysis. Topics include the policy process, actors and stakeholders, legal and economic tools, and evaluation. Emphasis is placed on discussion, faculty-student interaction, communication skills, and current resource policy issues.

**NTRES 606 Ecotoxicology (also TOX 607)**

Spring. 3 credits. Prerequisites: graduate or senior status and two 300-level courses in chemistry, biological science, or toxicology. M W F 11:15–12:05. Offered alternate even years. Next offered spring 2002. J. W. Gillett.

Lectures, readings, and special guests focus on the principles of toxic chemicals on natural ecosystems, their components, and processes. Major topics include fate and transport of chemicals (chemodynamics), comparative biochemical toxicology, ecosystem simulation through mathematical and physical (microcosm) models, and relationships to regulation and environmental management.

**NTRES 610 Introduction to Chemical and Environmental Toxicology (also Toxicology 610)**

Fall. 3 credits. Prerequisites: biochemistry and animal physiology. Letter grade only. M W F 11:15–12:05. J. W. Gillett.

Introduction to the basic concepts of toxicology, exposure and biological responses to toxicants, methods of assessing toxicity, factors affecting specific toxic actions, and environmental impact of toxicants. Prerequisites: consent of instructor.

**NTRES 612 Wildlife Science Seminar**

Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades only.

Check with department for availability. Discussion of individual research or current problems in wildlife science.

**NTRES 615 Case Studies and Special Topics in Agroforestry**

Spring. 2 credits. Prerequisites: NTRES/CSS/HORT 415 or permission of instructor. S-U grades optional. W 1:25–4:25.

L. E. Buck; J. P. Lassoie.

Interdisciplinary group of students examine case studies of agroforestry practice and research in developed and developing countries. Key current topics in the field are examined in depth, through lecture presentations, library research, and class discussion. Students prepare individual or team-written original case studies or critical analyses of existing case studies for presentation to class.

**NTRES 616 Forest Science and Management Seminar**

Fall and spring. 1 credit. Permission of instructor. S-U grades only. Check with department for availability.

**NTRES 618 Critical Issues in Conservation and Sustainable Development**

Fall. 3 credits. Preference to graduate students with minor in conservation and sustainable development; seniors by permission. Limited to 30 students. T R 2:30–4:25.

Establishes a conceptual foundation for analyzing and addressing conservation and development issues from an interdisciplinary perspective. Engages students in the inherent conflicts between natural resource conservation and rural development. Students work in interdisciplinary groups to analyze issues and cases from both developing and developed countries.

**NTRES 619 Field Practicum in Conservation and Sustainable Development**

Spring. 3 credits. Prerequisites: NTRES 618; preference given to graduate students with minor in conservation and sustainable development; permission of instructor. Limited to 12 students. Includes 2-week field study trip to a Latin American country in January.

An interdisciplinary study of a conservation and development problem in Latin America. The course will use an interdisciplinary research methodology that includes group problem identification, individual or rapid appraisal projects, and synthesis of group work to identify key conservation and development issues and research priorities for a selected site.

**NTRES 659 Techniques for Demographic Analysis of Wildlife Population**

Fall. 3 credits. Letter grade only. Prerequisites: CALS math requirements or permission of instructor. Lec, T R 1:25–2:15 p.m.; lab, W 1:25–4:25 p.m. Next offered fall 2001. E. Cooch.

This course will explore the theory and application of a variety of statistical techniques in the study of population dynamics. We will cover the use of capture-recapture and recovery analysis to estimate survival, growth, probability, abundance (and density), immigration, emigration, population change (lambda), and sensitivity analysis using open and closed population models. We will also examine inference methods including covariate analysis and model selection. Students enrolling for graduate credit will do extra work beyond that expected for undergraduates in the 400-level course (NTRES 459).

**NTRES 660 Quantitative Ecology of Fisheries Resources**

Spring. 3 credits. S-U grades optional. Prerequisites: NTRES 304 recommended or permission of instructor. M W F 10:10–11:00. Offered alternate even years. Next offered spring 2002. P. J. Sullivan.

This course is taught in conjunction with NTRES 460 (see description above). Students taking the course for graduate credit will be asked, in addition to the 400-level projects and homework, to construct and document a model of population or community dynamics that reflects and extends the concepts covered in the course.
PLANT BREEDING 105

Physical Sciences (ABEN 435, 475; CSS and EAS (SCS) 260, 321, 365, 371, 483; GEOG 102, 104; CEE 452)
Public Policy and Politics (GOVT 427, 428; BIO & SOC 461; CEE 529)
Resource Economics (ARME 100, 250, 450, 451; ECON 409)
Spatial Data Interpretation (CSS (SCS) 420, 461, 620, 660)

PLANT BREEDING

E. D. Earle, chair; W. R. Coffman; W. De Jong; S. Kresovich; M. M. Jahn; S. R. McCouch; M. A. Mutschler; K. V. Raman; M. E. Smith; M. E. Sorrells; S. D. Tanksley; D. R. Viands
Emeritus Professors: R. E. Anderson, H. L. Everett, H. M. Munger, R. R. Murphy, W. D. Farde, L. R. Plaisted and D. H. Wallace
Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PL BR 201 Plants, Genes, and Global Food Production
Spring. 2 credits. Prerequisite: 1 year of introductory biology or permission of instructor. Lecs. T R 11:15. S. R. McCouch
This course provides an introduction to plant breeding. It offers a sense of the historical and social role of plants in human food production systems. It also covers recent advances in molecular biology, to plant genetic improvement methods by discussing the history and current practice of plant breeding, tools available to breeders, choices and modifications of those tools to meet specific objectives, and challenges plant breeders face in developing varieties for the future.

PL BR 404 Genetic Diversity Laboratory
Spring. 1 credit. S-U only. Prerequisites: a course in genetics, plant breeding, or permission of instructor. T R 9:05-9:55. S. Kresovich
This course explores the structure of genetic variation within a species and how it ultimately may be maintained and utilized. Case studies representing organisms of biological interest and agricultural importance are employed to highlight biological and genetic theories, technologies, and approaches essential to conservation genetics and the improvement of crop and animal species. In complement, underlying ethical, legal, and social issues affecting conservation and use of genetic diversity are addressed.

PL BR 446 Plant Cytogenetics Laboratory
Spring. 1 credit. S-U only. Prerequisites: a course in genetics or permission of instructor. Will be offered as a 2-week module at a time to be arranged in Spring 2001. Check with department for further information. K. N. Watanabe
This course aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasis is on applications to research in plant genetics and plant breeding. Plant material will include a wide range of crop species. Basic techniques for examination of plant chromosomes are covered.

PL BR 494 Special Topics in Plant Breeding
Fall or spring. 4 credits maximum. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee and the same course will not be offered more than twice under this number.

PL BR 496 Internship in Plant Breeding
Fall or spring. Credits variable, may be repeated to a maximum of 6. Minimum of 60 on-the-job hours per credit granted. Prerequisites: permission of adviser and enrollment during the pre-enrollment period of the semester before the internship. Student must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a "CALS/Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their credits and grade. S-U grades only. Staff. On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting.

Related Courses in Other Departments
Courses in many other departments are relevant to students majoring in Natural Resources. The following list includes some of the most closely related courses but is not exhaustive.

Environment and Society (R SOC 208, 324, 340, 410, 440, 450)
Environmental Law, Ethics, and Philosophy (SOCJS 200, CRP 451; PHIL 241, 246, 247, 381)
Human Systems and Communication (COMM 260, 285, 352, 421)
PL BR 497 Individual Study in Plant Breeding  
Fall or spring. Credits variable. May be repeated to a maximum of 6 S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

PL BR 498 Undergraduate Teaching  
Fall or spring. Credits variable. May be repeated to a maximum of 6 S-U optional. Prerequisite: permission of instructor, and previous enrollment in course to be taught or equivalent. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PL BR 499 Undergraduate Research  
Fall or spring. Credits variable. S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Undergraduate research projects in plant breeding.

PL BR 604 Methods of Plant Breeding Laboratory  
Fall. 2 credits. Prerequisite: PL BR 403 or equivalent (may be taken concurrently). T R 1:25-4:15. M. E. Sorrells and R. E. Anderson.

Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and evaluation techniques, and variety and germplasm release. Additional labs include use of computers in plant breeding research and selection techniques for disease resistance. For a term project each student designs a comprehensive breeding program on a chosen crop.

PL BR 606 Advanced Plant Genetics  
Spring (Grades optional). Prerequisites: BIOGD 281, or equivalent. Lecs, T R 1:25-2:40. M. M. Jahn.

This course provides an advanced survey of genetics in higher plants. Topics include genetic analysis of developmental and metabolic processes, cytogenetics, mating behavior and barriers, and aspects of population and quantitative genetics.

PL BR 607 Analysis of Sequence Similarity  
Fall. 1 credit. Enrollment limited. S-U or letter grades optional. Prerequisites: basic biology, basic genetics, familiarity with computers. Permission of instructor required. 3 times a week for 4 weeks. Times TBA. Check with Plant Breeding Office for details. A. Baldo and S. McGuire.

This course will focus on the tools available for accessing nucleotide and protein sequence similarity in plants, animals, and microbes and the strengths and limitations of these approaches for answering biological questions. The mathematical and statistical background of the algorithms will be presented in lectures and weekly on-line projects will provide students with experience in addressing a range of biological problems involving sequence analysis.

PL BR 608 Comparative Genomics  

This course will emphasize how to access and integrate different types and sources of data using computer databases and a variety of querying mechanisms. Students will learn to integrate information derived from analysis of phenotypes, biochemical and metabolic pathways, DNA sequences, and genetic and physical maps using plant genome databases, and a variety of software packages.

PL BR 610 Advanced Plant Breeding Methods  
Spring. 3 credits. Prerequisites: PL BR 403 or equivalent. BIOGD 281, or equivalent. M W F 12:20-1:10. M. Mutschler.

This course integrates information from a variety of disciplines to examine current issues in plant breeding. Topics covered include: issues surrounding the maintenance, selection, and use of germplasm resources; traditional plant breeding methods used for a variety of crops; integration of biochemical and molecular techniques into an applied breeding program; the commercial aspects of plant breeding program on a chosen crop; and breeding for pest resistance.

PL BR 616 Breeding for Pest Resistance  
Fall. 2 credits. S-U grades optional. Prerequisites: BIOGD 281 and PL BR 403 or equivalents. M W F 2:30-3:20. Offered alternate years. P. Griffiths.

A multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics covered include national and international germplasm collections, identification of sources of resistance, resistance mechanisms in plants, monogenic and polygenic control of resistance, approaches for resistance, stability of genetic resistance mechanisms, and the use of biochemical, physiological, and molecular tools in breeding for pest resistance.

PL BR 622 Seminar  
Fall or spring. 1 credit. S-U grades only. T R 12:20-1:10. Staff and graduate students.

PL BR 650 Special Problems in Research and Teaching  
Fall or spring. 2 or more credits. Prerequisite: permission of instructor supervising the research or teaching. Staff.

PL BR 653.2 Plant Biotechnology (also PL PA 663 and BIO PL 653.2)  
Fall. 1 credit. S-U grades optional. Prerequisite: BIO PL 655.1 or permission of instructor. Lecs, M W F 1:25-2:15 (12 lecs) Sept. 27-Oct. 25. E. D. Earle and M. Zaitlin.

This course deals with production and use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

PL BR 653.3 Plant Genome Organization (also BIO PL 653.3)  

The structure and variation of plant nuclear genomes, including chromosome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing, and comparative genomics.

PL BR 653.6 Molecular Breeding and Genetic Diversity (also BIO PL 653.6)  

Application of DNA markers to the evaluation of genetic diversity in natural populations and germplasm collection as well as the identification, manipulation, and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students will learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs. Strategies for the use of DNA polymorphisms in the management of genetic resources will also be taught.

PL BR 694 Special Topics in Plant Breeding  
Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches “trial” courses under this number. Offers vary by semester, and will be advertised as course offerings. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

PL BR 716 Perspectives in Plant Breeding Strategies  

M. E. Sorrells. Emphasis is on discussion and evaluation of selected seminal papers and current literature. Selection of topics, objectives, methods, and strategies for both self- and cross-pollinated crops are reviewed and discussed. Extensive outside reading is required.

PL BR 717 Quantitative Genetics in Plant Breeding  

Discussion about quantitative genetics and quantitative trait loci (QTLs) for more efficient plant breeding. Specific topics include components of variance (estimated from various mating designs); theory and computer analysis for QTL, population structure, multiple locus regressions, and interval analysis; heritability; theoretical gain from selection; and genotypic and phenotypic correlation coefficients. During one period, plants in the greenhouse will be evaluated to provide data for computing quantitative genetic parameters.
PL BR 800 Master's-Level Thesis Research
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
For students working on a master's thesis.

PL BR 900 Graduate-Level Dissertation
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
For students in a Ph.D. program only before the "A" exam has been passed.

PL BR 970 Doctoral-Level Dissertation Research
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
For students admitted to candidacy after the "A" exam has been passed.

PLANT PATHOLOGY

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PL PA 101 Freshman Writing Seminar: Pests, Pesticides, People, and Politics
Spring. 3 credits. Limited to 17 students. Lecs, M W F 8:00. Offered spring 2001. P. A. Arneson.
This seminar examines the use of pesticides, their impact on human health and the environment, and their regulation. Beginning with Rachel Carson's classic Silent Spring, we will examine many facets of the pesticide controversy through readings in current popular literature, technical journals, government documents, industry propaganda, and publications of various so-called "public interest groups." We will emphasize the need for critical thinking as we explore the power of the written word to persuade.

PL PA 102 Freshman Writing Seminar: Environmental Issues and the Changing Global Climate
Fall. 3 credits. Limited to 17 students. Lecs, T R 8:40. Not offered fall 2000.
This seminar provides an opportunity to learn more about the global, social, and political impact of environmental issues on scales ranging from local to global. Readings, discussions, and some hands-on experience will provide subjects for a seminar designed to teach writing at all levels of simple sentences to term papers.

PL PA 201 Magical Mushrooms, Mischievous Molds
Spring. 2 credits. S-U optional. Lecs, T R 11:15. G. W. Hudler.
A presentation of the fungi and their roles in nature and in shaping our past and present civilizations. The historical and practical significance of fungi as decomposers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals are emphasized.

PL PA 241 Plant Diseases and Disease Management
Spring. 4 credits. Prerequisite: one year of biology. Lecs, M W F 11:15; lab, T or W 1:25. W. E. Fry.
An introduction to plant diseases, their diagnosis, and their management. Topics covered include fungi, bacteria, viruses, nematodes, and viruses. Plant pathogen life cycles, plant disease epidemiology, disease forecasting, and the principles and practices of plant disease management. This course is intended for students who want a practical knowledge of plant diseases and their control. It is not an adequate prerequisite for plant pathology courses numbered 600 and above.

PL PA 309 Introductory Mycology
Fall. 3 credits. Prerequisite: a year of biology or equivalent. Concurrent registration in PL PA 319 is recommended. Lecs, T R 9:05-9:55; labs, R 1:25-4:25. J. R. Aist.
An introduction to fungi, emphasizing biology, comparative morphology, and taxonomy.

PL PA 319 Field Mycology
Learn to identify mushrooms and other macrofungi and microfungi. Autumn field trips followed by evening lab sessions. Fungi are collected during field trips to sites in the Ithaca area. In the evenings, students learn to use technical field keys and to identify the fungi and learn about the ecology and biology of these enigmatic organisms. The course runs only for the first eight Wednesday of the semester. Grades are based on a collection project and a final laboratory examination.

PL PA 401 Basic Plant Pathology
Fall. 4 credits. Prerequisite: 1 year of biology and BIO PL 241 or equivalent. Recommended: general microbiology, plant physiology. Lecs, T R 11:15, F 12:20, lab, T or W 1:25. Not offered fall 2000. Principles and practice of plant pathology. Lectures and discussions are coordinated to consider types of plant pathology and their population dynamics, disease cycles, diagnostic criteria and procedures, mechanisms of pathogen attack and plant defense, vector relationships, epidemiology, disease forecasting, loss assessment, and disease control. This course prepares students for graduate-level work in plant pathology.

PL PA 407 Nature of Sensing and Response (also BIO G 407)
Spring. 3 credits. Prerequisites: BIO BM 350 or 353 or 531 and previous or concurrent registration in 332. Recommended: BIO GD 281. Lecs, T R 10:10-11:25. T. P. Delaney.
The responses of organisms and cells to their surroundings are examined to illustrate how biological systems both autonomic and abiotic environment and communicate sensing into appropriate responses. A wide variety of response systems will be explored to identify their unique features and to illustrate how similar processes are utilized by widely divergent organisms. Examples are drawn from prokaryote, plant and animal systems for environmental sensing, control of development and responses during disease. Discussion will also examine the role of genetics and biochemistry in understanding signal transduction pathways, as well as the way these systems are perturbed by mutation and disease.

PL PA 411 Plant Disease Diagnosis
Fall. 3 credits. Limited to 18 students. Prerequisites: PL PA 241 or equivalent and permission of instructor. Lecs, T R 10:10; lab T R 1:25-4:25. Alternate years. Next offered fall 2001. G. W. Hudler.
A method of diagnosing plant diseases caused by infectious and noninfectious agents is taught with emphasis on application of contemporary laboratory techniques and effective use of the literature. After seven weeks of formal lecture and laboratory sessions, students will spend the rest of the semester working on their own to determine the causes of plant diseases on samples that have either been received by the Plant Disease Diagnostic Lab or that have been prepared by instructors.

PL PA 443 Pathology and Entomology of Trees and Shrubs (also ENTOM 443)
Fall. 4 credits. Limited to 30 students. Prerequisites: PL PA 241 or equivalent, ENTOM 212 or 213, or equivalent. Lecs, M W F 11:15; lab F 1:25-4:25. Offered alternate years. G. W. Hudler, P. A. Weston.
For students preparing for careers in horticulture, urban forestry, natural resources, and pest management. Deals with identification, impact, assessment, biology, and management of insects and diseases that damage trees and shrubs. Emphasis is on pests of northeastern flora but examples from other parts of the country and the world are also used. Forest, shade, and ornamental plants are considered.

PL PA 444 Integrated Pest Management (also ENTOM 444)
Fall. 4 credits. Prerequisites: BIO ES 261, ENTOM 212 or 241, or PL PA 241 or their equivalents or permission of instructor. P. A. Arneson and J. Losey.
Lectures integrate the principles of pest control, ecology, and economics in the management across multiple systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

PL PA 472 Microbial Control of Plant Diseases
Spring. 3 credits. Limited to 20 students. Prerequisites: PL PA 241 or PL PA 401, BIOMI 290, or equivalent. Lecs, M W F 9:05-9:55; E. B. Nelson.
This course is intended to provide students with a broad exposure to the field of biological disease control. The basic ecological and molecular concepts and principles underlying microbial interactions with plants, as well as plant pathogens, and the role of these interactions in the suppression of fungal and bacterial diseases will be discussed. Emphasis will be placed equally on biological disease control in rhizosphere and phylloplane habitats. Topics will address aspects of root and leaf microbial ecology, plant pathogen ecology and behavior, ecological and molecular mechanisms of biological disease control, and manipulation and enhancement of biological control processes. Applied aspects such as delivery approaches, commercialization and registration of biological control organisms, and implementation of biological disease control practices in agriculture will also be covered.
PL PA 494 Special Topics in Plant Pathology
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL PA 497 Independent Study
Fall or spring. 1–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

PL PA 498 Teaching Experience
Fall or spring. 1–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

PL PA 499 Undergraduate Research
Fall or spring. 3–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
An opportunity for research experience under the direction of a faculty member.

PL PA 642-661 Special Topics Series
Unless otherwise indicated, the following description applies to courses 642-661. Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only.
Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PL PA 644 Ecology of Soil-Borne Pathogens

PL PA 645 Plant Virology

PL PA 647 Bacterial Plant Diseases
Fall and spring. M 9:05. S. V. Beer.
Emphasizes current research in phytopathology undertaken in laboratories at Cornell.

PL PA 648 Molecular Plant Pathology

PL PA 649 Mycology Conferences
Fall. 1 credit. TBA. K. T. Hodge.

PL PA 650 Diseases of Vegetable Crops
Fall. TBA. Hours TBA. J. W. Lorbeer and T. A. Zitter.

PL PA 652 Field Crop Pathology
Spring. W 8:00. G. C. Bergstrom.

PL PA 654 Diseases of Florist Crops

PL PA 655 Integrated Pest Management in Tropical Agriculture (also ENTOM 644)

PL PA 661 Diagnostic Lab Experience
Summer and fall. 1 or 2 credits. S-U grades only. Requires 3 hrs/wk per credit hour. 2 hours TBA or M. G. Milgroom.

PL PA 662 Molecular Plant-Pathogen Interactions
T. P. Delaney, A. R. Collmer.

PL PA 663 Plant Molecular Biology
Fall. 1–5 credit. Prerequisites: BIO GS 281, BIO BM 350 or 351.

Section 01 Concepts and Techniques in Plant Molecular Biology (BIO PL 653.1)

Section 02 Plant Biotechnology (BIO PL 653.2)

PL PA 701 Concepts of Plant Pathology: Organismal Aspects
Spring. 3 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent and permission of instructor. Lecs., T R 9:05; lab/disc., R 2–4:25. A. S. Galland.

Concepts in host-pathogen relationships with emphasis on roles of molecules and cells in determining the outcome of an interaction. Genetic, molecular biological, physiological, and cell biological approaches to experimental analysis of examples of host-pathogen systems are considered. Historical perspectives and recent research are reviewed and analyzed. Students prepare and review mock grant proposals.

PL PA 702 Concepts of Plant Pathology: Population Aspects
Fall. 3 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or permission of instructor. Some background in statistics is recommended.

Theory and concepts in plant disease epidemiology and population biology of plant pathogens. Topics include: population dynamics of pathogens in time and space, interactions of pathogen and plant populations, and population genetics of pathogens. The discussion section is used for examining current plant pathology literature and other exercises complementary to lecture material.

PL PA 705 Phytovirology
Fall. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent or permission of instructor. Not offered 2000–2001.
The course deals with plant-parasitic and plant-associated nematodes, their biology, morphology and systematics; ecology and role in ecosystem health; physiology and molecular aspects of nematode-plant interactions; population dynamics; interactions with other plant pathogens; and management options. Bioengineering, breeding for resistance, genetic mechanisms of host resistance, biological control, and technical methods of handling nematodes will also be covered. Emphasis will be placed on the nematode as an animal system.

PL PA 706 Phytonematology
Fall. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent or permission of instructor. Not offered 2000–2001.
The course deals with plant-parasitic and plant-associated nematodes, their biology, morphology and systematics; ecology and role in ecosystem health; physiology and molecular aspects of nematode-plant interactions; population dynamics; interactions with other plant pathogens; and management options. Bioengineering, breeding for resistance, genetic mechanisms of host resistance, biological control, and technical methods of handling nematodes will also be covered. Emphasis will be placed on the nematode as an animal system.

PL PA 707 Phytobacteriology
Fall. 2 credits. Prerequisites: general microbiology, lectures and laboratory; introductory plant pathology. Offered alternate years. S. V. Beer.
A consideration of the prokaryotes that cause disease in plants and examples of the diseases they cause. The course emphasizes properties of bacterial pathogenesis, management of plant diseases, methods for manipulation of the pathogens, and recent developments in phytophthora. The current state of
knowledge of important phytopathogenic genera including their genetics and mechanisms of pathogenesis is reviewed. Laboratory practice in isolation, inoculation, identification, genetics, and physiology is included.

PL PA 709 Phytomycology
Spring. 2 credits. For graduate students with a minor or major in plant pathology or mycology; others by permission. Prerequisites: PL PA 401 and 309 or equivalents, or permission of instructor. Lec. F 1:25-2:30; lab. 2:30-4:30. Not offered 2001. J. W. Lorber.
Provides basic information on the biology of plant pathogenic fungi with emphasis on the structure, ecology, genetics, life cycles, and disease cycles of representative genera and species.

PL PA 715 Phytopathology Laboratory
Spring. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. S-U grades only. Not offered spring 2000. S. G. Lazarowitz.

PL PA 738 Genetics and Development of Filamentous Fungi
Fall. 2 credits. Prerequisite: BIOG 241 or equivalent. Hours TBA. Next offered 2001–2002. B. C. Yoder. Molecular genetic and genomic approaches to the study of fungal biology. Applications of contemporary methodology to genetic dissection of developmental processes, such as plant pathogenesis (including host and tissue specificity) and reproduction, both sexual and asexual, are described. Experimental evidence supporting various hypotheses to explain fungal pathogenicity is evaluated. Examples are chosen from investigations of model plant pathogenic fungi such as Cochliobolus heterostrophus, Magnaporthe grisea, and Ustilago maydis and from well-known genetic models such as Aspergillus nidulans and Neurospora crassa.

PL PA 739 Advanced Mycology
Spring. 4 credits. Prerequisites: PL PA 309 or equivalent and permission of instructor. Offered odd-years. 1 lecture; 2 labs TBA. K. T. Hodge. Advanced-level topics in mycology, including ecology and systematics of selected fungal genera. One lecture per week introduces the week's topics; students gain hands-on experience working with and identifying fungi during two laboratory sessions. The course is aimed at students pursuing or preparing for graduate-level work in mycology.

PL PA 788 Research in Molecular Plant Pathology
Fall and spring. 2, 4, or 6 credits. Prerequisite: permission of instructor before beginning research. S-U grades only. S. V. Beer. Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in Molecular Plant Pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

PL PA 797 Special Topics
Fall or spring. 1–5 credits. S-U grades optional. An opportunity for independent study of a special topic.

PL PA 798 Graduate Teaching Experience
Fall or spring. 1–5 credits. S-U grades. Hours TBA. Graduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

PL PA 800 Master’s-Level Thesis Research
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty. For students working on a master's degree.

PL PA 900 Graduate-Level Thesis Research
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty. For doctoral candidates who have passed the "A" exam.

POMOLOGY (FRUIT SCIENCE)
See Horticulture.

RURAL SOCIOLOGY

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

R SOC 100 Indian America to 1890 (also AIS 100)
Fall. 3 credits. S-U grades. Enrollment limited to 550. W 7:30–10 p.m. R. W. Venables. Slide lectures survey the rich cultures and complex histories of the Indian nations north of Mexico. Indian arts and philosophies are compared and contrasted with those of Europe, Africa, Asia, Canada, and the United States. The origins of today's major legal issues involving American Indians are also discussed. This course begins with a survey of Indian America before Columbus and ends at Wounded Knee in 1890, the event which marks the end of the conquest of Indian America. Guest lecturers, including American Indian leaders, provide additional perspectives.

R SOC 101 Introduction to Sociology
Fall, spring, or summer. 3 credits. Enrollment limited to 300 in the fall, 400 in the spring. Lecs, T R 10:10–11:00; sec, various times. Fall, T. Hirschl; spring, staff. This course provides an introduction to theory and research in sociology. It demonstrates how the insights, theories, and methods of sociological analysis can be brought to bear on major issues of social life. A primary goal is to convey a sense of the manner in which sociologists formulate questions, and how the collection and analysis of data are used to evaluate those theories. The course will provide "hands-on" experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

R SOC 103 Self and Society (also SOC 103)
Fall. 3 credits. S-U grades. Lec. T R 1:25–2:15. M. Macy. An introduction to microsociology, focusing on social processes in small groups, including the family. Emphasis is on leadership, conformity, social influence, cooperation and competition, distributive justice, and micro analyses of interaction.

R SOC 105 Economic Sociology (also SOC 105)
Fall. 3 credits. S-U grades only. T R 11:30–12:45. C. Leuenberger. This course examines how sociologists understand the economy as a social phenomenon. The focus is on classical and contemporary theorists as well as empirical studies in economic sociology. We will study the impact of the dynamics of capitalism and globalization on social life and how the economic organization of society can be related to religion, culture, and concepts of leisure. We will also investigate areas in which people interact with the economy on a daily basis: in selling, shopping, and consuming.

R SOC 175 Indian America in the Twentieth Century (also AIS 175)
Spring. S-U grades. Enrollment limited to 125. Lec. M W 10:10–11:00, sec, various times. B. Baker. This course addresses major U.S. policies affecting American Indians in the twentieth century, and ways in which American Indians pursued strategies to sway the process of social change. American Indian political, economic, and cultural issues are examined through history, literature, music/art, and film/documentary. The approach of this course is interdisciplinary and an emphasis is placed on the study of American Indians as living cultures. Current trends are discussed, and the implications for American Indians in the twenty-first century are explored. Guest lecturers, including American Indian scholars, leaders, and activists, provide additional perspectives.

R SOC 200 Social Problems (also SOC 200)
Fall. 3 credits. S-U grades optional. Enrollment limited to 100. T R 10:10–11:25. Not offered fall 2000. T. A. Hirschl. This course investigates a variety of current social problems from a sociological perspective. The course begins with an overview of sociological theories that may account for social problems and identifies common as well as competing elements of these theories. The theoretical framework is then applied to analyze a variety of social problems, which may vary semester to semester. Examples of social problems are homelessness, teenage pregnancy, deindustrialization, and homicide; among others. Emphasis in the course will be given to how social problems are measured,
This course provides an introduction to the relationships between demographic processes (fertility, mortality, and migration) and social lines. Discussion will cover special topics related to population growth and distribution, including marriage and family formation, labor force participation, urban growth and urbanization, resource allocation, and the environment.

[R SOC 202 Religion and Family in the United States (also SOC 201)]

Fall. 3 credits. S-U optional. Lec, M W 2:55–4:10. Not offered fall 2000. P. Becker. This course will examine how two fundamental social institutions—religion and the family—are interlinked in American society. As recently as the 1950s, religious institutions were organized around the needs of one dominant family form, the male-breadwinner family with a stay-at-home mother. But since the 1950s, that family form is no longer statistically dominant and is culturally normative. How do religious beliefs influence behavior within families like the raising of children? How do religious groups foster ideal family life, or influence our beliefs about what are “good” families? How do people’s family experiences and family values influence their participation in organized religion? We will begin to answer these questions by drawing on readings that explore the religion-family link in a variety of ethnic and social class contexts within the contemporary United States.

[R SOC 205 International Development (also SOC 206)]

Spring. 3 credits. Enrollment limited to 74. Lec, M W F 10:10–11:00. Staff. New questions concerning development models in the post-Cold War era are examined from a comparative and global perspective on North-South relations. While the focus is the Third World, the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, we examine Southern societies (economies, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. We will also examine the new social movements, such as environmentalism, feminism, and grass roots activism.

[R SOC 206 Gender and Society (also WOMNS 206)]

Spring. 3 credits. Enrollment limited to 100. Lec, M W F 11:15–12:05, sec, various times. B. Weinert. Course will familiarize students with origin of gender hierarchies, social and behavioral similarities/differences between females and males, and the development that biological, psychoanalytic, psychological and sociological perspectives help to understand the differences. United States and cross-cultural comparisons of the consequences of gender inequality will be a major focus of the course. Objectives will be met through lectures, readings, films, participant observation, and personal experiences.

[R SOC 207 Problems of Contemporary Society (also SOC 207)]

Spring. 3 credits. S-U grades optional. Lec, T R 8:40–9:55. D. Heckathom. This course examines contemporary social problems, with a focus on their sources in the organization of industrial societies. Organizations are based on three fundamental types of institutions—social norms, hierarchies, and markets. Each is subject to distinctive types of failures resulting in problems that include poverty, prejudice and discrimination, intolerance and hate, alcohol and drug abuse, physical and mental illness, crime and delinquency, and urban problems. In analyzing these problems, we emphasize the institutional framework within which they are created and perpetuated, and the forms of institutional change required to address them.

[R SOC 208 Technology and Society]

Fall. 3 credits. Offered odd years. Next offered fall 2001. M W F 10:10–11:00. C. C. Geisler. The relationship between technology and society is among the most pervasive concerns of our time. Ultimately, what makes a technology useful or “appropriate” is a sociological question. Lectures and readings review classical debates regarding technology and society. Herein, students compare high technologies and appropriate technologies, identify problems associated with technology transfer to other societies, and create a list of important criteria by which technologies are judged appropriate or inappropriate using numerous case studies.

[R SOC 209 Social Inequality (also SOC 208)]

Fall. 3 credits. S-U optional. Tr R 1:25–2:40. D. Grusky. This course examines the nature and processes of social inequality in contemporary United States, with some comparisons to other industrial societies with different educational and class structures. Readings include theoretical and empirical materials on urban inequality and stratification along race, class, and gender lines. The course includes ethnographies of schools and workplaces as well as more quantitative research.

[R SOC 213 Social Indicators, Data Management, and Analysis]

Fall. 3 credits. Offered alternate years (complement of R SOC 214). Tr R 11:40–12:55. P. R. Ebers. A survey of definitions of social indicators and general principles of social indicators research will be illustrated from data on both develop­ed and less-developed countries. Data management and analysis of measures of poverty, level of living, inequality, quality of life, etc., based on census data, household surveys, and other primary and secondary data, will be examined using personal computers.

[R SOC 214 Research Methods for the Social Sciences]

Fall. Offered every year (complement of R SOC 213). 3 credits. Enrollment limited to 25. Tr R 11:40–12:55. Not offered fall 2000 through 2001; next offered fall 2002. L. B. Williams. A number of approaches to conducting research in the social sciences will be presented. These include experimental techniques, unstructured, semi-structured, and structured interviews, experiments, and focus groups. Some statistical techniques for data analysis will be discussed. A background in elementary statistics is preferred although it is not required.

[R SOC 215 Organizations: An Introduction (also SOC 215)]

Fall. 3 credits. S-U optional. Lec, T R 10:10–11:25. Not offered fall 2000. S. Han. This is an introductory course in the study of organizations. We will start by taking a look at various examples of organizing, including a street gang in a Boston neighborhood, a minority community, industrial corporations, modern universities, Silicon Valley and Route 128, and more. Hence, a sampler. These brief glimpses serve as exercises in looking behind and beyond diverse rhetoric for common patterns in organizational phenomena. The focus of the course is on research scholarship, not the training of managers. Nonetheless, the analytical skills you acquire are applicable to work in firms, government agencies, and nonprofit organizations.

[R SOC 220 Sociology of Health of Latinos and Ethnic Minorities (also LSP 220)]

Fall. 3 credits. S-U grades optional. Enrollment limited to 15. Tr R 10:10–11:25. P. A. Parra. Discusses the health status of minorities in the United States. This course explores intragroup diversity such as migration, economic status, and the influence of culture and environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

[R SOC 261 Sociology of Sustainable Development]

Fall. 3 credits. S-U grades optional. M W 2:55–4:10. L. Gitter. This course is designed to offer a critical evaluation of sustainable development as concept and practice. Although scholars and practitioners now analyze and debate it, sustainable development is more common in practice than in theory. Powerful global organizations, governments, and local activists have adopted and adapted it since it was popularized in the 1987 Brundtland report, giving rise to more than 40 definitions by 1994. To determine the social usefulness of such a widely debated term, we will examine its evolution from the original eighteenth-century concept of development into sustainable development in the field of natural resource management in the 1970s and into an environmental critique of economic growth, or market society, in the 1980s. We will then debate the salience of this concept by evaluating case studies in the United States and other parts of the world.

[R SOC 201 Theories of Society (also SOC 375)]

Spring. 3 credits. Prerequisites: Rural sociology or sociology course. S-U grades optional. Offered alternate years. Enrollment is limited to 30. M W F 11:15–12:05. P. K. Gellert. An introduction to the “classical” sociological theorists (Marx, Weber, Durkheim) of the late
nineteenth and early twentieth century, as well as "erased" and missing sociological voices and narratives (see G. Perkins Gilman, W.E.B. DuBois). The course addresses the dramatic social upheavals including the fall of the old order, industrialization, capitalism, and rise of bureaucracy to which these thinkers reacted and the inspiring (and conflicting) visions for the future which they offered. The intellectual history, the influence of the theorists on subsequent sociology, and the potential for relevance to contemporary society are emphasized.

[R SOC 302 Evaluating Statistical Evidence (also SOC 301)]
A first course in statistical evidence in the social sciences, with emphasis on statistical inference and multiple regression models. Theory is supplemented with numerous applications.

[R SOC 318 Ethnohistory of the Northern Iroquois (also AIS 318)]
Spring. 3 credits. S-U grades optional. Enrollment limited to 20. M 7:30-10:30 p.m. R. W. Venables.
The development of Iroquois (Haudenosaunee) history and culture is traced to the present day.

[R SOC 324 Environment and Society (also S&T 324 and SOC 324)]
Spring or summer. 3 credits. Enrollment limited to 100. M W F 1:25-2:15. L. Gienna. The main objective of the course is to develop a critical understanding of the dominant trends in modern U.S. environmental thought like preservationism, conservationism, deep ecology, ecofeminism, social ecology, NIMBYism, risk assessment, and environmental equity. Another objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships of substantive and philosophical/theoretical issues.

[R SOC 331 Demographic Analysis in Business and Government (also ARME 416)]
An overview of the way demographic analysis is used in business and government. Through the use of case study and problem solving methods of learning, students come to understand how demographic concepts, methods, and data are used by demographers to solve problems in business and government. The course is designed for upper-level undergraduates from a variety of academic disciplines and professional programs. Students will work on problems drawn from consumer marketing, education, housing and real estate development, human resources, and health services.

[R SOC 336 Rural Areas in Metropolitan Society]
This course analyzes the changing structure and role of small towns and rural areas in developed nations. The focus is on adaptation of rural communities and populations to major trends including increased societal differentiation and complexity, increased societal interdependence, and rapid social, economic, technological, and ecological change. Alternative policies to ameliorate rural problems and/or enhance rural contributions to national development are considered. Students participate in group research projects in rural communities.

[R SOC 340 Sociology of Food Systems]
Our changing food and agricultural systems will be examined sociologically, with attention to how these reflect the social organization of an increasingly global society. What are the major trends? What drives them? What do these trends imply for people, communities, and the environment? What are the social, human health, and environmental issues? What might be better alternatives and what strategies of development might achieve them?

[R SOC 360 Sociology of American Indians (also AIS 361)]
This course is designed to emphasize the role of theory and research in our understanding of American Indians. Towards that end, the relationship between the nation-state and indigenous populations will be emphasized. Students will be exposed to the following theoretical perspectives: world systems and dependency, internal colonialism, social disintegration, the social construction of reality, political mobilization, and ethnic reorganization. The course is also historical and comparative. Students will study different Indian tribes located in the United States and Canada.

[R SOC 367 American Indian Politics and Policy (also AIS 367)]
This course addresses the Constitutional basis of the Federal-Indian relationship through an examination of treaties, Supreme Court decisions, and congressional law/policy. The effects of European and American forms of governance on traditional American Indian political structures are detailed and contrasted with contemporary tribal governments and political organizations. Issues relating to sovereignty and self-governance with respect to American Indian tribal governments are addressed relative to state and federal governments.

[R SOC 370 Comparative Issues in Social Stratification (also SOC 371)]
Fall. 3 credits. Prerequisite: an introductory social science course. T R 1:25-2:40 or T R 8:40-9:55 (depending on professor). T. A. Lyons.
This course reviews both classical and contemporary issues in the comparative social stratification literature. Particular attention is given to the changing configurations of different labels, debates on the meaning of new economic constituencies, and the role of gender, race, ethnicity, and sexuality in assessing the patterns, meaning, and experiences of inequality. Throughout the course we will give special attention to the importance of understanding how questions of inequality are constructed and employed in understanding social inequality.

[R SOC 375 Classical Theory (also SOC 375)]
Introduces students to major macro-sociological paradigms and encourages them to participate in "cross-paradigm" debates. The three main theorists of sociology (i.e., Marx, Durkheim, and Weber) are compared with respect to their approaches to the social sciences, their views on human history, their conceptions of capitalist society, and their ideas on social change. The assigned reading focuses on the original writings of these theorists, while the lectures provide the requisite socio-historical context.

[R SOC 380 Independent Honors Research in Social Science]
Fall and spring. 1-3 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program. Staff.
Students should select a faculty adviser and begin proposal development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative.

[R SOC 408 Human Fertility in Developing Nations (also B&SOC 404)]
A review of the major literature dealing with the social causation of variation in human fertility. Emphasis will be on international comparisons and on the methodology of field research.

[R SOC 410 Population and Environment]
A voluminous new literature is emerging, attempting to trace the connections between population dynamics and environmental change. The seminar will be devoted to a critical examination of this literature, stressing population change both as cause and consequence of environmental factors. In addition, the social and economic forces that mediate the population-environment relation will be examined.

[R SOC 418 Population Policy (also B&SOC 418)]
Spring. 3 credits. Prerequisite: R SOC 201 or permission of instructor. Enrollment limited to 15. T R 10:10-11:25. Offered alternate years. Not offered 2001. Staff.
The ways in which societies try to affect demographic trends. Special focus is on government policies and programs to reduce fertility.

[R SOC 425 Gender Relations, Gender Ideologies, and Social Change]
Drawing on feminist and sociological theory and methods, and employing a comparative and global analytic framework, this course examines how gender ideologies, work-family
linkages, and the transformation of work and labor processes are based on and help transform gender relations. The course gives attention to the particularity of place and time as these help to situate gender relations in the different state, regional, and global configurations that contextualize and configure everyday life.

R SOC 430/629 Migration and Population Redistribution
Spring. 3 credits. Prerequisite: a social science course or permission of instructor. T R 11:40-12:55. Offered alternate years. D. L. Brown.

This course analyzes the determinants and consequences of internal migration in urban and rural areas of developed and developing nations. Economic and demographic interrelationships are emphasized as are implications of changes in local and regional population structures, occupation for labor supply, the demand for goods and services, and infrastructure. Public policy implications of the inter-relations are investigated. Techniques and measurement issues associated with migration and population distribution are discussed. For 629, graduate students will also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

R SOC 431/631 Comparative Ethnic Stratification: Demographic Perspectives
Spring. 3 credits. S-U grades optional. Prerequisite: Intro to Sociology or permission of instructor. T R 11:40-12:55. D. Gurak.

A comparative examination of ethnic stratification and mobility that focuses principally on dimensions of social groups that can be empirically measured using readily available demographic sources. These include residential segregation, occupation for labor supply, demand for goods and services, and infrastructure. Public policy implications of the interrelationships are investigated. Techniques and measurement issues associated with migration and population distribution are discussed. For 631, graduate students will also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

R SOC 437 Aging and Aging Social Policy in the 1990s

A survey of three general approaches for conducting analysis and practice in community and rural development. These approaches include examinations of: (1) community structural changes and policymaking; (2) participatory processes for generating community development; and (3) planning strategies as mechanisms for creating community development opportunities.

R SOC 438/638 Population and Development
Fall. 3 credits. S-U grades optional. Prerequisite: permission of instructor. T R 11:40-12:55. D. Gurak.

We examine major historical and recent demographic transitions in mortality, fertility, social structure, and composition and explore the relationships between these transitions and the social, economic, and cultural changes being experienced by diverse societies prior to, during and following the onset and conclusions of the demographic shifts. Case studies from diverse historical periods and groups of migration and population distribution are discussed. For 638, graduate students will also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

R SOC 440 The Social Impact of Resource Development (also AIS 440)

Social impact assessment (SIA) is a method of anticipating unwanted side-effects of projects, policies, and technologies before they happen and a decision tool for mitigation. The seminar explores SIA applications in different parts of the world and pays particular attention to impacts on native and indigenous peoples. Readings, lectures, and a course project are mandatory.

R SOC 442 American Indian Philosophies: Selected Topics (also AIS 442)
Spring. 3 credits. S-U grades optional. Prerequisite: permission of instructor. Enrollment limited to 15. W 7:30-10:30. R. W. Venables.

This course provides an opportunity for students to read and discuss a wide range of American Indian philosophies.

R SOC 490 Society and Survival

Course surveys existing theories, methodological techniques, and research results relating to the social, economic, and cultural structures and processes affect survival chances in diverse societies. A comparative framework is presented, and the utility of existing knowledge for policy-related applications in different social contexts. Attention is given to the problems associated with impinging causality in morbidity and mortality data.

R SOC 494 Special Topics in Rural Sociology

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

R SOC 495/695 Population, Environment, and Development in Sub-Saharan Africa
Fall. 3 credits. S-U grades optional. Prerequisite: permission of instructor. T R 2:55-4:10. P. E. Eberts.

This course examines trends in rapid population growth, weak economic growth, and growing environmental problems in Sub-Saharan Africa and examines the linkages among these dimensions. After reviewing the region, the course focuses on specific problems, including: urbanization, health and survival, population pressure and sustainable agriculture, refugees, and gender/family/community structures. Graduate students will be assigned additional readings and writing and will meet bi-weekly in a seminar format.

R SOC 497 Independent Study in Rural Sociology
Fall or spring. 3 credits variable (may be repeated for credit). Students must register with an Independent Study form (available at 140 Roberts Hall). Courses for students admitted specifically to a MPS program are mandatory.

R SOC 560 Managing Local Environmental Systems: Social Perspectives and Research Bases
Fall. 3 credits. S-U optional. Enrollment limited to 15. W 1:25-4:25. J. D. Francis.

Course is for students with diverse backgrounds: undergrads, grads, people in professional careers, others with interest in environmental issues, identification, resolution, and management. Course discussions include ecological, social, economic, and local government perspectives. Via lab exercises throughout the semester, student will have opportunities to apply the concepts and principles of these perspectives to analysis of specific local environmental management problems. Readings, lectures, and a course project are mandatory.

R SOC 599 M.P.S. Project
Fall and spring. 1-6 credits. S-U optional. Lec. TBA. Graduate faculty.

For students admitted specifically to a MPS program.

R SOC 601 Theoretical and Methodological Approaches to Community and Rural Development
Fall. 3 credits. Letter grade only. Prerequisite: graduate student. Lec. W 7:30-10:00. P. R. Eberts.

A survey of three general approaches for conducting analysis and practice in community and rural development. These approaches include examinations of: (1) community structural changes and policymaking; (2) participatory processes for generating community development; and (3) planning strategies as mechanisms for creating community development opportunities.
R SOC 603 Classical Sociological Theory
Fall. 4 credits. S-U grades optional. Prerequisites: open to graduate students only. T R 2:45–4:10. M. J. Pfeffer. Students will review the main streams of classical sociological thought, focusing on the work of Weber, Durkheim, and Marx. Course materials include original texts and secondary literature, an examination of key concepts, methods, and explanation in classical sociological thought. Important objectives of the course will be to identify the philosophical and conceptual core of the discipline and to critically evaluate the classical theories to contemporary social change and development.

R SOC 604 Theories of Social Change
Spring. 3 credits. S-U grades optional. T R 2:55–4:10. Not offered 2000–2001. P. D. McMichael. This course surveys major twentieth-century social theory. It constructs a framework from classical theory, and on theories relevant to understanding the processes of social change. Major topics covered will include mid-century functionalism, conflict theories, neo-Marxism, neo-Weberian economic sociology, and world-systems theory. Other topics, such as the "new sociology of culture," critical theory, structuration theory, neofunctionalism, the new methodological individualism, and the macro-micro link, will be covered briefly.

R SOC 605 Sociological Theories of Development
Spring. 3 credits. T 2:30–5:30. P. K. Gellert. This course is a critical examination of a historical range of theories and research in the sociology of development from the post-war period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the course of development is questioned and critiqued both theoretically and in terms of practical challenges from environmental, indigenous and other social movements.

R SOC 607 Sociology of Natural Resources and Development
Fall. 3 credits. S-U optional. Offered odd years. R 1:25–4:25. P. K. Gellert. Building on theories in the sociology of development, this seminar will examine the role of natural resource extraction, processing, and exports to global markets in the developmental trajectories of nations in Asia, Africa, and Latin America. Engages students in both theoretical debates and practical implications of resource access, control, and conflict amongst various social actors ('stakeholders'). Detailed historical cases will be examined, primarily from Southeast Asia (Indonesia, Malaysia, Philippines)."

R SOC 612 Population and Development in Asia (also WMNS 612)
Spring. 3 credits. Offered odd years. Not offered spring 2001. W 10:10–1:10. L. B. Williams. This graduate seminar considers issues surrounding population and development in Asia. Case studies pertaining to Southeast Asia will be highlighted. The linkages between population and development are highlighted and both are considered from a historical perspective. Recent social, economic, and demographic changes in the region are considered in depth. Engaging gender roles in the family, the course will engage broader social context are also examined.

R SOC 618 Research Design I
Fall. 4 credits. Prerequisite: a statistics course. T R 12:20–2:15. J. D. Francis. First of a two-semester sequence (may be taken individually) in introductory graduate methods. Discusses problems of measurement, the design of instruments, study problems of reliability and validity. Common forms of measuring instruments are discussed. Concludes with an introduction to factor analysis. Students apply principles to development of formal and common types of scales. Computers will be used exclusively.

R SOC 619 Research Design II
Spring. 4 credits. Prerequisite: an introductory methods course and a statistics course. T R 12:20–2:15. J. D. Francis. The second part of the two-semester sequence in introductory graduate methods, with emphasis on the statistical treatment of the following topics: regression, analysis of variance, analysis of covariance. Special attention is given to use of categorical variables in regression. Students develop and examine several analytical models using actual data to familiarize themselves with data handling and processing. Extensive use of computers.

R SOC 620 Sociology of the Community
Fall. 3 credits. R 1:25–4:25. D. Brown. This graduate seminar will critically analyze the intellectual core of community sociology, and its theoretical development over time. "Community," as a concept, is often reified and rarely critically examined, hence the course will begin by clarifying the various ways in which "community" has been conceptualized and operationalized by sociologists. The course will provide students with both a grounded conceptual foundation and an overview of multiple strategies for conducting research on community structure and change in the United States and internationally. The course will include a critical examination of the forms and shapes of sociological research on the community assumes. We will use a case study approach to examine the assumptions driving the methods and data sets of both contemporary and historical research.

R SOC 621 Foundations of Environmental Sociology
Fall. 3 credits. Open to graduate students only. S-U option. Enrollment limited to 20. W 10:10–12:15. Offered even years. L. Glenna. Foundations of Environmental Sociology provides graduate students with a broad survey of the literature in this disciplinary specialty area. Students will review the history of both environmental sociology as well as key literature in the various substantive foci of this specialty. The principle objective of this course is to provide graduate students specializing in environmental sociology with a firm grasp of the core, controversies, trends in the area. Sessions are conducted in a seminar style, and discussions are focused on close review of assigned readings.

R SOC 625 State, Economy, and Society

R SOC 630 Field Research Methods and Strategies
Fall. 3 credits. Enrollment limited to 20. W 10:10–1:10. Offered odd years. Next offered fall 2001. L. B. Williams. This course will cover a variety of methods: focus groups, in-depth interviews, participant observation, archival research, and structured surveys, among others. The importance of matching research questions with appropriate field methodologies and the strengths and weaknesses of various strategies of field research are assessed. Practical experience with a number of methodologies is offered. Ethical issues involved in fieldwork are highlighted.

R SOC 640 Community and Changing Property Institutions
Fall. 3 credits. R 1:25–4:25. Offered every years. C. C. Geisler. The seminar acquaints students with the evolution of property rights, from antiquity to the present, and features a number of property debates (the biological basis of ownership; private versus public ownership, property and value; the so-called "tragedy of the commons"; the "new" property). Readings explore land use regulation and property rights, common property issues, opposing land ethics, and new property forms in the future.

R SOC 641 Politics and Economics of Rural and Regional Development
Fall. 3 credits. Limited to upperclass or graduate students only. S-U grades optional. M 12:20–2:50. Offered alternate years. T. A. Lyson. A survey of social, political, and economic factors in local and regional development. Theories of community and regional development and underdevelopment are explored. Neoclassical, Marxist, and civil society theories are examined within local and global contexts.

R SOC 643 Land Reform Old and New
Spring. 3 credits. S-U grades optional. R 1:25–4:25. Offered odd years. Not offered 2000. C. C. Geisler. Land reform continues to be a major cornerstone of development planning. Between 1980 and 2000 the number of landless and near-landless in the Third World will approach one billion. Though land reform is a principal source of hope for the landless, its meanings are many and its models are controversial. The seminar acquaints students with land reform in antiquity as well as in contemporary settings (among others, Japan, the Philippines, Israel, India, Brazil, and the United States). Perennial issues of equity, efficiency, and sustainability will be discussed in each of these case study areas.

R SOC 645 Rural Economy and Society
Spring. 3 credits. W 1:25–4:25. Offered alternate years. Staff. The structure and dynamics of rural communities are examined in a comparative historical context.
framework focusing on continuities and divergences among imperialist and post colonial settings. Major topics include classical theories of rural social organization and their retheorization in contemporary peasant studies and agrarian political economy literatures, theorizations of locality, rurality and spatial complexity within the world economy, and critical issues framing the relationship between political and labor market restructuring and petty commodity and household production systems.

[R SOC 655 Advanced Techniques of Demographic Analysis

An examination of analytical techniques that assumes a basic knowledge of demographic data and research methodology. Life tables, demographic estimates with incomplete data, survey techniques to supplement inadequate vital registration systems, data management, multi-level models, and other multivariate procedures are among the topics to be covered.

[R SOC 661 Sustainable Agriculture and Development

This course examines the relationship between local agriculture and development as these are embedded in a globalization economy. Topics include an examination of the social scientific theoretical underpinnings of conventional agriculture, the social origins of sustainable agriculture, environmental and community sustainability, agricultural diversification strategies, community agriculture development, and the political and policy contexts of more sustainable agricultural systems.

[R SOC 671 Epistemological Challenges to Social Science Paradigms: A Feminist Inquiry (also WOMNS 671)

This course will review and analyze contemporary themes in feminist epistemological critiques of sociological methods and knowledge systems. It identifies mainstream explanations within the social sciences, introduces early feminist challenges to androcentric paradigms, and explores philosophical assumptions of postmodern and poststructural analyses. Substantive foci assess various methodological frameworks, archival and survey research, and the theoretical presuppositions of approaches from rationalism to postpositivism. We also address the linkages between theory and questions of political practice, individualism, and autonomy.

[R SOC 675 Global Patterns of International Migration

International migration to the United States and other countries has increased in recent decades. What accounts for that trend in an era when large-scale international migration is supposed to have ended and what are the implications of immigration for receiving countries? Theories and research on these issues are examined in the course from a comparative and interdisciplinary perspective. Several migration systems are examined, including those of North America and the European Community. Policies shaping immigration are also reviewed.

[R SOC 684 Special Topics in Rural Sociology

Fall or spring. 4 credits maximum. S-U grades optional. Prerequisites: three courses in sociology, one in statistics or research methods. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

[R SOC 715 Comparative Research Methods

This seminar focuses on one comparative method in the social sciences. The logic of comparative inquiry forms the substantive base of the course. Topics include cross-national and cross-regional research design and an analysis of the comparative case study approach. Illustrations of the comparative research approach will cover a range of data types and problems.

[R SOC 718 Multidimensional Measurement and Classification

Fall. 4 credits. Prerequisite: previous course work in scaling and statistics. T R 12:20–2:15. Offered every odd year since 2001-2002. J. D. Francis.

An advanced course in measurement and scaling, building from work by Thurstone, Guttman, and Coombs to multidimensional measurements. Topics include philosophy of factor analysis, factor-analysis models, factoring design, factoring techniques, and comparison with factor-analysis models. Cluster analysis and multidimensional scaling are the other major techniques discussed. As much algebra is required. Use of these procedures, class time devoted to this topic. Computers are used to analyze fit to models.

[R SOC 719 Logistic and Log Linear Models

The first part of the course reviews multiple regression theory and procedures, after which extensions of these models to categorical data are discussed. Consideration is given to violations of assumptions and their effects. Then more advanced regression concepts and estimation techniques are discussed. The main focus of the course is on logit and log linear models. Computation labs are an integral part of the course.

[R SOC 725 The Sociology of "Third World" States

Fall. 3 credits. W 1:25–4:25. Offered alternate years. S. Feldman.

This course examines how processes of political and economic transformation have reshaped state capacities and processes of state formation. Particular attention is paid to questions of class formation, corporatist alliances, transnational interests, and alternative development strategies with the emergence of austerity, privatization, and trade liberalization and its neoliberalist ideology. Critical to this discussion are the contours of authoritarianism, nationalism, commodification, and fundamentalism as these reconfigure national and regional alliances and practices and shape interpretations of current processes of change, and terms of intervention and exchange.

[R SOC 730 Sociology of Global Change

Analyses of social change and development are increasingly sensitive to global context. They include the sociology of the world economy as a multi-layered entity anchored in an evolving international division of labor and the system of nation states, and the sociology of transnational political, economic, and cultural processes (e.g., food regimes, commodity chains, diasporas and transnational identities, the new regionalism, and transnational social movements). The seminar examines the substantive and methodological questions generated by research on these global processes, including questions of relevant units of analysis, situating global process in local events and subjectivities and vice versa, and examining the ways in which national structures and cultures interact with global structures and cultures.

[R SOC 741 Community Development and Local Control

Theories of community growth and decline and the current debate over the place of local control in community development in general are considered. Seminar themes include the role of neopopulism in community development, changing institutions of property as community development occurs, and changing definitions of "community."

Walter Williams, director of alumni affairs and development
Cynthia K. Prescott, director of administration and finance
Reginald D. Ryder, director of minority educational affairs
Donna L. Kuhar, registrar

FACULTY ADVISERS
Architecture students are assigned faculty advisers for their first year. Upperclass students have one assigned adviser but are encouraged to seek assistance and advice from the most appropriate faculty member or college officer.

Students in the fine arts department are assigned a faculty adviser for the first year. After the first year, students may select their advisers. Students are required to have an adviser throughout their program in their area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers.

All students in the college are invited to share their concerns and seek advice from the volunteer student advisers at anytime.

Specific inquiries regarding rules, procedures, or deadlines should be addressed to:
Mark Cruvellier, chair, Department of Architecture
John Forester, chair, Department of City and Regional Planning
Roberto Bertola, chair, Department of Art

</table>

The college offers programs leading to the bachelor's degree—the five-year program in architecture leads to the Bachelor of Fine Arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the Bachelor of Science.

Graduate-level programs are offered in art, architectural design and urban design, architectural sciences, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in each of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with the students and faculty in other disciplines.

Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 650 students and a full-time teaching staff of over sixty, supplemented by visiting professors and critics, part-time lecturers, and assistants.

Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curriculum, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library, are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and shop facilities in Rand. The Green Dragon Cafe, a student eatery and lounge, is located in the lower level of Sibley Dome. There are darkrooms in the Department of Art that are available for general use by students in the college and are primarily used as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to graduate. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries

The Fine Arts Library in Sibley Hall serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning, and landscape architecture. The library, with more than 176,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,800 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, is located in Sibley Hall and contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection now includes approximately 450,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries

The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held.

Rome Program

The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources now and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held.

The program in Rome offers components for students majoring in architecture, fine arts, planning, and liberal arts. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that
ensure their particular requirements can be met, since course offerings in Rome are limited. For additional information, see individual department listings or contact the Rome Program Office, 149 Sibley Hall.

COLLEGE ACADEMIC POLICIES

Ownership of Student Work
All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be retained by the college for retention for academic purposes.

Exhibitions of Student Work
Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Gallery and the John Hartell Gallery in Sibley Dome. These galleries display work from a specific course or exhibit examples of recent work by individual faculty, students, and visitors.

Scholastic Standards
Term by term, a candidate for an undergraduate degree in the college is required to pass all courses in which the student is registered and have an average for the term of not less than C (2.0). The record of each student who fails below the standard will be reviewed by the Student Records Committee for appropriate action, as described below:

1) Warning means that the student's performance is not up to expectations. Unless improvement is shown in the subsequent term, the student may be placed on final warning or required to take a leave of absence from the college.
2) Final Warning indicates that the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student shall be required to take a leave of absence from the college.
3) Required leave of absence: academic deficiency. The student is dismissed from the college and may not continue studies in it. This action may be taken by the college and is permanently prohibited from continuing studies in the College of Architecture, Art, and Planning.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence for academic deficiency at the end of the next term if performance during that time is deemed to be grossly deficient. A cumulative average of at least C– (1.7) is required for graduation.

ARCHITECTURE

Professional Degree Program
The first professional degree in architecture is the Bachelor of Architecture. This degree counts toward the professional registration requirements established by the various states, National Architectural Accrediting Board, and the National Council of Architectural Registration Boards. The professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence courses in design, consisting of studio work augmented by lectures and seminars, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, architectural theory, visual studies, environmental controls, structures, construction and computer graphics, and applications provide a base for the work in design.

In the first three years, the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years, the student may expand through further detailed studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year's work for the Bachelor of Architecture degree to one of the graduate programs offered in the department. Some students are then able to complete the requirements for the master's degree in one additional year.

Note on Professional Accreditation
In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit professional degree programs in architecture, recognizes two types of degrees: the Bachelor of Architecture and the Master of Architecture. A program may be granted a five-year, three-year, or two-year term of accreditation, depending on its degree of conformance with established educational standards.

Master's degree programs may consist of professional undergraduate degree and a professional graduate degree, which, when earned sequentially, comprise an accredited professional education. The preprofessional degree, however, is not, by itself, recognized as an accredited degree.

Rome Program
The program offers the opportunity for students from Cornell and other universities to spend one or two terms of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, thesis, thesis introduction, history, theory, architectural science, and visual studies. In addition, courses are offered by other departments in Italian language, Italian culture, and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

Overlap Program
For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the Master of Architecture program. In the fall of the fourth undergraduate year, interested students petition the department to substitute ARCH 601–602 or 603–604 for ARCH 501–502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field assistant for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501–502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including ARCH 601–602 or 603–604 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

**Architecture Concentrations for Majors**

The Department of Architecture recognizes any concentration earned within the university but outside of the department (using standards set by those departments) on the transcripts of its students. It is often advantageous for undergraduates to concentrate in specific sub-disciplines of architecture, especially if they anticipate application to specialized graduate programs, therefore, the following concentrations in architecture are offered within the department for B.Arch. and B.F.A. in Architecture candidates only:

- Architecture, Culture, and Society 342 (or equivalent), plus 9 credits in this area.
- Architectural Science and Technology 261, 262, 263, 264, 361, 362, 363, distribution requirement (3 credits), plus 6 credits in this area.
- History of Architecture 181, 182, distribution requirements (9 credits), plus 6 credits in this area (including a 4 credit hour seminar course) in this area.
- Theory of Architecture 231, 232, distribution requirements (6 credits), plus 6 credits in this area.
- Visual Studies in Architecture 151, 152, distribution requirement (3 credits), plus 9 credits in this area.

Students wishing to receive recognition for a concentration must submit a Concentration Request form to the Architecture Department Office. In order for a course to count toward a concentration, the grade must be C or better.

**Transfer Students**

Although the program leading to the Bachelor of Architecture is specifically directed to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree must also apply to...
transfer to the Bachelor of Architecture degree program, since the graduate program in architecture requires the Bachelor of Architecture degree or its equivalent for entrance.

Transfer students are responsible for completing that portion of the curriculum that has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the 10-term design sequence. Since this sequence may be accelerated by attending summer terms, seven or eight regular terms and two or three summer terms are typically required.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint the participants with opportunities, issues, and methods in the field of architecture.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four terms in residence, three of which must be in architectural design (including four terms of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

**Alternative Programs**

**Bachelor of Fine Arts**

After completing the first four years of requirements, the student may choose to receive the degree of Bachelor of Fine Arts (B.F.A.) in architecture, which is not a professional degree.

**Bachelor of Science in History of Architecture**

The history of architecture major leads to a Bachelor of Science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic backgrounds, offers the opportunity for a vigorous exploration of architecture and its history.

**Admission requirements.** Two years of undergraduate study, ARCH 181 and 182 or the equivalent. Students transferring from a B.Arch. program must be in good standing in their design sequence.

**Procedure.** Students from Cornell may transfer to the program at the beginning of the fall term of their third or fourth year of study. They submit a short application as prospective internal transfer students. Before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss scheduling for the program.

Students who wish to transfer to the program from outside Cornell must apply to the Department of Architecture by March 15. Applications may be considered after this date but are given lower priority. Applications for both internal and external transfer students are available from Elizabeth Cutter, Admissions Office, College of Architecture, Art, and Planning, Cornell University, Sibley Hall, Ithaca, NY 14853-6701.

**Curriculum.** A student entering the program is assigned an advisor from the history of architecture faculty in the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines:

1) 24 credits of 300-level courses in architectural history: ARCH 380 through ARCH 399
2) 12 credits in 600-level architectural history seminars: ARCH 681 through ARCH 699; or 8 credits in a 600-level seminar plus ARCH 499, offered for honors candidates only
3) One 300-, 400-, or 600-level course in architectural theory
4) 24 credits in electives selected in consultation with the student's advisor
5) Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

**Honors program.** Students will graduate with honors if during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A- in all history of architecture courses taken at the 300 level, and have completed an honors thesis (ARCH 499) deemed to be of distinguished quality by the history of architecture faculty.

**Dual Degree Options.** Students can earn both the B.S. and B.Arch. degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an art college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, including the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, 151 East Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a Master of Arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened to one year.

**Summer Term in Architecture.** The summer term offers students the opportunity of a concentrated period of design work. Design is offered at both undergraduate and graduate levels; the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 101 and 502, are offered in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to enroll in any summer program.

At the graduate level participation in the summer program cannot be undertaken without the consent of the student's Special Committee.

Other department courses may be offered as elective courses, contingent upon student interest, faculty availability, and departmental approval.

The department offers a Career Explorations in Architecture Program for high school students and college students considering a professional education in architecture.

**Concentration In Architecture For Non-Majors.** This special concentration has been formulated specifically for those students not enrolled in the Department of Architecture and who are interested in complementing their current academic program with an introduction to various facets of architectural studies. Some students may wish to use the Concentration in Architecture for Non-Majors as a means of investigating possible graduate studies in architecture. Some may wish to develop architectural specialties within other disciplines. Students are admitted to this program through application to the Department of Architecture.

The curriculum for students accepted to the Concentration in Architecture Program totals 15 credit hours. Grades received must be C or better in all courses.

9 credits of required courses, including one semester each of:
- ARCH 130, 131, or 132: Introduction to Architecture 3 credits
- ARCH 151: Drawing I 2 credits
- ARCH 111: Concentration in Architecture: Design Studio 4 credits
- (ARCH 110: Introduction to Architecture: Design Studio, offered in the summer only, may substitute for ARCH 111.)

And 6 credits of elective department courses, chosen, for example from among the following:
- ARCH 130, 131, 132: Introduction to Architecture 3 credits
- ARCH 152: Drawing II 2 credits
- ARCH 181, 182: History of Architecture I, II 3 credits each
- ARCH 342: Architecture as a Cultural System 3 credits
- ARCH 231, 232: Architectural Analysis I, II 2 credits each
- ARCH 263, 264, 363: Structures 3 credits each
- ARCH 261, 361, 362: Environmental Controls 3 credits each
- ARCH 262: Building Technology 3 credits
- ARCH 476: Computer Applications 3 credits
Architectural Design

Courses in brackets are not offered this year. Each student in the architecture program (undergraduate, graduate, and in the Rome Program) is charged a fee each semester to help defray the continuing costs of refurbishing and replacing equipment.

Sequence Courses

ARCH 101 Design I
Fall. 6 credits. Limited to department students.
An introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

ARCH 102 Design II
Spring. 6 credits. Limited to department students. Prerequisite: ARCH 101 and ARCH 151. A continuation of ARCH 101. Human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

ARCH 201-202 Design III and IV
Fall and spring. 6 credits each term. Coregistration in ARCH 231-232 and completion of ARCH 151-152 required. Limited to department students. Prerequisite for ARCH 201 is ARCH 102 and ARCH 152. Prerequisite for ARCH 202 is ARCH 201.

ARCH 301-302 Design V and VI
Fall and spring. 6 credits each term. Limited to department students. Prerequisite for ARCH 301 is ARCH 202. Prerequisite for ARCH 302 is ARCH 301.

ARCH 401-402 Design VII and VIII
Fall and spring. 6 credits each term. Limited to department students. Prerequisite for ARCH 401 is ARCH 302. Prerequisite for ARCH 402 is ARCH 401 or ARCH 309.
Programs in architectural design, urban design, or architectural technology and environmental science, etc.

ARCH 501 Design IX
Fall or spring. 6 credits. Limited to department students. Prerequisite: ARCH 402.
Programs in architectural design, building typology investigations, and research leading to complete development of the student's thesis program. General instruction in the design, programming, and development of a thesis.

ARCH 502 Design X—Thesis
Fall or spring. 8 credits. Prerequisite: ARCH 501 or ARCH 500 and ARCH 510. Required of B.Arch. candidates who must satisfactorily complete a thesis. Students accepted for admission to the Overlap Program are exempt from the thesis requirement.

ARCH 601-602 Special Program in Architectural Design
Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

ARCH 603-604 Special Program in Urban Design
Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

Graduate Courses

ARCH 701-702 Problems in Architectural Design
Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is architectural design.

ARCH 703-704 Problems in Urban Design
Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is urban design.

ARCH 801 Thesis or Research in Architectural Design
Fall or spring. 9 credits. Prerequisite: ARCH 701 and ARCH 702.
Second-year design course for graduate students whose major concentration is architectural design.

ARCH 802 Thesis or Research in Urban Design
Fall or spring. 9 credits. Prerequisite: ARCH 703 and ARCH 704.
Second-year design course for graduate students whose major concentration is urban design.

Elective Design Courses

ARCH 103-104 Elective Design Studio
103, fall: 104, spring. 6 credits each term. Limited to students from outside the department. Prerequisite for ARCH 103: permission of instructor required. Prerequisite for ARCH 104: ARCH 103 and permission of instructor.

ARCH 200, 300, 400 Elective Design Studio
Fall or spring. 6 credits. This course is for students who are not architecture majors at Cornell. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level.
For descriptions, see ARCH 201-202, ARCH 301-302, and ARCH 401-402.

ARCH 309 Elective Design Studio
Fall, spring, or summer. 6 credits. Foreign summer and Rome Programs only. Prerequisite: C or better in ARCH 202. ARCH 309 is a design studio that, upon completion, will be credited as an elective design studio. With the successful completion of ARCH 302, ARCH 309 may be used as a substitute for ARCH 401.

ARCH 500 Design IX Alternate Studio
Fall, spring, or summer. 6 credits. Foreign summer and Rome Programs only. Prerequisite: C or better in ARCH 202. ARCH 500 will be considered equivalent to ARCH 501 when taken concurrently with ARCH 510.
In order to take ARCH 502, one must have a grade of C or better in ARCH 500 and a passing grade in ARCH 510.
For description, see ARCH 401-402.

Related Courses and Seminars

ARCH 110 Introduction to Architecture: Design Studio
Summer. 3 credits. S/U option. Open to nonarchitecture majors in college; high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.
A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty as well as by periodic reviews of the group by invited faculty and guest critics. The course grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

ARCH 111 Concentration in Architecture: Design Studio
Spring. 4 credits. Not open to architecture majors. Prerequisite: acceptance into the Concentration in Architecture Program.
A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the interrelationship of the architectural concepts of space, form, function, and technology. Instruction includes critiques of individual student work by department faculty as well as by periodic reviews by guest critics.

ARCH 303 Special Problems in Architectural Design
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study. This course does not count for design sequence credit.

ARCH 317 Contemporary Italian Culture
Fall or spring. Variable credit (maximum 3). For students in the Rome Program only.
This course provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 411 Professional Practice
Fall or spring. 3 credits. An examination of organizational and management theories and practices for delivering professional design services. Included is a historic overview of the profession and a review of the architect's responsibilities from the precontract phase through construction. Application of computer technology in preparing specifications.

ARCH 412 Professional Seminar
Fall or spring. 3 credits. Prerequisite: ARCH 411.
Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of each firm's practice and the identification of agency roles.

ARCH 510 Thesis Introduction
Foreign summer programs and Rome program only. 3 credits. Must be taken in conjunction with ARCH 500. Prerequisite for ARCH 500 is ARCH 402. ARCH 500 will be considered equivalent to ARCH 501.
when taken concurrently with ARCH 510 during a foreign summer program or in Rome. Lectures, seminars, and independent research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 605 Special Problems in Design
Fall and spring. Variable credit (maximum 3). Prerequisite: permission of instructor. Independent study. This course does not count for design sequence credit.

ARCH 610 Graduate Design Seminar
Fall. 3 credits. Intended for, but not limited to, graduate students in the Architectural Design and Urban Design Program. Issues in architectural and urban design.

ARCH 611-612 Urban Housing
611, fall; 612, spring. 3 credits each term. Limited to fourth- and fifth-year students in architecture and graduate students. Prerequisite: permission of instructor. Not offered every year.

ARCH 613 Transportation
Fall. 3 credits. Prerequisite: permission of instructor. Not offered every year. The affect of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

ARCH 614 Low-Cost Housing
Spring. 3 credits. Prerequisite: permission of instructor. Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

ARCH 618-619 Seminar in Urban and Regional Design
618, fall; 619, spring. 3 credits each term. Limited to fifth-year and graduate students. Not offered every year. A broad range of issues and problems of urban and regional development and the context in which the designer functions are surveyed. Selected case studies are presented by the participants and visitors.

Architectural Theory

ARCH 130 An Introduction to Architecture: Lectures
Summer. 3 credits. S-U option. Open to nonarchitecture majors in college, high school students in 11th and 12th grades, and any interested with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.

A survey course that covers the many facets of architecture: history, design principles, preservation, landscape architecture, building technology, and cultural factors. The format of the course comprises lectures, demonstrations, films, and field trips. Course evaluation is based on quizzes and a final examination.

ARCH 131 An Introduction to Architecture
Fall. 3 credits. Open to out-of-department students only. ARCH 131 is not a prerequisite for ARCH 132.

ARCH 132 An Introduction to Architecture
Spring. 3 credits. Open to out-of-department students only. ARCH 131 is not a prerequisite for ARCH 152. Nonarchitecture students are initiated into various types of architectural drawings and exposed to a variety of methods whereby architectural forms communicate both simple and complex meanings. Architecture in its relation to fields such as landscape architecture, urban design, structural design, interior design, set design, architectural history, preservation, and computer graphics will be included in the presentations, which will also deal with the various relationships established between an architect and a society. Cross-cultural and cross-cultural examples will be used in developing in the student a degree of fluency in the languages of architectural discourse.

ARCH 231 Architectural Analysis I
Fall. 2 credits. Architecture students must register concurrently in ARCH 201. An introduction to analysis of the object of study in the interest of broadening one's understandings of the ways in which architecture can connote and denote meanings.

ARCH 232 Architectural Analysis II
Spring. 2 credits. Architecture students must register for this course concurrently with ARCH 202. Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

ARCH 334 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 634)
Fall or spring. 3 credits. Limited to third-year level students and above. Field and figure relationships (interrelation of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades.

The first part of the seminar is lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

ARCH 335 Theory of Architecture
Fall or spring. 3 credits. Prerequisite: ARCH 231-232 or permission of instructor. Not offered every year.

ARCH 336 Theory of Architecture
Fall or spring. 3 credits. Limited to third-year students and above. Not offered every year.

Theories of modern architecture: De Stijl, cubist and purist painting, industrialized architecture, Le Corbusier's architecture and urban theories, architectural sequence, facades, the free plan, "DOM-INO" theory.

ARCH 337 Special Investigations in the Theory of Architecture I
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 338 Special Topics in the Theory of Architecture I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced before preregistration.

ARCH 339 Elements, Principles, and Theories in Japanese Architecture
Spring. 3 credits. Not offered every year. An examination of Japanese architecture—buildings and gardens—and their contexts—landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and Western writers.

ARCH 431 Theory of Architecture
Fall. 3 credits. Prerequisite: third-year status. Not offered every year. Gardening and architecture: urban parks, villas and country houses; and Italian, French, and English landscape gardens. Site planning.

ARCH 432 Theory of Architecture
Spring. 3 credits. Prerequisite: third-year status. Not offered every year. The development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

ARCH 435 Architecture and Representation
Fall. 3 credits. Limited to degree candidates in architecture. Prerequisite: successful completion of ARCH 231-232. Not offered every year. A study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 634 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 334)
Fall or spring. 3 credits. Limited to third-year level students and above. For description, see ARCH 334.

ARCH 635 Critical Theory in Architecture
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. An inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the twentieth century.

ARCH 637 Special Investigations in the Theory of Architecture II
Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. Independent study.
ARCH 448 The Indian Example and the Visual Tradition in Culture
Spring. 3 credits. Prerequisite: ARCH 442 or permission of instructor. Not offered every year.
This course provides a concise chronological summary of the major building traditions of Hindu India and explores the relationship between form and more general beliefs about the power of vision to reveal and transform. Topics include the sculptural program of the Hindu temple as a vehicle for the preservation and transmission of mythic texts, the oculus as an element and the eye as a motif, darshan, the spiritually transforming vision, and the destructive power of vision as revealed in myth and beliefs about “evil eye.”

ARCH 447-448 Architecture in Its Cultural Context I and II
447, fall; 448, spring. 4 credits each term. Prerequisite: permission of instructor. Not offered every year.
Fall term, theory; spring term, problem solving and method. An examination of the relationship between architecture and other aspects of culture. Emphasis on the motivations for particular architectural forms and especially on theories of architecture. Examples from the United States and Asia.

Visual Studies

ARCH 151 Drawing I
Fall. 2 credits. Freehand drawing with emphasis on line and perspective representation of form and space.

ARCH 152 Drawing II
Spring. 2 credits. Prerequisite: ARCH 151. Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

ARCH 251 Introductory Photo I (also ART 161)
Fall or spring. 3 credits each term. For description see ART 161.

ARCH 351 Photography II (also ART 261)
Spring. 4 credits. Prerequisites: ARCH 251 or ART 161, or permission of instructor. For description see ART 261.

ARCH 450 Architectural Publications
Fall and spring. Variable credit (maximum 3). May be repeated for credit.
Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production related to the exchange of architectural ideas. Exercises will cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 445 Graduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 649 Graduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 458 Special Investigations in Visual Studies I
Fall or spring. Variable credit (maximum 4). Prerequisites: permission of instructor and approved independent study form. Independent study.

ARCH 459 Special Topics in Visual Studies II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Topic to be announced before preregistration.

Visual Studies

ARCH 151 Drawing I
Fall. 2 credits. Freehand drawing with emphasis on line and perspective representation of form and space.

ARCH 152 Drawing II
Spring. 2 credits. Prerequisite: ARCH 151. Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

ARCH 251 Introductory Photo I (also ART 161)
Fall or spring. 3 credits each term. For description see ART 161.

ARCH 351 Photography II (also ART 261)
Spring. 4 credits. Prerequisites: ARCH 251 or ART 161, or permission of instructor. For description see ART 261.

ARCH 450 Architectural Publications
Fall and spring. Variable credit (maximum 3). May be repeated for credit.
Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production related to the exchange of architectural ideas. Exercises will cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 457 Special Project in Photography
Fall or spring. Variable credit (maximum 3). Prerequisites: written proposal outlining the special project and permission of instructor. Not offered every year. Independent study.

ARCH 458 Special Investigations in Visual Studies
Fall or spring. Variable credit (maximum 4). Prerequisites: permission of instructor and approved independent study form. Independent study.

ARCH 459 Special Topics in Visual Studies II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Topic to be announced before preregistration.

Visual Studies

ARCH 151 Drawing I
Fall. 2 credits. Freehand drawing with emphasis on line and perspective representation of form and space.

ARCH 152 Drawing II
Spring. 2 credits. Prerequisite: ARCH 151. Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

ARCH 251 Introductory Photo I (also ART 161)
Fall or spring. 3 credits each term. For description see ART 161.

ARCH 351 Photography II (also ART 261)
Spring. 4 credits. Prerequisites: ARCH 251 or ART 161, or permission of instructor. For description see ART 261.

ARCH 450 Architectural Publications
Fall and spring. Variable credit (maximum 3). May be repeated for credit.
Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production related to the exchange of architectural ideas. Exercises will cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 457 Special Project in Photography
Fall or spring. Variable credit (maximum 3). Prerequisites: written proposal outlining the special project and permission of instructor. Not offered every year. Independent study.

ARCH 458 Special Investigations in Visual Studies
Fall or spring. Variable credit (maximum 4). Prerequisites: permission of instructor and approved independent study form. Independent study.

ARCH 459 Special Topics in Visual Studies II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Topic to be announced before preregistration.

Visual Studies

ARCH 151 Drawing I
Fall. 2 credits. Freehand drawing with emphasis on line and perspective representation of form and space.

ARCH 152 Drawing II
Spring. 2 credits. Prerequisite: ARCH 151. Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

ARCH 251 Introductory Photo I (also ART 161)
Fall or spring. 3 credits each term. For description see ART 161.

ARCH 351 Photography II (also ART 261)
Spring. 4 credits. Prerequisites: ARCH 251 or ART 161, or permission of instructor. For description see ART 261.

ARCH 450 Architectural Publications
Fall and spring. Variable credit (maximum 3). May be repeated for credit.
Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production related to the exchange of architectural ideas. Exercises will cover both theoretical as well as hands-on aspects of architectural publication.
have historically had in the design of these structures. Engineers, on the other hand, have claimed bridge design as their responsibility and have failed it as evidence of Structural Art. Are the basic principles of bridge design such that this situation makes sense for our society? Or is a rethinking of the manner in which bridges are designed called for? Students in this course examine and experiment with the design of bridge structural forms, not only in terms of what is technically feasible but also, with equal emphasis, in the context of aesthetic, historical, and social considerations. Weekly meetings include lectures, discussion seminars, and studio-type design reviews.

ARCH 463 Special Topics in Structures
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 263, 264, and 363 or permission of instructor. Not offered every year.
Topic to be announced by preregistration.

ARCH 473 Special Investigations in Structures
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 664 Vertigo Structures
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year.
For description, see ARCH 364.

ARCH 665 Bridge Design
Fall or spring. 3 credits. Prerequisite: ARCH 363 or permission of instructor. Not offered every year.
For description, see ARCH 365.

Construction

ARCH 262 Building Technology, Materials, and Methods
Spring. 3 credits. Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

ARCH 485 Special Topics in Construction
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 262 or permission of instructor. Not offered every year.
Topic to be announced by preregistration.

ARCH 475 Special Investigations in Construction
Fall or spring. Variable credit (maximum 5). Prerequisite: permission of instructor and approved independent study form. Independent study.

Environmental Controls

ARCH 261 Environmental Controls—Site Planning
Fall. 3 credits. The basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

ARCH 361 Environmental Controls—Lighting and Acoustics
Fall. 3 credits. Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design; light, color, and form. Natural lighting possibilities and constraints as well as good and bad examples of artificial lighting.

ARCH 362 Environmental Controls—Mechanical and Passive Solar Systems
Spring. 3 credits. Basic thermal analysis of buildings. Human comfort criteria, energy conservation, passive solar design, HVAC distribution systems, overview of mechanical conveying systems, and plumbing.

ARCH 464 Special Topics in Environmental Controls
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 261, 361, and 362 or permission of instructor. Not offered every year.
Topic to be announced by preregistration.

ARCH 474 Special Investigations in Environmental Controls
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

Computer Applications

ARCH 372 Imaging and the Electronic Age
Spring. 3 credits. For undergraduate, non-computer-scientists. 2 lectures. 1 recitation. Not offered every year. D. Greenberg.
Natural lighting possibilities and constraints as well as good and bad examples of artificial lighting.

ARCH 375 Practicum in Computer Graphics (also COM S 417)
For description, see COM S 417.

ARCH 378 Microcomputer Applications in Design
Fall. 3 credits. Prerequisites: previous knowledge of PC-based CAD or permission of instructor.
This course covers advanced principles, concepts, and applications of microcomputer-aided design, synthetic imaging, and animations. It combines seminar-style presentation with hands-on laboratory sessions. The course uses IBM PC platforms exclusively.

ARCH 379 Design by Computer
Spring. 3 credits. Prerequisites: limited to third-year students and above. Not offered every year.
Exploration of the formalization of the design process for computability with the computer, and the role of computers in design. Lecture with CAD lab.

ARCH 476 Special Topics in Computer Applications
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 374 or 379 or permission of instructor. Not offered every year.
Topic to be announced by preregistration.

ARCH 477-478 Special Projects in Computer Graphics
477, fall; 478, spring. Variable credit (maximum 4). Limited to third-year students and above. Prerequisites: ARCH 374 plus concurrent registration in Computer Science 314 or equivalent, and permission of instructor.
Advanced work on computer graphics input and display techniques, including storage tube, dynamic vector, and color raster displays.

ARCH 479 Micro-Computer Applications in Design (also ARCH 679)
Fall. 3 credits. Prerequisites: an introductory course in computer graphics or computer science, or permission of instructor; upper level undergraduate or graduate status.
The course explores the role of synthetic imaging and computer graphics in architectural design. The first half of the course is devoted to examining the new possibilities that information technologies offer for multimedia visualization of architecture, from abstract conceptual drawings, to sketching, photorealistic rendering, and multimodal representation, including motion and sound. The second part of the course explores the uses of information technologies to model and simulate the creative design process. These explorations include developing a library of design ideas as building blocks for design, creating multimodal, multidimensional, immersive, virtual environments; interactive transformation and synthesis of design concepts; and “reverse architecting” of canonical works. The emphasis of this course is on concepts as well as methods and techniques of computer graphics and their application to simulating the creative design process in architecture.

Graduate Courses

ARCH 679 Micro-Computer Applications in Design
For description, see ARCH 479.

ARCH 761-762 Architectural Science Laboratory
761, fall; 762, spring. 6 credits each term. Open to architectural science graduate students only. Projects, exercises, and research in the architectural sciences.

ARCH 763-764 Thesis or Research In Architectural Science
763, fall; 764, spring. Variable credit (maximum 12). Limited to architectural science graduate students. Independent study.
ARCHITECTURE, ART, AND PLANNING 2000-2001

Architectural History

The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and society. Incoming students take ARCH 181–182 in the first year, and three additional courses from the 380–399 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students who do not satisfy undergraduate history requirements. Courses with the same number may only be taken once to satisfy history of architecture or in-college requirements.

Sequence Courses

ARCH 181 History of Architecture I
Fall. 3 credits. Required of all first-year students in architecture; open to all students in other colleges with an interest in the history of the built domain. The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

ARCH 182 History of Architecture II
Spring. 3 credits. Required of all first-year students in architecture. Open to all students in other colleges with an interest in the history of the built domain; may be taken independently of ARCH 181. The history of the built environment as social and cultural expression from more recent times to the present. Architecture and urban design themes, theories, and ideas are addressed in greater detail leading to the present time.

Directed Electives

ARCH 380 History of Theory
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. This course, in which classroom discussion and debate play a central role, explores the history of important theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on the relationship between the built environment and the construction and definition of cultural heritage, collective memory and civic identity, and the commodification or commercial celebration of specific buildings, sites, and urban events. We will focus on late eighteenth-, nineteenth-, and twentieth-century Europe. Particular attention will be awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Giovanni); political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (such as the world's fair, department store, morgue, and panorama); and the role played by tourism in the commodification of local and foreign sites.

ARCH 381 From Euporia to the Ghetto: Renaissance Urban Form
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Significant developments in European urban design from 1300-1600. Particular attention will be awarded to Italy and Spain. We will focus on a series of case studies: entire towns, specific urban spaces, and individual building types. Weekly discussions will contextualize the city within a larger cultural framework. We will consider how civic, economic, social, political, legislative, technical, and material concerns have had a significant impact on the form, function, and patronage of these places, spaces, and structures. The relevance of Renaissance theory to contemporary practice will also be emphasized through the discussion of several twentieth-century urban plans and built projects.

ARCH 382 Architecture of the Middle Ages (also ART H 332 and RELST 332)
Fall. 4 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. For description, see ART H 332.

ARCH 383 The Construction of Modern Life: The Politics of Memory and the Commodification of Architecture
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. This course will examine the complex relationship between the built environment, the construction and definition of cultural heritage, collective memory and civic identity, and the commodification or commercial celebration of specific buildings, sites, and urban events. We will focus on late eighteenth-, nineteenth-, and twentieth-century Europe. Particular attention will be awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Giovanni); political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (such as the world's fair, department store, morgue, and panorama); and the role played by tourism in the commodification of local and foreign sites.

ARCH 384 The Urban Landscape of Renaissance Rome: 1450–1600
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. This class is an exploration into the urban morphology, architecture, and civic life of Renaissance Rome. The city was a thriving center for architectural practice. It drew practitioners from throughout the peninsula and served as an important theoretical model for architects elsewhere. We will survey the important issues, individuals, and building projects of the city between 1450 and 1600 with particular emphasis on the intellectual and physical rediscovery and re-appropriation of Antiquity; the role of the Vatican with its large popular and visitor base; resident church officials, foreign bankers, and dignitaries that made specific demands of the built environment; and the unique topography and natural resources of the city's location. The last portion of the course will address the legacy of the Renaissance during the period of Italian unification and the Fascist regime.

ARCH 385 Magnificent Utility—Architecture and the Arts of Persuasion
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Architects put revolutionary attitudes about form, space, light, and the arts into practice during the course of the seventeenth century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

ARCH 387 The Nineteenth Century—Style, Technology, and Individuality in the West
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. An examination of the nineteenth-century efforts to create appropriate stylistic forms and expressions for emerging building technologies and typologies. The preservation of individual artistic expression against the backdrop of industrialization, urbanization, and professionalization will be emphasized. The course begins with Rationalist theory and its architectural expression and concludes with considerations of Art Nouveau, Modernismo, and Jugendstil.

ARCH 388 Modernism
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Precursors and proponents of the modern movement from the late nineteenth century into the 1940s are considered in this course. The cultural interests of the modern are examined in architectural and urban design for individuals, groups, and institutions, from Mies van der Rohe, Le Corbusier, and Frank Lloyd Wright to de Stijl, the Bauhaus, and design education. Attention is paid to the politics of design in serving the state during the 1930s.

ARCH 389 Architecture, Revolution, and Tradition
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. From early eighteenth to early twentieth century, European society underwent profound change. Political absolutism—the doctrine of unlimited government control—was challenged; Enlightenment attitudes—commitments to human reason, science, and education—gained ascendance. This course considers architectural and urban design in these terms of tumult. It begins with efforts to foment architectural revolution within inherited traditions of form, with attempts to establish design traditions within revolutionary settings.

ARCH 390 American Architecture and Building I
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. A review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts will be emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders will be examined. The architectural expressions of Native Americans, African Americans, women, and others will be treated in addition to those of European colonists and settlers.

ARCH 391 American Architecture and Building II
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. A continuation of Architecture 390 but may be taken independently. An account of American architecture, building, and responses to the environment from the post-Civil War period to the present day. Particular attention will be paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.
ARCH 392 Modern Architecture on Film
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.
An exploration of certain themes deemed critical to modern architecture and urbanism through their representation in both commercial and avant-garde films from the medium’s birth until the present day. The focus will vary each semester with particular emphases to include the modern house and housing, the modern city, technology and visions of the future, and finally the image of the architect.
Representations of these themes in other forms such as painting, photography, theatre, literature, and advertising will also be examined. Selected readings in modern architecture and film, screenings in class, presentations, and papers.

ARCH 393 The Cumulative City
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.
Well-established cities were transformed by radical and unimagined change in the nineteenth and twentieth centuries. Politics and economies were recast, populations exploded, and technologies reshaped transportation, communication, and building. This course explores transformation historically in the cumulative city, focusing on specific cities in America and Europe, Africa, and Asia. The cultural context of each city is examined to understand how it changed and how meanings became associated with evolving urban forms.

ARCH 394 Toward the Millennium
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.
Theory and practice in architecture and urbanism are investigated from the 1950s to the present. From the Americanized International Style to the recent internationalism of design attitudes, the immediate past is explored historically to probe the matrix of meanings associated with contemporary form, urbanism, and technology.

ARCH 396 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

ARCH 397 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

ARCH 398 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

ARCH 399 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year.

Courses in Preservation
ARCH 583 Measured Drawing (also CRP 567)
For description, see CRP 567.

ARCH 584 Problems in Contemporary Preservation Practice (also CRP 563)
For description, see CRP 563.

ARCH 585 Perspectives on Preservation (also CRP 562)
For description, see CRP 562.

ARCH 586 Documentation for Preservation (also CRP 560)
For description, see CRP 560.

ARCH 587 Building Materials Conservation (also CRP 564)
For description, see CRP 564.

ARCH 588 Historic Preservation Planning Workshop: Surveys and Analyses (also CRP 561)
For description, see CRP 561.

Graduate Seminars in the History of Architecture and Urbanism
ARCH 680 Seminar in Historiography
Fall. 4 credits. Prerequisite: permission of instructor.
Historiographic and methodological issues are examined in relation to the history of architecture and urbanism. Taught by different faculty members in successive years, the seminar is required of all first- and second-year graduate students in the History of Architecture and Urbanism Program.

ARCH 682 Seminar in Urban History
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Topic to be announced.

ARCH 683 Seminar in the History of Theory
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Topic to be announced.

ARCH 684 Seminar in the Italian Renaissance: Architecture, Politics, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Topic to be announced.

ARCH 686 Seminar in Seventeenth- and Eighteenth-Century Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Topic to be announced.

ARCH 688 Seminar in Twentieth-Century Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Topic to be announced.

ARCH 689 Seminar in the History of Cities
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Topic to be announced.

ARCH 690 Seminar in American Architecture, Building, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Topic to be announced.

ARCH 692 Seminar in Nineteenth-Century Architecture, Building, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Topic to be announced.

ARCH 696 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Topic to be announced.

ARCH 697 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Topic to be announced.

ARCH 698 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Topic to be announced.

ARCH 699 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.
Topic to be announced.

ARCH 299 Undergraduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor. May not be taken by students in design to satisfy undergraduate history requirements. Independent study for undergraduate students.

ARCH 499 Undergraduate Thesis in the History of Architecture and Urbanism
Fall or spring. 4 credits. For B.S. honors candidates in history only.

ARCH 799 Graduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum 12). Prerequisite: permission of instructor. Independent study for graduate students.

ARCH 899 M.A. Essay in the History of Architecture and Urbanism
Fall or spring. 4 credits. Independent preparation of the M.A. essay, often developed from topics investigated in ARCH 680.

ARCH 999 Ph.D. Dissertation in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum 12). Independent study for the doctoral degree.
ART

Undergraduate Program

The curriculum in art is a program of study within the College of Architecture, Art, and Planning, as well as other colleges at Cornell.

The undergraduate curriculum in art is an excellent preparation for a career in the visual arts. Past graduates have found it to be an excellent preparation for a career in applied art, although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters, all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience of the last two years. Beginning with the third year, students concentrate in painting, sculpture, photography, printmaking, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remainder is devoted to a diversified program of academic subjects with a generous provision for electives.

All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression.

A candidate for the B.F.A. degree may also earn a Bachelor of Arts degree from the College of Arts and Sciences or the College of Human Ecology, in a five-year dual degree program. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student will be assigned an adviser in both colleges of their dual degree program to provide needed guidance. A candidate for two degrees must satisfy all requirements for both degrees. At least 62 of the total credits must come from courses offered in the Department of Art. In addition, all Department of Art requirements for freshman writing seminars, art history, and distribution must be met.

It is expected that a dual degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during either their fourth or fifth year.

Bachelor of Fine Arts Degree Requirements

Credits and Distribution

130 credits are required for the B.F.A. degree. A minimum of 62 are taken in the Department of Art. A minimum of 57 are taken outside the department.

Curriculum

Students are expected to take an average course load of 16 credits per semester during their four years. If a student wishes to take more than three studio courses in any one semester they must file a petition. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. Any request to deviate from the standard curriculum must be petitioned to the department prior to the act.

Specific Course Requirements

By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, photography, and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

Concentration

Students must plan their programs to complete 27 credits in one of the studio areas of painting, sculpture, photography, or printmaking. Declaration of the area of concentration must be made during the second semester of the sophomore year. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

Concentration Requirements (27 credits total; 26 in printmaking)

The required courses for each concentration are as follows:

Painting: ART 121, 221, 321, 322, 421, 422 (Thesis)
Sculpture: ART 141, 241, 341, 342, 441, 442 (Thesis)
Printmaking: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331, 431, 432 (Thesis) Photographs: ART 161, 261, 263/264, 361, 461 and one of the following: ART 264, 265, 261

Dual Concentration

If a student is interested in studying in more than one area, they may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a non-thesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students take 23 credits in the first area of concentration and 15 credits in the second area of concentration. Drawing is only available as a second area of concentration.

The required courses for the dual concentration are:

First Area of Concentration Total Credits
Painting: ART 121, 221, 321, 322, 421, 422 23
Sculpture: ART 141, 241, 341, 441, 442 22
Printmaking: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331, 431, 432 22
Photography: ART 161, 261, 263/264, 361, 461, 462 23
Second Area of Concentration Total Credits
Drawing: ART 151, 152, 251, 252, repeat 251 15
Painting: ART 121, 221, 321, 322 15
Sculpture: ART 141, 241, 341, 342 15
Printmaking: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331 14

Photography: ART 161, 261, 263/264, 265 (2 of 3) 15

Note: The total number of in/out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Concentration

The combined media concentration enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music, theatre, and dance, etc. The student's proposed program must be approved by his or her adviser.

The required courses for the concentration in Combined Media (33 credits) are:

- 100 and 200 level studios
  - ART 1__, 2__; 200 and 300 level studios
  - ART 2__, 3__; 3__; 4__; 4__; (2 of 4)
  - 12
- ART 481, 482
- Out-of-college studio electives (minimum of 2)
- OCE Studio, OCE Studio
- Total
- 33 credits

Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the combined media concentration.

Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their academic records. Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty adviser, the Art Department Rome Program adviser, and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. Under special circumstances, seniors may petition to attend the Rome Program.

</table>

*Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.
Students may petition to take more than 16 credits per semester in the Rome Program. Students may study in Rome for one or two academic semesters.

*Fulfills 300-level Theory and Criticism requirement.

**Out-of-College Requirements**
A minimum of 57 electives credits must be taken outside of the college. In the first year, students must take two freshman writing seminars. Students are required to take courses from among three groups, which include: Physical and Biological Sciences (minimum of two courses, of at least 3 credits each), Social Sciences (minimum of three courses, of at least 3 credits each) and Humanities and Expressive Arts (minimum of three courses, of at least 3 credits each). All B.F.A. students are required to take 20 credits in the History of Art. One course must be taken in each of the following areas:
- Non-Western: 280, 378, 380, 381, 383, 384, 385, 386, 389, 395, 396

Three electives: any art history elective at the 300 level or above or any architectural history elective.

The university requirement of two terms in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two terms of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1962. No student may study in absentia for more than two terms.

Students who transfer into the undergraduate degree program in art must complete a minimum of four terms in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four terms of studio work.

**For those students matriculating in fall of 2000:**
Students are required to take ART 111, Introductory Art Seminar; ART 121, Introductory Painting; or ART 141, Introductory Sculpture; Art History Elective, and a Freshman Writing Seminar during the fall semester of the freshman year. Art History Elective, ART 171, Electronic Imaging in Art, and an additional Freshman Writing Seminar must be taken during the spring semester of the freshman year. A 300-level course in Theory and Criticism must be taken sometime during the junior or senior year.

Courses that will fulfill Theory and Criticism requirement (note: offerings may change from year to year. Check the current course catalog):
- ART 312
- ARCH 447
- ART H 370, 464, 494, 594
- ENGL 395
- GERST 660
- AS&RC 304, 503
- ANTHR 320, 322, 453

**The M.F.A. Program**
The Master of Fine Arts program requires four terms of full-time study, equal to a minimum of 60 credits. Graduate work done elsewhere or in the summer session is not applicable to the M.F.A. degree. The curriculum leading to the master's degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students allows an exceptional opportunity for individual mentoring.

Graduate students are provided individual studios and have 24-hour access to studios and labs.

Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university. Fifteen credits are required in each term of these, none credits are in studio work, and three credits are in Graduate Seminar (ART 611, 612, 613, 614). Students are required to take at least twelve credits of academic work outside the Department of Art during their four terms in residence. Candidates for the Master of Fine Arts degree must have completed eighteen credits in the history of art in the course of their graduate and/or undergraduate study. Every M.F.A. candidate must prepare a written thesis, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the written and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

**Course Information**
Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor.

Fees are charged for all studio courses. See the specific course description for course fees.

To take advantage of the special opportunities afforded by summer study, there are several course offerings during summer session.

**Guidelines for Independent Study**
A student who wants to undertake Independent Study must be a junior in good standing. Fine Arts students must have completed two years of the curriculum, including all first- and second-year studios and four semesters of drawing. An independent study cannot be used to fulfill any of the four drawing requirements. All students must have taken a minimum of one Cornell Art Department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor.
Independent studies must be petitioned to count toward required studio courses. Credit hours are variable up to a maximum of four.

Courses in Theory and Criticism

**ART 111 Introductory Art Seminar**  
Fall. 1 credit. S-U only. Limited to B.F.A. students.  
This course will investigate selected topics related to art and the multicultural experience. Students will study the basic vocabulary and tools used in the expression of art. They will question the nature of the visual arts as a discipline and survey art created by underrepresented American minority cultural groups.

**ART 214 Art and the Multicultural Experience**  
Fall. 3 credits.  
This course will investigate selected topics related to art and the multicultural experience. Students will study the basic vocabulary and tools used in the expression of art. They will question the nature of the visual arts as a discipline and survey art created by underrepresented American minority cultural groups.

**ART 312 Modern Art in Italy**  
Fall or spring. 3 credits. Rome Program only.  
This course is designed to introduce students to contemporary developments in Italian art and to major issues concerning the art world. Significant movements of the twentieth century, including Futurism, Metaphysical painting, and Magic Realism will be discussed. Post-war painting and sculpture will be emphasized. Visits with artists in studios, galleries, and museums will introduce students to the exchange between artists, dealers, and critics. Fulfills 300-level Theory and Criticism requirement for Fine Arts majors.

**ART 317 History of Art in Rome: Early Christian to the Baroque Age**  
Fall. 4 credits. Rome Program only.  
General survey of the early Christian period to the fantastic vision of Piranesi in the eighteenth century. Special emphasis will be placed on the developments of the Renaissance and Baroque periods. Weekly lecture and field trips.

**ART 318 History of Art in Rome: Renaissance in Rome and Florence**  
Spring. 4 credits. Rome Program only.  
A direct knowledge of art in its historical context is the aim of this course. Open both to students interested in history and those concentrating on the visual impact of art. Included are lectures and field trips.

**ART 419 Independent Study/Supervised Readings in Art**  
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the supervision of a faculty member.

**ART 611 Professional Skills for the Visual Artist**  
Fall. 3 credits. Limited to M.F.A. students.  
This seminar is designed to provide graduate students with an introduction to the concept of critical thinking with an emphasis on professional practice. The course will address the following topics: professional development, personal and professional growth, self-awareness, and the development of a personal philosophy of art. Students will be required to develop a personal statement and to present it to the class. Fulfills 600-level Theory and Criticism requirement for Fine Arts majors.

Students will complete a resource notebook that should be useful to them in the years after they graduate. Topics will include: funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

**ART 612 Recent Practice in the Visual Arts**  
Spring. 3 credits. Limited to M.F.A. students.  
This seminar is designed to introduce graduate students to the recent developments in the visual arts. The seminar will be structured around a series of lectures and discussions, with the students actively participating in the critique of contemporary art. Students will be expected to contribute to discussions and to present their own critical essays.

**ART 613 On-Line Publication for the Visual Artist**  
Fall. 3 credits. Limited to M.F.A. students.  
This seminar is designed to provide graduate students with an introduction to the concept of critical thinking with an emphasis on professional practice. The course will address the following topics: professional development, personal and professional growth, self-awareness, and the development of a personal philosophy of art. Students will be required to develop a personal statement and to present it to the class. Fulfills 600-level Theory and Criticism requirement for Fine Arts majors.

This seminar explores the use of digital technologies in the visual arts, focusing on the development of online publications. Students will be introduced to the basic principles of digital design and learn to create web-based publications using popular software programs. The seminar will cover topics such as web design, digital imaging, and interactive multimedia. Students will be expected to complete a project that demonstrates their knowledge and skills.

**ART 614 Contemporary Theory in the Visual Arts**  
Spring. 3 credits. Limited to M.F.A. students.  
This seminar explores the current issues represented within the visual arts. It is designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics will vary but may include the following: postmodernism, theory and practice, feminist theory, and postcolonial criticism.

**ART 721-722, 821-822 Graduate Painting**  
Fall 721, spring 821, fall, 822, spring, first-year M.F.A. students. 9 credits. 821, fall; 822, spring; second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation.

### Studio Courses in Painting

**ART 121 Introductory Painting**  
Fall, spring, or summer. 3 credits.  
The study of the language of painting through color, form, materials, and techniques. Aspects of traditional and modern pictorial composition are studied including proportion, space, and color theory through the representation of a variety of subjects.

**ART 221 Painting II**  
Fall or spring. 4 credits. Prerequisite: ART 121 or permission of instructor.  
A continuation of the study of aspects of pictorial composition initiated in ART 121, focusing on problems relating to the depiction of the figure, space, and light. Topics are explored within the context of historical and contemporary artistic expression.

**ART 321 Painting III**  
Fall or spring. 4 credits. Prerequisite: ART 221 or permission of instructor.  
A continuation of the study of aspects of pictorial composition initiated in ART 121, focusing on problems relating to the depiction of the figure, space, and light. Topics are explored within the context of historical and contemporary artistic expression.

**ART 322 Painting IV**  
Fall or spring. 4 credits. Prerequisite: ART 321 or permission of instructor.  
A continuation of the study of aspects of pictorial composition initiated in ART 121, focusing on problems relating to the depiction of the figure, space, and light. Topics are explored within the context of historical and contemporary artistic expression.

Fees for painting courses:
- 121, 221, 321, 322, 421, 422: $40

### Studio Courses in Printmaking

**ART 131 Introductory Intaglio**  
Fall and spring. 3 credits.  
An introduction to the two-dimensional thought processes and the language of vision. Students will explore design projects and the use of graphic materials, including collage, pochir, and screen printing.

**ART 132 Introductory Graphics**  
Fall and spring. 3 credits.  
A basic introduction to silkscreen techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

**ART 133 Introductory Lithography**  
Fall and spring. 3 credits.  
The theory and practice of lithographic printing, using limestone block and aluminum plate. Basic lithographic techniques of crayon, wash, and transfer drawing are studied.

### Notes
- Courses are offered in the fall, spring, and sometimes in the summer.
- Prerequisites and credits vary by course.
- Students are responsible under faculty direction for planning their own projects and selecting the media in which they work.
- Members of the faculty are available for individual consultation.
- Weekly discussion sessions of works in progress are held.
ART 361 Photography III
Fall, spring, or summer. 4 credits. Prerequisite: ART 161, 261, or permission of instructor.
Continued study of creative use of photography, with emphasis on specialized individual projects.
ART 461 Pre-Thesis in Photography
Fall or spring. 6 credits. Prerequisite: ART 261, 263.
A studio course intended for photography majors and other qualified students.
ART 462 Thesis in Photography
Fall or spring. 6 credits. Prerequisite: ART 461.
A studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.
ART 469 Independent Studio in Photography
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor.
Independent studio in photography allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.
ART 761-762, 861-862 Graduate Photography
761, fall; 762, spring; first-year M.F.A. students. 9 credits. 861, fall; 862, spring; second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation. Discussion sessions of work in progress are held.

Studio Courses in Drawing
Fees for drawing courses: $25

ART 151 Drawing I
Fall, spring, or summer. 3 credits. A course that is general in nature and introduces students to principles and techniques of representation. Emphasis will be on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. In addition, the student will have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink and wash, etc.

ART 152 Drawing II
Spring. 3 credits. Prerequisite: ART 151. A general course in drawing that will emphasize figure study and life drawing. This course will build on the foundation of ART 151 and concentrate on the analytical study of the figure. Students will explore a variety of materials, traditional and contemporary.

ART 153 Conceptual Drawing
Summer. 3 credits. Emphasis on drawing from the imagination. The generation of ideas and their development in sketches is stressed. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

ART 159 Life and Still-Life Drawing
Summer. 3 credits. The human figure and still life are studied both as isolated phenomena and in relation to their environment. Focuses on helping the student observe and discover.

ART 251 Drawing III
Fall. 3 credits. Prerequisites: ART 152. An intermediate drawing course in which students will study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials will be stressed.

ART 252 Drawing IV
Spring. 3 credits. Prerequisites: ART 251. Advanced drawing with an emphasis on life drawing and figure composition. Individual expression will be encouraged along with creative investigation of materials and processes.

ART 459 Independent Studio in Drawing
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in drawing allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

Special Studio Courses
Course fees:
171, 271, 272, 479 $105
391, 392 $50
481, 482, 489 $70

ART 171 Electronic Imaging in Art
Fall or spring. 3 credits. An introductory studio course using the computer as a tool for making art. Students will explore various approaches to 2- and 3-D image creation using software programs for imaging generation and processing. Intro to the web.

ART 271 Electronic 3-D Modeling and Animation
Fall or spring. 4 credits. Prerequisite: ART 171. A studio course in creating 2- and 3-D still and animated visualizations using computers and 3-D software for object modeling, animation, and rendering. Concentration on the web.

ART 272 Digital Video and Sound
Fall or spring. 4 credits. Prerequisite: ART 171. A studio course that introduces students to digital video including capture stills, animation, video, and sound with an introduction to interactive presentation and CD-ROM production. Concentration on the web.

ART 372 Special Topics in Art Studio
Fall, spring, or summer. Variable credit. An exploration of a particular theme or project.

ART 379 Independent Studio in Rome
Fall and spring. 4 credits variable. Prerequisite: student must be a junior in good standing, and have the written permission of the instructor. Rome Program only.

Independent studio in Rome allows non-art majors the opportunity to pursue special interests in fine arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide their progress and evaluate the results.

ART 391 Media Arts Studio I
Fall. 3 credits. Prerequisite: one of the following courses: ART 171, THETR 277, 377, MUSIC 120, or equivalent. Also student must be a junior and have permission of instructor. Lab fee $50. A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, film and video, and dance. Group projects and discussions will also investigate the artistic and interactive potential of a high-speed intranet connecting arts spaces on campus, including virtual and performative events.

ART 392 Media Arts Studio II
Spring. 3 credits. Prerequisite: one of the following courses: ART 171, THETR 277, 377, MUSIC 120, or equivalent. Also student must be a junior and have permission of instructor. Lab fee $50. A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, film, and video. Group projects and discussions will also investigate the artistic and interactive potential of a high-speed intranet connecting arts spaces on campus, including virtual and performative events.

ART 400 Rome Studio
Fall or spring. 4 credits. Rome Program only. Prerequisite: permission of instructor. Fee: $25. The content for the Rome studio will be determined by the instructor. Emphasis will be divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media will consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor. ART 400 fulfills four credits of the concentration requirement.

ART 479 Independent Studio in Electronic Imaging
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in electronic imaging allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 481 Pre-Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: written permission of instructor on a combined media thesis form must be received in the art department prior to enrollment in this course. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.
**Requirements for Graduation:**

1. **General Education**
   - Freshman writing seminars: 2 courses
   - Foreign language: 3 courses or qualification in one foreign language
   - Distribution Requirements: 9 courses

   Students must take a total of nine courses for the distribution requirement: four courses (of three or more credits each) from Groups 1 and 2, at least two of which are from Group 1, and at least one of which is from Group 2; five courses from Groups 3 and 4, with at least two in each group and two in the same department. No single course may satisfy more than one distribution requirement. URS students must follow the College of Arts and Sciences guidelines specifying courses that meet the requirements for groups 1-4.

   - Group 1: Physical and biological sciences (2-3 courses required)
   - Group 2: Quantitative and formal reasoning (1-2 courses required)
   - Group 3: Social sciences and history (2-3 courses required)
   - Group 4: Humanities and the arts (2-3 courses required)

2. **Advanced Placement Credit**

   Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 above, if they complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirement in Groups 3 and 4.

   - Grades of S-U courses cannot be applied to graduation or toward the 12-credit minimum required for good academic standing each semester. Please note that no course may satisfy more than one requirement.

   - Design
   - Economics
   - Environment
   - History
   - Politics/Policy
   - Quantitative Analysis

   a. Design
   - CRP 381: Principles of Spatial Design and Aesthetics
   - CRP 491: Rome Wasn’t Built in a Day
   - CRP 320: Regional Question: The Case of Italy (Rome)
   - CRP 401: Seminar in Urban Political Economy
   - CRP 404: Urban Economics
   - CRP 417: Industrial Restructuring: Implications for State and Local Policy

   b. Economics
   - CRP 380: Environmental Politics
   - CRP 395.15: Recycling & Solid Waste
   - CRP 395.31: Green Cities
   - CRP 443: Emerging Global Environmental Trends
   - *CRP 444: Resource Management & Environmental Law
   - *CRP 451: Environmental Law
   - *CRP 453: Environmental Aspects of International Planning
   - *Meets requirement only with instructor’s permission.

   c. Environment
   - CRP 380: Environmental Politics
   - CRP 395.15: Recycling & Solid Waste
   - CRP 395.31: Green Cities
   - CRP 443: Emerging Global Environmental Trends
   - *CRP 444: Resource Management & Environmental Law
   - *CRP 451: Environmental Law
   - *CRP 453: Environmental Aspects of International Planning
   - *Meets requirement only with instructor’s permission.

   d. History
   - CRP 261: Urban Archaeology
   - CRP 360: Pre-Industrial Cities and Towns of North America
   - CRP 361: Seminar in American Urban History
   - ARCH 399: Special Topics: Architectural History (Rome)
   - ART 317.20: Art History: Early Christian, Romanesque, and Gothic Art in Rome and Central Italy (Rome)
   - ART 318.20: Art History: Renaissance in Rome (Rome)
   - HIST 419: Seminar in American Social History: Race, Class, and the American City (Cornell-in-Washington)
Cornell faculty members teach these seminars, which provide credit toward fulfillment of major, distribution, and other academic requirements.

**Cornell Abroad.** We encourage qualified undergraduates to study abroad because exposure to foreign cultures can be an eye-opening aspect of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. We work continually to develop study abroad opportunities. Current programs are available in Great Britain, Spain, and Germany. Opportunities in Asia, the Mideast, and France should be forthcoming. We encourage URS students to explore these opportunities.

**Cornell-in-Rome Program.** The College of Architecture, Art, and Planning has a teaching facility in Rome located in the sixteenth-century Palazzo Massimo. Students in good standing can earn degree credits through courses taken with Cornell faculty assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and art.

**Research and fieldwork.** Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

**Additional Degree Options**

**Linked degree options.** Urban and regional studies students may earn both a Bachelor of Science degree and a Master of Regional Planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor’s degree. Under this option, a minimum of 30 credits and a master’s thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

**Dual degree option.** A student accepted in the Cornell College of Arts and Sciences may earn both a B.A. in a College of Arts and Sciences major and a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual degree program. Cornell students interested in pursuing the dual degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

**Admissions Requirements and Procedures**

Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university application admission.

**Transfer Students**

In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the Director of Admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, NY 14850–2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.

Prospective transfers should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous course work closely parallels the “General Education” requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus. Applicants who want further information regarding the Urban and Regional Studies Program, may contact Professor William W. Goldsmith, Program Director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853–6701 (telephone: 607-255-4613).

**The Graduate Program in City and Regional Planning**

The major concentrations of course work in city and regional planning are in the following areas:

- Built environment and urban development planning is concerned with physical facilities, the social, economic, and environmental forces that affect their design, and the process of development, plan making, and administration.
- History and historic preservation planning is a special program of study preparing students for work in history, analysis, and preservation of buildings, urban environments, and neighborhoods, including downtown business areas.
- Regional planning and regional science are concerned with socioeconomic issues and functional planning at the regional level, the forces that generate economic growth and social development, and the equitable distribution of resources which can best be used.
- Local and regional economic development is concerned with understanding and influencing how economic change may be harnessed to the benefit of communities, counteracting plant closings and more general regional decline and stimulating programs of socioeconomic change and development.
International planning offers a broad range of courses in international economic development, development planning, and political economy.

Quantitative methods and policy analysis courses are offered to prepare planners and researchers for a variety of situations and problems. Complementing these concentrations, planning theory and political economy courses examine the organizational and planning processes and the political and economic conditions in which planning and international development operate.

Several graduate degrees are offered: the Ph.D.; the Master of Regional Planning (M.R.P.), in a two-year program; the Master of Arts (M.A.) in historic preservation planning, in a two-year program, and, in special cases, the Master of Professional Studies (International Development) [M.P.S.O.D.I.], for the twelve-month international planning program.

Off-Campus Opportunities

Rome Program. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Massimo. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

Course Information

Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor.

The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

Undergraduate Program in Urban and Regional Studies

CRP 100 The American City
Fall. 3 credits. S-U grades optional for out-of-department students only.

An introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we approach the last decade of the twentieth century. Readings, discussions, and brief papers exploring topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to central city poverty, will be one of the world's most successful cities. The course will cover applicable methods in probability, descriptive statistics, estimation, hypothesis testing, and regression.

CRP 261 Urban Archaeology
For description, see LA 261.

CRP 314 Planning, Power, and Decision Making
Fall. 5 credits.
This seminar examines various bases of political and professional power. What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups?

CRP 318 Politics of Community Development (also CRP 518)
Spring. 3 credits. Letter grade.
A seminar on city economic development and community institutions. Attention to issues of local politics, planning, housing, and economics. Term papers on field investigations are encouraged. Topics will vary from year to year.

CRP 321 Introduction to Quantitative Methods for the Analysis of Public Policy (also CRP 545)
Spring. 3 credits.
An introduction to the role and use of quantitative methods in the study of urban and regional issues. This course will focus on various types of models commonly used to analyze urban and regional policy, including regression models, cost-benefit analysis, and simulation, and others. Strengths and weaknesses of these methods will also be considered.

CRP 360 Pre-Industrial Cities and Towns of North America (also LA 260/LA 666 and CRP 666)
Fall. 3 credits. S-U grades optional. For description, see LA 260.

CRP 361 Seminar in American Urban History (also CRP 662)
Fall or spring. 3 credits. Prerequisite: permission of instructor.
Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

CRP 363 American Indians, Planners, and Public Policy (also CRP 547 and LA 263/LAS47)
Spring. 3 credits. For description, see LA 363.

CRP 370 The Regional Question: The Case of Italy
Fall. 3 credits. For majors in urban and regional studies only. Rome Program only. The "southern problem" in Italy has long interested regional planners, economists, sociologists, and political scientists. This course will make use of field trips to the Mezzogiorno and the "Third Italy" to explore practical aspects of regional inequality. Special attention will be paid to theories that purport to explain why the south remains underdeveloped and why the "Third Italy" is thought to be one of the world's most successful regions—in economics, politics, and social life. We will examine how Italy's integration into the European Union affects and is affected by its regional issues.

CRP 371 Cuba: The Search for Development Alternatives
Fall. 3 credits. Open to sophomores, juniors, seniors.
Cuba is a symbol; it is also a society. This course looks beyond the symbol to Cuban society, environment, and political economy in a Caribbean context. Cuba's relations with other nations and their impacts on Cuban development will be emphasized. The 1959 Revolution was a defining moment in Cuban history and a central element in Cuban culture. Students will learn about the experiences that shaped the revolution, altered its course in the 1970s and 1980s, and led to profound experimentation and a renewed search for authenticity in the 1990s.

CRP 380 Environmental Politics
Spring. 4 credits.
Examines the politics of public decisions affecting the environment. Focuses on the roles played by different political actors, the powers of various interest groups, methods for influencing environmental decisions, and the political and social impacts of those decisions.

CRP 381 Principles of Spatial Design and Aesthetics (also CRP 581)
Fall. 3 credits. Course enrollment requires special permission of instructor and is limited to 30 students.
A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

CRP 385 Special Topics
Fall, spring, summer. 4 credits. Hours to be arranged.

CRP 385.40 The History of Urban Form in America (also CRP 685.40)
Fall. 3 credits.
The history of city planning in America from colonial times to the early 20th century, including brief reviews of European influences on urban form. Lecture, discussions, short papers.

CRP 400 Introduction to Urban and Regional Theory
Fall. 4 credits. Open to juniors and seniors.
Introductory review of theories dealing with the spatial distribution of population and economic activity, drawn from various social science disciplines such as geography, economics, and sociology. Review of recent research dealing with such topics as population distribution, migration, location of industry and economic activity, and the spatial organization of urban and regional social systems.
ARCHITECTURE, ART, AND PLANNING 2000-2001

CRP 401 Seminar in Urban Political Economy
Spring. 4 credits. Prerequisites: introductory economics or sociology, for URS students. CRP 400 also.
The world economy, the global city, and social change. Population, technology, and work in industrial and developing countries. Race, ethnicity, and nationality. Profits, subsistence, and poverty. Students may read and direct discussions on outstanding texts, write book reviews, and prepare brief reports.

CRP 404 Urban Economics (also CRP 504)
Spring. 4 credits. Prerequisite: microeconomics.
Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urban processes and policies, determinants of urban growth and decline, urban land and housing, public services, and public policy. Some time will be spent in discussing problems of cities in developing countries.

CRP 408 Introduction to Urban Geographic Information Systems (GIS) (also CRP 508)
Spring. 4 credits. Letter grade.
Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present spatial information. This course will focus on GIS in the social sciences. Many of the tools and methods discussed in GIS courses will be based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues to be covered include: fundamentals of spatial analysis; overview of GIS technology and applications; design of GIS projects; gathering and analyzing data; and creating thematic maps.

CRP 412 Devolution and Public Sector Restructuring (also CRP 612)
Fall. 3 credits optional.
This course will address devolution and decentralization of government services in a national and international context and then focus on the local public sector response in the United States. Privatization, intermunicipal cooperation, and devolution/reorganization will be reviewed including changing roles for the private sector, nonprofit sector, and unions. Implications for policy, program design, public advocacy, and citizen involvement will be discussed. Special topics may include welfare reform. Graduate students will be expected to write an major research paper in addition to short papers throughout the term.

CRP 416 European City: The Public Sphere and Public Space
Fall. 2-4 credits variable. Open to all juniors and seniors. S/U option available to non-majors. Enrollment may be limited by the instructor. Rome Program only.
An examination of the social, economic, and political life of the European city, particularly through the concept of the "public sphere." Study of the socio-economic underpinnings of the city. How are cities organized, how do citizens relate to the state, the city to the nation, the nation to the global market? How and where do different groups of people live? How do they travel, inside the city and from city to city? How are new parts of the city developed and old ones preserved, transformed, or destroyed? What public services do people expect, and how are they delivered? What is the role of private business? How do Italians/Europeans contend with the urban environment, poor neighborhood services, and impoverished immigrants? In all these cases, how do Italian (or European) conditions and policies differ from those in the United States (or elsewhere)?

CRP 417 Industrial Restructuring:Implications for State and Local Policy (also CRP 517)
Fall. 4 credits.
A basic introduction to new issues arising from the way in which national and international economic shifts are affecting diverse Urban states localities. The course will focus on intra-industry restructuring, the location of economic activities, and state and local economic policy. Cases will be drawn from a variety of industries and national situations, with specific application to New York and other Northeast locations.

CRP 418 Local Government Restructuring in New York (also CRP 618)
Spring. 4 credits. Optional grade. Prerequisite: CRP 412/612.
Students will undertake research requested by New York State clients—statewide associations of local government, state agencies, and the public sector unto analyze and identify alternative approaches to restructuring local government service delivery. The course will begin with an overview of qualitative research methods: case studies, interviews techniques, and surveys. The class will work as a team with specific statewide client organizations to complete a project. Formal presentation and written public policy design will be part of the final product.

CRP 442 The Sociology of Science
For description, see S&TS 442.

CRP 443 Emerging Global Environmental Trends (also CRP 543)
Spring. 3 credits. Letter grade. Limited to 20 students. Open to juniors, seniors, and graduate students by permission of instructor.
This seminar focuses on the emergence of broad trends that suggest human society is facing a global environmental crisis. It will examine the factual grounds on which concern about these trends is founded, their implications, and the types of steps human society might take in order to reverse or otherwise alter these trends before they generate enormous and irreversibly tragic problems.

CRP 444 Resource Management and Environmental Law (also CRP 544)
Spring. 4 credits. Letter grade. Open to juniors, seniors, and graduate students by permission of instructor.
This course introduces the application of legal concepts and processes to the management of natural resources and natural resource areas. It explores the role of the constitution of law, statutory law, administrative regulations, and judicial decisions in managing these resources. Particular focus is given to the management of wildlife, wetlands, and critical resources on public lands. The course considers the inherent 12 issues of the United States and other industrialized countries. The first part of the course will introduce principles that guide the development of social policy including fairness and justice. Various conceptions of social policy will be examined, with reference to their influence on the design and extent of social welfare provision, comparing the United States with other industrialized countries. The second part of the course will examine the relationship between economic change and social policy in the United States. A series of current social policy controversies (such as AIDS, homelessness, abortion, and workfare) will illustrate how values and assumptions about state, economy, and society affect the forms of social welfare provision and how they are administered.

CRP 451 Environmental Law (also CRP 551)
Fall. 4 credits.
An introduction to how the legal system handles environmental problems. Study of federal statutes such as the National Environmental Policy Act, the Clean Air Act, and the Clean Water Act, and of important judicial decisions that have been handed down under federal environmental statutes and regulations. Discussion of environmental law topics from a policy management perspective. This course is designed for undergraduate and graduate students interested in urban issues, planning, natural resources, government, environmental engineering, law, business, architecture, landscape architecture, etc. Course assignments for graduate students will differ in some aspects from those for undergraduates.

CRP 453 Environmental Aspects of International Planning (also CRP 683)
Fall. 3 credits.
This seminar will examine the roles of diverse environmental actors—international organizations, national bureaucracies, scientific communities, NGOs, and social movement organizations—in shaping environmental debates and designing conservation and remediation programs in the Third World. Open to advanced undergraduate and graduate students in planning, environmental studies, and related social and natural sciences.

CRP 457 Community Service Fieldwork
Fall or spring. 4 credits variable. Permission is granted by instructor.
Undergraduate students work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects will involve urban and regional issues as defined by a "client" and agreed upon by the faculty member.

CRP 461 Methods of Archival Research
Spring. 3 credits.
Examination of methods of using archival materials, including documents in the Cornell archives and regional history collections, for research in the history of architecture, historic preservation, and history of urban development.
CRP 474 Third World Urbanization (also CRP 674)
Spring. 4 credits. S-U grades optional. Colonialism and economic globalization have profoundly impacted cities worldwide. The course focuses on the social, political, and spatial dimensions of these processes. We look at rural-urban dynamics and their implications for the structure of urban space and for concepts of state and citizenship. We assess the position of Third World Cities in the global economy and implications for employment, paying special attention to women workers and urban environment. The second half of the course focuses on responses to these massive changes: violence and repression, social movements, and transnationalism.

CRP 477 Issues in African Development (also CRP 677)
Fall and spring. 1 credit. S-U only. This course examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

CRP 490 Student-Faculty Research
Fall or spring. 1-4 credits. Limited to undergraduate students in the Urban and Regional Studies Program. S-U grades only. Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

CRP 491 Rome Wasn't Built in a Day
Spring. 3 credits. Letter grade. In this electronic course, students will learn about how the form and spatial structure of the city of Rome has evolved over time. Using the interactive CD-ROM "Layers of Rome" as a digital text, the course will engage participants in the investigations of urban design in Rome both as a case study and as a vehicle for exploring concepts applicable to many contemporary cities worldwide. The material focuses on the intersection between historical studies of urban space, architectural geography, urban landscape formation, and the design of cities. Lectures, research, readings, and exercises will be developed using the Layers of Rome CD, web searches, digital networking, and various interactive learning technologies geared toward urban analysis and visual design media.

Graduate Courses and Seminars

CRP 504 Urban Economics (also CRP 404)
Spring. 4 credits. S-U only. For description, see CRP 404.

CRP 508 Introduction to Urban Geographic Information Systems (GIS) (also CRP 408)
Spring. 4 credits. Letter grade. For description, see CRP 408.

CRP 512 Public and Spatial Economics for Planners
Fall. 3 credits. Letter grade. No prior knowledge of economics required. Covers basic microeconomic theory and some topics in public economics. What distinguishes it from small courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. The course will also cover the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

CRP 513 Planning Practice and Urban Structure Seminar
Fall. 4 credits. This introductory graduate seminar has several objectives. It exposes students to the theories and history of (1) planning, administration, and related public intervention in urban affairs, (2) the development of cities, and (3) the built environment. Topics are analyzed from the perspective of public economy. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing short papers, and explore one research topic in depth.

CRP 517 Industrial Restructuring: Implications for State and Local Policy (also CRP 417)
Fall. 4 credits. For description, see CRP 417.

CRP 518 Politics of Community Development (also CRP 318)
Spring. 3 credits. Letter grade. For description, see CRP 318.

CRP 519 Urban Theory and Spatial Development
Spring. 3 credits. Letter grade. This course complements theories of urbanization and spatial development with an introduction to issues of governance within urban regions in the United States and Western Europe. The course will discuss economic and political institutions and actors as they shape the spatial form of cities. The work of authors such as Paty Healey, Margit Mayer, David Harvey, Mike Davis, and Susan Fainstein will be discussed.

CRP 520 Statistical and Mathematical Concepts for Planning
Fall. 3 or 4 credits. An introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics will include matrix algebra, probability, sampling, estimation, and regression as well as the use of a microcomputer statistical package.

CRP 521 Mathematical Foundation for Planning Analysis
Fall. 1 credit. S-U grades only. Meets for two hours, once each week, for approximately half the semester. Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis. Departmental permission required.

CRP 525 Introductory Methods of Planning Analysis
Fall. 4 credits. Letter grade. A course on quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from places in the United States, but tools are applicable throughout the world: descriptive and inferential statistics; mapping; and observation. Required lab exposes students to essential microcomputer applications and builds skills in writing and analysis.

CRP 529 Mathematics for Planners
Fall. 4 credits. Variable. S-U grades optional. The course covers basic mathematical concepts and techniques—with an emphasis on calculus—needed by the student who wishes to take intermediate-level courses in economics, urban and regional analysis, qualitative methods for the social sciences and policy analysis. Topics include: matrix algebra, set theory, functions, differentiation, and integration.

CRP 532 Real Estate Development Process
Fall. 3 credits. Examination of various forms of development as well as the role of major participants in the processes. Review issues in residential, retail, industrial, office, and low-income housing projects. Some guest speakers and case studies.

CRP 533 Real Estate Marketing and Management
Fall. 3 credits. The course focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of property are reviewed. Topics include examination of tenant types, factors creating preferred locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies.

CRP 537 Real Estate Seminar Series
Fall and spring. 1/2 credit per term. S-U grades only. Restricted to MFS/RE students. A one-credit course designed to bring students weekly into direct contact with real estate professionals mainly through the use of videoconferences originating from locations around the world.
This course will explore the theories and techniques of negotiation and mediation practice. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 547 American Indians, Planners, and Public Policy (also CRP 363 and LA 283/LA547) Spring. 3 credits.

For description, see LA 363.

CRP 548 Social Policy and Social Welfare (also CRP 448) Spring. 4 credits.

For description, see CRP 448.

CRP 549 Ethics and Practical Judgment in Planning Spring. 4 credits variable.

An introduction to problems of practical judgment and ethics as they arise in planning and public-serving professional practice. Issues such as consent, interests, deliberation, and legitimacy are central concerns.

CRP 551 Environmental Law (also CRP 451) Fall. 4 credits.

For description, see CRP 451.

CRP 552 Urban Land-Use Planning I Fall. 3 credits

Surveys, analyses, and plan-making techniques for guiding physical development of urban areas; location requirements, space needs, and interrelations of land uses. Emphasis on residential, commercial, and industrial activities and community facilities; housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 553 Urban Land-Use Planning II Spring. 3 credits. Prerequisite: CRP 552 or permission of instructor.

Seminar covering the essentials of growth management, zoning, and subdivision: the main tools for implementing a land-use plan. Agriculture and open space preservation, infrastructure timing controls, redevelopment, planned unit development, and much more.

CRP 555 Urban Systems Studio (also LA 701) Fall. 5 credits. Prerequisite: permission of instructor.

Application of urban design and town planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions involving the street, square, block, garden, and park systems. Topics covered in the studio include urban land-use development, spatial systems, and aesthetics, and private and public and private implementation of urban-design plans. Computer modeling and digital design media will be introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

CRP 557 City Planning Design Studio Spring. 4 credits. Prerequisite: previous design courses or permission of instructor. A series of individual and team small area design projects at district, neighborhood, and project scale. The course objective is to develop an understanding of the spatial issues, knowledge, and skills needed to design the functional, aesthetic, social, and cost needs of urban communities. Studio projects, field trips, and reading.

CRP 558 City and Regional Planning Workshop Fall and spring. 4 credits. S/U grades only. Students work on urban issues, such as housing, traffic and parking, economic development, zoning, and related planning issues with public or non-profit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work individually or in teams.

CRP 560 Documentation for Preservation (also ARCH 586) Fall or spring. 3 credits.

Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 561 Historic Preservation Planning Workshop: Surveys and Analyses (also ARCH 588) Fall or spring. 4 credits. Techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

CRP 562 Perspectives on Preservation (also ARCH 585) Fall. 3 credits.

Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

CRP 563 Problems in Contemporary Preservation Practice (also ARCH 584) Spring. Variable credit.

A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 564 Building Materials Conservation (also ARCH 587) Spring. 3 credits. Open to juniors, seniors, and graduate students.

A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

CRP 565 Fieldwork or Workshop in History and Preservation Fall or spring. Variable credit. Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 567 Measured Drawing (also ARCH 553) Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor. Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

CRP 569 Archaeology in Preservation Planning and Site Design (also LA 569) Spring. 3 credits.

For description, see LA 569.

CRP 581 Principles of Spatial Design and Aesthetics (also CRP 381) For description, see CRP 381.

CRP 605 Urban Public Finance Fall. 4 credits. Letter grade. Prerequisite: prior exposure to microeconomics.

An overview of neoclassical public economics theory, particularly those aspects of the theory that are central to urban public finance. In part two, the unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Part three of the course presents the public finance theory of taxation. Major taxes and other revenue sources used by large municipalities are described and analyzed. Part four is the heart of the matter, namely the measurement and analysis of the fiscal condition of cities.

CRP 607 GIS Applications Workshop Spring. 3 credits. Letter grade. Prerequisites: a basic GIS course and knowledge of ArcView or ArcInfo. Students with exceptional programming and web design skills can take the class with the prior permission of instructor.

This course is a more advanced GIS class that focuses upon GIS applications and projects for one or more clients. Clients may be out-of-state and travel for meetings and/or site visits for data collection may be required. Contact the instructor directly to learn about project options for the current semester.

CRP 612 Devolution and Public Sector Restructuring (also CRP 412) Fall. 3 credits. S-U grades optional. For description, see CRP 412.

CRP 614 Gender and International Development (also WOMNS 614) Spring. 3 credits.

This course has four main objectives. First, to provide an analysis of the location of women in processes of development and to understand the centrality of gender in each case. Second, to examine theoretical and conceptual frameworks for the analysis, including an understanding of gender divisions and their interaction with other forms of inequality such...
as class, race, and ethnicity. Third, to reflect upon the linkages between the global economy and the gendered macro and micro processes of development. Fourth, to provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.

CRP 616 Globalization and Development
Spring. 3 credits. Letter grade only.
This course concentrates on the current dynamics of national and international development, globalization of national economies, and the forces and trends that are shaping this process. Beginning with an analysis of economic restructuring taking place since the late 1960s, the emphasis is on the factors affecting the new international division of labor and production, the labor market, consumption, trade and finance, and the distribution of resources. This includes the analysis of processes through which the current neoliberal model is being built, such as trade liberalization, labor market flexibility, the erosion of nation states as economic units, and the formation of trade blocks and global institutions.

CRP 618 Local Government Restructuring in New York (also CRP 418)
Spring. 4 credits. S/U grades optional. Prerequisite: CRP 412/612. For description, see CRP 418.

CRP 621 Quantitative Techniques for Policy Analysis and Program Management
Spring. 4 credits. Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

CRP 631 Local Economic Policy—Field Workshop
Fall. 4 credits. A group policy analysis exercise in an upstate New York city. Students do a combination of data analysis; interviews with labor, business, and public leaders; and problem papers addressed to current issues presented by a client group. Individual work is synthesized into a comprehensive report at the end of the semester.

CRP 632 Methods of Regional Science and Planning I
Spring. 4 credits variable. An introduction to some of the major methods and models used in regional science and planning. This course is half of a two-semester sequence (see CRP 731). Either course may be taken first. Both courses will cover topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning. Where appropriate, computer implementation will be considered. CRP 730 emphasizes statistical and econometric models.

CRP 633 Methods of Regional Science and Planning II
Fall. 4 credits. See CRP 632. CRP 633 will provide an introduction to deterministic methods and models such as input/output models, social accounting models, and optimization models.

CRP 635 Workshop: State Economic Development Strategies
Spring. 4 credits. S-U grades optional. The purpose of this workshop is twofold: (1) to provide students with research tools useful in developing state-level economic development strategies; and (2) to provide a critical understanding of the primary economic development strategy used by U.S. state policymakers. Specific sites will be selected by students. Fieldwork is emphasized in the form of site visits, meetings with employees of state policymakers, firms, specific industries, and government agencies. The course will consist of lecture and discussion meetings. The workshop sessions will involve exercises in qualitative information gathering on economic development topics; use of the census in conjunction with geographic information systems for analysis and presentation; and shift-share analysis.

CRP 639.05 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World: Historical and Theoretical Perspective
Fall. 4 credits variable. Historical and conceptual background, and relevant case material, for dealing with urban and regional development using production analysis with a focus on the Third World. Consequences of the organization of production for urban-rural and regional interactions will be emphasized. This historically oriented theoretical framework will be compared to location, central place, and interregional feedback theories.

CRP 639.06 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World-II: Current Policy Perspective
Spring. 4 credits variable. The course focuses on the role of the market that can or cannot accomplish in terms of guiding economic, industrial, and regional development. Points of view represented range from completely unrestricted market operations to proactive industrial development policies in market contexts. Lessons are devised for Third World regional development policies drawn from the experience.

CRP 642 Critical Theory and the Micro-Politics of Practice
Spring. 4 credits variable. Trying to "solve problems," planners and policy analysts are constantly at a crossroads, shape participation, and negotiate relations of power. This seminar explores theories illuminating the communicative micro-politics of their daily practice. We explore issues of power and discourse, practical judgment and deliberation, productive and reproductive aspects of praxis, political speech, and action in diverse practical settings.

CRP 653 Legal Aspects of Land-Use Planning
Spring. 3 credits. Offered alternate years. Survey of legal issues affecting real estate industry. This class will be taken in conjunction with CRP 652. Preparation of elements of historic preservation law, statutory law and case law, environmental law, and regulatory law will be emphasized. Individual work is emphasized in the form of symposiums and reports.

CRP 655 Real Estate Project Workshop
Spring. 3 credits. Permission of instructor required. Students will be asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships will be required. A range of topics will be selected. Real estate field will be addressed including project feasibility, marketing, planning, and design, legal constraints and concerns, etc. Projects will focus on real world case studies and will require professional level reports suitable for oral and written presentations.

CRP 657 Real Estate Law
Fall. 3 credits. Letter grade. Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and sales and regulations. Discussion of current legal issues affecting real estate industry.

CRP 658 Residential Development
Spring. 3 credits. Letter grade. The course explores the residential development process from site acquisition through delivery and servicing of the finished product. Topics to be covered include market feasibility, land planning and acquisition, product selection and design considerations, project financing and feasibility, schedule and budgetary controls, contracting and construction issues, marketing and sales, and customer service. Current issues in providing competitive housing products in today's markets will also be explored. Composition of the residential development project team will be discussed, and fieldwork will be supplemented by presentations from visiting professionals as well as a visit(s) to an actual project(s).

CRP 661 Historic Preservation Planning Workshop: Plans and Programs
Fall or spring. 1-4 credits. Prerequisite: CRP 651. Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

CRP 662 Seminar in American Urban History (also CRP 361)
Spring. 3 credits. Prerequisite: permission of instructor. For description, see CRP 361.

CRP 663 Historic Preservation Law
Spring. 3 credits. Offered alternate years. Survey of legal issues affecting real estate industry. This class will be taken in conjunction with CRP 653. Preparation of elements of historic preservation law, statutory law and case law, environmental law, and regulatory law will be emphasized. Individual work is emphasized in the form of symposiums and reports.

CRP 664 Economics and Financing of Neighborhood Conservation and Preservation
Spring. 3 credits. The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

CRP 665 Preservation Planning and Urban Change
Fall. 3 credits. An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.
CRP 666 Pre-Industrial Cities and Towns of North America (also LA 666)
Fall. 3 credits. S-U grades optional.
For description, see LA 666.

CRP 669.40 The History of Urban Form in America (also CRP 395.40)
Fall. 3 credits
For description, see CRP 395.40.

CRP 670 Regional Planning and Development in Developing Nations
Fall or spring. 4 credits. Prerequisite: second-year graduate standing.
Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

CRP 671 Seminar in International Planning
Spring. 1 credit. S-U grades only.
The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

CRP 672 International Institutions
Fall. 3 credits. Letter grade.
Studying major international organizations of the post-WWII period like the UN, ILO, GATT-WTO, World Bank and IMF, and Bretton Woods. We examine how they functioned during and after the globalizing international economy. We explore weaknesses in global governance and in the international financial system, and we assess current debates and proposals for reform.

CRP 674 Third World Urbanization (also CRP 474)
Spring. 4 credits. S-U grades optional.
For description, see CRP 474.

CRP 675 Seminar in Project Planning in Developing Countries
Fall. 4 credits.
An examination of the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as a seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

CRP 677 Issues in African Development (also CRP 477)
Fall or spring. 1 credit. S-U grades only.
For description, see CRP 477.

CRP 683 Environmental Aspects of International Planning (also CRP 453)
Fall. 3 credits.
For description, see CRP 453.

CRP 703 Contemporary Theories of Regional Development
Fall or spring.
An advanced seminar, mainly for doctoral candidates, to review recent contributions to the literature. After a fast-paced review of basic material in political economy, students will read and present summaries of works by major contemporary theorists. A final paper is required.

CRP 711 Planning and Organization Theory
Fall or spring. 4 credits.
Advanced seminar on theoretical models of planning, organization, and urban structure. The first part of the course, which may be taken separately for one credit, provides an overview of administrative issues affecting urban planning. Next, attention is given to theories of organizational structure, growth, and change. Final sessions are devoted to the influence of urban and regional structures as context. Critical reading, short papers, and seminar discussion characterize the course.

CRP 722 Methods of Regional Science and Planning III
Fall or spring. 3 credits. Prerequisites: CRP 632 and CRP 633 or permission of the instructor.
An introduction to the design and implementation of Social Accounting Matrix and Computable General Equilibrium models and their uses, primarily in a regional context, for planning and policy analysis. The use of econometric methods and CGE models will be discussed. The GAUSS software package will be used in related computer exercises.

CRP 733 Seminar in Regional Models
Fall or spring. 3 credits. S-U grades optional. Prerequisites: sufficient methodological background to read the current literature.
A review of the classical and important current literature on socioeconomic and/or environmental models of subnational regions. Each student will be expected to identify his or her own area of interest and critically review and report to the class on important papers in that area.

CRP 790 Professional Planning Colloquium I
Fall. 1 credit.
Visiting lecturers address problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirement for the course is attendance and a brief evaluation at the semester's end.

CRP 791 Master's Thesis in Regional Science
Fall or spring. 12 credits variable. S-U grades optional. Hours to be arranged.
Regional Science faculty.

CRP 792 Master's Thesis, Project, or Research Paper
Fall or spring. 10 credits variable. S-U grades optional.

CRP 794 Planning Internships
Fall, spring, or summer. 1-12 credits variable.
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

CRP 795 Master's Thesis in Preservation Planning
Fall or spring. 1-6 credits variable.

CRP 796 Professional Writing and Publishing (Colloquium)
Fall or spring. 2 credits. S-U grades only.
Individual and group projects culminating in the production of a professional journal.

CRP 797 Supervised Readings
Fall or spring. 4 credits variable. Limited to graduate students by permission of instructor.

CRP 798 Colloquium in Regional Science, Planning, and Policy Analysis
Fall or spring. 1 credit.
Presentation and discussion of current research by faculty, visitors, and graduate students working on their dissertations. Typically, the colloquium will meet once a week during the semester.

CRP 800 Advanced Seminar in Urban and Regional Theory I
Fall. 3 credits.
The culture of urban spatial organization. Economic, technological, and social factors leading to urbanization and various kinds of spatial organizations are explored. Major theoretical contributions to the understanding of intra- and interurban distribution of population and economic activity are reviewed.

CRP 801 Advanced Seminar in Urban and Regional Theory II
Spring. 3 credits.
A continuation of City and Regional Planning 800, concentrating on recent developments.

CRP 810 Advanced Planning Theory
Fall. 3 credits.
A survey of the works of scholars who have contributed to current thinking about planning theory. Alternative assumptions concerning models of man and theoretical concepts concerning the nature of planning today are considered.

CRP 830 Seminar in Regional Science, Planning, and Policy Analysis
Fall or spring. 4 credits variable. S-U grades only.
This seminar will provide an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered will vary each year. Empirical and analytical research will be emphasized. Students will be expected to prepare and present a research paper during the semester on some aspect of the topics under review.

CRP 890 Planning Research Seminar I
Fall or spring. 2 credits.
Intended for doctoral candidates in city and regional planning, other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

CRP 892 Doctoral Dissertation
Fall or spring. 1-2 credits variable.

Special Topic Courses
Fall or spring. Variable credit.
Typical topics are.
Thesis requirements are generally integrated for dual degrees. Fulfill requirements of both fields of study. To engage in a dual degree program and must

Landscape Architecture offers a three-year Master of Landscape Architecture License Qualifying Degree, administered through the Graduate School, for those who have a four-year undergraduate degree in another field. The major is composed of several parts: core courses related to professional education in Landscape Architecture, a concentration in a subject related to the core courses, and free electives. Requirements of the three-year
M.L.A. curriculum include 90 credits, and six
resident units, satisfactory completion of the
core curriculum courses, and a thesis or a
capstone studio.
The department also offers a two-year Master of Landscape Architecture Advanced Degree Program, administered through the Graduate School, for those with accredited degrees in Landscape Architecture or Architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.
Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual Degree Options
Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information
*L A 141 Grounding in Landscape Architecture
Fall. 4 credits.
*L A 142 Grounding in Landscape Architecture
Spring. 4 credits.
*L A 201 Medium of the Landscape
Fall. 5 credits.
*L A 202 Medium of the Landscape
Spring. 5 credits.
*L A 260 Pre-Industrial Cities and Towns of North America (also CRP 360, CRP 666 and LA 666)
Fall. 3 credits.
*L A 261 Urban Archaeology (also
CRP 261)
Fall. 3 credits.
*L A 262 Laboratory in Landscape Archaeology (also ARKEO 262)
Spring. 3 credits.
*L A 263 American Indians, Planners, and Public Policy (also CRP 363/547 and
LA 547)
Spring. 3 credits.
*L A 268 The American Landscape
Fall. 3 credits.
*L A 269 Creating the Second Nature
Spring. 3 credits.
*L A 301 Integrating Theory and Practice
Fall. 5 credits.
*L A 302 Urban Design in Virtual Space
Spring. 5 credits.
*L A 315 Site Engineering I
Spring. 2 credits.
*L A 316 Site Engineering II
Fall. 2 credits.
*L A 318 Site Construction
Spring. 5 credits.
*L A 402 Integrating Theory and Practice
Spring. 5 credits.
*L A 410 Computer Applications in Landscape Architecture
Fall or spring. 3 credits.
*L A 412 Professional Practice
Spring. 1 credit.
*L A 483 Design Criticism
Fall. 3 credits.
[*L A 486 Community Design Workshop
Spring. 3 credits. Not offered 2000–2001.]
[*L A 487 Experiential Community Design
Fall. 3 credits. Not offered 2000–2001.]
*L A 490 Rome Wasn’t Built in a Day
Spring. 3 credits.
*L A 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 491)
Fall. 3 credits.
Spring. 3 credits.
*L A 494 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits.
*L A 497 Individual Study in Landscape Architecture
Spring. 1–5 credits, may be repeated for credit. S-U grades optional. L. J. Mirin. Work on special topics by individuals or small groups.
*L A 498 Undergraduate Teaching
Fall or spring. 1–2 credits.
*L A 501 Composition and Theory
Fall. 5 credits.
*L A 502 Composition and Theory
Spring. 5 credits.
*L A 505 Graphic Communication I
Fall. 3 credits.
*L A 506 Graphic Communication II
Spring. 3 credits.
*L A 524 History of European Landscape Architecture
Fall. 3 credits. L. Mirin.
A survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which gardens, streets, plazas, parks, and new towns reflect in their built form, a range of responses to demands of culture, economics, technology, security, the law, and ecology.
*L A 545 The Parks and Fora of Imperial Rome
Spring. 3 credits.

The biology major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the Announcement of the Graduate School.

ORGANIZATION
Many different departments participate in the biology major.

Student services are provided by the Office of Undergraduate Biology (OUB), which includes the Behman Biology Advising Center. Co-located in Stimson Hall, the professional and student advisers provide academic and career advising, as well as help undergraduates find research opportunities on campus. Advisers in the OUB also follow the progress of biology majors and work closely with faculty advisers. Additional services and resources of the Biology Center include tutoring, lecture tapes, examination files, and extensive information on summer research opportunities and graduate programs. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides academic and career advising for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner Westward or brigantine Corwith Cramer.

DISTRIBUTION REQUIREMENT
In the College of Agriculture and Life Sciences, the biological sciences distribution requirement (Group B) is for a minimum of 9 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109-110, 105-106, or 101 and 103 plus 102 and 104, or 107–108, or any combination of the first term of one sequence and the second term of another. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) may be applied to the Group 1 distribution area in accordance with regulations stipulated by the Arts College.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from BIO G 109-110, 101 and 103 plus 102 and 104, 105–106 or 107–108 or from specified courses in chemistry or physics. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) may be applied to the distribution requirement in the natural sciences.

Note: BIO G 101–102–103–104 should be taken as a unit by students of any college except those with advanced placement credit. Switching from one introductory biology sequence to another at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse or inconsecutive order is strongly discouraged.

USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY
Students wishing to enroll in biology ("BIO") courses should know and understand the following criteria relative to the use of animals in the teaching program: as passed by the faculty of the Division of Biological Sciences in 1988, and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching."

2. "Courses bearing the "BIO" description conform to the rules for the care of such animals as outlined in Guiding Principles in the Care and Use of Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals. (DH­EW­ publica­tion 86–23, revised 1996) and p. 14, Courses of Study), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge."

ADVANCED PLACEMENT
For information on credit for advanced placement in Biological Sciences, please see the section on Advanced Placement in the front of this publication.

THE MAJOR
The major of biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges through the Office of Undergraduate Biology. By completion of the sophomore year, all students who intend to major in biological sciences must declare the major and a program of study through the Office of Undergraduate Biology. In 216 Stimson Hall.

Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year.

Biology majors should regularly monitor their progress in the major, and should assess as realistically as possible the likelihood of achieving at a level that is consistent with their academic and personal goals. Weak performance in core courses, particularly after the freshman year, may indicate a need to reevaluate aptitude and genuine interest in the major. Students with questions, particularly with concerns about their ability to complete the major, are encouraged to consult with their biology adviser, and to take advantage of the advising and counseling resources of the
Office of Undergraduate Biology as well as those of the university and their college.

The requirements for the biological sciences major are listed below. Requirements 1-8 must be taken for a letter grade. Courses taken for the program of study should be taken for a letter grade unless the course is offered for S/U or if the student's adviser grants permission.

1) Introductory biology for majors
   (one year): BIO G 101 and 103 plus 102 and 104, or 105–106. BIO G 107–108, offered during the eight-week Cornell Summer Session for eight credits, also satisfies the introductory biology requirement for majors.
   Students may choose to accept advanced placement if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (CEEB). Students with a score of 4 must fulfill the introductory biology requirement by taking BIO G 101–102, 101 and 103, 102–104, or 103–104. These students should consult information available in the course office (1140 Comstock Hall) and in the Biology Center (216 Simon Hall) to determine which semester to complete the introductory biology requirement. For students in doubt, completion of BIO G 101 and 103 is advised. These students receive a total of eight introductory biology credits (four AP credits plus four course credits).

2) General chemistry (one year):
   Chemistry 207–208,* or 206–208, or 215–216.*

3) College mathematics (one year): one semester of calculus (Mathematics 106, 111, 191 or their equivalent) plus one semester selected from the following:
   a. a second semester of calculus (Mathematics 112, 192, or their equivalents).
   b. a course in finite mathematics (Biology 101, 417, Mathematics 105, 231).
   c. a course in statistics (Biometry 261, Mathematics 171, Agriculture and Resource Management 210, Psychology 350, Industrial and Labor Relations 210 and 211).

Students interested in quantitative aspects of biology (e.g., computational, physical, population biology) are advised to satisfy the mathematics requirement with two semesters of calculus.

4) Organic chemistry: Chemistry 257 and 251, or 357–358 and 251, or 357–358 and 301, or 359–360 and 251, or 359–360 and 301.

5) Physics: Physics 207–208,* or 112–213,* or 101–102. Those who take Physics 112–213 are advised to complete Physics 214 as well.

6) Genetics: BIOGD 281.

7) Biochemistry: BIOBM 330, or 351 and 352, or 333.

8) Evolutionary Biology: BIOES 278 or BIOPL 443.

9) A program of study selected from the outline below.

10) Foreign language: students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement for the biology major by (a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) attaining a score of 560 or more on the reading portion of the College Entrance Examination Board achievement test or (c) achieving "qualification" status in a language as defined by the College of Arts and Sciences or (d) successfully completing at least six college credits in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

Since modern biology has an important physical and quantitative orientation, students are advised to undertake basic science courses that emphasize this approach. Asterisks in the above list indicate the courses that provide this orientation, but all courses listed are acceptable. Although not required for the biological sciences major, a course in statistics is strongly recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

Note: Core courses cannot count toward the Program of Study Requirements.

Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. The program of study requirements are designed to help students achieve depth in one area of biology while ensuring that the selected advanced courses form a coherent and meaningful unit. Because of the flexibility allowed in satisfying these requirements, students should consult their faculty advisers. The possible programs of study are listed below.

1) Animal Physiology: BIOAP 311, Introductory Animal Physiology, Lectures, BIOAP 313, Histology; The Biology of Mammalian Tissues, BIOAP 316, Cellular Physiology, and BIOAP 319, Animal Physiology Experimentation. The Program of Study in Animal Physiology emphasizes whole-animal, tissue, and cell physiology, and provides considerable opportunity for studies using live animals. It is intended especially for students contemplating careers in biomedical practice or research. Advanced courses, though not required, include BIOAP 419, Advanced Animal Physiology Experimentation, which permits selected students to conduct supervised research projects of their choice, and BIOAP 458, Mammalian Physiology, which provides in-depth coverage of selected topics in mammalian and human physiology.

2) Biochemistry: Chemistry 300, Quantitative Chemistry (Chemistry 357–358 or 359–360); a minimum of four credits of organic chemistry laboratory (Chemistry 301–302 or 251–252–302 or 301 or 251–252); four credits of biochemistry laboratory courses (BIOBM 430), and Physical Chemistry (Chemistry 389–390 or 287–288 or 287–390 or 389–390).

Note: Chemistry 288 is designed for biologists. Five hours of Biochemistry are recommended (351 and 352 or 350 and 354) and students interested in graduate work in biochemistry should take Physical Chemistry and consider taking a third semester of calculus in preparation for CHEM 389–390. Be sure to complete CHEM 207–208 or 215–216 during the freshman year.

3) Molecular and Cell Biology: Chemistry 357–358 or 350–360; BIOBM 432, Survey of Cell Biology, four credits of BIOBM 430, Laboratories in Biochemistry (advanced), Molecular and Cell Biology, and at least seven additional credits of courses that have a cell biological or molecular biological orientation. The seven additional hours should include at least two courses from the following list (underlined courses are recommended as providing breadth in molecular and cell biology: BIOBM 450, Lipids; BIOAP 658, Molecular Mechanisms of Hormone Action; BIOBM 434, Applications of Molecular Biology; BIOBM 137, Eukaryotic Cell Proliferation; BIOBM 433, Introduction to Molecular and Cellular Function, BIOBM 632, Membranes and Bioenergetics; BIOBM 633, Biosynthesis of Macromolecules; BIOBM 635, Mechanisms of Metabolic Regulation and Mammalian Gene Expression; BIOBM 636, Cell Biology; BIOBM 639, The Nucleus; BIO G 305, Immunology; BIOBM 407, Nature of Sensing and Response: Signal Transduction in Biological Systems; BIOBM 443, Molecular Basis of Human Diseases; BIOGD 385, Developmental Biology; BIOGD 483, Molecular Aspects of Development; BIOGD 486, Molecular Evolution; BIOGD 486; Advanced Eukaryotic Genetics; BIOGD 682, Fertilization and the Early Embryo; BIOPL 343, Molecular Biology and Genetic Engineering of Plants; BIOPL 347, Laboratory in Molecular Biology and Genetic Engineering of Plants; BIOPL 444, Plant Cell Biology; BIOPL 641, Laboratory in Plant Molecular Biology; BIOPL 652, Plant Molecular Biology II; BIOPL 290, General Microbiology, Lectures: BIOPL 408, Viruses and Disease; BIOPL 485, Bacterial Genetics; BIOI 692, Protein-Nucleic Acid Interactions; BIOI 222, Neurobiology and Behavior I; Introduction to Neurobiology; BIOI 325, Neurotransmitters-Molecular Aspects; BIOI 425, Natural History of Ion Channels; BIOI 495, Molecular and Genetic Approaches to Neurosciences. Five hours of biochemistry are recommended (BIOBM 331 and 332 or 330 and 334). Be sure to complete CHEM 207–208 or 215–216 during the freshman year.

4) Ecology and Evolutionary Biology: BIOES 201, Ecology and the Environment, and 10 credits from the following course lists, including at least one course from each group:
   a. BIOPL 241, Introductory Botany; BIOES 274, The Vertebrates: Structure, Function, and Evolution; BIOES 573, Biology of the Marine
Applications are available at Cornell Abroad, administered through Duke University.

Courses for two three-credit courses at the 400 level are encouraged to gain experience in some aspect of field biology through course work at a biological field station or work experience.

The Program of Study

The Organization for Tropical Studies (OTS) offers an Undergraduate Semester Abroad Program, featuring two courses in biology (Fundamentals of Tropical Biology and Field Research in Tropical Biology) and one course each in Environmental Policy and Latin American Culture. Cornell biology majors, with a concentration in Ecology and Evolutionary Biology, who complete the OTS Program as part of Cornell Abroad can substitute the credit earned from the biology courses for two three-credit courses at the 400 level from list (b).

The Program of Study: General Biology requires a minimum of 13 credits each in three areas: General Biology, Microbiology, and Plant Biology. Students must complete additional course work in order to meet the credit requirements for the CALS major.

Invertebrates; BIOIM 415, Bacterial Diversity; BIOES 471, Mammaryology; BIOES 472, Herpetology, BIOES 475, Ornithology; BIOES 476, Bacterial Genetics; ENTO 212, Insect Biology.

(b) BIOES 263, Field Ecology; BIOPL 447, Molecular Systematics; BIOPL 448, Plant Evolution and the Fossil Record; BIOES 452, Herbivores and Plants: Chemical Ecology and Coevolution; BIOES 455, Insect Ecology; BIOES 456, Stream Ecology; BIOES 457 and 459, Limnology: Ecology of Lakes, Lectures and Laboratory; BIOES 461, Limnology and Marine Ecology; BIOES 462, Marine Ecology; BIOES 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; BIOES 464, Macromolecules; BIOES 466 and 468, Physiological Plant Ecology, Lectures and Laboratory; BIOES 473, Ecology of Agricultural Systems; BIOES 478, Ecosystem Biology; BIOES 479, Paleobiology; BIOES 481, Population Genetics; BIOES 484, Molecular Evolution.

Note: One 400-level, four-credit course (including four credits from BIOIM 364) offered at Shoals Marine Laboratory may be applied toward the 10 credits. Students are encouraged to gain experience in some aspect of field biology through course work at a biological field station or work experience.

The Ecology and Evolutionary Biology program of study offers an undergraduate specialization in Marine Biology and Oceanography. A description of this specialization can be found in the section entitled COURSES IN MARINE SCIENCE.

Note: The Organization for Tropical Studies (OTS) offers an Undergraduate Semester Abroad Program, featuring two courses in biology (Fundamentals of Tropical Biology and Field Research in Tropical Biology) and one course each in Environmental Policy and Latin American Culture. Cornell biology majors, with a concentration in Ecology and Evolutionary Biology, who complete the OTS Program as part of Cornell Abroad can substitute the credit earned from the biology courses for two three-credit courses at the 400 level from list (b). The OTS Program is administered through Duke University. Applications are available at Cornell Abroad, 474 Uris Hall.

5) General Biology: The Program of Study in General Biology requires a minimum of 13 credits in addition to courses counted toward requirements 1–10 on page 144. These 13 credits must include

1) One course from each of three different programs of study in biology. Otherwise, these courses specifically listed as fulfilling a program of study requirement are acceptable without permission of adviser.

2) A course with a laboratory, and

3) A minimum of two upper-level (300 and above) courses of two or more credits each.

100-level courses are not acceptable for meeting any of these requirements.

BIOL 341 may not count as the lab course; BIO G 498 may not be used to fulfill the requirements of this program of study. BIO G 499 (minimum of two credits, but no more than three credits) may count as one of the upper-level courses, and may count as the laboratory course with approval of the adviser, but it cannot count as a course representing a program of study.

Note: It is possible to use a single course to fulfill more than one requirement. For example, BIOES 472, Herpetology, could count in all three areas: as a course in the Ecology & Evolutionary Biology program of study, as an upper level course, and as a course with a lab.

6) Genetics and Development: A minimum of 13 credits, usually chosen from the following courses: BIOGD 385, Developmental Biology; BIOGD 387, Developmental Aspects of Evolution; BIOGD 389, Embryology; BIOGD 480, Seminar in Developmental Biology; BIOGD 481, Population Genetics; BIOGD 482, Human Genetics and Society; BIOGD 483, Molecular Aspects of Development; BIOGD 484, Molecular Evolution; BIOGD 486, Advanced Bacterial Genetics; BIOMI 485, Bacterial Genetics; BIOMI 493, Developmental Neurobiology; BIOPL 343, Molecular Biology and Genetic Engineering of Plants; BIOGD 450, Vertebrate Development.

Students may also choose from the following courses to complete the 13-credit requirement: BIOGD 682, Fertilization and Early Development; BIOGD 684, Advanced Topics in Population Genetics; BIOGD 687, Developmental Genetics; BIOMI 633, Biosynthesis of Macromolecules; BIOMI 639, The Nucleus; BIOES 663, Theoretical Population Genetics; BIOMI 694, Genetics of Diverse Bacteria; BIOPL 641, Laboratory in Plant Molecular Biology; BIOPL 644, Plant Growth and Development; BIOPL 652, Plant Molecular Biology II; BIOPL 653, Plant Molecular Biology I; PL BR 606, Advanced Plant Genetics.

Up to three credits for this program of study may be chosen from other biological sciences courses, including BIO G 499. Undergraduate Research in Biology, with approval of the faculty adviser.

7) Microbiology: BIOMI 290, General Microbiology, Lectures; BIOMI 291, General Microbiology, Laboratory; BIOMI 300, Seminar in Microbiology; and at least three courses chosen from the following: BIOMI 391, Advanced Microbiology Laboratory, BIOMI 415, Bacterial Diversity; BIOMI 416, Bacterial Physiology; and BIOMI 485, Bacterial Genetics.

8) Neurobiology and Behavior: The two-semester introductory course sequence, Neurobiology and Behavior I and II (BIONB 221 and 222) with discussion section (four-credits per term), and seven additional credits. These additional credits must include a course from the neurobiology and behavior offerings (this course can NOT be BIONB 420, 720 or BIOG 499). However, BIONB 420, 720 and BIO G 499 MAY be used to supplement this neurobiology and behavior course to fulfill the seven additional credits. Please consult with your advisor for courses that may be applied towards the seven additional credits that are not listed in the Biological Sciences course offerings. BIO G 498 may not be used to fulfill the requirements of this program of study.

Note: Students who declare the Program of Study in Neurobiology and Behavior after taking BIONB 221 or 222 for only three credits must complete additional coursework in neurobiology and behavior. These students should consult the chair of the Section of Neurobiology and Behavior (W363 Seeley G. Mudd Hall) to determine what course(s) to use to make up the deficiency.

9) Nutrition: NS 331, Physiological and Biochemical Bases of Human Nutrition (4 credits) and at least nine credits of additional coursework in the biological aspects of nutrition, such as NS 315, Obesity and the Regulation of Body Weight; NS 332, Methods in Nutritional Sciences; NS 431, Mineral Nutrition and Chronic Disease; NS 441, Nutrition and Disease; NS 475, Molecular Nutrition and Development; NS 601, Food Chemistry and Determination of Food Values; and NS 614, Topics in Maternal and Child Nutrition. Some courses require NS 115 Nutrition and Health: Concepts and Controversies, which may be used as part of the additional nine credits.

Note: For students in the College of Agriculture and Life Sciences, credits in NS courses count towards the required 55 CALS credits. For students in the College of Arts and Sciences, NS credits will count toward the 100 hours required in A&S if those credits fulfill major requirements.

10) Plant Biology: Students choose one area of study from the following two options:

Option (a) Botany: Students are required to take Introductory Botany (BIOPL 241). Students should then choose, with the aid of their faculty adviser, a maximum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIOPL 242 and 244, Plant Physiology, Lectures and Laboratory; BIOPL 247, Ethnobotany; BIOPL 248, Taxonomy of Vascular Plants; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory; BIOPL 345, Plant Anatomy; BIOPL 444, Plant Cell Biology; BIOPL 445, Photosynthesis; BIOPL 447, Molecular Systematics; BIOPL 448, Plant Evolution and the Fossil Record, BIOES 465 and 485, Plant Ecology and Population Biology, Lectures and Laboratory; or BIOES 466 and 468, Physiological Plant Ecology, Lectures and Laboratory.

Option (b) Plant Biotechnology: Students are required to take BIOPL 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory. Students choose, in consultation with their faculty adviser, a minimum of 10 additional credits
from the following list: BIOPL 241, Introductory Botany; BIOPL 242 and 244, Plant Physiology, Lectures and Laboratory; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 444, Plant Cell Biology; BIOPL 648, Plant Biochemistry; PL BR 401, Plant Cell and Tissue Culture; or PL BR 402, Plant Tissue Culture Laboratory.

11) Systems and Biotic Diversity: A minimum of 13 credits from the following groups, including at least seven from Group A, and three from Group B, and at least two laboratory courses (marked with *).

BIOG 499, Undergraduate Research in Biology, with approval of the adviser, can be used in fulfillment of up to four credits in Group A, and can count as one laboratory course if it has a laboratory component of two or more credits.

(a) *BIOES 274, The Vertebrates: Structure, Function, and Evolution; "BIOES 275, Invertebrates, Structure and Evolution; *BIOES 473, Vertebrate Paleontology; *BIOES 474, Vertebrate Paleobiology; *BIOES 475, Invertebrate Paleobiology; *BIOES 477, The Vertebrates: Classification and Evolution; *BIOPL 290, General Microbiology, Lectures; *BIOPL 291, General Microbiology, Laboratory; *BIOPL 415, Bacterial Diversity, Lectures; *BIOPL 241, Introductory Botany; *BIOPL 243, Taxonomy of Cultivated Plants; BIOPL 247, Ethnobiology; *BIOPL 248, Taxonomy of Vascular Plants; BIOPL 543, The Healing Forest; BIOPL 659, Families of Tropical Flowering Plants—Lecture; *BIOPL 646, Families of Tropical Flowering Plants—Lab. *ENTOM 212, Insect Biology; *ENTOM 215, Spider Biology; Life on a Silk Tread; *ENTOM 322, Insect Morphology; *ENTOM 331, Introductory Insect Systematics; *ENTOM 471, Freshwater Invertebrate Biology; *ENTOM 420, Systematics of the Coleoptera; PL PA 309, Introductory Mycology; *PL PA 319, Field Mycology.

(b) BIOES 464, Macroevolution; BIOES 479, Paleobiology; *BIOPL 440, Phylogenetic Systematics; BIOPL 447, Molecular Phylogenetics; *BIOPL 448, Plant Evolution and the Fossil Record; *BIOPL 453, Historical Biogeography; BIOPL 442, Current Topics in Ethnobiology.

12) Independent Option: Students who want to undertake a course of study not covered by the existing programs of study may petition the Biological Sciences Curriculum Committee. Information on independent option and Curriculum Committee petition forms are available in the Office of Undergraduate Biology, 216 Stimson Hall.

Genomics and BioInformatics: The term "genomics" refers to new ways that diverse biological problems can be addressed due to the availability of exponentially increasing amounts of data from genome sequencing and gene expression studies. Fueling the genomics explosion is a corresponding revolution in the management and analysis of data. This subdiscipline is often called "computational genomics" or, more broadly, "bioinformatics."

The impact of genomics is sweeping, from genetics and biochemistry to systematics and ecology, and courses scattered throughout the various biology programs study introduce genomic concepts and incorporate bioinformatic approaches. Some examples of biology courses with informatics and computational components or applications are: BIOM 293 (Introduction to Molecular Structure); BIOM 354 (Computer Graphics and Molecular Biology); BIOM 434 (Applications of Molecular Biology to Medicine, Agriculture, and Industry); BIOM 261 (Population and Evolutionary Ecology); BIOMG 481 (Population Genetics); BIOM 422 (Modeling Behavioral Evolution); BIOM 440 (Phylogenetic Systematics); BIOM 453 (Principles and Practice of Historical Biogeography).

Students majoring in biology and having proficiency with a computer and computational programming may wish to consider a career in bioinformatics. The computer, mathematical, and statistical skills required for a solid grounding in informatics go beyond what is required in the biology major. Therefore, students wishing to major in biology with an eye toward a career in bioinformatics should choose a biology program of study that most closely matches their interests in biology and also should take courses from the following lists of non-biology foundation courses.

Essential Bioinformatics foundation courses:

MATH 111*, 112*, and 213 or 221 (calculus and linear algebra courses).

COM S 100 (Introduction to Computer Programming).

BTRY 417 (Matrix Algebra). *Can be used to fulfill mathematics requirement for biology major.

Additional relevant foundation courses:

BTRY 601/602 (Statistical Methods).

BTRY 682 (Statistical Methods for Molecular Biology, undergraduate section to be offered in spring 2002).

COM S 211 (Computers and Programming).

COM S 222 (Introduction to Scientific Computation).

COM S 221 (Numerical Methods in Computational Molecular Biology).

COM S 409 (Data Structure and Algorithms for Computational Science).

MATH 222 (Linear Algebra and Calculus).

Independent Research and Honors Program

Individual research projects under the direction of a faculty member are encouraged as an important part of a biology education. Students interested in participating in research should contact faculty members with compatible research interests. Faculty members may consider students' previous academic accomplishments, interests and goals, and the availability of space and equipment when agreeing to supervise a student in his or her laboratory. Students conducting independent research may enroll for credit in Biological Sciences BIO G 499, Undergraduate Research in Biology, and must interact for this course with Undergraduate Biology, 216 Stimson Hall. The student's research project must have significant biological content in order to be considered for BIO G 499 credit. Students may not earn credit for research conducted outside of Cornell. Information about faculty research interests and undergraduate research opportunities is available in the Office of Undergraduate Biology, 216 Stimson Hall.

Up to three credits of research may be used to complete the program of studies in general biology, genetics and development, systematics and biogeography, as well as for courses of research in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Applications for the honors program are available in the Office of Undergraduate Biology, 216 Stimson Hall, and must be submitted early in the senior year to the Honors Program Committee by the announced deadline. Application forms for the honors program are separate from the enrollment forms for BIO G 499, Undergraduate Research in Biology. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have an overall Cornell cumulative grade-point average of at least 3.0. In addition, students must have at least a 3.0 Cornell cumulative grade-point average in all biology, biochemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill major requirements are included in this computation.) In addition, candidates must have a Cornell faculty member participate in honors research, and the student must arrange for a cosigner within Biological Sciences.

Students interested in the honors program should consult with the faculty advisors early during their junior year. Students are strongly encouraged to begin their research projects in their junior year, although they are not formally admitted to the honors program until the beginning of their senior year. Students...
who are considering study abroad during their junior year should consult with a member of
the Honors Committee during their sophomore year to plan a reasonable schedule for
honors research. The Honors Program
requires that student participants attend
honors seminars in which they give oral
presentations during the first and second
semesters of their junior year. Therefore,
students who are considering studying away
from campus during their senior year should
consult with a member of the Honors
Committee no later than the beginning of the first
semester of their junior year. Information pertaining to faculty research activities, thesis
due dates, seminars, and other requirements
may be obtained from the Office of Under
graduate Biology, 216 Stimson Hall.

CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum
and to the programs of study are made by the
Biological Sciences Curriculum Committee.
The committee consists of faculty and elected
student members and welcomes advice and
suggestions from all interested persons.

ADVISING

Students in need of academic advice are
encouraged to consult their advisers or come
to the Office of Undergraduate Biology, 216
Stimson Hall.

Students interested in marine biology should
visit the Shoals Marine Laboratory Office, G14
Stimson Hall.

Students interested in the multidisciplinary
program of Biology and Society should see
"Special Programs and Interdisciplinary
Studies," in the College of Arts and Sciences
section of this catalog.

INDEX OF COURSES

The following course identifiers are used to
denote biological sciences courses in specific
areas: General Courses, BIO G; Animal
Physiology, BIOAP; Biochemistry, Molecular
and Cell Biology, BIOBM; Ecology and
Systematics, BIOES; Genetics and Develop­
ment, BIOGD; Microbiology, BIOMI;
Neurobiology and Behavior, BIONB; Plant
Biology, BIOP; Shoals Marine Laboratory,
BIOM.

Note: Biological sciences ("BIO") courses
count as agriculture and sciences credits for
students in the College of Agriculture and
Life Sciences and as arts and sciences credits
for students in the College of Arts and
Sciences.

INDEX OF COURSES 147
GENERAL COURSES (BIO G)

Biological Sciences teaches three introductory biology course sequences during the academic year: BIO G 101-104, BIO G 105-106, and BIO G 109-110; and one during the eight-week summer session: BIO G 107-108, BIO G 101-104, 105-106, and 107-108 are intended for biological sciences majors and other students needing eight credits from an introductory sequence for majors (for example, students in a premedical curriculum). Any of these sequences meet the prerequisite for upper-level courses listing "one year of introductory biology for majors" as a prerequisite. BIO G 109-110 is a course sequence intended for nonmajors, and meets the prerequisite for many, but not all, upper-level courses listing "one year of introductory biology" as a prerequisite. Students can earn a maximum of eight credits in introductory biology (including advanced placement credits).

BIO G 101-102 Biological Sciences, Lectures
101, fall; 102, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 101 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless permission is obtained from instructor. May not be taken for credit after BIO G 105-106 or 109-110. S-U grades optional, with permission of instructor. Lecs, M W F 9:05 or 10:10. 2 hrs each week; to accommodate these, students must reserve all 3 days. Evening prelms: fall, Sept. 21 and Oct. 31; spring, Feb. 22 and Apr. 5. T. G. Owens and C. Walcott.

BIO G 103-104 Biological Sciences, Laboratory
103, fall; 104, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 101 (fall) or 102 (spring). 103 is prerequisite to 104 unless permission is obtained from instructor. No admiss after second week of classes. S-U grades optional, with permission of instructor. Lab, M T W or R 1:25-2:25, M or W 7:30-10:30 or T R 11-12, 101. Fee, $20 per week. One 3-hour each week and a weekly lec for discs, special lecs, etc. J. C. Glase, P. R. Ecklund, and staff.

BIO G 105-106 Introductory Biology
105, fall; 106, spring. 4 credits each term. Prerequisite: concurrent enrollment in BIO G 101 (fall) or 102 (spring). 105 is prerequisite to 106 unless permission is obtained from instructor. No admittance after second week of classes. S-U grades optional, with permission of instructor. Lect, T 9:05 (first lec of fall term, R 8/24 9:05); additional study and lab hours TBA. C. H. McFadden and staff.

BIO G 107-108 General Biology
Summer (8-week session; 107, weeks 1-4; 108, weeks 5-8). 4 credits each. Prerequisite: one year of college or permission of instructor. BIO G 101-103, 105, or 107 is a prerequisite for 108. One 3-hour each week and a weekly lec for groups, special lecs, etc. J. C. Glase, P. R. Ecklund, and staff.

BIO G 109-110 Biological Principles
109, fall; 110, spring. 3 credits each term. Limited to 600 students. A passing grade in 109 or 101-103 or 105 is prerequisite to 110 unless written permission is obtained from the instructor and the student has at least 3 credits of college biology. Since 109-110 together constitute an integrated survey, 109 cannot be used to satisfy the College of Arts and Sciences or College of Agriculture and Life Sciences distribution requirement unless it is followed by 110 or an exemption is obtained from the instructor. May not be taken for credit after BIO G 105-106 or 109-110. S-U grades optional, with permission of instructor. Lab, T 7:45 (first lec of fall term, R 8/24 9:05); additional study and lab hours TBA. C. H. McFadden and staff.

Designed both for students who intend to specialize in biological sciences and for those who want to obtain a thorough knowledge of biology as part of their general education. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in the light of modern evolutionary theory and discussions of plant and animal systems are integrated. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.
not choose lab sections during course enrollment; lab assignments are made during first day of classes. Each student must attend lab on alternate weeks. Evening: fall: Sept. 21 and Oct. 31; spring: Feb. 22 and Apr. 3. Lecs, M W F 9:05 or 10:10; lab, M T W R or F 2:45 or T 10:10-12:35. H. Greene, R. Turgeon, C. Berrish, and staff. Students who do not plan to major in biology may take this broad introductory course. The content is designed to appeal to anyone who seeks a comprehensive knowledge of biology as part of a general education. Broad goals of the course are to impart an understanding of the potential benefits and limitations of science, the complexity and workings of the natural world, and the internal machinery of life—how our bodies and those of other animals and plants work. Fall semester covers genetics and evolution, ecology and behavior, and conservation; spring semester covers cells, genetic engineering, function of plants and animals, and human health. Laboratory sections enable each student to meet with course staff and are used for problem-solving experiments, demonstrations, and discussions. There are dissections of preserved vertebrate, invertebrate, and plant materials; for those who object to dissection, alternative materials are available for study and there is no grade penalty for omitting dissection or observation of animals. Testing, for students choosing to be tested, will involve description of important structures in real organisms.

**BIO G 170 Evolution of the Earth and Life** *(also GEOL 101)*

**BIO G 200 Special Studies in Biology**

*Fall, spring, or summer.* 1–3 credits. Prerequisites: transfer- or special-student status and written permission from the Office of Undergraduate Biology. Students must register in 216 Simson Hall. S-U grades optional, with permission of instructor. Hours TBA. Staff. A registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 100-level courses and may not be used in fulfillment of college distribution requirements except by permission from the Office of Undergraduate Biology.

**BIO G 202 The Diversity of Life**

*Fall.* 3 credits. S-U grades optional. Lecs, M W F 2:00–3:00. J. L. Davis, J. J. Doyle, E. Rodriguez. The main focus of this course is on the diversity of living and extinct species. This diversity is examined from an evolutionary perspective, with attention to the principles employed in the discovery of species and in the analysis of relationships among them. Interactions between humans and other species are examined during the latter portion of the semester.

**BIO G 207 Evolution (also HIST 287 and SATX 287)**

*Fall or summer.* 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOS 278. Does not meet the evolutionary biology requirement for the biological sciences major. S-U grades optional. Fall: Lecs, T R 10:10; disc, 1 hour each week TBA. W. B. Provine. Summer (6-week session): Lecs and disc, M W 6:00–9:00 P.M. W. B. Provine. Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolutionary biology, and explore the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

**BIO G 209 Introduction to Natural Science Illustration**

*Summer (6-week session).* 2 credits. Limited to 12 students. Prerequisite: free-hand drawing or permission of instructor. S-U grades optional. Lecs and labs, T R 6:30–9:30 p.m. B. S. King. An introduction to the art of natural science illustration for publication, and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratchboard, and carbon dust. Potentials and limitations of line and half-tone reproduction, copyright, and portfolio presentation are discussed.

**BIO G 305 Basic Immunology Lectures** *(also VETMI 315)*

*Fall.* 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and genetics. S-U grades optional, with permission of instructor. Lecs, T R 8:50–9:55, J. A. Marsh. A survey of immunology, with emphasis on the biological functions of the immune response.

**BIO G 320 Principles of Toxicology** *(also VETMI 320)*

*Spring.* 3 credits. Prerequisites: 1 year each of introductory biology and chemistry, with lab; 1 semester of organic chemistry lecture or waiver by instructor. Lec T R 1:25–4:20. S. Penningroth, R. Dietert, and S. Blake. An introduction to the interdisciplinary science of toxicology is presented, including selected material from biology, chemistry, ecology and pharmacology. Basic principles are illustrated by examining several "toxicological contexts," for example, DDT toxicity to wildlife, reproductive. Risk management is introduced as a new discipline in which regulatory agencies integrate science-based quantitative risk assessment with economic and social considerations to implement politically acceptable cleanups at hazardous chemical waste sites. Students form teams and present toxicological analyses of hypothetical "risk scenarios," recommending acceptable risk management strategies in response to environmental contamination. Occasional research talks by toxicology faculty introduce students to basic research in this interdisciplinary branch of Biological Science. This is an introductory level course in toxicology. The format is lecture, supplemented by case examples. It is appropriate for non-majors seeking basic literacy in environmental and human toxicology, and also serves as a "gateway course" for students interested in 400- and 600-level toxicology courses.

**BIO G 400 Undergraduate Seminar in Biology**

*Fall or spring.* Variable credit (1–3 credits assigned for individual seminar offerings). May be repeated for credit. S-U grades optional. Sem TBA. Staff. From time to time specialized seminars on topics of interest to undergraduates are offered by visiting faculty or faculty from the Sections of Ecology and Systematics, Genetics and Development, or Plant Biology. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester. For students interested in Biochemistry, Physiology, or Neurobiology, please see descriptions under appropriate section.

**BIO G 401 Introduction to Scanning Electron Microscopy**

*Fall or spring, weeks 1–8.* 1 credit. Limited to 8 students (fall), 12 students (spring). S-U grades optional. Fee may be charged. Lec, T R 9:05–12:15 or T W or R 1:25–4:25. M. V. Parthasarathy. An introductory course that includes the principle and use of the scanning electron microscope. Students use biological material to explore and understand some of the fine biological architecture. In addition to preparing the specimens, the students use the scanning electron microscope to study and obtain micrographs of features that interest them.

**BIO G 403 Transmission Electron Microscopy for Biologists**

*Fall.* 1, 3, or 4 credits (3 credits if student takes both sections). Limited to 12 students. Prerequisites: BIOAP 313, BIOP 345 or 443. S-U grades optional. Two sections: Sec 01, 1 credit, weeks 1–4; sec 02, 3 credits, weeks 1–12. Students may register for one or both sections. Fee may be charged. Lec, T 11:15; labs, M W or T R 1:25–4:25. M. V. Parthasarathy. Section 01, 1 credit, weeks 1–4, covers the principles and use of the transmission electron microscope (TEM), with emphasis on proper operation of the instrument and interpretation of images obtained. Negatively stained materials are used for viewing with the transmission electron microscope. Section 02, 3 credits, weeks 5–12, covers the principles and techniques of preparing biological material for transmission electron microscopy. Using animal, plant, and microbial samples this section studies chemical fixatives, cryofixations, ultrathin sections, immunogold localization, quantitative microscopy, and metal shadowing techniques. Students have two additional weeks to complete laboratory assignments at the end of each section.

**BIO G 405 Biology of the Neotropics**

*Fall.* 2 credits. Prerequisite: introductory biology (majors, non-majors, or equivalent), or permission of instructor. S-U grades optional. Lec and disc, W 7:30–9:30 P.M. P. H. Winge, A. S. Flecker.
This course is an introductory survey of the biology of the New World tropics, with primary focus on moist lowland forests. The objectives are to learn the basic characteristics and phenomena important to understanding neotropical biology, to gain firsthand knowledge of the resources in tropical biology available at Cornell, and to learn how to organize and execute a meaningful seminar presentation.

**BIO G 406 Presentation Skills Biologists**

Spring. 1 credit. Prerequisites: previous research experience given to students accepted into the Honors Program. L. Southard and G. Hess. This course will cover oral and written communication skills used in presenting research to other scientists. Topics covered will include organization of scientific papers, presentation tips for research seminars, and preparation of visual aids using Power Point. All students will present a 10-minute seminar on their research and will evaluate other presentations.

**BIO G 410 Teaching Contemporary Biology**

Fall. 3 credits. Prerequisite: one year introductory biology, permission of instructor. L. Southard and S. Merkel. This course provides students with the opportunity to experience teaching high school science. Students will concentrate on a topic of current public interest, then develop teaching plans appropriate for high school students. The first part of the course consists of lectures, discussion, and laboratory experiments, which will familiarize the students with the scientific content of the course. Students will then work in teams with high school teachers to develop their own presentations. The final part of the course will include practice presentations and teaching at regional high schools.

**BIO G 431 Frontiers in Biophysics**

Fall. 1/2 credit. S-U grades only. Lec TBA. G. Feigenson and staff. A day of lectures on Saturday 9/23 giving an overview of current research in biophysics at Cornell by faculty from different departments across the university. Designed for undergraduates who are considering a career in biophysics and for graduate students who are interested in biophysics research opportunities at Cornell.

**BIO G 450 Light and Video Microscopy for Biologists**

Spring. 5 credits. Limited to 12 students. Prerequisites: one year of introductory biology and permission of instructor. Lecs, T R 1:25–2:30; lab, R 2:30–4:30. R. O. Wayne. Theoretical and practical aspects of light microscopy, including brightfield, darkfield, phase-contrast, polarization, Hoffman-modulation contrast, interference, differential-interference contrast, and fluorescence microscopes, as well as video- and computer-based digital image enhancement, are studied. Students learn both qualitative and quantitative techniques to probe noninvasively the structure and function of living cells.

**BIO G 467 Seminar in the History of Biology (also HIST 415, B&SOC 447, and B&T 447)**

Summer (6-week session). 4 credits. Limited to 18 students. S-U grades optional. W. B. Provine. Specific topic changes each year.

**BIO G 469 Food, Agriculture, and Society (also B&SOC 469 and S&T 469)**

Spring. 3 credits. Limited to 20 students. Prerequisite: an introductory ecology course or permission of instructor. S-U grades optional. Lecs, T R 1:25–2:40. Not offered 2000–2001. Next offered spring 2002. A. G. Power. A multidisciplinary course dealing with the social and environmental impact of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, plant genetic resources, biotechnology, and sustainable development.

**BIO G 498 Teaching Experience**

Fall or spring. 1–4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent. Arts students must pass this course toward graduation. They may, however, upon petition to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean’s List eligibility, but not eligibility for graduating with Distinction. S-U grades optional, with permission of instructor. Hours TBA. Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological sciences courses currently offering such experience include: BIO G 105–106, BIOAP 311, 313, 319; BIOM 330, 331; BIOES 274, 475; and BIOM 291, 292.

**BIO G 499 Undergraduate Research in Biology**

Fall or spring. Variable credit. Students in the College of Arts and Sciences may not register for more than 6 credits per term with one supervisor or 8 credits per term with more than one supervisor. Prerequisite: written permission of staff member who supervises the work and assigns the grade. Students must register in the Office of Undergraduate Biology in 216 Stimson Hall. Each student must submit an independent study statement describing the proposed research project during course registration. Applications (are available in the college offices and in 216 Stimson Hall.) Any faculty member in Biological Sciences may act as a supervisor. Supervisors outside of Cornell are not acceptable. S-U grades optional. Hours TBA. Staff. Practice in planning, conducting, and reporting independent laboratory and library research programs. Up to three credits of research may be used to complete the Program of Studies in general biology, genetics and development, and systematics and biotic diversity and four credits of research in neurobiology and behavior.

**BIO G 663 Nanobiotechnology (also AEP 663)**

Spring. 3 credits. Prerequisite: permission of instructor. Lecs, T R 1:25–2:40. Nanobiotechnology faculty. Nanobiotechnology is the application of nano- and microfabrication methods to build tools for exploring the mysteries of biological systems. It is a graduate-level course that will cover the basics of biology and the principles and practice of microfabrication techniques with a focus on applications in biomedical and biological research. One objective of the course is to facilitate a means through which biologists and engineers can communicate. A team design project that stresses interdisciplinary communication and problem solving will be one of the course requirements.

**BIO G 705 Advanced Immunology Lectures (also VETMI 705)**

**BIO G 706 Immunology of Infectious Diseases and Tumors (also VETMI 719)**

Spring. 2 credits. Prerequisite: BIO G 305 or permission of instructor. S-U grades optional, with permission of instructor. Lec, R 10:10–12:05. Offered alternate years. Coordinator: F. Denkers. Coverage at an advanced level of the immunology of diseases caused by selected viruses, protozoa, and helminthis, and tumor immunology.

**Related Courses in Other Departments**

The Saa: An Introduction to Oceanography (Biological Sciences [BIOS] 154)

Medicine and Civilization (Biology and Society 322)

Pathogenic Bacteriology and Mycology (Biological Sciences [BIOM] 404 and Veterinary Microbiology 318)

Viruses and Disease (Biological Sciences [BIOM] 408 and Veterinary Microbiology 408)

**ANIMAL PHYSIOLOGY (BIOAP)**

**BIOAP 212 Human Physiology for Non-Biology Majors**

Spring. 3 credits. May not be taken for credit after BIOAP 311. Limited to 130 students. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements of any program of study in the biological sciences major. Evening pre-requisites: March 1 and Apr. 12. Lecs, M W F 1:25, disc, M W F 2:15. P. W. Concannon and L. Chaffey. Introduction to the physiology of all major organ systems and the relation of that physiology to human health and disease. Emphasis on understanding of major body functions and control mechanisms regulating each organ system. Students develop a fundamental understanding of how their bodies work that will be the basis of making informed decisions about their own health and medical needs and those of their families. Taught by physiologists of the Department of Biomedical Sciences.
BIOAP 311 Introductory Animal Physiology, Lectures (also VETPH 346)
Fall. 3 credits. Prerequisites: one year of college biology, chemistry, and mathematics. Recommended: previous or concurrent course in physics. S-U grades optional. Lects., T R 11:15 E. R. Loew and staff.

A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

BIOAP 312 Farm Animal Behavior (also ANSC 305)
Spring. 2 credits. Prerequisites: Introductory animal physiology (ANSC 100 and 150 or equivalents). Recommended: at least one animal production course or equivalent experience. S-U grades optional. Lects., T R 11:15 E. A. Oltenacu, K. A. Houpt.
The behavior of various species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals, and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

BIOAP 313 Histology: The Biology of the Tissues
Fall. 4 credits. Prerequisite: one year of introductory biology. Recommended: BIOBM 350 or equivalent, and previous or concurrent enrollment in BIOAP 311. S-U grades optional, with permission of instructor. Evening prelms.: Sept. 28 and Nov. 9. Lects., T R 1:25, labs., T R 2:30-5:00. C. Wahl.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates, as well as methods of analysis and morphology at the cell and tissue levels. Dynamic interrelations of structure, composition, and function in cells and tissues are emphasized. The course may include work with vertebrate animals.

BIOAP 316 Cellular Physiology
Spring. 4 credits. Limited to 72 students, with preference given to students studying in animal physiology. Each lab limited to 36 students. S-U grades optional, and previous or concurrent enrollment in BIOBM 350 or 331 and 332 or 333. Evening prelms.: Feb. 27, Apr. 3, and Apr. 26. Lects., M W F 10:10; lab, M or T 12:55-5:00. A. Quarani and staff.

Lectures introduce students to cell and organ culture and to immunological techniques used to study cell structure and function in vivo and in vitro. Experiments performed in the laboratory are closely related to, and provide practical experience with, subjects covered in the lectures. Vertebrate animals are used in this course. No experimentation is performed on live animals.

BIOAP 319 Animal Physiology Experimentation
Fall. 4 credits. Designed for upper-level undergraduate and graduate students studying in physiology, and other students interested in biomedically related professions. Graduate students in the field of Physiology and related fields without equivalent background are strongly encouraged to enroll. Each of 2 afternoon laboratory sections is limited to 40 students. Prerequisite: concurrent or previous enrollment in BIOAP 311 or permission of instructor. Lect. R 12:20, lab, M or W 12:20-5:00 (includes disc section). Faculty.

A series of student-conducted in vivo and in vitro experiments designed to illustrate basic physiological processes in animals, with emphasis on relevance to humans, and to introduce students to physiology research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, vivisection under anesthesia, and real-time computerized analysis of data. Experiments with living tissues and live animals examine properties of blood, muscle, and nerves; cardiovascular, respiratory, and renal function and their control; and endocrine regulation of renal, cardiovascular, and reproductive tissue activity. Experimental resources include live animals, frogs, rats, and rabbits, which are euthanized after the experiment. Home case studies, laboratory performance, and weekly quizzes are required. Grading is based on evaluation of these reports, take-home case studies, laboratory performance, and weekly quizzes.

BIOAP 458 Mammalian Physiology
Spring. 3 credits. Enrollment limited. Graduate student auditors allowed. Prerequisite: BIOAP 311 or equivalent. Students not meeting this prerequisite must obtain written permission of instructor in T8 014 Vet Research Tower before the first class. Evening prelms.: Feb. 20, Mar. 27, and Apr. 24. Lects., M W F 10:10. K. W. Beyenbach and staff.

The course offers an in-depth treatment of selected topics in mammalian and human physiology. Emphasis is on concepts and the working knowledge of physiology. Selected topics include: basic functional elements of biological systems; recurrent themes in physiology; design of multicellular animals; mammalian fluid compartments; homeostasis; membrane and epithelial transport; electro-physiology; cardiovascular physiology; gastrointestinal physiology; renal physiology; and acid-base physiology. The lectures incorporate clinical correlations whenever appropriate. Occasional guest lecturers talk about work and careers in basic research and/or clinical medicine. Recommended for veterinary science majors, pre-vet students, and beginning graduate students in physiology, nutrition, and animal science.

BIOAP 619 Lipids (also NS 602)
Fall. 2 credits. Lects., T R 11:15. A. Bensadoun.

Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is placed on critical analysis of current topics in lipid methodology, lipid absorption; lipoprotein secretion, molecular structure, and catabolism; molecular biology, function and regulation of lipoprotein receptors; mechanism of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

BIOAP 710-718 Special Topics in Physiology
Fall or spring. 1 or 2 credits for each topic. May be repeated for credit. Enrollment in each topic may be limited. S-U grades optional, with permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics.

BIOAP 711 Readings in Applied Animal Behavior
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years. Lect., 1 hour each week TBA. K. A. Houpt.

BIOAP 712 Thermoregulation and Exercise

BIOAP 713 The Physiological Control Systems That Control Ingestive Behavior: Food and Water Intake
Fall. 1 credit. T. R. Houpt.

A variety of species will be considered with emphasis on common mammalian species: rat, dog, goat, pig, horse, and human. A mixed lecture/seminar format will be used. Open to both graduate and undergraduate students.

BIOAP 714 Cardiac Electrophysiology
Fall. 1 credit. Offered alternate years. R. Gilmour.

Survey of cardiac potentials, passive membrane properties, ion channels, and cardiac arrhythmias. Emphasis on nonlinear dynamical aspects of cardiac electrophysiology and cardiac arrhythmias.

BIOAP 715 Stress Physiology: To Be Discussed as Part of Animal Welfare
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years. K. A. Houpt.

The emphasis will be on physiological assessment of stress.
BIOAP 719 Graduate Research in Animal Physiology (also VETPH 628)
Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the faculty member who supervises the work and assigns the grade. Students must register in Vet Research Tower 825. S-U grades optional. Hours TBA. Staff. Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

BIOAP 757 Current Concepts in Reproductive Biology

A team-taught survey course in reproductive physiology. Endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function), female reproductive function (endocrinology, ovarian development and functions, oocyte physiology/function), fertilization and early embryo development; pregnancy; and pedagogical and reproductive technology. Student participation in the form of discussions and/or presentations.

BIOAP 811 Advanced Physiological Methods I
Fall. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. Coordinator: J. Ray. This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

BIOAP 812 Advanced Physiological Methods II
Spring. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. Coordinator: J. Ray. This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY (BIOBM)

BIOBM 132 Orientation Lectures in Biochemistry
Spring, weeks 1–3. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only (registered students receive a unsatisfactory grade for nonattendance). Lect, T R 10:10–11:00, for first three S of semester. Section chair and staff.

Discussions by six professors about their research and promising areas for research in the future.

BIOBM 233 Introduction to Biomolecular Structure (also CHEM 233)
Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207–208 or equivalent. Lects, T R 2:30–3:20. S. E. Ealick. This course is intended for students with a basic understanding of chemistry who are considering a program of study in biochemistry. The interrelationship between the structure and function of biologically important molecules are explored. Emphasis is placed on understanding the way in which the three-dimensional arrangements of atoms determine the biological properties of both small molecules and macromolecules such as proteins and enzymes. The study of molecular structure is aided by interactive computer graphics for visualizing three-dimensional structures of molecules.

BIOBM 330–332 Principles of Biochemistry
Introduction biochemistry is offered in three formats: individualized instruction (330) and lectures (331 and 332) during the academic year and lecture (333) during the summer. Individualized instruction is offered to a maximum of approximately 250 students each semester. Lectures given fall semester (331), spring semester (332), and summer (333).

BIOBM 330 Principles of Biochemistry, Individualized Instruction
Fall or spring, 4 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 257 or 357–358 (CHEM 358 may be taken concurrently) or equivalent, or permission of instructor. Concurrent registration in BIOBM 334 is encouraged. May not be taken for credit after BIOBM 331, 332, or 333. S-U grade optional for graduate students only. Evening prelims: fall, Oct. 3 and Nov. 2; spring, Feb. 27 and Apr. 5. Hours TBA. J. E. Blankenship, P. C. Hinkle, and staff.

Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures; autotutorial format.

BIOBM 331 Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 257 or 357–358 (CHEM 257 or 357 should not be taken concurrently) or equivalent, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades with permission of instructor.

The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated format. Topics include protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

BIOBM 332 Principles of Biochemistry: Molecular Biology
Spring. 2 credits. Prerequisites: one year of introductory biology for majors and previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades optional, with permission of instructor. Lects, T R 12:20–1:30. B. K. Tyte.

A comprehensive course in molecular biology that covers the structure and properties of DNA, RNA replication and recombination, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and uses of recombinant DNA technologies.

BIOBM 333 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology
Summer (8-week session). 4 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 257, or 357–358, or equivalents, or permission of the instructor. May not be taken for credit after BIOBM 330, 331, or 332. S-U grades with permission of instructor. Lects, M W F 10:00–12:00. S. Ely or H. T. Nivison.
The content of this course is similar to that of BIOBM 330, however, it is presented in lecture format rather than as individualized instruction. The topics include the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.

BIOBM 334 Computer Graphics and Molecular Biology
Fall or spring. 1 credit. Prerequisite: concurrent registration in BIOBM 330. If space permits, students who have completed BIOBM 331 and have either taken or are concurrently taking, BIOBM 332 will be permitted to register during the first week of classes. Disc: TBA. J. E. Blankenship, P. C. Hinkle, and staff.

Visualization of complex biomolecules using Silicon Graphics computers. Group presentations on current topics in molecular biology.

BIOBM 407 Nature of Sensing and Response: Signal Transduction in Biological Systems (also PLPA 407)
Spring. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 and previous or concurrent registration in 332. Recommended: BIOGD 281. S-U grades optional. Lect T R 10:10–11:15. T. P. Delaney.
BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY 153

The responses of organisms and cells to their surroundings are examined to illustrate how biological systems sense their biotic and abiotic environment and communicate sensing into appropriate responses. A wide variety of response systems will be explored to identify their unique features and to illustrate how similar processes are utilized by widely divergent organisms. Examples are drawn from prokaryote, plant and animal systems for environmental sensing, control of development and responses during disease. Discussion will also examine the role of genetics and biochemistry in understanding signal transduction pathways, as well as the way these systems are perturbed by mutation and disease.

**BIOBM 430 Laboratories in Biochemistry, Molecular, and Cell Biology (also BIONB 430)**
Fall, spring, summer. 2 or 4 credits (students are expected to sign up for two sections for a total of 4 credits; limited space available for students taking only one section). Enrollment limited. Prerequisites: BIOBM 330, or 331 and previous or concurrent enrollment in 332, or 352 and previous or concurrent enrollment in 331 or 333, and permission of instructor. Strongly recommended: BIOGD 281. Form to apply for admission to this course is found on the web (www.h-biochem/bio/biobm430/signup.html). Registration in the course is official only if the form is completed before a student preregisters. Class assignments are affected by the date the enrollment form is returned. Preference given to undergraduate majors in the Biochemistry or Molecular and Cell Biology Programs of Study, and to graduate students with a minor in the Field of Biochemistry, Molecular and Cell Biology. Each section is seven weeks during the semester, which sections are offered in each semester depends on scheduling constraints and student preferences. Labs, M W 12:20-4:25 (disc, T 1:25-2:25) or T 9:05-4:25 (disc, R 1:25-2:25) or R 9:05-4:25 (disc, T 1:25-2:25).

**Section 01 Experimental Molecular Biology**
2 credits. S. Ely and H. T. Nivison. Experiments include cloning of DNA fragments, restriction mapping, DNA sequencing, Southern blotting, and PCR. The experiments emphasize quantitative aspects as well as experimental design.

**Section 02 Experimental Proteins and Enzymology**
2 credits. S. Ely and H. T. Nivison. Experiments include purification of enzymes by salt fractionation, ion exchange chromatography, and affinity chromatography, determination of kinetic parameters for an enzyme, analysis of proteins by rate zonal sedimentation, SDS-polyacrylamide gel electrophoresis, and immunoblotting.

**Section 03 Experimental Cell Biology**
Spring only. 2 credits. T. Huffaker. Experiments include culture of animal cells, purification and analysis of subcellular components, immune fluorescence and electron microscopy, and in vitro assays.

**Section 04 Experimental Molecular Neurobiology**

Experiments include PCR, cloning of DNA fragments, RNA purification, restriction digests, bacterial transformation, and DNA sequencing. Experiments will emphasize how molecular techniques can be applied to studying neurobiological problems.

**BIOBM 432 Survey of Cell Biology**
Spring. 3 credits. Prerequisite: BIOBM 330, 333, or 351, and previous or concurrent registration in 332, or equivalent. Recommended: BIOGD 281. S-U grades optional for graduate students only. Lecs, M W 8:40-9:55, W. J. Brown, V. M. Vogt, D. Manor.
A survey of a wide array of topics focusing on the general properties of eucaryotic cells. The topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 437, BIOGD 483, BIOBM 652, 636, and 639.

**BIOBM 434 Applications of Molecular Biology to Medicine, Agriculture, and Industry**
Fall. 5 credits. Enrollment limited to 36 students. Prerequisites: BIOBM 330 or 333 or 331 and 332. Recommended: BIOGD 281. S-U grades optional. Lecs, M W F 11:15. J. M. Galvo, S. Ely.
By considering various applications of biology, you may extend your knowledge of molecular biology and integrate information from biochemistry, cell biology, genetics, immunology, virology, microbiology, and plant biology. Topics include large-scale sequencing of genomes, drug discovery based upon genomics, mapping and cloning human disease genes, DNA vaccines, transgenic animals, engineering plants resistant to insects, and gene therapy. Problem solving and oral presentations are important aspects of this course.

**BIOBM 435-436 Undergraduate Biochemistry Seminar**
435, Fall, 436, spring. 1 credit each term. May be repeated for credit. Limited to upperclass students. Prerequisites: BIOBM 330, 333, or 352 or written permission of instructor. S-U grades only. Semester TBA. Organizational meeting first week of each semester at 4 P.M. Not offered fall 2000. Offered spring 2001. Fall: G. P. Hess, spring, staff. Selected papers from the literature on a given topic are evaluated critically during six or seven two-hour meetings.

**Molecular Neurobiology 435-01 (undergraduates) 735-01 (graduates) (also BIONB 420-02/720-05)**
Fall 2000 only. 2 credits. Limited to 40 students. S-U and letter grades. Prerequisites: BIOBM 330 or 332 (or equivalent molecular biology course), and BIOBM 222 (or equivalent neurobiology course). For graduate students with a strong background in one of those areas, the prerequisite in the other area is waived. Lecs, R 12:20-2:25, and seminars F 4:00-5:30 (5 times during the semester). R. Harris-Warrick, M. Wolfner, and staff. Five leading international experts will come to Cornell for public seminars that describe recent advances in data and theory at the intersection between neurobiology and molecular biology. Topic coverage will center around the structure and function of ion channels and neurotransmitter receptors. During the Thursday class meeting prior to each expert's visit, students and course faculty will present and discuss recent papers by the upcoming speaker. The following week, students will be required to attend two one-hour seminars by the speaker (Thursday at 12:20 P.M. and Friday at 4 P.M.) and a one-hour in-depth discussion meeting with the speaker after the Thursday seminar.

**BIOBM 437 Eukaryotic Cell Proliferation (also TOX 437)**
Fall. 2 or 3 credits. (Students may take lectures for 2 credits and discussions for 3 credits. Enrollment for discussion section is limited to 20, with preference given to graduate students.) Prerequisite: BIOG 101-102 or BIOG 105-106 and BIOBM 330 or BIOBM 331-332. Recommended: BIOGD 281 and BIOBM 432. S-U grades optional. Lecs, T R 12:20-1:10. Disc. TBA. R.-H. Chen.
The course covers a wide spectrum of issues related to cell proliferation in eukaryotes. Lectures include various aspects of the regulation of cell division cycle and signal transduction pathways, with additional topics on oncogenesis, cell aging, and cell death. The facts as well as concepts and topics behind the findings are discussed. Selected papers from the literature on a given topic are evaluated critically during six or seven two-hour meetings.

**BIOBM 439 Molecular Basis of Human Disease**
Fall. 1 credit. Prerequisites: BIOBM 330 or BIOBM 331-332. Recommended: genetics (e.g. BIOGD 283) and molecular biology (e.g., BIOBM 432 or BIOAP 316). S-U grades optional. Lecs, T R 11:15 for the first 7 weeks of the semester. (Note: beginning fall 2001 this will be a 2-credit course, offered T R 11:15 for the entire semester.) W. L. Kraus.
This course will examine how changes in the normal expression, structure, and activity of gene products caused by genetic mutations and environmental agents lead to human diseases. The material will focus on how proteins with modified structures and biochemical activities cause alterations in normal cellular processes, as well as the physiological consequences of these changes. Topics will be selected from hormones, neurobiology syndromes, inborn errors of metabolism, gene fusions resulting in hybrid proteins, gene amplification, gene inactivation, disruption of signaling pathways, disruption of metabolic pathways, and the molecular actions of environmental poisons and toxins. Examples of diseases will be selected to emphasize various aspects of cell biology, physiology, and immunology that have been presented in other courses. In addition, the methods used to identify the underlying biochemical and genetic basis of the diseases, as well as possible pharmacological and genetic therapies for treating the diseases, will be presented.

**BIOBM 631 Protein Structure and Function**
Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332 and organic chemistry. Recommended: physical chemistry. S-U grades optional. Lecs, M W F 9:05. L. Nicholson.
Presentations on the principles of protein structure and the nature of enzymatic
Lectures on topics of eucaryotic gene organization, regulation of gene expression, RNA processing, chromatin structure, the structure and movement of chromosomes, and the architecture of the nucleus. This course covers the structure and function of the nucleus at the molecular and cell biological levels, and together with BIOBM 37, 632 and 636, provides broad coverage of the cell biology subject area.

BIOBM 641 Laboratory in Plant Molecular Biology (also BIOPL 641) Fall. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor. Students must have completed BIOBM 367. Strongly advised to preregister by Nov. 29, in the Section of Plant Biology main office (Room 228 Plant Science Building). S-U grades optional. Lab, T 9:05-4:30. J. B. Nasrallah, M. R. Hanson.

Selected experiments on gene expression, gene transfer, and assay of reporter genes in plants. The course emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

BIOBM 730 Protein NMR Spectroscopy (also VETPR 730) Spring. 2 credits. Prerequisites: CHEM 389 or 390 and CHEM 287 or 288 or permission of instructor. S-U grades optional. Lect, TBA. L. K. Nicholson, R. E. Owad.

The student acquires the tools necessary for in-depth understanding of multidimensional, multinuclear NMR experiments. Schemes for magnetization transfer, selective excitation, water suppression, decoupling, and others are presented. The application of these techniques to proteins for resonance assignment, structure determination, and dynamics' characterization is studied.

BIOBM 732-737 Current Topics in Biochemistry Fall or spring: 1/2 or 1 credit for each topic. May be repeated for credit. Prerequisite: BIOBM 330 or 331 and 332 or equivalent. S-U grades only.

Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each semester.

Lectures briefly cover the fundamentals of crystallography and focus on methods for determining the three-dimensional structures of macromolecules.

BIOBM 750 Cancer Cell Biology (also VETPA 750) Spring. 3 credits. Prerequisite: BIOBM 330 or 331 or 332 and 333 or equivalent. Lect, TBA. Offered alternate years. J. Guan, R. Levine, B. Pauli, A. Yen.

"Course covers molecular, cellular, and genetic aspects of cancer." For course description see VETPA 750.

BIOBM 833 Research Seminar in Biochemistry Fall or spring. 1 credit each term. May be repeated for credit. Required of, and limited to, second-, third-, and fourth-year graduate students majoring in biochemistry. S-U grades only. Sem, M 12:20-1:30. T. C. Hulfer.

Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

BIOBM 836-837 Methods and Logic in Biochemistry, Molecular and Cell Biology 836, spring; 837, fall. 1 credit each term. Limited to first-year graduate students majoring in the Field of Biochemistry. Molecular and Cell Biology. S-U grades only. Sem and disc TBA. Fall: G. P. Hess; spring: J. Roberts. A seminar course with critical discussion by students of original research papers. A variety
ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOES)

BIOES 154 The Sea: An Introduction to Oceanoigraphy (also GEOL 104)
Spring. 3 or 4 credits (4-credit option includes one 2 1/2 hour laboratory each week). S-sec. Lects, T-Th 11:40-12:55; lab, M or W 2:00-4:25, or M 7:30-9:55 p.m. C. H. Greene, W. M. White. A survey of the physics, chemistry, geology, and biology of the oceans for both science and non-science majors. Topics include: sea-floor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate, ocean ecology, coastal processes, marine pollution, and marine resources.

BIOES 261 Ecology and the Environment
Fall or summer. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional. Lects, M W F 11:15-12:10, disc, W 12:15-1:20, or R 1:25-2:30, or 3:35. R. B. Root and staff. An introduction to the science of ecology, the study of interactions between organisms and their environments. Major topics include demography, succession, biodiversity, biogeochemistry and ecosystems, and the evolution of adaptations. The influences of enemies, competitors, and mutualists on populations and communities are discussed. The effects of climate and human activities on ecological processes are also considered. Ecological principles are used to explain the issues associated with several environmental problems.

BIOES 263 Field Ecology
Fall. 2 credits. Limited to 25 students. Prerequisite: concurrent or previous enrollment in BIOES 261. Lect, R 1:25; lab, F 11:20-2:00; 1 weekend field trip to the Hudson Valley. R. B. Root. Field exercises designed to give students direct experience with field work, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores, and competition on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.

BIOES 264 Birds in Biology
Fall. 3 credits. Limited to 25 students. May not be taken for credit after BIOES 475. Intended primarily for biology nonmajors.

BIOES 267 Introduction to Conservation Biology
Fall. 3 credits. May not be taken for credit after NTRES 450. Intended for both science and non-science majors. Completion of BIOES 267 is not required for NTRES 450. S-U grades optional. Lects, M W 9:05; disc, F 9:05 or R 2:30; 1 Saturday field trip. A. S. Fleischman. An exploration of biological concepts related to conserving the earth's biodiversity, introducing ecological and evolutionary principles important for understanding major conservation problems. Topics include patterns of species and ecosystem diversity, causes of extinction, genetic risks of small populations, design of nature preserves, strategies for protecting endangered species, ecosystem restoration, and the value of biodiversity.

BIOES 274 The Vertebtates: Structure, Function, and Evolution
Spring. 4 credits. Prerequisite: one year of introductory biology. Fee, $25. Lects, M W F 12:20; lab, M T or W 1:25-4:25. K. R. Zamudio. An introductory course in vertebrate organizational biology which explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures will cover topics such as the origin and evolution of various vertebrate groups, sensory systems, thermoregulation, life history, locomotion, feeding, and sensory systems. Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations.

BIOES 275 Human Biology and Evolution (also ANTHR 275 and NS 275)
Fall. 3 credits. S-U grades optional, with permission of either instructor. Lects, W F 10:10; disc, M 10:10 or TBA. Offered alternate years. K. A. R. Kennedy, J. D. Haas. An introduction to the biology of Homo sapiens through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. This adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Piltdown fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology.

BIOES 278 Evolutionary Biology
Fall or spring. 3 or 4 credits. (4-credit option involves writing component and two discussion sections per week; limited to 20 students each semester. Students may not preregister for the 4-credit option; interested students complete an application form on the first day of class.) Limited to 300 students. Prerequisite: 1 year of introductory biology or permission of instructor. S-U grades optional. Evening prelms: fall, Sept. 21 and Oct. 26; spring, Feb. 27 and April 9. K. A. R. Kennedy. A broad survey of the fossil evidence for human evolution with special attention to skeletal and dental anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.

BIOES 371 Human Paleontology (also ANTHR 371)
Fall. 4 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lects, M W F 2:30; lab, 1 hour each week TBA; occasional field trips. Offered alternate years. Not offered 2000–2001. R. B. Root. A broad survey of the fossil evidence for human evolution with special attention to skeletal and dental anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.

BIOES 373 Biology of the Marine Invertebrates
Fall (but taken in the previous summer at the Shouls Marine Laboratory [SML]). 4 credits. Limited to 30 students. Prerequisite: 1 year of introductory biology for majors. Permission of faculty required because it will be off campus. Two week, full-time course (August). Daily and evening lectures, laboratories, and field work. Total cost for room, board, and overhead at SML: $800. Offered alternate years. Not offered 2000–2001. C. D. Harrell, J. G. Morin, SML Faculty. An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. The Shouls Marine Laboratory exposes students to a wealth of marine and terrestrial invertebrates in their natural habitats. Regular field excursions allow an excellent opportunity to study freshly collected and in situ representatives of most of the major phyla.

BIOES 452 Herbivores and Plants: Chemical Ecology and Coevolution (also ENTOM 452)
Spring. 3 credits. Prerequisites: one year of introductory biology, BIOES 261, CHEM 253 or 357/358 and 251 or 301, or permission of instructor. S-U grades optional. Field trips, additional lectures, or laboratory demonstrations may be held in
place of F lecture. Offered alternate years. Lects, M W F 11:15. P. P. Feney. Topics include: plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack, and implications for human food and agriculture.

**[BIOES 455 Insect Ecology (also ENTM 455)]**

Fall. 3 credits. Prerequisites: BIOES 261 or equivalent and ENTM 212 or knowledge of another grades optional. Lects, M W F 11:15. Offered alternate years Not offered 2000–2001. R. B. Root. Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

**[BIOES 456 Stream Ecology (also ENTM 456 and NTRES 456)]**

Spring. 4 credits. Recommended: BIOES 261. S-U grades optional. Field project with lab papers. Lects, T R 9:05; lab, T W or R 1:25–4:25. Offered alternate years. B. L. Peckarsky. Lecture: addresses the patterns and processes occurring in stream ecosystems, including channel formation; water chemistry; watershed influences; plant, invertebrate, and fish community structure; nutrient cycling; trophic dynamics, colonization, and succession; community dynamics; conservation; and the impacts of disturbances. Lab: a field project includes descriptive and experimental techniques, and a field practice test related to environmental assessment.

**[BIOES 457 Limnology: Ecology of Lakes, Lectures]**

Fall. 3 credits. Prerequisite: BIOES 261 or written permission of instructor. Recommended: introductory chemistry. Lects, M W F 11:15. Offered alternate years. N. G. Hairston, Jr. Limnology is the study of inland fresh waters and other, nonmarine, environments. This course focuses on lakes and ponds, which are discussed as distinct aquatic environments with clear terrestrial boundaries, and within which ecological interactions are especially evident. In lakes, interactions between organisms are often strong and adaptations easily recognized. Physical and chemical processes operate on the organism level and impact organisms in important ways and organisms, likewise, influence physics and chemistry. As a result, lakes provide excellent systems for understanding the links between physical (thermal, chemical, dissolved elements and compounds), and organismal dynamics. Lakes are exciting environments for study in their own right, and for gaining perspective on ecological and evolutionary processes in general.

**[BIOES 459 Limnology: Ecology of Lakes, Laboratory]**

Fall. 2 credits. Prerequisite: concurrent or previous enrollment in BIOES 457. Lab, T W or R 1:25–4:25; 1 weekend field trip. Fee, $10 (for food on field trip). Offered alternate years. N. G. Hairston, Jr. and staff. Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Excises focus on understanding the freshwater environment, on experiments, and on understanding these processes within lakes. Optional vertebrate dissection (fish) during one laboratory exercise and during a portion of the weekend field trip.

**[BIOES 461 Population and Evolutionary Ecology]**

Spring. 4 credits. Prerequisites: BIOES 261 or 278 or two semesters of calculus, or permission of instructor. S-U grades optional. Lects, M W F 9:05; lab, M or T 1:25–4:25. Offered alternate years. D. W. Winkler and staff. Problems of ecology are viewed from an evolutionary perspective, exploring issues of adaptation and fitness by developing advanced understanding of demography and interspecific interactions. Blending theory and empirical findings, the course explores population dynamics, life-history theory, dispersal; competition; predation; parasite-host coevolution; mutualisms; and sexual, and group selection. Methods of estimation and analysis are learned in laboratory.

**[BIOES 462 Marine Ecology (also GEOL 462)]**

Spring. 3 credits. Limited to 75 students. Prerequisite: BIOES 261. Lects and discs, M W F 10:10. Offered alternate years. C. D. Harvell, C. H. Greene. Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including animal, population, community, and ecosystem levels. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

**[BIOES 463 Plant Ecology and Population Biology, Lectures]**

Fall. 3 credits. Prerequisite: BIOES 261 or 278 or equivalent and permission of instructor. Recommended: some taxonomic knowledge of higher plants and microbes. Lects, M W F 11:15. Offered alternate years. M. A. Geber, P. L. Marks. This course examines the biological and historical factors affecting the structure of plant communities, and the distribution, abundance, and population dynamics of individual species. The influence of the environment, disturbance history, competition, and herbivory on the organization of plant communities are considered. Plant populations are also studied through an analysis of plant life histories and population growth and animal interactions. Throughout the course, attention is paid to the empirical patterns, experimental results, and theory. Readings are drawn from the primary literature.

**[BIOES 464 Macroevolution]**

Spring. 4 credits. Limited to 25 students. Prerequisite: previous or concurrent enrollment in BIOES 466. Lab, M 1:25–4:25, plus additional lab hours TBA. Offered alternate years. Not offered 2000–2001. Staff. A detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore physiological adaptation; limiting factors; resource acquisition and allocation; photosynthesis, carbon, and energy balance; water use and water relations; nutrient relations; linking physiology, development, and morphology; stress physiology; life history and physiology; the evolution of physiological performance; and community and ecosystem levels. Readings drawn from the primary literature and textbooks.

**[BIOES 466 Physiological Plant Ecology, Lectures]**

Fall. 2 credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOES 466. Lab, M 1:25–4:25, plus additional lab hours TBA. Offered alternate years. Not offered 2000–2001. Staff. A detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Laboratories integrate techniques to specific ecological problems and cover aspects of experimental design and computer-aided data analysis. Most laboratories are past the theories and four weeks of students spending an average of three hours/ week in additional lab time for this course.

**[BIOES 471 Mammalogy]**

Fall. 4 credits. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Carpools to the Vertebrate Collections at Research Park is necessary several times during the semester. Fee, $15. Lects, M W F 12:20; lab, M T or W 1:25–4:25; 1 weekend field trip required. Offered alternate years. Not offered 2000–2001. Staff. Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systematics,
ecology, and natural history of mammals of the world, with primary emphasis on the North American fauna. Systematics laboratories held in the museums at Research Park. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.

**BIOES 472 Herpetology**

Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology. Laboratory topics include systematics, morphology, and behavior. Live animals are studied in the field and are used in the laboratory for nondestructive demonstrations and experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.

**BIOES 473 Ecology of Agricultural Systems (also CSS [ACAS] 479)**
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or permission of instructor. S-U grade optional. During the first 6 weeks of class, the Thursday meetings may run to 5:00 because of field trips. Lecs and discs, T R 2:30-3:45. Not offered 2000-2001. Offered alternate years; next offered fall 2002. A. G. Power, E. C. M. Fernandes.

Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the role of beneficial organisms, mutualism in agroecosystems, plant-herbivore relations, plant-pest interactions, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

**BIOES 474 Laboratory and Field Methods in Human Anatomy (also ANTHR 474)**
Spring. 5 credits. Limited to 16 students. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Recommended: permission of instructor by preregistering in E235. Conron. Independent research project required. Lecs and labs, T R 10:10-12:05. Offered alternate years. K. A. R. Kennedy.

Practical exercises and demonstrations of modern approaches to the methodology of biological anthropology. Emphasis on comparative human anatomy, osteology, description of skeletal subjects, paleoanthropology, cranial and postcranial, and relevant field techniques for the archaeologist and forensic anthropologist.

**BIOES 475 Ornithology**
Fall. 4 credits. Limited to 30 students. Prerequisite: permission of instructor by preregistering in E235. Conron. Recommended: BIOES 274, S-U grade optional, with permission of instructor. Carpooling to the Vertebrate Collections at Research Park is necessary once a week. Fee. $15.

Lecs and labs, T R 12:20-4:25; occasional field trips and special projects. Offered alternate years. D. W. Winkler.

Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.

**BIOES 476 Biology of Fishes**
Fall. 4 credits. Limited to 24 students. Recommended: BIOES 274 or equivalent experience in vertebrate zoology. S-U grade optional, with permission of instructor. A small lab fee may be required. Lecs, M W F 10:10; lab, M 1:25-4:25, with additional lab time TBA; 2 field trips. Offered alternate years. A. R. McCune.

An introduction to the study of fishes: their structure, evolution, distribution, ecology, physiology, behavior, classification, and identification, with emphasis on local species. Two field trips, including one full day trip; five animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.

**BIOES 478 Ecosystem Biology**
Spring. 4 credits. Prerequisite: BIOES 261 or equivalent. S-U grade optional. Lecs and discs, T R 10:10-12:05. Offered alternate years. L. O. Hedin, R. W. Howarth.

Analysis of ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. Consideration of anthropogenic effects on ecosystems, such as from acid precipitation and offshore oil pollution. Analysis of climate change and regional environmental change from an ecosystem perspective.

**BIOES 479 Paleobiology (also GEOL 479)**
Fall. 4 credits. Prerequisite: one year of introductory biology for majors and either BIOES 274, GEOL 375, BIOES 373, or permission of instructor. S-U grade optional. Lecs, M W F 12:20; lab TBA. W. Allmon.

A survey of the principles and practice of paleontology and the major groups of organisms and their evolutionary histories. Intended to fill out the biological background of geology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.

**BIOES 490 Topics in Marine Biology**
Spring. 2 credits. May be repeated for credit.Primarily for undergraduates. Limited to 15 students. Prerequisite: permission of instructor. S-U grade optional. Lee, F 2:30-4:25. J. Morin and M. Shulman. Seminar courses on selected topics in marine biology, may include laboratory or field trips. Topics and times of organizational meeting are shown in departmental course offerings listed on the web site.

**BIOES 499 Field Studies in Ecology and Systematics**
Fall or spring. Variable credit. Prerequisites: BIOES 261, a taxon-oriented course, and permission of instructor. S-U grade optional, with permission of instructor. Lecs and field trips TBA. Estimated costs: to be announced. Not offered 2000-2001. P. L. Marks, R. B. Root.

This course provides students with opportunities to learn field techniques and new biota by participating in an intensive series of field exercises. Extended weekend trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

**Section 01: Life Histories of Marine and Freshwater Invertebrates**
Fall. 2 credits. Prerequisite: undergraduates must have previous experience or course work with marine or freshwater invertebrates. Two extended weekend field trips in early September and October. Fee. $100 (to help cover transportation and housing at Shools Marine Laboratory). Offered alternate years. Not offered 2000-2001. C. D. Harvell, N. G. Haisont, Jr.

Field trips to the Shools Marine Laboratory and Sharkelkon Point Field Station. Students employ experimental approaches to study the evolution of invertebrate life histories.

**Section 02: Graduate Field Course in Ecology**
Spring. 3 credits. Restricted to graduate students. A fee will be required to help cover food and lodging for trip to Florida. Offered alternate years. Not offered 2000-2001. P. L. Marks, R. B. Root.

The course is designed to give graduate students experience in defining questions and designing field investigations. The class is based at the Archbold Biological Station in central Florida over spring break and during the following week. Several ecosystems including sand pine scrub, cattle ranches, cypress swamps, everglades, and coral reefs.

**BIOES 661 Environmental Policy (also ALS 661 and BA/SOC 461)**
Fall and spring. 3 credits each term. Students must register for 6 credits each term, since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem, R 2:30-4:30. D. Pimentel.

This course focuses on complex environmental issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in the journal BioScience. Thus far, every study has been published.

**BIOES 665 Limnology Seminar**

A seminar course on advanced topics in freshwater ecology.
[BIOES 668] Principles of Biogeochemistry
Spring. 4 credits. Limited to 20 students. Prerequisites: solid background in ecology, environmental chemistry, or related environmental science. Permission of instructor required for undergraduates. S-U grades optional. Lecs and disc, T R 10:10-12:05. Offered alternate years. Not offered 2000-2001. R. W. Howarth, L. O. Hedin. Lectures cover the biotic controls on the chemistry of the environment and the chemical control of ecosystem function. Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes and soils.

[BIOES 669] Plant Ecology Seminar
Spring. 1 credit. May be repeated for credit. Suggested for students majoring or minoring in plant ecology. S-U grades optional. Instructor: A. Geber. Includes review of current literature, student research, and selected topics of interest to participants.

[BIOES 670] Graduate Seminar in Vertebrate Biology
Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students, written permission of instructor required for undergraduates. S-U grades only. Sem TBA. Not offered 2000-2001. Staff. Seminar presentations and discussions by students on areas of current research in vertebrate biology. Topics vary from semester to semester.

[BIOES 671] Palaeoanthropology of South Asia (also ANTHRO 671 and ASIAN 620)
Fall. 3 credits. Limited to 15 students. Lec, M 2:30-3:30; sem, W 7:30-9:30 p.m. Offered alternate years. Instructor: A. Geber. The course explores recent developments in the prehistoric archaeology, palaeo-ecology, and biological anthropology of the ancient peoples of India, Pakistan, Sri Lanka, and the bordering countries. Issues of origin and decline of the Indus Civilization, fossil record of early humans in the Indian subcontinent, and current research topics are discussed.

Fall. 3 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lec, M 2:30; sem and disc. W 7:30-9:30 p.m. Not offered 2000-2001. Offered alternate years. Next offered fall 2002. K. A. R. Kennedy. A survey of the historical background of present-day concepts of human evolutionary variations and adaptations in space and time. The formation of biological anthropology as an area of scientific inquiry within the social and biological sciences is reviewed. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature.

[BIOES 760] Special Topics in Evolution and Ecology
Fall or spring. 1-5 credits. May be repeated for credit. Enrollment limited. S-U grades optional, with permission of instructor. Hours TBA. Staff.

[BIOES 763] Workshop in Biogeochemistry
Fall or spring. 1 credit. May be repeated for credit. Limited to 15 students. Prerequisite: BIOES 668. S-U grades only. Workshop and disc, TBA. Staff. Provides a workshop in which graduate students interact with invited world-leading biogeochemists. Workshop topics will change each semester. A one-week workshop will be preceded by seven, one-hour preparatory discussions of readings.

[BIOES 767] Current Topics in Ecology and Evolutionary Biology
Fall. 4 credits. Prerequisite: permission of instructor required for undergraduates. S-U grades only. Lecs and disc, T R 10:10-12:05. Critical evaluation and discussion of theory and research in evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

[BIOES 899] M.S. Thesis Research
Fall or spring. 1-15 credits. Prerequisite: admission to the Field of Ecology and Evolutionary Biology. S-U grades optional. Hours TBA. E&EB Field Faculty. Thesis research conducted by an M.S. student in the Field of Ecology and Evolutionary Biology with advice and consultation of a major professor who is a member of the Field.

[BIOES 999] Ph.D. Dissertation Research
Fall or spring. 1-15 credits. Prerequisite: admission to the Field of Ecology and Evolutionary Biology as a Ph.D. student. S-U grades optional. Hours TBA. E&EB Field Faculty. Dissertation research conducted by a Ph.D. student in the Field of Ecology and Evolutionary Biology with advice and consultation of a major professor who is a member of the Field.

GENETICS AND DEVELOPMENT (BIOGD)

BIOGD 184 Understanding Genetics
Spring. 3 credits. May not be taken for credit after BIOGD 281 or 282. This course may be used to fulfill the requirements for any program of study in the biological sciences major. S-U grades optional. Lecs, M W F 2:30. Offered alternate years. T. D. Fox. An introduction to genetics for students majoring in fields other than biology. Genetics is a rapidly developing science that has provided insight into all aspects of biology and practical tools which increasingly affect our lives. The course shows how major conclusions about inheritance have been derived from the experimental evidence drawing on examples from the biology of humans, other animals, plants, fungi, and bacteria. It also illustrates current and future applications of genetic discoveries. For example, the basic principles of inheritance, in conjunction with methods for the isolation and detection of specific gene fragments, is used to understand the detection of genetic diseases and the identification of individuals (DNA fingerprinting). Topics to be covered include the origin of mutations, use of genetic tools to alter the properties of organisms and the influence of inheritance on behavior.

BIOGD 281 Genetics
Fall, spring, or summer (8-week session). 5 credits. Not open to freshmen in fall semester. Enrollment may be limited to 200 students. Prerequisite: one year of introductory biology or equivalent. No admittance after first week of classes. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Lecs, T R 10:10-12:05, lab, T W or F 2:30-4:25; additional hours TBA. Problem-solving sessions strongly recommended. T or W 8:30-9:45 (additional session TBA if necessary). P. J. Bruns, T. D. Fox, M. L. Goldberg, R. J. MacIntyre. A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions of gene transmission, gene action and interaction, gene linkage and recombination, gene structure, gene and chromosome mutations, genes in populations, and extrachromosomal inheritance. Aspects of recombinant DNA technology are discussed. In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in Drosophila.

BIOGD 282 Human Genetics
Spring. 2 or 3 credits (2 credits if taken after BIOGD 281). Each discussion limited to 25 students. Prerequisite: 1 year of introductory biology or equivalent; permission of instructor required for students who have taken BIOGD 281. S-U grades optional. Lecs, M W 10:10 (Lecs also F 10:10 first 3 weeks only); disc, R 10:10 or F 10:10 or 11:15. M. Goldberg. Spring 2001 Lecturer M. Goldberg, thereafter switching to a fall course. Taught alternate years by P. Bruns (Fall 01/Goldberg, fall 02/Bruns).
A course designed for nonmajors. Lecturers discussed in section meetings.

**BIOGD 385 Developmental Biology**
Fall. 3 credits. Prerequisite: BIOGD 281. Lecs, M W F 11:15. K. J. Kemphues.
An introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

**BIOGD 387 Developmental Aspects of Evolution**
Spring. 2 credits. Prerequisite: BIOGD 281. S-U grades optional. Lecs, T R TBA. Offered alternate years. A. W. Blackler. An examination of the developmental mechanisms that underlie evolutionary change and organismal diversity and of the developmental constraints that contribute to evolutionary conservatism.

**BIOGD 389 Embryology**
Spring. 3 credits. Preference given to seniors. Prerequisites: 1 year of introductory biology and a knowledge of mammalian adult anatomy. Lecs, T R 10:10; labs, T or R 2-4:25. A. W. Blackler. A course in the embryonic development of vertebrate animals, with emphasis on the comparative aspects of morphogenesis and function at the tissue and organ levels. The laboratory has a strong morphogenetic bias, emphasizing the comparative aspects of developmental anatomy and preparation for medical studies.

**BIOGD 450 Vertebrate Development**
Spring. 3 credits. Prerequisite: Introductory Biology. S-U and letter grades. Lecs, T R 11:40-12:55. Not offered 2000–2001. Offered spring 2002. This course is designed to examine the developmental characteristics of vertebrates. The course will begin with an introduction to recent evolutionary and molecular approaches to understanding the rise of vertebrates. The development of vertebrate structures, such as neural crest, specialized sense organs, and limbs, will be examined in detail with emphasis on the cellular and molecular events controlling their development.

**BIOGD 480 Seminar in Developmental Biology**
Spring. 1 credit. May be repeated for credit. Limited to upper-class students. Prerequisite: BIOGD 281. S-U grades only. Seminar TBA. Staff.

**BIOGD 481 Population Genetics**
Fall. 4 credits. Prerequisite: BIOGD 281, BIOES 278, or equivalents. Lecs, M W F 9:55-10:45; disc, T 2:30-3:20. C. F. Aquadro. Population genetics is the study of the transmission of genetic variation through time and space. The class explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of neutral variation. Emphasis is placed on DNA sequence variation, and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

**BIOGD 482 Human Genetics and Society**
Fall. 3 credits. Enrollment limited to 24 senior biological sciences majors, with preference given to students studying molecular or population genetics. Prerequisites: BIOGD 281 and BIOBM 330 or 331 and 332, and permission of instructor. S-U grades optional. Disc, T 2:30-4:25 and R 2:30-3:50. R. A. Calvo. Presentation of some of the science and technology, plus discussion of the ethical, social, and legal implications of recent advances in human genetics. Among the topics considered are assisted reproductive technologies, genetic counseling, genetic screening (pre-implantation, prenatal, neonatal, pre-symptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavioral and mental, and genetic diseases. Students lead many discussions. There is a major writing component in the course.

**BIOGD 483 Molecular Aspects of Development**
Spring. 3 credits. Prerequisites: BIOGD 281, BIOBM 332 or 330 or 333, and BIOGD 385 or permission of instructor. Lecs, T R 2:30-4:00. Offered alternate years. M. F. Wolnfr. An advanced course in developmental biology, with emphasis on the molecular events underlying developmental processes. Simultaneously, a molecular biology course that focuses on how development modulates and uses transcriptional, post-transcriptional, translational and post-translational regulation of gene expression and cellular functions such as signal transduction and cell-cell communication. Numerous developmental systems are discussed and analyzed in microorganisms, plants and, especially, animals including fruit flies, nematode worms, and vertebrates such as mice, frogs, and humans. Course readings include original research articles. Discussion emphasizes specific experiments and approaches, results and their interpretation.

**BIOGD 484 Molecular Evolution**
Spring. 3 credits. Prerequisites: BIOGD 281 and organic chemistry. Lecs, M W F 8:40-9:55. Offered alternate years. Not offered 2000–2001. R. J. MacIntyre. An analysis of evolutionary changes in genes and their protein products. Theories on the evolution of the genetic code, the construction of phylogenetic trees from biophysical and biochemical data, and the role of gene duplications in evolution are discussed. The second half of the course concerns the evolution and the organization of genomes from viruses to higher eukaryotes, including the translation of satellite DNA sequences and transposable elements.

**BIOGD 485 Bacterial Genetics (also BIOM 485)**
Fall. 2 credits. Graduate students, see BIOM 485. Prerequisite: BIOGD 281. Recommended: BIOM 290 and BIOBM 330 or 331 and 332 or 333. Lecs, W 7:30-9:25 P.M. Staff. For course description, see BIOM 485.

**BIOGD 486 Advanced Eukaryotic Genetics**
Spring. 4 credits. Enrollment may be limited to 50 students. Prerequisites: BIOGD 281, BIOBM 330 or 333 and 332. S-U grades optional. Lecs, T 12:20–2:15 and R 12:20–1:10; disc R 1:25–2:15 or R 1:15–1:25. F. E. Alani. The course develops essential skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as chromosome segregation. The tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, pathogen resistance in plants, and human genetics.

**BIOGD 600 Development of Sensory Systems**
Spring. 2 credits. Prerequisites: introductory biology, genetics, development, and neurobiology, or permission of instructor. S-U grades. Offered alternate years. Lec, M 7:00–8:40 P.M. K. J. Kemphues. This course will explore the unique and shared mechanisms used in sensory system development of both vertebrates and invertebrates. The first class of the course will provide a general introduction to the development of sensory systems in vertebrates and invertebrates. Following classes will involve the reading of current and classic papers in sensory system development. Students will choose a topic and articles from a list provided by the instructor. Students will be responsible for an oral presentation and short paper.

**BIOGD 682 Fertilization and the Early Embryo**
Spring. 2 credits. Prerequisites: BIOGD 281, BIOBM 332, 330 or 333, and BIOGD 385 or permission of instructor. Lec, R 2:30–4:25. Offered alternate years. Not offered 2000–2001. M. F. Wolnfr. This course treats the earliest events in the formation of a new organism. The methods and findings of genetic, developmental, and molecular analyses are discussed. Readings in the recent literature and discussions focus on pre-gastrulation embryos from several animal species. Topics include fertilization (sperm/egg binding, sperm entry into egg), nuclear fusion, egg activation, initiation and terminating the cleavage, division period, cytoplasmic determinants, changes in nuclear and cytoplasmic architecture.

**BIOGD 684 Advanced Topics in Population Genetics**
Spring. 2 credits. Limited to 20 students. Prerequisites: BIOGD 281 or equivalent and written permission of instructor. S-U grades optional. Lec, T 2:30–4:25. Not offered 2000–2001. Offered alternate years. Next offered spring 2001. C. F. Aquadro. An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics are announced the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.

**BIOGD 685 Advanced Bacterial Genetics (BIOM 485)**
Fall. 2 credits. Limited to graduate students in Biological Sciences; see BIOM 485. Prerequisites: BIOGD 281 or equivalent.

Microbiology (BIOM)

[BIOM 192 Microorganisms on the Planet Earth]

A course in microbiology designed to introduce students, who have a limited background in biology, to the microorganisms that populate our planet earth. Among the microorganisms studied are the bacteria, the archaea/bacteria, some of the single-celled plants and animals, and the viruses. Topics covered are the basic nature of microorganisms, their evolution on earth, their composition and growth, their role in the ecology of this planet, their role in human history and disease, and their use in bioengineering. This course is not a prerequisite for advanced courses in microbiology.

BIOM 290 General Microbiology

Lectures
Fall, spring, or summer (6-week session). 2 or 3 credits (2 credits if taken after BIOM 192). Prerequisites: 1 year of introductory biology for majors and 1 year of college chemistry, or equivalent. Recommended: concurrent registration in BIOM 291. Lecs. M W F 11:15. Staff.
A comprehensive overview of the biology of microorganisms, with emphasis on bacteria. Topics include microbial cell structure and function, physiology, metabolism, genetics, diversity, and ecology. Applied aspects of microbiology are also covered such as biotechnology, the role of microorganisms in environmental processes, and medical microbiology.

BIOM 291 General Microbiology Laboratory

Fall or spring, 2 credits. Summer (6-week session), 2 credits. Prerequisite: concurrent or previous enrollment in BIOM 290. Lecs. M W F 12:20-1:10, or T R 12:20-1:10, or 2:30-4:25. C. M. Rehkguler.
A study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

BIOM 292 General Microbiology Discussion

Spring. 1 credit. Prerequisite: concurrent or previous enrollment in BIOM 290. S-U grades only. D. D. TBA. C. M. Rehkguler.
A series of discussion groups in specialized areas of microbiology to complement BIOM 290.

BIOM 391 Advanced Microbiology Laboratory

A laboratory course that illustrates basic principles of experimental microbiology. The course is organized into four modules which last three weeks each: (1) ecology, (2) physiology, (3) genetics, and (4) structure and function. Students are encouraged to take this course during their third year of study.

BIOM 394 Applied and Food Microbiology (also FOOD 394)

Fall. 2-3 credits. Prerequisites: BIOM 290-291. M W F 12:20-1:10. C. A. Batt.
Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course will present a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. Issues related to the biosafety of microorganisms and the role of microorganisms important in these processes will be reviewed. A two-credit core section on food microbiology is complemented by a one-credit section on industrial/biotechnology applications.

BIOM 397 Environmental Microbiology

Fall. 3 credits. Prerequisite: BIOMS 201 or BIOM 290 or SCAS 200 or permission of instructor. Lecs. M W F 10:10. Not offered 2000-2001. W. C. Ghiorse.
The biology, behavior, diversity, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

BIOM 404 Pathogenic Bacteriology and Mycology (also VETMI 404)

Offered alternate years. M. Wiedmann
This is a course in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary medicine. The emphasis of this course is infection and disease pathogenesis. Topics include disease causality, interactions of host, pathogen and environment, including immunity to bacteria and fungi; and principles of antimicrobial therapy and drug resistance. A companion seminar addresses the current
and classic literature related to microbial pathophysiology on the cellular and molecular level.

**BIOMI 408 Viruses and Disease I (also VETMI 408)**

Spring. 2 credits. Prerequisites: BIOMI 290, 291. BIO G 305, and permission of instructor. Recommended: BIODG 281. Lecs, M W 7:30 P.M. Offered alternate years. J. Casey.

The course covers basic concepts in virology with emphasis on virus-host interactions, strategies for gene regulation, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasia are highlighted in the context of approaches to prevent or reduce the severity of diseases.

**BIOMI 409 Viruses and Disease II (also VETMI 409)**

Fall. 2 credits. Prerequisites: BIOMI 290 and 291. Recommended. BIOMI 408. BIOMI 350-352, BIOMI 432. Lecs, T R 2:30-3:20 P.M. Offered alternate years. C. Whitaker.

This course will be complementary to BIOMI 408, Viruses and Disease I, and will emphasize RNA viruses. The course will be complete in its own right. As such, completion of BIOMI 408 is not a requirement, but is encouraged. The structure and classification of viruses, virus entry, genome replication and assembly will be studied with particular emphasis on virus-host cell interactions. Vaccination, chemotherapy and evolution of viruses will also be discussed.

**BIOMI 414 Bacterial Diversity**

Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331 or 333. Lecs, M W F 11:15. Offered alternate years. Spring 2001/odd. S. H. Zinder.

A consideration of the physiology, ecology, genetics, and practical potential of important groups of bacteria. Topics include molecular methods for determining bacterial phylogeny and taxonomy, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

**BIOMI 416 Bacterial Physiology**

Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331 or 333, or their equivalents. Lecs, M W F 11:15. Offered alternate years. Spring 2002/even. J. P. Shapleigh.

The concern is with the physiological and metabolic functions of bacteria. Consideration is given to chemical structure, regulation, growth, and energy metabolism. Special attention is given to those aspects of bacterial metabolism not normally studied in biochemistry courses.

**BIOMI 417 Medical Parasitology (also VETMI 431)**

Fall. 2 credits. Prerequisites: courses pertaining to zoology and biology. Lecs, T R 3:35-4:25. Offered alternate years. D. Bowman.

A systematic study of anthropod, protozoan, and helminth parasites of public health importance with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasites.

**BIOMI 418 Microbial Ecology**

Spring. 3 credits Prerequisites: BIOMI 290 and 291, or BIOMI 398 and instructor's permission, and BIOMI 330 or 331 and 332. Lecs, M W F 10:10-11. E. R. Argert.

Understanding the role of microorganisms in natural environments is one of the greatest challenges facing microbiologists. This course will introduce current biochemical and molecular methods to assess community diversity and microbial activity in a variety of ecosystems. Other topics discussed include bacterial growth and survival, population biology, and microbial interactions.

**BIOMI 420 Microbial Genomics**

Spring. 2 credits. Prerequisites: BIOMI 290, BIO G 201, BIOMI 350, or equivalent. Offered odd years. Lecs, T R 10:10-11:25. J. P. Shapleigh and J. D. Helmann.

Genomic information is revolutionizing biology. We will discuss the impact of genomic information on the study of microbial physiology, evolution, and biotechnology. Topics will include both techniques (automated DNA sequencing, assembly, annotation, DNA chips) and applications (genome-wide analysis of transcription, functional genomics).

**BIOMI 485 Bacterial Genetics**

Fall. 2 credits. Graduate students, see BIOMI 485. Prerequisites: BIOMI 281. Recommended. BIOMI 290 and BIOMI 330 or 331 and 332 or 333. Lecs, W 7:30-9:25 P.M. Staff.

Concepts and principles of formal genetic analysis as applied to prokaryotes, with emphasis on enterobacteria and their viruses. Topics include mutagenesis and isolation of mutants; genetic exchange, recombination and mapping; complementation, epistasis and suppression, transposons, gene expression and regulation; and genetics of bacterial pathogenesis.

**BIOMI 610 Introduction to Chemical and Environmental Toxicology (also TOX 610)**

Fall. 3 credits. Prerequisite: graduate standing in the field or consent of the instructor. Letter grades. Lecs, M W F 11:15-12:05. A. Hay.

Introduction to the general principles of toxicology including the sources, mechanisms, and targets of toxic agents. Special attention will be given to the interaction between toxic agents and biological systems at both the organismal and ecological level. The effects of both anthropogenic and natural toxins will be examined with respect to genetic and developmental toxicity as well as carcinogenesis and specific organ toxicity.

**BIOMI 652 (Section 02) Molecular Plant-Microbe Interactions (BIOP 652, Sec 03)**

Spring. 1 credit. Prerequisites: BIOG 281, BIOMI 330 or 331 or 333, and BIOP 653 (section 01) or their equivalents. S-U grades optional. Lecs, M W F 10:10 (12 lecs) first third of semester. S. C. Winans.

For course description, see BIOP 652, Sec 03.

**BIOMI 690 Prokaryotic Biology**

Fall and spring 2000-2001. 4 weeks/8 lectures. 1 credit. Section to be offered. T R. Time TBA.

**Section 1—Microbial Structure and Function**

Fall. J. P. Shapleigh.

Discussion of those macromolecules and assemblages of macromolecules that together define the structure of the prokaryotic cell. This will include external structures, such as cell wall, flagella, pili, and peptidoglycan and internal structures such as specialized vesicles and other large complexes.

**Section 2—Microbial Genetics**

Fall. J. D. Helmann.

Reviews the fundamental concepts of microbial genetics including mutations and their analysis, plasmids, conjugation, transformation, transduction, recombination, repair, and mutagenesis.

**Section 3—Microbial Physiology/Diversity**

Fall. S. H. Zinder.

An overview of prokaryotic physiological diversity. The major energy producing pathways of bacteria and their phylogenetic distributions among both bacteria and archaea are reviewed. Topics include fermentation, respiration, photosynthesis, and pathways of carbon and nitrogen fixation.

**Section 4—Microbial Pathogenesis**

Spring. S. C. Winans.

An introduction to the fundamental concepts of bacterial pathogenesis including the normal flora, pathogen entry and colonization, the production and regulation of toxins, horizontal transfer of pathogenesis determinants, and the roles of both specific and nonspecific host defenses. Examples will include bacterial pathogens of both animals and plants.

**Section 5—Environmental Microbiology**

Spring. E. L. Madsen.

A core course of concepts, methods, and current literature that reveals the multidisciplinary nature of environmental microbiology and its relationship to prokaryotic biology. The crucial roles that microorganisms play in catalyzing biogeochemical reactions throughout the biosphere will be discussed.

**BIOMI 791 Advanced Topics in Microbiology**

Fall or spring. 1 credit. May be repeated for credit. Prerequisite: graduate standing in microbiology. S-U grades only. Disc, T 4-5:00. Staff.

Reading and presentation by graduate students of current literature in selected areas of modern microbiology.

**BIOMI 794-796 Current Topics in Microbiology**

Fall, 794; spring, 796. 1/2 or 1 credit for each topic. May be repeated for credit. Designed primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lecs TBA. Staff.

Lectures and seminars on special topics in microbiology.

**BIOMI 797 Scientific Communication Skills**

Fall and spring. 1 credit each semester. F 2:30-3:20.

The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their formal oral presentation skills. Students will be asked to present topical seminars that will be critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations will be emphasized. Taken in their first two semesters, a third semester is optional.
BIOMI 798 Graduate Research Seminar in Microbiology
Fall and spring. 1 credit each semester. Required of all graduate students in the Graduate Field of Microbiology. S-U grades only. F 1:25-2:15. Staff. Required of all graduate students in the Field of Microbiology. All graduate students in the Field of Microbiology are required to attend BIOM 798 and are required to present a seminar concerning their research at least once each year.

BIOMI 799 Microbiology Seminar
Fall and spring. Required of all graduate students in the Graduate Field of Microbiology and open to all who are interested. Sem TBA. Staff.

NEUROBIOLOGY AND BEHAVIOR (BIONB)
BIONB 111 Brain, Mind, and Behavior (also PSYCH 111 and COGST 111)
Spring. 3 credits. Intended for freshmen and sophomores in the humanities and social sciences. S-U grades optional. Lects, M W F 11:10-11:55; disc, F 1:25-2:15. E. Adkins Regan and R. R. Hoy. The course is about issues that relate to consciousness, awareness, attention, perception, cognition, and emotion to the mechanistic workings of the brain and hormonal system. The course will cover elementary neurophysiology, neuroanatomy, hormone physiology, ethology, plus relevant topics from psychology and clinical neurology. The course is for freshmen and presumes no biology or psychology background; no prerequisites; it is not for biology majors.

BIONB 221 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3, 4, or 5 credits (4 credits with one discussion period and 2 credits with two discussion periods per week and participation in the Writing in the Majors program). 4- or 5-credit option required of students in the neurobiology and behavior program of study. Each 4-credit section is limited to 20 students, with preference given to students studying neurobiology and behavior. Enrollment in the 5-credit option is limited to 15 students. Students may not preregister for the 5-credit option; interested students complete an application form on the first day of class. Not open to freshmen. Prerequisite: 1 year of introductory biology for majors. May be taken independently of BIONB 222. S-U grades optional. Lect, M W F 12:20; disc TBA. H. K. Reeve and staff. A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, rhythmicity, orientation and navigation, and hormonal mechanisms of behavior.

BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits (4 credits with discussion and written projects). 4-credit option required of students studying neuroanatomy and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisite: 1 year of introductory biology for majors and 1 year of chemistry. May be taken independently of BIONB 221. S-U grades optional. Lect, M W F 12:20; disc TBA. A. H. Bass and staff. A general introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.

BIONB 322 Hormones and Behavior (also PSYCH 322)
Spring. 3 credits. 2 lectures plus a section in which students will read and discuss original papers in the field, give an oral presentation, and write a term paper. Limited to juniors and seniors. Prerequisite: (1 of the following): (a) PSYCH 223 or (b) BIONB 221 or (c) BIONB 222 or (d) one year of introductory biology plus a course in psychology. S-U grades optional, but not recommended. Lect M W F 11:15; E. Adkins Regan. A major focus of the course will be comparative and evolutionary approaches to the study of the relationship between reproductive hormones and sexual behavior in vertebrates, including humans. Also included will be hormonal contributions to parental behavior, aggression, stress, learning and memory, and biological rhythms.

BIONB 324 Biopsychology Laboratory (also PSYCH 324)
Fall. 4 credits. Limited to 20 upperclass students. Prerequisite: experience in biology or psychology. BIONB 221 and 222 or PSYCH 123 and 222; and permission of instructor. Labs, T R 1:25-4:25; T. DeVooogt. Experiments designed to provide research experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included. Live animals are used in the laboratory.

BIONB 325 Neurodiseases—Molecular Aspects
Fall. 3 credits. Prerequisites: two courses from BIONB 222, BIOGD 281, BIOBM 330, or 331; co-registration in one of the two is acceptable. S-U grades optional. Lects, T R 9:05; disc, T 1:30 or 2:30. T. R. Podleski. The intent of this course is to teach students how to use recombinant DNA techniques for the study of neurodiseases. How are genes responsible for diseases identified and how are the functions of these genes studied? Attention is focused on those neural diseases in which significant advances have been made using these techniques, for example, Alzheimer's, Huntington's, Prion diseases, schizophrenia, depression, disorders affecting ion channels, and muscular dystrophies. Emphasis is placed on how these studies provide a useful approach to studying the mammalian nervous system by exposing the functions of genes that would be difficult to identify in other ways.

BIONB 326 The Visual System
Spring. 4 credits. Prerequisite: BIONB 222 or BIOAP 311, or permission of instructor. S-U grades optional. Lects, M W F 10:10; disc, 1 hour each week TBA. Offered alternate years. Not offered 2000-2001. H. C. Howland. The visual systems of vertebrates are discussed in breadth and depth. Topics covered include the optics of eyes, retinal neurophysiology, structure and function of higher visual centers, and ocular development.

BIONB 328 Biopsychology of Learning and Memory (also PSYCH 332)
Spring. 3 credits. Prerequisite: 1 year of biology and either a course in biopsychology or BIONB 222. Lects, M W F 11:15. T. DeVooogd. This course surveys the approaches that have been or are currently being used in order to understand the biological bases for learning and memory. Topics include vertebrate, "simple system" approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human pathology. Many of the readings are from primary literature.

BIONB 392 Drugs and the Brain
Spring. 4 credits. Prerequisites: BIONB 222 or equivalent with permission of instructor. S-U grades optional. Lects, T R 10:10-11:25; disc TBA. Offered alternate years. R. Harris-Warrick. An introduction to neuropharmacology. After a brief introduction to pharmacology, there is discussion of the major neurotransmitter families. Topics include the biological actions of the major psychoactive drugs in the brain, including cocaine, amphetamines, alcohol, psychedelics, marijuana, antidepressants and antipsychotics.
BIONB 396 Introduction to Sensory Systems (also PSYCH 396 and 696)

Spring. 4 credits. Limited to 25 students. Prerequisites: A prerequisite course in biology or biopsychology, plus a second course in behavior or biopsychology or cognitive science or neuroscience or perception. Students are expected to have knowledge of elementary physics, chemistry, and biology. S-U grades optional. Lecs. M W F 10:10. Offered alternate years. Not offered 2000–2001.

B. P. Halpern

This course covers both those characteristics of sensory systems that are common across living organisms and those sensory properties that represent adaptations of animals to particular habitats, environments, or niches. The principles and limitations of major methods used to examine sensory systems will be considered. Emphasis will be on somesthetic, visual, and auditory systems. This course will be taught using the Socratic method, in which the instructor asks questions of the students will be assigned original literature in the form of printed or electronic journal articles or reviews, and will be expected to come to class having read, thought about, and prepared to discuss the assigned material or information resources. A course packet of reproduced articles, textbooks, a course web site, and other Internet sites will be used.

Students will submit brief analyses of, and responses to questions on, all assignments by e-mail to the course's electronic mailing list a day before each class meeting. The mailing list will distribute submissions to all members of the class and to the instructor. In addition to the brief written exercises, a web site or a term paper on a topic germane to these brief tri-weekly written exercises, a website will be required. All exams will be in take-home format. At the level of "From Sound to Synapse" by C. D. Geisler, "The Retina," by J. F. Dowling, courseinfo.cit.cornell.edu/courses/psych396/

BIONB 420/720 Topics in Neurobiology and Behavior

Fall or spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S-U grades optional. TBA. Staff. Course on selected topics in neurobiology and behavior, can include lecture and seminar courses. Topics, instructors, and time of organizational meetings are listed in the catalog supplement issued at the beginning of the semester.

Molecular Neurobiology 420-02 (undergraduates) 720-05 (graduates) (also BIOL 453-01/735-01)

Fall. 2 credits. Limited to 40 students. S-U and letter grades. Prerequisites: BIOL 330 or 352 (or equivalent molecular biology course), and BIONB 222 (or equivalent neurobiology course). For graduate students with a strong background in one of those areas, the prerequisite in the other area is waived. Lecs. M W F 12:30–2:25, and seminars F 4:00–5:30 (five times during the semester). R. Harris-Warrick, M. Wölfner, and staff. Five leading international experts will come to Cornell for public seminars that describe recent advances in data and theory at the intersection between neurobiology and molecular biology. Topic coverage will center around the structure and function of ion channels and neurotransmitter receptors. During the Thursday class meeting prior to each expert's visit, students and course faculty will present and discuss recent papers by the upcoming speaker. The following week, students will be required to attend two one-hour seminars by the speaker (Thursday at 12:20 P.M. and Friday at 4:30 P.M.) and a one-hour in-depth discussion meeting with the speaker after the Thursday seminar.

BIONB 421 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 511/711/LC1)

Fall. 3 or 4 credits. The 4-credit option involves a term paper or creation of a relevant web site. Limited to 25 students. Prerequisites: An introductory course in biology or psychology, plus a second course in perception or neurobiology or cognitive science or biopsychology. T R 10:10–11:25. B. P. Halpern.

A literature-based examination of post-maturational changes in the perceptual, structural, and physiological characteristics of somesthetic, visual, auditory, and chemosensory systems. Emphasis will be on human data, with nonhuman information included when especially relevant. Quality of life issues will be included. Current developments in human sensory prosthetic devices, and in regeneration or replacement of receptor structures or organs, will be examined. Brief written statements by E-mail of questions and problems related to a set of assigned readings will be required in advance of each class meeting, and will be automatically distributed to all members of the class. This course will be taught using the Socratic Method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class difficult original literature, dealing with the subject matter of the course. Readings will be from the Courseinfo site: courseinfo.cit.cornell.edu/courses/psych431_nbb421/, from Internet sites, from a course packet, and from materials on reserve. Students are expected to come to each class having already done and thought about the assigned readings, and to take an active part in every class. All examinations will be take-home.

BIONB 422 Modeling Behavioral Evolution

Spring. 4 credits. Limited to 25 students. Prerequisites: BIONB 221, 1 year of calculus. 1 course in probability or statistics, and permission of instructor. Office: W309 Mudd Hall, phone: 254-4552. This course is open to advanced undergraduates and graduate students. S-U grades optional. Lecs. T R 2:30–4:00; computer lab, 1 class period per week TBA. Offered alternate years. H. K. Reeve.

This is an intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Populations—genetic (including quantitative-genetic), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by applications to problems ranging from foraging, sexual selection, sex ratio evolution, animal communication, and the evolution of cooperation and conflict within animal social groups. Students learn to assess critically recent evolutionary and behavioral models of interest or to extend pre-existing models in novel directions. The Mathematica software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required).

BIONB 424 Neuroethology (also PSYCH 424)

In the 1950s through the 1970s, ethologists attempted to understand the mechanisms of animal behavior and behavior analysis using quantitative methods, evolutionary analysis, careful observations of animals in their native habitats, and clever experimentation. Now, with the explosion of knowledge and techniques in the neurosciences, many of the ethologist's mechanisms are being explained in terms of neural systems. This course reviews the status of research in neuroethology, including mechanisms of behavior in insects and other invertebrates, and their underlying neural systems. In addition, the course reviews studies of the neural systems involved in decision making, in initiating action, and in coordinating fixed acts.

BIONB 425 Molecular Neurophysiology

Course focuses on ion channels, the primary proteins generating cellular electrical signals found in nerve cells and other eukaryotic cells (e.g., muscle, heart, glands). The latest electrophysiological and molecular genetic experiments will be reviewed. Diversity of electrophysiology deriving from channel structure and expression patterns must be considered in the contexts of behavior and behavioral plasticity (learning), neural development, and channel evolution. Course format includes written and oral presentations reviewing scientific literature in selected areas, and proposing new experiments.

BIONB 426 Animal Communication

A detailed examination of the study of communication by non-human animals. The course begins with an exploration of different conceptual frameworks used in the study of communication, then turns to specific studies of the mechanisms, ontogeny, functional design, and evolutionary history of the signaling systems used by animals. The class considers how communication provides humans with a window on the minds of other animals. Readings are drawn from the primary literature.

BIONB 427 Animal Social Behavior

An intensive course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, communication, mating
BIONB 428 Topics in Behavior
Fall or spring. 2–4 credits. (Credits based on number of lectures and/or field exercises as outlined in the division's catalog course supplement and subject to approval through the instructor's office.) May be repeated for credit. Primarily for undergraduates. S-U grades optional. (Fall or spring.)

Courses on selected topics in behavior; can include lecture and seminar courses; may include laboratory. Past topics have included animal orientation, insect behavior, biophysics, and communication. Topics, instructors, and time of organizational meeting are listed in the division's catalog supplement issued at the beginning of each semester.

BIONB 429 Olfaction and Taste: Structure and Function (also PSYCH 429)
Spring. 3 or 4 credits (4 credits with term paper for research project, which can be but need not, study nonhuman vertebrates). Preference given to junior and senior psychology and biology majors and graduate students. Graduate students see PSYCH 629. Mandatory registration by reading and discussing current literature in these areas. Structure is examined at the light levels of the olfactory system as well as at the cellular level. Function is examined primarily in its neurophysiological and biochemical aspects. The emphasis is on vertebrates, especially air-breathing vertebrates in the case of olfaction, although there is some coverage of invertebrate forms. A textbook and a course packet of reproduced articles are used. See also Small and Taste in Health and Disease, edited by T. V. Getchell, R. L. Doty, L. M. Bartoshuk, and J. B. Snow; The Neurobiology of Taste and Smell, edited by T. E. Finger and W. L. Silver.

BIONB 430 Experimental Molecular Neurobiology
Spring. 2 credits. Limited to 12 students. Prerequisites: co-meeting with BIONB 430 lab. Mandatory registration via web page: www.bio.comell.edu/biochem/bionb/signup.html. Letter grade only. Disc. 1 hour each week on day other than lab day, Lab T or R all day, or M and W afternoons, to be coordinated with other BIONB 430 sections. Offered alternate years. D. L. Detcheverry.

Experiments include PCR, cloning of DNA fragments, RNA purification, restriction digests, bacterial transformation, and DNA sequencing. Experiments will emphasize how molecular techniques can be applied to studying neurobiological problems.

BIONB 440 Electronics in Neurobiology

The course will emphasize understanding of the electrical functioning of the nervous system and will enable students to build instrumentation to study the nervous system. It will be taught by mathematical analysis, simulation, and construction of circuit examples drawn from practical neurobiological instrumentation examples and the electronic basis of neurons.

BIONB 441 Computers in Neurobiology

This course is an introduction to computer instrumentation techniques and data reduction. It will give a basic understanding of the techniques used for coupling a biological experiment to a computer. It will include lectures on computer programming, computer visualization. Some computer modeling examples drawn from practical neurobiological problems will be done.

BIONB 470 Biophysical Methods (also A&EP 470 and VETPR 470)
Spring. 3 credits. Prerequisites: basic knowledge of calculus, physics and mathematics is expected, but strong efforts are made to give an intuitive understanding of the mathematics and physics involved. Some knowledge of physical chemistry, molecular and cell biology, or neurobiology will be helpful. Depending on individual background, all students will find certain aspects easy and other aspects demanding. Letter grades only. Lecs. T R 8:40–9:55. M. Lindau.

An overview of the diversity of modern biophysical experimental techniques used in the study of biophysical systems at the cellular and molecular level. Topics include light microscopy, fluorescence microscopy, Fourier optics, and computer processing, and scientific visualization. Some computer modeling examples drawn from practical neurobiological problems will be done.

BIONB 491 Principles of Neurophysiology
Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U grades for graduate students with permission of instructor. Lecs. M W 10:10; lab, M or T 12:20–4:25; additional hours TBA. B. R. Johnson.

A laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology. Lecture time is used to introduce laboratory exercises and discuss results, to summarize the laboratory topics, and for discussion of primary research papers. Extracellular and intracellular recording and voltage clamp techniques are used to analyze neuron and sensory receptor firing properties, and examine the cellular basis for resting and action potentials and synaptic transmission. A variety of preparations are used as model systems. Computer acquisition and analysis of laboratory results are essential.

BIONB 492 Sensory Function (also PSYCH 492 or 632)
Spring. 4 credits. Limited to 25 students. Prerequisite: A 300-level course in biopsychology, or BIONB 222, or BIOP 311, or equivalent. Students are expected to have knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Lecs. M, W 1:25–4:25. Optional alternate years. H. C. Howland, B. P. Halpern.

In general, this course will cover classical topics in sensory function such as vision, hearing, touch, and balance, as well as some more modern topics like sensory processing, location of stimulus sources in space, the development of sensory and nonclassical topics such as electroreception and internal chemoreceptors. The human and nonhuman systems will be discussed. In all cases the chemical, physical, and neuropsychological bases of sensory information will be treated, and the processing of this information will follow into the central nervous system.

BIONB 493 Developmental Neurobiology
Fall. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional, with permission of instructor. Lecs. T R 2:55–4:10. R. Booker.

Lectures cover the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, how do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development is discussed. Readings are taken from original journal articles.

BIONB 494 Comparative Vertebrate Neuroanatomy

Organization and evolution of neuroanatomical pathways as substrates for species-specific vertebrate behaviors. The course is divided into three major sections: development, general principles of brain organization, and co-evolution of vertebrate brain and behavior.

BIONB 495 Molecular and Genetic Approaches to Neuroscience

Focus of the course is on how different molecular and genetic approaches have led to major advances in neuroscience. Lectures, student presentations, and discussions examine original research articles. Topics include ligand-gated channels, potassium channels, seven tranmembrane receptors, development of the neuromuscular junction, neurotransmitter release, second messengers, and learning and memory.
[BIONB 496] Bioacoustic Signals in Animals and Man
R. R. Hoy.
Humans and most terrestrial animals live in a world of sound. Acoustic signals mediate social interactions and predator-prey behavior. This course teaches students about animal acoustical communication by introducing them to the different communication systems that are based on sound. The course presents the physical properties of sound, the physical and social phenomena of sound production and hearing, and an analysis of the behavioral context of signaling. In the laboratory students learn how to record, synthesize, and analyze acoustic signals with the aid of tape recorders and the Macintosh computer. Laboratories are designed around the lecture material and provide "real-world" exercises designed to stimulate discovery of the fundamental principles described in class. Class research projects on a selected topic in bioacoustics are required. The laboratory is based on software instrumentation running on a Macintosh II platform equipped with A/D-D/A data acquisition boards.

[BIONB 623] Chemical Communication [also CHEM 622]
Fall. 3 credits. Primarily for research-oriented students. Limited to 30 students. Prerequisites: 1 year of introductory biology for majors or equivalent, course work in biochemistry, and CHEM 358 or equivalent. Lect., M W 10:10; disc. F 10:30. Offered alternate years. T. Eisen,
J. Meinwald, W. L. Roelofs, and guest lecturers.
The production, transmission, and reception of chemical signals in communicative interactions of plants and microorganisms. Studies of insects are emphasized. Specific topics are treated with varying emphasis on chemical, biochemical, ecological, behavioral, and evolutionary principles.

[BIONB 626] Sex Differences in Brain and Behavior (also PSYCH 524)
Spring. 3 credits. Limited to 12 students. Prerequisite: BIONB 322 or permission of instructor. Discs and sems TBA.
T. J. DeVoogd.
A survey of the newly discovered animal models for sex differences in the brain. Topics include the role of steroids in brain development, whether hormones can modify the structure of the adult brain, and the consequences of such sex differences in anatomy for behavior.

[BIONB 720] Seminar in Advanced Topics in Neurobiology and Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem TBA. Staff.
A hands-on workshop designed to familiarize graduate students with quantitative techniques as applied to behavioral ecology. Only one technique area will be considered in a given year. Possible areas are statistical analysis, spatial statistics, multivariate statistics, bioacoustical analysis, and event analysis. The material covered in the first weeks will attempt to bring everyone, regardless of background, up to a common starting point. All participants will be expected to do weekly homework, prepare an introduction to one sub-area, and create homework problems for that sub-area. The topic for a given semester is listed in the catalog supplement issued at the beginning of the semester.

[BIONB 721] Introductory Graduate Survey in Neurobiology and Behavior
Fall. 2 credits. Required of graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 221 and 222 not required. S-U grades only. Lecs and disc TBA. Staff.
A seminar on a specific topic in animal behavior. The instructor presents lectures during the first few course meetings; the remainder of the course is devoted to student presentations. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 723] Advanced Topics in Animal Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem and fieldwork TBA. Not offered 2000-2001. Staff.
A seminar-field experience course designed for first-year graduate students in animal behavior. Weekly seminars discussing field methodology, data collection, and hypothesis testing are followed by a two-week field experience (10 days to two weeks) in the field. Specific topics and field sites vary from semester to semester. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 724] Field Methods in Animal Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem and fieldwork TBA. Not offered 2000-2001. Staff.
A seminar-field experience course designed for first-year graduate students in animal behavior. Weekly seminars discussing field methodology, data collection, and hypothesis testing are followed by a two-week field experience (10 days to two weeks) in the field. Specific topics and field sites vary from semester to semester. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 725] Behavioral Ecology Workshop
Fall. 2 credits. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades only. Seminar TBA. Offered alternate years.
T. W. Bradbury, S. L. Vehrencamp.
A hands-on workshop designed to familiarize graduate students with quantitative techniques as applied to behavioral ecology. Only one technique area will be considered in a given year. Possible areas are statistical analysis, spatial statistics, multivariate statistics, bioacoustical analysis, and event analysis. The material covered in the first weeks will attempt to bring everyone, regardless of background, up to a common starting point. All participants will be expected to do weekly homework, prepare an introduction to one sub-area, and create homework problems for that sub-area. The topic for a given semester is listed in the catalog supplement issued at the beginning of the semester.

[BIONB 790] Advanced Topics in Cellular and Molecular Neurobiology
Fall or spring. Variable credit. May be repeated for credit. Limited to graduate students and advanced undergraduates studying neurobiology and behavior. Prerequisite: BIONB 222, S-U grades optional. Lecs and sem TBA. Not offered 2000-2001. Staff.
A lecture-seminar course on selected topics in cellular and molecular neurobiology. Students read original papers in the scientific literature and lead discussions of these articles. Suggestions for topics may be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 792] Advanced Laboratory in Cellular and Molecular Neurobiology
Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students. Prerequisites: BIONB 330 or 331 or equivalent, BIONB 491 or equivalent, and written permission of instructor. S-U grades optional. Lab TBA. Not offered 2000-2001. Staff.
A two-week intensive laboratory course designed to provide experience with a specific technique currently used in cellular and molecular neurobiology. The technique under study and instructor in charge vary from semester to semester and are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 793] Advanced Topics in Integrative Neurobiology
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Lecs and disc TBA. Not offered 2000-2001. Staff.
A course designed to provide in-depth knowledge of current research in anatomical and physiological bases of vertebrate and invertebrate behavior. Readings are primarily from specialty books and selected journal articles. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 794] Advanced Laboratory Techniques in Integrative Neurobiology
Fall or spring. Variable credit. May be repeated for credit. Prerequisite: permission of instructor based upon a personal interview. Lab TBA. Not offered 2000-2001. Staff.
A laboratory in the integrative, or neuroethological, approach to studying animal behavior. Designed to provide practical working knowledge of research methods in anatomical, physiological, and behavioral approaches to studies of vertebrate and invertebrate behavior. The technique to be covered and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

Related Courses in Other Departments
Animal Behavior (Psychology 535)
Biochemistry and Human Behavior (Psychology 361 and Nutritional Sciences 361)
Brain and Behavior (Psychology 425)
Developmental Biopsychology (Psychology 422)
include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant–water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones; responses to light, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering of plants.

**BIOL 243 Taxonomy of Cultivated Plants**

Fall. 3 credits. Prerequisite: 1 year of introductory biology or written permission of instructor. May not be taken for credit after BIOL 248. Lecs, M W 10:10; labs, W 2–4:25. Offered alternate years.

M. A. Luckow.

A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

**BIOL 244 Plant Physiology, Laboratory**

Spring. 2 credits. Prerequisite: Concurrent enrollment in BIOL 242. May not be taken for credit after BIOL 344. Disc and lab, M T or W 12:20–4:25; T. Silva.

Experiments exemplify concepts covered in BIOL 242 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level.

**BIOL 245 Plant Biology**

Summer (6–week session). 3 credits. Limited to 24 students. Lecs, M–F 11:30–12:45; labs, M W 2–5:00; T. Silva.

Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

**BIOL 246 Plant Anatomy**

Fall. 3 credits. Lecs, T R 10:10–11:25. T. G. Owens.

An integrated and interdisciplinary study of the processes that contribute to the growth, competition, and reproduction of plants. Emphasis is on experimental design.

**BIOL 248 Taxonomy of Vascular Plants**

Spring. 4 credits. Prerequisite: 1 year of introductory biology. May not be taken for credit after BIOL 342. Disc and lab, M W 9:05; W 12:20–1:25; F 12:20.

D. M. Bates.

A consideration of the principles, methods, and issues of ethology. Emphasis is on the past and present ecological, evolutionary, economic, and cultural interrelationships of humans in traditional and lay societies with their plants and animals, as a means of understanding the place and function of humans in the biosphere. Traditional medicines, underutilized organisms, resource management, and ownership of nature, and methodology are among the topics covered.

**BIOL 249 Methods in Chemical Prospecting**

E. Rodriguez and M. Arelluín.

Student participants will attend theory and methodology classes, including biochemical assays and other techniques, related to investigation of natural products from the biological world, and apply these methodologies to individual research projects. Each student will present results of their research in a poster session, in addition to preparing a scientific report.

**BIOL 344 Plant Physiology, Laboratory**

Spring. 2 credits. Prerequisite: concurrent enrollment in BIOL 342. May not be taken for credit after BIOL 244. Similar to BIOL 244 but at a more advanced level.

Experiments exemplify concepts covered in BIOL 342 and offer experience in a variety of biochemical techniques, from the cellular to whole plant level, with emphasis on experimental design.

**BIOL 345 Plant Anatomy**

Fall. 4 credits. Limited to 15 students.

Prerequisite: 1 year of introductory biology or a semester of botany. Lecs, M W 9:05; labs, M W 2–4:25. Offered alternate years.

A descriptive course with equal emphasis on development and morphological structure, lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

**BIOL 346 Molecular Biology and Genetic Engineering of Plants**

Spring. 2 credits. Prerequisite: concurrent enrollment in BIOL 344 or written permission of instructor. May not be taken for credit after BIOL 242 unless written permission is obtained from instructor.

Experiments exemplify concepts covered in BIOL 242 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

An introduction to current studies involving recombinant DNA technology and its application to the improvement of plants. The course emphasizes genetic transformation methodology, gene expression systems, and strategies for increasing productivity. The course is directed at undergraduates who wish to become familiar with theory and practice of plant biotechnology.
BIOL 347 Laboratory in Molecular Biology and Genetic Engineering of Plants

An introduction to the processes of domestication, the evolutionary history of selected cultigens, and the role of plants in human lives, in subsistence and exchange, and in thought.

BIOL 349 Topics and Research Methods in Systematics
Fall or spring. 1-credit module (1 credit per section). Prerequisite: written permission of instructor. S-U grades optional. Staff.

A series of one-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taken every semester. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester.

BIOL 444 Plant Cell Biology
Fall. 4 credits. Limited to 24 students. Prerequisites: BIOL 241 or equivalent, or permission of instructor. Lecs, T 2:30–4:25. R. E. Lees.

Evidence from microscopy, physiology, biochemistry, and molecular biology is used to try to unravel the mystery of the living cell. The dynamics of protoplasm, membranes, and the various organelles are studied. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

BIOL 445 Photosynthesis

An introduction to the processes of photosynthesis in plants, algae and bacteria. An interdisciplinary approach is emphasized incorporating biochemical, biophysical, physiological and molecular perspectives. The course will cover the range of processes involved in photosynthesis beginning with light harvesting and primary photochemistry through electron transport and inorganic carbon fixation. Emphasis will be placed on the regulation of photosynthesis from the cellular to the whole-plant level.

BIOL 446 Phylogenetic Systematics
Fall. 4 credits. Lec. 2 credits. Lab. 2 credits. Prerequisite: BIOL 241 or equivalent, or permission of instructor. Lecs, T R 10:10, labs, T R 2:30–4:25. Offered alternate years. K. C. Nixon.

An introduction to the theory and practice of phylogenetic analysis. Students are introduced to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics discussed include applications of phylogenetic methods to biogeography and evolutionary studies.

BIOL 447 Molecular Systematics
Fall. 3 credits. Prerequisites: BIOS 278 or BIOD 281 or BMB 323, or written permission of instructor. Lecs, T R 8:30–9:55. Offered alternate years. Not offered 2000–2001. T. G. Cowan, E. Rodriguez.

The theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organellar genomes is described from the standpoint of their suitability for systematic and evolutionary studies.

BIOL 448 Plant Evolution and the Fossil Record
Spring. 3 credits. Prerequisite: BIOL 241 or equivalent, or permission of instructor. Lecs, T R 9:00; lab, R 12:20–2:15. Offered alternate years. K. J. Niklas, W. L. Crepet.

An introduction to evolution, surveying major changes in life over time from the origin of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

BIOL 452 Systematics of Tropical Plants
Spring. 3 credits. Prerequisite: BIOL 243 or BIOL 248. Letter grades only. Lec, M W
BIOLOGICAL SCIENCES - 2000-2001

An introduction to some modern methods in experimental plant biology. A partial list of techniques used includes fluorescence measurements, infrared CO₂ analysis, gel electrophoresis and autoradiographs, cellular membrane, cellular electrophoresis, microtome plate technology for enzyme assays, sensitive growth measurements, HPLC and GC-MS, and computer interfacing with laboratory equipment.

[BIOPL 644 Regulatory Factors in Plant Growth and Development] Spring. 1-2 credits (1 credit per section). Prerequisite: BIOPL 242 or 342 or equivalent, or permission of instructor. Two modules, which can be taken together or in isolation. These mesh with BIOPL 647 (quantitative whole-plant physiology), which is a companion module. S-U grades optional. Offered alternate years. Not offered 2000-2001.

Section 01 Plant Hormones
1 credit. Lecs M W F 9:05 (14 lecs).

F. J. Davies.

Plant Hormones: their role in plant growth and development, analysis, biosynthesis and mode of action, including signal transduction, examined from a physiological, biochemical and molecular point of view. The interaction of hormones, gibberellins, cytokinins, ethylene, abscisic acid, brassinosteroids and other compounds as appropriate.

Sec 02 Phytochrome and Photomorphogenesis
1 credit. Lecs M W F 9:05 (12 lecs).

F. J. Davies.

A study of the regulation of plant growth and development by light as perceived through the pigments phytochrome and cryptochrome. This will include the biochemistry and molecular biology of phytochrome and the way in which phytochrome modulates plant growth, including molecular and genetic analysis of its effects and the mechanisms by which it acts. The role of phytochrome in detecting and modulating growth in natural and agricultural environments will also be covered.

BIOPL 647 Seminar in Systematic Botany
Fall or spring. 1 credit. May be repeated for credit. Prerequisite: written permission of course coordinator required for undergraduates. S-U grades optional. Term, T 12:20 Bailey Hortorum staff.

Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates, organic acids, phenolic compounds, and proteins; nitrogen and sulfur assimilation, respiration, photosynthesis, development and replication of chloroplasts; and cell-wall composition and properties. Attention is paid to operation of control mechanisms.

[BIOPL 649 Physiology of Ion and Water Transport in Plants] Fall. 1-3 credits (1 credit per section). Prerequisite: BIOPL 342 or equivalent, or permission of instructor. Three modules to be taken independently, although section 01 is recommended before taking section 02. Offered alternate years. Not offered 2000-2001. R. M. Spanswick.

Section 01 Basic Principles of Ion Transport and Electrophysiology
1 credit. Lecs T R 10:10-11:30 (9 lecs).

The biophysical basis of ion transport across cell membranes, including membrane structure, ion fluxes and their measurement, the thermodynamic criterion for active transport, and the relationship between ion transport and the electrical properties of cell membranes.

Section 02 Ion Transport in Plants
1 credit. Lecs T R 10:10-11:30 (9 lecs).

Transport of the major ions in plant cells and whole plants. Properties of proton ATPases and their relationship to transport of ions, sugars, and amino acids at the plasma membrane and tonoplast. Ion channels in plant cell membranes. Intercellular ion transport via plasmodesmata. Long distance ion transport in higher plants.

Section 03 Water Transport in Plants
1 credit. Lecs T R 10:10-11:30 (9 lecs).

Water relations of plant cells and tissues using water potential terminology. Permeability of plant cells to water and the role of aquaporins. Transport of water through whole plants, including transpiration, stomatal physiology and the effects of water stress.

BIOPL 651 Quantitative Whole-Plant Physiology
Fall. 3 credits. Prerequisites: introductory physics, calculus, and plant physiology. S-U grades only. Lecs. T R 10:10-11:30. Offered alternate years. R. M. Spanswick.

An exploration of the extent to which physiological processes and their interactions can be formulated in a quantitative manner and integrated to describe various aspects of plant behavior, including growth and yield. Consideration is given to characterization of the plant environment, energy balance, gas exchange, water relations, photosynthesis, respiration, translocation, nutrient supply, and the timing of developmental events.

BIOPL 652 Plant Molecular Biology II
Spring. 1-4 credits (1 credit per section). Prerequisites: BIOGD 281 and BIOBM 330 or 332, or their equivalents. Recommended: BIOBM 331. S-U grades optional. A series of four-week modules on specialized topics. Coordinator: S. H. Howell. A series of four-week modules on specialized topics.

An examination of the molecular properties that control the development of host-parasite interactions in both microorganisms (bacteria, viruses, and fungi) and higher plants. Contemporary theories describing the genetic and molecular mechanisms of microbial pathogenesis and plant resistance are discussed.

The molecular genetics of plant development. This module focuses on vegetative development and includes topics such as the development of the shoot, root, and vasculature and the operation of the vegetative shoot apical meristem. Topics covered include a comparison to BIOPL 653, Sec 04 (Plant Development I), which covers molecular aspects of reproductive development.

Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and orthology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns.

BIOPL 653 Plant Molecular Biology I Fall. 1-5 credits (1 credit per section). Prerequisites: BIOGD 281 and BIOBM 330 or 332, or their equivalents. Recommended: BIOBM 331. S-U grades optional. Coordinator: S. H. Howell. A series of four-week modules on specialized topics.

Section 01 Concepts and Techniques in Plant Molecular Biology (also PLPA 663.01) 1 credit. Lecs. M W F 10:10 (12 lecs) Aug. 30-Sept. 25. T. P. Delaney, G. B. Martin. This is an introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences, and serves as a prerequisite to other modules in the BIOPL 653 (fall) and BIOPL 652 (spring) series. The course is divided into two sections: 1) Gene discovery, which covers genetic, molecular, and genomic approaches to the isolation of plant genes; and 2) Gene characterization, which covers DNA sequencing, DNA and RNA blotting, use of gene databases, and various approaches to producing transgenic plants. Emphasis is on understanding the appropriate approach that is needed for different experiments.
Section 02 Plant Biotechnology (also PLBR 653.2 and PLPA 663)
This course deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

Section 03 Plant Genome Organization (also PLBR 653.3)
The structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene clonmg, genomc sequencing and comparative genomics.

Section 04 Molecular Aspects of Plant Development I
This module focuses on the molecular genetics of plant reproduction. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include the establishment of pattern during floral morphogenesis, cell death and sex determination, gamete development, cell-cell signaling during pollination, and fertilization. The module is a companion to BIOPL 652, Sec 02 (Molecular Aspects of Plant Development II), which covers molecular aspects of vegetative development.

Section 05 Molecular Biology of Plant Organelles
1 credit. S-U grades optional. Lecs, M W F 1:25 (12 lecs) Oct. 27-Nov. 27. M. R. Hanson (odd years), D. B. Stern (even years).
An in-depth examination of the molecular biology of plant mitochondria (odd years) and plastids (even years). Topics include the organization, evolution, and expression of organellar genomes, RNA editing, and the expression of nuclear genes encoding structural or regulatory organellar proteins. Special topics include mitochondrially-encoded cytoplasmic male sterility, transformation and expression of foreign genes in chloroplasts, and the use of genetics to investigate nucleo-organellar interactions.

Section 06 Molecular Breeding and Genetic Diversity
Application of DNA markers to plant and animal using molecular genetic techniques. Students will learn how to design and execute experiments for identification of quantitative trait loci (QTLs) as well as how to apply molecular markers to plant and animal breeding programs. Strategies will also be taught for the use of DNA polymorphisms in the management of genetic resources.

Section 07 Biotechnology
Application of DNA markers to the evaluation of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

Section 08 Plant Genome Organization (also PLBR 653.3)
The structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene clonmg, genomc sequencing and comparative genomics.

Section 09 Molecular Aspects of Plant Development I
This module focuses on the molecular genetics of plant reproduction. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include the establishment of pattern during floral morphogenesis, cell death and sex determination, gamete development, cell-cell signaling during pollination, and fertilization. The module is a companion to BIOPL 652, Sec 02 (Molecular Aspects of Plant Development II), which covers molecular aspects of vegetative development.

Section 10 Molecular Biology of Plant Organelles
1 credit. S-U grades optional. Lecs, M W F 1:25 (12 lecs) Oct. 27-Nov. 27. M. R. Hanson (odd years), D. B. Stern (even years).
An in-depth examination of the molecular biology of plant mitochondria (odd years) and plastids (even years). Topics include the organization, evolution, and expression of organellar genomes, RNA editing, and the expression of nuclear genes encoding structural or regulatory organellar proteins. Special topics include mitochondrially-encoded cytoplasmic male sterility, transformation and expression of foreign genes in chloroplasts, and the use of genetics to investigate nucleo-organellar interactions.

Section 11 Molecular Breeding and Genetic Diversity
1 credit. Lecs, M W F 10:10 (12 lecs) Oct. 27-Nov. 27. D. B. Stern.
Application of DNA markers to plant and animal using molecular genetic techniques. Students will learn how to design and execute experiments for identification of quantitative trait loci (QTLs) as well as how to apply molecular markers to plant and animal breeding programs. Strategies will also be taught for the use of DNA polymorphisms in the management of genetic resources.

Section 12 Biotechnology
Application of DNA markers to the evaluation of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

Section 13 Plant Genome Organization (also PLBR 653.3)
The structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene clonmg, genomc sequencing and comparative genomics.

Section 14 Molecular Aspects of Plant Development I
This module focuses on the molecular genetics of plant reproduction. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include the establishment of pattern during floral morphogenesis, cell death and sex determination, gamete development, cell-cell signaling during pollination, and fertilization. The module is a companion to BIOPL 652, Sec 02 (Molecular Aspects of Plant Development II), which covers molecular aspects of vegetative development.

Section 15 Molecular Biology of Plant Organelles
1 credit. S-U grades optional. Lecs, M W F 1:25 (12 lecs) Oct. 27-Nov. 27. M. R. Hanson (odd years), D. B. Stern (even years).
An in-depth examination of the molecular biology of plant mitochondria (odd years) and plastids (even years). Topics include the organization, evolution, and expression of organellar genomes, RNA editing, and the expression of nuclear genes encoding structural or regulatory organellar proteins. Special topics include mitochondrially-encoded cytoplasmic male sterility, transformation and expression of foreign genes in chloroplasts, and the use of genetics to investigate nucleo-organellar interactions.

Section 16 Molecular Breeding and Genetic Diversity
1 credit. Lecs, M W F 10:10 (12 lecs) Oct. 27-Nov. 27. D. B. Stern.
Application of DNA markers to plant and animal using molecular genetic techniques. Students will learn how to design and execute experiments for identification of quantitative trait loci (QTLs) as well as how to apply molecular markers to plant and animal breeding programs. Strategies will also be taught for the use of DNA polymorphisms in the management of genetic resources.

Section 17 Biotechnology
Application of DNA markers to the evaluation of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

Section 18 Plant Genome Organization (also PLBR 653.3)
The structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene clonmg, genomc sequencing and comparative genomics.
of study requirements, students in marine biology are encouraged to enroll in the following courses:

1) BIOES 154, The Sea: An Introduction to Oceanography,
2) BIOES 375 Field Marine Biology and Ecology or a 400-level BIOES field course at the Shoals Marine Laboratory,
3) BIOES 462, Marine Ecology.

**Undergraduate Specialization in Ocean Sciences**

Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four advanced courses from the following list to fulfill their major requirements:

1) BIOES 357 Marine Invertebrate Zoology
2) BIOES 457 Limnology
3) BIOES 462 Marine Ecology
4) BIOES 478 Ecosystem Biology
5) BIOES 303 Ecology of Marine Fishes
6) BIOES 308 Marine Microbial Ecology
7) BIOES 309 Climates and Ecosystems
8) BIOES 329 Ecology of Animal Behavior
9) BIOES 364 Field Marine Science
10) BIOES 365 Underwater Research
11) BIOES 366 SEA: Introduction to Oceanography
12) BIOES 369 SEA: Oceanography I
13) BIOES 370 SEA: Oceanography II
14) BIOES 371 SEA: Oceanography III
15) BIOES 374 An Introduction to Field Ornithology
16) BIOES 375 Field Marine Biology and Ecology
17) BIOES 413 Experimental Marine Ecology
18) BIOES 418 Tropical Marine Science
19) BIOES 449 Seaweeds, Plankton and Seagrass
20) BIOES 376 Marine Invertebrate Zoology (note: not the same as BIOES 373)
21) BIOES 477 Marine Vertebrates
22) GEOL 375 Sedimentology and Stratigraphy
23) GEOL 455 Geochemistry
24) GEOL 475 Special Topics in Oceanography
25) GEOL 479 Paleobiology
26) NTRES 306 Coastal and Oceanic Law and Policy
27) NTRES 417 Wetland Resources

Students in both marine science specializations are exposed to an integrated program of study, emphasizing a natural progression of formal course work combined with ample opportunities for practical field experience.

**SHOALS MARINE LABORATORY (BIOG)**

GI4 Stimson Hall, 255–3717

The objective of the Shoals Marine Laboratory (SML) is to provide undergraduates, beginning graduate students, and other interested adults with a unique opportunity to explore marine sciences in an island setting noted for its biota, geology, and history. SML has established a national reputation for excellence and has become North America's largest marine field station focusing on undergraduate education.

The summer population of Appledore Island is limited to about one hundred people at any one time. Participants and faculty members can literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences. Participants learn from and exchange ideas with a wide range of specialists whose primary interests are marine but whose perspectives often differ, providing fertile ground for lively discussions.

Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but not concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands and the mainland, and collecting and research excursions aboard the Laboratory's 47-foot research vessel, John M. Kingsbury. Field experience is an integral component of all courses, using Appledore's extensive intertidal and subtidal zones, wading bird rookeries, and seahird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academies, are selected not only based on their academic excellence, but also on their teaching ability in the field. In addition, numerous guest lecturers include engineers, coastal planners, and specialists from private industry, government, and the academic community.

The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs Office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association (SEA). SML and SEA offer a joint sea/land semester for 18 credits, which combines both programs (BIOES 364, 366, 367, 368, 372).

The following marine sciences courses are currently administered by the Cornell Marine Programs Office.

**BIOG 150 The Oceanography of the Gulf of Maine**

Summer. 4 credits. Limited to 24 students. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, contact the SML office, G14 Stimson Hall or the Sea Education Association office at P.O. Box 6, Woods Hole, MA, 02543. Daily 10am, labs, and fieldwork for 2 weeks. SML faculty.

An exciting opportunity to explore the offshore and near-coastal environments of the Gulf of Maine for pre-college and first-year non-science majors. Students spend 10 days aboard the Sea Education Association's sailing vessels round trip between Woods Hole, Mass., and the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven days at Cornell's Shoals Marine Laboratory to collect data characteristic of the Isles of Shoals coastal environment.

**BIOG 161 Introduction to Field Marine Science**

Summer. 4 credits. S-U grades optional. A special 2-week course offered in cooperation with Roder University at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. Apply directly to Roder University, College of Continuing Studies. Contact Dr. Richard Alexander for application and information at: alexander@cornell.edu, (609) 895-5422. Offered alternate years.

This course allows students who are not biology majors to experience the breadth of the marine sciences under field conditions at an island laboratory. Aspects of biology, geology, earth science, chemistry, and physics are included. Specific topics include beach, salt marsh, tidal mud flat, tide pool, and benthic offshore environments. Identification of marine plants and animals, chemical and physical oceanography, marine geology, and ecology of kelp beds and urchin barrens.

**BIOG 204 Biological Illustration**

Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, contact the SML office, G14 Stimson Hall. Daily sessions for 1 week. SML faculty.

General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. The course provides the scientist or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

**BIOG 303 Ecology of Marine Fishes**

Summer. 4 credits. Prerequisite: 1 year of college-level biology. SCUBA certification recommended, not required. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs and fieldwork for 2 weeks. SML staff.

This course presents principles, models, and methods for analysis of dynamics of fish populations and communities, and analysis of current research emphasizing theory and its potential uses in fisheries' management. Lab and field activities emphasize collection and analysis of data from the Gulf of Maine and adjacent estuarine habitats.
**BIOSM 308 Marine Microbial Ecology**  
Summer. 4 credits. Prerequisite: 1 year of college-level biology. S-U grades optional. A special 2-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs and fieldwork for 2 weeks. SML staff.

This course examines the fundamental role of marine microbial communities in the function of the biosphere. Lectures survey bacterial, protozoan, and micrometazoan assemblages from Arctic to deep sea vent communities. Laboratory exercises cover several principal techniques of field microbial ecology and explore the rich marine microbial environment surrounding the Isles of Shoals.

**BIOSM 309 Climates and Ecosystems**  
Summer. 4 credits. Prerequisite: 1 year of college-level biology, background preferred in physics/physical geography. S-U grades optional. A special 2-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork. SML faculty.

A study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including solar radiation, temperature, atmospheric pressure, wind, and currents. On-site exploration of the dynamics of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

**BIOSM 329 Ecology of Animal Behavior**  
Summer. 4 credits. Prerequisite: 1 year of introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

**BIOSM 363 Marine Biology for Teachers**  
Summer. 3 or 4 credits (4-credit option: additional 4 days for individual research). Primarily for teachers, grades 6 through 12, but open to others with teaching experience. Prerequisite: 1 year of introductory college biology. S-U grades optional. A special 10-day course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 10 days. Offered alternate years. Not offered 2000–2001. SML faculty.

Designed to give an overview of living marine organisms (algae, invertebrates, fishes, marine mammals, and shorebirds) and of the environment they inhabit. Fieldwork is emphasized. Occasional lectures and films deal with additional topics such as coastal-zone problems, marine fisheries, economics of marine organisms, and educational resources of the marine environment.

**BIOSM 364 Field Marine Science (FMS)**  
Summer. 6 credits. Prerequisite: 1 year of college biology. S-U grades optional. A special 4-week course offered twice each summer at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. 3 core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies. SML faculty.

Designed for the student who desires an initial overview of the marine sciences, this course emphasizes living material in natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introduction to physical and chemical oceanography and marine geology. Marine biology and the effects of human activity on the marine environment. Students apply this knowledge by conducting a transect study toward the end of the course. FMS places additional emphasis on ichthyology, fisheries biology, general oceanography (biological, physical, and chemical marine geology). FMBE (BIOSM 375) places an additional emphasis on ecology, especially in the intertidal zone; ecological, evolutionary and physiological adaptations of marine organisms, and field experiments.

**BIOSM 365 Underwater Research**  
Summer. 4 credits. Prerequisites: 1 year of college-level biology, recognized scuba certification, and a medical examination. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

An introduction to marine pollutants; their effects of human activity on the marine environment; governmental agencies. SML faculty.

**BIOSM 374 Field Ornithology (An Introduction)**  
Summer. 4 credits. Prerequisite: 1 year of college-level biology. S-U grades optional. A special 4-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. SML faculty.

An introduction to field ornithology focusing on the biology, ecology, and behavior of the avifauna on the Isles of Shoals. The course focuses on field work designed to observe and study many concepts frequently taught in the classroom setting including territoriality, breeding biology, and survivalship. Students learn and apply numerous ornithological field methods including various census techniques, territory mapping, banding, behavioral observations, and creating a field notebook.

**BIOSM 375 Field Marine Biology and Ecology (FMBE)**  
Summer. 6 credits. Prerequisites: 1 full year of college level biology. S-U grades optional. A 4-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G-14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. SML faculty.

Designed for students seeking an introduction to the marine sciences and marine ecology; FMBE emphasizes field work in natural habitats. Examines aspects of the biology and ecology of marine organisms, including intertidal plants and invertebrates, fishes, marine mammals and birds, biological oceanography, and human impacts on the marine environment. FMBE places a special emphasis on the ecology of the intertidal zone, ecological, evolutionary and physiological adaptations of marine organisms. Students may not take FMBE after taking FMS (BIOSM 364).

**BIOSM 376 Marine Invertebrate Zoology**  
Summer. 6 credits. Prerequisite: 1 year of introductory biology and permission of instructors. S-U grades optional. A special 2-week course offered at Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. Emphasis is placed on the evolution of form and function, and the ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. Appledore Island's unique location provides an excellent venue for the study of freshly collected and in situ representatives of most of the major phyla.

**BIOSM 402 Marine Pollution**  
Summer. 4 credits. Prerequisites: 1 year of college-level biology and chemistry or permission of instructor. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. Offered alternate years. SML faculty.

An introduction to marine pollutants, their sources and control/treatment; the effects of marine pollution upon coastal ecosystems; and federal and state water pollution regulatory programs. Laboratory includes training in field collection of water samples, measurement and modeling of effluent plume dynamics, and measurement of microbial indicators of water quality, dissolved nutrients, BOD, dissolved oxygen, and toxicity.

**BIOSM 413 Experimental Marine Ecology**  
Summer. 6 credits. Prerequisite: 1 year of college level biology experience in ecology or physiology recommended. S-U grades optional. A special 4-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.
An introduction to the physiological ecology and functional morphology of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics covered include photosynthesis in the marine environment; respiration in intertidal and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and into functional analyses of metabolic phenomena. The process of scientific investigation is the predominant theme of the course.

**BIOSM 418 Tropical Marine Science (plus BIOSM 499)**
Summer. 8 credits and 4 credits of research. Offered to 12 students. Prerequisites: 1 year college-level biology; recognized SCUBA certification; medical exam; and permission of instructor. A special 8-week course offered in Akumal, Mexico. For more details, contact Shools Marine Laboratory, G-14 Stimson Hall, 255-3717. For certified divers only. Lectures, labs, and fieldwork for 2 weeks. SML faculty. In addition to lectures and laboratories, covering the basic principles of coral reef ecology, students participate in a coral reef monitoring survey. Following two weeks of course work, students engage in independent research projects.

**BIOSM 449 Seaweeds, Plankton and Seagrass: the Ecology and Systematics of Marine Plants**
Summer. 4 credits. Prerequisite: BIOSM 364 or 1 year of introductory biology. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty. An overview of the major marine algal groups, including aspects of anatomy, morphology, development, life histories, physiology, and use. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and involve student projects.

**GEOL 475 Special Topics in Oceanography: Satellite Remote Sensing in Biological Oceanography**
Summer. 6 credits. Prerequisites. I course in oceanography and/or marine biology, or permission of the instructor. Strong computer skills are desired. S-U grades optional. A special 4-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. and on campus at Cornell University. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. SML faculty. "Remote Sensing" provides hands-on research experience in hydrologic optics and satellite remote sensing to advanced undergraduate and beginning graduate students. The course is comprised of four principal parts, each taught by a separate team of instructors at two different locations: Part 1 (nine days) will be conducted at Shools Marine Laboratory and aboard the R/V Kingsbury in waters surrounding the Isles of Shoals. Part 1 will be devoted to the theory and application of seawater optical properties, emphasizing the dependency of apparent optical property on chlorophyll and dissolved organic matter concentrations. Parts 2-4 (19 days) will be conducted at the Science of Earth Systems computer laboratory on the Cornell campus. Part 2 will cover satellite remote sensing of the apparent optical properties of seawater with an emphasis on processing SeaWiFS data using SeaDAS software and IDL programming language. Part 3 addresses satellite remote sensing of physical oceanographic processes that influence ecosystem dynamics with an emphasis on AVHRR-derived sea-surface temperature and SSM/I-derived ocean winds. Part 4 is devoted to independent projects; student will attempt to integrate SeaWiFS, AVHRR, and SSM/I data in order to address questions of biological-physical interactions.

**BIOSM 477 Marine Vertebrates**
Summer. 6 credits. Prerequisites: a course in vertebrate biology. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty. Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics covered include systems of fishes of the Gulf of Maine, elasmobranch physiology, interpretation of life history and parameters from ontolith microstructure, teleost skeletomuscular structure and function, population biology and the contemporary Gulf of Maine fishery. Mesozoic marine reptiles, the biology of sea turtles in cold water, coloniality in sea birds, avian adaptations to life at sea, evolution and systematics of marine mammals, diving physiology, and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

**BIOSM 490 Topics in Marine Biology**
Summer. 1-2 credits. Prerequisite: 1 year of introductory biology and permission of instructors. S-U grades optional. A special course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. and on campus at Cornell University. For more details, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty. Seminar courses on selected topics in marine biology. Students and faculty will explore recent research through reading of the primary literature. Students may also include a lab or field trips. Offered in spring semester for two credits with a two-hour discussion per week. Offered at the Shools Marine Laboratory (summer) for one credit with four one-hour discussions per week for four weeks.
This course examines the complete history of the Isles of Shoals from Paleozoic intrusion, deformation and metamorphism to recent glaciation, sea-level change and wave erosion. Students will learn basic sampling and mapping techniques using the Brunton compass, pole-level/stadia rod, autolevel and GPS. Sea kayaks will be used for inter-island travel and explorations of the islands. No previous kayaking experience is required. Field efforts will focus on creating a series of thematic maps depicting island characteristics such as topography, bedrock geology and structure, vegetation and land use patterns.

**NTRES 306 Coastal and Oceanic Law and Policy**

**Summer. 2 credits.** A special 1-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Simson Hall. Daily lecs and disc for 1 week. SML faculty.

Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, habitat protection, wetlands, offshore oil and gas production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policies and analysis of the efficacy of various legal techniques. A case study that requires extensive use of the laboratory’s library and personnel is assigned. The week concludes with a mock hearing.

**NTRES 417 Wetland Resources**

**Summer. 2 credits. Prerequisite: 1 year of college-level biology. A special 1-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Simson Hall. Daily lecs and labs, and fieldwork. SML faculty.**

An examination of coastal and adjacent freshwater wetlands from historic, destruction, and preservation perspectives, including fresh- and salt-marsh ecology and management. Field trips explore wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

**BIOES 373 Biology of the Marine Invertebrates**

**Fall (but taken in the previous summer at the Shoals Marine Laboratory (SML)). 4 credits. Limited to 30 students. Prerequisite: 1 year of introductory biology for majors. Permission of faculty required for 2001.** Because it will be off campus 2 weeks, full-time course. Daily and evening lectures, laboratories, and field work.

An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. By being taught at the Shoals Marine Laboratory, students are exposed to a wealth of marine and terrestrial invertebrates in their natural habitats. Regular field excursions allow an excellent opportunity to study freshly collected and in situ representatives of most of the major phyla.

**BIOES 366-372 SEA Semester**

In cooperation with the Sea Education Association (SEA), the Shoals Marine Laboratory offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. This sequence is repeated approximately once every June by students returning for the following year. Students spend the first half of SEA Semester (a six-week shore component) in Woods Hole, MA, receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (a six-week sea component) is spent at sea aboard the R/V Westward or the R/V Corwith Cramer.

Enrollment is open to both men and women judged capable of benefiting from SEA Semester, a student must have successfully completed at least one college-level laboratory science course (or its equivalent) in order to be admitted to SEA Semester or SEA Summer Session.

No prior sailing experience is necessary. Cornell students enrolled in the SEA Semester must take the entire sequence.

For more information, contact the Shoals Marine Laboratory office, G14 Simson Hall, or call SEA directly at 800-552-3633. Program costs are to be paid in place of regular Cornell tuition and fees. Tuition for the entire 17-credit SEA Semester is approximately $4,000, which includes room and board at SEA.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

**BIOES 383 SEA Practical Oceanography I**

3 credits. Prerequisites: concurrent enrollment in BIOES 366 and 368.

A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced and developed from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

**BIOES 367 SEA Introduction to Maritime Studies**

3 credits. Prerequisite: concurrent enrollment in BIOES 366 and 368.

An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

**BIOES 368 SEA Introduction to Nautical Science**

3 credits. Prerequisites: concurrent enrollment in BIOES 366 and 367.

An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial, and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

**SEA Component (six weeks)**

Courses 369, 370 and 372 take place aboard the R/V Westward, a 125-foot steel auxiliary-powered staysail schooner built in 1961, or the R/V Corwith Cramer, a 154-foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship's company of 34. The professional staff of nine includes the captain, the chief scientist, three science watch officers, three deck watch officers, an engineer, and a steward. In addition, one or more visiting investigators are frequently aboard. Up to 24 students round out the complement.

**BIOES 369 SEA Practical Oceanography I**

4 credits. Prerequisite: BIOES 366.

Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment; in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

**BIOES 370 SEA Practical Oceanography II**

4 credits. Prerequisites: BIOES 368 and 369.

Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

**BIOES 372 SEA Practical Oceanography III**

Summer. 3 credits. Prerequisites: BIOES 366, 367, and 368.

Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, reduction, and analysis of oceanographic data, and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

**FACULTY ROSTER**

Deitche, David, Ph.D., Harvard Med. School. Asst. Prof., Neurobiology and Behavior

Ferguson, Gerald W., Ph.D., California Inst. of Technology. Prof., Molecular Biology and Genetics

Finlay, Barbara, Ph.D., Massachusetts Inst. of Tech. Prof., Neurobiology and Behavior/Psychology

Geber, Monica A., Ph.D., U. of Utah. Assoc. Prof., Ecology and Evolutionary Biology

Gibson, Quentin H., Ph.D./D.Sc., Queen's U. (Northern Ireland). Greater Philadelphia Professor Emeritus in Biological Sciences, Molecular Biology and Genetics

Gilbert, Perry W., Ph.D., Cornell U. Prof. Emeritus, Neurobiology and Behavior

Greene, Harry W., Ph.D., U. of Tennessee. Prof., Ecology and Evolutionary Biology

Hairson, Nelson G., Jr., Ph.D., U. of Washington. Frank H. T. Rhodes Professor of Environmental Science, Ecology and Evolutionary Biology

Halpern, Bruce P., Ph.D., Brown U. Prof., Neurobiology and Behavior/Psychology

Hedin, Lars O., Ph.D., Yale U. Assoc. Prof., Ecology and Evolutionary Biology

Heppe, Leon A., Ph.D., U. of California at Berkeley. Prof., Emeritus, Molecular Biology and Genetics

Hess, George P., Ph.D., U. of California at Berkeley. Prof., Molecular Biology and Genetics

Hinkle, Peter C., Ph.D., New York U. Prof., Molecular Biology and Genetics

Howland, Howard C., Ph.D., Cornell U. Prof., Neurobiology and Behavior/Biomedical Sciences

Hoy, Ronald R., Ph.D., Stanford U. Prof., Neurobiology and Behavior

Huffaker, Thomas C., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Molecular Biology and Genetics

Kennedy, Kenneth R. A., Ph.D., U. of California at Berkeley. Prof., Ecology and Evolutionary Biology

Leonard, Samuel L., Ph.D., U. of Wisconsin. Prof. Emeritus, Molecular Biology and Genetics

Linstert, Christine, Ph.D., Pierre and Marie Curie U. Asst. Prof., Neurobiology and Behavior

McCobb, David, Ph.D., U. of Iowa. Asst. Prof., Neurobiology and Behavior

MacDonald, June M. Fessenden, Ph.D., Tufts U. Assoc. Prof., Molecular Biology and Genetics/Program on Science, Technology, and Society

McFarland, William N., Ph.D., U. of California at Los Angeles. Prof Emeritus, Ecology and Evolutionary Biology

Nicholson, Linda, Ph.D., Florida State U. Asst. Prof., Molecular Biology and Genetics

Podleski, Thomas R. Ph.D., Columbia U. Prof., Neurobiology and Behavior

Power, Alison G., Ph.D., U. of Washington. Prof., Ecology and Evolutionary Biology/Science and Technology Studies

Provine, William B., Ph.D., U. of Chicago. Charles A. Alexander Professor of Biological Sciences, Ecology and Evolutionary Biology

Salpeter, Miriam M., Ph.D., Cornell U. Prof., Neurobiology and Behavior/ Applied and Engineering Physics

Seeley, Thomas D., Ph.D., Harvard U. Prof., Neurobiology and Behavior

Sherman, Paul W., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior

Turgeon, Robert, Ph.D., Carleton U. (Canada). Prof., Plant Biology

Wallace, Bruce, Ph.D., Columbia U. Prof Emeritus, Molecular Biology and Genetics

Whitleck, Kathleen E., Ph.D., U. Washington Seattle. Asst. Prof., Molecular Biology and Genetics

Wilson, David B., Ph.D., Stanford U. Prof., Biochemistry, Molecular Biology and Genetics

Wolfner, Mariana F., Ph.D., Stanford U. Prof., Molecular Biology and Genetics

**Other Teaching Personnel**

Albrecht, Genia S., Ph.D., U. of Washington. Sr. Lecturer, Molecular Biology and Genetics

Berry, John Ph.D., Cornell U. Post Doc Plant Biology (Bailey Hortorum)

Corley, Carolyn Ph.D., Boston U. Sr. Lecturer, Plant Biology

Johnson, Bruce R., Ph.D., Boston U. Sr. Lecturer, Neurobiology and Behavior

Land, Bruce, Ph.D., Cornell U. Sr. Lecturer, Neurobiology and Behavior

Wahl-Loeve, Christina M., Ph.D., Cornell U. Lecturer, Physiology

**Joint Appointees**

Levin, Simon A., Adjunct Prof., Princeton U./Ecology and Evolutionary Biology

Likens, Gene E., Adjunct Prof., Institute of Ecosystem Studies/Ecology and Evolutionary Biology

**New York State College of Veterinary Medicine**

Gasteiger, Edgar L., Ph.D., U. of Minnesota. Prof. Emeritus, Physiology/Veterinary Physiology

Tapper, Daniel N., Ph.D., Cornell U. Prof. Emeritus, Physiology/Veterinary Physiology

Wasserman, Robert H., Ph.D., Cornell U. James Law Prof. Emeritus, Physiology/Veterinary Physiology/Nutritional Sciences

**Other Teaching Personnel**

Concannon, Patrick W., Ph.D., Cornell U. Sr. Res. Assoc., Veterinary Physiology/Physiology

**Joint Appointees**

Fortune, Joanne E., Ph.D., Cornell U. Prof., Veterinary Physiology/Physiology

Gilmour, Robert F., Ph.D., SUNY Upstate Medical Center. Assoc. Prof., Veterinary Physiology/Physiology

Houpt, Katherine A., Prof., Veterinary Physiology/Physiology

Houpt, T. Richard, Prof., Veterinary Physiology/Physiology

Nathaniel, Peter W., James Law Prof., Veterinary Physiology/Physiology

Robertshaw, David, Ph.D., Glasgow U. (Scotland). Prof., Veterinary Physiology/Physiology

Wootton, John F., Prof., Veterinary Physiology/Physiology

**College of Engineering**

**Joint Appointees**

Cisne, John L., Assoc. Prof., Geological Sciences/Biological Sciences

Webb, Watt W., Prof., Applied and Engineering Physics/Biological Sciences

**Biological Sciences**

**Joint Appointees**

Snedeker, Suzanne M., Asst. Prof., Center for the Environment/Biological Sciences

**Division of Nutritional Sciences**

**Joint Appointees**

Arion, William J., Prof., Nutritional Sciences/Molecular Biology and Genetics

Bensadjoud, Andre, Prof., Nutritional Sciences/Physiology

Kazarinoff, Michael N., Assoc. Prof., Nutritional Sciences/Molecular Biology and Genetics

Wright, Lemuel D., Ph.D., Oregon State Coll. Prof Emeritus, Nutritional Sciences/Molecular Biology and Genetics

*Joint appointment with the College of Arts and Sciences.

†Joint appointment with the College of Veterinary Medicine

‡Joint appointment with the College of Agriculture and Life Sciences

§Joint appointment with the College of Engineering.
FACILITIES AND SPECIAL PROGRAMS

Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. Facilities for applied and engineering physics are located in Clark Hall on the College of Arts and Sciences campus, and facilities for agricultural and biological engineering are centered in Kelsey-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.

Cornell programs and centers of special interest in engineering include the following:

- Center for Applied Mathematics. A cross-disciplinary center that administers a graduate program.
- Center for Manufacturing Enterprise. A joint venture of Cornell, industrial organizations, and the federal government to encourage the development and implementation of modern manufacturing systems.
- Center for Radiophysics and Space Research. An interdisciplinary unit that facilitates research in astronomy and the space sciences.
- Center for Theory and Simulation in Science and Engineering. A supercomputer facility used for advanced research in engineering and the physical and biological sciences.
- Cornell Electronic Packaging Alliance. A cooperative venture involving Cornell and several corporations in the areas of computing and microelectronics, organized to undertake pre-competitive, interdisciplinary research in electronic packaging.
- Cornell Nanofabrication Facility (part of the National Science Foundation funded National Nanofabrication Users Network). A center that provides equipment and services for research in the science, engineering, and technology of nanometer scale structures for electronic, chemical, physical, and biological applications.
- Cornell Waste Management Institute. A research, teaching, and extension program within the Center for Environmental Research that addresses the environmental, technical, and economic issues associated with solid waste; one facility sponsored by the institute is the Combustion Simulation Laboratory in the Sibley School of Mechanical and Aerospace Engineering.
- Institute for the Study of the Continents. An interdisciplinary organization that promotes research on the structure, composition, and evolution of the continents.
- Laboratory of Plasma Studies. A center for interdisciplinary research in plasma physics and lasers.
- Cornell Center for Materials Research. An interdisciplinary facility with substantial support from the National Science Foundation, providing sophisticated scientific measurement and characterization equipment.
- National Astronomy and Ionosphere Center. The world's largest radio-telescope facility, operated by Cornell in Arecibo, Puerto Rico.
- National Earthquake Engineering Research Center. A facility recently established by the National Science Foundation and a group of universities in New York State to study response and design of structures in earthquake environments.
- National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics. A resource that develops novel measurement and optical instrumentation for solving biophysical problems.
- Power Systems Engineering Research Center. A research and instructional program centered in a laboratory that has a complete real-time model of an electric power system.
- Program of Computer Graphics. An interdisciplinary research center that operates one of the most advanced computer-graphics laboratories in the United States.
- Program on Science, Technology, and Society. A cross-disciplinary unit that sponsors courses and promotes research on the interaction of science, technology, and society.
- SRC Program on Microscience and Technology. A center sponsored by the Semiconductor Research Corporation to promote research essential to the development of VLSI devices and circuits.
- Ward Laboratory of Nuclear Engineering. Irradiation, isotope production, and activation analysis facilities for interdisciplinary research.

The programs listed on this page are sponsored by College of Engineering units and several are industry affiliated. These are in the areas of injection molding, computer science, materials science, geologic study of the continents, and nanometer scale structures.

DEGREE PROGRAMS

Cornell programs in engineering and applied science lead to the degrees of Bachelor of Science, Master of Engineering (with field designation), Master of Science, and Doctor of Philosophy.

General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to the Master of Science and Doctor of Philosophy degrees are administered by the Graduate School. They are described in the "Announcement of the Graduate School" and the special announcement, "Graduate Study in Engineering and Applied Science." The professional Master of Engineering programs and cooperative programs with the Johnson Graduate School of Management are described below.

UNDERGRADUATE STUDY

Bachelor of Science (B.S.) degrees are offered in the following areas:

- Agricultural and Biological Engineering
- Chemical Engineering
- Civil Engineering
- College Program
- Computer Science
- Electrical Engineering
- Engineering Physics
- Geological Sciences
- Materials Science and Engineering
- Mechanical Engineering
- Operations Research and Engineering

Students in the College of Engineering begin their undergraduate studies in the Common Curriculum, which is administered by the faculty members of the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and the Engineering Advising office. Subsequently, most students enter field programs, which are described separately for each academic area. Criteria for entrance into the field programs are described in the section titled "Affiliation with a Field Program." Alternatively, students may enter the College Program (described below), which permits them to pursue a course of study adapted to individual interests.
Students interested in bioengineering may arrange a suitable curriculum through the bioengineering option in one of the field programs or through the College Program. Students interested in implementing their field program with formal study in another traditional area of engineering may wish to consider one of the engineering minors offered by the college. Information about both the bioengineering option and engineering minors is available in the Engineering Advising Office, 167 Olin Hall. Students interested in environmental engineering and science may pursue the environmental option offered by the School of Civil and Environmental Engineering and the Department of Agricultural and Biological Engineering, or the science of earth systems (SES) option offered by the Department of Geological Sciences.

*Agricultural and biological engineering, chemical engineering, civil engineering, electrical engineering, engineering physics, materials science and engineering, mechanical engineering, and operations research and engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.*

To major in agricultural and biological engineering students normally enroll in the College of Agriculture and Life Sciences for the first three years, and jointly in that college and the College of Engineering for the final year. Students initially enrolled in the College of Engineering, however, may affiliate with the field of agricultural and biological engineering and complete the degree solely within that college.

**Requirements for Graduation**

To receive the Bachelor of Science degree, students must meet the requirements of the Common Curriculum, as set forth by the College of Engineering, including the requirements of the field program, as established by the school or department with which they become affiliated. Students must meet the Common Curriculum as explained below. (Further explanation of the revised Common Curriculum and field flow charts are provided in the 2000–2001 edition of The Engineering Undergraduate Handbook.)

*One writing-intensive technical course or a course in technical or scientific writing must also be taken; this course may simultaneously satisfy some other requirement.

†One approved course in computing applications must also be taken; this course may simultaneously satisfy some other requirement, such as an engineering distribution course, an approved elective, or a field program course.

From 123 to 133 credits are required for graduation; the specific number of required credits will vary depending on which field program is chosen (see field curricula for specific field requirements). Two terms of physical education must be taken in the freshman year and students must demonstrate proficiency in swimming to satisfy a university requirement.

**Mathematics**

The normal program in mathematics includes MATH 191 (or 190), 192, 293, and 294. Every student must attain a grade of at least C- in MATH 191 (or 190), 192, 293, and 294, or other courses that may be approved as substitutes for these courses. If this requirement is not met at the first time a course is taken, the course must be repeated immediately and a satisfactory grade attained before the next course in the sequence may be taken. Failure to achieve at least a C- the second time around will generally result in dismissal from the engineering program. Courses that are taken a second time in order to meet this requirement do not yield additional credit toward a degree.

**Physics**

The normal program in physics includes PHYS 112, 213, and 214 or the corresponding honors courses (PHYS 116, 217, and 218). Engineering students are required to have attained a minimum grade of C- in MATH 191 or equivalent before taking PHYS 112. The same minimum grade is required in each subsequent mathematics course before taking the physics course for which it is a prerequisite (e.g., C- in MATH 192 before taking PHYS 213, or C- in MATH 293 before taking PHYS 214). Students in the field programs of ABEN, CHEM, CEE, COM S, GEOL (geoscience and SES options), or OR&E may substitute CHEM 208 for PHYS 214.

**Chemistry**

CHEM 211 or 207 is required for all students. CHEM 211 is a course designed for students who do not intend any further study in chemistry. Typically, CHEM 211 is taken during the freshman year, but students who wish to complete the physics program (PHYS 112, 213, and 214) first may postpone CHEM 211 until the sophomore year. In general, students intending to affiliate with the following departments and schools usually take CHEM 211: Applied and Engineering Physics, Civil Engineering (not students in the environmental engineering option), Computer Science, Electrical and Computer Engineering, Materials Science and Engineering, Mechanical and Aerospace Engineering, and Operations Research and Industrial Engineering. Students considering Chemical Engineering must take CHEM 207 in the fall of their freshman year, to be followed by CHEM 208 in the spring term. All students considering the environmental option in Civil Engineering, Agricultural and Biological Engineering, the science of earth systems option in Earth and Atmospheric Sciences, or a health-related career such as medicine, should take the CHEM 207–208 sequence.

**First-Year Writing Seminars**

Each semester of their freshman year, students choose a First-Year Writing Seminar from among more than one hundred courses offered by over thirty different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

**Technical Writing**

The ability to communicate is essential to successful professional practice. In addition to taking two First-Year Writing Seminars, engineering students must have a significant amount of instruction and practice in technical or scientific writing. They can fulfill this technical-writing requirement by enrolling in an Engineering Communications course (e.g., ENGRD 354 or ENGRD 355) offered in the Communications department (COMM 260, 263, or 352), or an approved writing-intensive engineering course, including:

- ABEN 493 (with coregistration in ABEN 450 or ABEN 473)
- ENGRD/A&EP 264
- CHEM 432
- M&AE 427
- MS&E 435
- MS&E 443–444

For information about other options for fulfilling the writing requirement, please consult the Engineering Advising Office, 167 Olin Hall or contact the Engineering Communications Program, 465 Hollister Hall.

**Computing**

In either the first or second term of their freshman year, students normally take COM S 100, Introduction to Computer Programming. Before graduation they must take an additional course with a significant amount of computing applications; this course may also be used to meet another graduation requirement. Courses that satisfy this requirement are ABEN 453, ABEN 475, ENGRD/COM S 211, ENGRD/COM S 222, ENGRD/CEE 214, ENGRD/A&EP 264, ELE E 423, M&AE 470, M&AE 479, M&AE 575, and M&AE 578. The recommended choice for students intending to enter the field program in Engineering Physics is ENGRD 264; in Chemical Engineering, ENGRD 211, 222, or 241; in Civil Engineering, ENGRD 241; in Computer Science, ENGRD 241, in Electrical Engineering, ENGRD 211; in Mechanical Engineering, M&AE 470, M&AE 479, M&AE 575, or M&AE 578; and in Operations Research and Engineering, ENGRD 211.

**Engineering Distribution**

Three engineering distribution courses (nine credits) are required. One course must be an Introduction to Engineering Course (designated by ENGRD) to be taken by the student during their freshman year. The Introduction to Engineering course will introduce students to the engineering process and provide a substantive experience in an open-ended problem solving context. See the Introduction to Engineering Course listing for current course offerings.
The other two distribution courses must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

1) **Scientific computing**
- ENGRD 211, Computers and Programming
- ENGRD 222, Introduction to Scientific Computation
- ENGRD 241, Engineering Computation

2) **Materials science**
- ENGRD 261, Introduction to Mechanical Properties of Materials

3) **Mechanics**
- ENGRD 202, Mechanics of Solids
- ENGRD 203, Dynamics

Students in the field program in Engineering Physics may substitute A&EP 333 for ENGRD 203.

4) **Probability and statistics**
- ENGRD 270, Basic: Engineering Probability and Statistics

Students in the field program in Electrical Engineering may substitute ELE E 310 for ENGRD 270. Students in the field program in Engineering Physics may substitute ELE E 310 or MATH 471 for ENGRD 270. Students in the field programs in Civil Engineering and Agricultural and Biological Engineering may substitute CEE 304 for ENGRD 270.

5) **Electrical sciences**
- ENGRD 210, Introduction to Circuits for Electrical and Computer Engineers
- ENGRD 231, Introduction to Digital Systems
- ENGRD 264, Computer-Instrumentation Design

6) **Thermodynamics and energy balances**
- ENGRD 219, Mass and Energy Balances
- ENGRD 221, Thermodynamics

7) **Earth and life sciences**
- ENGRD 201, Introduction to the Physics and Chemistry of the Earth
- ENGRD 250, Engineering Applications in Biological Systems

8) **Biological and chemistry**
- BIO G 101 and 103, Biological Sciences, Lecture and Laboratory
- BIO G 105, Introductory Biology
- BIO G 107, General Biology (summer only)
- CHEM 389, Physical Chemistry I

Some fields require a specific engineering distribution course as a prerequisite for the upperclass course sequence. These requirements are:

Agricultural and Biological Engineering: ENGRD 202

Chemical Engineering: ENGRD 219

Civil Engineering: ENGRD 202

Computer Science: ENGRD 211

Electrical Engineering: ENGRD 231
(co-enrollment in ELE E 232 strongly recommended)

Geological Sciences: ENGRD 201

Materials Science and Engineering: ENGRD 251

Mechanical Engineering: ENGRD 202

Operations Research and Engineering: ENGRD 270

**Liberal Studies Distribution**

The six required liberal studies courses (totaling at least 18 credits) may be chosen from approved courses in four categories: (a) humanities or history, (b) social sciences, (c) foreign languages, and (d) expressive arts. (No First-Year Writing Seminar may be used to meet the liberal studies requirement.)

- At least two courses must be chosen from category (a).
- At least two courses in either category (a), (b), or (d) must be from the same field of study. One of these courses must be at or above the 200-level or be an explicit prerequisite of the other.

Following each category is a list of approved courses. Every effort has been made to keep the lists up to date, but errors sometimes occur. Students who wish to use a course that seems to fit the category description but is not listed should contact the Engineering Advising Office.

### a) Humanities or History

**American Studies**
- American Studies 101
- American Studies 201, 202
- Architecture 131, 132, 181, 182, 382
- Art 317, 318

**African Studies**
- African Studies 202, 204, 205, 211, 280, 285, 304, 310, 361, 370, 381, 404, 422, 425, 431, 432, 455, 475, 483

**Anthropology**
- Anthropology 290, 451, 452, 453, 455
- Anthropology (courses in Old World Anthropology only)

**Archeology**
- Archeology 200, 451, 452, 453, 455
- Archeology (courses in Old World Archeology only)

**Arts**
- Art 317, 318
- Architecture 131, 132, 181, 182, 382
- Architecture (all courses)

**Biology and Society**
- Biology and Society 201, 301, 314, 361, 382, 404, 442

**Communication**
- Communication 116, 120, 240, 410, 420

**Design**
- Design 210, 212, 271, 311, 317, 322, 360, 413, 477

**Economics**
- Economics (all courses except 315, 317, 318, 319, 320, 321, 325, 490, 645, 664, 700)

**English**
- English (all courses except 315, 326, 327, 328, 355, 360, 361, 366, 369, 390, 404, 406, 408, 420, 433, 444, 445, 451, 455, 474, 493

**Film**

**French**
- French (all courses)

**German**
- German (all courses)

**Geography**
- Geography (all courses)

**History**
- History (all courses)

**Humanities**
- Humanities (all courses)

**International**
- International (all courses)

**Labor**
- Labor (all courses)

**Law**
- Law (all courses)

**Literature**
- Literature (all courses)

**Music**
- Music (all courses)

**Philosophy**
- Philosophy (all courses)

**Psychology**
- Psychology (all courses)

**Religion**
- Religion (all courses)

**Russian**
- Russian (all courses)

**Science**
- Science (all courses)

**Technology**
- Technology (all courses)

**Theater**
- Theater (all courses)

**Women**
- Women (all courses)

**Writing**
- Writing (all courses)
c) Foreign Language

This category includes all foreign language courses; if two or more foreign language courses are used to fulfill part of the liberal studies requirement, they must be a sequence in the same language. The rules for placement and advanced placement credit in languages are those of the College of Arts and Sciences. Speakers of languages other than English may obtain up to six advanced placement credits equal to two courses according to these rules.

d) Expressive Arts

Africana Studies 303, 425, 430

Art (studio courses)

Biological Sciences 208, 209

Communications (all courses except 116, 120, 314, 410, 416, 420, 426, 465)

Design and Environmental Analysis 101, 102

Engineering (all Engineering Communications courses, which are designated ENGRC)

English (expository and creative writing courses, whose numbers end in the 80's, e.g., 288, 289, 382, etc.)

Floriculture (courses in Freehand Drawing and Scientific Illustration)

Industrial and Labor Relations 452

Music (courses in musical performance, musical organizations and ensembles; three one-credit courses equals one course)

Science and Technology Studies 352

Theater Arts (all courses except those listed in category (a) above)

Electives

- Approved electives—six credits required (approved by the academic adviser)
- Because these courses should help develop and broaden the skills of the engineer, advisers will generally accept the following as approved electives:
  1. One Introduction to Engineering course (ENGRI).
  2. Engineering distribution courses.
  3. Courses stressing written or oral communication.
  4. Upper-level engineering courses.
  5. Advanced courses in mathematics.
  6. Rigorous courses in the biological and physical sciences.
  7. Courses in business, economics, or language (when they serve the student’s educational and academic objectives).
  8. Courses that expand the field program or another part of the curriculum (Note: No ROTC courses may be used as approved electives unless they are co-listed by an academic department.)
  9. Field approved electives—nine credits (approved by engineering field program faculty and field faculty advisers).
  10. Students should refer to the field program curricula for descriptions of courses that meet this category.
  11. To ensure breadth of engineering studies, field programs will also include nine credits of courses outside the field.

Social Issues of Technology

It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their humanities, social sciences, and approved electives, students are urged to consider courses listed in the "Science and Technology Studies" undergraduate area of concentration (see Interdisciplinary Centers and Programs section). These courses may provide students with an important perspective on their studies and their future careers.

Engineering Advising Office

From the time that students enter the college as freshmen until they are affiliated with a major field or the College Program before the second term of the sophomore year, they are under the administration of the Engineering Advising Office, which implements the academic policies of the College Curriculum Governing Board. The office offers general advising and counseling services and serves as the primary resource center for undergraduate students in the college. The Engineering Minority Programs office and the Women’s Programs in Engineering office provide additional specialized services.

Freshman Year Requirements

By the end of the freshman year, engineering students are expected to have completed (or received credit for) the following core requirements:

- MATH 191 (or 190) and MATH 192
- Two of the following: CHEM 211, 207, 208, PHYS 112, 113, 214*
- COM S 100
- Two First-Year Writing Seminars
- One Introduction to Engineering course (ENGRI designation)
- Two Physical Education courses

*Students with an interest in pre-med (or other health-related careers), Agricultural and Biological Engineering, Chemical Engineering, the environmental option in Civil Engineering, or the science of earth systems option in Geologic Sciences should enroll in the CHEM 207–208 sequence during their freshman year.

Affiliation with a Field Program

Students must apply for affiliation with a field program during the first term of their sophomore year, although earlier affiliation may be granted at the discretion of the field. This is done by visiting the undergraduate field consultant’s office in the field of their choice and completing the Application for Field Affiliation form. To affiliate with a field program, students must (1) have a 2.0 cumulative grade point average and (2) have satisfied the field’s course and grade requirements as specified below:

(Please note that fields may impose alternative affiliation requirements for students applying for affiliation later than the first semester of the sophomore year.)

Field Program Courses and Minimum Grade Requirements

Agricultural & Biological Engineering

No more than one grade below C- in mathematics and science courses and ABEN 151 or equivalent

Chemical Engineering

No more than one grade below C- in chemistry, mathematics, physics, or chemical engineering courses (both overall and in the term immediately prior to affiliation).

Civil Engineering

A 2.0 GPA in all engineering and science courses and a grade of C- or better in ENGRD 202 (for students in the environmental option who do not take ENGRD 202 prior to affiliation, a grade of C- or better in CHEM 208 is required)

Computer Science

Completion of MATH 293, ENGRD/COM S 211, and COM S 280; a grade of C or better in all COM S courses (excluding COM S 100), with the overall average of these courses being no less than 2.7; a grade of C or better in all MATH classes, with an overall average of these courses being no less than 2.7; an overall GPA of 2.5 or better recommended. (In the event of repeated courses, both grades will be counted in the averages used for affiliation.)

Electrical Engineering

Good academic standing in the College of Engineering; a grade of C or better in MATH 293 and PHYS 213.

Repeated technical courses used to satisfy this requirement require field approval.

Engineering Physics

A grade of B- or better in all required mathematics and physics courses

Geological Sciences

Good academic standing in the College of Engineering

Materials Science & Engineering

A grade of C- or better in all physics and chemistry courses and a grade of C or better in ENGRD 261.

Mechanical Engineering

A grade of C- or better in mathematics and science courses and ENGRD 202

Operations Research & Engineering

A grade of C- or better in MATH 191 and 192, and a 2.0 GPA in all mathematics, science, and engineering courses (both overall and in the term immediately prior to affiliation).

Students must be affiliated or conditionally affiliated by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.

SPECIAL PROGRAMS

Dual Degree Option

A special academic option, intended for superior students, is the dual degree program, in which both a Bachelor of Science and
either a Bachelor of Arts or Bachelor of Fine Arts degree can be earned in about five years. Students registered in the College of Engineering, the College of Arts and Sciences, or the College of Architecture, Art, and Planning may apply and, after acceptance of their application, begin the dual degree program in their second or third year. Those interested should contact the appropriate coordinators of dual degree programs at the following locations: 55 Goldwin Smith Hall (for Arts and Sciences); or 135 East Sibley (for Architecture, Art, and Planning); and the Director of Engineering Advising, 167 Olin Hall.

Double Major in Engineering

The Double Major option, which makes it possible to develop expertise in two allied fields of engineering, generally requires at least one semester beyond the usual four years. Students affiliate with one field following normal procedures and then petition to enter a second field before the end of their junior year. All the requirements of both fields must be satisfied. Further information is available from the Engineering Advising Office, 167 Olin Hall, and the individual field consultant offices.

College Program

Individually arranged courses of study under the College Program are possible for those well-qualified students whose educational objectives cannot be met by one of the regular field programs. Often the desired curriculum is in an interdisciplinary area. Each program is developed by the student in consultation with faculty advisers and must be approved by the College Program Committee, which is responsible for supervising the student's work.

Students apply to enter the College Program by the end of the first term of the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed major and minor subject areas. If approved, the program is the curricular contract to which the student must adhere. Normally, students applying to the College Program should have a 3.0 cumulative grade point average.

Every curriculum in the College Program, with the exception of certain faculty-sponsored programs, must comprise an engineering major and an educationally related minor. The major may be in any subject area offered by schools or departments of the college; the minor may be in a second engineering subject area or in a logically connected nonengineering area. The combinations must clearly form an engineering education in scope and in substance and should include engineering design and synthesis as well as engineering sciences. In addition to 48 credits in the major and minor subjects, including at least 32 credits in engineering courses, each program includes the normally required courses in humanities and social sciences and approved electives.

Further information about the College Program may be obtained from the Director of Engineering Advising, 167 Olin Hall.

Important note: because no single standardized curriculum exists, the College Program is not accredited. College Program students who intend to seek legal licensing as a Professional Engineer should be aware that this non-accredited degree program will require additional education, work, and/or experience to qualify for eligibility to take the Fundamentals of Engineering examination, and may affect acceptance into engineering graduate programs.

Engineering Minors

The Engineering Minor is a supplement to the regular bachelor's degree programs in the college, including the College Program, and recognizes formal study of a particular technical subject area in engineering normally outside the student's major. Therefore, it may be necessary for some students choosing to complete the requirements for an engineering minor to spend more than the traditional eight semesters to complete their studies at Cornell. In many cases, however, courses fulfilling minor requirements may also satisfy degree requirements (e.g., distribution courses, approved electives, or field-approved electives). Students undertaking a minor are expected to complete the requirements during the time of their continuous undergraduate enrollment at Cornell.

To complete an engineering minor, an undergraduate engineering student must

- be enrolled in a major field program that approves the participation of its affiliates in the desired minor.
- successfully complete all the requirements for a bachelor of science degree in engineering.
- satisfactorily complete six courses (18 credit minimum) stipulated in a college-approved minor offered by an engineering school or department other than that which offers the student's major.
- Students may apply for certification of an engineering minor at any time after the necessary coursework has been completed in accordance with published standards. Students who receive certification in an approved engineering minor will be recognized by means of an official notation on their Cornell transcript following graduation.

The College of Engineering currently offers minors in the following areas (offering departments are indicated in parentheses):

- Applied Mathematics (T&AM)
- Biomedical Engineering (T&AM)
- Civil Infrastructure (CEE)
- Electrical and Computer Engineering (ECE)
- Engineering Management (CEE)
- Engineering Statistics (OR&IE)
- Environmental Engineering (ABEN/CEE)
- Geological Sciences (EAS)
- Industrial Systems and Information Technology (OR&IE)
- Materials Science and Engineering (MS&E)
- Mechanical Engineering (M&EAE)
- Operations Research and Management Science (OR&IE)
- Materials Science and Engineering (MS&E)
- Mechanical Engineering (M&EAE)
- Operations Research and Management Science (OR&IE)
- Environmental Engineering (ABEN/CEE)
- Geological Sciences (EAS)
- Industrial Systems and Information Technology (OR&IE)
- Materials Science and Engineering (MS&E)
- Mechanical Engineering (M&EAE)
- Operations Research and Management Science (OR&IE)
- Additional information on specific minors can be found in the departmental sections of this publication, The Engineering Undergraduate Handbook, the undergraduate field office of the department offering the minor, and the Engineering Advising Office.

Bioengineering Option

Students who elect this option will graduate with a B.S. degree in one of the traditional fields and with an administrative note on their transcript formally recognizing their efforts in bioengineering.

The requirements for completion of the option are four courses (12 credit hours minimum) and one credit hour of Bioengineering Seminar (ENGR 501). These courses can simultaneously satisfy other degree requirements and are not necessarily four additional courses. These four courses must be selected from two categories: science-based courses and bioengineering courses. At least one course must be from the science-based course list and at least two (totaling at least six credits) from the bioengineering course list. Each student interested in the bioengineering option can request (through the Engineering Undergraduate Programs office) a faculty consultant who will assist the student in course selection for this option. The bioengineering faculty consultant is in addition to the student's regular academic adviser.

A list of approved courses is available in the Engineering Advising Office, 167 Olin Hall or in the Engineering Undergraduate Programs Office, 222 Carpenter Hall.

International Programs

All students who plan to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study.

An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important to today's engineers. In keeping with the university goals of internationalizing the curriculum, the College of Engineering encourages students to study or work abroad during their undergraduate years. For further information on the many study abroad opportunities to add an international dimension to your undergraduate education, see the staff in the Engineering Advising Office, 167 Olin Hall. Information on co-op programs abroad is available from the Engineering Professional Programs Office in 146 Olin Hall.

Engineering Communications Program

The Engineering Communications Program (ECP) provides instruction in the written, oral, and visual presentation of technical and scientific information. Engineering Communications, ENGR 350, and Communications for Engineering Managers, ENGR 335, are three-credit seminars that give students a thorough introduction to these areas. These courses use material from the core engineering and business workplace, and many assignments are based on actual events and professional situations. Students learn to direct their writing and presentations to different audiences that have varying roles and levels of expertise. They learn about effective teamwork and deal with organizational and ethical issues in the communications they encounter and produce. Classes have lively discussion, and the limited size of sections ensures close attention to individual students' work. Occasionally, the program's instructors offer courses or independent studies in topics of special interest. ECP courses fulfill the college's technical writing requirement (see Requirements for Graduation).
In addition to offering communications seminars, the program works with the engineering fields to integrate communications instructional and technical courses. The program presents workshops and lectures on relevant communications topics and helps to develop assignments, instructional materials, and assessment strategies for writing and oral presentations. The goal of these writing-intensive efforts is to strengthen students’ understanding of engineering course material and increase their ability to communicate it.

The ECP also gives presentations to student groups on effective writing, oral communication, and teamwork and has been involved in innovative educational projects such as Peer Teaching in Engineering (ENGRG 470), a collaborative learning initiative in physics, mathematics, chemistry, and engineering design. The program awards several annual prizes for writing, oral presentation, and teamwork. For further information, contact the director, 465 Hollister Hall.

Engineering Cooperative Education Program

A special program for undergraduates in most fields of engineering is the Engineering Cooperative Education Program, which provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession.

To be eligible, a student must have been admitted to Cornell for four semesters or prior to working, with a cumulative GPA of 2.7 or higher. Students in Computer Science and Agricultural and Biological Engineering are eligible, even though they may not be registered in the College of Engineering. Applicants are interviewed by representatives of participating companies and select their work assignment from any offers they receive. Those students who are offered assignments and elect to join the program usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin a work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same company the following summer. Co-op students return to campus for their senior year and graduate with their class.

Further information may be obtained from the Engineering Professional Programs Office, 146 Olin Hall.

MASTER OF ENGINEERING DEGREE PROGRAMS

One-year Master of Engineering (M.Eng.) programs are offered in 13 fields. These programs are discussed in this announcement in connection with the corresponding upperclass engineering field programs because the curricula are integrated. Cornell baccalaureate engineering graduates frequently begin their studies in the M.Eng. program, although the program is also open to qualified graduates of other schools. More information is available through the Master of Engineering web site: www.engineering.cornell.edu/EngProfProg. The M.Eng. degrees and the academic fields under which they are described are listed below.

- **M.Eng. (Airspace):** Mechanical and Aerospace Engineering
- **M.Eng. (Agricultural and Biological):** Agricultural and Biological Engineering
- **M.Eng. (Chemical):** Chemical Engineering
- **M.Eng. (Civil & Environmental):** Civil and Environmental Engineering
- **M.Eng. (Computer Science):** Computer Science
- **M.Eng. (Electrical):** Electrical and Computer Engineering
- **M.Eng. (Engineering Physics):** Applied and Engineering Physics
- **M.Eng. (Geology):** Earth and Atmospheric Sciences
- **M.Eng. (Materials):** Materials Science and Engineering
- **M.Eng. (Mechanical):** Mechanical and Aerospace Engineering
- **M.Eng. (Engineering Mechanics):** Theoretical and Applied Mechanics
- **M.Eng. (Nuclear):** Nuclear Science and Engineering
- **M.Eng. (OR&IE):** Operations Research and Industrial Engineering

Candidates for a professional master’s degree who wish to specialize in areas related to manufacturing may avail themselves of two special programs. The manufacturing systems engineering option may be centered in any one of the fields listed above. This option is attested to by a Dean’s Certificate in addition to a diploma at the time of graduation. An industrial internship program provides opportunities to combine on-campus education with off-campus industrial experience.

An M.Eng. option of potential interest to engineers from all fields is the program in Engineering Management, offered by the School of Civil and Environmental Engineering. This option is described in the section related to the M.Eng. (Civil & Environmental) degree.

Cornell engineering graduates in the upper half of their class will generally be admitted to M.Eng. programs; however, requirements for admission vary by field. Superior Cornell students who will have between one and eight credits remaining in their last undergraduate semester may petition their field representative for early admission to the M.Eng. program. Other applicants must have a baccalaureate degree or its equivalent from a college or university of recognized standing, in an area of engineering or science that is judged appropriate for the proposed field of study. They must also present evidence of undergraduate preparation equivalent to that provided by a Cornell undergraduate engineering education, a transcript, two letters of recommendation, and a statement of academic purpose. A candidate who is admitted with an undergraduate background that is judged inadequate must make up any deficiencies in addition to fulfilling the regular course requirements for the degree. Most fields require applicants from other under-graduate institutions to submit the results of the Graduate Record Examination (GRE) aptitude tests. All applicants from foreign universities must submit GRE scores and must have an adequate command of the English language. Financial aid providing partial support is available for very highly qualified candidates, primarily those who are residents of the United States.

Cooperative Programs with the Johnson Graduate School of Management

Outstanding students with relevant work experience may be admitted to one of two joint Master of Engineering and Master of Business Administration degree programs. One, which Cornell students enter during their undergraduate career, makes it possible to earn the B.S., M.Eng., and M.B.A. in six years—one year less than such a program would normally require. The second program, which is available to students who already hold baccalaureate degrees from Cornell or other institutions, requires five semesters and leads to both the M.Eng. and M.B.A. Students are required to apply for admission to both the College of Engineering and the Johnson Graduate School of Business Management.

Students interested in deferring admissions to the Johnson Graduate School of Business Management may be eligible for the Knight Scholarship Award. Upon completion of the M.Eng. degree, Knight Program students spend three to five years in relevant full-time work experience before starting the M.B.A. program. More information about the Knight program or admission to the joint degree programs may be obtained from the Office of Engineering Professional Programs, 146 Olin Hall.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering students who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:

1. Advanced placement examinations given and scored by the College Entrance Examination Board (CEEB);
2. General Certificate of Education (GCE) Advanced ("A") Level Examinations;
3. International Baccalaureate (IB) Higher Level Examinations; or
4. Cornell's departmental placement examinations, given during orientation week prior to the beginning of fall-term classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways.

1. They may enroll in a more advanced course in the same subject right away.
2. They may substitute an elective course from a different area.
Acceptable Subjects and Scores for CEEB or Cornell Departmental AP Exams

The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

Mathematics: MATH 191 (or 190), 192, 293, and 294 are required.

First-term math (MATH 191). AP credit may be earned by:
- a score of 3, 4, or 5 on the CEEB BC exam, or
- a score of 5 on the CEEB AB exam, or
- a passing score on the Cornell departmental exam for first-term math.

First-year math (through MATH 192). AP credit may be earned by:
- a passing score on the Cornell departmental exam for first-year math.

Physics: PHYS 112 and 213 are required.

PHYS 112. AP credit may be earned by:
- a score of 4 or 5 on the mechanics portion of the CEEB C exam, or
- a score of 5 on the CEEB B exam only if the student has at least one semester of AP or transfer credit in first-term mathematics at the time of matriculation, or
- a passing score on the Cornell departmental exam for PHYS 112.

Note: Students who have received credit for PHYS 112 may not enroll in PHYS 213 unless concurrently enrolled in MATH 293.

PHYS 213. Students receiving a 5 on the Electricity and Magnetism portion of the C-exam may choose to accept AP credit for PHYS 213 or placement in PHYS 217 with no AP credit for PHYS 213. For advice or more information contact Professor Joseph Rogers (607-255-8158), the departmental representative.

Chemistry: CHEM 207 or CHEM 211 is required.

CHEM 207 or CHEM 211. AP credits may be earned by:
- a score of 5 on the CEEB AP exam, or
- a passing score on the Cornell departmental exam for Chemistry.

Note: Students who are successful in obtaining AP credit for CHEM 207 and who are considering majors in Chemical Engineering or Materials Science and Engineering should consider enrolling in CHEM 215. Those who are offered AP credit for CHEM 207 and then elect to take CHEM 215 will also receive academic credit for CHEM 207. You may want to discuss this option with your faculty adviser.

Computing: COM S 100 is required. AP credit may be earned by:
- a score of 4 or 5 on the CEEB A or AB exam, or
- a passing score on the Cornell departmental exam for COM S 100.

Biology: Biology is not required of engineering students, although it is a popular option as an elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:
- eight credits will be offered to students who receive a 5 on the CEEB AP exam; and
- six credits will be offered to students who receive a 4 on the CEEB AP.

Those who want to study more biology should contact the Office of Undergraduate Biology, 200 Stimson Hall, to discuss proper placement.

First-Year Writing Seminar: Two First-Year Writing Seminars for (a total of six credits) are required.
- AP credit for one First-Year Writing Seminar may be earned by a score of 5 on either of the CEEB AP English exams.

Students who earn a score of 4 on the AP English Literature and Composition exam will be offered three credits which may be applied toward the Humanities/History category of the Liberal Studies distribution requirement. Students who earn a score of 4 on the AP English Language and Composition exam will be offered three credits which may be applied toward the Expressive Arts category of the Liberal Studies distribution requirement.

Liberal Studies Distribution: Six courses beyond two First-Year Writing Seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CEEB) AP tests. AP credit earned in the humanities or social sciences cannot be used to fulfill the "upper level" liberal studies requirements.

Modern Languages: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test are entitled to three credits. In order to qualify for the CASE exam, the student must score at least 650 on a College Placement Test (taken either in high school or at Cornell during Orientation Week). A score of 2 on the CASE entitles the student to three credits, and a score of 3 entitles the students to six credits which are equivalent to two courses. Modern language AP credits may be used to satisfy the foreign language category of the liberal studies distribution, or may meet an approved elective requirement, contingent on discussions with the faculty adviser.

Advanced Placement and Credit for International Credentials

Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

General Certificate of Education Advanced Level Examination (GCE "A")

Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Level Certificate of Education in Malaysia and Singapore—principal passes only—are considered equivalent in standard to GCE "A" Levels.

</tbody>
</table>

Computer 4 credits (COM S 100)

Chemistry 6 or 7 4 credits (CHEM 207 or CHEM 211)

Mathematics 6 or 7 8 credits (engineering students must consult the math department to determine prerequisites for placement in third-semester math course.)

Physics 6 or 7 4 credits (PHYS 112)

Note: Advanced Placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering. In such cases, the College of Engineering follows the AP guidelines found earlier in this publication under "General Information."

General Policies for Advanced Placement

The general policies in the College of Engineering governing awards of AP credit are as follows:
1. AP credit will not be offered in any subject area without a documented examination.
2. All AP examinations are normally taken and scored before fall-term classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Students who have completed either GCE "A" Level or IB Higher Level Examinations must present the original or a certified copy of their examination certificate to the Engineering Advising Office, 167 Olin Hall. Those who wish to take departmental examinations should do so during Orientation Week;
Advanced Placement and Transfer Credit for courses at Cornell. Transfer credit will not be awarded for courses taken during a semester that must be equivalent in scope and rigor to such in writing by the secondary institution. The total number of credits required for graduation ranges from 123 to 133, depending on the field program. Therefore, an average semester credit load ranges from approximately 15 to 17 credits. Because mathematics is pivotal to the study and practice of engineering, students must meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASAP), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 12 credits passed, including at least two courses from mathematics, science, and/or engineering
2. A C- or better in the mathematics course
3. A semester average of 2.0 or higher
4. No F, U, or INC grades

Requirements for second-semester freshman and first-semester sophomores to be in good standing are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASAP), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 14 credits passed in courses that meet engineering degree requirements
2. A C- or better in the mathematics course, if one was taken
3. A semester average of 2.0 or higher
4. No F, U, or INC grades

Academic Progress

To be eligible for field honors, a student must enter a program and maintain a cumulative GPA of 3.5. If the student's major field has an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the field may commend that a student graduate with the additional diploma and transcript notation of "With Honors." For more specific information, see the field program outline in this catalog.

Dean's List

Dean's List citations are presented each semester to engineering students with exemplary academic records. The criteria for this honor are determined by the dean of the college. For 2000-2001, the requirement is a semester average of 3.4 or higher (without rounding), no failing, unsatisfactory, missing, or incomplete grades (even in physical education), and at least 12 letter-grade credits (not S-U). Students may earn Dean's List status retroactively if they meet these criteria after making up incomplete grades. Students who earn Dean's List status receive certificates from the Engineering Registrar's Office, and the honor is noted on the transcript.

Graduating with Distinction and Honors Program

Graduating with Distinction

Meritorous students graduating with a Bachelor of Science degree from the College of Engineering may also be designated cum laude, magna cum laude, or summa cum laude.

• Cum laude will be awarded to all engineering students with an overall GPA ≥ 3.5. Cum laude will also be awarded to all engineering students who received a semester GPA ≥ 3.5 in each of the last four semesters of attendance at Cornell; in each of these semesters, at least 12 letter graded credits must be taken with no failing, unsatisfactory, missing, or incomplete grades. If the student is an engineering co-op student, then the engineering co-op summer term will count as one of the last four. Students who were approved for pro-rated tuition in their final semester will be awarded cum laude if they received a semester GPA ≥ 3.5 in their last semester and met the conditions above in the prior four semesters. (The change in the cum laude policy will become effective for the class graduating in May 2001.)

• Magna cum laude will be awarded to all engineering students with an overall GPA ≥ 3.75 (based on all credits taken at Cornell).

• Summa cum laude will be awarded to all engineering students with an overall GPA ≥ 4.0 (based on all credits taken at Cornell).

Note: All GPA calculations are minimums and are not rounded.

Field Honors Program

To be eligible for field honors, a student must enter a program with and maintain a cumulative GPA of ≥ 3.5. If the student's major field has an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the field may commend that a student graduate with the additional diploma and transcript notation of "With Honors." For more specific information, see the field program outline in this catalog.
S-U Grades

Many courses offered by the university may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Under the S-U option, students earning the letter grade equivalent of C- or better in a course will receive a grade of S; those earning less than C- receive a grade of U. (Any course in which a U grade is received does not count toward graduation requirements.)

Engineering students may choose to receive an S-U grade option under the following conditions:

- The course in question must be offered with an S-U option.
- The student must have previously completed at least one full semester of study at Cornell.
- The proposed S-U course must count as either a liberal studies distribution or an approved elective in the engineering curriculum.
- Students may only elect to enroll S-U in one course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U only" may be taken in the same semester as the "elected S-U" course.)

The choice of grading option for any course is initially made during the pre-enrollment period. Grading options may be changed, however, by submitting a properly completed Add/Drop Form to the Engineering Registrar by the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which they were previously enrolled in the current semester under a different grade option.

Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell. They must also spend at least three semesters of this time affiliated with an engineering field program or with the College Program.

Students who are on a voluntary leave of absence are permitted to register for courses extramurally only with the approval of their field (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) after matriculation may be used to satisfy the requirements for the bachelor's degree in engineering.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad Office, 174 Uris Hall. Programs for study abroad should be planned in consultation with the staff of the Engineering Advising Office, who can provide information on credit-evaluation policies and assist in the petitioning process.

Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The office responsible for assisting students with the transfer process is the Internal Transfer Division Office. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with the Engineering Advising Office.

Students who wish to transfer into the College of Engineering can apply at the Engineering Advising Office—application forms are available in 167 Olin Hall. Students who would enter the college as second-semester sophomores may be accepted by a field program as part of the admission process. Students who would enter as a second-semester freshman or first-semester sophomore may be accepted into the college without the requirement of field affiliation but must be sponsored by a field program.

Students who hope to transfer into engineering should take courses in mathematics, chemistry, computer science, physics, and engineering that conform to the requirements of the Common Curriculum. Interested students should schedule an appointment with an adviser in the Engineering Advising Office, 167 Olin Hall.

Leaves of Absence

A leave of absence may be voluntary, medical, or required. A description of each follows:

Voluntary Leave: Students sometimes find it necessary to suspend their studies. To do this, students must petition for a leave of absence for a specified period of time and receive written approval.

Affiliated students request leave through their fields. Unaffiliated students request leave through the Engineering Advising Office; the first step is to interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliation with a field and while not in good standing may be given a "conditional leave." This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

Leaves of absence are not generally granted for more than two years. A leave of absence granted during a semester goes into effect on the day it is requested and lasts for a minimum of six months. If a leave is requested after the twelfth week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a "W" will appear on the transcript for each course). Students who leave the university are ineligible for leaves of absence. If courses taken during a leave are to satisfy Cornell degree requirements, they must be approved in advance through a transfer petition. (See previous section of Transfer Credit for details.)

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those who have taken out educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing, at least six weeks prior to the date the student plans to return to campus.

Medical Leave: Medical leaves are granted by the college only upon recommendation by a physician from Gannett Health Center. Such leaves are granted for a maximum of five years with the understanding that the student may return at the beginning of any term after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student's academic standing will also be subject to review both at the time the leave is granted and upon the student's return.

Required Leave: A required leave of absence is imposed in cases where the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example where a leave of absence would be required might be failure in several courses in a semester. Unless the student is ahead in the curriculum, returning to the next semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are only offered in the fall or the spring semester. Leaves are given voluntarily when the probability of success is increased substantially by deferring the student's return one semester (or, in unusual circumstances, one year).

Rejoining the College

Students wishing to rejoin the college who have not yet affiliated with a field should request permission to rejoin in a letter to the Engineering Advising Office; affiliated students should contact their field office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student's activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

Withdrawal from the College

A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

Voluntary Withdrawal: Students who voluntarily withdraw from the engineering degree program sever all connection with the college. Unaffiliated students who wish to withdraw should do so through the Engineering Advising Office. Affiliated students should contact their field office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations. Any student who fails to register in the first three weeks of the semester, without benefit of a leave of absence or permission for study in absentia, will be deemed to have withdrawn.

Students who withdraw from the College of Engineering are eligible to apply for admission to one of the other six colleges at Cornell. The intra-university transfer process should be followed. If students who have withdrawn subsequently wish to return, they must make a formal application for readmission. This is rarely granted. It is subject to a review of the student's academic background and depends
on available space in the college and in the student's major field.

Required Withdrawal: Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action only withdraws them from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university.

ENGINEERING CAREER SERVICES

Individual advising and group seminars are available for students who desire assistance in career and job-search matters. More than 300 national employers visit the campus annually to recruit technical graduates. Additional job opportunities are posted electronically. Both undergraduate and graduate students can use these services to pursue temporary or permanent summer employment opportunities. Further information on all services is available from the Engineering Career Services Office, 201 Carpenter Hall (255-5006).

AGRICULTURAL AND BIOLOGICAL ENGINEERING

Bachelor of Science Curriculum

Agricultural and Biological Engineering is at the focus of three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, energy and biodiversity; and developing technologies to monitor, replace, or intervene in the biology of livingorganisms. The undergraduate engineering program in the Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, applications courses, and liberal studies. The program leads to a Bachelor of Science degree and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Three concentrations in Agricultural and Biological Engineering are offered: environmental engineering, biological engineering, and food production and process engineering. All students, regardless of concentration, take courses in mathematics, statistics, computing, physics, chemistry, biology and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. Students select application courses in the department in areas that include bioprocessing, soil and water management, bioenvironmental and facilities engineering, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students select other courses in the College of Engineering that strengthen their program, such as environmental sciences or biomedical engineering. Students planning for medical school also take additional lab-based courses in biology and organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills. Many undergraduate students participate in teaching assistantships, research assistantships, design teams, Engineering Coop, and study abroad. Students should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

The department also participates in a new interdisciplinary major, Science of Earth Systems (SES). Students in the joint program may minor in SES by taking 18 credits of engineering and science electives as part of their engineering program.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, science, medicine, law, and other fields. In recent years, graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international development.

The living world is all around us, and within us. The biological revolution continues and it has given rise to a growing demand for engineers who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who are sensitive to the needs of people and who are interested in the challenges facing society. Agricultural and Biological Engineering is educating the next generation of engineers to meet these challenges. The department is located in Riley-Robb Hall and operates specialized facilities that are among the largest and most complete of their kind in the world.

For further details see the department's undergraduate programs publication, available at 207 Riley-Robb Hall, or contact the field's advising coordinator, Professor Jim Bartsch, at 255-2800.

The field program requirements are outlined below.

Basic Subjects

<table>
<thead>
<tr>
<th>Subject</th>
<th>Credits</th>

</tr>
<tr>
<td>Engineering distribution (two courses, including ENGRD 202, Mechanics of Solids)</td>
<td>6</td>
</tr>
<tr>
<td>Liberal studies (two freshman seminars and at least two courses in humanities or history)</td>
<td>24</td>
</tr>
</tbody>
</table>

Advanced and Applied Subjects

Engineering sciences in any field (must include fluid mechanics and thermodynamics), plus ABEN 250 and 350 (Engineering Applications in Biological Systems, Bio. & Env. Transport Processes), and a minimum of three agricultural and biological engineering courses (at least 9 credits) chosen from courses numbered 450 to 493.

Environmental, biological, or agricultural sciences (at least 3 credits of biological sciences beyond the introductory level)

Approved electives (at least 3 credits in the College of Agriculture and Life Sciences)

Total (minimum)

Agricultural and Biological Engineering Honors Program

Eligibility

This program is only available to seniors registered in the College of Engineering.

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirement for a bachelor's degree, have satisfactorily completed the honors program in the Department of Agricultural and Biological Engineering and have been recommended for the degree by the honors committee of the department. An honor's program student must enter with and maintain a cumulative GPA ≥ 3.5.

Content

An ABEN honors program shall consist of at least nine credits beyond the minimum required for graduation in ABEN. These nine credits shall be drawn from one or more of the following with at least four credit hours in the first category:

- A significant research experience or honors project under the direct supervision of an ABEN faculty member using ABEN 499, Undergraduate Research. A written senior honors thesis must be submitted as part of this component.
- A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department (e.g., ABEN 151 or 250) under ABEN 498, Undergraduate Teaching.
- Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, mathematics, biology, chemistry and physics at the 400+ and graduate level.

Note: no research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.
Procedures
Each applicant to the ABEN honors program must have an ABEN faculty adviser to supervise the honors program. A written approval of the faculty member who will direct the research is required. After the college verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Minor in Environmental Engineering
(Offered in cooperation with the School of Civil and Environmental Engineering)

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: A&EP, CHEM, COM S, EAS, ECF, M&AE, MS&E, OR&IE. A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be stewards and managers of our nation’s resources, the air in our cities, and use and quality of water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues. The requirements for the environmental engineering minor are outlined below. For further details consult the Agricultural and Biological Engineering Undergraduate Programs Office, 207 Riley-Robb Hall, or the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows.

Students must select courses from the following group listings, with at least one course from each group.

Group A. Environmental Engineering Processes:
CEE 351 Environmental Quality Engineering
CEE 352 Water Supply Engineering
CEE 451 Microbiology for Environmental Engineering
CEE 453 Laboratory Research in Environmental Engineering
ABEN 476 Solid Waste Engineering
ABEN 478 Ecological Engineering
CEE 644 Environmental Applications of Geotechnical Engineering
ABEN 651 Bioremediation
CEE 653 Water Chemistry for Environmental Engineering
CEE 655 Pollutant Transport and Transformation in the Environment
CEE 658 Sludge Treatment, Utilization, and Disposal
CEE 654 Aquatic Chemistry

Group B. Environmental Systems:
ENGRI 113* Introduction to Environmental Systems (May count only if taken before the student's junior year.)
ABEN 475 Environmental Systems Analysis
CEE 529 Water and Environmental Resources Problems and Policies
CEE 597 Risk Analysis and Management
CEE 623 Environmental Quality Systems Engineering
ABEN 678 Nonpoint Source Models

Group C. Hydraulics, Hydrology, and Environmental Fluid Mechanics:
CEE 331 Fluid Mechanics (CHEME 323 or M&AE 325 may be substituted for CEE 331)
CEE 332 Hydraulic Engineering
ABEN 371 Hydrology and the Environment
CEE 431/ABEN 471 Geohydrology
CEE 432 Hydrology
CEE 435 Coastal Engineering
CEE 437 Experimental Methods in Fluid Dynamics
ABEN 473 Watershed Engineering
ABEN 474 Drainage and Irrigation Systems
CEE 633 Flow in Porous Media and Groundwater
CEE 655 Pollutant Transport and Transformation in the Environment
ABEN 671 Analysis of the Flow of Water and Chemicals in Soils
ABEN 672 Drainage

Academic Standards: A letter grade of C- or better in each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Master of Engineering (Agricultural and Biological) Degree Program
The program for the M.Eng. (Agricultural and Biological) degree is intended primarily for those students who plan to enter engineering practice. The curriculum is planned as an extension of an undergraduate program in agricultural and biological engineering but can accommodate graduates of other engineering disciplines. The curriculum consists of 30 credits of courses intended to strengthen the students' fundamental knowledge of engineering and develop their design skills. At least three of the required 30 credits are earned for an engineering design project that culminates in a written and oral report.

A candidate for the M.Eng. (Agricultural and Biological) degree may choose to concentrate in one of the subareas of agricultural and biological engineering or take a broad program without specialization. The subareas include biological engineering, energy, environmental engineering, environmental management, food engineering, international agriculture, local roads, machine systems, soil and water engineering, and structures and environment. Elective courses are chosen from among engineering subject areas relevant to the student's interests and design project. Courses in technical communication, mathematics, biology, and the physical sciences may also be taken as part of a coherent program. Master of Engineering students in agricultural and biological engineering can qualify for the Dean's Certificate in energy, manufacturing, or bioengineering by choosing their design project and a number of electives from the designated topic areas. More information is available from the ABEN Student Services Office, 207 Riley Robb Hall (255-2173), or by e-mail at abengradfield@cornell.edu.

APPLIED AND ENGINEERING PHYSICS

Bachelor of Science Curriculum
The undergraduate engineering physics curriculum is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and mathematics fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration, the students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for engineering physics graduates with baccalaureates is high, and many students go directly to industrial positions where they work in a variety of areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state-device development, technical management, and financial consulting. A number of our graduates go on for advanced study in all areas of basic and applied physics, as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mechanical engineering, medical physics, mathematics, medicine, nuclear engineering, oceanography, and physics. The undergraduate program can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The Engineering Physics program fosters this breadth of opportunity because it both
stresses the fundamentals of science and engineering and gives the student direct exposure to many of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGRD 110, The Laser and Its Applications in Science, Technology, and Medicine (a freshman introduction to engineering course); ENGRD/A&EP 264, Computer-Instrumentation Design (a recommended sophomore engineering distribution course); A&EP 330, Modern Experimental Optics (a junior/senior course); A&EP 363, Electronic Circuits (a sophomore/junior course); PHYS 410, Advanced Experimental Physics; and A&EP 438, Computational Engineering Physics (a senior computer laboratory).

Undergraduates who plan to enter the field program in Engineering Physics are advised to arrange their Common Curriculum with their developing career goals in mind. Students are also encouraged to take PHYS 112 or PHYS 116 during their first semester (if their advanced placement credits permit) and are recommended to satisfly the computing applications or technical writing requirement with the engineering distribution course ENGRD 264. Engineering physics students need to take only two engineering distribution courses, since they take in their junior year, counts as a third member of this category. Engineering Physics students are advised to take A&EP 363 in the spring semester of the sophomore year. Students with one semester of advanced placement in math, who have received a grade of A- or better in MATH 192, may wish to explore accelerating their mathematics requirements so as to enroll in A&EP 321 and 322 in the sophomore year. For advice on this option, consult with the A&EP associate director.

In addition to the requirements of the Engineering Common Curriculum,* the upperclass course requirements of the field program are as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>A&amp;EP 333, Mechanics of Particles and Solid Bodies</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 355, Intermediate Electromagnetism</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 356, Intermediate Electrodynamics</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 361, Introductory Quantum Mechanics</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 363, Electronic Circuits</td>
<td></td>
</tr>
<tr>
<td>A&amp;EP 423, Statistical Thermodynamics</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 434, Continuum Physics</td>
<td>4</td>
</tr>
<tr>
<td>PHYS 410, Advanced Experimental Physics</td>
<td></td>
</tr>
<tr>
<td>A&amp;EP 321, Mathematical Physics I; or MATH 421 (applied mathematics)</td>
<td>4</td>
</tr>
<tr>
<td>A&amp;EP 322, Mathematical Physics II; or MATH 422 (applied mathematics)</td>
<td>4</td>
</tr>
<tr>
<td>Applications of quantum mechanics</td>
<td>3 or 4</td>
</tr>
</tbody>
</table>

Five field-approved electives (15–19 credits), of which four must be technical. The technical electives are expected to be upper-level courses (300 or above).

Total field credits=58 credit hours minimum.

*The Engineering Common Curriculum allows students to take only four courses each semester of their freshman year if they so desire. This course load is fully consistent with the requirements of the EP major, but entering students with strong preparation are encouraged to consider taking an additional course during one of the two periods of the freshman year so that they may have additional flexibility in developing a strong, individualized educational program in their latter years, and for allowing options such as a semester or year abroad or early graduation.

Some courses (though the list is not all-inclusive) that will satisfy this requirement are PHYS 444, Nuclear and High-Energy Particle Physics; PHYS 454, Introductory Solid-State Physics; A&EP 438, Computational Engineering Physics; A&EP 440, Quantum and Nonlinear Optics; A&EP 609, Nuclear Physics for Applications (one is recommended); A&EP 640, Lasers and Optical Electronics; and ELE E 531, Quantum Electronics I.

Two of the four credits of PHYS 410 required for the BS degree in Engineering Physics can be satisfied by successfully completing A&EP/PHYS 330. The remaining two credits of PHYS 410 can then be satisfied by taking PHYS 400 for two credits, provided that the experiments completed in PHYS 400 do not overlap with those in A&EP/PHYS 330. (A list of experiments that are not appropriate will be prepared by the faculty and made available in the A&EP office.) If a student chooses this option, A&EP/PHYS 330 may also count as a technical elective, provided the remaining three technical electives are four credits each.

If a scientific computing course was not selected as an engineering distribution course, one of these technical electives may be needed to satisfy the computing applications requirement. For students going on to graduate school a third course in mathematics is recommended.

**Choosing elective courses.** A distinctive aspect of the Engineering Physics curriculum is the strong opportunity it provides students to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of a dual major or the development of a broad expertise in one or more of a number of advanced technical and scientific areas. With at least seven technical and approved electives in the sophomore, junior, and senior years, Engineering Physics majors are encouraged to work closely with their adviser to develop a coherent academic program in accordance with those goals. For those students who look toward an industrial career, the electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore advanced level and graduate courses, and to prepare themselves particularly well for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of Applied and Engineering Physics, Clark Hall. Students interested in these options are advised to consult with their EP adviser, a professor active in their area of interest, or with the associate director of the school, Professor W. Wise.

Electives need not be all formal course work; qualified students are encouraged to undertake independent study under the direction of a member of the faculty (A&EP 490). This may include research or design projects in areas in which faculty members are active.

The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

The Engineering Physics Program requires that a minimum GPA of 2.7 (B-) be attained in all physics and mathematics courses taken by a student before entering the Engineering Physics field unless approval is obtained from the A&EP associate director. To remain in good standing in the field, the engineering physics student is expected to pass every course for which he or she is registered, to earn a grade of C- or better in specifically required courses, and to attain each semester a grade-point average for that semester of at least 2.3.

**Engineering Physics Honors Program Eligibility**

The Bachelor of Science degree with honors will be conferred upon those students who, while completing the requirements for a bachelor's degree, have successfully completed the honors program in the Department of Engineering Physics and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA $\geq 3.5$.

**Content**

The student must

1. Complete at least eight credits of field approved electives at the 400-level or higher and receive a minimum grade of an A- in each of the courses taken to fulfill this eight-credit requirement. These eight credits are in addition to the credits obtained by completing the senior thesis or special project requirement as discussed in item 2.

2. Enroll in A&EP 490 or an equivalent course over two semesters for the purpose of completing an independent research project or senior thesis under the supervision of a Cornell engineering or science faculty member. A minimum enrollment is to be two credits in the first semester and four credits in the second. The level of work required for a successful completion of this project or thesis is to be consistent with the amount of academic credit granted.

**Timing**

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

**Procedures**

Before enrolling in A&EP 490, or the equivalent, the honoree candidate must submit a brief proposal outlining the topic and scope of the proposed project or thesis and a faculty supervisor's written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the A&EP Honors Committee and either approved or returned to the candidate to correct deficien-
cies in the proposal. The proposed research project or senior thesis is to consist of a research design or design project and must go beyond a literature search. The final steps in completing the honors project are a written and oral report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee.

Following the completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee, and at least one other departmental faculty member, along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor, following the oral presentation and after consultation with the chair of the Honors Committee. A minimum grade of A is necessary for successful completion of the honors requirement.

**Master of Engineering (Engineering Physics) Degree Program**

The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanotechnology and nanosciences, computational materials science, device physics, materials characterization, or software engineering. A wide latitude is allowed in the choice of the required design project.

One example of a specific area of study is solid-state physics and chemistry as applied to nanotechnology and nanosciences. Core courses in this specialty include the micro-characterization of materials (A&EP 661) and the micro-processing and microfabrication of materials (A&EP 662). The design project may focus on such areas as semiconductor materials, device physics, nanotechnology, or optoelectronics. Another area of study may be applied optics where core courses may be chosen from applied physics, electrical engineering, and physics.

Each individual program is planned by the student in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in engineering and physics usually seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. All students granted the degree will have demonstrated competence in an appropriate core of basic physics. If this has not been accomplished at the undergraduate level, subjects such as electricity and magnetism, or classical, quantum, and statistical mechanics should be included in the program.

The general requirement for the degree is a total of 30 credits for graduate-level courses or their equivalent, earned with a grade of C or better and distributed as follows:

1. a design project in applied science or engineering with a written final report (not less than 6 nor more than 12 credits)
2. an integrated program of graduate-level courses, as discussed below (17 to 23 credits)
3. a required special-topics seminar course (one credit)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. It's purpose is to provide an appropriate combination of physics and physics-related courses (applied mathematics, statistical mechanics, applied quantum mechanics) and engineering electives (such as courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level are acceptable for credit toward the degree; other graduate courses may be required as prerequisites but are not credited toward the degree.

Students interested in the M.Eng. (Engineering Physics) degree program should contact Professor Bruce Russel.

**APPLIED MATHEMATICS**

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research in a wide range of the mathematical sciences. For detailed information on opportunities for graduate study in applied mathematics, contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in application-oriented mathematics may select an appropriate program in the Department of Mathematics or one of the departments in the College of Engineering.

A list of selected graduate courses in applied mathematics may be found in the description of the Center for Applied Mathematics, in the section "Interdisciplinary Centers and Programs."

**CHEMICAL ENGINEERING**

**Bachelor of Science Curriculum**

The undergraduate field program in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Special programs in biochemical engineering and polymer sciences are available. Students who plan to enter the field program take CHEM 208 during the freshman year. The program for the last three years, for students who have taken an Introduction to Engineering course during the first year is as follows:

*The electives in semester seven and eight comprise six credits of field approved electives, and six credits of advanced CHEME electives. Advanced CHEME electives include any CHEME course 400 or higher level, except CHEME 490, 491, and 492.

| Approved electives include BIOMI 290, General Microbiology Lectures, BIOBM 330, 331, 332, and 333, Principles of Biochemistry; CEE 654, Aquatic Chemistry, CHEME 480, 188
Chemical Processing of Electronic Materials; CHEM 640, Polymeric Materials; FOOD 409, Food Chemistry; MS&E 206, Atomic and Molecular Structure of Matter; MS&E 300, Electrical, Optical, and Magnetic Properties of Materials; MS&E 541, Microprocessing of Materials; MS&E 531, Introduction to Ceramics; T&AM 310, Advanced Engineering Analysis I; any A&EP course numbered 333 or above; any CHEM course numbered 301 or above; any PHYS course numbered 300 or above.

**Master of Engineering (Chemical) Degree Program**

The professional master's degree, M.Eng. (Chemical), is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, mathematics, chemistry, physics, and business administration. Courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described in the college's introductory section.

Specific requirements include:

1. two courses in advanced chemical engineering fundamentals chosen from CHEM 711, 713, 731, 732, and 751
2. two courses in applied chemical engineering science chosen from CHEM 480, 520, 564, 690, 645, 656, and 661
3. a minimum of three credits of a design project, CHEM 565

Dean's certificate programs in Bioengineering, Engineering Management, Energy Engineering, and Manufacturing are available. A program offered jointly with the Food Science Department is also available, leading to both the Master of Engineering and the Master of Professional Studies degrees.

### CIVIL AND ENVIRONMENTAL ENGINEERING

Bachelor of Science Curriculum

The School of Civil and Environmental Engineering (CEE) offers an accredited undergraduate program in civil engineering and permits the students to pursue one of two options leading to the B.S. degree: civil engineering or environmental engineering. Within civil engineering, while it is not necessary to do so, students may concentrate in structural engineering, geotechnical engineering, fluid mechanics and hydrology, water resource systems, or transportation. The environmental engineering curriculum emphasizes study of environmental engineering, water resource systems, and fluid mechanics and hydrology. Sample curricula are available in the CEE Undergraduate Program Office, 221 Hollister Hall.

### Requirements for Admission to the Field:

Students planning to enter the field program in Civil and Environmental Engineering are required to complete the following courses before or during the first semester of the sophomore year with a grade of C- or better for the civil option, ENGRD 202, Mechanics of Solids, for the environmental option, either ENGRD 202, Mechanics of Solids or CHEM 208, General Chemistry. In addition, the field requires a cumulative grade point average of at least 2.0 both overall and in engineering and sciences courses.

### Recommended Engineering Distribution Courses:

Students in the environmental option are required to take ENGRD 202 (Mechanics of Solids), as an engineering distribution course. The second engineering distribution may be selected according to their interests, and the following engineering distribution courses are recommended: ENGRD 201 Introduction to the Physics and Chemistry of the Earth, ENGRD 219 Mass and Energy Balances, ENGRD 221 Thermodynamics, ENGRD 250 Engineering Applications in Biological Systems, BIO G 101 and 103 Biological Sciences Lecture and Laboratory, BIO G 105 Introduction to Biology, BIO G 107 General Biology, or CHEM 289 Physical Chemistry.

Recommended engineering distribution courses for students planning to enter the civil engineering option are:

ENGRD 261, Introduction to Mechanical Properties of Materials, for students interested in structural engineering or civil engineering materials;
ENGRD 201, Introduction to the Physics and Chemistry of the Earth, for students interested in geotechnical engineering;
ENGRD 221, Thermodynamics, for students interested in fluid mechanics and hydraulic/hydrology;
ENGRD 211, Computers and Programming, for students interested in transportation;
ENGRD 241, Engineering Computation,* for all students.

### Field Program:

#### Civil Engineering Option

For the field program in Civil Engineering, students may elect to substitute CHEM 208 for PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum.

**Core Courses**

ENGRD 203, Dynamics 3
ENGRD 241, Engineering Computation* 3
CEE 304, Uncertainty Analysis in Engineering 4
CEE 323, Engineering Economics and Management 3
CEE 331, Fluid Mechanics 4
CEE 341, Introduction to Geotechnical Engineering 4
CEE 351, Environmental Quality Engineering** 3
CEE 361, Introduction to Transportation Engineering* 3
CEE 371, Structural Behavior 4

### Additional requirements include a set of two field-approved electives and three design electives from an approved list of courses that is available in the CEE Undergraduate Program Office. In addition, students must complete one technical communications course from among the courses designated ENGR or approved communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective from a department or school other than Civil and Environmental Engineering.

*ENGR 241 can be used to satisfy both the computer application requirement and a field program requirement. If a student elects to use this course as a second distribution course, the student must take an additional field-approved elective to fulfill the core course requirements.

**ENGR 270 may be accepted (by petition) as a substitute for CEE 304 in the field program. But only if ENGR 270 is taken before entry into the field, or in some special cases where co-op or study abroad programs necessitate such a substitution.

### Environmental Engineering Option

These option requirements apply to all students in the Classes of 2002 and later. For the field program in Environmental Engineering, students must take CHEM 208 in place of PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum.

**Common Courses**

CEE 304, Uncertainty Analysis in Engineering† 4
CEE 323, Engineering Economics and Management 3
CEE 331, Fluid Mechanics 4
CEE 341, Introduction to Geotechnical Engineering 4
CEE 351, Environmental Quality Engineering 3
CEE 451, Microbiology for Environmental Engineering§ 3
CEE 452, Laboratory Research in Environmental Engineering 3
ABEN 475, Environmental Systems Analysis 3

Additional requirements include one field-approved elective and three design electives from an approved list of courses that is available in the CEE Undergraduate Program Office. In addition, students must complete one technical communications course from among the courses designated ENGR or approved communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective.

†The requirement for students prior to the Class of 2002 is two field-approved electives and no requirement for a core course in introductory biology.
ENGINEERING - 2000-2001

$Students planning graduate level study in environmental engineering may take BIOM 290 Introduction to Microbiology in place of CEE 453. These students should also take CHEM 257 or CHEM 357 Introduction to Organic Chemistry as an approved elective.

Civil and Environmental Engineering Honors Program

Eligibility
The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Civil and Environmental Engineering and have been recommended for the degree by the faculty of the school. An honors program student must enter with and maintain a cumulative GPA ≥ 3.5.

Content
A CEE honors program shall consist of at least nine credits beyond the minimum required for graduation in CEE. These nine credits shall be drawn from one or more of the following components:

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 400: Senior Honors Thesis (1-6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component.
2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering (i.e., ENGRG 470: Peer Teaching in Engineering or CEE 401: Undergraduate Teaching in CEE (1-3 credits per/semester).
3. Advanced or graduate courses at the 500-level or above.

The minimum number of credits in any component included in a program should be two. No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Timing
All interested students must apply no later than the beginning of the first semester of their senior year. Students are encouraged to apply as early as the first semester of their junior year. All honors program students must be in the program for at least two semesters prior to graduation.

Procedures
Each applicant to the CEE honors program must have a faculty adviser or faculty mentor to supervise the student's individual program. The application to the program shall be a letter from the student describing the specific proposed honors program and include the explicit proposal of the faculty adviser and the honors adviser. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the associate director for all but unusual proposals.

Engineering Minor Programs
The School of Civil and Environmental Engineering currently offers three engineering minor programs: civil infrastructure, engineering management, and environmental engineering (offered in cooperation with the Department of Agricultural and Biological Engineering). Descriptions and requirements for each program follow.

Minor in Civil Infrastructure

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the civil infrastructure minor: ABEN, A&EP, CHHEME, COM S, EAS, ECE, M&AE, M&S&E, OR&IE.

The minor in civil infrastructure is intended to introduce engineering undergraduates to the engineering methodologies of mechanics, materials, analysis, design, and construction and to show how these are used in solving problems in the development, maintenance, and operation of the built environment which is vital for any modern economy.

The requirements for the civil infrastructure minor are outlined below. For further details consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. Required Course: ENGRD 202 Mechanics of Solids
II. Additional Courses: choose any 5 (groupings are for information only)*

Geotechnical Engineering
CEE 341 Introduction to Geotechnical Engineering
CEE 640 Foundation Engineering
CEE 641 Retaining Structures and Slopes
CEE 644 Environmental Applications of Geotechnical Engineering

Structural Engineering
CEE 371 Structural Behavior
CEE 372 Structural Analysis
CEE 473 Design of Concrete Structures
CEE 474 Design of Steel Structures
CEE 476 Physical and Computational Material Simulation
ABEN 481 Design of Wood Structures
CEE 672 Fundamentals of Structural Mechanics
CEE 673 Advanced Structural Analysis

Other Related Courses
CEE 332 Hydraulic Engineering
CEE 361 Introduction to Transportation Engineering
CEE 595 Construction Planning and Operations

* Other CEE courses approved by petition in advance.

Academic Standards: a letter grade of C or better for each course in the minor.

Minor in Environmental Engineering
(Offered in cooperation with the Department of Agricultural and Biological Engineering)

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: A&EP, CHHEME, COM S, EAS, ECE, M&AE, M&S&E, OR&IE.

This minor focuses on giving engineering students a basic understanding of environmental economics, accounting, statistics, project management methods, and analysis tools necessary to manage technical operations and projects effectively. The minor provides an important set of collateral skills for students in any engineering discipline.

The requirements for the environmental management minor are outlined below. For further details, consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. Required Courses (3):
CEE 304† Uncertainty Analysis in Engineering
or ENGRD 270 Basic Engineering Probability and Statistics
or ELE 310 Introduction to Probability and Random Signals
CEE 323 Engineering Economics and Management
OR&IE 350 Financial and Managerial Accounting

II. Additional Courses—choose any 3*
CEE 490 Management Practice in Project Engineering
CEE 593 Management Engineering Methods I: Data, Information, and Modeling
CEE 594 Engineering Management Methods II: Managing Uncertain Systems
CEE 595 Construction Planning and Operations
CEE 597 Risk Analysis and Management
NBA 401 Entrepreneurship for Engineers

*Other courses approved by permission in advance.
†&T&M 310 may not be substituted for CEE 304.

Academic Standards: a letter grade of C or better for each course in the minor.

Minor in Engineering Management
(Offered in cooperation with the Department of Agricultural and Biological Engineering)

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: A&EP, CHHEME, COM S, EAS, ECE, M&AE, M&S&E, OR&IE.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation's resources, the air in our cities, and use and quality of water in our aquifers, streams, estuaries and coastal areas. This minor encourages engineering
students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

The requirements for the environmental engineering minor are outlined below. For further details consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall, or the Agricultural and Biological Engineering Undergraduate Programs Office, 207 Riley-Robb Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

II. Students must select courses from the following group listings, with at least one course from each group.

Group A. Environmental Engineering Processes:

CEE 351 Environmental Quality Engineering
CEE 352 Water Supply Engineering
CEE 451 Microbiology for Environmental Engineering
CEE 453 Laboratory Research in Environmental Engineering
ABEN 476 Solid Waste Engineering
ABEN 478 Ecological Engineering
ABEN 671 Analysis of the Flow of Water and Chemicals in Soils

Group B. Environmental Systems:

ENGRI 113* Introduction to Environmental Systems (May count only if taken before the student's junior year.)
ABEN 475 Environmental Systems Analysis
CEE 529 Water and Environmental Resources Problems and Policies
CEE 597 Risk Analysis and Management
CEE 623 Environmental Quality Systems Engineering
ABEN 678 Nonpoint Source Models

Group C. Hydraulics, Hydrology, and Environmental Fluid Mechanics:

CEE 331 Fluid Mechanics (CHEM E 323 or MERA E 323 may be substituted for CEE 331)
CEE 332 Hydraulic Engineering
ABEN 471 Hydrology and the Environment
CEE 431/ABEN 471 Geohydrology
CEE 432 Hydrology
CEE 435 Coastal Engineering
CEE 437 Experimental Methods in Fluid Dynamics

ABEN 473 Watershed Engineering
ABEN 474 Drainage and Irrigation Systems
CEE 633 Flow in Porous Media and Groundwater
CEE 655 Transport, Mixing, and Transformation in the Environment
ABEN 671 Analysis of the Flow of Water and Chemicals in Soils
ABEN 672 Drainage

Academic Standards: A letter grade of C- or better in each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Master of Engineering (Civil) Degree Program

The M.Eng. (Civil) degree program is a 30-credit (usually 10-course) curriculum designed to prepare students for professional practice. There are two options in this program: one in civil and environmental engineering design and one in engineering management. Both options require a broad-based background in an engineering field. Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering automatically satisfy this requirement. Those without such preparation will require course work beyond the graduate program's 30-credit minimum to fulfill the engineering preparation requirement. Both options also require one course in professional (design-option) or managerial (management-option) practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, with some options indicating an intensive, full-time session between semesters. The general degree requirements and admissions information are described above in the section entitled "Master of Engineering Degree Programs." Each student's program of study is designed individually in consultation with an academic adviser and then submitted to the school's Professional Degree Committee for approval.

For the M.Eng. (Civil) program in civil and environmental engineering design options, the requirements are:

1) Three courses, one in professional engineering practice (CEE 590) and a two-course design project (CEE 501 and 502).
2) Specialization in a major concentration area—three to five courses in either environmental engineering, environmental fluid mechanics/hydrology, geotechnical engineering, structural engineering, transportation management, or water resources and environmental systems engineering.
3) Technical electives.
4) Study in a related area or areas.
5) Three courses: Project Management (CEE 590), Engineering Management Methods (CEE 593 and 594), and the Management Project (CEE 591 and 592).

1) Five courses: Project Management (CEE 590), Engineering Management Methods (CEE 593 and 594), and the Management Project (CEE 591 and 592).
2) One course in finance, accounting, or engineering economics, as appropriate given a student's background.
3) One course in individual and/or organizational behavior from a recommended list.
4) Three courses from a disciplinary or functional specialization, subject to adviser's approval.

The School of Civil and Environmental Engineering cooperates with the the Johnson Graduate School of Management in two joint programs leading to both Master of Engineering and Master of Business Administration degrees. See the introductory section under College of Engineering for details.

Computer Science

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.

For the most current and accurate details, visit our web site at www.cs.cornell.edu/ugrad

Bachelor of Science Curriculum

The Department of Computer Science meets the University requirement for the bachelor of science degree. It consists of 120 credits over four years and includes some or all of the following components: liberal arts requirements, computer science courses, and related courses in such areas as mathematics, electrical engineering, and business administration. Computer Science majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:

• four semesters of calculus (MATH 191–192–293–294 or 111–122 (or 112)–221–222)
• two semesters of introductory computer programming (COM S 100 and ENGRD 211)
• a seven-course computer science core (ENGRD 222, COM S 280, 314, 414, and 482)
• two 400+ computer science electives, totaling at least six credits
• a computer science project course (COM S 413, 415, 418, 433, 473, 501, 514, 519, and 664)
• a mathematical elective course (ORIE 270, MATH 300+, TRAM 300+; etc.)
• two 300+ courses (field approved electives) that are technical in nature and total at least six credits
• a three-course specialization in a topic area other than computer science. These courses must be numbered 300-level or greater.
Note: All of the field electives described above must be courses of three or more credit hours, with the exception of the COM S project course, which may be two credits. The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study and employment in any technical area and any professional area such as business, law, or medicine. With the advisor, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of liberal education.

**Computer Science Honors Program**

**Eligibility**
The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have:

- qualified for Latin honors in the College of Engineering (basically, a cumulative GPA ≥ 3.5)
- at least eight credits of COM S course work at or above the 500-level
- at least six credits of COM S 490 (independent research) spread over two semesters, with a grade of A- or better each term.

See the COM S undergraduate web site for more information on eligibility: www.cs.cornell.edu/ugrad

**Content**
Honors courses may not be used to satisfy the COM S 400+ elective requirement, the COM S project requirement, the math or field approved electives, or the specialization.

**Timing**
Honors' determinations are made during the senior year. Students wanting to be considered for honors should notify the Undergraduate Office in the Department of Computer Science via electronic mail at the following address: <ugrad@cs.cornell.edu>. The subject line for this message should read "HONORS TRACK." Related questions may be addressed to the graduate e-mail alias, or candidates can call or stop by 303 Upson Hall, 255-0982.

**Preparation**
Arrangements for doing COM S 490 research should be made directly with faculty members in the department. Students are encouraged to discuss potential contacts with their advisers and to browse the department's web page at www.cs.cornell.edu for specific leads on research opportunities.

The Department of Computer Science reserves the right to change to the honors program requirements at any time. Generally speaking, all members of the same graduating class in COM S will be subject to the same honors criteria.

**Master of Engineering (Computer Science) Degree Program**
The M.Eng. program in computer science is a one-year program that can be started in either the fall or spring semester. This program is designed to develop expertise in system design and implementation in many areas of computer science, including computer networks, Internet architecture, fault-tolerant and secure systems, distributed and parallel computing, high performance computer architecture, databases and data mining, multimedia systems, computer vision, computational tools for finance, computational biology (including genomics), software engineering, programming environments, and artificial intelligence.

A typical program in computer science includes several upper-division and graduate courses and a faculty-supervised project. The course and project requirements are flexible and allow students to build up a program that closely matches their interests. In particular, slightly under half the courses may be taken outside the computer science department (for example, many students choose to take several business administration courses). Project work, which may be done individually or in a small group, can often be associated with ongoing research in the Department of Computer Science in one of the areas listed above.

Cornell students may use the early admission option to effectively co-register for the M.Eng. program while completing the undergraduate degree. This option can be started in either the fall or spring semester. It applies to students who have at least one credit and no more than eight credits remaining to complete their undergraduate program. All remaining undergraduate degree requirements must be satisfied by the end of the first semester the student is enrolled in the M.Eng. "early admit" program.

For more information about the M.Eng. program in computer science and the early admission option for Cornell seniors, please consult our web page at: www.cs.cornell.edu/grad/eng

**Cooperative Program with the Johnson Graduate School of Management**
Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (Computer Science), and M.B.A. degrees. This program, which is sponsored jointly by the College of Engineering and the Johnson Graduate School of Management, enables students to study several subjects required for the M.B.A. degree as part of their undergraduate curriculum. Planning must begin early, however, if all requirements are to be completed on schedule.

For further details and assistance in planning a curriculum, students can consult with their adviser, the undergraduate office in 303 Upson Hall, or the Johnson School directly.

**Atmospheric Science Option**
Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes, and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. The atmospheric science option satisfies both the curricular guidelines of the American Meteorological Society and the educational requirements of the National Weather Service for employment as a meteorologist, which also qualifies graduates for positions in private-sector forecasting and environmental consulting firms. The option also provides excellent preparation for graduate work in atmospheric science and related fields.

Students following the atmospheric science option are required to take ENGRD 270 as the engineering distribution field course. The field program includes required introductory courses in atmospheric science (EAS 131) and EAS 250 (Instrumentation and Observations). Many of the upper division field courses require EAS 341 (Atmospheric Thermodynamics) and EAS 342 (Atmospheric Dynamics) as prerequisites, which are normally taken in the junior year. The additional required field program courses are EAS 351 (Climate Dynamics), EAS 352 (Synoptic Meteorology I), EAS 451 (Synoptic Meteorology II), EAS 435 (Statistical Methods in Meteorology), and EAS 447 (Physical Meteorology). Field-approved electives may be chosen from other EAS courses or from economics and hydrostatics) and EAS 342 (Atmospheric Dynamics) as prerequisites, which are normally taken in the junior year. The additional required field program courses are EAS 351 (Climate Dynamics), EAS 352 (Synoptic Meteorology I), EAS 451 (Synoptic Meteorology II), EAS 435 (Statistical Methods in Meteorology), and EAS 447 (Physical Meteorology). Field-approved electives may be chosen from other EAS courses or from economics and hydrostatics) and EAS 342 (Atmospheric Dynamics) as prerequisites, which are normally taken in the junior year. The additional required field program courses are EAS 351 (Climate Dynamics), EAS 352 (Synoptic Meteorology I), EAS 451 (Synoptic Meteorology II), EAS 435 (Statistical Methods in Meteorology), and EAS 447 (Physical Meteorology). Field-approved electives may be chosen from other EAS courses or from economics and hydrostatics) and EAS 342 (Atmospheric Dynamics) as prerequisites, which are normally taken in the junior year. The additional required field program courses are EAS 351 (Climate Dynamics), EAS 352 (Synoptic Meteorology I), EAS 451 (Synoptic Meteorology II), EAS 435 (Statistical Methods in Meteorology), and EAS 447 (Physical Meteorology). Field-approved electives may be chosen from other EAS courses or from economics and hydrostatics) and EAS 342 (Atmospheric Dynamics) as prerequisites, which are normally taken in the junior year. The additional required field program courses are EAS 351 (Climate Dynamics), EAS 352 (Synoptic Meteorology I), EAS 451 (Synoptic Meteorology II), EAS 435 (Statistical Methods in Meteorology), and EAS 447 (Physical Meteorology). Field-approved electives may be chosen from other EAS courses or from

**EARTH AND ATMOSPHERIC SCIENCES**
(Formerly the Departments of Geological Sciences and part of Soil, Crop, and Atmospheric Sciences)

B. L. Jacks, chair; S. J. Riha, associate chair; Directors of Undergraduate Studies: K. H. Cook (Science of Earth Systems), R. W. Kay (Geological Sciences), and D. S. Wilks (Atmospheric Science).

**Bachelor of Science Curriculum**
We live on a planet with finite resources and a finite capacity to recover quickly from human-induced environmental stresses. It is also a powerful planet, with geologic hazards such as earthquakes, hurricanes, and volcanic eruptions that alter the course of history with little prior warning. As the human population grows, understanding the earth and its resources becomes progressively more important for both future policymakers and ordinary citizens. Because the human need to understand the earth is so pervasive, we provide our students with three tracks covering the spectrum of modern earth sciences.

The Department of Earth and Atmospheric Sciences offers an undergraduate engineering program which permits students to pursue one of three options leading to a B.S. degree in geological sciences: the geoscience option, the atmospheric science option, and the science of earth systems (SES) option. The geoscience option stresses structure, composition, and evolution of our planet; the atmospheric science option covers the planetary processes producing weather and climate; and the SES option is concerned with processes on and near the earth's surface where the interactions of water, life, rock, and air produce our planetary environment. An engineering minor is available in one or a combination of these programs.
selected upper-division courses offered in other departments.

Geoscience Option

The geoscience option reveals Earth’s turbulent history from the formation of our solar system to the plate tectonic cycles that dominate Earth’s present. This history is highlighted by the co-evolution of life and the Earth system—from the origin of life to the modern inter-glacial phase during which our species has so proliferated. Topics of study also include the fundamental processes responsible for earthquakes, volcanic eruptions, and mountain building. The geoscience option prepares students for advanced study in geology, geophysics, geochemistry, and geobiology, and careers in environmental and petroleum exploration or environmental geology. Alternatively, it is a valuable major for a pre-law or pre-med program or in preparation for a career in K-12 education.

The geoscience option stresses a balanced overview of geology with considerable flexibility and a degree of specialization achieved by careful selection of field-approved electives. Students are required to take ENG RD EAS 201 as an engineering distribution course. For students interested in geobiology or paleontology, BIO G 101/103-102/104 (or BIO G 109-110) are recommended. CHEM 208 may be substituted for PHYS 214.

The geoscience option requires the following courses: the introductory outdoor field course; EAS 210, and the five core courses; EAS 326, 355, 356, 375, and 379. Two additional EAS field-approved courses and at least one field-approved elective must be EAS 300 through 600-level courses. The core courses may be taken in any reasonable sequence; except that EAS 355, which is offered in the fall, should be taken before EAS 356, which is offered in the spring. EAS 326, 355, 356, and 375 should be taken relatively early in the major program.

In addition, a requirement for an advanced outdoor field experience may be met by completing one of the following four-credit options: (a) EAS 417 (Field Mapping) (3 credits), EAS 418, and EAS 321 (3 credits). Students who want a more general background or want to remain uncommitted with regard to specialty must choose at least two of their field-approved electives from the same field. The field-approved electives outside the field may be chosen from offerings in other science or engineering fields or the liberal arts, but should be at the 300-level or above. Students may request substitution of EAS 491 and 492, Undergraduate Research, for a fourth-year field-approved elective if not if it is being used to fulfill the outdoor field requirement.

In addition to coursework, students learn by involvement in research projects. Facilities include equipment for processing seismic signals and digital images of the earth’s surface, instruments for highly precise isotope and element analyses, and extensive libraries of earthquake records, satellite images, core analysis, exploration seismic records. High-pressure, high-temperature mineral physics research uses the diamond anvil cell and the Cornell High Energy Synchrotron Source (CHESS). 

Undergraduates may be faculty members and graduate students in Argentina, British Columbia, the Aleutian Islands, Scotland, Switzerland, Tibet, and Barbados. Undergraduates are encouraged to participate in research activities, frequently as paid assistants.

Science of Earth Systems (SES) Option

The science of earth systems (SES) option provides an integrated view of Earth processes critical to the understanding of our environment. This scientific understanding is the primary foundation used to determine to what degree human societies can modify or adapt to future change. The SES option is for students interested in careers and/or graduate study in any of the earth system sciences or a future in environmental law, environmental engineering, science teaching, or environmental public policy. The SES option enables students in the College of Engineering to take part in the multi-disciplinary, intercollege program in the Science of Earth Systems. Collaborations with other departments provide breadth and depth to the program.

The SES option emphasizes a strong preparation in basic mathematics and sciences and an integrated approach to the study of the Earth system including the lithosphere, biosphere, hydrosphere, and atmosphere.

Students are required to take a second semester of a core set of three lower-division core courses: EAS 321 and 343, and (c) EAS 411-412 (Undergraduate Research, two credits each) with a significant component of field work; or (d) an approved outdoor field course taught by another college or university (four-credit minimum).

A selection of field-approved electives may provide specializations in geophysics, geochemistry (including petroleum and mineralogy), geobiology (paleontology), and geology applied to mineral and petroleum industries, environmental problems, hydrology, and civil engineering. Students intending to specialize in economic geology or pursue careers in the mining industries or mineral exploration should consider including economics courses among their liberal studies distribution courses. Students who want a more general background or want to remain uncommitted with regard to specialty must choose at least two of their field-approved electives from the same field. The field-approved electives outside the field may be non-EAS courses. The three SES core courses are:

- EAS 302 Evolution of the Earth System—Spring, 4 credits
- EAS 321 Biogeochemistry (also NTRES 321)—Fall, 4 credits
- EAS 351 Climate Dynamics (also ASTRO 351)—Fall, 4 credits

Areas of specialization include (but are not limited to) the following:

- Biogeochemistry
- Climate dynamics
- Ecological systems
- Environmental biophysics
- Environmental geology
- Hydrological sciences
- Soil science
- Ocean sciences

In addition to faculty in or associated with the Department of Earth and Atmospheric Sciences, faculty currently associated with the SES program include the following: W. Brutsaert (CEE); P. Gierasch (ASTRO); L. Hedlin (EEB); R. Howarth (EEB, EAS); J.-Y. Parlane (ABEN); J. Yavit (NTRES).

Earth and Atmospheric Science Honors Program

Eligibility

The Bachelor of Science degree (in geological sciences) with honors will be granted to students who, in addition to having completed the requirements for a bachelor’s degree, have satisfactorily completed the honors program in Earth and Atmospheric Sciences and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA ≥ 3.5.

Content

In addition to the minimum requirements, a student must

1. take at least nine credits above the minimum required for graduating and approved by the upperclass adviser;
2. have a written proposal of the honors project accepted by his or her faculty adviser and the director of undergraduate studies;
3. complete an honors thesis involving research (EAS 491-492 or 499, two or more credits each) of breadth, depth, and quality.

Timing

A student interested in completing an honors thesis must, by the beginning of the seventh semester, have a written proposal of the honors project accepted by the student’s adviser and the director of undergraduate studies.

Procedures

Each applicant to the Earth and Atmospheric Sciences honors program must have a faculty adviser to supervise the honors thesis research. Written approval by the faculty member who will direct the research is required. After the college verifies the student’s grade-point average, the student will be officially enrolled in the honors program.
Minor in Geological Sciences

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the Geological Sciences minor: ABEN, A&EP, CEE, CHEM, COM S, ECE, M&AE, MS&E, OR&IE.

Whereas many engineering students will encounter and have to understand the natural operating systems of Earth in their professions, the tools and techniques used by earth scientists to understand these solid and fluid systems over the widest scales of space and time are of use to a wide cross-section of engineering students. This minor is designed to give a flexible set of options for students looking to complement training in their major field with a core education in Geological Sciences.

The requirements for the Geological Sciences minor are outlined below. For further details consult the Undergraduate Programs Office, 2122 Snee Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. Choose one or two of these three courses:
   ENGRD 201 Introduction to the Physics and Chemistry of the Earth
   EAS 210 Introduction to Field Methods in Geological Sciences
   EAS 203 Natural Hazards and the Science of Complexity

II. Choose at least two courses from the following list of core courses:
   EAS 302 Evolution of the Earth System
   EAS 321 Introduction to Biogeochemistry
   EAS 326 Structural Geology
   EAS 355 Mineralogy
   EAS 356 Petrology and Geochemistry
   EAS 375 Sedimentology and Stratigraphy
   EAS 388 Geophysics and Geoelectronics

III. To complete the minor, these three to four courses are to be supplemented with two to three additional EAS courses at the 300-level or higher. These may include, for example, additional courses from the above list of core courses, undergraduate research courses, and outdoor field courses.

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Electrical and Computer Engineering

Bachelor of Science Curriculum

The Department of Electrical and Computer Engineering offers an undergraduate field program which leads to a B.S. degree in electrical engineering. The curriculum provides a foundation which reflects the broad scope of this engineering discipline.

Concentrations include computer engineering and digital systems; control systems; electronic circuit design; information, communication, and decision theory; microwave electronics; plasma physics; power and energy systems; quantum and optical electronics; radio and atmospheric and space physics; and semiconductor devices and applications.

Electrical Engineering Field Program

Students planning to enter the field program in Electrical Engineering must take ENGRD 231 as an engineering distribution course. The fall of the sophomore year is the preferred term for ENGRD 231/ELE E 232 for students without advanced standing in mathematics. Electrical engineering students with an interest in computer engineering are encouraged to take ENGRD 211 as an engineering distribution course prior to entry into the field program. In addition, the field program normally begins in the spring of the sophomore year, as shown below. All of these courses (except ELE E 210 and ENGRD 231) are taught only once each academic year, either spring or fall, as indicated in the course descriptions.

Course  Credits
Field Required Courses
ELE E 210, Introduction to Circuits for Electrical and Computer Engineers  3
ELE E 215, Introductory Integrated Circuits Laboratory  1
ELE E 232, Digital Systems Design Laboratory  1
ELE E 301, Signals and Systems I  4
ELE E 303, Electromagnetic Fields and Waves  4
ELE E 315, Electronic Circuit Design  4
Field Approved Electives (36-credit minimum in the following categories)
Advanced Electrical and Computer Engineering Electives (8 courses)  24 minimum
Outside ECE Electives (3 courses)  9 minimum
Total minimum field credits  53

ELE E 310 can be taken in place of ENGRD 270 or TAM 310 to satisfy the college application of probability and statistics requirement.

These electives must include three 400-level electrical and computer engineering laboratory courses and at least two additional courses at the 400-level or above. The remaining electives may not include independent project courses, such as ELE E 391, 392, 491, or 492, and must be at the 300-level or above in Electrical and Computer Engineering.

Other courses that meet the laboratory requirement are described in the online ECE Handbook (The list is dynamic and changes frequently. Always refer to the latest information in the ECE Web Handbook.)

Students planning to enter the honors program (see Electrical and Computer Engineering Web Handbook for details).

Undergraduate specialization is achieved through the various electrical and computer engineering elective courses, as well as other courses in related technical fields within engineering, mathematics, the physical sciences, and the analytical biological sciences. The School of Electrical and Computer Engineering offers more than 30 courses that are commonly taken as electives by undergraduates.

An electrical and computer engineering honors program also exists for those students who so desire and meet the program entrance requirements. The honors program requires an additional senior ELE E course, a required senior year directed reading course, or a design project, and completion of the honors seminar. Details are available via the electrical and computer engineering homepage located through the web at www.ee.cornell.edu/.

All students majoring in electrical engineering are expected to meet the following academic standards.

1. Students must achieve a grade-point average of at least 2.3 every semester.
2. No course with a grade of less than C- may be used to satisfy degree requirements in the field program or serve as a prerequisite for a subsequent electrical and computer engineering course.
3. Students must complete satisfactorily ELE E 210, ELE E 215, MATH 294, and PHYS 214 by the end of the sophomore year in the field program of Electrical Engineering and make adequate progress toward the degree in subsequent semesters.
4. Honors program students must meet the GPA and progress requirements specified in the Electrical and Computer Engineering Web Handbook to remain active participants.

Electrical and Computer Engineering Honors Program

Eligibility, Entry, and Continuation
A student must apply to enter the ECE Honors Program and may do so as early as the beginning of the fifth semester or as late as the end of the sixth semester. A student must have a cumulative GPA of at least 3.5 to apply for entry. A student in the honors program whose cumulative GPA falls below 3.5 at the end of any semester will be dropped from the honors program by College of Engineering regulations. There is an additional requirement (see Honors Seminar) for entry into the program after the end of the fifth semester.
Honors Seminar

Any student in the honors program is required to take (or to have taken) an honors seminar during his or her junior year. The Honors Seminar is a two-credit semester-course (offered spring only) consisting of a weekly series of introductory research lectures by electrical and computer engineering faculty members. Each honors seminar enrollee will be required to write a number of short papers on topics covered in the lecture series. Many electrical and computer engineering faculty members will give a lecture or short series of lectures as part of the Honors Seminar.

Students in the honors program and students with a cumulative GPA of at least 3.5 who are considering entering the honors program must receive letter grades for the Honors Seminar.

Honors Project

Any student in the honors program is required to accumulate at least three credit hours from a senior year honors project consisting either of a design, ENGRD 470, or directed reading. All honors projects emphasize the development of communication skills. Design and reading-oriented honors projects require explicitly a written submission summarizing and concluding the project.

Additional Coursework

Any student in the honors program is required to take at least three credit hours of advanced (senior level) ECE coursework that has at least a 3.00-level prerequisite. These credit hours are in addition to any credit hours required as part of the ELE E field program.

The program described above requires honors program participants to amass at least nine credit hours over and above the 128 credit hours required for a B.S. degree, thus an honors degree requires a minimum of 137 credit hours.

Minor in Electrical and Computer Engineering

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the electrical and computer engineering minor: ABEN, A&EP, CEE, CHEM, COM S, EAS, M&AE, MS&E*, OR&IE. (*MS&E students planning to pursue this minor must receive prior written approval from both MS&E and ECE, via petition.)

The School of Electrical and Computer Engineering offers a minor to students who wish to complement their major field by obtaining a background in electrical and computer engineering. The minor offers the opportunity to study analog and digital circuits, signals and systems, electromagnetic fields, and additionally specialize at higher levels in one of several different areas such as circuit design, electronic devices, communications, computer engineering, networks, or space engineering.

The requirements for the electrical and computer engineering minor are outlined below. For further details consult the Electrical and Computer Engineering Undergraduate Programs Office, 222 Phillips Hall.

Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

1. Required Courses:
   - ELE E 210 Introduction to Circuits for Electrical and Computer Engineers
   - ELE E 215 Introductory Integrated Circuits Laboratory (ELE E 210 and 215 count as one course)
   - ENGRD 231 Introduction to Digital Systems
   - ELE E 232 Digital Systems Design Laboratory (ENGRD 231 and 232 count as one course)

2. Two of the following:
   - ELE E 301 Signals and Systems I
   - ELE E 303 Electromagnetic Fields and Waves
   - ELE E 315 Electronic Circuit Design

3. One other ELE E course at the 300 level or above (3 credit minimum)

4. One other ELE E course at the 400 level or above (3 credit minimum)

5. Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.3 or better for all courses in the minor.

6. Honors Project

The requirements for a Bachelor of Science degree in materials science and engineering are:

1. Completion of the common engineering curriculum including liberal studies electives
2. ENGRD 261, Introduction to Mechanical Properties of Materials
3. Completion of 12 required field courses:
   - ENGRD 202 Mechanics of Solids
   - MS&E 204 Materials Chemistry
   - MS&E 206 Atomic and Molecular Structure of Matter
   - MS&E 302 Mechanical Properties of Materials, Processing, and Design
   - MS&E 309 Thermodynamics of Condensed Systems
   - MS&E 304 Kinetics, Diffusion, and Phase Transformations
   - MS&E 305 Electronic Structure of Matter
   - MS&E 306 Electronic, Optical and Magnetic Properties of Materials
   - MS&E 307 Materials Design Concepts I
   - MS&E 403/405 Senior Materials Lab I or Senior Thesis I
   - MS&E 404/406 Senior Materials Lab II or Senior Thesis II
   - MS&E 407 Materials Design Concepts II

4. Depth in one specialization developed through three technical electives
5. Breadth developed through two technical electives in different specialization areas
6. One of the depth or breadth electives must be taken from outside MS&E
1. Maintain a 2.0 term average for all semesters.
2. Maintain an average of 2.3, with no grade below C, in the department's core curriculum.
3. Complete ENGRD 261 with a minimum of C prior to affiliation.

The department's core curriculum consists of ENGRD 261, the 12 required field courses, and the five technical electives constituting the depth and breadth requirements.

An attractive and very challenging program combines the materials science and engineering curriculum with that of either electrical engineering or mechanical engineering, leading to a double major. Curricula leading to the double-major degree must be approved by both of the departments involved and students are urged to plan such curricula as early as possible to avoid scheduling conflicts.
The standard concentrations are:

- related courses to form a custom concentration.

At least three of the courses must be upper-class offerings. However, two must satisfy a concentration chosen by the student's adviser. The upper-level program includes five field approved electives. Using these five courses, students delay use of approved electives until after term three. The faculty encourages students to consider the following as possible approved electives:

- any engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in informational science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (economics, financial, legal, etc.)
- courses in organizational behavior
- courses in cognitive sciences.

Recommendation on humanities/social sciences electives

Students are encouraged to build a program that includes studies in:

- history of technology
- societal impacts of technology
- foreign languages
- communications
- political science

Biomechanics M&amp;AE 463, 464, 565

Of the three upper-level M&amp;AE courses, one must be an approved design elective. The design offerings may change from year to year.

Typically this list includes M&amp;AE 401, 412, 470, 479, and 486.

Note that the design elective must be taken during the senior year. Note that a single course may satisfy both the design and concentration requirements, in which case the third course could be any upper level M&amp;AE course.

One of the courses must be an approved upper-level mathematics course taken after MATH 294. The course must include some material on statistics. Currently, the approved courses are T&amp;AM 310 and OR&amp;IE 270.

One of the field approved electives can be viewed as a technical elective and may be any course at an appropriate level, chosen from engineering, mathematics, or science (physics, chemistry, or biological sciences). An appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Note that courses in economics, business, and organizational behavior are not accepted. Advisers may approve such courses as approved electives.

Approved Electives

To maximize flexibility (i.e., the option for study abroad, COOP, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of approved electives until after term three. The faculty encourages students to consider the following as possible approved electives:

- any engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in informational science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (economics, financial, legal, etc.)
- courses in organizational behavior
- courses in cognitive sciences.

Recommendation on humanities/social sciences electives

Students are encouraged to build a program that includes studies in:

- history of technology
- societal impacts of technology
- history
- foreign languages
- ethics
- communications
- political science

Minor in Mechanical Engineering

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the mechanical engineering minor: ABEN, AKRP, CHEM, CEE, COM S, EAS, ECE, MS&amp;E, OR&amp;IE.

Requirements

To complete the minor, the student must choose at least six courses (minimum of 18 credits) from among the following: M&amp;AE courses at the 200-level or above; ENGRD 202, Mechanics of Solids; ENGRD 203, Dynamics.

Rules for selecting Courses:

1. The selection of courses must satisfy the following three requirements.
   a) At least two courses must be numbered above 300.
   b) At least one course must be either (1) numbered above 500 or (2) numbered above 520 and have as its prerequisite ENGRD 202, ENGRD 203, or an M&amp;AE course.
   c) Each course must be worth at least three credits.

2. Substitutions of courses other than M&amp;AE (or ENGRD 202 and 203) will not be accepted as part of the M&amp;AE minor. However, some instructors of M&amp;AE courses will accept non-M&amp;AE courses as substitute prerequisites for their courses, or may choose to waive prerequisites in some circumstances. Students should check with the course instructor.
Academic Standards: A letter grade of C- or better for each course in the minor. Examples of typical minor programs are as follows:

Typical focus in Fluids/Thermal Systems:
The following four courses:
- ENGRD 202 Mechanics of Solids
- ENGRD 203 Dynamics
- ENGR 221 Thermodynamics
- MAEE 323 Introductory Fluid Mechanics

Plus two of the following, of which at least one course must satisfy requirement 1b:
- MAEE 305 Introduction to Aeronautics
- MAEE 324 Heat Transfer
- MAEE 423 Intermediate Fluid Dynamics
- MAEE 427 Fluids/Heat Transfer Laboratory
- MAEE 449 Combustion Engines
- MAEE 490 Special Investigations in Mechanical and Aerospace Engineering
- MAEE 491 Design Projects in Mechanical and Aerospace Engineering
- M&AE 506 Aerospace Propulsion Systems
- M&AE 507 Dynamics of Flight Vehicles
- M&AE 543 Combustion Processes

Typical focus in Mechanical Systems/Design:
The following two courses:
- ENGRD 202 Mechanics of Solids
- ENGRD 203 Dynamics

One or more of the following:
- M&AE 212 Mechanical Properties and Processing of Engineering Materials
- M&AE 225 Mechanical Design and Synthesis
- M&AE 325 Mechanical Design and Analysis
- MAEE 326 System Dynamics

The remainder from this list, of which at least one course must satisfy requirement 1b:
- MAEE 306 Spacecraft Engineering
- MAEE 386/386 Automotive Engineering
- MAEE 412 Smash and Crash: Mechanics of Large Deformations
- MAEE 417 Introduction to Robotics: Dynamics, Control, Design
- MAEE 464 Design for Manufacture
- MAEE 478 Feedback Control Systems
- MAEE 490 Special Investigations in Mechanical and Aerospace Engineering
- MAEE 491 Design Projects in Mechanical and Aerospace Engineering
- M&AE 514 Design for Manufacture and Assembly
- MAEE 565 Biomechanical Systems—Analysis and Design
- MAEE 570 Applied Dynamics

Preparation in Aerospace Engineering
Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by majoring in mechanical engineering and taking courses from the aerospace engineering concentration such as MAEE 305, 306, 506, and 507. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

Master of Engineering (Aerospace) Degree Program
The M.Eng (Aerospace) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, acoustics and noise, turbulent flows, non-equilibrium flows, combustion, turbulence, dynamics and control, CFD, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. Any subsequent changes must also be approved by the committee. An individual student’s curriculum includes a four- to eight-credit design course, consisting of a minimum of 12 credits in aerospace engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have an aerospace engineering design focus and have the close supervision of a faculty member.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program. Credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AEE Master of Engineering Committee.

The technical electives may include courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of six credits may be taken in areas other than those if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should check with the M&AEE graduate field office (104 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Mechanical) degree program may take courses that also satisfy the requirements of the manufacturing, energy, or electronic packaging option programs leading to special dean’s certificates in those areas.

NUCLEAR SCIENCE AND ENGINEERING
Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the curriculum include K. B. Cady, D. A. Hammer, R. W. Kay, V. O. Kostroun, and K. Unlu.

Undergraduate Study
Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives.
within regular field programs (such as those in engineering physics, materials science and engineering, computer science, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

**Master of Engineering (Nuclear) Degree Program**

The two-term curriculum leading to the M.Eng. (Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for a doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Center for Nuclear Sciences are described in the Announcement of the Graduate School.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

The following courses, or equivalents, are included in the 30-credit program:

**Fall term**
- NS&E 509, Nuclear Physics for Applications
- A&EP 612, Nuclear Reactor Theory
- A&EP 633, Nuclear Engineering
- Technical elective

**Spring term**
- NS&E 551, Nuclear Measurements in Research
- NS&E 545, Energy Seminar
- Technical elective
- Engineering design project
- Mathematics or physics elective

Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

- A&EP 606/ELE E 581, Introduction to Plasma Physics (fall, 4 credits)
- A&EP 607/ELE E 582, Basic Plasma Physics (spring, 4 credits)
- A&EP 661, Microrheocaracterization (fall, 3 credits)
- ELE E 457, Silicon Device Fundamentals (fall, 4 credits with lab)
- ELE E 471/M&AE 478/CHMEE 372, Feedback Control Systems (fall, 4 credits)
- MS&E 459, Physics of Modern Materials Analysis (spring, 3 credits)
- MS&E 603, Analytical Techniques for Materials Science (spring, 4 credits)

**OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING**

**Bachelor of Science Curriculum in Operations Research and Engineering**

The program is designed to provide a broad education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. The program prepares students for a wide range of careers including operations research, industrial engineering, entrepreneurship, information technology, operations management, consulting, financial engineering, financial services, and management.

The foundation of the B.S. curriculum is the development of basic skills in calculus, statistics, probability, mathematical programming, and computer science. Required courses in manufacturing systems and simulation build on these skills and provide engineering design experience. The curriculum culminates in a major engineering design experience in one of two required OR&IE electives, OR&IE 416 or 480.

Because of the wide range of career goals among our students, the B.S. program is designed with a minimum of required courses and a large number of required electives. Students should consult with their field advisers to select electives that best meet their future goals.

The program is accredited as a "nontraditional" program by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). The faculty have not sought accreditation of the B.S. curriculum as a program in industrial engineering. Industrial engineering curricula, while excellent for preparing industrial engineers, do not have the flexibility that the wide range of our students requires. Nonetheless, by proper selection of field electives, graduates of the B.S. program can develop successful and competent industrial engineers. Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisers concerning an accelerated program of study.

A student who intends to enter the field program in Operations Research and Engineering should plan to take Basic Engineering Probability and Statistics (ENGRD 270) after completing MATH 192. Early consultation with a faculty member of the school or with the associate director for undergraduate studies can be helpful in making appropriate choices. The required courses for the OR&IE field program and the typical terms in which they are taken are as follows:

<table>
<thead>
<tr>
<th>Term 2, 3, or 4</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGRD 211, Computers &amp; Programming</td>
<td>3</td>
</tr>
<tr>
<td>Term 5</td>
<td></td>
</tr>
<tr>
<td>OR&amp;IE 320, Optimization I</td>
<td>4</td>

</table>
student's performance is reviewed at the conclusion of each term.

Operations Research and Engineering Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Operations Research and Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA > 3.5.

Content

An OR&IE honors program shall consist of at least nine credits beyond the minimum required for graduation in OR&IE, so that no part of the honors program can also be used to satisfy graduation requirements. The nine credits shall be from one or more of the following with at least four hours in the first category.

1. Advanced courses in OR&IE at the 500- level or above.
2. A significant research experience or honors project under the direct supervision of an OR&IE faculty member using OR&IE 499: OR&IE Project. A significant written report must be submitted as part of this component.
3. A significant teaching experience under the direct supervision of a faculty member in OR&IE using OR&IE 490: Teaching in OR&IE, or ENGRG 470: Undergraduate Engineering Teaching.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the first semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures

Each application to the OR&IE honors program must have a faculty adviser to supervise the honors program. The honors adviser need not be the student's faculty adviser. The application to the program shall be a letter from the student describing the specific proposed honors program and including the explicit approval of the honors adviser. Each program must be approved by the associate director, and any changes to the student's program must also be approved by the associate director of undergraduate studies.

Engineering Minor Programs

The School of Operations Research and Industrial Engineering currently offers three engineering minor programs: engineering statistics, industrial systems and information technology, and operations research and management science. (A student may not receive credit for more than one minor offered by the School of Operations Research and Industrial Engineering.) Descriptions and requirements for each program follow.

Minor in Engineering Statistics

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the engineering statistics minor: ABEN, A&EP, CEE, CHEME, COM S, EAS, ECE, M&AE, MS&E.

This minor requires the student to develop expertise in engineering statistics. The goal of the program is to provide the student with a firm understanding of statistical principles and engineering applications, and the ability to apply this knowledge in real-world situations. The requirements for the engineering statistics minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 202 Rhodes Hall.

Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. Required Courses:
   - ENGRD 270 Basic Engineering Probability & Statistics
   - OR&IE 350 or ELE E 310 Basic Engineering Probability & Statistics II or Introduction to Probability & Random Signals

II. Four courses (11 credits minimum) taken from the following list:
   - OR&IE 361 or ELE E 411 Introductory Engineering Stochastic Processes I or Random Signals in Communications/Signal Processing
   - OR&IE 476 Applied Linear Statistical Models
   - OR&IE 576 Regression
   - OR&IE 563 Applied Time Series Analysis
   - OR&IE 565 Applied Financial Engineering
   - OR&IE 575 Experimental Design
   - OR&IE 577 Quality Control
   - OR&IE 581 Simulation Modeling
   - OR&IE 582 Simulation Analysis
   - MATH 472 or BTRY 409 Basic Probability or Theory of Statistics
   - BTRY 602 Statistical Methods II
   - BTRY 603 or ILRST 411 Statistical Methods III or Statistical Analysis of Qualitative Data
   - ILRST 310 Statistical Sampling
   - ILRST 314 Graphical Methods for Data Analysis
   - ILRST 410 Techniques of Multivariate Analysis

*Other course options approved by petition in advance. The student should be aware that some of these courses require others as prerequisites. All these courses are cross-listed under the Department of Statistical Science.

Academic Standards: a letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Minor in Industrial Systems and Information Technology

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the industrial systems and information technology minor: ABEN, A&EP, CEE, CHEME, COM S, EAS, ECE, M&AE, MS&E.

The aim of this minor is to provide an in-depth education in the issues involved in the design and analysis of industrial systems, and the tools from information technology that have become an integral part of the manufacturing process. Students will become familiar with the problems, perspectives, and methods of modern industrial engineering and be prepared to work with industrial engineers in designing and managing manufacturing and service operations. That is, rather than providing a comprehensive view of the range of methodological foundations of operations research, this minor is designed to give the student a focused education in the application area most closely associated with these techniques.

The requirements for the industrial systems and information technology minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 202 Rhodes Hall.

Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. At least three of the following:
   - ENGRD 270 Basic Engineering Probability & Statistics
   - OR&IE 320 Optimization I
   - OR&IE 310 Industrial Systems Analysis
   - OR&IE 480 Information Technology for Operations Research and Industrial Technology

II. The remaining courses/credit hours from the following:
   - OR&IE 350 Financial and Managerial Accounting
   - OR&IE 416 Design of Manufacturing Systems
   - OR&IE 451 Economic Analysis of Engineering Systems
   - OR&IE 525 Production Planning and Scheduling: Theory and Practice
   - OR&IE 552 Revenue Management
   - OR&IE 577 Quality Control
   - OR&IE 581 Simulation Modeling

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Minor in Operations Research and Management Science

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the operations research and management science minor: ABEN, A&EP, CEE, CHEME, COM S, EAS, ECE, M&AE, MS&E.

The aim of this minor is to provide an in-depth education in the issues involved in the design and analysis of industrial systems, and the tools from information technology that have become an integral part of the manufacturing process. Students will become familiar with the problems, perspectives, and methods of modern industrial engineering and be prepared to work with industrial engineers in designing and managing manufacturing and service operations. That is, rather than providing a comprehensive view of the range of methodological foundations of operations research, this minor is designed to give the student a focused education in the application area most closely associated with these techniques.

The requirements for the operations research and management science minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 202 Rhodes Hall.

Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. At least three of the following:
   - ENGRD 270 Basic Engineering Probability & Statistics
   - OR&IE 320 Optimization I
   - OR&IE 310 Industrial Systems Analysis
   - OR&IE 480 Information Technology for Operations Research and Industrial Technology

II. The remaining courses/credit hours from the following:
   - OR&IE 350 Financial and Managerial Accounting
   - OR&IE 416 Design of Manufacturing Systems
   - OR&IE 451 Economic Analysis of Engineering Systems
   - OR&IE 525 Production Planning and Scheduling: Theory and Practice
   - OR&IE 552 Revenue Management
   - OR&IE 577 Quality Control
   - OR&IE 581 Simulation Modeling

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.
The field of operations research and management science (OR/MS) aims to provide rational bases for decision making by seeking to understand and model complex situations and to use this understanding to predict system behavior and improve system performance. This minor gives the student the opportunity to obtain a wide exposure to the core methodological tools for OR/MS, including mathematical programming, stochastic and statistical models, and simulation. The intent of this minor is that the student should obtain a broad knowledge of these fundamentals, rather than train the student in a particular application domain. This way the student can adjust their advanced courses and pursue either methodological or application oriented areas of greatest interest and relevance to the overall educational goals of their program.

The requirements for the operations research and management science minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 200 Rhodes Hall.

**Requirements**

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

1. Choose three courses from the following list:
   - ENGRD 270 Basic Engineering Probability and Statistics
   - ORIE 320 Optimization I
   - ORIE 321 Optimization II
   - ORIE 350 Engineering Probability and Statistics II
   - ORIE 361 Introduction Engineering Stochastic Processes I
   - ORIE 591 Simulation Modeling
   - ORIE 592 Simulation Analysis

2. These courses are to be supplemented with additional OR/IE courses at the 300 level or higher, so that entire program includes at least six courses and at least 18 credits. For example, taking the remaining three options on this list would suffice.

**Academic Standards:** a letter grade of C- or better for each course in the minor and a cumulative GPA of or better for all courses in the minor.

**Master of Engineering (OR&IE) Degree Program**

This two-semester professional degree program stresses applications of operations research and industrial engineering. The centerpiece of the program is a team-based project experiences include working as part of a group of three to five students on an engineering design problem, meeting with a faculty member on a regular basis, and oral and written presentation of the results obtained. Most projects address problems that actually exist in manufacturing firms, financial firms, hospitals, and other service industries.

**Cooperative Program with the Johnson Graduate School of Management**

Undergraduates majoring in operations research and engineering may be interested in a cooperative program at Cornell that leads to both Master of Engineering and Master of Business Administration (M.B.A.) degrees. With appropriate curriculum planning, such a combined B.S./M. Eng./M.B.A. program can be completed in six years at Cornell, with time out for work experience. For undergraduates from other schools, it may be feasible to complete the M. Eng./M.B.A. program in two years, possibly with an intervening summer or time out for work experience. Most projects address problems that actually exist in manufacturing firms, financial firms, hospitals, and other service industries.

**Cooperative Program with the Johnson Graduate School of Management**

Undergraduates majoring in operations research and engineering may be interested in a cooperative program at Cornell that leads to both Master of Engineering and Master of Business Administration (M.B.A.) degrees. With appropriate curriculum planning, such a combined B.S./M. Eng./M.B.A. program can be completed in six years at Cornell, with time out for work experience. For undergraduates from other schools, it may be feasible to complete the M. Eng./M.B.A. program in two years, possibly with an intervening summer or time out for work experience. Most projects address problems that actually exist in manufacturing firms, financial firms, hospitals, and other service industries.

An advantage for OR&E majors is that as part of their undergraduate and/or M. Eng. curriculum, they study several subjects that are required for the M.B.A. degree. (This is because modern management is concerned with the operation of production and service systems, and much of the analytical methodology required to deal with operating decisions is the same as that used by systems engineers in designing these systems.) This early start on meeting the business-degree requirements permits degrees in two years rather than the three years such a program would normally take.

The details of planning courses for this program should be discussed with the admissions office of the Johnson Graduate School of Management. Since 95 percent of the students in the Johnson Graduate School of Management have work experience, there will typically be a gap for work experience between the M. Eng. and M.B.A. portions of the program for students who do not already have it when beginning the M. Eng. portion.

**Program in OR&E who wish to expand their program is intended for three groups of**

**General admission and degree requirements**

**A minimum of 30 credit hours are required to complete this program. Additional program requirements exist and are described in the**

**Master of Engineering Handbook**, which is available in Room 201, Frank H. T. Rhodes Hall and on the web at www.orie.cornell.edu.

The project requirement can be fulfilled in a variety of ways. Common elements in all project experiences include working as part of a group of three to five students on an engineering design problem, meeting with a faculty member on a regular basis, and oral and written presentation of the results obtained. Most projects address problems that actually exist in manufacturing firms, financial firms, hospitals, and other service industries.
Further details and application forms may be obtained at the office of the School of Operations Research and Industrial Engineering, Frank H. T. Rhodes Hall, and at the admissions office of the Johnson Graduate School of Management.

STATISTICAL SCIENCE DEPARTMENT

The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the Interdisciplinary Centers, Programs, and Studies section at the front of this catalog (see p. 15).

THEORETICAL AND APPLIED MECHANICS

Undergraduate Study

The Department of Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the Common Curriculum.

College Program in Engineering Science

A student may enroll in the College Program in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. The College Program is described in the section on undergraduate study in the College of Engineering.

Minor in Applied Mathematics

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the Applied Mathematics Minor: ABEN, A&EP, CEE, CHEME, COM S, EAS, ECE, M&AE, MS&E, and OR&IE.

Requirements

To complete the minor, the student must take at least six courses beyond MATH 294, to be chosen as follows:

a) No more than one course may be chosen from any one of the groups 1, 2, 3, or 4.

b) At least three courses must be chosen from groups 5 and 6.

c) No more than one 200-level course may be chosen.

d) No more than one 200-level course may be chosen which is offered by the student's major department.

I. Analysis

T&AM 310 Advanced Engineering Analysis I

MATH 321 Mathematical Physics I

MATH 322 Computational Methods

COM S/ENGGRD 222 Introduction to Scientific Computation

CEE/ENGGRD 241 Engineering Computation

ABEN 449 Computational Tools for Engineers

OR&IE 320 Optimization I

3. Probability and Statistics

OR&IE/ENGGRD 270 Basic Engineering Probability and Statistics

OR&IE 360 Engineering Probability and Statistics II

ELE E 310 Introduction to Probability and Random Signals

CEE 304 Uncertainty Analysis in Engineering

MATH 371 Basic Probability

4. Applications

A&EP 333 Mechanics of Particles and Solid Bodies

CHEME 323 Fluid Mechanics

CEE 333 Fluid Mechanics

CEE 371 Structural Behavior

ELE E 425 Digital Signal Processing

MS&E 303 Thermodynamics of Condensed Systems

M&AE 323 Introductory Fluid Mechanics

5. Advanced Courses

—Only one of the following three may be chosen:

T&AM 311 Advanced Engineering Analysis II

MATH 422 Applicable Analysis II

A&EP 322 Mathematical Physics II

—Only one of the following two may be chosen:

ELE E 411 Random Signals in Communications and Signal Processing

OR&IE 361 Introductory Engineering Stochastic Processes I

—Only one of the following two may be chosen:

COM S 381 Introduction to Theory of Computing

COM S 481 Introduction to Theory of Computing

COM S 482 Introduction to the Design of Algorithms

OR&IE 321 Optimization II

OR&IE 431 Discrete Models

OR&IE 435 Introduction to Game Theory

OR&IE 462 Introductory Engineering Stochastic Processes II

ELE E 522 Nonlinear Systems: Analysis, Stability, Control, and Applications

—Only one of the following two may be chosen:

M&AE 571 Applied Dynamics

T&AM 570 Intermediate Dynamics

T&AM 578 Nonlinear Dynamics and Chaos

6. Math Courses—Any 300+ level course offered by the mathematics department in algebra, analysis, probability/statistics, geometry, or logic, with the following exceptions:

1) MATH 321 or MATH 420, if any course from group 1 is chosen

2) MATH 371, if any course from group 3 is chosen

3) MATH 422, if T&AM 311, MATH 422, or A&EP 322 are chosen from group 5

Academic Standards: A letter grade of C or better for each course in the minor.

Minor in Biomedical Engineering

Eligibility

All undergraduates in the College of Engineering are eligible to participate in the biomedical engineering minor, unless they are also pursuing the bioengineering option. (Students may participate in either the bioengineering option or the biomedical engineering minor, but not both.)

Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits) from the five groups listed below, with at least one course from each group. At least four of the six courses must be from outside the student's major. In addition, all students must take ENGRG 501, Bioengineering Seminar (1 credit).

Required Course: ENGRG 501, Bioengineering Seminar (1 credit)

I. Biomedical Materials and Biomechanics

ABEN 565 (3) Properties of Biological Materials

M&AE 265 (3) or TXA 439 (2) Biological Materials and Their Synthetic Replacements

M&AE 565 (3) Biomechanical Systems—Analysis and Design

M&AE 664 (3) Mechanics of Bone

ENGRG 605.3 (1) Biomedical Instruments

ENGRG 605.1 (1) Artificial Organs and Tissue Engineering

ENGRG 606.3 (1) Biomechanics of Musculoskeletal Systems

II. Biomedical Systems

ABEN 453 (3) Computer-Aided Engineering: Applications to Biomedical and Food Processes

CHEME 481 (3) Biomedical Engineering

ABEN 454 (3) Physiological Engineering

ENGRG 605.1 (1) Cellular Dynamics and Cancer

ENGRG 605.2 (1) Physiological Systems

III. Instrumentation

ABEN 418 (3) Introduction to Biotechnology

ELE E 432 (3) MicroElectro Mechanical Systems (MEMS)

ELE E 593 (3) Bioelectric Signal Analysis and Processing

ABEN 450 (4) Biomedical Instrumentation

ENGRG 606.2 (1) Biomedical Instrumentation and Diagnosis
ENGINEERING COMMON COURSES

IV. Molecular and Cell Biology
BIOGD 281 (5) Genetics
BIOGD 282 (2-3) Human Genetics
BIOMI 290 (3) Microbiology
BIOAP 316 (4) Cellular Physiology
BIOBM 330-333 (2-4) Principles of Biochemistry
BIOBM 432 (3) Survey of Cell Biology

V. Physiology
BIOAP 212 (3) Human Physiology
BIOAP 311 (3) Introductory Animal Physiology
BIOAP 313 (4) Histology: The Biology of the Tissues
BIOGD 389 (3) Embryology
BIOND 222 (3-4) Neurobiology and Behavior II: Introduction to Neurobiology
AN SC 427 (3) Fundamentals of Endocrinology

Engineering Communications Courses

Courses offered in the College of Engineering are listed under the various departments and schools.

- Engineering Communications
- Engineering Distribution
- Engineering General Interest
- Introduction to Engineering
- Agricultural and Biological Engineering
- Applied and Engineering Physics
- Chemical Engineering
- Civil and Environmental Engineering
- Computer Science
- Earth and Atmospheric Sciences
- Electrical and Computer Engineering
- Materials Science and Engineering
- Mechanical and Aerospace Engineering
- Nuclear Science and Engineering
- Operations Research and Industrial Engineering
- Theoretical and Applied Mechanics

These courses are designed to develop writing and oral presentation skills, and to enhance understanding of the course content while addressing relevant organizational and ethical issues. Students learn to communicate effectively through diverse assignments and a variety of audiences. They write a range of documents, give oral presentations, and use visuals to enhance their writing and talks.

Engineering Communications

ENGRC 335 Communications For Engineering Managers

TBA. 3 credits. Limited to 20 students per section. Prerequisite: two First-Year Writing Seminars.

This interactive workshop focuses on communications in organizational contexts, including writing technical documents, giving oral presentations, and communicating specialized information to colleagues, shareholders, and clients. Students develop writing and management strategies that apply to individual and collaborative assignments. By completing written brief exercises, formal and informal presentations, and a larger design project, students learn how to develop information, organize and support ideas, and address a variety of audiences. Fulfills the college technical writing requirement.

ENGRC 350 Engineering Communications

Fall, spring, summer TBA. 3 credits. Prerequisite: two First-Year Writing Seminars.

Engineering graduates spend much of their time conveying technical information to a variety of audiences. They write a range of documents, give oral presentations, and use visuals to enhance their writing and talks. These important tasks can seem daunting and burdensome; ENGRC 350 aims to make them manageable and interesting. This course draws on material from professional settings to help students develop effective processes for drafting, editing, and revising documents; communicating specialized information in different contexts; working in teams; and addressing relevant organizational and ethical issues. Students learn to communicate effectively through diverse assignments and a longer-term project of their choice (for example, a research paper, feasibility study, or proposal) that may require pre- or corequisites.

ENGRC 333 Topics in Engineering Communications

TBA. 3 credits.

Students work closely with a Communications Program instructor to pursue an aspect of professional communications not available through regular course work. Projects may involve writing technical documentation, creating user manuals, and producing technical graphics, or reading and writing about problems in engineering practice. Interested students should contact the Engineering Communications Program.

ENGRC 334 Independent Study in Engineering Communications

TBA. Variable credits (1-5).

Students work closely with a Communications Program instructor to pursue an aspect of
Formation of the solar system: accretion and evolution of the earth. The rock cycle: radioactive isotopes and the geological time scale, plate tectonics, rock and minerals, earth dynamics, mantle plumes. The hydrologic cycle: runoff, groundwater flow, contaminant transport. Weathering cycle: chemical cycles, CO2 (weathering), rock cycle, controls on global temperature (CO2 or ocean currents), oil and mineral resources.

**ENGRD 202 Mechanics of Solids (also T&AM 202)**
Fall, spring. 3 credits. Prerequisite: PHYS 112, coregistration in MATH 293 or permission of instructor.

Principles of statics, force systems, and equilibrium; frameworks; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force, shearing force, bending moment, plane stress, Mohr's circle; bending and torsion of bars; buckling and plastic behavior.

**ENGRD 203 Dynamics (also T&AM 203)**
Fall, spring. 3 credits. Prerequisite: T&AM 202, coregistration in MATH 294, or permission of instructor.

Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope.

**ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers (also ELE E 210)**
Fall, spring. 3 credits. Corequisites: MATH 293 and PHYS 213.

A first course in electrical circuits, establishing the fundamental properties of circuits with application to high-speed computers and modern electronics. Topics include node and mesh analysis applied to CMOS circuit design, transient response and its impact on computer speed, sinusoids, resonance, complex impedance, and operational amplifiers.

**ENGRD 211 Computers and Programming (also COM S 211)**
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or an equivalent course in Java or C++.

Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, modules (classes), program development, proofs of program correctness, recursion, data structures and types (lists, stacks, queues, trees), object-oriented and functional programming, analysis of algorithms, and an introduction to elementary graph theory and graph algorithms. Java is the principal programming language. Knowledge of classes and objects is assumed.

**ENGRD 219 Mass and Energy Balances (also CHEME 219)**
Fall. 3 credits. Corequisite: physical chemistry or permission of instructor.

K. H. Lee

Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems.

**ENGRD 221 Thermodynamics (also M&AE 221)**
Fall, spring, summer TBA. 3 credits.

Prerequisites: MATH 192 and PHYS 112.

The definition of concepts and laws of thermodynamics. Applications to ideal and real gases, vapor and gas power systems, refrigeration, and heat pump systems. Thermodynamics relations for simple, compressible substances. Gaseous reactions. Examples and problems will be related to contemporary aspects of power generation and broader environmental issues.

**ENGRD 222 Introduction to Scientific Computation (also COM S 222)**
Spring, summer. 3 credits.

Prerequisites: COM S 100 and (MATH 222 or 294).

An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Special lectures on parallel computation.

**ENGRD 231 Introduction to Digital Systems**
Fall, spring. 3 credits. Prerequisite: COM S 100.

An introduction to basic principles, design techniques, and methodology for communication, computer, and information systems, which process digital data streams. Includes Boolean algebra, integrated circuit components, switching circuits, and systems which provide computation, data, voice, and video service.

**ENGRD 241 Engineering Computation (also CEE 241)**
Fall, spring. 3 credits.

Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294. (Completion of MATH 294 is suggested.) W. Philpot.

This course introduces the discipline of numerical methods while developing programming and graphics proficiency with MATLAB and spreadsheet packages. Numerical analysis topics considered are accuracy, precision, Taylor-series approximations, truncation and rounded-off errors, condition numbers, operation counts, convergence, and stability. Included are numerical methods for solving engineering problems that entail roots of functions, simultaneous linear equations, regression, interpolation, numerical differentiation and integration, and ordinary differential equations. The context and solution of partial differential equations are broached. Applications are drawn from different areas of engineering.

**ENGRD 250 Engineering Applications in Biological Systems (also ABEN 250)**
Fall. 3 credits.

Corequisite: MATH 295. Recommended for the sophomore year.

B. A. Almeda

Case studies of engineering problems in agricultural, biological, and environmental systems, including bioremediation, crop production, environmental controls, energy, biomedicine, and food engineering. Emphasis is on the application of mathematics, physics, and the engineering sciences to energy and mass balances in ecological systems.

**ENGRD 261 Introduction to Mechanical Properties of Materials (also MS&E 261)**
Fall. 3 credits. S. P. Baker.

The mechanical properties of materials (strength, stiffness, toughness, ductility, etc.) and their physical origins are examined. The relationship of the elastic, plastic, and fracture behavior to microscopic structure in metals, ceramics, polymers, and composite materials. Effects of time and temperature. Considerations for design and optimal performance of materials and engineered objects.

**ENGRD 264 Computer-Instrumentation Design (also A&EP 264)**
Fall, spring. 3 credits.

Prerequisites: COM S 100. 1 lec, 1 lab.

This course covers the use of a small computer in an engineering or scientific research laboratory. Various experiments are performed using a PC (Pentium III, 450 MHZ CPU) running Windows 98. The experiments and devices to be investigated include: input and output ports, analog to digital converters (ADC), digital to analog converters (DAC), thermistors, optical sensors, digital temperature control, nonlinear elements, curve fitting of experimental data, thermal diffusion, and viscosity of fluids. A second goal of this course is to develop effective written communication skills in the context of science and engineering. An understanding of these principles will be presented that can produce clarity in communication without oversimplifying scientific subjects. Students will prepare progress reports, technical reports, and formal articles based on the experiments.

**ENGRD 270 Basic Engineering Probability and Statistics**
Fall, spring. 3 credits. Pre- or corequisite: MATH 293.

This course should give students a working knowledge of basic probability and statistics and their application to engineering. Computer analysis of data and simulation are included. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

**Courses of General Interest**
Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

**ENGRG 102 Drawing and Engineering Design (also M&AE 102)**
Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to 30 students each half-term. Recommended for students without mechanical drawing experience. Letter grade required for students majoring in M&AE. S-U grades optional for all others. Introduction to sketching, drawing, and graphic techniques useful in design, analysis, and presentation of ideas. Computer-aided design is integral to the course-work and final design project.

**ENGRG 150 Engineering Seminar**
Fall. 1 credit. First-year students only. S-U grades only.

Engineering freshmen meet weekly with their faculty advisers to discuss a range of engineering topics. Discussions may include the engineering curriculum and student programs, what different types of engineers
ENGRG 198 Introduction to the Electronic Revolution (also ELE E 198)
Summer only. 3 credits. Cannot be taken in addition to ENGRG 298. This course is an introductory survey of the development of information technologies in the United States from the 1830s to the present. Students focus on themes of the social process of invention, the federal government's role in promoting and regulating technological change, and the relationship between technological and social change in regard to the history of the telegraph, telephone, radio, television, computers, and the Internet. The themes of gender and technology and the relationship between science and technology will be addressed throughout the course. Laboratory demonstrations of current research in information technology at Cornell will be given in some afternoon sessions.

ENGRG 250 Technology in Society (also ELE E 250, MIST 250, S&S 250)
Fall. 3 credits. A humanities elective for engineering students. Not offered 2000–2001. This course will investigate the history of technology in Europe and the United States from ancient times to the present. Topics include the economic and social aspects of industrialization; the myths of heroic inventors like Morse, Edison, and Ford; the government's regulation of technology, the origins of mass production, and the spread of the automobile and microelectronics cultures in the United States.

ENGRG 298 Inventing an Information Society (also ELE E 298 and S&S 292)
Spring. 3 credits. Approved for humanities distribution. Cannot be taken for credit after ENGRG 198/ELE E 198. May not be offered 2000–2001. Explores the history of information technology from the 1830s to the present by considering the technical and social history of telecommunications, the electric-power industry, radio, television, computers, and the Internet. Emphasis is placed on the changing relationship between science and technology, the economic aspects of innovation, gender and technology, and other social relations of this technology.

ENGRG 323 Engineering Economics and Management (also CEE 323)
Spring, usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. D. P. Loucks. Introduction to engineering and business economics and to project management. Intended to give students a working knowledge of the major management tools and how to make economic comparisons of alternative engineering designs or projects. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, auxiliary issues are introduced and applied to economic investment and project-management problems.

ENGRG 360 Ethical Issues in Engineering (also S&S 360)
Spring. 3 credits. A humanities elective for engineering students. Open to sophomores. May not be offered 2000–2001. A discussion of ethical issues encountered in engineering practice, such as the rights of engineers in corporations, responsibility for actions, whistleblowing, conflicts of interest, and decision making based on cost-benefit analysis. Codes of ethics and ethical theory will be used to sort out conflicts the engineer may feel toward public safety, professional standards, employers, colleagues, and family. Students will present a case study to the class.

ENGRG 461 Entrepreneurship For Engineers (also M&AE 461)
Fall. 3 credits. Enrollment open to upper class engineers; others with permission of instructor. For description, see M&AE 461.

ENGRG 470 Peer Teaching in Engineering
Fall. 1 credit. This class provides students with training and support while they facilitate a freshman/sophomore Academic Excellence Workshop (AEW). AEW's run parallel to courses in math, physics, chemistry, and engineering design. The course introduces students to concepts such as cooperative learning, education theory, teaching practices, and group dynamics. Students learn to understand and work with gender and cultural issues as they intersect the learning process. ENGRG 470, if taken for credit, is an approved elective and may be applied toward the honors program in electrical and computer engineering. Students may request pay rather than credit for the training and facilitation components.

ENGRG 501 Bioengineering Seminar
Fall, spring. 1 credit. For juniors, seniors, and graduate students only. K. H. Lee. Broad survey of all aspects of bioengineering, including biomedical, bioprocess, biological, and bioenvironmental engineering and aspects of biotechnology. Sessions may be technical presentations or discussions. Sessions may occasionally be held outside of scheduled times.

ENGRG 605 Fundamentals of Biomedical Engineering I (also CHEM 605)
Fall. 1–4 credits (1 credit per section). Prerequisites: satisfactory grades in engineering or science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&AE 465. S–U grades optional for students not majoring or minoring in biomedical engineering. Coordinator: M. L. Shuler. A series of one and two-credit modules on specialized topics.

ENGRG 606 Fundamentals of Biomedical Engineering II (also CHEM 606)
Spring. 1–4 credits. Prerequisites: prerequisites in standing in engineering or science; PHYS 213 and MATH 294, or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&AE 465. S–U grades optional for students not majoring or minoring in biomedical engineering. Coordinator: M. L. Shuler. A series of one and two-credit modules on specialized topics.

606.1 Artificial Organs and Tissue Engineering
1 credit. Prerequisite: ENGRG 605, Section 03 (Biomaterials). Meets first third of term. Lec. T R 1:25–2:40. W. L. Olbricht and staff. An introduction to the use of cells, biological molecules, and synthetic materials as the basis for building artificial organs and encouraging tissue regeneration. Students will discuss the physiological and engineering issues underlying the use of synthetic, extracorporeal systems (e.g., membrane-based dialysis devices), composite implantable materials (e.g., drug-delivery systems and nerve regeneration guides), and hybrid cell/polymer implantable systems (e.g., engineered tissues).

606.2 Biomedical Instrumentation and Diagnosis
1 credit. Lec. Meets second third of term. Preregistration with the instructor before end of fall 2000 term is required. T R 1:25–2:40. C. D. Montemagno. Perspective on the use of advanced instrumentation for the diagnosis and treatment of disease and the investigation of fundamental biological processes. The basic theory and application of different microscopic and spectroscopic methods, imaging tomographies, and micro- and electromechanical devices to biological systems will be explored. A two-day trip to Cornell University Medical Center to learn techniques of functional MRI is required.

606.3 Biomechanics of Musculoskeletal Systems
Introduction to Engineering Courses

Courses in this category are freshman-level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are always cross-listed with a department.

ENGR 110 The Laser and Its Applications in Science, Technology, and Medicine (also A&EP 110)

Fall, Spring. 3 credits. The principles of laser action, types of laser systems, elements of laser design, and applications of lasers in science, technology, and medicine are discussed. In the laboratory students build and operate a nitrogen laser and a tunable dye laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser processing of materials, and Raman spectroscopy.

ENGR 111 Electronic Materials for the Information Age (also MS&E 111)

Fall. 3 credits. G. M. Whitesides. The electronics revolution sweeping society today is a direct result of advanced developments in optically and electrically active materials. This course examines how the properties of modern electronic materials, including metals, semiconductors, insulators, and novel organic materials have enabled and driven new applications. Examples will be drawn from the microelectronics, telecommunications, and consumer markets.

ENGR 112 Introduction to Chemical Engineering (also CHEM 112)

Fall. 3 credits. Limited to freshmen. T. M. Duncan. Design and analysis of processes involving chemical change. Strategies for design, such as creative thinking, conceptual blockbusting, and visualization of the design goal, in the context of contemporary chemical engineering. Methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGR 113 Introduction to Environmental Systems (also CEE 113)

Fall. 3 credits. Not open (without instructor's permission) to upper-division engineering students. M. L. Weber-Shirk. We will explore the environmental engineering systems that make New York City possible. We will discuss the engineering required to provide clean water and to remove the garbage from NYC sidewalks. We will evaluate NYC's current strategies and future options as their watersheds become more populated and their landfill is closed. See www.epa.cornell.edu/cee113/ for more information.

ENGR 114 An Introduction to Electrical Circuit Engineering Design

Spring. 3 credits. This course introduces students to the basic principles of electronic circuit design. We will work in teams on a focused series of electronic circuit experiments which will then be demonstrated on a computer model of the (knee) joint will be created by combining knowledge of the anatomy and the mechanical environment.

ENGR 115 Engineering Applications of Operations Research

Fall, Spring. 3 credits. Enrollment not open to OR&E upper-class majors. An introduction to the problems and methods of Operations Research and Industrial Engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems can be found, and several standard solution techniques. In the computer laboratory, students will encounter problem simulations and use some standard software packages.

ENGR 116 Modern Structures (also CEE 116)

Fall. 3 credits. A. R. Ingraffea. Introduction to the basic principles of structural engineering and to structural forms. Emphasis is placed on how various types of structures carry loads. Concepts are illustrated by a series of case studies of major structures such as bridges, long-span structures, and shell structures. The philosophy of engineering design and lessons learned from structural failures and earthquakes are discussed. A semester project involves the design and construction of a small balsa-wood bridge.

ENGR 117 Introduction to Mechanical Engineering (also M&E 117)

Fall or Spring. 3 credits. W. Sachse. An introduction to the basic principles of mechanical engineering.

ENGR 118 Design Integration: A Portable CD Player (also MS&E 118 and T&M 118)

Spring. 3 credits. W. Sachse. This course examines the roles of various engineering disciplines on the design of a portable compact disc (CD) player. Students are introduced to the tools of mechanical, electrical, materials, environmental, manufacturing, and computer engineering as related to the CD player. Laboratory sessions and demonstrations are used to illustrate the principles of design.

ENGR 119 Biomaterials for the Skeletal System (also MS&E 119)

Fall. 3 credits. D. T. Grubh. Biomaterials are at the intersection of biology and engineering. We will explore natural structural materials in the human body, their properties and microstructure, and their synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments will be used as examples, with their metal, plastic, and ceramic replacements. Topics covered include strength, corrosion, toughness, wear, and bio-compatibility. Case studies of design will lead to consideration of regulatory approval requirements and legal liability issues.

ENGR 120 Introduction to Biomedical Engineering (also CHEM 120)

Fall. 3 credits. W. M. Saltzman. Introduction to the fundamental science and engineering that spawned the biotechnology revolution—technologies of cell cultures, DNA, and antibodies—and the relationship between biomedical science, bioengineering, and the growing biomedical product industry. Case studies of the development of biotechnical processes, from discovery to clinical use, will include processes for vaccines, antibiotics, cancer chemotherapy, protein pharmaceuticals, and organ transplantation.

ENGR 121 Fission, Fusion, and Radiation (also A&EP 121 and NS&E 121)

Spring. 3 credits. S-U grades optional for students outside the College of Engineering. R. B. Cady. Lecture-laboratory course on (1) the physical nature and biological effects of nuclear radiation; (2) benefits and hazards of nuclear energy; (3) light-water reactors, breeder reactors, and fusion reactors; and (4) uses of nuclear radiation in research. Laboratory demonstrations involve Cornell's research reactor; detection of nuclear radiation; activation analysis using gamma-ray spectroscopy; neutron radiography; and pulsed power generators for fusion research.

ENGR 122 Earthquake! (also GEOL/EAS 122)

Spring. 3 credits. D. B. Brown. The science of natural hazards and strategic resources is explored. Techniques for locating and characterizing earthquakes, and assessing the damage they cause, methods of using sound waves to image the earth's interior to search for strategic materials; the historical importance of such resources. Seismic experiments on campus to probe for groundwater, the new critical environmental resource.

ENGR 124 Designing Materials for the Computer (also MS&E 124)

Spring. 3 credits. R. K. Ober. Introduces the materials, processes, and properties of the semiconductors, polymers, ceramics, and metals used in the microelectronics industry to form integrated circuits, electronic devices, and displays. The course examines lithographic processing, metallization, diffusion, ion implantation, oxidation, and other processes used in fabricating electronic devices, and their packages. The technology of displays will be discussed including liquid crystal displays and light emitting devices.

ENGR 126 Introduction to Telecommunications

Fall. 3 credits. This course introduces the students that undertake wired and wireless telecommunication systems. The course begins with an introduction to telephony and the public switched telephone network. Moderns and cellular telephony are then introduced, along with ISDN and BISDN. The course concludes with an introduction to ATM and TCP/IP. The course will include both lectures and laboratory demonstrations. The students will have the opportunity to design communication systems, and to determine their performance through simulations.

ENGR 127 Introduction to Entrepreneurship and Enterprise Engineering (also M&E 127)

Spring. 3 credits. This course provides a solid introduction to the entrepreneurial process to students in engineering. The main objective is to identify
and to begin to develop skills in the engineering work that occurs in high-growth, high-tech ventures. Basic engineering management issues, including the entrepreneurial perspective, opportunity recognition and evaluation, and gathering and managing resources will be covered. Technical topics such as the engineering design process, product realization, and technology forecasting will be discussed. Guest lecturers will provide material for analysis and class discussion.

ENGR 185 Art, Archaeology, and Analysis (also ARKEO 285, ART 372, ARTH 200, GEOL/EAS 200, and PHYS 209) Spring. 3 credits. 3 lectures. R. Kay. An interdepartmental course on the use of techniques of science and engineering in cultural research. Applications of physical and physiological principles to the study of archaeological artifacts and works of art. Historical and technical aspects of artistic creation. Analyses by modern methods to deduce geographical origins, and for exploration, dating, and authentication of cultural objects. Does not meet liberal studies distribution requirement for Engineering.

AGRICULTURAL AND BIOLOGICAL ENGINEERING
For complete course descriptions, see the Agricultural and Biological Engineering listing in the College of Agriculture and Life Sciences section or visit the department web site, www.aben.cornell.edu.

ABEN 151 Introduction to Computing
Fall. 4 credits. Prerequisite: MATH 191 or equivalent (coregistration permissible). Each lab and recitation section limited to 22 students.

ABEN 152 Computer Applications for Engineers
Spring. 3 credits. Prerequisites: ABEN 151 or equivalent. Course is comprised of three one-credit modules: (1) MATLAB; (2) spreadsheets; and (3) presentation graphics.

ABEN 200 The ABEN Experience
Spring. 1 credit. S-U grades optional.

ABEN 250 Engineering Applications in Biological Systems (also ENGRD 250)
Fall. 3 credits. Corequisite: MATH 293. Recommended for the sophomore year. For description, see ENGRD 250.

ABEN 299 Sustainable Development: A Web-Based Course
Spring. 3 credits. Prerequisite: sophomore standing and above. S-U grades optional.

ABEN 300 Career Development
Spring. 1 credit. Prerequisites: ABEN 200 or permission of instructor. S-U grades optional.

ABEN 301 Energy Systems
Spring. 3 credits. Prerequisite: college physics.

ABEN 350 Biological and Environmental Transport Processes
Fall. 3 credits. Prerequisites: MATH 294 and fluid mechanics (coregistration permissible).

ABEN 363 Properties of Biological Materials
Spring. 3 credits. Prerequisites: ENGRD 202 (coregistration permissible). S-U grades optional.

ABEN 367 Introduction to Biological Engineering
Fall. 3 credits. Prerequisites: 1 year each of calculus and introductory biology; minimum 1 term each of college chemistry and physics. S-U grades optional. Not open to freshmen.

ABEN 371 Hydrology and the Environment (also GEOL/EAS 204)
Spring. 3 credits. Prerequisite: 1 course in calculus.

[ABEN 411 Biomass Processing: Modelling and Analysis
Spring. 3 credits. Prerequisites: ABEN 250, ABEN 350 (or any course in heat and mass transport), BIOBM 331, 332, or BIOMI 290. Not offered 2000–2001.]

ABEN 418 Introduction to Biotechnology
Fall. 3 credits. Prerequisites: ABEN 350 (coregistration permissible), biochemistry, microbiology, fluid mechanics, or permission of instructor.

ABEN 425 Science and Technology of Environmental Management
Fall. 3 credits. Open to seniors and graduate students only. Letter grades only.

ABEN 427 Water Sampling and Measurement
Fall. 3 credits. Prerequisites: soils and/or fluids or hydrology courses and MATH 191.

ABEN 435 Principles of Aquaculture
Spring. 3 credits. Prerequisite: minimum junior standing.

[ABEN 450 Bioinstrumentation
Fall. 4 credits. Prerequisites: linear differential equations, physics or electrical science, computer programming, and use of spreadsheets. Not offered 2000–2001.]

ABEN 453 Computer-Aided Engineering: Applications to Biomedical and Food Processes
Spring. 3 credits. Prerequisite: computer programming (ABEN 151 or COM S 100) and heat and mass transfer (ABEN 350 or equivalent).

ABEN 454 Physiological Engineering
Fall. 3 credits. Corequisite: fluid mechanics.

ABEN 456 Biomechanics of Plants
Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology, and 1 year of calculus, or permission of instructor. S-U grades optional.

ABEN 471 Geohydrology (also CEE 431 and GEOL/EAS 445)
Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202.

ABEN 473 Water Quality Monitoring
Fall. 3 credits. Prerequisite: computer programming (ABEN 350 or equivalent).

ABEN 476 Solid Waste Engineering
Spring. 3 credits. Prerequisites: MATH 294 and 250, or equivalent.

ABEN 481 LRFD-Based Engineering of Wood Structures
Fall. 1 credit. Prerequisite: admission to the M.Eng. or B.Eng. Program.

ABEN 482 Biothermal Engineering
Spring. 3 credits. Prerequisites: ABEN 150 or ABEN 473.

ABEN 483 Water and Waste Flow in Channels
Spring. 3 credits. Prerequisites: MATH 294 and 250, or equivalent.

ABEN 493 Technical Writing for Engineers
Fall. 1 credit. Prerequisite: admission to the M.Eng. or B.Eng. Program.

ABEN 494 Special Topics in Agricultural and Biological Engineering
Fall, spring. 1-4 credits. S-U grades optional.

ABEN 496 Senior Design in Agricultural and Geological Engineering
Fall. 3 credits. Prerequisite: senior standing in ABEN engineering program or permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

ABEN 497 Individual Study in Agricultural and Biological Engineering
Fall, spring. 1-4 credits. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. S-U grades optional. Completed independent study form (available in 140 Roberts Hall) is required to register.

ABEN 499 Undergraduate Teaching
Fall, spring. 1-3 credits. Prerequisite: written permission of instructor and adequate training for work proposed. Normally reserved for seniors in upper two-fifths of their class. S-U grades optional. Completed independent study form (available in 140 Roberts Hall) is required to register.

ABEN 500 Undergraduate Research
Fall, spring. 1-4 credits. Prerequisite: written permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

ABEN 551 Agricultural and Biological Engineering Design Project
Fall. 5 credits. Prerequisite: admission to the M.Eng. (Agricultural and Biological) degree program.

ABEN 651 Bioremediation: Engineering Organisms to Clean Up the Environment
Spring. 3 credits. Prerequisites: BIOMI 290 or BIOMI 294 or BIOMI 331 or permission of instructor.
ABEN 652 Instrumentation: Sensors and Transducers
Spring. 3 credits. Prerequisites: linear differential equations, introductory chemistry and introductory physics, or permission of instructor. Not offered 2000–2001.

ABEN 655 Thermodynamics and Its Applications
Spring. 3 credits. Prerequisite: MATH 293 or equivalent.

ABEN 671 Analysis of the Flow of Water and Chemicals in Soils
Fall. 3 credits. Prerequisites: 4 calculus courses and fluid mechanics.

ABEN 672 Drainage
Spring. 4 credits. Prerequisites: ABEN 471 or ABEN 473. S-U grades optional. Offered alternate years.

ABEN 673 Sustainable Development Seminar
Spring. 1–3 credits. Prerequisite: upper division undergraduate and graduate standing or permission of instructor.

ABEN 679 Nonpoint Source Models
Spring. 3 credits. Prerequisites: computer programming and calculus.

ABEN 685 Biological Engineering Analysis
Spring. 4 credits. Prerequisite: T&AM 310 or permission of instructor.

ABEN 694 Graduate Special Topics in Agricultural and Biological Engineering
Fall, spring. 1–4 credits. S-U grades optional.

ABEN 697 Graduate Individual Study in Agricultural and Biological Engineering
Fall, spring. 1–6 credits. Prerequisite: permission of instructor. S-U grades optional.

ABEN 700 General Seminar
Fall. 1 credit. S-U grades only.

ABEN 750 Orientation to Graduate Study
Fall. 1 credit. S-U grades only. Limited to newly joining graduate students.

ABEN 754 Watershed Management
Spring. 2–3 credits. Prerequisite: graduate standing or permission of instructor.

ABEN 771 Soil and Water Engineering Seminar
Fall. 1–3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional.

ABEN 781 Structures and Related Topics Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

ABEN 785 Biological Engineering Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

ABEN 900 Graduate-Level Thesis Research
Fall, spring. 1–15 credits. Prerequisite: permission of advisor. S-U grades only. Variable credit for Ph.D. research before the "A" exam is passed.

ABEN 901 Doctoral-Level Thesis Research
Fall, spring. 1–15 credits. Prerequisite: passing of Admission Candidacy Exam and permission of advisor. S-U grades only.

APPLIED AND ENGINEERING PHYSICS

A&EP 110 The Laser and Its Applications in Science, Technology, and Medicine (also ENGRD 110)
Fall. 4 credits. Prerequisites: PHYS 112 or 116 and coregistration in MATH 294. Intended for upper-level undergraduates in the physical sciences. For description, see ENGRD 110.

A&EP 121 Fission, Fusion, and Radiation (also ENGRD 121 and NS&E 121)
Spring. 3 credits. S-U grades optional. Offered alternate years.

A&EP 217 Electricity and Magnetism (also PHYS 217)
Fall, spring. 4 credits. Prerequisites: approval of student's advisor and permission of the instructor; registration in PHYS 216 or knowledge of special relativity at the level of PHYS 116; MATH 192 or equivalent and coregistration in MATH 293 or equivalent. Staff. Intended for students who have done well in PHYS 112 or 116 (or the equivalent) and in mathematics who desire a more analytic treatment than that of PHYS 215. At the level of Electricity and Magnetism, by Purcell. Recommended for prospective engineering physics majors. A placement quiz may be given early in the semester, permitting those students who find the material too abstract or analytical to transfer into PHYS 215 without difficulty.

A&EP 264 Computer-Instrumentation Design (also ENGRD 264)
Fall, spring. 3 credits. Prerequisites: COM S 100. 1 lec, 1 lab. For description, see ENGRD 264.

A&EP 321 Mathematical Physics I
Fall, summer. 4 credits. Prerequisite: MATH 294. Intended for upper-level undergraduates in the physical sciences. Review of vector analysis; complex variable theory. Cauchy-Riemann conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping. Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: Mathematical Methods for Physicists, by Arfken; Mathematical Physics, by Butkove.

A&EP 322 Mathematical Physics II
Spring. 4 credits. Prerequisite: A&EP 321. Second of the 2-course sequence in mathematical physics intended for upper-level undergraduates in the physical sciences.

A&EP 330 Modern Experimental Optics (see also PHYS 330)
Fall. 4 credits. Prerequisites: PHYS 214 or equivalent. E. Bodenschatz.

A&EP 355 Intermediate Electromagnetism
Fall. 4 credits. Prerequisites: PHYS 214 or 217 and coregistration in A&EP 321 or equivalent or permission of instructor.

A&EP 356 Intermediate Electrodynamics
Spring. 4 credits. Prerequisites: A&EP 355 and coregistration in A&EP 322 or equivalent, or permission of instructor.

A&EP 465 Quantum Theory
Fall, spring. 4 credits. Prerequisites: PHYS 214 or 217. Staff.

A&EP 471 Analytical Mechanics
Fall, summer. 4 credits. Prerequisites: MATH 294. Staff.

A&EP 472 Electromagnetics
Fall, summer. 4 credits. Prerequisites: PHYS 214 or 217. Staff.
A&EP 361 Introductory Quantum Mechanics
Spring. 4 credits. Prerequisites: A&EP 333 or PHYS 318; coregistration in A&EP 322 or equivalent and in A&EP 357 or PHYS 326.
A first course in the systematic theory of quantum phenomena. Topics include wave mechanics, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory.

A&EP 363 Electronic Circuits (also PHYS 360)
Fall, spring. 4 credits. Prerequisites: PHYS 218 or 213 or permission of the instructor. No previous experience with electronics assumed, however, the course moves quickly through some introductory topics such as basic DC circuits. Fall term usually less crowded. 1 lab. 2 labs. Fall: E. Kirkland; spring: J. Alexander. Analyze, design, build and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits, resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes and transistors. Digital circuits: combinational (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (D/A) and analog to digital conversion (A/D) and signal averaging.

A&EP 403 Introduction to Nuclear Science and Engineering (also ELE E 458, and NS&E 403)
Fall. 3 credits. Prerequisite: PHYS 214 and MATH 294. For description see NS&E 403.

A&EP 423 Statistical Thermodynamics
Fall. 4 credits. Prerequisite: introductory 3-semester physics sequence plus 1 year of junior-level mathematics. Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of Thermal Physics, by Kittel and Kroemer. Statistical Physics, by Rossler.

A&EP 434 Continuum Physics

A&EP 438 Computational Engineering Physics
Spring. 3 credits. Prerequisites: COM S 100, A&EP 321, 333, 355, 361, or equivalent, or permission of instructor; coregistration in 361 permitted. Numerical computation (derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods, etc.) will be introduced and applied to engineering physics problems that cannot by solved analytically (three-body problem, electrostatic fields, quantum energy levels, etc.). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

A&EP 440 Quantum and Nonlinear Optics

A&EP 450 Introductory Solid State Physics (also PHYS 454)
Fall. 4 credits. Prerequisites: Some exposure to quantum mechanics is assumed; however, the course moves quickly through some introductory topics such as quantum size effects. At the level of PHYS 443, A&EP 361, or CHEM 793 is highly desirable but not absolutely required. An introduction to the physics of crystalline solids, crystal structures, electronic states, lattice vibrations, and metals, insulators, and semiconductors. Computer simulations of the dynamics of electrons and ions in solids. Optical properties, magnetism, and superconductivity are covered as time allows. The majority of the course will address the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum size effects. At the level of Introduction to Solid State Physics by Kittel, or Solid State Physics by Ashcroft and Mermin.

A&EP 470 Biophysical Methods (also BIONB 470)
Spring. 3 credits. Prerequisites: solid knowledge of basic biology helpful but not required. Letter grades only. An overview of the diversity of modern biophysical experimental techniques used in the study of biophysical systems at the cellular and molecular level. Topics covered will include methods that examine both structure and function of biological systems, with emphasis on the applications of these methods to biological membranes. The course format will include assigned literature reviews written by the students on specific biophysics topics and individual student presentations on these topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods.

A&EP 484 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484, M&AE 459, and NS&E 484)
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electrical engineering and/or plasma dynamics, and permission of instructor. Intended for seniors and graduate students. Offered on demand. For description, see NS&E 484.

A&EP 490 Independent Study in Engineering Physics
Fall, spring. Credit TBA. Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software developments, theoretical design and analysis. Details TBA with respective faculty member.

Spring. 3 credits. Prerequisites: A&EP 356, 361, 423, 450 (or equivalent). Directed at students who have had an introductory course in solid state physics at the level of Kittel. This course will concentrate on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices, and mesoscopic quantum mechanical effects. The course will stress the basic, fundamental physics underlying the applications rather than the applications themselves. At the level of Introduction to Applied Solid State Physics by Dalven.

A&EP 606 Introduction to Plasma Physics (also ELE E 581)
Fall. 4 credits. Prerequisites: ELE E 303 or equivalent. First-year graduate-level course; open to exceptional seniors. For description, see ELE E 581.

A&EP 607 Advanced Plasma Physics (also ELE E 582)
Spring. 4 credits. Prerequisites: ELE E 581 and A&EP 606. Offered on demand. For description, see ELE E 582.

A&EP 633 Nuclear Reactor Engineering (also NS&E 633)
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady. For description, see NS&E 633.

A&EP 661 Microcharacterization
Fall. 3 credits. Prerequisites: introductory 3-semester physics sequence or an introductory course in modern physics. The basic physical principles underlying the many modern microanalytical techniques available for characterizing materials from volumes less than a cubic micron. Discussion centers on the physics of the interaction process by which the characterization is performed, the methodology used in performing the characterization, the advantages and limitations of each technique, and the instrumentation involved in each characterization method.
A&EP 662 Micro/Nano-fabrication and Processing
Spring. 3 credits
An introduction to the fundamentals of micro and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic and optical materials, micromechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

A&EP 663 Nanobiotechnology (also BIO G 663 and MS&E 563)
Spring. 3 credits. Letter grade only. C. Batt and H. Craighead.
A graduate-level course that will cover the basics of biology and the principles and practice of microfabrication techniques. The course will focus on applications in biomedically and biological research. A team design project that stresses interdisciplinary communication and problem solving will be one of the course requirements. The course will be held twice weekly with 75-minute classes. All lectures will be teleconferenced to our NBTC associate institutes.

A&EP 711 Principles of Diffraction (also MS&E 671)
Spring. 3 credits. Letter grades only. J. D. Brock.
This course is a graduate-level introduction to diffraction/scattering phenomena in the context of solid-state and soft condensed-matter systems. The primary topic will be the use of the scattering and absorption of neutron, electron, and X-ray beams to study physical systems. Particular emphasis will be placed on issues related to synchrotron X-ray sources. Specific topics that will be covered in the course include: elastic and inelastic scattering, diffraction from two- and three-dimensional periodic lattices; the Fourier representation of scattering centers and the effects of thermal vibrations and disorder; diffraction, reflectivity, or scattering from surface layers; diffraction or scattering from gases and amorphous materials; small angle scattering, X-ray absorption spectroscopy; resonant (e.g., magnetic) scattering; novel techniques using coherent X-ray beams; and a survey of dynamical diffraction from perfect and imperfect lattices.

A&EP 751 M Eng Project
Fall, spring. 6-12 credits TBA. Required for candidates for the M.Eng. (Engineering Physics) degree. Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

A&EP 753 Special Topics Seminar in Applied Physics
Fall. 1 credit. Prerequisite: undergraduate physics. Required for candidates for the M.Eng. (Engineering Physics) degree and recommended for seniors in engineering physics.
Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

CHEMICAL ENGINEERING

CHEM 112 Introduction to Chemical Engineering (also ENGR 112)
Fall. 3 credits. Limited to freshmen. T. M. Duncan.
This is a course in the Introduction to Engineering series. For description, see ENGR 112.

CHEM 120 Introduction to Biomedical Engineering (also ENGR 120)
Fall. 3 credits. W. M. Saltzman.
This is a course in the Introduction to Engineering series. For description, see ENGR 120.

CHEM 219 Mass and Energy Balances (also ENGR 219)
Fall. 3 credits. Corequisite: physical or organic chemistry or permission of instructor. K. H. Lee.
For description, see ENGRD 219.

CHEM 301 Nonresident Lectures
Spring. 1 credit. P. Clancy.
Lectures from industry and from selected departments of the university provide information to assist students in their post-graduate plans.

CHEM 313 Chemical Engineering Thermodynamics
Fall. 4 credits. Corequisite: physical chemistry. F. A. Escobedo.
A study of the first and second laws and their consequences for chemical systems. Thermodynamic properties of pure fluids, solids, and mixtures; phase and chemical reaction equilibrium; heat effects in batch and flow processes; power cycles and refrigeration.

CHEM 323 Fluid Mechanics
Fall. 3 credits. Prerequisites: CHEM 219 and engineering mathematics sequence. P. H. Steep.

CHEM 324 Heat and Mass Transfer
Spring. 3 credits. Prerequisite: CHEM 323. W. L. Olbricht.

CHEM 332 Analysis of Separation Processes
Spring. 3 credits. Prerequisites: CHEM 313 and 323. P. Clancy.
Analysis of separation processes involving phase equilibria and mass transfer. Phase equilibria: binary and multicomponent distillation; liquid-liquid extraction; gas absorption, adsorption, membrane separations.

CHEM 372 Introduction to Process Dynamics and Control
Spring. 1 credit. Prerequisites: CHEM 313 and 323. A. B. Anton
Modeling and analysis of the dynamics of chemical processes. Laplace transforms, block diagrams, feedback control systems, and stability analysis.

CHEM 390 Reaction Kinetics and Reactor Design
Spring. 3 credits. Prerequisites: CHEM 313 and 323. D. L. Koch.
A study of chemical reaction kinetics and principles of reactor design for chemical processes.

CHEM 391 Physical Chemistry II (also CHEM 391)
For description, see CHEM 391.

CHEM 432 Chemical Engineering Laboratory
Spring. 4 credits. Prerequisite: CHEM 432. K. E. Ackley and staff.
A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEM 472 Feedback Control Systems (also ELE E 471 and M&AE 478)
Fall. 4 credits. Prerequisites: CHEM 372, ELE E 301, M&AE 326, or permission of instructor. A. B. Anton.
For description, see M&AE 478.

CHEM 480 Chemical Processing of Electronic Materials
Spring. 3 credits. A. B. Anton.
Introduction to chemical processing of semiconductor materials for the manufacture of microelectronic devices, with specific emphasis on thermodynamics, transport phenomena, and kinetics. Topics include semiconductor properties and behavior, microelectronic device operation, thermochimistry of deposition and etching reactions, vacuum transport, plasmas, PVD, oxidation, diffusion, CVD, and statistical process control.

CHEM 481 Biomedical Engineering
Spring. 3 credits. Prerequisite: CHEM 324 or equivalent or permission of instructor. W. M. Saltzman.
Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, biomedical transducers (ECG and pace-makers), and analysis of physiological processes such as adhesion, mobility, secretion, and growth.

CHEM 490 Undergraduate Projects in Chemical Engineering
Fall, spring. Variable credit. Research or studies on special problems in chemical engineering.

CHEM 491 Undergraduate Teaching in Chemical Engineering
Fall, spring. 1 credit. T. M. Duncan and M. Ackley.
Methods of instruction in chemical engineering acquired through discussion with faculty and by assisting with the instruction of freshmen and sophomores.
CHEM 492 Research Principles and Practices
- Spring, 1 credit. T. M. Duncan.
- Introduces research procedures, including documenting and reporting research (writing and speaking), experimental design, data analysis, visual display of quantitative information, serendipity (capitalizing on accidents), inadvertent self-deception (recognizing and avoiding). Also includes social aspects of research, such as professional ethics, applying to graduate school, and graduate student life.

CHEM 520 Chemical, Polymer, Biomedical, and Electronic Materials Processing
- Fall, spring. 1-6 credits (1 credit per section).

520.1 An Overview of Chemical Processing
- 1 credit. Meets first third of term.
- T. M. Duncan.
- An introduction to chemical engineering design and analysis—mathematical modeling, graphical methods and dynamic scaling. Open to nonchemical engineers only.

520.2 Introduction to Biomedical Engineering
- 1 credit. Meets first third of term.
- W. M. Saltzman.
- Meets concurrently with CHEM 481.

520.3 Introduction to Electronic Materials Processing
- 1 credit. Meets first third of term.
- A. B. Anton.
- Meets concurrently with CHEM 480.

520.4 Introduction to Polymer Processing
- 1 credit. Meets final third of term.
- C. Cohen.
- Overview and simple quantitative analyses of several plastic processes with an emphasis on the role of rheology in polymer processing.

520.5 Chemical Engineering Processing Units and Equipment
- 1 credit. Meets second third of term.
- K. E. Ackley and A. M. Center.
- A hands-on survey of standard chemical processing equipment structure and operation—with emphasis on trouble-shooting techniques.

520.6 Petroleum Refining
- 1 credit. Meets final third of term.
- A. M. Center.
- The technical and business aspects of petroleum refining. Applications of chemical engineering principles for practical solutions to business needs.

520.7 Process Control Strategies
- 1 credit. Meets second third of term.
- A. M. Center.

CHEM 562 Managing Chemical Process Design
- Fall. 1 or 2 credits. Prerequisite: CHEM 492 or A. M. Center.
- Guidance and evaluation of chemical process designs developed by teams of chemical engineers.

CHEM 564 Design of Chemical Reactors
- Spring. 3 credits. Prerequisite: CHEM 390 or equivalent. P. Harriott.

CHEM 565 Design Project
- Fall, spring. 3 credits. Required for students in the M.Eng. (Chemical) program.
- Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

CHEM 572 Managing Business Development Solutions
- Fall. 3 credits. A. M. Center.
- A case study approach to introduce the typical fundamental factors driving a business venture, to examine how to develop implementation strategies for the venture, and to learn the project management skills necessary to successfully implement the venture.

CHEM 590 Special Projects in Chemical Engineering
- Fall, spring. Variable credit. Non-thesis research or studies on special problems in chemical engineering.

CHEM 605 Fundamentals in Biomedical Engineering I (also ENGRG 605)
- Fall. 1–4 credits (1 credit per section).
- Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&amp;AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering.
- For description, see ENGRG 605.

CHEM 606 Fundamentals in Biomedical Engineering II (also ENGRG 606)
- Spring. 1–4 credits. Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&amp;AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering.
- For description, see ENGRG 606.

CHEM 640 Polymeric Materials
- Fall. 3 credits. P. Rodriguez.

CHEM 643 Introduction to Bioprocess Engineering
- Fall. 3 credits. Prerequisite: CHEM 390 or permission of instructor. No prior background in the biological sciences required. M. L. Shuler.
- A discussion of principles involved in using microorganisms, tissue cultures, and enzymes for processing. Application to food, fermentation, and pharmaceutical industries and to biological waste treatment.

CHEM 655 Separations Using Membranes or Porous Solids
- P. Harriott.
- Diffusion of small molecules in gases, liquids, and solids. Membrane separation processes including gas separation, pervaporation, reverse osmosis, and ultrafiltration. Purification of gases and liquids by adsorption, ion exchange, and chromatography.

CHEM 661 Air Pollution Control
- Spring. 3 credits. P. Harriott.

CHEM 675 Synthetic Polymer Chemistry (also MS&amp;E 622 and CHEM 671)
- Fall. 4 credits. Prerequisites: CHEM 359–360 or equivalent or permission of instructor.
- For description, see CHEM 671.

CHEM 711 Advanced Chemical Engineering Thermodynamics
- Fall. 3 credits. Prerequisite: CHEM 315 or equivalent. P. Clancy.

CHEM 713 Chemical Kinetics and Dynamics
- Spring. 3 credits. Prerequisite: CHEM 390 or equivalent. F. Escobedo.

CHEM 731 Advanced Fluid Mechanics and Heat Transfer
- Fall. 3 credits. Prerequisites: CHEM 323 and 324 or equivalent. D. L. Koch.
- Derivation of the equations of motion for Newtonian fluids. Low Reynolds number fluid dynamics, lubrication theory, inviscid fluid dynamics. Boundary layer theory. Convective and conductive heat transfer.

CHEM 732 Diffusion and Mass Transfer
- Spring. 2 credits. Prerequisite: CHEM 731 or equivalent. P. H. Steen.
- Conservation equations in multicomponent systems, irreversible thermodynamics, dispersion, and Brownian diffusion. Mass transfer for convective diffusion in liquids. Application to a variety of problems such as cogulation of aerosols, diffusion through films and membranes, liquid-liquid extraction, chemical vapor deposition, polymer rheology and diffusion, and reaction-diffusion systems.

CHEM 741 Selected Topics in Biochemical Engineering
- Fall. 1 credit (may be repeated for credit).
- Prerequisite: CHEM 643 or permission of instructor. K. H. Lee, M. L. Shuler, and W. M. Saltzman.
- Discussion of current topics and research in biochemical engineering for graduate students.
### Thermodynamic properties of dilute, semidilute, and concentrated solutions from transition phenomena

### Polymeric melts: equations of state and glass transition phenomena

### Application of advanced mathematical techniques to chemical engineering analysis

### Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, and curve fitting

### Characterization techniques of dilute solutions: osmometry, light scattering, viscometry, and sedimentation. Rubber elasticity, mechanical and thermodynamic properties of gels.

### General Thermodynamics

**CHEME 741** Introduction to Environmental Systems (also ENGR 113) (F,3cr.)

**CHEME 751** Mathematical Methods of Chemical Engineering Analysis

Fall. 4 credits. A. B. Anton. Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

**CHEME 753** Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation

**CHEME 790** Seminar

Fall, spring. 1 credit each term. General chemical engineering seminar required of all graduate students in the Field of Chemical Engineering.

**CHEME 792** Principles and Practices of Graduate Research

Fall, spring. 1 credit. T. M. Duncan and staff. A colloquium/discussion group series for first-year graduate students. Topics include the culture and responsibilities of graduate research and the professional community; the mechanics of conducting research (experimental design, data analysis, serendipity in research, avoiding self-deception), documenting research (lab notebooks, computer files), and reporting research (writing a technical paper and oral presentations).

**CHEME 890** Thesis Research

Fall, spring. Variable credit. Thesis research for the M.S. degree in chemical engineering.

**CHEME 990** Thesis Research

Fall, spring. Variable credit. Thesis research for the Ph.D. degree in chemical engineering.

### CIVIL AND ENVIRONMENTAL ENGINEERING

Courses in the School of Civil and Environmental Engineering are offered in three broad mission areas: Civil Infrastructure, Environmental, and Systems Engineering and Information Technology. Within each mission area are several areas of specialization. The following are the course numbers and titles listed by specialization within each mission area. Some courses are listed in two or more mission areas because the course content is relevant to multiple areas. The school also offers a number of general courses that are not unique to one mission area. Full course descriptions follow in the subsequent section and are listed in numerical order.

#### General

- **CCEE 113** Introduction to Environmental Systems (also ENGR 113) (F,3cr.)
- **CCEE 116** Modern Structures (also ENGR 116) (F,3cr.)
- **CCEE 241** Engineering Computation (also ENGRD 241) (F,3cr.)
- **CCEE 304** Uncertainty Analysis in Engineering (F,3cr.)
- **CCEE 308** Introduction to CADD (F,3cr.)
- **CCEE 309** Special Topics in Civil and Environmental Engineering (S,3cr.)
- **CCEE 323** Engineering Economics and Management (also ENGRG 323) (F,3cr.)
- **CCEE 400** Senior Honors Thesis (F,3cr.)
- **CCEE 401** Undergraduate Engineering Teaching in CEE (F,3cr.)

#### Civil Infrastructure

See also: CCEE 116, CCEE 241, CCEE 304, CCEE 308, CCEE 503, and CCEE 595

#### Geotechnical Engineering

- **CCEE 341** Introduction to Geotechnical Engineering (F,3cr.)
- **CCEE 501/502** Design Project in Geotech./Structures (F,3cr.)
- **CCEE 602** Civil Infrastructure Seminar (F,3cr.)
- **CCEE 640** Foundation Engineering (F,3cr.)
- **CCEE 641** Retaining Structures and Slopes (S,3cr.)
- **CCEE 644** Environmental Applications of Geotechnical Engineering (S,3cr.)
- **CCEE 649** Special Topics in Geotechnical Engineering (S,3cr.)
- **CCEE 740** Engineering Behavior of Soils (F,3cr.)
- **CCEE 741** Rock Engineering (S,3cr.)
- **CCEE 744** Advanced Foundation Engineering (S,3cr.)
- **CCEE 745** Soil Dynamics (S,3cr.)
- **CCEE 746** Embankment Dam Engineering (S,3cr.)
- **CCEE 749** Research in Geotechnical Engineering (F,3cr.)
- **CCEE 840** Thesis—Geotechnical Engineering (F,3cr.)

#### Structural Engineering

- **CCEE 116** Modern Structures (F,3cr.)
- **CCEE 371** Structural Behavior (S,4cr.)
- **CCEE 372** Structural Analysis (F,S,4cr.)
- **CCEE 473** Design of Concrete Structures (S,4cr.)
- **CCEE 474** Design of Steel Structures (S,4cr.)
- **CCEE 475** Introduction to Composite Materials (S,4cr.)
- **CCEE 476** Physical and Computational Material Simulation (S,4cr.)

#### Environmental Engineering

See also CCEE 113, CCEE 241, and CCEE 304

- **CCEE 113** Introduction to Environmental Systems (F,3cr.)
- **CCEE 351** Environmental Quality Engineering (S,3cr.)
- **CCEE 352** Water Supply Engineering (F,3cr.)
- **CCEE 451** Microbiology for Environmental Engineering (S,3cr.)
- **CCEE 453** Laboratory Research in Environmental Engineering (S,3cr.)
- **CCEE 501/502** Design Project in Environmental Engineering (F,3cr.)
- **CCEE 601** Water Resources and Environmental Engineering Seminar (F,3cr.)
- **CCEE 653** Water Chemistry for Environmental Engineering (F,3cr.)
- **CCEE 654** Aquatic Chemistry (S,3cr.)
- **CCEE 655** Transport, Mixing, and Transformation in the Environment (F,3cr.)
- **CCEE 658** Sludge Treatment, Utilization, and Disposal (S,3cr.)
- **CCEE 659** Environmental Quality Engineering Seminar (S,1cr.)
- **CCEE 750** Research in Environmental Engineering (F,3cr.)
- **CCEE 755** Physical/Chemical Processes (F,3cr.)
- **CCEE 756** Biological Processes (S,3cr.)
- **CCEE 757** Physical/Chemical Processes Laboratory (F,2cr.)
CIVIL AND ENVIRONMENTAL ENGINEERING 213

Environmental Fluid Mechanics and Hydrology
CEE 331 Fluid Mechanics (F,Su,4cr.)
CEE 332 Hydraulic Engineering (S,4cr.)
CEE 341 Geohydrology (also GEOL 445 and ABEN 471) (F,3cr.)
CEE 342 Hydrology (S,3cr.)
CEE 345 Coastal Engineering (S,4cr.)
CEE 457 Experimental Methods in Fluid Dynamics (S,3cr.)
CEE 501/502 Design Project in Fluid Mechanics and Hydrology (F,S,3cr.)
CEE 601 Water Resources and Environmental Engineering Seminar (F,1cr.)
CEE 630 Advanced Fluid Mechanics (F,3cr.)
CEE 631 Flow and Contaminant Transport Modeling in Groundwater (S,3cr.)
CEE 632 Hydrology (S,3cr.)
CEE 633 Flow in Porous Media and Groundwater (F,3cr.)
CEE 634 Boundary Layer Meteorology (F,3cr.)
CEE 635 Small and Finite Amplitude Water Waves (S,3cr.)
CEE 636 Environmental Fluid Mechanics (S,3cr.)
CEE 637 Experimental Methods in Fluid Dynamics (S,3cr.)
CEE 638 Hydraulics Seminar (S,1cr.)
CEE 659 Special Topics in Hydraulics (F,S,3cr.)
CEE 655 Transport, Mixing, and Transformation in the Environment (F,3cr.)
CEE 732 Computational Hydraulics (S,3cr.)
CEE 735 Research in Hydraulics (F,S,3cr.)
CEE 830 Thesis—Fluid Mechanics and Hydrology (F,S,3cr.)

Systems Engineering and Information Technology
See CEE 113, CEE 241, and CEE 304

Engineering Management
CEE 400 Management Practice in Project Engineering (S,3cr.)
CEE 590 Project Management (F,S,4cr.)
CEE 591 Engineering Management Project (F,3cr.)
CEE 592 Engineering Management Project (S,3cr.)
CEE 593 Engineering Management Methods I: Data, Information, and Modeling (F,3cr.)
CEE 594 Engineering Management Methods II: Managing Uncertain Systems (S,3cr.)
CEE 595 Construction Planning and Operations (F,3cr.)
CEE 596 Current Topics in Construction Management (S,3cr.)
CEE 597 Risk Analysis and Management (S,3cr.)
CEE 692 Special Topics in Engineering Management (F,S,3cr.)
CEE 694 Research in Engineering Management (F,S,3cr.)

Environmental and Public Systems
CEE 323 Engineering Economics and Management (also ENGRG 323) (S,3cr.)
CEE 501/502 Design Project in Environmental Systems (F,S,3cr.)
CEE 528 Public Political Economy (also ECON 567) (S,3cr.)
CEE 529 Water and Environmental Resources Problems and Policies (F,3cr.)
CEE 597 Risk Analysis and Management (S,3cr.)
CEE 620 Water Resources Systems Engineering (F,3cr.)
CEE 621 Stochastic Hydrology (S,3cr.)
CEE 623 Environmental Systems Engineering (F,3cr.)
CEE 628 Environmental and Water Resources Systems Analysis Seminar (S,1cr.)
CEE 722 Environmental and Water Resources Systems Analysis Research (F,S,3cr.)
CEE 729 Special Topics in Environmental and Water Resources Systems Analysis (F,S,3cr.)
CEE 820 Thesis—Environmental and Water Resources Systems (F,S,3cr.)

Remote Sensing
CEE 411 Remote Sensing: Environmental Applications (also SCAS 411) (S,3cr.)
CEE 610 Remote Sensing Fundamentals (F,3cr.)
CEE 615 Digital Image Processing (S,3cr.)
CEE 617 Project—Remote Sensing (F,S,3cr.)
CEE 618 Special Topics—Remote Sensing (F,S,3cr.)
CEE 710 Research—Remote Sensing (F,S,3cr.)
CEE 810 Thesis—Remote Sensing (F,S,3cr.)

Transportation
CEE 361 Introduction to Transportation Engineering (S,3cr.)
CEE 463 Transportation and Information Technology (F,3cr.)
CEE 464 Transportation Systems Design (S,3cr.)
CEE 501/502 Design Project in Transportation (F,S,3cr.)
CEE 561 Urban Transportation Planning and Modeling (F,3cr.)
CEE 665 Transportation Network Analysis (S,3cr.)
CEE 762 Transportation Research (F,S,3cr.)
CEE 764 Special Topics in Transportation (F,S,3cr.)
CEE 860 Thesis—Transportation Engineering (F,S,3cr.)

CEE 113 Introduction to Environmental Systems (also ENGRG 113)
Fall. 3 credits. Not open (without instructor's permission) to upper-division engineering students. M. Weber-Shirk.

CEE 116 Modern Structures (also ENGRG 116)
Fall. 3 credits. A. R. Ingraffea.

CEE 241 Engineering Computation (also ENGRG 241)
Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294 (completion of MATH 294 is suggested). W. Philpot.

CEE 304 Uncertainty Analysis in Engineering
Fall. 4 credits. CEE Engineering Co-op students may substitute summer ENGRD 270. Prerequisite: first-year calculus. J. R. Stedinger.

CEE 309 Special Topics in Civil and Environmental Engineering
Fall. 1-6 credits. Staff. Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

CEE 323 Engineering Economics and Management (also ENGRG 323)
Spring; usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. D. P. Loucks.

CEE 331 Fluid Mechanics
Fall; usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: ENGRD 202 (may be taken concurrently). P. L.-F. Liu.

Hydrostatics, the basic equations of fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, open-channel flow. Elements of design in water supply systems, canals, and other hydraulic schemes.
CEE 332 Hydraulic Engineering  Spring. 4 credits. Prerequisite: CEE 331. M. L. Weber-Shirk. Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, water-distribution systems, open-channel design, river engineering, and pollutant dispersal. Lectures, laboratory work, and a design project. See www.cee.cornell.edu/cee332/ for details.

CEE 341 Introduction to Geotechnical Engineering  Spring. 4 credits. Prerequisite: ENGRD 202. F. H. Kulhawy. Soil as an engineering material. Chemical and physical nature of soil. Stresses and stress analysis of soil. Basic theory and design for water flow in soil, one-dimensional consolidation of clay and silts, and shear-strength problems. Introduction to slope stability, earth pressure, geotechnics, and landfill and waste-containment issues. Introduction to laboratory and test results for the design of engineering structures.

CEE 361 Introduction to Transportation Engineering  Spring; usually offered in summer for Engineering Co-op Program. 3 credits. A. H. Meyburg. Introduction to technological, economic, and social aspects of transportation. Emphasis on design and functioning of transportation systems and their components. Supply-demand interactions; system planning, design, and management; traffic flow and control. Intersection and network analysis. Institutional and energy issues; environmental impacts.

CEE 372 Structural Analysis  Fall, usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: CEE 371. S. Billington. Fundamentals of statically indeterminate structural analysis; methods of calculating displacements; force and displacement methods of indeterminate analysis; matrix structural analysis; introduction to the finite element method; application of theory and methods to engineering analyses using educational and commercial software.

CEE 400 Senior Honors Thesis  Fall, spring. 1-6 credits. Staff. Available to students admitted to the CEE Honors Program. Supervised research, study, and/or project work resulting in a written report or honors thesis.

CEE 401 Undergraduate Engineering Teaching in CEE  Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff. Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

CEE 411 Remote Sensing: Resource Invention Methods (also SCAS 411) Spring. 3 credits. Prerequisite: permission of instructor. S. C. DeGloria. For description, see SCAS 411.

CEE 431 Geohydrology (also GEOE/EAS 445 and ABEN 471) Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202. L. Cathles. Intermediate-level study of hydrogeology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

CEE 432 Hydrology  Spring. 3 credits. Prerequisite: CEE 351. Intended for undergraduates. Lectures and discussions. W. H. Brutsaert. Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers. See description for CEE 652.

CEE 435 Coastal Engineering  Spring. 4 credits. Prerequisite: CEE 331. Not offered 2000-2001. L. F. Liu. Introduction to wave water phenomena, including wave generation, shoaling, refraction, diffraction, and breaking. Applications of wave theories to engineering design problems such as metal structures and beach erosion in coastal zones. Lectures supplemented by four laboratory assignments and a design project.

CEE 437 Experimental Methods in Fluid Dynamics  Spring. 3 credits. Not offered 2000-2001. E. A. Cowen. Same as CEE 637 but no project is required. For description, see CEE 637.

CEE 451 Microbiology for Environmental Engineering  Fall. 3 credits. Prerequisite: 2 semesters of college chemistry. J. M. Gossett. An introduction to fundamental aspects of microbiology, organic chemistry, and biochemical engineering pertinent to environmental engineering. Topics include nomenclature and principal reactions of organic compounds; characteristics of bacteria, fungi, algae, protozoa, and viruses relevant to water and wastewater; pathogens, disease, and immunity; environmental influences on microorganisms; bioenergetics, enzymes and metabolism, microbial genetics, and microbial ecology. This is an introductory course; consequently, it is inappropriate for those who have taken BIOM 290 or equivalent.

CEE 453 Laboratory Research in Environmental Engineering  Spring. 3 credits. Prerequisites: CEE 351 or permission of instructor. M. L. Weber-Shirk. Laboratory investigations of reactor flow characteristics, acid rain/lake chemistry; contaminated soil-site assessment, risk assessment, and remediation, pollutant dispersion/transport in rivers; drinking water filtration for pathogen removal; oxygen sag in rivers; and biodegradation in landfills. Design of laboratory experiments, development of laboratory methods, and use of experimental data are emphasized. See www.cee.cornell.edu/cee453/ for more information.

CEE 463 Transportation and Information Technology  Fall. 3 credits. L. K. Nozick. Improvements in the use of existing facilities has become an important objective in transportation planning. This course examines the role of computer and telecommunications technologies to achieve these improvements. Specific attention is focused on the development of analyses to evaluate the benefits of inclusion of these technologies in transportation systems.

CEE 464 Transportation Systems Design  Spring. 3 credits. Prerequisite: CEE 351. Staff. Advanced techniques for physical and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including investment strategies. Faculty location decisions, networks, and passenger and freight terminals.

CEE 473 Design of Concrete Structures  Spring. 4 credits. Corequisites: CEE 372 or permission of instructor. K. C. Hove. Behavior and design of reinforced concrete and structures. Discussion of how forces are transferred through elements of building system. Semester project requiring the design of a reinforced concrete structure.

CEE 474 Design of Steel Structures  Spring. 4 credits. Prerequisite: CEE 372 or permission of instructor. T. Pekoz. Behavior and design of steel members, connections, and structures. Discussion of structural systems for buildings and bridges.

CEE 475 Introduction to Composite Materials (also M&AE 455, MSAE 555, and T&AM 455)  Spring. 4 credits. L. Phoenix. For description, see TRAM 455.

CEE 476 Physical and Computational Material Simulation  Spring. 4 credits. Prerequisites: ENGRD 202, ENGRD 261, PHYS 214, CEE 372. S. Billington. This course is organized around material failure phenomena, such as fracture, plastic yielding, and buckling. Each phenomenon is presented in terms of experimental observation of physical behavior, theories for prediction, and methods for computational simulation. Similar failure phenomena are seen in many materials at multiple length/time scales and under varying boundary conditions. Materials discussed include metals, plastics,
composites, concrete, smart materials, and aged materials for historic preservation.

**C 509 Management Practice in Project Engineering**
Spring. 3 credits. Prerequisite: permission of instructor. K. C. Hover.
An introduction to the principles of project management. Planning, organizing, communicating, scheduling, and controlling of engineering work done in project teams.

**C 501/502 Design Project**
Fall, spring. 3 credits each term. Required for students in the M.Eng. (Civil) program. Staff.

**C 501/502 Design Project in Geotech Structures**
Design of major civil engineering project. Planning and preliminary design during the fall term; final design completed in January intersession.

**C 501/502 Design Project in Environmental Fluid Mechanics and Hydrology**
Design of a major fluid mechanics/hydraulics project.

**C 501/502 Design Project in Environmental Engineering**
Design of a major environmental engineering project.

**C 501/502 Design Project in Environmental Systems**
Design of a major environmental systems project.

**C 501/502 Design Project in Transportation Systems**
Design of a major transportation systems project. May work in conjunction with CEE 591/592 Engineering Management Project design group.

**C 504 Applied Systems Engineering I**
(also COM S 504, ELE E 512, M&A E 591, OR&IE 512)
Fall. 3 credits. Prerequisite: permission of instructor. Staff. For description, see M&E 591.

**C 505 Applied Systems Engineering II**
(also COM S 505, ELE E 513, M&A E 592, OR&IE 513)
Spring. 3 credits. Prerequisite: Applied Systems Engineering I (C 504, COM S 504, ELE E 512, M&A E 591, or OR&IE 512). L. K. Nozick, P. Jackson, and R. Thomas. For description, see M&E 592.

**C 509 Heuristic Methods for Optimization (also COM S 574)**
Spring. 3 or 4 credits. Prerequisites: CEE/ENGRD 241 or COM S/ENGRD 211 or 222 or graduate standing, or permission of instructor. C. A. Shoemaker and B. Selman. This course will describe a variety of heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, random walk, and direct search algorithms. Algorithms will be used to find values of discrete and/or continuous variables arising in optimization and model fitting. Applications will be discussed in a range of areas including some of the following: artificial intelligence, scheduling, protein folding, economic planning, water quality protection, telecommunications, and robotics. The advantages and disadvantages of heuristic search methods for both serial and parallel computation will be discussed in comparison to other optimization algorithms.

**C 528 Public Political Economy (also ECON 538)**
Spring. 4 credits. R. E. Schuler. For description, see ECON 539.

**C 529 Water and Environmental Resources Problems and Policies**
Fall. 3 credits. Intended primarily for graduate engineering and non-engineering students but open to qualified upperclass students. Prerequisite: permission of instructor. D. J. Allee and L. B. Dworsky. Evaluation, appraisal, and prospects for problems involving water and environmental resources. Organization and public policies in the federal system.

**C 561 Urban Transportation Planning Project and Modeling**
Fall. 3 credits. Prerequisites: CEE 361, statistics and probability, or permission of instructor. Designed for seniors with appropriate background and graduate students from CEE, CRP, and CIPA. A. H. Meyburg. This course is intended to expose interested students to modern transportation planning practice and to the analytical tools necessary to enable people to work in this field. Emphasis will be on passenger transportation in the urban context. The course discusses the legislative, political, and economic contexts of urban transportation planning (UTP). It presents the travel demand estimation and the associated models and approaches. Finally, it evaluates the forecasting results and assesses energy and environmental impacts. Student projects are an important element of the course.

**C 590 Project Management**
Fall, spring. 4 credits. Prerequisite: permission of instructor. A. H. Meyburg and J. W. Wilcox. A core graduate course in project management for people who will manage technical or engineering projects. Focuses both on the "technical" tools of project management (methods for planning, scheduling, and control) and the "human" side (forming a project team, managing performance, resolving conflicts, etc.), with somewhat greater emphasis on the latter.

**C 591 Engineering Management Project**
Fall. 3 credits. Prerequisite: permission of instructor. Staff. An intensive evaluation of the management aspects of a major engineering project or system. Most students will work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

**C 592 Engineering Management Methods I: Data, Information, and Modeling**
Spring. 3 credits. Prerequisite: permission of instructor. Staff. A continuation of CEE 591.

**C 593 Engineering Management Methods II: Decision, Information, and Modeling**
Fall. 3 credits. Prerequisites: CEE 523 and CEE 304 or equivalent. D. P. Loucks. Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in project design, scheduling, operation, quality control, forecasting, and resource allocation.

**C 594 Engineering Management Methods III: Managing Uncertain Systems**
Spring. 3 credits. Prerequisite: CEE 593 or permission of instructor. Staff. Modeling and managing systems in which uncertainty is a major factor. An overview of systems behavior. Systems which are subject to breakdown, deterioration, and queuing. Simulation as a tool for analyzing uncertain systems. Project cases and studies to illustrate application of the methods.

**C 595 Construction Planning and Operations**
Fall. 3 credits. K. C. Hover. A course on the fundamentals of construction planning: organization of the worksite, construction planning, scheduling, and cost estimating, bidding, temporary structures, applications of computer methods, and the relationships among owners, designers, contractors, suppliers, and developers.

**C 596 Current Topics in Construction Management**
Spring. 3 credits. Prerequisite: CEE 595 or equivalent. Not offered 2000–2001. This course will focus on recent trends in the professional management of construction projects and organizations. It will draw from literature, practicing construction managers, software producers, and research. The course seeks to identify fundamental trends and prepare students for management positions in engineering design and construction.

**C 601 Water Resources and Environmental Engineering Seminar**
Fall. 1 credit. Presentation of topics of current interest.

**C 602 Civil Infrastructure Seminar**
Fall. Spring. 1 credit. Required for first-year graduate students. Presentation of topics of current interest.

**C 603 Systems Engineering and Information Technology Seminar**
Fall, spring. 1 credit. Presentation of topics of current interest.

**C 610 Remote Sensing Fundamentals (also SCAS 660)**
Fall. 3 credits. Prerequisite: permission of instructor. W. D. Philpot. An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

**C 615 Digital Image Processing**
Spring. 3 credits. Prerequisites: facility with algebra and trigonometry (e.g., MATH 109) and statistics (e.g., CEE 304 or ARMF 310), or permission of instructor. W. D. Philpot. An introduction to digital image-processing concepts and techniques, with emphasis on...
remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral extraction, and classification, with an introduction to hyperspectral data analysis. Assignments will require the use of image-processing software and graphics.

**CEE 617 Project—Remote Sensing**
On demand. 1–6 credits. W. D. Philpot. Students select a project to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

**CEE 618 Special Topics—Remote Sensing**
On demand. 1–6 credits. W. D. Philpot. Supervised study in small groups on one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.

**CEE 620 Water-Resources Systems Engineering**
Spring. 3 credits. Prerequisites: CEE 323 and CEE 593. D. P. Loucks. Development and application of deterministic and stochastic optimization and simulation models for water-resources planning and management. River-basin modeling, including reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and pollution, and water-quality prediction and control.

**CEE 621 Stochastic Hydrology**
Spring. 3 credits. Prerequisites: CEE 304 or permission of instructor. J. R. Stedinger. Course examines statistical, time series, and stochastic optimization methods used to address water resources planning and management problems involving uncertainty objectives and hydrologic inputs. Statistical issues include maximum likelihood and moments estimators; censored datasets and historical information; probability plotting; Bayesian inference; regionalization methods; ARMA models; multivariate stochastic streamflow models; stochastic simulation; and stochastic reservoir-operation optimization models.

**CEE 623 Environmental Quality Systems Engineering**
Fall. 3 credits. Prerequisites: MATH 294, optimization, and graduate standing or permission of instructor. C. A. Shoemaker. Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution. Case studies include: regional waste and wastewater treatment, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated groundwater. Applications use linear programming, integer, dynamic, nonlinear programming, and sensitivity analysis.

**CEE 628 Environmental and Water Resources Systems Analysis Seminar**
Spring. 1 credit. Prerequisite: permission of instructor. C. A. Shoemaker. Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

**CEE 630 Advanced Fluid Mechanics**

**CEE 631 Flow and Contaminant Transport Modeling in Groundwater**
Spring. 3 credits. Prerequisites: MATH 294 or equivalent. ENGRD 241 or experience in numerical methods and programming, and elementary fluid mechanics. P. L.-F. Liu. Potential flows and their calculation. Numerical methods include finite difference, finite elements, and boundary elements. Fundamental equations of saturated and unsaturated flow in porous media. Flow in fractured media. Numerical modeling of transport in porous media. Diffusion and advective diffusion in one, two, and three dimensions. Anisotropy. Additional terms for reactive substances. The course will include the use of computer programs.

**CEE 632 Hydrology**
Spring. 3 credits. Prerequisite: CEE 331. W. H. Brutsaert. Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers and scientists. Physical and statistical prediction methods for design related to hydrologic processes: Hydrogeomorphology and evaporation. Infiltration and base flow. Surface runoff and channel routing. Linear and nonlinear hydrologic systems. Storage routing and unit hydrograph methods.

**CEE 633 Flow in Porous Media and Groundwater**

**CEE 634 Boundary Layer Meteorology**
Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor. W. H. Brutsaert. Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

**CEE 635 Small and Finite Amplitude Water Waves**

**CEE 636 Environmental Fluid Mechanics**

**CEE 637 Experimental Methods in Fluid Dynamics**

**CEE 638 Hydraulics Seminar**
Spring. 1 credit. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering. P. L.-F. Liu. Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

**CEE 639 Special Topics in Hydraulics**
On demand. 1–6 credits. Staff. Special topics in fluid mechanics, hydraulic engineering, or hydrology.

**CEE 640 Foundation Engineering**

**CEE 641 Retaining Structures and Slopes**
Spring. 3 credits. Prerequisite: CEE 341. Staff. Earth pressure theories. Design of rigid, flexible, braced, tied-back, slurry, and reinforced soil structures. Stability of excavation, cut, and natural slopes. Design problems stressing application of course material under field conditions of engineering practice.

**CEE 644 Environmental Applications of Geotechnical Engineering**
Spring. 3 credits. Prerequisite: CEE 341 or equivalent. T. D. O’Rourke. Principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasis on environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

**CEE 649 Special Topics in Geotechnical Engineering**
On demand. 1–6 credits. Staff. Supervised study of special topics not covered in the formal courses.

**CEE 653 Water Chemistry for Environmental Engineering**
Fall. 3 credits. Prerequisite: 1 semester of college chemistry or permission of instructor. L. W. Lion. Principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics,
acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. The focus of the course is on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

**CxEE 654 Aquatic Chemistry**
Spring. 3 credits. Prerequisite: CxEE 653 or CHEM 287-288. J. J. Bisogni. Concepts of chemical equilibria applied to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, Eh-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques. In-depth coverage of topics covered in CxEE 653.

**CxEE 655 Transport, Mixing, and Transformation in the Environment**
Fall. 3 credits. Prerequisite: CxEE 331. E. A. Cowen. Application of fluid mechanics to problems of transport, mixing, and transformation in the water environment. Introduction to advective, diffuse, and dispersive processes in the environment. Boundary interactions: air-water and sediment-water processes. Introduction to chemical and biochemical transformation processes. Applications to transport, mixing, and transformation in rivers, lakes, and coastal waters.

**CxEE 658 Sludge Treatment, Utilization, and Disposal**
Spring. 3 credits. Prerequisite: CxEE 352 or permission of instructor. R. I. Dick. Analysis of the quantity and quality of industrial water-supply and pollution-control facilities and other residue-producing processes. Alternatives for reclaiming or disposing of hazardous and nonhazardous residues. Performance of treatment processes for altering sludge properties prior to reuse or ultimate disposal. Considerations in selecting and integrating of sludge-management processes.

**CxEE 659 Environmental Quality**
Spring. 1 credit. Prerequisite: enrollment as graduate student in environmental engineering. Staff. Presentation and discussion of current research in environmental engineering.

**CxEE 663 Transportation Network Analysis**
Spring. 3 credits. Prerequisites: CxEE 463 or CxEE 464, or permission of instructor. Not offered 2000–2001. M. A. Turnquist. Topics in flow prediction and estimation for transportation networks, including equilibrium assignment, stochastic network loading, trip table estimation, dynamic vehicle allocation, and routing/scheduling models.

**CxEE 671 Random Vibration**
Fall. 3 credits. Prerequisites: M&AE 326, CxEE 779, and OR&E 260; or equivalent and permission of the instructor. Not offered 2000–2001. M. D. Grigoriu. Review of probability process theory, simulation and first-passage time. Linear random vibration: second-moment response descriptors and applications from fatigue; seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration: equivalent linearization, perturbation techniques, Fokker-Planck and Kolmogorov equations, Itô calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.

**CxEE 672 Fundamentals of Structural Mechanics**
Fall. 3 credits. K. D. Popaolu. Theory of elasticity, energy principles, plate flexure, failure theories for structural design, beams on elastic foundations, differential equation method, plate theory, introduction to finite-element method.

**CxEE 673 Advanced Structural Analysis**
Fall. 3 credits. Prerequisites: CxEE 372 and computer programming. J. F. Abel. Matrix analysis of structures, computer programming of displacement (stiffness) method, use of interactive graphical analysis programs, solution methods, errors and accuracy, special analysis procedures, virtual work in matrix analysis, and introduction to nonlinear analysis and finite-element methods.

**CxEE 675 Concrete Materials and Construction**
Spring. 3 credits. Prerequisite: CxEE 376 or equivalent. Offered alternate years. Not offered 2000-2001. K. C. Hover. Materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

**CxEE 692 Special Topics in Engineering Management**

**CxEE 694 Research in Engineering Management**
On demand. 1-6 credits. Staff. The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge of the form of a research report.

**CxEE 710 Research—Remote Sensing**
On demand. 1-6 credits. W. D. Philpot. For students who wish to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

**CxEE 722 Environmental and Water Resources Systems Analysis Research**
On demand. 1-6 credits. Prerequisite: permission of instructor. Preparation must be suitable to the investigation to be undertaken. Staff. Investigations of particular environmental or water resources systems problems.

**CxEE 729 Special Topics in Environmental or Water Resources Systems Analysis**
On demand. 1-6 credits. Staff. Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

**CxEE 732 Computational Hydraulics**

**CxEE 735 Research in Hydraulics**
On demand. 1-6 credits. Staff. The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge of the form of a research report.

**CxEE 740 Engineering Behavior of Soils**
Fall. 3 credits. Prerequisite: CxEE 541. H. E. Stewart. Detailed study of the physicochemical nature of soil. Stress states due to geostatic loading and stress-history effects. In-depth evaluation of stress-strain-strength, compressibility, and hydraulic conductivity of natural soils. Laboratory and field-testing methods for determining properties.

**CxEE 741 Rock Engineering**
Spring. 3 credits. Prerequisite: CxEE 541 or permission of instructor. Recommended: introductory geology. Staff. Geologic and engineering classifications of intact rock, discontinuities, and rock masses. Laboratory and field evaluation of properties. Stress states and stress analysis. Design of foundations on, and openings in, rock masses. Analysis of the stability of rock slopes.

**CxEE 744 Advanced Foundation Engineering**
Spring. 2 credits. Prerequisite: CxEE 640. F. H. Kulhawy. A continuation of CxEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.

**CxEE 745 Soil Dynamics**

**CxEE 746 Embankment Dam Engineering**

**CxEE 749 Research in Geotechnical Engineering**
On demand. 1-6 credits. Staff. For the student who wants to pursue a particular geotechnical topic in considerable depth.
CEE 750 Research in Environmental Engineering
On demand. 1-6 credits. Staff.
This course is designed for students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

CEE 755 Physical/Chemical Processes
Fall. 3 credits. Prerequisite: previous or concurrent enrollment in CEE 653 or permission of instructor. J. J. Bisogni.
Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Analysis and design of treatment processes and systems.

CEE 756 Biological Processes
Spring. 3 credits. Prerequisites: an introductory course in microbiology and CEE 755, or permission of instructor. J. J. Bisogni.
Theoritical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Biokinetic analysis and design of biological treatment process.

CEE 757 Physical/Chemical Processes Laboratory
Fall. 2 credits. Prerequisite: concurrent enrollment in CEE 653 and CEE 755. J. J. Bisogni.
Laboratory studies of aquatic chemistry and physical/chemical processes of environmental engineering. Topics include gravimetric analyses; acids/bases; alkalinity; gas chromatography; UV-visible and atomic absorption spectrophotometry; adsorption; filtration; ion exchange; gas transfer; sedimentation; characterization of reactor mixing regimes; coagulation.

CEE 758 Biological Processes Laboratory
Spring. 2 credits. Prerequisite: concurrent enrollment in CEE 756 and CEE 755. J. J. Bisogni.
Laboratory studies of microbiological phenomena and environmental engineering. Topics include microscopy; biochemical and chemical oxygen demand; biological treatability studies; enumeration of bacteria.

CEE 759 Special Topics in Environmental Engineering
On demand. 1-6 credits. Staff.
Supervised study in special topics not covered in formal courses.

CEE 762 Transportation Research
On demand. 1-6 credits. Staff.
In-depth investigation of a particular transportation planning or engineering problem mutually agreed upon between the student and one or more faculty members.

CEE 764 Special Topics in Transportation
On demand. 1-6 credits. Staff.
Advanced subject matter not covered in depth in other regular courses.

CEE 770 Engineering Fracture Mechanics
Fall. 3 credits. Prerequisite: CEE 772 or permission of instructor. Offered alternate years. Not offered 2000–2001. R. Ingraffea.

CEE 772 Finite Element Analysis (also M&AE 680 and T&AM 666)
Spring. 3 credits. Prerequisites: T&AM 663 or equivalent. Staff.
For description, see M&AE 680.

CEE 773 Structural Reliability
Review of probability theory, practical measures for structural reliability, second-moment reliability indices, probability models for strength and loads, probability-based design codes, reliability of structural systems, imperfection-sensitive structures, fatigue, stochastic finite-element techniques, elementary concepts of probabilistic fracture mechanics.

CEE 774 Advanced Structural Concrete
Fall. 3 credits. Prerequisite: undergraduate concrete design course. S. Billington.
Behavior, analysis, and design of structural concrete with an introduction to prestressing; integration of material, component and system modeling, and simulation with structural design; course project integrating computer simulation and physical experimentation of a design.

CEE 775 Structural Concrete Systems
Behavior and design of structural concrete building and bridge systems. Risk assessment and repair and retrofit strategies for structural concrete systems vulnerable to deterioration and/or seismic loading.

CEE 776 Advanced Design of Metal Structures
Fall. 3 credits. Prerequisite: CEE 374 or equivalent. T. Pekoz.
Preliminary design of structural systems. Behavior and design of members and connections. Behavior and computer-aided design of building frames.

CEE 777 Advanced Behavior of Metal Structures

CEE 779 Structural Dynamics and Earthquake Engineering
Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

CEE 783 Civil and Environmental Engineering Materials Project
On demand. 1-3 credits. Staff.
Individual projects or reading and study assignments involving engineering materials.

CEE 785 Research in Structural Engineering
On demand. 1-6 credits. Staff.
Pursuit of a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

CEE 786 Special Topics in Structural Engineering
On demand. 1-6 credits. Staff.
Individually supervised study or independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

CEE 810 Thesis—Remote Sensing
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. W. D. Philpot.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 820 Thesis—Environmental and Water Resource Systems
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 830 Thesis—Fluid Mechanics and Hydrology
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 840 Thesis—Geotechnical Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 850 Thesis—Environmental Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 860 Thesis—Transportation Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.
A brief introduction to the C programming language and standard libraries. Unix accounts will be made available for students wishing to use that system for projects, but familiarity with Unix is not required. (Projects may be done using any modern implementation of C). COM S 213 (C++ Programming) includes much of the material covered in 113. Students planning to take COM S 213 normally do not need to take 113.

COM S 114 Unix Tools
Fall, spring. 1 credit. Usually weeks 5–8. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only. An introduction to Unix, emphasizing instruction in tools for file management, communication, process control, and program development. Knowledge of at least one programming language is expected. Projects assume no previous knowledge of Unix or expertise in any particular language.

COM S 130 Creating Web Documents
Fall. 3 credits. Interactive online media such as the World Wide Web are revolutionizing the way we communicate. This course introduces students having little or no computer background to tools and techniques for creating interactive documents. We will emphasize both questions of design and technical issues. This will involve thinking seriously about digital graphic impact and learning how to do some relatively simple programming with a scripting language (such as JavaScript). Topics covered will include HTML, JavaScript, interaction techniques (elementary DHTML); ways of coping with slow connections; the incorporation of sound, video, and images in web documents, ethics, and e-commerce.

COM S 201 Cognitive Science in Context Laboratory (also COGST 201 and PSYCH 201)
Fall or spring. 4 credits. Limited to 24 students. Prerequisite: concurrent or prior registration in Introduction to Cognitive Psychology (PSYCH 102/COGST 101/COM S 103/LING 170). COM S 103/LING 170 (PSYCH 102) is suggested but not required. Knowledge of programming languages is not assumed. Fall, B. Halpern and staff; spring, D. Field and staff. For description, see COGST 201.

COM S 202 Transition to Java
Fall, spring. Usually weeks 1–4. 1 credit. Prerequisite: one semester-long programming course. A brisk introduction to the Java programming language.

COM S 211 Computers and Programming (also ENGRD 211)
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or an equivalent course in Java or C. Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, modules (classes), program development, proofs of program correctness, recursion, data structures and types (lists, stacks, queues, trees), object-oriented and functional programming, analysis of algorithms, and an introduction to elementary graph theory algorithms. Java is the principal programming language. Knowledge of classes and objects is assumed.

COM S 213 C++ Programming
Fall, spring. 2 credits. Prerequisite: COM S 100 or equivalent programming experience. Students who plan to take COM S 113 and 213 must take 113 first. S-U grades only. An intermediate-level introduction to the C++ programming language and the C/C++ standard libraries. Topics include basic statements, declarations, and types; stream I/O; user defined classes and types; derived classes, inheritance, and object-oriented programming, exceptions throughout. Recommended for students who plan to take advanced courses in computer science that require familiarity with C++ or C. Students planning to take COM S 213 normally do not need to take COM S 113; 213 includes most of the material taught in 113.

COM S 221 Numerical Methods in Computational Molecular Biology
Fall. 3 credits. Prerequisites: At least 1 course in calculus, such as MATH 106, 111, or 191 and a course in linear algebra, such as MATH 221 or 294 or BTRY 417. No particular course in computer science is required, but the student should have some familiarity with iteration, arrays, and procedures. An introduction to numerical computing using MATLAB organized around five applications: the analysis of protein shapes, dynamics, protein folding, and nonlinear minimization will also be treated. The goal of the course is to develop a practical computational expertise with MATLAB and to build mathematical intuition for the problems of molecular biology.

COM S 222 Introduction to Scientific Computation (also ENGRD 222)
Spring. Summer. 3 credits. Prerequisites: COM S 100 and (MATH 221 or MATH 294). An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and cubic spline interpolation. More advanced problem-solving techniques that involve eigenvalue analysis, the solution of ordinary and partial differential equations, linear programming, and nonlinear minimization will also be treated. The goal of the course is to develop a practical computational expertise with MATLAB and to build mathematical intuition for the problems of molecular biology.

COM S 230 Intermediate Web Design
Spring. 3 credits. Enrollment may be limited. Prerequisite: COM S 130 or equivalent. Not offered every year, may be offered spring 2001. Web programming requires the cooperation of two machines: the one in front of the viewer (the client) and the one delivering the content (the server). COM S 130 concentrates almost exclusively on the client side. The main emphasis in COM S 230 is learning about server side processing. We will, through a succession of projects, learn some CGI scripting (programming in PERL or the use of an integrated web site development tool such as ColdFusion); interactions with standard databases; techniques to enhance security, privacy, and reliability; and ways of incorporating other programs. There will again be emphasis on design issues. A major component of the course will be the creation of a substantial web site.
COM S 280 Discrete Structures
Fall, spring, 4 credits. Prerequisite: COM S/ENGRD 211 or permission of instructor.
Covers mathematical aspects of programming and computing. Topics will be chosen from the following: mathematical induction; logical reasoning, propositional and predicate calculus; combinatorics and discrete mathematics covering manipulation of sums, recurrence relations, and generating-function techniques; basic number theory; sets, functions, and relations; partially ordered sets; graphs; algebraic structures.

COM S 312 Structure and Interpretation of Computer Programs
Fall, spring, 4 credits. Prerequisite: COM S 211 or equivalent programming experience.
A challenging introduction to programming languages and computer science that emphasizes alternative modes of algorithmic expression. Topics include recursive and higher-order procedures, performance analysis of algorithms, proofs of program correctness, probabilistic algorithms, symbolic hierarchical data, abstract data types, polymorphic functions, object-oriented programming, infinite data types, simulation, and the interpretation of programs.

COM S 314 Computer Organization (also ELE E 314)
Fall, spring, 4 credits. Prerequisite: COM S/ENGRD 211; COM S 312 or ENGRD 231/ELE E 232 are recommended but not required.
Basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic; datapath design, memory hierarchies including caches and virtual memory, I/O devices, bus-based I/O systems. Students will learn assembly language programming and design a simple pipelined processor.

COM S 381 Introduction to Theory of Computing
Fall, summer, 4 credits. Prerequisite: COM S 280 or permission of instructor.
Credit will not be granted for both COM S 381 and COM S 481. Corrective transfers between COM S 381 and COM S 481 (in either direction) are encouraged during the first few weeks of instruction.
An introduction to the modern theory of computing: automata theory, formal languages, and effective computability.

[COM S 400 The Science of Programming](Spring, 4 credits. Prerequisite: COM S 280 or equivalent. Not offered every year; next offered Spring.)
The practical development of correct programs based on the conscious application of principles that are derived from a mathematical notion of program correctness. Besides dealing with conventional sequential programs, the course covers implementations of abstract data types and contains an introduction to problems with concurrence. Issues in programming-language design that arise from program correctness are discussed. Programs are written but not run on a computer.

COM S 409 Data Structures and Algorithms for Computational Science
Spring, 4 credits. Prerequisite: COM S 211 or equivalent programming experience.
This course is not open to COM S majors.

Data structures and algorithms with emphasis on those useful for computational science. This course is intended for students outside of the Department of Computer Science whose work involves a significant amount of computing. Topics include basic data structures as well as more advanced topics. Emphasis is placed on the use of abstract data types and on how best to select appropriate data structures.

COM S 411 Programming Languages and Logics
Fall, 4 credits. Prerequisite: COM S 312 or permission of instructor. Not offered every year; next offered Fall, spring.
The major concepts of programming languages, with emphasis on synthesis and interpretation. Language-based programming methodologies, including object-oriented, functional, and logic programming. Design and criticism of programming languages. Type theory and typed lambda-calculus. Exercises in several unusual programming languages.

COM S 412 Introduction to Compilers and Translators
Spring, 3 credits. Prerequisites: COMS/ENGRD 211, COM S 312 (or permission of instructor) and COM S 314. Corequisite: COM S 413.
An introduction to the specification and implementation of modern compilers. Topics covered include lexical scanning, parsing, type checking, code generation and translation, an introduction to optimization, and the implementation of modern programming languages. The course entails a substantial compiler implementation project.

COM S 413 Practicum in Compilers and Translators
Spring, 2 credits. Corequisite: COM S 412.
A compiler implementation project related to COMS 412.

COM S 414 Systems Programming and Operating Systems
Fall, summer, 3 credits. Prerequisite: COM S 211, 312 (or permission of instructor), and 314.
An introduction to the logical design of systems programs with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlocks, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

COM S 415 Practicum in Operating Systems
Fall, 2 credits. Corequisite: COM S 414.
The practical aspects of operating systems are studied through the design and implementation of an operating system that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

COM S 417 Computer Graphics and Visualization (also ARCH 374)
Spring, 3 credits. Prerequisite: COM S/ENGRD 211.
An introduction to the principles of interactive computer graphics and scientific visualization. Topics include surface modeling, animation, perspective projection, hidden-line and hidden-surface algorithms, lighting models, image synthesis, and application to scientific data analysis.

COM S 418 Practicum in Computer Graphics (also ARCH 375)
Programming assignments dealing with interactive computer graphics and visualization of scientific data.

COM S 421 Numerical Analysis
Fall, 4 credits. Prerequisites: MATH 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming.

COM S 432 Introduction to Database Systems
Fall. 3 credits. Prerequisites: COM S/ENGRD 211 and COM S 312 (or permission of instructor). Recommended: COM S 213 and strong programming skills in C, C++ or Java.
Introduction to modern relational database systems. The course emphasizes practical knowledge about the internals of database systems and includes several large programming assignments. Topics include the relational model, SQL, index structures, query evaluation, query optimization, database design, security, and transaction management.

COM S 433 Practicum in Database Systems
Fall. 2 credits. Corequisite: COM S 432.
Design and implementation of an electronic commerce system. Technologies include Java Servlets, Active Server Pages, Java Server Pages, JDBC, and ODBC.

[COM S 444 Distributed Systems and Algorithms](Fall, 4 credits. Pre- or corequisite: COM S 414 or permission of instructor. Not offered every year.)
The fundamentals of distributed systems and algorithms. Topics include the problems, methodologies, and paradigms necessary for understanding and designing distributed applications, with an emphasis on fault-tolerant computing. Theoretical concepts will be complemented with practical examples of their application in current distributed systems.

COM S 472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: COM S/ENGRD 211 and COM S 280 (or equivalent).
A challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Corequisite: COM S 472.
Project portion of COM S 472. Topics include knowledge representation systems, search procedures, game-playing, automated reasoning, concept learning, reinforcement learning, neural nets, genetic algorithms, planning, and truth maintenance.
COM S 478 Machine Learning
Spring. 3 credits. Prerequisites: COM S/ ENGRD 211, COM S 280, and COM S 312. This course presents an introduction to machine learning, the study of computer algorithms that improve automatically through experience. Topics to be covered will include some or all of the following: concept learning, decision tree learning, propositional and first-order rule learning, bayesian learning, instance-based learning, analytical learning, genetic algorithms, reinforcement learning, unsupervised learning, computational learning theory, and methods for empirical evaluation of learning algorithms.

COM S 481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481. Corrective transfers between COM S 481 and 381 (in either direction) are encouraged during the first few weeks of instruction. A faster-moving and deeper version of COM S 381.

COM S 482 Introduction to Analysis of Algorithms
Spring, summer. 4 credits. Prerequisites: COM S 211, 280, 312, and either 381 or 481, or permission of instructor. Techniques used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

COM S 483 Quantum Information Processing (also PHYS 481 and 681)
Fall. 2 credits. Prerequisite: familiarity with the theory of vector spaces over the complex numbers. For description, see PHYS 481.

COM S 486 Applied Logic (also MATH 486)
Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (such as MATH 332, 432, 434, 481), and some additional course in mathematics or theoretical computer science. Programming logic, compactness and completeness by tableaux, natural deduction, and resolution. Equational logic. Herbrand Universes and unification. Rewrite rules and equational logic. Knuth-Bendix method and the congruence-closure algorithm and lambda-calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

COM S 490 Independent Reading and Research
Fall. spring. 1–4 credits. Independent reading and research for undergraduates.

COM S 501 Software Engineering
Fall. 4 credits. Prerequisite: COM S 211 or 410 and experience programming in Java or C++. An introduction to the problems of specifying, designing, and building large, reliable software systems. The methods, languages, and tools used in modern software development. Topics include requirements analysis, software life-cycle models, software analysis and design, verification and validation, reliability, engineering ethics, and professionalism. The emphasis is on object-oriented design and program development. Includes team projects for real clients.

COM S 502 Computing Methods for Digital Libraries
Spring. 3 credits. Prerequisites: COM S 211 or 410 and some familiarity with the technology of web sites. This course examines the application of computer science methods in digital libraries. A central topic is the representation of complex information in computer systems, including object models and metadata. Closely related topics include how to discover and deliver information over heterogeneous distributed systems, and how to preserve intellectual information over worldwide networks for long periods of time. A theme that runs through the course is the interplay between computing and people, including the legal, social, and economic context.

COM S 504 Applied Systems Engineering I (also CEE 504, ELE E 512, M&AE 591, OR&IE 512)
Fall. 3 credits. Prerequisite: permission of instructor. For description, see M&AE 591.

COM S 505 Applied Systems Engineering II (also CEE 505, ELE E 513, M&AE 592, OR&IE 513)
Spring. 3 credits. Prerequisite: Applied System Engineering I (CEE 504, COM S 504, ELE E 512, M&AE 591, OR&IE 512) or permission of instructor. See description, see M&AE 592.

COM S 513 System Security
Spring. 4 credits. Prerequisites: COM S 414 or 519 and familiarity with JAVA programming language. The course discusses security and survivability for computers and communications networks. The course will include discussions of policy issues (e.g. the national debates on cryptography policy) as well as the discussions of the technical alternatives for implementing the properties that comprise "trustworthiness" in a computing system. Mechanisms for authorization and authentication as well as cryptographic protocols will be covered.

COM S 514 Intermediate Computer Systems
Fall or spring. 4 credits. Prerequisites: COM S 411 or permission of instructor. This course focuses on practical issues in designing and implementing distributed software. Topics vary depending upon instructor. Recent offerings have covered object-oriented software development methodologies and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by coregistering in COM S 490, 515, or 790.

COM S 515 Practicum in Systems
Fall or spring. 1–2 credits. Corequisite: COM S 514. The practical aspects of modern software systems are studied through the design and implementation of a significant system. Students may work alone or in teams. The project varies from year to year at the discretion of the instructor. Some students take COM S 490 or 790 instead of COM S 515.

COM S 519 Engineering Computer Networks
Fall or spring. 4 credits. Prerequisites: COM S 414 or permission of instructor. Not offered every year.

COM S 522 Computational Tools and Methods for Finance
Spring. 4 credits. Prerequisites: programming experience (e.g., FORTRAN, or MATLAB), some knowledge of numerical methods, especially numerical linear algebra. Not offered every year. This course provides a hands-on introduction to computational methods and tools used in finance. We study both the underlying methods and efficient implementation. The MATLAB Financial Toolbox, along with additional MATLAB tools, will be used extensively. The underlying numerical techniques discussed include linear, least-squares procedures (regression), basic linear algebra, linear and nonlinear optimization, finite-difference methods for PDEs, quadratic programming (and linear complementarity problems), specialized tree (and lattice) evaluation methods.

COM S 574 Heuristic Methods for Optimization (also CEE 508)
Spring. 3 or 4 credits. Prerequisites: COM S/ENGRD 211 or 222 or CEE/ENGRD 241, or graduate standing, or permission of instructor. C. A. Shoemaker and B. Selman. This course will describe a variety of heuristic search methods including simulated annealing, tabu search, genetic algorithms, and techniques based on integer programming. We will be considering in comparison to other optimization algorithms.

COM S 601 System Concepts
Fall. 3 credits. Prerequisites: open to students enrolled in the COM S Ph.D. program. This course covers broadly applicable principles of computing system design and analysis. For example, the principles of locality of reference used in caching, virtual memory, and network service hints. Such broadly applicable abstractions will be discussed along with their implementations in a variety of settings. Case studies from the systems literature will be employed throughout.

COM S 611 Advanced Programming Languages
Fall. 4 credits. Graduate standing or permission of instructor. A study of programming paradigms: functional, imperative, concurrent, and logic programming. Modern programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program
transformation, programming logic, and applications to programming methodology.

**COM S 612 Compiler Design for High-Performance Architectures**
Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor. Compiler design for pipelined and parallel architectures. Program analysis: data and control dependencies, dataflow analysis, efficient solution of dataflow equations, dependence analysis, solution of Diophantine equations. Architecture and code generation for instruction-level parallel (ILP) processors: pipelined, VLIW and superscalar architectures, code reorganization and software pipelining. Architecture and code generation for multiprocessors: shared- and distributed-memory architectures, latency tolerance and avoidance, loop transformations to enhance parallelism and locality of reference.

**COM S 613 Concurrent Programming**
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. Not offered every year; see BBS. Advanced techniques in, and models of, concurrent systems. Synchronization of concurrent processes; parallel programming languages; deadlocks; verification.

**COM S 614 Advanced Systems**
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. An advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, scheduling, concurrency control, and authentication and security issues.

**COM S 618 Principles of Distributed Computing—Message-Passing**
Fall. 4 credits. Prerequisites: mathematical maturity and some basic knowledge of distributed systems. Offered in odd-numbered years; not offered 2000–2001. This course focuses on research in message-passing distributed computing. It covers the fundamental problems and presents some of the latest results and open questions in message-passing systems. Problems will be viewed from a theoretical standpoint with an emphasis on precise specifications, proofs of correctness, upper and lower bounds on various complexity measures and impossibility results.

**COM S 619 Principles of Distributed Computing—Shared Memory**
Fall. 4 credits. Prerequisites: mathematical maturity and some basic knowledge of distributed systems. Offered in even-numbered years; not offered 2000–2001. This course focuses on research in shared-memory distributed computing. It covers the fundamental problems and paradigms of shared-memory systems. Topics include linearity and other models of consistency, nonblocking and wait-free computation, universality of wait-free objects, the atomic snapshot problem, the k-set consensus problem, bounded concurrent timestamps, etc.

**COM S 621 Matrix Computations**
Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor. Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The MATLAB system is used extensively.

**COM S 622 Numerical Optimization and Nonlinear Algebraic Equations**
Spring. 4 credits. Prerequisite: COM S 621. Offered in odd-numbered years. Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton algorithms, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

**COM S 624 Numerical Solution of Differential Equations**
Spring 4 credits. Prerequisites: previous exposure to numerical analysis (e.g., COM S 421 or 621) and differential equations, and knowledge of MATLAB. Offered in even-numbered years; not offered 2000–2001. Finite difference methods for the solution of ordinary and partial differential equations. A fast-moving course that begins with a three-week survey of numerical methods for ODEs, then moves to linear algebra and methods for PDEs, especially parabolic and hyperbolic equations. Other topics covered include numerical stability, linear finite element methods, Hamiltonian problems, and computational issues such as mesh generation and sparse matrix computation for PDEs.1

**COM S 626 Computational Molecular Biology**
Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations and nonlinear optimization methods. Problems and algorithms in computational molecular biology. Topics include sequences (alignment, scoring functions, complexity of searches and alignment, secondary structure prediction, families, and function), the protein folding problem (lattice models, lattice searches, the HP model, chemical potentials, statistical potentials, funnels, complexity and model verification, global optimization, homology, threading, and the dynamics of complex biological systems). Other topics considered are stochastic reasoning, Hamiltonian problems, and computational issues such as mesh generation and sparse matrix computation for PDEs.

**COM S 632 Advanced Database Systems**
Spring. 4 credits. Prerequisite: COM S 432/433 or permission of instructor. A variety of advanced issues ranging from transaction management to query processing to data mining. Extensive paper reading and discussion. Development of a term project with research content.

**COM S 664 Machine Vision**
Spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 221 or equivalent. An introduction to computer vision. The following topics will be covered: edge detection, image segmentation, stereopsis, motion and optical flow, shape reconstruction, shape representations and extracting shapes from images, model-based recognition. Students will be required to implement several of the algorithms covered in the course and evaluate them on both synthetic and real images.

**COM S 671 Introduction to Automated Reasoning**
Fall. 4 credits. Prerequisite: (COM S 611 and graduate standing) or permission of instructor. Topics in modern logic needed to understand and use automated reasoning systems such as HOL, Nuprl, and PVS. Special emphasis on type theory and logic and on tactic-oriented theorem proving.

**COM S 672 Advanced Artificial Intelligence**
Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor. Artificial intelligence (AI) provides many computational challenges. This course covers a variety of areas in AI, including knowledge representation, automated reasoning, learning, games-playing, and planning, with an emphasis on computational issues. Specific topics include stochastic reasoning and search procedures, properties of problem encodings, issues of syntax and semantics in knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

**COM S 674 Natural Language Understanding**
Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor. Not offered every year. This course presents an introduction to natural language processing, the primary concern of which is the study and use from a computational perspective. The course will cover syntactic analysis, semantic interpretation, and discourse processing, via symbolic and statistical approaches. Possible topics include information extraction, natural language generation, memory models, ambiguity resolution, finite-state methods, mildly context-sensitive formalisms, deductive approaches to interpretation, machine translation, and machine learning of natural language.

**COM S 676 Reasoning about Knowledge**
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Offered even-numbered years; not offered 2000–2001. Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues: common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, and modeling resource-bounded reasoning, and connections to game theory.

**COM S 677 Reasoning about Uncertainty**
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Offered odd-numbered years; not offered 2000–2001. Examines formalizing reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logic of probability, combined knowledge and probability, probability and adversarial, conditional logics of normality, Bayesian networks, qualitative approaches to uncer-
COM S 681 Analysis of Algorithms
Fall, 4 credits. Prerequisite: (COM S 381 or 481) and (COM S 482 or 681) or permission of instructor.
Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polynomial-time algorithms, randomized algorithms, NP-completeness, randomized reducibilities. Additional topics such as parallel algorithms and efficient data structures.

COM S 682 Theory of Computing
Spring. 4 credits. Prerequisite: (COM S 381 or 481) and (COM S 482 or 681) or permission of instructor.
Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

COM S 686 Logics of Programs
Spring. 4 credits. Prerequisites: COM S 481, 682, and MATH 481 or MATH/COM S 486.
Topics in logics of programs and program verification. Possible topics include: Floyd/Hoare logic, modal logic, dynamic logic, temporal logic, process logic, automata on infinite objects and their relation to program logics, the Rabin tree theorem, the modal mu-calculus, games and alternating automata, applications to type inference, set constraints, Kleene algebra.

COM S 709 Computer Science Colloquium
Fall, spring. 1 credit. S-U grades only. For staff, visitors, and graduate students interested in computer science. A weekly meeting for the discussion and study of important topics in the field.

COM S 713 Seminar in Systems and Methodology
Fall, spring. 4 credits. Prerequisites: a graduate course employing formal reasoning such as COM S 611, 613, 671, a logic course, or permission of instructor. Not offered every year; semester TBA. Discussion of contemporary issues in the design and analysis of computing systems. Emphasis on the proper use of rigor, models, and formalisms.

COM S 715 Seminar in Programming Languages
Fall, spring. 4 credits. Prerequisite: permission of instructor.
Topics in programming languages, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

COM S 717 Topics in Parallel Architectures
Fall. 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year; semester TBA. Covers topics in parallel computers. Material includes: architectures of parallel computers, parallelizing compilers, operating systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

COM S 719 Seminar in Programming Languages
Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.

COM S 722 Topics in Numerical Analysis
Fall, spring. 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year; semester TBA. Topics are chosen at instructor's discretion.

COM S 729 Seminar in Numerical Analysis
Fall, spring. 1-4 credits (TBA). Prerequisite: permission of instructor. S-U grades only.

COM S 754 Systems Research Seminar
Fall, spring. 1 credit. S-U grades only.

COM S 772 Seminar in Artificial Intelligence
Fall, spring. 4 credits. Prerequisites: permission of instructor. S-U grades only.

COM S 773/774 Proseminar in Cognitive Studies I & II (also COGST, PHIL, LING, and PSY 773/774)
Fall, 773; spring, 774. 4 credits. For description, see COGST 773/774.

COM S 775 Seminar in Natural Language Understanding
Fall, spring. 2 credits. Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

COM S 779 Seminar in Theory of Algorithms and Computing
Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 809 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. Letter grade only. Independent research or Master of Engineering project.

COM S 890 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Master of Science degree research.

COM S 990 Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.

EARTH AND ATMOSPHERIC SCIENCES
(Course listings formerly under Geological Sciences and Soil, Crop, and Atmospheric Sciences)

Courses
For complete course descriptions, see the Earth and Atmospheric Sciences listing in the College of Agriculture and Life Sciences section. Students should note that the EAS designation does not yet appear in the university's enrollment software. Therefore, those who wish to enroll in an EAS class should register under the GEOL or SCAS department designation or in an appropriate cross-listed course, as indicated below.

EAS 101 Introductory Geological Sciences (enroll in GEOL 101)
Fall, spring, summer. 3 credits. Fall, staff; spring, J. M. Bird; summer, W. Brice.

EAS 102 Evolution of the Earth and Life (enroll in GEOL 102 or BIO G 170)
Spring. 3 credits. J. L. Cisne.

EAS 104 The Sea: An Introduction to Oceanography (enroll in GEOL 104 or BIOES 154)
Spring, summer. 3-4 credits (4 credits with lab section). Spring: C. H. Greene, W. M. White; summer: J. Chiment.

EAS 105 Writing on Rocks (First-Year Writing Seminar) (enroll in GEOL 105)
Fall. 3 credits. J. Chiment. See First-Year Seminar Handbook for description.

EAS 106 Vertebrate Fossil Preparation (enroll in GEOL 106)
Spring. 1 credit. Prerequisites: 1 introductory geology course or concurrent enrollment; class size is limited. J. Chiment.

EAS 107 How the Earth Works (enroll in GEOL 107)
Fall. 1 credit. J. L. Cisne.

EAS 109 Dinosaurs (enroll in GEOL 109)
Fall. 1 credit. J. L. Cisne.

EAS 111 To Know the Earth and Build a Habitable Planet (enroll in GEOL 111)
Fall. 3 credits. J. M. Bird.

EAS 122 Earthquake! (enroll in GEOL or ENGR 122)
Spring. 3 credits. L. D. Brown. This is a course in the Introduction to Engineering series. For description, see ENGR 122.

EAS 131 Basic Principles of Meteorology (enroll in SCAS 131)
Fall. 3 credits. M. W. Wysocki.

EAS 150 Introduction to Fortran Programming (enroll in SCAS 353)
Fall. 3 credits. M. W. Wysocki.

EAS 200 Art, Archaeology, and Analysis (enroll in GEOL 200, ARKEO 285, ARTH 200, ENGR 185, or PHYS 200)
Spring. 3 credits. R. W. Kay. This is a course in the Introduction to Engineering series. For description, see ENGR 185.

EAS 201 Introduction to the Physics and Chemistry of the Earth (enroll in GEOL or ENGR 201)
Fall. 3 credits. Prerequisites: PHYS 112 or 207. L. M. Cathles.

EAS 203 Natural Hazards and the Science of Complexity (enroll in GEOL 203)

EAS 204 Ocean Sciences Laboratory (enroll in GEOL 204)
Spring. 3 credits. Prerequisite or corequisite: BIOES 154/EAS 104. C. H. Greene, B. W. Monger.
EAS 210 Introduction to Field Methods in Geological Sciences (enroll in GEOL 210) Fall. 3 credits. Prerequisites: EAS (GEOL) 101 or 201, or permission of instructor. 1 lecture, Saturday field trips. S. M. Kay.

EAS 212 Caribbean Field Trip (enroll in GEOL 212) Spring. 2 credits. Prerequisite: permission of instructor. Enrollment limited to 15. Approximate cost $1,100. L. D. Brown.

EAS 213 Marine and Coastal Geology (enroll in GEOL 213) Summer. 2 credits. Prerequisite: an introductory course in geology or permission of instructor. Staff.

EAS 250 Meteorological Observations and Instruments (enroll in SCAS 250) Spring. 3 credits. Prerequisite: EAS 131. M. W. Wysocki.

EAS 296 Forecast Competition (enroll in SCAS 296) Fall and spring. 1 credit. S-U grades only. Prerequisite: sophomore undergraduate standing in atmospheric science, or permission of instructor. D. S. Wilks.

EAS 302 Evolution of the Earth System (enroll in GEOL 302) Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. W. M. White, W. D. Allmon, B. L. Isacks.

EAS 315 Geomorphology (enroll in GEOL 315) Fall. 4 credits. Prerequisite: 1 of the following: a 3-credit EAS or SES course, or EAS 260. T. E. Jordan and B. L. Isacks.

EAS 321 Introduction to Biogeochemistry (enroll in GEOL or NTRES 321) Fall. 4 credits. Prerequisites: CHEM 207, MATH 112 plus a course in biology and/or geology. L. A. Derry, J. Yavitt.

EAS 326 Structural Geology (enroll in GEOL 326) Spring. 4 credits. Prerequisites: MATH 112, EAS 101, or 201, or permission of instructor. R. W. Allmendinger.

EAS 331 Climate Dynamics (enroll in SCAS 331 or ASTRO 331) Fall. 4 credits. Prerequisite: MATH 112 or 192 or equivalent. K. H. Cook, P. J. Gierasch.

EAS 341 Atmospheric Thermodynamics and Hydrostatics (enroll in SCAS 341) Fall. 3 credits. Prerequisites: 1 year of calculus and 1 semester of physics. W. W. Knapp.

EAS 342 Atmospheric Dynamics (enroll in SCAS 342) Spring. 3 credits. Prerequisites: 1 year each of calculus and physics. K. H. Cook.

EAS 352 Synoptic Meteorology I (enroll in SCAS 352) Spring. 3 credits. Prerequisites: EAS 341 and concurrent enrollment in EAS 342. M. W. Wysocki.

EAS 355 Mineralogy (enroll in GEOL 355) Fall. 4 credits. Prerequisite: EAS 101 or 201 and CHEM 207 or permission of instructor. S. Mahlburg Kay.

EAS 356 Petrology and Geochemistry (enroll in GEOL 356) Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay.

EAS 375 Sedimentology and Stratigraphy (enroll in GEOL 375) Spring. 4 credits. Prerequisite: EAS 101 or 201. J. L. Cisne.

EAS 388 Geophysics and Geotectonics (enroll in GEOL 388) Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. B. L. Isacks.

EAS 417 Field Mapping in Argentina (enroll in GEOL 417) Summer. 3 credits. Prerequisites: EAS 210 and 326; Spanish desirable, but not required. S. Mahlburg Kay.

EAS 423 Petroleum Geology (enroll in GEOL 423) Fall. 3 credits. Recommended: EAS 326. Offered alternate years; not offered 2000-2001.

EAS 435 Statistical Methods in Meteorology (enroll in SCAS 435) Fall. 3 credits. Prerequisites: an introductory course in statistics (e.g., BTRY 215 or MATH 250) and calculus: D. S. Wilks.

EAS 437 Geophysical Field Methods (enroll in GEOL 437) Fall. 3 credits. Prerequisite: PHYS 210 or PHYS 213 or MATH 250, or permission of instructor. L. D. Brown.

EAS 444 Tropical Meteorology (enroll in SCAS 444) Spring. 3 credits. Prerequisite: EAS 342 or instructor's approval. Offered alternate years; not offered 2000-2001. K. H. Cook.

EAS 445 Hydrology and the Environment (enroll in GEOL 445, ABEN 471, or CEE 431) Fall. 5 credits. Prerequisites: MATH 294 and ENGR 202. W. Brutsaert, L. M. Cathles, J.-Y. Parlange, T. S. Steenhuis. For description, see CEE 431.

EAS 446 Modeling the Earth System (also EAS 646) (enroll in SCAS 446) Spring. 3 credits. Prerequisite: programming knowledge and instructor's approval. Not offered 2000-2001. K. H. Cook.

EAS 447 Physical Meteorology (enroll in SCAS 447) Fall. 3 credits. Prerequisites: 1 year each of calculus and physics. M. W. Knapp.

EAS 451 Synoptic Meteorology II (enroll in SCAS 451) Fall. 3 credits. Prerequisites: EAS 341 and 342. S. J. Colucci.

EAS 453 Advanced Petrology (enroll in GEOL 453) Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years. R. W. Kay.

EAS 454 Advanced Mineralogy (enroll in GEOL 454) Spring. 3 credits. Prerequisites: EAS 355 or permission of instructor. Offered alternate years. W. A. Bassett.

EAS 455 Geochemistry (enroll in GEOL 455) Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended: EAS 356. Offered alternate years; not offered 2000-2001. W. M. White.

EAS 456 Mesoscale Meteorology (enroll in SCAS 456) Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Not offered 2000-2001.

EAS 457 Atmospheric Air Pollution (enroll in SCAS 457) Fall. 3 credits. Prerequisites: EAS 341 or 1 course in thermodynamics, and one semester of chemistry, or permission of instructor. Offered alternate years. M. W. Wysocki.

EAS 462 Marine Ecological Processes (enroll in GEOL or BIOES 462) Spring. 3 credits. Limited to 75 students. Prerequisite: BIOES 261. Offered alternate years. C. H. Greene.

EAS 475 Special Topics in Oceanography (enroll in GEOL 475) Spring, summer. 2-5 var. credits. Prerequisites: EAS 104 or BIOES 154, and permission of instructor. C. H. Greene.

EAS 476 Sedimentary Basins: Tectonics and Mechanics (enroll in GEOL 476) Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. T. E. Jordan.

EAS 478 Advanced Stratigraphy (enroll in GEOL 478) Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years; not offered 2000-2001. T. E. Jordan.

EAS 479 Paleobiology (enroll in GEOL or BIOES 479) Fall. 3 credits. Prerequisites: 1 year of introductory biology for majors and either BIOES 274, 373, EAS 375, or permission of instructor. W. Allmorn.

EAS 481 Senior Survey of Earth Systems (enroll in GEOL 481) Fall. 3 credits. Limited to seniors majoring in geological science. J. M. Bird.

EAS 483 Environmental Biophysics (enroll in SCAS 483) Spring. 3 credits. Offered alternate years. Prerequisite: EAS/SCAS 260 or equivalent, or permission of instructor. S. J. Riha.
EAS 491-492 Undergraduate Research (enroll in EOL 491/492)
Fall, spring. 1-4 credits. Staff.

EAS 494 Special Topics in Atmospheric Science (enroll in SCAS 494)
Fall, spring. 8 credits maximum. S-U grades optional. Undergraduate level.

EAS 496 Internship Experience (enroll in SCAS 496)
Fall. Spring. 1-2 credits. S-U grades only.

EAS 497 Individual Study in Atmospheric Science (enroll in SCAS 497)
Fall, spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form.

EAS 498 Teaching Experience in Atmospheric Science (enroll in SCAS 498)
Fall, spring. 1-5 credits. S-U grades optional. Students must register with an Independent Study form.

EAS 499 Undergraduate Research in Atmospheric Science (enroll in SCAS 499)
Fall, spring. Credit by arrangement. Students must register with an Independent Study form.

EAS 500 Design Project in Geohydrology (enroll in GEOL 500)
Fall, spring. 3-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over 2 or more semesters.

L. M. Cathles.

EAS 502 Case Histories in Groundwater Analysis (enroll in GEOL 502)
Spring. 4 credits. L. M. Cathles.

[EAS 622 Advanced Structural Geology I (enroll in GEOL 622)]
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years, not offered 2000-2001.

R. W. Allmendinger.

[EAS 624 Advanced Structural Geology II (enroll in GEOL 624)]
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.

[EAS 628 Geology of Orogenic Belts (enroll in GEOL 628)]
Spring. 3 credits. Prerequisite: permission of instructor. J. M. Bird.

[EAS 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics (enroll in GEOL 634)]
Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years, not offered 2000-2001.

D. L. Turcotte.

[EAS 635 Advanced Statistical Meteorology (enroll in SCAS 635)]
Fall. 3 credits. Prerequisites: coursework in or elementary knowledge of statistics, calculus, matrix algebra, and computer programming. D. S. Wilks.

[EAS 636 Advanced Geophysics II: Quantitative Geodynamics (enroll in GEOL 636)]
Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. D. L. Turcotte.

EAS 641 Analysis of Biogeochemical Systems (enroll in GEOL 641)
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. L. A. Derry.

[EAS 646 Modeling the Earth System (also EAS 446) (enroll in SCAS 646)]

[EAS 651 Advanced Atmospheric Thermodynamics (enroll in SCAS or ASTRO 651)]
Fall. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. K. H. Cook, P. J. Gierasch, S. J. Colucci.

[EAS 652 Advanced Atmospheric Dynamics (enroll in SCAS or ASTRO 652)]
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. S. J. Colucci, K. H. Cook, P. J. Gierasch.

[EAS 656 Isotope Geochemistry (enroll in GEOL 656)]
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years, not offered 2000-2001. W. M. White.

[EAS 675 Modeling the Soil-Plant-Air System (enroll in SCAS 675)]
Spring. 3 credits. Prerequisite: EAS/CSS 483 or equivalent. Offered alternate years, not offered 2000-2001. W. M. White.

[EAS 681 Geotectonics (enroll in GEOL 681)]
Fall. 3 credits. Prerequisite: permission of instructor. J. M. Bird.

[EAS 692 Special Topics in Atmospheric Science (enroll in SCAS 692)]
Fall, spring. 1-6 credits. S-U grades optional.

[EAS 695 Computer Methods in Geological Sciences (enroll in GEOL 695)]
Fall, spring. 3 credits. L. Brown, B. L. Isacks.

[EAS 700-799 Seminars and Special Work (enroll in GEOL 700-799)]
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff. Advanced work on original investigations in geological sciences. Topics change from term to term. Contact appropriate professor for more information.

[EAS 722 Advanced Topics in Structural Geology (enroll in GEOL 722)]
R. W. Allmendinger.

[EAS 731 Plate Tectonics and Geology (enroll in GEOL 731)]
J. M. Bird.

[EAS 733 Fractals and Chaos—Independent Studies (enroll in GEOL 733)]
D. L. Turcotte.

[EAS 751 Petrology and Geochemistry (enroll in GEOL 751)]
S. Mahlburg Kay, R. W. Kay.

[EAS 753 Advanced Topics in Mineral Physics (enroll in GEOL 753)]
W. A. Bassett.

EAS 755 Advanced Topics in Petrology and Tectonics (enroll in GEOL 755)
J. M. Bird, W. A. Bassett.

EAS 757 Current Research in Petrology (enroll in GEOL 757)
S. Mahlburg Kay, R. W. Kay.

EAS 762 Advanced Topics in Petroleum Exploration (enroll in GEOL 762)
Fall. W. B. Travers.

EAS 771 Advanced Topics in Sedimentology and Stratigraphy (enroll in GEOL 771)
T. E. Jordan.

EAS 773 Paleobiology (enroll in GEOL 773)
J. L. Casner.

EAS 775 Advanced Topics in Oceanography (enroll in GEOL 775)
Spring. C. H. Greene.

EAS 780 Earthquake Record Reading (enroll in GEOL 780)
Fall. M. Barazangi.

EAS 781 Geophysics, Exploration, Seismology (enroll in GEOL 781)
L. D. Brown.

EAS 783 Advanced Topics in Geophysics (enroll in GEOL 783)
B. L. Isacks.

EAS 789 Lithospheric Seismology (enroll in GEOL 789)
L. D. Brown. COCORP Seminar.

EAS 793 Andes-Himalaya Seminar (enroll in GEOL 793)
S. Mahlburg Kay, R. W. Allegmender, B. L. Isacks, T. E. Jordan.

EAS 795 Low Temperature Geochemistry (enroll in GEOL 795)
Offered spring 2001 only. L. A. Derry.

EAS 796 Geochemistry of the Solid Earth (enroll in GEOL 796)
W. M. White.

EAS 797 Fluid-Rock Interactions (enroll in GEOL 797)
L. M. Cathles.

EAS 799 Soil, Water, and Geology Seminar (enroll in GEOL 799)
L. M. Cathles, T. S. Steenhuis.

EAS 850 Master’s-Level Thesis Research in Atmospheric Science (enroll in SCAS 850)
Fall, spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

EAS 950 Graduate-Level Dissertation Research in Atmospheric Science (enroll in SCAS 950)
Fall, spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.

EAS 951 Doctoral-Level Dissertation Research in Atmospheric Science (enroll in SCAS 951)
Fall, spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.
ELE E 198 Introduction to the Electronic Revolution (also ENGRG 198)
Summer only. 3 credits. This course cannot be taken in addition to ENGRG 298. For description, see ENGRG 198.

ELE E 210 Introduction to Circuits for Electrical and Computer Engineers (also ENGRD 210)
Fall, spring. 3 credits. Corequisites: MATH 293 and PHYS 213.
A first course in electrical circuits, establishing the fundamental properties of circuits with application to high-speed computers and modern electronics. Topics include node and mesh analysis applied to CMOS circuit design, transient response and its impact on computer speed, sinusoids, resonance, complex impedance, and operational amplifiers.

ELE E 215 Introductory Integrative Circuits Laboratory
Fall, spring. 1 credit. Pre- or corequisite: ENGRD 210.
Laboratory course to develop skills with modern instrumentation, and to explore the design and operation of electrical circuits used in computers, amplifiers, and signal processing.

ELE E 232 Digital Systems Design Laboratory
Fall, spring. 1 credit. Pre- or corequisite: ENGRD 231.
An introduction to digital systems design using computer-aided design (CAD) tools. Students complete a sequence of eight experiments covering combinational logic, sequential circuits, counters, data transfer and microcontroller design. Hands-on experience is provided by designing, implementing and testing an 8 bit microcontroller using a field programmable gate array (FPGA).

ELE E 291-292 Sophomore Electrical and Computer Engineering Project
Fall, spring. 1-8 credits. Limited to sophomores in Engineering.
Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student under consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration and submit a Request for Independent Project form to the Electrical Engineering Undergraduate Office.

ELE E 298 Inventing an Information Society (also ENGRG 298 and S&T S 292)
For description, see ENGRG 298.

ELE E 301 Signals and Systems I
Fall. 4 credits. Prerequisites: a grade of at least C+ in ENGRD 210 and C in MATH 293 and 294.
Continuous-time signals and linear time-invariant systems, continuous-time convolution and impulse response, Fourier series and transforms of continuous-time signals, the Sampling Theorem, amplitude modulation and time- and frequency-division multiplexing, bilateral Laplace transforms and applications, discrete-time convolution and z-transforms with applications to discrete-time linear time-invariant systems.

ELE E 302 Signals and Systems II: Discrete-Time Systems and Signal Processing
Spring. 4 credits. Prerequisite: ELE E 301.
Review of discrete-time convolution and bilateral z-transforms with discrete-time linear time-invariant systems applications. Unilateral z-transforms and difference equations. Discrete-time Fourier transforms. Sampling and reconstruction of continuous-time signals. DFTs and FFTs and attendant computational issues. Introduction to digital filter design techniques with special emphasis on: linear-phase FIR filters; FIR filter design using windowing, frequency sampling, and least squares; and IIR filter design using impulse invariance and bilinear transformation.

ELE E 303 Electromagnetic Fields and Waves
Fall. 4 credits. Prerequisites: grades of C or better in PHYS 213, 214, and MATH 294. Maxwell's equations in differential form; wave equation; plane electromagnetic waves; phase and group velocities; Poynting's theorem; complex dielectric constant; wave reflection and transmission; guided waves on transmission lines; transient pulse propagation; elementary dipole antenna; analysis of wireless communication links.

ELE E 306 Fundamentals of Quantum and Solid-State Electronics
Fall, spring. 4 credits. Prerequisites: PHYS 214 and MATH 294.
Introductory quantum mechanics and solid-state physics necessary for modern solid-state electronic devices. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy-band theory, and the basic physics of semiconductors. Applications include quantum wells and the p-n junction.

ELE E 310 Introduction to Probability and Random Signals
Spring. 4 credits. Prerequisite: MATH 294.
This course may be used in place of ENGRD 270 to help satisfy the engineering distribution requirement. Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications will be given in such areas as communications, and device modeling, probability and characteristic functions, nonlinear transformations of data; expectation and correlation; and the central limit theorem.

ELE E 311 Electrical and Computer Engineering Honors Seminar
Spring. 2 credits variable.
Students registered for this course are required to attend all of the colloquia lectures. Summary papers are required. Honors students who take the seminar for letter grade are required to write two summary papers for two credits. Non-honors students, who must take the seminar pass/fail, are required to write one summary paper for one credit. Each summary paper reviews a topic presented during the term.

ELE E 314 Computer Organization (also COM S 314)
Fall, spring. 4 credits. Prerequisites: COM S/ENGR 211; COM S 312 or ENGRD 231/ ELE E 232 are recommended, but not required.
For description, see COM S 314.

ELE E 315 Electronic Circuit Design
Fall, spring. 4 credits. Prerequisites ELE E 210 and ELE E 215.
Design of electronic circuits for computers, signal processing, communication, microelectronics, optoelectronics, measurements, and control.

ELE E 328 Dynamic Systems in Communication and Control
Spring. 3 credits. Prerequisite: ELE E 301.
Task-driven introduction to discrete-time system analysis and design, with emphasis on digital communication and control systems. Format is to introduce a particular design task, abstract it to a linear algebra problem, solve it using MATLAB, and study solution in terms of original application. Applications of interest: network and modem echo cancellation for full-duplex transmission, terrestrial microwave radio-channel multipath equalization for wireless communication, satellite-tracking antenna azimuth control, and effect of re- transmit protocols on distribution of steady-state communication network flows.

ELE E 391-392 Junior Electrical and Computer Engineering Project
Fall, spring, 391 1-8 credits. Limited to juniors in Engineering.
Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration and submit a Request for Independent Project form to the Electrical Engineering Undergraduate Office.

ELE E 403 Introduction to Nuclear Science and Engineering (also A&EE 403, M&AE 458, and NS&E 403)
Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294.
For description, see NS&E 403.

ELE E 407 Quantum Electronics
Fall. 4 credits. Prerequisite: some previous knowledge of quantum mechanics.
Angular momentum; effective potential; spin states; atom-radiation interaction; oscillator strengths; LCAO; lattice waves; thermal properties of xtal; thermal energy; metals; electron and phonon contributions to specific heat; metallic conductivity; thermal conduction in metals; electron and hole E vs k curves; effective mass; E(k) surface and m* from cyclotron resonance; k- p expansion; plasma dispersion relation; EM waves in a metal, plasmons; polaritons (TO phonons + EM wave); IAST relation; surface and interface plasmons; optical properties of xtal; excitons (Mott-Wanner and Frenkel); polarizability; Landau theory ferroelectric transition; piezoelectricity. Elements of superconductivity: Josephson Junction and the SQUID device. Schottky and Frenkel defects; Schottky barrier,
heterostructures and solid-state lasing; resonant tunnel diode; optical detectors. Conduction in amorphous media.

**ELE E 411 Random Signals in Communications and Signal Processing**
Fall. 3 credits. Prerequisite: ELE E 301 and 310 or equivalent.
Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

**ELE E 412-413 Hybrid Electric Vehicle**
Spring, Fall. 4 credits.
The Cornell Hybrid Electric Vehicle (CUHEV) project focuses on the design, development, testing, and competition of a Hybrid Electric Vehicle through a team structure. Students work in teams that include powertrain, business, finance, control, algorithm design, etc. There are design reviews, weekly presentations and team leader meetings in addition to any meetings the teams require to complete the project. There is a team selection process so students interested in the projects should contact team leaders or a faculty adviser prior to registering for the course.

**ELE E 415 Global Position System Theory and Design (also M&E 415)**
Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 303 or permission of the instructor.
A laboratory course using the Global Positioning System as a model for examining space-based engineering systems. The course consists of lectures, laboratories, and a design project. The laboratory is based on a GPS engine development system and covers the navigation solution, geodesy, control, navigation of other design and function, and differential GPS.

**ELE E 423 Computer Methods in Digital Signal Processing**
Spring. 4 credits. Prerequisite: ELE E 301 or ELE E 328; basic knowledge of C/C++ helpful. Satisfies undergraduate computer-applications requirement.

**ELE E 425 Digital Signal Processing**
Fall. 4 credits. Prerequisites: ELE E 301, ELE E 302, and ELE E 310.
An advanced course in digital signal processing. Topics include sampling, A/D and D/A conversion, digital signal design and implementation, multirate DSP filtering, spectral conversion and filter bank theory, Wiener filtering, spectral estimation, introduction to two-dimensional sampling, and Fourier techniques.

**ELE E 426 Applications of Signal Processing**
Spring. 3 or 4 credits. Prerequisite: ELE E 425.
Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

**ELE E 430 Lasers and Optical Electronics**
Fall. 4 credits with lab: may be taken for 3 credits without lab. Prerequisite: ELE E 303 or equivalent.
An introduction to the operation and application of lasers. Material covered includes diffraction-limited optics, Gaussian beams, optical resonators, interaction of radiation with matter, physics of laser operation, laser design. Applications of coherent radiation to nonlinear optics, communication, and research will be discussed.

**ELE E 432 MicroElectro Mechanical System (MEMS)**
Spring. 2 credits. Prerequisite: ELE E 315 or permission of instructor.
Introductory course to MEMS: microprocessors, microactuators, and microrobots. Fundamentals of MEMS including materials, microstructures, and the integration of microelectromechanical systems, scaling electronic and mechanical systems to the micrometer/nanometer scale, material issues, and the integration of microelectromechanical structures and actuators with simple electronics. Two-week labs cover the basics of designing, fabricating, and testing microsensors and microactuators.

**ELE E 433 Microwave Integrated Circuits**
Fall. 4 credits; may be taken for 3 credits without laboratory. Prerequisites: ELE E 303 and ELE E 306.
An introduction to the design and testing of high-speed circuits (frequencies above 1 GHz). Topics include: computer-aided design, automated microwave measurement techniques, optical and electronic applications, and GaAs monolithic microwave integrated circuits (MMICs). Two-week labs cover the basics of designing, fabricating, and testing microwave integrated circuits.

**ELE E 438 VLSI Digital System Design**
Spring. 4 credits. Prerequisites: EGRD 231 and ELE E 315.
Covers VLSI digital system design from both the circuit and system viewpoints. Topics include the CMOS transistor, scalable design rules, design styles, circuit implementation of common digital functional modules, physical layout techniques, system design both for high performance and low power, timing and interconnect issues, and overall strategy of digital design methodology and testing.

**ELE E 439 VLSI Digital System Design**
Spring. 3 credits. Prerequisite: ELE E 310 or some familiarity with random variables.
May not be offered 2000–2001. In the last two or three years a surprising number of connections between AI and telecommunications have been identified. Significant discoveries in the area of wireless systems (e.g. a variety of network control algorithms) have been found to be straightforward restatements of old results from the field of Artificial Intelligence. (We may hope that the reverse is the case, as well.) It also is becoming clear that, to provide an acceptable level of performance, the next generation of wireless multimedia systems will need some degree of predictive "cognitive" capacity. This senior/introductory graduate course focuses on the expert system side of AI. It has been designed to provide: an overview of the development and analysis of expert systems with an emphasis on telecommunications engineering applications. The students will develop a background in the theory of expert systems, and then be given an opportunity to apply their knowledge in an area of their choice. Areas of discussion will include: rule-based expert systems, probabilistic systems, network technology, network interconnections, protocol design (OSI and IP), network security, and multimedia. Emphasis will be placed on performance evaluation.

**ELE E 450 Electric Power Systems**
Spring. 3 credits.
The objective is to acquaint the student with modern electric power system operation and control. Aspects of the restructuring of the industry and its implications for planning and operation objectives and methods will be explored. Topics include unit commitment, economic dispatch, optimal power flow, control of generation, system security and reliability, state-estimation, analysis of system dynamics, and system protection.

**ELE E 453 Analog Integrated Circuit Design**
Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 315 or equivalent. ELE E 457 recommended as a corequisite.
Overview of devices available to analog integrated-circuit designers in modern CMOS processes: resistors, capacitors, MOS transistors, and bipolar transistors. Basic building blocks for linear analog integrated circuits: single-stage amplifiers, current mirrors, and differential pairs. Transistor-level design of linear analog integrated circuits, such as operational amplifiers and transconductance amplifiers. Layout techniques for analog integrated circuits. Throughout the course, emphasis will be placed on design-oriented analysis techniques.

**ELE E 457 Silicon Device Fundamentals**
Fall. 4 credits with lab. Prerequisite: ELE E 315 and ELE E 306 or equivalent.
Fundamentals on semiconductor device operation and carrier statistics, band diagrams, and transport. The device physics, modeling, simulation, and measurement on pn-junction diodes, Schottky diodes, photodiodes, MOS capacitor, MOSFET, and bipolar transistors (BJT). An emphasis will be put on the MOSFET physics for advanced VLSI technology. Six labs cover detailed IV and CV measurements and modeling on devices in the wafer level and in standard packages.

**ELE E 462 Artificial Intelligence and Expert Systems**
Spring. 3 credits.
Prerequisite: ELE E 310 or some familiarity with random variables. May not be offered 2000–2001.
Bayesian networks, and the propagation of evidence.

ELE E 467 Telecommunication Systems I
Fall. 4 credits Prerequisites: ELE E 301 and ELE E 302.
An introduction to modulation and demodulation techniques. Topics include: signal representation and filtering, amplitude modulation (AM); frequency modulation (FM); pulse amplitude modulation (PAM); pulse-code modulation (PCM); channel noise effects; and synchronization.

ELE E 468 Telecommunication Systems II
Spring. 4 credits Prerequisite: ELE E 467 or permission of instructor. Suggested prerequisite: ELE E 411.
Fundamentals of digital communications. Topics include: digital source coding, Huffman coding, sampling, quantization, analog source coding; optimum receivers for digital transmission through additive white Gaussian noise (AWGN) channels, matched filters, channel capacity and error control coding; digital transmission through bandlimited AWGN channels, inter-symbol interference (ISI), equalization techniques, phase-locked loops (PLL), trellis-coded modulation (TCM); spread-spectrum communication systems.

ELE E 471 Feedback Control Systems
(Also CHEM E 301 and M&E E 302)
Fall. 4 credits Prerequisites: CHEM E 372, ELE E 301, M&E E 326, or permission of instructor.
For description, see M&E E 478.

ELE E 475 Computer Architecture
Fall. 4 credits Prerequisites: ELE E 314 or COM S 314.
Topics include instruction set principles, advanced pipeline, data and control hazards, multiple cycle instructions, dynamic scheduling, out-of-order execution, speculation branch prediction, instruction-level parallelism, and high-performance memory hierarchies. Students learn the issues and tradeoffs involved in the design of modern microprocessors. Labs involved in the design of a processor and cache subsystem at the RTL level.

ELE E 476 Digital Systems Design Using Microcontrollers
Spring. 4 credits Prerequisite: ELE E 314 or COM S 314 (ELE E 315 strongly recommended).
Design of real-time digital systems using microprocessor-based embedded controllers. Students working in pairs will design, debug, and construct several small systems that illustrate and employ the techniques of digital system design acquired in previous courses. The content focuses on the laboratory work. The lectures are used primarily for the introduction to the design of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed.

ELE E 482 Plasma Processing of Electronic Materials (also M&E E 544)
Spring. 3 credits Prerequisites: PHYS 213 and 214 or their equivalents. Offered on demand.
Fundamental principles that govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials. Topics include simple models of low pressure, partially ionized plasmas, collision phenomena, diffusive processes, plasma chemistry, and surface processes. Examples and their applications to electronic materials processing will be discussed in detail.

ELE E 484 Introduction to Controlled Fusion: Principles and Technology
(Also A&EE 484, M&E E 459, and NS&E 484)
Spring. 3 credits Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. Offered on demand.
For description, see NS&E 484.

ELE E 486 Electromagnetic Waves and Communication
Spring. 3 credits Prerequisite: ELE E 303.
This course is recommended for students who wish to obtain a greater understanding of the fundamentals of guided waves, high data rate electronics and communication. Topics to be covered will include: vector and scalar potentials, transmission lines, waveguides, fiber optics, antenna arrays, and propagation in different environments including interference and diffraction.

ELE E 487 Introduction to Antennas and Radar
Fall. 3 credits Prerequisites: ELE E 301 and ELE E 486 (or a grade of B or better in ELE E 303).
Fundamentals of antenna theory, including gain and effective area, near and far fields, phased arrays, aperture antennas and aperture synthesis. Fundamentals of radars, including detection, tracking, Doppler shifts, sampling, range and frequency aliasing. Synthetic aperture radars and remote sensing from aircraft and satellites; over-the-horizon (OTH) radars and ionospheric propagation effects, radar astronomy techniques.

ELE E 488 RF Circuits and Systems
Spring. 3 credits Prerequisites: ELE E 315 or equivalent. 2 design credits. Lab credit: Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transistors, switches, lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio, and radar astronomy. Computer-aided circuit analysis. Five laboratory sessions.

ELE E 490 Practicum in Systems Engineering
Spring. 3 credits 1 credit of Engineering Design.
Concepts involved with bringing an engineered product to reality. The course employs techniques from Systems Engineering along with a knowledge of computer networks, microprocessor systems, and semiconductor devices, to create a plan for a specific engineered product: a web-based home security, control, and monitoring device. Students will gain a working knowledge of system design concepts including product cycle, design cycle, product specification, UI safety issues, new product testing, RFI, and product test. We also develop the full plan of a business plan through product development and support. A final team product mock-up is required as are weekly team presentations. Teams must contain students from ELE E, M&E E, OR&IE, and COM S. Each 400 student must also present at least one weekly lecture on an assigned topic.

ELE E 491-492 Senior Electrical and Computer Engineering Design Projects
Fall, 491; spring, 492. 1-8 credits. Limited to seniors in Engineering.
Individual study, analysis, and, usually, experimental tests in connection with a senior electrical engineering problem chosen by the student under consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration for this course and submit a request for an independent project form to the Electrical Engineering undergraduate office.

ELE E 495 Introduction to Point and Space Groups (also MS&E 575)
Fall. 2 credits S-U grades only. R. L. Liboff.
Topics include definition of groups; classes; subgroups, character tables, bases, irreducible representations, great orthogonality theorem, symmetry group, Cayley's theorem. Young diagrams, cosets and invariant subgroups, the factor group, space groups, translation and crystallographic groups, the star of k and the translation of k, and application to solid state and semiconducting materials.

ELE E 498 Global Positioning System Projects
Fall, spring. Variable credits Prerequisite: ELE E 415 or permission of instructor.
Projects using the Global Positioning System or GPS receivers are offered. Projects vary from semester to semester and typically either explore receiver design, hardware issues, or hardware and system performance. Students are welcome to suggest their own projects.

ELE E 495-499 Special Topics in Electrical and Computer Engineering 1-4 credits
Seminar, reading course, or other special arrangement agreed upon by the students and faculty members concerned.

ELE E 512 Applied Systems Engineering I (also CEE 504, COM S 504, M&E E 591, OR&IE 512)
Fall. 3 credits Prerequisite: permission of instructor.
For description, see M&E E 591.

ELE E 513 Applied Systems Engineering II (also CEE 505, COM S 505, M&E E 592, OR&IE 513)
Spring. 3 credits Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ELE E 512, M&E E 591, or OR&IE 512).
For description, see M&E E 592.

Project-level design of systems in the area of signal processing and general instrumentation, including digital signal processing hardware, audio, speech, and analog interfacing. Students pursue individual projects and coordinate ideas and resources with other students with related interest.

ELE E 521 Theory of Linear Systems
Fall. 4 credits Prerequisite: ELE E 302 or permission of instructor. Recommended: a good background in linear algebra and linear differential equations.
State-space and multi-input-multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization
theory. At the level of Linear Systems, by T. Kailath.

ELE E 525 Adaptive Filtering in Communications Systems
Spring, 4 credits. Required prerequisite: ELE E 328. Recommended prerequisite: ELE E 406. Fundamentals of theory for adaptive filters intended for digital communication system applications. Wired and wireless communication systems tasks such as channel equalization, echo cancellation, smart antennas, and interference rejection are used to motivate adaptive filter design issues of current interest. Assignments will consist of reports on adaptive digital filter algorithms and their simulated evaluation.

ELE E 526 Signal Representation and Modelling
Spring, 4 credits. Prerequisites: ELE E 425. Sampling and signal reconstruction. Approximation theory. Linear inversion theory. Exponential signal modelling. Multirate filter banks, wavelets, and lifting. Laboratory experiments with speech and image signals.

ELE E 530 Fiber and Integrated Optics
Spring, 4 credits with lab. Prerequisite: ELE E 303 or equivalent. Not offered 2000–2001. Physical principles of optical waveguides, optical sources and detectors, noise, modulators, and sensing. Wave equation solutions to the mode structure in waveguides, mode coupling, dispersion and bandwidth limitations, optical sources based on semiconductor detectors, detectors and noise, modulation techniques, nonlinear effects in optical waveguides, and optical sensors.

ELE E 531 Quantum Electronics I
Fall, 4 credits. Prerequisites: ELE E 306 and 407, or PHYS 443. A detailed treatment of the physical principles underlying lasers, related fields, and applications. Topics include the interaction of radiation and matter, including emission, absorption, scattering, and basic spectroscopic properties of key laser media; theory of the laser, including methods of achieving population inversions, dispersive effects, and laser oscillation spectrum.

ELE E 533 Semiconductor Lasers
Spring, 3 credits. Prerequisites: ELE E 430, ELE E 457, or permission of instructor. Not offered 2000–2001. Study of principles and characteristics of semiconductor lasers. Topics cover laser dynamics, noise, quantum confined structures, single-frequency lasers, traveling-wave lasers, surface-emitting lasers, reliability, and emerging research subjects. A term project and paper will be required.

ELE E 535 Semiconductor Physics
Fall, 4 credits. Prerequisites: ELE E 457 and 407, or permission of instructor. Not offered 2000–2001. Physics of materials and structures useful in semiconductor electronic and photonic devices, including crystalline structure, energy bands, effective mass, phonons, classical low-field transport, high-field and ballistic charge carrier transport, electron scattering by phonons, optical absorption, reflection, optical emission, deep level traps, surface and interface effects. On the level of Compound Semiconductor Device Physics by S. Tiwari.

ELE E 536 Micro/Nanofabrication Technology
Spring, 4 credits. 3 credits without lab with permission. Prerequisites: ELE E 453, or ELE E 457 or ELE E 439 or equivalent, or permission of instructor. Fabrication of ultra-large scale integrated circuits (ULSI), microelec tromechanics (MEMS), active matrix liquid crystal displays (AMLCD), and optoelectronic integrated circuits (OEIC). Lithography; diffusion, ion implantation, thin film deposition, etching, metallization, and precision assembly. Process integration for CMOS, BICMOS, ECL, MEMS, AMLCDS, and OEICs. Hands-on microfabrication laboratory with full MOS/MEMS process.

ELE E 537 Electronic System Packaging
Fall, 4 credits. 3 credits without project work. Prerequisites: ENGRD 231 and ELE E 315 or ELE E 453 or ELE E 457 or ELE E 439 or equivalent or permission of instructor. Physical integration of circuits, chips, packages, modules, boards, and cabinets into electronic systems. Computer, communication, and wireless systems. Portable, desktop, and cabinet level computers. Handset, base station, and switch level communication systems. Physical and optical signal distribution; power and ground distribution; signal integrity, electromagnetic interference (EMI), and electromagnetic compatibility (EMC); low power and mixed signal circuit/system design; energy management and cooling; assembly and manufacturing; measurements; computer and wireless system case studies.

ELE E 539 Advanced Digital Integrated Circuits
Fall and spring, 5 credits. Required prerequisite: ELE E 439. This course aims to convey a knowledge of advanced concepts on circuit design for digital LSIs and VLSI components in state-of-the-art CMOS technologies. Emphasis is on the circuit design, optimization, and layout of either very high-speed, high-density memory circuits, or power circuits for use in applications such as microprocessors, signal and multimedia processors, memory and periphery. Special attention will be devoted to the most important challenges facing digital circuit designers today and the coming decade, being the impact of scaling, deep submicron effects, interconnect, signal integrity, power distribution and consumption, and timing. This year, special attention will be given to the following topics: high performance design techniques, low power design techniques, and the impact of interconnect. This will be reflected in both the lectures and the desired projects.

ELE E 542 Parallel Processing
Spring, 3 credits. May not be offered 2000–2001. Parallel computer systems that are designed to provide a high computation rate for large specific problems are studied. Topics include computer architecture, interconnection networks, performance characterization, basic algorithms, and parallel programming techniques. Recent multicompeller and massively parallel processors are also discussed.

ELE E 546 Introduction to Color Imaging Science

ELE E 547 Computer Vision
Fall. 4 credits. Prerequisites: ELE E 302 (or COM S 280 and 314) or consent of instructor. Computer acquisition and analysis of image data with emphasis on techniques for robot vision. This course will concentrate on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms will be required.

ELE E 548 Digital Image Processing
Spring, 3 credits. Prerequisites: ELE E 411, ELE E 425. Familiarity with linear algebra. Not offered 2000–2001. Introduction to image processing through seven major topics: perception, statistical modeling, transforms, enhancement, analysis, compression, and restoration. Special attention is allocated to compression. Equal emphasis will be placed on gaining a mathematical and an intuitive understanding of algorithms through actual image manipulation and viewing.

ELE E 549 Visual Motion Seminar
Spring, 1 credit. May not be offered 2000–2001. This seminar will provide an overview of motion as used in both coding and analysis of digital video, through examination of motion estimation and motion segmentation techniques. Topics include an introduction to digital video, techniques for computing motion, both block-based and pixel-based motion estimation, MPEG motion coding, Haussdorff-based motion estimation, motion-based tracking, and various techniques for motion segmentation. An emphasis will be placed on recent research results.

ELE E 554 Advanced Analog VLSI Circuit Design
Spring, 4 credits. Prerequisite: ELE E 453. Advanced analog integrated circuit and system design. Topics will include integrated continuous-time filter design, translinear circuits and systems, dynamic analog techniques, integrated discrete-time filter design, and Nyquist-rate data converter design.

ELE E 555 Compound Semiconductor Electronics
Spring, 4 credits, with lab. Prerequisite: ELE E 457 or equivalent. Electronic properties of advanced semiconductor structures using compound semiconduc tor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quantum wells. Advanced semiconductor devices including metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices. Six-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characterization of
compound semiconductor devices.

**ELE E 561 Error-Control Codes**
Spring. 4 credits. Prerequisite: ELE E 301 or ELE E 521 or equivalent. A strong familiarity with linear algebra is assumed. Not offered 2000-2001.

An introduction to the theory of algebraic error-control codes. Topics include: Hamming codes, group codes, the standard array, minimum-distance decoding, cyclic codes, and the dual of a linear block code. Hamming and Singleton bounds for error-correcting codes. The construction and decoding of Bose-(Ray) Chaudhuri-Hocquenghem (BCH) and Reed-Solomon (RS) codes. Computer methods for the study of the structure and algorithms for error-control are used.

**ELE E 562 Fundamental Information Theory**
Fall. 4 credits. Prerequisite: ELE E 310 or equivalent.

Fundamental results of information theory, including source, channel, compression, and transmission of data: Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

**ELE E 563 Communication Networks**
Spring. 4 credits. Prerequisite: ELE E 411 or permission of instructor.

**ELE E 565 Statistical Signal Processing**
Fall. 4 credits. Prerequisite: ELE E 411.

This course introduces basic theory and techniques for parameter estimation and statistical signal processing. For estimating deterministic parameters, we consider minimum variance unbiased estimation, Cramer-Rao lower bound, linear models, best linear unbiased estimators, maximum likelihood (ML) estimation, least squares methods, recursive estimation, and methods of moments. For estimating random parameters, we discuss minimum mean square error (MMSE) estimation, and maximum a posteriori (MAP) estimation, Wold decomposition and spectral factorization, Wiener and Kalman filters. Finally, as applications of basic estimation theory, we examine channel and signal estimation techniques for digital communications. Applications in array signal processing and frequency estimation are discussed throughout the course.

**ELE E 566 Wireless Networks**
Spring. 4 credits. Prerequisites: ELE E 445 and ELE E 411.

An introductory course in mobile and wireless networks. The course is targeted mainly at the graduate level, but is open to undergraduates as well. The course covers fundamental techniques and protocols in the design and operation of the first, second, and third generation of wireless networks. Examples of related topics include cellular systems, mobile access control, control of a mobile session and a mobile call, signaling in mobile networks, mobility management techniques, common air interfaces (AMPS, IS-136, IS-95, GSM), wireless data (GDPD, Mobitex), satellite communication, ad hoc networks (Bluetooth), Internet Mobility, Personal Communication Services (PCS), etc.

**ELE E 567 Topics in Digital Communications**
Spring. 2 credits. Prerequisites: ELE E 562.

Fundamental topics in modern digital communications, with applications to space physics, plasma technology, and controlled fusion.

**ELE E 568 Mobile Communication Systems**
Spring. 4 credits. Prerequisites: ELE E 411 and ELE E 467; corequisite: ELE E 468.

Theory and analysis of mobile communication systems, with emphasis on understanding the unique characteristics of these systems. Topics include: cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations.

**ELE E 571 Asynchronous VLSI Design**
Fall. 3 credits. Prerequisite: ELE E 314 or COM S 314.

An introductory course in asynchronous design. The course is targeted at the graduate and advanced undergraduate level. The course will be about the design of clockless digital circuits whose correct operation is relatively independent of delays in gates and wires. Emphasis will be placed on the synthesis of circuits by program transformations. Topics include concurrency, compile-time optimizations, delay-insensitive design techniques, synthesis of circuits from programs, timing analysis and performance optimization, pipelining, and case studies of complex asynchronous systems.

**ELE E 572 Parallel Computer Architecture**
Spring. 3 credits. Prerequisite: ELE E 475.

Principles and tradeoffs in the design of parallel architectures. Emphasis on latency, bandwidth, and synchronization in parallel machines. Case studies illustrate the history and techniques of shared-memory, message-passing, dataflow, and data-parallel machines. Additional topics include memory consistency models, cache coherence protocols, and interconnection network topologies. Architectural studies presented through lecture and some research papers.

**ELE E 577 Feedforward Neural Networks**
Fall. 4 credits. Prerequisite: ELE E 310.

Feedforward neural networks (multi-layer perceptrons) are computing systems formed out of many highly interconnected nonlinear memoryless elements that are arranged in a parallel architecture that is loosely modeled on that of the brain. Our focus is on their roles as pattern classifiers, signal processors, estimators, and forecasters and on their role in communication, control, and scientific networks through mathematical analyses and extensive simulation studies using MATLAB.

**ELE E 581 Introduction to Plasma Physics (also A&EP 606)**
Fall. 4 credits. Prerequisite: ELE E 303 or equivalent. First-year graduate-level course; open to exceptional seniors.

Plasma state: motivation, applications in fields; drift-orbit theory; coulomb scattering, collisions; ambipolar diffusion; elementary transport theory; two-fluid and hydromagnetic equations, plasma oscillations and waves, CMA diagram; hydromagnetic stability; elementary applications to space physics, plasma technology, and controlled fusion.

**ELE E 582 Advanced Plasma Physics (also A&EP 607)**
Spring. 4 credits. Prerequisites: ELE E 581 or A&EP 606. Offered on demand.

Boltzmann and Vlasov Equations; dielectric tensor; wave in a magnetized plasma; Landau and cyclotron damping; microinstabilities; drift waves, low-frequency stability; test particles, Cerenkov emission; fluctuations; collisional effects; applications.

**ELE E 583 Electrodynamics**
Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 304 or equivalent. 3 lecs. May not be offered 2000-2001.

Maxwell's equations, electromagnetic potentials, integral representations of the electromagnetic field, Green's functions. Special theory of relativity, Liénard-Wiechert potentials, radiation from accelerated charges, Cerenkov radiation. Electrodynamics of dispersive dielectric and magnetic media. At the level of Classical Electrodynamics, by Jackson.

**ELE E 584 Microwave Theory**
Spring. 4 credits. Prerequisites: ELE E 301 and 304 or equivalent. 5 lecs. 1 rec. May not be offered 2000-2001.

**ELE E 585 Ionospheric and Magnetospheric Physics**
Fall. 3 credits. Prerequisites: Physics through 214 or equivalent, introductory chemistry, ELE E 301 or equivalent. Not offered 2000-2001.

The structure and dynamics of the ionosphere and magnetosphere; charged particle production, loss and transport, coupling to the neutral atmosphere; ionospheric instabilities, high-latitude currents and plasma convection; solar wind and magnetic storms; particle acceleration processes; waves in the ionosphere and magnetosphere.

**ELE E 587 Energy Seminar (also NS&AE 545 and M&AE 545)**
Fall. 1 credit. Offered on credit only for credit both semesters. For description, see NS&AE 545.

**ELE E 588 Advanced Radio Wave Propagation and Scattering**
Spring. 3 credits. Prerequisite: ELE E 487 or permission of instructor. Not offered every year; not offered 2000-2001.

Propagation in a turbulent plasma (the ionosphere) with a magnetic field, WKB theory (for a slowly varying medium), and full wave theory (near the level of reflection). Theory of scattering from random media, particularly "incoherent"
ELE E 591 Advanced Device Physics and Device Integration
Fall. 4 credits. Prerequisites: ELE E 457 and ELE E 535, or permission of instructor. An integrated study of properties of micro- and nanoscale electronic and optical devices with emphasis on implementation in circuits. Topics include fundamental properties, scaling and limits, effect of design on digital or analog circuit operation, effect of variations, nanoscale quantum and size effects, and unification of the needs of circuits (integration, low power, high speed, high frequency, etc.) with device behavior. Devices include transistors and memories in silicon and silicon-on-insulator, and small optical structures.

ELE E 593 Bioelectric Signal Analysis and Processing
Fall. 3 credits. Prerequisites: some knowledge of basic analog circuit design, and a simple, working knowledge of MATLAB. Measurement and computer-aided analysis of low-level biological signals in the presence of background noise. A/D conversion, filtering, signal conditioning, and data compression techniques will be investigated. The human surface ECG forms the signal source in much of the course, and so basic electrocardiography will be covered. Pattern classification and nonlinear dynamical system analysis will be introduced. Four major team design and analysis projects are required in lieu of examinations.

ELE E 594 Nonlinear Computation and Applications in Circuits, Signals, and Systems
Spring. 3 credits. Prerequisites: MATH 293 and MATH 294. This project-oriented course will familiarize students with the many applications of nonlinear analysis in today's engineering design world. The course will stress concepts in relation to contemporary design problems. Applications to information technologies, neural networks, digital communication systems that use chaos techniques, stability of nonlinear systems, and human ECG arrhythmia analysis and prediction will demonstrate the range of engineering analysis and design situations to which these techniques apply.

ELE E 595-599 Advanced Topics in Electrical and Computer Engineering
Seminars, reading course, or other special arrangement agreed on by the students and faculty members concerned.

ELE E 597 Wireless Information Seminar
Spring. 2 credits. Prerequisites/corequisites: ELE E 411, ELE E 445, and ELE E 566. The purpose of the seminar is to expose the students to new directions in the area of wireless networks. The seminar is a mixture of presentations given by students and other invited speakers. Each student will be required to read a topic, deliver a talk, and subsequently deliver a talk. The topics will be arranged with the instructor.

ELE E 598 RF Integrated Circuit Design
Fall, spring. 4 credits. Prerequisites: ELE E 488, ELE E 453, and ELE E 438 or ELE E 539 are required. The course aims to convey practical knowledge of advanced concepts related to the design radio-frequency (RF) integrated circuits in modern silicon and silicon germanium (SiGe) technologies. Emphasis is on the circuit architecture, design, trade-offs, optimization, and layout of RF integrated circuits for use in wireless applications. Special attention will be devoted to the most important challenges facing RF circuit designers today, such as the impact of scaling, deep submicron effects, noise, and power distribution and consumption. Low noise amplifier, power amplifier, and high performance mixer design is also emphasized. The basic components in a transmitter or receiver circuit will be covered as well as how to design and assemble them to form an RF integrated circuit.

ELE E 599 Wiener and Kalman Filtering

ELE E 602 Graduate Seminar in Telecommunications and Information Processing
Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering. This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a listing of appropriate subject areas and suggest certain papers for discussion. Student will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

ELE E 604 Graduate Seminar in RF, Antenna, and Space Science Systems
Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering. This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a listing of appropriate subject areas and suggest certain papers for discussion. Students will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

ELE E 606 Graduate Seminar in Semiconductor and Microelectromechanical Systems
Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering. This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a listing of appropriate subject areas and suggest certain papers for discussion. Students will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

ELE E 608 Graduate Seminar in Computer and Digital Systems
Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering. This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a listing of appropriate subject areas and suggest certain papers for discussion. Students will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

ELE E 610 Graduate Seminar in Medical Electronics and Analysis Systems
Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering. This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a listing of appropriate subject areas and suggest certain papers for discussion. Students will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

ELE E 691-692 Electrical and Computer Engineering Colloquium
Fall, 691; spring, 692. 1 credit each term. For students enrolled in the graduate field of Electrical Engineering. Lectures by staff, graduate students, and visiting authorities. A weekly meeting for the presentation and discussion of important current topics in the field. Reports required.

ELE E 693-694 Master of Engineering Design
Fall, 693; spring, 694. 1-8 credits. For students enrolled in the M.Eng. (Electrical) degree program. Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

ELE E 695-699 Graduate Topics in Electrical and Computer Engineering
1-4 credits. Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned. See M.Eng. office for course registration procedure.

ELE E 791-792 Thesis Research
Fall, 791; spring, 792. 1-15 credits. For students enrolled in the master's or doctoral program.

MATERIALS SCIENCE AND ENGINEERING 231

MS&E 111 Electronic Materials for the Information Age (also ENGR 111)
Fall. 3 credits. G. Mallaras. This is a course in the Introduction to Engineering series. For description, see ENGR 111.

MS&E 118 Design Integration: A Portable CD Player (also ENGR 118 and T&AM 118)
Spring. 3 credits. W. Sachse. This is a course in the Introduction to Engineering series. For description, see ENGR 118.
232

ENGINEERING - 2000-2001

MS&E 119 Biomedical Materials for the Skeletal Systems (also ENGRI 119)
Fall. 3 credits. D. T. Grubb.
This is a course in the Introduction to Engineering series. For description, see ENGRI 119.

MS&E 124 Designing Materials for the Computer
Spring. 3 credits. 3 lectures. C. K. Ober.
This is a course in the Introduction to Engineering series. For description, see ENGRI 124.

MS&E 204 Materials Chemistry
Spring. 3 credits. U. B. Wiesner.
This course is designed to give a molecular understanding of materials properties with emphasis on general concepts. In the first part, fundamental concepts of quantum chemistry, group theory, and organic chemistry are outlined reflecting the interdisciplinary nature of materials science. In the second part, examples demonstrate how these concepts are used in current materials research involving nanobiotechnology, organic optoelectronics, self-assembling materials, or nano-ceramics.

MS&E 206 Atomic and Molecnlar Structure of Matter
Spring. 3 credits. S. L. Sass.

MS&E 261 Introduction to Mechanical Properties of Materials (also ENGRD 261)
Fall. 3 credits. S. P. Baker.
For description, see ENGRD 261.

MS&E 265 Biological Materials and Their Synthetic Replacements
From contact lenses and false teeth to artificial implants and hip joints, a tremendous range of synthetic materials are used in contact with the body to replace or supplement natural biological materials. The course will consider a number of biological systems and describe the properties and structure of the natural materials. Requirements for candidate replacement materials will be discussed, with historical and current solutions. These involve material properties such as strength and corrosion resistance as well as toxicity and biocompatibility. Design constraints, including methods of production, economics, regulatory approval, and legal liabilities will also be considered.

MS&E 281 The Substance of Civilization—Materials Through the Ages
Spring. 3 credits. 2 lectures, 1 lab. S. L. Sass.
Materials have enabled revolutionary advances in how we live, work, fight, travel, and play; hence the meaning of era after era—Stone, Bronze, and Iron Ages. This course explores the role of materials in the development of the modern industrial Western civilization by putting technology into a historical context and examining the advances made possible by innovations with materials, starting with the Stone Age. Interconnections between crucial innovations and historical events are identified and explored. Lectures, demonstrations, and hands-on laboratory experiments will elucidate the origin of the unique properties of materials such as polymers, ceramics, metals, and glass. This course is designed to fulfill the science requirement in the College of Arts and Sciences.

MS&E 291-292 Research Involvement I and II
291, fall, 292, spring. 3 credits each term.
Prerequisite: approval of department. Staff. Supervised independent research project in association with faculty members and faculty research groups of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized. Each semester may be taken as a continuation of a previous project or as a one-term affiliation with a research group.

MS&E 302 Mechanical Properties of Materials, Processing, and Design (also MS&E 582)
Spring. 3 credits. Prerequisite: MS&E 206. Corequisite: MS&E 304, or permission of instructor. A. L. Ruoff.
Stress, strain, and the basics of concepts in deformation and fracture for metals, polymers, and ceramics. Analysis of important mechanical properties such as plastic flow, creep, fatigue, fracture toughness, and rupture. Application of these principles to the design of improved materials and engineering structures.

MS&E 303 Thermodynamics of Condensed Systems (also MS&E 391, 392)
Fall. 4 credits. Prerequisites: PHYS 214 and MATH 294. M. O. Thompson.
The three laws of thermodynamics are introduced as the fundamental basis for thermal and chemical equilibrium. Statistical mechanics extensions are developed for calculations of entropy and specific heat capacities. These principles are applied to understanding phase equilibria and phase diagrams, heterogenous reactions, solutions, electrochemical processes, surfaces, and defects.

MS&E 304 Kinetics, Diffusion, and Phase Transformations (also MS&E 584)
Spring. 4 credits. Prerequisite: MS&E 303 or permission of instructor. R. Dieckmann.
Introduction to the concentration, atomic motion, and diffusion. Applications and design involving nucleation and growth of new phases in vapors, liquids, and solids, solidification, crystal growth, corrosion, recrystallization, gas-metal reactions, and thermomechanical processing to produce desired microstructures and properties. One-third of the course involves examples of design and control of processes.

MS&E 305 Electronic Structure of Matter (also MS&E 585)
Fall. 3 credits. Prerequisite: MS&E 206 or permission of instructor. J. M. Blakely.
This course covers quantum theory and electronic structure as it applies to electron conduction. Basic principles of wave mechanics. Electrons in crystals. Electronic structure of metals, semiconductors, and insulators. Conductivity of solids: electronic and ionic contributions; effects of an electric field on electrons in periodic potentials; sources of electron scattering, atomic vibrations, and defects.

MS&E 306 Electronic, Optical, and Magnetic Properties of Materials (also MS&E 596)
Spring. 3 credits. Prerequisites: MS&E 305 or permission of instructor. Y. Suzuki.
This course covers electronic, optical, and magnetic phenomena that are found in crystalline solid materials. Conduction in metals, semiconductors, and insulators. Design of semiconductor properties by doping. Properties of semiconductor devices (p-n junctions and transistors). Absorption, emission, luminescence. Principles and design of magnetic and superconducting materials for relevant applications. Dielectric properties. Ionic conductivity.

MS&E 307 Materials Design Concept I
Fall. 1 credit. C. K. Ober.
For description, see MS&E 407.

MS&E 391-392 Research Involvement I and II
391, fall, 392, spring. 3 credits each term.
Prerequisite: approval of department. Staff. For description, see MS&E 291. May be continuation or a 1-credit affiliation with a research group.

MS&E 403-404 Senior Materials Laboratory I and II
403, fall; 404 spring. 3 credits each term. D. T. Grubb.
Practical laboratory covering the analysis and characterization of materials and processing. Emphasis on design of experiments for evaluation of materials’ properties and performance as related to processing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, magnetic properties, and electron microscopy.

MS&E 405-406 Senior Thesis I and II
405, fall; 406 spring. 4 credits each term. D. T. Grubb.
Open to advanced undergraduates in lieu of the senior materials laboratory. Proposals for thesis topics should be approved by the supervising faculty member prior to beginning the senior year. Approved thesis topics will normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required. Both semesters must be taken to complete the laboratory requirement. This course is required for graduation with honors.

MS&E 407 Materials Design Concepts II
Fall. 2 credits. C. K. Ober.
Develops design in the field of materials science using Dieter’s Engineering Design, Ashby’s Materials Selection in Engineering Design, and other sources. Innovation, patent searching, and ASTM standards. Speakers from industry and other institutions lecture on case studies of design problems. Students give short oral presentations and written reports. Study includes prior art literature, materials selection, and some modeling, as well as discussion of broader economic, regulatory, environmental, and liability concerns that may arise. In 407, students are required to develop a design-study project.

MS&E 491-492 Research Involvement IVa and IVb
491 fall, 492, spring. 3 credits each term.
Prerequisite: approval of department. Staff. For description, see MS&E 291. May be continuation or a one-term affiliation with a research group.
MS&E 495 Undergraduate Teaching Involvement
Fall, spring. Variable credit. Staff. This course will give credit to students who help in the laboratory portions of ENGR 111, 119 or 124, ENGRD 261 or MS&E 281. The number of credits earned will be determined by the teaching load and will typically be 1–3 credits.

MS&E 512 Mechanical Properties of Thin Films

MS&E 521 Properties of Solid Polymers

MS&E 522 Physics of Soft Materials
Fall. 3 credits. Offered alternate years. U. B. Wiesner. The course will cover general aspects of the structure, order, and dynamics of soft materials. Typical representatives of this class of materials are polymers and liquid crystals and many examples will deal with these materials. After describing structural aspects of different materials, a general formalism for the description of order in terms of orientation distribution functions will be introduced. Examples will be given for the measurement of order parameters for partially ordered materials derived from grand canonical Monte Carlo simulation and other theoretical approaches. Finally, the dynamics of soft materials is discussed. Besides transport and flow, behavior aspects of the local dynamics of soft materials are presented. Using examples of modern multidimensional spectroscopic techniques, the issue of heterogeneous dynamics at the glass transition of amorphous liquids is presented.

MS&E 524 Materials Chemistry of Synthetic Polymeric Materials
Spring. 3 credits. Prerequisite: MS&E 521 or permission of instructor. Offered alternate years; not offered 2000–2001. C. K. Ober. Preparation of synthetic polymers by step- and chain-growth polymerization: condensation, free radical, anionic, and cationic mechanisms; ring opening and coordination routes. Statistical and tactic aspects of homopolymer and copolymer formation. Stereochemistry of polymers and spectroscopic methods for polymer analysis. Molecular aspects of polymer design and properties such as conductivity, elasticity, thermal stability, and engineering properties. Special topics will include liquid crystalline polymers, photore sist s, and supramolecular chemistry. At the level of Principles of Polymerization, by Odian.

MS&E 525 Organic Optoelectronics
Fall. 3 credits. Offered alternate years; not offered 2000–2001. G. G. Malliaris. Overview of relevant materials from small aromatic molecules to conjugated polymers. Focuses on optoelectronic properties including photophysics (absorption, emission, photosaturation, recombination), large charge transport (doping, hopping, disorder, charge injection), and elements of nonlinear optics. Optoelectronic applications (such as electrophotography, light emitting diodes, lasers, photovoltaic cells, thin film transistors) will also be discussed.

MS&E 531 Introduction to Ceramics
Fall. 3 credits. Offered alternate years; not offered 2000–2001. Ceramic processes and products, crystal structures, structure of glasses, point defects (point-defect chemistry and relation to non-stoichiometry), line defects, grain boundaries, diffusion in ionic materials (emphasis on the relationships between diffusion and point-defect structure), phase diagrams, phase transformations, kinetics of solid-state reactions (red and between solids: heterogeneous reactions, reactions between different solids, point-defect relaxation, internal reactions), grain growth and sintering. Physico-chemical aspects are emphasized.

MS&E 532 Glass, Ceramic, and Glass-Ceramic Materials: Critical Components in Technologies
Spring. 3 credits. Offered alternate years; not offered 2000–2001. Conventional and unconventional techniques for processing glass, glass-ceramic, and ceramic materials. Case studies illustrate the design, engineering, and scientific aspects of such processes. Vapor processes for high-purity optical fibers, hot-processing of ceramic turbine blades, photosensitive materials, and powder processing and sintering of ceramics will be discussed. Course taught with industrial participation.

MS&E 541 Microprocessing of Materials
Fall. 3 credits. Offered alternate years; not offered 2000–2001. D. G. Ast. Materials and processing steps involved in the production of integrated circuits and other microdevices. Science, engineering, and design of processes to produce a specific device, such as a DRAM or CMOS inverter. Emphasis is on silicon, with extensions to compound semiconductors. All fabrication steps are considered, from single crystal growth and wafer production, to characterization, testing, and yield calculations. Major topics are thermal oxidation of silicon, chemical vapor deposition of thin films, diffusion, ion implantation, resist, and the principles of lithography (foreground UV, electron, X-rays, and wet/dry etching).

MS&E 542 Materials Design in Electronic Packaging
Spring. 3 credits. Staff. Design, materials, and manufacturing needs for packaging technology from chip to board. Principles involved in key areas of materials science and other engineering disciplines. Packaging materials to be discussed include metals, ceramics, and polymers.

MS&E 543 Thin-Film Materials Science
Fall. 3 credits. Offered alternate years. D. G. Ast. This course is a fundamental approach to thin-film science that will cover deposition methods, growth of epitaxial layers, formation of multilayered structures such as superlattices and quantum wells, and interdiffusion and reaction in thin films. The course will begin with the structure and thermodynamics of surfaces and ultrathin films. The conditions for epitaxial growth, such as used in semiconductor heterostructures, will be contrasted with those for amorphous or polycrystalline films. The role of thermal processing for reactive thin films involving the formation of surface oxides, metallic silicides, and aluminides will be presented.

MS&E 544 Plasma Processing of Electronic Materials (also ELE E 482)
Spring. 3 credits. Prerequisites: PHYS 213 and 214 or their equivalents. Offered on demand. For description, see ELE E 482.

MS&E 545 Magnetic Materials
Fall. 3 credits. Prerequisites: PHYS 213 and 214, or equivalent. Offered alternate years. Y. Suzuki. This course covers the fundamentals of magnetic phenomena and specific magnetic materials and their use in modern applications. Magnetization phenomena, the origin of magnetism in a material, magnetic domains, and magnetic anisotropy will be included in the fundamentals. Specific magnetic materials and their applications include: ferromagnetism in thin films and fine particles, amorphous magnetic materials; magnetic recording, magnetic circuits.

MS&E 555 Introduction to Composite Materials (also CEE 475, M&AE 455, and T&AM 485)
Spring. 4 credits. For description, see T&AM 455.

MS&E 563 Nanobiotechnology (also A&EP 663 and BIO Q 663)
Spring. 3 credits.
For description, see A&EP 663.

MS&E 571 Physics of Modern Materials Analysis
Spring. 3 credits. D. T. Grubb. Survey of modern analytical techniques used to determine composition and structure of near-surface and bulk materials. Interaction of ions, electrons, and photons with solids; characteristics of the emergent radiation. Techniques covered include: Auger electron spectroscopy, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopies, and X-ray techniques. Selection and design of experiments.

MS&E 575 Introduction to Point and Space Groups (also ELE E 495)
Fall. 2 credits. S-U grades only. R. L. Liboff. For description, see ELE E 495.

Graduate Professional Courses

MS&E 501-502 Special Project
501, fall; 502, spring. 6 credits each term. Master of Engineering research project.

MS&E 582 Mechanical Properties of Materials, Processing, and Design (also MS&E 302)
Spring. 3 credits. Corequisite: MS&E 584, or permission of instructor. A. L. Ruoff. For description, see MS&E 502.
MS&E 583 Thermodynamics of Continuous Systems (also MS&E 303)
Fall. 4 credits. M. O. Thompson.
For description, see MS&E 303.

MS&E 584 Kinetics, Diffusion, and Phase Transformations (also MS&E 304)
Spring. 4 credits. Prerequisite: MS&E 583 or permission of instructor. R. Dieckmann.
For description, see MS&E 304.

MS&E 585 Electronic Structure of Matter (also MS&E 303)
Fall. 3 credits. J. M. Blakely.
For description, see MS&E 305.

MS&E 586 Electronic, Optical, and Magnetic Properties of Materials (also MS&E 306)
Spring. 3 credits. Prerequisite: MS&E 585 or permission of instructor. Y. Suzuki.
For description, see MS&E 306.

Graduate Core Courses

MS&E 601 Thermodynamics of Materials
Fall. 3 credits. Prerequisite: course in thermodynamics at level of MS&E 303. M. O. Thompson.
Basic statistical thermodynamics, partition functions and thermodynamic state functions, distributions, laws of thermodynamics, free-energy functions and conditions of equilibrium, chemical reactions, statistics of electrons in crystals, heat capacity, heterogeneous systems and phase transitions, and lattice models of 1-, 2-, and 3-dimensional interacting systems. Statistical thermodynamics of alloys, free-energy and phase diagrams, order-disorder phenomena, point defects in crystals, and statistical thermodynamics of interfaces.

MS&E 602 Elasticity, Plastic Flow, and Fractures
Spring. 3 credits. Offered alternate years. S. P. Baker.
Micromechanical modeling of mechanical behavior. A materials-science approach to modeling combines concepts from continuum mechanics, thermodynamics, kinetics, and atomic structure. Topics include: elastic properties of crystals, deformation mechanisms from ambient temperature to very high temperature over a wide range of strain rates, fracture in brittle materials, fracture in ductile materials, fracture at elevated temperatures, crack tip phenomena, and composite materials.

MS&E 603 Analytical Techniques for Materials Science (also MS&E 571)
Spring. 3 credits. D. T. Grubb.
For description, see MS&E 571.

MS&E 604 Kinetics of Reactions in Condensed Matter
Fall. 3 credits. A. L. Ruoff.
Phenomenology and microscopic aspects of diffusion in fluids, both simple and polymeric, and in metallic and ionic solids. Phase stability and transformations, nucleation and growth, spinodal decomposition and dissipative transformations. Phase coarsening processes, recrystallization, and grain growth. Diffusion-controlled growth, interfacial reactions, moving boundary problems. Grain-boundary migration and interface kinetics. At the level of Diffusion in the Condensed State, by Kirkaldy and Young.

Related Course in Another Department

Introductory Solid-State Physics (PHYS 454)

Further Graduate Courses

MS&E 621 Advanced Inorganic Chemistry for Solid-State Chemistry (also CHEM 607)
Spring. 4 credits. Prerequisite: CHEM 605 or permission of instructor. F. DiSalvo.
For description, see CHEM 607.

MS&E 622 Synthetic Polymer Chemistry (also CHEM 675 and CHEM 671)
Spring. 4 credits. Prerequisites: CHEM 358-360 or equivalent or permission of instructor.
For description, see CHEM 671.

MS&E 631 Solid-State Reactions
Fall. 3 credits. Offered alternate years; not offered 2000–2001. R. Dieckmann.
Point defects (thermal disorder, component-activity-dependent disorder, influence of dopants, different kinds of associates, Coulomb interaction between point defects), dislocations, grain boundaries transport in solids (definition and different types of diffusion coefficients, reference frames, mechanisms of electrical conduction, elementary diffusion mechanisms, atomic theory of transport, correlation effects, phenomenological theory of transport including some aspects of thermodynamics of irreversible processes, Fick's laws), point defect relaxation (migration controlled, phase-boundary reaction controlled), interdiffusion, solid-state reactions involving compound formation (oxidation of metals, reactions between solids), defect migration of materials in potential gradients, and selected solid-state processes (internal reactions, etc.).

MS&E 632 Solid State Electrochemistry
Fall. 3 credits. Prerequisite: MS&E 631 or permission of instructor. Not offered 2000–2001.
Disorder in solids, thermodynamic quantities of quasi-free and electron defects in semiconductors; mobility, diffusion, and partial conductivity of ions and electrons; solid ionic conductors, solid electrolytes, and solid solution electrodes; galvanic cells with solid electrolytes for thermodynamic investigations, technical applications of solid electrolytes. At the level of Electrochemistry of Solids by H. Ricket.

MS&E 655 Composite Materials (also M&AE 655 and T&AM 655)
Spring. 4 credits.
For description, see T&AM 655.

MS&E 671 Principles of Diffraction (also A&EP 711)
Spring. 3 credits. Letter grades only. J. D. Brock.
For description, see A&EP 711.

MS&E 672 Transmission Electron Microscopy
Spring. 3 credits. Prerequisite: MS&E 206 or equivalent. Offered alternate years; not offered 2000–2001.
This course covers the theory and practice of obtaining and interpreting TEM data from crystalline materials. Topics include microscope optics and conventional and high resolution image formation. Special emphasis is placed on electron diffraction (formation and analysis of spot patterns, Kikuchi patterns, and convergent beam patterns), and obtaining useful images of crystal defects. Practical requirements for high-resolution imaging of crystal lattices and interfaces are also covered. Associated theoretical topics include kinematical and dynamical diffraction theories, the contrast transfer function theory of phase contrast, and image modeling and image analysis for quantitative interpretation of data. Current text is Transmission Electron Microscopy by D. B. Williams and C. B. Carter.

MS&E 681 Surfaces and Interfaces in Materials
Spring. 3 credits. Offered alternate years. J. M. Blakely.
This course deals with special topics in the field of surface and interface science. Some knowledge of basic statistical thermodynamics, crystallography, elementary quantum mechanics, and theory of rate processes will be assumed. The following are the main topics: statistical thermodynamics of interfaces, morphological stability, atomic structure, energetics and structure determination, electronic structure of interfaces, charge and potential distributions, surface steps, adsorption and segregation, atomic transport and growth processes at surfaces, oxidation, and other surface reactions.

Specialty Courses

MS&E 800 Research in Materials Science
Fall, spring. Credit to be arranged. Staff.
Independent research in materials science under the guidance of a member of the staff.

MS&E 801 Materials Science and Engineering Colloquium
Fall and spring. 1 credit each term. Credit limited to graduate students. Staff.
Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

MS&E 802 Materials Science Research Seminars
Fall, spring. 2 credits each term. For graduate students involved in research projects. Staff.
Short presentations on research in progress by students and staff.

MECHANICAL AND AEROSPACE ENGINEERING

General and Required Courses

M&AE 101 Naval Ship Systems
For description, see NAV S 202.

M&AE 102 Drawing and Engineering Design (also ENGRG 102)
Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to 32 students each half term. Recommended for students without previous mechanical drawing experience. Letter grades required for students majoring in M&AE, S-U grades optional for all others. For description, see ENGRG 102.

M&AE 117 Introduction to Mechanical Engineering (also ENGR 117)
Fall or spring, to be determined. 3 credits. 2 lectures and 1 lab per week.
MECHANICAL AND AEROSPACE ENGINEERING

M&AE 127 Introduction to Entrepreneurship and Enterprise Engineering (also ENGR 127)
Spring. 3 credits.
This is a course in the Introduction to Engineering series which provides a solid introduction to the entrepreneurial process to students in engineering. For description, see ENGR 127.

M&AE 212 Mechanical Properties and Processing of Engineering Materials
Spring. 4 credits. Prerequisite: ENGRD 202. Introduction to the broad range of mechanical behavior of materials and their processing: atomic bonding and crystalline structures, point and line defects, plastic deformation of crystals and polycrystals; hardening behavior and basic elements of plasticity: equilibrium, microstructural development and time-dependent phases, deformations; bulk deformation processes; the ideal work and slab analysis methods; failure of materials; materials selection.

M&AE 221 Thermodynamics (also ENGRD 221)
Fall, spring, may be offered summer. 3 credits. Prerequisites: MATH 192 and PHYS 112.
For description, see ENGRD 221.

M&AE 225 Mechanical Synthesis
Spring. 3 credits. Prerequisite: ENGRD 202. Pre- or corequisites: ENGRD 203 and ENGRD 221. Lab fee.
A hands-on introduction to the mechanical design process. Basic prototyping skills developed using machine tools. Mechanical dissection used to demonstrate successful product design and function. Design projects provide experience from conceptualization through prototype construction and testing.

M&AE 323 Introductory Fluid Mechanics
Fall. Usually offered in Engineering Cooperative Program also. 4 credits. Prerequisites: ENGRD 202 and 203 and coregistration in 221, or permission of instructor.
Physical properties of fluids, hydrostatics, conservation laws using control volume analysis and using differential analysis, Bernoulli's equation, potential flows, simple viscous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers, introduction to compressible flow.

M&AE 324 Heat Transfer
Spring. May also be offered in Engineering Cooperative Program. 3 credits. Prerequisite: M&AE 323 or permission of instructor.
Topics include conduction of heat in steady and unsteady situations; surfaces with fins and systems with heat sources; forced and natural convection of heat arising from flow around bodies and through ducts; heat exchangers; emission and absorption of radiation, and radiative transfer between surfaces.

M&AE 325 Mechanical Design and Analysis
Fall. Usually offered in Engineering Cooperative Program also. 4 credits. Prerequisites: ENGRD 202, ENGRD 203, M&AE 212, and M&AE 225. Lab fee.
Application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems.

M&AE 326 System Dynamics
Spring. May be offered in Engineering Cooperative Program. 4 credits. Prerequisite: MATH 294, ENGRD 203. Junior standing required.
Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems; Computer simulation and experimental studies of vibration and control systems.

M&AE 427 Fluids/Heat Transfer Laboratory
Fall. 3 credits. Prerequisites: M&AE 323, 324. Fullfills the technical writing requirement.
Laboratory exercises in methods, techniques, and instrumentation used in fluid mechanics and the thermal sciences. Measurements of temperature, heat transfer, viscosity, drag, fluid-flow rate, effects of turbulence; air foil stall, two-phase flows, and engine performance. Biweekly written assignments.

M&AE 428 Seminar on Engineering Design
Fall. 2 credits. Prerequisite: completion of 6 semesters in mechanical engineering or equivalent. Stat 415 or 425 only.
This course is offered to illustrate the design 'process' in action. It consists of seminars by industrial and academic practitioners of design. Case studies are presented in weekly invited lectures from a wide range of disciplines, including thermo-fluid processes, manufacturing, energy, mechanical design, aerospace, and biological sciences. The invited lectures are supplemented by one or more design projects in the semester, such as a competition to design an all-balsa indoor hand or catapult-launched glider for maximum duration.

M&AE 591 Applied Systems Engineering I (also CEE 504, COM S 504, ELE E 512, OR&IE 512)
Fall. 3 credits. Prerequisite: permission of instructor.
Fundamental ideas of systems engineering, and their application to design and development of various types of engineered systems. Defining system requirements, creating effective project teams, mathematical tools for system analysis and control, testing and evaluation, economic considerations, and the system life cycle.

M&AE 592 Applied Systems Engineering II (also CEE 505, COM S 505, ELE E 513, OR&IE 513)
Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ELE E 512, M&AE 591, or OR&IE 512).
An advanced course in the application of the systems engineering process to the design and operation of complex systems. It focuses on the descriptive and analytical tools of systems engineering including schematic databases, dynamic optimization, discrete event simulation, and risk analysis. Students work in teams on projects including space transportation and electric power systems design.

M&AE 386 Automotive Engineering
Spring. 3 credits. Prerequisite: M&AE 325 or permission of instructor.
Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles, trucks, and related vehicles. Power plant, drive line, brakes, aerodynamics, suspension, and structure. Other types of vehicles may be considered.

M&AE 412 Smash and Crash: Mechanics of Large Deformations
Severe loading is a defining feature of both materials processing and crash worthiness. Materials intentionally are stressed beyond their elastic limits, resulting in deformations that are not reversible. In materials processing, the desire is to change the shape to manufacture components; in crash worthiness, it is to absorb the vehicle's energy. In this course the fundamentals of plasticity are covered: yielding, flow laws, work hardening. Various solution methods, including bound theorems, are presented. The fundamentals are applied to localization, primary and secondary forming operations, and plastic buckling. Laboratory experiments deal with these topics and conclude with the individual design, construction, and testing of a crush cage.

M&AE 415 Global Position System Theory and Design (also ELE E 415)
Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 503 or permission of instructor.
For description, see ELE E 415.

M&AE 417 Introduction to Robotics: Dynamics, Control, Design
Spring. 3 credits.
Introductory course in the analysis and control of mechanical manipulators. Topics include spatial descriptions and transformations, manipulator kinematics and inverse kinematics, differential relationships and static forces, manipulator dynamics, trajectory generation, sensors and actuators, trajectory control, and compliant motion control. Several experiments with a five axis manipulator arm as well as simulation and design using MATLAB and multibody codes will be used.

M&AE 425 FSAE Automotive Design Project
Fall, spring. 3 or 4 credits. Permission of instructor only.
Project course to research, design, build, develop, and compete with a Formula SAE car for intercollegiate competition. Students work in interdisciplinary teams using concurrent engineering and systems engineering principles applied to complex mechanical, electromechanical, and electronic systems. Intended for M&AE or ELE E juniors and seniors, or by arrangement with instructor. (Usually 3 credits.)

M&AE 426 FSAE Auto Design Project (Design Option)
Fall, spring. 3 or 4 credits. Limited to M&AE seniors; permission of instructor only.
Senior design version of M&AE 425. For description, see M&AE 425.

M&AE 440 Hybrid Electric Vehicle
Fall, spring. 3 credits for team members; 4 credits for team leaders. Enrollment limited to a maximum of 4 semesters. Permission of instructor only.
Team work on the design and fabrication of a hybrid vehicle for national competition.

Mechanical Systems, Design, Materials Processing, and Precision Engineering
M&AE 441 Hybrid Electric Vehicle (Design Option)
Fall, spring. 3 or 4 credits. Limited to M&AE seniors; permission of instructor only. Senior design version of M&AE 440. For description, see M&AE 440.

M&AE 455 Introduction to Composite Materials (also CEE 475, M&AE 555, and T&AM 455) Spring. 4 credits. For description, see T&AM 455.

M&AE 461 Entrepreneurship for Engineers (also ENGRG 461) Fall. 3 credits. Enrollment open to upper class engineers; others with permission of instructor. This course will examine issues and skills necessary to identify, evaluate, and start new business ventures. Topics include competition, strategy, writing a business plan, intellectual property, technology forecasting, project design and development, sources of capital, and manufacturing. Case studies and guest lectures will provide material for analysis and class discussion.

M&AE 463 Neuromuscular Biomechanics Spring. 3 credits. Prerequisites: ENGRD 202 and 203, or permission of instructor. Offered alternate years, not offered 2000-2001. Modeling and simulation of biomechanical systems using mechanics, dynamics, and control principles. Physiology of neurons and muscles introduced and related to the production of force and movement in biological systems. Representation of neuromuscular systems as simultaneous equations. Exploration of the muscular redundancy problem using optimization methods and general-purpose languages (such as Mathematica or MATLAB). Selected clinical applications.

M&AE 464 Orthopaedic Tissue Mechanics Spring. 3 credits. Prerequisites: ENGRD 202 and M&AE 325 or permission of instructor. Offered alternate years. Applications of mechanics and materials principles to orthopaedic tissues. Physiology of bone, cartilage, ligament, and tendon introduced and related to mechanical function. Mechanical behavior of skeletal tissues in the laboratory. Functional adaptation of these tissues to their mechanical environment. Tissue engineering of replacement structures.

M&AE 469 Stress Analysis for Mechanical and Aerospace Design Fall. 3 credits. Prerequisites: T&AM 202 and M&AE 325 or permission of instructor. Offered alternate years. Study of advanced topics in the analysis of stress and deformation of elastic bodies, with applications to analysis and design of mechanical and aerospace systems and components. Review of mechanics fundamentals and their application to classical problems. Introduction to modern computational methods (such as the finite element method) for analysis of stress and deformation.

M&AE 470 Finite Element Analysis for Mechanical and Aerospace Design Spring. 3-4 credits. (4 credits as M&AE elective for M&AE seniors) Prerequisite: senior standing or permission of instructor. Evening examinations. Term project. Fullfills computing applications requirement for M&AE students. Introduction to linear finite element static and dynamic analysis for discrete and distributed mechanical and aerospace structures. Prediction of load, deflection, stress, strain, and temperature distributions. Major emphasis on underlying mechanics and numerical methods. Introduction to computational aspects via educational and commercial software (such as ANSYS). Selected mechanical and aerospace applications.

M&AE 479 Feedback Control Systems (also CHEME 472 and ELE E 471) Fall. 4 credits. Prerequisites: one of the following: CHEME 372, ELE E 301, M&AE 526, or permission of instructor. Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the principal mathematical tools. Design techniques include root-locus and frequency-response methods. Includes laboratory that examines modeling and control of representative dynamic processes. Includes laboratory that examines modeling and control of representative dynamic systems.

M&AE 479 Modeling and Simulation of Mechanical and Aerospace Systems (also M&AE 579) Fall. 3 or 4 credits. Prerequisite: senior engineering standing or permission of instructor. Evening examinations. Fullfills M&AE design elective if taken for 4 credits. Fullfills computer applications requirement for M&AE students. Limited enrollment of M.Eng. students by permission of instructor only. F. Valero-Cuevas. Analysis and simulation of linear and nonlinear systems. Representation of discrete and distributed dynamical systems by state-variable models. Time- and frequency-domain simulation via general-purpose languages (such as MATLAB or Mathematica) and special-purpose software (such as Simulink). Selected applications from diverse fields.

M&AE 486 Automotive Engineering Design Spring. 4 credits. Prerequisite: senior standing. Fullfills field design requirement. For description, see M&AE 386.

M&AE 514 Design for Manufacture and Assembly Fall. 3 or 4 credits; (4 credit option provides design credit for M&AE seniors). Prerequisites: ENGRG 102 and M&AE 212 or 412, and introductory probability and statistics, or permission of instructor. Nominal DFMA (Design for Manufacturing & Assembly) and variational DFMA are covered in two parallel streams. The nominal stream is based on readings in a popular text that surveys the characteristics of manufacturing and assembly processes that influence the design of parts and products. The second stream, covered through lectures and diverse reading, addresses dimensional variability and its control through parametric and geometric tolerances, design and aspects of statistical quality and process control.

M&AE 525 Mechatronics Systems Engineering Project Fall, spring. 4 credits each term (must be taken for 8 credits). Limited enrollment, engineering seniors and Master of Engineering students only. Corequisite: Applied Systems Engineering I or permission of instructor. Fullfills Master of Engineering project requirement, Systems Engineering Option project requirement, and undergraduate design elective. Project-based introduction to systems engineering with a focus on system design, systems and technology integration, and systems analysis. Approximately 30 students from the various engineering disciplines will design, construct, test, and present projects for autonomous mobile robots. These teams will engage in head-to-head competitions at the end of the spring semester. There will be approximately six lectures per semester, and weekly group meetings with the instructor. The project involves vehicle design, real-time feedback control and trajectory generation, microprocessor design and implementation, wireless communication, computer vision, and artificial intelligence.

M&AE 558 Biomechanical Systems—Analysis and Design Fall. 3 or 4 credits. Prerequisites: undergraduate courses in dynamics and strength of materials, (e.g., T&AM/ENGRD 202 and 203) and senior standing, graduate standing, or permission of instructor. Not offered 2000-2001. Selected topics from the study of the human body as a mechanical system. Emphasis on the modeling, analysis, and design of biomechanical systems frequently encountered in orthopaedic engineering, especially bone-implant systems.

M&AE 570 Simulation of Mechanical and Aerospace Systems (also M&AE 470) Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Evening examinations. Term project. Graduate version of M&AE 470. For description, see M&AE 470.

M&AE 571 Applied Dynamics Fall. 3 credits. Prerequisites: graduate standing, senior standing, T&AM/ENGRD 203, M&AE 326 or permission of instructor. 2 lectures. Introduction to multibody dynamics; dynamics of rigid bodies; Newton-Euler methods, Lagrangian dynamics, principle of virtual power (Kane-Jourdain methods); applications to robotics, space dynamics of satellites, electro-mechanical systems.

M&AE 579 Modeling and Simulation of Mechanical and Aerospace Systems Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Evening examinations. Term project. For description, see M&AE 479.

M&AE 612 Materials Processing: Theory and Applications Fall. 4 credits. Prerequisite: graduate standing, or permission of instructor. Basic principles governing the inelastic behavior of solids are discussed and bound theories for problems of forging, extrusion, and rolling. Analysis of sheet-metal forming including limit diagrams and springback. Defect initiation during forming processes. Basic solidification processes. Morphological instability of a solid/liquid interface, solidification microstructures, solute

*M&AE 613 Computational Methods in Materials Processing*
Spring. 4 credits. Prerequisite: M&AE 612 or permission of instructor. Not offered 2000–2001.

*M&AE 615 Experiments in Materials Processing*
Fall. 4 credits. Prerequisite: M&AE 680 (finite elements) or permission of instructor.

This course will focus on experiments and simulations related to the mechanical properties of materials and materials processing. A general introduction to sensors and instrumentation for engineering applications will also be included. Testing for mechanical properties/model parameter characterization and simple boundary value problems: linear elasticity, inelastic deformation, fatigue, and fracture, including rate and temperature effects. Process simulation experiments including forging, extrusion, rolling, and ironing may also be conducted. In addition, an emphasis will be placed on the experiment/simulation interface. Students will perform analyses including finite element modeling to correlate and predict material behaviors observed in the experiments. These analyses include linear elasticity behavior, fatigue, plasticity modeling, and fracture mechanics.

*M&AE 655 Composite Materials (also M&AE 655 and T&M 655)*
Spring. 4 credits. For description, see T&M 655.

*M&AE 663 Advanced Topics in Neuromuscular Biomechanics*
Spring. 3 credits. Permission of instructor only. Offered alternate years.

F. Valero-Cuevas

Advanced topics in modeling and simulation of biomechanical systems using mechanics, dynamics, and control principles. Mathemati
cal representation of the functional interactions among neurons, muscles, and skeletal structures. Numerical prediction of force and movement in biological systems, and exploration of muscle coordination using optimization methods and general-purpose languages (such as Mathematica or MATLAB). Project-based investigation of clinically relevant topics.

[M&AE 664 Mechanics of Bone]
Spring. 3 credits. Prerequisites: graduate standing or permission of instructor. Offered alternate years, not offered 2000–2001.

This course will focus on current methods and results in skeletal research, focusing on bone. Topics include skeletal anatomy and physiology, experimental and analytical methods for determination of skeletal behavior, mechanical behavior of bone tissue, and skeletal functional adaptation to mechan­ics.

[M&AE 670 Model-Based Estimation]
Fall. 3 credits. Prerequisites: linear algebra, differential equations, and MATLAB programming. Open to M.S./Ph.D.; others by permission of the instructor. Not offered 2000–2001.

This course covers a variety of ways in which models and experimental data can be used to estimate model quantities that are not directly measured. The two main estimation methods that are presented are (a) least-squares estimation for general problems and (b) Kalman filtering for dynamic systems. Techniques for linear models are taught as are techniques for nonlinear models. Both theory and application are presented. The course includes a final programming project.

[M&AE 677 Robust and Optimal Control]
Spring. 4 credits. Prerequisites: M&AE 678/ELE 471/CHEME 472 (or equivalent), ELE 521 (or equivalent), graduate standing, or permission of instructor.

An introduction to model based control of multi-input, multi-output systems. Emphasis on design techniques which result in closed loop systems that are insensitive to modeling errors and which achieve a pre-specified level of performance. Topics include Lp spaces and performance measures, model reduction and approximation, H2 and H-infinity optimal control, explicit models of system uncertainty, and the analysis of uncertain control systems. Most of the design and analysis tools developed in the course are in the form of linear matrix inequalities, or semidefinite programs. Each student will be expected (1) to give a presentation on a research paper, which will be chosen from a list provided by the instructor, OR (2) to complete a design project applying the techniques developed in the course.

[M&AE 680 Finite Element Analysis (also CE 772 and T&M 666)]
Fall. 3 credits. Prerequisites: T&M/ENG 663 or equivalent.

Conceptual, theoretical, and practical bases for finite element methods in engineering, with emphasis on structural, mechanical, and thermal problems. Focuses on the FEM as a method for numerically solving partial differential equations. Topics include: strong and weak problem forms, weighted-residual and variational formulations, formulation of elliptic, parabolic, hyperbolic, and eigenvalue problems, convergence and error estimation; and various kinds of elements. Also, an introduction to boundary element and mesh-free methods.

*M&AE 699 Combustion Engines*
Spring. 3 credits. Prerequisites: ENGRD 221 and M&AE 323.

Introduction to combustion engines, with emphasis on the application of thermody-
namic and fluid-dynamic principles affecting their performance. Chemical equilibrium and kinetics, ideal-cycle analyses, deviations from ideal processes, engine breathing, combustion knock. Formation and control of undesirable exhaust emissions.
For description, see NS&E 403-M&AE 459 Introduction to Controlled
Application of thermodynamic and fluid-
mechanic principles to design and perfor­
propulsion principles, including rockets.

At the level of
Small disturbance equations of unsteady
of linear systems. Static stability and control.

An introduction to stability and control of
atmospheric-flight vehicles. Review of
aerodynamic forces and methods for analysis of
linear systems. Static stability and control.
Small disturbance equations of unsteady
motion. Dynamic stability of longitudinal and
lateral-directional motions; transient response.
At the level of Dynamics of Flight: Stability and
Control by Etkin.

An introduction to combustion and flame
processes, with emphasis on fundamental
fluid dynamics, heat and mass transport, and
reaction-kinetic processes that govern
combustion rates. Thermochemistry, kinetics,
vessel explosions, laminar premixed and
diffusion flames, droplet combustion, and
combustion of solids.

Foundations of fluid mechanics from an
advanced viewpoint, including formulation of
continuum fluid dynamics; surface phenom­
ena and boundary conditions at interfaces;
fundamental kinematic descriptions of fluid
flow, tensor analysis, derivation of the Navier-
Stokes equations and energy equation for
compressible fluids; sound waves, viscous
flows, boundary layers, and potential flows.

Soviet-era foundations. Prerequisite: M&AE 601.
Navier-Stokes and Euler equations, integral
formulas for fluid forces and moments on
immersed bodies in compressible and
incompressible viscous flows. Vorticity
dynamics and Kelvin's theorem, Prandtl's
vortex. Fluid dynamics and thermodynamics;
compressible flows, boundary layers,
computation of flows, and turbulence
models. Prerequisite: M&AE 601.

Laminar flames. Prerequisite: graduate
standing or permission of instructor.
Laminar flame importance in combustion
systems, and they provide a complex example of laminar reactive flows.
This course examines the behavior of laminar
flames and the chemical and transport
processes involved. The emphasis of the

Laminar reactive flows. Prerequisite: graduate
standing or permission of instructor.
Large turbulent reactive flows occur in
combustion devices, the chemical process
industry, the atmosphere, oceans, and
elsewhere. In the last decade, substantial
progress has been made in the understanding
of these flows, through both experimental and
computational approaches. This course
focuses on turbulent, nonpremixed combus­
tion and describes: the different phenomena
involved, the basic processes and governing
equations, experimental techniques and
observations, and a broad range of modeling
approaches. The material covered is
relevant to other single-phase turbulent reactive flows.
Class meets, on average, once per week.

Conduction and Radiation
Thermal Flow
In this course, the effect of heat conduction
and thermal radiation on the performance of
devices is studied. Basic principles of heat
transfer are reviewed, and the development
of analytical and numerical procedures for
solving basic two-dimensional problems is
covered. Prerequisite: M&AE 458.

Convective Flow
Direct numerical simulations, analysis of
computational approaches. The material covered is relevant
for both convective and radiative heat transfer.
To some extent, these two topics are
inseparable in modern scientific
computations. This course will cover
principles and applications of both
transport phenomena, with emphasis on
realistic applications to engineering
problems. Prerequisite: M&AE 603.

Analysis of Turbulent Flows
This course is intended to provide an
introduction to the analysis of turbulent
flows, including the basics of turbulence
theory, the Navier-Stokes equations, and
the use of turbulence models in practical
applications. Prerequisite: M&AE 603.

Stability of Fluid Flow
Fluid flow stability problems are
parametric in nature, and thus are
represented by their governing
partial differential equations (PDEs).
In these equations, stability is related
usually to the sign of certain
parameters or coefficients. One
approach to determine stability
is to linearize the governing
PDEs, obtain the so-called
linearized governing PDEs,
and then to solve them
analytically. However, one
usually finds that the
analytical solution is
intractable. Therefore,
other methods are
employed to approximate
the solution. Such
methods are the
spectral or
spectral
methods, etc.

Turbulence and Turbulent
Flow
This course is intended to introduce
students to the fundamental concepts
and theories of turbulence, with an
emphasis on the practical applications
of these concepts in real-world
problems. Prerequisite: M&AE 601.

bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

M&AE 736 Theory of Computational Aerodynamics
Fall. 4 credits. Prerequisites: graduate standing, an advanced course in continuum mechanics or fluid mechanics, and some FORTRAN programming experience. Numerical methods are developed to solve inviscid and high-Reynolds-number fluid-dynamics problems, including finite-difference, finite-volume, and surface-singularity methods. Accuracy, convergence, and stability, treatment of boundary conditions and grid generation. Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic (steady transonic flow) problems. Assignments require programming a digital computer.

M&AE 737 Computational Fluid Mechanics and Heat Transfer
Fall. 4 credits. Prerequisites: graduate standing, an advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some FORTRAN, C, or C++ programming experience. Offered alternate years; not offered 2000–2001. Numerical methods are developed for the elliptic and parabolic partial differential equations that arise in fluid flow and heat transfer when convection and diffusion are present. Finite-difference, finite-volume, and some spectral methods are considered, together with issues of accuracy, stability, convergence, and conservation. Current methods are reviewed. Emphasis is on steady and unsteady essentially incompressible flows. Assigned problems are solved on a digital computer.

Special Offerings

M&AE 490 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit TBA. Limited to graduate students. Prerequisite: permission of instructor. Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

M&AE 491 Design Projects in Mechanical and Aerospace Engineering
Fall, spring. Credit TBA. Prerequisite or concurrent: M&AE 428. Fulfills field design requirement. Intended for individual students or small groups of students who want to pursue particular design projects outside of regular courses.

M&AE 545 Energy Seminar (also ELE E 587 and NS&E 545)
Fall, spring. 1 credit. May be taken for credit both semesters. For description, see OR&E 893-894.

M&AE 594 Manufacturing Seminar (also OR&E 893-894)
Fall, spring. 1 credit. For description, see OR&E 893-894.

M&AE 890 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit TBA. Limited to graduate students.

M&AE 695 Special Topics in Mechanical and Aerospace Engineering
Fall, spring. Credit TBA. Graduate standing and permission of instructor. Special lectures by faculty members on topics of current research.

M&AE 791 Mechanical and Aerospace Research Conference
Fall, spring. 1 credit each term. S-U grades only. For graduate students involved in research projects. Presentations on research in progress by faculty and students.

M&AE 799 Mechanical and Aerospace Engineering Colloquium
Fall, spring. 1 credit each term. Credit limited to graduate students. All students and staff invited to attend. Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

M&AE 890 Research in Mechanical and Aerospace Engineering
Credit TBA. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

M&AE 990 Research in Mechanical and Aerospace Engineering
Credit TBA. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

NUCLEAR SCIENCE AND ENGINEERING

NS&E 121 Fission, Fusion, and Radiation (also A&EP 121 and ENGR 121)
Spring. 3 credits. S-U grades optional for students outside the College of Engineering. K. B. Cadby.
This is a course in the Introduction to Engineering series. For description, see ENGR 121.

NS&E 403 Introduction to Nuclear Science and Engineering (also A&EP 403, ELE E 403, and M&AE 450)
Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294. This course is designed for juniors or seniors from any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. It can also serve as a basic course for those who do not intend to continue in the field. K. B. Cadby.
Introduction to the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering, nuclear structure, radioactive decay, and reactions; interaction of radiation and matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics. At the level of introduction to nuclear engineering, by Lamarch, third edition.

NS&E 484 Introduction to Controlled Fusion: Principles and Technology (also A&EP 484, ELE E 484, and M&AE 459)
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. Offered on demand. D. A. Hammer.
Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include: (1) fuels and conditions required for fusion power, and basic fusion-reactor concepts; (2) fundamental aspects of plasma physics relevant to fusion plasmas; and basic engineering problems for a fusion reactor; and (3) an engineering analysis of proposed magnetic and/or inertial confinement fusion-reactor designs.

NS&E 509 Nuclear Physics for Applications
Fall. 3 credits. Prerequisites: sophomore physics and math, or permission of instructor; some FORTRAN programming experience is desirable. Primarily for graduate students, especially those with a major or minor in Nuclear Science and Engineering; also open to qualified undergraduates. V.O. Kostin.
A first course in nuclear physics. Systematic presentation of nuclear phenomena and processes that underlie applications ranging from nuclear power (fission and fusion), to nuclear astrophysics, to nuclear analytical methods for research in nonnuclear fields, Radioactivity, nuclear reactions, and interaction of radiation with matter. At the level of Radiochemistry and Nuclear Methods of Analysis, by Ehrman and Vance; Nuclear and Radiochemistry, by Friedlander, et al.

NS&E 521 Radiation Effects in Materials
Fall. 3 credits. Prerequisite: introductory nuclear science and materials science. K. Unlu.
Radiation effects in fission and fusion reactors. Displacement of atoms by neutrons, electrons and ions; radiation induced defects; radiation damage effects of point defects in the crystalline lattice, void swelling, and other radiation induced changes in mechanical properties of alloys. Radiation effects in fission and fusion reactor materials. Nuclear reactor fuels. At the level of Fundamental Aspects of Nuclear Reactor Fuel Elements, by D. R. Olander.

NS&E 545 Energy Seminar (also ELE E 587 and M&AE 545)
Fall, spring. 1 credit. May be taken for credit both semesters. K. Unlu.
Energy resources, their conversion to electricity or mechanical work, and the environmental consequences of the energy cycle will be discussed by faculty members from several departments in the university and by outside experts. Examples of topics to be surveyed are energy resources and economics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; and air pollution control.

NS&E 551 Nuclear Measurements in Research
Spring. 3 credits. Prerequisite: PHYS 214 or 218, or permission of instructor; some upper-division physics desirable. Primarily for graduate students in archaeology,
A variety of optimization methods stressing extensions of linear programming and applications including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed as well as numerous applications.

**OR&IE 350 Financial and Managerial Accounting**  
Fall. 4 credits. Principles of accounting, financial reports, financial-transactions analysis; financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, economic analysis of short-term decisions.

**OR&IE 360 Engineering Probability and Statistics II**  
Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent.  
This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and solving problems in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

**OR&IE 361 Introductory Engineering Stochastic Processes I**  
Spring. 4 credits. prerequisite: OR&IE 360 or equivalent.  
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queueing, and reliability.

**OR&IE 414 Using Simulation Models for Engineering Design**  
Spring. 4 credits. Prerequisites: an undergraduate course in probability and statistics through regression analysis, computer programming skills with a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queueing, and reliability.

**OR&IE 416 Design of Manufacturing Systems**  
Fall. 4 credits. Senior OR&IE students only.  
Design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisers are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance will be presented in lectures.

**OR&IE 431 Discrete Models**  
Fall. 4 credits. Prerequisites: OR&IE 320 and COM S 211, or permission of instructor. Not offered 2000–2001.  
Basic concepts of graphs, networks, and discrete optimization are developed using fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.

**OR&IE 432 Nonlinear Optimization**  
Spring. 4 credits. Prerequisite: OR&IE 320.  
Introduction to the practical and theoretical aspects of nonlinear optimization. Attention given to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming, e.g., interior-point methods. Methods of numerical linear algebra introduced as needed.

**OR&IE 433 Optimization Modeling**  
The emphasis is on modeling complicated decision problems related to linear integer programs, or highly-structured nonlinear programs. Besides modeling, students are required to assimilate articles from the professional literature and to master relevant software.

**OR&IE 435 Introduction to Game Theory**  
Spring. 3 credits.  
A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

**OR&IE 436 A Mathematical Examination of Fair Representation**  
Spring. 3 credits. Prerequisites: MATH 222 or 294 or permission of instructor. Not offered 2000–2001.  
In this course we will study the mathematical aspects of the political problem of fair apportionment. The most recognizable form (in the United States) of apportionment is the determination of the number of seats in the U.S. House of Representatives awarded to each state. The constitution indicates that the apportionment should reflect the relative populations, but it does not prescribe a specific method. At first blush it appears that there is a straightforward approach that must lead to a fair, or fairest apportionment, for any fixed house size and known populations. However, indivisibility of seats leads us to interesting mathematical questions and a long, rich, and fractious political history involving many famous figures. The basic ideas extend beyond apportionment of legislatures (in both federal systems and proportional representation systems) to some other realms where indivisible resources are to be allocated among competing constituencies.

**OR&IE 451 Economic Analysis of Engineering Systems**  
Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350.
Financial planning, including cash-flow analysis and inventory flow models. Engineering economic analysis, including discounted cash flows and taxation effects. Application of optimization techniques, as in equipment replacement or capacity expansion models. Issues in designing manufacturing systems. Student group project.

**ORIE 462 Introductory Engineering Stochastic Processes II**
Spring; 4 credits. Prerequisite: ORIE 361 or equivalent.
Stationary processes, martingales, random walks, and gambler's ruin problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.

**ORIE 473 Empirical Research Methods in Financial Engineering**
Spring; 3 credits. Prerequisites: ENGRD 270, ORIE 360 and 361, or their equivalents.
This course represents an advanced study of empirical research methods in financial economics. We focus on the empirical techniques used most often in the analysis of financial markets and how they are applied to actual market data.

**ORIE 474 Statistical Data Mining**
Fall; 3 credits. Prerequisites: ORIE 360 and MATH 294 or equivalent, or permission of instructor.
This course will examine the statistical aspects of data mining, the effective analysis of large data sets. The first half of the course will cover the process of building and interpreting statistical models in a variety of settings including multiple regression and logistic regression. The second half will connect these ideas to techniques being developed to handle the large data sets that are now routinely encountered in scientific and business applications. Assignments will be done using one or more statistical computing packages.

**ORIE 476 Applied Linear Statistical Models**
Spring; weeks 1–7, 2 credits. Prerequisite: ENGRD 270.
Multiple linear regression, diagnostics, model selection, inference, one and two factor analysis of variance. Theory and applications both treated. Use of MINITAB stressed.

**ORIE 480 Information Technology**
Fall; 4 credits. Preregistration: COM S/ ENGRD 211, plus either ORIE 310 or ORIE 350.
This course views information technology as the means by which computer science, operations research, and industrial engineering are brought to serve the operational and strategic needs of enterprises. As such, information technology encompasses communications systems, information architectures, data management, development methodologies, implementation projects (with the attendant organizational design, business process analysis, requirements analysis, systems and organizational design, and implementation planning steps), operations management, electronic commerce, and more. The course takes the perspective of a professional who accesses existing computer data to analyze a problem or opportunity, uses computer tools to manage the data, develops an effective solution, and employs a computer application to implement the solution. This perspective introduces students to the ways in which information technology is currently being used throughout enterprises and how these uses are changing with the explosive growth of the Internet. The course uses lectures (including guest lectures by practitioners), cases, and laboratory exercises intended to make the general concepts concrete. The course centers around a design project, in which student teams develop a solution to a business problem of their choosing and prepare a memorandum with supporting technical, financial, and process detail.

**ORIE 481 Delivering OR Solutions with Information Technology**
Spring; weeks 8–14. 2 credits. Prerequisites: ORIE 480.
Study of ways in which information technology is used to do operations research methodology in real applications, including decision support systems, embedded operations research techniques, packaged software, web-based techniques, collaborative software, and expert systems. Several real applications will be investigated.

**ORIE 490 Teaching in OR&IE**
Fall, spring. Credit TBA. Prerequisite: permission of instructor.
This course involves working as a TA in an OR&IE course. The course instructor will assign credits (the guideline is 1 credit per 4 hours of work with a limit of 3 credits).

**ORIE 499 OR&IE Project**
Fall, spring. Credit TBA. Prerequisite: permission of instructor.
Project-type work, under faculty supervision, on a real problem existing in some firm or institution. Opportunities in the course may be discussed with the Associate Director.

**ORIE 512 Applied Systems Engineering I** (also CEE 504, COM S 504, ELE E 512, M&AE 591)
Fall; 3 credits. Prerequisite: permission of instructor.
For description, see M&AE 591.

**ORIE 513 Applied Systems Engineering II** (also CEE 505, COM S 505, ELE E 513, M&AE 592)
Spring; 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ELE E 512, M&AE 592, or ORIE 512).
For description, see M&AE 592.

**ORIE 515 Design of Manufacturing Systems**
Fall; 4 credits. Prerequisite: permission of instructor. Limited to graduate students in Engineering and the Business School.
For description, see OR&IE 416. Lab fee $15.

**ORIE 516 Case Studies**
Fall; 1 credit. Limited to M.Eng. students in OR&IE.
Students are presented with an unstructured problem that resembles a real-world situation. They work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

**ORIE 518 Supply Chain Management**
Spring; 3 credits. Prerequisites: one of ORIE 310, ORIE 410, ORIE 525, or ORIE 562.
A supply chain is the scope of activities that convert raw materials (i.e., wheat) to finished products delivered to the end consumer (i.e., a box of cereal at the local P&G), usually spanning several corporations. Supply chain management focuses on the flow of products, information, and money through the supply chain. An overview of issues, opportunities, tools, and approaches emphasized on business processes, system dynamics, control, design, re-engineering. Relationship between the supply chain and the company's strategic position relative to its clients and its competition. Dimensions of inter­corporate relationships with partners, including decision-making, incentives, and risk.

**ORIE 520 Operations Research I: Optimization I**
For description, see ORIE 320.

**ORIE 521 Optimization II**
For description, see ORIE 321.

**ORIE 522 Operations Research II: Topics in Linear Optimization**
Fall; 1 credit. Preregistration: ORIE 520. Students who have already taken ORIE 521 or 521 should not enroll. Limited to M.Eng. students in OR&IE.
An extension of ORIE 520 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

**ORIE 523 Operations Research II: Introduction to Stochastic Processes I**
For description, see ORIE 361.

**ORIE 524 Design of Manufacturing Systems II**
This project course focuses on the design and analysis of a global corporation's operations. Working in teams, students will examine issues pertaining to a prototype company on the following topics: information system design, marketing, strategic locations, location of facilities, organization design, manufacturing capacity, planning logistics, production planning, scheduling, inventory control, and financial analysis. Meetings between project teams and faculty will be substituted for some lectures or laboratories. Analytical methods appropriate for conducting analysis will be discussed in lectures.

**ORIE 525 Production Planning and Scheduling Theory and Practice**
Spring; 4 credits. Corequisites: ORIE 320, ORIE 360.
Production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus on setup time as a determinant of plans and schedules.

**ORIE 528-529 Selected Topics in Applied Operations Research**
Fall, spring. Credit TBA. Prerequisite: permission of instructor.
Current topics dealing with applications of operations research.
OR&IE 551 Economic Analysis of Engineering Systems
Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350.
Lectures concurrent with OR&IE 451. For description see OR&IE 451.

[OR&IE 552 Revenue Management]
Spring. weeks 8-14. 2 credits. Prerequisites: thorough knowledge of OR&IE 360, familiarity and appreciation of time series and regression methods, and graduate standing. OR&IE 320/321 helpful but not required. Others by permission of instructor. Not offered 2000-2001.
Revenue Management (RM) concepts, models used in practice, and possible extensions; forecasting techniques, including time series methods, booking curves, and customer preference models; demand unceresting; overbooking, optimization with emphasis on stochastic models of demand; benefit measurement; computational and technological issues; examples from the airline and other industries.

OR&IE 560 Engineering Probability and Statistics II
For description, see OR&IE 360.

OR&IE 561 Queuing Theory and Its Applications
Fall. 3 credits. Prerequisite: OR&IE 361 or permission of instructor.
Basic queuing models; delay and loss systems; finite source, finite capacity, balking, reneging, systems in series and in parallel; FCFS versus LCFS, busy period problems; output, design and control problems; priority systems; queuing networks, the product formula; time sharing; server vacations; applications to equipment maintenance, computer operations and flexible manufacturing systems.

OR&IE 562 Inventory Management
Fall. 3 credits. Prerequisite: OR&IE 321, 361, or permission of instructor.
The first portion of this course is devoted to the analysis of several deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion of this course is presented in an experiential learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.

OR&IE 563 Applied Time-Series Analysis
Fall. 3 credits. Prerequisites: OR&IE 361, ENGRD 270, or permission of instructor.
The first part of this course treats regression methods to model seasonal and nonseasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.

OR&IE 564 Introductory Engineering Stochastic Processes II
Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent. Lectures concurrent with OR&IE 462.
For description, see OR&IE 462.

OR&IE 565 Applied Financial Engineering
Spring. 4 credits. Limited to M.Eng. students.
This course has two components: a sequence of lectures and a project. The course will be co-taught with the Johnson School and will be co-taught by one faculty member from each school. The lectures will be given by the faculty for the course and by invited speakers from the financial industry. The project will satisfy the M.Eng. project requirement.

OR&IE 567 Semester in Manufacturing Management (also MBA 650)
Spring. 15 credits. Enrollment limited to OR&IE M.Eng. students only.
For description, see MBA 650.

OR&IE 575 Experimental Design
Spring; weeks 8-14 (alternates with 576). 2 credits. Prerequisite: OR&IE 476.
Randomization, blocking, sample size determination, factorial designs, 2^p full and fractional factorials, response surfaces, Latin squares, split plots, Taguchi designs. Engineering applications. Computing in MINITAB or SAS.

OR&IE 576 Regression
Nonlinear regression, advanced diagnostics for multiple linear regression, collinearity, ridge regression, logistic regression, nonparametric estimation including spline and kernel methods, regression with correlated errors. Computing in MINITAB or SAS.

OR&IE 577 Quality Control
Fall. 3 credits. Prerequisites: OR&IE/ENGRD 270.

OR&IE 581 Simulation Modeling
Fall, weeks 1-7. 2 credits. Prerequisites: programming experience and OR&IE 360 or permission of instructor. OR&IE 360 may be taken concurrently.
Models and digital computer programs to simulate the behavior of complex stochastic systems in time. Modeling time and randomness, simulation languages, generation of stochastic inputs (scalers and processes).

OR&IE 582 Simulation Analysis
Fall; weeks 8-14. 2 credits. Prerequisites: programming experience and OR&IE 360 or permission of instructor OR&IE 360 may be taken concurrently.
Probabilistic and statistical methods for design of computer simulation experiments and analysis of their outputs. Initialization issues, analysis of simulation outputs, variance reduction methods, optimization through simulation.

OR&IE 598 Master of Engineering Manufacturing Project
Fall, spring. 5 credits. For M.Eng. students. Project course for M.Eng. students enrolled in the Manufacturing Option coordinated by the Center for Manufacturing Enterprise.

OR&IE 599 Project
Fall. 1 credit; spring, 5 credits. For M.Eng. students.
Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

OR&IE 625 Scheduling Theory
Fall. 3 credits.
Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling. The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.

OR&IE 630 Mathematical Programming I
Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra.
A rigorous treatment of the theory and computational techniques of linear programming and its extensions, including formulation, duality theory, algorithms; sensitivity analysis; network flow problems and algorithms; theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' Lemma, exploiting special structure in the simplex method, and computational implementation.

OR&IE 632 Nonlinear Programming
Spring. 3 credits. Prerequisite: OR&IE 630.
Necessary and sufficient conditions for unconstrained and constrained optimum. Topics include the duality theory, computational methods for unconstrained problems (e.g., quasi-Newton algorithms), linearly constrained problems (e.g., active set methods), and nonlinearly constrained problems (e.g., successive quadratic programming; penalty, and barrier methods).

OR&IE 633 Graph Theory and Network Flows
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2000-2001.

OR&IE 635 Interior-Point Methods for Mathematical Programming
Spring. 3 credits. Prerequisites: MATH 411 and OR&IE 650, or permission of instructor. Not offered 2000-2001.
Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming. Discussion of the basic ingredients—barrier functions, central paths, and potential functions—that go into the construction of polynomial-time algorithms, and various ways of combining them. Emphasis on recent mathematical theory and the most modern viewpoints.

OR&IE 636 Integer Programming
Spring. 3 credits. Prerequisite: OR&IE 630.
Discrete optimization. Linear programming in which the variables must assume integral values. Theory, algorithms, and applications. Cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.
[OR&IE 637] Semidefinite Programming
Linear optimization over the cone of positive semidefinite symmetric matrices; applications to control theory, optimal value optimization, and strong relaxations of combinatorial optimization problems; duality; computational methods, particularly interior-point algorithms.

[OR&IE 639] Polyhedral Convexity
A comprehensive introduction to the geometry and combinatorics of polyhedral convex sets. Also, linear inequalities, supporting and separating hyperplanes; polarity; convex hulls, facets, and vertices; face lattices; convex cones and polytopes; minkowski sums; gale transforms; simplicial and polyhedral subdivision; applications to linear programming, combinatorial optimization, and computational geometry.

Fall. 4 credits. Prerequisite: a 1-semester calculus-based probability course. An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branchings, Brownian motion, stationary processes, martingales, and point processes.

[OR&IE 651] Probability
Spring. 4 credits. Prerequisite: real analysis at the level of MATH 413 and a previous 1-semester course in calculus-based probability. Sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, conditioning.

[OR&IE 662] Advanced Stochastic Processes
Fall. 3 credits. Prerequisite: OR&IE 651 or equivalent. Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Levy processes, regenerative phenomena, random walks, and stochastic integrals.

[OR&IE 670] Statistical Principles
Fall. 4 credits. Corequisite: OR&IE 650 or equivalent. Review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics, theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; introduction to linear models.

[OR&IE 671] Intermediate Applied Statistics
Spring. 3 credits. Prerequisite: OR&IE 670 or equivalent. Not offered 2000-2001.
Statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; simultaneous inference. Applications in regression analysis and ANOVA models. Variance components and mixed models. Use of the computer as a tool for statistics is stressed.

[OR&IE 677] Sequential Methods in Statistics
Spring. 3 credits. S-U grades only. The statistical theory of sequential design and analysis of experiments has many applications, including monitoring data from clinical trials in medical studies and quality control in manufacturing operations. Topics in this course include classical sequential hypothesis tests, Wald's SPRT, stopping rules, Kiefer-Weiss test, optimality, group sequential methods, estimation, repeated confidence intervals, stochastic curtailment, adaptive designs, and bayesian and decision theoretic approaches.

[OR&IE 680] Simulation
Fall. 4 credits. Prerequisite: permission of instructor. An advanced version of OR&IE 581 and 582, intended for Ph.D.-level students.

[OR&IE 728-729] Selected Topics in Applied Operations Research
Fall, spring. Credit TBA. Current research topics dealing with applications of operations research.

[OR&IE 738-739] Selected Topics in Mathematical Programming
Fall, spring. Credit TBA. Current research topics in mathematical programming.

[OR&IE 768-769] Selected Topics in Applied Probability
Fall, spring. Credit TBA. Topics are chosen from current literature and research areas of the staff.

[OR&IE 778-779] Selected Topics in Applied Statistics
Fall, spring. Credits TBA. Topics chosen from current literature and research of the staff.

[OR&IE 790] Special Investigations
Fall, spring. Credit TBA. For individuals or small groups. Study of special topics or problems.

[OR&IE 799] Thesis Research
Fall, spring. Credit TBA. For individuals doing thesis research for master's or doctoral degrees.

[OR&IE 891] Operations Research Graduate Colloquium
Fall, spring. 1 credit. A weekly 1-1/2 hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

[OR&IE 893-894] Applied OR & IE Colloquium (also M&E 594)
Fall, winter, spring. 1 credit each term. A weekly meeting for Master of Engineering students. Discussion of various topics on manufacturing with faculty members and outside speakers.

THEORETICAL AND APPLIED MECHANICS

Basics in Engineering Mathematics and Mechanics

T&AM 118 Design Integration: A Portable CD Player (also ENGR 118 and M&SE 118)
Spring. 3 credits. This is a course in the Introduction to Engineering series. For description, see ENGR 118.

T&AM 202 Mechanics of Solids (also ENGRD 202)
Fall, spring. 3 credits. Prerequisite: PHYS 112, coregistration in MATH 293 or permission of instructor. For description, see ENGRD 202.

T&AM 203 Dynamics (also ENGRD 203)
Fall, spring. 3 credits. Prerequisite: T&AM 202, coregistration in MATH 294, or permission of instructor. For description, see ENGRD 203.

Engineering Mathematics

T&AM 191 Calculus for Engineers (also MATH 191)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry. For description, see MATH 191.

T&AM 192 Calculus for Engineers (also MATH 192)
Fall, spring, or summer. 4 credits. Prerequisite: MATH/T&AM 191. For description, see MATH 192.

T&AM 293 Engineering Mathematics (also MATH 293)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 192 plus a knowledge of computer programming equivalent to that taught in COM S 100. For description, see MATH 293.

T&AM 294 Engineering Mathematics (also MATH 294)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 293. For description, see MATH 294.

T&AM 310 Advanced Engineering Analysis I
Fall, spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent. Initial value; boundary value, and eigenvalue problems in linear ordinary differential equations. Special functions, linear partial differential equations. Introduction to probability and statistics. Use of computers to solve problems.

T&AM 311 Advanced Engineering Analysis II
Spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent (T&AM 311 can be taken without T&AM 310). Mathematical modeling of physical and biological systems. Examples range from molecular diffusion, crystal growth, physiological flows, to bird flight. The mathematics necessary to understand these phenomena will be discussed in depth. They include probability theory, PDEs, stability analysis, complex variable analysis, and numerical analysis.
T&AM 610 Methods of Applied Mathematics I
Fall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates (see T&AM 310-311) but open to exceptional undergraduates with permission of instructor. Emphasis is on applications. Linear algebra, calculus of several variables, vector analysis, series of ordinary differential equations, complex variables.

T&AM 611 Methods of Applied Mathematics II
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent. Emphasis on applications. Partial differential equations, transform techniques, tensor analysis, calculus of variations.

T&AM 612 Methods of Applied Mathematics
Fall. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent. Integral transform, methods, Wiener-Hopf technique, solutions of integral equations and partial differential equations. Problems drawn from electromagnetics, elasticity, fluid mechanics, heat transfer, and acoustics.

T&AM 613 Methods of Applied Mathematics IV
Spring. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent. Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKBJ boundary layer and multiple-scale methods), asymptotic expansion of integrals (method of steepest descent, stationary phase and Laplace methods). Regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include normal forms, center manifolds, Liapunov-Schmidt reductors, Stokes phenomenon. The course may also include computer exercises at the option of the instructor.

T&AM 591 Master of Engineering Design Project I
Fall. 3-6 credits. M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 592 Master of Engineering Design Project II
Spring. 5-15 credits.

T&AM 655 Composite Materials (also M&AE 655 and MS&E 655)
Spring. 4 credits. Taught jointly with T&AM 455 using same lecture material, but also includes more advanced materials and homeworks through additional lectures. Additional material includes: shear-lag models of stress transfer around arrays of fiber breaks including viscoelastic effects, statistical theories of composite strength and failure, stress distributions around holes and cuts in composite laminates; compressive strength of composites. Laboratory on effects of holes and notches in composites.

T&AM 663 Solid Mechanics I
Fall. 4 credits. Rigorous introduction to solid mechanics emphasizing linear elasticity, deformations, rotations and strains, balance principles, stress; small-strain theory, linear elasticity, anisotropic and isotropic; basic theorems of elastostatics; boundary-value problems, e.g., plates, St. Venant's solutions.

T&AM 664 Solid Mechanics II
Spring. 4 credits. Prerequisites: MATH 610 and T&AM 663, or equivalent. Preparation for advanced courses in solid mechanics. Singular solutions in linear elasticity; plane stress, plane strain, anti-plane shear, airy stress functions; linear viscoelasticity; cracks and dislocations, classical plasticity; thermoelasticity; three-dimensional elasticity.

T&AM 666 Finite Element Analysis (also M&AE 665, or CEE 772)
Spring. 3 credits. Prerequisites: T&AM 663 or equivalent. P. Dawson. For description, see M&A 680.

T&AM 751 Continuum Mechanics and Thermodynamics
Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Kinematics; conservation laws; the entropy inequality, constitutive relations: frame indiscernibility, material symmetry; finite elasticity, rate-dependent materials, and materials with internal state variables.

T&AM 752 Nonlinear Elasticity
Spring. 3 credits. Prerequisites: T&AM 610, 611, and 751 or equivalents. Offered alternate years. Review of governing equations. Linearization and stability; constitutive inequalities; exact solution of special problems; nonlinear spring and rod theories, phase transformations and crystal defects.

T&AM 753 Fracture

T&AM 757 Inelasticity
Spring. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years. Plasticity: dislocation slip systems; early experimental observations; general principles; limit analysis; solution of boundary-value problems, plastic waves, one- and threedimensional. Visco-elasticity: general principles, solution of boundary-value problems.

T&AM 759 Boundary Element Methods
Fall. 4 credits. Prerequisites: T&AM 610 and 611, and 633 and 644 or equivalents. Offered alternate years. Introduction to boundary element methods. Solutions for potential theory, linear elasticity, diffusion, material and/or geometric nonlinearities. Modern developments: hypersingular integrals, the boundary contour methods, sensitivity analysis.

Dynamics and Space Mechanics

T&AM 570 Intermediate Dynamics
Fall. 3 credits. Newtonian mechanics; motion in rotating coordinate systems; Lagrange's analytical mechanics; virtual work. Langrangian-Eulerian mechanics. Hamilton's principle. Small vibration and stability theory. Newtonian-Eulerian mechanics of rigid bodies. Gyroscopes.

T&AM 578 Nonlinear Dynamics and Chaos
Fall. 3 credits. Prerequisite: Mathematics/T&AM 293 or equivalent. Introduction to nonlinear dynamics, with applications to physics, engineering, biology, and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics: one-dimensional systems. Bifurcations. Phase plane. Nonlinear oscillators. Lorenz equations, chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

T&AM 671 Hamiltonian Dynamics
Spring. 3 credits. Prerequisite: T&AM 570 or equivalent. Offered alternate years; not offered 2000-2001. Review of Lagrangian mechanics, Kane's equations; Hamilton's principle, the principle of least action, and related topics from the calculus of variations; Hamilton's canonical equations; approximate methods for twodegrees-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theory; KAM theory; Melnikov's method.

T&AM 672 Celestial Mechanics (also ASTRO 579)
Fall. 3 credits. Offered alternate years. Description of orbits, 2-body, 3-body, and n-body problems; Hill curves, libration points and their stability; capture problems. Osculating orbital elements, perturbation equations; effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits, secular perturbations, resonances, mechanics of planetary rings.

T&AM 673 Mechanics of the Solar System (also ASTRO 571)
Spring. 3 credits. Prerequisite: an advanced undergraduate course in dynamics. Offered alternate years; not offered 2000-2001. Gravitational potentials, planetary gravity fields. Free and forced rotations. Chandler
 Ahner, Beth A., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Agricultural and Biological Engineering
 Albright, Louis D., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering
 Allmendinger, Richard, Ph.D., Stanford U. Prof., Earth and Atmospheric Engineering
 Aneshansley, Daniel J., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
 Anton, A. Brand, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical Engineering
 Arms, William, Ph.D., U. of Sussex. Prof., Computer Science
 Ast, Dieter G., Ph.D., Cornell U. Prof., Materials Science and Engineering
 Athreya, Krishna B., Ph.D., Stanford U. Prof., Operations Research and Industrial Engineering
 Avedissian, G. Thomas, Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
 Avramidis, Athanassios, Ph.D., Purdue U. Asst. Prof., Operations Research and Industrial Engineering
 Baeumner, Antje J., Ph.D., Universitat Stuttgart. Asst. Prof., Agricultural and Biological Engineering
 Baker, Shefford P., Ph.D., Stanford U. Asst. Prof., Materials Science and Engineering
 Ballantyne, Joseph M., Ph.D., Massachusetts Inst. of Technology. Prof., Electrical and Computer Engineering
 Barazangi, M. Mawia, Ph.D., Columbia U. Prof., Earth and Atmospheric Sciences
 Bartel, Donald L., Ph.D., U. of Iowa. Prof., Mechanical and Aerospace Engineering
 Bartsch, James A., Ph.D., Purdue U. Prof., Agricultural and Biological Engineering
 Battersman, Boris W., Ph.D., Massachusetts Inst. of Technology. Walter S. Carpenter, Jr. Professorship in Engineering, Applied and Engineering Physics
 Berger, Toby, Ph.D., Harvard U. Irwin and Joan Jacobs Professor of Engineering, Electrical and Computer Engineering
 Billera, Louis, Ph.D., City U. of New York Prof., Operations Research and Industrial Engineering
 Billington, Sarah, Ph.D., U. of Texas at Austin. Asst. Prof., Civil and Environmental Engineering
 Bird, John M., Ph.D., Rensselaer Polytechnic Inst. Prof., Earth and Atmospheric Sciences
 Birman, Kenneth P., Ph.D., U. of California at Berkeley. Prof., Computer Science
 Bisogni, James J., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering
 Blakely, John M., Ph.D., Glasgow U. (Scotland). Herbert Fisk Johnson Professor of Engineering, Materials Science and Engineering
 Bland, Robert G., Ph.D., Cornell U. Prof., Operations Research and Industrial Engineering
 Boanczyk, Adam W., Ph.D., U. of Warsaw (Poland). Assoc. Prof., Electrical and Computer Engineering
 Booker, John F., Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering
 Brock, Joel D. Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Applied and Engineering Physics
 Brown, Larry D., Ph.D., Cornell U. Prof., Earth and Atmospheric Sciences
 Brutsaert, Wilfred H., Ph.D., U. of California at Davis. Prof., Civil and Environmental Engineering

Buhman, Robert A., Ph.D., Cornell U. John Edson Sweet Professor of Engineering, Applied and Engineering Physics
 Burns, Joseph A., Ph.D., Cornell U. Irving Porter Church Professor in Engineering, Astronomy and Theoretical and Applied Mechanics
 Burtscher, Martin, Ph.D., U. of Colorado at Boulder. Asst. Prof., Electrical and Computer Engineering
 Cady, R. Bingham, Ph.D., Massachusetts Inst. of Technology. Prof., Theoretical and Applied Mechanics
 Callister, John R., Ph.D., Cornell U. Kinzelberg Director of Entrepreneurship in Engineering
 Cardie, Claire T., Ph.D. U. of Massachusetts at Amherst. Asst. Prof., Computer Sciences
 Castillo-Chavez, Carlos, Ph.D., U. of Wisconsin at Madison. Prof., Theoretical and Applied Mechanics, Biometry, Applied Mathematics, Ecology and Evolutionary Biology, Statistics, Epidemiology, Latin American Studies
 Catledge, Lawrence M. III, Ph.D., Princeton U. Prof., Earth and Atmospheric Sciences
 Gaughey, David A., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
 Chang, Hsiao-Dong, Ph.D., U. of California at Berkeley. Prof., Electrical and Computer Engineering
 Cisne, John L., Ph.D., U. of Chicago. Prof., Earth and Atmospheric Sciences
 Clancy, Paulette, Ph.D., Oxford U. (England). Assoc. Prof., Chemical Engineering
 Cohen, Claude, Ph.D., Princeton U. Prof., Chemical Engineering
 Coleman, Thomas F., Ph.D., U. of Waterloo. Prof., Computer Science
 Golbeck, Stephen J., Ph.D., SUNY. Assoc. Prof., Earth and Atmospheric Sciences
 Constable, Robert L., Ph.D., U. of Wisconsin. Prof., Computer Science
 Conway, Harry D., Ph.D., London U. Prof., Theoretical and Applied Mechanics
 Coook, Kerry H., Ph.D., North Carolina State U. Assoc. Prof., Civil and Environmental Sciences
 Cooke, J. Robert, Ph.D., North Carolina State U. Prof., Agricultural and Biological Engineering
 Cool, T. Mark, Ph.D., California Inst. of Technology. Prof., Applied and Engineering Physics
 Cowen, E. A., Ph.D., Stanford U. Assoc. Prof., Civil and Environmental Engineering
 Craighead, Harold G., Ph.D., Cornell U. Prof., Applied and Engineering Physics
 D'Ambra, Raffaello, Ph.D., California Inst. of Tech. Asst. Prof., Mechanical and Aerospace Engineering
 Datta, Ashim K., Ph.D., U. of Florida. Assoc. Prof., Agricultural and Biological Engineering
 Davidson, Rachael A., Ph.D., Stanford U. Assoc. Prof., Civil and Environmental Engineering
 Dawson, Paul R., Ph.D., Colorado State U. Assoc. Prof., Mechanical and Aerospace Engineering
 deBoer, P. Tobias, Ph.D., U. of Maryland. Prof., Mechanical and Aerospace Engineering
 Delchamps, David F., Ph.D., Harvard U. Assoc. Prof., Electrical and Computer Engineering
 Demers, Alan, Ph.D., Princeton U. Prof., Computer Science
 Derry, Louis, Ph.D., Harvard U. Prof., Earth and Atmospheric Sciences
 Dick, Richard J., Ph.D., U. of Illinois. Joseph P. Riley Professor of Engineering, Civil and Environmental Engineering

GRADUATE SCHOOL

Walter Cohen, dean
Alison G. Power, associate dean (on leave 2000)
Terry D. Plater, associate dean
Hilary Ford, assistant dean

Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, or through the various graduate professional schools and colleges.

GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements that best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee and usually has the primary responsibility for directing the student's thesis or dissertation research.

REQUIREMENTS FOR ADMISSION

To be admitted to the Graduate School, an applicant should:

1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) take the Graduate Record Examinations General Test, or other specific examinations, for those fields that require these examinations.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be

1) a minimum Test of English as a Foreign Language (TOEFL) score of 550 on the paper-based test or 213 on the computer-based test (higher for some fields);
2) evidence of two or more years study in, or a degree from, a college or university in a country where both the language of instruction and the native language is English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, NJ 08541, U.S.A.

Applications for fall admission to the Graduate School should be received by the deadline of the field to which one applies. The earliest deadline is December 15. Many fields, however, have different deadlines. Applicants should consult the Graduate School's application booklet for the specific closing date for each field.

Inquiries regarding admission should be addressed to the specific graduate field office or to the Graduate School Admissions Office, Cornell University, Caldwell Hall, Ithaca, NY 14853-2602.

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for fellowships and teaching and research assistantships should be addressed to the particular graduate field of interest.

More detailed information is contained in the application for admission to the Graduate School and in the Graduate School Catalog. Both may be viewed on the web at <www.gradschool.cornell.edu/>. An interactive application is available at this site and application forms may be downloaded and printed directly from the web. Both the application and the Catalog may be received through the mail by contacting either the individual graduate field office or the Graduate School, Caldwell Hall, Cornell University, Ithaca, NY 14853-2602. (The application is mailed world-wide; the Catalog is mailed to addresses with the U.S.)

Note: Programs leading to the degrees of Doctor of Law (J.D.), Master of Laws (LL.M.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School. Information on those programs can be obtained from the Law School, the Weill Medical College of Cornell University (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management respectively.
SCHOOL OF HOTEL ADMINISTRATION

ADMINISTRATION
David W. Butler, dean
Judi Brownell, associate dean for academic affairs
Daphne A. Jameson, Richard J. and Monene P. Bradley director for graduate studies
Timothy Hinkin, director of undergraduate studies
Donald C. Bishop, associate dean of students and enrollment management
Robert N. D'Entremont, director of external relations
Margaret Haley Ferguson, director of financial services
James E. Hisle, managing director of the Statler Hotel and J. Willard Marriott Executive Education Center
Cheryl S. Farrell, director of admissions and student services
Neoma Mullens, director of minority programs
Katherine S. Margolis, director of library
Shari Avery, director of information technologies
Philippus Miller III, director of alumni affairs
Timothy J. Durnford, director of instructional support
Millie Reed, director of career services
Glenn Withiam, director of publications
Fred Conner, senior editor of the Cornell Hotel and Restaurant Administration Quarterly
Mark Adams, director of communications

DEGREE PROGRAMS
hotel and restaurant administration

B.S.
M.M.H.
M.S.
Ph.D.

FACILITIES
Statler Hall. Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a computer center, a beverage-management center, an auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed expressly for the school's academic and executive-education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation.

The School of Hotel Administration's Nestle Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 23,000 books, 1,000 videotapes, numerous ephemera and memorabilia (such as photographs, menus, and rare books), and more than 800 journal, magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, and general business topics comprise the core of the library's collections. Among the library's special features are numerous computerized information resources, including NEXIS, Dow Jones, ABI/INFORM, and The International Hospitality and Tourism Database, an extensive and unique index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library's HOSTLINE service. In addition to offering an excellent collection of materials and a dignified and refined study space, the Hotel School library extends quality service to every student. Please visit us and benefit from our collections and services.

Statler Hotel and J. Willard Marriott Executive Education Center. The Statler Hotel comprises 150 guest rooms, an executive education center, restaurants, a lounge, and the university's faculty and staff club. It demonstrates the very finest in hospitality and hospitality-education practices. The Statler is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the local community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the hotel is a practice-management facility for certain classes, internships, and independent-study projects. It offers part-time jobs to approximately 300 students each semester with preference given to students in the hotel school.

UNDERGRADUATE CURRICULUM

The School of Hotel Administration offers education in the numerous disciplines required for modern management in the global hospitality industry. Included in the core curriculum are courses in management, human resources, financial management, food and beverage operations, marketing, tourism, property asset management, communications, and law. Students also are encouraged to pursue a broad range of elective courses, including those in the humanities, social sciences, and natural sciences, as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the school's student handbook or course supplement (available in room 174 Statler Hall).

Requirements for Graduation
Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements for that degree are:
1) completion of eight terms in residence for those who entered as freshmen; terms of residence for transfer students are determined by the amount of transfer credit awarded;
2) completion, with a minimum cumulative grade-point average of 2.0 (including a grade-point average of 2.0 in a full-time schedule of courses on campus in the final semester), of 120 required and elective credits, as set forth in the table on the following page;
3) qualification in one language other than English. This requirement may be met by any one of the following: (1) three years of high school study of one foreign language; (2) score of 560 on Cornell Placement Test; (3) pass language 121 and 122 (eight credits) or the equivalent, and attain a minimum grade of at least C- or "Satisfactory" in each (C or above for transfer credit from other institutions); or (4) pass 123 or the equivalent;
4) completion of two units of practice credit prior to the last two terms of residence, as defined on the following page;
5) completion of the university requirement in physical education.

Suggested course programs appear on the following pages. The core courses account for 72 of the 120 credits needed for graduation, the hotel electives account for 12 credits, and 18 credits are allotted for distributive electives. The remaining 18 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval-science courses may be counted in the 18-credit group of free electives. No credit toward the degree is allowed for "0"-level courses, such as Edu 005.

Transfer Credit Policy
Transfer students are required to complete all degree requirements with at least 75 credits at Cornell University, of which a minimum of 60 must be in courses offered by the Hotel School, and nine must be in distributive electives taken outside the Hotel School. Thus, a maximum of 45 hours in transfer credit may be allowed from other accredited colleges or universities as follows:
Practice-Credit Requirement

As part of degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice-credit requirement and submit verification thereof prior to registering for the last two semesters. Further details are set forth in the Practice Credit Handbook for Undergraduates in the School of Hotel Administration, available in the School's Career Services Office, room 255 Statler Hall.

Management-Intern Program

Hotel School juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the management intern program. Students receive 12 free elective credits and 1 practice credit. While on the management internship, tuition is reduced and students receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Sponsors include hotels, restaurants, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See HADM 493 and 494 for more details. Information about the management internship program also is available in the Career Services Office, 255 Statler Hall.

Study Abroad

All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study.

Programs providing an opportunity to study in a foreign country and develop an awareness of the international component of the hospitality industry can contribute to each student's total educational experience.

Students in recent years have studied in Italy, Spain, France, England, Australia, and many other countries. Information on the study-abroad programs operating during the summer and academic year is available at the Cornell Abroad Office (in Uris Hall).

Students should discuss their plans with the school's director of student services so that all petition and credit-evaluation procedures are followed.

Part-Time Study

Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or other extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last term of study. Further details on part-time study may be found in the school's student handbook (available in room 174 Statler Hall).

Grading System

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each term average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0; D to 1.0; F to 0. For good standing, the student must maintain a minimum average of 2.0. A maximum of four credits each term may be taken on a "satisfactory-unsatisfactory" (S-U) basis. Students should be aware that a satisfactory grade equals "C" or above and an unsatisfactory grade equals "D+" or lower.

Students whose term averages are at least 3.3 and who took at least 6 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

Course Requirements for Graduation

Required courses Credits
Management Operation: Hotel Administration 105, 401 6
Human-Resources Management: Hotel Administration 115, 211 6
Financial Management: Hotel Administration 121, 221, 222, 321 12
Food and Beverage Management: Hotel Administration 136, 236, 335 12
Marketing and Tourism: Hotel Administration 243, elective 6
Property Asset Management: Hotel Administration 255, 355 6
Communication: Hotel Administration 165, 365 6
Operations Management and Information Technology: Hotel Administration 174, 371, 475 9
Law: Hotel Administration 387 3
Economics: Micro and Macro 6
Specifically required credits 72
Hotel Electives 12
Distributive electives 18
Free electives 18

Total credits required for graduation 120

Typical Course Sequences

The following arrangements of courses tend to be more fixed in the freshman and sophomore years, with a greater degree of flexibility characterizing the upperclass years.

Freshman Year

Typically, a freshman schedule will consist of 15 to 16 credits each term, to include the following:

Required courses Credits
H ADM 105, Introduction to Lodging 3
H ADM 115, Organizational Behavior and Interpersonal Skills 3
H ADM 121, Financial Accounting 3
H ADM 136, Introduction to Food Service Operations 4
H ADM 165, Managerial Communication 1 3
H ADM 174, Microcomputing 3
H ADM 191, Microeconomics for the Service Industries 3
Macroeconomics 3
Electives 6

Total 31

</thead>
<tbody>
<tr>
<td>H ADM 100, Principles of Management</td>
<td>Fall and spring. 3 credits. Limited to non-hotel students. Elective. K. Namasiyavam. An introductory survey course in management with orientation to the hospitality industry. The course is organized around the traditional management functions of planning, organizing, commanding, coordinating, and controlling.</td>
</tr>
<tr>
<td>H ADM 102, Distinguished Management Lectures</td>
<td>Fall. 1 credit. Elective. Faculty. A series of lectures given by nonresident speakers prominent in the hotel and restaurant industries or allied fields. Topics include career ladders, company profiles, and business-policy formulation.</td>
</tr>
<tr>
<td>H ADM 104, Elements of Business for Non-Business Majors</td>
<td>Spring. 1 credit. Limited to non-hotel students. P. Rainsford. Provides hands-on skills and knowledge about how to start or run a small business for students whose professional careers may require them to operate their own business. The course will be especially appropriate for students interested in professional careers such as architecture, design, writing, art, engineering, law, and other service businesses. Utilizes a computer-based management simulation game and will require students to work in management teams of six to start and operate a hotel. Each management team’s hotel will be in competition with other hotels in the simulation. The course is introductory level and no previous business experience or computer knowledge is required. Students will be required to attend all sessions and complete a paper that will be due a week after the conclusion of the course. Hotel and DEA students may not enroll.</td>
</tr>
<tr>
<td>H ADM 105, Introduction to Lodging</td>
<td>Fall and spring. 3 credits. Limited to hotel and sponsored internal transfer division students. Required. R. McCarthy. Designed to provide students with a comprehensive, fundamental understanding of how hotels are managed from the rooms perspective. Through practical hands-on experiences, students will be exposed to operational line-level positions in the rooms division including housekeeping, reservations, front desk, P/BX, and bellstand. Lectures will begin with an overview of the lodging industry and will focus on the managerial aspects of the rooms division. Topics include revenue management, forecasting, budgeting, measuring performance, transient versus group displacement, pricing and inventory management, service quality, ethics, and technology. Students will apply what they have learned in class while operating their own virtual 250-room hotel using a CHESS computer simulation. Guest lecturers will provide students with insight on various career opportunities in the operations or rooms-related areas.</td>
</tr>
<tr>
<td>H ADM 303, Club Management</td>
<td>Fall and spring. Fall, second 7 weeks only; spring, first 7 weeks only. 2 credits. Fall, limited to 35 hotel school juniors and seniors; spring, open enrollment. Prerequisite for hotel students: H ADM 105, or equivalent. Elective. R. James. The study of private membership clubs and club administration. The application of current management principles in a not-for-profit environment is discussed and club management is compared to other areas of the hospitality industry. Topical coverage includes: tournament, facility, and recreation management, legal, financial, and legislative issues; human relations and resource consideration; marketing, pricing policies, and quality standards. The deadline to drop is the mid-point of the course.</td>
</tr>
<tr>
<td>H ADM 304, Room-Division Strategic Management</td>
<td>Fall. 2 credits. Second seven weeks of the semester. Limited to juniors, seniors, and graduate students. Elective. Not offered fall 2000. Faculty. Designed for students to study and explore the strategies used by hotel companies competing in multiple market areas. The course will build on the student’s awareness of operations, marketing, law, and finance. The course content parallels presentations made to many hotel companies and their senior management staffs. Assignments will involve readings about service marketing strategies. Participation, analysis, and communication in the Cornell Hotel Administration Strategic Exercise will compose a term project. Ownership meetings and emphasis on renewal or extension of management contracts with the strategic exercise will be a focus of the course. The deadline to drop is the mid-point of the course.</td>
</tr>
<tr>
<td>H ADM 306, Franchising in the Hospitality Industry</td>
<td>Fall. 3 credits. Not open to freshmen. Elective. M. Noden. This course looks at relationships between franchisor and franchisee, advantages and disadvantages of franchising, and structure and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. Guest speakers from the franchising industry.</td>
</tr>

H ADM 401 Strategic Management
Fall and spring. 3 credits. Prerequisites: H ADM 105, 115, 211, and 321, or equivalents. Required. T. Cullen, C. Enz. This is a top management, "big picture" course. It is a single functional area such as marketing, human resources, finance, food and beverage, design, or so forth. The problems and issues of strategy require a total enterprise perspective and the skill of judging all the relevant factors that affect the business organization. Introduces a number of models, methods, and techniques that can be used to identify strategic issues, generate future-oriented action plans to address these issues, and implement change. An important goal is to emphasize the need to review a firm's strengths and weaknesses as the basis for formulating the firm's strategy for exploiting environmental opportunities and coping with environmental threats. Because of the group nature of the course, the absolute drop deadlines are September 1 in the fall and January 26 in the spring.

H ADM 402 Hospitality Management Seminar
Fall. 1 credit. Limited to 30 seniors and graduate students by permission. Students will be expected to register for H ADM 102, Elective, Faculty. A weekly meeting with the H ADM 102 speaker of the week. The subject matter varies from week to week, depending on the speaker's area of expertise. The class is relatively unstructured, and students are expected to participate in discussions.

H ADM 403 Resort and Condominium Management
Fall. Students may enroll in first seven weeks, second seven weeks, or both. 2 credits. Limited to seniors and graduate students, others by permission of instructor. Mandatory attendance in all class periods. Elective. M. Noden. First Seven Weeks: Resort Management: A lecture course in the development, operations, and management of the resort property. Resorts of various types, seasons, and economic levels are considered. Emphasis is on the financing and environmental considerations of the resort development cycle. Regulatory issues are examined, and relationships with host communities and governmental bodies are explored. Special consideration is given to the promotion of business, the provision of facilities, services and guest entertainment. Contract and noncontract relationships with the travel industry are reviewed.

Second Seven Weeks: Resort Condominium Management: A lecture course in the development, financing, and management of secondary-residential hotel condominiums. Contemporary state statutory requirements, S.F.C. regulations and practice, and prospects for are reviewed for application in the managerial portfolio. Federal land use controls are examined and explained. Individual financing of units, and management contracts are fully reviewed, and students will be exposed to typical management contract requirements and protocols. Rental pooling and its effects upon management and owners will be fully explored. Applications of the condominium concept, including such by-products as time sharing, will be examined from a managerial perspective.

H ADM 404 Entrepreneurship
Fall and spring. 3 credits. Limited to 40 seniors, and graduate students. Prerequisite: H ADM 321 or equivalent. Elective. Faculty. Emphasis: Starting a new business, not franchising or buying an existing business. Topics will cover how to conceptualize an idea, how to evaluate and articulate the plan, and how to sell the plan to investors, customers, clients, and employees. Students work in teams to develop and present a business plan to a panel of judges at the end of the course. Case studies, guest lecturers. Because of the group project nature of the course, the absolute drop deadline for all students is the last day of the first week of classes.

H ADM 405 Quality Planning in the Hospitality Industry
Spring. 3 credits. Limited to 25 seniors and graduate students. Prerequisites: all required hotel undergraduate courses at the 100, 200, and 300 levels. Elective. T. Hinkin. Focuses on the analysis of work processes and examines organizations from three perspectives: the customer, the employee, and management. Provides students with a systematic approach to identifying, prioritizing, and improving job functions and work processes utilizing the tools of quality management. Readings, case analysis.

H ADM 407 Seminar in Hotel Operations
Spring. 3 credits. Limited to 25 juniors and seniors. Estimated cost of field trip, $200. Elective. R. McCarthy. Seminar course applies management theory to actual hotel operations via semester-long interactions and visits with the department heads and general manager of a medium- to large-size hotel. Field trip includes attendance at executive committee meeting, presentations by various department heads, and half-day "shadow assignments."

H ADM 408 Seminar In Casino Operations
Fall. 2 credits. Limited to hotel juniors and seniors. Estimated cost of field trip, $200. Elective. R. McCarthy. Introduction to the multi-billion dollar gambling industry, including a historical overview of gaming and examination of legal, social, and economic issues within the industry. Reviews various games played in casinos, current trends, and the most popular casino destinations in the world. Special attention is devoted to the growth of casinos in cruise ships, Indian reservations, and on river boats in the United States.

H ADM 409 Airline Management
Spring. 3 credits. Elective. Offered alternate years. M. Noden. Focuses on domestic and international airline industries and explores both pre- and post-regulatory climates. Emphasis is on dynamic organizational change in response to fluctuating economic and legal conditions. Topics include airline organization, comparative strategic perspectives, and marketing and distribution networks, operations and service management, union relations, finance, government regulation, and air transport. Case studies and guest lecturers will be used. Also, using the computer-driven simulation exercise called AIRLINE, student teams will operate a small regional carrier.

H ADM 415 Organizational Behavior and Interpersonal Skills
Fall and spring. 3 credits. Required. F. Berger. Focuses on managing people in the workplace. Students develop theoretic lenses for understanding people and organizations and practical tools for accomplishing personal and organizational goals. Topics include individual differences, conflict management, problem solving, power and influence, motivation, leadership, coaching and counseling, and group process. Self-assessments, experiential exercises, reading, discussions, papers, and group activities.

H ADM 420 The Management of Human Resources
Fall and spring. 3 credits. Limited to 40 non-hotel students, no freshmen. Elective. Faculty. Examines the role of human resources management, starting with an introduction to
the personnel function and an analysis of the social, legal, international, and competitive factors. Examines recruitment, selection, training, motivation, development, compensation, performance appraisal, and labor relations. Class discussion and case analysis are emphasized.

H ADM 211 Human Resources Management
Fall and spring. 3 credits. Limited to 60 hotel students per lecture, no freshmen or graduate students. Prerequisites: H ADM 105 and 115 (co-registration in 115 is allowed). B. Tracey. Provides students with an overview of the human resources management (HRM) field and shows them the link between specific HRM activities and substantive issues/situations they will face as future hospitality managers. Integrates information and knowledge acquired in previous courses. Students will understand the relationship between compensation and benefit activities and job design, motivation, and reward structures. Upon completion, students will: (1) understand the interrelationship of HRM activities, as well as the relationship between HRM and other functional areas within hospitality organizations; and (2) understand how to effectively attract, retain, and motivate hospitality employees.

H ADM 411 Negotiations in the Hospitality Industry
Spring. 3 credits. Limited to 30 undergraduate students. Prerequisites: H ADM 115, or equivalent. Elective. T. Simons. Negotiation skills are crucial to business success. The course provides hands-on experience in negotiation in the hospitality field. Writing, role-playing exercises, and discussions are used to develop students' negotiation skills. Students will improve their comfort level with negotiating as well as develop their own personal style. Students will also learn how to adjust their negotiating style to respond appropriately to different personalities and negotiation tactics.

H ADM 412 Managing Organizational Change
Spring. 3 credits. Prerequisite: H ADM 211 or equivalent. Elective. C. Lundberg. Facilitating and managing change in organizations. Topics include change processes, organizational diagnosis, action planning, and consultancy. Individual and team projects.

H ADM 415 Managerial Leadership in the 21st Century
Spring. 1 credit. Weekend course. Dates TBA. Elective. Required notebook $25. K. Blanchard. Students become participant observers in their own lives by studying the field of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop quality relationships between themselves and the people they support and depend upon (boss, staff, internal peers/associates, and customers). Because of the popularity of this class, priority will be given in the following order: seniors, juniors, non-enrolled extramural students, sophomores, freshmen, and Cornell employees. The absolute deadline for adding or dropping the course is 12:00 noon on the first day of class.

H ADM 416 Special Studies in the Management of Human Resources: Service Cultures
Spring. 2 credits. Limited to juniors, seniors, and graduate students. Prerequisite: H ADM 211 or equivalent. Elective. C. Lundberg.

First Seven Weeks—Service Cultures. This course will assist students in understanding the creation and maintenance of effective service-driven operations. Emphasis will be placed on the diagnosis and design of human resource initiatives aimed at creating effective service cultures and improving organizational performance. Topics covered include the management of emotions, monitoring and measuring the corporate culture for service, and the linkage of human resource practices to service vision, organizational design, and strategic objectives. Students will develop and conduct a culture audit in a business. The seminar format is intended to encourage class discussion, case analysis, and field experience.

Second Seven Weeks—Service Organization Design. Since the earliest organizations, questions of how to best organize activities and resources have challenged managers. Traditional structures, e.g., those organized by functions, products, territories, seem to work less effectively as time goes on. The contemporary management challenge is to design and use more responsive, and flexible organizations—especially in the service sector. It is important to understand the effects of different organizational designs and systems on behavior and efficiency. This course will therefore carefully explore the components, processes, and issues associated with known and probable design options. We will operate as a seminar with several application classes.

H ADM 418 Innovation and Dynamic Management (also ARME 328)
Spring. 3 credits. Limited to juniors and seniors. Elective. C. Enz. A university-wide course that investigates the innovation process and how to develop good management practice. Innovative firms are studied via case analyses, and a framework for effective change management is devised by the end of the semester. Emphasis is placed on examining how businesses and managers can build productive organizations through a process of rethinking, re-evaluating, and discarding existing practices. The class will operate as a seminar with several hands-on experiences in innovation.

H ADM 611 Negotiations in the Hospitality Industry
Spring. 3 credits. Limited to 30 graduate students. Prerequisite: H ADM 702 or equivalent. Elective. T. Simons.

Negotiation skills are crucial to business success. This course provides hands-on experience in negotiation in the hospitality field. Writing, role-playing exercises, and discussions are used to develop students' negotiation skills. Students will improve their comfort level with negotiating as well as develop their own personal style. Students will also learn how to adjust their negotiating style to respond appropriately to different personalities and negotiation tactics.

H ADM 614 Leadership and Small Group Processes
Fall. 3 credits. Limited to 30 hotel seniors and graduate students. Elective. C. Lundberg.

Theoretical and practical applications of organizational behavior will be explored through lectures, case studies, and management games and exercises. Students will participate in experiential labs aimed at enhancing their effectiveness as members or leaders of groups. Topics include leadership, decision making, motivation, power, and organizational change.

H ADM 711 Human Resources Management
Spring. 3 credits. Professional master's requirement. B. Tracey. Addresses the policies and procedures that are required to attract, develop, and retain quality employees. Attention will be given to both strategies and tactics that influence HR decisions, as well as individual and organizational performance. A variety of learning methodologies will be used and students will have the opportunity to apply knowledge and skills in a semester-long project.
H ADM 222 Finance
Spring. 3 credits. Prerequisite: H ADM 121, 221, or equivalents. Required. S. Carvell.
Provides students with accounting cash flow information for financial planning, capital structure, decisions, capital budgeting, evaluation, and short-term and long-term financial decision making. Topics include current asset management, short-term financing, capital budgeting, long-term financing, cost of capital, and problems in international finance.

H ADM 321 Hospitality Financial Management
Fall. 3 credits. Prerequisites: H ADM 121, 221, and 222, or permission of instructor. Required. S. Carvell, F. Kwansa.
Integrates the areas of financial accounting, managerial accounting, and finance and applies the interpretive and analytical skills of each to hospitality-industry situations. Topics include uniform system of accounts, revenue and expense tracking and internal control, accounting systems, ratio and comparative analysis, cost-volume-profit analysis, pricing, operational budgeting, project capital budgeting, decision making, equity and debt financing structures, and operating agreement forms.

H ADM 322 Principles of Investment Management
Fall and spring. Limited to non-hotel students. Hotel students or those with a background in economics, quantitative analysis, and computers are advised to enroll in H ADM 424. Elective. Faculty.
An introductory course covering institutional and analytical aspects of security analysis and investment portfolio management including valuation models and practical strategies for stocks, bonds, and mutual fund selection and trading. Computer-assisted analysis, including students' participation in an investment game, is discussed and applied in a realistic manner.

H ADM 323 Hospitality Real-Estate Finance
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: H ADM 321 or equivalent. Elective: J. deRoos, D. Quan.
Focuses on real estate financing for hospitality-oriented projects. Topics include methods of measuring rates of return, feasibility and appraisal processes, equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, participating, convertible, and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises, and trends in international hotel franchising. Presentations by hospitality-industry real estate practitioners.

H ADM 324 International Financial Management
Fall and spring. 3 credits. Prerequisites: H ADM 121, 221, 222, or equivalents, and micro and macroeconomics. Elective. D. Ferguson.
Focuses on the international aspects of financial management important to the hospitality industry with the intention of providing an understanding of and confidence in dealing with the economic issues faced by the multinational corporation. Areas covered are the international financial management environment, the management of foreign exchange risk, international asset management, and international sources of funds.

H ADM 326 Corporate Finance
Fall. 3 credits. Limited to juniors and seniors. Prerequisite: H ADM 321. Elective. S. Carvell.
In-depth analysis of corporate financial management, including financing alternatives and capital structure, cash management, capital budgeting decisions, risk analysis, and working capital management. Although applicable to all businesses, special attention is placed on issues important to the hospitality industry. Emphasizes analytical methods through case studies and an in-depth semester project.

H ADM 421 Internal Control in Hospitality Operations
Hotel and restaurant operations are analyzed from the perspective of preventing fraud and embezzlement. The design and distribution of production, accounting, information systems, and supervisory tasks are studied in a manner that will ensure effective internal control and verifiable audit trails. Case studies.

H ADM 422 Taxation and Management Decisions
Fall. 3 credits. Limited to 50 juniors, seniors, and graduate students. Elective. A. Scariabba.
Introduction to tax advantages and disadvantages of various organizational structures, including corporations, partnerships, and subchapter "S" corporations; financial information reporting to tax authorities and shareholders and how they differ; use of depreciation methods to achieve tax reductions; syndication techniques, and the role tax laws play in promoting private investments and development.

H ADM 423 Financial Management Policy
Spring. 3 credits. Limited to 30 students; non-hotel students by permission of instructor. Prerequisite: H ADM 326 or 721. Elective. S. Carvell.
Covers numerous policy issues in financial management. Each of these issues will affect the potential profitability and survivability of the firm under conditions of uncertainty. The course will concentrate on nine major policy issues including capital structure, dividend policy, lease vs. buy analysis, and working capital financing.

H ADM 424 Security Analysis and Portfolio Management
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: macro and micro economics, introductory course in statistics and/or quantitative analysis, and knowledge of computers beyond word processing. Elective. Faculty.
An in-depth analysis of financial instruments, investments and portfolio management including fixed income, equity securities, advanced valuation models, risk-retum analysis, screening techniques, asset allocation, and active portfolio management and trading. Recent developments in investments research are covered, and large financial databases are used for practical applications of the concepts and techniques presented.

H ADM 525 Securities and Structured Financial Products
Fall. 3 credits. Limited to seniors and graduate students. Prerequisites: H ADM 222 or 721 and 424, or by permission. Elective: D. Quan.
Deals with the structure and analysis of securitized financial products with an emphasis on residential and commercial mortgage-backed securities (MBS). Intended for those who wish to acquire working knowledge in the analysis of such securities (such as collateralized securities) and a deep understanding of the securitization process. Necessitates a highly analytic and quantitative approach. Students are required to have a strong background in finance and economics.

H ADM 621 Hospitality Real Estate Finance
Spring. 3 credits. Limited to graduate students. Prerequisite: H ADM 722 or equivalent. Elective: J. deRoos.
For description, see H ADM 523. This graduate course builds on H ADM 523. Includes three hours in class each week plus an hour-long discussion seminar session each week which features guest speakers from industry, faculty from other colleges, and case studies.

H ADM 622 Capital Investment Analysis
Spring. 3 credits. Prerequisite(s): a course in principles of corporate finance (for graduate students) or equivalent; for undergraduate students, H ADM 722 and permission). Elective. S. Carvell.
This course is about how financial managers must make capital investment decisions in order to maximize shareholder wealth. This requires an in-depth understanding of both the investing and financing decision-making process. To understand the former, students learn about the capital budgeting process and acquire specific skills enabling them to evaluate capital projects, e.g., net present value, discounted cash flow and risk analysis. For the latter, students learn how equity and debt securities are priced in a dynamic capital market and how the firm's capital cost and structure are linked with maximization. Cases are used to illustrate theory and industry guest speakers conduct occasional seminars.

H ADM 624 Reporting and Analysis for Financial Statements
Spring. 3 credits. Limited to 30 seniors and graduate students. Elective. P. Surihara.
Covers the financial accounting issues that are encountered in reporting the operations of corporate enterprises. Emphasis is on the components of financial statements, how and why they are reported, and their impact on the overall financial success of the firm and its acceptance in capital markets. Emphasis is on outsiders' views of the company and their decision making through interpretation of financial statements.

H ADM 721 Financial Economics
Fall. 3 credits. Professional master's requirement. L. Caimar.
Integrates corporate finance with the framework of value maximization and the competitive analysis of product and factor markets in the hospitality industry. Topics include short-term asset management, strategic valuation, capital budgeting analysis, capital structure decisions, leasing, and international financial management.
H ADM 722 Hospitality Financial Management  
Spring. 3 credits. Professional master's requirement. G. Potter.  
Covers both managerial accounting and financial management as they are practiced in the hospitality industry. Topics include hospitality accounting systems and internal control, financial statement analysis and interpretation, operational analysis, cost behavior, budgeting and forecasting, pricing, and feasibility analysis.

FOOD AND BEVERAGE MANAGEMENT

H ADM 136 Introduction to Food Service Operations  
Fall and spring. 4 credits. Limited to hotel students. Required. G. Norkus, A. Susskind.  
An introduction to the principles of food and beverage management, beginning with an overview of the food service industry at large. Attention is focused on major industry segments, business practices, and trends. Detailed consideration is given to the components of the food service system: marketing, menu planning, logistical support, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments is emphasized.

H ADM 230 Introduction to Culinary Arts  
Fall and spring. 2 credits. Limited to non-hotel students. Priority given to seniors and graduate students. S-U grades only.  
Attendance at first class is mandatory. Absolute drop deadline for fall is September 10; spring drop deadline is January 30. Elective. There will be a course fee of $60 which includes the cost of a uniform and uniform cleaning. D. D'Aprix, S. Gould, T. O'Connor, R. White.  
Studies of food groups, their respective methods of preparation, cooking, presentation, and holding. Designed for non-hotel students who are interested in learning the professional approach to food preparation and service with hands-on practice. Food product identification, preparation and service methods, and professional language of food and cooking.

H ADM 236 Culinary Theory and Practice  
Fall and spring. 4 credits. Prerequisite: H ADM 136. Attendance at first class is mandatory. Required. T. O'Connor, R. Spies, R. White.  
Designed to introduce the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety and sanitation. Students will prepare recipes, review menus, and production schedules and will develop the ability to recognize properly prepared foods by preparing, tasting, and evaluating foods. They also will develop an awareness of potential production problems and how to troubleshoot them.

H ADM 331 Creating Distributor Partnerships  
Spring. 3 credits. Limited to 20 juniors, seniors, and graduate students; others by permission of instructor. Elective. E. Metberg.  
Beginning with a historical overview, the student gains an appreciation for the role the food service distributor plays in the movement of food from farm to the operator. Emphasis on the complexity of the distributors' operations in today's high tech world. Students prepare and negotiate sole source supply agreements with the nation's largest food distributors. Exposure to the various disciplines and employment opportunities in food service distribution. Guest speakers, distributor visits.

H ADM 332 Reviewing the Restaurant: The Consumer's View of the Dining Experience  
Fall. 3 credits. Field trip $325. Limited to 20 students with written permission. Prerequisites: H ADM 165 and 335, or permission of the instructor. Elective. N. Dahl, G. Pezzotti.  
Trains the student to perform a comprehensive analysis of the restaurant dining experience. The role of the restaurant critic/reviewer will be discussed in depth. The student will examine and enhance his or her critical writing skills, as the course will require each student to complete approximately ten restaurant reviews.

H ADM 333 Current Issues in Food Safety and Sanitation  
Spring. Variable to 3 credits. Three-credit registration limited to 12 students. Elective. Faculty.  
A study of current issues in food safety and sanitation procedures as they affect managerial decisions in food service and hospitality operations. Topics include risk assessment and hazard analysis; legal responsibilities related to food, food handlers, equipment and facility; illness and other public-health concerns; and certification and training. Preparation for NIH/NRA certification and the Food Protection (ETS) certification exam (optional) is offered.

H ADM 334 Wine and Food Pairing Principles and Promotion  
Spring. 2 credits. Limited to 20 juniors, seniors, and graduate students. Prerequisite: H ADM 430 or permission of instructor. Elective. G. Pezzotti.  
Focuses on the pairing and marketing of wine and food. Students develop an understanding of regional and varietal wine styles; how wines' flavors can change a wine's flavor, and the promotion of wine and food. Topics include wine and food pairing principles, cuisines and their flavor components, food trends in restaurants and in the home, special event planning, and wine list development. Students design and present wine and food tastings to industry guests.

H ADM 335 Restaurant Management  
Fall and spring. 4 credits. Limited to 30 hotel school students per lab; others by permission of instructor. Prerequisites: H ADM 136 and 236. Approximate cost of utensils and manual, $85. Once enrolled, students may not drop the course without permission of instructor. Required. D. D'Aprix, Y. Kerr-Donovan, B. Lang, M. McCarthy, J. Ridley, E. Merberg.  
A restaurant-management course in which each student participates as a manager of a full-service restaurant operation. Topics include operational issues, customer satisfaction, restaurant trends and challenges defining a service philosophy, and management development. The laboratory is based on a hands-on managerial component, including the development of a business plan and post-analysis of the operation. Students become familiar with all aspects of a restaurant operation.

H ADM 338 Seminar in Culture and Cuisine  
Fall. 3 credits. Limited to 20 students. Prerequisites: H ADM 165 and 236 (or 230), or permission of instructor. Elective. R. Spies.  
Explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines, enabling students to make comparisons among the foodways of different cultures. Students prepare research reports and oral presentations, and design menus and orchestrate their preparation.

H ADM 339 Wine in Culture and History  
Fall and spring. 2 credits. Limited to 200 students. Fall regions: Germany, Italy, and Champagne. Spring regions: Bordeaux, Burgundy, and California. Elective. A. Nash.  
Designed to provide students with a cultural and historical perspective on wine and its place in society. Topics include history, people, culture, production of wine in specific wine-producing regions of the world, wine and health issues, wine and food pairing, cooking with wine, and retail wine buying strategies. Regions covered will change each semester so students may take the course more than once.

H ADM 430 Introduction to Wines  
Fall and spring. 2 credits. Wine glass kit and course fee, $25.00. Limited to hotel school juniors, seniors, and graduate students, and seniors and graduate students in all other colleges. Hotel students encouraged to enroll in the fall. All students, except those in the hotel school, must be 21 years old by the first day of university classes (August 24, 2000 and January 22, 2001). S-U grades only. Elective. S. Mutsoksi, A. Nash.  
An introduction to the major wine-producing regions of the world and what the consumer needs to know to purchase wines, spirits, and beer at retail outlets and in a restaurant setting. Topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wines, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

(Preregistered students who do not attend the first class and fail to notify the course secretary in 274 Statler of their absence before the first class are automatically dropped from the course. The student must then follow the normal drop procedure in his or her school. Because of the high demand for this course and because a product is consumed, the absolute drop deadline for all students is September 8 in the fall and February 2, 2001 in the spring.)

H ADM 431 Seminar in Independent Restaurant Operations Management  
Fall and spring. 3 credits. Five field trips, $325. Limited to 20 students, with written permission of instructor. Elective. G. Pezzotti.  
Designed for students who have a strong interest in food and beverage operations and who may be considering a career as an...
Entrepreneur. Students visit and analyze various independently owned restaurant operations. Analysis covers the restaurant's concept (market), organization, ownership, management, physical structure, staff, front- and back-of-the-house operations, and fiscal integrity. Resident relevant to current topics in the restaurant industry are required. Classes alternate weekly between field trips and seminar/case presentations.

H ADM 432 Contemporary Healthy Foods
Fall. 3 credits. Field trip, $50. Limited to 20 seniors and graduate students, or by permission of instructor. Prerequisite: H ADM 355 or equivalent. Elective. M. Tabacchi.

Builds a greater awareness and understanding among nutrition and food service professionals of the origins and manifestations of today's health-conscious and educated food service patron. Topics include the marriage of nutrition and the cuisine demanded by today's consumer, fresh produce, lean meats, and lack of fabricated diet foods. Menu design includes creating and evaluating menus of foods. Major emphasis is on preparation, marketing, merchandising, and selling of healthy menus in Statler's outlets.

H ADM 433 Contract Services Management
Fall. 3 credits. Field trips. $25–50. Limited to 25 juniors, seniors, and graduate students. Prerequisites: H ADM 136 and 236. Elective. D. Reynolds.

Operations in business and industry, healthcare, and education, as well as other on-site segments, represent more than one-fourth of total restaurant industry revenues. Addresses the major differences between on-site food service management and traditional restaurant management with particular focus on organizational structure, competitive challenges, revenue enhancement/containment, labor issues, systems design, and branding. Readings, discussions with industry leaders, cases, site visits, and an integrated research project.

H ADM 434 Desserts Merchandising
Spring. 3 credits. Limited to 25 students. Prerequisite: H ADM 230, 236, or permission of the instructor. Elective. Faculty.

A hands-on course providing exposure to a variety of breads, pastries, cakes, and other desserts. Students develop large-scale production skills, become familiar with bakeshop utensils, and advertise and sell their products.

H ADM 435 Selection, Procurement, and Supply Management
Fall. 3 credits. Limited to 20 students. Prerequisites: H ADM 136 and 236, or 731. Elective. R. Spies.

Expands upon the concepts of purchasing and supply management that were developed in H ADM 136 and 731. Designed to expose the student to two specific areas: the management of the procurement system and the major commodity groups that are germane to the operation of a hotel or foodservice operation. Lectures include discussions on the comparison of the purchasing function in the hospitality industry to other industries, distribution systems, legal and ethical implications in buyer-seller relationships, procurement options, buying strategy development, price protection programs, and other contemporary issues. Students work with the major entree food groups: meats, seafood, and poultry, with emphasis placed on identification, quality and condition, market form, yield tests, and cost analyses.

H ADM 436 Beverage Management
Fall and spring. 2 credits. Limited to 25 hotel school juniors, seniors, and graduate students. Prerequisite: H ADM 430 (coregistration is not allowed). Elective. S. Mukherji.

Designed for students who intend to pursue food and beverage as a career. Deals specifically with the management of beverage operations. Lectures develop skills in and awareness of the following: staff training and responsible customer service; beverage pricing; food and wine pairings; wine list development; purchasing, storage, and service; wine regions, cost controls and loss prevention; and creative beverage merchandising. Guest lecturers.

H ADM 437 Specialty Food and Beverage Operations: Guest Chefs
Spring. 3 credits. Limited to 20 juniors, seniors, and graduate students. Prerequisite: H ADM 355 or 731. Elective. G. Pezzotti.

Designed for students with a strong food and beverage orientation, especially students considering careers in the hotel food and beverage environment, or those who anticipate interacting with current culinary trends. Working in groups, students market, organize, plan, produce, serve, and prepare the financial analysis and accounting relative to four guest chef specialty production nights for the Cornell community, utilizing the Statler Hotel facility. Final project.

H ADM 438 Catering Management
Spring. 2 credits. Field trip, $180. Limited to 25 students. Prerequisite: H ADM 236 or permission of instructor. Elective. R. Spies.

Examines on- and off-premise catering for business and social functions, as well as sports events and events. Topics include the organizational structure of catering operations; legal aspects of catering businesses; menu design for special functions and its operational implications; marketing from a caterer’s perspective; financial management; staff recruitment, training, and supervision; and post-event analysis. Site visits and analyses of actual catering operations.

H ADM 530 Anheuser Busch Seminar in Quality Brewing and Fine Beer
Fall. 1 credit. First 7 weeks of the semester. Prerequisite: H ADM 430. Elective. G. Pezzotti.

Designed for upper-level students who intend to pursue food and beverage careers. Serves to advance one's knowledge about beers in terms of managing such products in a restaurant or other food service outlet. Topics include the brewing process, sensory aspects of beer, international beer types and styles, marketing malt products, purchasing and distribution, storage and service, beer and food pairing, staff training and education, cost controls, and third party liability issues. Local field trip, no cost.

H ADM 538 Health and Fitness in the Resort Hotel and Spa Industry
Fall. 3 credits. Limited to seniors and graduate students. Two field trips, $75–100. Prerequisite: previous courses in food and beverage management and marketing. Elective. M. Tabacchi.

Emphasizes the management aspects of spas, health clubs, and spa resorts. Topics include feasibility of success and marketing research necessary to establish new spas, design of menus, mental and physical fitness programs, stress management, spa medical treatments, complementary medicine, and other spa programs. Other topics include required personnel, safety, legal and ethical issues, and integration of nutritious menu items and their marketing and merchandising. Guest speakers.

H ADM 539 Airline Service Foodservice and In-flight Management
Spring. 3 credits. Preference given to seniors and graduate students. Field trip, $75–100. Prerequisites/Corequisites: H ADM 136, 236, or permission of the instructor. Elective. M. Tabacchi.

Focuses on the challenge of preparing and distributing 20,000–30,000 meals per day to 20–30 different airline carriers and retheralizing, serving, and clearing those meals at 30,000 feet in confined space and short periods of time. Examines strategies, planning, and forecasting food and beverage costs and revenues. Topics include airline culture, catering, and sales executives, as well as the effect of the economy and the airline's competition upon the type of meals served.

H ADM 631 Case Studies in Multi-unit Restaurant Management
Spring. 3 credits. Limited to 20 graduate students, seniors by permission. Elective. R. Spies.

Case studies of multi-unit restaurant organizations will focus on topics such as: new venture planning, rapid growth and organizational change, market identification, service delivery and design, customer relations, strategic planning, and operations management, strategic planning and implementation, tactics and market responses, international expansion, marketing and sales growth, and thought thinking. Each class period will be spent in student-organized discourses and exchange based upon their assigned written case analysis. Grading will be on individual case presentations, class participation and written case assignments.

H ADM 633 Food Service Operations Management
Spring. 3 credits. Limited to 20 graduate students, others by permission. Elective. A. Susskind.

Applies fundamental concepts of marketing, financial analysis, food service production and management, and human resource principles that were addressed in previous courses. Combines theory and practice in all levels of a food service operation: basic knowledge, technical skills, and analytical skills. Manages by planning, implementing, critiquing, and analyzing a food service operation. Designs and implements a training program for an opening staff and employees who will be rotating through different positions. Develops budgets, both profit and loss, for different food service operations. Employ a feasibility model for a particular food service concept and operation.

H ADM 731 Graduate Food and Beverage Management
Spring. 3 credits. Professional master's requirement. R. Kelly, A. Susskind.

Focuses on the technical, managerial, and human resource skills needed to be successful in food service management. Topics include market analysis, concept development, menu planning, operations management, marketing, and operations management.
and current and future issues affecting the food service industry.

MARKETING AND TOURISM

H ADM 243 Marketing Management for the Hospitality Industry
Fall and spring. 3 credits. Limited to 80 hotel students per lecture, not open to freshmen. Required. J. Sigauw.
Helps students acquire the knowledge and skills necessary to get and keep profitable customers in today's competitive business environment. Topics are product quality, branding, pricing, personal selling, advertising, sales promotions, market segmentation, target marketing, product positioning, and marketing research. Class exercises, assignments, and essay exams.

H ADM 343 Marketing Research
Fall and spring. 3 credits. Limited to 32 students per section. Requires: Introductory principles of marketing or marketing management and an introductory course in quantitative methods for management. Elective. J. Austin.
Introduces students to the basic techniques and practices used to collect, analyze, and disseminate data for decision making in hospitality marketing. The goal is to help future managers develop a level of research competency that will enable them to interact intelligently with marketing research providers when requesting information, assessing proposed research projects, as well as evaluating and using information from completed research.

H ADM 344 Tourism I
Fall and spring. 3 credits. Not open to freshmen. Elective. M. Noden.
An introductory course in the study of tourism. The origins and evolution of contemporary tourism are examined. Students are familiarized with the various supply components of tourism and their integration on an international scale. The effects of mass-volume tourist demand on destination development are explored through the use of selected limited case studies. Guest lectures highlight the economic operations and effects of tourism in both the public and private sectors.

H ADM 345 Hospitality Sales
Spring. 3 credits. Limited to 24 students. Prerequisite: H ADM 243, 741, or equivalent. Elective. J. Sigauw.
An in-depth study of the promotional tool of personal selling, with an emphasis on identifying and meeting the needs of the customer. Course material encourages the use of intuition, judgment, logic, problem-solving methodology, and other tools as part of an overall sales mix. Class sessions involve lectures, role playing, videos, presentations, and guest lectures.

H ADM 347 Consumer Behavior
Fall and spring. 3 credits. Limited to 45 juniors and seniors. Prerequisite: an introductory principles of marketing or marketing management course. Elective. M. Lynn.
Helps students become better at understanding, predicting, and influencing consumer behavior. Topics are motivation, perception, learning, decision making, persuasion, compliance, geo-demographics, and psychographics. Applications of the material to hospitality marketing issues such as guest frequency programs, menu design, advertising, personal selling, and promotion strategy will be stressed through class exercises, a term paper, and essay exams.

H ADM 442 Strategic Marketing
Fall. 3 credits. Limited to seniors. Prerequisite: a previous marketing course. Elective. C. Dev.
Offers theoretical and practical approaches addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles will be learned through lectures, discussion, case studies, and development of a strategic marketing report.

H ADM 444 Tourism II
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: H ADM 243, 244, or equivalents, or written permission of instructor. Elective. M. Noden.
An advanced course in the study of tourism. Emphasis is placed on the development of the tourism industrial base and development and financial structure and infrastructure. Students are expected to engage in a wide range of discussions and analysis of the effects of tourism on various environments in social and economic terms. Case studies, occasional guest lectures.

H ADM 445 Services Marketing
Fall. 3 credits. Limited to 40 students. Prerequisite: a previous marketing course or permission of instructor. Elective. L. Renaghan.
Students preparing for management positions will develop an understanding of services marketing principles attributable to the hospitality industry. Topics include marketing strategies of service firms, new marketing approaches, and the reformation of traditional marketing principles from consumers and industrial goods marketing. Case studies, guest speakers.

H ADM 446 Marketing Planning for Hotels
Spring. 3 credits. Prerequisites: H ADM 243, 741, or equivalent. Elective. L. Renaghan.
Students learn about the key variables in property-level management and their proper application in developing a marketing plan, e.g., marketing intelligence, demand analysis, supply and competitor analysis, segment analysis, resource allocation, sales strategies, and measurement of results. Test material, cases, relevant articles, lectures, and key speakers. Upon completion of the course, the student should be able to design, develop, and implement a comprehensive, targeted, and action-oriented marketing plan for a lodging property.

H ADM 447 Channels of Distribution in Tourism
Spring. 3 credits. Prerequisite: H ADM 243. Elective. M. Noden.
Examines the major elements of the structure, arrangement, management, and control of the channels of distribution in the tourism industry. Topics include emerging trends in electronic distribution, organizational structures of distributive consortia, and their effectiveness in service distribution. Significant readings, guest lectures.

H ADM 448 Marketing Communications
Spring. 3 credits. Prerequisite: a previous marketing course. Elective. C. Dev.
Provides students with a managerial understanding of the effective use of a variety of marketing communication media, including advertising, sales promotion, public relations, etc. Hospitality industry emphasized.

H ADM 449 International Marketing
Fall and spring. 3 credits. Limited to 25 students. Prerequisites: Micro and macroeconomics. Elective. Not offered fall 2000. Faculty. Develops understanding of international marketing with emphasis on hospitality-industry applications. Focuses on the similarities and differences that exist between domestic and international marketing and the conduct of international marketing in various segments of the world.

H ADM 451 Marketing Decision Models for Service Firms
Fall. 3 credits. Limited to 20 seniors and graduate students. Prerequisite: a principles of marketing or marketing management course and an introductory course in quantitative methods for management. Elective. J. Austin.
Introduces students to advanced data analysis and modelling methods used for decision making in hospitality marketing.

H ADM 462 Strategic Marketing
Fall. 3 credits. Limited to graduate students. Prerequisite: a previous marketing course and permission of instructor. Elective. C. Dev.
Offers theoretical and practical approaches to addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles will be learned through lectures, discussion, and development of a strategic marketing report.

H ADM 463 Marketing Research
Spring. 3 credits. Limited to 20 graduate students. Prerequisites: introductory principles of marketing or marketing management and an introductory course in quantitative methods for management. Elective. J. Austin.
Introduces students to the basic techniques and practices used to collect and analyze data for decision making in hospitality marketing. The goal is to help upper-level managers develop a level of research competency that will enable them to interact intelligently with marketing research providers when requesting information, assessing proposed research projects, as well as evaluating and using information from completed research.

H ADM 464 Food and Beverage Marketing Strategy
Spring. 3 credits. Limited to graduate students, seniors by permission. Prerequisite: prior 3-credit marketing course. Elective. T. Kelly.
Focuses on how to apply marketing, sales, and merchandising techniques to the commercial food and beverage industry. Addresses developing a market segmentation based on understanding the needs and wants of potential target markets, translating needs and wants into a viable food service concept positioning strategy, and marketing strategies used to maintain and increase sales and market share. Recitation and analysis involves substantial use of the Consumer Report on Eating Share Trends (CREST) database.
**PROPERTY ASSET MANAGEMENT**

**H ADM 255 Hotel Development and Planning**
- Spring. 3 credits. Limited to 20 sophomores, juniors, and seniors per section.
- Required: R. Penner, S. Robson.
- An introduction and management overview of the problems and opportunities inherent in the development and planning of hospitality facilities. Topics include the project development sequence; conceptual and space planning; architectural design criteria; construction management; and the interpretation of architectural and consultant drawings. Emphasis is on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

**H ADM 350 Real Estate Management**
- Fall. 2 credits. First 7 weeks of the semester. Elective: J. deRoos.
- Introductory course designed for students interested in learning the principles of property management for residential and commercial real estate. Lectures will provide an overview of the different aspects of property management such as leases and management contracts (including landlord/tenant issues), accounting and finance, staffing, and building operations. Case studies.

<th>Course Code</th>
<th>Course Title</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>H ADM 351</td>
<td>Hospitality Facilities Design</td>
<td>Fall. 4 credits. Prerequisite: H ADM 255 or 751 or permission of instructor. Elective: R. Penner, S. Robson. A lecture-studio course dealing with property development and design by focusing on the interpretation and analysis of hotel plans. Students learn basic graphic techniques and apply them to planning problems for hospitality facilities. Final project.</td>
</tr>
<tr>
<td>H ADM 352</td>
<td>Hotel Planning and Interior Design</td>
<td>Spring. 3 credits. Field trip, $250; drawing supplies, $100. Limited to 18 students. Prerequisite: H ADM 351 or permission of instructor. Elective: R. Penner. A project course in which student teams develop operational criteria and a complete interior design presentation for a new hotel or major renovation. The early semester includes a number of short design exercises. A field trip to a northeastern city introduces students to the particular hotel and its requirements. During the remainder of the term, the teams will plan the hotel public areas and guestrooms, develop conceptual designs, establish preliminary budgets, and assemble presentation boards to describe the design.</td>
</tr>
<tr>
<td>H ADM 353</td>
<td>Food Service Facilities Design</td>
<td>Spring. 3 credits. Limited to 24 students. Prerequisites: H ADM 351 and 352 (coregistration is allowed) or food service experience or permission of instructor. Elective: S. Robson. An introduction to the basic concepts of food service facilities design and planning. Students will determine space allocations for kitchens and their support areas; develop basic production work flow in the preparation and service areas; and select equipment utilizing quality of construction, and ease of maintenance. Students will use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.</td>
</tr>
<tr>
<td>H ADM 354</td>
<td>Computer-Aided Design</td>
<td>Fall and spring. 2 credits. Limited to 18 students per lecture. Prerequisite: H ADM 351 or non-credit student experience. Attendance at first class is mandatory. Elective: S. Curtis. The operation of microcomputer-based computer-aided design (CAD) systems. Using AutoCAD on the IBM PC, the course presents an organized and logical sequence of commands, mode settings, drawing aids, and other characteristics of CAD. Students will learn the program in the school's computer center and will develop a complete graphic presentation. Emphasis is on the use and operation of CAD systems in a commercial document production environment.</td>
</tr>
<tr>
<td>H ADM 355</td>
<td>Hospitality Facilities Operations</td>
<td>Fall. 3 credits. Limited to 20 students per section. Prerequisite: H ADM 255. Required: M. Redlin. An overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of management, planning, and the responsibilities of the engineering-maintenance departments. The renovation needs of hospitality facilities are examined and key managerial aspects of renovations considered.</td>
</tr>
<tr>
<td>H ADM 356</td>
<td>Hospitality Risk Management</td>
<td>Spring. 3 credits. Limited to sophomores, juniors, seniors, and graduate students. Elective: D. Stipanuk. A comprehensive look at risk management within the hospitality industry, and responses to and opportunities associated with the sustainability movement. Course will give students an understanding of the more advanced capabilities of AutoCAD, including raster image support, OLE, 3-D surface and solid modeling, and photorealistic rendering. The availability and capabilities of &quot;third party&quot; plug-ins to AutoCAD will also be explored. There will be weekly projects as well as a final project.</td>
</tr>
</tbody>
</table>
H ADM 456 Hospitality Facilities Management
Spring. 3 credits. Prerequisite: H ADM 355, 751, or permission of the instructor. Elective. D. Stapanuk.
A managerial approach to hospitality facilities addressing issues of owning and operating, cost management, facilities services and delivery systems management, governmental regulation covering codes and zoning, and emerging issues. Emphasis on environmental issues such as indoor air quality, waste management, and energy conservation. Extensive use of the web.

H ADM 457 Advanced Development and Construction
Fall. 3 credits. Overnight field trip, $175. Limited to juniors with permission, seniors and graduate students. Elective. D. Stapanuk.
Focuses on the management structure and systems, laws, regulations, and industry practices. Examination of the successful development of commercial and residential real estate, including lodging and eating facilities. Topics include scheduling, budgeting, managing other professionals, and analysis of alternative materials and methods. Guest speakers, case studies, and group project.

H ADM 458 Hospitality Real Estate
Spring. 3 credits. Limited to 40 seniors or graduate students. Prerequisites: H ADM 323, 450, or permission of instructor. Elective. Faculty.
Expands the student's understanding of the role of real estate in individual hospitality businesses and corporations. Designed for those who plan careers in the hospitality industry. Specific objectives are to develop an appreciation of real estate as a factor in the production of income for hospitality businesses; to develop an appreciation of real estate as an asset that can be managed, sold, and otherwise used to increase the wealth of hospitality owners and managers; and to understand the importance of valuing real estate, and the approaches to valuation and contemporary hospitality valuation issues.

H ADM 459 International Hospitality Development
Spring. 3 credits. Limited to 30 seniors and graduate students. Elective. J. Clark.
A seminar course covering the strategic development of international hospitality projects. Topics will include corporate expansion strategies, the international development process, viewpoints of public and private stakeholders, and such development challenges as technology, infrastructure, environmental concerns, and public policy issues. Senior corporate guest lecturers will present and discuss new projects in such locations as Hawaii, Mexico, Europe, and Latin America and contrast these opportunities with development in the United States.

H ADM 550 Principles of Timeshare Development and Operations
Fall. 2 credits. Second 7 weeks of the semester. Free.
Provides an introduction to the rapidly growing timeshare and vacation ownership industry. Students will learn who the four major business disciplines of financial management, real estate development, marketing and sales, and resort operations are specifically applied to the industry. Guest speakers, course project, and case studies.

H ADM 561 Principles of Real Estate
Fall. 3 credits. Limited to graduate students. Elective. Faculty.
This survey course approaches real estate from four perspectives: investment, market, mortgage finance, and legal. Understanding these perspectives will enable students to make better investment and financing decisions, to use real estate resources wisely, to understand public policy issues, and to be prepared for additional courses in real estate investment, finance, and development. This course includes much of the material in H ADM 450 plus special topic sessions that feature guest speakers from the industry, faculty from other colleges, and case studies.

H ADM 565 Advanced Real Estate
Spring. 3 credits. Limited to 40 graduate students. Prerequisites: H ADM 323, 450, 621 or 651. Elective. D. Quan.
Promotes sound real estate investment and finance decision making through the use of advanced techniques and principles in financial economics. Real estate investment decisions are made through applications of the after-tax discounted cash flow model which incorporates prevailing domestic and international economic conditions in real estate markets, tax rules, and government regulations. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options is considered including convertible, participating, and accrual mortgages. All types of residential and nonresidential real estate are analyzed, including hospitality properties.

H ADM 751 Properties Development and Planning
Spring. 3 credits. Professional master's requirement. J. deRoos, M. Redlin.
Provides an overview of project development, hotel planning, and the construction process, including the role of the development team, feasibility, functional planning and design, interpretation of architectural drawings, architectural and engineering criteria, discounted cash flow model which incorporates prevailing economic conditions in real estate markets, tax rules, and government regulations. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options is considered including convertible, participating, and accrual mortgages. All types of residential and nonresidential real estate are analyzed, including hospitality properties.

H ADM 266 Intermediate French: Le Francais de l'Hotellerie et du Tourisme
Spring. 3 credits. Limited to 15 students. Prerequisite: French 123 or permission of instructor. Elective. A. Grandjean-Levy.
Offers continuing study of the French language with specific emphasis on the hospitality industry. Material presented considers cultural, geographical, economic, historical, political, and social contexts within which the business functions. The course is conducted in French, emphasizing a conversational approach. Specialized situations and vocabulary are used in historical, social, and business contexts.

H ADM 364 Advanced Business Writing
Fall and spring. 3 credits. Limited to juniors, seniors, or graduate students, or written permission of instructor. Prerequisite: English 201 or English 202 (for hotel school students) or completion of student's freshman writing requirement. Elective. S. Hryson, Y. Kim, R. Steineracher.
Focuses on communicating challenging messages in business communications. Writing assignments will emphasize delivering persuasive messages, working with tone and style, and developing different types of documents in professional contexts. Assignments will include business letters and memos written for various contexts, procedures and policy statements, promotional materials, negative messages, and analytical reports requiring research.

H ADM 365 Managerial Communication II
Fall and spring. 3 credits. Limited to 22 juniors and seniors per lecture. Note: Students required to take this course generally may not drop it; however, students may be allowed to drop before the first class meets if the area has a wait list and the vacancy can be filled. Students may drop between the first and second class if they (1) check first with the course instructor, (2) check with the registrar, (3) check with their academic advisor, (4) check with their dean or academic advisor, (5) check with their professional services advisor, and (6) check with their college/department advisor. Students may not drop after the second class unless they petition and present a case of extenuating circumstances. It is expected these cases would be rare. Prerequisites: H ADM 165 or H ADM 165. Required. N. Dahl, Y. Kim, E. Roberts, C. Snow, H.苏宁.
A broad study of communication in a management context. Emphasizes the significant role of communication in developing work relationships that enable managers to achieve their goals. It presents the theories and principles of communication that underlie effective performance. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally delivering and presenting ideas to larger audiences.

H ADM 462 Communication and the Multicultural Organization
Fall and spring. 3 credits. Elective. E. Roberts.
Influence of culture, perception, and gender on communication in multicultural organizations, including international and domestic businesses with diverse work forces. Focus is
on human interaction at work. Special emphasis on the hospitality industry. Topics include values and beliefs, how race and gender affect language use, cultural differences in nonverbal communication, ethnocentrism and stereotyping, intercultural sensitivity and adjustment, cultural variables, persuasion, and ethics of communication in international business.

H ADM 463 Persuasive Communication in Organizations  
Spring. 3 credits. Limited to 18 students. Prerequisite: H ADM 165 and 365 for hotel undergraduates, or permission of instructor. Elective. Faculty. Prepares students to communicate effectively in a variety of persuasive speaking contexts. Principles of persuasion will be thoroughly examined as they apply to managerial communication tasks. Emphasis on persuasive speaking; also relationship between written and oral communication. Studies the principles of persuasion, analyzes case studies in the hospitality industry, and applies persuasive strategies in simulated workplace settings.

H ADM 661 Organizational Communication for Managers  
Spring. 3 credits. Elective. Faculty. Provides an in-depth understanding of the theories and practice of organizational communication. Structured around the communication tasks managers must accomplish in order to be effective on the job: communicating to diverse audiences, resolving conflicts, making presentations, and influencing colleagues. Students read and discuss a series of articles to increase knowledge of organizational communication issues and expand their understanding of the political, sociological, and ethical dimensions of problems in organizational communication. Oral and written assignments, service project with a nonprofit organization in Tompkins County.

H ADM 761 Communication Modules  
Fall and spring. Variable credits. Limited to MMH students. Elective. N. Dahl, D. Jamroz, C. Snow. Instruction in communication and leadership skills helps MMH students reach their individual professional development goals, enrich their education, perform well on course assignments, and meet the program benchmarks in managerial writing, presentation speaking, and group process and leadership.

OPERATIONS MANAGEMENT, INFORMATION TECHNOLOGY COURSES

H ADM 170 Keyboarding for Windows  
Spring. 2 credits. Limited to 30 students. Elective. B. David. An introduction to the computer and a beginning course in alphabetic and numeric keyboarding. Students learn word-processing skills during the second half of the course.

H ADM 174 Microcomputing  
Fall and spring. 3 credits. Limited to hotel school freshmen and transfers. Limited to 30 students per section. Required. R. Alvarez, P. Clark, R. Moore. This course is designed to aid students in building functional computer literacy. Students will develop their skills in five generic areas: text, graphics, spreadsheet, presentation, and listing processing. This portion of the class is taught in the Bienenkorb computer lab, where students work with Microsoft Office and the Internet. In addition, students learn introductory statistical concepts, including descriptive statistics, correlation, and regression analysis. Course material is presented through a combination of lectures and labs.

H ADM 274 Microcomputing  
Spring. 3 credits. Limited to 50 non-hotel students. Elective. R. Moore. An introduction to microcomputing to develop functional computer fluency. Students will develop their skills in five generic areas: text, graphics, spreadsheet, presentation, and file processing. The course is entirely lab-oriented and students work in Windows. Software used is Word, Excel, PowerPoint, and Filemaker.

H ADM 371 Hospitality Quantitative Analysis  
Fall and spring. 3 credits. Required. G. Thompson. Introduces statistical and operations research methods appropriate for the hospitality industry. The overriding goal is to provide students with the skills and understanding necessary for decision making using quantitative data. Students will use computer spreadsheetsoftware extensively. A key element is an ability to communicate the results of the analyses in a clear manner. Topics include probability, decision analysis, modeling, forecasting, quality management, process design, waiting lines, project management, and revenue management.

H ADM 474 Corporate Information Systems Management  
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective. R. Alvarez. Explores 10 key issues in information technology management through use of case studies of companies who have relevant experience with the issues. A basic understanding of information technology, organizational behavior, and general management is advised.

H ADM 475 Information Technology for Hospitality Managers  
Fall and spring. 3 credits. Prerequisite: H ADM 174. Required. R. Alvarez, M. McCarthy, R. Moore, M. Talbert. Composed of three blocks: (1) Lecture—the goal of this block is to provide the students with a broad-base knowledge of Information Technology (IT) management issues. (2) Lab—the goal of this block is to provide the students with advanced Excel model-building skills and concepts. (3) Section—the goal of this block is to provide students with the opportunity to focus on a special topic in IT relevant to their career direction. Block 1: Meets for the entire semester. Students must register for this lecture. Block 2: Meets the first nine weeks of the semester. Students must register for one of these two labs. Block 3: Meets for the last three weeks of the semester. Students must register for at least one of these sections. Students who wish to register for more than one section may do so and receive one additional credit of independent study for each.

H ADM 476 Visual Basic for Applications: End-User Programming  
Fall and spring. 3 credits. Limited to 25 students. Elective. M. Talbert. Introductory programming course for end-users (e.g., business managers, consultants, etc.). Students will develop fluency in the popular Visual Basic for Applications (VBA) language. Using VBA, students will learn how to customize and extend the Microsoft Office Suite, with an emphasis on Excel. They also will develop custom information systems using Microsoft Office applications as programmable building blocks. Secondary objectives will be to develop fundamental design and programming principles. Entirely lab-based.

H ADM 574 Strategies for Internet Business  
Fall. 3 credits. Limited to 30 hotel seniors and graduate students. Prerequisite: H ADM 174. Elective. G. Piccoli. Information technologies, and particularly Internet technologies, are revolutionizing business organizations, commerce, and society. This course will explore how such technologies can be leveraged to create shareholder value and can be used to service customers. The fundamental technologies, the economic premises of the new competitive landscape, business strategy in this environment, and the risks these strategies engender will be analyzed. The course will have a managerial orientation but a basic understanding of information technology and a minimum level of proficiency are required. Cases and examples drawn from the hospitality industry will be used, but the topic is more general and a number of applications to other industries will be contemplated as well.

H ADM 674 Service Operations Management  
Fall and spring. 3 credits. Limited to 25 graduate students. Prerequisite: H ADM 775 or equivalent. Elective. Not offered fall 2000. G. Thompson. The objective of this course is to improve the understanding of the operations function of service organizations. Focuses on the role and nature of service operations, the relationship of operations to other business functions, and develops skills and provides techniques for the effective management of service operations. Topics include service design, bottleneck and layout analysis, capacity management, work force management, and quality management. Intended for graduate students interested in services management.

H ADM 675 Yield Management  
Fall and spring. 3 credits. Limited to 40 students. Prerequisites: H ADM 371, 771, or equivalent. Elective. S. Kimes. Students learn how to effectively apply the principles of yield management. Focuses on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group discounts, and management and marketing issues.

H ADM 676 Restaurant Revenue Management  
Spring. 2 credits. First 7 weeks. Limited to 30 graduate students, or undergrads with H ADM 335 and 371 by permission of the instructor. Prerequisites: H ADM 731 and 771. Elective. S. Kimes.
Law courses

H ADM 385 Business Law I
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students outside the hotel school, and hotel students by permission of the instructor. Recommended for hotel students, H ADM 387 preferred. Elective. P. Wagner.

H ADM 387 Business and Hospitality Law
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students. Required. D. Sherwyn.

H ADM 405 Employment Discrimination to Law and Union Management Relations
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: H ADM 387 or permission of instructor. Elective. D. Sherwyn.

H ADM 487 Real Estate Law
Fall and spring. 3 credits. Limited to hotel hotel students, seniors, and graduate students. Recommended: completion of H ADM 387 preferred. Elective. A. Klausner.

H ADM 490 Housing and the Homeless
Spring. Variable to 4 credits. Limited to juniors and seniors. Elective. T. O’Connor.

LAW COURSES

H ADM 385 Business Law I
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students outside the hotel school, and hotel students by permission of the instructor. Recommended for hotel students, H ADM 387 preferred. Elective. P. Wagner.

H ADM 387 Business and Hospitality Law
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students. Required. D. Sherwyn.

H ADM 405 Employment Discrimination to Law and Union Management Relations
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: H ADM 387 or permission of instructor. Elective. D. Sherwyn.

H ADM 487 Real Estate Law
Fall and spring. 3 credits. Limited to hotel hotel students, seniors, and graduate students. Recommended: completion of H ADM 387 preferred. Elective. A. Klausner.

H ADM 490 Housing and the Homeless
Spring. Variable to 4 credits. Limited to juniors and seniors. Elective. T. O’Connor.

H ADM 491 Hotel Ezra Cornell
Fall and spring. Variable to 4 credits. Prerequisite: written permission. Elective. Y. Kerr-Dovian.

H ADM 494 Management Intern Program II—Academic
Fall and spring. 6 credits. Limited to hotel hotel students with approval of the MIP faculty committee. Prerequisites: completion of the following courses is strongly recommended: H ADM 321, 335, 355, and 365. Additional course work might be required for students considering specialized internships. A detailed plan for the completion of all remaining academic requirements must be approved prior to acceptance into the course. Must be taken in conjunction with H ADM 493. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term. Further information is available in the Student Services Office, 178B Statler Hall.

OTHER COURSES

H ADM 493 Management Intern Program I—Operations
Fall and spring. 6 credits. Limited to hotel hotel students and seniors with approval of the MIP faculty committee. Prerequisites: completion of the following courses is strongly recommended: H ADM 321, 335, 355, and 365. Additional course work might be required for students considering specialized internships. A detailed plan for the completion of all remaining academic requirements must be approved prior to acceptance into the course. Must be taken in conjunction with H ADM 493. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term. Elective. R. Chase.

H ADM 494 Management Intern Program II—Academic
Fall and spring. 6 credits. Must be taken in conjunction with H ADM 493. Letter grades only, based on six performance evaluations. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term. Elective. R. Chase.

OTHER COURSES

H ADM 491 Hotel Ezra Cornell
Fall and spring. Variable to 4 credits. Prerequisite: written permission. Elective. Y. Kerr-Dovian.

H ADM 493 Management Intern Program I—Operations
Fall and spring. 6 credits. Limited to hotel hotel students and seniors with approval of the MIP faculty committee. Prerequisites: completion of the following courses is strongly recommended: H ADM 321, 335, 355, and 365. Additional course work might be required for students considering specialized internships. A detailed plan for the completion of all remaining academic requirements must be approved prior to acceptance into the course. Must be taken in conjunction with H ADM 493. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term. Further information is available in the Student Services Office, 178B Statler Hall.

H ADM 494 Management Intern Program II—Academic
Fall and spring. 6 credits. Must be taken in conjunction with H ADM 493. Letter grades only, based on six performance evaluations. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term. Elective. R. Chase.

H ADM 491 Hotel Ezra Cornell
Fall and spring. Variable to 4 credits. Prerequisite: written permission. Elective. Y. Kerr-Dovian.

H ADM 493 Management Intern Program I—Operations
Fall and spring. 6 credits. Limited to hotel hotel students and seniors with approval of the MIP faculty committee. Prerequisites: completion of the following courses is strongly recommended: H ADM 321, 335, 355, and 365. Additional course work might be required for students considering specialized internships. A detailed plan for the completion of all remaining academic requirements must be approved prior to acceptance into the course. Must be taken in conjunction with H ADM 493. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term. Further information is available in the Student Services Office, 178B Statler Hall.

H ADM 494 Management Intern Program II—Academic
Fall and spring. 6 credits. Must be taken in conjunction with H ADM 493. Letter grades only, based on six performance evaluations. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term. Elective. R. Chase.
H ADM 495 Development and Management of Wellness in Business Organizations
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective. M. Tabacchi.

Designed to encourage effective managers and entrepreneurs to evaluate the work environment and to enforce policies to enhance overall productivity which should increase the corporation's competitive edge. Emerging fields of complementary and alternative medicines are explored as preventive and cost effective methods of improving workers’ health.

H ADM 499 Undergraduate Independent Study
Fall and spring. Variable, to 4 credits. Elective. Faculty. Students are afforded an opportunity to pursue independent student projects under the direction of a resident faculty member. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Student Services Office. Independent study work must be performed in the term for which it is approved, and the usual add/drop policy applies. Retroactive credit for work commenced after an academic term has ended is not allowed.

H ADM 690 Honors Monograph
Year-long course. 4 credits. Limited to professional master's students whose: (1) either have a minimum GPA of 3.7 or are in the top 10 percent of the students in the year group in their first-year professional master’s courses; (2) have given evidence of being a good writer by meeting all components of the written communication benchmark; and (3) obtained the approval of a brief topic proposal from the potential adviser. Elective. Faculty.

A special integrative course for students who write well and desire to explore in depth a topic of their choice. The approval of the second reader is required for completion of the course. Special recognition of students who complete the course will be made at graduation. Applications available in the Graduate Office, Room 172 Statler.

H ADM 695 Industry Challenges and Trends
Spring. 3 credits. Limited to 15 seniors and graduate students. Elective. J. Clark.

A seminar approach will be used to discuss readings and case studies selected to illustrate current challenges and future trends such as globalization, consolidation, etc., in the hospitality industry. The view will be futurist and primarily from that of a multi-unit/corporate perspective. An in-depth analysis of a few specific companies will be included, using case studies and guest lecturers when appropriate. Student teams will research new topics and make presentations and final reports.

H ADM 698-699 Graduate Independent Research
Fall and spring. Credit to be arranged. Elective. Faculty. Student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Graduate Office, Room 172, Statler.

H ADM 791 Creating and Managing for Service Excellence
Fall. 3 credits. Professional master's requirement. L. Benaugha.

Covers the complex management practices and concepts necessary to deliver consistent value in the hospitality industry (determining customer expectations; integrating marketing into operations; managing customer satisfaction; and measuring and controlling costs). Cases, lectures, discussion, and industry experts will be used, with emphasis on translating the strategic understanding of value into management practice.

H ADM 793 Industry Mentorship Program
Spring. No credits. S-U grades only. Professional master's requirement. M. Redlin.

Interaction with a senior hospitality industry executive. Objectives are to give the student an overview of the operating dynamics of a segment of the industry, to provide a realistic awareness of day-to-day life working as an executive in the industry, and to develop an awareness of the skills, level of integration, and other factors required for success.

H ADM 794 Management Development

Students must register for the first three semesters, and they will get a grade at the end of each semester. Second semester students must keep the times open for team project meetings. All students in the Master of Management in Hospitality Program must enroll for HA 794. This requirement includes participation in the MMH Assessment Center, program benchmarking, team project, and other activities related to students' professional development.

H ADM 890 M.S. Thesis Research
Fall and spring. Credit to be arranged.

H ADM 990 Ph.D. Thesis Research
Fall and spring. Credit to be arranged.

FACULTY ROSTER
Alvarez, Roy, M.Ed., Auburn U. Lecturer
Arbel, Avner, Ph.D., New York U. Prof.
Austin, Jon R., Ph.D., U. of Wisconsin-Madison. Asst. Prof.
Berger, Florence, Ph.D., Cornell U. Prof.
Brownell, Judith, Ph.D., Syracuse U. Prof., and Assoc. Dean for Academic Affairs.
Bryson, Susan, M.A., U. of Chicago. Lecturer
Butler, David W., Ph.D., U. of Wisconsin-Madison. Dean and E. M. Statler Professor.
Canina, Linda, Ph.D., New York U. Asst. Prof.
Carroll, Steven A., Ph.D., SUNY Binghamton. Assoc. Prof.
Chase, Robert M., M.B.A., Cornell U. Prof.
Clark, John J., Jr., Ph.D., Cornell U. Prof.
Clark, Preston, M.S., Syracuse U. Lecturer
Corgel, John B., Ph.D., U. of Georgia. Prof.
Cullen, Thomas, Ph.D., Cornell U. Assoc. Prof.
Curtis, Steven, B.L.A., Syracuse U. Lecturer
Dahl, Nicholas, M.A., Oregon State U. Lecturer
DeKos, Jan A., Cornell U. Asst. Prof.
Dev, Chekistan S., Ph.D., Virginia Polytechnic. Assoc. Prof.
Dittman, David A., Ph.D., Ohio State U. Prof.
Enz, Cathy A., Ph.D., Ohio State U. Prof. and Lewis G. Schaeneman, Jr. Professor of Innovation and Dynamic Management.
Ferguson, Dennis H., Ph.D., Cornell U. Assoc. Prof.
Geller, A. Neal, Ph.D., Syracuse U. Robert A. Beck Prof. of Hospitality Financial Management.
Hinkin, Timothy, Ph.D., U. of Florida. Prof. and Director of Undergraduate Studies.
Jones, Scott L., M.A., Purdue U. Lecturer
Kim, H. Young, Ph.D., Oklahoma State U. Lecturer.
Kimes, Sheryl E., Ph.D., U. of Texas. Assoc. Prof.
Lang, Barbara, B.S., Cornell U. Lecturer.
Lundberg, Craig C., Ph.D., Cornell U. Blanchard Professor of Human-Resources Management.
Lynn, Wm. Michael, Ph.D., Ohio State U. Assoc. Prof.
McCarthy, Reneta, B.S., Cornell U. Lecturer.
Mutzikos, Adam, M., Cornell U. Barde Vinnners Professor of Wine Education and Management.
Nash, Abby, B.A., Cornell U. Lecturer.
Noden, Malcolm A., Senior Lecturer.
Norvis, Gregory X., M.S., Cornell U. Senior Lecturer.
O'Connor, Theresa A. M.S., Elmira College. Senior Lecturer.
Penna, Michael, M.S., Cornell U. Prof.
Pezzotti, Giuseppe B. G., B.S., Cornell U. Senior Lecturer.
Quan, Daniel W. C., Ph.D., UCLA at Berkeley. Assoc. Prof.
Redlin, Michael H., Ph.D., Cornell U. Prof.
Renuhan, Leo M., Ph.D., Pennsylvania State U. Assoc. Prof.
Roberts, Elizabeth, Ph.D., Purdue U. Senior Lecturer.
Sherwyn, David J., Cornell U. Asst. Prof.
Siwuag, Judy, D.B.A., Louisiana Technical U. Assoc. Prof.
Simons, Tony L., Ph.D., Northwestern U. Assoc. Prof.
Sinha, Praveen, Ph.D., Carnegie Mellon U. Assoc. Prof.
Snow, Craig, Ph.D., Purdue U. Senior Lecturer.
Spies, Rupert, Studiendassessor, Senior Lecturer.
Steinalcher, Richard, Ph.D., Florida State U. Senior Lecturer.
Stevens, Betsy, Ph.D., Wayne State U. Asst. Prof.
Stepanuk, David M., M.S., U. of Wisconsin. Assoc. Prof.
Suskind, Abi, Ph.D., Michigan State U. Asst. Prof.
Tabacchi, Mary H., Ph.D., Purdue U. Assoc. Prof.
Taber, Mark, M.P.S., Cornell U. Lecturer.
Thompson, Gary M., Ph.D., Florida State U. Assoc. Prof.
Tracey, J. Bruce, Ph.D., SUNY Albany. Assoc. Prof.
White, Robert A.O.S., Culinary Institute of America. Teaching Support Specialist.
COLEGE OF HUMAN ECOLOGY

ADMINISTRATION
Patsy M. Brannon, dean
D. Merrill Ewert, director of Cornell Cooperative Extension
Jennifer Gerner, associate dean
Charles Mcintosh, associate dean
S. Kay Obendorf, associate dean
Brenda Bricker, director, undergraduate affairs
Darryl Scott, director, admissions
Duncan Bell, college registrar

COLLEGE FOCUS
The College of Human Ecology anticipates and responds to human needs in the areas of nutrition and health, economic and social wellbeing, environmental design and technology, as well as human development through education, basic and applied research, and the extension of knowledge. The college is distinctively characterized by the faculty of its research in the natural and social sciences and the design arts, a global perspective in academic programs, a preventive approach to contemporary societal problems, multidisciplinary departments and programs, development of leadership in students and citizens, and a commitment to diverse populations. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

FACILITIES
The college is housed in Martha Van Rensselaer Hall. The Division of Nutritional Sciences, an intercollege division supported jointly by the College of Human Ecology and the College of Agriculture and Life Sciences, has space in Savage, Kinzelberg, and Martha Van Rensselaer Halls. The buildings include administrative and faculty offices, classrooms, auditoriums, galleries, and lecture halls; wet chemistry and biochemistry laboratories for nutrition, food science, and textile science; experimental food laboratories; design studios and computer-aided design laboratories; woodworking shops; experimental observation rooms with one-way vision screens and sound-recording equipment; human factors and infant research facilities; educational television studios; and an audiovisual classroom for distance learning. Also included are learning resource centers for career planning, field and international study, a historical costume collection, a human metabolic research unit, an animal research facility, cold rooms, a constant temperature and humidity laboratory, and an early childhood research and care program.

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatography, radioisotope analysis, electrophoresis, microscopy, and ultra centrifugation; physical testing equipment; and cameras, videotape, and sound recording equipment.

DEGREE PROGRAMS
Cornell programs in Human Ecology lead to the degrees of Bachelor of Science (B.S.), Master of Arts (M.A.), Master of Science (M.S.), Master of Professional Studies in Human Ecology (M.P.S.), Master of Health Services Administration (M.H.A.), and Doctor of Philosophy (Ph.D.).

General academic information concerning the Bachelor of Science degree is given here under the heading “Undergraduate Study.” Curricula for major studies are described under the various academic areas.

Programs leading to master and doctoral degrees are administered by the Graduate School. They are described in the Announcement of the Graduate School and in announcements published by the individual field offices (Design and Environmental Analysis, Human Development, Nutrition, Policy Analysis and Management, and Textiles and Apparel). For information regarding The Sloan Program in Health Services Administration, contact the Department of Policy Analysis and Management.

UNDERGRADUATE DEGREES
Bachelor of Science (B.S.) degrees are offered in the following areas:

- Biology and Society
- Design and Environmental Analysis
- Human Development
- Human Biology, Health, and Society
- Nutritional Sciences
- Policy Analysis and Management
- Textiles and Apparel
- Individual Curriculum

Counselors in the Office of Admission, Student, and Career Services (172 MVR) can help perspective students understand college programs and requirements, as well as college and university resources and services. They provide a broad range of career services and personal support for all matriculated undergraduates. The college registrar (1145 MVR) assists undergraduates with questions on academic credit and graduation requirements.

The Student Body
The College of Human Ecology undergraduate enrollment is 1,435. Roughly 350 students graduate each year; last year 268 freshmen and 188 transfer students matriculated. Ninety-five faculty members serve as advisers to undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is highly selective. Approximately 69 percent of the student body comes from New York State, with the remainder coming from other parts of the United States and abroad. In 1999, 29 percent were identified as members of minority groups. Approximately 220 graduate students have members of the college's faculty chairing their special committees. The college awarded 59 master's degrees and 29 doctorates last year.

Mature Students
The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of younger undergraduates. To facilitate the education of mature students, defined as those 24 years old or older at first matriculation, the college has adopted certain procedures specifically for that group. Counselors in the Office of Admission, Student, and Career Services (172 MVR) can provide information of interest to mature students. Mature students are permitted to enroll for as few as six credits without petitioning for permission and also are permitted to extend their residency beyond the normal eight terms. To qualify for prorated tuition, mature students must see the registrar about plans before registration each semester.

Special Students
Students eligible for special status are those visiting from other institutions and interested in particular programs in the college; those with a bachelor's degree who are preparing for graduate study or jobs and careers in human ecology–related fields; or those who have interrupted their education and are considering completing degree programs. Students accepted in the nondegree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester. Special students are
expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the statutory divisions of the university. Courses taken while a person is counted as a special student may be counted toward the requirements of the bachelor’s degree. Those interested in becoming special students should make appointments to discuss admission procedures in the Office of Admission (170 MVR, 255–5471).

Empire State Students
Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Study, and Related Programs (B20 Day Hall, 255–4987). All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor. At the time of registration, Empire State College students must provide the extramural division with a completed copy of Empire State College’s notification of cross-registration (form number, SA-22, F-031) to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

Transfer students
Students who enter the College of Human Ecology after the first semester of their freshman year are considered transfer students. An internal transfer student is one who transfers to Human Ecology from one of the other colleges at Cornell University. An external transfer student is one who transfers to Human Ecology from an institution outside of Cornell University. Internal transfer students should take special care to learn the policies of Human Ecology because each college at Cornell operates under a different set of rules. Staff in the Office of the College Registrar (145 MVR, 255–2255) and in the Office of Admission, Student, and Career Services (172 MVR, 255–5471) are available to answer students’ questions. External transfer students may transfer a maximum of 60 credits to the college. Both internal and external transfer students should contact the Office of the College Registrar to discuss how the transfer credit will apply to the various degree programs.

MAJORS
The college requires students to fulfill requirements for one or more majors in order to graduate. Students must declare a major by the end of the sophomore year, and may elect to complete more than one College of Human Ecology major. It is common for students to change majors during their undergraduate careers. Counseling is available in the office of Admission, Student, and Career Services (172 MVR) and directors of undergraduate study in each of the academic departments can help students consider their options and engage in academic planning. All changes of major require submission of the Change of Major form, and are processed through the College Registrar’s office, 145 MVR. Change of major will trigger re-evaluation of credit and assignment of a new faculty adviser.

DESIGN AND ENVIRONMENTAL ANALYSIS
The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing interior environments to satisfy needs. Most people spend over 90 percent of their lives inside buildings. Those settings have substantial and far-reaching effects on the quality of our lives. The processes for creating and maintaining the built environment face enormous challenges, including frequent social and organizational changes, technological advances, new building methods, and finite resources. The program in DEA is dedicated to preparing professionals who can meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Excellent laboratories, shop, studio, and computer facilities for computer-aided design integrate innovative concepts for the design and management of interior environments. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the MVR gallery. The DEA Resource Center includes books, journals, newsletters, and material samples for student use.

Options
The department offers undergraduate education in three professional areas: interior design, facility planning and management, and human factors and ergonomics. The interior design option is accredited by the Foundation for Interior Design Education Research (FIDER). The Facility Planning and Management Program at Cornell is an “IFMA Recognized Program.” This means that it meets the standards for quality of programs established by the International Facility Management Association.

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option may need one or two extra semesters to complete the program.

Option I: Interior Design
The interior design option prepares students for professional careers in the planning and design of interior spaces and associated products. The program emphasizes a problem-solving approach based on knowledge of buildings and their associated systems, furnishings and interior products, human-environment relations, and design principles. Some students combine this program with another option.

Careers are available in interior design and space planning, interior architecture, facility planning, interior product design, and housing. This option provides an excellent preparation for graduate study in interior design, facility management, architecture, and product design.

Option II: Facility Planning and Management
This option is designed to prepare students for professional careers in facility management. The program focuses on the planning, design, and management of facilities within complex organizations such as corporations, health-care institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate, and business administration with human factors, ergonomics, environmental psychology, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.

Excellent career opportunities exist in the facility management divisions of private companies, institutions, the health-care industry, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

Option III: Human Factors and Ergonomics
Human factors and ergonomics focuses on the interaction between people and their physical surroundings. This option seeks to expand understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior. This knowledge is then used to help architects, planners, interior and product designers, and facility managers to plan, design, and manage facilities that support individual and social environments. The effect of human capabilities or characteristics such as family structure, lifestyle, social class, and stage-in-life cycle on environmental needs and requirements is also a focus of the program. Career opportunities are available in design firms and in urban planning and other public agencies as well as in the facility management and product design division of private companies. Human factors and ergonomics is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

Academic Advising
All DEA majors are matched with a faculty adviser during their first semester by the director of undergraduate studies, William Sims, in E214 Martha Van Rensselaer Hall. Consultation with faculty advisers about future goals, departmental requirements, sequences of courses, and electives is strongly encouraged. Outside the college helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many possible and for application to graduate schools. Faculty advisers can make recommendations on what to include. Students are free to change advisers. Although advisers must sign the
Ownership and Exhibition of Student Work

All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

HUMAN BIOLOGY, HEALTH, AND SOCIETY

The Human Biology, Health, and Society (HBHS) Program permits you to combine your interests in the biological sciences while exploring human health issues from the perspectives of both the biological and behavioral sciences. HBHS majors select the issues they want to explore in depth from Human Ecology courses that address health and the broad range of factors that influence human well-being. Examples of issues you can explore include: biology and behavior; metabolism, genetics, and health; biology, growth, and development; and food and health policy and health promotion. Most students in this program will proceed to programs of advanced study to pursue careers related to health. This new major is offered by faculty in the Division of Nutritional Sciences. More information about this program can be found in a separate section of the catalog that describes the division’s programs.

HUMAN DEVELOPMENT

Human Development majors explore the psychological, social, cultural, and biological development concepts from conception to old age, focusing on the processes and mechanisms of growth and change over the life course. A wide range of issues are included in the study of human development, including physical, cognitive, and emotional development; the role of family, neighborhood, workplace, and culture in development; and the influence that developing humans have on their environment. The Human Development major provides an excellent foundation for many careers, such as medicine (particularly family medicine, pediatrics, and psychiatry), clinical psychology and other mental health professions, law, business (especially human resources), child and family advocacy, and education (from preschool to high school teaching to school administration). The major prepares students for academic careers as professors in human development, psychology, or sociology departments. Learning about human development also helps students understand more clearly their own development and the development of those around them.

The faculty of the Department of Human Development comes from several disciplines, including developmental and clinical psychology, sociology, and history. The diversity of faculty expertise results in a wide-ranging view of human development. The research of the department’s faculty is extensive. It includes basic research on issues such as the neurobiology of personality, the role of childhood attachments in the development of adult romantic relationships, the acquisition of language in infants, and the effects of environmental toxins on children’s cognitive development. It also includes applied research useful for the creation of public policy such as studies of the causes and consequences of child maltreatment and studies of the effectiveness of reading programs for Headstart preschoolers, apprenticeship programs for high school students, and support programs for Older adults moving into retirement communities.

Curriculum

Human Development is the most flexible major in the College of Human Ecology. While all students learn the fundamentals of human development, each student can focus on one or more areas of particular interest. The flexibility of the major also allows students ample opportunity to meet the requirements for admission to many professional schools, including medical, dental, law, and business schools.

Requirements specified by the College of Human Ecology make up part of each student’s curriculum, and include classes in the social and natural sciences, humanities, writing, and communication. In addition, there are requirements for the Human Development major. Students in this major can choose up to 14 elective courses from the broad range of offerings across the Cornell campus.

Special Opportunities

Beyond formal coursework, students have many other opportunities that involve ongoing individual work with Cornell faculty or other professionals. Academic credit can be earned simultaneously through all of them. These opportunities include

Field Placements. Human Development majors can arrange internships with Urban Semester in New York City, Cornell-in-Washington, and other programs and in local agencies. These have included hospitals, psychiatric hospitals, juvenile detention centers, retirement homes, and the department’s on-campus Early Childhood Program. Students have also participated in projects with the Tompkins County Office of Aging, the Tompkins County Youth Bureau, and the Law Guardian’s Office of Tompkins County.

Faculty Research. Many students work as research assistants on faculty projects. Students use research techniques ranging from laboratory procedures to family observations to large surveys. They assist in study design, data collection, and data analysis. Participation in faculty research provides the type of experience that many graduate and professional schools expect from their top applicants. What are the roles of nutrition and environment in fuel choice? What nutrients and dietary patterns are recommended to promote growth, maintain health, or reduce the risk of chronic disease? Students in this program may also fulfill the requirements for professional membership in the American Dietetic Association, which will enable them to be employed as nutrition counselors, clinical nutritionists, sports nutritionists, or administrators of food and nutrition services. Students also may prepare for medical school and other types of food advanced degree programs through this major.

The requirements for this program are outlined in the section of this catalog that describes the division’s programs.

Special Opportunities

Dietetics and Clinical Nutrition

Interested students should complete the following requirements for the American Dietetic Association (ADA). Courses in foods, nutrition and disease, microbiology, management, statistics, and economics are added to the core curriculum (specific requirements). Evaluation of academic performance and membership in ADA should be
be completed before graduation. Seniors should initiate this academic evaluation process in March if they will graduate in January or in September if they will graduate in May. All students who will complete the academic requirements by graduation should participate in the evaluation process while at Cornell. Students who meet most but not all of the academic criteria are encouraged to have their academic work evaluated while they are at Cornell so that deficiencies can be identified and documented.

Advisers in the dietetics program can also help students plan to meet the experience or supervised practice component required for active membership and/or eligibility to take the registration examination to be certified as a registered dietitian (R.D.). For additional information about meeting ADA requirements, contact Marie Kampo (373 MVR, 255-2636).

Exercise Science Minor

Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in fitness measurement, exercise physiology, and biomechanics of human movement. Nutrition courses of special interest relate to growth and development, regulation of body weight, and community nutrition and health. For information about the Applied Exercise Science Concentration, contact the DNS Academic Advising Office (309 MVR, 255-4410).

POLICY ANALYSIS AND MANAGEMENT

The Policy Analysis and Management (PAM) major produces graduates skilled in policy analysis, program planning, and evaluation and possessing management skills applicable in the public, nonprofit, and private sectors. In addition, the Policy Analysis and Management graduate will have concentrated knowledge in one of three areas: family/social welfare, health, and community nutrition and health. Graduates are well-qualified for a wide variety of public, nonprofit, and private sector employment emphasizing either program analysis and evaluation or management. The major also attracts large numbers of pre-MBA students, pre-MBA students, and students intending to pursue graduate education in public affairs. The overall mission of the college, emphasis on policy and management includes a panoply of governmental and private sector income maintenance, social, and human services, delivery programs and policies that range from child adoption and child neglect and abuse policies and anti-poverty programs to policies and programs that impinge on or regulate marriage, divorce, and fertility. Health programs and policies include the more traditional applications found in public health, family, health, or consumer policy. These concentrations may emphasize either policy analysis or management skills. Finally, PAM majors will have the opportunity to participate in departmentally approved experiential learning. Please check with the undergraduate advising coordinator, Professor Alan Mathios, for further details.

TEXTILES AND APPAREL

The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, durable and nondurable household goods, composites, geotechnical, and biomedical applications. Programs in the department, in keeping with the overall mission of the college, emphasize the use of materials to meet human needs. The curriculum includes the application of design principles, physical and materials science, economics and marketing, government policy/regulation, management of products and their delivery, and technological developments.

Practical problem-solving skills are developed in the department's laboratories and studios. Academic course work is further enhanced by field and international experiences. Gallery space provides the setting to display design work; in addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource; items from the collection are made available to students for classroom and special-study use.

Academic Advising

All TXA majors are matched with a faculty adviser by the director of undergraduate studies, Anita Racine (316 MVR). Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty adviser. Students in apparel design must begin working with their advisers early to develop a professional portfolio of their work. Students are free to change advisers; changes must be recorded with the advising coordinator. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for their major and college.

Ownership and Exhibition of Student Work

All apparel design work done as part of the academic program is the property of the department until it has been released by the instructor. Certain exceptional work may be retained by the department to exhibit for academic purposes. The department is not responsible for the loss or theft of student work.

Options

Students may select options in apparel design, apparel/textile management, or fiber science. The curriculum is based on manipulation of form, color, and the physical characteristics and properties of materials. These concentrations may need one or two extra semesters to fulfill the requirements of the major.

Option I: Apparel Design

The study of apparel design includes both aesthetic and functional considerations in the design of body coverings. The program emphasizes problem-solving approach that enables the student to bring a background in apparel, textiles, and human factors to the design process.

Option II: Apparel/Textile Management

Apparel and textile management combines the fields of apparel and textiles with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, economics, business management, and communication, as well as practical field experiences. This provides students with the experience of working with professionals from a wide variety of disciplines. Students often combine this option with either Option I (Apparel Design) or III (Fiber Science).

Option III: Fiber Science

Applications for textile structures include advanced engineering composites, protective clothing for industry and military environments, and biomedical materials, as well as the more traditional applications found in apparel and home furnishings. The fiber science option provides a strong base in mathematics and the physical sciences combined with supporting courses in...
engineering, consumer economics, and the social sciences.

Career Opportunities
Grades of programs in the Department of Textiles and Apparel have found challenging employment within the textile and apparel sector, in independent and government-sponsored research, and in community organizations. Recent graduates are working in the fields of design, management, new product development, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in fiber and polymer science, textile marketing, apparel design, textiles, or business and management.

INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY
Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the role of medical care, and the relation between biology, society, and ethics and/or public policy, as well as for students who plan to graduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, including courses in the fields of mathematics, biology, humanities, and social sciences. In addition, majors are required to take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology may be selected from concentrations in human development and the environment, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating these required courses are designed in consultation with a faculty adviser to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see the advising coordinator in MVR 205. Academic advising is coordinated by the Director of Undergraduate Studies.

INDIVIDUAL CURRICULUM
A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition the director of undergraduate studies for major specific information. The Bronfenbrenner Life Course Center, offers the special research opportunity to students interested in the honors program, it is important to contact the director of undergraduate studies (DUS) in your department or division for information and guidelines.

SPECIAL OPPORTUNITIES
Several programs allow students to receive academic credit for fieldwork and internship experience, study abroad, study in absentia, college-wide certificate programs, and joint programs with other schools and colleges at Cornell. Students may petition the college registrar to have concentrations that are formally recognized elsewhere within the university noted on their transcripts, when accompanied by appropriate documentation from the program.

Study Abroad
Each year nearly 100 Human Ecology students spend a semester or more off campus in such remote points of the globe as Australia and Zaire. There they supplement their Cornell studies with a wide range of cross-cultural and academic experiences. Study abroad opportunities are available through Cornell Abroad, U.S. college-sponsored programs abroad, and individual applications at foreign universities. All study abroad students must meet college study abroad requirements and remain registered at Cornell during the overseas study. Credits earned count towards the 60 Cornell credits required for graduation. Study abroad credits do not count toward the maximum number of endowed credits that Human Ecology students are permitted to earn. Typically, students considering study abroad begin their planning at least by September or October of their sophomore year.

To start:
• Carefully consider what it is you hope to get out of a study abroad experience (academically and culturally). The Cornell Abroad Center (474 Uris Hall) houses the largest on-campus collection of materials on programs around the world. The Human Ecology Career Development Center (159 MVR) has additional materials.
• Pick up an application from the Office of the Registrar (145 MVR).
• Meet with the college's study abroad adviser (172 MVR). The adviser, with the college registrar, will help you complete the application, plan for your semester off campus, and secure the necessary signatures.
• Submit your application to the Office of the Registrar. Deadlines are early February for study abroad the following fall term, and early October for study abroad the following spring term. Please note that some programs fill up quickly and applications to these most popular programs should be submitted several months before these deadlines.

Independent Research
Research opportunities for undergraduates are extensive and valued as an important part of the learning experience. The opportunity to engage in substantive research with some of the leading scientists in their fields is so compelling that at least a third of the college's undergraduates conduct research projects. Students may become involved in research with the guidance of faculty members by conducting research assigned in a class, joining a faculty member's research group, completing an independent study research project, or carrying out an honors program project.

For further information, contact individual faculty members or the director of undergraduate studies (DUS) in your department.

Hons Programs
Students interested in college honors programs that lead to the degree "bachelor of science with honors" usually apply to the appropriate honors committee no later than the end of the sophomore year. Generally, a minimum grade point average of 3.3 and demonstrated potential for honors-level research is required. Students take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and defend it in an oral examination.

In addition to the college honors program, special programs are offered by the Department of Human Development and the Division of Nutritional Sciences. If you are interested in the honors program, it is important to contact the director of undergraduate studies (DUS) in your department or division for information and guidelines.

Field Study and Internships
Field study and internships provide experiential learning opportunities in real-life circumstances where classroom knowledge is tested and applied. Students are able to master new skills, develop and implement plans of action, solve problems, interact in multicultural situations, and build networks for future job opportunities. By applying techniques of research methods, critical thinking, and self-directed learning, students learn to think conceptually while becoming agents of change.

Check with the Director of Undergraduate Studies for major specific information. The Career Development Center (159 MVR) can also provide resources and assistance in finding internships and other experiential opportunities.

Concentration/Certificate in Gerontology
For students interested in pursuing study related to aging, the College of Human Ecology, under the auspices of the Bronfenbrenner Life Course Center, offers the option of completing an undergraduate concentration in gerontology. This program is
The concentration is available in combination with many majors offered by the university. Twelve credit hours of course work must be completed with nine of these taken in the College of Human Ecology. The courses explore aging through biology, psychology, sociology, economics, and design.

Experiential learning opportunities are strongly recommended as a complement to classroom work. With faculty sponsorship, students can participate in experiences in the Ithaca area, the Urban Semester in New York City, Cornell-in-Washington, the Capitol Semester, or in a placement arranged more individually.

Both Cornell and Ithaca College offer courses that incorporate a service-learning component into their curriculum. Cornell's course, "The Culture of the Elderly," (PAM 375) has placements in a variety of local agencies (e.g., Office of Aging, Housing Authority, IthacaCare) where students gain valuable experience with the different ways communities make it possible for adults to remain independent. This course and others at Ithaca College are sponsored by the Ithaca Partnership for Service Learning in Elder Care. They offer a variety of options for combining volunteer service with classroom experiences. Opportunities for undergraduates to become involved in research projects, such as the Pathways to Life Quality Study, a new Cornell University/ Ithaca College longitudinal study of residential changes and adjustments in the later years are also available. In addition, senior students can apply to work as a teaching assistant for a gerontology course.

Departments and programs have designated academic advisors in gerontology who will help students plan the courses of sequences and electives needed to complete both a major and the gerontology concentration. Because many gerontology courses have prerequisites, early and careful planning is essential.

Specific program requirements may be obtained in the Office of the College Registrar (145 MVR, 255-2235) or from Donna Dempster-McClain, Bronfenbrenner Life Course Center (G20 MVR, 255-5557).

**General Concentration**

Students may develop a concentration in additional fields taught at Cornell by taking 12 credits in approved area. Computer science, Africana Studies, Women's Studies, communications, or business are just a few examples of concentrations that are possible.

---

**THE URBAN SEMESTER PROGRAM IN NEW YORK CITY**

**Multicultural Issues in Urban Affairs**

Sam Beck, Ph.D., director

The Urban Semester Program is a set of courses spanning the entire year. During fall and spring semesters, students enroll in three courses focusing on the opportunities and barriers that a multicultural society presents and their relationship with professional, community, or public policy settings and concerns (15-credit residential program). Students intern three days each week in placements of their choosing. One day each week, students carry out community service in an inner city school (pre-K to high school). One day each week, students participate in site visits. Seminars are incorporated into these activities. All students reside in the Olin Hall dormitory of the Weill Medical College of Cornell University.

The two-week winter intercession program, "Urban Semester," (two credits) enables students to carry out community service through a reflective practice and problem-solving curriculum. In the eight-week summer semester (one to two credits), students carry out internships in placements of their choosing. Students work with the program staff to locate internship placements. For information, contact the Urban Semester Program staff (159 MVR, 607-255-1846) or the Urban Semester Program in New York City at 212-746-2277.

New York City offers a wide variety of internship settings. Many bilingual and bicultural internship settings are available in Chinese, Spanish, Creole, Russian, Yiddish, and other languages. Examples of internships follow:

**Health and Medicine**—New York-Presbyterian Hospital/New York Weill Cornell Center, Queens Medical Center for Women and Children, South Bronx Health Center for Children and Families, Memorial Sloan Kettering Hospital, Hospital for Special Surgery, Montefiore Hospital, Columbia Presbyterian Hospital, Gracie Square Hospital, Our Lady of Mercy Hospital

**Private and Public Law**—NOW Legal Defense and Education Fund, Agenda for Children Tomorrow, Skadden Arps, Slate, Meagher, & Flom, Lawyers for Children; DA's Office; Legal Aid Society; AALDEF, Committee Against Anti-Asian Violence; Center for Immigrant Rights; NAACP-LDF, Dorsey & Whitney

**Government and Community Agencies**—Cornell University Cooperative Extension, Senator Charles Schumer's office, NYC Housing Authority, Department of Aging, Women's Action Alliance, NYC Commission on the Status of Women, NYC Department of Consumer Affairs, The Center for Puerto Rican Studies, Manhattan Borough President's Office, Central Park Wildlife Center, Attorney General's office

**Private Not-for-Profit Organizations**—City Lights Youth, Council on Economic Priorities, Planned Parenthood, Talbot Perkins, FEGS, National Resources Defense Council, Urban Youth Alliance Inc., Phipps Housing, The Door, Covenant House, Global Policy and International Law, UN International Association of Religious Freedom, Mothers and Others for a Livable Planet, UN Child Care Center, WHEDCo

**Private and Public Schools**—Beginning with Children, Banana Kelly H.S., East Harlem School at Exodus House, The Hetrick Martin Institute, Nuestros Ninos, Theodore Roosevelt HS, The Choir Academy of Harlem, El Puente, Genesis RKF Center, River East School, MS 118

---

**Other Off-Campus Programs**

**Capital Semester**

Combine a full semester of Cornell credit with a three-day-a-week paid internship of $3,000. Students intern directly for New York State legislators in Albany to explore their interests in greater depth, doing research projects, meeting with lobbyists and constituents, writing reports for legislation and publication, and working on legislative hearings. This is great experience for law, graduate school, and employment. It is available for the spring semester only with preference given to juniors. Visit the Career Development Center (159 MVR) for more information and applications. Applicants must meet with Professor Charles McClintock before completing an application (N117a MVR, 255-2514, ccml@cornell.edu).

**Cornell-in-Washington**

Students take courses from Cornell faculty, conduct individual research projects, and work as externs while taking advantage of the rich resources of the nation's capital. For more information, visit the program office (471 Hollister Hall) or refer to the web site at www.info.cornell.edu/ciw/.

**Courses at Ithaca College and Wells College**

Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca or Wells College. Students pay regular full tuition to Cornell and only special fees to either Ithaca or Wells where applicable. Students are allowed to register for one course per term and a maximum of 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice teaching courses at Ithaca and Wells, and those students pursuing a concentration in exercise
science through a specially arranged program with Ithaca College.

Cornell students are eligible to register only for Ithaca and Wells College courses that are relevant to their program and that do not duplicate Cornell courses. Ithaca and Wells College credit counts as Cornell credit, but not as Human Ecology credit. Students are accepted on a space-available basis. Participation in this program is not guaranteed, and both Ithaca and Wells have the right to accept or reject students for any reason deemed appropriate. The program is available only during the fall and spring semesters. For further information, contact the college registrar (145 MVR, 255-2235).

Double-Registration Programs

Five-Year BS/MPS in Health Care Administration

Undergraduates from HBHS and PAM are eligible to apply to the Sloan Program in their junior year for a five-year B.S./M.P.S. degree. During their senior year, students will take first-year Sloan courses which will be counted twice to satisfy both undergraduate as well as graduate requirements. Also during this year, students will complete a graduate school application and take the GRE or GMAT test. At the end of their senior year, students will graduate with a B.S. degree. If the students’ grades and test scores are competitive, they will be notified during the spring semester of their senior year that they have been formally accepted into the Sloan Program.

Those students accepted will participate in a health care administration residency during the summer after earning their BS. The following year they will complete the second year of required Sloan courses and earn a Masters in Professional Studies with Cornell certifying completion of requirements in a degree in health administration.

Double-Registration Program for Law

A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding academic and personal qualifications and demonstrate professional motivation. The junior year applicant follows the ordinary application procedures for Cornell Law School admission.

Interested students should contact the Law School director of admissions (Myron Taylor Hall, 255-5141) to discuss the admissions criteria. Because students accepted to this program will be spending their senior year away from Human Ecology, they need to plan ahead to ensure that distribution requirements for the BS degree will be met. Successful applicants need the approval of the college registrar in Human Ecology.

ACADEMIC ADVISING AND STUDENT SERVICES

Facility Advisers

Students who choose to major in a particular department are assigned an adviser whose special interests match their need. Students may change advisers as their own interests change by working with the director of undergraduate studies (DUS).

Faculty advisers are available to discuss course requirements and sequences, useful electives inside or outside the college, as well as future goals and career opportunities. Although advisers may provide the primary key number (PIN) during course enrollment each term, it is the student’s responsibility to make sure that his or her program meets graduation requirements for the major and the college. Directors of undergraduate studies in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors.

Office of Admission, Student, and Career Services

The Office of Admission, Student, and Career Services (ASCS) (172 MVR) is a center for student orientation activities; academic, personal, and career advising; study abroad; and minority student programs.

Personal counseling, including exploration of personal problems or concerns of a personal nature, is available to all students. These ASCS counselors, however, are not psychiatrists or therapists; they are available to help students understand and navigate the Cornell system, and to offer support, assistance, and referral. Discussions are completely confidential. Appointments may be made through the receptionist in ASCS or by calling 255-2532.

In addition, ASCS provides support for several student organizations, including Human Ecology Ambassadors, the Mature Students Association, the Association for Students of Color, the Pre-professional Association, and Human Ecology Voices. ASCS also provides leadership to groups such as the Human Ecology Council. The college’s primary responsibilities of the office are listed below:

Academic advisement. This service is provided to all students as an adjunct to faculty advising. Counselors can assist in course scheduling, academic planning, selection of a major, graduation requirements, and related issues.

Undeclared majors. Students who have not yet declared a major are urged to work closely with student services staff to plan their program of study. For the period a student is undeclared, counselors will provide assistance during course enrollment.

Career counseling. Career counseling is designed to help students clarify the relationship between personal skills, abilities, and career goals. Services are offered on an individual or group basis. Counselors assist in identifying career outcomes of the majors, discuss employment trends in various fields, and suggest courses and materials appropriate to various career goals.

Post graduate advisement. Material pertaining to graduate and professional schools, graduate entrance examinations, courses of study, and career outcomes is readily available.

Students with disabilities. The college is committed to assisting students with disabilities. Students who have special needs are urged to see a counselor in ASCS when they arrive on campus.

Financial aid. Students who encounter financial difficulty or anticipate running short of funds may discuss their needs with a counselor. Complete information is available from the Office of Financial Aid, 203 Day Hall. The Human Ecology Alumni Association Career Award Fund is available to eligible Cornell students with unexpected financial problems. Applications may be made through ASCS.

Office of the Registrar

The Office of the University Registrar (222 Day Hall) maintains the official academic records for the university and provides students with their official university transcripts. Additional information is available on the university registrar’s web site: www.sws.cornell.edu/our/. The college registrar (145 MVR) maintains students’ official academic records, including the audit of progress toward the degree. The college registrar also provides services such as adding and dropping classes, correcting student records, issuing letters verifying that a student is registered, and approving the transfer of credit from other institutions.

Minority Programming

The College of Human Ecology at Cornell University believes that a diverse community enriches the educational process for all members of the college community. Consequently, the college focuses particular efforts on a broad range of services for students of color. This includes not only recruitment but also services for students already on campus. Additionally, the college cooperates with university and New York State programs to assure Human Ecology students access to the vast array of services available here.

The professional staff of Human Ecology’s Office of Admission, Student, and Career Services includes a director of multicultural programs who assists in the recruitment, admission, and enrollment of the most qualified and appropriate EOP (a program for New York State residents), African American, Native American, Hispanic American, and Asian American students to the college. All EOP students are invited to a special university-wide pre-freshman summer program that introduces accepted students to the Cornell campus and its classrooms. Services for current students include EOP/COSEP, academic, career, and personal counseling; recommendation letters for employment or graduate schools; and advising and support for student activities and programs.

The Human Ecology Partnership Program provides mentorship through a network of faculty and upper-class students to all incoming students of color, particularly during their first year. In addition, this office serves as a liaison to the Office of Minority Educational Affairs (COSEP), State Programs (EOP), and the Learning Strategies Center. Students are also encouraged to visit the college’s Career Development Center to enhance personal career exploration and decision making.

Selected programs include the following:

BBMTA (Black Biomedical and Technical Association). A university organization that provides enrichment and networking for minority students interested in pursuing medical careers. For more information, contact Janice Turner (55 Goldwin Smith, 255-5004).

The Human Ecology Partnership Program
ASC (Association for Students of Color). With the motto "Yesterday's vision, today's reality, and tomorrow's hope," the ASC was created to bring together Human Ecology students to provide a supportive foundation for enrollment, retention, graduation, and career placement of students of color.

The goals of the ASC are to increase communication between students of color, administration, and faculty; assist in increasing enrollment of students of color in Human Ecology; and assist in increasing the retention of students of color in Human Ecology and in their selected majors.

ASC's four committees are recruitment, student relations, career development, and peer advising. For more information contact Verdense Lee (172 MVR, 255-2532).

Human Ecology Peer Partnership Program was created in 1990 to help incoming students of color transition to the college and university. Small groups of freshmen, usually about six to eight students, are paired with faculty and upperclassmen. They meet weekly for discussions, guidance, and exploration of the Cornell campus and the Ithaca community. For more information, contact Verdense Lee (172 MVR, 255-2532); Gary Evans in the Department of Environmental Analysis (E306 MVR, 255-1775); or Lorraine Maxwell in the Department of Environmental Analysis (E310 MVR, 255-1956).

CSTEP: The College Science and Technology Entry Program is the New York State program of enrichment for pre-med and pre-law New York State residents. Students are targeted at populations who are historically underrepresented in scientific, technical, health-related, or licensed professions or who are economically disadvantaged and who demonstrate interest in, and potential for, a CSTEP-targeted profession. For more information, contact Verdense Lee (172 MVR, 255-2532).

Multicultural Education

Multicultural education broadens understanding of the world's many different societies as well as the various cultures of this country. Students take courses in the Cornell programs listed below that may be used to meet degree requirements. The college encourages students to incorporate courses from these cultural programs and from study abroad experiences in their degree programs. See information on study abroad opportunities.

Africana Studies and Research Center
American Indian Program
Asian American Studies Program
East Asia Program
Gender and Global Change
Institute for European Studies
Languages and Linguistics
Latin American Studies Program
Latino Studies Program
Peace Studies Program
Program in Jewish Studies
Program for Contemporary Near Eastern Studies
Religious Studies
South Asia Program
Southeast Asia Program

Women's Studies Program

International Students

The International Students and Scholars Office (ISSO, B50 Caldwell Hall, 255-5243) provides a broad range of services to international students. All international students should maintain contact with the ISSO. Counselors in ASCS are also available for assistance.

International students in the College of Human Ecology are encouraged to meet with the college registrar to discuss any questions or concerns that they have about their academic record.

Career Planning, Graduate and Professional School, and Job Search Services

Counseling: The Office of Admission, Student, and Career Services (ASCs, 172 MVR, 255-2532) provides career counselors and resources in the Career Development Center to help students assess possible career outcomes and access educational and extracurricular programs and resources to prepare for those careers. Assistance is available through one-on-one advising or group programming. The office works with the Cornell Career Services (193 Barnes Hall, 255-5221) to facilitate access to larger, university-wide programs.

The Career Development Center (CDC, 159 MVR, 255-2532) is a starting point for students looking for career information. Selected resources about career planning and job search techniques, general directories to begin job or graduate school searches, and information for alumni networking are housed here. Also available are Cornell Career Services handouts and registration forms, graduate and professional school testing booklets and registration packets, study abroad, and urban semester materials. Computer terminals provide access to web-based information regarding internship and employment opportunities as well as graduate/professional schools.

The CDC is open most days from 9:00 A.M. - 5:00 P.M. throughout the week, closing at 4:00 P.M. on Friday. Student career assistants are available during these hours to provide resume and cover letter critiques, conduct mock interviews on video, and help navigate the library resources. Final critiques can be provided by a career counselor once the student review has been completed.

The CDC also provides information on the Urban Semester Program. Former participants comprise a portion of the CDC staff and are available daily to answer questions about the program and its application process. Selected services are listed below. They will help you investigate your interests, skills, and values as they relate to career options; provide you with useful information and tips for a successful summer or full-time job search; and provide access to employment opportunities. In addition, please refer to the college's career services web site: www.career.cornell.edu/ccs/college_pages/human_ecology/

PreLaw or Premed: Students who consider themselves prelaw or premed are encouraged to join a student group affiliated with ASCS. Those interested in a law career can join PLUS (PreLaw Undergraduate Society) where information on applying to law school, preparing for the LSAT, and examining career opportunities in law is provided. Students interested in pursuing a health-related career are welcome to join PATCO (Pre-professional Association Towards Careers in Health) which serves as a link to the university health careers network and provides guidance as students prepare for the MCAT, apply to medical school, and explore the various specialties of medicine.

Extern Program: Spend one day to one week over winter break shadowing an alum in a career field of your choice. Observe day-to-day activities, discuss specific jobs and careers, and sometimes obtain limited hands-on experience. This service is available to sophomores, juniors, and seniors.

Student Jobs and Internships: This is an electronic listing of information about internships and career-related summer and academic year employment that is exclusive to Cornellians.

Alumni Career Presentations: Alumni from the college come back to campus throughout the year to discuss their experiences or professional experiences. These meetings are ideal for exploring career outcomes of specific majors.

AlumNet: Students have access to Human Ecology alumni who can provide information on their careers and offer suggestions on a job search in their particular area or field. Students can query alumni on a host of variables and review selected alumni resumes to learn more about specific careers.

Job Search Workshops: These workshops are designed to help students market themselves for either summer or full-time job opportunities. Students learn how to conduct an effective job search, write a resume and cover letter, and interview successfully.

Jobtrak: Jobtrak provides a listing of job opportunities available exclusively for Cornell students. Most are full-time jobs, although some summer opportunities are listed. Search by career field, geographic location, or both.

On-campus Recruiting: This service provides access to on-campus interviews with employers interested specifically in Human Ecology students as well as employers looking for Cornell graduates in general. Interviews occur primarily in banking and financial services, retail sales and management, and consulting, along with a few nonprofit organizations. All activity regarding on-campus recruiting is handled through Interactive, our web-based listing of employers.

New York Recruiting Consortium: Available exclusively to Human Ecology and Arts and Sciences students, the New York Recruiting Consortium offers interviews for full-time employment with employers involved in banking and financial services, retail sales/management, advertising, law, and consulting in New York City over winter break.

NFP in New York City and NFP in Washington, D.C.: Speak with representatives from dozens of New York City and Washington, D.C. not-for-profit/public service agencies about work or internship opportunities in health, education, advocacy, government, and more (occurs only during the spring semester).
GRADUATION REQUIREMENTS AND POLICIES

It is important for students to track their graduation progress by comparing their current transcript with an appropriate curriculum sheet. Unofficial transcripts and curriculum sheets are available in the Human Ecology Registrar's Office (145 MVR Hall). The office also keeps a graduation progress record for each student and distributes a copy prior to the start of the fall term. Students should compare this record against their own worksheet for any errors or omissions.

Cornell Credit Requirements

- To graduate, a student must earn a minimum of 120 academic credits. An unlimited number of credits that may be taken in Cornell's endowed colleges.
- Of the 120 credits required to graduate, at least 60 credits must be earned at Cornell University.

Human Ecology Credit Requirements

- The college divides the 120 required academic credits into four general categories. (Refer to curriculum sheets in your major for specific details on course selections. These sheets are available in the Office of the Registrar (145 MVR) and in the Office of Admission, Student, and Career Services (172 MVR) as well as on the college web site at www.human.cornell.edu.)
  a) Category I—College distribution requirements
     - Natural sciences
     - Social sciences
     - Freshman writing seminars
     - Humanities
     - Quantitative and analytical courses (math and statistics)
  b) Category II—Requirements for a major
  c) Category III—Electives (see definition below)
  d) Category IV—Physical education
- Students must complete a minimum of 40 Human Ecology credits in Category II.
- Within Category II, students must earn nine credits in Human Ecology departments outside the major.
- These Human Ecology courses outside the major may not include HE 100, HE 101, or any 403 course. A maximum of three credits of special studies outside the major (400, 401, and 402), or any internship credit may be applied to this requirement. A maximum of five credits of HE 470, HE 480, HE 490, or PAM 392 may be used.
- Human Ecology courses used to satisfy distribution requirements in Category I:
  1) WILL NOT count towards the 40-credit minimum in Category II.
  2) Will satisfy the nine-credit requirement for course work outside the major. (Exception: BKS majors must refer to the "NOTE" on BKS curriculum sheets at the end of Category II requirements for appropriate guidelines.)

Elective Credits

- Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and faculty advisers are available to discuss which courses may interest students and best round out their education.
- Students should consult the index in this book to learn where different subjects are taught in the university. Some subjects are taught in more than one division.
- Elective credits can be earned in the endowed and statutory divisions of Cornell.

Endowed Colleges

- Africana Studies and Research Center
- College of Architecture, Art, and Planning
- College of Arts and Sciences
- College of Engineering
- School of Hotel Administration
- Johnson Graduate School of Management

Statutory Colleges

- College of Agriculture and Life Sciences
- College of Human Ecology
- School of Industrial Relations
- College of Veterinary Medicine
- Students are allowed 21 credits of endowed electives; they may take more than 21, but will then be billed at the endowed rate of tuition for the extra credits.
- To the extent possible, courses taken in the endowed colleges will be counted to meet distribution requirements in Category I. More than 40 endowed credits taken in Category I, however, will count against the 21 allowed endowed elective credits.
- Endowed credits earned in Category II (even if the endowed courses are required for the major) and Category III will be counted against the 21.
- Required credits listed in the requirements charts for Categories I and II are the minimums; credits taken in excess of those minimums count toward the additional credits required in Category III to make a total of 120 credits (exclusive of physical education). An unlimited number of credits that may be taken in the statutory colleges of Cornell.
- Students may choose to take additional statutory credits and graduate with more than 120 credits.
- Elective credits in Category III earned in Cornell's endowed divisions during summer session, study abroad credits, in absentia credits, and transfer credits do not count against the 21 credits allowed in the endowed divisions.

Minimum Semester Requirements

- Freshmen and sophomore students are required to enroll in at least one Human Ecology course per semester (Economics 101 and 102 may be used to fulfill this requirement).
- Students must carry 12 credits each semester, excluding physical education, to be matriculated as full-time students (Exception: mature students).

Requirements for Majors

- Students must fulfill the requirements specified for a major that are in effect at the time of their matriculation or thereafter.

Grade Point Average

- Students must earn a minimum cumulative grade point average of 1.7 (C-) or better to graduate.
- To be eligible for the Dean's List, students must have a semester GPA of 3.7 with no F or U grades. At least 12 credits of letter grades are required.

S-U Grade Options

- The S-U grading option may NOT be used for courses in Category I or required courses in Category II unless it is the only grade option offered for those courses. S-U MAY be used for the nine credits of Human Ecology coursework outside of one's major and for electives in Category III.
- Students may apply no more than 12 credits of S-U towards graduation. If a required course is only offered S-U, it will not count towards this limit. Also, Honors Research 499 taken S-U does not count. Students may take more S-U's if they choose, but the additional credit cannot be applied towards graduation.

Special Studies

- Students may use only 12 credits of 400, 401, 402, or 403 courses toward graduation.
- Additional credits of 400, 401, 402, or 403 courses can be taken but will not be applied towards graduation.

“00” Courses

- “00” courses do not count towards graduation requirements but do count towards full-time semester status.

Wells, Ithaca College, and Study Abroad Credits

Any credits earned with the Wells or Ithaca College exchange program are considered Cornell credits for the purpose of fulfilling the 60 Cornell credit graduation requirement. They can not be used for Human Ecology credit. Study Abroad credits may also count as Cornell credit.

Physical Education

- Students must earn two credits of physical education within their first two semesters.
These two credits do not count as part of the 60 Cornell credits, or as part of the 120 total credits required for a degree, or towards full-time status. Students who matriculate at Cornell with 12 or more credits must complete only one credit of physical education. Students who transfer more than 25 credits (excluding AP credits) are not required to take physical education at Cornell, regardless of whether they took physical education at their previous college.

- Students must pass the university’s swim test. Students who transfer more than 25 credits (excluding AP credits) are exempt. Refer to page 13 of this book for specifics.

**Advanced Placement Credit**

Students can earn advanced placement credit from one of the following:

1. The requisite score on a departmental examination at Cornell (usually given during orientation week) or on a College Entrance Examination Board (CEEB) achievement examination. The requisite scores for the CEEB exams are determined by the relevant department at Cornell, vary by subject, and are listed in the beginning of this book (page 7).

2. A regular course taught at an accredited college or university within two years of taking the AP examination, subject to the approval of the relevant department at Cornell.

3. Credit from the international baccalaureate program sponsored by colleges but taught in high schools to high school students. This is often formulated. Some departments review each request individually. Some departments accept credit from virtually all colleges; some do not.

4. Credit from the New York State Board of Regents. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.

5. Credit of extramural credit toward their degree requirements. A student may enroll for extramural credit during the fall or spring semester only if he or she is not registered in the College of Human Ecology. For example, some students enroll for extramural credit before matriculating at Cornell.

An exception to this rule is credit earned in the Ithaca College or Wells College exchange. Students enrolled in these programs simultane­ously maintain their status as students registered in the College of Human Ecology.

**Humanities**

Only certain classes will count for Category I.D, Humanities. To determine eligibility the college uses the following definition: "The university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communica­tion of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must complete course enrollment according to individual college requirements; settle all financial accounts; and have no holds from the college. The Office of the Judicial Administrator, Gannett Clinic, or the Bursar.

Individuals must become registered students by the end of the third week of the semester. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons to attend classes in order to exercise student privileges to leave the university premises.

**Verification of Registration**

Many insurance companies or scholarship funds require verification of full-time registration at Cornell. Students need such verification, request an official letter from the Office of the University Registrar (B-7 Day Hall). Students who need letters of good standing should contact the Human Ecology Registrar’s Office (145 MVR).

**Bursar Bill**

A bursar bill is sent to each student over the summer and summarizes what is owed to the university. The bursar bill can also be viewed through Just the Facts. Any questions regarding the bursar bill can be directed to the Bursar’s Office (260 Day Hall, 255-2336). Initial New York State residency eligibility is determined during the admissions process, but the Bursar’s Office will handle any request for a status change after matriculation.

**Late University Registration**

A student clearing his or her financial obligations after the deadline date on the bursar’s bill is considered late. Late registrants are assessed a finance charge on the bursar’s bill starting from the date the bill is due. According to university policy, all students must be registered before the end of the third week of classes. If for any reason a student registers after that time, the Bursar’s Office will charge a late fee. Students who fall to register by the third week of the term may be withdrawn from the university. Should withdrawn students wish to return, they must reapply through the admissions committee.

**Proration of Tuition**

Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. (See the college registrar or counselors for more information.) Students of mature status may carry 6 to 11 credits without petitioning, but must request that their tuition be prorated. All requests should be made to the college registrar by the first week of classes and no later than the third week of the term.

**Course Enrollment**

**Initiating the process**

Students are expected to make course requests for the subsequent semester during a specified time in the current semester. Those dates are advertised publicly and available on the University Registrar’s web site (www.sws.cornell.edu). Course Enroll takes place electronically, using software available through Just the Facts. During this time, each student must meet with his or her faculty adviser to discuss academic plans and to obtain the advising PIN code required for finalizing course requests. A student may enter and hold courses prior to entering their PIN.
Once the PIN number is entered, however, the schedule is locked and it is not possible to change until the add/drop period of the next term. Information on courses is readily available in this book and in the Course and Time Rooster for each semester. Both of these publications can be accessed on the web through CUINFO.

Incoming students will receive tentative schedules upon their arrival to campus, and will meet with faculty advisers during the orientation period.

Course Loads

The normal course load in the college ranges from 12 to 18 credits, although there is no limit to the number of statutory credits a student may take each semester. Nonetheless, students should avoid planning excessive workloads; the time required to keep abreast of courses tends to increase as the semester progresses. Classes cannot be dropped after the seventh week of classes without petitioning and by substantiating extenuating circumstances. Permission to drop late is rarely granted. Students should avoid the need to drop courses by taking on a reasonable workload and using the drop period to make changes in their program.

Except for those with mature student status, students must carry at least 12 credits (exclusive of physical education) to maintain full-time status. In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning and advice on how to proceed are available from the Office of Admission, Student, and Career Services (172 MVR).

Late Course Enrollment

Students who do not complete course enrollment during the CoursEnroll period usually must wait until the beginning of the next semester's add/drop period to enroll. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason must file with the college registrar in 145 MVR as soon as possible. The college registrar can explain available options and course enrollment procedures under such circumstances.

Note: Students can review their course schedule via computer using Just the Facts. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade options, and other data. Errors must be corrected immediately. Procedures for correcting enrollment errors are available for students who wish to make any other changes as described below under Course Enrollment Changes.

Course Enrollment Changes

It is to the student’s advantage to make any necessary course enrollment changes as early in the term as possible. Adding new classes early makes it easier for the student to keep up with class work. Dropping a class early makes room in the class for other students who may need it for their academic programs.

Ideally, students evaluate their class workload carefully at the beginning of the term. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements.

Some procedures required for course enrollment are also required for course enrollment changes. For example, students must obtain the instructor's permission for a course requiring it, and must complete the same forms for special studies courses. Aside from the procedures listed below for course enrollment changes, all drop/add forms for nutritional science majors must be signed by a faculty adviser.

Deadlines for Add/Drop and Grade Option Changes

- During the first three weeks of the term, courses may be added, dropped, or the grade option changed.
- From the fourth through the seventh week of the term, courses may be dropped. Grade option changes cannot be made at this point regardless of instructor's permission.
- From the fourth week of the term, instructors have the right to consider students' requests for course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.
- After the eighth week of the term, no course changes may be made. Exceptions are considered only in extenuating circumstances.
- After the seventh week of the term, any student granted permission to drop a course after petitioning will automatically receive a grade of W (Withdrawn), and the course will remain on the official transcript.

Deadlines for Half-Term Courses

Students may drop half-term courses within the first three-and-one-half weeks of the course. Students may add a course after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course.

Procedures for Add/Drop and Grade Option Changes

To make course changes during the add/drop period, a student must take the following five steps:

1. Obtain a drop/add form from the Human Ecology Registrar's Office (145 MVR).
2. Complete the form and take it to the appropriate office for a signature: for Human Ecology courses, the forms should be taken to the Human Ecology Registrar's Office; for courses outside the college, the forms should be taken to the appropriate departmental office of the college. (Students in the Division of Nutritional Sciences must have their advisor's signature on all drop/add forms).
3. Make sure their name is added to the list of enrolled students for a course being added, or removed from the class list for a course being dropped. Ask the person recording the change to sign the form.
4. Submit all signed forms to the Human Ecology Registrar's Office, including the forms for out-of-college courses. Changes are not completed until the signed forms are filed in that office. Students who do not drop a course they no longer attend are in danger of receiving an F in the course.

5. Receive carbon copies of each course change form at the time it is submitted. It is important for students to keep these copies to verify any changes.

To make course changes after the seventh week of the term, a student must file a general petition form. (See the section, Petition Process.) Students are expected to attend classes and do assigned work until the petition has been formally approved or denied.

Time and Place for Drop/Add and Grade Option Changes

All students may adjust their schedules and grading options during the first three weeks of each semester. The university also holds a course exchange the day before fall classes begin where students have the opportunity to change their class enrollment in centralized locations. The Human Ecology Course Exchange is located in the MVR auditorium. For course exchange location for other colleges check the registration flyer each semester.

Permission of Instructor

Certain courses may be taken only with the permission of the instructor as indicated in this book. Undergraduates must obtain permission of the instructor to take any graduate course. Students must request the instructor's permission during the CoursEnroll period by placing their name on a list maintained by the departmental advising assistant.

Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary (100 Olive Tjadan Hall) before enrolling in the course. Seniors who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student then files with that school's registrar in Sage Hall.

Course Enrollment while Studying Abroad

Students who plan to study abroad have several options available to enroll for their returning semester at Cornell. Students can consult with their faculty adviser before departure to consider the schedule of classes that they will take upon their return to campus. Once abroad, the student can use the web to access the Cornell University Courses of Study and the Course and Time Roster for the coming term. The roster is available on the web approximately the first week of October and the first week of March. Using these resources, the student can e-mail the course requests to the student's faculty adviser for approval; the faculty adviser can then e-mail them to the college registrar. A student who does not have access to the Internet while abroad can wait for the Course and Time Roster to arrive via airmail from the Cornell Abroad Office. The student can then e-mail, fax, or mail the course requests to their faculty adviser and ask the faculty adviser to submit the course requests to the college registrar. The Course and Time Roster becomes available only the day that pre-enrollment begins; thus,

Course Enrollment while Studying Abroad

Students who plan to study abroad have several options available to enroll for their returning semester at Cornell. Students can consult with their faculty adviser before departure to consider the schedule of classes that they will take upon their return to campus. Once abroad, the student can use the web to access the Cornell University Courses of Study and the Course and Time Roster for the coming term. The roster is available on the web approximately the first week of October and the first week of March. Using these resources, the student can e-mail the course requests to the student's faculty adviser for approval; the faculty adviser can then e-mail them to the college registrar. A student who does not have access to the Internet while abroad can wait for the Course and Time Roster to arrive via airmail from the Cornell Abroad Office. The student can then e-mail, fax, or mail the course requests to their faculty adviser and ask the faculty adviser to submit the course requests to the college registrar. The Course and Time Roster becomes available only the day that pre-enrollment begins; thus,
Students who do not attend the first two class sessions of a course may be considered. Those students not admitted to a course may be placed on a waiting list.

Course Wait List
The Human Ecology Registrar's Office maintains waiting lists for selected courses to accommodate students who want to enroll in courses that have been filled. Waiting lists are maintained on a first-come, first-served basis without regard to seniority or other factors. To keep their names active on a waiting list, students must check in person every 48 hours with the Human Ecology Registrar's Office. Names of students who do not check in are automatically dropped from the list. Waiting lists are maintained only for the first three weeks of each semester.

Limited Enrollment Classes
Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the course list. Students cannot be dropped from a course by notifying the instructor that unavoidable circumstances have prevented their attendance.

Special Studies Courses
Each department in the College of Human Ecology (D.E.A., HD, DNS, PAM, and TXA) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 300, Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work. The other special studies courses are 400, Directed Readings; 401, Empirical Research; and 402, Supervised Fieldwork. Upper-class students normally take these courses, and a faculty member in the department in which the course is offered supervises work on an individual basis. It is important for students to use the appropriate course number (300, 400, 401, or 402) for a special project.

To register for a special studies course, a student obtains a special studies form from the departmental office where they plan to take the course. The student discusses the proposed course with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a special studies form and obtains signatures from the instructor, department chair, and faculty adviser before submitting the form to the Office of the College Registrar (145 MVR). The student must also submit a course registration form (add/drop form) to the Office of the College Registrar. Special studies forms are available in 145 MVR or in departmental offices. Add/drop forms are only available in 145 MVR.

Semester credits for special studies courses are determined by the number of contact hours the student has with the supervising faculty member (or a person designated by the faculty member). To earn one credit, a student must have the equivalent of three hours of contact time per week for 15 weeks (a total of 45 contact hours). For additional credit, multiply the number of credits to be earned by 45 to determine the number of contact hours needed for the course. A student can only use 12 credits of 400, 401, 402, or 403 courses towards graduation and only three 400-, 401-, or 402-credits can be used to satisfy the nine-credit-outside-the-major requirement. To register in a special studies course taught in a department outside the college, follow the procedures established by that department.

Changes in Status
General Petition Process
The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations. In most cases, extenuating circumstances are needed for a petition to be approved if it is submitted after the deadline. These are situations beyond a student's control, such as a documented medical emergency. Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See the Course Enrollment Change section above for some of the important deadlines. If unsure about a deadline, check with a counselor in the Office of Admission, Student, and Career Services (172 MVR) or with the Office of Registrar's staff (145 MVR).

A general petition may be needed to carry fewer than 12 credits, drop a class after the seventh week deadline, add a course after the third week deadline, change a grade option after the third week deadline, or exempt from one or more of the college's graduation requirements. Substitute a required course in one's major with another course, or stay an additional semester to complete the graduation requirements.

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor or the college registrar.

If a student decides to submit a general petition, the form is available in the Office of the Registrar (145 MVR) and in the Office of Admission, Student, and Career Services (172 MVR). After completing the form and obtaining the required signatures, the student must turn the form in to the Office of the Registrar. Once a decision is made, a letter is placed in the student's mail folder indicating approval or denial of the petition.

In Absentia Study
In absentia study is allowed under certain conditions. Credit toward a Cornell degree may be given for in absentia study if a student is enrolled at an accredited institution away from Cornell after the student matriculated in the College of Human Ecology. In absentia study can be done during any term, fall, winter, spring, or summer.

To be eligible for in absentia study, a student must be in good academic standing and must receive permission in advance from the college registrar. Students not in good standing may study in absentia but will not receive transcript credit until the Committee on Academic Status has returned them to good standing. In some cases, students may petition for in absentia credit after the work has been completed, but there is no guarantee that such credit will be awarded without advance approval.

In absentia petition forms are available in the Human Ecology Registrar's Office (145 MVR). The student completes the form, attaches catalog descriptions for the courses that will be taken, then submits the form to the Human Ecology Registrar's Office (145 MVR). In absentia study during the fall or spring term carries a nominal administrative fee. (Contact the Bursar's Office, 260 Day Hall, for the current amount.)

Students will receive a letter in their mail folder from the college registrar notifying them of the petition decision. A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and the in absentia courses are applicable to the requirements of their major. Students who study abroad during the summer or winter term are limited to a maximum of nine in absentia credits. Study abroad during the fall or spring semester must be done through the Study Abroad Office and is not considered in absentia study.

On rare occasions a student's petition for more than 15 credits in absentia may be allowed: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia. Wells and Ithaca College credit are not considered in absentia credit and are not included in the 15 credit limit.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements in his or her major. If in absentia credit is sought for a modern foreign language in which the student has done work at Cornell, the Department of Modern Languages and Linguistics (College of Arts and Sciences) must be notified. The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is taken send transcripts of grades to the Human Ecology Registrar's Office at 145 MVR Hall. Only then will credit be officially assessed and applied to the Cornell degree. Credit for in absentia study will be granted only for those courses with grades of C- or better. Only credits (not course names and
grades) for in absentia study appear on the Cornell University transcript.

A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology.

The rules regarding study in absentia apply to transfer students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 60 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 60 credits required in human ecology course work.)

Leaves of Absence

A student may request a leave of absence before the beginning of the semester or during the first seven weeks of the semester for which a leave is requested. A leave may be extended for a second semester by making a written request to the Office of Admission, Student, and Career Services. Note that in absentia status and leave of absence status are mutually exclusive. Students on leave must notify the college registrar in MVR 145, in writing, of their intention to return to campus prior to the beginning of the semester. Those whose leave period has expired will be withdrawn from the college after the seventh week of the semester they were due back.

Students considering a leave of absence should discuss their plans with a counselor in the Office of Admission, Student, and Career Services. The counselor can supply the necessary forms for the student to complete and file with the Human Ecology Registrar's Office. If the student has not completed all required forms for the college outside the major when the leave expires, the office will inform the student of the possible consequences. The student should discuss their return with the college registrar and file with the Human Ecology Registrar's Office. A student considering such an action is urged to discuss plans with a counselor in the Office of Admission, Student, and Career Services (172 MVR).

In some instances a student may be given a withdrawal by the college registrar. Students who leave the college without an approved leave of absence, or do not return after the leave has expired will be given a withdrawal after the seventh week of the term in which they fail to register.

A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Office of Admissions for consideration along with all other applicants for admission. If the student was given a leave of absence, the request for readmission will be referred to the Committee on Academic Status for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

Withdrawal

A withdrawal is a termination of student status at the university. Students may voluntarily withdraw at any time by notifying a counselor in the Office of Admission, Student, and Career Services and written notice of withdrawal in the Human Ecology Registrar's Office. A student considering such an action is urged to discuss plans with a counselor in the Office of Admission, Student, and Career Services (172 MVR).

In some instances a student may be given a withdrawal by the college registrar. Students who leave the college without an approved leave of absence, or do not return after the leave has expired will be given a withdrawal after the seventh week of the term in which they fail to register.

A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Office of Admissions for consideration along with all other applicants for admission. If the student was given a leave of absence, the request for readmission will be referred to the Committee on Academic Status for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

GRADES AND EXAMINATIONS

Grade Definitions and Equivalents

The official university grading system uses a system of letter grades ranging from A+ to D, with F denoting failure. An INC grade is given for incomplete work and is given at the end of the first semester of a two-semester class. If a student is given permission to withdraw from a class after the second week of the term a W is automatically assigned. Students can view their grades on Just the Facts after the third week of the term. The office of the college registrar and who wishes to return at a later date must reapply through the Office of Admissions for consideration along with all other applicants for admission. If the student was given a leave of absence, the request for readmission will be referred to the Committee on Academic Status for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

The grading system is used to determine the student's academic standing. Students are assigned a grade for each course they complete. The grade is determined by the instructor and is based on the student's performance in the course. Grades are recorded on the student's transcript and are used to calculate the student's cumulative grade point average (GPA). Students are also eligible for honors and recognition based on their academic performance.

Grades are recorded on the student's transcript and are used to calculate the student's cumulative grade point average (GPA). Students are also eligible for honors and recognition based on their academic performance.
awarding of a degree, whichever is the shorter period of time. The instructor has the option of setting a shorter time limit for completing the course work. If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. If the work is not completed within the designated time period, the grade of incomplete automatically will be converted to an F.

When a student wants to receive a grade of incomplete, the student should arrange a conference with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called explanation for reporting a final grade of F or incomplete, which must be signed by both the instructor and the student, needs to be submitted by the instructor to the Human Ecology Registrar's Office. This form is submitted with the final grade sheets whenever a grade of incomplete is given. This form is for the student's protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course. If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing part of the form and turning it in to the Human Ecology Registrar's Office with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Human Ecology Registrar's Office to fill out and sign the remainder of the form.

If the work is satisfactorily completed within the required time, the course appears on the student's official transcript with an asterisk and the final grade received for the course in which the student was registered for the course. A student who completes the work in the required time and expects to receive a grade of incomplete, the student should arrange a conference with the course instructor. The instructor has the option of setting a shorter time limit for completing the required time and expectations to receive a grade of incomplete, which must be signed by both the instructor and the student. If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing part of the form and turning it in to the Human Ecology Registrar's Office. Before a student will be allowed to register for succeeding semesters, he or she must go to the Human Ecology Registrar's Office to fill out and sign the remainder of the form.

Examinations
Both the preliminary and final examination schedules are printed every semester in the Course and Time Roster. The current examination is also available on the university website at www.cornell.edu/Academic/ Academic.html#Class.

Final Examinations
The following is quoted from the Cornell University Faculty Handbook, 1990, pages 66-67:

"The University Faculty long ago established, and has never reversed, the policy that each course should have an examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation, or conference) to be conducted or due during the period set aside for final examinations.

Although not specifically prohibited, it is University policy to discourage more than two examinations for a student in one twenty-four hour time period and especially on one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a makeup for other valid reasons, i.e. illness, death in the family, etc.

Legislation of the University Faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official Examination Roster promulgated by the Registrar's Office without prior written permission of the Dean of the Faculty.

2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.

3. Permission will be given by the Dean of the Faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time that the examination was originally scheduled. The faculty member requesting such a change will be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the Registrar's Office.

4. No tests are allowed during the week preceding the final examination period, although minor tests may be given during the week preceding the final examination period. Minor tests are defined as those required for examinations or makeup examinations involving small numbers of students (generally 30 or fewer) provided that the scheduled time is

5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period preparing them.

6. Faculty can require students to submit papers during the week preceding the study period.

7. Take home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period.

Students have a right to examine their corrected exams, papers, and the like, in order to be able to question their grading. They do not, however, have an absolute right to the return thereof. Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester preferably until the end of the following term, to afford students such right of review.

Preliminary Examinations
The following is quoted from the Cornell University Faculty Handbook (1990), pages 65-66:

"Preliminary examinations are those given at intermediate times during a course. It is common to have three of these in a term to encourage review and integration of major segments of the course, to provide students with feedback on how well or poorly they are progressing, and to contribute to the overall basis for a subsequent final grade.

The most convenient times and places for "prelims" are the normal class times and classrooms. But many courses, particularly large ones with multiple sections, choose to examine all the sections together at one time and to design an examination that takes more than one class period to complete. In such cases the only alternative is to hold the prelim in the evening. This practice creates conflicts with other student activities, with evening classes and laboratories, and among the various courses that might choose the same nights.

To eliminate direct conflicts, departments offering large multidiscipline courses with evening prelims send representatives annually to meet with the dean of the University Faculty to lay out the evening prelim schedule a year in advance. Instructors of smaller courses work out their own evening exam schedules, consulting their students to find a time when all can attend. Exam assignments are obtained by the faculty member through the contact person in his or her college or the Central Reservations Coordinator.

The policy governing evening examinations is as follows:

1. Evening examinations may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m. without prior permission from the Office of the University Faculty.

a. Such prior permission is not, however, required for examinations or makeup examinations involving small numbers of students (generally 30 or fewer) provided that the scheduled time is
acceptable to the students involved and that an alternate examination time is provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

2. Permission from the Office of the University Faculty to schedule on evenings other than Tuesdays and Thursdays or at a time prior to 7:30 p.m. will be granted only on the following conditions:

a. Conditions such as the nature of the examination, room availability, large number of conflicts, etc., justify such scheduling.

b. An alternate time to take the exam must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

3. If there is a conflict between an examination listed on the schedule developed at the annual evening prelim scheduling meeting and an examination not on the schedule, the examination on the schedule shall have a priority, and the course not on the schedule must provide an alternate time to take the examination for those students faced with the conflict.

4. If there is a conflict between examinations, both of which are on the schedule developed at the annual evening prelim scheduling meeting or both of which are not on the schedule, the instructors of the courses involved must consult and agree on how to resolve the conflict. Both instructors must approach this resolution process with a willingness to provide an alternative or earlier examination.

5. Note that courses using evening examinations are strongly urged to indicate this in the course description listed in Courses and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed."

**ACADEMIC STANDING**

**Criteria for Good Standing**

The College of Human Ecology has established a set of minimum academic standards which all students must meet or exceed each semester. These standards are as follows:

1. A student must maintain a semester and cumulative grade point average of 1.7 or higher.

2. A student must successfully complete at least 12 credits per semester, excluding physical education courses.

3. Freshmen and sophomore students must complete at least one human ecology course each semester. (ECON 101 and ECON 102 are considered Human Ecology courses).

4. A student must be making "satisfactory progress" toward a bachelor's degree.

Upon the completion of each semester the Committee on Academic Status (CAS) reviews each student's academic record to ensure the above academic standards are upheld. The committee then takes appropriate action for students whose academic achievement is considered unsatisfactory as defined by the above criteria. The five voting faculty members, along with several nonvoting student services staff, consider each case individually before deciding on a course of action. The committee may take any of the following actions depending on the seriousness of the student's academic difficulties:

1. Take no action.

2. Return the student to Good Standing.

3. Place the student on a Review List, which means the case will be monitored throughout the semester.

4. Place the student on a Warning status.

5. Place the student on a Severe Warning status.

6. Place the student on a Severe Warning With Danger of Being Dropped status, implying that if the student does not show considerable improvement during the semester the committee will likely drop the student at the end.

7. Suspend the student for one or more terms during which the student may not register at Cornell (except in extramural status with CAS approval).

8. Permanently withdraw the student from the college and Cornell University.

Students who have been suspended or withdrawn have the right to appeal the decision in front of the committee during the appeals meeting. Students who have been placed on warning due to incomplete or missing grades may request their status be updated to good standing once they have cleaned up their records. These requests should be made with a general petition and submitted to the Office of the Registrar.

All students with a status will automatically be reviewed at the end of the subsequent semester. In most cases, students put on a warning, severe warning, or severe warning with danger of being dropped status will be informed of conditions that they are expected to fulfill in order to return to good standing. In general these conditions are that a student must earn a minimum GPA of 2.0, complete 12 credits, and not have any incomplete, missing, "F," or "U" grades on their semester record.

If a student who has been previously suspended wishes to return to the college he/she must submit a plan of study to the committee before being rejoined.

Students who have been withdrawn by CAS may request reconsideration and ask to be readmitted by the committee. Such students have three years during which they can ask to be withdrawn to make this request. After three years, a former student must apply for admission through the Office of Admission. A student should discuss their situation with a counselor in the Office of Admission, Student, and Career Services (172 MVR). They should talk with others who may be able to help them—faculty advisers, instructors, or a member of the medical staff. A student may also write directly to the committee (via the committee chair, whose name can be obtained from the college registrar) and present new or previously unknown information. Any information given to the committee is held in the strictest confidence.

**Academic Integrity**

Academic integrity is a critical issue for all students and professors in the academic community. The University Code of Academic Integrity states that a student assumes responsibility for the content and integrity of the academic work he or she submits, such as papers, examinations, or reports and that a student shall be guilty of violating the code and subject to proceedings under it if he or she:

a. Knowingly represents the work of others as his or her own.

b. Uses or obtains unauthorized assistance in any academic work.

c. Gives fraudulent assistance to another student.

d. Fabricates data in support of laboratory or fieldwork.

e. Forgives a signature to certify completion of approval of a course assignment.

f. Uses an assignment for more than one course without the permission of the instructor involved.

g. Uses computer hardware and/or software to abuse privacy, ownership, or user rights of others.

h. In any manner violates the principle of absolute integrity.

The Academic Integrity Hearing Board, which consists of a chairperson, three faculty members, and three students, hears appeals from students who have breached the code. It also deals with cases brought directly to it by members of the faculty.

**Academic Records**

Students may obtain their Cornell academic record in several ways. The Cornell transcript, which is the official record of the courses, credits, and grades that a student has earned can be ordered with no charge at the Office of the University Registrar (B7 Day Hall). For more information call (607) 255-4252. Students who merely want an unofficial working copy of their transcript can request a copy of their record card from the Office of the College Registrar (145 MVR). Students may also access their grades and course schedules electronically using Just the Facts. Student should be in the habit of checking Just the Facts by the second week of every semester to confirm that their schedule and grade options are correct.

The college also maintains a graduation progress worksheet for each student showing progress towards the degree. At the beginning of fall term continuing students receive a copy of their worksheet. It is important to check this document and bring any errors to the attention of the staff in the Office of the College Registrar (145 MVR).

**Access to Records**

The Family Educational Rights and Privacy Act of 1974 assures students of privacy of their records. The law also assures students' access to their records. Information concerning a student's relationship with the university is considered restricted and may be released only at the student's specific written request. Restricted information includes the courses elected, grades earned, class rank, academic and disciplinary actions by appropriate faculty, student, or administrative committees;
and financial arrangements between the student and the university. Letters of recommendation are restricted information unless the student has specifically waived right of access.

Students who want additional information on access to their records may contact the Office of the College Registrar (145 MVR) or the Office of the University Registrar (37 Day Hall). An inventory of those student records maintained by Cornell University offices in Ithaca, their location, and cognizant officer are available in the Office of the Dean of Students (401 Willard Straight Hall).

For specific information, refer to the university’s policy, “Access to Student Information,” at the following web address: www.univco.cornell.edu/policy/ASI.html or talk with the college registrar in the Office of the College Registrar (145 MVR).

ACADEMIC HONORS AND AWARDS

The college encourages high academic achievement and recognizes outstanding students in several ways.

Honors

Dean’s List. Excellence in academic achievement is recognized each semester by placing on the Dean’s List the names of students who have completed satisfactorily at least 12 credits of letter grade classes and who have a semester grade point average of 3.7 or above. No student who has received an F or U in an academic course will be eligible.

Kappa Omicron Nu seeks to promote graduate study and research and to stimulate scholarship and leadership toward the well-being of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of living—at home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative grade point average of not less than B. Transfer students are eligible after completing one year in this institution with a B average.

Current members of Kappa Omicron Nu elect new members. Not more than 10 percent of the junior class may be elected to membership and not more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected. The president of Kappa Omicron Nu has the honor of serving as First Degree Marshall for the college during May commencement.

Bachelor of Science with Honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and the Division of Nutritional Sciences. Information about admission to the programs and their requirements may be obtained from the appropriate department or division.

Students in other departments who wish to qualify for honors degrees may contact Janet Brown-Ast (N118A MVR) during their sophomore year or the first semester of their junior year. Most honors candidates have a minimum grade point average of 3.3 and have demonstrated potential for honors-level research. To graduate with honors a student must take approved courses in research methodology and evaluation, attend honors seminars, complete a senior thesis, and successfully defend it in front of a committee.

Bachelor of Science with Distinction recognizes outstanding scholastic achievement. Distinction is awarded to students in the top 10 percent of the graduating class based on the last 60 credits earned at Cornell. The graduating class comprises of students who will complete requirements for Bachelor of Science degrees in January or May of the same academic year or the prior August. Names of seniors who meet these requirements are presented to the faculty of the college for approval.

The primary objectives of the honor society, Phi Kappa Phi, are to promote the pursuit of excellence in higher education and to recognize outstanding achievement by students, faculty, and others through election to membership. Phi Kappa Phi is unique in that it recognizes scholarship in all academic disciplines. To be eligible for membership students must rank in the top 10 percent of the senior class, or in the top 5 percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

Gamma Sigma Delta is an honor society of the faculty in the colleges of Human Ecology, Agriculture and Life Sciences, and Veterinary Medicine. The common bond is promotion of excellence in work related to the quality of our environment and life based on “agriculture and the related sciences.” The Cornell chapter recognizes the academic achievements of students, faculty, and alumni of those colleges with nominations for membership and with special awards. To be eligible, seniors must be in the upper 15 percent of their major. Five juniors with the highest grade point average in their college are also nominated.

Class Rank for the junior and senior classes is computed at the end of each semester. The college registrar processes class rank after final grades are recorded. Class rank will not be adjusted if a student’s academic record changes for any reason.

Awards

The Elsie Van Buren Rice Award in Oral Communication is awarded for original oral communication projects related to the college’s mission by undergraduate students in the College of Human Ecology. The contest is held each year in February and awards prizes totaling $1,500.

The Flora Rose Prize is given biennially to a Cornell junior or senior who demonstrates a creative spirit, a spirit of inquiry, and a desire to explore beyond the classroom. The recipient will receive a cash prize of $500.

The Florence Halpern Award is named for the noted psychologist, Dr. Florence Halpern, in recognition of her lifelong interest in “innovative human service, which betters the self-fulfillment of future generations.” The recipient will receive a cash prize of $500.

Human Ecology Ambassadors is a group of undergraduates who assist the Office of Admission, Student, and Career Services by participating in group conferences with prospective students to provide information from a student’s perspective, assisting with recruitment and yield activities for potential students, conducting high school visits, assisting with on-campus open-house programs for high school students and potential transfer students, helping with prospective students and alumni phonathons.
