The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss these activities because of religious observances be given adequate opportunity to make up the missed work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

This catalog was produced by Media and Technology Services at Cornell University.

INTRODUCTION

Courses of study (cuinfo.cornell.edu/Academic/Courses/), a catalogue of Cornell University's many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings, and procedures. Additionally, a student handbook, distributed to all incoming students, describes life at Cornell, The Policy Notebook (www.univc.cornell.edu/policy/library.html), also distributed to each new student, summarizes pertinent university policies, including the campus Code of Conduct and the Code of Academic Integrity. Students should consult with their college's advising office for specific information on their college's academic policies and procedures, degree programs, and requirements.

All these publications are also available for viewing on CUINFO the university's electronic information system, and in print at the various university libraries, the Office of the Dean of the University Faculty, the Office of University Counsel, the Office of the Judicial Administrator, and the college offices.

Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City.

The following are offices and sources of information about admission to Cornell University.

Undergraduate Admissions Office. 410 Thurston Avenue, Ithaca, NY 14850-2488, 607-255-5241.

Medical College and Graduate School of Medical Sciences. Office of Admissions, 1300 York Avenue, New York, NY 10021, 212-746-1067.

CUINFO ON THE WEB

It is not possible to keep this single-volume course list completely up-to-date. The most current information regarding course schedules, sections, rooms, credits, and registration procedures may be found on CUINFO, Cornell's electronic information source, and in the Course and Time Roster and the Course and Room Roster, published each semester by the Office of the University Registrar. You may access CUINFO through the web. The URL is: www.cornell.edu. Students are also advised to consult individual college and department offices for up-to-date course information.

EXPLANATION OF COURSE NUMBERING SYSTEMS

The course levels have been assigned as follows:

100-level course—introductory course, no prerequisites, open to all qualified students

200-level course—lower-division course, open to freshmen and sophomores, may have prerequisites

300-level course—upper-division course, open to juniors and seniors, prerequisites

400-level course—upper-division course, open to seniors and graduate students, 200- and 300-level course prerequisites or equivalent

500-level course—professional level (e.g., management, law, veterinary medicine)

600-level course—graduate-level course, open to upper-division students

700-level course—graduate-level course

800-level course—master's level, thesis, research

900-level course—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups:

Group 1: Divisions that offer both undergraduate- and graduate-level courses

Agriculture and Life Sciences

Architecture, Art, and Planning

Arts and Sciences

Engineering

Hotel Administration

Human Ecology

Industrial and Labor Relations

Nutritional Sciences

Officer Education

Group 2: Graduate professional divisions

Law

Management

Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the department. All courses, 0-999 are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

ACCREDITATION

Cornell University is accredited by the Middle States Association of Colleges and Schools. A copy of the most recent reaffirmation of Cornell's accreditation can be found at www.jsp.cornell.edu/Accreditation/Status. Requests to review additional documentation supporting Cornell's accreditation should be addressed to Michael Matier, Director, Institutional Research and Planning, Cornell University, 440 Day Hall, Ithaca, NY 14853-2801, mmw5@cornell.edu.

Advanced Placement CREDIT FOR ADVANCED PLACEMENT

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen. Students may use credit they receive for advanced placement to satisfy degree requirements only as specified by the individual college at Cornell. Although such credit counts toward the bachelor's degree, its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their undergraduate curricula.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from the following:

a. Achieving the requisite score from the Advanced Placement Examinations (AP exams) from the College Entrance Examination Board (CEEB) in Princeton, NJ. The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on pages 6 and 7.

b. Some departments at Cornell offer departmental exams (usually during orientation), for placement and advanced placement credit.

c. Passing a regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.

d. See below for international credentials.

Please note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work. Students who have taken such courses may, however, earn credit by taking an appropriate exam as described in paragraph a or b above.

†Cornell Advanced Standing Examination. Contact Callean Hile, 303 Morrill Hall, for French, Italian, and Spanish. Contact Marguerite Mizelle, 183 Goldwin Smith Hall, for German.
The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement in its subject. It recommends AP credit for those who meet the standards, and determines which Cornell courses the credit places students out of. The final decision for awarding advanced placement credit at Cornell rests with each individual college. For policies governing advanced placement in a specific college, see the academic information section for that college. Students need not accept advanced placement. They may repeat the course they have placed out of, thereby relinquishing the advanced placement credit.

**Advanced placement examinations.** Entering freshmen should have their scores from CEEB Advanced Placement Examinations sent to their college or school office (see below, "Forwarding of scores and transcripts").

**Departmental advanced standing examinations.** In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during orientation week. A schedule of these examinations appears in the orientation booklet mailed to entering freshman. Students need not complete departmental examinations that award advanced placement and credit on the basis of departmental examinations are shown on pages 5, 6 and 7.

**Transfer of credit.** Entering freshmen who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course syllabi to their college or school office (see the list at the end of this section). The award of credit or placement for such courses is determined by the appropriate departments according to individual school and college guidelines. Because policy for using advanced placement credit varies according to each college or school's professional and academic goals, students should consult the relevant section of Courses of Study or their college or school office to determine how they may use such credit.

**Written inquiries.** Students can address questions to departments, schools, or college offices by adding Ithaca, New York 14853 to the addresses given in the following sections.

**Forwarding of scores and transcripts.** Entering freshmen should have their advanced placement test scores sent to their school or college registrar's office.

- **College of Agriculture and Life Sciences**
  140 Roberts Hall
- **College of Architecture, Art, and Planning**
  380 West Side Hall
- **College of Arts and Sciences**
  172 Goldwin Smith Hall
- **College of Engineering**
  158 Olin Hall
- **School of Hotel Administration**
  174B Statler Hall
- **College of Human Ecology**
  174 Slash Hall
- **School of Industrial and Labor Relations**
  101 Ives Hall

**DETERMINATION OF CREDIT AND PLACEMENT**

The table on pages 6 and 7 provides information on how credit and placement are determined for most subjects. Supplementary information for subjects requiring additional explanation is provided below.

**Biological Sciences**

Any student who earns a score of 5 on the CEEB Advanced Placement Examination in biology may elect to receive eight credits and be exempted from all introductory biology courses.

Students not majoring in biological sciences who score a 4 may earn six advanced placement credits. This will satisfy the distribution requirement in biological sciences for students in the College of Agriculture and Life Sciences. For students in the College of Arts and Sciences, this may be applied toward the distribution in science and quantitative reasoning as stipulated by the college.

Biological sciences majors who receive a score of 5 may receive eight credits and be exempt from all introductory biology courses or elect to receive four credits and select one of the options allowed for majors with a score of 4. The student receiving a score of 4 must fulfill the introductory biology requirement by taking BIO G 101–102, 101/103, 102/104, or 103–104 or 105 or 106 (Biological Sciences, Lectures and Laboratory). These students should consult the departmental syllabi for further information available in the BIO G 101–104 course office (1140 Comstock Hall) and in the Office of Undergraduate Biology (216 Simson Hall) to determine which course is correct for their introductory biology requirement. Students in doubt, BIO G 101/103 is advised. These students will receive a total of eight introductory biology credits (four advanced placement credits plus four course credits).

**Chemistry**

The Department of Chemistry offers two sequences that satisfy prerequisites for further work in the department: Chemistry 207–208, an eight-credit sequence that includes qualitative analysis, and Chemistry 215–216, a nine-credit sequence that includes qualitative and quantitative analysis.

Freshmen who earn a score of 5 on the CEEB Advanced Placement Examination in chemistry or by passing an advanced standing examination offered by the department may elect to receive four advanced standing credits in chemistry. A student may earn four or more credits by suitable performance on the departmental examination. To take the departmental examination students must sign up beforehand in 131 Baker Laboratory.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her adviser, and the professors teaching the courses. Questions may also be directed to Dr. Stanley Marcus, associate director of undergraduate studies, in 138 Baker Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking Chemistry 215–216 and should consult the Chemistry 215 instructor or Dr. Stanley Marcus.

**Classics**

For advanced placement and credit in Latin and ancient and modern Greek, students should consult the Department of Classics, 120 Goldwin Smith Hall. Credit and placement are determined on the basis of a departmental examination. A student who is permitted to register in a 300-level course (or in Modern Greek, is determined to be at an advanced level) will be given six advanced placement credits.

**Computer Science**

Students who receive a score of 4 or 5 on the CEEB Advanced Placement Examination in computer science will receive four advanced placement credits and may take Computer Science 211. These credits are used to satisfy the requirement in computer programming for students in the College of Engineering or part of the distribution requirement in science and quantitative reasoning for students in the College of Arts and Sciences.

Freshmen may also earn four credits by suitable performance on a departmental examination to be given during orientation week. To take the departmental examination, students must sign up beforehand in the Undergraduate Office, 303 Upson Hall.

**English**

The English department will grant 3 credits to students who score 5 on the CEEB Advanced Placement Examination in English Literature and Composition or English Language and Composition. Students in Arts and Sciences may receive credit for one English AP exam only. The credits are granted automatically; no application to the department is required.

Students who receive scores of 700 or better on the CEEB SAT II examination in English composition, 700 or better on the CEEB SAT II examination in literature, or 4 or 5 on either CEEB Advanced Placement Examination in English are eligible to enroll, space permitting, in the following English freshman writing seminars: 270, 271, 272.

**Mathematics and Statistics**

The Cornell calculus sequences discussed below are described under "Basic Sequences" in the Department of Mathematics section of this catalog.

The non-engineering freshman calculus courses at Cornell do not differ substantially from calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary school students who have had the equivalent of at least one semester of analytic geometry and calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (Calculus AB or Calculus BC) during their senior year.

Students who have been awarded Advanced Placement credit for calculus or statistics may not also receive academic credit for similar courses taken at Cornell. In particular, students who have been awarded AP credit for 1 semester of calculus (4 academic credits)
may not also receive academic credit for any first-semester course (MATH 106, 111, 121, 190, 191). Students who have been awarded AP credit for 2 semesters of calculus (8 academic credits) may also receive academic credit for any first-semester calculus course (MATH 106, 111, 121, 190, 191) nor for any second-semester calculus course (MATH 112, 192, 192). Arts & Sciences students receive a maximum of 8 credits for AP Math AB and BC combined. Finally, students who have been awarded AP credit for statistics (3 academic credits) may also receive academic credit for any of the introductory statistics courses BIO M 200, ILRST 210, or MATH 171.

The following rules apply to students in all colleges and programs except the College of Engineering and the Agricultural and Biological Engineering (ABEN) program in the College of Agriculture and Life Sciences. Rules applicable to students in these engineering programs are provided near the end of this section.

Students with a score of 4 or 5 on the BC examination may take any of the following third-semester courses (MATH 221, 223, or 213). Students who wish to take courses in the engineering calculus sequence and who have had no multivariable calculus may give up their AP credit for the second semester and take the second-semester engineering calculus course, Math 192. On the other hand, students with scores of 4 or 5 on the BC examination who can also demonstrate sufficient mastery of introductory multivariable calculus (which is covered in MATH 192 but not on the BC examination) may obtain permission from the Department of Mathematics to take either of the second-year engineering calculus courses, MATH 293 or 294.

Students with a score of 3 on the BC examination, or a 3, 4, or 5 on the AB examination, may take any of the second-semester calculus courses (MATH 112, 122, or 192); however, students in the latter category who take MATH 192 may have to make up some material on techniques and applications of integration. For purposes of advanced placement and credit, AB subscores and BC examination scores are regarded as equivalent to the same scores on the AB examination. Students who receive the borderline passing score of 3 on the BC examination or an AB subscore of 3 on the BC examination, who wish to continue with calculus, are strongly advised to take MATH 112 rather than the more demanding courses 122 or 192. Advanced placement credit will be awarded appropriately; however, no credit will be granted for a score of 1 or 2 on the AB examination, nor for a score of 1 or 2 on the BC examination unless the AB subscore on that examination is at least 3.

A placement examination in mathematics for non-engineering students is offered at Cornell only during Orientation Week and should be taken by

1. students who have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination; or
2. students who believe that the placement assigned on the basis of the CEEB Advanced Placement Examination is not high enough in their case.

The exam covers the material of the AP calculus program. Students are strongly urged to take this departmental placement exam even if they feel that their grasp of the material is uncertain. The grade on this test does not become a part of the student’s record. No advanced placement credit for the departmental examination is necessary.

The College of Engineering and the Agricultural and Biological Engineering (ABEN) program in the College of Agriculture and Life Sciences will give credit for MATH 191 (4 credits), and permission to take MATH 192, for a score of 3, 4, or 5 on the BC examination, or the score of 5 on the AB examination, or for a satisfactory score on the Engineering Mathematics Placement Examination. Credit for MATH 191 and 192 (8 credits), and permission to take MATH 293 or 294, will be given to students in the Engineering College or ABEN program who achieve a suitably high score on the Engineering Mathematics Placement Examination.

Students will receive academic credit for two semesters of calculus, and permission to take any third-semester calculus course, for scores of A or B on the General Certificate of Education (GCE) Advanced (“A”) Level Examination, or scores of 6 or 7 on the International Baccalaureate (IB) Higher Level Examination, in mathematics. They will receive credit for one semester of calculus, and permission to take any second-semester calculus course, for scores of C on the GCE “A” Level Examination. These rules for international credentials in mathematics apply to all students, including those in engineering programs.

Modern Foreign Languages

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See “Placement Tests and Advanced Placement credit” under “Foreign Language Requirements” in the Arts and Sciences section of this catalog. Students who have had a year of formal study or substantial informal study since they last took a placement test should take the examination again during Orientation Week if they plan to continue course work.

Advanced standing credit may be entered on a student’s record as follows:

1) Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB, earn three credits, and are eligible to take Cornell’s Advanced Standing Examination (CASE). Outstanding performance on this examination can result in three additional credits.

2) Students who achieve a minimum score of 65 on the Cornell language placement test given during Orientation Week are eligible to take Cornell’s Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.

3) For formal language work at an accredited college, credit is considered by the department on submission of a transcript and may be entered on the student’s Cornell record.

4) Native speakers of languages other than English may, on examination by the appropriate professor, be granted a maximum of the credit if they can demonstrate proficiency equivalent to course work on the 200 level or above at Cornell. Additional credit will be awarded only for those who complete advanced college courses in their native language.

Information about times and places of placement tests is available in the orientation booklet and from Academic and Career Counseling Services on the web at dml.cornell.edu/html/place/testschedule.html. For more information, see the College of Arts and Sciences section on language course placement, or contact Calleman Hile, 305 Morrill Hall for French, Italian, and Spanish; Miriam Zubal, 183 Goldwin Smith Hall, for German; Doreen Silva, 226 Morrill Hall, for Russian; Kim Robinson, 388 Rockefeller Hall, for Asian languages, Nava Scharf, 350 Rockefeller Hall for Hebrew, Manjot Younes, 421 Rockefeller Hall, for Arabic.

Music

Advanced placement and credit are awarded only in music theory and only on the basis of a comprehensive examination administered by the Department of Music, normally during orientation week. If advanced placements are made, the examination may be administered at other times during the academic year. Inquiries may be directed to the Department of Music (telephone: 607-255-4097).

Physics

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (Physics B or Physics C), certain international examinations, or the departmental examination (which may be taken during Orientation Week or at other times as arranged). For information about the departmental examination, students should consult the director of undergraduate studies, 101 Clark Hall, or the department chair, 109 Clark Hall.

Physics B. Students earning a score of 4 or 5 may receive eight credits for noncalculus-based Physics 101 and 102. Those earning a score of 5 in physics B and a score of 4 or 5 in calculus BC may choose to accept four credits in calculus-based PHYS 112 or 207 instead of eight credits in PHYS 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

Physics C.—Mechanics. Students earning a score of 4 or 5 may receive four credits for PHYS 112 or 207, or placement into PHYS 116, a first-semester honors course, with no AP credit.

Physics C.—Electricity and Magnetism. Students earning a score of 5 may receive four credits for PHYS 213.

Students may not accept credit for an advanced placement course if they receive credit for a Cornell course with similar content. Students may receive credit for only one of the courses in each group:

PHYS 101, 112, 116, 207
PHYS 102, 208, 213, 217

A student planning a major in Physics or Applied and Engineering Physics and who is eligible for AP credit should consult with his/her adviser or the department representative.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrolling. To qualify for advanced placement credit, it is not necessary to continue the study of physics.
University Registration

University registration is the official recognition of a student's relationship with the university and is the basis for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must
• complete course enrollment according to individual college requirements;
• settle all financial accounts, including current semester tuition;
• satisfy New York State health requirements;
• have no holds from the college, the office of the Judicial Administrator, the University Health Services, or the Bursar.

Individuals must become registered students by the end of the third week of the semester or they will be subject to a financial penalty.

Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

COURSE ENROLLMENT

Pre-course enrollment for each semester at Cornell takes place partway through the preceding semester. Dates are announced in advance and are posted in school and college offices. Students are expected to meet with their advisers during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. A form is completed by the student and signed by both the student’s adviser and an appropriate representative of the department offering the course (an instructor, department staff member, or college registrar, depending on the college). The completed and signed form must be returned to the student's college office to be processed. Professional schools, Continuing Education and Summer Sessions, and the Department of Physical Education and Athletics have different course enrollment and add-drop policies. See the chart below for their course add/drop/change fees.

LEAVES AND WITHDRAWALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. Students should inform their college of intent to return.

A student may withdraw from the university at the student’s discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave.

Medical leaves are granted and processed through University Health Services.

Internal Transfer Division

Students may not always be satisfied with the original Cornell school or college into which they’ve been admitted. They may decide to transfer from one college to another, within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division’s director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Although sponsorship does not guarantee admission to the Internal Transfer Division, it is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division.

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-4386).

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.

*Residency status is determined at the time of admission by the college. Change in residency status is determined by the University Bursar.

Fees and Expenses

Undergraduate applicants to Cornell pay a nonrefundable $65 application fee when submitting an application for admission. The graduate application fee is $65. Application to the Johnson Graduate School of Management costs $150.

Tuition Refund Policy

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. Previously matriculated students who terminate their registration with the university during a fall or spring semester in this manner will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second week, 20 percent; third week, 30 percent; fourth week, 40 percent; fifth week, 60 percent; sixth week, 80 percent; seventh week to the end of the semester, 100 percent.

First-time matriculants will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second and third weeks, 20 percent; fourth week, 40 percent; fifth and sixth weeks, 40 percent; seventh week, 50 percent; eighth and ninth weeks, 60 percent; tenth week to the end of the semester, 100 percent.

Repayment policy. Students receiving financial aid from the university who withdraw during a term will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. A partial semester will generally count as one of the eight semesters of financial aid eligibility normally allowed a student.

BURSAR INFORMATION 11
BILLY AND PAYMENT

Billing

Tuition and room and board charges will be billed in July and December and must be paid prior to registration. The due date for these semester bills will normally be five to ten working days prior to registration day. All other charges, credits, and payments will appear on monthly statements mailed before the twenty-fifth of every month.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.

All bills are due by the date stated on the bill; all payments must be received by that date to avoid finance charges. Payments are not processed by postmark.

Please inform the Office of the Bursar of any change in billing address. Address changes made at other offices will not change the billing address. The address initially used on billing statements will be the home address as listed on each student's application for admission.

Payments

An individual who has outstanding indebtedness to the university will not be allowed to register or re-register in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. University policy precludes the use of any current financial aid for payment of past-due charges.

The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student's bill by several departments and offices of the university. Since the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.

For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall, Ithaca, New York 14853-2801 (telephone: 607-255-2326; fax: 607-255-6142). E-mail: UCO-Bursar@cornell.edu

STUDENT HEALTH INSURANCE

Because of the high cost of medical care, it is Cornell University policy that every full-time registered student must have health insurance coverage:

CLASS ATTENDANCE AND ABSENCES

Students are expected to be present throughout each term at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

Absences because of religious beliefs. In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up examinations, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

The Student Health Insurance Plan is developed especially for Cornell students and provides extensive coverage at a reasonable cost for most on- or off-campus medical care. Complete and current details of the SHIP, its cost, and population-specific material for Undergraduates, Graduate Students and Professional Students is mailed to each student with the July bursar bill. Undergraduates, Graduate Students and Professional Students each have separate deadlines and guidelines. Please be sure to check your July bursar bill for complete details.

The Student Health Insurance Plan provides coverage twenty-four hours a day, 365 days a year, anywhere in the world. Students graduating mid-year may be eligible to purchase a five-month plan. Students enrolled in the SHIP may enroll their eligible dependents for an additional cost (fall deadline: September 30). Graduate and professional students who prefer to pay monthly must enroll in the installment payment plan no later than September 30. Because of policy restrictions, the plan is non-refundable (except for dependents who no longer meet eligibility requirements and students who withdraw from Cornell within the first 30 days of the academic year).

For more information, contact the:

Student Insurance Office

Gannett Health Center
Ho Plaza
Ithaca, NY 14853-3101, USA
Telephone: 607-255-6363
E-mail: SICU@cornell.edu
Web: www.gannett.cornell.edu/student_insurance

No classes or laboratory exercises are to be held between the hours of 4:25 p.m. and 7:30 p.m. Monday through Thursday, after 4:25 p.m. on Friday, after 12:20 p.m. on Saturday, and all day Sunday.
EVENING PRELIMINARY EXAMINATIONS

The most convenient times and places for "prelims" are the normal class times and classroom. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 P.M.

An alternative time to take the examination must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in Courses of Study and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 315 Day Hall.

Grading Guidelines

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D-; F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a year-long course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

- A+ = 4.3
- A+ = 4.0
- A- = 3.7
- B+ = 3.3
- B = 3.0
- B- = 2.7
- C+ = 2.3
- C = 2.0
- C- = 1.7
- D+ = 1.3
- D = 1.0
- D- = 0.7
- F = 0.0

This is how a term average is computed:

\[ \text{Course} \times \text{Grade Points} = \text{Quality Points} \times \text{Credits Product} \]

<table>

To arrive at the term average, add the products (credits x quality points) and divide by the number of credits taken. Here, 16 divided by 16 equals 1.00.

The cumulative average (an average of grades from two or more terms) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

S-U GRADES

On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

"Resolved, that:

A. the S-U system have symbol equivalents which are uniform within the university: "S" means C- or above; "U" means D+, D-, or failure.

B. S-U options be chosen by the student during the first three weeks of the term.

C. the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U. Any change in grading options must be announced by the instructor within the first two weeks of the term.

D. course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades.

The rules for the S-U option are further defined by each of the academic units. They are as follows:

**Agriculture and Life Sciences.** (a) Must have 100 credit hours with A, B, C, D grades. (b) The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (c) Freshmen may not exercise the S-U option.

**Architecture, Art, and Planning.** (a) All courses specifically required for a degree are included. Various departments may designate specific required courses where S-U will be permitted. (b) In a course designated as S or U, the entire class is so graded. The instructor must announce this decision within the first
two weeks of class. (c) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, the S-U grade option will be used for the final grade.

Arts and Sciences. (a) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (b) Permission of instructor. (c) A minimum of 80 of the 120 hours required for the A.B. degree must be in courses for which the student has received letter grades.

Engineering. (a) May take one Humanities and Social Sciences, Approved, or Free Elective per term after completing first semester. (b) This option may be elected during Pre-Course Enrollment or with the written permission of the instructor and adviser on an add/drop form in the first three weeks of classes. (c) Decision is irrevocable after first three weeks of term.

Graduate School. (a) Seminars and Thesis Research courses are usually graded S-U, and should be registered accordingly or a grade error results at semester's end. Other courses may be registered as S-U only if offered as S-U option.

Hotel. (a) Maximum of four free-elective credit hours per term. (b) Exceptions are by petition only.

Human Ecology. (a) Not part of student's major. (b) May be used in the 19 hours required outside the major in Human Ecology courses. (c) Not part of hours required in humanities, natural sciences, and social sciences. (d) A department may approve S-U grading in specific courses if approved by Educational Policies Committee. (e) Freshmen enrolled in ENGL 137 and 138, which are only offered for S-U credit, are permitted to apply these courses to the freshman seminar requirement. (f) Total of 12 credits in S-U courses (not counting PE) may be counted towards degree requirements during a student’s college career.

Industrial and Labor Relations. (a) This option may be elected, if available in I&LR electives, or in out-of-college electives but not including directed studies. (b) Degree requirements include a minimum of 105 lettergrade (A+ to D-) credits. (c) Student must also be in good academic standing. (d) A "U" is considered the equivalent of an "F" in determining a student’s academic status. (e) Limited to two courses per term, not to exceed four hours in any one course.

Internal Transfer. (a) S-U grades permitted only when it is the only option or when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

Veterinary Medicine. (a) There is one foundation course in the veterinary curriculum that is offered on an S-U basis only. All other required core courses must be taken for a letter grade. (b) Elective courses for veterinary students may be offered on an S-U basis at the option of the professor.

INCOMPLETE
The grade of incomplete is appropriate only when two basic conditions are met:

1) the student has a substantial equity at a passing level in the course with respect to work completed, and
2) the student has been prevented by circumstances beyond the student’s control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student’s own discretion.

While it is the student’s responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student’s college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up within the deadline and that the grade has been properly recorded with the student’s college registrar.

CHANGES IN GRADES
Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS
An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts can be obtained through the Office of the University Registrar, B7 Day Hall.

University Requirements for Graduation
The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student’s college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar’s office.

PHYSICAL EDUCATION
Classes
All undergraduate students must complete two terms of work in physical education unless exempted from this requirement by medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of terms completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each term, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding 20 hours a week). The Gannett Health Center can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

Swim Test
The University Faculty Committee on Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. Students will receive a grade of incomplete in Physical Education until they have passed the swim test or fulfilled the requirement by satisfactory attendance in two terms of Basic Swimming and Water Safety. Students unable to meet the physical education requirement because of medical, psychological, or religious reasons must petition the University Faculty Committee on Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

STUDENT RESPONSIBILITIES
Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student’s responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.
Accordingly, the following student information be posted:

- Grades earned
- Courses elected
- Student identification number
- Grades earned
- Grade point average
- Class rank
- Date of birth
- Place of birth
- Home telephone listing

Academic and disciplinary actions
Student or administrative committees
The most recent student educational records from previous educational agency or institution
Financial arrangements between the student and the university
Any other education record containing personally identifiable information

For further information, please refer to the revised Policy on Access to and Release of Student Education Records on the web at www.univco.cornell.edu/policy/asi.html.

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet entitled the Code of Academic Integrity and Acknowledging the Work of Others is distributed to new and transfer students and is also available from the office of the dean of faculty. The policy is published in the Policy Notebook, available free of charge from the office of the dean of students.

PROTECTION OF HUMAN SUBJECTS IN RESEARCH

The University Committee on Human Subjects is the official review board of all university projects that use humans as research subjects. Projects affected by this restriction include, but are not limited to, surveys, questionnaires, studies of existing data, documents, records in which there are no identifiers, as well as mental and physical tests of human subjects. Requests for student information must be submitted in writing to the Assistant Vice President for Academic Programs and Campus Affairs, 311 Day Hall. All proposals involving human subjects in any category must be submitted to the committee for review. Inquiries, communications, and requests for guidelines should be directed to the committee's Executive Secretary, 120 Day Hall (255-2945). The guidelines are also available at the web address www.osp.cornell.edu.

USE OF ANIMALS FOR COURSES

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A list of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered.

Guidelines for Faculty and Students with Respect to the Use of Animals in Instruction

Background: On December 8, 1987, the Cornell University Institutional Animal Care and Use Committee approved a series of guidelines recommended to them by the University Animal Welfare Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

Guidelines

1. For demonstrating certain principles and procedures the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.
2. For courses in which vertebrate animals are to be used in dissection, surgery, or in other experimental procedures, the course description that appears in the Announcement "Courses of Study" should alert students to this fact.
3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor of each course.
4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.
5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor in the course.
6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.
7. When students object on ethical or other valid grounds, to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives, for learning the same material.
8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the Director of the Cornell Center for Research Animal Resources (255-3520).

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE
PROFESSORS-AT-LARGE

726 University Avenue (255-0832)
The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by...
Toward this end, Professors-at-Large engage in a variety of activities including public lectures, participation in ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. Professors-at-Large serve for a six-year term and are full members of the faculty when in residence.

**Term Ending in 2002**
- Chartier, Roger, cultural historian
- Ernst, Richard R., physical chemist
- Goodall, Jane, primatologist
- Tobias, Phillip V., paleoanthropologist

**Term Ending in 2003**
- Morrison, Toni, novelist
- Ribakovich, Ilamar, historian of the Middle East, diplomat

**Term Ending in 2004**
- Bal, Mieke, cultural analyst
- Cleese, John, writer and actor
- MacDonald, David W., mammalogist and behavioral ecologist
- Silajdžić, Haris, political leader, historian of the Middle East

**Term Ending in 2005**
- Jenison, Mae, astronaut
- McDonough, William, archtect
- O’Brien, Stephen J., geneticist
- Scheckter, Richard, director of performance studies

**Term Ending in 2006**
- Goldsworthy, Andy, sculptor
- Sacks, Oliver, physician and writer

**Term Ending in 2007**
- Pretty, Jules, sustainable agriculture ecologist
- Short, Roger, reproductive physiologist

**FRANK H. T. RHODES CLASS ‘56 UNIVERSITY PROFESSORSHIP**
To commemorate their 40th reunion, the Class of 1956 initiated an endowment to create the Frank H. T. Rhodes Class of ‘56 University Professorship in honor of Cornell’s ninth president (1977–1995). The purpose of the Rhodes Class of ‘56 Professorship is to strengthen the undergraduate experience by bringing to the university individuals from every walk of life who represent excellence of achievement and to create opportunities for interaction with undergraduates. The endowment also makes it possible to create public events related to the professorship such as lectures, performances, films, art exhibits, or conferences. Rhodes Class of ‘56 Professors are full members of the faculty while in residence. Appointments are awarded for a period of one to five years. During each year of their appointment, Rhodes Class of ‘56 Professors visit the campus for a minimum of two weeks to engage in a variety of activities including public lectures, participation in ongoing courses, and collaborative research.

**Term Ending in 2005**
- Meier, Richard, architect
- Scelnick, Edward M., biomedical scientist

**CENTER FOR APPLIED MATHEMATICS**
657 Frank H. T. Rhodes Hall (255–4335)

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student’s program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center’s members. Detailed descriptions of these courses can be found in the listings of the individual departments.

**Selected Applied Mathematics Courses**

**Basic Graduate Courses in Mathematics and Applied Mathematics**
- MATH 413-414 Honors Introduction to Analysis
- MATH 433-434 Honors Introduction to Algebra
- MATH 436 Applications of Abstract Algebra
- MATH 611-612 Real and Complex Analysis
- MATH 615-616 Mathematical Methods in Physics
- MATH 621 Measure Theory and Lebesgue Integration
- MATH 622 Applied Functional Analysis
- MATH 631-632, 634 Algebra
- MATH 651 Introductory Algebraic Topology
- MATH 651 Geometric Topology
- TRAM 612-613 Methods of Applied Mathematics

**Analysis (and Differential Equations)**
- MATH 427 Introduction to Ordinary Differential Equations
- MATH 428 Introduction to Partial Differential Equations
- MATH 617 Dynamical Systems
- MATH 618 Smooth Ergodic Theory
- MATH 619-620 Partial Differential Equations
- MATH 652-653 Differentiable Manifolds
- MATH 662 Riemannian Geometry
- MATH 711-712 Seminar in Analysis
- MATH 713 Functional Analysis
- MATH 715 Fourier Analysis
- MATH 722 Topics in Complex Analysis
- MATH 728 Seminar in Partial Differential Equations

**Logic and Theory of Computing**
- CS 618 Principles of Distributed Computing
- CS 619 Introduction to Automated Reasoning
- CS 677 Reasoning about Uncertainty
- CS 782 Theory of Computing
- CS 715 Seminar in Programming Refinement

**Numerical Mathematics and Operations Research**
- CS 522 Computational Tools and Methods for Finance
- CS 621 Matrix Computations
- CS 622 Numerical Optimization and Nonlinear Algebraic Equations
- CS 624 Numerical Solution of Differential Equations
- CS 664 Machine Vision
- CS 681 Analysis of Algorithms
- CS 722 Topics in Numerical Analysis
- CS 729 Seminar in Numerical Analysis
- EE 423 Computer Methods in Digital Signal Processing
- MATH 425 Numerical Solution of Differential Equations
- MATH 728 Seminar in Partial Differential Equations

**Discrete Mathematics and Geometry**
- MATH 441-442 Introduction to Combinatorics
- MATH 455 Applicable Geometry
- OR&IE 633 Graph Theory and Network Flows
- OR&IE 636 Integer Programming
- OR&IE 639 Polyhedral Convexity

**Information Communication and Control Theory**
- EE 411 Random Signals in Communications and Signal Processing
- EE 425 Digital Signal Processing
- EE 467-468 Telecommunication Systems I and II
- EE 471 Feedback Control Systems (also ChemE 472 and MAE 478)
- EE 521 Theory of Linear Systems
- EE 522 Theory of Nonlinear Systems
- EE 525 Adaptive Filtering in Communication Systems
- EE 526 Signal Representation and Modeling
- EE 561 Error-Control Codes
- EE 562 Fundamental Information Theory
- EE 563 Communication Networks
- EE 565 Statistical Signal Processing
- EE 567 Topics in Digital Communication
- EE 577 Feed Forward Neural Networks
- MAE 677 Robust and Optimal Control

**Mathematical Biology**
- BTRY 451 Mathematical Modeling of Populations
- BTRY 662 Mathematical Ecology (also STBTRY 662)
- BIO M 697 Individual Graduate Study in Biometry and Statistics
PHYS 561 Classical Electrodynamics
PHYS 562 Statistical Physics
PHYS 572 Quantum Mechanics I
PHYS 574 Quantum Mechanics II
PHYS 651-652 Relativistic Quantum Field Theory

CORNELL CENTER FOR THE ENVIRONMENT
Rice Hall (255-7535)

The Cornell Center for the Environment (CfE) coordinates interdisciplinary research, teaching, and outreach programs on environmental issues. CfE’s overarching goal is to continuously advance an intellectual community for the environment at Cornell University, with the objective of promoting a sustainable future. To meet this goal, CfE:

- initiates environmental courses and curricula at both the graduate and undergraduate levels;
- facilitates interdisciplinary environmental research;
- coordinates outreach programs that assist federal, state, and local government, international agencies, private organizations, businesses, and individuals;
- organizes environmental events, lectures, festivals, and seminars; and
- serves as a clearinghouse for environmental information.

CfE's overarching goal is to continuously advance an intellectual community for the environment at Cornell University, with the objective of promoting a sustainable future. To meet this goal, CfE:

- organizes environmental events, lectures, festivals, and seminars; and
- serves as a clearinghouse for environmental information.

The CfE web page (www.cfe.cornell.edu) is the principal source of environmental information for Cornell students, faculty, and staff. Check it frequently for the latest updates on funding, seminars, courses, lectures, events, research opportunities, and new educational programs.

EDUCATION

Undergraduates and graduates can study environmental courses and curricula at both the graduate and undergraduate levels. To meet this goal, CfE:

- organizes environmental events, lectures, festivals, and seminars; and
- serves as a clearinghouse for environmental information.

The CfE web page (www.cfe.cornell.edu) is the principal source of environmental information for Cornell students, faculty, and staff. Check it frequently for the latest updates on funding, seminars, courses, lectures, events, research opportunities, and new educational programs.
RESEARCH AND OUTREACH

CFE is home for several environmental institutes offering students opportunities for study, project work, research, and outreach. These programs are focused on a variety of issues from watershed management to sustainable economic development to environmental risks. CFE programs include:

- Water Resources Institute (WRI)
- Institute for Comparative and Environmental Toxicology (ICET)
- Waste Management Institute (WMI)
- Institute for Resource Information Systems (Cornell IRIS)
- Program on Environment and Community (PEC)
- Program on Breast Cancer and Environmental Risk Factors in New York State (BCERF)
- Work and Environment Initiative (WEI)
- Environmental Inquiry (EI)
- Environmental Risk Analysis Program (ERAP)
- CFE Watersheds Program.

THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES

170 Uris Hall (255-6370)

The Mario Einaudi Center for International Studies, established in 1961 to encourage and support comparative and interdisciplinary research on international subjects, is one of the largest and most diverse centers of its kind in the United States. Currently, it includes four U.S. Department of Education Title VI National Resource Centers and 16 other area, development, topical, and educational programs. More than 500 faculty members voluntarily collaborate in the center’s programs with well over 300 graduate students involved directly in its international programs. Undergraduate students may choose concentrations in International Relations, Latin American Studies, Modern European Studies, East Asian Studies, South Asian Studies, or Southeast Asian Studies. (See also Africana Studies and Research Center, Asian Studies, and International Agriculture for related majors and concentrations.)

Cornell’s international programs are poised to anticipate and respond to changing global circumstances and perspectives. While some programs offer study of geographic regions, others focus on such topics as international agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. As programs gain momentum and recognition to attract their own resources, the center applies its resources to new pilot activities that bring faculty and students together across traditional disciplines and departmental boundaries.

Each year the center brings an eminent world leader to campus as the Henry E. and Nancy Horton Bartels World Affairs Fellow to deliver a public lecture, meet with classes, and interact informally with faculty and students. Together with the Peace Studies Program, the center hosts a Current Events Roundtable each June that enables Cornell alumni to join faculty in discussion of key world events.

Besides the educational and research opportunities the Einaudi Center makes available on the Ithaca campus, it also provides foreign study options for undergraduate students through the Cornell Abroad Program. The Center promotes graduate students’ overseas field research through an annual competition for travel grants and assistance with other fellowship programs. The Fulbright fellowship program, administered by the center, is available to graduating seniors as well as graduate students. The center also is the administrative home of the International Students and Scholars Office, the principal campus resource serving Cornell’s large international community.

Cornell is committed to the study of the global community in all its complexity—through a faculty of preeminent scholars and teachers, outstanding research facilities, instruction in more than 40 languages, and a library system with 2,500,000 volumes related to international and comparative studies.

COGNITIVE STUDIES

282 Uris Hall (255-6431) (cogst@cornell.edu)

Cognitive Studies focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Studies draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of cognitive studies is primarily represented by faculty in the following departments: Communication, Computer Science, Design and Environmental Analysis, Economics, Education, Human Development, Linguistics, Mathematics, Neurobiology and Behavior, Philosophy,
INTERDISCIPLINARY CENTERS, PROGRAMS, AND STUDIES

Psychology, and Sociology, as well as the Johnson Graduate School of Management.

Undergraduate Programs

An undergraduate concentration in cognitive studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see “Cognitive Studies Concentration” in the College of Arts and Sciences section. Contact Linda LeVan (255-6431 or cogst@cornell.edu).

Graduate Programs

Cornell offers a graduate field minor in cognitive studies. Cornell’s unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in cognitive studies to combine faculty members from such fields as Philosophy, Computer Science, Linguistics, Psychology, or Neurobiology and Behavior on common committees. For further information on the graduate Field of Cognitive Studies, contact Shimon Edelman and Ron Hoy, directors of graduate studies, (255-6365 or 254-4518, se57@cornell.edu or rsh5@cornell.edu), or Linda LeVan, executive staff assistant, 282 Uris Hall, Office of Cognitive Studies (255-6431, cogst@cornell.edu).

Courses

Courses from across the university that are relevant to the Cognitive Studies program are listed in this catalog under Arts and Sciences in the section “Special Programs and Interdisciplinary Studies.”

CORNELL ABROAD

474 Uris Hall 607/255-6224, fax 607/255-8700, e-mail: CUAbroad@cornell.edu
web homepage: www.einaudi.cornell.edu/cuabroad

Study abroad is an integral part of a Cornell education. We live in an increasingly global society in which knowledge, resources, and authority transcend national and regional boundaries. To help students develop the knowledge, skills, and attitudes necessary for global citizenship in the twenty-first century, Cornell Abroad offers a wide range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree.

Qualified students study abroad through programs administered by Cornell and other American institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisers. To earn credit for overseas study during the fall and/or spring semester(s), students must apply through Cornell Abroad, whose staff services the planning and application process.

LOCATIONS ABROAD

Cornell students majoring in a broad array of fields in all seven undergraduate colleges regularly study in more than 40 countries. The following list includes programs chosen frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by Cornell.

AFRICA

Botswana, Cameroon, Kenya, Madagascar, Tanzania, Uganda: School for International Training;
Ghana: University of Ghana (through the Council of International Educational Exchange, CIEE);
Kenya: Wildlife Management (School for Field Studies);
South Africa: Universities of Cape Town and Natal.

ASIA

China: Chinese University of Hong Kong; *Cornell FALCON for the spring semester or full year at the Inter-University Program for Chinese Language Studies at Tsinghua University, Beijing; Peking, Nanjing and Fudan Universities (CIEE); International Chinese Language Program at National Taiwan University; IES Beijing
India: School for International Training; St. Stephen’s College Delhi (through Brown or Rutgers Universities);
Indonesia: Institut Keguruan Dan Ilmu Pendidikan (IKIP) in Malang (CIEE);
Japan: *Kyoto Center for Japanese Studies; various university programs; IES Tokyo;
Korea: Yonsei University;
Nepal: *Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University;
Thailand: Khon Kaen University (CIEE);
Vietnam: University of Hanoi (CIEE);

AUSTRALIA AND NEW ZEALAND

Australian National University, Canberra; University of Sydney; University of Melbourne; University of New South Wales, Sydney; University of Queensland, Brisbane; University of Western Australia, Perth; School for International Training; Sydney Internship (Boston University); Otago and Lincoln Universities in New Zealand;

EUROPE

Denmark: *Denmark’s International Study Program (DIS);
France: *EDUCO (Cornell, Duke, and Emory in Paris) at Universite de Paris VII, Institut d’Etudes Politiques de Paris (*Sciences Po*); Critical Studies Program at the University of Paris (CIEE); Paris Internship (Boston University); IES Dijon Business Program
Germany: *Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg;

Greece: College Year in Athens;
Ireland: Trinity College Dublin and the National University Colleges of Dublin, Galway, and Cork;
Italy: *Cornell College of Art, Architecture, and Planning Program in Rome; Bologna Cooperative Studies Program; Boston University Program in Padova; IES Milan; Intercollegiate Center for Classical Studies in Rome; Syracuse University program in Florence;
Netherlands: University of Amsterdam; Leiden University;
Russia: St. Petersburg University (CIEE); Moscow International University and other universities (American Council of Teachers of Russian);
Spain: *Cornell-Michigan-Penn program at the University of Seville; various language and culture programs;
Sweden: *Swedish Child Care and Family Policy Practicum at the University of Göteborg; The Swedish Program at the University of Stockholm;
United Kingdom: *Direct enrollment at: the University of Birmingham; University of Bristol; Cambridge University; University of East Anglia; University of Edinburgh; University of Glasgow; University of Manchester; Oxford University; University of St. Andrews; University of Sussex; University of Warwick; University of York; University of London: King’s College, University College (including the School of Slavonic and East European Studies), Imperial College of Science and Technology, the London School of Economics and Political Science, and the School of Oriental and African Studies, as well as other universities of choice.

Externally sponsored programs in the UK include the British American Drama Academy, the Beaver College, Boston, and Rochester University internships, the Marymount College Program at the London College of Fashion, and the Hansard Parliamentary Internship Program:

Students studying in the United Kingdom enjoy a variety of services, and cultural activities, provided by the Cornell-Brown-Penn UK Centre in London.

LATIN AMERICA, CENTRAL AMERICA, AND THE CARIBBEAN

Argentina and Chile: various university-based study abroad programs, through the Cooperating Programs in the Americas (COPA) of Butler University and the University of Illinois;
Belize, Brazil, Chile, Ecuador: School for International Training;
Costa Rica: Organization for Tropical Studies (OTS) Undergraduate Semester Abroad in tropical biology; School for Field Study; Universidad Nacional (Heredia);
Cuba: the University of Havana through COPA; School for International Training;
Ecuador and Jamaica: Partnership for Service Learning;
Honduras: Escuela Agrícola Panamericana (Zamorano);
Mexico: Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM); Universidad de las Americas-Puebla (UDLA); Universidad Iberoamericana; School for Field Studies in Baja California;
MIDDLE EAST AND NORTH AFRICA
Egypt: American University in Cairo;
Israel: Ben-Gurion University; Haifa University; Hebrew University of Jerusalem; Tel Aviv University;
Jordan: University of Jordan (CIEE);
Morocco: School for International Training

Other Locations
Cornell students are by no means limited to the locations listed above or to the programs identified for particular countries. In recent years, they have also studied in Austria, Croatia, Czech Republic, Dominican Republic, Finland, the Philippines, Poland, Portugal, Switzerland, Turkey, Venezuela, and elsewhere.

Who Studies Abroad
Students from all seven undergraduate colleges and from all major fields study abroad; they are generally expected to have a cumulative grade point average of 3.0 or above. More than 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least 60 hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count study abroad credit toward their Cornell degree.

When Students Study Abroad and for How Long
Students may study abroad their sophomore, junior, or senior year. Junior year is the traditional choice, but second semester sophomore year or first semester senior year is increasingly popular. To ensure preparation, it is important to begin planning for study abroad in the freshman year. Although semester-long programs are usually available, academic year programs are highly recommended.

Application Process
Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions—are available at Cornell Abroad, 474 Uris Hall, where students are encouraged to consult the library of study abroad materials, talk with staff, and attend information meetings. The Cornell Abroad web site is a good place to browse through program offerings and to explore links to universities and programs worldwide. Students meet with the study abroad advisers in their colleges to discuss how they will meet college degree requirements. Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both the faculty adviser and the college study abroad adviser. Arts and Sciences, Human Ecology, and Industrial and Labor Relations students submit applications to their college for forwarding to Cornell Abroad; Agriculture and Life Sciences, Architecture, Art, and Planning, Engineering and Hotel Administration students submit applications directly to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities as necessary. All students who wish to receive academic credit for study abroad must apply through Cornell Abroad and their undergraduate college.

The application deadline for study abroad in the fall 2002 semester and the 2002–2003 academic year is February 15, 2002, for all programs except Oxford and Cambridge, for which the deadline to study at those universities for the full year in 2002–2003 is November 1. Many universities and programs admit on a rolling basis before and after these dates. Students planning to study abroad in the spring semester should initiate the application process during the preceding spring. Early application should improve your chances of admission. In all cases, it is a good idea to check with Cornell Abroad.

Registration, Credit Transfer, and Grades
Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enroll for a full load of courses abroad, according to the standards of the institution they are attending. Programs overseas, and normally receive 30 credits per year, or 12 to 20 credits per semester. The colleges review coursework taken abroad and mark the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the transcript will indicate the names of the courses taken, the grades received, and the total credits earned for each semester. The foreign grades are not translated into the Cornell American grading system, nor are they averaged into the Cornell grade point average.

Foreign Language Requirements
Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require at least two years, or the equivalent, of college-level language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available in non-English-speaking countries—for example, Belgium, Denmark, Hong Kong, Indonesia, Italy, Japan, Korea, Netherlands, People’s Republic of China, and Sweden. Cornell students who participate in programs in a non-English-speaking country with English-language work are required to take at least one language course as part of their program of study and are strongly encouraged to take more. Students are advised to consult with their college study abroad adviser about language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, prior to study abroad.

Housing Arrangements
Study abroad programs generally provide housing in the homes of local residents, in halls of residence for university students, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

Costs
Students studying abroad on Cornell programs pay a uniform Cornell Abroad Tuition per semester, which covers tuition, housing, orientation, some field trips, and excursions. Some or all meals may be included also. Cornell Abroad staff are always available to discuss study abroad costs on all programs.

In 2001–2002, The Cornell Abroad Tuition for students participating in the Berlin Consortium for German Studies, the Cornell Nepal Study Program, EDCUO (Emory, Duke and Cornell in Paris), the Michigan-Cornell-Penn Program in Seville, and the Swedish Child Care Fracticum at the University of Goteborg is $15,600. For the following affiliate universities in the United Kingdom, Cornell Abroad tuition is also $15,600: Cambridge and Oxford, St. Andrews, Imperial College, King’s College, London School of Economics, School of Oriental and African Studies, and University College London (including the School of Slavonic and East European Studies).

At the following affiliate universities in the United Kingdom, the Cornell Abroad program tuition will be $13,100 per semester: The Universities of Birmingham, Bristol, East Anglia, Glasgow, Manchester, Sussex, Warwick and York. For Denmark’s International Studies Program (DIS), the Cornell Abroad program tuition will be $14,900. For the Kyoto Center for Japanese Studies (KCJS) the tuition will be $18,700 per semester.

Students studying abroad on all other programs in 2001–2002 pay the tuitions and other costs charged by their programs, and a Cornell International Program Tuition of $3,600 per semester. The International Program Tuition covers the direct and indirect costs of study abroad to the university, including financial aid for all study abroad students.

Financial Aid
Students who are accepted for study abroad during the academic year are eligible for two semesters of financial aid, consistent with general university aid policy; this applies to all programs, whether run directly by Cornell or not. Students who have transferred to Cornell with 60 or more credit hours are not likely to receive aid for study abroad assuming they would thereby need more than eight semesters to earn the undergraduate degree. Some programs abroad offer need-based and merit-based scholarships.

Security Abroad and Related Issues
The decision to study in a particular region of the world must be made by each student himself or her family in light of their own interpretation of current events. The director, associate director, and staff stay in regular contact with representatives abroad and receive information regarding rapidly changing political situations worldwide through the U.S. Department of State Office of...
is an ideal place to study American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington's rich collection of libraries, museums, theaters, and art galleries, offers an opportunity to explore American history, literature, art, and the full range of the American humanistic tradition.

The Cornell-in-Washington Program offers two study options: (1) studies in public policy, and (2) studies in the American experience. Students take courses from Cornell faculty, conduct individual research projects, and work as externs in the Washington community.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, D.C. 20037. The academic and administrative space is located on the first floor and 27 residential units for approximately 60 students and faculty are on the upper floors.

Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

Housing

Apartments are rented at the Cornell Center during the academic year. All are fully furnished (except for dishes, cookware, towels and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and bedding) and reasonably priced by both Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstances and have tuition refund policies based on prorated formulas.

Sources of Information and Advice Concerning Study Abroad

Cornell Abroad (474 Uris Hall): Richard Gaulton Ph.D., director; Beatrice B. Szekely Ph.D., associate director; Libby Okihiro, student services coordinator; Kathy Lynch, financial services coordinator. The Cornell Abroad library contains an extensive collection of university catalogs and study abroad program brochures, files of course syllabi and evaluations, books, videotapes, and some information on travel, summer study, and work abroad. Comprehensive information is provided on the Cornell Abroad web site which incorporates linkages to universities, programs, and resources worldwide. In early weeks of every semester, faculty, students, and staff discuss programs in a series of information meetings announced in the Cornell Daily Sun and on the Cornell Abroad web homepage.

College Study Abroad Advisers

CORNELL-IN-WASHINGTON PROGRAM

511 Caldwell Hall (255-4090)

Cornell-in-Washington is a program that offers students from all colleges in the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. The aim of the program is to give students a chance to take advantage of the rich resources of the national capital. Washington, as the center of much of the nation's political energy, features of the program may be obtained at either the Cornell-in-Washington office at 311 Caldwell Hall (607) 255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, (202) 466-2184.

CORNELL INSTITUTE FOR PUBLIC AFFAIRS

473 Hollister Hall (255-8018)

The Cornell Institute for Public Affairs (CIPA) is a university-wide institute that offers a two-year graduate professional program leading to a Master of Public Administration. Our mission is to develop professionals who can be effective, ethical, and creative leaders in government and in the private sector's interface with government.

CIPA emphasizes the interactions between public and private interests for the benefit of all sectors of society. At CIPA, we utilize Cornell's cutting-edge strengths as a major research university to understand rapidly evolving public interests, technological opportunities, ecological constraints, individual aspirations, and political possibilities. Examples of Cornell's extraordinary breadth of policy-related specialties include science and technology; health, education, and social services administration; agricultural, food, and nutrition policy; international development; environmental studies; peace studies; labor relations; city and regional planning; and ethics in public life. These areas of expertise provide a diverse base for the CIPA Fellows (our students) to pursue the study of public affairs. Thus, CIPA Fellows take courses and work with faculty from all of Cornell's Colleges as well as the Cornell Law School, with whom a joint M.P.A./J.D. degree is offered, and the Johnson Graduate School of Management.

The CIPA program has been developed to offer both a sound foundation in the principles, tools and techniques of a career and leadership in public policy either in the public or private sector. CIPA also offers flexibility to accommodate and encourage the specialized policy-related interests of our students.

The two-year curriculum is structured into three parts: five interdisciplinary core courses taken by all CIPA Fellows; "competency" area requirements to develop the wide variety of skills and professional perspectives necessary for the practice of public policy; and sectoral specialization through additional courses and the completion of a thesis in the area of the fellow's policy focus.

The Core Courses

These courses have been developed specially for CIPA Fellows to provide a common, hands-on experience in employing the latest analytical techniques to guide the formulation of programs, their supporting institutions, and their effective administration. They will also provide strategies for implementing change in complex heterogeneous societies.

CIPA I: Quantitative Techniques for Policy Analysis and Program Management (CRP 621)

Provides students with the basic management tools essential for the contemporary career in public affairs. It includes hands-on practice with formal management techniques,
including investment analysis and linear and dynamic programming.

CIPA II: Public Political Economy (ECON 539) Uses techniques of economic analysis to understand the need for various public programs, to estimate the value of new programs, and to forge desirable institutional structures for service delivery, and to anticipate and evaluate outcomes.

CIPA III: Administration, Politics, and Public Affairs (GOVT 621) Explores the processes and institutional context of public affairs and analyzes the political and administrative structure and dynamics of policy development and implementation.

CIPA IV: Social Policy (526) Integrates a variety of analytic methods, especially statistics and simulation models, to explore the structure of public programs and to assess their direct and indirect consequences.

CIPA V: Models and Quantitative Methods (CRP 528) Demonstrates the use and limits of models and quantitative techniques in forming and administering policy.

The Area Requirements
In addition to the five core courses, fellows must also complete satisfactorily a series of foundations, the "competency" area requirements that are essential to the training of public policy professionals. These competency areas are: administration, politics, and policy; economics; math and statistics; finance; regulation; and ethics and public law.

The Sectoral Specialty
At least three courses taken by individual fellows will be in their sectoral specialty or "concentrations." These are widely divergent and depend on the unique interests and background of the individual student.

The CIPA Thesis
Each fellow must complete a thesis, which applies the conceptual tools, theories, and analytical techniques to a problem in the fellow's area of sectoral expertise. As the culmination of each M.P.A. course of study, this thesis must be both critical and creative, reflecting the fellow's ability to identify, analyze, and generate supportable solutions to important public policy questions.

Additional Requirements
All M.P.A. candidates must spend four semesters in residence to complete the degree.

The Faculty
In addition to our five core faculty members (Richard E. Schuler, director, economics and civil and environmental engineering; Steven Caldwell, sociology; Arch Dotson, government; David Lewis, city and regional planning; and Peter Stein, physics) who offer the five core courses and advise the fellows in the development of their programs of study, over 100 faculty members at Cornell participate in the graduate field of public affairs and policy. All field faculty members are available to supervise the theses of individual Fellows whose policy interests coincide with faculty expertise.

Special Programs
The combined four-year M.P.A./J.D. and M.P.A./M.B.A. degree programs are available for interested applicants. For selected Cornell undergraduates who are accepted by the end of their junior year, a combined five-year bachelor's/M.P.A. program can be arranged.

Student Organization
The Cornell Public Affairs Society, governed by the fellows, conducts a weekly colloquium with guest speakers, a bi-weekly television program, "Point-Of-View," aired on the local public access channel, and produces, edits, and sponsors student authors for its annual public policy journal, "The Current," as well as arranging regular social events.

Application. Applicants are required to submit GRE general test scores. CIPA has a policy of rolling admissions. Students requesting aid, however, must submit applications by February 15 for consideration. For an application or more information, contact Cornell Institute for Public Affairs, 472 Hollister Hall (phone: 607 255-8018; fax: 607 255-5240; e-mail: cipa@cornell.edu; web site: www.cipa.cornell.edu).

Financial Support. As a professional program, the financial aid resources of CIPA are extremely limited. Students lack a variety of strategies for supporting their lives while attending Cornell. In addition to the financial aid resources that are available through the university, students are encouraged to explore and take advantage of all available sources of external funding.

For an application or more information, contact Cornell Institute for Public Affairs, 472 Hollister Hall (phone: 607-255-8018; fax: 607-255-5240; e-mail: cipa@cornell.edu).

CORNELL PLANTATIONS
One Plantations Road (255-3020)
Internet homepage: www.plantations.cornell.edu
e-mail: plantations@cornell.edu
A place of exceptional diversity and learning opportunities, Cornell Plantations comprises the university's botanical garden, arboretum, and natural areas. Its 3,000+ acres include the woodlands and gorges on and around campus, as well as specialized gardens and a 150-acre arboretum that features a field flower meadow and shrubs largely in central New York State. Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell's academic programs and research in disciplines such as ecology and systematics, floriculture, ornamental horticulture, and bioengineering. While many of Cornell Plantations' resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these areas for classes and research can be made by calling Cornell Plantations.

Cornell Plantations also offers relaxation, rejuvenation, and inspiration. The vast open spaces provide privacy, while the intimate gardens provide respite from the busy campus. Visitors always discover surprises and learn something new in the gardens, which feature herbs, flowers, vegetables, international crops, rock garden plants, peonies, poisonous plants, ground covers, rhododendrons, wildflowers, and a winter garden.

Students are encouraged to volunteer as photographers, tour guides, computer assistants, gardeners and writers for our magazine and newsletter. A number of student internships are also offered each summer. Maps, information, publications, and class brochures (for noncredit classes and workshops) are available in the Garden Gift Shop in the Lewis Headquarters Building at the botanical garden. Noncredit courses in horticulture, landscape design, botanical arts, and natural history are offered throughout the year. A one-credit seminar series (HORT 480) is offered each fall; a three-credit Public Garden Management course, (HORT 485) is offered every other spring semester.

PROGRAM ON ETHICS & PUBLIC LIFE
240 Goldwin Smith Hall (255-8515)
The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.
The university-wide Program on Ethics & Public Life (EPL) is Cornell's initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing their ethical character.

EPL does not intend to create either an undergraduate major or a graduate field in Ethics & Public Life. On the contrary, we seek to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that are intellectually and practically fruitful at the same time. It offers a concentration in Law and Society (see separate listing under "Special Programs and Interdisciplinary Studies").

EPL Core Courses
PHIL 194 / GOVT 294 Global Thinking
PHIL 242/GOVT 260 Social and Political Philosophy
PHIL 246 Ethics and the World Environment
PHIL 247 Ethics and Public Life
PHIL 294 / GOVT 294 Global Thinking
PHIL 342 Law, Society, and Morality
PHIL 343 Political Obligation and Civil Disobedience
GOVT 469 / PHIL 369 Limiting War: The Morality of Modern State Violence
GOVT 412 Voting and Political Participation
GOVT 455/WRIR 604 Feminism and Gender Discrimination
GOVT 468/PHIL 368 Global Climate and Global Justice
the degree provide a comprehensive and understanding of the long-range social, many other aspects of the real estate business.

The professional study of real estate is involved in the design and administration of several different colleges that is directly concerned with the finance, exchange, sustainable development, property and asset management, real estate marketing and market analysis or international real estate concentrations. Students complete a real-world, semester long project workshop during their final semester.

Admissions
Admissions procedures for the M.P.S. (Real Estate) program are supervised by the Graduate School and Real Estate Field. Applicants to the program must have completed a bachelor's degree with a good academic background. They must achieve Graduate Management Admission Test (GMAT) or Graduate Record Examination (GRE) scores that are at the level required in other Cornell graduate professional degree programs; and at least two letters of recommendation from undergraduate college faculty members (and if appropriate, from employers) familiar with the student's academic and professional work must be submitted. There is no work experience requirement for admission (although work experience is preferred). Foreign students, for whom English is a second language, will need to achieve acceptable TOELF scores.

For more information, contact C. Bradley Olson, director of the Program in Real Estate (607-255-7110) or e-mail real_estate@cornell.edu.

SCIENCE OF EARTH SYSTEMS: AN INTERCOLLEGE MAJOR
During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. In this program, Cornell's strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the twenty-first century. Graduates of Cornell's SES program are well prepared for several career and advanced study options:

- Graduate work leading to the M.S. and/or Ph.D. in any of the earth science sub-disciplines (e.g., atmospheric science, geology, geophysics, biogeochemistry, hydrology, oceanography).
- Employment in environmentally-oriented careers in both the private and public sector at the B.S. or B.A. level.
- Advanced degree in environmental law or policy. These fields value students with an understanding of the science behind legal and policy decisions.
- Advanced degree in teaching, for example, earth science at the middle or high school level.
- Medical school. The emphasis on basic sciences in the SES curriculum makes the SES major a suitable springboard for a career in medicine.

The SES major is available for students in the College of Agriculture and Life Sciences and the College of Arts and Sciences. In the College of Engineering, the SES curriculum may be completed by choosing the SES option in the Department of Earth and Atmospheric Sciences. The SES major has as its home in the Department of Earth and Atmospheric Sciences, but relies on the collaboration of several departments across the university.

The SES Curriculum
The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The requirements for the major are as follows:

1. Basic Math and Sciences
   a. MATH 111 and 112, or MATH 191 and 192, or MATH 190 and 192
   b. PHYS 207 and 208, or PHYS 112 and 213, if PHYS 214 will also be taken (see below)
   c. CHEM 207 and 208
   d. BIO 101/103 and 102/104 (or 105-106) or BIO 109 and 110
   e. THREE ADDITIONAL 3-4 credit courses in basic science and math, generally 100- and 200-level classes. At least one of the following must be included in the selection:
      EAS 201 Physics and Chemistry of the Earth
      BIOE 261 Ecology and the Environment

Other examples are MATH 293 and MATH 294, biochemistry, organic chemistry, PHYS 214, and introductory statistics. With the exception of an introductory statistics course, the additional basic courses should require at least one of the classes listed in a-d above as a prerequisite.
DEPARTMENT OF STATISTICAL SCIENCE
301 Malott Hall (255-8066)

The university-wide Department of Statistical Science at Cornell coordinates activities in statistics and probability at the undergraduate, graduate, and research levels.

Students interested in graduate study in statistics and probability can apply to the Graduate Field of Statistics or to one of the other graduate fields of study that offer related coursework. Students in the Field of Statistics plan their graduate program with the assistance of their Special Committee. For detailed information on opportunities for graduate study, students should contact the Director of Graduate Studies, 301 Malott Hall.

The department also offers an undergraduate program through the Biometrics Unit in the College of Agriculture and Life Sciences and an Engineering Statistics minor in the College of Engineering. Undergraduate major and certificate programs are currently under development for other colleges. For information, contact the Undergraduate Coordinator, (301 Malott Hall, 255-8066). Statistics courses offered by the departments listed below will fill distribution requirements in many of the colleges.

A free consulting service is offered through the Biometrics Unit in the College of Agriculture and Life Sciences. Statistical computing consulting is available through the Office of Statistical Consulting, B21 Savage Hall, 255-1926.

The department is organized into four units: Biometrics, Engineering Statistics, Mathematical Statistics and Probability, and Social Statistics. The areas covered include agricultur之际, biostatistics, econometrics, and social statistics, epidemiology, medical statistics, quality control and reliability, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

Course designations
The following course identifiers are used to designate the courses offered by the separate units: Biometrics Unit (CALS), STBTRY, Engineering Statistics Unit (ENGR), STENGR, Mathematical Statistics Unit (ARTS), STMATH, Social Statistics Unit (ILR), STSOC. To enroll in one of the courses, see the listing for the appropriate college.

Descriptions of undergraduate and graduate courses are listed below.

Department of Statistical Science
ST 501-502 Applied Statistical Analysis
This is the two-semester core course for students in the Master of Professional Studies (M.P.S.) degree program in applied statistics in the Department of Statistical Science. Enrollment is limited to students enrolled in the M.P.S. program. The course consists of a series of modules on various topics in applied statistics. Some modules will include guest lectures from practitioners. Parallel with the course, students complete a year-long, in-depth data analysis project.

ST 501: Applied Statistical Analysis. Letter only. Topics include, but are not limited to: statistical computing systems, statistical software packages, data management, statistical graphics, and simulation methods and algorithms.

ST 502: Applied Statistical Analysis. Letter only. Topics include, but are not limited to: sample surveys and questionnaire design, data sources, experimental design, and data mining.

Biometrics Unit
STBTRY 100 Statistics and the World We Live In (enroll in BTRY 100)
STBTRY 201 Statistical Methods I (enroll in BTRY 261)
STBTRY 302 Statistical Methods II (enroll in BTRY 302)
STBTRY 400 Biometry Seminar (enroll in BTRY 400)
STBTRY 408 Theory of Probability (enroll in BTRY 408)
STBTRY 409 Theory of Statistics (enroll in BTRY 409)
STBTRY 494 Undergraduate Special Topics in Biometry and Statistics (enroll in BTRY 494)
STBTRY 495 Statistical Consulting (enroll in BTRY 495)
STBTRY 497 Undergraduate Individual Study in Biometry and Statistics (enroll in BTRY 497)
STBTRY 498 Undergraduate Supervised Teaching (enroll in BTRY 498)
STBTRY 499 Undergraduate Research (enroll in BTRY 499)
STBTRY 600 Statistics Seminar (enroll in BTRY 600)
STBTRY 601 Statistical Methods I (enroll in BTRY 601)
STBTRY 602 Statistical Methods II (enroll in BTRY 602)

STBTRY 603 Statistical Methods III (enroll in BTRY 603)
STBTRY 604 Statistical Methods IV: Applied Design (enroll in BTRY 604)
STBTRY 652 Computationally Intensive Statistical Inference
STBTRY 662 Mathematical Ecology (enroll in BTRY 662)
STBTRY 672 Topics in Environmental Statistics (BTRY 672)
STBTRY 682 Statistical Methods for Molecular Biology (enroll in BTRY 682)
STBTRY 694 Graduate Special Topics in Biometry and Statistics (enroll in BTRY 694)
STBTRY 697 Individual Graduate Study in Biometry and Statistics (enroll in BTRY 697)
STBTRY 717 Linear and Generalized Linear Models (enroll in BTRY 717)
STBTRY 795 Statistical Consulting (enroll in BTRY 795)
STBTRY 798 Graduate Supervised Teaching (enroll in BTRY 798)

Engineering Statistics Unit
STENGR 270 Basic Engineering Probability and Statistics (enroll in ENGRD 270)
STENGR 310 Introduction to Probability and Random Signals (enroll in ELE E 310)
STENGR 360 Engineering Probability and Statistics II (enroll in ORIE 560)
STENGR 361 Introductory Engineering Stochastic Processes I (enroll in ORIE 361)
STENGR 411 Random Signals in Communications and Signal Processing (enroll in ELE E 411)
STENGR 467 Telecommunication Systems I (enroll in ELE E 467)
STENGR 473 Empirical Research Methods in Financial Engineering (enroll in ORIE 473)
STENGR 474 Statistical Data Mining (enroll in ORIE 474)
STENGR 476 Applied Linear Statistical Models (enroll in ORIE 476)
STENGR 512 Fundamental Information Theory (enroll in ELE E 562)
STENGR 517 Artificial Neural Networks (enroll in ELE E 577)
STENGR 523 Introductory Engineering Stochastic Processes I (enroll in ORIE 523)

**Program in Comparative and Environmental Toxicology**

**213 Rice Hall (255–8008)**

The Cornell Program in Comparative and Environmental Toxicology is a broadly based inter-college program facilitated by the Institute for Comparative and Environmental Toxicology (ICET) serves as a focal point for all research, teaching, and cooperative extension activities in the broad interdisciplinary area of environmental toxicology at Cornell and encourages the development of collaborative programs between faculty members in many university departments.

### Graduate Studies

The graduate field of Environmental Toxicology provides training leading to the M.S. or Ph.D. degrees. There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Concentrations include cellular and molecular toxicology; nutritional and food toxicology; ecotoxicology and environmental chemistry; and a minor concentration of risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated.

### Courses

Courses in environmental toxicology are cosponsored by the university's academic departments and are open to all graduate students and to undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below. Details of course content are provided in the catalog under the listings of the cosponsoring department. Further information concerning the program and the development of new courses may be obtained through the director of graduate studies, 213 Rice Hall, telephone: 255-8008, e-mail: envtox@cornell.edu; www.cfe.cornell.edu/icet/.

**TOX 370** Pesticides and the Environment (ENTOM 570)

**TOX 437** Eukaryotic Cell Proliferation (BIO S 437)

**TOX 490** Insect Toxicology and Insecticide Chemistry (ENTOM 690)

**TOX 607** Ecotoxicology (Natural Resources 607)

**TOX 610** Introductory Chemical and Environmental Toxicology (Natural Resources 610)

**TOX 611** Molecular Toxicology

**TOX 625** Nutritional Toxicology (Animal Science 625)

**TOX 698** Current Topics in Environmental Toxicology (Nutritional Sciences 700, NatRes 698, Ag & Bio Eng 698)

**TOX 702** Seminar in Toxicology

**TOX 750** Cancer Cell Biology (Biological Sciences 750, Vet. Pathology 750)

**TOX 899** Master’s Thesis and Research

**TOX 999** Doctoral Thesis and Research

### Cornell's Undergraduate Environmental Programs

Exciting opportunities are available at Cornell University for students interested in environmental study and research. Environmental curricula and courses are found in many parts of the university including the biological, physical, and social sciences, engineering, the humanities, and the design professions. Each of the majors and concentrations/specializations listed below provide opportunities for environmental study. Information can be found in each Department’s Courses of Study.
section, on departmental web pages, or by contacting each department directly. The following information is also available on the Center for the Environment's web page www.cfe.cornell.edu/cfe.education.

College of Agriculture and Life Sciences

- Agricultural and Biological Engineering offers environmental study opportunities through a combination of engineering sciences, biology, and applications courses. Within the ABEN major, there are several concentrations including Environmental Systems Engineering and Environmental Systems Technology.
- Within the Department of Applied Economics and Management, students can select a specialization in Environmental and Resource Economics, which provides training in the application of economic concepts to environmental and resource use problems.
- Biometry and Statistics majors learn to use quantitative methods to solve problems in the biological, physical, and social sciences.
- Communication offers a curriculum for communication in the Life Sciences that deals with the impact of communication on environmental, health, science, and agricultural issues, and with public perceptions of risk.
- Crop and Soil Sciences provides instruction in four specializations: agronomy, crop science, earth systems (see multi-college opportunities below), and soil science. The department also has strong programs in the environmental information sciences including geographic information systems and remote sensing.
- Earth and Atmospheric Sciences is a new department that offers majors in atmospheric sciences and geological sciences, as well as the Science of Earth Systems major. Students in the Colleges of Agriculture and Life Sciences, the College of Arts and Sciences, and the College of Engineering can choose from a variety of options, depending on their interests.
- Entomology provides students with a basic background in biological and environmental sciences, with a special emphasis on the study of insects.
- Environmental Science is a new major in the College of Agriculture and Life Sciences that is pending approval. The proposed major provides an integrative and broad-based program in the physical, biological, and social sciences. The major consists of foundation courses and environmental core courses in earth, biotic, human, and economic systems. Students focus their upper-level study in a concentration or "environmental track," which provides expertise in a particular area. For more information about this new major, contact the Center for the Environment cfe.cornell.edu or (607)255-7535.
- Landscape Architecture focuses on the art of landscape design as an expression of cultural values combined with the natural processes of the ambient environment. The program promotes interaction among the areas of horticulture, architecture, and city and regional planning.
- Natural Resources has four concentrations that focus on systems that yield renewable natural resources such as wildlife, forests, fish, and water.
- Plant Sciences students can specialize in plant biology, plant genetics and breeding, plant pathology, plant protection, or horticultural sciences including floriculture and ornamental horticulture, and fruit and vegetable science.
- Rural Sociology is a major that includes interdisciplinary focus: development sociology, population, environment, and society; and applied social data analysis.
- General Studies provides opportunities for motivated students—with their faculty adviser—to plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by existing programs.

Office of Undergraduate Study in Biological Sciences

- Biology majors are enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Students can concentrate in a number of areas including biochemistry, ecology and evolutionary biology, marine biology and oceanography, general biology, microbiology, plant biology, plant biotechnology, and systematics and biotic diversity. Students can also enroll in the interdisciplinary Biology and Society major (see "Multi-College Majors" below).

College of Arts and Sciences

- Chemistry and Chemical Biology offers a full range of physical, organic, inorganic, analytical, theoretical, bioorganic, and biophysical chemistry.
- Science and Technology Studies is a major that focuses on the important roles of science and technology in society. Students select a concentration that draws together a group of related courses. Current concentrations include science, technology, and public policy: technology, culture, and society; environment, science, and society; and history and philosophy of science. Science and Technology Studies also offers the Biology and Society major (see "Multi-College Majors" below).

College of Engineering

- Civil and Environmental Engineering offers an accredited undergraduate program in civil engineering and permits students to pursue one of two options leading to a Bachelor of Science degree, one of which is environmental engineering. This option emphasizes study of environmental engineering, water resource systems, and fluid mechanics and hydrology.

College of Architecture, Art, and Planning

- Urban and Regional Studies is offered by the Department of City and Regional Planning and is focused on the problems of human communities and regions.

College of Human Ecology

- Design and Environmental Analysis is concerned with planning, designing, and managing interior environments to satisfy human needs. The department offers concentrations in interior design, facility planning and management, and human factors and ergonomics.

Multi-College Majors

- Science of Earth Systems is designed to educate students across the breadth of the earth sciences without sacrificing the depth of understanding that is needed to face the environmental challenges of the twenty-first century. Students can focus on environmental science, climate dynamics, oceanography, hydrological science, geophysics, and environmental biophysics. The Science of Earth Systems major is open to students in the Colleges of Agriculture and Life Sciences, Engineering, and Arts and Sciences.
- Biology and Society is offered as a major by both the College of Arts and Sciences and the College of Human Ecology. Additionally, students in the College of Agriculture and Life Sciences can develop an approved sequence of courses under the College's general studies option. Students in the Biology and Society major combine training in biology with exposure to perspectives from the social sciences and humanities on the social, political, and ethical aspects of modern biology.

Extramural Opportunities

At Cornell, environmental experiences are not limited to classroom work or studies in a major field. There are many other ways to learn about the environment including formal experiences like the Undergraduate Research Programs or environmental courses such as the annual Seminar on Sustainable Development. Another course, Environmental Stewardship in the Cornell Community, was organized by undergraduate students to address new strategies for improving the University's overall environmental performance.

Students can also study abroad in over 40 countries or gain valuable public policy experience by spending a semester in the Cornell-in-Washington program. To enhance their learning experience, students can connect with a variety of campus resources including Cornell Plantations, Laboratory of Ornithology, Agricultural Experiment Station, Center for the Environment, Ecology House, or the Center for Religion, Ethics, and Social Policy.

Opportunities to associate with like-minded student colleagues can be found in many student-run organizations with environmental themes including the Cornell Greens, Cornell Students for Composting, Dillmun Hill Organic Farm, United Progressives, Entomaniax, Cornell Hookbill Association, Wildlife Society, and the International Association of Camel Breeders. Students also publish Zrus, a magazine forum for environmental issues at Cornell.
Environmental lectures, seminars, and conferences are a Cornell specialty. At Cornell a student might hear a lecture by one of the University's notable A. D. White Professors-at-Large, which include among others Jane Goodall, international expert on African primates, and William McDonough, a Time Magazine "Hero for the Planet." Also, in April of each year, the Ithaca Ren Iscol Distinguished Environmental Lecture features a prominent scientist or policymaker.

The surrounding Ithaca community offers Cornellians a range of environmental activities—from outdoor recreation to an organic farmers market to local activism—which most college towns cannot match. Local organizations like EcoVillage at Ithaca, Finger Lakes Land Trust, Cayuga Lake Watershed Network, and the various Finger Lakes State Parks are terrific local resources for the environmentally inclined. The area's unique natural beauty is a haven for outdoor enthusiasts and casual observers of nature.

Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Undergraduate preparation for business is found in many schools and colleges at Cornell. Students most frequently take courses in more than one area, as well as in related fields, to construct a program to suit their interests and career objectives. Each of the following areas provides a different focus for application and use of business study and training, and students should consider carefully the implications of each program when making a choice. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields following each of the undergraduate options.)

The areas most often pursued include applied economics and management (soon to be only non-B.S.), applied economics, applied management (College of Architecture and Life Sciences), economics (College of Arts and Sciences), engineering, hotel administration, policy analysis and management (College of Human Ecology), industrial and labor relations, and sociology.

Applied economics and management. This is the undergraduate business degree program at Cornell whose requirements are consistent with the AACSB-International Association for Management Education, the accrediting body for university business programs. Here students gain a general business degree, with courses spanning the fields of marketing, finance, management, accounting, business law, and human resources. Students also participate in specialized programs focusing on entrepreneurship, small business, food industry management, and agribusiness.

Economics. This program provides a broad view of that social science concerned with the description and analysis of the production, distribution, and consumption of goods and services, the understanding of monetary systems, and the comprehension of economic theories and models. It is viewed more often as preprofessional than as training for immediate practice in business or economics.

Industrial and labor relations. This area focuses on the interactions among human beings, organizations, and institutions. It encompasses not only the relationships between employer and employee but the political, economic, social, and psychological factors that affect those relationships. It includes the study of the hiring, training, and motivating of individual workers; negotiation and conflict resolution; and the economic and technological changes that affect the jobs that people perform. Finally, it embraces the many regulations and regulatory agencies created by our society to protect and help both employer and employee.

Sociology. The program provides disciplined understanding of social and social issues. The insights and analytical skills you will acquire are applicable to corporate, government, and nonprofit settings, and the department's focus on social organization and institutions will prepare you well for graduate or professional programs in business schools. (Also see the description of the Society and Economy Concentration in the Department of Sociology section of Arts and Sciences.)

Related Areas

Courses in areas directly related to these business programs are found in many of the university departments. For example, quantitative methods may be studied in the departments of Mathematics and Computer Science, and courses in public administration are found in the departments of Government and City and Regional Planning. There are additional programs that allow students with an interest in business to focus on a particular geographic area. Examples are the Latin American Studies Program, the Asia Program, and the Africana Studies and Research Center. Such interdisciplinary programs as the Program on Science, Technology, and Society and the various programs in international agriculture provide additional opportunities for study of interest to business students.

Combined Degree Programs

Because Cornell has the Samuel Curtis Johnson Graduate School of Management, special opportunities exist for highly qualified undergraduates to combine their undergraduate programs with graduate study in that school. Students in the double-registrant program generally receive a bachelor's degree after four years of study and a Master of Business Administration (M.B.A.) degree after the fifth year of study, rather than the usual six years. Students in all Cornell undergraduate colleges and schools are eligible to explore this option. There is also a program with the College of Engineering that allows qualified students to earn a B.S., M.B.A., and Master of Engineering degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the work in the two schools.

SELECTED BUSINESS AND MANAGEMENT COURSES

Accounting
AEM 221 Financial Accounting
AEM 323 Managerial Accounting
H ADM 120 Survey of Financial Management

PRELAW STUDY

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.
2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. First-year writing seminars, required of nearly all Cornell first-year students, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence. Psychology and human development lead to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.

3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.

4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, veterinary, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the Bachelor of Arts degree, including 92 credits of course work in the College of Arts and Sciences. It may be possible for exceptionally well-qualified Cornell undergraduate collegians to arrange to enter the Law School after three years. The College of Human Ecology offers a program in which students spend their fourth year at the Law School. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as Nature, Functions, and Limits of Law, which are open to all undergraduates.

5. There is no specific preprofessional program at Cornell, and students interested in veterinary medicine as a career should select a major area for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preprofessional students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

For information on additional preparation, including work experience and necessary examinations, students should consult the Guaranteed Admissions Program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York 14853-1601.

1. "Arbitrary and Capricious" describes actions which have no sound basis in law, fact, or reason are grounded solely in bad faith or personal desires. A determination is arbitrary and capricious only if it is one no reasonable mind could reach.

2. "Clear and convincing" as a standard of proof refers to a quantum of evidence beyond a mere preponderance but below that characterized as "beyond a reasonable doubt" and such that it will produce in the mind of the trier of fact a firm belief as to the facts sought to be established.

3. PREVETERINARY STUDY

For information on additional preparation, including work experience and necessary examinations, students should consult the Guaranteed Admissions Program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York 14853-1601.

For information on additional preparation, including work experience and necessary examinations, students should consult the Guaranteed Admissions Program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York 14853-1601.

2. "Arbitrary and Capricious" describes actions which have no sound basis in law, fact, or reason are grounded solely in bad faith or personal desires. A determination is arbitrary and capricious only if it is one no reasonable mind could reach.

3. "Clear and convincing" as a standard of proof refers to a quantum of evidence beyond a mere preponderance but below that characterized as "beyond a reasonable doubt" and such that it will produce in the mind of the trier of fact a firm belief as to the facts sought to be established.

4. See the definition at section II.B.4.c.
COLLEGE OF AGRICULTURE AND LIFE SCIENCES

ADMINISTRATION
Susan A. Henry, dean
William E. Fry, senior associate dean
John M. Finamore, associate dean for financial affairs
Mary Lou Doyle, assistant dean for human resources
Michael P. Riley, assistant dean for public affairs
H. Dean Sutphin, associate dean and director of academic programs
Donald R. Viands, associate director of academic programs
Daniel J. Decker, associate dean and director of the Cornell University Agricultural Experiment Station
Anthony M. Shelton, associate director of research
D. Merrill Ewert, associate dean and director of international agriculture
James E. Haldeman, associate director of international agriculture
Norman T. Uphoff, director of international agriculture
Edward D. Harwood, associate dean and director of cooperative extension
Margaret E. Smith Einarson, associate director of cooperative extension
Bernadette Soto, Bryan Nance
Minority programs: Catherine Thompson
Career development: Amy Benedict-Augustine, Pamela Hampton

Office of Academic Programs Staff
Counseling and advising: Lisa Ryan, Bonnie Shelley
Registrar: Mary Milks, Patricia Austic
Admissions: Robert Springall, Ann LaFave, Bernadette Soto, Bryan Nance
Career development: Amy Benedict-Augustine, Laurie Gillespie, Pamela Hampton
Minority programs: Catherine Thompson

Department Chairs
Agricultural and biological engineering: M. F. Walter, Riley-Robb Hall
Applied economics and management: A. M. Novakovic, Warren Hall
Animal science: A. W. Bell, Morrison Hall
Atmospheric science unit (part of earth and atmospheric sciences): S. J. Riha, Bradfield Hall
Biometrics: M. T. Wells, Ives Hall
Communication: R. E. Osman, Kennedy Hall
Crop and soil sciences: S. D. DeGloria, Emerson Hall
Ecology and evolutionary biology: R. G. Harrison, Corson Hall
Education: D. E. Hedlund, Kennedy Hall
Entomology: D. A. Rutz, Comstock Hall
Food science: D. Miller, Stocking Hall
Horticultural science: H. C. Wien, Plant Science Building
Landscape architecture: Kennedy Hall
Microbiology: S. H. Zinder, Wing Hall
Molecular biology and genetics: D. I. Shalloway, Biotechnology Building
Natural resources: J. P. Lassoie, Fernow Hall
Neurobiology and behavior: C. Walcott, S. G. Mudd Hall
Plant breeding: Emerson Hall
Plant pathology: R. Loria, Plant Science Building
Rural sociology: P. D. McMichael, Warren Hall
Statistical sciences: B. W. Turnbull, Mallott Hall

College Focus
The College of Agriculture and Life Sciences provides educational programs that prepare men and women with technical, management, and leadership skills.

There are six primary areas of focus, developed in response to the needs of society, and representing agriculture and life sciences in their broadest and most dynamic meaning:
- Agriculture (production and marketing)
- Biological Sciences
- Community, Human, and Rural Resources
- Environment
- Food and Nutrition
- International

DEGREE PROGRAMS
The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy. Professional degrees include the Master of Professional Studies and the Master of Arts in Teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Department and is linked with the national Higher Education General Information Survey (HEGIS) codes for federal and state reporting.

Graduate Degrees
Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields are also listed.

Agriculture [M.P.S. (Agr.)]: H. D. Sutphin, Roberts Hall
Agricultural and Biological Engineering: D. J. Aneshansley, Riley-Robb Hall
Agricultural Economics: R. N. Boisvert, Warren Hall
Animal Breeding: E. J. Pollak, Morrison Hall
Animal Science: R. L. Quaas, Morrison Hall
Atmospheric Sciences
Biochemistry, Molecular and Cell Biology: W. J. Brown, Biotechnology Building
Biometry: M. Wells, Warren Hall
Communication: J. E. Shanahan, Kennedy Hall
Development Sociology: C. C. Geisler, Warren Hall
Ecology and Evolutionary Biology: D. W. Winkler, Corson Hall
Education [also M.A.T.]: D. J. Trumbull, Kennedy Hall
Entomology: E. Shields, Comstock Hall
Environmental Toxicology: A. Yen, Rice Hall

Facilities
The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm. Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harford and the Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, research, and cooperative extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Office of Minority Programs, and the Registrar.

Mann Library, with its extensive collections of materials in the agricultural and biological sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, in Riley-Robb Hall, and in Mann Library.
Food Science and Technology: H. T. Lawless, Stocking Hall
Genetics and Development: K. J. Kemphues, Biotechnology Building
Horticulture: N. L. Bassuk, Plant Science Building
International Agriculture and Rural Development (M.P.S. (Agr.)): R. W. Blake, Morrison Hall
International Development: N. T. Uphoff, Caldwell Hall
Landscape Architecture [M.L.A.], D. W. Kral, Kennedy Hall
M.P.S. Agriculture with Peace Corps Option (offered by most agriculture fields with M.P.S. programs): J. Hulde, Warren Hall or see director of graduate studies for chosen field
Microbiology, S. C. Winans, Wing Hall
Natural Resources, M. E. Krasny, Femow Hall
Neurobiology and Behavior, C. D. Hopkins, Seely-Mudd Hall
Nutritional Sciences, M. N. Kazarian, Martha Van Rensselaer Hall
Physiology, S. S. Suarez, Vet Research Tower
Plant Biology, J. B. Nasrallah, Plant Science Building
Plant Breeding, M. E. Sorrells, Bradfield Hall
Plant Pathology, J. W. Lorber, Plant Science Building
Plant Protection [M.P.S. (Agr.)], Plant Science Building
Soil and Crop Sciences
Statistics, M. Wells, Malott Hall
Zoology, J. W. Hermanson, Schumran Hall

**Bachelor of Science Degree**

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in 20 major programs. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations in the major field.

Agricultural and Biological Engineering: Jim Bartsch, 514 Ridley-Rob Hall
Animal Sciences: W. Bruce Currie, 434 Morrison Hall
Atmospheric Sciences: Dan Wilks, 1113 Bradfield Hall
Biological Sciences: Jeff Doyle, 200 Staton Hall; Bonnie Comella, 216 Staton Hall
Biology and Society: Marta Weiner, 275 Clark Hall
Biometry and Statistics: Steve Schwager, 424 Warren Hall
Communication: Brian Earle, 328 Kennedy Hall
Crop and Soil Sciences: Ray Bryant, 795 Bradfield Hall

**Education:** George Posner, 416 Kennedy Hall
Entomology: Bobbie Peckarsky, 3134 Comstock Hall
Floriculture and Ornamental Horticulture: Ken Mudge, 20 Plant Science Building
Food Science: Janice Brown, 107 Stocking Hall
Landscape Architecture: Peter Trowbridge, 440 Kennedy Hall
Natural Resources: Tim Fabey, 12 Fermow Hall
Nutrition, Food, and Agriculture: Carole Bisogni, 334 MVR Hall
Plant Science Units (Plant Biology, Genetics and Breeding, Pathology/Protection, Pomology, Vegetable Crops): George Hudler, 315 Plant Science
Rural Sociology: Paul Eberts, 319 Warren Hall

**Special Programs in Agriculture and Life Sciences:** Lisa Ryan, 140 Roberts Hall; Terry Tucker, 31 Warren Hall, for International Agriculture Program

**Summary of Basic College Requirements for Graduation**

1. **Credit Hours**
   a. Minimum: 120
   b. Minimum at Cornell: 60; Maximum transferred in (C- or higher): 60
   c. Minimum from College of Agriculture and Life Sciences: 55 (includes credit used in the distribution and appropriate transfer credit)
   d. Maximum from endowed colleges (Arts and Sciences; Architecture, Art, and Planning; Engineering; and Hotel School) without additional charge: 55 (includes credit used in the distribution AND failed courses)
   e. Minimum with letter grade: 100; Maximum with S-U grade based on 120 credits: 20 (prorated for transfer students) with maximum of one course per semester
   f. Maximum independent study, teaching experience, internships based on 120 credits: 15 (pro-rated for transfer students)
   g. Credit for physical education does not count toward the 120 credits or the minimum 12 credits for full-time status (see #6).

2. **Residence**
   a. Students are entitled to enroll eight full-time semesters (prorated for transfer students). A full-time semester requires a minimum of 12 credits per semester. Not counting physical education. Tutorial courses (see #1A) are counted.
   b. A minimum of seven semesters is required.
   c. Internal transfer students must be enrolled in CALS for at least two semesters, not including residency in Internal Transfer Division.
   d. The final semester before graduation must be in residence at Cornell as a full-time student in good academic standing.

**Exception:** Students with eight or fewer credits remaining for graduation and with circumstances that prevent full-time study may petition for approval to complete remaining credits at another institution or part-time in CALS.

3. **Grade-point Average (GPA)**

Cumulative GPA: 2.00 or above must be maintained. Includes only grades earned at Cornell after matriculating into the college.

For students matriculated prior to 8/01: Cumulative GPA: 1.70 or above must be maintained. Includes only grades earned at Cornell after matriculating into the college.

4. **Distribution**

The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical sciences, students develop quantitative and analytic skills based on an understanding of the physical laws governing the universe and through study of the biological sciences, they gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will affect their work and role in society. Through development of written and oral expression skills, students master the essentials of effective communication.

Credits received for independent study, field, teaching, work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be remedial in the discipline, such as Education 005, will not be counted.

**Group A: Physical Sciences.** 9 credits of 100- or 200-level courses, in at least two disciplines, including at least one course in chemistry or physics.

Chemistry
   Physics
   *Mathematics (excluding Education 005, Mathematics 103 and 109)*
   Education 115
   Earth and Atmospheric Sciences (SCAS) 131, 260
   Crop and Soil Sciences (SCAS) 260
   Astronomy
   Geology
   Statistics and Biometry (including AEM (ARMF) 210, ILRST 210)
   *The college mathematics requirement is described below.*

**Group B: Biological Sciences.** 9 credits, to include 6 of introductory biological science (introductory courses include BIO G 101-104, 105, 106, 109, 110)

Biological Sciences (excluding 160, 200) [unless permission of the director of Undergraduate Biology is obtained], 202, 209, or 367]
Animal Sciences 100, 110, 221, 300, 301
Crop and Soil Sciences (SCAS)/Horticulture 366
Entomology 212
Nutritional Sciences 262
Plant Breeding 201, 225
Plant Pathology 309, 401

**Group C: Social Sciences and Humanities.**
12 credits (6 in each of the following two categories):
- Social Sciences. 100- through 400-level courses in the following departments (excluding Freshman Seminars):
  - American Indian Studies 401
  - Anthropology
  - Archaeology
  - AEM (ARME) 416
  - Communication 110, 120, 410, 418, 420, 422
- Economics (excluding all AEM (ARME) courses)
- Education 271, 311, 317, 370, 378
- Government
- HD 150 (cannot receive credit for this course and Soc 151)
- LA/CRP 201, 360, 363
- Psychology (except 111)
- S & TS 324, 350, 390, 391, 400, 401, 406, 407, 427, 442, 467, 485
- Sociology (includes Rural Sociology except RS 100, 175, 305, 311, 318, 325, 333, 442)
- Humanities. 100- through 400-level courses in the following departments (excluding Freshman Seminars and language courses):
  - Africana Studies (literature and history)
  - Asian American Studies
  - Asian and Near Eastern Studies (literature and history)
  - Classics (literature and history)
  - Comparative Literature
  - English (literature only)
  - French, German, Italian, Russian, and Spanish (literature only)
  - History
  - History of Art/History of Architecture
  - LA 232
  - Music and Theatre Arts (theory, literature, and history only)
  - Natural Resources 212, 407, 411
  - Philosophy
  - Religious Studies
  - Rural Sociology 100, 175, 318, 442
  - Women's Studies 444

**Group D: Written and Oral Expression.** 9 credits, of which at least 6 must be in written expression, selected from the following:
- Written Expression
  - Freshman Seminars
  - Communication 117, 350, 352, 260 (was 360), 263 (was 363), 365
  - Education 100
  - Oral Expression
  - Comm 201, 203
- Students scoring 4 or 5 on the English advanced placement exam may be awarded three credits which will be recorded in Group D.

**5. Math Requirement**
Faculty legislation requires minimum competency in mathematics to complete a degree in the College of Agriculture and Life Sciences. As a measure of competency in mathematics, all entering undergraduates, including those with advanced placement or transfer credit in calculus, must take the college math proficiency exam (administered during orientation). The following students are exempt from the CALS Math Placement Exam: 1.) internal transfer students who already have passed one math course listed below under Group II section 1, and 2.) entering ABEN students (who take the placement exam in the College of Engineering).

The CALS exam score determines the college math graduation requirement, and provides placement information. The exam has two components. Cut-off scores divide students into three groups, each with specific graduation requirements.

**Mathematics requirements and placement suggestions:**
- **Group I** Students in this group are considered proficient in math for college graduation requirements. If further math is needed for the major, placement score suggests calculus skill level (e.g., Math 111, 191, 195).

- **Group II** Placement score suggests precalculus skill level, and students in this group must satisfy one of the following:
  1. Successfully complete an approved mathematics or statistics course at Cornell. EDUC 115 is recommended. Other approved courses are any mathematics course (except for Math 103, 109); AEM (ARME) 210; ITTRY 100, 101, 102, 201, 261, 302; ILRST 210, 211, 310, 311, 312, 313, 314; ENGRD 270.
  2. Successfully complete or have completed an approved calculus course at another college or university with a final grade of B- or better.
  3. Receive AP credit for calculus or statistics.

- **Group III** Students in this group must successfully complete an approved mathematics or statistics course at Cornell (see list in Group II above). Prior completion of EDUC 105 may be recommended at the discretion of the student's academic adviser.

- Transfer and AP math credit (up to six) will be recorded in Group A of the college distribution requirements. Additional transfer credit in math will be recorded as general electives. ABEN students typically receive fewer AP credits than other CALS students with the same scores. ABEN students also may receive AP credits based on the Engineering math placement exam.

**6. Physical Education**
- Pass a required swim test, administered during orientation.
- Two courses with a satisfactory grade (courses do not count toward 120 credits for graduation or the minimum 12 credits for full-time study).
- Students are expected to complete the physical education requirement in their first two semesters at Cornell.
- Transfer students are credited with one course of physical education for each semester previously enrolled full-time (12 or more credits) at another college.

**Faculty Advising**
- Each student is assigned to a faculty adviser soon after being admitted to the college. The faculty adviser will help the student plan a program of study of courses appropriate to the degree programs offered by the college.

- Course enrollment each semester should be planned in consultation with the faculty adviser. Students pre-enroll for courses by computer through CourseEnroll, under courses, classes, and exams on the Bear Access menu. Pre-enrollment by computer is not valid until the student's individual code is entered. This code, or adviser key, is provided to the student by the faculty adviser after approval of the choice of courses.

- All academic plans, such as acceleration and graduate study, should be made in consultation with the student's faculty adviser. Support of the adviser is essential if a student petitions for an exception to any of the requirements of the college.

**Progress toward the Degree**
- The progress of each student toward meeting the degree requirements is recorded each term in the college registrar's office on a Summary of Record form.

- Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are entitled to attend for the full eight semesters if they have completed the graduation requirements in fewer semesters. A student who wishes to continue study after graduation must apply for admission as a special student through the college admissions office, 177 Roberts Hall.

- Application to graduate. Students who are planning to graduate must complete an "Application to Graduate" by the end of the fourth week of classes in the spring semester for May graduates or in the fall semester for January graduates. The adviser signs the application after verifying that the requirements for the major have been completed. The college registrar signs after verifying that the college requirements will be fulfilled after successful completion of the student's final semester.

**Credit Earned While in High School**
Transfer credit will not be accepted for the Syracuse Project Advance Program and similar programs. If a student is enrolled in a college/university course during his/her high school years, transfer credit will be given only if certain criteria are met:

1. Course must be a standard course taught by a post-secondary institution.
2. High school must be a satellite location, one of several options available to all students taking the course.
3. Course syllabus, text, examinations, and evaluation process must be the same for all students at all sites.
4. Students must be enrolled for college credit and pay college tuition.
5. Instructor must be a faculty member (includes adjunct) at the offering college.
If one of these is not met, no transfer credit will be given. Written verification may be necessary.

**CLEP Credit**
The College of Agriculture and Life Sciences awards CLEP (College-Level Examination Program) credit if a student achieves an acceptable score on the CLEP exam. Please contact the Registrar's Office in 140 Roberts Hall for specific information about CLEP credit.

**STUDENTS**
Undergraduate enrollment is approximately 3,300, with about 56 percent in the upper division. Each year about 850 students are graduated, while 635 freshmen and 250 new transfer students are enrolled. College faculty members serve as chairs of the special committees of roughly 1,100 graduate students.

**Admission**
The College Admissions office selects applicants who are academically well prepared and likely to benefit from the college's various curricula.

While most students come from New York State, about 30 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 22 percent are self-identified as members of minority ethnic groups.

**Transfer Students**
Approximately 18 to 20 percent of ALS undergraduate students are transfers who have completed part of their collegiate work at community colleges, agricultural and technical colleges, or other four-year institutions. Many of them hold an associate degree.

A Cornell student in good standing may apply for an intra-university transfer to pursue a course of study unavailable in his or her current college. Guidelines are available in the Admissions Office of the College of Agriculture and Life Sciences, 177 Roberts Hall. The procedure involves filing a transfer request, meeting with a faculty member in the proposed area of study and submitting a letter of explanation for the transfer.

Consideration is given to students who have demonstrated an interest in their proposed field of study, by taking appropriate prerequisite courses and courses within the area of study. Academic achievement is also considered. Students are seldom allowed to transfer during their freshman year. In certain cases a student may be referred to the Internal Transfer Division (ITD) to study for one semester before entering the college. A second semester in ITD is considered only in unusual circumstances. During this trial semester the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

**Special Students**
A limited number of non-degree candidates who want to take courses in the college are admitted each year. Applicants should submit the standard Cornell application, a resume of their work experience, and a list of the courses in which they are interested. For more information and guidelines, students should contact the Admissions Office, 177 Roberts Hall.

**Off-Campus Students**
Programs in which students study off campus but enroll for Cornell credit include SEA semester, field study in human ecology or industrial and labor relations, Albany programs, Cornell-in-Washington, student teaching, IPM internship, and clinical microbiology internship. Students intending to receive Cornell credit for work done off campus should inform the college registrar at the time of enrolling for courses to ensure that proper registration will occur.

**Off-Campus Courses**
Students in CALS must be registered for at least 12 credits of course work each semester. It is expected that students will not be enrolled in course work at another institution while they are enrolled at CALS.

Two exceptions to enrollment elsewhere while being a full-time student at Cornell would be the joint enrollment agreements between Cornell and Ithaca College and Wells College. Other exceptions must be reviewed by the Committee on Academic Achievement and Petitions. Students must petition before enrolling for a course elsewhere. The committee may approve such petitions only when there are compelling circumstances such as severe scheduling problems or no equivalent course available at Cornell. Enrolling in a course at another college to avoid taking it at Cornell is not permitted.

**Leave of Absence**
A student wishing a break from studies in a future semester, or those who find it necessary to leave the university before the end of a semester, should submit a written petition for a leave of absence. Such action is necessary to clear the record for the semester and if not taken may adversely affect the student's subsequent readmission to the university.

An approved leave is considered a voluntary interruption in study and holds the student's place in the college without requiring the student to reapply to the college. Voluntary leaves are issued in two ways: unrestricted for students in good academic standing (no restrictions placed on length of leave, activities pursued, and simple notification by student of intent to return), and restricted (length of leave and activities pursued may be specified, and a petition to return must be approved by the Petitions Committee).

A database is maintained by the Counseling and Advising Office to assist participation in pre-course enrollment the semester before a student's return. Information and petition forms are available in the Counseling and Advising Office, 146 Roberts Hall.

**Withdrawal**
A student who wishes to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good academic standing. Students who have withdrawn and who later decide to return must apply to the Admissions Office.

**Graduation and Diplomas**
Graduating seniors must complete the Application to Graduate (see the details in Part C of "Progress toward the Degree"). Diplomas are distributed to those who have completed the degree requirements and have been approved by the college faculty. After the commencement ceremony at Schoellkopf Field in May, graduates return to the Ag Quad to obtain their diplomas. For January and August graduates, diplomas are mailed.

**ADVISING AND COUNSELING SERVICES**
Faculty members in the College of Agriculture and Life Sciences recognize that students need information and advice to make intelligent decisions while in college. They believe that personal contact is the best way to provide information and advice on both academic and personal matters; they consider advising to be an important and integral part of the undergraduate program. Each student enrolled in the college is assigned to a faculty adviser in his or her major field of study for assistance and guidance in developing a program of study, and to enhance the student's academic experience.

The Counseling and Advising Office coordinates the faculty advising program, serves as the college's central undergraduate advising office, and offers personal counseling. Academic advising is available for students who are interested in international study, need to file petitions to waive college academic regulations, have disability concerns, are experiencing academic difficulties, or have requests for tutoring. The staff coordinates new student orientation, award ceremonies, commencement activities, and the activities of Ho-Nun-De-Kah, the college's honor society. Students seek counseling and advising on a variety of issues including academic problems, career problems, personal and family problems, stress management, and time management. Two counselors provide short-term counseling with an expertise in college counseling. Counseling and advising are defined as appropriate to each student's academic circumstances. The staff is available on a walk-in basis, as well as by appointment.

The Office of Minority Programs serves to recruit, admit, monitor, and influence policy on behalf of all minority students in the College of Agriculture and Life Sciences. This population is defined as encompassing all African American, Latin American, Asian American, and Native American students. Students who meet economic and academic criteria set by the college, State Programs, and New York State Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall.

Within the university, the Office of Minority Programs is charged with acting as the college...
liaison with the central Office of Minority Education Affairs, the Learning Strategies Center, and the State Programs Office. Other university connections include the Undergraduate Admissions Office and the Office of Financial Aid regarding the concerns of the minority student population. The director, assistant director, and 7 to 10 peer advisers primarily carry out the duties of the Office of Minority Programs. Together, the staff acts as a major advocacy and advising group, as well as an informational and referral center. The director and assistant director provide support for the Academic Human Diversity and Resources Committee. Its constituency includes students, faculty, and the general public.

Given the college's policy on non-exclusionary programming, the Office of Minority Programs is also responsible for some functions that serve the college's entire population. Presently, that includes reviewing non-minority applicant folders, serving as the Prehealth Program adviser and liaison, and providing ongoing support at all levels for the Office of Counseling and Advising.

The Office of Career Development offers a variety of helpful services to all students and alumni of the college. Career development is comprised of self-assessment, career exploration, decision making, and transition to employer or further study. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths proceed and change.

The Career Library contains an extensive collection of current and useful material, including career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of 300 college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as resume writing, cover letter writing, and interview skills are presented throughout the semester and are available on videotape. An active on-campus recruiting program brings more than 90 employers to campus each year to interview students for full-time and summer jobs. Additionally, the office provides information on hundreds of internships.

The office, in conjunction with a network of college faculty and staff members, assists students throughout their undergraduate years and beyond. For further information, students should contact Amy Benedict-Augustine and the staff in 177 Roberts Hall.

Financial aid is administered through the university office in Day Hall. Endowment funds and annual donations provide supplemental aid for students in the college who are eligible for financial aid. Information about these college grants is available from the Office of Academic Programs in Roberts Hall for students who have their financial aid package established through the university office in Day Hall. Grants are processed through the university's Office of Financial Aid.

**Academic Integrity Policy**

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings: students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

1. Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.

2. Students are guilty of violating the code if they
   - knowingly represent the work of others as their own
   - use or obtain unauthorized assistance in any academic work
   - give fraudulent assistance to another student
   - fabricate data in support of laboratory or field work
   - forge a signature to certify completion or approval
   - submit the same work for two different courses without advanced permission
   - knowingly deprive other students of library resources, laboratory equipment, computer programs, or similar aids
   - in any other manner violate the principle of absolute integrity

3. Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.

4. Faculty members fulfill their responsibility to
   - maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor
   - make clear the conditions under which examinations are to be given
   - make clear the consequences of violating any aspect of the code
   - provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently
   - state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials
   - approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course
   - monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students' submitted work must be their own and no one else's

Cornell’s Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides informal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a non-voting record keeper. Professor Dale Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising Office, 140 Roberts Hall.

**ACADEMIC POLICIES AND PROCEDURES**

**Records**

The college registrar maintains a complete academic record for each matriculated student. The director of enrollment management and student records, registrar, and associate registrar are available to consult with students regarding the assignment of credit toward meeting distribution and elective requirements as listed on the Summary of Record form.

**Registration Procedures**

All students must register with the university and check-in with this college at the beginning of each semester. Check-in materials are available in 140 Roberts Hall as announced each term by the university registrar.

**Course Enrollment Procedures**

To enroll in courses, students will receive information from the university registrar; plan a schedule in consultation with their adviser; and pre-enroll by computer, through CoursesEnroll in "Just the Facts" on the Bear Access menu. Pre-enrollment is not valid until the student enters the adviser key code into the computer. Adviser key codes are provided by faculty advisers after a discussion of selections and requirements takes place. The adviser key code changes each semester to ensure ongoing contact between student and faculty adviser.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the college Registrar's Office, 140 Roberts Hall. Students who will be studying off campus should notify the Registrar's Office to ensure that proper registration will occur.
Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their GPA. If a student retakes a course in which a passing grade was earned, the second time will be for no credit.

Students must not enroll again for a course in which they received an incomplete or NGR. Instead, work for that course should be completed without further enrollment. The instructor files a manual grade form to the college registrar when a grade has been assigned. An incomplete not made up by the end of two successive semesters of residence reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

Students enrolled in a two-semester course will receive an R at the end of the first semester and should enroll again for the same course the second semester. The letter grade will be recorded for the second semester when all work for the course is completed. A note on the transcript will explain the R grade.

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless otherwise officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student at the Registrar's Office, 140 Roberts Hall, on the official university course drop and add form. Approval and signature of the faculty adviser and course instructor are required to change course enrollment.

Students may add courses and change grading options or credit hours where applicable during the first three weeks of the term, and may drop courses until the end of the seventh week.

Students wishing to withdraw from a course after the end of the seventh week must petition to the college Committee on Academic Achievement and Petitions (also see Petitions Procedures below). Petition forms are available in Counseling and Advising, 140 Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total workload, and scheduling prior to stated deadlines. A grade of W (for "withdrawal") is recorded on the transcript if a petition to drop a course is approved after the end of the seventh week of classes, and if an approved drop results in fewer than twelve credits.

Petitions Procedures

The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee:

- reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students toward meeting graduation requirements
- receives and acts upon petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee

ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways:

Dean's List. Each semester, students are recognized for academic excellence by inclusion in the Dean's List. Eligibility for the Dean's List in the College of Agriculture and Life Sciences is determined by the following criteria:

1) a minimum course load for the semester of 12 letter-graded credits;
2) achievement of a semester GPA of at least 3.50; and
3) achievement of an 'A' grade, or a 'C' or better grade in each course (including physical education), with no Incompletes.

Dean's List will be granted retroactively if students meet all the requirements after successful course completion to make up incomplete grades.

Bachelor of Science with Honors. Students receiving a cumulative GPA of 4.0 or greater (based on the last four full-time semesters of Cornell credits in residence, with a minimum of 48 letter graded credits) will graduate "summa cum laude."

Students receiving a cumulative GPA of greater than or equal to 3.75 and less than 4.0 (based on the last four full-time semesters of Cornell credits in residence, with a minimum of 48 letter graded credits) will graduate "magna cum laude."

Students receiving a cumulative GPA of greater than or equal to 3.5 and less than 3.75 (based on the last four full-time semesters of Cornell credits in residence, with a minimum of 48 letter graded credits) will graduate "cum laude."

Bachelor of Science with Distinction in Research. Students will graduate with a bachelor of science degree with distinction in research when, in addition to having completed all the graduation requirements, they have satisfactorily completed the research honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Research Honors Program.

Ho-Nun-De-Kah, founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top 15 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community.

Gamma Sigma Delta is an honor society of faculty and students in the Colleges of Agriculture and Life Sciences, Human Ecology, and Veterinary Medicine. The common bond is promotion of excellence in work related to the quality of our environment and life as it relates to agriculture and the related sciences. The Cornell chapter recognizes the academic achievements of students, faculty, and alumni of those colleges with nominations for membership and with special awards. To be eligible, seniors must be in the upper 15 percent of their major. Five juniors with the highest grade point average in the college are also nominated. Gamma Sigma Delta also
RESEARCH HONORS PROGRAM

The Research Honors Program provides students with a special opportunity to work with a faculty mentor to experience the research process. Successful completion of this program requires a thesis written in the style of a master’s thesis or professional journal in that area of research. Original research often is published in a professional journal. During the summer of each year, a CALS Research Honors Proceedings is published as a compilation of abstracts of the honors theses. Students are required to send an electronic version of their thesis title, abstract, student’s name, and the research adviser’s name to Ann Gantner, amg28@cornell.edu, by the end of the spring semester.

The Bachelor of Science degree with “distinction in research” is conferred upon those students who, in addition to having completed the requirements for the degree of Bachelor of Science, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area.

Research may be done under the appropriate program area: Animal Sciences, Biological Sciences, Entomology, Natural Resources, Nutritional Sciences, Physical Sciences, Plant Sciences, and Social Sciences. Each program area has its own requirements in addition to the college requirements. After reviewing the requirements of each program area (below), students’ inquiries may be directed toward the appropriate program area chair.

Consult “Undergraduate Research Opportunities” on the web (http://www.cals.cornell.edu/stud_research/) for information about identifying a research topic, conferring with faculty, and undergraduate funding opportunities.

College Requirements

An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of those 55 at Cornell. Also, the student must have attained a cumulative Cornell GPA of at least 3.0 (unless otherwise noted by a particular program) at the time of entry.

Interested students must make written application no later than the end of the sixth week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year (or earlier if required by the program area). For most of the program areas, an application form is available from the college registrar in 140 Roberts Hall. The application form also can be printed from the web at http://www.cals.cornell.edu/oap/registrar/HonorMainWebPage.htm.

Applications for Biological Sciences students can be picked up at 280 Stimson Hall, and for Biology and Society students at 275 Clark Hall.

Before the completed application is returned to the registrar, signatures of approval are required in the following order: your faculty research mentor, your academic adviser, and the research honors program area chair. After the college registrar verifies the student’s GPA, the student will be officially enrolled in the honors program. Additional requirements for application and completion of the program are described under each particular program area.

Academic credit may also be earned by enrolling in an appropriate independent study course (required by some program areas). When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds (up to $350) to cover some of the costs the student incurring in doing the research. If approved, the funding will be transferred from an account in the CALS Office of Academic Programs to a departmental account for the student’s research advisor. The research advisor will use this funding to support the student’s research. This funding is not to be used as salary for the student. Additional funding opportunities are described on the Undergraduate Research Opportunities web site.

Unless otherwise indicated in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the program committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the research honors program must be accepted in one of the program areas approved by the faculty. Students are not eligible for distinction in research by participating in a program offered by another college or administrative unit.

The research honors committee for each program area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with “distinction in research.”

For more information, consult the web at http://www.cals.cornell.edu/oap/registrar/HonorMainWebPage.htm.

Animal Sciences

Faculty committee: W. B. Currie, chair; Y. R. Boisclair, S. M. Quirk, P. A. Johnson, P. Schofield

The objective of the animal sciences research honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing a research project should consult with a faculty adviser early in their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential research honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member’s commitment to sponsor the student in the research project. This should be accomplished early in the second semester of the junior year.
- Preregister during the spring semester for AS 495, Animal Sciences Honors Seminar, which is offered in the fall semester.
- Register for AS 490, Undergraduate Research.
- Participate in AS 402, Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results (see exceptions under particular program areas).
- Submit a written thesis to the Animal Sciences Research Honors Committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the Research Honors Committee for a short oral defense of the thesis following a review of the thesis by the student’s sponsor and the research committee.

Details pertaining to the specific requirements of the program can be obtained from the office of the committee chair, 434 Morrison Hall.

Biological Sciences

Students interested in the research honors program in the biological sciences should consult with their faculty advisers and with potential faculty research sponsors early in their junior year. See “Independent Research and Honors Program” in the Biological Sciences section of this catalog for complete details. Information on faculty research, applications, and program requirements may be obtained from the Office of Undergraduate Biology, 216 Stimson Hall.

Biology & Society

Faculty committee: D. Pimentel, chair

The research honors program in Biology & Society is designed to provide independent research opportunities for academically talented undergraduate students in Biology & Society. Students who enroll in this program are expected, with faculty guidance, to do independent study and research dealing with issues in biology and society. Students participating in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career.

Biology & Society students are considered for entry into the research honors program at the end of the second semester of the junior year. Application forms for the program are available in the Biology & Society Office, 275 Clark Hall. To qualify for the Biology & Society research honors program, a student must have an overall Cornell cumulative GPA of at least 3.3, have formulated a research topic, and have found a project supervisor (with a Cornell academic appointment) and a Biology & Society faculty member willing to serve as his/her adviser. The director of undergraduate studies will appoint a third reader of the completed research thesis. Applications will be reviewed by a committee.
headed by the director of undergraduate studies, who will notify students directly of their acceptance. Students will be permitted to register for the research honors program only by permission of the Biology & Society program. Students must enroll for two semesters and may take three to five credits per semester up to a maximum of eight credits in NS 498 and 499. Honors Project I and II. More information on the honors program is available in the Biology and Society Office, 275 Clark Hall (255-6047).

Important Deadlines

(NOTE: If the following dates fall on a weekend, the deadline is the preceeding Friday.)

• Last week of second semester of the junior year: Application for honors program submitted to 275 Clark Hall.
• April 15: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
• April 29: Thesis defense accomplished.
• May 13: Two bound copies of completed and defended thesis submitted to director of undergraduate studies.

Entomology

Faculty committee: B. L. Peckarsky, chair

A research honors program in the area of entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences. The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for studying a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for research honors study. Cornell’s diverse faculty interests and extensive collections and library in entomology are also major assets for students selecting entomology as their area for research honors study.

Research Honors students have the option of earning academic credit by enrolling in Independent Study (ENTOM 497) during any semester while working toward a Research Honors Thesis. Credits and grade option for satisfying requirements of ENTOM 497 should be discussed with the thesis adviser (see below.)

Note: Enrolling in independent study is not a requirement for graduating with distinction in research honors in Entomology. The Entomology Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

• Discuss the matter with his or her academic adviser, preferably in the junior year. This will make it possible to carefully plan a research project, and implement some research during the junior year and/or summer before the senior year.
• Select an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. This need not be the student’s academic adviser. The academic adviser will be of assistance in determining which faculty entomologist has expertise most compatible with the interests of the student.
• Prepare a brief, tentative plan of the project for the discussion and approval of the honors project supervisor. The plan should include a statement of objectives or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
• Submit a completed application and proposal (approved by the honors project supervisor and the chair of the Entomology Research Honors Committee) no later than the end of the sixth week of the first semester of the senior year. Earlier submission is encouraged. Applications are available and should be submitted to the CALS Registrar 140 Roberts Hall. These applications include an opportunity to request a modest amount of funding from the CALS honors program. These funds are distributed only once a year (in late fall).
• Submit a brief progress report, approved by the project supervisor, to the Entomology Research Honors Committee by mid-term of the semester in which the student will complete his or her graduation requirements.
• Present a formal seminar reporting the significant findings of the research to the Department of Entomology (as a Jugatae seminar) in the last semester of the senior year.
• Submit two copies of the final honors thesis (as approved by the thesis supervisor) to the chair of the Entomology Research Honors Committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee selected by the chair of the honors committee. Referees will return the thesis to the student one week before the last day of the classes. If reviewers indicate that changes must be made, the revised thesis should be submitted no later than the last day of classes. Referees should include a recommendation to the Entomology Research Honors chair regarding acceptability of the honors thesis. Approved honors theses will be bound and housed in the Entomology Library in Comstock Hall.

Natural Resources

Faculty committee: J. B. Yavitt, B. A. Knuth, J. P. Lassoie, E. Mills

The research honors program in natural resources provides an opportunity for undergraduates to pursue supervised independent research in the areas of applied ecology or resource policy and management. The subject matter and nature of the research experience may be quite varied. The guidance and supervision of a faculty member with substantial interest and expertise in the subject area is essential to the success of the project.

In addition to meeting requirements of the college, the student is expected to do the following:

• Register for the research honors program in the junior year or earlier.
• Work with a faculty adviser to identify and formulate a research problem.
• If the faculty adviser is not in the Department of Natural Resources, select a co-advisor from the department to ensure the research is consistent with the field.
• Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
• Describe and summarize the work in the format of a conventional master’s thesis or scientific paper ready for publication in a scientific or policy journal. A copy is due the first week of April. This version will be reviewed by two ad hoc reviewers, and the student will be able to incorporate their comments and suggestions into the final version which will be due the last day of classes. About half of the theses have been published.
• Give two oral presentations to the group of other honors research students and invited faculty members. Both presentations are during the student’s senior year.
• Students should be aware that this requires a considerable time commitment, and they are responsible for meeting deadlines and being prepared for presentations and other meetings.

Nutritional Sciences

Faculty committee: M. N. Kazarnoff

The research honors program offers students a research experience structured to give them the opportunity to choose a research project, search the literature relevant to it, plan and execute the research, and write it up in the form of a thesis. As in other types of research available to undergraduates, each student is guided by a faculty mentor. The honors project is designed to be spread across both semesters of the junior and senior years.

Students who consider this option should be aware that it involves a number of deadlines and considerable time commitment. Before signing on for research honors, students need to consult with their academic advisers to make sure that honors will not interfere with other academic objectives, such as preparation for admission to medical school or making the dean’s list. Although honors research credits are distributed only once a year, students may take the R grade for work in progress until the project has been fully completed. Grade is determined by each student’s mentor. An outline of activities for both years is given below. Letters of invitation are sent to upcoming juniors during the summer.

Junior Year

Fall Semester Course No: NS 398 (1 credit, S-U). Students are oriented to the program, and provided material that summarizes the research activities of NS. Students begin making arrangements with faculty members. These arrangements have been completed, students begin a literature search that focuses on their research problems.

Spring Semester Students register for NS 498 (1 credit, section 1). Additional faculty
The student is expected to:
1. become familiar with literature and/or research methods appropriate to the problem for the honors research.
2. develop a research proposal.

The semester outcome will be written reports/discussions of the method(s) or literature searches and a short research proposal, evaluated by the research adviser.

**Senior Year**

**Fall Semester** Students will register under the number NS 499 (2–4 credits, LET, by arrangement with their mentors). They may begin their research earlier than fall, (e.g. during the summer, or even earlier) but should be available through DNS. Placement early in the fall semester at the latest. The objective for the semester will be to conclude most of the hands-on research/data acquisition.

**Spring Semester** Students will again register under course number NS 499 for 2–4 credits, LET, by arrangement with their research mentors. Much of the allotted time will be spent on analyzing data and on writing the honors thesis.

Several important deadlines should be noted:
1. **Last week in March**: The names of thesis readers* are to be in the hands of the research honors committee.
2. **Second to fourth week of April**: A final draft of the thesis is handed to the readers.
3. **First to second week of May**: Scheduled seminars for oral presentations of each student's research.
4. **Last day of classes**: Final form of the thesis is handed to the research honors chair.

To help students meet these deadlines, students register for NS 498 (1 credit, section 2) class sessions will be held before spring break for guidance in thesis writing and/or informal reporting of preliminary data. After spring break the group will meet once or twice (depending on number of students) to practice oral presentations and to be in the hands of the research honors committee.

**Physical Sciences**

Faculty committee: J. Y. Parmelee, chair; S. Colucci, S. J. Mulvaney, R. L. Strawderman

The research honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the department of Agricultural and Biological Engineering, Food Science, Earth and Atmospheric Sciences, or Biometrics.

In addition to the requirements of the college, the student is expected to:

- Identify a thesis adviser and thesis topic before the end of junior year.
- Work with the thesis adviser, prepare a budget and application form (due by the sixth week of senior year).
- Enroll in the program for a minimum of two semesters.
- Enroll in the appropriate departmental undergraduate research course for a total of at least six credits.
- Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).
- Submit a draft of the thesis to the thesis adviser with sufficient lead-time for a revision to be prepared.
- Submit three copies of the thesis and names of recommended reviewers to the chair of the honors committee by three weeks before the end of classes in the semester in which graduation is expected.

There is no required format but the thesis is usually written in the form of a research journal article or a master's thesis.

Further details of the program can be obtained from the chair of the Physical Sciences Research Honors Committee.

**Plant Sciences**

Faculty committee: R. L. Obendorf, chair; J. A. Mervin, E. B. Nelson, F. S. Rossi

Students perform independent scientific research under the guidance of faculty members in fields of horticultural, agronomic, and soil sciences; plant biology; plant genetics and breeding; and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Honors Committee a project proposal (two to three pages) which includes a title; a brief background to the problem (justification and literature review); a clear statement of objective(s) and hypotheses to be tested; methodology and experimental plan, necessary space, equipment and supplies; and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project and that its completion within the remainder of the student's undergraduate tenure is feasible.

Successful completion of the research honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptable report must have been reviewed according to the recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the honors committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor evaluating the research and, if appropriate, recommending graduation with distinction in research.

The research honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the associate director of academic programs and to the college registrar that the student be graduated with distinction in research. One copy of the accepted report will be returned to the student with review comments from the committee.

**Social Sciences**

Faculty committee: R. E. Ostman, S. Feldman, J. M. Conard, S. Peters

Students are accepted into the social sciences research honors program of the College of Agriculture and Life Sciences after meeting all the criteria described above, after evaluation of the student’s written application, and on approval of a detailed thesis proposal. The application and proposal are due no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis adviser during the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty adviser. Second, the Honors Committee reviews the proposal to determine whether it is consistent with honors thesis requirements, and to make suggestions for improvement.

The proposal should be 5 to 10 typed, double-spaced pages and include the following:

- **Research Topic**: State the problem to be studied or the topic of interest. Review the relevant literature and the background of the problem or topic, include a more extensive bibliography.
- **Research Questions/Empirical Hypotheses**: Specify the questions to be answered or hypotheses to be tested—empirically via collection of data and a mode of analysis accepted in the social sciences.
- **Research Methods**: Discuss the models to be constructed (if any), sampling procedures, data collection procedures (including measurement instruments and survey or experimental designs, if appropriate), and methods of analysis.
- **Expected Significance**: State what new knowledge or information is likely to be forthcoming and why it is important.

Faculty advisers must be members of the graduate faculty. Exceptions to this rule will be granted for persons with special expertise who are deemed capable of thesis supervision; exceptions will be granted pending petition to the Social Science Honors Committee. Students may register for honors credit directed by the faculty adviser in conjunction with a research honors project.

Distinction in research is awarded upon approval of the research honors thesis by the social science honors committee. The research should deal with a substantive issue in one of the fields in the social sciences. Both the results of the research and the methodology (or the argument put forth) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient to count as research.
Honors theses should be written according to the form of any standard journal within the appropriate field. Duplicated copies of the thesis must be submitted to the chair of the social science committee no later than three weeks before the last day of classes of the semester for which the degree is sought. A supporting letter from the faculty member supervising the work must also be submitted. The thesis will be independently reviewed and revisions may be required before the thesis is presented for final approval. Final approval of the thesis requires a majority vote of the honors committee.

**INTERCOLLEGE PROGRAMS**

**The College of Veterinary Medicine**

may accept students who are then permitted to double-register in their seventh and/or eighth semester and complete requirements for the Bachelor of Science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to ensure that degree requirements have been fulfilled.

**Students who have been offered admission to the S. C. Johnson Graduate School of Management**

are enrolled in this college and the College of Engineering in the junior and senior years. Students pay the engineering college tuition during the senior year. The B.S. degree is awarded in conjunction with the College of Engineering. The curriculum is accredited by the Accreditation Board for Engineering and Technology.

**The Department of Landscape Architecture**

offers a first professional degree curriculum in landscape architecture at both undergraduate (BSLA) and graduate (MLA I) levels, as well as a second professional graduate degree program (MLA II). The curricula for both the undergraduate and graduate programs are accredited by the Landscape Architecture Accreditation Board, LAAB. The graduate program is cosponsored by the Department of Landscape Architecture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning.

**The Division of Nutritional Sciences**

is an intercollegiate unit affiliated with the College of Human Ecology and the College of Agriculture and Life Sciences. The nutrition, food, and agriculture major offers students in the College of Agriculture and Life Sciences the opportunity to focus their studies in human nutrition while obtaining a strong background in courses related to agriculture and the life sciences. Students in the biological sciences major may complete the program of study in human nutrition. Courses offered by the Division of Nutritional Sciences support many undergraduate programs in the College of Agriculture and Life Sciences including animal science, biological sciences, communication, food science, international agriculture, plant sciences, and rural sociology. Nutritional sciences courses count toward the undergraduate degree requirement for 55 credit hours of courses in Agriculture and Life Sciences.

**The American Indian Program (AIP)**

is a multidisciplinary intercollege program consisting of academic, research, extension, and student support components. Course work is intended to enhance students' understanding of the unique heritage of North American Indians and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses that focus on American Indian life from pre-contact times to the present and feature the perspectives of Native American people.

Research areas among faculty active in the program include Indian education, social and economic development, agriculture, environmental issues, history, sociology, language, literature and the arts, and cultural preservation. Extension and outreach efforts within the program seek to develop solutions to problems identified by Indian communities and to facilitate the application of institutional resources, research, and expertise to community needs.

The American Indian Program's Akwe:kon Press publishes *Native Americas*, a multidisciplinary journal that covers issues across the Western Hemisphere, and sponsors conferences, guest lectures, and forums on important local, national, and international issues. Akwe:kon, the American Indian Residence House, offers undergraduate students a living environment that promotes intercultural exchange.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration will be earned upon completion of five courses: American Indian Studies 100 (Indian America to 1890) and American Indian Studies 175 (Contemporary American Indian Issues), plus three other courses selected from the American Indian Studies course listing, for a total of at least 15 credits. Students choosing a concentration in American Indian Studies should obtain application materials from the AIP office in 450 Caldwell.

AIP also offers a graduate minor. Students interested in choosing the minor should contact Daniel Usner, American Indian Program, (607) 255-8402.

**Science of Earth Systems (SES)**

major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. Within this program, Cornell's strengths across a broad range of earth and environmental sciences have been brought together to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

The major is available to students in the College of Agriculture and Life Sciences as well as students in the Colleges of Arts and Sciences and, as an option, Engineering. The SES major has its home in the Department of Earth and Atmospheric Sciences, which spans all three colleges, but relies on the collaboration of several departments across the university.

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences. Graduates of Cornell's SES program are well prepared for graduate studies in the earth and environmental sciences. The SES major also provides an excellent background for students wishing to pursue careers, with or without advanced study, in environmental law and policy, and environmental protection. SES is also a good major for students wishing to teach earth and environmental science at a high school level, perhaps in conjunction with Cornell's Teacher Education in Agriculture, Mathematics, and Science (TEAMS) program.

See the Science of Earth Systems listing in the section on "Major Fields of Study" for complete information about the SES curriculum. For more information contact Professor Kerry H. Cook, Department of Earth and Atmospheric Sciences, khc5@cornell.edu, and visit the web site: www.geo.cornell.edu/SES/

**The Comparative and Environmental Toxicology Program**

is an interdisciplinary intercollege program with research, teaching, and cooperative extension components coordinated by the Institute for Comparative and Environmental Toxicology (ICET). Courses are cosponsored by academic departments in several colleges of the university. A description of the program and general information is available from the director of the program through the ICET office, 213 Rice Hall, or at www.cfe.cornell.edu/icet. See also the Interdisciplinary Centers, Programs, and Studies section at the front of this catalog.

**The Cornell Institute for Resource Information Systems (Cornell IRIS)**

is an interdisciplinary, inter-college unit affiliated with the Center for the Environment. The mission of Cornell IRIS is to advance the development and use of spectral and spatial information science and technology to benefit the environment. The Institute is comprised of three program areas in environmental resource inventory, remote sensing, and geographic information systems. A description of these programs and general information is available from the Institute director through the Cornell IRIS office in 302 Rice Hall.

**OFF-CAMPUS STUDY PROGRAMS**

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses
should be selected in consultation with the faculty adviser.

**Albany Programs**

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Three formalized opportunities are available. The Assembly Intern Program is available during the spring semester and provides placement with a staff member of the New York State Assembly. The Senate Assistants Program also occurs during the spring semester and has placements with New York State senators and selected staff. The Assembly Intern Program is available during the spring, summer, and fall semesters and provides experience with a state agency such as the Departments of Environmental Conservation, Education, or Labor. Each program has an academic component as well. Check the individual folders in the internship files in the ALS Career Development Office, 177 Roberts Hall.

Applications are collected and processed by the ALS Career Development Office, 177 Roberts Hall, in the term prior to assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least 12 credits must be carried to meet the residency requirement. To receive academic credit for the internship, students enroll in ALS 400, for an S-U grade only.

Information and applications are available in the ALS Career Development Office, 177 Roberts Hall.

**Cornell-in-Washington**

The Cornell-in-Washington Program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Cornell-in-Washington Program offers two study options: (1) studies in public policy, and (2) studies in the American experience. Students take part in a public policy or humanities seminar which requires them to serve as externs in federal agencies, congressional offices, or nongovernmental organizations and to carry out individual research projects under the supervision of Cornell faculty. The required externships and all course enrollments are arranged through, and approved by, the Cornell-in-Washington Program. Students in the College of Agriculture and Life Sciences must register for ALS 500 and cannot receive credit for the externship experience alone. For further information, see p. 21, inquire at 311 Caldwell Hall, 607-255-3717 or visit our web site: www.cornell.edu.

**SEA Semester**

The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea: Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is 12 weeks in length. Six weeks are spent in Woods Hole, and the following six weeks are spent on either one of SEA's two sailing vessels: the R/V Westward or the R/V Corwith Cramer. For more information, students should contact the Cornell Marine Programs office, G14 Stimson Hall (607-255-3717) or visit SEA's web site: www.sea.edu. ALS students should file an intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

**Shoals Marine Laboratory**

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on the 95-acre Appledore Island off the coast of Portsmouth, New Hampshire, in the Gulf of Maine. SML offers undergraduates and other interested adults a unique opportunity to study marine science in a setting noted for its biodiversity, geophysical history. Please refer to "Courses in Marine Science," under the section on the Office of Undergraduate Biology, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 607-255-3717 or visit their web site: www.sml.cornell.edu.

**Internships**

Several departments in the college offer supervised internships for academic credit. Arrangements should be made with the offering department for assignment of a faculty member who will be responsible for planning the work and for evaluating student performance.

For internships not governed by an established internship course, the student must enroll in a 497 course for the number of credits to be assigned. If the work is done during the summer, the student must enroll in the Cornell summer session for the agreed-upon credits.

In cases where the work is not done at Cornell, the awarding of credits depends upon a prior contractual arrangement between a Cornell professor and the student. Specific terms for receiving credit and a grade should be recorded, using the Independent Study, Research, Teaching, or Internship form, available in the Registrar's Office, 140 Roberts Hall.

A maximum of 15 (pro-rated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. No more than 6 of the 15 credits allowed for independent study may be awarded for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The six-credit allotment includes transfer credit and credit for internships in other colleges at Cornell. The six-credit limit does not apply to secondary, postsecondary, and cooperative extension teaching internships in the Department of Education.

The College of Agriculture and Life Sciences does not offer a field study option. In general, a rather narrow view is taken toward awarding academic credit for work experience, "life" experience, or apprenticeships. Credit will only be assigned or accepted in cases where a professor is directly involved in determining both the course content and evaluating a student's work. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit. All students enrolling for an internship must file an Independent Study, Research, Teaching, or Internship form with the Office of the College Registrar.

**International Exchange Programs in the College of Agriculture and Life Sciences**

Any student whose grade point average is 2.75 or above and has completed one year of continuous study in CALS may apply to a CALS international student exchange programs.

These undergraduate exchange opportunities are for **CALS students only**. For more information on programs and application process, see the CALS Study Abroad Adviser in 140 Roberts Hall or visit our web site www.cals/oap/advising/international/index.cfm.

Students who are interested in international study but not in one of the CALS programs must apply through Cornell Abroad in 474 Uris Hall. Please refer to the Cornell Abroad section of Courses of Study.

**MAJOR FIELDS OF STUDY**

The college curriculum consists of 20 major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet the minimum distribution requirements of the college.

**Agricultural and Biological Engineering**

The Department of Agricultural and Biological Engineering addresses three great challenges facing humanity today: ensuring an adequate and safe food supply to feed an expanding world population; protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering program in the Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, applications courses, and liberal studies. The program leads to a Bachelor of Science degree, which is awarded jointly by the Colleges of Engineering and Agriculture and Life Sciences, and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Two concentrations in Agricultural and Biological Engineering are offered: biological engineering and environmental engineering. Students take courses in biometrics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics,
fluid mechanics, and transport processes), engineering applications, and design. Students select upper-level courses in this department in areas that include bioprocessing, soil and water management, bioenvironmental and facilities engineering, bioinstrumentation, engineering aspects of animal physiology, environmental analysis, and waste treatment and disposal. Students select other courses in the College of Engineering that strengthen their program, such as environmental engineering or biomedical engineering. Students planning for medical school also take additional lab-based courses in biology and organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills. Students in the engineering program may pursue minors and options in specialized areas as noted in the engineering section of this publication. Specific course requirements and other information for the Agricultural and Biological Engineering joint program are in the College of Engineering section of this publication. Further information is available at the undergraduate program office, ABEN Student Services, 207 Riley-Robb.

The department also offers two technology programs: Biological Systems Technology and Environmental Systems Technology. The technology programs emphasize applied and technical aspects of biological, environmental, and agricultural sciences. These programs incorporate courses in basic biological and physical sciences and mathematics as well as engineering and technology, agriculture, social sciences, and liberal studies. The department also participates in the interdisciplinary major, Science of Earth Systems (SES). Students in the joint engineering program may minor in SES by taking 18 credits of engineering and science electives as part of their engineering program. Students in the technology program may participate in SES by completing the SES courses as part of their technology program. Students may pursue the SES major through any one of the cooperating departments as noted in the SES description on page 53. The student develops his or her own program of advanced and elective courses in consultation with a faculty adviser, and may minor in an area such as communications, business, education, or international agriculture.

Many undergraduate students participate in teaching assistantships, research assistantships, design teams, and study abroad. Students in the Engineering program are also eligible to do Engineering Co-Op. Students should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, science, medicine, law, and other fields. In recent years graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international development.

The living world is all around us and within us. The biological revolution continues and it has given rise to careers for engineers who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, who are sensitive to the needs of people, and who are interested in the challenges facing society. The Department of Agricultural and Biological Engineering is educating the next generation of engineers to meet these challenges.

**Specific course requirements for the Accredited Engineering Programs are found in the College of Engineering section of this book.**

Specific course distribution requirements for the academic programs in Biological Systems Technology and Environmental Systems Technology include:

A. **Basic Subjects**

<table>
<thead>
<tr>
<th>Subject</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calculus</td>
<td>8</td>
</tr>
<tr>
<td>Chemistry</td>
<td>6</td>

</tbody>
</table>

B. **Advanced and Applied Subjects**

<table>
<thead>
<tr>
<th>Subject</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Five courses in the biological, environmental, or agricultural sciences</td>
<td>15</td>
</tr>
<tr>
<td>Five engineering or technology courses at the 300 level or above; at least 9 credits in agricultural and biological engineering</td>
<td>15</td>
</tr>
</tbody>
</table>

C. **Electives**

- Additional courses to complete college requirements

D. **Total (minimum)**

120

For further details on the Agricultural and Biological Engineering and Technology Programs (including SES), see the department's Undergraduate Programs brochure, available at 207 Riley-Robb Hall; contact the advising coordinator, Professor Jim Bartsch, at 255-2800; or visit the department's web site at www.aben.cornell.edu.

**Animal Sciences**

The animal sciences program area offers a coordinated group of courses dealing with the principles of animal breeding, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Animal Science Department has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisers. In this way it is possible to concentrate by species as well as by subject matters (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation.

Dairy management is a popular program among students who may be preparing to manage a dairy farm or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. These are examples of the flexibility within these programs that can be adapted to a student's career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Juniors and seniors whose academic records warrant it may, by arrangement with individual faculty members, engage in research (either for credit or Honors) or assist with teaching (for credit). The Dairy Management Fellows Program offers an equally challenging but different type of experience for a highly select group of students.

**Applied Economics and Management**

The undergraduate program in the Department of Applied Economics and Management (AEM) offers programs of study in three broad areas: Business, Agribusiness, and Applied Economics. Here you will find what will soon be only the second accredited undergraduate general business program in the Ivy League, as well as specializations focusing on the economics of agriculture and the environment.

**Applied Economics and Management courses** stress the application of analytical skills, critical thinking, and economic theory to real-world business and public-policy issues. Six areas of specialization are offered:

- **Business**, one of the largest undergraduate majors at Cornell University, offers students a variety of courses that provide not only breadth, but also depth in most business fields, including finance, marketing, entrepreneurship, and general management.

**Food Industry management** is designed for students interested in management positions with the processing, manufacturing, or marketing segments of the food industry, an industry that accounts for $1 out of every $3 in retail sales in the U.S.

**Agribusiness management** students study general business courses, including business management, marketing, accounting, and finance, as well as courses tailored to agricultural businesses.

**Farm business management and finance**, an agribusiness specialization, is designed for students interested in working for firms with ties to farming and agriculture, such as cooperatives, commercial banks, horticultural businesses, family farms, Farm Credit Services, and agribusiness firms.

**Agricultural and applied economics** is a broad-based specialization that focuses on such important national and international issues as the economics of policy, markets, production, international trade, and international development.

**Environmental and resource economics** is designed for students interested in the economics of such international issues as...
water and air quality, waste management, rural-urban land use: the sustainability of natural resources, energy use, and global climate change.

AEM graduates are actively recruited by elite businesses for positions in finance, marketing, investment banking, and management consulting, as well as by federal and international agencies. Many graduates go on for advanced professional and academic degrees, often after several years in a challenging career position in business or government.

### Atmospheric Science

Atmospheric Science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. All students are required to complete a minimum of three semesters of calculus, two semesters of physics, and a semester each of chemistry, computer science, and statistics.

Atmospheric science courses are offered through the Department of Earth and Atmospheric Sciences (EAS). There are two options for the B.S. in Atmospheric Science through the College of Agriculture and Life Sciences:

#### Option A

1. Mathematics, Computer Science, and Statistics:
   - a. Math 190/191, 192, 293, or Math 111, 112, 215
   - b. Computer Sci. 100, or EAS 150
   - c. AEM (ARME) 210 or equivalent
   - d. Math 294 (or MATH 221 and 222, without MATH 213) or EAS 435

2. Basic Physical Sciences:
   - a. Physics 207, 208, or Physics 112, 213, 214
   - b. Chem 105, 207, or 211

3. Atmospheric Science:
   - a. EAS 131, 250, 341, 342, 352, 447, 451
   - b. At least two atmospheric science electives

#### Option B

1. Mathematics, Computer Science, and Statistics:
   - a. Math 190/191, 192, 293, 294; or Math 111, 112, 215
   - b. Computer Sci. 100, or EAS 150
   - c. AEM (ARME) 210 or equivalent
   - d. Math 321, Math 420, or T&AM 310

2. Basic Physical Sciences:
   - a. Physics 112, 213, 214
   - b. Chem 207 or 211

3. Atmospheric Science:
   - a. EAS 341, 342, 352, 451

Option A is intended to meet the needs of students whose primary interests are in forecasting and operational meteorology. Upon graduation, a student who has completed Option A has satisfied both the curricular guidelines of the American Meteorological Society and the educational requirements of the National Weather Service for employment as a meteorologist. They will also be well qualified for positions in private-sector forecasting and environmental consulting firms, and in broadcast meteorology. In addition, Option A provides good preparation for graduate work in atmospheric science and closely related fields.

Option B is designed to focus on preparation for graduate study in atmospheric science and as well as other sciences that includes somewhat stronger coursework in mathematics and physics than does Option A. The minimum coursework in Option B does not satisfy the National Weather Service requirements or American Meteorological Society guidelines for employment in operational meteorology, but may be more appropriate for students with academic or research career goals. It can also be an attractive option for students transferring into the program as juniors.

### Biological Sciences

Biological Science is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The Office of Undergraduate Biology provides student services which are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include either general biology or one of the following concentrations: animal physiology, biochemistry, computational biology, ecology and evolutionary biology, genetics and development, molecular and cell biology, microbiology, neurobiology and behavior, nutrition, plant biology, and systematics and biotic diversity. Students interested in the marine sciences should consult the Shulls Marine Laboratory Office, G14 Simson Hall, 255–5717, for academic advice and career counseling. For more details about the biology curriculum see the section in this catalog on Biological Sciences.

### Biology & Society

The Biology & Society program area is designed for students who wish to combine the study of biology with exposure to perspectives from the social sciences and humanities. Many of the most critical social issues of our time, from the implications of genetic engineering to the impact of global climate change, have biological processes at their core. At the same time these issues are inherently social, involving complex relationships among people, institutions, laws, and beliefs. The Biology & Society field of study provides the skills and perspectives necessary to confront problems with biological, social, and ethical dimensions. In consultation with a faculty member, students are expected to select their courses in the field to meet their own goals and interests. For a description of the Biology & Society requirements and courses, see the section on Biology and Society under “Special Programs and Interdisciplinary Study” in this publication or visit the web site at www.sts.cornell.edu.

Students who elect Biology & Society as their major field of study leave Cornell with well-developed writing and analytical skills and a knowledge base that can lead to employment in a variety of fields. Many graduates have accepted positions as health counselors, writers, or policy analysts and researchers for government organizations, medical institutions, consumer or environmental groups, or scientific research institutes. Students have found that Biology & Society is also excellent preparation for professional training in medicine, law, and health services administration and for graduate programs in such fields as genetic counseling, nutrition, clinical psychology, public health, environmental studies, anthropology, sociology, and other related fields.

### Admissions

Students must have completed a year of college-level biology and must submit an application during their sophomore year. Students in the College of Agricultural and Life Sciences may be admitted directly into the field of study when they apply to the college; as with all students admitted prior to completing the biology prerequisite, the admission is provisional. It is the student’s responsibility to assure that final acceptance is granted upon completion of the introductory biology sequence. Although only introductory biology is a prerequisite for acceptance, students will find it useful to have completed some of the other requirements (obtain course checklist in 275 Clark Hall) by the end of their sophomore year. Juniors are considered on a case-by-case basis. Upper-division applicants should realize the difficulties of completing the biology and society requirements in less than two years.

The application includes:

- A one- to two-page statement explaining your intellectual interests in Biology & Society and why it is consistent with your academic goals and interests.
- A selected theme.
- A tentative plan of courses fulfilling Biology & Society requirements, including courses you have taken and those you plan to take.
- A transcript of work taken at Cornell University, current as of the date of application.

The faculty admissions committee reviews applications twice a year, once each during the fall and spring semesters. A faculty adviser is assigned upon admission to the field. Approximately 50 faculty members from five colleges serve as advisers to Biology & Society students. The major program is coordinated for students in all colleges through the Biology and Society Office, 275 Clark Hall, where students can get information, specific
course requirements, and application forms. Faculty and student advisers are available to discuss the Biology & Society requirements with you.

Requirements for the program are listed below. A full description and listings of courses that satisfy the requirements can be obtained in 275 Clark Hall or on the web at www.scts.cornell.edu. Also refer to the section on Biology & Society under “Special Programs and Interdisciplinary Study” in this publication.

Biology and Society Requirements:

- College calculus (one course)
- Ethics (one course)
- Two social sciences/humanities foundation courses
- Three biology foundation courses
- One biology depth course
- Statistics (one course)
- Core course
- Five theme courses (a coherent group of five courses relevant to the student’s special interest in Biology & Society, including a senior seminar that serves as a capstone course for the program).

Students should develop their theme and select their courses in consultation with a member of the Biology & Society faculty. A list of faculty is available in 275 Clark Hall. Further information may be obtained by calling (607) 255-6047 or sending an e-mail message to msw8@cornell.edu.

I. First-Year Writing Seminars

Check the current FWS pamphlet for information.

II. Foundation Courses

A. Ethics (select one)

B&SOC 205 Ethical Issues in Health and Medicine (also S&TS 205)
Fall. 4 credits. Limited to 150 students. E. Toon.
For description, see B&SOC 205.

B&SOC 206 Ethics and the Environment (also S&TS 206 and PHIL 246)
Spring. 4 credits. Limited to 60 students. N. Sethi.
For description, see B&SOC 206.

B. Social Sciences/Humanities Foundation

(2 courses, 1 from any 2 areas)

1. History of Science

[S&TS 233 Agriculture, History, and Society: From Squanto to Biotechnology]
For description, see S&TS 233.

S&TS 282 Science in Western Civilization (also HIST 282) (#)
Spring. 4 credits. P. Dear.
For description, see HIST 282.

[S&TS 283 The Sciences in the Twentieth Century (also HIST 280)]
For description, see S&TS 283.

S&TS 287 Evolution (also BIOEE 207 and HIST 287)
Fall or summer. 3 credits. W. Provine.
For description, see BIOEE 207.

S&TS 355 Computers: From Babbage to Gates
Fall. 4 credits. M. Dennis.
For description, see S&TS 355.

[S&TS 390 Science in the American Polity: 1600-1960 (also GOVT 308, AM ST 388)]
For description, see S&TS 390.

[S&TS 433 Comparative History of Science]
For description, see S&TS 433.

S&TS 444 Historical Issues of Gender and Science (also WOMNS 444)
Spring. 4 credits. M. Rossiter.
For description, see S&TS 444.

2. Philosophy of Science

S&TS 201 What is Science? An Introduction to the Social Studies of Science and Technology
Spring. 3 credits. T. Pinch.
For description, see S&TS 201.

S&TS 286 Science and Human Nature (also PHIL 286)
Spring. 4 credits. May be used to meet the philosophy of science requirement if not used to meet the core course requirement. R. Boyd.
For description, see PHIL 286.

S&TS 381 Philosophy of Science: Knowledge and Objectivity (also PHIL 381)
Fall. 4 credits. Limited to 30 students. R. Boyd.
For description, see PHIL 381.

3. Sociology of Science

B&SOC 301 Biology and Society: The Social Construction of Life (also S&TS 401)
Fall. 4 credits. Limited to 75 students. May be used to meet the sociology of science requirement if not used to meet the core course requirement. E. Toon.
For description and prerequisites, see B&SOC 301.

B&SOC 342 Sociology of Science (also S&TS 442, CRP 442 and SOC 442)
Fall. 4 credits. H. Mialet.
For description, see S&TS 442.

R SOC 208 Technology and Society
Fall. 3 credits. C. Geisler.
For description, see R SOC 208.

S&TS 201 What is Science? An Introduction to the Social Studies of Science and Technology (also SOC 210)
Spring. 3 credits. T. Pinch.
For description, see S&TS 201.

S&TS 311 The Sociology of Medicine
Spring. 4 credits. E. Toon.
For description, see S&TS 311.

S&TS 411 Knowledge, Technology, and Property
Spring. 4 credits. S. Hilgartner.
For description, see S&TS 411.

[SOC 434 The Sociology of Reproduction (also WOMNS 435)]
For description, see SOC 434.

4. Politics of Science

B&SOC 406 Biotechnology and the Law (also S&TS 406)
Spring. 4 credits. L. Glenna.
For description, see S&TS 406.

[B&SOC 407 Law, Science, and Public Values (also GOVT 407 and S&TS 407)]
For description, see S&TS 407.

CRP 380 Environmental Politics
Fall. 4 credits. R. Booth.
For description, see CRP 380.

S&TS 324 Environment and Society (also R SOC 324 and SOC 324)
Spring. 3 credits. L. Glenna.
For description, see R SOC 324.

S&TS 391 Science in the American Polity: 1960-Now (also GOVT 309 and AM ST 389)
Fall. 4 credits. M. Dennis.
For description, see S&TS 391.

[S&TS 427 Politics of Environmental Protection in America (also GOVT 427)]
For description, see S&TS 427.

5. Science Communication

COMM 260 Scientific Writing for Public Information
Fall or spring. 3 credits. Limited to 25 non-freshman or graduate students per section. For description and prerequisites, see COMM 260.

[COMM 421 Communication and the Environment]
Spring. 3 credits. May be used in the foundation only if not taken as a senior seminar. Not offered 2001–2002. J. Shannahahan.
For description, see COMM 421.

S&TS 285 Communication in the Life Sciences (also COMM 285)
Spring. 3 credits. Staff.
For description, see COMM 285.

S&TS 352 Science Writing for the Mass Media (also COMM 352)
Fall. 3 credits. Not open to freshmen. Limited to 25 students. B. Lewenstein.
For description and prerequisites, see COMM 352.

[S&TS 466 Communication of Science and Technology (also COMM 466)]
Fall. 3 credits. May be used in the foundation only if not taken as a senior seminar. Limited to 15 students. Offered even fall semesters. Not offered 2001–2002. B. Lewenstein.
For description and prerequisites, see COMM 466.

C. Biology Foundation (breadth requirement): Three courses: one from three of the following subject areas:

1. Biochemistry, Molecular and Cell Biology
BIOMB 330 Principles of Biochemistry, Individual Instruction
Fall or spring. 4 credits. J. Blankenship.
For description and prerequisites, see BIOMB 330.

BIOMB 331 Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. May not be taken for credit after BIOMB 330 or 333. G. Feigenson.
For description and prerequisites, see BIOMB 331.

BIOMB 333 Principles of Biochemistry, Lectures
Summer. 4 credits. H. T. Nivison.
For description and prerequisites, see BIOMB 333.

NS 262 The Cell and the External World
Spring. 3 credits. N. Noy.
For description and prerequisites, see NS 262.

NS 320 Introduction to Human Biochemistry
Fall. 4 credits. W. Arion and P. Stover.
For description and prerequisites, see NS 320.

2. Ecology

BIOE 261 Ecology and the Environment
Fall or summer. 4 credits. Not open to freshmen. N. G. Hairston.
For description and prerequisites, see BIOE 261.

3. Genetics and Development

BIOD 281 Genetics
Fall, spring, or summer. 5 credits. Not open to freshmen fall semester. Limited to 200 students. P. Bruns.
For description and prerequisites, see BIOD 281.

BIOD 282 Human Genetics
Spring. 3 credits (2 cr. if taken after BIOD 281). Limited to 25 per discussion group. M. L. Goldberg.
For description and prerequisites, see BIOD 282.

4. Evolutionary Biology

BIOEE 278 Evolutionary Biology
Fall or spring. 3 or 4 credits. Limited to 300 students. M. A. Geber.
For description, see BIOEE 278.

5. Microbiology

BIOM 290 General Microbiology Lectures
Fall, spring, or summer. 2 or 3 credits (2 credits if taken after BIOM 192). S. Morkel, S. Winans, J. Helmann.
For description and prerequisites, see BIOM 290.

6. Neurobiology and Behavior

BIONB 221 Neurobiology and Behavior I: Introduction to Neurobiology
Fall. 3, 4, or 5 credits. Not open to freshmen. P. Sherman.
For description and prerequisites, see BIONB 221.

BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits. Not open to freshmen. Each discussion limited to 20 students. A. Bass.
For description and prerequisites, see BIONB 222.

7. Botany

BIOPL 241 Introductory Botany
Fall. 3 credits. K. J. Niklas.
For description, see BIOPL 241.

8. Physiology and Anatomy

BIOAP 311 Introductory Animal Physiology, Lectures (also VETMED 346)
Fall. 3 credits. E. Loew and staff.
For description and prerequisites, see BIOAP 311.

NS 341 Human Anatomy and Physiology
Spring. 4 credits. Permission only. Must preregister for lab in 305 MVR during CourseReg. V. Utermohlen.
For description and prerequisites, see NS 341.

D. Biology Foundation (depth requirement): one course for which one of the above breadth requirement courses (2C) is a prerequisite.

E. Statistics (select one)

AEM (ARME) 210 Introductory Statistics
Fall. 4 credits. C. van Es.
For description and prerequisites, see AEM (ARME) 210.

BTRY 261 Statistical Methods I
Fall or summer. 4 credits. Note: BTRY 261 is limited to undergraduates. R. Lloyd.
For description and prerequisites, see BTRY 261-261.

CRP 223 Introduction to Statistical Reasoning for Urban and Regional Analysis
Fall. 3 credits. J. Lobo.
For description, see CRP 223.

ECON 319 Introduction to Statistics and Probability
Fall. 4 credits. Y. Hong.
For description and prerequisites, see ECON 319.

ILRST 210 Statistical Reasoning I
Fall, spring. 3 credits. Staff.
For description, see ILRST 210.

MATH 171 Statistical Theory and Application in the Real World
Fall, spring. 4 credits. Staff.
For description and prerequisites, see MATH 171.

PAM 210 Introduction to Statistics
Spring. 4 credits. K. Joyner.
For description, see PAM 210.

PSYCH 350 Statistics and Research Design
Fall. 4 credits. T. Giroich.
For description, see PSYCH 350.

SOC 301 Evaluating Statistical Evidence (also R SOC 302)
Fall. 3 credits. Staff.
For description, see SOC 301.

III. Core Courses

B&SOC 301 Biology and Society: The Social Construction of Life (also S&T S 401)
Fall. 4 credits. Limited to 75 students. E. Toon.
For description and prerequisites, see B&SOC 301.

S&T S 266 Science and Human Nature (also PHIL 266)
Spring. 4 credits. R. Boyd and N. Sturgeon.
For description, see PHIL 266.

IV. Themes

A. Natural Sciences Issues/Biology Elective (two courses). Select from the following list of B&SOC approved Natural Science Issues courses or choose course(s) with introductory biology as a prerequisite.

B&SOC 214 Biological Basis of Sex Differences (also BIOAP 214 and WOMNS 214)
For description, see BIOAP 214.

B&SOC 347 Human Growth and Development: Biological and Behavioral Interactions (also HD 347 and NS 347)
For description and prerequisites, see HD 347.

BIOEE 275 Human Biology and Evolution (also ANTHR 275 and NS 275)
For description, see BIOEE 275.

BIOEE 474 Laboratory and Field Methods in Human Biology (also ANTHR 474)
For description, see BIOEE 474.

BIOEE 673 Human Evolution: Concepts, History, and Theory (also ANTHR 673)
For description, see BIOEE 673.

BIOPL 247 Ethnobiology
Fall. 3 credits. D. M. Bates.
For description, see BIOPL 247.

HD 266 Emotional Functions of the Brain
Fall. 3 credits. R. DePue.
For description, see HD 266.

HD 344 Infant Behavior and Development
Fall. 3 credits. Not open to freshmen. S. Robertson.
For description and prerequisites, see HD 344.

HD 370 Adult Experimental Psychopathology
Spring. 3 credits. Limited to sophomores, juniors, and seniors. S. Bem.
For description and prerequisites, see HD 370.

HD 436 Language Development (also LING 436, PSYCH 436, and COGST 436)
Spring. 4 credits. B. Lust.
For description, see HD 436.

NS 222 Maternal and Child Nutrition
Fall. 3 credits. Limited to 20. C. Garza.
For description and prerequisites, see NS 222.

NS 331 Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits. May be used to fulfill the Biology Depth requirement. M. Stipanuk.
For description and prerequisites, see NS 331.

NS 361 Biology of Normal and Abnormal Behavior (also PSYCH 361)
Fall. 3 credits. Limited to juniors and seniors only. B. J. Strupp.
For description and prerequisites, see NS 361.
For description, see NTRES 407.

NS 475 Molecular Nutrition and Development
Spring. 3 credits. P. Stover and D. Noden.
For description and prerequisites, see NS 475.

NTRES 201 Environmental Conservation
Spring. 3 credits. T. Fahey.
For description, see NTRES 201.

PSYCH 326 Evolution of Human Behavior
Fall. 4 credits. R. E. Johnston.
For description and prerequisites, see PSYCH 326.

Examples of biology electives
AN SCI 300 Animal Reproduction and Development
Spring. 3 credits.
For description, see AN SCI 300.

HD 366 Psychobiology of Temperament and Personality
Spring. 3 credits. P. DePue.
For description, see HD 366.

NS 331 Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits. M. Szpanuk.
For description and prerequisites, see NS 331.

B. Humanities/Social Sciences Elective
(two courses)
Courses listed earlier as social science/humanities foundation courses (2.1B) are particularly appropriate as social science/humanities electives. A single course, however, cannot be used to meet both requirements. Additional courses that are recommended as social science or humanities electives are:

Examples of humanities/social sciences electives
AEM (ARME) 464 Economics of Agricultural Development
Spring. 3 credits. R. Christy.
For description, see AEM (ARME) 464.

[ANTHR 211 Nature and Culture &
For description, see ANTHR 211.]

CRP 380 Environmental Politics
Fall or spring. 4 credits. R. Booth.
For description, see CRP 380.

HD 251 Social Gerontology
Spring. 3 credits. D. Dempster-McLain.
For description, see HD 251.

NS 245 Social Science Perspectives on Food and Nutrition
Fall. 3 credits. J. Schal.
For description, see NS 245.

NS 450 Public Health Nutrition
Spring. 3 credits. D. Pelletier.
For description, see NS 450.

NTRES 400 International Environmental Issues
Spring. 4 credits. R. McNeil.
For description, see NTRES 400.

NTRES 407 Religion, Ethics, and the Environment
Fall. 4 credits. R. Buer.
For description, see NTRES 407.

PAM 303 Ecology and Epidemiology of Health
Spring. 3 credits. E. Rodriguez.
For description, see PAM 303.

PAM 380 Human Sexuality
For description, see PAM 380.

PAM 435 U.S. Health Care Systems
Fall. 3 credits. R. Battistella.
For description, see PAM 435.

PHIL 241 Ethics (by petition for breadth requirement)
Spring. 4 credits. N. Sturgeon.
For description, see PHIL 241.

[PHIL 368 Global Climate and Global Justice (also GOVT 468)
For description, see PHIL 368.]

R SOC 205 International Development (also SOC 206)
Spring. 3 credits. C. Geiser.
For description, see R SOC 205.

R SOC 320 Sociology of Health of Latinos and Ethnic Minorities (also LSP 220)
Fall. 3 credits. R. Parra.
For description, see R SOC 320.

R SOC 261 Sociology of Sustainable Development
Fall. 3 credits. L. Glenn.
For description, see R SOC 261.

[R SOC 490 Society and Survival
For description, see R SOC 490.]

S&TS 324 Environment and Society (also SOC 324 and SOC 324)
Spring. 3 credits. L. Glenn.
For description, see S&TS 324.

[S&TS 453 Reflections on Scientific Personae: Visibility and Invisibility of the Body
For description, see S&TS 453.]

S&TS 681 Philosophy of Science (also PHIL 681)
Spring. 4 credits. R. Boyd.
For description, see PHIL 681.

SOC 340 Health, Behavior, and Policy
Spring. 4 credits. S. Caldwell.
For description, see SOC 340.

C. Senior Seminars: Representative seminars listed below. Complete list available in 275 Clark Hall.
B&SOC 406 Biotechnology and the Law (also S&TS 406)
Spring. 4 credits. L. Palmer.
For description, see S&TS 406.

B&SOC 427 Politics of Environmental Protection (also GOVT 427 and S&TS 427)
For description, see S&TS 427.

B&SOC 447 Seminar in the History of Biology (also BIOEE 447, HIST 415, and S&TS 447)
Summer (6-week session). 4 credits.
Limited to 18 students. W. Provine.
For description, see BIOEE 447.

B&SOC 461 Environmental Policy (also BIOEE 661 and ALS 661)
Fall and spring. 3 credits each term.
Limited to 12 students. (Students must register for 6 credits each term since an "R" grade is given at the end of the fall term.)
D. Pimentel.
For description, see BIOEE 661.

[B&SOC 469 Food, Agriculture, and Society (also BIOEE 469 and S&TS 469)
Spring. 3 credits. Limited to 20 students.
For description, see BIOEE 469.

COMM 421 Communication and the Environment
Fall. 3 credits. J. Shanahan.
For description, see COMM 421.

HD 418 Psychology of Aging
Fall. 3 credits. S. Cornelius.
For description, see HD 418.

HD 419 Midlife Development
Spring. 3 credits. S. Cornelius.
For description, see HD 419.

HD 366 Psychobiology of Temperament and Personality
Fall. 3 credits. R. A. DePue.
For description and prerequisites, see HD 366.

[HD 610 Processes in Human Development
Fall. 3 credits. Limited to 20 students. Not offered 2001–2002.
U. Bronfenbrenner.
For description and prerequisites, see HD 610.]

HD 660 Social Development
Spring. 3 credits. Permission of the instructor required for undergraduates.
C. Raver.
For description, see HD 660.

PAM 575 Housing and Long Term Care for the Elderly
Fall. 3 credits. P. Chi.
For description and prerequisites, see PAM 575.

[PAM 652 Health Care Services: Consumer and Ethical Perspectives
Fall. 3–4 credits. If using this course as a senior seminar, Biology & Society majors must take it for 4 credits. Enrollment limited; preference given to PAM students.
For description and prerequisites, see PAM 652.]

PAM 656 Managed Health Delivery Systems: Primary-Ambulatory Care
Spring. 3 credits. For undergraduate seniors only by permission of instructor.
J. Ruder.
For description and prerequisites, see PAM 656.

PAM 659 Epidemiology, Clinical Medicine, and Management Interface Issues
Spring. 3 credits. E. Rodriguez.
For description, see PAM 659.

[R SOC 410 Population and Environment
For description, see R SOC 410.]

R SOC 438 Social Demography (also SOC 437)
Fall. 3 credits. D. Gurak.
For description, see R SOC 438.
Students majoring in this area are required to take a computer science course (e.g., Computer Science 100), mathematics courses (at least three semesters of calculus), Biometry and Statistics 100, 101, 102, 408-409, 421, 601-602, Industrial and Labor Relations 310, and Operations Research and Industrial Engineering 270. Experience gained through summer employment or work as an undergraduate teaching assistant is highly recommended. Students should contact Professor Steven J. Schwager for information.

Communication
The single most important thing to learn in college is how to assess and manage constantly changing information. The amount of information the public receives and is expected to understand is growing exponentially. Communication is taking a more central role in science, technology, business, and public policy. Increasingly, government, industry, and special interest groups rely on communication specialists to aid in managing information—collecting, sorting, interpreting or reinterpreting, summarizing, and making information understandable and accessible to the general public, to interest groups, and to decision makers in organizations. Effective information management requires a thorough understanding of the communication process. Students who graduate from this department, have excellent speaking, writing, and listening skills. Communication majors are taught:

- Communication processes, such as how communication influences attitudes, opinions, and behaviors.
- How communication systems work in our society.
- How to apply their understanding of communication to solving problems in science, government, industry, health, and education.

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice. Required freshman courses are:

| Fall semester | COMM 120 Contemporary Mass Communication |
| Spring semester | COMM 116 Communication in Social Relationships |
| Spring semester | COMM 117 Writing about Communication |
| Spring semester | COMM 201 Oral Communication |
| Spring semester | COMM 282 Communication Industry Research |
| Spring semester | COMM 230 Visual Communication |

After completing the courses in the core curriculum, all majors take an additional 12 credits in communication. Students can choose to concentrate in one of three focus areas:

- Communication in the Life Sciences. (Studies of the impact of communication on environmental, health, science, and agricultural issues, and public perceptions of risk.)
- Communication Planning and Evaluation. (Development of communication plans to solve problems for individuals or for organizations and evaluating the success of these plans.)
- Communication Systems and Technology. (Principles of how we use communication technologies and how we are influenced by these technologies.)

Detailed information on the distribution of courses is available from the department.

In designing the communication major, the faculty of the department has kept in mind the need for students to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and in society at large.

A minor in communication is pending. Please inquire if interested.

Crop and Soil Sciences
The Department of Crop and Soil Sciences provides instruction in three specializations: agronomy, crop science, and soil science. Employment opportunities are increased with practical experience, and the faculty of the department and the Career Development Office of the college are glad to help students search for relevant summer jobs and internship opportunities. Professional certification can also be obtained in these specializations.

Agronomy combines the study of crop production and soil management. It provides the student with a broad array of career opportunities after completion of the B.S. degree, including agricultural business, extension service work, and farming. Graduate school is also possible after a well-planned program. Students should take at least 12 credits of crops and 12 credits of soils and design the remainder of their curriculum to meet specific interests and goals. Some students pursue a major in agronomy with a concentration in international agriculture. Agronomy is also offered as a specialization within the plant sciences major field of study.

Crop science is the application of basic biological and ecological science to the improvement and management of the world's major field crops used for human food and livestock feed. Courses required include 18 credits of crops, 12 credits of plant biology, and 6 credits of soils. Students who anticipate a career in agricultural production or service after completion of the B.S. degree should take additional courses in economics, communication, plant pathology, entomology, and nutrition. Students planning graduate or professional study beyond the bachelor's degree should take advanced course work in organic chemistry and biochemistry, calculus, physics, and statistics. Crop science is also offered as a specialization within the plant sciences major field of study.
Soil science is a basic discipline important in ecology, engineering, agriculture, and conservation. A student of soil science combines physical and biological training to address critical issues in environmental and agriculture management related to soils. Students take 16 credits in soil science, including four credits in the introductory course. In addition, chemistry, mathematics, physics, and microbiology are required, as well as six credits of crop science to satisfy the major. Soil science is also offered as a specialization within the Science of Earth Systems and the Environmental Science major fields of study.

Education

The Department of Education is currently redesigning its programs. Building on strong academic disciplines and grounding in sociopolitical, psychological, empirical, and theoretical bases of educational practice, the department has two foci to meet societal demands for teachers of mathematics, science and agriculture and for leaders in non-formal educational settings: Teacher Education, and Adult and Extension Education. The two programs of study, largely at the graduate level, prepare leaders who will both engage in professional practice and improve educational processes through research, practice and scholarship. Our undergraduate program leads to provisional certification in agricultural education. The latest information on program developments may be found on our web site, http://ed.cornell.edu/education.

Adult and Extension Education. The purpose of the Adult and Extension Graduate Program of Professional Development is to promote social learning and civic engagement through participatory adult and extension education practice. Program coursework, research, and fieldwork integrate critical educational, philosophical, psychological, and sociological bases of democratic engagement. Through several credits in the content area(s), and one off-campus semester of student teaching. Graduates are eligible to apply for New York State provisional certification (grades 7-12) to teach in one or more of the content areas emphasized in the program. Two years of successful teaching experience are subsequently required for permanent certification in New York State. Note that Undergraduate graduates in environmental science, education practice, and extension majors should apply to the M.A.T. program during their sophomore year. Students complete their undergraduate subject matter majors while taking selected courses in Education during their junior and senior years. Contact the TEAMS coordinator, 255-5973, for further information.

Master of Professional Studies—Non-Certification Option in Agricultural Education (M.P.S. Agriculture and Life Sciences). Students enrolled in the M.P.S. Non-Certification Option in Agricultural Education complete a program of professional education, additional coursework in their technical content area(s), and an in-depth project. Graduates of this option work in formal educational settings that do not require state certification (e.g., private schools, industry), but do require a background in the planning, delivery, and assessment of instruction.

Graduate Studies in Curriculum and Instruction (Master of Science—M.S. and Doctor of Philosophy—Ph.D.). Graduate Studies in Curriculum and Instruction prepare teachers, teacher educators, and scholars and practitioners for faculty roles in universities, and one off-campus semester of student teaching. Graduates are eligible to apply for New York State provisional certification (grades 7-12) to teach in one or more of the content areas emphasized in the program. Two years of successful teaching experience are subsequently required for permanent certification in New York State. Note that Undergraduate graduates in environmental science, education practice, and extension majors should apply to the M.A.T. program during their sophomore year. Students complete their undergraduate subject matter majors while taking selected courses in Education during their junior and senior years. Contact the TEAMS coordinator, 255-5973, for further information.

Effectve College Teaching Series. The Center for Learning and Teaching, under the auspices of the Department of Education, offers a series of courses, both credit and non-credit, for the improvement of teaching at Cornell. Designed for Cornell faculty and graduate students who intend to pursue an academic career. 1-3 credits.

EDUC 548 Effective College Teaching Spring and one-week spring session. For faculty, graduate students who intend to pursue an academic career. 1-3 credits.

EDUC 578 ITATP Cross-Cultural Classroom Dynamics, Language, and Teaching Practicum Fall and spring. For international graduate students who have, or will have, teaching assistantships. 2 credits.

The purpose of this program is to provide opportunity for professional development and graduate study for adult, extension, and international educators working in a variety of non-formal and community-based settings.

Master's of Science (M.S.) and Doctor of Philosophy in Education (Ph.D.) in Adult and Extension Education

The M.S. and Ph.D. programs of advanced graduate study are designed to provide intellectual and professional preparation of scholars and practitioners for faculty roles in higher education, leadership roles in non-formal and community-based education, and activist roles in a variety of adult and extension education endeavors.

Teacher Education. The Teacher Education Program prepares teachers, teacher educators, and scholars in the areas of Agriculture, Mathematics, and Science. Students develop knowledge and expert practice skills to assume leadership positions in formal educational settings, including public and charter schools, private schools and other formal educational settings. Through a combination of coursework and field experiences, students gain knowledge of ethical practice, the teaching and learning process, and the social-political context of education, and integrate this with their specific content area of science, math, and agriculture. Building on the land-grant mission of Cornell, this program focuses on the improvement of public education through exemplary instruction, meaningful inquiry, and collaboration with public schools. Students become practitioners who have the intellectual resources and praxis to engage in educational practice that promotes engaged and informed citizens who participate in promoting positive social change.

Programs of professional development and graduate research studies include Teacher Education in Agriculture, Mathematics, and Science Program. The TEAMS Program prepares educational professionals who are recognized for the quality and significance of their teaching in the areas of Agriculture, Mathematics, and Science. The Program provides students with the opportunity to engage in coursework and field experiences that focus on the character and formation of cognitive abilities as well as subject matter expertise, critical and reflective thinking, the social context of schooling, the synthesis and communication of knowledge; professional development and inquiry.

Graduates of this program work in formal educational settings such as public and private schools, and in other areas where preparation in teaching are highly desirable. There is also an Agricultural Education Undergraduate Certification Option (B.S.). Students enrolled in the undergraduate Education major and in one of the technical agriculture areas of the College of Agriculture and Life Sciences complete coursework in professional education in addition to their technical agriculture requirements. One semester of off-campus student teaching is required. Individuals who complete the Undergraduate Certification Option are eligible to apply for New York State provisional certification to teach agriculture in the public schools. Completion of a Master's degree within five years of graduation and two years of successful teaching are required for permanent certification.

Master of Arts in Teaching Certification Option (M.A.T.—Agriculture, Mathematics, and Science). Students enrolled in the M.A.T Certification Option complete a graduate curriculum of professional education, additional coursework in their content area(s), and one off-campus semester of student teaching. Graduates are eligible to apply for New York State provisional certification (grades 7-12) to teach one or more of the content areas emphasized in the program. Two years of successful teaching experience are subsequently required for permanent certification in New York State. Note that Undergraduate graduates in environmental science, education practice, and extension majors should apply to the M.A.T. program during their sophomore year. Students complete their undergraduate subject matter majors while taking selected courses in Education during their junior and senior years. Contact the TEAMS coordinator, 255-5973, for further information.

Major Fields of Study 47

MAJOR FIELDS OF STUDY
Research
The Institute research agenda is centered on leadership theory and practice, and on social and economic policies affecting education.

Education
EDUC 694 is a three credit course offered in the fall term. Analysis of Leadership Theories: Developing a Leadership Philosophy. Designed for faculty and administrators in higher education, particularly in the community colleges.

Entomology
The entomology curriculum provides students with a basic background in biological and environmental sciences, with a special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology including integrated pest management, insect pathology, environmental assessment, medical or veterinary entomology, insect toxicology, apiculture, insect systematics, or insect ecology. Because of the diversity of career options, the major includes a common core of requirements allowing flexibility to electives selected by students in consultation with their advisers.

Specific requirements
Basic Sciences
One year of college mathematics, including a course in calculus, may substitute for microeconomics.
One semester of physics
Chemistry 257 (Organic and Biological Chemistry)
Chemistry 257 (Organic and Biological Chemistry)

General Biological Introduction
Biological Sciences 281 (Genetics)
Biological Sciences 278 (Evolutionary Biology)

A choice of one: Biological Sciences 261 (Ecology and the Environment) or Biological Sciences 350 or 351 (Principles of Biochemistry)

Entomology
Entomology 212 (Insect Biology)
A choice of two:
Entomology 322 (Insect Morphology)
Entomology 331 (Insect Systematics)
Entomology 485 (Insect Physiology)
Students must also enroll in at least two additional entomology courses offered at the 300–400 level on more specialized topics.

Environmental Science
Environmental Science is a new major for the College of Agriculture and Life Sciences that is pending approval. The proposed major provides an integrative and broad-based program in the physical, biological, and social sciences. The major consists of foundation courses and environmental core courses in earth, biotic, human, and economic systems. Students focus their upper-level study in a concentration or "environmental track," which provides expertise in a particular area. For more information about this new major, contact the Center for the Environment (cufe@cornell.edu, or (607) 255–7535).

Food Science
The mission of the Food Science Program is to educate students for careers in food science and technology. Graduates are prepared for entry level positions in industry, government, and research organizations or for advanced study in food science and related disciplines. Food scientists qualify for satisfying careers which focus on ensuring the sustainable availability of a safe, nutritious, affordable, and high quality food supply for people throughout New York State, the nation, and the world.

Students choose one of five specialization options: (1) Basic Food Science; (2) Food Engineering; (3) Food Processing; (4) Food Operations and Management; and (5) Food Biotechnology. The first three options meet minimum curriculum standards set by the Institute of Food Technologists, the premier professional society for food scientists. Students choose an option based on individual interests and career goals.

The first two years of the program are focused on establishing a solid background in the physical and biological sciences, math, and communication. Required courses include chemistry (intro and organic), biology, microbiology, calculus, physics, freshman seminar, food science, and nutrition.

The second two years emphasize the application of basic science and technology to the processing, storage, distribution, marketing, and final preparation of foods. Required courses include Food Engineering Principles, Physical Principles of Food Processing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, Food Microbiology, and Statistics. Students choose electives to satisfy college distribution requirements and individual interests.

Students are strongly encouraged to participate in research supervised by a faculty member and/or to work as an intern in a food company during summer breaks. Most faculty in the department have active research programs and welcome participation by undergraduate students who may receive academic credit or wages for faculty-directed undergraduate research. Many food companies recruit on campus for their summer internship programs. These internships are excellent opportunities for students to gain experience and establish contacts for future employment.

A state-of-the art food processing and development laboratory, an operational dairy plant, and extensive laboratory facilities are available for training, research, and employment.

Landscape Architecture
Landscape Architecture focuses on the art of landscape design as an expression of the cultural values and the natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of architecture, environmental science, architecture, and city and regional planning.

The course of study prepares students for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction and engineering technology, and professional practice. Design studios deal with
the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects range from garden design, parks design, housing design, historic preservation, environmental rehabilitation, and urban design.

Landscape Architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences; a three-year Master of Landscape Architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program administered through the Graduate School, for those with accredited degrees in Landscape Architecture or Architecture. The two-year program entails core courses in the discipline and the development of a concentration in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

In addition, an undergraduate concentration in the American Cultural Landscape is available for nonmajors.

Dual Degree Options
Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Study Abroad
The faculty encourages study abroad and has two formally structured programs. The Denmark International Study (DIS) program is available primarily to senior undergraduates and third year graduates in the fall semester and is administered through Cornell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Bachelor of Science Landscape Architecture Degree Sequence: (Please note that each semester the studio classes require a supply and field trip fee and all landscape architecture majors are required to pay an annual technology fee.)

Master of Landscape Architecture (M.L.A.) License Qualifying Degree
Requirements of the three-year M.L.A. curriculum include 90 credits, six resident units of satisfactory completion of the core curriculum courses, and a thesis or a capstone studio. (Please note that each semester the studio classes require a supply and field trip fee and all landscape architecture majors are required to pay an annual technology fee.)

### Master of Landscape Architecture

#### Advanced Degree Program

The two-year Master of Landscape Architecture (M.L.A./A.D.) program serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants must hold a Bachelor’s Degree in Landscape Architecture or Architecture from an accredited program. The objective of the two-year (M.L.A./A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture.

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. For landscape architects, this must include at least two advanced studios, a graduate seminar, a concentration, and a thesis. For architects the curriculum requires three advanced studios, two courses in plants and planting design, two courses in the history of landscape, two courses in site engineering, a seminar in design theory, a course in professional practice, a concentration, and electives.

### Undergraduate Concentration for Nonmajors

Students outside the professional program may choose the undergraduate concentration in the American Cultural Landscape to complement their major. The courses center on the landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society and its relationship to natural systems and diverse cultures. The cultural landscape includes its visible elements as well as perceptions and cultural ideas and values. The concentration consists of four courses, two required and two electives. Students may petition to substitute one course in the electives list. Direct inquiries to professors H. Gottfried or S. Baugher.

### Visual Studies (choose one):

- Art 121 Introduction to Painting (3 cr)
- Art 141 Introduction to Sculpture (3 cr)
- Art 151 Introduction to Drawing (3 cr)

### Natural Resources

As the number of humans living on the Earth surpasses six billion at the start of the twenty-first century, knowing how to conserve and manage well our Earth’s remaining biological resources and natural environments takes on increasing importance and urgency. The undergraduate curriculum in natural resources provides students with the concepts and tools needed to understand the Earth’s environmental resources and ecological systems, and to participate with intelligence and foresight in this conservation and management. The department’s program allows students flexibility to pursue a variety of paths to an integrated, hands-on, knowledge-based understanding of relationships of organisms to their environments, and ways in which humans affect, and are affected by, those relationships. Students are encouraged to understand the scientific, ethical, and societal basis for management and protection of natural resources and environments through the application of ecological principles and knowledge of societal needs.

### The Future for Natural Resource Majors

Most students entering the department have a strong interest in the natural world and contributing in some way to greater harmony between humans and the environment. An undergraduate degree in natural resources prepares students to make these contributions as informed citizens with a strong liberal arts education and a firm grasp of the scientific, ethical, and societal dimensions of environmental conservation and management. It also prepares them for advanced level positions with conservation organizations, state and federal resource management agencies, environmental consulting firms, and environmental education centers, or for graduate study in several environmentally-related fields, including the biological, physical, and chemical sciences; forest, wetland, stream, wildlife, or fisheries management; and environmental law and public policy.

Because high-level positions in environmental fields usually require advanced study, most career-minded natural resource majors eventually pursue graduate or professional degrees. These students will assume positions of leadership in government, colleges and universities, national and international conservation organizations, environmental design firms, environmental consulting firms, the environmental divisions of private industry, and organizations involved in environmental education or communication.

### Curriculum

**Freshmen**

- Bioscience (choose one):
  - BSC 128 Introduction to Biology (4 cr)
- Visual Studies (choose one):
  - Art 121 Introduction to Painting (3 cr)
- Art 141 Introduction to Sculpture (3 cr)
- Art 151 Introduction to Drawing (3 cr)

**Sophomores**

- Natural Resource Majors (choose two):
  - AN 121 Introduction to Animal Science (3 cr)
  - AN 161 Introduction to Plant Science (3 cr)
  - AN 221 Introduction to Agriculture (3 cr)
- Visual Studies (choose one):
  - Art 291 Introduction to Photography (3 cr)
  - Art 292 Introduction to Digital Media (3 cr)
  - Art 293 Introduction to Installation (3 cr)

**Seniors**

- Natural Resource Majors (choose one):
  - AN 321 Advanced Animal Science (3 cr)
  - AN 361 Advanced Plant Science (3 cr)
  - AN 322 Advanced Agriculture (3 cr)
- Visual Studies (choose one):
  - Art 391 Advanced Photography (3 cr)
  - Art 392 Advanced Digital Media (3 cr)
  - Art 393 Advanced Installation (3 cr)

**Distribution Elective**

- Arts and Social Sciences (choose one):
  - Art 161 Introduction to Photography (3 cr)
  - History II (3 cr)
  - Literature II (3 cr)
  - Philosophy II (3 cr)
  - Psychology II (3 cr)
  - Sociology II (3 cr)

**Natural Resources**

As the number of humans living on the Earth surpasses six billion at the start of the twenty-first century, knowing how to conserve and manage well our Earth’s remaining biological resources and natural environments takes on increasing importance and urgency. The undergraduate curriculum in natural resources provides students with the concepts and tools needed to understand the Earth’s environmental resources and ecological systems, and to participate with intelligence and foresight in their conservation and management. The department’s program allows students flexibility to pursue a variety of paths to an integrated, hands-on, knowledge-based understanding of relationships of organisms to their environments, and ways in which humans affect, and are affected by, those relationships. Students are encouraged to understand the scientific, ethical, and societal basis for management and protection of natural resources and environments through the application of ecological principles and knowledge of societal needs.

### Areas of Concentration

The concentration in Applied Ecology is designed as a foundation for those who wish to pursue careers or advanced study in science-based conservation or management of wild populations of animals and plants, conservation biology, control of invasive and overabundant species, watershed and landscape management, quantitative resource management, resource inventory and information management, global ecology, or applied ecology, and biogeochemistry of forests and wetlands. This concentration also aims to interest students seeking a biologically based approach to environmental science or global studies. Students who select this concentration typically focus their course work in the areas of biology and applied ecosystem ecology, including quantitative analysis of fish and wildlife populations, ecosystems, and landscapes. They complement their course work within the department with courses in other departments, such as Ecology and Evolutionary Biology, Microbiology, Geology, Crop and Soil Sciences, Atmospheric and Earth Sciences, and Plant Sciences.
Nutrition, Food, and Agriculture

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural economics, and social and institutional environments.

The program in nutrition, food, and agriculture provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships of human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work together with specialists in areas such as agricultural economics, food production, and rural sociology. Advances in biotechnology provide researchers with new opportunities to enhance human nutritional requirements and the regulation of human metabolism.

Nutrition, food, and agriculture majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 115 Nutrition and Health: Concepts and Controversies, NS 245 Social Science Perspectives on Food and Nutrition, NS 345 Nutritional and Physicochemical Aspects of Foods, NS 331 Physiological and Biochemical Bases of Nutrition, and NS 332 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, the life sciences, environment and natural resources, communication, and education.

All majors have faculty advisers in the Division of Nutritional Sciences with whom they meet regularly. Advisers plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The research honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in special experiences for credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutrition, food, and agriculture can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in government, community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the Division faculty members work in Savage-Kinzelberg Hall and Martha Van Rensselaer (MVR) Hall. In addition to housing offices, laboratories, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. The nutritional sciences Learning Resource Center in MVR is used by students for study and small group discussion. The center contains class materials, computers, audio-visual aids, and supplementary books and periodicals for independent study and special projects.

For additional information about the nutrition, food, and agriculture program, contact the Division of Nutritional Sciences Academic Affairs Office, 335 MVR, 607-255-2628.

Plant Sciences

Plant Science is a multidisciplinary program governed by faculty in the Departments of Crop and Soil Sciences, Horticulture, Plant Biology, Plant Breeding, and Plant Pathology. Students in the program share a common interest in learning about topics associated with plant growth and development in the broadest sense, and many have their sights set on careers in applied agricultural fields. In addition to the college distribution requirements, they must take at least one course in each of several areas including botany, plant physiology, ecology, taxononomy/systematics, genetics, statistics, plant-pest interactions, crop production, and soil science for a total of 40 credits.

Students who begin with well-defined interests or who identify certain areas of interest after seeing several courses can usually choose a specialization within one of the six cooperating departments. Each specialization has additional requirements beyond the basic core courses. However, students who are uncertain about the breadth of their interests or who are seeking as much flexibility as possible may choose to design their course of study without declaring a specialization. Those students have fewer required courses but are still expected to develop a strong background in plant science.

More than one hundred courses that deal directly with some aspect of plant sciences are offered by the cooperating departments, and other courses relating to plant science are offered elsewhere in the university. There are also ample opportunities for undergraduate teaching and research experience, and qualified students, especially those expecting to go on for graduate degrees, are encouraged to avail themselves of such opportunities.

Students who are planning to enter the work force immediately upon completion of the BS degree are encouraged to gain practical experience. This may involve summer employment in a plant production or maintenance-related industry such as a lawn and tree care company, commercial greenhouse, nursery, botanic garden, farm, crop production farm or with Cooperative Extension. Plant Science faculty also encourage students to avail themselves of opportunities to work and/or study abroad.

In addition to classrooms and laboratories in five buildings on the Cornell campus proper, research and teaching facilities adjacent to the campus provide students with ample opportunities for hands-on practice, technical training, independent research projects, and internships in plant science. Facilities available...
to students include research orchards and vineyards, golf courses and a turf research facility, the Cornell Plantations, Arboretum and vineyards, golf courses and a turf research facility in Aurora (Cayuga County), Geneva (Ontario County), Highland (Ulster County), Lake Placid (Essex County), Middletown (Orange County), Odessa (Tioga County), and Riverhead, (Suffolk County), Middletown (Orange County), Odessa (Tioga County), and Riverhead (Suffolk County) are also sites administered by departments in the Plant Science consortium and are available for undergraduate and graduate field study.

Crop Science and Agronomy are specializations that focus on the science and management of the major food crops of the world such as wheat, corn, rice, soybean, and alfalfa. In addition to several courses in Crop Science, students in this program also take courses in the sister disciplines of weed science, seed science, and soil science. At present, the specialization is described in detail under the major field of study called Crop and Soil Sciences, but it will become a part of the Plant Science major field of study in the near future.

Horticulture. Derived from the Latin word "hortus," meaning garden, horticulture is a blend of science and culture involving knowledge of plants in farms and gardens, parks and landscapes, athletic and recreational facilities, indoor plants and greenhouse and nursery plant production, and crops used for wines, herbs and spices, medicinal purposes, coffee and teas. The knowledge and skills essential to grow, maintain, process and market horticultural plants are in high demand in a world increasingly concerned with environmental quality, recreation, and health. There are approximately 40 faculty members in horticulture specializing in almost every aspect of horticultural science, with active research and outreach programs regionally, nationally and internationally. Students choosing a concentration in horticulture must complete the minimum 40 credits of core courses for the Plant Science major, plus the following courses:

HORT 101-Horticultural Science and Systems (4 credits)

HORT 400-Plant Propagation (3 credits)

Two HORT courses in plant production or management at the 400 level (6 credits)

One additional course of integrated pest management (plant pathology, entomology or weed science) beyond the 3-credit Plant Science core requirement (3 credits).

Students transferring into Cornell from other colleges can petition to waive or adjust these requirements, in consultation with their faculty advisers.

Plant Biology stresses a basic, rather than applied, understanding of how plants function, grow and develop, as well as a study of their genome, evolution and relationships to man. It provides undergraduates with a thorough preparation for graduate study in plant sciences. In cooperation with an adviser each student works out a curriculum with a concentration in basic sciences, supplemented by more advanced courses in plant biology. Students specializing in Plant Biology within the Plant Science major should take a minimum of 6 credits beyond the core of Plant Science courses. Options include plant molecular biology, plant cell biology, biochemistry, ethnobotany, and further courses in the function, growth, genetics, systematics, ecology and evolution of plants.

Individual research under professorial guidance is encouraged. Each student within Plant Biology affords a flexible curriculum.

Plant Genetics and Breeding relates information about genetics/genomics of plants to the improvement of cultivated plant species. Agriculturally important genes are identified, characterized and deployed through combinations of molecular studies and sexual crosses. This area of study integrates genetic information with plant physiology/biochemistry, plant pathology, entomology, conservation biology, international agricultural development, and the knowledge and skills needed to create crops that meet the needs of modern society. In addition to the core plant science courses, students should take PLBR 201, 401, 403, and 404. Other courses may be included after consultation with the adviser. Students are encouraged to participate in research projects and take advantage of opportunities for internships in industry.

Plant Pathology is the study of plant disease—its causes and how they are identified, the molecular basis for pathogenicity and resistance, and disease management. For most students planning on a plant pathology as an undergraduate is preparation for graduate study in plant pathology or another field of plant science. However, study in plant pathology also prepares students for careers as technical representatives with agricultural businesses, Cooperative Extension educators, integrated pest management practitioners, state or federal plant pest regulatory agents, and laboratory technicians. Suggested courses beyond the plant science core include organic chemistry and biochemistry, calculus, introductory plant pathology, plant disease diagnosis, mycology, entomology, and plant breeding.

Plant Protection is offered to students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. Although designed as a terminal program for students desiring practical preparation for careers in pest management, the specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

Rural Sociology

Technological, economic, demographic, and environmental changes are social processes, and each has major impacts on both individuals and social groups and on the international order. At Cornell, rural sociology students study these and other facets of social change in both domestic and international settings. Among the topic areas in which faculty members in the Department of Rural Sociology specialize are international agricultural and rural development, community and regional development and changes in the United States, environmental sociology, aging and the life course, sociology of agriculture, rural industrialization and labor markets, technology and social change, population and development, political economy, women in development, race and ethnic relations, and research methodology. Most courses provide background in both domestic and international aspects of the subject matter. Normally, students will develop a specialization with either a domestic or international emphasis by choosing appropriate courses. All students learn the theory and methodology of sociology, and how to apply both to research and policy in their subject areas.

Recognizing that students are concerned with future career opportunities, the undergraduate program emphasizes acquisition of skills as well as general knowledge preparation for jobs or further study upon graduation. Accordingly, students are expected to become involved in the application of theory, methodology, principles, and concepts in the analysis of practical problems.

Rural sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., M.P.S., or Ph.D.). These programs are offered through the Department of Rural Sociology and the Graduate Field of Development Sociology, both of which are located in Warren Hall. For many years, the department and graduate field have been recognized as among the top programs in the country, and both are known for innovative program orientations. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and other topics. Faculty members in this department are committed to both quality instruction and research programs. Being located in a college of agriculture, faculty members maintain strong ties to the technical fields within the college as well as with the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Community and Rural Development Institute, the Gender and Global Change Program, the Life Course Institute, the Rural Development Program, the Hispanic Studies Program, the Program on Science, Technology, and Society, and the Center for International Studies. Nearly half of the department faculty are associated with one or more area studies programs (the Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Research Program, or the Institute for African Development). Department members also maintain working relations with faculty in the Department of Sociology and other social science units located in other colleges at Cornell. Students are encouraged to supplement their core work by electing courses in these other departments and programs, thereby rounding out their educations with different perspectives.

The courses offered in rural sociology can be grouped into three broad categories: development sociology; population, environment, and society; and social data and policy analysis. All students majoring in rural sociology are required to take five core courses: an introductory course (R SOC 101), methods (R SOC 213), theory (R SOC 301), social stratification (R SOC 200), and a course in statistics. Four elective Rural Sociology courses are also required of all majors.

The focus area in development sociology provides an understanding of the processes and policies that influence social and economic development in rural settings in North America and low-income countries in the developing world. Courses provide background in the sociology of development in both the advanced and developing
countries. Students normally select a set of elective courses in which either domestic or international development is emphasized. These courses provide background in several aspects of development sociology, including: (1) an understanding of the processes of socioeconomic development in low-income or Third World countries and training in the formulation of strategies to enhance the socioeconomic well-being of citizens of those countries; (2) analysis of the social structures and processes for development in metropolitan settings in the United States; (3) analysis of the processes of agricultural change and development in industrialized and low-income countries; and (4) an understanding of the processes of technological development and change in agriculture and other rural industries in developed and developing countries.

Students are encouraged to complement courses in the department with course work in the history and economics of development, area studies, and the policy sciences.

Courses in the population, environment, and society focus area provide an understanding of (1) the causes and consequences of the major components of population change—fertility, mortality, and migration; (2) the major patterns of population distribution and population characteristics in the United States and the developing world; (3) the relationships between social structure and the biophysical environment; (4) the relationships between population change and natural resource utilization in development; and (5) impacts of public policy interventions on population size, growth, and composition or on natural resource availability and environmental quality. Students normally select the elective courses for the major so as to stress either population studies or sociological aspects of natural resources and the environment.

Students are encouraged to complement courses in the department with course work in demographic methods, household analysis, ecology and environmental studies, natural resources, and policy sciences.

Courses in the social data and policy analysis focus area provide: knowledge of research methodology, statistics, and computer applications; an understanding of social, economic, political, and historical concepts essential for conducting meaningful analyses of practical problems and issues faced by organizations, communities, regions, and states; and knowledge and practice in policy analysis. Students ordinarily select electives in order to specialize in either policy analysis or in a particular area of public policy (international development policy, domestic rural development policy, environmental policy, or population policy, etc.).

Students are encouraged to complement courses in the department with course work in data collection and research design, evaluation research, computing, and advanced statistics.

Science of Earth Systems (SES)

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the destruction of the ozone, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The SES major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Cornell's strengths across a broad range of earth and environmental sciences have been fused to provide students with the tools to engage in what will be the primary challenge of the twenty-first century. The SES major has its home in the Department of Earth and Atmospheric Sciences, but relies on the collaboration of several departments across the university.

The SES curriculum includes a strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. During the junior and senior years, students complete the SES core sequence, studying such topics as climate dynamics, Earth system evolution, and biogeochemical cycles. These classes emphasize the interconnectedness of the Earth system, and are taught by professors from different traditional disciplines. The selection of upper-level "concentration" courses allows the student to develop an area of expertise that complements the breadth of the introductory SES core courses.

Possible areas of concentration include climate dynamics, biogeochemistry, ecological systems, environmental geology, ocean sciences, environmental biophysics, hydrological system, and soil science.

The SES major provides a strong preparation for graduate school in any one of the Earth system sciences, such as atmospheric sciences, geology/geochemistry, oceanography, hydrology, ecology, and biogeochemistry. Students seeking employment with the B.S. degree will have many options in a wide variety of environmentally oriented careers in both the private sector and government. Students with the strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy. In addition, the emphasis on basic science makes the SES major excellent preparation for medical school.

The requirements for the major are as follows:

1. Basic Math and Sciences

This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.

a. MATH 191 or 193, and MATH 192 (or MATH 111, 112)

b. PHYSICS 207 and 208 (or PHYSICS 112, 213)

c. CHEM 207 and 208

d. BIOGD 101/103-102/104 (or 105-106) or BIOGD 109/110

e. Three additional 3-4 credit courses in basic science and math, generally 100 and 200-level classes. At least one of the following courses must be included in the selection: GEOG 201 Physics and Chemistry of the Earth or ENV 201 Ecology and the Environment

Other examples are MATH 293 and MATH 294, biochemistry, organic chemistry, PHYS 214, and introductory statistics. With the exception of the introductory statistics course, the additional basic courses will require at least one of the classes listed above as a prerequisite.

2. Science of Earth Systems Core Courses

Three 4-credit courses that emphasize the interconnectedness of the Earth system are required. These classes are founded on the most modern views of the planet as an interactive and ever-changing system, and each class crosses the traditional boundaries of disciplinary science.

a. EAS 303 Evolution of the Earth System
b. EAS 331/ASTRO 331 Climate Dynamics
     EAS 321/NATRES 321 Biogeochemistry

3. Concentration Courses

Four intermediate to advanced-level courses (300-level and up) that build on the core courses and have prerequisites in the basic sciences and mathematics courses. These classes build depth and provide the student with a specific expertise in some facet of Earth system science. The concentration should be chosen before the junior year in consultation with an SES adviser whose interests match those of the student.

For more information contact Professor Kerry H. Cook, Department of Earth and Atmospheric Science, khc@cornell.edu, and visit the web site: www.geo.cornell.edu/SES/

Special Programs in Agriculture and Life Sciences

General Studies. The opportunity to develop an independent major in General Studies is available for students interested in pursuing a general education in Agriculture and Life Sciences. In consultation with a faculty adviser, students may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university. Students completing this major are often planning a career in agriculturally related food and service enterprises. Many biotechnology careers require the broad perspective, the scientific and technical skills, the attitudes and the analytical ability that a general education fosters.

General Studies includes production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology concerns deal with aspects of agriculture, especially plants, crops, and ecosystems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural sciences is essential in this rapidly growing field. Students should plan basic course work in the major areas of study in the college—animal sciences, plant sciences, environment and technology.
agronomic sciences, biological sciences, and social sciences. Advanced courses may be selected in these and other areas of individual interest or career aspiration. A course of study for a special program must be planned with and approved by a college faculty adviser. Information on the options and names of faculty advisers prepared to advise in special programs are available in the Counseling and Advising Office, 140 Roberts Hall.

**International Agriculture** provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural development in low-income countries. The student typically specializes in a particular subject and works with an adviser to plan a program oriented toward international agriculture. The courses in International Agriculture are designed to acquaint students with the socioeconomic factors in agricultural development, with the physical and biological nature of tropical crops and animals, and the various world views for which study programs exist. Study of a foreign language is required.

In addition to the college distribution requirements, students in International Agriculture must take a minimum of 30 credits toward the major. A minimum of seven credits in International Agriculture and eight credits in a modern foreign language are required.

Students are expected to complete an overseas field experience of a minimum of six weeks. The other courses recommended are drawn from a wide range of disciplines. The objective is to familiarize students with the many facets of agricultural development in low-income countries. Students are encouraged to take additional specialized courses in one of the other program areas of the college.

**International Studies Certificate Program for CALS Undergraduates**

Preparing for leadership in an increasingly interconnected and dynamic world, CALS undergraduates need knowledge, skills and attitudes that build "global competencies." The certificate program for CALS students not majoring in International Agriculture will recognize an international concentration of coursework and experiences.

**Requirements**

- Four courses with significant international content, as recommended by students' major departments (2 should be from CALS).
- One semester of the Global Seminar, INTAG 480.
- Four semesters of foreign language instruction, or demonstrated language competency equivalent to that achieved by the end of the 4th semester of instruction at Cornell.
- An approved overseas experience (exchange, study abroad program, internship or faculty-led short course).

For more information contact the Student Services Coordinator in the International Agriculture Program Office, 31 Warren Hall, (607) 255-3037.

**DESCRIPTION OF COURSES**

Undergraduate and graduate courses in the college are offered through the academic departments and units and also through the Biological Sciences undergraduate program and the Division of Nutritional Sciences.

Descriptions of undergraduate and graduate courses are arranged by department, in alphabetical order.

Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Announcements of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.

**INTERDEPARTMENTAL/INTERCOLLEGE COURSES**

**American Indian Studies**

American Indian Studies is the instructional component of the American Indian Program (AIP). It is a multidisciplinary program offering course work that enhances students' understanding of the unique heritage of North American Indians and their relationship to other peoples in the United States and Canada. Students are challenged by such topics as the sovereignty rights of Indian nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses that focus on American Indian life from pre-contact times to the present and feature the perspectives of Native American people.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration will be earned upon completion of five courses: American Indian Studies 100 and American Indian Studies 175, plus three other courses selected from the American Indian Studies course listing, for a total of at least 15 credits. Students choosing a concentration in American Indian Studies should obtain application materials from the AIP office in 450 Caldwell. AIP also offers a graduate minor.

Students interested in choosing the minor should contact Daniel Usner, American Indian Program, (607) 255-8402.

**AIS 100 Introduction to American Indian Studies (also R SOC 100)**

Fall. 3 credits. W 7:30-10:30 p.m. plus sections. R. W. Venables

Slide lectures survey the rich cultures and complex histories of the Indian nations north of Mexico. Indian arts and philosophies are compared and contrasted with those of Europe, Africa, Asia, Canada, and the United States. The origins of today's major legal issues involving American Indians are also discussed. The course begins with a survey of Indian America before Columbus and ends at Wounded Knee in 1890, the event which marks the end of the conquest of Indian America. Guest lecturers, including American Indian leaders, provide additional perspectives.

**AIS 175 Indian America in the 20th Century (also R SOC 175)**

Spring. 3 credits. W 11:15-12:05 plus sections. B. Baker.

This course addresses major U.S. policies affecting American Indians in the 20th Century, and ways in which American Indians pursued strategies to sway the process of social change. American Indian political, economic, and cultural issues are examined through history, literature, art, and film. The approach of this course is interdisciplinary and an emphasis is placed on the study of American Indians as living cultures. Current trends are discussed, and the implications for American Indians in the 21st Century are explored. Guest lecturers, including American Indian scholars and leaders, provide additional perspectives.

**AIS 209 Political History of American Indians in the U.S. (also HIST 209)**

An investigation of political organization and change among Native American peoples. Discussions and assignments examine forms of tribal government, diplomacy, and warfare, as well as political relations with European colonies and the United States. Specific topics include pan-Indian confederacies, Indian policy, challenges over sovereignty, and Indian strategies of autonomy and resistance.

**AIS 230 Cultures of Native North America (also ANTHR 230)**

Fall. 3 or 4 credits. M W F 1:25-2:15.

B. Lambert.

A survey of the principal Inuit and American Indian culture areas north of Mexico. Selected cultures are examined to bring out distinctive features of the economy, social organization, religion, and worldview. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.

**AIS 260 Introduction to American Indian Literatures (also ENGL 260 and AM ST 260)**

An introduction to Native American literatures, a variety of genres—novels, short fiction, autobiography, poetry, oral traditions—are covered spanning Indian publications through the last two centuries. Issues arising from the texts include aesthetics of orality and literacy; cultural change and survival; colonial identity politics; mythic histories; worldviews and ideologies; and contemporary tribal sovereignty. A goal of the course is to read historical American contexts through the eyes of Native American texts.

**AIS 261 Urban Archaeology (also LA 261 and CRP 261)**

5. Baugher.

Urban archaeologists study American Indian, colonial, and nineteenth-century sites which now lie within the boundaries of modern cities. This course explores how urban centers evolve; what lies beneath today's cities; and how various cultures have altered the urban landscape. Students participate in a local archaeological excavation.
AIS 276 American Indian History, 1500-1850 (also HIST 276 and AM ST 272) 4 credits. Not offered 2001–2002. D. H. Usner. A survey of North American Indian history from the sixteenth century to the mid-nineteenth century. Relations between Indian nations and with European colonies are explored. Different cultural groups and cross-cultural encounters are compared, with emphasis on resistance and adaptation to European colonialism. The formative years of U.S. Indian policy and the experiences of Indian people through the removal era also receive close attention.

AIS 277 American Indian History Since 1850 (also HIST 277) 4 credits. Not offered 2001–2002. D. H. Usner. A historical study of American Indians in the United States and Canada from the mid-nineteenth century to the present. The active and complex role played by Indian people in their responses to government policies and to socioeconomic changes is emphasized. Challenges faced and initiatives taken by Indians are traced from the early reservation years to the current era of self-determination. Cultural change and continuity within Indian communities is closely examined.

AIS 316 Ethnohistory of the Northern Iroquois (also R SOC 316) Spring. 3 credits. Enrollment limited to 20. T 1:25–4:25. R. W. Venables. The development of Iroquois (Houdenosaunee) history and culture is traced to the present day.

AIS 329 Indians, Settlers, and Slaves in the Early South (also HIST 329) Spring. 4 credits. M W 10:10–11:00 plus sections. D. H. Usner. History of the American South from the sixteenth century to the early nineteenth century with an emphasis on intercultural relations. Topics include colonization of the region by Spain, England, France, and the United States. American Indian adaptation and resistance, the evolution of slavery, African American relations with Europeans and Indians, and the role of racial ideology and ethnic identity in the formation of the South as a distinct section of the United States.

AIS 360 Preindustrial Cities and Towns of North America (also LA 360 and CRP 360) 3 credits. Not offered 2001–2002. S. Baughur. Considers how various American Indian civilizations as well as diverse European cultures have exerted their influences on the organization of town and city living. Each culture has altered the landscape in their own way as they created their own built environments.

AIS 361 Sociology of American Indians (also R SOC 360) Spring. 3 credits. Prerequisite: R SOC 101/ SOC 101 or approval of instructor. Enrollment limited to 20. Not offered 2001–2002. W 2:30–4:25. B. Baker. This course is designed to emphasize the role of theory and research in our understanding of American Indians. Towards that end, the relationship between the nation-state and indigenous community is emphasized. Students are exposed to the following theoretical perspectives: world systems and dependency, internal colonialism, social disintegration, the social construction of reality, political mobilization, and ethnic reorganization. The course is also historical and comparative. As students study different Indian tribes located in the United States and Canada.

AIS 363 American Indians, Planners, and Public Policy (also LA 363 and CRP 363) 3 credits. Not offered 2001–2002. S. Baughur. Decisions made by public agencies and private enterprise too often lead to the flooding, polluting, strip-mining, or other destruction of American Indian reservations, archaeological sites, and burial grounds. The central focus of the course is how to address urban and regional problems without imperiling the cultural survival of minorities.

AIS 367 American Indian Politics and Policy (also R SOC 367) Fall. 3 credits. Enrollment limited to 20. T R 2:55–4:10. B. Baker. This course addresses the Constitutional basis of the Federal-Indian relationship through an examination of treaties, Supreme Court decisions, and Congressional law-policy. The effects of European and American forms of governance on traditional American Indian political structures are detailed and contrasted with contemporary tribal governments and political organizations. Issues relating to sovereignty and self-government with respect to American Indian tribal governments are addressed relative to state and federal governments.

AIS 429 Undergraduate Seminar in Indians of Eastern North America (also HIST 429) 4 credits. Not offered 2001–2002. D. H. Usner. A seminar examining the history of Native Americans in the eastern woodlands from colonial times to the present. The cultural and economic participation of Indians in the evolution of frontier societies is examined. Major topics include fur-trade networks, political relations, removal, and the persistence of Indian communities in eastern states.

AIS 442 American Indian Philosophies: Selected Topics (also R SOC 442) Spring. 3 credits. Prerequisite: permission of instructor. Enrollment limited to 15. R 1:25–4:25. R. W. Venables. This course provides an opportunity for students to read and discuss a wide range of American Indian philosophies.

AIS 450 Practicum in American Indian Studies Fall. 4 credits. Prerequisites: AIS 100 or 175; one additional AIS course at the 200 level or higher; and permission of instructor. F 2:30–4:25. B. Baker. As a service learning initiative, this course provides students with the opportunity to work in American Indian reservations or urban communities. Students apply knowledge and skills derived from their AIS coursework and major field of study under the supervision of Cornell faculty affiliated with the American Indian Program and representatives from Indian communities. Students are expected to contribute to the goals and objectives identified by Indian communities during the semester. Students meet in a weekly seminar where they engage in critical dialogue and reflection about the experience relative to academic knowledge. Students also write a series of short papers and submit a final project at the end of the semester.

AIS 600 American Indian Studies 4 credits. Not offered 2001–2002. Staff. This seminar surveys the field of American Indian Studies across different academic disciplines. Designed specifically for students considering the graduate minor in American Indian Studies, it offers some commonly intellectual ground beyond the more specialized avenues of scholarship. Various areas of study are explored, with an emphasis on current methods, theories, and problems involved in researching Indian topics in North America.

AIS 624 Graduate Seminar in American Indian History (also HIST 624) 4 credits. Not offered 2001–2002. D. H. Usner. This seminar examines, through a selected series of major topics and problems, the historical study of North American Indians. Emphasis is placed on current interpretations and directions.

AIS 665 Topics in Native American Societies and Cultures (also ANTHR 665) Spring. 4 credits. B. Lambert. Department of Statistical Science The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the "Interdisciplinary Centers, Studies, and Programs" section at the front of this catalog (see p. 24).

NONDEPARTMENTAL COURSES

ALS 101 Transition and Success to Cornell Fall. 1 credit. Prerequisites: must be an entering student in CALS. Letter grade only. B. O. Earle and CALS Career Development Office. Discussion-oriented course to enable all new CALS students to enjoy their experience at and transition to Cornell. Lecture, discussion, guest speakers, and assignments that explore Cornell's history, services, and organizations are used. Emphasis on role of Agriculture and Life Sciences in future of all related careers.

ALS 134 Emergency Medical Technician Fall and spring. 3 credits. S-U grades optional. Prerequisite: none—but basic and advanced life support are required. Lec: M 12:30–5:00, lab: M 1:30–5:00. D. A. Grossman, P. Rach and A. E. Gantert. E.M.T. is an intensive 140-hour course taught throughout the fall and spring semesters. Enroll early, therefore, occurs in the fall term only. Course includes training in C.P.R. for the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, patient assessment, spinal immobilization, medical antishock trousers, and defibrillation. Students will qualify for the New York State E.M.T. Certification Exam upon successful completion of the course. Classes are conducted in the Teagle Hall second-floor classroom.
**ALS 400 Internship**
Fall, spring, or summer. 6 credits maximum. Not for those who have earned internship credits elsewhere or in previous terms. S-U grades only. Students may register only for internships in the New York State Assembly Intern Program, the New York State Senate Session Assistant's Program, or the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s), stating conditions of the work assignment, supervision, and reporting. Participation is required in any structured learning activities associated with the internship.

**ALS 402 Agricultural Study Tour to Burgundy, France**
A two-week study tour held in the month of May in Burgundy, France. Students experience French agriculture, history, and cuisine. Tour includes wine, fruit, vegetable, cheese dairy, beef and poultry production, and French university facilities featuring modern agricultural research. Ten- to twenty-page paper requirement. Students travel throughout Burgundy and Eastern France with Pascal Durand, professor at ENESAD in Dijon France.

**ALS 403 Internship Opportunities in Burgundy, France**
Six- to eight-week internship experiences in Burgundy, France in agriculturally related subject areas including viticulture, agribusiness, agronomy, food science, and biotechnology. Final paper documenting internship experience required.

**ALS 477 Environmental Stewardship in the Cornell Community**
Fall and spring. 2-4 variable credits. T R 11:40-1:10. J. M. Regenstein plus a faculty adviser.
Each student undertakes an original project to improve the environment at Cornell while working with a faculty adviser and the Cornell infrastructure (generally campus life and/or facilities). Through seminar discussions and presentations on environmental activism, students learn how to be more effective at developing environmental programs in the future, both during and after college. The final written project report is also presented orally at a public seminar forum. (Note: If students prefer to take one or two credits of independent research in a department in the College of Agriculture, this can be arranged. Assistance in finding a faculty adviser is provided. This course may be taken more than once.)

**ALS 480 Global Seminar: Environment and Sustainable Food Systems (also ENST 480)**
Spring. 3 credits. Prerequisite: juniors, seniors, and graduate students. Letter grade. Lec: R 8:00-9:55 a.m.; lab: 5:35-4:25 p.m.; scheduled, one additional hour unscheduled. M. H. D. Sutphin, P. A. Amesonn, and D. Lee.
A distance learning course involving Cornell and universities in Australia, India, The Netherlands, Sweden, Costa Rica, and Honduras. The seminar provides students the opportunity to explore and learn about the dynamic linkages between sustainable development, food security, population, the environment, and agricultural progress from a global perspective. Students across the different sites interact via Internet, satellite, and videoconferencing technologies to analyze a series of interdisciplinary case studies related to global sustainable development. Team projects will involve students collaborating on a number of projects that are presented during a live videoconference at the end of the semester.

**ALS 500 Politics and Policy: Theory, Research, and Practice (also AM ST 501, PAM 406 and GOVT 500)**
Students in the College of Agriculture and Life Sciences must register for ALS 500 S. Jackson and staff.
This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell-in-Washington Program. The central course objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components interrelate to provide students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Applications are made through the Cornell-in-Washington office, 311 Caldwell Hall.

**ALS 661 Environmental Policy (also Biology and Society 461 and BioEE 661)**
Fall and spring. 3 credits each term. (Students must register for 6 credits each term since an “R” grade is given at the end of the fall term.) Limited to 12 students.
Prerequisite: permission of instructor. Seminar.
This course focuses on complex environmental issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team has two semesters preparing a scientific report for publication in *Science or BioScience*. Thus far, every study has been published.

**Agricultural and Biological Engineering**
Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible.

**ABEN 102 Introduction to Microcomputer Applications**
Fall or spring. 3 credits. S-U grades optional. PC or Mac labs available. All students, including those pre-enrolled, must attend the first lecture to guarantee admittance and to select a laboratory section. Lec: fall: T R 12:20-1:10, spring: M W 12:20-1:10, labs: M T R 1:25-4:25 or 7:30-10:30; or W 1:25-4:25 or 7:30-10:30 p.m.; or R 1:25-4:25 p.m. Fee, $15. P. E. Hillman.
Introduction to application packages on microcomputers. Laboratories provide experience with word processing, micro-sheets, database management, presentation graphics, and web page authoring. An independent project related to the student's major is required. PC or Mac labs cover the same software material. These packages and others such as desktop publishing, multimedia, statistical software, and those used for searching the Internet for information are discussed and demonstrated in the lectures, along with computer hardware and operating systems.

**ABEN 110 Introduction to Metal Fabrication Techniques**
Spring. 3 credits. Each lab limited to 18 students. Lec: T R 9:05; labs M T or R 1:25-4:25, M or T 7:30-10:30. T. J. Cook.
Emphasis is on selection of proper materials and techniques to accomplish a variety of metal fabrication and maintenance projects. Covers hand and machine tools, fasteners, strengths of materials, classification and identification of metals, soldering, brazing, forging, pipe fitting, sheet metal work, controlling distortion, oxy-acetylene cutting, and arc welding.

**ABEN 132 Introduction to Wood Construction**
Fall. 3 credits. Each lab limited to 15 students. Lec: T R 9:05; labs, T W R 1:25-4:25, or T or W 7:30-10:30. T. J. Cook.
Principles and practice of wood construction. Covers site selection and preparation, drainage, water and septic development, footers and foundations, material properties, framing and roofing, comparison of alternatives to wood construction, use of hand and power tools, wood joining methods, fasteners, concrete work, and black construction. Each student plans and constructs an approved carpentry project.

**ABEN 151 Introduction to Computing**
An introduction to computer programming and concepts of problem analysis, algorithm development, and data structure in an engineering context. The structured programming language, JAVA, is used, implemented on interactive personal computers, and applied to problems of interest in agricultural and biological engineering. No previous programming experience is assumed.

**ABEN 152 Computer Applications for Engineers**
Spring. 1-3 credits variable (three 1-credit modules). A student can take any one, any two, or all three of the modules. Prerequisites: ABEN 151 or equivalent computer programming course and 1 semester of calculus for the Matlab module. No prerequisites for the other two modules. Letter grades only. Lec: T R 9:20-10:30; lab M W 1:25-4:25, 7:30-10:30; or R 1:25-4:25 P.M. P. E. Hillman.
Major application packages useful to engineering and science students are covered in three modules. The first module introduces Matlab and explores the problem-solving...
Sustainable development is the dominant economic, environmental, and social issue of the twenty-first century. This web-based course develops the concepts of sustainable development as an evolutionary process, demanding the integration of the physical sciences and the engineering, with the biological and social sciences for design of systems. Topics include the nature of ecosystems, global processes, sustainable communities, and industrial ecology and life cycle analysis.

**ABEN 301 Renewable Energy Systems**
Introduction to energy systems with emphasis on quantifying costs and designing renewable energy systems to convert environmental inputs into useful forms of energy. Course covers solar energy, small-scale hydropower, wind, bio-conversion processes, house energy balances, and the public policy implications of alternatives. Use of spread sheets is extensive.

**ABEN 305 Principles of Navigation (also Nav S 301)**
Fall. 4 credits. 4 classes each week (lecture-recitation-project work). Lecs, M W F 8:00-8:50; lab, R 8:00 or 9:05. T. J. Cook. Lees.
An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. The course covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tides and currents. Electronic navigation systems are also briefly discussed. This course does not satisfy ABEN technical electives.

**ABEN 310 Advanced Metal Fabrication Techniques**
Spring. 1 credit (2-credit option available). Prerequisite: ABEN 110 or permission of instructor. Lab, F 12:20-1:10. T. J. Cook. Principles and practices extending beyond the scope of ABEN 110. Includes out-of-position, high carbon steel and cast iron welding. Topics such as shielding and brazing of aluminum, hard surfacing, both tungsten (TIG) and metallic (MIG) inert gas welding, plasma-arc and oxy cutting of metals are covered. Planning, development, and fabrication of a metal construction project for the two-credit option.

**ABEN 350 Biological and Environmental Transport Processes**
Fall. 3 credits. Prerequisites: MATH 294 and fluid mechanics (co-registration permissible). Lecs, M W F 11:15-12:05; disc, W 2:30-3:20. 2 evening prelims. K. G. Gehremedin. Focus is on understanding the principles of heat and mass transfer in the context of biological and environmental systems. Physical understanding of transport processes and engineering with application, examples from plant, animal and human biology, the environment (soil/water/air), and industrial processing of food and biomaterials are emphasized.

**ABEN 365 Properties of Biological Materials**
Spring. 3 credits. Prerequisites: ENGRD 202 (co-registration permissible). Lec, T R 12:20-1:10; lab W 2:30-4:25, R 2:30-4:25, or F 2:30-4:25. J. A. Bartsch.
Mechanics and structural properties of biological materials. Mechanical testing of animal, plant, and food products. Laboratory exercises in quasi-static and dynamic testing of materials and interpretation of test results. Experimental techniques for determining engineering properties of these materials. This course satisfies the ABEN laboratory experience requirement.

**ABEN 371 Hydrology and the Environment**
Spring. 3 credits. Prerequisite: one course in calculus. 2 lecs, 1 lab. Lecs, T R 9:05-9:55; lab, F 2:30-4:25. T. S. Steenhusis.
Introduction to hydrology: the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, ground water, surface runoff, river meandering, floods, and droughts. Case studies, short field trips, and laboratories foster an understanding of concepts and principles of hydrologic processes.

**ABEN 411 Biomass Processing: Modeling and Analysis**
This course is designed to introduce students to how basic concepts from physical chemistry, enzymatic and microbial kinetics, and transport phenomena are used to model biomass conversion and degradation processes. Examples of different agricultural and environmental processes are used to explore model development, solutions, and validation. Strong emphasis on the use of differential equations to model process dynamics.

**ABEN 425 Science and Technology of Environmental Management**
Fall. 3 credits. Prerequisite: senior and graduate students only. Lec, T R 9:05-10:10. W. J. Jeffries.
Quantitative description of decline in environmental quality caused by human activities, and exploration of science and technology solutions to pollution and their limits. Tools used by engineers and scientists to understand the environment are used to focus on water quality problems (two-thirds), air quality (one-sixth), and land quality (one-sixth).

**ABEN 427 Water Sampling and Measurement**
Fall. 3 credits. Prerequisites: fluids or a hydrology course and MATH 191. Lec, T R 9:05-9:55; lab, T 1:25-4:25. L. D. Geotrich and T. S. Steenhusis.
Get your feet wet and your hands busy with this course on water sampling methods where science and engineering techniques are integrated to quantify, characterize, and analyze environmental engineering problems. This field-based laboratory course focuses on quantification of surface and subsurface flow and quality, and includes sampling techniques of soils, sediments, and biological waste products. Quality assurance and control protocols and interpretation of watershed loading of contaminants are addressed. This course satisfies the ABEN laboratory experience requirement.
ABEN 435 Principles of Aquaculture  
Spring. 3 credits. Prerequisite: must be at least a junior. Lec. W 1:25–4:25. M. B. Timmons.  
An in-depth treatment of the principles of aquaculture: fish biology, waste treatment, engineering design, fish health, nutrition, processing, and so on. This course is intended to build upon the undergraduate’s previous course background and interests. Includes supervised “hands-on” laboratory experiences.

ABEN 436 Aquaculture Using Recirculating Water Reuse Technology  
The course focuses on actual fish culture using water reuse technology. Course begins after spring break. Requires daily care of animals and performing water chemistry management. Team report required. Intended to complement ABEN 435 as a “hands-on” learning experience.

ABEN 450 Bioinstrumentation  
Spring. 4 credits. Prerequisites: MATH 204, LEE 251, PHYS 151, or permission of instructor. Lec. M W 8:40–9:50; lab. M or W 2:30–4:25. A. D. Anshesnay.  
Biological and biomedical applications are emphasized in this laboratory-based course. The electronic instrument from sensor to computer is considered. Static and dynamic characteristics of components and systems are determined theoretically and empirically. General analog and digital signal condition circuits are designed, constructed, and tested. This course satisfies the ABEN capstone design requirement.

ABEN 453 Computer-Aided Engineering: Applications to Biomedical and Food Processes (also M&E 453)  
Spring. 3 credits. Prerequisite: computer programming (ABEN 151 or CS 100) and heat and mass transfer (ABEN 350 or equivalent). Lec. M.W 11:15–12:05; computation disc/ lab. F 11:15. A. K. Datta.  
Introduction to simulation-based design as an alternative to prototype-based design. Analysis and optimization of complex real-life processes, using industry-standard physics-based computational software on a supercomputer or on high end personal computers. Biomedical processes and industrial food processing applications of heat and mass transfer are covered. Computational topics introduce the finite-element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own term project, which is the major component of the course (no final exam). The course satisfies the College of Engineering upper-level computing application requirement. This course satisfies the ABEN capstone design requirement.

ABEN 454 Physiological Engineering  
Engineering principles and design in the physiology of animals and humans. Covers the use of engineering principles to study how animals work in nature and to intervene in physiological functions. The two major engineering themes are signal processing as related to neural conduction, sound processing, vision, and image processing; and systematics as applied to cardiovascular and respiratory systems, bioenergetics, and bird flight. Laboratories involve experiments, computing applications, field trips, and live animal demonstrations. This course satisfies the ABEN laboratory experience requirement.

ABEN 456 Biomechanics of Plants (also BIO PL 456)  
Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology and one year of calculus, or permission of instructor. Lec. T R 11:15–12:05; disc. W 2:30–3:20. J. R. Cooke and K. J. Niklas.  
An engineering approach is taken to plant form and function following the text, Plant Biomechanics. Topics include: mechanical behavior of materials, effect of geometry on mechanical behavior, plant-water relations, plant cell walls, mechanical behavior of tissues, mechanical attributes of organs, the plant body, fluid mechanics and biomechanics, and plant evolution.

ABEN 458 Biotechnology: Principles and Application in Engineering  
Fall. 4 credits. Prerequisites: ABEN 350 (co-registration required), biochemistry, microbiology, fluid mechanics, or permission of instructor. Lec. T R 8:40–9:55; lab. 1:25–4:25 and 7:30–10:30 (students must attend both lab sections). A. J. Baumberg.  
This course provides students with an understanding of the scientific and engineering principles of biotechnology and their applications in agriculture, environmental and consumer protection, manufacturing, and processing. Topics include microbial synthesis, production and degradation, genetic engineering, immobilization, biosensor techniques, up- and downstream processing, and fermentation techniques. This course satisfies both the ABEN laboratory experience and the ABEN capstone design requirement.

ABEN 471 Geohydrology (also CEE 431 and EAS 431)  
Fall. 3 credits. Prerequisites: Mathematics 294 and ENgr 202. 2 lecs. 1 disc, lecture, field trip. W. Brutsaert, L. M. Cathles, J.-Y. Parlange, T. S. Steenhuis.  
Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulic, soils, water, and solute transport.

ABEN 473 Watershed Engineering  
Fall. 3 credits. Prerequisite: fluid mechanics or hydrology. Lec. T.R. 10:10–11:00; disc. R 1:25–4:30. M. F. Wallace.  
Engineering principles and design to the design of soil and water management technologies aimed at solving natural resource problems in the context of watersheds. Emphasis is placed on rural and countryside engineering and small-scale design for water conveyance, soil erosion control, flood damage control, earthen dams, ponds, moisture conservation, drainage, and water supply. ABEN students who wish to take this course to satisfy the ABEN capstone design requirement must co-register in ABEN 496 for one credit hour. This course satisfies the College of Engineering technical writing requirement when co-registered in ABEN 493.

ABEN 474 Drainage and Irrigation Design  
This course will focus on design of drainage and irrigation systems for agriculture and nonagricultural purposes. The course will also briefly cover design for rural water supply and sanitation systems. Emphasis is placed on problem solving with actual situations used wherever possible. One major design project is required of each student. This course satisfies the ABEN capstone design requirement.

ABEN 475 Environmental Systems Analysis  
Spring. 3 credits. Prerequisites: Matlab and 2 years of calculus. Lec. M W F 10:10–11:00. L. P. Walker.  
Systems analysis and its use in environmental quality management. Emphasis is on modeling of environmental problems, translation of models into efficient computer algorithms, and use of computer simulation and optimization procedures (search techniques, linear programming, and dynamic programming) to evaluate management alternatives. Applications include water quality management, air pollution control, solid waste management, and industrial ecology. This course satisfies the College of Engineering upper-level computing application requirement.
ABEN 496 Capstone Design in Agricultural and Biological Engineering
Fall and spring. 1 credit. Corequisite: Students must co-register in one of the approved upper level courses (ABEN 473, 478, 481). Students must register with an independent study form (available in 140 Roberts Hall). Staff.
Involves capstone design experience, including a team project incorporating analysis, design, evaluation, synthesis, and a written report of the end-product. This course must be taken in conjunction with one of the following approved ABEN courses (ABEN 473, 478, 481).

ABEN 497 Individual Study in Agricultural and Biological Engineering
Fall and spring. 1–4 credits. S-U option. Prerequisite: Written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in the upper two-fifths of their class. Students must register with an independent study form (available in 140 Roberts Hall). Staff.
Special work in any area of agricultural and biological engineering. Problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

ABEN 498 Undergraduate Teaching
Fall and spring. 1–4 credits. Prerequisite: Written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall). Staff.
The student assists in teaching an agricultural and biological engineering course appropriate to his/her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

ABEN 499 Undergraduate Research
Fall and spring. 1–3 credits. Prerequisites: normally reserved for seniors in the upper two-fifths of their class; adequate training for work proposed; and written permission of instructor. Students must co-register in one of the following approved ABEN courses (ABEN 473, 478, 481). Students must register with an independent study form (available in 140 Roberts Hall). Staff.
Research in any area of agricultural or biological engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

ABEN 501-502 M.P.S. Project
Fall and spring. 1–6 credits. Required of each M.P.S. candidate in the field. Hours TBA.
A comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

ABEN 551-552 Agricultural and Biological Engineering Design Project
Fall and spring. 3–6 credits. Prerequisite: admission to the M.Eng. (ABEN) degree program. ABEN graduate faculty.
Comprehensive design projects dealing with existing engineering problems in the field. Emphasis is on the formulation of alternative design proposals that include consideration of economics, non-technical factors, engineering analysis, and complete design for the best design solution. Projects are supervised by faculty members on an individual basis. There, however, is a formal presentation during the first four weeks of the semester. A formal report and public presentation of the results of the design project are required for completion of the course(s). A minimum of 3 to a maximum of 12 credits of 551-552 is required for the Master of Engineering degree. Students should register for 551 their first semester and complete any additional design project credits with 552. If more than six design project credits are desired in one semester, both 551 and 552 may be taken.

ABEN 651 Bioremediation: Engineering Organisms to Clean Up the Environment
Spring. 3 credits. Prerequisites: BIOM 290 or BIOM 398 or BIOM 331 or permission of instructor. Lect. T R 10:10-11:00. B. Ahner.
This course explores ways in which organisms may be used to remove or metabolize pollutants in the environment including bacterial degradation of organics and phytoremediation of heavy metals. Through lectures and current literature, students evaluate the benefits as well as the current obstacles. The current efforts to genetically engineer organisms for bioremediation and the potential risks of releasing them into the environment are examined.

ABEN 652 Instrumentation: Sensors and Transducers
Spring. 3 credits. Prerequisites: Linear differential equations, introductory chemistry and introductory physics, or permission of the instructor. Lect. T R 12:20-1:10; lab 2:00-4:25.
D. J. Anechanley.
Application of instrumentation concepts and systems to the measurement of environmental, biological, and agricultural phenomena. Construction and characterization of electronic sensors and transducers is emphasized. Image processing techniques are introduced. A final project is required.

ABEN 655 Thermodynamics and Its Applications
Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, and structure of organisms.).

ABEN 658 Biosensors and Bioanalytical Techniques
A. J. Baeumner.
This course provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. The course addresses selected topics from simple biosensors to microbial/nanofabricated microTotal Analysis Systems. Their application in environmental analysis,
food safety, and medical diagnostic is explored. Students take an active part in the course, prepare a biosensor of their choice in the laboratory, and present its concept in a biosensor workshop at the end of the semester.

[ABEN 671 Analysis of the Flow of Water and Chemicals in Soils]
The course encompasses a full range from simple to complex methods to describe the chemical and water flow on the surface, in the vadose zone, and through the aquifer. Current analytical, semi-analytical, and computer-based techniques are discussed. Both homogeneous and heterogeneous soils are analyzed. 1–3 credits. Prerequisites: with Civil and Environmental Engineering 633—a complementary, but not identical, course.

[ABEN 672 Drainage]
Theory of water and solute flow in aquifers, hillslopes, and the vadose zone as it relates to artificial drainage is discussed. Drainage design as it relates to agricultural land, landfills, and land application sites is critically reviewed. The importance of preferential flow and matrix flow on water quality of drainage waters is examined. Laboratories are used for hands-on experience with measuring soil parameters and for actual drainage design. This course satisfies the capstone design experience requirement.

[ABEN 673 Sustainable Development Seminar (also NBA 673)]
Spring. 4 credits. Prerequisites: upper division undergraduate and graduate students or permission of instructor. Lecs. F 1:30–3:30. N. R. Scott.
Sustainable development is the most beneficial concept to come out of the environmental movement in years. The concept of a sustainable world, however, is not a constant. There are many aspects of sustainability involving economics, environment, and political, social, scientific, and technological developments. This seminar explores topics such as energy, agricultural and food systems, green buildings and ecological design, corporate sustainability, and other contemporary issues.

[ABEN 678 Nonpoint Source Models]
Spring. 3 credits. Prerequisites: computer programming and calculus. Lecs, T R 8:40–9:55. D. A. Hair.
Development and programming of simulation models for management of water pollution from runoff and percolation. Emphasis is on prediction of water and chemical inputs to surface waters and groundwater. Applications include watershed hydrology and sediment yield, urban and rural runoff, lake eutrophication, waste disposal sites, and pesticides, nutrients, and salts in drainage.

[ABEN 685 Biological Engineering Analysis]
Spring. 4 credits. Prerequisite: T&AM 310 or permission of instructor. Lecs. M W F 11:15–12:05. J. R. Cooke.
Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of results. The student's knowledge of fundamental principles is used extensively.

[ABEN 694 Graduate Special Topics in Agricultural and Biological Engineering]
Fall or spring. 4 credits maximum. S-U grades optional. ABEN graduate faculty. The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

[ABEN 697 Graduate Individual Study in Agricultural and Biological Engineering]
Fall or spring. 1–6 credits. Prerequisite: permission of instructor. S-U grades optional. ABEN graduate faculty.
Topics are arranged by the staff at the beginning of the term.

[ABEN 700 General Seminar]
Fall. 1 credit. S-U grades only. Staff.
Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

[ABEN 750 Orientation to Graduate Study]
Fall. 1 credit. Limited to new graduate students. S-U grades only. Lecs. first 7 weeks, M 3:35–4:25; remainder to be arranged. D. J. Aneshansley.
An introduction to ABEN research policy, programs, methodology, resources, and graduate status or permission of instructor. S-U grades only. J. R. Cooke.

[ABEN 754 Watershed Management]
Spring. 2–3 credits. Prerequisite: graduate standing or permission of instructors. Lecs. W 2:30–4:25. T. S. Steenhuis and M. J. Pfeffer.
Traditional top-down approaches to watershed management have been challenged by advocates of public participation. These challenges have raised questions about how to effectively integrate science, policy, and public participation. This course reviews different management approaches and evaluates their usefulness in dealing with different watershed management problems. Case examples from watersheds in the United States and overseas are considered.

[ABEN 771 Soil and Water Engineering Seminar]
Fall and spring. 1–3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional. Hours TBA. T. S. Steenhuis, J.-Y. Parlangue, and M. F. Walter.
Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

[ABEN 781 Structures and Related Topics Seminar]
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. TBA. Staff.
Advanced and design of production systems with emphasis on structural and environmental requirements, biological responses, and economic considerations.

[ABEN 785 Biological Engineering Seminar]
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. J. R. Cooke.
The interactions of engineering and biology, especially the environmental aspects of plant, animal, and human physiology, are examined in order to improve communication between engineers and biologists.

[ABEN 800 Master's-Level Thesis Research]
Fall and spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty.

[ABEN 900 Doctoral-Level Thesis Research]
Fall and spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty. Variable credit for Ph.D. research.

APPLIED ECONOMICS AND MANAGEMENT

Courses by Subject

Farm management, agricultural finance, and production economics: 302, 403, 404, 405, 605, 606, 708

Statistics, quantitative methods, and analytical economics: 210, 410, 411, 412, 415, 416, 417, 710, 711, 712, 713, 714, 717

Policy and International Trade: 230, 430, 431, 432, 433, 434, 630, 632, 633, 634, 730, 735

Environmental and resource economics: 250, 450, 555, 651, 652, 655, 750, 751

Economics of development: 464, 660, 665, 666, 672, 763

Consumer economics: 670

General, contemporary issues, research, and other: 101, 380, 494, 497, 498, 499, 694, 698, 699, 700, 800, 900, 901

SPECIAL NOTE: The department formally known as Agricultural, Resource, and Managerial Economics (ARME) is changing its name to the department of Applied Economics and Management (AEM). Courses cross-listed as ARME can be found here. Courses with the same number listed as either ARME or AEM, are identical.
AEM (ARME) 101 Introduction to Applied Economics and Management
Fall. 1 credit. Required of and limited to freshmen in Applied Economics and Management. S-U grades only. Lecs, W 11:15-12:05, M. J. Hubbell.
An introduction to the various specialized programs of study within the Department of Applied Economics and Management. Numerous faculty members from the AEM Department will participate. Team work and group interaction are emphasized.

AEM (ARME) 210 Introductory Statistics
Fall. 4 credits. Prerequisite: EDUC 115 or equivalent level of college algebra. Lecs, M W F 11:15-12:05; secs, M 7:30-9:25 p.m.; T 10:10-12:05, 12:20-2:15 (2 secs), or 2:30-4:25 (2 secs); W 12:20-2:15 (2 secs), 2:30-4:25, or 7:30-9:25 (2 secs), R 12:20-2:15 (2 secs), or F 12:20-2:15 (2 secs). 2 evening prelims. G. van Es.
An introduction to statistical methods. Topics covered include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Applications from business, economics, and the biological sciences are used to illustrate the methods covered in the course.

AEM (ARME) 220 Introduction to Business Management
Spring. 3 credits. Enrollment limited to AEM majors, and those in the process of transferring to the major. Preference given to other CALS majors. Additional enrollment as capacity permits, with permission of the instructor. 2 evening prelims. Lecs, M W F 10:10-11:00, P. D. Perez.
This course provides an overview of management and business. Human resources, marketing, finance, and strategy concerns are addressed with consideration paid to current issues such as globalization, ethics, quality, and strategic alliances. Case studies and group exercises are an important part of the course.

AEM (ARME) 221 Financial Accounting
2 evening prelims and a comprehensive final; weekly homework assignments; one written case study; and one project using an electronic spreadsheet. Staff.
A comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, underlying theory of GAAP, and statements interpretation. Elements examined include inventory, depreciation, internal control of assets, time value of money, notes, stocks, bonds, and the statement of cash flows. Limited use of a financial database of publicly held companies. Introduction to financial information on the web.

AEM (ARME) 230 International Trade and Finance (also ECON 230)
Spring. 3 credits. Prerequisites: ECON 101 or equivalent required; ECON 102 or equivalent recommended. Lecs, T R 1:25-2:40; sec, M 2:30-3:20, 3:35-4:25, or 7:30-8:20; T 3:35-4:25; or W 2:30-3:20, 3:35-4:25, or 7:30-8:20 P.M.; 1 evening prelim. D. R. Lee.
This course provides a one-semester introduction to international economics principles and issues. The course first surveys key topics such as the elements of comparative advantage, tariff and non-tariff barriers, and multilateral institutions. The second part of the course treats selected topics in international finance, including exchange rates, balance of payments, and capital markets. Current issues such as the effects of trade liberalization, trade and economic growth, and instability in international capital markets are discussed throughout. This course is designed as a less technical introduction to concepts developed at a more advanced level in AEM (ARME) 430 and ECON 361-362.

AEM (ARME) 240 Marketing
Fall. 3 credits. Enrollment limited to AEM majors and those in the process of transferring to the major. Preference given to other CALS majors. Additional enrollment as capacity permits, with permission of the instructor. No adds after first week of class. Lecs, M W F 10:10-11, M. G. Meloy.
This course provides a broad introduction to the fundamentals of marketing. The components of an organization's strategic marketing program, including how to price, promote, and distribute goods and services to people are explored. Industry guest lectures and current marketing applications from various companies are presented and analyzed.
Concurrent enrollment in AEM 241 is required for AEM majors and recommended for those considering transferring to AEM.

AEM (ARME) 241 Marketing Plan Development
Fall. 1 credit. Prerequisites: concurrent enrollment in AEM 240 required of and limited to AEM majors enrolled in AEM 240; others by permission of instructor. Lecs, M W F 7:30-8:20 P.M. L. A. Robinson.
The course offers students, working in teams, the opportunity for an intensive, hands-on application of basic marketing concepts through research and development of a marketing plan. Guided by a series of assignments, teams develop key components that are integrated into a comprehensive written plan for a local not-for-profit organization. A PowerPoint-based oral presentation of the plan is also required. All AEM majors registered in AEM 240 are required to take AEM 241. Additional students are accommodated on a space availability basis with permission of the instructor. Assignments are closely coordinated with both the content and sequencing of material being presented in AEM 240.

AEM (ARME) 250 Environmental and Resource Economics
An introduction to the economic concepts and methods used in the private and public analysis of how society uses and impacts its environmental resources. Subjects include valuation, benefit-cost analysis, property rights, and ecological economics. These tools are used to explore major current policy issues such as economic incentives in environmental policy, endangered species protection, air and water pollution, depletion of renewable and non-renewable resources, global warming, the growing world trade in resource intensive manufactured products and the impact on income, employment, pollution, and comparative resource use and environmental protection in industrialized and developing countries.

AEM (ARME) 302 Farm Business Management
Fall. 4 credits. Not open to freshmen. This course is a prerequisite for AEM 405 and AEM 427. Lecs, M W F 9:05-9:55; sec, W or R 1:25-4:25. On days farms are visited, the section period is 1:25-6:00. W. A. Krohla.
An intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and cost management, insurance, and management of capital, labor, land, buildings, and machinery.

AEM (ARME) 320 Business Law I (also NBA 560)
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Lecs, M W F 9:05-9:55. 1 evening prelim. D. A. Grossman.
The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion of the course reviews selected topics in business law, including employment discrimination, debtor-creditor relations, product liability, unfair competition, e-commerce law, and international business law.

AEM (ARME) 321 Business Law II (also NBA 561)
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: AEM (ARME) 320. Lecs, T R 8:40-9:55, D. A. Grossman.
The course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion of the course reviews selected topics in business law, including employment discrimination, debtor-creditor relations, product liability, unfair competition, e-commerce law, and international business law.

AEM (ARME) 322 Managerial Accounting
Fall. 3 credits. Priority given to CALS majors. Prerequisite: AEM (ARME) 221 or equivalent. Lecs, M W 12:20-1:10; secs, R 10:10-12:05 (2 secs), 12:20-2:15 (3 secs), or 2:30-4:25 (3 secs); or F 10:10-12:05 or 12:20-2:15 (3 secs). 2 evening prelims, a third exam, weekly homework, one written case study, and one project using an electronic spreadsheet. Staff.
An introduction to cost accounting that emphasizes the importance of cost accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, inventory control, variance analysis, measurements of performance, and accounting systems in the manufacturing environment. Use of electronic spreadsheets is required.

AEM (ARME) 324 Financial Management
Spring. 4 credits. Priority given to CALS majors. Prerequisite: AEM (ARME) 220 or equivalent. Recommended: AEM (ARME) 210 and 221 or equivalent. Lecs, T R 2:55-4:10, secs, W 12:20-2:15, 2:30-4:25 or 7:30-9:25 P.M. or F 10:10-12:05, 12:20-2:15, or 2:30-4:25. 3 evening prelims. R. Curtis.
This course focuses on basic managerial, financial, and economic decisions, corporate financial policy, risk management, and investments. Topics include the time value of money, capital budgeting decisions, financing alternatives, short-term financial policy, the cost of capital, structure decision, distribution policy, mergers and acquisitions, options, forward and futures contracts, market efficiency and market anomalies, and personal financial considerations.

AEM (ARME) 325 Personal Enterprise and Small Business Management
Spring. 4 credits. Limited to juniors and seniors. Prerequisites: AEM (ARME) 220 and 221 or permission of instructor.
Absolutely no adds or drops after second class meeting. Term project work will amount to approximately $100 per team. Lect. T R 12:20-1:30; sec. W 9:30-10:25. Two additional hours to be arranged. D. Streeter.
Course is focused on the activities involved in planning a start-up business, including the exploration of semantic dimensions, performance of marketing research, and planning of financial aspects related to the new company. Lectures and hands-on clinics include visits by real world entrepreneurs who discuss the start-up challenges and managing growth in a small business. Term project is the development of a business plan, completed in teams of no fewer than three students.

AEM (ARME) 326 Human Resource Management in Small Businesses
Fall. 3 credits. Prerequisite: AEM (ARME) 220 or AEM (ARME) 302 or equivalent. S-U grades optional. Lect. T R 10:10-11:25 or 11:40-12:55 or 2:55-4:10. 1 evening prelim. R. A. Milligan.
An introduction to the management of human resources in small businesses. The focus is on developing skills using all of the capabilities of all small business personnel including owners, family members, and employees. Topics include people-oriented management, alignment, coaching, evaluation, recruitment, selection, compensation, training, empowerment, team building, leadership, performance management, and conflict resolution. Student involvement and active learning experiences are emphasized.

AEM (ARME) 328 Innovation and Dynamic Management (also H ADM 416)
For description, see H ADM 418.

AEM (ARME) 329 Global Agribusiness Management
Spring. 1 credit. Prerequisites: AEM (ARME) 220 or AEM (ARME) 302, and AEM (ARME) 240. There is a 2-credit study trip that is available to 10-15 students (instructor permission necessary). Students complete an independent study for the 2 credits the following fall term. Cost of the study tour is $800 per student (some scholarship support is available). Lect. W 10:10-11:00. B. A. Gloy and B. L. Anderson.
The general purpose of this course is to provide students interested in agribusiness management exposure to the managerial practices essential to the success of agriculture, agribusiness, and food companies competing in the global marketplace. Students are exposed to foreign and international U.S. firms and industries. A term paper is required. During the fifth week of the course 10-15 students are selected to participate in a two-credit, two-and-a-half week international study trip that occurs the semester. Preference is given to sophomores and juniors in the College of Agriculture and Life Sciences. An additional term paper will be required for the international field study. Preference is given to students with a demonstrated career interest in agribusiness. Students selected for the study trip enroll in a 2-credit independent study course (AEM 497) in the following fall semester.

AEM (ARME) 340 Futures and Options Trading
Spring. 3 credits. Limited to juniors and seniors. Priority given to CALS juniors and seniors, then out of college seniors. Prerequisites: ECON 101, EDUC 115, and AEM (ARME) 210 or equivalent. S-U grades optional. Lect. T R 10:10-11:25. W. J. Lee.
The focus of the course is on the use of futures and options as risk management tools. Commodities, exchange rate, and interest rate derivatives are covered from the perspective of the hedger, but those interested in arbitrage and speculation are provided some insights as well. Students participate in a simulated trading exercise in which they use price and market information and input from industry experts to manage a hedge position.

AEM (ARME) 344 Consumer Behavior
Fall. 3 credits. Prerequisites: AEM (ARME) 210 and AEM (ARME) 240 or equivalents. Limited to 15 juniors and seniors. Priority given to CALS students. Lect. M W 2:55-4:10. M. G. Meloy.
This course introduces students to the psychological, sociological, and cultural theories of buyer behavior, with specific application to consumer information processing and decision making. Class discussions, lectures, experiential exercises, and group projects are used to illustrate behavioral concepts and their application to marketing practice. The role of research in understanding and explaining consumer behavior is emphasized.

AEM (ARME) 346 Dairy Markets and Policy
An introduction to dairy markets and policy. Major topics include: milk pricing, marketing channels, dairy trends and demographics, world trade for dairy products, and policy issues. Class participation is expected as topics and new ideas are explored.

AEM (ARME) 347 Strategic Marketing for Horticultural Firms
This course emphasizes applications in strategic marketing. Lectures focus on practical aspects of the planning, implementation, and control phases of the strategic marketing process. Students develop a long-range marketing plan for a fruit, vegetable, greenhouse, nursery, winery, or related horticultural firm.

AEM (ARME) 380 Independent Honors Research in Social Science
Fall or spring. 1-6 credits. Limited to students who have met the requirements for the honors program. See "Honors Program" in CALS sections of this catalog. Provides qualified students an opportunity to conduct original research under supervision. Information available in AEM (ARME) Undergrad Program Office in Warren Hall.

AEM (ARME) 403 Farm Management Study Trip
Spring. 1 credit. Prerequisite: AEM (ARME) 302. Open by application only. Secs. arranged. W. A. Knoblach.
This is a special program to study production and management systems in diverse agricultural regions of the United States. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. A paper, selected by the student, which further explores an aspect of the trip, is a requirement for completing the course.

AEM (ARME) 404 Advanced Agricultural Finance Seminar
Spring. 2 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. Open by application prior to March 1 of the year before the course is offered. W. 2:30-4:25. E. L. LaDue.
A special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Northeast Farm Credit Corporation, a two to four-day trip to financial institutions in New York City, and an actual farm consulting and credit analysis experience in the spring term.

AEM (ARME) 405 Agricultural Finance
Spring. 4 credits. Prerequisite: AEM (ARME) 302 or equivalent. Lect. M W F 9:05-9:55; sec. T 2:30-4:25. E. L. LaDue.
The principles and practices used in financing agricultural businesses, from the perspective of the business owner and the lender. Topics include sources of capital financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

AEM (ARME) 410 Business Statistics
Spring. 3 credits. Prerequisite: preference given to AEM (ARME) majors. AEM (ARME) 210 or equivalent. Lect. M W 10:10-11:00. 2 evening prelims. Not offered spring 2002. C. van Es.
This course focuses on four major topics used to analyze data from marketing research, business, and economics. Topics studied include: survey sampling procedures, contingency table analysis, time series and forecasting, and experimental design and ANOVA. A brief introduction to nonparametric methods is also included. The course involves a research project designed to give experience in collecting and interpreting data.

AEM (ARME) 411 Introduction to Econometrics
Spring. 3 credits. Prerequisite: AEM (ARME) 210 and either ECON 513 or PAM 200, or equivalent. Lect. T R 2:55-4:10, sec M 7:30-9:25. M. Ng.
The course introduces students to basic economic principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression are discussed and simultaneous equation models, simulation, and forecasting techniques are introduced.

AEM (ARME) 412 Introduction to Mathematical Programming
Fall. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: AEM (ARME) 210 or equivalent. Lees, T R 11:40-12:55; sec. T or W 1:25-2:15. J. E. Pratts.
This is a course in applied mathematical programming. Emphasis is on formulation and interpretation of solutions to mathematical models of problems in economics and business. Blending, resource allocation, capital budgeting, transportation and financial planning, and inventory management are studied. Integer and nonlinear programming are introduced.

AEM (ARME) 415 Price Analysis (also ECON 415)
Fall. 3 credits. Prerequisites: AEM (ARME) 210 or equivalent. ECON 313 or PAM 200 or equivalent. Lees, T R 8:40-9:55. H. M. Kaiser.
The focus of this course is on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Special attention is paid to empirical analysis. Institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions are included.

AEM (ARME) 416 Demographic Analysis in Business and Government (also R SOC 331)
Fall. 3 credits. Prerequisite: AEM (ARME) 210 or equivalent. Lees, M W F 1:25-2:15. W. Brown.
For description, see R SOC 331.

AEM (ARME) 417 Decision Models for Small and Large Businesses
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: given to AEM (ARME) minors. Prerequisites: AEM (ARME) 210 or equivalent. Lees, M W F 1:25-2:15; lab W 7:30-9:25 or R 12:20-2:15 or R 2:30-4:25. In weeks labs are held, there will be no Friday lecture. Not offered spring 2002. C. L. van Es.
The course is focused on economic and statistical models of decision analysis and their application in large and small business settings. The course demonstrates how use of models can improve the decision-making process by helping the decision maker understand the structure of the decision, incorporate subjective probabilities as a way to portray risk, measure outcomes in a way that is consistent with risk aversion, and understand the value of information. The importance of sensitivity analysis is emphasized, as is the need to combine both quantitative and qualitative considerations in decision making. Cases are drawn from small business scenarios, the public policy arena, and corporate settings. Implementing decision models with computers is the focus of lab sessions.

AEM (ARME) 420 Investments
This course focuses on financial mathematics and empirical data in the field of investments. Descriptions of financial institutions, markets, and instruments are also covered. Topics include: equilibrium models of security prices (CAPM, APT), fixed-income markets, derivatives, efficient market hypotheses, mutual funds, IPO, behavioral finance.

AEM (ARME) 422 Estate Planning (also MBA 562)
Fourteen sessions on the various aspects of estate-planning techniques. The law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures are covered.

AEM (ARME) 424 Strategic Management
This is a capstone course designed to integrate what students have learned in other AEM (ARME) courses with an emphasis on strategic decision making. Issues are approached from the standpoint of the board of directors, chief executive officer, and business unit managers. What should be considered and how strategic decisions should be made are the focus of the course. While the primary focus is on public corporations, not-for-profits, cooperatives, and small business strategic decisions are also included. The course is built around several high-level guest executives and a series of case studies. Improving oral and written communication skills in a business context is emphasized.

AEM (ARME) 425 Small Business Management Workshop
Fall. 4 credits. Limited to seniors. Prerequisite: AEM (ARME) 325 or NBA 300 and permission of instructor. Term project work will amount to approximately $100 per team. Lees, M W 2:30-4:25. D. Streeter.
Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. Encourages the application of business principles to an existing business and the winning of the results of firm-level decision making. Student teams meet with the business owners and course staff at arranged times during the semester.

AEM (ARME) 426 Cooperative Management and Strategies
This course examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries are emphasized.

AEM (ARME) 430 International Finance
Spring. 3 credits. Prerequisite: ECON 313 or PAM 200 or equivalent. Lees, M W F 11:40-12:55; sec. W 7:30-9:25. D. P. M. H. de Gorter.
The purpose of this course is to learn about major issues in international financial management and international investment. The major issues that are discussed include exchange rate volatility, the benefit of international diversification, and the analysis of international capital budgeting decisions. Specific topics include the determination of the cost of capital for foreign investments, the determination and management of foreign exchange risks and country risks, and the use of innovative financing for the multinational corporation.

AEM (ARME) 431 Food and Agricultural Policies
The course deals broadly with food and agricultural policies, including price support and storage or reserve policies, agricultural protection, soil conservation programs, the structure of agriculture, domestic food subsidy programs, environmental issues, and food safety. The importance of international trade and agricultural policies in other countries is emphasized.
AEM (ARME) 432 Markets or Governments?
Fall. 3 credits. Prerequisite: Intermediate microeconomics. Lec, T R 2:55-4:10. C. K. Ranney. This course explores why certain economic activities occur in the private sector, through markets, or the public sector, through governments. Emphasis is on microeconomic analysis of public finance, public resource allocation, and the impact of those on private firm and consumer decision. Topics include: perfectly competitive markets, market failure, public choice theory, government expenditure analysis, tax analysis, and government failure.

AEM (ARME) 433 Devolution, Privatization, and the New Public Management (also CRP 412)
Fall. 3 credits. S-U grades optional. Lec, M 10:10-11:45. M. E. Warner. For description, see CRP 412.

AEM (ARME) 434 Local Government Workshop (also CRP 418)
Spring. 4 credits. Prerequisite: AEM (ARME) 433, S-U grades optional. Lec, F 9:05-12:25. M. E. Warner. For description, see CRP 418.

AEM (ARME) 443 Food-Industry Management
Fall. 4 credits. Limited to AEM (ARME) juniors and seniors in Business or Food Industry Management and grad students. Prerequisite: AEM (ARME) 240 or 448 or permission of instructor. Lecs, T R 11:40-12:55; sect 2 T 10:25-11:40. G. A. German. A case-study approach is used to examine the application of management principles and concepts to marketing and distribution problems of the food industry. Cases covering new product introductions, merchandising strategies, and investment decisions are included. Guest speakers from the food industry present case-study solutions at the Tuesday afternoon section.

AEM (ARME) 446 Food Marketing Colloquium
Fall. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. R 3:35-4:25. D. J. Perosio. AEM (ARME) 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar covers advanced topics in food marketing, many of which have an important international dimension and are presented by industry members. A number of field trips are taken. Students participate in research topics on various aspects of the food industry.

AEM (ARME) 447 Food Marketing Colloquium
Spring. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. R 1:25-2:15. D. J. Perosio. AEM (ARME) 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar covers advanced topics in food marketing, many of which have an important international dimension and are presented by industry members. A number of field trips are taken. Students participate in research topics on various aspects of the food industry.

AEM (ARME) 448 Food Merchandising
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: AEM (ARME) 240. Lecs, T R 10:10-11:25. D. J. Perosio. Covers merchandising principles and practices as they apply to food industry situations. The various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy are examined. The consequences of food industry trends and initiatives by other industry members, public policymakers, and consumers are considered.

AEM (ARME) 449 Global Marketing Strategy
Spring. 3 credits. Prerequisite: a previous marketing course. Limited to juniors, seniors, and graduate students. M W 2:55-4:10. J. M. Hagen. This course examines opportunities and challenges in the rapidly changing global marketplace. Topics include the decision to serve a foreign market, alternative strategies for entry into foreign markets (such as exporting or establishing a local subsidiary), and issues in implementing those strategies. The course includes case analysis and discussion.

AEM (ARME) 450 Resource Economics (also ECON 450)
Fall. 3 credits. Prerequisites: MATH 111, ECON 313, and a familiarity with EXCEL. Lecs, T R 2:55-4:05. J. M. Conrad. Dynamic models of renewable, nonrenewable, and environmental resources are constructed to examine market allocation and optimal resource management.

AEM (ARME) 451 Environmental Economics and Policy (also ECON 409)
Spring. 3 credits. Prerequisites: ECON 313, or intermediate microeconomics course, and calculus. Limited to undergraduate students. S-U grades optional. Lecs, T R 1:25-2:40. W. D. Scholz. This course explores the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasis is placed on the welfare economic approach for allocating public goods, with specific emphasis on market failure, externalities, benefit-cost analysis, and the use of nonmarket valuation techniques. Property rights/institutional perspectives and ecological economic concepts are also examined.

AEM (ARME) 464 Economics of Agricultural Development (also ECON 464)
Spring. 3 credits. Prerequisites: ECON 101-102, or permission of instructor. Lecs, T R 11:40-12:55. R. D. Churcy. This course is designed to provide an understanding of the economics of the agricultural sector in low-income countries. In addition, more general issues of economic development beyond the agricultural sector are covered to provide the necessary context for an understanding of rural problems. Among the areas covered are the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Examples from a wide variety of developing countries are used to illustrate the basis for economic analysis.

AEM (ARME) 494 Undergraduate Special Topics in Applied Economics and Management
Fall or spring. Variable credit. S-U grades optional. Students must register with an Independent Study form (available in the Undergraduate Program Office in Warren Hall). Staff. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester.

AEM (ARME) 497 Individual Study in Applied Economics and Management
Fall or spring. Variable credit. S-U grades optional. Students must register with an Independent Study form (available in the Undergraduate Program Office in Warren Hall). Staff. Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students are expected to teach at least one hour per week for each credit hour. Students cannot receive both pay and credit for the same hours of preparation and teaching.

AEM (ARME) 499 Undergraduate Research
Fall, spring, or summer. 1-4 credits. Limited to students with GPAs of at least 2.7. Students must register with an Independent Study form (available in the Undergraduate Program Office in Warren Hall). S-U grades optional. Staff. Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

AEM (ARME) 555 Environmental Management and Policy
Fall. 3 credits. Prerequisite: ECON 101 and 102 or equivalents and calculus. Lecs, M W F 11:15-12:05. L. D. Chapman. This seminar intends to familiarize students with the rapidly evolving state of the art in the analysis and management of environmental policy and practice in enterprise. Although focused on the private sector, some attention is given to public enterprises.

AEM (ARME) 605 Agricultural Finance
Fall. 3 credits. Prerequisite: AEM (ARME) 324 or 405 or equivalent. T R 8:40-9:55. B. A. Gloy. Advanced topics in agricultural finance. Topics include investment analysis, capital budgeting under uncertainty, decision analysis, risk management, capital structure, and financial intermediaries.

AEM (ARME) 608 Production Economics (also ECON 408)
Fall. 3 credits. Recommended: ECON 313 and MATH 111 or equivalents. Lecs, M W F 10:10-11. L. W. Tauer.
The theory of production economics with emphasis on applications to agriculture and natural resources. Topics include the derivation, estimation, and use of production, cost, profit, demand, and supply functions. Production response over time and under risk is introduced.

AEM (ARME) 630 Policy Analysis: Welfare Theory, Agriculture, and Trade (also ECON 430)
Spring. 4 credits. Prerequisites: AEM (ARME) 608 or PAM 603, ECON 315, or equivalent. Intermediate micro theory incorporating calculus. Lects, M W 12:20-2:15. H. de Gorter.

The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optimal. The second half of the course focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

AEM (ARME) 632 Open Economy Analysis: Theory and Applications
Spring. 3 credits. Prerequisites: ECON 313, ECON 314, and permission of instructor. S-U grades optional. Lects, M W 10-11:15. N. Chau and S. Kyle.

This course explores both recent theoretical developments and practical applications in analyzing current topics and issues in open economies. It brings together research methods pertinent to open economy macroeconomics and international trade policies, to give students a basic understanding of how different aspects of contemporary debates are analyzed in practice.

AEM (ARME) 633 Devolution, Privatization, and the New Public Management (also CRP 612)
For description, see CRP 612.

AEM (ARME) 634 Local Government Workshop (also CRP 618)
For description, see CRP 618.

AEM (ARME) 640 Analysis of Agricultural Markets (also ECON 440)
Fall. 3 credits. Prerequisites: AEM (ARME) 411 and 415 or equivalents. Lects, T R 2:55-4:10. H. M. Kaiser.

This course focuses on the unique features of agricultural commodity markets. Focus is placed on government and private institutions impacting these markets, as well as on models of price behavior including marketing margins and imperfect competition. Empirical tools to evaluate market characteristics are also covered.

AEM (ARME) 641 Commodity Futures Markets (also ECON 441)

This course is about markets for agricultural futures contracts. Emphasis is placed on models of price behavior including marketing margins and futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public-policy issues.

AEM (ARME) 651 Environmental and Resource Economics
Spring. 4 credits. Limited to graduate students. Lects, M W 10-11:15. W. D. Schulze.

A review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Techniques for measuring benefits and costs—including property value and wage, hedonic approaches, travel cost models, and contingent valuation—are covered. Survey/data collection methods are described in detail. Innovative market mechanisms for resolving public goods, common property, and externality problems are explored. Students are required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem. Open to graduate students outside of economics. AEM (ARME) 651 is a core course for the Environmental Management concentration/option.

AEM (ARME) 652 Land Economics Problems (co-listed with CEE 529)
Fall or spring. 1 or more credits. Limited to graduate students. Prerequisite: permission of instructor. S-U grades optional. W 7:30-9:25 p.m. D. J. Alle.
Special work on any subject in the field of land and resource economics.

AEM (ARME) 655 Electric Systems Engineering and Economics (also ECE 551)
Fall. 2 credits. Prerequisites: basic calculus and microeconomics. Lects, to be arranged. T. D. Mount and R. Thomas.
For description, see ECE 551.

AEM (ARME) 660 Agroeconomics, Economic Development and the Environment
Spring. 3 credits. Prerequisites: introductory microeconomics and intermediate statistics (i.e. including multiple regression) or permission of instructor. Limited to graduate students. An additional section will be arranged for economics majors. S-U grades optional. Lects, M W 2:55-4:10. D. R. Lee.

This course examines selected topics in agricultural and economic development, technology assessment, ecosystem management, and the environment, with a focus on developing countries. Topics covered include production, poverty, and environmental tradeoffs; sustainable technology development, trade and environment linkages; economics of conservation and development; and alternative methodologies for analyzing these interactions. Readings emphasize the economic literature, but also draw from the biophysical sciences, ecosystem management, and the social sciences. This course is open to graduate students outside of economics.

AEM (ARME) 665 Food and Nutrition Policy (also NS 685)
Spring. 3 credits. Prerequisites: introductory microeconomics and intermediate statistics (i.e. through multiple regression), or permission of instructor. S-U grades optional. Lects, M W 2:55-4:10. D. Sahn.
For description, see NS 685.

AEM (ARME) 666 Economics of Development (also ECON 466)

The course is designed as an introduction to the economics of development at the graduate level. The course is split into two major sections, the first dealing with the microeconomics of households in developing countries and the second covering macroeconomic strategy and performance. A principal goal is to illuminate the particular features of low-income countries which are important to economic analysis and policy. Special attention is given to issues facing countries with important agricultural and resource sectors.

AEM (ARME) 667 Topics in Economic Development (also ECON 770)
Fall. 3 credits. Prerequisite: basic first-year courses in ECON or AEM (ARME), or instructor's permission. S-U grades optional. Lects, W 1:25-4:25. R. Kanbur.
This course is targeted to second-year graduate students. Topics covered vary from year to year but may include: poverty, inequality, intra-household allocation, structural adjustment, and debt. Examination is by term paper.

AEM (ARME) 670 Economics of Consumer Demand (also PAM 608)
Fall. 3 credits. Prerequisites: ECON 311 or 313 and 2 semesters of calculus. S-U grades optional. Lects, T R 10:10-11:25. C. K. Ranney.
A graduate level introduction to theory and empirical research on household demand, consumption, and saving. Emphasis is on the use of the theory in empirical research. Topics include neo-classical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. As time allows, Becker and Lancaster models of demand may be introduced.

AEM (ARME) 684 Graduate Special Topics in Applied Economics and Management
Fall or spring. 4 credits maximum. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the beginning of the semester.

AEM (ARME) 698 Supervised Graduate Teaching Experience
Fall or spring. 1-4 credits. Total of 4 credits maximum during graduate program. Students must register with an Independent Study form (available in the Undergraduate Program Office in Warren Hall). Open only to graduate students.
Undergraduates should enroll in AEM 498. S-U grades optional. Prerequisite: permission of instructor. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit earned. Students cannot receive both pay and credit for the same hours of preparation and teaching.

AEM (ARME) 699 M.P.S. Research
1-6 credits. Prerequisite: registration as an M.P.S. student. Credit is granted for the M.P.S. project report. Staff.

AEM (ARME) 700 Individual Study in Applied Economics and Management
Fall or spring. Limited to graduate students. S-U grades optional. Credit, class hours, and other details arranged with a faculty member. Staff.

This course is used for special projects designed by faculty members. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered; the section number is provided by the instructor.

AEM (ARME) 708 Advanced Production Economics
Fall. 3 credits. Prerequisite: AEM (ARME) 609, 710, or equivalents; ECON 609 is highly recommended. Offered alternate years. Offered fall 2002 and 2004. Not offered fall 2001. Hours TBA. R. N. Boisvert.

Covers theoretical and mathematical developments in production economics, with emphasis on estimating production relationships, scale economies, technical change, and factor substitution. Developments in flexible functional forms, duality, and dynamic adjustments are emphasized. Discussions of other topics (risk, supply response, and household production functions) based on student interest.

AEM (ARME) 710 Econometrics I
Spring. 3 credits. Prerequisite: statistical methods at the level of ILRST 311 or ECON 619. Undergraduates must have permission of instructor. Lecs, M W F 9:05-9:55. T. D. Mount.

This course, together with AEM (ARME) 711, provides a graduate sequence in applied econometrics that is suitable for M.S. and Ph.D. students. AEM (ARME) 710 covers linear regression models and the associated estimation and testing procedures. Models from demand and production theory are used as illustrations.

AEM (ARME) 711 Econometrics II
Fall. 3 credits. Prerequisite: AEM (ARME) 710 or equivalent. Lecs, M W F 10:10-11:00. T. D. Mount.

Coverage includes AEM (ARME) 710 of dynamic models, including single equation ARIMA, vector ARIMA, Kalman filtering, structural dynamic models, and regime switching. Topics covered include endogeneity, stability, causality, and cointegration.

AEM (ARME) 712 Quantitative Methods I
Fall. 4 credits. Prerequisite: some formal training in matrix algebra. A course at the level of BTRY 417 is highly recommended. Lecs, M W F 10:10-10:55. Not offered fall 2001. R. N. Boisvert.

A comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics in nonlinear programming, including separable, spatial equilibrium, and risk programming models. Input-output models and their role in social accounting matrices and computable general equilibrium models are discussed. Applications are made to agricultural, resource, and regional economic problems.

AEM (ARME) 713 Quantitative Methods II
Spring. 3 credits. Prerequisite: ECON 609. S-U only. Lecs, T R 8:40-9:55. J. M. Conrad.

This course is concerned with the analysis and optimization of dynamic systems. Course objectives are to (1) present the basic theory of dynamical systems and dynamic optimization, (2) introduce methods of optimization and numerical analysis, (3) review some applications of dynamic analysis from various subfields in economics, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

AEM (ARME) 714 Experimental Economics

The course will survey both experimental economics methods and research as an approach to test economic theory. Students will participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics covered include experimental methods; decisions and games, markets (testing auction institutions); market power (monopoly, oligopoly); bargaining, compensation and performance; public goods; externalities; information and uncertainty; and economic anomalies. Students must design and write a paper describing their own experiment.

AEM (ARME) 717 Research Methods in Agricultural Economics
Spring. 2 credits. Limited to graduate students. T 2:30-4:25. R. N. Boisvert.

Discussion of the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questions and variable design and testing, field organization, and analysis of data. During the semester each student develops a research proposal that may be associated with his or her thesis.

AEM (ARME) 730 Seminar on International Trade Policy: Agriculture, Resources and Development
Spring. 3 credits. Limited to graduate students. Prerequisites: AEM (ARME) 630 or equivalent. Offered alternate years. Not offered spring 2002 and 2004. Next offered spring 2003. Hours TBA. D. R. Lee.

This course examines selected topics in the professional literature on international trade policy, focusing on agricultural trade and related topics, including trade liberalization, trade and environmental linkages, technological change and trade policy, and agricultural trade and development.

AEM (ARME) 735 Public Finance: Resource Allocation and Fiscal Policy (also ECON 735)
Fall. 4 credits. TBA. R. Kanbur.

For description, see ECON 735.

AEM (ARME) 740 Agricultural Markets and Public Policy
Spring. weeks 1–7. 2 credits. Limited to graduate students. Prerequisite: familiarity with multiple regression techniques at the AEM (ARME) 411 level or higher. Recommended: AEM (ARME) 640. T R 12:20-2:15. W. H. Lesser.

Develops the concepts and methodology for applying and analyzing the effects of public-policy directives to the improvement of performance in the U.S. food marketing system. Prospective topics include a survey of industrial organization principles, antitrust and other legal controls, and coordination systems in agriculture. Topics may be adjusted to students' interests.

AEM (ARME) 750 Resource Economics

This course is the study of the basic theory and applications of environmental economics and policy. Extensions include comparisons of taxes, subsidies and other policy instruments, an examination of the effects of policy on market imperfections, multiple positive and negative externalities, and other government regulations such as those in agriculture. Also examined are the effects of uncertainty, and special problems associated with non-point externalities and asymmetric information.

There is an extensive treatment and evaluation of contingent valuation and other methods for valuing non-market goods. Throughout, the theoretical results are highlighted through discussions of important empirical policy applications.

AEM (ARME) 762 Microeconomics of International Development
Fall. 3 credits. Prerequisite: completion of first year Ph.D. course sequence in AEM (ARME) or ECON, or instructor's permission. S-U grades optional. Lecs, T R 2:30-4:00. C. B. Barrett.

This course focuses on models of individual, household, firm/farm, and market behavior in low- and middle-income developing economies. Topics covered include: agricultural land, labor and financial institutions, technology adoption, food security and nutrition, risk management, intra-household analysis, reciprocity networks, and product/factor markets analysis. Empirical investigation is emphasized.
ANIMAL SCIENCE

AN SC 100 Domestic Animal Biology I
Fall. 4 credits. S-U grades optional. Lecs, M W F 9:05; sec, T W R 2–4:25.
W. B. Currie.

AN SC 105 Contemporary Perspectives of Animal Science
Spring. 1 credit. Limited to freshmen, sophomores, and first-year transfers. T 1:25 or W 12:20, E. J. Poliak and D. J. Cherney.
A forum to discuss the students' career planning and the contemporary and future role of animals in relation to human needs.

AN SC 110 The Animals That Sustain Us
Students completing this course understand the importance of the symbiosis between humans and domestic animals, learn how animal enterprises can be ethically, environmentally and economically sound, and are able to care for various species of domestic animals. Lab sessions feature both live farm animals and computer simulations.

AN SC 120 Animal Domestication and Behavior
Fall. 3 credits. T R 8:40–9:55. E. A. Oltenacu.

AN SC 150 Domestic Animal Biology II
Fall. 4 credits. S-U grades optional. Lecs, M W F 9:05; lab, M T W R or F 2–4:25. W. R. Butler and staff.
Second of a two-semester sequence (100/150) applying the basic biology of growth, defense mechanisms, reproduction, and lactation to aspects of the production and care of domestic animals. Fresh tissues and organs from dead animals along with preserved specimens are used in laboratories, exercises, and demonstrations. A quail colony will be used for growth exercises and data collection.

AN SC 212 Animal Nutrition
Fall. 4 credits. Prerequisite: CHEM 208 or equivalent. Recommended: AN SC 100 or 150. Lecs, M W F 10:10; lab, M T W R or F 1:25–4:25. A. W. Bell and D. J. Cherney.
An introduction to animal nutrition, including digestive physiology and metabolism of domestic animals and other species; nutrient requirements and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and a nutritional experiment performed on a laboratory or farm animal species.

AN SC 213 Nutrition of the Dog
Spring, weeks 1–7. 1 credit. Prerequisite: AN SC 212 or equivalent. Offered alternate years. Next offered spring 2003; not offered spring 2002 or 2004. Lecs W 7:30–9:25 p.m. H. F. Hintz.
Nutrition of the dog. Digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.

AN SC 214 Nutrition of Exotic Animals
Principles of nutrition for exotic animals. Nutrient requirements, sources of nutrients, feeding management systems, and ration formulation are discussed. Signs of nutrient deficiencies and excesses are described.

AN SC 215 Exotic Avian Husbandry and Propagation
Fall. 2 credits. Limited to 100 students. Prerequisites: AN SC 100, 150 or one year of introductory biology; Lecs, M 2:30–4:30. J. Parks and D. Muscarella.
Natural history, care, management, health, and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and cockatiels. Course includes lectures, demonstrations, and local field trips.

AN SC 216 Nutrition of the Cat
Fall, weeks 1–7. 1 credit. Prerequisite: AN SC 212 or equivalent. Offered alternate years. Next offered fall 2002, not offered fall 2001 or 2003. Lecs, W 7:30–9:25 p.m. H. F. Hintz.

AN SC 221 Introductory Animal Genetics
Spring. 3 credits. Prerequisite: a year of college biology. Lecs, T R 9:05; sec, T W R or F 2–4:25. E. J. Poliak.
An examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

AN SC 222 Introduction to Canine Genetics
Fall, spring or summer. 1 credit. Prerequisites: introductory biology or permission of instructor. To receive credit, register through the School of Continuing Education, http://www.sce.cornell.edu/DDL/html/caninegenetics.html. E. J. Poliak and P. A. Oltenacu.
Introduction to basic Mendelian genetics and simply inherited characteristics in the dog. This distance-education course delivered by CD and web interaction for residents and nonresidents consists of lectures on basic genetic principles, probabilities, linkage and genetic testing, and seminars on genome mapping, inherited sexual disorders, bleeding disorders, and eye defects. This course cannot be taken for credit by students who have successfully completed AN SC 221.

AN SC 250 Dairy Cattle Principles
Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques. This course is a prerequisite for AN SC 251, 351, and 355.

AN SC 251 Dairy Cattle Selection
Covers the application of scientific principles of genetic programs in breeds with different breeding programs. Emphasis is on economical traits to be used to improve genetic progress and herd profitability.

AN SC 265 Horse
Fall. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U grades optional. Lecs, T R 9:05; lab, R 1:25–4:25. C. Collyer.
Selection, management, feeding, breeding, and training of light horses.

**AN SC 280 Molecular Biology in Agriculture and Medicine**

Spring. 3 credits. Prerequisite: AN SC 221 or equivalent. S-U grades only. Lec, T R 10:10; disc, M 1:25, P. A. Oleniacu and J. E. Pollak.

Topics of the course relate to the genetic definition and control of qualitative and quantitative traits in various species of animals are presented. Genetic conservation programs and current animal improvement strategies as well as challenges presented by new developments in reproductive biology and molecular genetics are addressed in a lecture-discussion-type format.

**AN SC 320 Meat Science (also FOOD 290)**

Spring. 2 or 3 credits. Lecs, T R 11:15, lab, M or R 12:20-5:20. Lecture only, 2 credits; lecture plus lab, 3 credits; lab cannot be taken without lecture. D. Shaw.

An introduction to meat science through a study of the structure, composition, and functional genomics, transgenic animal production, mammalian cloning, gene therapy, and genetic screening. Ethical issues raised by use of these techniques are discussed.

**AN SC 310 Animal Reproduction and Development Lab**

Spring. 1 credit. Prerequisite: AN SC 100-150 or permission of instructor. Offered alternate years. Next offered spring 2002, 2004; not offered spring 2003; M. L. Thorne.

The course focuses on anatomy and physiology of various organs of poultry. Principles of poultry nutrition, breeding, and embryology are discussed with an emphasis on their practical application. The student becomes familiar with the concept of least-cost feed formulation for poultry. The course also is designed to provide an understanding of current technology involved in commercial poultry production.

**AN SC 314 Biology of Lactation**

A comprehensive survey of the biology of the mammary gland. Lectures cover: (1) basic aspects of structure and development of the mammary gland, biochemistry and hormone regulation of milk synthesis and regulation of gene expression in the mammary cells; (2) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Lactation in the dairy cow provides the primary context to the course, but examples from other mammals including humans are used.

**AN SC 351 Dairy Herd Management**

Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

**AN SC 355 Dairy Nutrition and Health**

Spring. 3 credits. Prerequisite: AN SC 250 and permission of instructor. Letter only. Lecs, T R 10:10; lab, M 1:25-4:25. D. M. Galton, L. E. Chase and T. L. Butcher.

Application of scientific principles to practical herd management with components of nutrition and herd health. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

**AN SC 360 Beef Cattle**

Fall. 3 credits. Lecs, T R 10:10; disc, W 2:00-4:25. Offered alternate years. Next offered spring 2002, 2004; not offered spring 2003; M. L. Thorne.

Emphasis is on the management of reproduction, nutrition, and selection in beef cattle enterprises. A cattle growth model is studied. Laboratories acquaint students with management skills through computerized simulations and working directly with cattle. Students spend several days during the semester feeding and caring for cows and their newborn calves.

**AN SC 365 Equine Nutrition**

Fall. 1 credit. Prerequisite: AN SC 100 or equivalent. S-U grades optional. Lec, M W F 9:05-9:55. H. F. Hintz.

The principles of nutrition for horses are presented. Digestive physiology, sources of nutrients, feeding programs for various classes of horses and interactions of nutrition and diseases are discussed.

**AN SC 370 Swine Nutrition and Management**

This course focuses on swine nutrition, feeding, and management. Lectures are integrated basic nutrition and swine systems including pig biology, digestive and metabolic development, nutritional biochemistry and physiology, impact of swine nutrition on environment, use of pig model in medicine, and current swine nutrition and biotechnology. Laboratory practice, animal projects, and problem troubleshooting are offered.

**AN SC 380 Sheep**

Emphasis is on the breeding, feeding, management and selection of sheep from a production-system approach. Lectures and laboratories are designed to give students a practical knowledge of sheep production as well as the scientific background for improved management practices. Students work directly with sheep during laboratories and spend several days during the semester feeding and caring for ewes and their newborn lambs.

**AN SC 400 Livestock in Tropical Farming Systems**

An analysis of constraints on livestock production in developing countries of the tropics, economic objectives and risk, and production methods. Emphasis is on strategic use of animal and plant resources, animal performance with inputs restricted, decision making, and alternative systems of production. Principles, real examples, independent study projects, and classroom interactions aid problem-solving efforts to improve food security.

AN SC 401 Dairy Production Seminar
Capstone course where students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

AN SC 402 Seminar in Animal Sciences
Review of literature pertinent to topics of animal science or reports of undergraduate research and Honors projects. Students present oral reports of their work for class discussion in addition to written reports.

AN SC 403 Tropical Forages
An overview of tropical grasslands, seeded pastures, and crop residues as feed resources; grass and legume characteristics; establishment and management of pastures; determination of feeding value of forages and crop residues; physiological and nutritional problems that affect feeding behavior; problems of chemical inhibitors in plants; and preservation of tropical forages as hay or silage.

AN SC 410 Nutritional Physiology and Metabolism
Fall. 3 credits. Prerequisites: biochemistry and physiology. M W F 11:15. R. F. Austic and D. E. Bauman.
A fundamental approach to nutrition focusing on the metabolic fate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to increase understanding of metabolism and metabolic regulation through an integration of nutrition, biochemistry, and physiology.

AN SC 411 Applied Cattle Nutrition
Fall. 4 credits. Prerequisites: AN SC 100 and 212 (or equivalent); AN SC 355 is strongly encouraged. Lecs, M W F 10:10; lab, M 1:25-4:25. M. E. Van Amburgh.
An applied approach to predicting nutrient requirements and feed utilization to meet requirements with wide variations in cattle type, feed composition, and environmental conditions. Dairy cattle are emphasized. Nutrient management to minimize cost of production and environmental effects is discussed. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to apply the information presented in lectures, including evaluation of feeding programs on case study farms. Course is designed for juniors, seniors, and entering graduate students.

AN SC 412 Livestock and the Environment
Spring. 2 or 4 credits. No prerequisite for 2 credits (weeks 1–16). Students who have taken AN SC 411 can sign up for 4 credits (full semester) to take the lab section, which involves whole-farm environmental planning. Lec, T R 11:15–12:05; lab T 1:30–4:30. D. G. Fox.
This course explores controversial issues surrounding livestock and the environment, including competition with humans for food resources, impact of animal products on human health, and impact of livestock farms on environmental community problems, including odor, pathogens, and excess nutrient effects on water quality. Those taking the lab section for two additional credits use computer software tools to evaluate aspects of whole-farm nutrition and environmental management on case study farms, with data collection and analysis continuing throughout the semester.

AN SC 414 Ethics and Animal Science
Fall. 2 credits. Enrollment limited to 20 students, juniors and seniors only. Lec, M 12:20; disc, W 12:20–1:10. One Saturday morning, required farm tour. D. J. R. Cherney.
Exploration of the place of humans in the biological world, origins of ethics and morality, speciesism, the use of animals for research and agricultural purposes, transgenic animals. A reporting on the farm tour or a book review, participation in discussion and a project of the student's choice are used to evaluate the performance of each student.

AN SC 420 Quantitative Animal Genetics
Spring. 2 credits. Prerequisite: AN SC 221 or equivalent. Limited to 30 students. Lec, M 12:20, sec, M 2–4:25. E. J. Poliak.
A consideration of problems involved in improvement of animals through application of the theory of quantitative genetics, with emphasis on genetic evaluation and analysis of data for genetic parameters. Computer labs use interactive matrix algebra programs for problem solving.

AN SC 425 Gamete Physiology and Fertilization
Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years. Next offered fall 2001, 2003; not offered fall 2002. Lecs; R 2:30–4:25. J. E. Parks.
Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and aspects of gamete physiology and in vitro technologies such as cryopreservation, oocyte maturation, and fertilization are covered.

AN SC 427 Fundamentals of Endocrinology (also BIOAP 427)
Fall. 3 credits. Prerequisites: animal or human physiology or permission of instructor. Lecs, M W F 9:05. P. A. Johnson.
Physiology and regulation of endocrine secretions. Neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology are emphasized. Examples are selected from many animals, including humans.

AN SC 456 Dairy Management Fellowship
Spring. 2 credits. Limited to seniors. Prerequisites: AN SC 351 and 355, and permission of instructor. S-U grades only.
Hours TBA. D. M. Galton and T. Batchelder.
The program is designed for undergraduates who have a sincere interest in dairy farm management. Objective is to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

AN SC 494 Special Topics in Animal Science
Fall or spring. 4 credits maximum. Prerequisite: undergraduate standing. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

AN SC 495 Introduction to Research
Fall. 1 credit. S-U grades only. Required of students undertaking Honors in Animal Science. Open to juniors and seniors in other programs and those planning to pursue research, by permission of the instructor. Disc, M 12:20–1:10. W. B. Currie.
An exposure to the world of scientific research including: identifying problems, devising hypotheses to test problems in research plans; evaluating scientific writings and other forms of communication; finding and managing reference materials; examining the cost of research and opportunities for funding; discussing the obligations imposed on investigators by society and a host of regulatory agencies, along with responsibilities and freedom in science; and considering ethical issues that affect scientists. Students make oral presentations and prepare brief items of technical writing.

AN SC 496 Internship in Animal Science
Fall or spring. 1–3 credits; limited to 6 credits maximum during undergraduate career. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades only. Staff.
Structured, on-the-job learning experience under supervision of qualified professionals in a cooperating organization (e.g., farm, agribusiness, pharmaceutical company, zoo, educational institution). Internships must be approved in advance by the student's academic advisor and must provide an acceptable, professionally supervised experience of at least 60 hours on the job per credit required.

AN SC 497 Individual Study in Animal Science
Fall or spring. 1–3 credits; may be repeated. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff.
May include individual tutorial study or a lecture topic selected by the student. Since topics may change, the course may be repeated for credit.
AN SC 498 Undergraduate Teaching
Fall or spring. 1, 2, or 3 credits; limited to 2 experiences during undergraduate career. Limited to students with a GPA of at least 2.7. Students must register with an Independent Study form (available in Roberts Hall).

AN SC 499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Open not to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to seniors and with a GPA of at least 2.7. Students must register with an Independent Study form (available in Roberts Hall).

AN SC 601 Amino Acids (also NS 601)

AN SC 602 Seminar in Animal Breeding
Fall and spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only. Hours TBA. E. J. Pollak.

AN SC 605 Seminar: Endo/Reprod Biology
Fall and spring. 1 credit. Prerequisites: permission of instructor. Registration limited to graduate students. S-U grades only. Lec: W 4:00. W. R. Butler and staff.

AN SC 610 Animal Science Seminar
Fall and spring. 1 credit. Registration limited to graduate students. S-U grades only. Lec: T 12:20-1:10. D. J. Cherney. Students attend a weekly seminar on topics related to animal science. The requirement for an S grade is to regularly attend seminars during the semester.

AN SC 619 Field of Nutrition Seminar (also NS 619)
Fall and spring. No credit. No grades given. For description, see NS 619.

AN SC 620 Seminar in Animal Breeding
Fall and spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only. Hours TBA. E. J. Pollak.

AN SC 621 Seminar: Endo/Reprod Biology
Fall and spring. 1 credit. Prerequisites: permission of instructor. Registration limited to graduate students. S-U grades only. Lec: W 4:00. W. R. Butler and staff.

AN SC 625 Nutritional Toxicology (also TOX 625)

AN SC 630 Bioenergetics/Nutritional Physiology
Spring. 3 credits. Prerequisites: AN SC 410 and biochemistry or physiology, or permission of instructor. S-U grades optional. Offered alternate years. Next offered spring 2003; not offered spring 2002, 2004. A. W. Bell and D. E. Bauman.

AN SC 640 Individual Study in Animal Science
Fall or spring. 1 or more credits. S-U grades optional. Hours TBA. Staff.

AN SC 650 Molecular Techniques for Animal Biologists

A laboratory course designed for students with little or no experience with techniques in molecular biology. Emphasis is on modern techniques used in conducting research in animal-related sciences such as nutrition, physiology, pharmacology, and immunology (e.g., subcloning, mutagenesis of DNA, RT-PCR, analysis of gene expression, protein expression). Lectures introduce laboratory exercises and supplement laboratory topics. Students perform an independent project requiring time outside scheduled laboratories and give a scientific presentation.

AN SC 694 Special Topics in Animal Science
Fall or spring. 4 credits maximum. Prerequisite: graduate standing. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under the same number.

AN SC 720 Advanced Quantitative Genetics

This course covers statistical methods used in a variety of problems in the quantitative genetics of animal populations. The initial focus is the estimation of breeding values for purposes of ranking animals for selection. The core of the course is the mixed linear model; linear estimators and predictors are treated synthetically. The importance of appropriate modeling is emphasized. Generalizations to nonlinear models, via Bayesian principles, are made, i.e., inferences from posterior distributions.

AN SC 800 Master's-Level Thesis Research
Fall or spring. Credit: TBA, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students admitted specifically to a Master's program.

AN SC 900 Graduate-Level Thesis Research
Fall or spring. Credit: TBA, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students in a Ph.D. program only before the "A" exam has been passed.

AN SC 901 Doctoral-Level Thesis Research
Fall or spring. Credit: to be arranged maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.
For students admitted to candidacy after the "A" exam has been passed.

**BILOGICAL SCIENCES**
The program of study in biology is coordinated by the Office of Undergraduate Biology. For course descriptions, see the section on Biological Sciences.

**BIOLOGY & SOCIETY**
The undergraduate major field of study in biology and society is offered through the Department of Science and Technology Studies. For a full description of courses that fulfill field requirements, see the Biology and Society listing under 'Special Programs and Interdisciplinary Studies' in this publication.

**BIOMETRY AND STATISTICS**

The Department of Biometrics in Statistical Science offers the following courses in Biometry and Statistics. Students need to register under Course Listings: College of Agriculture and Life Sciences—Biometry and Statistics.

**BTRY 100 Statistics and the World We Live In (also STBTRY 100)**
Fall. 3 credits. Lecs, M W F 11:15–12:05; sec, M or T 1:25–2:15 or 2:30–3:20. S. J. Schwager.

Major concepts and approaches of statistics are presented at an introductory level. Three broad areas are covered: collecting data, organizing data, and drawing conclusions from data. Topics include: sampling, statistical experimentation and design, measurement, tables, graphs, measures of center and spread, probability, the normal curve, confidence intervals, and statistical tests.

**BTRY 101 Introduction to Biometry I**

An introductory survey course in the use of mathematics, computing, and probability and statistics in the biological sciences. Case studies are used to develop the ideas of statistics, curve fitting, elementary matrix algebra, basic probability, and differentiation. Selected topics in differential and difference equations and integration are also covered. A symbolic mathematics and graphics package (e.g., Maple or Mathematica) is taught and used throughout the course.

**BTRY 102 Introduction to Biometry II**
Fall. 4 credits. S-U grades optional. Prerequisite: BTRY 101 or 2 semesters of calculus. Lecs, M W F 11:15–12:05; lab, T 12:20–2:15 or 2:30–4:25. D. Hiebeler. This course is the continuation of Biometry 101. It provides a more in-depth view of the use of mathematics, computing, and probability and statistics in the biological sciences. Topics covered include discrete and continuous models, applications of differential and integral calculus, optimization methods, matrix algebra, and Markov models.

**BTRY 261 Statistical Methods I (also STBTRY 261)**
Fall and summer. 4 credits. Lecs, M W F 12:20–1:10; sec, M or T 1:25–2:15 or 2:30–3:20. R. Lloyd. Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one and two-way analysis of variance, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINTAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques. The lectures may co­meet with BTRY 601. Sections, homeworks, and exams are administered separately.

**BTRY 302 Statistical Methods II (also STBTRY 302)**
Spring. 4 credits. Prerequisite: BTRY 261 or BTRY 601. Limited to undergraduates. Lecs, M W F 11:15–12:05; sec, M 2:30–4:25. R. Lloyd.

A continuation of BTRY 261. Emphasis is on the use of multiple regression analysis, analysis of variance and related techniques to analyze data in a variety of situations. Topics include: least squares estimation; multiple regression; model selection techniques; detection of influential points; goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs including multiway factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on the appropriate design of studies prior to data collection and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done using the SAS statistical package. The lectures co-meet with BTRY 602. Homeworks and exams are administered separately.

**BTRY 400 Biometry Seminar (also STBTRY 400)**
Fall and spring. 1 credit. S-U grades only. Prerequisite: BTRY 302, or 409, or 602, or permission of instructor. Lecs, M W F 10:10–11:00; sec, M 3:35–5:00. R. Strawderman.

An introduction to probability theory: foundations, combinatorics, random variables and their probability distributions, expectations, generating functions, and limit theory. Biological and statistical applications are the focus. Can serve as either a one-semester introduction to probability or a foundation for a course in the theory of statistics.

**BTRY 409 Theory of Statistics (also STBTRY 409)**
Spring. 4 credits. Prerequisite: BTRY 408 or equivalent. Lecs, M W F 10:10–11:00; sec, M 3:35–5:00. R. Strawderman.

The concepts developed in BTRY 408 are applied to provide an introduction to the classical theory of parametric statistical inference. Topics include sampling distributions, parameter estimation, hypothesis testing, and linear regression.

**BTRY 421 Matrix Computation**

Introductory course in matrix computations that reviews linear algebra (vector spaces, linear independence) and emphasizes a matrix approach to solving systems (LU-factorization, QR-decomposition, SVD, Schur complements) and the role of the condition number of a matrix. Positive definite matrices, eigenvalues, and their applications in modeling are discussed. Weekly homework assignments and a course project design to teach numerical and statistical simulations in Matlab using the theory of matrices are required.

**BTRY 494 Undergraduate Special Topics in Biometry and Statistics (also STBTRY 494)**
Fall or spring. 1–3 credits. S-U grades optional.

A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 495 Statistical Consulting (also STBTRY 495)**
Spring. 2 credits. S-U grades only. Limited to undergraduates. Prerequisites or co­requirements: BTRY 302 or 602 and 409 and permission of instructor. Lecs, W 1:25–2:15. S. J. Schwager.

Participation in the Department of Biometrics consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered during previous weeks.

**BTRY 497 Undergraduate Individual Study in Biometry and Statistics (also STBTRY 497)**
Fall and spring. 1–3 credits. S-U grades optional. Students must register with Independent Study form (available in 140 Roberts Hall).

Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.
[BTRY 498] Undergraduate Supervised Teaching (also STBTRY 498)
Fall and spring. 3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

Students assist in teaching a course appropriate to their previous training. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

[BTRY 499] Undergraduate Research (also STBTRY 499)
Fall or spring. 1–3 credits. S-U grades optional. Limited to statistics and biometry undergraduates. Prerequisite: permission of faculty member directing research. Students must register with an Independent Study form (available in 140 Roberts Hall).

[BTRY 600] Statistics Seminar (also STBTRY 600)
Fall and spring. 1 credit. S-U grades only. Prerequisite or corequisite: BTRY 409 or permission of instructor. Seminar 3:35–4:25. M. Wells.

[BTRY 601] Statistical Methods I (also STBTRY 601)
Fall and summer. 4 credits. Limited to graduate students; others by permission of the instructor. Lecs, M W F 12:20–1:10; sec, M or T 2:30–4:00 or 7:30–9:00 p.m. or T 10:10–11:40. R. Lloyd.
Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB.

[BTRY 602] Statistical Methods II (also STBTRY 602)
Spring. 4 credits. Limited to graduate students; others by permission of instructor. Prerequisite: BTRY 601 or equivalent. Lecs, M W F 11:15–12:05; sec, M 2:20–4:25 or 7:30–9:25 p.m. or T 12:20–2:15. R. Lloyd.
A continuation of BTRY 601. Emphasis is on the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines and analysis of covariance. Emphasis is on appropriate design of studies prior to data collection, and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the MINITAB and SAS statistical packages.

[BTRY 603] Statistical Methods III (also STBTRY 603)
Spring. 3 credits. Prerequisite: BTRY 401 and 602 or permission of instructor. Offered alternate years. Next offered spring 2003. Lecs T R 8:40–9:55. Categorical data analysis, including logistic regression, loglinear models, stratified tables, mixed classification analysis, polynomial response and ordinal data. Applications in biomedical and social sciences.

[BTRY 604] Statistical Methods IV: Applied Design (also STBTRY 604)
Spring. 3 credits. Prerequisites: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered spring 2003. Lecs T R 8:40–9:55. F. Hu. Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factorials. Use of the computer for both design and analysis is stressed, with emphasis on solutions of real data problems.

[BTRY 652] Computationally Intensive Statistical Inference (also STBTRY 652)
Modern applications in statistics often require intensive computation not handled by "off-the-shelf" software. This course covers topics in statistical computing including numerical optimization and finding zeros (likelihood and related techniques including generalized estimating equations and robust estimation), kernel density estimation, resampling methods (randomization and bootstrap tests and confidence intervals), and statistical simulation (random number generation, heuristic search methods, Bayesian estimation and Monte Carlo Markov Chain methods for tests and interval estimation). Programming will be done in Matlab. The focus of the course is on the use of numerical analysis methods for solving problems in statistical inference and estimation.

[BTRY 662] Mathematical Ecology (also STBTRY 662)
Fall. 3 credits. S-U grades optional. Prerequisites: a year of calculus and a course in statistics. Lecs, T R 1:25–2:40. C. Castillo-Chavez.
Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis, deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, and simulation and analytical techniques.

[BTRY 672] Topics in Environmental Statistics (also STBTRY 672)
This course is a discussion group focusing on statistical problems arising in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

[BTRY 682] Statistical Genomics (also STBTRY 682)
Spring. 4 credits. S-U grades optional. Prerequisite: BTRY 408, BTRY 409, and BiOGD 281, or equivalent or permission of the instructor. Lecs T R 11:40–12:55; sec, F 12:20–1:10. R. Nielsen.
This course covers topics in the statistical analysis of genetic, molecular and genomic data, including the statistics of DNA database searches and alignment, statistical methods in molecular evolution, population genetics, phylogenetics, molecular ecology, forensic genetics, the analysis of complex, molecular and genomic data, QTL mapping, and association mapping. Topics may vary from year to year. All students are expected to participate in small research projects.

[BTRY 694] Graduate Special Topics in Biometry and Statistics (also STBTRY 694)
Fall or spring. 1–3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

[BTRY 697] Individual Graduate Study in Biometry and Statistics (also STBTRY 697)
Fall, spring, or summer. 1–3 credits. S-U grades optional. Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

[BTRY 717] Linear and Generalized Linear Models (also STBTRY 717)
Spring. 3 credits. S-U grades optional. Prerequisites: BTRY 409, BTRY 417, and 602 or equivalents. Offered alternate years. Not offered 2001–2002. Statistical modeling and inference using linear models and generalized linear models. Estimation by least squares, maximum likelihood, quasi-likelihood, and generalized estimating equations. Covers the use of link functions and generalized linear models to accommodate non-normal distributions and some non-normally distributed data. Also covers the use of random effects to accommodate correlation structures in both linear mixed models and generalized linear mixed models and to model longitudinal data. Some use of software packages and illustrative examples.

[BTRY 795] Statistical Consulting (also STBTRY 795)
Spring. 2 credits. S-U grades only. Limited to graduate students. Prerequisite or corequisite: BTRY 602 and BTRY 409 or equivalent. Lecs W 1:25–2:15. S. J. Schwager.
Participation in the Department of Biometrics consulting service: faculty supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the services during previous years. Since consultations usually change from semester to semester, the course may be repeated for credit.

[BTRY 798] Graduate Supervised Teaching (also STBTRY 798)
Fall and spring. 2–4 credits. S-U only. Permission of instructor and chair of special committee plus at least 2 advanced courses in statistics and biometry. Students assist in teaching a course appropriate to their previous training. Students meet...
Assignments include case studies, experiential systems. Topics include the evolution of communication to express those ideas clearly and cogently. The processes and effects of communication are studied in personal and professional contexts. Assignments polish students' ability to integrate ideas about communication, and to gather information, to analyze information, and to engage in other speech-related activities. Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

COMM 116 Communication in Social Relationships
Spring or summer. 3 credits. Spring: lecs, M W F 1:25-2:15. Staff. An overview of current knowledge about communication, with particular emphasis on interpersonal communication. Introduction to a wide range of contemporary theories and research about effective communication in contexts such as friendships, small groups, organizations, and health care settings.

COMM 117 Writing about Communication

Students develop skill in various writing styles and genres. The class explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students' ability to gather information, to analyze information, to integrate ideas about communication, and to express those ideas clearly and cogently.

COMM 120 Contemporary Mass Communication
Fall or summer. Lecs, M W F 12:20-1:10. J. Shanahan.

The processes and effects of communication systems. Topics include the evolution of communication media, current knowledge about mediated communication, and the role of communication in contemporary social issues. Discussion sections relate the course topics to students' personal experience. Assignments include case studies, experiential learning exercises, and short papers.

COMM 121 Investigating Communication
Fall. 1 credit. Communication majors only. Students must be enrolled concurrently in COMM 120. Lecs, T 10:10-11:00. J. Shanahan.

An examination of research methods in communication, with particular emphasis on the mass communication process. Lectures and exercises are linked to lectures from COMM 120, providing an introduction to how research about communication is done. This course is required for communication majors.

COMM 191 Topics in Communication
Summer. 1–3 credits. Hours TBA. Staff. Study of topics in communication at lower-division level. Special emphasis is on topics reflecting the expertise of visiting faculty available in summer session and on topics suitable for entry-level college students.

COMM 201 Oral Communication
Fall, spring, or summer. 3 credits. Each section limited to 20 students (fall and spring) or 15 students (summer). Preference given to sophomores, juniors, and seniors. Fluency in spoken English is assumed. Students missing the first two class meetings without university excuse are dropped so others may register. No student will be added or dropped after the second week of classes. J. Berggren, J. Hayman, T. Russo, R. Thompson, and staff.

Through theory and practice students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

COMM 203 Argumentation and Debate
Fall or summer. 3 credits. T R 10:10-11:25. J. Hayman.

Students learn the principles of argumentation and debate. Topics emphasize Internet database research, synthesis of collected data, analysis of evidentiary quality, refutation of counter claims, identification of logical fallacies, risk evaluation, framing of issues, and coherent storytelling. Students are prepared to work with a great range of opinion and evidence. The course emphasizes different viewpoints regarding topics of interest to different cultures. Assumptions are questioned and interrogated.

COMM 204 Effective Listening

Lecture and sections are used to present an analysis of the process of listening, to identify barriers to effective listening, and to develop students' listening skills. Topics include audiology, cultural contexts, intercultural communication, linguistics, therapeutic listening, and critical analysis of information. Students are involved in building exercises and in writing self-analytical papers, as well as attending seminars.

COMM 230 Visual Communication

An introduction to visual communication theory. The course examines how visuals influence our attention, perspectives, and understanding. Examples of visuals drawn from advertising, TV news, documentaries, entertainment movies, print and interactive media are used to develop a theoretical framework for becoming more visually aware and for thinking more critically about how visuals influence us.

COMM 240 Communication Systems and Technologies
Spring. 3 credits. Lec M W 2:35-4:30. A. P. Chan.

An exploration of the nature of communication systems and technologies. Topics include a brief history of communication and information technologies, descriptions of the uses, and impacts of technologies within the social system, and an introduction to electronic message design and construction.

COMM 250 Newswriting for Newspapers

Writing and analyzing news stories. A study of the elements that make news, sources of news, interviewing, writing style and structure, press problems, and press-society relations. Concentration on newswriting as it is practiced by newspapers in the United States. Two writing assignments each week, one done in class, one done out of class.

COMM 260 Science Writing for Public Information
Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman or graduate students per section. Prerequisite: one college-level writing course. Lecs, L 01, M W F 9:05-9:55, Lec 02, M W F 10:10-11:00; spring: Lec 01, M W F 9:05-9:55 or Lec 02, M W F 1:25-2:15. Staff.

An intensive course in simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include instructions, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Audience analysis and writing style is emphasized. Not oriented to the mass media.

COMM 263 Organizational Writing
Fall, spring, or summer. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: any college-level writing course. Lecs, L 01, M W F 10:10-11:00, Lec 02, M W F 1:15-12:05. L. VanBuskirk.

Students write from the point of view of various organizations, including businesses, government agencies, and non-profit organizations. Emphasis is on appropriate representation of the writer's organization, audience analysis, and clear and effective written presentation of detailed content. Assignments include text for web sites, reports, proposals, memoranda, letters, and e-mail.

COMM 272 Principles of Public Relations and Advertising
Summer. 3 credits. Not open to freshmen.

Staff.
Survey of the fields of public relations and advertising. Descriptions of organizations, jobs, and functions in the industry. The roles of public relations and advertising in society,
the economic system, and organizations. Psychological and sociological principles as bases for appeals. Strategies for media selection and message execution. Introduction to research and regulation.

COMM 282 Communication Industry Research
Fall. 3 credits. Prerequisite: COMM 116, 120, 121, Lec. M W F 12:20–1:10. D. Scheufele. Public opinion polls, readership/viewership studies, audience segmentation techniques, and media and message effect evaluation are all widely used in the communication industries. This course covers the uses of basic research design, measurement, sampling, and simple descriptive statistics in conducting these studies.

COMM 284 Sex, Gender, and Communication
Fall. 3 credits. Not open to freshmen. T R 2:55–4:10, L. Vanhussirk. The course explores the personal, career, social, and economic implications of gender categories. Topics considered include theories of gender construction, social structures, personal relationships, and gender concerns in the workplace.

COMM 285 Communication in Life Sciences (also S&TS 285)
Spring. 3 credits. M W F 10:10–11:05. Staff. Environmental problems, public health issues, scientific research—in each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the web, communication helps define social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

COMM 301 Business and Professional Speaking
Fall, spring, or summer. 3 credits. Prerequisite: COMM 201. Limited to second term sophomores, juniors, and seniors during fall and spring. Lec. M W 11:15–12:05; sec. T 2:30–4:25; W 1:25–3:20, R 10:10–12:05. B. Earle. The study and practice of written and oral communication skills used in formal and informal organizations, including interviews, informative and persuasive speeches, reports, and discussions. Students exercise and enhance the organizational, analytical, and presentational skills needed in particular settings suited to their own business and professional careers.

COMM 303 Speech and Debate Practicum
Fall and spring. 2 credits. Limited to 10–15 Program in Speech and Debate members only; permission of instructor and completion of 1-year trial basis. Hours TBA. J. Hayman. Students learn preparation for practice in CEDA (Cross Examination Debate Association) debate, Lincoln Douglas debate, or individual speaking events. The class is divided into four groups according to level of experience; therefore it may be repeated to a maximum of eight credits.

COMM 330 Communication Technologies and Management of Information
Fall. 3 credits. Prerequisite: COMM 240. T R 10:10–11:25. Staff. Appropriate use of communication and information technologies can facilitate the coordination, control, and management of information. This course surveys existing theories and practices of information management, integrating insights cutting across communication, economics, management science, and sociology.

COMM 350 Writing for Magazines
Fall, spring, or summer. 3 credits. Prerequisite: any college-level writing course. Limited to 25 juniors, seniors, and graduate students, or others with permission of instructor. T R 9:05–10:00; lab. M W F 12:20–1:10. Extensive out-of-class writing assignments. Fall: M 1:25–4:25. W. Ward. Spring: Lec, T R 8:40–9:55; lab. R 1:25–2:15. Staff. A course in nonfiction freelance writing for magazines. Intensive fact writing to enable students to communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine.

COMM 352 Science Writing for the Mass Media (also S&TS 352)
Fall. 3 credits. Not open to freshmen. Limited to 24 students. Prerequisite: 1 college-level writing course. Lec. M W F 9:05–10:00; lab. M W F 12:20–2:15. Staff. How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

[COMM 353 Science Writing Practicum
Spring. 1 credit. Prerequisite: COMM 260, COMM/S&TS 352, ENG. 350 or permission of instructor. Hours TBA. Limited to 24 students. Prerequisite: any college-level writing course. Limited to 24 students. Lec. M W F 11:10–12:05. B. Earle. Students cover the annual meeting of the American Association for the Advancement of Science, held in February each year. Before the meeting, students review science writing techniques and issues. At the meeting, students meet with science writers and attend press conferences and scientific sessions. Students write at least two stories. Students are responsible for all costs of travel, lodging, and meals.]

[COMM 358 Text Editing and Management
Fall. 3 credits. Limited to 25 junior, senior, or graduate students. Prerequisite: COMM 250, 260, 263, 350 or 352. M W F 12:20–1:10. Not offered 2001–2002. Staff. How to guide a manuscript from draft to presentation. Topics include production, copy editing and design, document management, and editorial decision making. Publications include books, magazines, newsletters, and promotional and educational materials for internal and external use. Appropriate for those who will oversee publications as part of their work.]

COMM 376 Planning Communication Campaigns
Spring. 3 credits. Prerequisites: COMM 282 or equivalent social research course (may be taken concurrently). M W F 9:05–9:55. D. Scheufele. Overviews theories that guide and influence social change efforts. Research techniques and combined tools used in communication planning and campaign design are reviewed. Class discussion focuses on social change efforts in nutrition and health, rural development, marketing, and the environment. Students work closely with a client in designing a communication campaign.

COMM 380 Independent Honors Research in Communication
Fall or spring. 1–6 credits. Limited to undergraduates who have met the requirements for the honors program. R. Ostman.

COMM 398 Issues in Teaching Communication
Fall and spring. 1 credit. Prerequisite: must be past or current undergraduate teaching assistant for COMM 201, 204, or 301. Alternate M 7:30–9:10 T–R. K. Berggren. This seminar brings together novice educators to discuss ideas, experiences, and practice. Integration of theory and practice in teaching communication efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine new ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 405 Community Service Practicum
Fall and spring. 2 credits. May be repeated for credit. Limited to 10–15 Program in Speech and Debate members; permission of instructor required. Hours TBA. J. Hayman. Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

COMM 410 Organizational Behavior and Communication
Fall. 3 credits. Labs limited to 15 junior, senior, or graduate students. Prerequisite: COMM 116 or equivalent. Lec. M W 10:10–11:10; Sec. 02, 10:10–12:05; Sec. 03, F 10:10–12:05; Sec. 04, F 12:20–2:15; Sec. 05, F 12:20–2:15. D. Krikorian. Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational context. Case studies are used in lab.

[COMM 411 Leadership from a Communication Perspective
Spring. 3 credits. Limited to 30 students. Lec. T R 1:25–2:40. Not offered 2001–2002. Staff. Leadership is a product of human communication. Leadership competence can be increased by increasing communication competence. Leadership theories, particularly transformational leadership, are studied, and gender/ minority responsive leadership is stressed. Practical application includes leadership exercises and observation of leaders.]
COMM 412 Communication Leadership Lab
This course provides practical experience in leadership and the methods used to analyze leadership in an organization. Students take turns serving as a group leader of six to eight students in applying leadership theories to study leadership styles, leader-follower relations, organizational culture, and leadership competencies in an organization.

COMM 418 Communication and Persuasion
Spring. 3 credits. Limited to juniors and seniors only. Prerequisite: COMM 282 or equivalent social science research methods course; and COMM 116 and 120 or introductory psychology or social psychology. T 10:10-11:10. M. Campo.
The course focuses on theories of communication's influence on persuasion and attitude change. Students become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories are also applied to a variety of communication situations including mass communication, advertising, public relations/ public information, and interpersonal communication. Lectures concurrent with COMM 618; graduate students should enroll in COMM 618.

COMM 420 Public Opinion and Social Processes
Fall. 3 credits. Limited to juniors and seniors only. Prerequisite: COMM 282 or equivalent social science research methods course. T 10:10-11:15. M. Campo.
The course provides an overview of the theoretical and applied literature related to the concept, "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication, and social psychological variables are examined. Public opinion is studied using current theoretical and practical implications and interpretation of public opinion polls and trends in public opinion on specific issues. Lectures concurrent with COMM 620; graduate students should enroll in COMM 620.

COMM 421 Communication and the Environment
Spring. 3 credits. Lect. T R 11:40-12:55. Offered even-numbered years. Not offered 2001-2002. J. Shanahan. Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media's impact in public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 422 Psychology of Television (and Beyond)
Fall. 3 credits. Prerequisites: introductory psychology or COMM 120. M W F 12:20-1:10 (one evening mid-semester prelim). M. Shapiro.
A survey of knowledge about the psychological influence of television and other audiovisual communication technologies. Topics may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media, the mass media's virtual reality. Lectures concurrent with COMM 622; graduate students should enroll in COMM 622.

COMM 424 Communication in the Developing Nations
Fall. 3 credits. Limited to juniors and seniors. Lect. T 1:25-2:35; lab, T 2:35-4:25. R. Colle.
The role of community in development programs, particularly in the Third World. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 642; graduate students should enroll in COMM 642.

COMM 426 Impact of Communication Technologies
Spring. 3 credits. Offered even-numbered years. Limited to junior, senior, and graduate students; others by permission of the instructor. Lect. M W F 11:15-12:15. D. Grossman.
A practical survey of the law governing mass media, primarily for those working in the field. Coverage includes restraints on news gathering and publication, privacy, decency and obscenity, libel, invasion of privacy, the rights to publicity, copyright, broadcast and cable regulation, access, electronic media, and other issues of current interest.

COMM 428 Communication Law
Spring. 3 credits. Offered even-numbered years. Limited to junior, senior, and graduate students; others by permission of the instructor. Lect. M W F 11:15-12:15. D. Grossman.
A practical survey of the law governing mass media, primarily for those working in the field. Coverage includes restraints on news gathering and publication, privacy, decency and obscenity, libel, invasion of privacy, the rights to publicity, copyright, broadcast and cable regulation, access, electronic media, and other issues of current interest.

COMM 429 Legal Issues in Business and Electronic Communication
The increase in commercial use of the Internet and new types of interactive electronic media in business create unique contexts for applying traditional principles of law. This course examines the rights and responsibilities of parties involved in electronic commerce, including information security (guaranteeing confidentiality and effective record-keeping), electronic contracts and EDI, rights in information (copyrights, trademarks, and patents), regulation of information content (pornography and advertising), and regulation of on-line conduct (criminal liability and civil exposure).

COMM 430 Designing for Human Computer Interaction
Fall. 3 credits. Prerequisite: permission of instructor. Lect. T 11:40-12:55; lab 01, T 1:25-2:15, lab 02, R 1:25-2:15. G. Gay.
This course is concerned with key issues of the design of the interaction between computers and people. Students come away from the course with an ability to evaluate solutions to design problems and a familiarity with implementing HCI designs. Lectures concurrent with COMM 639; graduate students should enroll in COMM 639.

COMM 440 Computer Mediated Communication: Theory and Practice
Spring. 3 credits. Permission of instructor. Letter grade only. Lect. T 12:20-2:15; lab 01, T 11:15-12:05; lab 02, R 11:15-12:05. G. Gay.
Course focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, ethical and philosophical design considerations, and cultural and social issues. Lectures concurrent with COMM 640; graduate students should enroll in COMM 640.

COMM 466 Public Communication of Science and Technology (also S&T 466)
Fall. 3 credits. Limited to 15 students. Prerequisite: COMM 352 or 360, or Engineering 350, with permission of instructor. Offered even numbered years. M W F 2:55-4:10. B. Lewenstein.
Explore the structure, meanings, and implications of "public communication of science and technology" (PCST). Examine the contexts in which PCST occurs, look at motivations and constraints of those involved in producing information about science for nonprofessional audiences, analyze the functions of PCST. Tie existing ideas about PCST to general communication research, and learn how to develop new knowledge about PCST. Course format is primarily seminar/discussion.

COMM 476 Communication Fellows Program
Spring. 2 credits. M 2:55-4:10. Prerequisites: permission of instructor; limited to communication seniors selected based on goals and academic preparation. B. O. Earle.
A series of lectures, seminars and guest speakers exploring the planning, evaluation and policy-making processes. Includes a three-day trip to a metropolitan area to visit corporate leaders, administrative agencies, and policymakers. Fee of $150.00 charged.

COMM 486 Risk Communication
Spring. 3 credits. T R 2:25-4:15. C. Scherer.
An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course concentrates on social theories related to risk perception and behavior. Case studies involving engineering, or permission management, water quality, environmental hazards, and personal health behaviors are examined. Emphasis is placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 666; graduate students should enroll in COMM 668.

COMM 494 Special Topics in Communication
Fall, spring, or summer. 1-3 credits variable. S-U grades optional. Prerequisite: permission of instructor.
COMM 496 Internship
Fall, spring, summer, and intersession. 1-3 credits. Students must apply no later than the spring pre-course enrollment period for a fall internship or the fall pre-course enrollment period for a spring or summer internship. Prerequisites: limited to communication juniors or seniors, 3.0 average in communication courses, and approval of academic adviser. S-U grades only.

Structured, on-the-job learning experience under supervision of communication professionals in a cooperating organization. Maximum of six credits total may be earned; no more than three per internship but flexibility allows six for one credit each, three for two credits each, or two for three credits each. Internships must be approved in advance by the student's academic adviser and must be supervised by a communication professional in fields of public relations, advertising, publishing, or broadcasting. Minimum of 60 on-the-job hours per credit required.

COMM 497 Individual Study in Communication
Fall or spring. 1-3 credits; may be repeated to 6 credits with a different supervising faculty member. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall).

Individual study under faculty supervision. Work should be on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

COMM 498 Communication Teaching Experience
Fall or spring. 1-3 credits, may be repeated to 6 credits in different courses. Limited to juniors and seniors. Intended for undergraduates desiring classroom teaching experience. Prerequisite: 3.0 cumulative average (2.7 if teaching assistant for a skill development course) and permission of the faculty member who will supervise the work and assign the grade. Students must register with an Independent Study form (available in 140 Roberts Hall).

Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

COMM 499 Independent Research
Fall or spring. 1-3 credits; may be repeated to 6 credits. Limited to seniors and graduate students. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall). Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

COMM 510 Organizational Behavior and Communication
Fall. 3 credits. Lec. M W 10:10-11:00; sec, TBA. D. Krikorian.

Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational setting. Case studies analyzed in lab. Lectures concurrent with COMM 410; graduate students should enroll in COMM 510.

COMM 610 Seminar in Organizational Communication
Spring. 3 credits. Prerequisites: COMM 410/510 or one course in organizational behavior or permission of instructor. Lect. M W 11:15-12:05; lab, F 10:10-12:05.

D. Krikorian.

Examination of contemporary research on the social psychology of interpersonal communication in organizations including supervisor-employee relations, leadership style, work motivation, organizational socialization, and formal and informal communication networks.

COMM 618 Communication and Persuasion
Spring. 3 credits. Prerequisite: COMM 410/510 or one course in organizational behavior or permission of instructor. Lect. M W 10:10-11:40 M. Campo.

The course focuses on theories of communication's influence on persuasion and attitude change. Students become familiar with a variety of social-psychological theories of attitude change and persuasion. These theories are applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 418; graduate students should enroll in COMM 618.

COMM 620 Public Opinion and Social Processes

The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by societies. Relationships between public opinion, communication, and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues. Lectures concurrent with COMM 420; graduate students should enroll in COMM 620.

COMM 622 Psychology of Television (and Beyond)
Fall. 3 credits. Prerequisites: introductory psychology or social psychology and introductory communication methods course. M W F 12:20-1:10. M. Shapiro.

A survey of knowledge about the psychological influence of television and other audio-visual communication technologies. Topics may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 422; graduate students should enroll in COMM 622.

COMM 624 Communication in Developing Nations
Fall. 3 credits. Open to juniors, seniors, and graduate students. Lec, T 1:25-2:35; lab, T 2:35-4:25. R. D. Colle.

The role of communication in development programs, particularly in Third World nations. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for human, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 424; graduate students should enroll in COMM 624.

COMM 626 Impact of Communication Technologies
Fall. 3 credits. Open to seniors. M W 2:55-4:10. Staff.

Examines emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television. Meets with COMM 426; graduate students enroll in COMM 626.

COMM 639 Designing for Human Computer Interaction
Fall. 3 credits. Prerequisite: permission of instructor. Lect. T 11:40-12:15; lab 01, T 1:25-2:15. R. D. Colie.

This course is concerned with key issues of the design of the interaction between computers and people. Students come away from the course with an ability to evaluate solutions to design problems and a familiarity with implementing HCI designs. Lectures concurrent with COMM 439; grad students should enroll in COMM 639.

COMM 640 Computer Mediated Communication: Theory and Practice
Spring. 3 credits. Prerequisite: permission of instructor. Lect. T 11:40-12:15; lab 01, T 1:25-2:15. R. D. Colie.

Focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues. Lectures concurrent with COMM 440; graduate students should enroll in COMM 640.

COMM 641 Human-Computer Interaction

An examination of how people relate to, think about, and think with new communication technologies in schools, homes, and the workplace. Using assigned readings from multiple disciplines, class exercises, field studies, and case studies, students study and critique aspects of human-computer interaction, social psychology, and other issues that shape the process and effectiveness of designing, implementing, and using computer systems.
COMM 676 Communication Planning for Social and Behavioral Change
Overview theories to provide guidance and influence social change efforts. Research techniques and communication tools used in communication planning and campaign techniques and communication tools used in communication planning and campaign design are reviewed. Class discussion focuses on social change efforts in nutrition and health, rural development, marketing, and the environment. Course seeks to integrate theory, data-based generalizations, and planning processes into a comprehensive communication plan.

COMM 680 Studies in Communication
Fall. 3 credits. Limited to graduate students in communication; others by permission of instructor. M W 8:00–9:15. J. Shanahan. A review of classical and contemporary readings in communication, including key concepts and areas of investigation. An exploration of the scope of the field, the interrelationships of its various branches, and an examination of the role of theory in the research process.

COMM 681 Advanced Communication Theory
Spring. 4 credits. Prerequisite: COMM 680 or graduate standing and permission of instructor. M W 2:55–4:10 with additional meetings TBA. Staff.
Development of, and contemporary issues in, communication theory. Discussion includes the interaction between communication and society, social groupings, and mental processing.

COMM 682 Methods of Communication Research
Spring. 3 credits. Lec, M W 12:20–1:10; sec, F 12:20–2:15. Staff.
An analysis of the methods used in communication research. Emphasis is on understanding the rational for survey, test, experimental, and ethnographic research methods. Development of class research project from research question to final report. Computer use of Statistical Package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.

COMM 683 Quantitative Research Methods in Communication
Spring. 3 credits. Prerequisite: COMM 682 or equivalent. Lec, M 6:00–9:00 p.m. Not offered 2001–2002. Staff.
Experience in quantitative research techniques. The course provides an introduction to inter- and multi-disciplinary research through examination of the procedures, techniques, and assumptions associated with particular techniques of design and measurement, data collection, data preparation, data analysis, and hypothesis testing. Readings include a variety of fields and disciplines in the social and natural sciences.

COMM 685 Training and Development: Theory and Practice (also International Agriculture 685 and EDUC 685)
Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Design for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

COMM 686 Risk Communication
An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course concentrates on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors are examined. Emphasis is placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 486; graduate students should enroll in COMM 686.

COMM 691 Seminar: Topics in Communication
Fall and spring. No credit. S-U grades only. Hrs TBA. Staff.
Some weeks scholars from a wide variety of fields present varied topics in theory or research as it relates to communication; other weeks graduate students present thesis (project) proposals to faculty and peers.

COMM 694 Special Topics in Communication
Fall, spring, or summer. 1–3 credits. Variable. Some weeks scholars from a wide variety of fields present varied topics in theory or research as it relates to communication; other weeks graduate students present thesis (project) proposals to faculty and peers.

COMM 700 MPS Project Research
Fall or spring. 1–6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair. Project research for Master of Professional Studies (Communication) students.

COMM 701 Seminar in Psychology of Communication
Spring. 3 credits. Letter grade. Offered odd-numbered years. Prerequisite: COMM 680 and 681 or equivalent graduate level course work in psychology or social psychology. Hours TBA. Not offered 2001–2002. M. Shapiro.
Discussion and analysis of selected current issues in the psychology of communication. Students discuss and synthesize current research and theory in the mental processing of communication.

COMM 794 Seminar in Communication Issues
Fall, spring, or summer. 1–5 credits. Letter grade only. Prerequisite: permission of instructor. Small group study of topical issues in communication not otherwise examined in a graduate field course.

COMM 797 Graduate Independent Study
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: permission of instructor. Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 798 Communication Teaching Laboratory
Fall and spring. 1–3 credits each semester. Letter grade only. May be repeated once. Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member’s section number to register. Graduate faculty.
Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

COMM 799 Graduate Research
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: appropriate communication graduate course work or permission of instructor.
Small-group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

COMM 800 Master's-Level Thesis Research
Fall or spring, 1–6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair. Thesis research for Master of Science (Communication) students.

COMM 901 Doctoral-Level Dissertation Research
Fall or spring. 1–9 credits. May be repeated for a maximum of 9 credits. S-U grades only. Prerequisites: completion of “A” exam; permission of committee chair. Dissertation research for doctoral candidates.

CROP AND SOIL SCIENCES
Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

Courses by Subject
Crop Science: 311, 312, 314, 315, 317, 455, 608, 610, 612, 613, 614, 642, 691, 820, 920, 921
Environmental Information Science: 308, 411, 420, 465, 560, 660, 675, 694, 860, 961
All following Crop and Soil Sciences course prefixes were previously listed as SCAS.
General Courses

**CSS 190 Sustainable Agriculture**
Fall. Credit variable; 2 or 3. Limited to 60 students. S-U grades optional. Lec, R 10:10; labs, M T 2:00–4:25. G. W. Fick.
This course is designed to be an enjoyable introduction to basic food production resources (soils, crops, and climates), and it emphasizes scientific principals of management that conserve or renew those resources for continuing benefit to society. The information is of general value for nonmajors and students new to the field. Laboratories include several field trips and stress hands-on experience with soils, crops, and descriptive climatology. Written assignments are prepared for the web. Extra credit can be earned by participation in team preparation and delivery of a lesson in sustainable agriculture.

**CSS 497 Individual Study in Crop and Soil Sciences**
Fall or spring. 1–6 credits maximum. S-U grades optional. The department teaches “trial” courses under this number. Offers vary by semester, and are advertised by the department before the semester begins. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**CSS 499 Undergraduate Research**
Fall or spring. Credit TBA. Students must register with an Independent Study form (available in 140 Roberts Hall). Independent research on current problems selected from any phase of crop science or soil science.

**CSS 695 Planning and Reporting Research**
Spring. 2 credits. First meeting the first T of the semester in 102 Bradfield. G. W. Fick. New graduate students and students starting to write their theses have found this course very helpful. Topics covered include scientific writing, reviewing, seminar presentations, and poster presentations. The nature of science and the scientific method are also discussed along with professional ethics in the conduct and communication of science.

**CSS 696 Seminar in Crop and Soil Sciences**
Fall and spring. 1 credit. S-U grades only. Lec, T 3:30–4:30. Staff.
Current research and selected topics in the crop and soil sciences and related fields.

Crop Science

**CSS 311 Grains and Nutriceuticals**
Fall. 4 credits. Prerequisite: CSS 260 or BIOPL 241. Lec, M W F 10:10; lab, M 1:25–4:25. 1 or 2 field trips during lab periods (until 5 p.m. or on weekends). R. L. Osburn.
Globally, six seed crops provide 75 percent of the caloric and protein needs of mankind by direct consumption or indirectly through animal and microbial products. Seed crops for starch, protein, oil, fiber, sugar, nutriceuticals, pharmaceutical, and industrial uses are emphasized, including adaptation, growth and development, environmental stress, optimization of yield and quality, and genetic improvement of the context of food systems for improved health. Laboratory uses living plants, extensive crop garden, and computer simulation.

**CSS 312 Forage Crops**
Spring. 4 credits. Prerequisites: introductory course in crop and/or soil science. Recommended: course in animal nutrition. Lec, M W F 11:15; lab, T or W 1:25–4:25. A. DiTommaso.
The production and management of crops used for livestock feed are considered in terms of establishment, growth, maintenance, harvesting, and preservation. Forage grasses, forage legumes, and corn are emphasized, and consideration is given to their value as livestock feed in terms of energy, protein, and other nutritional components.

**CSS 314 Tropical Cropping Systems**
Fall. 4 credits. Prerequisite: introductory course in crop science or soil science or biology or permission of instructor. Lec, T R 8:40–9:55. E. C. Fernandes.
Characterization and discussion of: traditional shifting cultivation; lowland rice-based systems; upland cereal-based systems; and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. The impact of tropical cropping systems on the environment are evaluated.

**CSS 315 Weed Science**
Fall. 4 credits. Prerequisite: introductory course in biology or botany. Lec, T R 10:10–11:25; lab, T or W 2:15–3:30. D. DiTommaso.
Principles of weed science are examined. Emphasis is on: (a) weed biology and ecology; (b) chemistry of herbicides in relation to effects on plant growth and the environment; and (c) current management strategies that are relevant to both crop and noncrop ecosystems. Hands-on laboratory sessions cover weed identification and ecology, and herbicide selectivity and symptomology.

**CSS 317 Seed Science and Technology** (also HORT 415 and HORT 416)
Fall. 3 credits. Prerequisites: BIOPL 241 or equivalent. Lec, M W F 11:40–12:30; lab, R 2:15–4:25. 2 all-day field trips will be scheduled during the semester. Offered alternate years. A. G. Taylor, Geneva Experiment Station (Ithaca contact, R. L. Obendorf). The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.

**CSS 415 Principles and Practices of Agroforestry** (also NTRES 415, HORT 415)
Fall. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option. Lec, M W F 10:10–11:00. A. G. Taylor, Geneva Experiment Station (Ithaca contact, K. Mudge, L. Buck, J. Lassoie). An introduction to modern and traditional agroforestry systems which involves spatial or temporal integration of multiple uses of woody plants (trees and/or shrubs) with annual and perennial crops and/or livestock. Interactions between woody and nonwoody components of agroforestry systems are considered, based on above and below ground processes. The sustainability of agroforestry systems is critically examined from biophysical, socio-economic, and policy perspectives.

**CSS 416 Principles and Practices of Agroforestry—Laboratory** (also NTRES 416 and HORT 416)
Fall. 1 credit. Optional lab component of HORT 415 (also NTRES and CSS [SCAS]). S-U grades optional. Prerequisites: junior, senior, or graduate standing or permission of instructor; prior or concurrent enrollment in HORT 415. W 1:25–4:25. K. Mudge, E. Fernandez, L. Buck, J. Lassoie.
An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management skills applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, use of computer-based sources of information, and practical skills with woody plants including identification, propagation, planting, pruning, and measurement.

**CSS 455 Mineral Nutrition of Crops and Landscape Plants** (also HORT 455)
Spring. 3–5 credits. Prerequisite: CSS 260 and BIOPL 242, or equivalent. Lec, M W F 9:05; lab, R 1:30–4:00. Offered alternate years. H. C. Wien and staff.
A modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on agronomic crops, vegetables, floriculture, and fruit crops. Each module carries one credit; a minimum of three credits must be taken in one semester. By the end of the course, students understand the principles of mineral nutrient function in crop plants, are able to diagnose deficiencies by symptoms and tissue tests, and devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.
CSS 608 Water Status in Plants and Soils
Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Lec. 1 hour.
TBA; lab, 1st class meeting T 1:25-4:25.
Offered alternate years. T. L. Setter.
Covers techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, and abscisic acid analysis with ELISA.

CSS 610 Physiology of Environmental Stress
Spring. 3 credits. Prerequisite: BIOL 242 or 341.
A study of the responses of plants to environmental stresses, with emphasis on thermal stresses including chilling, freezing, and high temperature injury. Emphasis is on the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.

CSS 612 Seed Physiology and Biotechnology
Spring. 3 credits. Prerequisite: plant physiology. T R 8:30-9:55. R. L. Obendorf.
This course in seed biology describes the molecular, biochemical, physiological, environmental, and genetic regulation of seed development, maturation, and germination events including the deposition and mobilization of seed reserves with illustrations from the world's major food and feed seeds. Illustrations extend the principles to practical situations, industrial uses, and food systems for improved health.

CSS 613 Physiology and Ecology of Yield
A study of environmental constraints on crop-plant productivity from a physiological perspective. Aspiration responses and genetic adaptation are examined for temperature, light, water, compacted soil, and mineral nutrient environments. Topics include: photosynthesis and nitrogen assimilation, translocation, and partitioning; canopy-scale influences on solar radiation use efficiency; regulation of growth processes in leaf, root, and floral sinks in response to environment, seed set; water transport and stomatal regulation; root growth in flooded and compacted soils; and drought responses. Emphasis is on growth processes of vegetative plant organs.

CSS 614 Weed Ecology and Management
Spring. 3 credits. Prerequisite: CSS 315 or equivalent. Lec. T R 10:10-11:25. Offered alternate years. A. DiTommaso.
An examination of plant ecological principles governing weed population dynamics and weed-crop competitive interactions in different crop and noncrop ecosystems. Application of these fundamentals for the development and implementation of environmentally sound and sustainable integrated weed management strategies is explored. Topics include seed biology and seedbank dynamics, weed demography and spatial variation, weed-crop interferences, bio-economic weed thresholds, and site-specific weed management.

CSS 642 Plant Mineral Nutrition (also BIO PL 642)
Spring. 3 credits. Prerequisite: BIO PL 341 or equivalent. Lecs, M W F 10:10-11:10. Offered alternate years. L. V. Kochian, A. Lemb, M. W. Welch.
A detailed study of the processes by which plants acquire and utilize mineral nutrients from the soil. Topics include the uptake, translocation, and compartmentation of mineral elements; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Precise mineral elements are emphasized to illustrate the above topics.

CSS 661 Special Topics in Crop Science
Fall or spring. 1-6 credits. S-U grades optional. Hours TBA. Staff.
Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered depend on staff and student interests.

CSS 680 Master's-Level Thesis Research in Crop Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement.
Graduate faculty.
Limited to students specifically in a master's program.

CSS 691 Graduate-Level Thesis Research in Crop Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement.
Graduate faculty.
Limited to students in a Ph.D. program only before the "A" exam has been passed.

CSS 692 Doctoral-Level Dissertation Research in Crop Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement.
Graduate faculty.
Limited to students admitted for candidacy after the "A" exam has been passed.

Environmental Information Science

CSS 398 Environmental Microbiology (also BIOMI 397)
Fall. 3 credits. Prerequisite: BIOES 261 or BIOMI 290 or CSS (SCAS) 260 or permission of instructor. Lecs, M W F 10:10 W. C. Ghiorsa.
The biology, behavior, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

CSS 411 Resource Inventory Methods (also CEE 411)
Spring. 3 credits. Prerequisite: permission of instructor. Lecs, M W F 9:05-9:55; lab, M R 1:25-4:25. A. Lemb.
A survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, inventory, and monitor environmental resources.

CSS 420 Geographic Information Systems
Fall. 4 credits. Prerequisite: CSS (SCAS) 411 or permission of instructor. Lecs, T R 9:05-9:55; lab, T 10:10-11:10. M W F 1:25-4:25.
Principles and applications of geographic information systems for the characterization and assessment of agronomic and environmental resources. Methods for accessing, updating, analyzing, and mapping spatial data and information are emphasized. Needs assessment, coordinate systems, database design and maintenance, data transformations, and map accuracy assessment are considered.

CSS 465 Global Positioning System
Fall and spring. 1 credit. Prerequisite: CSS 411 or CSS 420, or equivalent, or consent of instructor. Lecs, T R 1:25-4:25. A. Lemb.
Introduction to navigation-grade GPS instruments used in agricultural and environmental science. Topics include instrument familiarization, field-data collection and processing, real-time and post-differential correction, and GPS-GIS integration.

CSS 620 Spatial Modeling and Analysis
Spring. 3 credits. Prerequisites: CSS (SCAS) 420, CSS (SCAS) 463, or permission of instructor. Lecs, T R 9:05-9:55; lab, T W 1:25-4:25. A. Lemb.
Theory and practice in the development, integration, and visualization of spatial data for resource inventory, environmental modeling, land classification and evaluation. Application and evaluation of advanced spatial analytical methods applied to environmental systems and databases of interest to the student are emphasized.

CSS 660 Remote Sensing Fundamentals (also CEE 610)
Fall. 3 credits. Prerequisite: permission of instructor. Lecs, M W F 12:20-1:10; lab, T W 2:30-4:25. W. D. Philpot.
An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data collection, data analysis and interpretation, and project design.

CSS 675 Modeling the Soil-Plant-Atmosphere System (also EAS 675)
Spring. 3 credits. Prerequisite: CSS (SCAS) 483 or equivalent. Offered alternate years. Lecs, T R 8:40-9:55. S. J. Riba.
Introduction to the structure and use of soil-plant-atmosphere models. Topics covered include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability, plant-plant competition; and land surface processes as well as model data requirements, validation and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation are discussed.

CSS 694 Special Topics in Environmental Information Science
Fall or spring. 1-6 credits. S-U grades optional. Hours TBA. Staff.
Study of topics in environmental science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.
CSS 860 Master's-Level Thesis Research in Environmental Information Science
Fall or spring. Credit by arrangement. S-U grades only. Graduate faculty. Limited to students specifically in a master's program.

CSS 960 Graduate-Level Dissertation Research in Environmental Information Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students in a Ph.D. program only before the "A" exam has been passed.

CSS 961 Doctoral-Level Dissertation Research in Environmental Information Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy after the "A" exam has been passed.

Soil Science

CSS 260 Soil Science (also EAS 260)
Fall. 4 credits. S-U grades optional. Lecs, M W F 9:05, lab, M T W or R 1:25, S. Riha. Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective. This course is divided into three units. A unit on soil information introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. A soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. The unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

CSS 321 Soil and Water Management
Fall. 4 credits. Prerequisites: CSS (SCAS) 260. S-U grades optional. Lecs, T R 11:40–12:55, lab, R 2:30–4:25. Offered alternate years. H. M. van Es. Introduces students to the principles of soil and water interaction and to the effects of human intervention on these interactions. Aspects of soil and water management, including hydrology, soil erosion and conservation, water management, contaminant movement, tillage, soil compaction, and water quality are examined. Case studies and policy approaches from both the United States and abroad are discussed.

CSS 362 Soil Morphology
Fall. 1 credit. Undergraduates only. Recommended for sophomores and juniors. R 1:25–4:25; all day field trip required. R. B. Bryant. The principles for field identification of soil properties, profiles, and landscapes are presented. A series of soil pits are examined, described, classified, and interpreted in the field.

CSS 363 Soil Genesis, Classification, and Survey
Fall. 4 credits. Prerequisite: CSS (SCAS) 260. Lecs, M W F 11:15; lab, W 1:25–4:25. 1 all day field trip required. R. B. Bryant. Factual and theoretical information on which soil survey is based are discussed. Principles of field identification, classification, survey, and interpretation are practiced in a field setting. An overview of soil databases, their content, development, and use for site evaluation and land classification is provided.

CSS 365 Environmental Chemistry: Soil, Air, and Water
Spring. 3 credits. Prerequisites: CHEM 207–208. Lecs, M W F 10:10–11:00. M. McBride. An overview of the chemical processes that control the concentrations and bioavailability of nutrients and pollutants in soil, air, and water. Particular attention is given to soil's function as a filter for contaminants. The history of environmental contamination and its impact on agricultural soils and ecosystems is described.

CSS 366 The Soil Ecosystem (also HORT 366)
Spring. 3 or 4 credits. Lecture only, 3 credits; lecture plus lab, 4 credits; lab cannot be taken without lecture. Prerequisite: one year intro biology. Lecs, T R 10:10–11:25; lab, W 1:25–4:25. J. E. Thies, L. E. Drinkwater. Activities of the soil biota are crucial for the continued functioning and renewal of soil ecosystems. Through study of the soil as an ecosystem, students gain an understanding of the diversity of soil organisms and the critical roles that microbial activities and interactions have in agricultural production and environmental protection. Through a small research project, students also gain competencies in developing research questions and formulating hypotheses, planning appropriate methods for gathering and interpreting data, and summarizing research work.

CSS 372 Nutrient Management in Agroecosystems: Soil Fertility Management
Spring. 4 credits. Prerequisite: CSS (SCAS) 260 or equivalent or permission of instructor. Lecs, T R 8:40–9:55; lab, R 1:25–4:25. J. Lehmann. Students become familiar with the basic concepts of soil fertility, and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agro-ecosystems. Emphasis is placed on the role of nutrient management can be improved without creating environmental hazards. Students have hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations.

CSS 471 Properties and Appraisal of Soils of the Tropics
Spring. 3 credits. Prerequisite: CSS (SCAS) 260 or equivalent. S-U grades optional. Lecs, T R 12:20; disc, W 1:25–3:25. A. Van Wambeke. The course examines the conditions in which soils form, and considers ecological, geological, and vegetational factors that produce the diversity that exists among them. The major kinds of soils are recognized, their management properties described, and methods to alleviate the constraints to crop production and the preservation of the environment examined. Topics include the identification of soils, and their functions in sustaining traditional farming systems and advanced technological packages. The course pursues these themes revisiting the sources of information generated in tropical countries and published in Latin-American, French, and English journals. The last part of the course gives special attention to soil-affected soils, paddy rice cultivation, and the characteristics of acid-sulfate soils. Lectures include slides of soils, landscapes, and cropping systems.

CSS 473 Ecology of Agricultural Systems (also BIOEE 473)
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. Lecs and disc, T R 2:30–4:35. During the first 6 weeks of class, the Thursday meetings may run to 5:30 because of field trips. Not offered 2001–2002. Offered fall 2002. A. G. Power and E. C. Fernandez. Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of soil infestations, mutualism in agroecosystems, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

CSS 483 Environmental Biophysics (also EAS 483)
Spring. 3 credits. Prerequisite: CSS (SCAS) 260 or equivalent or permission of instructor. Lecs, M W F 11:15, S, J. Riha. Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum are covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problems sets.

CSS 663 Pedology

CSS 666 Plant/Microbe Interactions
Fall. 3 or 4 credits. Prerequisite: CSS 366 or equivalent, or permission of instructor. Lecs, T R 10:10–11:25; lab, F 1:25–4:25. Offered alternate years. J. E. Thies. Discussions on current research into plant/microbe interactions including: molecular signaling between plants and microbes involved in symbiotic, associative, or pathogenic interactions; new methodologies for understanding the role(s) soil microorganisms play in plant production. Students participating in the optional lab section (for a total of four credits) undertake a group research project of current interest, the results of which will be presented in a final seminar.
EARTIl AND ATMOSPHERIC SCIENCES

CSS 677 Advanced Soil Physics
Spring. 3 credits. Prerequisites: CSS SCAS 260 and CHEM 357-358 or equivalent. M W F 9:05. J. M. Duxbury.
A detailed study of measurement processes and of the hydrostatics of aqueous solutions in soils and porous media, with emphasis on fundamental principles. Examination of the molecular aspects of water-solid interactions, including shrink-swell phenomena and the properties of absorbed water. Analysis of equilibrium water adsorption from thermodynamic and mechanistic (molecular) standpoints. Also covered are mechanical and thermodynamical analysis of the equilibrium status of aqueous solutions in deformable soils. Formal lectures are complemented by tutorial sessions.

CSS 699 Organic Matter—Soils, Sediments, and Waters
Spring. 3 credits. Prerequisites: CSS SCAS 260 and CHEM 357-358 or equivalent. M W F 9:05. J. M. Duxbury.
A discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Interaction with anthropogenic organics and effects of anthropogenic activities on natural organics are considered.

CSS 671 Soil Chemistry
Fall. 3 credits. Prerequisite: 1 year of physical chemistry or permission of instructor. Offered alternate years. Lecture, M W F 10:10. M. B. McBride.
A detailed examination of the structure and surface chemistry of colloidal particles common to soils. Ion exchange, mineral-solution equilibria, and adsorption reactions of silicate clays, oxides, and organic matter are emphasized. The behavior of environmental contaminants in soils, particularly metals and toxic organics, is discussed.

CSS 693 Special Topics in Soil Science
Fall, spring, or summer. 1-6 credits. S-U grades optional.
Study of topics in soil science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

CSS 880 Master's-Level Thesis Research in Soil Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.
Limited to students specifically in a master's program.

CSS 900 Graduate-Level Dissertation Research in Soil Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.
Limited to students in a Ph.D. program only before the "A" exam has been passed.

CSS 981 Doctoral-Level Dissertation Research in Soil Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.
Limited to students admitted to candidacy after the "A" exam has been passed.

EAS 101 Introductory Geological Sciences
Fall, spring, or summer. 3 credits. Fall and spring, A. Moore; summer, W. Brice. Designed to enhance an appreciation of the physical world. Natural environments, surface temperatures, dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems are emphasized. Interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth System Sciences) are covered, as well as some mineral, and fuel resources and environmental concerns are also examined. Field trips in the Ithaca region.

EAS 102 Evolution of the Earth and Life (also BIO G 170)
Spring. 3 credits. J. L. Cisne. This course covers: earth systems and their evolution; earth history's astronomical context; plate tectonics, continental drift, and their implications for climate and life; coevolution of life and the atmosphere; precedents for ongoing global change; and dinosaurs, mass extinctions, and human ancestry. Includes laboratory work constructing geological history and mapping ancient geography. Fossil collection on field trips.

EAS 104 The Sea: An Introduction to Oceanography (also BIO EE 154)
Spring, summer. 3-4 credits (4 credits with lab section). Spring, C. H. Greene, W. M. White; summer, J. Chiment. A user-friendly introduction to the workings and interactions of solid earth, ocean, atmosphere, and life as they relate to understanding ongoing global change.

EAS 107 How the Earth Works
Fall. 1 credit. J. L. Cisne.
A user-friendly introduction to the workings and interactions of solid earth, ocean, atmosphere, and life as they relate to understanding ongoing global change.

EAS 109 Dinosaurs
Fall. 1 credit. J. L. Cisne.
An introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

EAS 111 To Know the Earth
Fall. 3 credits. J. M. Bird.
An introductory course to Earth, its major features, how Earth has evolved, Earth System Science, and building a habitable planet. Covers the effects of human activity on geoscience environments, mitigating environment damage, and living with natural hazards. Also covers mineral resources use in the twenty-first century and an environmentally sound fuel-minerals cycle.

EAS 122 Earthquake! (also ENGR 122)
Spring. 3 credits. L. D. Brown.
The science of natural hazards and strategic resources is explored. Covers techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the Earth's interior to search for strategic minerals; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

EAS 131 Basic Principles of Meteorology
Fall. 3 credits. Lecture, R 11:15. Lab, T W or R 1:25-4:25 and M W 7:00-9:30 P.M. M. W. Wysocki.
A simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and secondary circulations: air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

EAS 150 Introduction to Fortran Programming
Fall. 5 credits. Lecture, T R 12:20-1:10; lab T 1:25-3:25. M. W. Wysocki.
An introduction to the elements of computer programming using Fortran. Exercises involve mainly meteorological problems.

EAS 200 Art, Archaeology, and Analysis (also ARKEO 285, ARTH 200, ENGR 185, PHYS 200)
Spring. 3 credits. R. W. Kay. An interdepartmental course on the use of techniques of science and engineering in cultural research. Applies physical and physiological principles to the study of archaeological artifacts and works of art. Covers historical and technical aspects of artistic creation. Includes analyses by modern methods to deduce geographic origins, and for exploration, dating, and authentication of cultural objects. Does not meet liberal studies distribution requirement for engineering.

EAS 201 Introduction to the Physics and Chemistry of the Earth (also ENGRI 201)
Fall. 3 credits. Prerequisites: PHYS 112 or 207. L. M. Cathles.
This course covers: formation of the solar system; accretion and evolution of the Earth; the rock cycle; radioactive isotopes and the geological time scale, plate tectonics, rock and mineral resources, meteor impacts. A multidisciplinary look at earth science and operations is the Centro Ecologico Akumal, 1 Cancun. This coast and its associated reef features snorkel tours of reefs and lagoons as well as the ceriotes (sinkholes) that characterize the Yucatan Peninsula of Mexico. Base for operations is the Centro Ecologico Akumal, located on the Caribbean coast south of Cancun. This coast and its associated reef ecosystems are being studied for trace gases, and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

EAS 210 Introductions to Field Methods in Geologic Sciences

1 lec, Saturday field trips. 3 credits. Prerequisite: permission of instructor. Enrollment limited to 15. Autumn. Approximate cost $1,100. L. D. Brown. A multidisciplinary look at earth science and environments of the Yucatan Peninsula. This course introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. A soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, and soil health. The unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

EAS 250 Meteorological Observations and Instruments

Spring. 3 credits. Prerequisite: EAS 131. Lecs, M W 12:20, lab, R 1:25–3:20. M. W. Wysocki. This course covers methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. It also covers a wide variety of techniques and experimental design, and the interpretation of data. The course is intended to serve as preparation for Observers Examination. Lab fee $50.

EAS 260 Soil Science (also CSS 260)

Fall. 4 credits. S-U grades optional. Lecs, M W F 9:05, lab, M T W R 1:25. S. J. Rha. Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective, this course is divided into four units. A unit on soil information introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. A soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, and soil health. The unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

EAS 268 Climate and Global Warming

Spring. 3 credits. Prerequisite: basic college math; S-U grades optional. Lecs, M W F 9:05. A. T. DeGaetano. Students from a range of disciplines become familiarized with such contemporary issues in climatology as global warming and El Niño. Introductions to the natural greenhouse effect, past climates, observed and projected climate changes and natural climate variations (e.g. El Niño) and their consequences and predictability. Weekly student-led discussions of issues appearing in journals such as Nature.

EAS 296 Forecast Competition

Fall and spring. 1 credit. S-U grades only. Prerequisites: sophomore undergraduate standing in atmospheric science, or permission of instructor. Time TBD. D. S. Wilks. This two-semester course provides daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully. Enroll for two consecutive semesters, with credit awarded after the second semester. May be repeated for credit.

EAS 302 Evolution of the Earth System (also SES 302)

Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. Lecs and disc, TBA. W. White and staff. Co-evolution of life and the Earth system: Earth's early history; plate tectonics, continental drift, and climate changes during the past billion years, mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting information preserved in the rock record.

EAS 315 Geomorphology

Fall. 4 credits. Prerequisite: one course in either geology, hydrology, or soil science. T. E. Jordan and B. L. Isacks. A study of the processes that sculpt the Earth's landscapes (above and below sea level) and the nature of those landforms. Landforms constructed by Earth's internal processes are the point of departure, as we examine their modification by physical interaction with the atmosphere and ocean. Also treated are depositional landforms that are generated by accumulations of grains or sediment. Laboratory exercises include both field examination of landforms of the Finger Lakes area and computer analysis of satellite images and Digital Elevation Models of examples from around the globe. Two Saturday field trips.

EAS 321 Introduction to Biogeochemistry (also SES 321, NTRES 321)

Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus a course in biology and/or geology. L. A. Derry, J. Yavitt. Control and function of the Earth's global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, biodegradable tracers, the use of isotopic tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

EAS 326 Structural Geology

Spring. 4 credits. Prerequisite: MATH 112, EAS 101 or 201, or permission of instructor. R. W. Allmendinger. Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics. Topics include stress, strain, rheology, deformation mechanisms, minor structures, faulting, folding, and structural families.

EAS 331 Climate Dynamics (also ASTRO 331)

Fall. 4 credits. Prerequisites: MATH 112 or 192 or equivalent. Lecs, M W F 2:25–3:25, disc, W 2:30. K. H. Cook and P. J. Gierasch. Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

EAS 334 Microclimatology

Spring. 3 credits. Prerequisite: A course in physics. T R 10:10–11:25. Offered alternate years. D. S. Wilks. The relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.
EAS 341 Atmospheric Thermodynamics and Hydrostatics
Fall. 3 credits. Prerequisites: 1 year of calculus and 1 semester of physics. M W F 9:05-9:55, M. W. Wysocki.
Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics covered include thermodynamic processes of dry air, water vapor and moist air, and concepts of hydrostatics and stability.

EAS 342 Atmospheric Dynamics
Spring. 3 credits. Prerequisites: 1 year each of calculus and physics. K. H. Cook and P. J. Gierasch.
Introduction to atmospheric dynamics and to the methods of description and quantitative analysis used in meteorology. Topics considered include equations of atmospheric motion, motion in the free atmosphere, vertical variations of wind and pressure fields, mathematical representation and characteristics of fronts, mechanisms of pressure change, concepts of circulation and vorticity, and effects of friction on atmospheric motion.

EAS 352 Synoptic Meteorology I
Spring. 3 credits. Prerequisites: EAS 341 and concurrent enrollment in EAS 342. Lecs, T R 9:05; lab, M 1:25-3:25.
M. W. Wysocki.
Weather map analysis and forecasting techniques are studied by applying the principles of fluid and heat flow. This course strengthens previously introduced meteorological concepts which are applied to forecasting midlatitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

EAS 355 Mineralogy
Fall. 4 credits. Prerequisite: EAS 101 or 201 and CHEM 207 or permission of instructor. S. Mahlburg Kay.
Examination of minerals by hand-specimen properties and optical microscopy. Geological setting, classification and structures, phase relations, chemical properties, and physical properties of minerals are covered. X-ray diffraction is introduced. Includes an independent research project.

EAS 356 Petrology and Geochemistry
Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay.
Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. Also covers the petrological evolution of the planets.

EAS 375 Sedimentology and Stratigraphy
Fall. 4 credits. Prerequisite: EAS 101 or 201. J. L. Cisne.
Covers formation of sedimentary rocks; depositional processes and environments; correlation of strata in relation to time and environment; petrology of sandstones and limestones; geological age determination; reconstruction of paleogeography and interpretation of Earth history from stratigraphic evidence; and organization of strata in stratigraphic sequences.

EAS 386 Geophysics and Geotectonics
Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. B. L. Isacks.
Covers global tectonics and the deep structure of the solid earth as revealed by investigations of earthquakes, earthquake waves, the Earth's gravitational and magnetic fields, and heat flow.

EAS 411 Satellite Remote Sensing in Geosciences
Fall. 3 credits. Prerequisite: permission of instructor. L. D. Brown.
Instruction in satellite remote sensing, image processing, geographic information systems (GIS), and analysis or digital elevation models using advanced computer workstations via participation in current research on earthquakes, glaciers, and tectonics.

EAS 417 Field Mapping in Argentina
Summer. 3 credits. Prerequisites: EAS 210 and 326; Spanish desirable, but not required. S. Mahlburg Kay.
Modern techniques of geological mapping applied in the region of San Juan, Argentina, including field mapping and map-aided sedimentary rock units of the Andean Precordillera (San Juan River section), intensively deformed Precambrian metamorphic rocks of the Pampean Ranges (Pie de Palo), and shallow-level intrusive plutons (Cerro Blanco-Ullun).

EAS 423 Petroleum Geology
Introduction to hydrocarbon exploration and development. Covers exploration techniques, including well logs, fluid pressures, seismic-reflection methods, gravity, and magnetic measurements to map subsurface structures and stratigraphy. Also covers: petroleum origin and migration; dispersal systems and depositional patterns of petroleum reservoirs; economics of exploration, leasing, drilling, and production; and techniques for evaluating petroleum reserves, including tar sands and oil shales.

EAS 434 Reflection Seismology
Spring. 4 credits. Prerequisites: MATH 192 and PHY 208, 213, or equivalent. L. D. Brown.
Fundamentals of subsurface imaging by multichannel seismic reflection techniques as used in oil exploration and geohydrological investigations. Covers survey design, acquisition, analysis, processing, and interpretation in both 2-D and 3-D. Includes discussion of related techniques such as seismic refraction analysis, tomographic inversion, vertical seismic profiling, shear wave exploration, and ground penetrating radar. Lab is keyed to state-of-the-art seismic imaging software from LandMark.

EAS 435 Statistical Methods in Meteorology and Climatology
Fall. 3 credits. Prerequisites: EAS 101. D. Wilks.
Statistical methods used in climate estimation, operational weather forecasting, and selected meteorological applications. Includes some statistical characteristics of meteorological data including probability distributions and correlation structures. Covers operational forecasts derived from multiple regression models including the NARR system. Also covers forecast verification techniques and scoring rules, time series analysis, EOFs, and other research topics as time permits.

EAS 437 Geophysical Field Methods
Fall. 3 credits. Prerequisites: PHYS 213 or 208, or permission of instructor. L. D. Brown.
Introduction to field methods of geophysical exploration, especially as applied to environmental issues. Emphasis is on seismic, ground penetrating radar, gravity, and magnetic techniques. Field surveys carried out at the beginning of the semester are analyzed and interpreted. A field companion to EAS 436, which is recommended but not required prior to this course.

EAS 445 Geohydrology (also ABEN 471 and CEE 431)
Fall. 3 credits. Prerequisites: MATH 294 and ENGR 202. Not offered 2001-2002.
Intermediate- to advanced study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

EAS 447 Physical Meteorology
Fall. 3 credits. Prerequisite: 1 year each of calculus and physics. M W F 10:10. Offered alternate years. A. T. DeGaetano.
Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, solar and terrestrial radiation, and principles of radar probing of the atmosphere.

EAS 449 Physical Meteorology II
Fall. 3 credits. Prerequisites: EAS 341 and 342. Lecs, T R 9:05; lab, M 1:25-3:20.
S. J. Colucci.
Structure and dynamics of large-scale midlatitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes and precipitation. Laboratory sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale midlatitude weather events.

EAS 453 Advanced Petrology
Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years. Not offered 2001-2002.
R. W. Kay.
Magmas and metamorphism in the context of plate tectonics. Major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks. Temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems.

EAS 455 Geochemistry
Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended: EAS 356. Offered alternate years.
W. M. White.
The Earth from a chemical perspective. Covers the formation of the elements, cosmochronology, chemical evidence regarding the formation of the Earth and solar system; trace-element geochemistry; isotope geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemistry of rivers and the oceans; hydrothermal systems; and ore deposition.
EAS 456 Mesoscale Meteorology  
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. T R 11:40-12:55. Offered alternate years. J. J. Colucci.  
Structure and dynamics of midlatitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms.

EAS 457 Atmospheric Air Pollution  
Fall. 3 credits. Prerequisites: EAS 341 or 1 course in thermodynamics, and 1 semester of chemistry, or permission of instructor. M W F 11:15-12:05. Offered alternate years.  
Not offered 2001–2002. M. W. Wysocki. Course examines sources, effects, transport, measurement, and controls of air pollution. The basic principles in each area are discussed with an emphasis on their local, regional, and global impacts.

EAS 458 Volcanology  

EAS 462 Marine Ecological Processes (also BIOEE 462)  
Spring. 3 credits. Limited to 75 students. Prerequisites: BIOEE 201. Offered alternate years. Not offered 2001–2002. C. D. Harvell and C. H. Greene. Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

EAS 475 Special Topics in Oceanography  
Spring, summer. 2-5 var. credits. Prerequisites: EAS 104 or BIOEE 154, and permission of instructor. C. H. Greene. Undergraduate instruction and participation in advanced areas of oceanographic research. Topics will change from term to term. Contact instructor for further information.

EAS 476 Sedimentary Basins: Tectonics and Mechanics  
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. T. E. Jordan. Subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Course covers interactions of subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences. Also covers stratigraphic characteristics of active-margin, passive-margin, and cratonic basins. Geophysical and stratigraphic modeling; sequence stratigraphy. Uses modern and ancient examples.

EAS 478 Advanced Stratigraphy  
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. T. E. Jordan. Course covers modern improvements on traditional methods of study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Introduces techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Physical, chemical, clastic, and organic techniques, and time resolution in sedimentary rocks are considered as are, physical controls on the stratigraphic record, and numerical modeling.

EAS 479 Paleobiology (also BIOEE 479)  
Fall. 4 credits. Prerequisites: 1 year of introductory biology for majors and either BIOEE 274, 275, EAS 375, or permission of instructor. W. Alhadeff. A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgounds of Earth and atmospheric science students concerning the nature and significance of the fossil record for their respective studies.

EAS 481 Senior Survey of Earth Systems  
Fall. 3 credits. Limited to seniors majoring in geological science. J. M. Bird. A survey course that integrates undergraduate course work, intended to enhance overall understanding of geological sciences. Emphasis is on current models of the dynamic systems (e.g., global climate change, mantle evolution). Utilizes guest lecturers; synthesis and review of literature; scientific literature readings; discussions; and student presentations.

EAS 483 Environmental Biophysics (also CSS 483)  
Spring. 3 credits. Offered alternate years. Prerequisites: EAS/CSS 260 or equivalent, or permission of instructor. M W F 11:15. Not offered 2001–2002. S. J. Riba. Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum are covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problem sets.

EAS 491-492 Undergraduate Research  
Fall, spring. 1 to 4 credits. Staff. Introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with, and guided by, a staff member. A short written report is required, and outstanding projects are prepared for publication.

EAS 494 Special Topics in Atmospheric Science (undergraduate level)  
Fall or spring. 8 credits maximum. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. The same course is not offered more than twice.

EAS 496 Internship experience  
Fall or spring. 1-2 credits. S-U grades only. Staff.

EAS 497 Individual Study in Atmospheric Science  
Fall or spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form. Staff. Topics are arranged at the beginning of the term for individual study or for group discussions.

EAS 498 Teaching Experience in Atmospheric Science  
Fall or spring. 1-5 credits. S-U grades optional. Students must register with an Independent Study form. Staff. Teaching experience is obtained by assisting in the instruction of an atmospheric science course.

EAS 499 Undergraduate Research in Atmospheric Science  
Fall or spring. Credit by arrangement. Students must register with an Independent Study form. Staff. Independent research on current problems in atmospheric science.

EAS 500 Design Project in Geohydrology  
Fall, spring. 3-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over 2 or more semesters. L. M. Cathles. The project may address one of the many aspects of groundwater flow and contamination, and must involve a significant geologic component and lead to concrete recommendations or conclusions that will be of engineering nature. Results are presented orally and in a professional report.

EAS 502 Case Histories in Groundwater Analysis  
Spring. 4 credits. L. M. Cathles. Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, analyzed in depth. Geologic and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes a part of a final report. Results are presented in a half-day seminar at the end of term.

EAS 622 Advanced Structural Geology I  
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger. Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement; microstructure, preferred orientation, and TEM analysis; and pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.

EAS 624 Advanced Structural Geology II  
EAS 628 Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor. J. M. Bird.
A seminar course in which students study specific geologic topics of an orogenic belt selected for study during the term. The course is intended to complement EAS 681.

EAS 634 Advanced Geophysics II: Fractals and Chaos in Geology and Geophysics
Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. Not offered 2001–2002. D. L. Turcotte.
Course covers: definitions of fractal sets and statistical fractals, scale invariance, self-affine fractals, multifractals, applications to fragmentation, seismicity and tectonics, petroleum distribution and reserves, ore grade and tonnage, drainage networks and landforms, and floods and droughts. Definitions of chaos and self-organized criticality, renormalization groups, diffusion limited aggregation and percolation clusters, wavelet transforms, applications to mantle convection, the Earth’s dynamo, and distributed seismology.

EAS 635 Advanced Statistical Meteorology
Fall. 3 credits. Prerequisites: coursework in or elementary knowledge of statistics, calculus, maxima algebra, and computer programming. Lec. T R 10:10-11:25, R 11:35-12:05, D. S. Wilks.
Lectures and topics concurrent with EAS 435, plus an extra 30-minute session per week in which selected topics from EAS 435 are treated in more depth, and additional topics are covered which may vary from year to year according to student interest. A term project is required. Not open to students who have taken EAS 435 for credit.

EAS 636 Advanced Geophysics II: Quantitative Geodynamics
Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. Not offered 2001–2002. D. L. Turcotte.
Stress and strain in the Earth, elasticity and flexure, heat transfer, gravity, fluid mechanics, rock rheology, faulting, chemical geodynamics, flow in porous media.

EAS 641 Analysis of Biogeochemical Systems
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. Next offered 2002–2003. L. A. Derry.
Covers: dynamics of biogeochemical systems. Kinetic treatment of biogeochemical cycles. Box models, residence time, response time. Analytical and numerical solutions of model systems. Eigen-analysis of linear systems. Feedback and nonlinear cases, problems of uncertainties in natural systems. Modeling software such as Stella II and Matlab; applications to current research of participants or from recent literature.

EAS 651 Advanced Atmospheric Thermodynamics (also ASTRO 651)
A survey of the fundamental physical processes in atmospheres. Topics include thermodynamics of atmospheric gases, moist effects, hydrostatics, convective instability, atmospheric radiation and radiative heating, radiative-convective equilibrium, clouds, cloud microphysics, and precipitation processes. Thermal structure and greenhouse effects on the Earth and other planets is discussed. The course is taught at the level of Fundamentals of Atmospheric Physics by Salby.

EAS 652 Advanced Atmospheric Dynamics (also ASTRO 652)
Course covers quasigeostrophic theory, atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and other topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

EAS 655 Isotope Geochemistry
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years. W. M. White.
Nucleosynthetic processes and the isotopic abundance of the elements. Geochronology and cosmochronology using radioactive decay schemes, including U-Pb, Rb-Sr, Sm-Nd, K-Ar, U-series isotopes, and cosmogenic isotopes such as 14C and 36Cl. Use of radiogenic and stable isotopes in petrology and their application to study of the evolution of the crust and mantle. Isotopic evidence regarding the formation of the Earth and the solar system. Stable isotopes and their use in geothermometry, paleogeology, and the global climate system.

EAS 675 Modeling the Soil-Plant-Atmosphere System (also CSS 675)
Spring. 3 credits. Prerequisites: EAS/CSS 483 or equivalent. T R 11:40-12:55. Offered alternate years. S. J. Riha.
Introduction to the structure and use of soil-plant-atmosphere models. Topics covered include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation is discussed.

EAS 681 Geotectonics
Fall. 3 credits. Prerequisite: permission of instructor. J. M. Bird.
Theories of orogeny; ocean and continent evolution. Kinematics of lithosphere plates. Rock-time assemblages of modern oceans and continental margins, and analogs in ancient orogenic belts. Time-scale reconstructions of specific regions. Also covers problems of dynamic mechanisms—corollaries and evidence from crustal features.

EAS 692 Special Topics in Atmospheric Science
Fall or spring. 1-6 credits. S-U grades optional. Staff.
Study of topics in atmospheric science that are more specialized or different from other courses. Special topics to be covered depend on staff and student interests.

EAS 695 Computer Methods in Geological Sciences
Fall, spring. 3 credits. L. Brown and B. L. Isacks.
Independent research projects using modern computational resources in the Department of Earth and Atmospheric Sciences. Possibilities include: image and seismic processing, seismic and geomechanical modeling, GIS, use of interpretational workshops for 3-D seismics and satellite imagery, modeling fluid flow through complex media.

EAS 700-799 Seminars and Special Work
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff.
Advanced work on original investigations in earth and atmospheric sciences. Topics change from term to term. Contact appropriate professor for more information.

EAS 722 Advanced Topics in Structural Geology
R. W. Allmendinger.

EAS 731 Plate Tectonics and Geology
J. M. Bird.

EAS 733 Fractals and Chaos—Independent Studies

EAS 751 Petrology and Geochemistry
S. Mahlburg Kay and R. W. Kay.

EAS 753 Advanced Topics in Mineral Physics

EAS 755 Advanced Topics in Petrology and Tectonics
J. M. Bird.

EAS 757 Current Research in Petrology
S. Mahlburg Kay and R. W. Kay.

EAS 762 Advanced Topics in Petroleum Exploration

EAS 771 Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

EAS 773 Paleobiology
J. L. Cisne.

EAS 775 Advanced Topics in Oceanography
Spring. C. H. Greene.

EAS 780 Earthquake Record Reading
Fall. M. Barazangi.

EAS 781 Geophysics, Exploration Seismology
L. D. Brown.

EAS 783 Advanced Topics in Geophysics
B. L. Isacks.

EAS 789 Lithospheric Seismology (COCORP Seminar)
L. D. Brown.

EAS 793 Andes-Himalaya Seminar

EAS 795 Low Temperature Geochemistry
L. A. Derry.

EAS 796 Geochemistry of the Solid Earth
W. M. White.

EAS 797 Fluid-Rock Interactions
L. M. Cathles.
EAS 799 Soil, Water, and Geology Seminar
L. M. Cattles and T. S. Steenhuis.

EAS 850 Master's-Level Thesis Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students in the master's program in atmospheric science.

EAS 950 Graduate-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty. Limited to students in the atmospheric science Ph.D. program only before the "A" exam has been passed.

EAS 951 Doctoral-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy in the atmospheric science Ph.D. program after the "A" exam has been passed.

EDUCATION

EDUC 005 Basic Review Mathematics
Fall and spring. 3 credits (this credit is not counted toward the 120 credits required for the degree). Lecs, M W F 8:00 or 9:05. J. J. Lo.
Review of concepts necessary for success in basic mathematics and statistics courses.
Topics include problem solving, graphing, basic algebra skills, linear and quadratic functions, polynomial equations, exponents and logarithms, and trigonometry. Considerable emphasis is placed on learning mathematics for understanding and solving word problems.

EDUC 100 Multiculturalism in Education
Fall. 3 credits. M W F 10:10–11:25. S. Kroma.
Should schools provide mandatory bilingual education programs to non-English speaking students? Should the United States adopt an "English Only" official language policy? Should Kwanza be celebrated as a public holiday? These are some of the many questions that challenge the notion of "cultural unity" one expressed as the "melting pot." In this course students develop writing skills as they explore the forces responsible for our cultural diversity and the changing perspectives on our "cultural unity." Through writing activities, students learn to critically examine the historical, political, and legal contexts of this diversity and to analyze their own views on the competing public positions that multicultural education issues arouse.

EDUC 101 Introduction to Education
An introduction to the field of education that is structured around an examination of three contemporary policy issues. The issues are chosen to help students understand important aspects of formal schooling systems (e.g., the public schools, colleges, and universities) as well as nonformal educational activities (e.g., adult education, extension education, and community education). The course is team-taught by two members of the faculty and is designed for students seeking a self-contained introduction to education that can also lead to additional study in the field.

EDUC 115 Introductory College Mathematics
Fall and spring. 4 credits. M W F 11:15 or 12:20. J. J. Lo.
Designed for students wishing to fulfill distribution requirements and/or prepare for study in calculus. The course offers a multi-representational approach to college-level precalculus mathematics, stressing conceptual understanding, problem solving, and applications in a technology-enhanced environment. Considerable emphasis is placed on numerical, graphical, and symbolic representations of functions and their transformations. Students use graphing calculators in a collaborative lab setting.

EDUC 120 Education for Empowerment
Common themes running through the modules include human learning, teaching strategies, and political/social/economic factors affecting education. The course provides an opportunity to sample different areas of study and to gain knowledge and awareness of one's own educational processes.

EDUC 210 Psychology of Learning and Memory
Fall. 3 credits. Prerequisite: introductory psychology. W 2:00–4:25; plus time TBA. Not offered 2001–2002. J. A. Dunn.
This course deals with contemporary theories of learning, issues in the study of learning, and application of the principles of learning to the management of teaching and learning. Practical applications of research findings are emphasized. One or more experimental projects and the use of microcomputers is required.

EDUC 220 Community Learning and Service Projects in the Field
A lecture/discussion survey of the psychological foundations of educational practice. Topics include the selective contributions of developmental, social, and experimental psychology, including instructional technology, to American educational practice. Standards of programs for each module. Course activities include field observations and experiences during arranged times.

EDUC 221 Psychological Foundations of Education
A lecture/discussion survey of the psychological foundations of educational practice. Topics include the selective contributions of developmental, social, and experimental psychology, including instructional technology, to American educational practice. Standards of programs for each module. Course activities include field observations and experiences during arranged times.

EDUC 240 The Art of Teaching
Fall and spring. 3 credits. Fall; M 12:20–2:15 or T 2:30–4:25; W 12:20–2:15 or 2:30–4:25. Spring; M 8:00–9:55, W 12:20–2:15 or 2:30–4:25. Staff, fall; spring, G. J. Posner and staff.
This course is designed for all students interested in finding out more about teaching. Students engage in field experiences to find out what teaching involves. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and vocational areas, and from school-based to non-school-based. Class work builds on those experiences and provides skills and concepts to make the field experiences more profitable.

EDUC 271 Sociology of Education
An introduction to the sociological study of schooling and education. Topics include the effects of social factors on educational achievement, the norms and values learned as part of the process of schooling, the relations between students and teachers, and the school's relations to the economic and political systems. All levels of education, from elementary school to the university, are considered.

EDUC 311 Educational Psychology
This course applies psychological concepts to educational settings with a focus on understanding the interaction between people, context, and knowledge in schools and other learning environments. It examines education as a social, moral, and interpersonal enterprise that respects differences between individuals. This course is designed to foster effective teaching and learning across the life span, but has a focus on secondary education.

EDUC 317 Psychology of Adolescence
Spring. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W F 11:15–12:05; Friday morning section TBA. D. E. Schrader.
This course surveys the nature of adolescent cognitive, social, moral, and self-development. Theories of adolescence are examined in the context of real-life experiences of adolescents using case analysis as a methodological tool. Educational implications are discussed for both formal and informal settings.

EDUC 331 Careers in Agriculture, Extension, and Adult Education
Fall. 1–3 credits. Letter grade only. F 2:00–4:25. D. E. Foster, and G. J. Applebee.
This course offers modules in three areas of teaching: Adult Education, Cooperative Extension, and Agricultural Education. Each module focuses on a one hour of credit, and students may take one or more of the modules. The course provides an historical perspective and an introduction to the organization and scope of programs for each module. Students examine career opportunities and characteristics of the professions addressed by each module. Course activities include field observations and experiences during arranged times.
EDUC 332 Instructional Methods in AgriScience Education
Spring. 3 credits. Prerequisite: enrollment in a Cornell teacher education program or permission of instructor. R 2:00-4:25. C. A. Conroy.

Selection, practice, and evaluation of methods in AgriScience education are stressed. The course offers a modular approach to focus on teaching strategies and methodology unique to teaching in schools. Content includes program planning (Module I), experiential learning (Module II), and youth leadership (Module III). All students must enroll for one credit in Module I; students may be exempt from Modules II and III with permission of instructor. Participants are required to participate in field experiences at arranged times.

[EDUC 335 Youth Organizations]

Visionary, creative, and competent leaders are essential for youth organizations. Class participants learn how to facilitate both youth and adult volunteer leadership development. They examine factors affecting membership, purposes, design, operation, and administration of youth organizations. The course provides students with in-depth learning-by-doing experience of how youth organizations function. Field experience with a recognized youth organization is required.

EDUC 370 Issues in Educational Policy
Spring. 3 credits. T R 10:10-11:25. Staff. An examination of selected policy issues in current education. Included are such topics as equality of educational opportunity; student, parent, and teacher rights; and educational politics. Issues are treated from legal, sociological, and economic perspectives. Meets group C requirements for College of Agriculture and Life Sciences.

EDUC 378 Political Economy of Education
Fall. 3 credits. S-U grades optional. T R 1:25-2:40. Staff. A policy oriented examination of educational systems with an emphasis on political and economic perspectives. Attention is paid to both external and internal aspects of educational activities. Specific topics include the changing contributions of education to earnings, school-community relations, power within educational organizations, the impact of technology in the workplace and in classrooms, and the sources and impact of educational costs. A variety of education settings are examined including higher education and non-formal education.

EDUC 380 Independent Honors Research in Social Science
Fall or spring. 1-6 credits. Limited to students who have met requirements for the honors program. S-U grades optional. A maximum of 6 credits may be earned in the honors program. Staff.

EDUC 401 Our Physical Environment
Fall. 3 credits. Prerequisite: permission of instructor. Charge for laboratory supplies, approximately $7. T 1:25-4:25. V. N. Rockcastle.

A practical, relatively nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science. Attention is paid to analysis for understanding and techniques for teaching. An individual research project is included. Useful for teachers, environmental educators, and those for whom physical science seems difficult or uninviting.

EDUC 402 Knowing and Learning in Science, Mathematics, and Agriscience
Fall. 4 credits. Prerequisite: enrollment in a Cornell teacher education program or permission of instructor. M W 2:30-4:20. D. J. Trombull.

Students examine both current notions in the history and philosophy of science that explain how knowledge within a discipline develops and current theory and research that examines the individual's acquisition of knowledge. This material serves as a basis for students' individual research projects investigating neophytes' knowledge of science and mathematics concepts. All students enrolled must complete fieldwork. Fieldwork comprises a minimum of three hours a week in an appropriate educational setting.

EDUC 403 Observing and Teaching Science, Mathematics, and Agriscience
Spring. 4 credits. Prerequisites: EDUC 402, enrollment in a Cornell teacher education program or permission of the instructor. C. A. Conroy.

Designed for prospective secondary teachers, this course provides a multi-perspectives orientation to the culture of schools and the work of teaching science and mathematics. Students spend six to eight hours each week observing in area schools. Students also plan and teach innovative lessons in the scheduled teaching laboratory. Includes readings and discussions planning, delivery, and evaluation of instruction. Classroom management, and other issues such as equity, tracking, and classroom language.

[EDUC 413 Psychology of Human Interaction]

Designed to develop skills for, and understanding of, interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources.

[EDUC 414 Counseling Psychology]

The processes of counseling are examined from various theoretical perspectives. Typical counseling issues are examined, and implications are drawn for counseling strategies, including psychological assessment, establishing therapeutic goals, intervention strategies, and evaluation of outcomes.

EDUC 420 Field Experience
Fall or spring. 1-4 credits. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade. Staff.

Students may engage in planned, semi-professional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate their field experience.

EDUC 441 Language Acquisition, Literacy, and Schooling
Spring. 4 credits. Prerequisites: education majors or permission of instructor. M W 8:40-9:55; lab, TBA. S. Kroma.

This course examines current research, policy, and practice relating to the acquisition of first and second languages, the dynamics of literacy in school contexts, and the development of academic literacy. Emphasis is placed on understanding the processes by which the language arts (listening, speaking, reading, and writing) progress in first and second languages, and the roles they play in academic development. Students spend two out-of-class hours per week working together or literacy development settings and undertake practical projects involving analyses of second language performance, writing, or oral reading behavior.

EDUC 445 Curriculum Design Workshop
Summer. 3 credits. G. J. Posner.

A general practical approach to course planning. Readings, group discussions, workshops, and individual conferences centering on each student's project. This project consists of designing a course in a subject area for an age level and an institutional setting of the student's choosing.

EDUC 447 Curriculum Design Laboratory: A Technology-Intensive Course
Spring or summer. 3 credits. Staff.

A project-focused introduction to course design, from needs assessment, through materials development, to the evaluation of student outcomes. The course involves the creation and implementation of an actual curriculum, and the nature of the project varies from year to year. Students are expected to make extensive use of computer software writing, design, management, and communications. The summer section of 447 is smaller and rather than working on a single class project, students undertake curriculum development projects of their own design.

EDUC 459 Education in Africa and the Diaspora (also AS&RC 459)

This course deals with educational innovations geared to promoting equal opportunity based on gender, race, and class in Africa and the African Diaspora. After an introduction on the concepts and innovations and the stages of innovation as planned by the course, the course focuses on concrete cases and different types of educational innovations. The selected case studies, in the United States, include the creation and expansion of historically black institutions with a focus on Tuskegee Institute (now Tuskegee University), Lincoln University, Spelman College, and the Westside Preparatory School in Chicago. The African cases to be studied include African languages for teaching in Nigeria and science education in Nigeria. Ujamaa and education for self-reliance in Tanzania, television as a medium of instruction and technological innovation in Côte d'Ivoire, classroom action research in Lesotho, and higher education and distance learning in South Africa.
EDUC 463  Policy Issues in Distance Learning in Developing Countries  
Spring. 3 credits. S-U grades optional. T 2:00–4:25. N. Assié-Lumumba.  
Distance Learning is being increasingly adopted to respond to the high demand for  
education in developing countries. This course critically analyzes distance education for the  
general population as well as specific social and professional categories. A typology of the  
ICTs (Information and Communication Technologies) used and the different forms of  
virtual learning institutions are examined.

EDUC 472  Philosophy of Education  
Fall. 3 credits. T 2:30–4:25. Staff.  
A study of central issues in the philosophy of education. Questions of ethics, political  
philosophy, and the theory of knowledge are examined and linked to current educational  
issues.

EDUC 477  Law and Educational Policy  
Fall. 3 credits. M 3:45–4:25. Staff.  
A study of recent federal court decisions concerning education. Emphasis is on  
examining legal issues against a background of related educational issues and in terms of  
the consequences of legal decisions for the development and operation of educational  
institutions.

EDUC 480  Global Seminar: Environment and Sustainable Food Systems (also  
ALS 480 and INTAG 480)  
Spring. 1–3 credits. Prerequisite: juniors, seniors, and graduate students. Letter  
Literature on comparative adult education, programs in countries around the world.  
Exploration of selected topics in environmental science and environmental science  
education. This course critically analyzes distance education for the education in developing countries. This course critically analyzes distance education for the general population as well as specific social and professional categories. A typology of the ICTs (Information and Communication Technologies) used and the different forms of virtual learning institutions are examined.

EDUC 497  Individual Study in Education  
Fall or spring. 1–3 credits. S-U grades optional. Students must register with an  
Independent Study form (available in 140 Roberts Hall). Hours TBA. Staff.  
A student may, with approval of a faculty adviser, study a problem or topic not covered in  
a regular course but may undertake tutorial study of an independent nature in an area of  
educational interest.

EDUC 498  Undergraduate Teaching  
Fall or spring. 1 or 2 credits; 4 credits maximum during undergraduate career.  
Limited to students with GPA of at least 2.7. S-U grades optional. Students must register  
with an Independent Study form (available in 140 Roberts Hall). Hours TBA. Staff.  
Participating students assist in teaching a course allied with their education and  
experience. Students are expected to meet regularly with a discussion or laboratory  
section, to gain teaching experience, and to regularly discuss teaching objectives,  
techniques, and subject matter with the professor in charge.

EDUC 499  Undergraduate Research  
Fall or spring. 6 credits maximum during undergraduate career. Not open to  
students who have earned 6 or more undergraduate research credits elsewhere in  
the college. Limited to juniors and seniors with GPAs of at least 2.7. Students  
must register with an Independent Study form (available in 140 Roberts Hall). Hours  
TBA. Staff.  
Affords opportunities for students to carry out independent research under appropriate  
supervision. Each student is expected to review pertinent literature, prepare a project  
outline, conduct the research, and prepare a report.

EDUC 502  Education and Development in Africa (also AS&RC 502)  
In the 1950s and 1960s, human capital theory that emphasized the importance of formal  
education for achievement of full productive potential of individuals and economic growth  
and development of countries enjoyed a renewed popularity. African countries  
promoted education expansion with the expectation that it would lead to socio-  
economic development. The initial euphoria, however, was followed by skepticism and  
then disillusion. Education, as it was being organized, delivered, received, and utilized  
began to be perceived even as a hindrance to development. This course examines the  
relationship between formal education and individual and national development. Different  
paradigms of development, including modernization, dependency theories, and  
Third World Forum are examined. Issues discussed include education and schooling,  
the role of primary, secondary, and higher education in development, the problems of  
employment, language, equity in access, and results based on social class, ethnicity, race,  
and gender. Endogenous knowledge, new perspectives for relevant education, and the  
role of international organization and cooperation are also discussed.

EDUC 507  Environmental Inquiry (also NTRES 507)  
Summer. 1–3 credits. S-U grades optional. Prerequisite: limited to preservice or  
service secondary science teachers. Permission of the instructor required. M. E. Kransy.  
Exploration of selected topics in environmental science and environmental science  
education at the secondary school level. The subject matter focus varies from year to year,  
and tracks ongoing research and development conducted through Cornell's Environmental  
Inquiry project, a collaboration between the Departments of Education and Natural  
Resources and the Center for the Environment. Current work centers on watershed  
dynamics, biodegradation, environmental toxicology, and invasive species.

EDUC 513  Interpersonal Interaction  
Summer. 1–2 credits. D. E. Hedlund.  
Designed to develop skills for an understanding of effective interpersonal communication  
and interaction. Appropriate for students in the helping professions, education, and areas  
involving management of human resources. A workshop design is required for the second  
credit. Participants must bring a tape recorder to class.

EDUC 523  Food and Fiber Across the Curriculum  
Summer. 0–3 credits. J. Hawkes.  
An intensive five-day course designed to help New York State elementary teachers and  
administrators implement the New York Agriculture in the Classroom Program and  
understand the complexity of New York's leading industry. Participants learn how  
instructional materials and experiences with our food-fiber system can be used to teach  
students language arts, mathematics, science, and social studies. One credit is earned by  
class attendance and participation. Two credits require one additional project. Three credits  
require two additional projects.

EDUC 548  Effective College Teaching  
Spring. 1–3 credits. S-U grade option. T 5:00–7:00. D. Way.  
This course is designed to help participants become more effective college teachers. It  
examines the basic principle of learning, identifies different teaching methods, and  
explains a variety of teaching techniques, methods, and technologies. Participants also  
learn how to design a course and improve their effectiveness as teachers.

EDUC 578  International TA Training  
Course: Cross-Cultural Classroom Dynamics, Pronunciation, and Language, Video Teaching  
Practicum  
Fall and spring. 2 credits. S-U only. TBA.  
Designed for first-time international teaching assistants from countries in which English is  
not the primary language, the ITATP course focuses on three areas: cross-cultural  
dynamics, pronunciation, and language—enhancing communicative competence in English.  
Through small group seminars and individual conferences, the ITATP helps international  
TA's develop their linguistic and pedagogical skills as they gain sensitivity to the dynamics of  
U.S. classrooms.
EDUC 601 Secondary Agriculture, Science, and Mathematics Teaching Practicum
Fall or spring. 6 credits. Prerequisite: permission of instructor. Letter grades only. For graduate students enrolled in the Teacher Education in Science and Mathematics Program. M T W R F 8:00-9:50. C. A. Conroy, S. C. Piliero, G. J. Posner, A. Solomon, and D. J. Trumbull. Supervised student teaching in science or mathematics at the secondary level. Program includes teaching in a local school for ten weeks.

EDUC 602 Teaching Agriculture, Science/Mathematics: Methods, Materials, Practice
Fall or spring. 9 credits. Prerequisite: concurrent enrollment in EDUC 601 or permission of instructor. M T W R F 9:00-11:50. Staff. The course begins with full day sessions of intensive consideration of theoretical frameworks relevant to all aspects of student teaching. Assignments and a weekly seminar during the semester require students to use those theories to develop and evaluate teaching materials and practices. Students complete an extensive portfolio documenting their work.

[EDUC 606 Seminar in Science and Mathematics Education
Fall. 1 credit. S-U grades only. T 4:30-5:30. Not offered 2001-2002. Staff. Explores topics in science and mathematics education. The focus of the seminar changes each year.]

EDUC 609 Methods for Interpretive Research
Spring. 3 credits. Prerequisite: course in research methods or measurement or permission of instructor. T R 2:55-4:10. D. J. Trumbull. This course examines some of the methods of educational interpretive research. An interpretive research perspective attends to the complex interactions between researcher, researched, and context and the centrality of interpretation in the conduct of human affairs. This perspective imposes some unique demands on researchers wishing to justify the quality of their projects. In the class, students practice methods for gathering and interpreting data by conducting a small project using methods as they relate to the aims and assumptions of interpretive research.

EDUC 611 Educational Psychology
Fall. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W 11:15-12:05. R. E. Ripple. A basic survey course for graduate students (selected undergraduates admitted with permission). Emphasis is on psychological factors involved in human learning and the educational process. Set in a broad-based conceptual model of any behavioral setting for learning. A life span developmental approach is used, appropriate for those seeking an introduction to educational psychology or a refresher course in contemporary educational psychology.

EDUC 614 Gender, Context and Epistemological Development (also WOMNS 624
Fall. 3 credits. S-U grades optional. M 12:20-2:15. D. E. Schrader. Insight into how individuals make sense of knowledge is essential to teaching and learning. This course examines theories of intellectual development and their implications for educating students of various age groups, particularly college students. The role of reflection on thinking (metacognition) and its impact on development of thought is explored.

EDUC 615 Self and Interpersonal Development and Education (also WOMNS 625)
Spring. 3 credits. S-U grades optional. M 12:20-2:15. Offered alternate years. D. E. Schrader. Interpersonal interactions affect teaching and learning. This course takes a life-span perspective as it explores constructive-developmental theories of self and others, the influence of gender, and how such theories explain students' understanding of their own and others' actions in educational contexts.

EDUC 620 Internship in Education
Fall or spring. 1-6 credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work. Staff. An opportunity for practical experience in educational professions development.

[EDUC 621 Work-Experience Coordinator Certification Course I
Summer. 3 credits. S-U grades optional. Not offered 2001-2002. D. E. Foster. The first of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. The course focuses on the history and philosophy, types, operation, and evaluation of work-experience programs including articulation with JPTA and VESID. Field interviews are required. A prerequisite for Course II, EDUC 622.]

[EDUC 622 Work-Experience Coordinator Certification Course II
Summer. 3 credits. Prerequisite: EDUC 621 Work-Experience Certification Course I. Not offered 2001-2002. D. E. Foster. The second course for certification as a diversified cooperative work experience coordinator combines course work and directed field experience leading to the planning, development, and approval of a work-experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval required.]

EDUC 624 Gender, Context and Epistemological Development (also WOMNS 624)

EDUC 632 Teaching Agricultural, Extension, and Adult Education
Summer. 3 credits. Prerequisite: an introductory course in teaching methods or permission of instructor. Hours TBA. C. A. Conroy. The focus of the course is on the selection, use, and evaluation of methods and materials for teaching. Methods for group and informal instruction are covered. Opportunity is provided for students to develop teaching competence based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the development of instructional materials is required.

EDUC 633 Program Planning in Agriculture, Extension, and Adult Education
Spring. 3 credits. S-U grades optional.LEC, R 2:00-5:00. A. Wilson. Current social and economic conditions affecting agricultural, extension, and adult education are examined. Principles, objectives, strategies, and sources of information are applied to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education and to pursue individual interests in program development and improvement.

EDUC 635 Experiential Learning
Fall. 2 credits. Prerequisite: open to undergraduates with permission of instructor. S-U grades optional. T 12:20-2:15. Not offered 2001-2002. Staff. Participants explore various dimensions of scholar and practitioner thinking about the understanding and practice of experiential learning. Theoretical perspectives on experiential education, reflective practice, and a critical learning systems perspective are explored through readings and applied assignments. The instructor introduces methods of facilitation designed to encourage inquiry and dialogue for improvement of both nonformal and formal educational activities. The course process is intended to engage participants in reflective dialogue—nurturing emergence of learning community elements.

EDUC 644 Curriculum Theory and Analysis
Spring. 3 credits. M 1:25-4:25. Not offered 2001-2002. G. J. Posner. An examination of the basic elements involved in making curriculum decisions and an analysis of current approaches to curriculum. The course focuses on the assumptions underlying any curriculum. The major task of each student is to choose and conduct an in-depth analysis of a curriculum. This course is the basic graduate course in curriculum.

EDUC 661 Administration of Educational Organizations
Fall. 3 credits. R 3:55-6:00. J. W. Sipple. Perspectives on the administration of educational organizations. Consideration of social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of educational organizations.
EDUC 664 Educational Finance
Fall. 3 credits. S-U grades optional. W 3:35-6:00. Not offered 2001-2002. Staff. An analysis of the distribution and use of public and private resources for educational purposes. Discussion revolves around the issues of equity, efficiency, and freedom of choice. Alternative methods of financing schools are evaluated, and the perplexing legal and moral issues raised by such questions as "Who pays?" and "Who benefits?" are discussed. Specific attention is given to budgeting, accountability, and productivity. An opportunity for individuals to focus on their own areas of interest, such as occupational education in K-12, higher education and nonformal education.

EDUC 665 Administrative Decision Making
Spring. 3 credits. S-U grades optional. W 3:35-6:00. Staff. An introduction to decision-making theory and its relevance to the field of educational administration. Special applications are made to the study and improvement of productivity in educational systems. A wide variety of educational settings are considered, including K-12, higher education and nonformal education.

EDUC 660 Foundations of Extension Education
Fall. 3 credits. Limited to 20 students. S-U grades optional. R 3:35-6:00. A. Wilson. An analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Definitions, conceptual controversies, philosophical issues, and current research directions are examined through a seminar approach.

EDUC 682 Community Education and Development
Fall. 3 credits. Limited to 25 students. Letter grade only. M 1.25-4.25. S. Peters. An examination of the concept of community; changes in community life; the analysis of community; alternative strategies for community development; patterns of response to community by universities, colleges, schools, cooperative extension, and government service agencies; and such functional dimensions of community education programming as participatory decision making, volunteers, leadership development, council formation and function, interagency coordination, and change-agents roles.

EDUC 685 Training and Development: Theory and Practice (also COMM 685, INTAG 685)
Spring. 4 credits. S-U grades optional. F 9:00-12:00, T 10:00-1:00. J. M. Kroma. Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literature and cultural education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

EDUC 694 Special Topics in Education
Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Hours TBA. Staff. Topics to be announced.

EDUC 711 Contemporary Issues in Educational Psychology
Fall and spring. Variable, 3 credits. TBA. This is a graduate-level seminar dealing with key issues in contemporary psychology having implications for educational practice and research. Topics vary from semester to semester. Students may take the course more than once.

EDUC 714 Moral Development and Education
Spring. 3 credits. S-U grades optional. M 12:20-2:15. Offered alternate years. Not offered 2001-2002. D. E. Schrader. This seminar focuses on current topics in moral development research related to educational processes. Topics include the question of the development of moral reasoning, gender differences, the relationship between moral judgment and moral action, questions related to moral education in secondary school and university settings, and professional ethics in educational settings. This course takes a life-span perspective; however, special emphasis is placed on development from adolescence through adulthood.

EDUC 718 Adult Learning and Development
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 2:00-4:25. A. Wilson and R. E. Ripple. Deals with adult development and learning behavior from points of view of educational psychology and adult education. Inferences are drawn from theory and research to the practice of adult continuing education. Appropriate for graduate students in educational psychology, extension and continuing education, and community service education, and for others interested in adult learning and development.

EDUC 730 Seminar in Agricultural, Extension, and Adult Education
Spring. 3 credits. S-U grades optional. R 8:00-9:55. S. Peters. Emphasis is on current problems and research in agricultural, extension, and adult education. Includes discussion and analysis of student and staff research.

EDUC 745 Seminar in Curriculum Theory and Research
Fall. 3 credits. Prerequisite: EDUC 644, or permission of instructor. Not offered 2001-2002. T 2:30-5:00. G. J. Posner. Theoretical issues in curriculum and appropriate areas for curriculum research are discussed. Two current topics of interest are the hidden curriculum and school reform. (Both topics serve to uncover the relation between ideology and research.)

EDUC 760 Practicum Seminar in Educational Administration
Fall, spring, and summer. 2 credits. S-U only. Hours TBA. J. W. Sipple. The practicum seminar is taken in conjunction with the administrative internship and serves to tie together previous coursework, current policy issues, and the concurrent internship. It involves two elements. First, current interns meet regularly during the semester to bring their knowledge base (developed in the program) to bear on their current duties and problems and collaboratively problem solve with faculty and other interns. Second, interns participate in special topics seminars as needed in order to supplement coursework in critical areas. Examples of special topics are AIDS, sexual harassment in the workplace, child abuse, and substance abuse recognition.

EDUC 761 Internship in Educational Administration
Fall, spring, and summer. 9 credits. S-U only. Hours TBA. G. Posner and J. W. Sipple. The internship experience provides aspiring administrators with supervised professional training in agricultural, extension, and community service activities in a public school district. Students undertaking an internship in Educational Administration (1) learn the practical day-to-day skills of school administration under the supervision of an on-site administrator, and (2) conceptualize and execute a research project dealing with an issue of interest to the participating school district and the student's special committee. Students work in collaboration with their special committee and on-site supervisor to critically analyze theory and the field experience. A minimum of 20 hours per week are devoted to on-site internship duties. Students enroll concurrently in EDUC 760 (practicum seminar) to complete additional degree and certification requirements.

EDUC 762 Comparative Educational Systems
Fall. 3 credits. S-U grades optional. M 10:10-12:35. N. Assie-Lumumba. This seminar critically analyzes education conceived both as a universal social institution and a reflection of cultural, economic, and political dynamics of the local and global contexts. The analysis focuses on policies, organization, and the functioning of education in industrial, new/emerging economies and developing countries. Specific case studies are drawn from different countries.

EDUC 783 Farmer-Centered Research and Extension (also INTAG 783)
Fall. 3 credits. S-U option. M. Kroma. This course provides an introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal, and documentation of local and indigenous knowledge of community-based development. Case studies of farmer-centered research and extension provide a focus for analysis. Appropriate roles of researchers and extensionists as partners with farmers are examined. A major contribution of farmer-centered research and extensions is its potential to legitimize people's knowledge by enhancing their capacity to critically analyze their own problems, to conduct their own research, and to empower them to take direct action to solve those problems.

EDUC 800 Master's-Level Thesis Research
Fall or spring. Credit TBA. S-U grades optional. Each student, before course enrollment, must present a plan to the student's major advisor for approval of a faculty member who will assume responsibility for guiding the work. Hours TBA. Staff.

EDUC 900 Doctoral-Level Thesis Research
Fall or spring. Credit TBA. Limited to students working on theses or other research and development projects. S-U grades optional. Each student, before
course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours TBA. Staff.

ENTOMOLOGY

Courses by Subject

Apiculture: 260, 264
Behavior: 215, 325, 354, 471, 662
Ecology: 452, 455, 456, 470, 471, 672
Introductory courses: 201, 212, 215
Medical entomology and veterinary entomology: 352
Morphology: 322
Pathology: 463
Physiology, development and toxicology: 370, 394, 400, 483, 490, 689
Systematics: 331, 353, 351, 632, 634, 635

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

ENTOM 201 Alien Empire: Bizarre Biology of Bugs
Spring. 2 credits. Limited to 100 students. S-U grades optional. Lecs, T R 9:05; optional field trips, required lab demonstrations. Offered alternate years.
B. N. Danforth.

Insects are the most abundant and diverse animals on earth. This course explores the bizarre biology of insects by examining their evolutionary history, anatomy, development, feeding habits, life-history strategies, behavior, and their interactions with humans (both positive and negative) through history. Optional field trips and one open lab provide hands-on opportunities for examining these amazing animals.

ENTOM 212 Insect Biology
Fall. 4 credits. Prerequisites: BIO G 101-102 or equivalent. Lecs, W F 10:10-11:00; labs T W or R 1:25-4:25; Lab fee $35. C. Gilbert.

An introduction to the fascinating world of spiders. Evolution, ecology, behavior, and physiology of spiders and their close kin are explored from a modern perspective. Topics include identification of major spider families, spiders' unique use of silk, risky courtship, predatory behavior, diverse life styles, social spiders, and potential use in IPM.

ENTOM 241 Applied Entomology
Spring. 3 credits. Prerequisites: BIO G 101-102 or equivalent. Lecs, T R 10:10; lab, disc, T or W 12:20-3:15; W. M. Tingley.

An introduction to major pest species and tactics for their management. Discussions of insect pest management requirements on farms, gardens, forests, and urban environments, along with descriptions of control methods, materials, and equipment.

ENTOM 260 Introductory Beekeeping
Fall. 2 credits. Lecs, T R 11:15.
N. W. Calderone.

An introduction to the beekeeping business. Classical and contemporary research on the dance language, chemical communication, behavioral genetics, division of labor, and evolution of social behavior are reviewed. Lectures on pollination of agricultural crops, honey bees, and beekeeping are also included.

ENTOM 264 Practical Beekeeping
Fall. 1 credit. Limited to 20 students. Prerequisite: ENTOM 260 (may be taken concurrently). Lab, R 5:45-7:30.
N. W. Calderone.

This course covers the basics of beekeeping including bee biology, colony management, and disease identification/ control. Students conduct hands-on work with honey bee colonies and equipment. Some of the topics covered include management of bees for apple pollination, honey harvesting and processing, and disease identification/control. The class makes a number of field trips to commercial beekeeping operations. Students conduct simple experiments to demonstrate color perception by bees, as well as the chemical basis for swarming, nest guarding, and mating.

ENTOM 277 Natural Enemies Managing Pests: An Introduction to Biological Control
Spring. 2 credits. S-U grades optional. Lecs, T R 1:25-2:15; lab demonstration; optional field trip. Offered alternate years.
A. E. Hajek.

This course explores the neural, endocrine, and behavioral genetics of honey bees, as well as to the fundamentals of practical beekeeping. Classical and contemporary research on the dance language, chemical communication, behavioral genetics, division of labor, and evolution of social behavior are reviewed. Lectures on pollination of agricultural crops, honey bees, and beekeeping are also included.

ENTOM 331 Introductory Insect Systematics
Fall. 3 credits. Prerequisites: ENTOM 212, BIO GD 241. Lecs, T R 12:20, labs, T R 1:25-4:25, Lab fee $50. Offered alternate years.

An introduction to classification, evolutionary history, and distribution of the insects. Laboratory practice in the identification of orders, families, and representative genera of insects; methods of collection, preservation, and study. Lectures on theory and practice of insect systematics and major features of insect evolution. Insect collections are required.

ENTOM 370 Pesticides, the Environment, and Human Health (also TOX 370)
Fall. 2 credits. Prerequisites: BIO G 101-102 or equivalent. Lecs, T R 9:05. Offered alternate years. Not offered fall 2001; next offered fall 2002. J. G. Scott.

A survey of the different types of pesticides, their uses, properties, and effects on the environment. Discussion of the risks, benefits, regulation, politics, and current controversies associated with pesticide use.

ENTOM 394 Circadian Rhythms (also BIOGD 394 and BIONB 394)
Fall. 2 credits. Prerequisite: ENTOM 212, or BIOGD 281, or HONB 221 or 222, or permission of instructor. S-U grades optional. Lecs, W 7:30-9:10. M. Offered alternate years. J. Ewer.

This course explores the neural, endocrine, and molecular mechanisms by which organisms "keep time," and how their clocks are synchronized with the planet's 24 hour light and temperature cycles. The course leans heavily on the knowledge obtained from the analysis of rhythms in insects, especially Dirocheilia, but also includes an in-depth analysis of circadian rhythms in other organisms, from cyanobacteria to mammals.

ENTOM 400 Insect Development (also BIOGD 402)
Spring. 4 credits. Prerequisites: ENTOM 212 or BIOGD 281 or permission of instructor. S-U grades optional. Lecs, M W F 11:15-12:05, offered alternate years. J. Ewer.

The course emphasizes the mechanisms that underlie embryonic and post-embryonic developmental processes of insects. The portion of the course on embryonic develop-
ment leans heavily on knowledge obtained from *Drosophila*, but also covers more classical studies as well as recent advances in exploring the molecular basis for the evolution of organs. The post-embryonic development portion covers the control of growth, molting, and metamorphosis. The laboratory uses modern techniques to illustrate developmental events at the organismal and cellular level. The discussion section involves the analysis and presentation of primary research papers.

**ENTOM 441 Seminar in Insect Pest Management**  
Spring. 1 credit. Limited to 15 students. Prerequisite: ENTOM 241 or 444 or permission of instructor. S-U grades only. Hours TBA. Offered alternate years. Not offered spring 2002; next offered spring 2003. M. P. Hoffmann and A. M. Shelton. Discussion and analysis of current topics in insect pest management.

**ENTOM 443 Entomology and Pathology of Trees and Shrubs (also PL PA 443)**  
Fall. 4 credits. Prerequisites: ENTOM 212 or equivalent and PL PA 241 or equivalent. S-U grades optional. Evening prelimes. Lecs. M W F 11:15; labs. F 1:25-4:25. Offered alternate years. Not offered fall 2001; next offered fall 2002. P. A. Weston and G. W. Hudler. For students preparing for careers in horticulture, urban forestry, pest management, and natural history/science education. Deals with the nature, diagnosis, assessment, and management of insect and disease pests on trees and shrubs in forests, urban landscapes, Christmas tree plantations, and other sites where intensive pest management is practiced.

**ENTOM 444 Integrated Pest Management (also PL PA 444)**  
Fall. 4 credits. Prerequisites: BIOEE 261, ENTOM 212 or 241, and PL PA 241 or equivalent knowledge of insects and their control. S-U grades optional. Evening prelimes. Lecs. M W F 9:05; labs. M 1:25-4:25. P. Arneson and J. Losey. Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Laboratories reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

**ENTOM 452 Herbivores and Plants: Chemical Ecology and Coevolution (also BIOEE 452)**  
Spring. 3 credits. Prerequisites: 1 year of introductory biology; BIOEE 261; CHEM 257 or 357/358 and 251 or 301; or permission of instructor. Lecs. M W F 9:05; labs. M 1:25-4:25. P. P. Fecny. Significance of plant chemistry in mediating interactions between plants and herbivorous insects and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; implications for human food and agriculture.

**ENTOM 453 Principles and Practice of Historical Biogeography (also BIOEI 453)**  
Fall. 3 credits. Prerequisite: a course in systematics or permission of instructor. S-U grades optional. Lecs. T R 10:10; lab T 1:25-4:25. Offered alternate years. J. K. Liebherr and M. Luckow. A survey of techniques in historical biogeography and the development of modern biogeographic theory in the context of classical, ecological, and phylogenetic analytical methods. Geological and paleontological aspects of biogeography are presented, and large-scale patterns are discussed. Laboratories focus on computer applications and discussion of controversial issues.

**ENTOM 455 Insect Ecology (also BIOEE 455)**  
Fall. 3 credits. Prerequisites: BIOEE 261 or equivalent and ENTOM 212 or equivalent knowledge of insects and their control. S-U grades optional. Lecs. M W F 11:15. Offered alternate years. R. B. Root. Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

**ENTOM 456 Stream Ecology (also BIOEE 456 and NTRES 456)**  
Spring. 4 credits. Limited to 60 students. Prerequisites: BIOEE 261. S-U grades optional. Lecs. T R 9:05; labs. T W or R 1:25-4:25. Offered alternate years. Not offered spring 2002; next offered spring 2003. B. L. Peckarsky. Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, plant, invertebrate, and fish community structure, nutrient cycling, trophic dynamics, colonization and succession, community dynamics, conservation, and the impacts of disturbances. Laboratory projects include descriptive and experimental techniques, hypothesis testing and writing of scientific papers related to environmental assessment.

**ENTOM 463 Invertebrate Pathology**  
Spring. 4 credits. Prerequisites: one year of introductory biology. S-U grades optional. Lecs. M W F 9:05; labs. M 1:25-4:25. A. E. Hajek. Lecture presents principles of pathology as applied to invertebrates. Topics explored include noninfectious and infectious diseases caused by viruses, bacteria, fungi, protozoa, and nematodes, as well as pathways of insect diseases, and use of pathogens for control. Laboratory involves a diversity of pathogens and hosts using techniques such as microinjection, electrophoresis, immunocytochemistry, density gradient centrifugation, soil extraction, and computer simulation.

**ENTOM 470 Ecological Genetics**  
Spring. 3 credits. Prerequisites: BIOEE 278 or permission of instructor. S-U grades optional. Lecs. T R 10:10; disc. 1 hr/wk TBA. Offered alternate years. Not offered spring 2002; next offered spring 2003. Staff. A study of the genetic basis and evolution of ecologically important traits. Blending theory with an experimental approach to study evolution in nature, the course includes methods for measuring genetic variation and natural selection; biometrical and molecular analysis of genetic architecture; constraints and limits on evolution in natural populations; genetic aspects of coevolution, phenotypic plasticity, and conservation of endangered species. Examples are taken from studies of animals and plants.

**ENTOM 471 Freshwater Invertebrate Biology and Biomonitoring**  

**ENTOM 477 Biological Control**  
Fall. 3 credits. Prerequisite: BIOTE 212. BIOEE 261, and permission of instructor. Lecs. T R 9:05; lab T 1:25-4:15. Offered alternate years. Not offered fall 2001; next offered fall 2003. Staff. Approaches and principles in biological control of arthropod pests and weeds. Demonstrations focus on living parasitoids and predators. Discussions focus on case histories.

**ENTOM 483 Insect Physiology**  
Fall. 5 credits. Prerequisite: ENTOM 212 or permission of instructor. Lecs. M W F 11:15; lab W 1:25-4:25 and a disc, TBA. Offered alternate years. Not offered fall 2001; next offered fall 2002. C. Gilbert. An introduction to the often unique ways in which insects have met their basic needs. Each organ system is examined with emphasis on basic principles and examples. Students are also introduced to some common methods used in physiological research and to the critical reading of scientific literature.

**ENTOM 490 Toxicology of Insecticides (also TOX 490)**  

**ENTOM 494 Special Topics in Entomology**  
Fall or spring. 4 credits maximum. S-U grades optional. Hours TBA. Staff. The department teaches "A" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not be offered more than twice under this number.
ENTOM 497 Individual Study in Entomology
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

ENTOM 498 Undergraduate Teaching
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Undergraduate teaching assistance in an entomology course by agreement with the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

ENTOM 631 Systematics of the Coleoptera
Summer. 3 credits. Limited to 18 students. 3 week summer session. Prerequisites: an introductory course in insect taxonomy and permission of instructor. Labs, M T W R F 9–4; Saturday field trips. Offered alternate years. Not offered 2001; next offered 2002. Q. D. Wheeler.

A comprehensive review of the comparative morphology, phylogenetic relationships, classification, natural history, and distribution of the Coleoptera, including adult and immature stages. Laboratory practice in identification and methods for collection and study of beetles. A collection is required.

ENTOM 632 Advanced Coleopterology

An advanced course on the phylogeny and classification of selected subclades of Coleoptera. Laboratory exercises in identification of beetles, generally to the level of genus or beyond. Taught by authority on taxon of interest, frequently including a visiting scholar. Can be repeated for credit.

ENTOM 634 Special Topics in Systematic Entomology
Fall or spring; taught on demand. 2–4 credits. Prerequisite: permission of instructor. Staff.

Lectures on the classification, evolution, and bionomics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

ENTOM 635 Insect Molecular Systematics
Spring. 2 credits. Prerequisites: permission of instructor. Offered alternate years. Not offered spring 2002; next offered spring 2003. TBA. Limited to 6 students. B. N. Danforth.

Analysis of DNA sequence variation can provide a powerful tool for resolving problems in insect systematics, from species level taxonomic decisions to higher level (ordinal) relationships. This course introduces students to the basic methods of insect molecular systematics, including DNA extraction, gel electrophoresis, PCR, DNA purification, and DNA sequencing (manual and automated). Results are analyzed using available computer programs. Students are encouraged to collect preliminary data for thesis or post-doctoral research.

ENTOM 644 Advanced IPM: Theory and Implementation

This advanced course in integrated pest management (IPM) is comprised of a rotating series of four-week intensive modules on specialized topics. Topics range from basic ecology and genetics of pests and their natural enemies to specific strategies for pest management implementation. The course is designed to provide advanced IPM instruction for graduate and upper-level undergraduate students with intermediate backgrounds in IPM. In special cases, students with little or no background in IPM seeking intensive instruction on a specialized topic may enroll with permission of the instructor. Each module is a unique unit and students may take any or all modules each time the course is offered. Prerequisites and grading procedures are determined by the instructor(s) of each module. Potential modules include: Insecticide resistance and resistance management—J. Scott; Entomology (Ithaca). Crop protection decision making—J. Nyrop; Entomology (Geneva). Economics of pest management—Staff; AEM; Greenhouse and Floriculture IPM—J. Sanderson; Entomology (Ithaca). IPM in fruit systems—A. Agnello; G. English-Loeb; Entomology (Geneva). Genetics in managed ecosystems—M. C. Caillaul; Entomology (Ithaca). Turfgrass insect IPM—M. Villani; Entomology (Geneva). Insect vectors of plant pathogens—Staff; IPM of soil-dwelling arthropods—M. Villani; Entomology (Geneva). Integrated weed and insect pest management—C. Mohler; Ecology & Evolutionary Biology; IPM implementation and extension—M. Hoffmann, J. Sanderson; Entomology (Ithaca). Plant resistance—Staff; Entomology, Plant Breeding; Integrated Pest Management in Tropical Agriculture—P. Arnoson; Plant Pathology (also PL PA 655). IPM of natural systems—B. Blosey; Natural Resources; and Sustainable strategies for pest management—Staff.

ENTOM 662 Insect Behavior Seminar
Spring. 2 credits. Prerequisites: permission of instructor and ENTOM 212 and BIONB 221 or equivalents. S-U grades optional. Offered alternate years. Not offered spring 2002; next offered spring 2003. Hours TBA. Staff.

ENTOM 672 Seminar in Aquatic Ecology
Spring. 1 credit. Prerequisites: permission of instructor or either ENTOM 450, 471, or BIOEE 261, 462. S-U grades optional. Hours TBA. Offered alternate years. Not offered spring 2002; next offered spring 2003. B. L. Peckarsky.

Discussion and analysis of current topics in the ecology of streams, lakes, and marine ecosystems, including student-generated synthesis of key papers in the literature. Generally appropriate for graduate students only. Interested undergraduates must contact the instructor.

ENTOM 685 Seminar in Insect Physiology
Spring. 1 credit. S-U grades optional. Prerequisite: permission of instructor. Offered alternate years. Not offered spring 2002; next offered spring 2003. Hours TBA. C. Gilbert.

ENTOM 707 Individual Study for Graduate Students
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Not for thesis research. Staff.

ENTOM 709 Teaching Entomology
Credit TBA. Staff.

Teaching entomology or for extension training.

ENTOM 767 Current Topics in Entomology
Fall. 1 credit. Required of graduate students pursuing a degree in the Field of Entomology. Lecs and disc, TBA. Staff.

This course provides lectures, readings and discussion to introduce first-year graduate students to the research activities of faculty in the Graduate Field of Entomology. Class meets weekly for one hour.

ENTOM 800 Master's-Level Thesis Research
Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Staff.

ENTOM 900 Doctoral-Level Thesis Research
Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Staff.

Jugatae Seminar
Fall and spring. A seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

FLORICULTURE AND ORNAMENTAL HORTICULTURE
See Horticulture.

Freehand Drawing and Scientific Illustration
Freehand Drawing and Scientific Illustration courses are offered through the Department of Horticulture and are described in the section "Freehand Drawing and Scientific Illustration."

FOOD SCIENCE

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.
FOOD 101 Science and Technology of Foods  
Fall. 1 credit. S-U grades only. M 1:25–2:15.  
J. H. Hotchkiss and staff.  
This course explores the application of science and technology to foods. Lectures will elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of foods as related as discipline and career choice is given.

FOOD 102 Exploring Food Processing  
Spring. 1 credit. S-U grades only. F 12:20.  
A series of seminars on current technological and regulatory developments in food science. Field trips to four commercial food manufacturing processing plants and one food research organization are used to illustrate the application of current technologies. A course project, using the Food Science Alumni Network, is required.

FOOD 150 Food Choices and Issues  
This course provides an introduction to the knowledge needed to make healthy food choices. Topics include the U.S. food system; relationships between diet and health; food processing; food safety; and discussions of controversial food issues related to food quality, safety, and nutrition. Students assess the nutritional quality of their personal diets and learn how to make changes to improve their diets.

FOOD 200 Introductory Food Science  
Fall. 3 credits. Prerequisite: college-level courses in chemistry and biology. M W F 11:15–12:05. J. M. Regenstein.  
A comprehensive introduction to the principles and practice of food science and technology. Topics include: chemistry of foods; nutritional significance; food formulation, preservation, and processing; microbiology and fermentation; composition and processing of food commodities; and contemporary issues including food safety, regulation, and world food needs. Interrelationships between the chemical, physical, nutritional, and quality properties of foods as affected by formulation, processing, and packaging are stressed.

FOOD 210 Food Analysis  
Introduces basic analytical techniques for food analysis and other biological analysis. Emphasizes fundamental principles of analytical chemistry, basic laboratory techniques, and modern instrumental methods. Gravimetric, volumetric, and spectrophotometric methods; gas chromatography (GC); high-performance liquid chromatography (HPLC); infrared spectra (IR); and atomic absorption spectrometry are discussed.

FOOD 250 Kosher and Halal Food Regulations  
A comprehensive introduction to kosher and halal foods in the American food industry with some coverage of home practices. The kosher food laws, their origin, and their application in modern food processing are examined. The nature of the kosher supervision industry in America is described. Halal laws are also examined and the interactions between the two communities explored. Current food-related issues in both communities are reviewed, including recent court decisions. Some aspects of ethnic foods are also considered.

FOOD 290 Meat Science (also AN SC 290)  
Fall. 2 or 3 credits. Lecs. T R 11:15; lab M or R 12:20–5:30. Lab cannot be taken without lecture. D. E. Shaw.  
An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are discussed. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat plants is taken.

FOOD 321 Food Engineering Principles  
Introduces the engineering principles underlying food processes and equipment. Topics covered include thermodynamics, mass and energy transport, fluid mechanics, heat and mass transport, and refrigeration and psychrometrics.

FOOD 351 Milk Quality  
Fall. 1 credit. Prerequisite: AN SCI 250 or equivalent or permission of instructor. F 12:20. M. Wiedmann.  
This course focuses on the effects of on-farm and animal husbandry practices on milk and dairy food quality and safety. Significant parts of class focus on discussion and critical analysis of the assigned reading materials, questions, and hot topics.

FOOD 394 Applied and Food Microbiology (also BIOMI 394)  
Fall. 2–3 credits. Prerequisites: BIOMI 290–291. M W 12:30–2:15; lab, M 1:00–3:15. A. Bant.  
Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course presents a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. Issues related to the biochemistry, genetics, and physiology of microorganisms important in these processes are reviewed. A two-credit core section on food microbiology is complemented by a one-credit section on industrial/biotechnology applications.

FOOD 395 Food Microbiology Laboratory  
Fall. 2 credits. Prerequisite: BIOMI 291 or equivalent. M W 2:00–4:25. J. M. Brown.  
Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and rapid methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods, or addressing a food safety issue.

FOOD 396 Food Safety Assurance  
This course provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions of the Hazard Analysis Critical Control Point (HACCP) concept, good manufacturing practices, prerequisite programs, and the application of current technologies in reducing the risk of foodborne illnesses. Case studies and exercises are used to demonstrate and apply the key principles that are discussed.

FOOD 400 Senior Seminar in Food Science and Technology  
Students prepare and present a seminar on a topic of current interest in food science and technology.

FOOD 401 Concepts of Product Development  

FOOD 405 Managing Food Waste without Trashing the Environment  
Spring. 2 credits. Prerequisite: FOOD 200 or its equivalent. M W 12:30–2:15; lab, M 2:30–4:25. Offered alternate years. Not offered 2002, 2004, next offered spring 2003. J. M. Regenstein. A look at the various waste streams generated by food plants: institutional feeders, supermarkets, and restaurants. What is the role of waste minimization? What technologies can control or remediate the problems? What are the disposal, composting, and recycling options? What are the legal requirements locally, statewide, and nationally that affect various food waste processes? This course serves as a general introduction to available waste management technologies and to policy issues faced by a wide range of businesses and production plants.

FOOD 406 Dairy and Food Fermentations  
This is a lecture course covering the basic principles of fermentation, the microbiology of food fermentations (including the physiology and genetics of fermentative microorganisms), starter cultures and their preparations and applications as well as specific examples of food fermentations. Selected textbook readings are supplemented with papers from peer-reviewed journals. Significant parts of class focus on discussion and critical analysis of the assigned reading materials, questions, and hot topics.

FOOD 410 Sensory Evaluation of Food  
Topics include the sensory evaluation methods used to test the flavor, appearance,
and texture of foods by quantitative description and simple difference testing; consumer testing for product acceptability; sensory tests in quality control; strategic product research, and product development. The psychological principles for an understanding of statistical methods for sensory data analysis are presented. The laboratory provides first hand experience in organizing and conducting sensory tests and an introduction to online data collection and analysis. Undergraduate Food Science majors are required to take both the lecture and the laboratory.

FOOD 415 Principles of Food Packaging
J. H. Hotchkiss.
The chemical and physical properties and manufacture of the basic materials used to construct packaging are discussed. The influence of packaging on shelf life is presented. Emphasis is on newer packaging technologies and materials. Economics, design, and regulation of food packaging are briefly presented.

FOOD 417-418 Food Chemistry I and II
Spring 417; fall 418. 3 credits, spring, 2 credits, fall. Prerequisites: CHEM 257 or BIOBM 330 or 331, S-U or letter grade.
FOOD 417, M W F 9:05; FOOD 418, M W 9:05. Both courses will be offered in 2001-2002.
J. E. Toepffer.
A course on the chemistry of food and food ingredients. Chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components/substrates are discussed in the context of their interactions and functional roles in foods. The effects of chemical changes during processing and storage on quality and nutritional aspects of several food commodity groups (milk, meat, fruits and vegetables, cereals and legumes) are described.

FOOD 419 Food Chemistry Laboratory
Spring. 2 credits. Prerequisites: CHEM 257 or BIOBM 330 or 331 and concurrent registration in FOOD 417. W 12:00-4:25.
A laboratory course emphasizing fundamental chemical principles and laboratory techniques necessary for an understanding of the chemistry of foods. Relationships between chemical composition and functional, nutritional and organoleptic properties of foods are stressed. Many of the laboratory techniques involved are common to those used in biochemistry laboratories (e.g., spectrophotometry, chromatography, enzyme assays) but are applied to specific foods or beverages.

FOOD 423 Physical Principles of Food Preservation and Manufacturing
Fall. 3 credits. Prerequisites: PS 321, Lec, T R 11:15-12:05, disc, T 12:20-2:15.
S. J. Mulvaney and J. S. Roberts.
This course emphasizes the fundamental principles that underlie much of food preservation and manufacturing. A systems analysis approach is used to make connections between the chemical and physical changes that occur in food processing and their impact on food quality. Topics include materials properties of foods, heat processing, freezing, concentration and drying. Selected products serve as case studies for more complex manufactured foods.

FOOD 424 Food Polymer Science: Principles and Applications
Spring. 3 credits. Prerequisites: introductory chemistry and physics. Lec, T R 10:10-11:00; disc, R 12:20-1:10.
S. J. Mulvaney.
Integration of polymer science, food science, and materials science principles as the basis for characterization of the physical properties of food materials. Emphasis is on unique aspects of food materials, e.g., plasticization by water, gelation, lipids, transient networks, and effects of thermal treatments on material properties. Problems and case studies based on proteins, starches, and hydrocolloids relevant to foods.

FOOD 430 Understanding Wine & Beer
Spring. 3 credits. Prerequisites: introductory biology and chemistry or permission of instructor. Students must be 21 years old by the second day of class (Jan. 24, 2002) to enroll. S-U grades optional. T R 1:25-2:20, T. E. Accre, T. Henick-Kling, K. J. Siebert.
An introduction to wine and beer appreciation through the study of fermentation biology, wine and beer composition and sensory perception. Samples of beers and wines are used to illustrate the sensory properties, microbiological processes, and chemical components that determine wine and beer quality. Students learn to recognize the major features of beer and wine that determine sensory quality and know the processes that produced them. Topics include the psycholgy and chemistry of bouquet, taste, and aroma—the microbiology of fermentation and spoilage—and the sensory properties of wines and beers from different raw materials (produced in various climates with different agricultural practices) and with different wine and beer production techniques.

FOOD 447 International Postharvest Food Systems
Fall. 2 or 3 credits. Prerequisite: freshman chemistry. S-U grades optional. T R 10:10-11:00. M. C. Bourne and staff.
An interdisciplinary course designed for all undergraduate and graduate students. Describes postharvest food losses and methods to reduce the loss. Topics include storage and care of unprocessed and minimally processed foods such as cereal grains, fruits, vegetables, tubers, and fish, biology and control of fungi, insects, and vertebrates in foods; chemical causes of quality loss; effects of climate; and economic and social factors affecting food preservation and storage. Emphasis is given to the problems in developing countries. The third credit requires a written case study of a country or commodity.

FOOD 450 Fundamentals of Food Law
Spring. 2 credits. Offered alternate years. Next offered spring 2002 and 2004; not offered spring 2003.
J. M. Regerstein.
Introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasis is on the Food and Drug Administration and U.S. Department of Agriculture regulations, but the course also refers to other regulatory agencies. Emphasis is placed on how a food or agricultural professional interacts with this legal system during legislative action, regulatory rule making, and with respect to compliance.

FOOD 456 Advanced Concepts in Sensory Evaluation
H. T. Lawless.
Readings and discussions of primary source materials in sensory evaluation, including recent advances in sensory methods, historical perspectives, psychophysics, perceptual biases, and multivariate statistical approaches to sensory data. A major independent research project is conducted on a current issue in sensory evaluation.

FOOD 494 Special Topics in Food Science
Fall or spring. 3 credits maximum. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

FOOD 495 Individual Study in Food Science
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor.
Students must register with an Independent Study form (available in 410 Roberts Hall). S-U grades optional. Staff.
May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. Since topics vary, the course may be repeated for credit.

FOOD 498 Undergraduate Teaching Experience
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor.
Students must register with an Independent Study form (available in 410 Roberts Hall). S-U grades optional. Staff.
Students assist in teaching a course appropriate to their previous training and experience. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

FOOD 499 Undergraduate Research in Food Science
Fall or spring. 4 credits maximum. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). This course may be repeated for credit. Staff.
Students conduct original research directed by a food science faculty member.

FOOD 599 Research for Lausanne Exchange Students
Fall/spring. 10 credits maximum. Prerequisite: permission of instructor. S-U grades optional. Staff.
Undergraduate senior thesis research for Lausanne exchange students only. Students conduct original research directed by a Food Science faculty member. A final report is written and presented to the faculties of both Cornell University and the University of Lausanne.

FOOD 600 Seminar in Food Science
Fall and spring. 1 credit. S-U grades only. Required of all food science graduate students. T 4:00-5:00. Staff.
A weekly seminar series on contemporary topics and issues in the Field of Food Science and Technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in the Field of Food Science and Technology may use the forum to present their required thesis research seminar. Required of all graduate students in the Field of Food Science and Technology. Strongly recommended for graduate students minoring in Food Science and Technology.

**FOOD 604 Chemistry of Dairy Products**
Fall. 2 credits. Limited to 16 students. Prerequisites: Food Science 210, 417, 418, and a dairy foods processing course. Permission of instructor required; if lacking prerequisites, F 1:25-3:30. Offered alternate years. Not offered fall 2001 or 2000; offered spring 2002.
D. M. Barbano.
The chemical and physical changes that occur in dairy products prior to, during, and after processing are covered. This course emphasizes current research in dairy chemistry.

**FOOD 605 Physical Chemistry of Food Components**
Fall. 3 credits. Prerequisite: an undergraduate course in physical chemistry. M W F 10:10. Offered alternate years. Not offered fall 2001. J. W. Brady.
This course covers the physical properties of food molecules. Emphasis is placed on the molecular basis of structural characteristics; colloidal properties; molecular interactions; foams, gels; and water binding of foods.

**FOOD 607 Advanced Food Microbiology**
This two-credit course explores advanced topics in Food Microbiology. A major emphasis is placed on critical evaluation of current literature and on microbiological concepts that affect food microbiology. Specific areas that are covered include microbial ecology of foods, rapid detection and typing methods for foodborne pathogens, microbial modeling, pathogenesis of foodborne diseases, and food applications of genetic engineering. Some guest lectures may be arranged to provide an introduction to other advanced food microbiology topics (e.g., risk assessment).

**FOOD 608 Chemometric Methods in Food Science**
Food science applications using multivariate statistical methods (chemometrics) include extracting information from large data sets, modeling molecular and product properties, optimizing analytical methods and processing operations, discerning relationships between product composition and sensory properties, identifying cultivars or species, and detecting adulteration. The techniques covered are also applicable to many other problems in biology and chemistry.

**FOOD 616 Flavors—Analysis and Applications**
An advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods for food scientists and those in related fields concerned with human food perception and consumption. The course surveys taste, aroma and volatile flavors, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems, and consumer acceptance.

**FOOD 620 Food Carbohydrates (also NS 620)**
A consideration of the chemistry of carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasis is on the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.

**FOOD 621 Food Lipids**
Fall. 2 credits. Letter grade only. Prerequisites: FOOD 417 and a Biochemistry course. Offered alternate years. Next offered fall 2001; not offered fall 2002 or 2004. R. Liu.
An advanced course in food lipids. Describes the physical, chemical, biochemical, and functional properties of lipids. Emphasis is on lipid oxidation, emulsions, functional foods associated with lipids, and modern analytical methodology of lipids.

**FOOD 665 Engineering Properties of Foods**
Spring. 2 credits. Prerequisite: course in transport processes or unit operations as applied to foods; or permission of instructor. T R 12:20-1:10. Offered alternate years. Next offered fall 2002; not offered spring 2003. S. S. H. Rizvi and S. J. Mulvaney.
Theories and methods of measurement and prediction of rheological, thermal, and mass transport properties of foods and biomaterial systems. Emphasis is on physical-mathematical basis of measurement as well as the prediction processes. Examples of appropriate use of these properties in engineering design and analysis of food processes are also provided.

**FOOD 694 Special Topics in Food Science**
Fall or spring. 4 credits maximum. S-U grades optional. Staff.
The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee; and the same course is not offered more than twice under this number.

**FOOD 695 Current Readings in Food Science**
Fall and spring. 1 credit. Prerequisite: 300- to 400-level course relevant to the chosen topic. S-U grades only. Lect., by arrangement/1 hour per week. Staff.
A seminar series on current topics chosen by participating faculty and students on a rotating basis. Format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading. Multiple sections focusing on different topics may be taught in any given semester. Topics include (but are not limited to) Food Microbiology and Food Safety; Food Chemistry, Packaging, Food Engineering. This course can be taken multiple times. Graduate students in Food Science are strongly encouraged to enroll in this course. Interested students should contact the designated instructor(s) for each term.

**FOOD 800 Masters-Level Thesis Research**
Fall or spring. Credit TBA. Maximum credit. 12. Prerequisite: limited to master’s candidates; permission of Special Committee Chair. S-U grades only. Graduate faculty.

**FOOD 900 Graduate-Level Thesis Research**
Fall or spring. Credit TBA. Maximum credit. 12. Prerequisite: limited to doctoral students who have passed the "A" exam; permission of Special Committee Chair. S-U grades only. Graduate faculty.

**FOOD 901 Doctoral-Level Thesis Research**
Fall or spring. Credit TBA. Maximum credit. 12. Prerequisite: limited to doctoral students who have passed the "A" exam; permission of Special Committee Chair. S-U grades only. Graduate faculty.

Introduction to Business Management (AEM [ARME] 220)
Marketing (AEM [ARME] 240)
Food Industry Management (AEM [ARME] 443)
Biological and Environmental Transport Processes (ABEN 350)
Computer-Aided Engineering: Applications to Biomaterials and Food Processing (ABEN 453)
Practical Aspects of Postharvest Handling of Horticultural Crops (HORT 325)
Introduction to Culinary Arts (H ADM 230)
FREEHAND DRAWING AND SCIENTIFIC ILLUSTRATION

Freehand Drawing is a program in the Department of Horticulture. Other courses offered by the department are listed under Horticulture.

[FR DR 109 Nature Drawing]
A beginning course with emphasis on the drawing of natural forms: plants, animals, and landscapes. Of particular interest to students in floriculture and ornamental horticulture, landscape architecture, biological sciences, nature education, or similar fields. Outside field notebook assignments.

[FR DR 211 Freehand Drawing and Illustration]
Fall. 2 credits. Prerequisite: FR DR 109 or equivalent. S-U grades optional. 6 studio hours scheduled in 2 or 3 hour units between 9:05 and 12:05 M T W R. Not offered 2001-2002. R. J. Lambert.
Progression to the organization of complete illustrations. Subject matter largely from sketchbooks, still life, and imagination. Composition, perspective, and ways of rendering in different media are considered.

[FR DR 214 Watercolor]
Spring. 2 credits. S-U grades optional. 4 studio hours scheduled in 2 hour units between 9:05 and 12:05 and 2 hours outside sketching. T W R 9:05-12:05. R. J. Lambert.
A survey of watercolor techniques. Subject matter largely still life, sketchbook, and on-the-spot outdoor painting.

[FR DR 316 Advanced Drawing]
Fall. 2 credits. Prerequisite: FR DR 109, 211 or permission of instructor. S-U grades optional. 4 hours TBA. T W R 9:05-12:05, 2 hours outside sketching. R. J. Lambert.
For students who want to attain proficiency in a particular type of illustration or technique.

[FR DR 417 Scientific Illustration]
Fall. 2 credits. Prerequisite: FR DR 211 or 316 or equivalent. S-U grades optional for graduate students only. Not offered fall 2001. R. J. Lambert.
A survey of methods of illustration. Training in techniques of accurate representation in media suitable for reproduction processes, including pen and ink, scratchboard, wash, and mixed media.

FRUIT AND VEGETABLE SCIENCE: HORTICULTURAL SCIENCE

See Horticulture.

HORTICULTURE

Courses by Subject:

General horticulture: 101, 102
Public garden management: 485
Crop production:
Agroforestry: 415
Fruit: 442, 444, 445
Greenhouse and controlled environments: 310, 400
Nursery: 400, 420
Turfgrass: 330, 475
Vegetable: 225, 366, 460

Extension education: 476

Horticultural physiology: 400, 449, 455, 460, 462, 615, 620
Independent study, research, and teaching: 495, 496, 497, 498, 499, 500, 700, 800, 900
Internships: 496

Landscape horticulture: 301, 435, 440, 485, 491, 492
Plant materials: 243, 300, 301, 317, 491, 492
Plant propagation: 317, 400
Postharvest physiology: 525, 625

Seminars: 600
Special topics: 494, 635, 694
Turfgrass management: 330, 475
Vegetable types and varieties: 220, 465

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

HORT 101 Horticultural Science and Systems
Fall. 4 credits. Lec: M W F 9:05; lab: W 1:25-4:25. I. A. Merwin.
The science and technology of horticultural plants grown for foods and beverages, and ornamental, landscape or recreational purposes. Lectures, labs and field trips involve natural history and evolution of horticultural plants, botany and physiology, sustainable management of soil, water and plant nutrition, breeding and propagation, ecological and landscape functions, and integrated design and management of horticultural plantings and production systems.

HORT 102 General Horticulture
Spring. 4 credits. Each lab limited to 25 students. Lec: M W F 10:10; lab: M T or W 2:00-4:25. L. D. Topoleski.
The subject matter of this course acquaints the student with the applied and basic science of horticulture. Open to all students who want a general knowledge of the subject or who want to specialize in horticulture but have a limited background in practical experience or training in plant science. Includes flower, fruit, and vegetable growing and gardening techniques.

HORT 200 Vegetable Types and Identification
The subject matter of this course acquaints students with the vegetable species grown in the Northeast and the pests and disorders encountered in their production. Subjects covered include identification of economically destructive weeds, diseases, and insects of vegetables, identification of vegetable and weed seeds, nutrient deficiencies, vegetable judging, and pest and disease defects.

HORT 225 Vegetable Production
Intended for those interested in the production, processing, and marketing of vegetables. Topics included are techniques, problems, and trends in the culture, harvesting, and storage of the major vegetable crops. Field trips to conventional and organic farms and hands-on experience in growing vegetables in the greenhouse are included.

HORT 243 Taxonomy of Cultivated Plants (also BIO 141)
Fall. 4 credits. Prerequisite: 1 year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Lec: M W F 10:10-11:00; lab: M or W 2:00-4:25. Offered even years. M. A. Luckow.
A study of families and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

HORT 300 Herbaceous Plant Materials
Identification, use, characteristics, and garden cultural requirements of annual and herbaceous perennial plants, especially those used in northern climates. Practical gardening experiences at selected campus locations. Field trips to nearby specialty nurseries. Garden planting design is not a component of the course.

HORT 301 Plants for Interiors
Study of plants for interiors: identification, design characteristics, and cultural requirements; use of plants as elements of planting design (trees, shrubs, groundcovers, and accent plants including potted flowering plants and cut flowers); the interior landscape industry (organization, bidding, installation, maintenance). Required three-day field trip, estimated cost, $130.

HORT 310 Production and Marketing of Crops Grown in Controlled Environments
Spring. 4 credits. Letter grade only. Offered odd years; next offered 2003. Lec: T R 10:10; lab: R 2-4:25. 2.5 hours TBA. T. C. Weiler.
Basics of establishing and managing agricultural production in environmentally optimized facilities; technology basics, systems and practices, structures, systems and equipment, materials handling, heating and cooling, lighting, fertilizing and irrigation, environmental stewardship, integrated pest management, business management, world centers of production; production of cut, pot, bedding, vegetable, and fruit crops in controlled environments, emphasizing predictive harvesting through environmental, physical, and chemical management of growth and development. Each student grows one or more crops. Required three-day field trip, estimated cost, $130.
HORT 317 Seed Science and Technology (also CSS 317) 
Fall. 3 credits. Prerequisites: BIOL 241 or an equivalent course approved by instructor. Letter grade only. Offered alternate years. Lec T R 11:00-12:30; lab, R 12:45-1:45. F. A. G. Taylor, Geneva Experiment Station. Study of the principles and practices involved in seed production, conditioning, storage, quality management and stand establishment. Information is applicable to various kinds of agricultural and horticultural seeds. Hands-on laboratory experience.

HORT 325 Practical Aspects of Postharvest Handling of Horticultural Crops 
Spring. 3 credits. Lec, M W 9:05; lab T 1:25-2:25. Next offered 2003. Staff. A study of changes that occur in horticultural crops between harvest and consumer. Practices that affect the rate of change and the final effect on quality of the commodity are discussed. Maturity/quality indices, preharvest treatments, handling and storage/transportation requirements of selected horticulture crops are covered.

HORT 330 Turfgrass Management 

HORT 366 The Soil Ecosystem (also CSS 366) 
Spring. 3 credits lecture; 1 credit lab. Lab cannot be taken without lecture. Prerequisites: one year of introductory biology. S-U optional. Lec. T R 10:10-11:25; lab. W 1:25-2:25. J. E. Thies, L. E. Drinkwater. Activities of the soil biota are crucial for the continued functioning and renewal of soil ecosystems. Through study of the soil as an ecosystem, students gain an understanding of the diversity of soil organisms and the critical roles that microbial activities and interactions have in agricultural production and environmental protection. Through a small research project, students also gain competency in developing research questions and formulating hypotheses, planning appropriate methods for gathering and interpreting data, and summarizing research work.

HORT 400 Principles of Plant Propagation 
Fall. 3 credits. Prerequisites: BIOL 242 and 244 or another course in plant physiology. Lec. T R 9:05; lab. R 1:25-2:25. K. W. Mudge. Sexual (seed) propagation and asexual (vegetative) propagation including cutting, graftage, tissue culture, layering, and specialized vegetative reproductive structures. Physiological, environmental, anatomical principles, and practical applications are stressed in lecture and hands-on skills in laboratories. Examples include both temperate and tropical horticultural, agronomic, and forestry crops.

HORT 401 The How, When and Why of Grafting—A Distance Learning Approach 
Spring. 2 credits. Lec: autotutorial (web, cd); lab: greenhouse/autotutorial, discussion, and introductory face-to-face meeting TBA. K. W. Mudge. A ten-week, web/CD-based autotutorial approach to the principles and practices of grafting and budding as applied to plant propagation. Emphasis is on the role of grafting in modern horticultural practice and on student development of hands on grafting skills. Instruction involves web-based asynchronous presentation of lecture materials (web, CD-rom), asynchronous discussion and hands-on and greenhouse laboratory exercises in grafting.

HORT 415 Principles and Practices of Agroforestry (also NTRES 415 and CSS 415) 
Fall. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option. Lec. M W 10:10-11:00; lab. Optional laboratory. HORT 416 (also NTRES 416 and CSS [SCAS] 416). Offered alternate years. E. Fernandes, K. Mudge, L. Buck. An introduction to modern and traditional agroforestry systems and their temporal integration of multipurpose woody plants species and arable crops (trees or shrubs) with annual or perennial crops or with livestock. Interactions between woody and nonwoody components of agroforestry systems are considered, based on above- and below-ground processes. The sustainability of agroforestry systems is critically examined from biophysical, socioeconomic and policy perspectives.

HORT 416 Principles and Practices of Agroforestry—Laboratory (also NTRES 416 and CSS 416) 
Fall. 1 credit. Optional lab component of HORT 415 (also NTRES and CSS [SCAS]). S-U grades optional. Prerequisites: junior, senior, or graduate standing or permission of instructor; prior or concurrent enrollment in HORT 415. W 1:25-4:25. Offered alternate years. K. Mudge, E. Fernandes, L. Buck. An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management skills applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests, case study design and analysis, use of computer-based sources of information, and practical skills with woody plants including identification, propagation, planting, pruning, and measurement.

HORT 420 Principles of Nursery-Crop Production 
Fall. 4 credits. Prerequisite: HORT 400. Lec. M W F 9:05; lab. M 2:00-4:25. Field trips. Offered odd years. G. L. Good. Principles of production of nursery crops to marketable stage, including postharvest handling and storage. Terminal project required. Field trips are made to commercial nurseries.

HORT 435 Landscape Management 
Fall. 4 credits. Prerequisites: HORT 270 or 335. Lec. M W F 9:05; lab. M 2:00-4:25. Offered even years. G. L. Good. A study of the practices involved in the maintenance of woody ornamental plants in the landscape. The major emphasis is on post-planting techniques, including water and fertilization management, weed management, pruning, and general tree care. Labs have a hands-on focus.

HORT 440 Restoration Ecology 
Fall. Weeks 1-10. 3 credits. Prerequisite: upper division or graduate standing. Letter grade only. Lec, T R 10:10; lab, F 1:25-4:25. Offered odd years; 2001. T. H. Whittlow. An inquiry based treatment of the principles and methods of ecology, conservation biology, hydrology, soil science and related disciplines applied to the restoration of degraded terrestrial ecosystems. Weekly labs, four weekend field trips, and a semester-long project provide many opportunities for experiential learning. Substantial commitment outside of the classroom is expected.

HORT 442 Berry Crops: Culture and Management 
Fall. 3 credits. Lecs. M W 9:05; lab. M 1:25-4:25. Offered even years. M. P. Prifts. A study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other minor small fruit crops, and of cultural practices that influence productivity, fruit quality, and pest management. Marketing and economics are considered, and alternative production practices for both commercial and home gardeners are discussed. Frequent field trips enhance classroom activities.

HORT 444 Vineyard Management 
Spring. 3 credits. S-U grades optional. Lec T R 9:05; lab. T 1:25-4:25. R. M. Powrie. Commercial grape production with an emphasis on the problems of production in cold climates. Students examine site selection, world and regional grape varieties, and the anatomical and physiological basis for vineyard management decision making. Laboratory exercises and field trips offer hands-on experience.

HORT 445 Orchard Management 
Spring. 3 credits. S-U grades optional. Lec T R 10:10; lab, T 1:25-4:25. Offered even years. A. Merwin. The science and technology of deciduous tree fruit production. Topics include basic tree and fruit physiology, orchard renovation and design systems, nutrition, irrigation and freeze protection practices, tree pruning and training, post-harvest fruit storage, marketing and economic spreadsheet models, monitoring and decision systems for integrated pest management, and efficient use of orchard equipment. Emphasis is on the agroecology of perennial crop systems, with labs providing hands-on experience in orchard management. Previous coursework in horticulture and other plant sciences is suggested, but not a prerequisite.

HORT 449 Green Signals and Triggers—The Plant Hormones (also BIOL 449) 
Fall. 1 credit. Prerequisites: introductory biology course and permission of instructor. S-U grades optional. Offered odd years. Lecs, F 1:25-2:15. P. J. Davies. A study of the plant hormones and how they regulate plant growth and development. Topics include the discovery, role in growth and development, mode of action and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.
HORT 455 Mineral Nutrition of Crops and Landscape Plants (also CSS 455)
Spring. 3 credits. Prerequisite: CSS 260 and BIOL 242, or equivalent. Lecs, M W F 9:05; lab, R 1:30–4:00. Offered alternate years, not offered spring 2003. H. C. Wien and staff.
A modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on agronomic crops, vegetables, floriculture, and fruit crops. Each module carries one credit; a minimum of three credits must be taken in one semester. By the end of the course, students understand the principles of mineral nutrient function in crop plants, are able to diagnose deficiencies by symptoms and tissue tests, and can devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.

HORT 460 Plant-Plant Interactions
Spring. 3 credits. Prerequisite: any crop production on plant ecology course or permission of instructor. Lecs, T R 9:05; lab/disc, M 2–4:25. D. W. Wolfe.
Mechanisms by which plants interfere or positively interact in the context of environmental conditions such as light, temperature, and fertility. Competitive and chemical interactions are considered between weeds and crops, among crops in polyculture, and between individuals in monoculture. Most examples are taken from temperate and tropical monoculture and intercropping systems, but implications for natural ecosystems are also considered.

HORT 462 Vegetable Crop Physiology
Study of the physiological processes that determine the timing, quantity, and quality of vegetable crop yields. Processes of flower induction, fruit set, fruit growth, and the relations between vegetative and reproductive growth are covered. The course emphasizes practical hands-on greenhouse experiments and small group discussions.

HORT 475 Golf Course Management
Fall. 2 credits. Prerequisite: HORT 330 or equivalent. Lecs, F 1:25–4:25. Offered odd years. A. M. Petrovic.
Advanced study in the management of golf course operations including selection of root zone materials, fertilization practices, integrated pest management practices, irrigation systems, environmental based decision making, personnel management, and financial operations. Analysis of a central New York golf course provides the basis for discussion.

HORT 476 Practical Problem Solving in Horticulture
Foundation for extension or similar career oriented students. Application of horticultural science principles to practical situations faced primarily by home gardeners. Techniques of synthesizing information from various scientific disciplines and strong emphasis on communications abilities led by staff in several departments. Topics are interdisciplinary, drawing from expertise in horticultural science (landscape and food), entomology, plant pathology, natural resources, and Cornell Plantations.

HORT 480 Plantations Seminar Series
Fall. 1 credit. S-U grade only. W 7:30 P.M. D. A. Rakow.
A 10-week series of seminars given by prominent speakers on a variety of horticultural, natural sciences, and human cultural themes.

HORT 485 Public Garden Management
Spring. 3 credits. Prerequisites: HORT 300 or HORT 301, HORT 230 or HORT 335. Lecs, T R 10:10–11:00, lab, T R 11:15–12:05. Two-and-a-half-day field trip to visit other botanical gardens and arboreta. Next offered spring 2003. D. A. Rakow.
Course explores the history of public gardens, types of contemporary public gardens, and the operation of botanical gardens and arboreta. Included are separate units on: collections curation, design of collections, management of landscapes and natural areas, educational programming, interpretive programs, research, financial management, and staffing.

HORT 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 491)
Fall. 4 credits. Prerequisites: major in horticulture or landscape architecture or permission of instructor. Limited to 48 students. Preregistration required. Lec, T R 12:20–1:10; Lab, T R 1:25–4:25.
N. L. Bassuk and P. J. Trowbridge.
This course focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students can critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices. A project where students implement what they have learned by creating a new landscape serves to integrate theory, principles, and practices.

HORT 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 492)
Spring. 4 credits. Prerequisite: a passing grade in HORT/LA 491. Attendance limited to horticulture and landscape architecture majors or permission of the instructors.
N. L. Bassuk and P. J. Trowbridge.
The second half of this course continues focus on the winter identification, uses and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detailing, and planting techniques. Students critically assess potential planting sites, select appropriate trees, shrubs, vines and ground covers for a given site. Design for specific sites followed by written specifications and graphic details are produced to implement these proposals. Students implement in a hands-on manner, site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT LA 491 and 492 constitute an integrated course. Attendance limited to Horticulture and Landscape Architecture majors or permission of the instructors.

HORT 494 Special Topics in Horticulture
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings may vary by semester, and will be advertised before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

HORT 495 Undergraduate Seminar—Current Topics in Horticulture
Fall and spring. 1 credit. Undergraduate participation in weekly departmental seminar series. Graduate students should enroll in HORT 600. May be taken four times for one credit per semester. S-U grades only. R. L. A. Weston, D. W. Wolfe.

HORT 496 Internship in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of student's advisor in advance of participation in internship programs. Students must register with an Independent Study form (available in 140 Roberts Hall) signed by the faculty member who will supervise their study and assign their grade. Hours TBA. Staff.

HORT 497 Independent Study in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor(s). Students must register with an Independent Study form (available in 140 Roberts Hall). Independent study in horticultural sciences under the direction of one or more faculty members. Hours TBA. Staff.

HORT 498 Undergraduate Teaching Experience
Fall or spring. Credit variable. S-U grades optional. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Independent study in horticultural sciences under the supervision of departmental faculty members. This experience may include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

HORT 499 Undergraduate Research
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours TBA. Staff.
Undergraduate research projects in horticultural sciences.

HORT 500 Master of Professional Studies (Agriculture) Project
Fall or spring. 1–6 credits. (6 credits maximum toward M.P.S. Agriculture) S-U grades optional. Staff.
A comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension,
and research programs and situations. Required of Master of Professional Studies (Agriculture) candidates in the respective graduate fields of horticulture.

HORT 600 Seminar in Horticulture
Fall and spring. 1 credit. S-U grades only. R 4:00. D. W. Wolfe and L. A. Weston. Weekly seminars consist of graduate student research project reports, faculty research topics, as well as guest speakers from other universities and/or industry. Required of graduate students majoring or minoring in horticulture. Undergraduate students register under HORT 495.

HORT 615 Quantitative Methods in Horticultural Research
Spring. 3 credits. Prerequisite: BTRY 601, BTRY 602 or permission of instructor. S-U grades only. W F 2:30-4:25. Offered alternate years. D. W. Wolfe. Advantages and limitations of conventional experimental designs and analyses of growth and yield (including-on-farm) experiments. Use and interpretation of plant growth analysis techniques. Discussions include critical analysis of published data and research in progress.

HORT 620 Woody Plant Physiology
Spring. 4 credits. Prerequisites: BIOL 351, CHEM 357, or equivalent, or permission of instructor. Lec. T R 8:40-9:55. Lab, T 1:25-4:25. Offered odd years. 2003, T. H. Whitlow. An examination of physiological processes in woody plants emphasizing whole plant integration and how these processes affect plant growth under both natural and cropping systems. Topics include: evolution of the woody plant form, structure and function of the root andshoot, growth periodicity, dormancy, growth analysis, carbon balance and allocation, root symbioses, and physiological responses to abiotic stresses. Faculty from Geneva and Fruit and Vegetable Science collaborate in teaching.

HORT 625 Advanced Postharvest Physiology of Horticultural Crops
Spring. 3 credits. Prerequisite: BIOL 242 and/or HORT 325. Lec. T R 10:10; disc, to be arranged. Not offered spring 2002. R. W. Everett. Physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticultural plant parts. Topics include morphological and compositional changes during ripening and storage, life, some physiological disorders, aspects of hormone action and interactions, and a consideration of control.

HORT 635 Tools for Thought
Fall. 1 credit. Open to graduate students only. S-U grade only. 1 hour per week. TBA. Not offered 2001-2002. T. H. Whitlow. A discussion of readings from Kuhn, Waddington, Wilson, Lewontin, and others emphasizing application of the philosophy of science to the real world practices of scientists.

HORT 636 Current Topics in Horticulture
Fall or spring. 1 credit. S-U grades only. 1 hour per week. TBA. Staff. A seminar series on current topics chosen by participating students and faculty, on a rotating basis. Format consists of weekly discussion groups, with each participant presenting at least one oral report based on independent reading and/or experimentation relating to the chosen topic. Interested students should contact the designated instructor(s) for each term.

HORT 694 Special Topics in Horticulture
Fall or spring. 4 credits maximum. S-U grades optional. Hours TBA. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committees, and the same course are not offered more than twice under this number.

HORT 700 Graduate Teaching Experience
Fall or spring. Credit variable. Open only to graduate students. Undergraduates should enroll in HORT 498. S-U grades optional. Prerequisite: permission of instructor. Hours TBA. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

HORT 800 Thesis Research, Master of Science
Fall or spring. Credit TBA. S-U grades only.

HORT 900 Thesis Research, Doctor of Philosophy
Fall or spring. Credit TBA. S-U grades only.

INTERNATIONAL AGRICULTURE
Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

INTAG 402 Agriculture in the Developing Nations I
Fall. 2 credits. Prerequisite: International Agriculture 300. F 1:25-3:20. P. A. Ameson and staff. The goal of this course is to acquaint students with the major issues and problems in international agriculture and rural development and to show how problems in development are being addressed by international, government, and nongovernment agencies. The lectures/discussions attempt to establish the global context for sustainable agricultural development and focus on agriculture in the tropics, using case studies of agricultural development in Latin America, especially Ecuador. This course may be taken as a stand-alone survey course in international agriculture, but it is also the preparatory course for participation in Agriculture in the Developing Nations II (International Agriculture 602), which includes a trip to Ecuador during the intersession.

INTAG 403 Traditional Agriculture in Developing Countries
Fall. 1 credit. S-U only. T 8:40-9:55. H. D. Thurston, D. Bates, R. Blake, J. Lassoie, A. Power, E. Fernandez, T. Steenhusen. Today, perhaps over half of the world's arable land is farmed by traditional farmers. They developed sustainable agriculture practices which allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten in developed countries but are still used by many traditional, subsistence, or partially subsistence farmers in developing countries. The course examines traditional systems from several disciplinary points of view.

INTAG 460 Global Seminar: Environment and Sustainable Food Systems (also AL5 480 and EDUC 480)
Spring. 1-3 credits. Prerequisite: junior, senior, and graduate students. Letter grade. Lec., R 8:00-9:55 AM; Lab, 3:35-4:25 PM. scheduled, one additional hour unscheduled. H. D. Sutphin, P. A. Ameson, and D. Lee. For description, see ALS 480.

INTAG 497 Independent Study in INTAG
Fall and spring. 1-3 credits. S-U or letter grade. Prerequisites: permission of instructor and signed Independent Study Form. Staff. Independent Study in INTAG allows students the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the direction of a faculty member.

INTAG 598 International Development M.P.S. Project Paper
Fall and spring. 1-6 credits. (A maximum of 6 credits may be applied toward M.P.S. degree requirements). Limited to M.P.S. candidates in the Field of International Development (ID). S-U grades only. N. Uphoff. A problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international development.
INTAG 599 International Agriculture and Rural Development M.P.S. Project Paper
Fall and spring. 1-6 credits. (A maximum of 6 credits may be applied toward M.P.S. degree requirements). Limited to M.P.S. candidates in the Field of International Agriculture and Rural Development (IARD). S-U grades only. R. Blake. A problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international agriculture and rural development.

INTAG 602 Agriculture in the Developing Nations II
Spring. 3 credits. Prerequisites: INTAG 300 or equivalent, INTAG 402, and permission of instructors. Cost of field-study trip includes air fare and approximately $450 for lodging, meals, and personal expenses. T R 2:30-4:25 until midterm only. R. W. Blake and staff. Oriented to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisciplinary exchange among staff and students. The two-week field-study trip during January to Latin American countries is followed by discussions and assignments dealing with problems in agriculture and livestock production in the context of social and economic conditions.

INTAG 603 Administration of Agricultural and Rural Development (also GovT 692)
Spring. 4 credits. M 2:30-5:30. N. T. Uphoff and T. W. Tucker. An intercollege course designed to provide graduate students with a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students in agricultural or social sciences who may have administrative responsibilities during their professional careers.

INTAG 685 Training and Development: Theory and Practice (also COMM 685, EDUC 685 and ILR 658)
Spring and summer. 4 credits. S-U grades optional. M. Kroma. Analysis, design, and administration of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy as nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the United States and abroad.

INTAG 694 Graduate Special Topics in INTAG
Fall or spring. 1-4 credits. S -U or letter option. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

INTAG 697-698 International Development M.P.S. Seminar
Fall, spring. 1 credit. S-U only. N. Uphoff. A seminar for M.P.S. students to discuss important issues in international development and to prepare them to write their project papers. Specific content varies.

INTAG 699 International Agriculture and Rural Development M.P.S. Project Seminar
Fall, spring. 1 credit. S-U grade only. Required for, and limited to, M.P.S. IARD students or with permission of instructor. R. Blake. The seminar provides students with the opportunity to develop and present their special projects. It also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

INTAG 783 Farmer Centered Research and Extension (also EDUC 783)
Fall. 3 credits. S-U or letter option.
M. Kroma and T. Tucker. This course provides an introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal, and documentation of local and indigenous knowledge of community-based development. Case studies of farmer-centered research and extension provide a focus for analysis. Appropriate roles of researchers and extensionists as partners with farmers are examined. A major contribution of farmer-centered research and extensions is its potential to legitimize people's knowledge by enhancing their capacity to critically analyze their own problems, to conduct their own research, and to empower them to take direct action to solve those problems.

Related Courses in Other Departments
Related Courses in Other Departments
In addition to International Agriculture (INTAG) courses, there are a wide variety of other courses with an international focus. The following are suggested relevant courses:

Agricultural & Biological Engineering
How to Manage a Watershed (ABEN/GOVT 644)

Applied Economics & Management
International Trade and Monetary Economics (AEM 230)
*Global Agribusiness Management (AEM 329)
International Trade Policy (AEM 430)
*Food Marketing Colloquium (AEM 446/447)
Global Marketing Strategy (AEM 449)
Seminar on Agricultural Trade Policy (AEM 730)
Macro Policy in Developing Countries (AEM 763)

Agriculture & Life Sciences
*Agriculture Study Tour to Burgundy, France (ALS 402)
*Internship Opportunities in Burgundy, France (ALS 405)
Global Seminar (ALS 480)

Animal Science
Tropical Livestock Production (AN SC 400)
Tropical Forages (AN SC 403)

Asian Studies
Southeast Asia Seminar: Country Seminar (ASIAN 601)

Biology
Biological of the Neotropics (BIOE 405)
Food, Agriculture, and Society (BIOE 469)
The Healing Forest (BIO PL 348)

Communication
Communication in the Developing Nations (COMM 424)
Intercultural and Development Communication (COMM 612)

City & Regional Planning
Seminar in International Planning (CRP 671)
Seminar in Project Planning in Developing Countries (CRP 675)

Crop & Soil Science
Properties and Appraisal of Soils of the Tropics (CSS 471)
Ecology of Agricultural Systems (CSS 473)
Tropical Cropping Systems (CSS/INTAG 314)

Education
Comparative Studies in Adult Education (EDUC 483)
Farmer-Centered Research & Extension (EDUC/INTAG 783)

Food Science
International Postharvest Food Systems (POOD 447)

Horticulture
Genetic Improvement of Crop Plants (HORT 403)

Nutritional Science
Nutritional Problems in Developing Nations (NS 506)
Integrating Food Systems and Human Needs (NS 380)
National and International Food Economics (NS 457)
International Nutrition Problems, Policy, and Programs (NS 680)

Natural Resources
Ecological Dimensions of Global Change (NTRES 350)
International Environmental Issues (NTRES 400)
Religion, Ethics, and the Environment (NTRES 407)
Principles and Practices of Agroforestry (NTRES/HORT 415)

Plant Breeding
Introduction to Plant Breeding (PL BR 201)

Genetic Diversity (PL BR 404)

Plant Pathology
Plant Diseases in Tropical Agriculture (PL PA 655)

Integrated Pest Management in Tropical Agriculture (PL PA 655)
Rural Sociology
Population Dynamics (RSOC 201)
International Development (RSOC 205)
Social Indicators, Data Management and Analysis (RSOC 213)
Comparative Issues in Social Stratification (RSOC 370)
Human Fertility in Developing Nations (RSOC 408)
Population and Environment (RSOC 410)
Population Policy (RSOC 418)
Migration and Population Redistribution (RSOC 430)
Social Impact of Resource Development (RSOC 440)
Society and Survival (RSOC 490)
Population, Environment, and Development in Sub-Saharan Africa (RSOC 495)
Sociological Theories of Development (RSOC 606)
The Sociology of "Third World" States (RSOC 725)
*Includes overseas travel

LANDSCAPE ARCHITECTURE
LA 141 Grounding in Landscape Architecture
Fall. 4 credits. Limited to 15 students. Letter grade only. Cost of basic drafting equipment for the major plus materials for projects; about $250.
Introduction to the representation and design of landscapes and to working in a studio setting. Freehand drawing, measured drawing, and model making are used to understand design principles of the changing landscape.

LA 142 Grounding in Landscape Architecture
Spring. 4 credits. Limited to approximately 20 students; freshman landscape architecture majors or permission of instructor.
Cost of basic drafting equipment and project supplies, about $250.
Fundamentals of landscape design applied to small-scale site-planning projects. Work in the studio introduces course participants to the design process, design principles, construction materials, planting design, and graphics.

LA 201 Medium of the Landscape
Fall. 5 credits. Limited to landscape architecture majors. Cost of basic drafting equipment, supplies, and fees, about $200; expenses for field trip, about $250.
This studio course emphasizes the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthform, water, and vegetation.

LA 202 Medium of the Landscape
Spring. 5 credits. Prerequisite: LA 201 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.
This course focuses on the role of materials in design, design theory, and design vocabulary associated with landscape architectural projects.

LA 260 Pre-Industrial Cities and Towns of North America (also CRP 260 and CRP 666 and LA 668)
Fall. 3 credits. Offered alternate years. Next offered fall 2002.
Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. This course considers how each culture has altered the landscape in its own unique way as it created its own built environments.

LA 261 Urban Archaeology (also CRP 261)
Fall. 3 credits.
Urban archaeologists study American Indian, colonial, and modern urban landscapes. This course explores how urban centers evolve; what lies beneath today's cities; and how various cultures have altered the urban landscape. Students participate in a local archaeological excavation.

LA 262 Laboratory in Landscape Archaeology (also ARKEO 262)
Fall. 3 credits. Prerequisites: LA 201 or CRP 261 or permission of instructor.
Various American Indian civilizations and European cultures have all altered the landscape to meet the needs of their cultures. Students learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

LA 263/547 American Indians, Planners, and Public Policy (also CRP 363/547)
Spring. 3 credits. Offered in alternate years.
Decisions made by public agencies and private enterprise too often lead to the flooding, polluting, strip-mining, or other destruction of American Indian reservations, archaeological sites, and burial grounds. The central focus of this course is how to address urban and regional problems without imperiling the cultural survival of minorities.

LA 282 The American Landscape
Fall. 3 credits.
An interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature.

LA 292 Creating a Second Nature
Spring. 3 credits. Prerequisites: none, but ARKEO 100, ANTHR 100, or CLASSICS/HISTORY OF ART 220 recommended.
Offered alternate years.
What can archaeological investigation tell us about the landscape of cultures that spent much of their civic and private lives out of doors? This course introduces the evidence for the markets, parks, gardens, fields, and burial places central to daily life in the ancient Near East and Classical Worlds and formative of our current ideas of these landscapes.

LA 301 Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: LA 202 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.
Course participants are engaged in the art and science of site-scaled urban design. This includes relating construction and planting details to concepts and program.

LA 302 Urban Design in Virtual Space
Spring. 5 credits. Cost of supplies and fees, about $250; basic expenses for field trip, about $250.
A sequence of projects introducing students to advanced skills in large-scale urban design, including 3-D computer modeling and digital design media as tools for shaping the form of the city.

LA 315 Site Engineering I
Spring. 3 credits. Prerequisite: permission of instructor.
Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 316 Site Engineering II
Fall. 2 credits. Prerequisite: LA 315 or permission of instructor.
Lectures and studio projects dealing with earthwork estimation, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 318 Site Construction
Spring. 5 credits. Prerequisite: permission of instructor.
The emphasis of this course is design detail and use of landscape materials in project implementation. Exploration of construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the focus for this course. The course includes lectures, studio problems, and development of drawing leading to construction documentation for a comprehensive project. Students develop a process of self-criticism related to measured drawings specific to the comprehensive project. Course participants fabricate material prototypes in wood and metal.

LA 402 Integrating Theory and Practice: Community Design Studio
Spring. 5 credits. Prerequisite: LA 301 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.
This course engages the theory and practice of participatory community design through a real community service project. Students become knowledgeable about the theory and practice of community design while learning an array of techniques and tools. Participants gain an understanding of how to integrate meaningful public service with design invention and creativity, engage rigorous design research methods, and understand how institutional and community contexts influence design problem solving. Students will be expected to work independently and collaboratively on team projects in a community. One class period per week will be designated for community fieldwork. Studio theme for 2001-2002 to be announced.

LA 403 Directed Study: The Concentration
Fall, spring. 1 credit. Prerequisite: any Landscape Architecture undergraduate students in their final year of study.
Working with their adviser, students create a written and visual paper that documents the concentration intent.

**LA 410 Computer Applications in Landscape Architecture**
Fall or spring. 3 credits. Offered to landscape architecture students only. Limited to 15 students.
This course is designed to develop a working knowledge of various computer software applications with emphasis on Autocad. The course explores applications relative to land use planning and the profession of Landscape Architecture.

**LA 412 Professional Practice**
Spring. 1 credit.

Presents the student with a comprehensive understanding of the role of the professional landscape architect and the problems and opportunities one may encounter in an office or in other professional situations. Topics discussed include practice diversity, marketing professional services, office and project management, construction management, computers in the profession, and ethics.

**LA 486 Placemaking by Design**
Spring. 3 credits. Permission of instructor. S-U grades optional.

This seminar provides an understanding of contemporary planning and landscape architectural design strategies that reaffirm and reclaim a sense of place. Readings and discussions focus on the theory and practice of placemaking as presented in the literature and in built works. The seminar addresses the following questions: What constitutes a place-based design approach and what distinguishes it from other more conventional design approaches? Who are the key players shaping the theory and practice of placemaking?

**LA 490 Rome Wasn’t Built in a Day**
Spring. 3 credits.

In this electronic course, students learn about how the form and spatial structure of the city of Rome has evolved through time. Using the interactive CD-ROM *Layers of Rome* as a digital text, the course engages participants in the investigations of urban design in Rome both as a case study and as a vehicle for exploring concepts applicable to many contemporary cities worldwide. The material focuses on the intersection between historical studies of urban space, architectural geography, urban landscape formation, and the design of cities. Lectures, research, readings and exercises are developed using the *Layers of Rome* CD, web searches, digital networking, and various interactive learning technologies geared toward urban analysis and visual design media.

**LA 491 Creating the Urban Eden: Woody Plant Selection, Design and Landscape Establishment (also HORT 491)**
Fall. 4 credits. Prerequisites: major in horticulture or landscape architecture or permission of instructor. Cost of supplies, about $50, expenses for field trips, about $250.

This course focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students are able to critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices.

**LA 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 492)**
Spring. 4 credits. Prerequisites: a passing grade in HORT/LA 491. Attendance limited to horticulture and landscape architecture majors or permission of the instructor. Limited to 48. Preregistration required.

The second half of this course continues to focus on the winter identification, uses and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detailing and planting techniques. Students critically assess potential planting sites, select appropriate trees, shrubs, vines and ground covers for a given site. Design for specific sites followed by written specifications and graphic details are produced to implement these proposals. Students implement in a hands-on manner, site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles and practices. Together, HORT/LA 491 and 492 constitute an integrated course.

**LA 494 Special Topics in Landscape Architecture**
Fall or spring. 1-3 credits; may be repeated for credit. S-U grades optional.

Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

**LA 495 Green Cities: The Future of Urban Ecology (also CRP 495)**
Fall.

Explores the history and future of the ecology of cities and their role in solving the present global ecological crisis. The politics, design, and economics of "green cities" are examined in terms of transportation, renewable energy, solid waste and recycling, land use, and the built environment.

**LA 497 Individual Study in Landscape Architecture**
Fall or spring. 1-5 credits; may be repeated for credit. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Work on special topics by individuals or small groups.

**LA 498 Undergraduate Teaching**
Fall or spring. 1-2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty.

**LA 501 Composition and Theory**
Fall. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250; expenses for field trip, about $250.

Projects focus on design applied to the practice of landscape architecture: particularly the relationship between measurement, process, experience, and form at multiple scales of intervention.

**LA 502 Composition and Theory**
Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250; expenses for field trip, about $250.

The studio focuses on the spatial design of project-scale site development. Students develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.

**LA 505 Landscape Representation I**
Fall. 3 credits. Prerequisites: concurrent enrollment in LA 501 or permission of instructor.

This course introduces students to both conventional and unconventional modes of landscape architectural design representation. Drafting, orthographic drawing, axonometric project, lettering, analysis and concept drawing are taught alongside more expressive modes of direct site study and representation.

**LA 506 Graphic Communication II**
Spring. 3 credits. Prerequisites: LA 505 and concurrent enrollment in LA 502 or permission of instructor.

An intermediate level course focused on modes of landscape representation from ideation to presentation. Representation modes may include freehand, process drawing, analysis and orthographic drawing, concept modelling, composite drawings, and visual books.

**LANAR 524 History of European Landscape Architecture**
Fall. 3 credits. Offered through the College of Architecture, Art, and Planning.

**LANAR 525 History of American Landscape Architecture**
Fall. 3 credits. Offered through the College of Architecture, Art, and Planning.

**LA 545 The Parks and Fora of Imperial Rome**
Spring. 3 credits. Prerequisites: advanced standing in a design field, classics or history of art, other disciplines, or by permission of the instructor.

This advanced seminar is seeking an interdisciplinary group of students in classics, art history, archaeology, landscape architecture, horticulture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design, or computer modeling to a collaborative study of the ancient fora and public parks depicted on the Severan Marble plan of Rome. Opportunity for a spring break trip to Rome.

**LA 569 Archaeology in Preservation Planning and Site Design (also CRP 569)**
Spring. 3 credits. Offered alternate years.

In response to federal, state, and local legislation, archaeology now plays an important role in design, planning, and land-use decisions. Students develop the research skills needed to complete environmental review projects and historic landscape plans.

**LA 580 Landscape Preservation: Theory and Practice**
Fall. 3 credits. Prerequisites: Limited to junior and senior undergrads, and graduate students.
This course examines the evolving practice of landscape preservation in the United States. Topics include the recent history of the discipline, methodology in documentation of historic landscapes, and important practitioners and notable projects. Format for the class is assigned readings and discussion, invited speakers, lectures, and a project documenting a local site.

LA 582 The American Landscape
Fall. 3 credits. An interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to culture, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs, and literature. Graduate students complete additional outside work and attend an additional class session.

LA 590 Theory Seminar
Spring. 3 credits. Seminar in landscape design theory. For graduate students and seniors.

LA 598 Graduate Teaching
Fall or spring. 1-3 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form. Staff. Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in desk critiques, and presenting lectures. There are assigned readings and discussion sessions on education theory and practice throughout the term. (Credit hours are determined by: 2 hours per week = 1 credit hour).

LA 601 Integrating Theory and Practice I
Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about $250. The studio focuses on site-scaled projects that consider significant cultural and natural landscapes. Theories of landscape restoration, sustainable design, and landscape representation are explored through projects that derive form from site and place. The integration of site history and ecology and site construction supports an understanding and relationship between design and place.

LA 602 Integrating Theory and Practice II
Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250; expenses for field trip, about $250. The studio builds upon prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary construction technology. The course focuses on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationship to site design and planning are critically explored through theory and practice.

LA 603 Directed Study: The Concentration
Fall, spring. 1 credit. Prerequisite: any Landscape Architecture graduate student in their final year of study. Working with their adviser, students create a written and visual paper that documents the concentration intent.

LA 615 Site Engineering I
Spring. 3 credits. Prerequisite: permission of instructor. Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 616 Site Engineering II
Fall. 2 credits. Prerequisite: LA 615 or permission of instructor. Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 618 Site Construction
Spring. 5 credits. Prerequisite: permission of instructor. The emphasis of this course is detail design and use of landscape materials in project implementation. Exploration of materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the foci for this course. The course includes lectures, short studio projects, and the development of drawings leading to construction documentation for a comprehensive project. Students develop a process of self-criticism related to measured drawings specific to the comprehensive project. Course participants fabricate material prototypes in wood and metal.

LA 619 Advanced Site Grading
Fall. 2 credits. Limited to 10 students. Prerequisite: LA 515 or LA 615. Not offered 2001. Grading skills and knowledge applied as a design component of site planning projects.

LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)
Fall. 3 credits. Offered alternate years. Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. This course considers how each culture altered the landscape in their own way as they created their own built environments.

LA 680 Graduate Seminar in Landscape Architecture
Fall or spring. 1-3 credits. May be repeated for credit. Limited to graduate students. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Includes seminar topics and group study not considered in other courses.

LA 684 Special Topics in Landscape Architecture
Fall or spring. 1-3 credits; may be repeated for credit. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Includes group study of topics not considered in other courses.

LA 701 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555)
Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about $250; expenses for field trip, about $250. Application of urban design and town-planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. 3-D computer modeling and design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Department of City and Regional Planning.

LA 702 Advanced Design Studio
Spring. 5 credits. A capstone studio that provides the opportunity to explore issues in contemporary landscape architecture and to integrate related fields. Topics include the influences of culture, history, and criticism, as well as reinterpretations of engineering and representation.

LA 800 Master's Thesis in Landscape Architecture
Fall or spring. 9 credits. Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

NATURAL RESOURCES

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

NTRES 100 Principles of Conservation
Fall. 5 credits. Limited to first-year students specializing in natural resources. Letter grade only. M W F 9:05; 1 hr disc TBA. Staff.

The nature of natural resources, how they are managed, and their interactions with individuals and societies are considered. Case histories are used to illustrate both principles and practices. Emphasis is on management of renewable resources based on ecological and cultural perspectives.

NTRES 110 Introduction to the Field of Natural Resources
Fall. 5 credits. Limited to Natural Resource majors only. M W 9:05-9:55; lab, R 2:30-4:25. Letter grade only. R. Sherman and J. Lassoie.

This course provides a comprehensive overview of the modem field of natural resources and environment to new students. The course focuses on identifying the components of knowledge required to understand the Earth's natural resources and ecological systems, and to participate
intelligently in their conservation and management. Local case studies are used to introduce students to the scientific, ethical, and societal basis for protection and management of natural resources and environments. Students become actively engaged in data collection and analysis, use quantitative models to analyze and interpret data, explore the human dimensions of natural resource issues, and come to understand the complexities of the policy process and management strategies.

**NTRES 201 Environmental Conservation**
Spring. 3 credits. M W F 12:20-1:20. 1 hr disc. sec TBA. T. Falhey.
At the beginning of the twenty-first century, our lives are increasingly touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course stimulates students to go beyond the often simplistic portraits of the environmental dilemma offered by the mass media to gain a firmer basis for responsible citizenship and action on environmental issues.

**NTRES 210 Introductory Field Biology**
Fall. 4 credits. Limited to 90 students. Open to sophomores and juniors with an advisor in Natural Resources or by permission of instructor. Prerequisites: BIO G 101 and 102 or equivalent. 2 overnight weekend field trips required. Cost of field trips, approximately $12. Lec., W 9:05; labs, M W 1:25-4:25 or T R 1:25-4:25. T. Gavin and C. Smith.
Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn the taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 species of woody plants. Selected aspects of current ecological thinking are stressed. The interaction of students with biological events in the field and accurate recording of those events are emphasized.

**NTRES 212 People, Values, and Natural Resources**
Spring. 3 credits. M W F 10:10-11:00. J. Tantillo.
Cultural and political context for natural resources conservation and management in North America. Historical basis is explored through analysis of North American environmental history, examining shifts in attitudes and conceptions of human relationships to natural resources and the environment. Key laws guiding policy, conservation, and management of natural resources are reviewed. Concepts underlying the study of human attitudes, behaviors, institutions, and decision-making processes related to natural resource conservation and management are introduced.

**NTRES 301 Forest Ecology**
Fall. 3 credits. Prerequisite: Introductory biology. M W F 11:15. T. J. Falhey.
A comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include the ecology of forest communities, ecophysiology of forest trees, disturbance, succession and community analysis, primary productivity, and nutrient cycling.

**NTRES 302 Forest Ecology Laboratory**
Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and to the White Mountains, New Hampshire. Includes group research projects in local forests.

**NTRES 303 Forest Management and Maple Syrup Production**
A practical, field-oriented course emphasizing principles and practices of multiple purpose management of small, nonindustrial, private forest land in the northeastern United States, including the production of maple syrup.

**NTRES 305 Applied Population Ecology**
Fall. 3 credits. Letter grade only. Prerequisite: NTRES 210 and background in biology or ecology is strongly recommended; completion or concurrent enrollment in CALS math requirement. M W F 9:05-9:55. E. Cochran.
An in-depth analysis of the ecological factors influencing the natural fluctuation and regulation of animal population numbers. The course examines in detail models of single species and multi-species population dynamics, with emphasis on understanding the relationship between ecological processes operating at the individual level and subsequent dynamics at the population level. Computer and field-based exercises are used to reinforce concepts presented in lecture.

**NTRES 306 Coastal and Oceanic Law and Policy**
Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Staff. Intended for students interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, offshore oil and gas production, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

**NTRES 308 Natural Resources Management**
Fall. 3 credits. Prerequisite: junior standing. M W F 10:10. B. A. Knuth.
Focus is on terrestrial and aquatic resources. Concepts emphasized include the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.

**NTRES 309 Sovereign Tribal Environments**
Summer. 1 credit. Prerequisite: none; recommended: one course each in Natural Resources and American Indian Program. Consult Cornell University Summer Session Catalog or the Summer Session and Continuing Education section of this book for scheduling information. S. M. Penningroth. Under federal law, Native American tribes possess significant attributes of sovereignty. This course introduces American Indian territories as a unique policy arena where tribal jurisdiction and traditions merge with the goals of economic development and cultural survival to shape resource management decisions. Course includes lectures, class discussions, case studies, and a mandatory field trip to an Iroquois territory.

**NTRES 310 Conservation of Birds**
Spring or summer. 2 credits. Prerequisite: NTRES 210 or permission of instructor. Offered alternate years. Next offered spring 2002. C. R. Smith.
A course for majors and nonmajors, focusing on science-based bird conservation and management at the organism, population, community, and landscape levels. Current resource management issues relevant to birds are explored in the contexts of agricultural
practices, habitat management, tropical deforestation, the design and management of natural preserves, endangered species management, global climate change, and the economic importance of bird study as an outdoor recreational activity.

**NTRES 371 Conservation of Birds Laboratory**

A field-oriented course designed to teach skills of bird observation and identification based on their songs and calls, and habitat cues. Topics covered include the choice and effective use of field guides, binoculars, and other tools for bird identification; procedures for taking and organizing field notes; the relationships of birds to their habitats and to other birds; and methods and procedures for censusing and surveying songbird populations.

**NTRES 400 International Environmental Issues**

Fall. 4 credits. Prerequisite: junior standing or above. T R 10:10-12:05. R. McNeil.

A survey of current international environmental issues and the institutions through which we deal with them. Among subjects included are: biodiversity and endangered species, global climate change, Antarctica, Law of the Sea, parks and protected areas, and tourism. International organizations, such as World Bank. World Trade Organization, nongovernmental organizations, governments and their policies are studied. Laws and treaties are examined, as are negative forces such as corruption and colonialism. Lectures, discussion, term paper.

**NTRES 402 Natural Resources Policy, Planning, and Politics**

Spring. 3 credits. Prerequisites: junior standing; special application process, and course fee (approx. $375). Loc, January twelfth orientation sessions, two 2-hour orientation sessions in fall semester and four 2-hour sessions in February and March. Completed applications due by October 12. Applications are available by contacting map10@cornell.edu or at www.democracy.cornell.edu/courses/course.html. B. A. Knuth.

An introduction to the environmental policy process and its conceptual framework. Recognizing and defining natural resource or environmental problems and issues; aggregating interests; formulating and selecting alternative solutions; implementation and evaluation stages; roles of lobbyists, legislatures, executive branch, and other actors. Case studies; presentation by and discussions with about twenty prominent Washington policy makers appearing as guest lecturers. Required interviews, term paper, and oral reports. Several meetings in Ithaca before and after intensive January session in Washington.

**NTRES 406 Ecology Risk Assessment**

(Also TOX 406)

Spring. 3 credits. Prerequisites: BIOES 261 or equivalent; permission of instructor if not an advanced student in natural sciences of engineering. M W F 11:15-12:05. J. W. Gillett.

This course strives to develop understanding of and competence in the different types of ecological (nonhuman health) risk assessments. Focus is on cases for chemical, physical, and biological stressors in a variety of circumstances. The proposed USEPA approach under development serves as the working model.

**NTRES 407 Religion, Ethics, and the Environment**

Fall. 4 credits. For juniors, seniors, and graduate students; others by permission only. M W 10:10-11:00; lab 10:30-11:00; an hr disc TBA. R. A. Baer.

How religion, philosophy, and ethics influence our treatment of nature. Terms like religion, nature, fact, value, knowledge, and public interest are examined in detail. Particular themes include character and moral development, similarities and differences between moral and scientific claims, truth telling, public reason, and property. Also covers animals rights vs. ecosystem concerns, responsibility to future generations, the limitations of rationalism in ethics, and discussion of whether women approach moral issues differently than men.

**NTRES 408 Resource Management and Environmental Law**

Also CRP 444)

Fall. 3 credits. For juniors, seniors, and graduate students. S-U grades optional. M W 1:25-2:25. W. M. M., B. L. Bedford.

An introduction to modem and traditional regulatory processes available for resolving conflicts between exploitation and protection and stresses a practical understanding of how public and private values, economic considerations, and constitutional limitations affect management techniques and objectives.

**NTRES 410 Quantitative Methods in Wildlife Management**

Spring. 5 credits. Letter grade only. Prerequisite: NTRES 210, with NTRES 305, strongly recommended. Lec, T R 11:15-12:05; lab, R 2:30-4:25.

An in-depth analysis of ecological and quantitative dimensions of decision making in modern wildlife management and conservation. This includes analysis of population and systems models for planning and evaluating management decisions particularly under uncertainty, and methods for adaptive management, techniques which are increasingly important for resource management and conservation. Afternoon lab sessions use case studies, group discussion, and computer-based exercises to reinforce concepts presented in lecture.

**NTRES 411 Seminar in Environmental Ethics**

Fall. 3 credits. For seniors, juniors and graduate students. S-U grades optional. W 1:25-3:50.

Moral concerns relative to the natural environment and agriculture. Major themes generally include: animal rights vs. ecosystem concerns; natural resource management and the concept of the public interest; applying environmental ethics in a democratic and pluralistic society, how our treatment of one another parallels our treatment of nature; and land use ethics. Several classes focus on the nature of facts, values, knowledge, and truth telling.

**NTRES 415 Principles and Practices of Agroforestry**

Also HORT 415 and CSS 415)

Fall. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U optional. Lec, M W F 10:10-11:00. B. L. Bedford, E. Fernandes, K. Mudge.

An introduction to modern and traditional agroforestry systems which involves spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or livestock. Interactions between woody and non-woody components of agroforestry systems are considered, based on above- and below-ground processes. The sustainability of agroforestry systems is critically examined from biophysical, socioeconomic, and policy perspectives. Optional laboratory, NTRES 416 (also CSS and HORT).

**NTRES 416 Principles and Practices of Agroforestry—Laboratory**

Also HORT 416 and CSS 416)

Fall 1 credit. Optional lab component of NTRES 415 (also HORT and CSS SCAS). S-U grades optional. Prerequisites: junior, senior, or graduate standing or permission of instructor; or prior or concurrent enrollment in NTRES 415. W 10:10-11:00. K. Mudge, E. Fernandes, B. L. Bedford.

An integrated set of laboratory and field exercises designed to develop competency in diagnostic and management skills applied to agroforestry practice. Sessions include field trips to local practitioners as well as working demonstration farms and forests. Case study design and analysis, use of computer-based sources of information, and practical skills with woody plants including identification, propagation, planting, pruning, and measurement.

**NTRES 417 Wetland Resources**

Summer. 2 credits. Prerequisite: 1 year of college biology. A special 1-week course offered at Cornell’s Shallows Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stinson Hall.

An examination of coastal and adjacent freshwater wetlands from historical, disturbance, and preservation perspectives, including freshwater and marine wetland ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

**NTRES 418 Wetland Ecology and Management—Laboratory**

Fall. 1 credit. Optional. Concurrent enrollment in NTRES 418 is required. W or F 12:20-4:15. B. L. Bedford.

Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on principles required to understand how human activities affect wetlands. Current regulations, protection programs, and management strategies are considered.

**NTRES 419 Wetland Ecology and Management—Laboratory**

Fall. 1 credit. Optional. Concurrent enrollment in NTRES 418 is required. W or F 12:20-4:25. B. L. Bedford.

An integrated set of laboratory field exercises designed to expose students to: the diversity of wetland ecosystems; the vegetation, soils, water chemistry, and hydrology of wetlands in the region; methods of sampling wetlands.
vegetation, soils, and water; and methods of wetland identification and delineation.

**NTRES 420 Ecological Management of Water Resources**
Spring. 3 credits. Prerequisites: introductory ecology and introductory chemistry or permission of instructor. M W F 9:05-9:55.
R. Schindler
In-depth analysis of those ecological and biological principles relevant to the management of fresh and marine water resources, with emphasis on the effects of water management on community ecology. Lectures and discussion integrate scientific literature with current management issues. Topics include: linkages between hydrologic variability and communities; groundwater-surface connections, flow paths for dispersal, patchily distributed water resources, and water-quality concerns on organisms.

**NTRES 428 Landscape Impact Analysis**
Spring. 3 credits. Prerequisites: 1 introductory and 1 advanced course in ecology or the equivalents, and junior standing. T R 1:25-2:40. B. Bedford
This course presents ecological concepts and analytical tools necessary to evaluate environmental impacts to natural resources and ecosystems within an integrated context that incorporates the landscapes in which these resources occur. It explores diverse conceptual frameworks for landscape impact analysis and exposes students to modern tools for evaluating landscapes.

**NTRES 438 Fishery Management**
Introduction to management as an adaptive process that focuses on achievement of goals. Coverage includes sport and commercial fisheries and species restoration. Topics include goals and objectives, regulations, habitat management, population control, stocking and management of trout, reservoirs, and the Great Lakes and Pacific halibut. Ecological, social, political, and economic aspects of those topics are discussed.

**NTRES 440 Conservation Biology**
Fall. 3 credits. Prerequisites: a reasonable biology background. Limited to first 30 seniors, plus graduate students. Lec. T 10:10-12:05; disc. R 10:10 or 11:15. T. A. Gavin.
Emphasis is on biological topics that are important to the maintenance of biological diversity. Examples include population viability analysis, and the analysis of the demography and genetics of small populations as they are affected by habitat fragmentation and isolation. Students gain thorough familiarity with these concepts and their potential application through lectures, discussion, and use of aquatic models. This course is intended primarily for students with a background in college biology. Students with no college biology background should enroll in BIODE 257.

**NTRES 456 Stream Ecology (also ENOM 456, BIODE 456)**
Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, plant, invertebrate, and fish community structure, nutrient cycling, trophic dynamics, colonization and succession, community dynamics, conservation, and the impacts of disturbances. Lab: field projects include descriptive and experimental techniques, hypothesis-testing, and writing of scientific papers related to environmental assessment.

**NTRES 458 Human Dimensions of Natural Resource Management**
This course focuses on how a social science-based understanding of human attitudes, values, and behaviors can be incorporated in natural resource management decisions and actions. Examples from federal, state, and nongovernmental fish, wildlife, and forest management programs are used to illustrate the importance of socioeconomic considerations in problem solving and decision making.

**NTRES 459 Techniques for Demographic Analysis of Wildlife Population**
Fall. 3 credits. Letter grade only. Prerequisites: CALS math requirements or permission of instructor. NTRES 305 and/or NTRES 340 suggested. Lec. T R 12:55-2:15; lab. W 1:25-4:25. Offered alternate years. E. Goosh.
This course explores the theory and application of a variety of statistical techniques in the study of population dynamics. Topics include the use of capture-recapture and recovery analysis to estimate survival probability, abundance (and density), immigration, emigration, population growth, and sensitivity analysis, using both open and closed population models. Also examined are inference methods including covariance analysis and model selection.

**NTRES 460 Quantitative Ecology of Fisheries Resources**
Spring. 3 credits. S-U grades optional. Prerequisites: NTRES 304 recommended or permission of instructor. M W F 10:10-11:00. Offered alternate even years. P. J. Sullivan.
The dynamics of marine and freshwater fisheries resources are examined with a view towards observation, analysis, and decision making within a quantitative framework. Growing pressure on fisheries' resources, habitat modification, and increased uncertainty about the nature of biological systems are at the center of many fisheries' issues. Quantitative models are useful for integrating information needed by decision makers in addressing these issues. The course develops analytical methods to assess the dynamics and status of fisheries' resources and then demonstrates how the information may be transformed into useful information for decision makers.

**NTRES 471 Ecoregions: Ecology and Conservation**
Spring. 2 credits. Letter grade only. Prerequisites: NTRES 210, 305; statistics recommended, junior standing or above. Lec./Lab, W 1:25-4:25. Offered alternate odd years. Next offered 2003. C. R. Smith.
Approaches to characterizing and classifying terrestrial habitats and ecoregions at a variety of spatial scales are reviewed and discussed. A landscape approach is used to introduce habitat management concepts and land cover classifications. Legislation guiding federal land management decisions is discussed, and field trips go to areas managed by public and private land management organizations.

**NTRES 493 Individual Study in Resource Policy, Management, and Human Dimensions**
Fall, spring, or winter. Credit TBA. S-U grades optional. Prerequisite: permission of instructor. R. A. Baer, T. Brown, L. E. Buck, D. J. Decker, J. Enck, J. Gillett, R. W. Krush, T. B. Lauber, R. McNeil.
Topics in environmental and natural resource policy, management, and human dimensions are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

**NTRES 494 Special Topics in Natural Resources**
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**NTRES 495 Individual Study in Fish and Wildlife Biology and Management**
Topics in fish and wildlife biology and management are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

**NTRES 496 Individual Study in Ecology and Management of Landscapes**
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of instructor. B. Bedford, B. Blossey, T. Fahey, M. Krasny, J. Lassoie, R. Schneider, R. Sherman, P. Smallidge, J. Yavitt.
Topics in ecology and management of landscapes are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

**NTRES 498 Teaching in Natural Resources**
Fall and spring. 1-4 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
Course designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students gain insight into the organization, preparation, and execution of course plans through application and discussions with instructor.

**NTRES 500 Professional Projects**
Fall and spring. Credit TBA. Limited to graduate students working on professional master's projects. S-U grades only.
NTRES 507 Environmental Inquiry (also EDUC 507)
Summer. 1–3 credits. S-U grades optional. Prerequisite: limited to preserve or inservice secondary science teachers. Permission of one of the instructors required. W. S. Carlsen and M. E. Krasny. Exploration of selected topics in environmental science and environmental science education at the secondary school level. The subject-matter focus varies from year to year, and tracks ongoing research and development conducted through Cornell's Environmental Inquiry project, a collaboration between the Departments of Education and Natural Resources and the Center for the Environment. Current work centers on watershed dynamics, biodegradation, environmental toxicology, and invasive species.

NTRES 600 Introduction to Graduate Study in Natural Resources
Fall. 2 credits. Prerequisite: course is open to beginning graduate students whose faculty advisors are in Natural Resources. S-U grades. Lect. Wed. 7:00–8:50. M. E. Krasny. Designed for beginning Natural Resources graduate students, this course includes faculty-led discussions of key natural resources issues, student discussions of research ideas, and skill building sessions on proposal writing and giving research presentations. Students are required to complete a research proposal.

NTRES 601 Seminar on Selected Topics in Natural Resources
Fall or spring. 1 credit. S-U grades only. T 3:35–4:25; disc. sec. T 4:30–5:20. Selected readings and discussions of research and/or current problems in natural resources.

NTRES 604 Seminar on Selected Topics in Resource Policy and Management
Fall. 2 credits. S-U grades only. M 3:00–4:30. Not offered in 2001–2002. Primarily for graduate students with a major or minor in resource policy and management, and undergraduates and graduate students with a strong interest in resource policy analysis. Topics include the policy process, actors and stakeholders, ethical dimensions, and evaluation. Emphasis is placed on discussion, faculty/student interaction, communication skills, and current issues in natural resources.

NTRES 605 Issues in Risk Analysis Seminar (also CEE 605)
Fall. 1 credit. Prerequisite: calculus, advanced course in statistics and basic natural sciences (Chemistry, Biology, Earth Systems); S-U only. Lect. J. B. Tavares and R. Davison. Discussion of current issues and ongoing research on risk analysis issues from many perspectives with an emphasis on environmental risk analysis. Speakers address problem formulation, quantitative/qualitative methods in assessment of risks, communication issues, and challenges to risk assessment methodologies. Some sessions held jointly with other seminar series. Enrollment in seminar requires short reports and participation in two round-robin discussion meetings for class members designed to integrate the issues raised during the semester.

NTRES 607 Ecotoxicology (also TOX 607)
Spring. 3 credits. Prerequisites: graduate or senior status and two 300-level courses in chemistry, biological science, or toxicology. M W F 11:15–12:05. Offered alternate even years. J. W. Gillett. Lectures, readings, and special guests focus on the principles of effects of toxic chemicals on natural ecosystems, their components, and processes. Major topics include fate and transport of chemicals (chemodynamics), comparative biochemical toxicology, ecosystem process analysis, simulation through mathematical and physical (micro- computer) models, and relationships to regulation and environmental management.

NTRES 612 Wildlife Science Seminar
Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Check with department for availability.

NTRES 618 Forest Science and Management Seminar
Fall. 2 credits. For graduate students and upper-level undergraduates. Time TBA, organizational meeting to be scheduled. J. B. Yavitt.

NTRES 619 Field Practicum in Conservation and Sustainable Development
Fall or spring. 1–3 credits. Prerequisites: limited to preservice or graduate credit. Offered alternate odd years. P. J. Sullivan. Offered during the fall semester. Courses offered under the number will be approved by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.
PLANT BREEDING

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PL BR 201 Plants, Genes, and Global Food Production
Fall or spring. 2 credits. Prerequisite: 1 year of introductory biology or permission of instructor. Lees, T R 11:15 S. R. McCouch.

This course provides an introduction to plant breeding. It offers a sense of the historical and social importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. It offers specific examples of how breeding objectives are realized and raises questions about the environmental, social, and economic consequences of intensive food production systems. This course may be used for partial fulfillment of the CALS distribution requirement GROUP B—Biological Sciences.

PL BR 225 Plant Genetics
Spring. 2 or 3 credits (2 credits if taken after BIOGD 281). Prerequisites: 1 year of introductory biology or equivalent; permission of instructor required for students who have taken BIOGD 281. Lees, M W 11:15-12:05; lab, R 1:25-4:25. M. Jahn and M. Mutschler.

This course surveys the fundamentals of plant genetics. It shows how this information is used in plant biology and allied agricultural sciences and provides a basis for understanding the complex issues related to modern crop genetics. Topics include simple inheritance, linkage analysis, polyploidy, analysis of nuclear, chloroplast, and mitochondrial genomes, pollenination controls, and methods for analysis and manipulation of genes, chromosomes, and whole genomes. Examples and materials are drawn from diverse crops and plant species.

PL BR 401 Plant Cell and Tissue Culture
Fall. 3 credits. Prerequisites: a course in plant biology or genetics, or permission of instructor. Lees, T R 10:10. E. D. Earle.

Lectures and demonstrations dealing with the techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and agricultural studies. Methods for plant improvement via manipulations of cultured cells are discussed.

PL BR 402 Plant Tissue Culture Laboratory
Fall. 1 credit. S-U only. Prerequisites: a 1 year of introductory biology or equivalent; 1 year of genetics (BIOGD 281 or other standard genetics number). Staff.

Laboratory exercises complementing PL BR 401. Techniques for establishing, evaluating, and utilizing plant organ, tissue, and cell cultures are covered. Experiments use a broad range of plant materials and include Agrobacterium-mediated gene transfer.

PL BR 403 Genetic Improvement of Crop Plants
Fall. 3 credits. Prerequisites: genetics (BIOGD 281 or other standard genetics course), and a course in crops or horticulture. M W F 9:05-9:55. M. E. Smith.

Genetic enhancement of crop value to humans began with domestication and continues with farmers' variety development and scientifically trained plant breeders' applications of Mendelian, quantitative, and molecular genetics. This course examines crop genetic improvement methods by discussing the history and current practice of plant breeding, tools available to breeders, choices and modifications of tools to meet specific objectives, and challenges plant breeders face in developing varieties for the future.

PL BR 404 Crop Evolution, Domestication, and Diversity (also BIOPL 404)
Spring. 2 credits. S-U letter. Prerequisites: Genetics 281 or Plant Breeding 225 or permission of the instructor. Lees, T R 9:05 S. Kresovich.

Evolution, domestication, and breeding of crop plants have molded the current diversity we conserve and use. Based on advances in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Underlying ethical, legal, and social issues affecting conservation and use also are addressed.

PL BR 446 Plant Cytogenetics Laboratory
Fall. 1 credit. S-U only. Prerequisites: a course in genetics or permission of instructor. Will be offered as a 2-week module at a time to be arranged in fall 2001. Check with department for further information. K. N. Watanabe.

This course aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasis is on applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. Basic techniques for examination of plant chromosomes are covered.

PL BR 494 Special Topics in Plant Breeding
Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL BR 499 Internship in Plant Breeding
Fall or spring. Credits variable. May be repeated to a maximum of 6. Minimum of 60 on-the-job hours per credit granted. Prerequisites: permission of adviser and enrollment during the pre-enrollment period of the semester before the internship. Student must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their credits and grade. S-U grades only. Staff.

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting.

PL BR 497 Individual Study in Plant Breeding
Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
PL BR 498 Undergraduate Teaching
Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisites: permission of instructor, and previous enrollment in course to be taught or equivalent. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff. Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PL BR 499 Undergraduate Research
Fall or spring. Credits variable. S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff. Undergraduate research projects in plant breeding.

PL BR 604 Methods of Plant Breeding Laboratory
Fall. 2 credits. Prerequisite: PL BR 403 or equivalent (may be taken concurrently). T R 1:25-4:15. M. E. Sorrells and R. E. Anderson. Field trips to plant breeding programs involve discussion of breeding methods used, overall program, national and international germplasm collections, identification of sources of resistance, resistance mechanisms in plants, selection and screening techniques, and variety and germ plasm release. Additional labs include use of computers in plant breeding research and selection techniques for disease resistance. For a term project each student designs a comprehensive breeding program on a chosen crop.

PL BR 605 Advanced Plant Genetics
Spring. 3 credits. S-U grades optional. Prerequisites: BIOGD 281 or equivalent. Lecs, T R 1:25-4:40. W. S. De Jong. Provides an advanced survey of genetics in higher plants. Topics include discussion of the complete genome sequence of Arabidopsis, forward and reverse genetic analyses of biochemical and developmental pathways, mating behavior and barriers, polyploidy, transposable elements, and the relationship between nuclear and chromosome structure and gene expression.

PL BR 607 Analysis of Sequence Similarity
Fall. 1 credit. Enrollment limited. S-U grades only. Prerequisites: basic biology, basic genetics, familiarity with computers. Permission of instructor required. M W F 11:15-12:05 for 4 weeks. Dates TBA. Check with Plant Breeding Office after June for details. D. Schneider. This course focuses on the tools available for accessing nucleotide and protein sequence similarities in plant genomes, and microbes and the strengths and limitations of these approaches for answering biological questions. The mathematical and statistical background of the algorithms is presented in lectures, and weekly on-line projects provide students with experience in addressing a range of biological problems involving sequence analysis.

PL BR 610 Advanced Plant Breeding Methods
Spring. 3 credits. Prerequisites: PL BR 403 or equivalent. BIOGD 281 or equivalent. M W F 12:20-1:10. Not offered 2001-2002. M. Mutschler. This course integrates information from a variety of disciplines to examine current issues in plant breeding. Topics covered include issues surrounding the maintenance, selection, and use of germplasm resources; traditional plant breeding methods used for a variety of crops; integration of biochemical and molecular techniques into an applied breeding program, the effect of crop and breeding objectives on the success of breeding strategies; and intellectual property protection and its impact on breeding goals and strategies.

[PL BR 618 Breeding for Pest Resistance
Fall. 2 credits. S-U grades optional. Prerequisites: BIOGD 281 and PL BR 403 or equivalents. An introductory course in Plant Pathology and/or Entomology also highly recommended. Lecs, M F 2:30-3:20. Offered alternate years. P. Griffiths. A multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics covered include national and international germplasm collections, identification of sources of resistance, resistance mechanisms in plants, monogenic and polygenic control of resistance, approaches to breeding for resistance, statistics of resistance mechanisms, and the use of biochemical, physiological, and molecular tools in breeding for pest resistance.]

PL BR 622 Seminar
Fall or spring. 1 credit. S-U grades only. T 12:20-1:10. Staff and graduate students.

PL BR 650 Special Problems in Research and Teaching
Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising the research or teaching. Staff.

PL BR 653.2 Plant Biotechnology (also PL PA 653 and BIO PL 653.2)
Fall. 1 credit. S-U grades optional. Prerequisite: BIO PL 653.1 or permission of instructor. Lecs, M W F 1:25-2:15 (12 lects) Oct.-Dec. 1999. E. F. Earle and M. Zaitlin. This course deals with production and use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides. Produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

[PL BR 653.3 Plant Genome Organization (also BIO PL 653.3)
Fall. 1 credit. S-U grade or letter option. Prerequisites: BIO PL 653.1. M W F 10:10-11:00. (12 lects) Offered alternate years. Not offered 2001-2002. S. D. Tanksley. The structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing, and comparative genomics.]

PL BR 653.6 Molecular Breeding (also BIOPL 653.6)
Fall. 1 credit. S-U grade or letter option. Lecs, M W F 10:10-11:00. (12 lects) Oct.-Dec. 29. Offered alternate years. S. Tanksley. Application of DNA markers to the identification, manipulation and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.

PL BR 694 Special Topics in Plant Breeding
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL BR 694.1 Intellectual Property Management for Plant Scientists
Spring. 3 credits. S-U grades optional. Prerequisite: functioning knowledge of plant sciences or permission of instructor. Lecs, W 1:25-4:25. A. F. Krattiger and R. D. Kryder. A comprehensive introductory course for plant scientists and research administrators on the management of intellectual property (IP) and institutional IP strategies. Topics include: intellectual property patents and utility patents (US and ex-US); plant variety protection/Plant Breeders' Rights; contracts and agreements (confidentiality, employment, material transfer, collaboration, consulting, licensing); technology valuation; IP management and strategies (laboratory notebooks, institutional management, Freedom-to-Operate reviews, IP audits, portfolio management); bioprospecting and genetic resource issues; and negotiation and litigation.

[PL BR 716 Perspectives in Plant Breeding Strategies

PL BR 717 Quantitative Genetics in Plant Breeding
Spring. 3 credits. S-U grades optional. Prerequisites: PL BR 403 and BTRY 601 or equivalent. M F 2:55-4:10. Offered even years. D. R. Vilans and M. E. Sorrells. Discussion of quantitative genetics and quantitative trait loci (QTLs) for more efficient plant breeding. Specific topics include: components of variance (estimated from various mating designs); theory and computer analysis for QTL, population structure, multiple locus regressions, and interval analysis; heritability; theoretical gain from selection; and genotypic and phenotypic correlation coefficients. During one period, plants in the greenhouse are evaluated to provide data for computing quantitative genetic parameters.

PL BR 726 Problems and Perspectives in Computational Molecular Biology (also CS 726)
Fall, spring. 1 credit. S-U only. Prerequisite: permission of the instructor. Disc, W 2:55. R. Elber and S. McCouch.
A weekly seminar series discussing timely topics of Computational Molecular Biology. This course addresses methodological approaches to gene annotation, protein structure and function relationships, and evolutionary relationships across species. Statistical and deterministic computational approaches are covered (e.g. psi-Blast, Hidden Markov Models, Threading, Evolutionary models), and specific and detailed biological examples are discussed.

**PL BR 800 Master’s-Level Thesis Research**
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students working on a master’s thesis.

**PL BR 900 Graduate-Level Dissertation Research**
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students in a Ph.D. program only before the "A" exam has been passed.

**PL BR 901 Doctoral-Level Dissertation Research**
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted to candidacy after the "A" exam has been passed.

**PLANT PATHOLOGY**

**Note:** class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

**PL PA 241 Plant Diseases and Disease Management**
Spring. 4 credits. Prerequisite: one year of biology. Lect, M W F 11:15; lab, T or W 1:25. W. E. Fry

An introduction to plant diseases, their diagnosis, and their management. Topics covered include: fungi, bacteria, viruses, nematodes, and other plant pathogens, disease cycles, plant disease epidemiology, disease forecasting, and the principles and practices of plant disease management. This course is intended for students who want a practical knowledge of plant diseases and their control. It is not an adequate prerequisite for plant pathology courses numbered 600 and above.

**PL PA 309 Introductory Mycology**
Fall. 3 credit. Prerequisite: 1 year of biology. Concurrent registration in PL PA 319 is recommended. Lect, T R 9:05-9:55; lab R 1:25-4:25. K. T. Hodge

A survey of the astounding kingdom of fungi, including mushrooms, molds, yeasts, athlete’s foot, fairy rings, and the blue stuff in blue cheese. The course covers fungal biodiversity and systematics, how fungi work, and their roles in the environment and in human affairs. Students work with preserved and living fungi and learn basic identification skills. Grades are based on two problem sets, a final exam, and a culture collection project.

**PL PA 319 Field Mycology**
Fall, weeks 1-8. 1 credit. Letter grades only. Lab, W 1:25-4:25 and W 6:30-9:25

P.M. K. T. Hodge

Learn to identify mushrooms and other macrofungi on a series of eight afternoon field trips followed by evening lab sessions. Fungi are collected during afternoon trips to sites around Ithaca. In the evenings, students use technical keys and microscopes to identify the fungi and learn about their ecology. The course runs only the first eight Wednesdays of Fall semester. Grades are based on a collection projection and a final laboratory examination.

**PL PA 401 Basic Plant Pathology**
Fall. 4 credits. Prerequisite: 1 year of biology and BIO PL 241 or equivalent. Recommended: general microbiology, plant physiology. Lect, T R 11:15; F 12:20; lab, T or W 1:25. M. G. Milgroom

Principles and practice of plant pathology. Lectures and labs are coordinated to consider types of plant pathogens and their population dynamics, disease cycles, diagnostic criteria and procedures, mechanisms of pathogen attack and plant defense, vector relationships, epidemiology, disease forecasting, loss assessment, and disease control. This course prepares students for graduate-level work in plant pathology.

**PL PA 407 Nature of Sensing and Response: Signal Transductions in Biological Systems (also BIO BM 407)**
Spring. 3 credits. Prerequisites: BIO BM 530 or 533 or 531 and previous or concurrent registration in 532. Recommended: BIO GD 281. Lect, T R 10:10-11:25. T. P. Delaney.

The responses of organisms and cells to their surroundings are examined to illustrate how biological systems sense their biotic and abiotic environment and communicate sensing into appropriate responses. A wide variety of response systems are explored to identify their unique features and to illustrate how similar processes are utilized by widely divergent organisms. Examples are drawn from prokaryote, plant and animal systems for environmental sensing, control of development and responses during disease. Discussion also examines the tools of genetics and biochemistry in understanding signal transduction pathways, as well as the way these systems are perturbed by mutation and disease.

**PL PA 411 Plant Disease Diagnosis**
Fall. 3 credits. Limited to 18 students. Prerequisites: PL PA 241 or equivalent and permission of instructor. Lect, T R 10:10; lab T R 12:55-1:45. Offered alternate years. G. W. Hudler

A method of diagnosing plant diseases caused by infectious and noninfectious agents is taught with emphasis on application of contemporary laboratory techniques and effective use of the literature. After seven weeks of formal lecture and laboratory sessions, students spend the rest of the semester working on their own to determine the causes of plant diseases on samples that have either been received by the Plant Disease Diagnostic Lab or that have been prepared by instructors.

**PL PA 443 Pathology and Entomology of Trees and Shrubs (also ENTOM 443)**
Fall. 4 credits. Limited to 30 students. Prerequisites: PL PA 241 or equivalent, ENTOM 212 or equivalent. Lect, M W F 11:15; lab F 1:25-4:25. Offered alternate years. Next offered 2002. G. W. Hudler, P. A. Weston.

For students preparing for careers in horticulture, urban forestry, natural resources, and pest management. Deals with identification, impact, assessment, biology, and management of insects and diseases that damage trees and shrubs. Emphasis is on pests of northeastern flora but examples from other parts of the country and the world are also used. Forest, shade, and ornamental plants are considered.

**PL PA 444 Integrated Pest Management (also ENTOM 444)**
Fall. 4 credits. Prerequisites: BIO ES 261, ENTOM 212 or 241, or PL PA 241 or their equivalents or permission of instructor. P. A. Weston.

Lectures integrate the principles of pest control, ecology, and economics in the management across multiple systems. Laboratories consist of exercises to reinforce concepts presented in the lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

**PL PA 472 Microbial Control of Plant Diseases**
Spring. 3 credits. Limited to 20 students. Prerequisites: PL PA 241 or PL PA 401, BIOMI 290, or equivalent. Lect, M W F 9:05-9:55. E. B. Nelson.

This course is intended to provide students with a broad exposure to the field of biological disease control. The basic ecological concepts and principles underlying microbial interactions with plants, as well as plant pathogens, and the role of these interactions in the suppression of fungal and bacterial diseases are discussed. Emphasis is placed equally on biological control processes in rhizosphere and phylloplane habitats. Topics address aspects of root and leaf
PL PA 494 Special Topics in Plant Pathology  
Fall or spring. 4 credits maximum. S-U grades optional.  
An opportunity for research under the direction of a faculty member.  

PL PA 497 Independent Study  
Fall or spring. 1-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.  

PL PA 498 Teaching Experience  
Fall or spring. 1-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.  

PL PA 499 Undergraduate Research  
Fall or spring. 3-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.  

PL PA 642-661 Special Topics Series  
Unless otherwise indicated, the following description applies to courses 642-661.  

PL PA 650 Diseases of Vegetable Crops  
Fall. TBA. Hours TBA. J. W. Lorbeer and T. A. Zitter.  

PL PA 652 Field Crop Pathology  

PL PA 655 Integrated Pest Management in Tropical Agriculture (also ENTOM 644)  

PL PA 661 Diagnostic Lab Experience  
Summer and fall. 1 or 2 credits. S-U grades only. Requires 3 hrs/wk per credit hour. Hours TBA. T. A. Zitter.  
For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students work in the Diagnostic Laboratory (Plant Pathology Department) under supervision of the diagnostician. Coursework or experience in diagnostic techniques is strongly advised. Priority is given to graduate students in plant pathology and plant protection.  

PL PA 662 Molecular Plant-Pathogen Interactions (also BIOL 652.1)  
An examination of the molecular properties that control the development of host-parasite interactions in both microorganisms (bacteria, viruses, and fungi) and higher plants. Contemporary theories describing the genetic and molecular mechanisms of microbial pathogenesis and plant resistance are discussed.  

PL PA 663 Plant Molecular Biology  
Fall. 1-5 credit. Prerequisites: BIO GS 281, BIOM 330 or 331.  

Section 01 Concepts and Techniques in Plant Molecular Biology (BIO PL 653.1)  
This is an introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences, and serves as a prerequisite for other modules in the BIO PL 653 (Fall) and BIO PL 652 (Spring) series. The course is divided into two sections: 1) gene discovery, which covers genetic, molecular, and genomics approaches to the isolation of plant genes; and 2) gene characterization, which covers DNA sequencing, DNA and RNA blotting, use of gene databases, and various approaches to producing transgenic plants. Emphasis is on understanding the appropriate approach that is needed for different experiments.  

Section 02 Plant Biotechnology (BIO PL 653.2 and PL 703.2)  
This course deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved and/or novel characteristics. Regulatory and social issues related to plant biotechnology are discussed.  

PL PA 681 Plant Pathology Seminar  
Fall and spring. 1 credit. Required of all plant pathology majors. S-U grades only. W 12.20-1.10.  

PL PA 694 Special Topics in Plant Pathology  
Fall or spring. 4 credits maximum. S-U grades optional.  

PL PA 701 Concepts of Plant Pathology: Organismal Aspects  
Spring. 3 credits. For graduate students with majors or minors in plant pathology; others by permission. Prerequisites: PL PA 401 or equivalent and permission of instructor. Lect., M W F 10:10; disc, T R 2-4:25. A. R. Collmer.  

PL PA 702 Concepts of Plant Pathology: Population Aspects  
Fall. 3 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or permission of instructor. Some background in statistics is recommended. Lab/discussion section. Lect., M W F 1:25 (12 lecs). Oct. 1-Oct. 29. M. Zaitlin, E. D. Earle.  

PL PA 705 Phytopathology  
Spring. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent. S. G. Lazarowitz.  

PL PA 707 Phytopathology  
Fall. 2 credits. Prerequisites: general microbiology, lectures and laboratory; introductory plant pathology. Not offered 2001-2002. S. V. Bect.  
A consideration of the prokaryotes that cause disease in plants and examples of the diseases they cause. The course emphasizes properties of bacterial, pathogenic and non-pathogenic methods for manipulation of the pathogens, and recent developments in phytopathology. The current state of knowledge of important phytopathogenic
assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

PL PA 800 Master's-Level Thesis Research
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty. For students working on a master's degree.

PL PA 900 Graduate-Level Thesis Research
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty. For students in a Ph.D. program who have not passed the "A" exam.

PL PA 901 Doctoral-Level Thesis Research
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of adviser. Graduate faculty. For doctoral candidates who have passed the "A" exam.

POMOLOGY (FRUIT SCIENCE)
See Horticulture.

RURAL SOCIOLOGY

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

R SOC 100 Introduction to American Indian Studies (also AIS 100)
Fall. 3 credits. S-U optional. Enrollment limited to 550. W 7:30-10:30 P.M. R. W. Vanables. Slide lectures survey the rich cultures and complex histories of the Indian nations north of Mexico. Indian arts and philosophies are compared and contrasted with those of Europe, Africa, Asia, Canada, and the United States. The origins of today's major legal issues involving American Indians are also discussed. The course begins with a survey of Indian America before Columbus and ends at Wounded Knee in 1890, the event which marks the end of the conquest of Indian America. Guest lecturers, including American Indian leaders, provide additional perspectives.

R SOC 101 Introduction to Sociology
Fall, spring, or summer. 3 credits. Enrollment limited to 300 in the fall, 400 in the spring. Lecs, T R 10:10-11:00, sec. various times. Fall, T. Hirsch; spring, staff. This course provides an introduction to theory and research in sociology. It demonstrates how the insights, theories, and methods of sociological analysis can be brought to bear on major issues of social life. A primary goal is to convey a sense of the manner in which sociologists formulate theories and how the collection and analysis of data are used to evaluate those theories. The course provides "hands-on" experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

R SOC 103 Self and Society (also SOC 103)

R SOC 105 Economic Sociology (also SOC 105)
Fall. 3 credits. S-U optional. M W 1:25-2:15. Sec 1 F 12:20-1:10; sec 2 F 1:25-2:15. C. Leuenberger. This course examines how sociologists understand the economy as a social phenomenon. The focus is on the work of contemporary theorists as well as empirical studies in economic sociology. Students consider the impact of the dynamics of capitalism and globalization on social life and how the economic organization of society can be related to religion, culture, and concepts of leisure. Also investigated are areas in which people interact with the economy on a daily basis: in selling, shopping, and consuming.

R SOC 175 Indian America in the Twentieth Century (also AIS 175)
Spring. S-U option. Enrollment limited to 125. Lec., M W 11:15-12:05; sec. various times. B. Baker. This course addresses major U.S. policies affecting American Indians in the twentieth century, and ways in which American Indians pursued strategies to sway the process of social change. American Indian political, economic, and cultural issues are examined through history, literature, music/art, and film/documentary. The approach of this course is interdisciplinary and an emphasis is placed on the student's role in the course. The course is open to students who have completed American Indian Studies (also AIS 175) and to students who have not.

R SOC 200 Social Problems (also SOC 200)
Fall. 3 credits. S-U grades optional. Enrollment limited to 100. T R 10:10-11:25. Not offered fall 2001. T. A. Hirsch. This course investigates a variety of current social problems from a sociological perspective. The course begins with an overview of sociological theories that may account for social problems and identifies common as well as competing elements of these theories. The theoretical framework is then applied to analyze a variety of social problems, which may vary semester to semester. Examples of social problems are homelessness, teenage pregnancy, deindustrialization, and homicide, among others. Emphasis is given to how social problems are measured, and students are given an opportunity to test theories with data analysis.
This course provides an introduction to techniques, the course focuses on how demographic processes (fertility, mortality, and migration) affect social and economic outcomes. Discussions cover special topics related to population growth and distribution, including mass education, marriage and family formation, labor force participation, inequality and poverty, women’s status, resource allocation, and the environment.

New questions concerning development models in the post-Cold War era are examined from a comparative and global perspective on North-South relations. While the focus is the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multinational institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. Also examined, are the new social movements, such as environmentalism, feminism, and grassroots activism.

Course familiarizes students with origin of technology useful or “appropriate” is a sociological question. Lectures and readings review classical debates regarding technology and society. Herein, students compare high technologies and appropriate technologies, identify problems with technology transfer to other societies, and create a list of important criteria by which technologies are judged appropriate or inappropriate using numerous case studies.

This course examines the nature and processes of social inequality in industrial societies. The principal focus is on the contemporary United States, with some comparisons to other industrial societies with different educational and class structures. Readings include theoretical and empirical materials on urban inequality and stratification along race, class, and gender lines. The course includes ethnographies of schools and workplaces as well as more quantitative research.

A survey of definitions of social indicators and general principles of social indicators research is illustrated from data on both developed and less-developed countries. Data management and analysis of measures of poverty, level of living, inequality, quality of life, and so on, based on census data, household surveys, and key-informant and other low-cost techniques, are examined using personal computers.

An introduction to the "classical" sociological theorists (Marx, Weber, Durkheim) of the late nineteenth and early twentieth century, as well as "erased" and missing sociological voices of the period (such as E. C. Perkins Gilman, W.E.B. DuBois). The course addresses the dramatic social upheavals including the fall of the ‘old order,’ industrialization, capitalism, and rise of bureaucracy to which these thinkers reacted and the inspiring (and conflicting) visions for the future which they offered. The intellectual history, the influence of the theorists on subsequent sociology, and the potential for relevance to contemporary society are emphasized.
Improvements in formal school systems are often advocated as solutions for a variety of economic, health, political, and environmental problems in non-industrial nations. Commonly suggested improvements include: raising enrollments, reducing schooling inequalities, improving the quality and relevance of instruction, and adjusting the private returns to schooling. This course offers a critical assessment of human capital approaches to development. The course examines how improvements can be achieved in poor countries and how much such improvements are likely to boost these countries' economic prospects. Specific reviews focus on: current trends in mass schooling across the developing world, patterns of schooling inequalities, policy tools for evaluating the impact of alternative education policies; and the theory and evidence on the benefits of mass schooling on development indicators.

R SOC 311 Social Movements
Spring. 3 credits. T R 11:40-12:55.
A. Gonzales.
Social movements are collective efforts by relatively powerless groups of people to change society. Social movements have occurred throughout history and the world, even under the most repressive regimes. This course examines the origins and impact of contemporary social movements on politics and policy in the United States and elsewhere. After reviewing the major theoretical perspectives on social movements, focus is on three questions: Under what circumstances do movements emerge? How do movements internally organize and choose political tactics and strategies to achieve their goals? How have these movements changed history, identities, society, and politics? The course explores these questions through an examination of Indigenous movements for social justice, civil rights, environmental protection, and trial sovereignty.

R SOC 318 Ethnohistory of the Northern Iroquois (also AIS 318)
Spring. 3 credits. S-U grades optional. Enrollment limited to 20. T 1:25-1:45.
R. W. Venables.
The development of Iroquois (Haudenosaunee) history and culture is traced to the present day.

R SOC 324 Environment and Society (also S&T S 324 and SOC 324)
Spring or summer. 3 credits. Enrollment limited to 100. M W F 1:25-2:15.
L. Glenna.
The main objective of the course is to develop a critical understanding of the dominant trends in modern U.S. environmental thought like preservationism, conservationism, deep ecology, ecofeminism, social ecology, NIMBYism, risk assessment, and environmental equity. Another objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships of substantive and philosophical/theoretical issues.

R SOC 325 Indigenous People and Globalization
Fall. 3 credits. Prerequisites: introductory social science course or permission of instructor. Letter grade. T R 2:55-4:10.
A. Gonzales.
This course examines issues of globalization and how they affect indigenous people in the Americas. The processes of globalization, under the auspices of the World Trade Organization and regional economic agreements such as the North American Free Trade Agreement (NAFTA), have profound social, cultural and economic impacts upon indigenous peoples. At issue are the lands, resources, traditional knowledge, cultural property, and tribal sovereignty of indigenous peoples. This course examines questions such as the effect of NAFTA on the Indian people of Mexico and Central America; issues of cultural property such as songs and stories of native artists, intellectual property such as plant medicines; the question of treaties and water rights; and whether and to what extent civil society can truly include and address the interests of indigenous peoples.

R SOC 331 Demographic Analysis in Business and Government (also AEM 416)
Fall. Prerequisite: AEM (ARME) 210 or equivalent. Enrollment limited to 50 students (15 R SOC students, 35 AEM (ARME) students). Lee, M W F 1:25-2:15.
W. Brown.
An overview of the way demographic analysis is used through case study and problem solving methods of learning, students come to understand how demographic concepts, methods, and data are used by demographers to solve problems and govern. The course is designed for upper-level undergraduates from a variety of academic disciplines and career orientations. Students work on problems drawn from consumer marketing, education, housing and real estate development, human resources, and health services.

R SOC 333 Genomics and Society
Fall. 3 credits. T R 1:25-2:40.
L. Glenna.
The implications of genomics for society are far-reaching and controversial. In this course, a sociological perspective is deployed to examine and situate the debate by examining proponents' and opponents' assumptions about science and society. Special attention is given to the social origins and goals of agricultural and food biotechnologies, questions of social and environmental risk and reward, its relationship to previous trends in agricultural and food technologies, and the social forces and conditions that put biotechnology on the research and commercial agenda at this time. Placing the debate in social context promotes understanding and constructive dialogue regarding an important social issue.

R SOC 336 Rural Areas in Metropolitan Society
Spring. 3 credits. S-U option. Enrollment limited to 20. Prerequisite: RSOC/SOC 101, AIS 100 or AIS 175, or approval of the instructor. Enrolled to 20. T R 2:30-4:25.
S-U option. Enrollment limited to 20. Prerequisite: RSOC/SOC 101, AIS 100 or equivalent. Enrollment limited to 100. M W F 1:25-2:25.
L. Glenna.
The processes of globalization, under the auspices of the World Trade Organization and regional economic agreements such as the North American Free Trade Agreement (NAFTA), have profound social, cultural and economic impacts upon rural communities and populations to major trends? What drives them? What do these trends imply for people, communities, and the environment? What are the social, human, health, and environmental issues? What might be better alternatives and what strategies of development might achieve them? This course addresses such questions.

R SOC 340 Sociology of Food Systems
G. W. Gillespie.
Our changing food and agricultural systems are examined sociologically, with attention to how these reflect the social organization of an increasingly complex world of the major trends? What drives them? What do these trends imply for people, communities, and the environment? What are the social, human, health, and environmental issues? What might be better alternatives and what strategies of development might achieve them? This course addresses such questions.

R SOC 360 Sociology of American Indians (also AIS 361)
Spring. 3 credits. S-U option. Enrollment limited to 20. Prerequisite: RSOC/SOC 101, AIS 100 or AIS 175, or approval of the instructor. Enrolled to 20. T R 2:30-4:25. Not offered spring 2002.
This course is designed to emphasize the role of theory and research in our understanding of American Indians. Tensions towards that end, the relationship between the nation-state and indigenous populations is emphasized. Students are exposed to the following theoretical perspectives: world systems and dependency, internal colonialism, social disintegration, the social construction of reality, political mobilization, and ethnic reorganization. The course is also historical and comparative, as students study different Indian tribes located in the United States and Canada.

R SOC 367 American Indian Politics and Policy (also AIS 367)
Fall. 3 credits. S-U option. Enrollment limited to 20. Prerequisite: RSOC/SOC 101, AIS 100 or equivalent. Enrollment limited to 100. M W F 1:25-2:25.
L. Glenna.
The American Indian political and policy agenda at this time. Placing the debate in social context promotes understanding and constructive dialogue regarding an important social issue.

R SOC 370 Comparative Issues in Social Stratification (also SOC 371)
Fall. 3 credits. Prerequisite: an introductory social science course. T R 1:25-2:40 or T R 8:40-9:55. Offered alternate years.
D. L. Brown.
This course reviews both classical and contemporary issues in the comparative social stratification literature. Particular attention is given to the changing configurations of different labor markets, debates on the meaning of new economic constituencies, and the role of gender, race, ethnicity, and sexuality in assessing the patterns, meaning, and experiences of inequality. Throughout the course special attention is given to the
importance of understanding how questions of measurement are constructed and employed in understanding social inequality.

R SOC 380 Independent Honors Research In Social Science
Fall and spring. 1-6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program. Staff. Students should select a faculty adviser and begin proposal development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative.

[R SOC 418 Population Policy (also B&SOC 414)]
Spring. 3 credits. Prerequisite: R SOC 201 or permission of instructor. Enrollment limited to 15. T R 10:10-11:25. Offered alternate years. Not offered 2002. Staff. The ways in which societies try to affect demographic trends. Special focus is on government policies and programs to reduce fertility.

R SOC 430/629 Migration and Population Redistribution
Spring. 3 credits. Prerequisite: a social science course or permission of instructor. T R 8:40-9:55. Offered alternate years. D. L. Brown.
This course analyzes the determinants and consequences of internal migration in urban and rural areas of developed and developing nations. Economic and demographic interrelationships are emphasized as are implications of changes in local and regional population size and composition for labor supply, the demand for goods and services, and infrastructure. Public policy implications of the inter-relationships are investigated. Techniques and measurement issues associated with the analysis of migration and population distribution are discussed. For 629, graduate students also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

[R SOC 431/631 Comparative Ethnic Stratification: Demographic Perspectives]
A comparative examination of ethnic stratification and mobility that focuses principally on dimensions of social groups that can be empirically measured using readily available demographic sources. These include residential segregation, occupational status and mobility, marriage and family formation patterns, health and mortality, family structure, fertility, and intermarriage. The role of migration in shaping ethnic stratification systems is also examined. About half of the course examines the U.S. situation. Other societies receiving significant attention include India, Brazil, Nigeria, and several European societies. Four or five graduate students will also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

[R SOC 437 Aging and Aging Social Policy in the 1990s]
An analysis of the "graying" of America and the responses of the public and private sectors to this demographic revolution. Examines the interplay between basic and applied knowledge in social gerontology. Explores the formal and informal networks of services, in both rural and urban environments, that help maintain independent living arrangements for the elderly.

R SOC 438/638 Population and Development
Fall. 3 credits. S-U grades optional. Prerequisite: permission of instructor. T R 11:40-12:55. D. Gurak.
Examines major historical and recent demographic transitions in mortality, fertility, age structure, and composition and explore the relationships between these transitions and the social, or economic, and cultural changes being experienced by diverse societies prior to, during, and following the onset and conclusions of the demographic shifts. Case studies from diverse historical periods and geographic locations are used. Graduate students also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

[R SOC 440 The Social Impact of Resource Development (also AIS 440)]
Social impact assessment (SIA) is a method of anticipating unwanted side-effects of projects, policies, and new technologies before they happen and a decision tool for mitigation. The seminar explores SIA applications in different parts of the world and pays particular attention to impacts on native and indigenous peoples. Students learn practical SIA skills and related theoretical/conceptual debates.

R SOC 442 American Indian Philosophies: Selected Topics (also AIS 442)
This course provides an opportunity for students to read and discuss a wide range of American Indian philosophies.

R SOC 494 Special Topics in Rural Sociology
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee. The course is not offered more than twice under this number.

R SOC 495/595 Population and Development in Sub-Saharan Africa
Fall. 3 credits. S-U grades optional. Prerequisite: permission of instructor. T R 2:55-4:10. P. Floudou-Enyegue.
This course examines recent trends in population, the economy and environment in sub-Saharan Africa. After reviewing these individual trends, the course examines possible linkages among these three processes. Specific discussions examine the theory and evidence on the effects of rapid population growth on the economy, mass schooling, health, gender and community structures, sustainable agriculture, and inequality. Graduate students are assigned additional reading and writing and meet bi-weekly in a seminar format.

R SOC 497 Independent Study in Rural Sociology
Fall or spring. 3 credits variable (may be repeated for credit). Students must register with an Independent Study form (available at 140 Roberts Hall). S-U grades optional. Informal study may include a reading course, research experience, or public service experience.

R SOC 560 Managing Local Environmental Systems: Social Perspectives and Research Bases
Course is for students with diverse backgrounds: undergrads, grad, people in professional careers, others with interest in environmental issue identification, resolution, and management. Course discussions include ecological, social, economic, and local government perspectives. Via lab exercises throughout the semester, students have opportunities to apply the concepts and principles of these perspectives to analysis of specific local environmental management problems. Readings, lectures, and a course project are mandatory.

R SOC 599 M.P.S. Project
Fall and spring. 1-6 credits. S-U optional. Lec: TBA. Graduate faculty. For students admitted specifically to a MPS program.

R SOC 601 Theoretical and Methodological Approaches to Community and Rural Development
Fall. 3 credits. Letter grade only. Prerequisite: graduate student.LEC. W 7:30-10:00 P.M. P. R. Eberts.
A survey of three general approaches for conducting analysis and practice in community and rural development. These approaches include examinations of: (1) community structural changes and policymaking; (2) participatory processes for generating community development; and (3) planning strategies as mechanisms for creating community development opportunities.

R SOC 602 Community Development Seminar
Spring. 1 credit. Prerequisite: R SOC 601 W 7:30-10 p.m. (Meets tri-weekly.) P. R. Eberts.
A participatory seminar for feedback, collective learning, and guidance as M.P.S. students apply community and rural development theory and methods in thesis project work with local and regional communities.

R SOC 603 Classical Sociological Theory
Fall. 4 credits. S-U grades optional. Prerequisites: open to graduate students only. T R 2:55-4:10. M. J. Pfeffer.
Students review the main streams of classical sociological thought, focusing on the work of Weber, Durkheim, Marx, and Simmel. Course materials include original texts and secondary literature, used to examine the concepts.
methods, and explanation in classical sociological thought. Important objectives of the course are to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical theories to contemporary social change and development.

R SOC 606 Sociological Theories of Development
Spring. 3 credits. T 2:30-5:30. P. K. Geller. This course is a critical examination of a historical range of theories and research in the sociology of development from the post-war period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the concept of development itself is questioned and critiqued both theoretically and in terms of practical challenges from environmental, indigenous and other social movements.

R SOC 607 Sociology of Natural Resources and Development
Fall. 3 credits. S-U optional. Not offered 2001-2002. R 2:25-4:25. P. K. Geller. Building on theories in the sociology of development, this seminar examines the role of natural resource extraction, processing, and exports to global markets in the development trajectories of nations in Asia, Africa, and Latin America. Engages students in both theoretical debates and practical implications of resource access, control, and conflict amongst various social actors ("stakeholders"). Detailed historical cases are examined, primarily from Southeast Asia (Indonesia, Malaysia, Philippines.)

R SOC 608 Demographic Techniques (also PAM 608)
Fall. 3 credits. Prerequisite: multivariate statistics or permission of instructor. S-U grades optional. Not offered 2001-2002. R 2:25-4:25. D. Gurak. This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

R SOC 612 Population and Development in Asia (also WMNS 612)
Spring. 3 credits. Offered odd years. W 10:10-1:10. L. B. Williams. This graduate seminar considers issues surrounding population and development in Asia. Case studies pertaining to Southeast Asia are highlighted. The linkages between population and development are highlighted and both are considered from a historical perspective. Recent social, economic, and demographic changes in the region are considered in depth. Evolving gender roles in the family, labor force, and broader social context are also examined.

R SOC 616 Research Design I
Fall. 4 credits. Prerequisite: a statistics course. T 12:20-2:15. Not offered fall 2001. J. D. Francis. First of a two-semester sequence (may be taken individually) in introductory graduate methods. Discusses problems of measurement, the design of instruments, and problems of reliability and validity. Common forms of measuring instruments are discussed. Concludes with an introduction to factor analysis. Students apply principles to development of several common types of scales. Computers are used extensively.

R SOC 619 Research Design II
Spring. 4 credits. Prerequisite: an introductory methods course and a statistics course. T R 12:20-2:15. Not offered spring 2002. J. D. Francis. The second part of the two-semester sequence in introductory graduate methods, with emphasis on an intermediate-level treatment of the following topics: regression, analysis of variance, analysis of covariance. Special attention is given to use of categorical variables in regression. Students develop and examine several analytical models using actual data to familiarize themselves with data handling and processing. Includes extensive use of computers.

R SOC 620 Sociology of the Community
Fall. 3 credits. R 1:25-4:25. D. Brown. This graduate seminar critically analyzes the intellectual core of community sociology, and its theoretical development over time. "Community," as a concept, is often reified and rarely critically examined, hence the course begins by clarifying the various ways in which "community" has been conceptualized and operationalized by sociologists. The course provides students with both a grounded conceptual foundation and an overview of multiple strategies for conducting research on community structure and change in the United States and internationally. The course includes a critical examination of the forms and shapes sociological research on the community assumes. A case study approach is used to examine the assumptions driving the methods and analysis of both contemporary and historical research.

R SOC 621 Foundations of Environmental Sociology
Fall. 3 credits. Open to graduate students only. S-U optional. Enrollment limited to 20. W 10:10-12:35. Offered even years. Not offered 2001-2002. L. Glenn. Foundations of Sociology provides graduate students with a broad survey of the literature in this disciplinary specialty area. Students review the history of thought in environmental sociology as well as key literature in the field. The seminar provides a focus of this specialty. The principle objective of this course is to provide graduate students specializing in environmental sociology with a firm grasp of the content, controversies, and trends in the area. Sessions are conducted in a seminar style, and discussions are focused on close review of assigned readings.

R SOC 625 State, Economy, and Society
Spring. 3 credits. Enrollment limited to 25. W 1:25-4:25. Offered even years. P. D. McMichael. Reviews major issues concerning the relations between political and economic institutions and the role of states, markets, firms, social movements, and cultural institutions in the process of social change. Theoretical perspectives are drawn from classical and modern social theory, including the application of comparative and world/historical methodologies.

R SOC 630 Field Research Methods and Strategies
Fall. 3 credits. Enrollment limited to 20. W 10:10-1:10. Offered odd years. L. B. Williams. This course covers a variety of methods: focus groups, in-depth interviews, participant observation, archival research, and structured surveys, among others. The importance of matching research questions with appropriate field methodologies and the strengths and weaknesses of various strategies of field research are assessed. Practical experience with a number of methodologies is offered. Ethical issues involved in fieldwork are highlighted.

R SOC 640 Community and Changing Property Institutions
Fall. 3 credits. R 1:25-4:25. Offered even years. Not offered 2001-2002. C. C. Geisler. The seminar acquaints students with the evolution of property rights, from antiquity to the present, and features a number of property debates (the biological basis of ownership; private versus public ownership; property and value; the so-called "tragedy of the commons"; the "new" property). Readings explore land use regulation and property rights, common property issues, opposing land ethics, and new property forms in the future.

R SOC 641 Politics and Economics of Rural and Regional Development
Fall. 3 credits. Limited to upperclass or graduate students. S-U grades optional. M 12:20-2:50. Offered alternate years. Not offered 2001-2002. T. A. Lyson. A survey of social, political, and economic factors in local and regional development. Theories of community and regional development and underdevelopment are explored. Neoclassical, Marxist, and civil society theories are examined within local and global contexts.

R SOC 643 Land Reform Old and New
Spring. 3 credits. S-U grades optional. R 1:25-4:25. Not offered spring 2002, next offered spring 2003. C. C. Geisler. Land reform continues to be a major controversy of development planning. Currently the number of landless and near-landless in the Third World will approach one billion. Though land reform is a principal source of hope for the landless, its meanings are many and its models are controversial. The seminar acquaints students with land reform in antiquity as well as in contemporary settings (among others, Japan, the Philippines, Israel, India, Brazil, Mexico, Russia, and the United States). Perennial issues of equity, efficiency, and sustainability are discussed in each of these case study areas.

R SOC 645 Rural Economy and Society
Spring. 3 credits. W 1:25-4:25. Offered alternate years. Not offered 2001-2002. Staff. The structure and dynamics of rural communities are examined in a comparative historical framework focusing on continuities and divergences among imperialist and post colonial settings. Major topics include classical theories of rural social organization and their retheorization in contemporary peasant studies and agrarian political economy literatures, theorizations of locality, rurality and spatial complexity within the world economy, and critical issues framing the
An examination of analytical techniques that assume a basic knowledge of demographic data and research methodology. Life tables, demographic estimates with incomplete data, survey techniques to supplement inadequate vital registration systems, data management, multi-level models, and other multivariate procedures are among the topics covered.

This course examines the relationship between local agriculture and development as these are embedded in a globalizing economy. Topics include an examination of the social scientific theoretical underpinnings of conventional agriculture, the social origins of sustainable agriculture, environmental and community sustainability, agricultural diversification strategies, community agriculture development, and the political and policy contexts of more sustainable agricultural systems.

This seminar examines many of the emerging social, economic, political, cultural and demographic aspects of agricultural and food-related genomics. Advanced biotechnologies have the potential to revolutionize many aspects of society, from how, when, and by whom food is produced, processed and consumed, to how dietary changes may be used to treat illness and disease. The consequences of the genomics revolution development processes in both advanced industrial as well as the developing world are considered.

This course examines how processes of political and economic restructuring have reshaped state capacities and processes of state formation. Particular attention is paid to questions of class formation, corporatist alliances, transnational social movements and alternative development strategies with the emergence of austerity, privatization, and trade liberalization and its neoliberalist ideology. Critical to this discussion are the contours of authoritarianism, nationalism, communalism, and fundamentalism as these reconfigure national and regional alliances and practices and shape interpretations of current processes of resistance, change, and terms of intervention and exchange.

This course examines the substantive and methodological questions generated by research on these global processes, including questions of specialization in terms of analysis, situating global process in local events and subjectivities and vice versa, and examining the ways in which national structures and cultures interact with global structures and cultures.

Fall or spring. 1-3 credits. Limited to graduate students. S-U grades optional. Graduate faculty. Participation in the ongoing teaching program of the department.

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

Limited to master's and doctoral degree candidates with permission of the graduate field member concerned. S-U grades optional. Graduate faculty.

Limited to master's and doctoral degree candidates with permission of instructor. S-U grades optional. Graduate faculty.

For students admitted specifically to a Master's program.

Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

For students admitted specifically to the "A" exam has been passed.

For students admitted to candidacy after the "A" exam has been passed.

ADMINISTRATION
Porus Olpadwala, dean
John E. Zissovici, associate dean
Walter C. Williams, director of alumni affairs and development
Cynthia K. Prescott, director of administration and finance
Leon Lawrence, director of minority educational affairs
Jayne A. Worden, registrar
Elizabeth A. Cutter, director of student services and admissions
Margaret Webster, curator of visual resources facility
M. Susan Lewis, director of career services

FACULTY ADVISERS
Architecture students are assigned faculty advisers. Juniors and seniors have one assigned adviser and are also invited to share their concerns with and to seek advice from the most appropriate faculty member or college officer, including the registrar, the department chair, and the dean.

Students in the fine arts department are assigned a faculty adviser for the first year. After the first year, students may select their advisers. Students are required to have an adviser throughout their program in their area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers.

All students in the college are invited to share their concerns and seek advice from the volunteer student advisers at anytime.

Specific inquiries regarding rules, procedures, or deadlines should be addressed to:
Mark Cruvellier, chair, Department of Architecture
Pierre Clavel, chair, Department of City and Regional Planning
Roberto Bertoa, chair, Department of Art

The college offers programs leading to the bachelor's degree—the five-year program in architecture leads to the Bachelor of Architecture; four-year programs in art and architecture lead to the Bachelor of Fine Arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the Bachelor of Science.

Graduate-level programs are offered in art, architectural design and urban culture; architectural sciences, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in each of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with students and faculty from other disciplines.

Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 650 students and a full-time teaching staff of over sixty, supplemented by visiting professors and critics, part-time lecturers, and assistants. Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curriculum, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library, are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. The Department of Architecture is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and shop facilities in Rand. The Green Dragon Cafe, a student eatery and lounge, is located in the lower level of Sibley Dome. There are darkrooms in the Department of Architecture that are available for general use by students in the college and are primarily used as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lillian P. Lazzaroni in the center of the eternal city next to such well-known Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.

The program in Rome offers components for students majoring in architecture, Fine Arts, planning, and liberal arts. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that

Libraries

The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the restored 17th century Palazzo Lazzaroni in the center of the eternal city next to such well-known Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.

The program in Rome offers components for students majoring in architecture, Fine Arts, planning, and liberal arts. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that
ensure their particular requirements can be met, since course offerings in Rome are limited. For additional information, see individual department listings or contact the Rome Program Office, 149 East Sibley Hall.

COLLEGE ACADEMIC POLICIES

Ownership of Student Work
All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work
Exhibitions of student work are held each semester at the scheduled site of the Olive Tjaden Gallery and the John Hartell Gallery in Sibley Dome. These galleries display work from a specific course or exhibit examples of recent work by individual faculty, students, and visitors.

Scholastic Standards
Term by term, a candidate for an undergraduate degree in the college is required to pass all courses in which the student is registered and have an average for the term of not less than C (2.0). The record of each student who falls below the acceptable standard will be reviewed by the Student Records Committee for appropriate action, as described below:

1) Warning means that the student's performance is not up to expectations. Unless improvement is shown in the subsequent term, the student may be placed on final warning or required to take a leave of absence from the college.

2) Final Warning indicates that the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student shall be required to take a leave of absence from the college.

3) Required leave of absence: academic deficiency. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may apply for readmission after a leave of absence of at least two semesters. Application for readmission is made by letter addressed to the college's Student Records Committee. The student must submit evidence that the time has been well used, and if employed, must submit a letter from the employer(s). If a student chooses to enroll in courses at an institution other than Cornell while on required leave, credit is not granted automatically. Upon receiving permission to return, a student must petition the department to request credit for courses taken elsewhere. Students on required leave are not allowed to register extramurally at Cornell as the intention of the required leave is to insist upon a break from study at Cornell. The grades received for any courses taken while on a required leave of absence will not be counted into the grade point average.

Readmission to the college is at the discretion of the Student Records Committee. Application for spring-term readmission must be made by November 15, and application for fall-term readmission must be made by April 15. Refer to the Architecture, Art, & Planning Handbook (Whitebook) for further information regarding required leaves of absence.

4) Required withdrawal: may not reregister in the College of Architecture, Art, and Planning. The student is dismissed from the college and permanently prohibited from continuing studies in it. This dismissal does not preclude the possibility of applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence for academic deficiency at the end of the term if performance during that time is deemed to be grossly deficient. A cumulative average of at least C- (1.7) is required for graduation.

ARCHITECTURE

Professional Degree Program
The first professional degree in architecture is the Bachelor of Architecture. This degree counts toward the professional registration requirements established by the various states, National Architectural Accrediting Board, and the National Council of Architectural Registration Boards. The professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and development levels. The sequence of courses in design, consisting of studio work augmented by lectures and seminars, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, architectural theory, visual studies, environmental controls, structures, construction and computer graphics, and applications provide a base for the work in design.

In the first three years, the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years, this base may expand through further detailed studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year of the Bachelor of Architecture degree to one of the graduate programs offered in the department. Some students are then able to complete the requirements for the master's degree in one additional year.

Note on Professional Accreditation
In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes two types of degrees: the Bachelor of Architecture and the Master of Architecture. A program may be granted a five-year, three-year, or two-year term of accreditation, depending on its degree of conformance with established educational standards.

Master's degree programs may consist of a preprofessional undergraduate degree and a professional graduate degree, which, when earned sequentially, comprise an accredited professional education. The preprofessional degree, however, is not, by itself, recognized as an accredited degree.

Rome Program
The program offers the opportunity for students from Cornell and other universities to spend one or two terms of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, theory, thesis introduction, history, and practice. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

Overlap Program
For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the Master of Architecture program. In the fall of the fourth undergraduate year, interested students petition the department to substitute ARCH 601-602 or 603-604 for ARCH 501-502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field assistant for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501-502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including ARCH 601-602 or 603-604 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

### Architecture Concentrations for Majors

The Department of Architecture recognizes any concentration earned within the university but outside of the department (using standards set by those departments) on the transcripts of its students.

It is often advantageous for undergraduates to concentrate in specific sub-disciplines of architecture, especially if they anticipate application to specialized graduate programs, therefore, the following concentrations in architecture are offered within the department for B.Arch. and B.F.A. in Architecture candidates only:

- Architecture, Culture, and Society 342 (or equivalent), plus 9 credits in this area.
- Architectural Science and Technology 261, 262, 265, 264, 361, 362, 363, distribution requirement (3 credits), plus 6 credits in this area.
- History of Architecture 181, 182, distribution requirements (9 credits), plus 7 credits (including a 4 credit hour seminar course) in this area.
- Theory of Architecture 231, 232, distribution requirements (6 credits), plus 6 credits in this area.
- Visual Studies in Architecture 151, 152, distribution requirement (3 credits), plus 9 credits in this area.
- Students wishing to receive recognition for a concentration, must submit a Concentration Request form to the Architecture Department Office. In order for a course to count toward a concentration, the student must receive a grade of C or better.

### Transfer Students

Although the program leading to the Bachelor of Architecture is specifically directed to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree must also apply to transfer to the Bachelor of Architecture degree program, since the graduate program in architecture requires the Bachelor of Architecture degree or its equivalent for entrance.
Curriculum. A student entering the program is assigned an adviser from the history of architecture faculty in the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines:

1) 24 credits of 300-level courses in architectural history: ARCH 380 through ARCH 399
2) 12 credits in 600-level architectural history seminars: ARCH 681 through ARCH 699; or 8 credits in a 600-level seminar plus ARCH 499, offered for honors candidates only
3) One 300-, 400-, or 600-level course in architectural theory
4) 24 credits in electives selected in consultation with the student's adviser
5) Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

Honors program. Students graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A– in all history of architecture courses taken at the 300 level, and have completed an honors thesis (ARCH 499) deemed to be of distinguished quality by the history of architecture faculty.

Dual Degree Options
Students can earn both the B.S. and B.Arch. degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, B-1 West Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a Master of Arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened to one year.

Summer Term in Architecture
The summer term offers students the opportunity of a concentrated period of design work; the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 101 and 502, are offered in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to enroll in any summer program. Other department courses may be offered as elective courses, contingent upon student interest, faculty availability, and departmental approval.

The department offers a Career Explorations in Architecture Program for high school students and college students considering a professional education in architecture.

Concentration In Architecture For Non-Majors
A special concentration has been formulated specifically for those students not enrolled in the Department of Architecture but who are interested in complementing their current academic program with an introduction to various facets of architectural studies. Some students may wish to use the Concentration in Architecture for Non-Majors as a means of investigating possible graduate studies in architecture. Some may wish to develop architectural specialties within other disciplines. Students are admitted to this program through application to the Department of Architecture.

The curriculum for students accepted to the Concentration in Architecture Program totals 15 credit hours. Grades received must be C or better in all courses.

9 credits of required courses, including one semester each of:

- ARCH 130, 131, or 132: Introduction to Architecture
- ARCH 151: Drawing I
- ARCH 111: Concentration in Architecture: Design Studio

(ARCH 110: Introduction to Architecture: Design Studio, offered in the summer only, may substitute for ARCH 111.)

And 6 credits of elective department courses, chosen, for example from among the following:

- ARCH 130, 131, 132: Introduction to Architecture
- ARCH 152: Drawing II
- ARCH 181, 182: History of Architecture I, II
- ARCH 342: Architecture as a Cultural System
- ARCH 231, 232: Architectural Analysis I, II
- ARCH 263, 264, 363: Structures
- ARCH 261, 361, 362: Environmental Controls
- ARCH 262: Building Technology
- ARCH 476: Computer Applications

Architectural Design
Courses in brackets are not offered this year.

Each student in the architecture program (undergraduate, graduate, and in the Rome Program) is charged a fee each semester to help defray the continuing costs of refurbishing and replacing equipment.

Sequence Courses
ARCH 101 Design I Fall. 6 credits. Limited to department students.

An introduction to design as a conceptual discipline directed at the analysis, interpreta-
ARCHITECTURE, ART, AND PLANNING 2001–2002

126

ARCH 102 Design II
Spring. 6 credits. Limited to department students. Prerequisite: ARCH 101 and ARCH 151. A continuation of ARCH 101. Human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

ARCH 201–202 Design III and IV
Fall and spring. 6 credits each term. Corequisite in ARCH 231–232 and completion of ARCH 151–152 required. Limited to department students. Prerequisite for ARCH 201 is ARCH 102 and ARCH 152. Prerequisite for ARCH 202 is ARCH 201.

ARCH 301–302 Design V and VI
Fall and spring. 6 credits each term. Limited to department students. Prerequisite for ARCH 301 is ARCH 202. Prerequisite for ARCH 302 is ARCH 301.

ARCH 401–402 Design VII and VIII
Fall and spring. 6 credits each term. Limited to department students. Prerequisite for ARCH 401 is ARCH 302. Prerequisite for ARCH 402 is ARCH 401 or ARCH 309.

Programs in architectural design, urban design, or architectural technology and environmental science, and other topics.

ARCH 501 Design IX
Fall or spring. 6 credits. Limited to department students. Prerequisite: ARCH 402.

Programs in architectural design, building technology investigations, and research leading to complete development of the student’s thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 502 Design X—Thesis
Fall or spring. 8 credits. Prerequisite: ARCH 501 or ARCH 500 and ARCH 510. Required of B.Arch. candidates who must satisfactorily complete a thesis. Students accepted for admission to the Overlap Program are exempt from the thesis requirement.

ARCH 601–602 Special Program in Architectural Design
Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

ARCH 603–604 Special Program in Urban Design
Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

Graduate Courses

ARCH 701–702 Problems in Architectural Design
Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is architectural design.

ARCH 703–704 Problems in Urban Design
Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is urban design.

ARCH 801 Thesis or Research in Architectural Design
Fall or spring. 9 credits. Prerequisite: ARCH 701 and ARCH 702.

Second-year design course for graduate students whose major concentration is architectural design.

ARCH 802 Thesis or Research in Urban Design
Fall or spring. 9 credits. Prerequisite: ARCH 703 and ARCH 704.

Second-year design course for graduate students whose major concentration is urban design.

Elective Design Courses

ARCH 103–104 Elective Design Studio
103, fall; 104, spring. 6 credits each term. Limited to students from outside the department. Prerequisite for ARCH 103: permission of instructor required. Prerequisite for ARCH 104: ARCH 103 and permission of instructor.

ARCH 200, 300, 400 Elective Design Studio
Fall or spring. 6 credits. This course is for students who are not architecture majors at Cornell. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level.

ARCH 309 Elective Design Studio
Fall, spring, or summer. 6 credits. Foreign summer and Rome Programs only. Prerequisite: C or better in ARCH 202. ARCH 309 is a design studio that, upon completion, will be credited as an elective design studio. With the successful completion of ARCH 302, ARCH 309 may be used as a substitute for ARCH 401.

ARCH 500 Design IX Alternate Studio
Fall, spring, or summer. 6 credits. Foreign summer and Rome Programs only. Prerequisite: C or better in ARCH 202. ARCH 500 will be considered equivalent to ARCH 501 when taken concurrently with ARCH 510. In order to take ARCH 502, one must have a grade of C or better in ARCH 500 and a passing grade in ARCH 510.

For description, see ARCH 401–402.

Related Courses and Seminars

ARCH 111 Introduction to Architecture: Design Studio
Summer. 3 credits. S-U option. Open to nonarchitectural majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.

A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty, as well as periodic reviews of the group by invited faculty and guest critics. The course grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

ARCH 111 Concentration in Architecture: Design Studio
Spring. 4 credits. Not open to architecture majors. Prerequisite: acceptance into the Concentration in Architecture Program. A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the interrelationship of the architectural concepts of space, form, function, and technology. Instruction includes critiques of individual student work by department faculty, as well as, by periodic reviews by guest critics.

ARCH 303 Special Problems in Architectural Design
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study. This course does not count for design sequence credit.

ARCH 317 Contemporary Italian Culture
Fall or spring. Variable credit (maximum 3). For students in the Rome Program only. This course provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 411 Professional Practice
Fall or spring. 3 credits. An examination of organizational and management theories and practices for delivering professional design services. Included is a historic overview of the profession and a review of the architect’s responsibilities from the precontract phase through construction. Application of computer technology in preparing specifications.

ARCH 412 Professional Seminar
Fall or spring. 3 credits. Prerequisite: ARCH 411.

Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of each firm’s practice and the identification of agency roles.

ARCH 510 Thesis Introduction
Foreign summer programs and Rome program only. 3 credits. Must be taken in conjunction with ARCH 500. Prerequisite for ARCH 500 is ARCH 402. ARCH 500 will be considered equivalent to ARCH 501 when taken concurrently with ARCH 510 during a foreign summer program or in Rome.

Lectures, seminars, and independent research leading to complete development of the student’s thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 605 Special Problems in Design
Fall and spring. Variable credit (maximum 3). Prerequisite: permission of instructor. Independent study. This course does not count for design sequence credit.

ARCH 610 Graduate Design Seminar
Fall. 3 credits. Intended for, but not limited to, graduate students in the Architectural Design and Urban Design Program. Issues in architectural and urban design.
ARCH 611-612 Urban Housing Developments
611, fall; 612, spring. 3 credits each term.
Limited to fourth- and fifth-year students in architecture and graduate students.
Prerequisite: permission of instructor. Not offered every year.

ARCH 613 Transportation
Fall. 3 credits. Prerequisite: permission of instructor. Not offered every year.
The affect of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

ARCH 614 Low-Cost Housing
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.
Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

ARCH 618-619 Seminar in Urban and Regional Design
618, fall; 619, spring. 3 credits each term.
Limited to fifth-year and graduate students.
Not offered every year.
A broad range of issues and problems of urban and regional development and the context in which the designer functions are surveyed. Selected case studies are presented by participants and visitors.

Architectural Theory

ARCH 130 An Introduction to Architecture: Lectures
Summer. 3 credits. S-U option. Open to nonarchitecture majors in college; high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.
A survey course that covers the many facets of architecture: history, design principles, preservation, landscape architecture, building technology, and cultural factors. The format of the course comprises lectures, demonstrations, films, and field trips. Course evaluation is based on quizzes and a final examination.

ARCH 131 An Introduction to Architecture
Fall. 3 credits. Open to out-of-department students only. ARCH 131 is not a prerequisite for ARCH 132.
Intended to familiarize nonarchitecture students with the art and science of architecture. The fundamentals of plan, section, and elevation, the primary elements that comprise an architectural form, basic organizational principles; the ways in which we perceive architectural space; and the various concepts of function in relation to form will be included among the topics to be covered, using examples from numerous times and cultures as well as from the contemporary Cornell campus.

ARCH 132 An Introduction to Architecture
Spring. 3 credits. Open to out-of-department students only. ARCH 131 is not a prerequisite for ARCH 132.
Nonarchitecture students are initiated into various types of architectural drawings and are exposed to a variety of methods whereby architectural forms communicate both simple and complex meanings. Architecture in its relation to fields such as landscape architecture, urban design, structural design, interior design, set design, architectural history, preservation, and computer graphics will be included in the presentations, which also deal with the various relationships established between an architect and a society. Cross-historical and cross-cultural examples will be used in developing in the student a degree of fluency in the languages of architectural discourse.

ARCH 231 Architectural Analysis I
Fall. 2 credits. Architecture students must register concurrently in ARCH 201.
An introduction to analysis of the object of study in the interest of broadening one's understandings of the ways in which architecture can connote and denote meanings.

ARCH 232 Architectural Analysis II
Spring. 2 credits. Architecture students must register for this course concurrently with ARCH 202.
Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

ARCH 334 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 634)
Fall or spring. 3 credits. Limited to third-year level students and above.
Field and figure relationships (interrelation of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades.
The first part of the seminar is a lecture/seminar format. Students are required to research and present a paper for discussion.
In the latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

ARCH 335 Theory of Architecture
Fall or spring. 3 credits. Prerequisite: ARCH 231-232 or permission of instructor. Not offered every year.

ARCH 336 Theory of Architecture
Fall or spring. 3 credits. Limited to third-year students and above. Not offered every year.
Theories of modern architecture: De Stijl, cubist and purist painting, industrialized architecture, Le Corbusier's architecture and urban theories, architectural sequence, facades, the free plan, and "DOMINO" theory.

ARCH 337 Special Investigations in the Theory of Architecture I
Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor. Not offered every year.
For description, see ARCH 334.

ARCH 338 Special Topics in the Theory of Architecture II
Fall or spring. 3 credits. Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 339 Elements, Principles, and Theories in Japanese Architecture
Spring. 3 credits. Not offered every year.
An examination of Japanese architecture (buildings and gardens) and their contexts:

landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

ARCH 431 Theory of Architecture
Fall. 3 credits. Prerequisite: third-year status. Not offered every year.
Gardening and architecture; urban parks; villas and country houses, and Italian, French, and English landscape gardens. Site planning.

ARCH 432 Theory of Architecture
Spring. 3 credits. Prerequisite: third-year status. Not offered every year.
The development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

ARCH 435 Architecture and Representation
Fall. 3 credits. Limited to degree candidates in architecture. Prerequisite: successful completion of ARCH 231-232. Not offered every year.
A study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 534 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 334)
Fall or spring. 3 credits. Limited to third-year level students and above.
For description, see ARCH 334.

ARCH 535 Critical Theory in Architecture
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.
An inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the twentieth century.

ARCH 537 Special Investigations in the Theory of Architecture II
Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 538 Special Topics in the Theory of Architecture II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.
Topic is announced before preregistration.

Architecture, Culture, and Society

ARCH 432 Architecture as a Cultural System
Spring. 3 credits. ARCH 445, 446, 447, or 448 can substitute with permission of instructor.
What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural
anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies; the structure of the ideal social order and its refraction in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 349 Undergraduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 441-442 Special Topics in Architecture, Culture, and Society
Fall and spring. 3 credits each term. Prerequisite: permission of instructor. Topic to be announced before preregistration.

ARCH 445 Architecture and the Mythic Imagination
Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year.
This course focuses on traditional societies in which beliefs about architectural order are borne out of the mythic and religious imagination. Certain themes that are common to a range of cultures are explored in detail. They include the myth of the human body as a source of architectural knowledge, the sacred center, the cosmic mountain, and architectural rituals as enactments of myths. Such themes are traced across cultures, through time, and into contemporary theory.

ARCH 446 Topics in Architecture, Culture, and Society
Fall or spring. 3 credits. Prerequisite: ARCH 342 or permission of instructor.

ARCH 447 Architectural Design and the Utopian Tradition
Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year.
This course explores the relationship between visionary lecture of the late 19th and 20th centuries and the wider utopian literature of the time. It first explores themes in utopian fiction as well as in anti-utopian tracts and then turns to the attempts of architects, planners, and artists to concretize visions of the ideal world. The course will devote special attention to the ways in which ideals grounded in the utopian tradition have emerged in the social criticism of housing and neighborhood design in the urban setting in recent times.

ARCH 448 The Indian Example and the Visual Tradition in Culture
Spring. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year.
This course provides a concise chronological summary of the major building traditions of Hindu India and explores the relationship between form and more general beliefs about the power of vision to reveal and transform. Topics include the sculptural program of the Hindu temple as a vehicle for the preservation and transmission of mythic texts, the oculus as an element and the eye as a motif, darshan, the spiritually transforming vision, and the destructive power of vision as revealed in myth and beliefs about "evil eye."

ARCH 467-468 Architecture in Its Cultural Context I and II
Fall, 4 credits. Prerequisite: permission of instructor. Not offered every year.
This course is an introduction to and analysis of simple structural systems. Concepts and procedures for the design of individual structural components (columns, beams, etc.) in steel, concrete, and timber construction.

ARCH 469 Graduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. Independent study.

Visual Studies
Darkroom fees are charged for all photography courses.

ARCH 151 Drawing I
Fall. 2 credits.
Freehand drawing with emphasis on line and perspective representation of form and space.

ARCH 152 Drawing II
Spring. 2 credits. Prerequisite: ARCH 151.
Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

ARCH 251 Introductory Photo I (also ART 161)
Fall, spring or summer. 3 credits. Prerequisite: ART 161.

ARCH 351 Photography II (also ART 261)
Fall, spring or summer. 4 credits. Prerequisite: ARCH 251 or ART 261, or permission of instructor.

ARCH 450 Architectural Publications
Fall and spring. Variable credit (maximum 3). May be repeated for credit.
Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production issues related to the exchange of architectural ideas. Exercises cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 457 Special Project in Photography
Fall or spring. Variable credit (maximum 3). Prerequisites: written proposal outlining the special project and permission of instructor. Not offered every year. Independent study.

ARCH 458 Special Investigations in Visual Studies
Fall or spring. Variable credit (maximum 3). Prerequisites: permission of instructor and approved independent study form. Independent study.

ARCH 459 Special Topics in Visual Studies I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Topics announced before preregistration.

ARCH 658 Special Investigations in Visual Studies II
Fall or spring. Variable credit (maximum 4). Prerequisites: permission of instructor and approved independent study form. Independent study.

ARCH 659 Special Topics in Visual Studies II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Topics announced before preregistration.
ARCH 463 Special Topics in Structures
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 263, 264, and 363 or permission of instructor. Not offered every year.
Topics announced before preregistration.

ARCH 472 Special Investigations in Structures
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 664 Vertigo Structures (also ARCH 364)
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year.
For description, see ARCH 364.

ARCH 665 Bridge Design (also ARCH 365)
Fall of spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year.
For description, see ARCH 365.

Construction

ARCH 262 Building Technology, Materials, and Methods
Spring. 3 credits.
Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

ARCH 465 Special Topics in Construction
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 262 or permission of instructor. Not offered every year.
Topics announced before preregistration.

ARCH 475 Special Investigations in Construction
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

Environmental Controls

ARCH 261 Environmental Controls—Site Planning
Fall. 3 credits.
The basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

ARCH 361 Environmental Controls—Lighting and Acoustics
Fall. 3 credits.
Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design; light, color, and form. Natural lighting possibilities and constraints as well as good and bad examples of artificial lighting.

ARCH 362 Environmental Controls—Mechanical and Passive Solar Systems
Spring. 3 credits.
Basic thermal analysis of buildings, human comfort criteria, energy conservation, passive solar design, HVAC distribution systems, overview of mechanical conveying systems, and plumbing.

ARCH 464 Special Topics in Environmental Controls
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 261, 361, and 362 or permission of instructor. Not offered every year.
Topics announced before preregistration.

ARCH 474 Special Investigations in Environmental Controls
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

Computer Applications

ARCH 372 Imaging and the Electronic Age
Spring. 3 credits. For undergraduate, non-computer-scientists. 2 lectures. 1 recitation. Not offered every year. D. Greenberg. Historical technological advances which created major paradigm shifts for communications as well as advances in computer technology are presented. Technical fundamentals of computer graphics capabilities are emphasized. The latter half of the course covers the effect of these scientific advances on many diverse, specific areas including architecture, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education. The course is heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

ARCH 374 Computer Graphics and Visualization (also COM S 417)
Spring. 3 credits. Prerequisite: COM S/ENGRD 211.
For description, see COM S 417.

ARCH 375 Practicum in Computer Graphics (also COM S 418)
For description, see COM S 418.

ARCH 376 Microcomputer Applications in Design
Fall. 3 credits. Prerequisites: previous knowledge of PC-based CAD or permission of instructor.
This course covers advanced principles, concepts, and applications of microcomputer-aided design, synthetic imaging, and animations. It combines seminar-style presentation with hands-on laboratory sessions. The course uses IBM PC platforms exclusively.

ARCH 379 Design by Computer
Spring. 3 credits. Prerequisites: limited to third-year students and above. Not offered every year.
Exploration of the formalization of the design process for computability with the computer, and the role of computers in design. Lecture with CAD lab.

ARCH 476 Special Topics in Computer Applications
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 374 or 379 or permission of instructor. Not offered every year.
Topics announced before preregistration.

ARCH 477–478 Special Projects in Computer Graphics
477, fall; 478, spring. Variable credit (maximum 4). Limited to third-year students and above. Prerequisites: ARCH 374, plus concurrent registration in Computer Science 314 or equivalent, and permission of instructor.
Advanced work in computer graphics input and display techniques, including storage tube, dynamic vector, and color raster displays.

ARCH 479 Micro-Computer Applications in Design (also ARCH 479)
Fall. 3 credits. Prerequisites: an introductory course in computer graphics or computer science, or permission of instructor; upper level undergraduate or graduate status.
The course explores the role of synthetic imaging and computer graphics in architectural design. The first half of the course is devoted to examining the new possibilities that information technologies offer for multimedia visualization of architecture, from abstract conceptual drawings to sketching, photorealistic rendering, and multimodal representation, including motion and sound. The second part of the course explores the uses of information technologies to model and simulate the creative design process. These explorations include: developing a library of design ideas as building blocks for design; creating multimodal, multidimensional, immersive, virtual environments; interactive transformation and synthesis of design concepts; and "reverse architecturing" of canonical works. The emphasis of this course is on concepts as well as methods and techniques of computer graphics and their application to simulating the creative design process in architecture.

Graduate Courses

ARCH 679 Micro-Computer Applications in Design (also ARCH 479)
Fall. 3 credits. Prerequisite: an introductory course in computer graphics or computer science, or permission of instructor; upper level undergraduate or graduate studies.
For description, see ARCH 479.

ARCH 761–762 Architectural Science Laboratory
761, fall; 762, spring. 6 credits each term.
Open to architectural science graduate students only.
Projects, exercises, and research in the architectural sciences.

ARCH 763–764 Thesis or Research in Architectural Science
763, fall; 764, spring. Variable credit (maximum 12). Limited to architectural science graduate students.
Independent study.

Architectural History

The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take ARCH 181–182 in the first year, and three additional courses from the 380–399 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses with the same number may only be taken once to
satisfy history of architecture or in-college requirements.

Sequence Courses

ARCH 181 History of Architecture I
Fall. 3 credits. Required of all first-year students in architecture; open to all students in other colleges with an interest in the history of the built domain. The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

ARCH 182 History of Architecture II
Spring. 3 credits. Required of all first-year students in architecture. Open to all students in other colleges with an interest in the history of the built domain; may be taken independently of ARCH 181. The history of the built environment as social and cultural expression from more recent times to the present. Architecture and urban design themes, theories, and ideas are addressed in greater detail leading to the present time.

Directed Electives

ARCH 380 History of Theory
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year.
This course, in which classroom discussion and debate play a central role, explores the history of important theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy.

ARCH 381 From Eupatoria to the Ghetto: Renaissance Urban Form
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year.
Significant developments in European urban design from 1500–1600. Particular attention will be awarded to Italy and Spain. The course focuses on a series of case studies: entire towns, specific urban spaces, and individual building types. Weekly discussions contextualize the city within a larger cultural framework. We will consider how civic, economic, social, political, legislative, technical, and material concerns have had a significant impact on the form, function, and patronage of these places, spaces, and structures. The relevance of Renaissance theory to contemporary practice is also emphasized through the discussion of several twenty-first-century urban plans and built projects.

ARCH 382 Architecture in the Middle Ages [also ART H 332 and RELST 333]
Fall. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year.
For description, see ART H 332.

ARCH 383 The Construction of Modern Life: The Politics of Memory and the Commodification of Architecture
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year.
This course examines the complex relationship between the built environment, the construction and definition of cultural heritage, collective memory and civic identity, and the commodification or commercial celebration of specific buildings, sites, and urban events. Pre-Celtic, nineteenth-, and twentieth-century Europe. Particular attention is awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Gio Ponti); political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (such as the world's fair, department stores, museums, and panoramas); and the role played by tourism in the commodification of local and foreign sites.

ARCH 384 The Urban Landscape of Renaissance Rome: 1450–1600
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year.
This class is an exploration into the urban morphology and architecture with efficient of Renaissance Rome. The city was a thriving center for architectural practice. It drew practitioners from throughout the peninsula and served as an important theoretical model for architects elsewhere. We survey the important issues, individuals, and building projects of the city between 1450 and 1600 with particular emphasis on the intellectual and physical rediscovery and re-appropriation of Antiquity, the role of the Vatican with its large population of pilgrims, tourists, resident church officials, foreign bankers, and dignitaries that made specific demands of the built environment, and the unique topography and natural resources of the city's location. The last portion of the course addresses the legacy of the Renaissance during the period of Italian unification and the Fascist regime.

ARCH 385 Magnificent Utility—Architecture and the Arts of Persuasion
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year.
Architects put revolutionary attitudes about form, space, light, and the arts into practice during the course of the seventeenth century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

ARCH 387 The Nineteenth Century—Style, Technology, and Individuality in the West
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year.
An examination of the nineteenth-century efforts to create appropriate stylistic forms and expressions for emerging building technologies and typologies. The preservation of individual artistic expression against the backdrop of industrialization, urbanization, and professionalization is emphasized. The course begins with Rationalist theory and its architectural expression and concludes with considerations of Art Nouveau, Modernismo, and Jugendstil.

ARCH 388 Modernism
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year.
Precursors and proponents of the modern movement from the late nineteenth century into the 1940s are considered in this course. The cultural intents of the modern are examined in architectural and urban design for individuals, groups, and institutions, from Mies van der Rohe, Le Corbusier, and Frank Lloyd Wright to de Stijl, the Bauhaus, and design education. Attention is paid to the politics of design in serving the state during the 1930s.

ARCH 389 Architecture, Revolution, and Tradition
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year.
From early eighteenth to early twentieth-century European society underwent profound change. Political absolutism—the doctrine of unlimited governmental control—was challenged. Enlightenment attitudes—commitments to human reason, science, and education—gained ascendency. This course considers architectural and urban design in these times to the present. Themes, theories, and ideas are addressed in greater detail leading to the present time.

ARCH 390 American Architecture and Building I
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year.
A review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts are emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders are examined. The architectural expressions of Native Americans, African Americans, women, and others are treated in addition to those of European colonists and settlers.

ARCH 391 American Architecture and Building II
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year.
A continuation of Architecture 390 but may be taken independently. An account of American architecture, building, and responses to the environment from the Civil War period to the present day. Particular attention is paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

ARCH 392 Modern Architecture on Film
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year.
An exploration of certain themes deemed critical to modern architecture and urbanism through their representation in both commercial and avant-garde films from the medium's birth until the present day. The focus varies each semester with particular emphases to include the modern house and housing, the modern city, technology and visions of the future, and family image of the architect. Representations of these themes in other forms such as painting, photography, theatre, literature, and advertising also are examined. The course includes selected readings in modern architecture and film, screenings in
class, class discussions, presentations, and papers.

ARCH 393 The Cumulative City
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Well-established cities were transformed by radical and unimagined change in the nineteenth and twentieth centuries. Politics and economies were recast, populations exploded, and new technologies reshaped transportation, communication, and building. This course explores transformation historically in the cumulative city, focusing on specific cities in America and Europe, Africa and Asia. The cultural context of each city is examined to understand how it changed and how meanings became associated with evolving urban forms.

ARCH 394 Toward the Millennium
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Theory and practice in architecture and urbanism are investigated from the 1950s to the present. From the Americanized International Style to the recent internationalization of design attitudes, the immediate past is explored historically to probe the matrix of meanings associated with contemporary form, urbanism, and technology.

ARCH 396 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Topics to be announced.

ARCH 397 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Topics to be announced.

ARCH 398 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Topics to be announced.

ARCH 399 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Topics to be announced.

Courses in Preservation

ARCH 583 Measured Drawing (also CRP 567)
Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor. For description, see CRP 567.

ARCH 584 Problems in Contemporary Preservation Practice (also CRP 563)
Spring. Variable credit. For description, see CRP 563.

ARCH 585 Perspectives on Preservation (also CRP 562)
Fall. 3 credits. For description, see CRP 562.

ARCH 586 Documentation for Preservation (also CRP 560)
Fall or spring. 3 credits. For description, see CRP 560.

ARCH 587 Building Materials Conservation (also CRP 564)
Spring. 3 credits. Open to juniors, seniors, and graduate students. For description, see CRP 564.

ARCH 588 Historic Preservation Planning Workshop: Surveys and Analyses (also CRP 561)
Fall or spring. 4 credits. For description, see CRP 561.

Graduate Seminars in the History of Architecture and Urbanism
All topics for ARCH 682 to ARCH 699 will be announced prior to the start of the semester.

ARCH 680 Seminar in Historiography
Fall. 4 credits. Prerequisite: permission of instructor. Historiographic and methodological issues are examined in relation to the history of architecture and urbanism. Taught by different faculty members in successive years, the seminar is required of all first- and second-year graduate students in the History of Architecture and Urbanism Program.

ARCH 682 Seminar in Urban History
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

ARCH 683 Seminar in the History of Theory
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

ARCH 684 Seminar in the Italian Renaissance: Architecture, Politics, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

ARCH 685 Seminar in Seventeenth- and Eighteenth-Century Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

ARCH 686 Seminar in Twentieth-Century Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

ARCH 687 Building Materials Conservation (also CRP 564)
Spring. 3 credits. Open to juniors, seniors, and graduate students. For description, see CRP 564.

ARCH 688 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

ARCH 689 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

ARCH 299 Undergraduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor. May not be taken by students in design to satisfy undergraduate history requirements. Independent study for undergraduate students.

ARCH 499 Undergraduate Thesis in the History of Architecture and Urbanism
Fall or spring. 4 credits. For B.S. honors candidates in history only.

ARCH 799 Graduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum 12). Prerequisite: permission of instructor. Independent study for graduate students only.

ARCH 899 M.A. Essay in the History of Architecture and Urbanism
Fall or spring. 4 credits. Independent preparation of the M.A. essay, often developed from topics investigated in ARCH 680.

ARCH 999 Ph.D. Dissertation in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum 12). Independent study for the doctoral degree.

ART

Undergraduate Program

The curriculum in art is a program of study within the College of Architecture, Art, and Planning, as well as other colleges at Cornell. The undergraduate curriculum in art is an excellent background for a career in the visual arts. Past graduates have found it to be an
excellent preparation for a career in applied art, although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a liberal education with the studio concentration required for a professional degree. During the first four semesters, all students follow a common core of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience of the last two years. Beginning with the third year, students concentrate in painting, sculpture, photography, printmaking, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remaining time is devoted to a diversified program of academic subjects with a generous provision for electives. All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression.

A candidate for the B.F.A. degree may also earn a Bachelor of Arts degree from the College of Arts and Sciences or the College of Human Ecology, in a five-year dual degree program. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student is assigned an adviser in both colleges of their dual degree program to provide needed guidance. A candidate for two degrees must satisfy all requirements for both degrees. At least 62 of the total credits must come from courses offered in the Department of Art. In addition, all Department of Art requirements for freshman writing seminars, art history, and distribution must be met. It is expected that a dual degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during either their fourth or fifth year.

Bachelor of Fine Arts Degree Requirements

Credits and Distribution

130 credits are required for the B.F.A. degree. A minimum of 62 are taken in the Department of Art. A minimum of 57 are taken outside the department.

Curriculum

Students are expected to take an average course load of 16 credits per semester during their four years. If a student wishes to take more than three studio courses in any one semester they must file a petition. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. Any request to deviate from the standard curriculum must be petitioned to the department prior to the act.

Specific Course Requirements

By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, photography, and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

Concentration

Students must plan their programs to complete 27 credits in one of the studio areas of painting, sculpture, photography, or printmaking. Declaration of the area of concentration must be made during the second semester of the sophomore year. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

Concentration Requirements (27 credits total)

The required courses for each concentration are as follows:

**Painting**: ART 121, 221, 321, 322, 421, 422 (Thesis)

**Sculpture**: ART 141, 241, 341, 342, 441, 442 (Thesis)

**Printmaking**: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331, 431, 432 (Thesis)

**Photography**: ART 161, 261, 263, 461, 462 and one of the following: ART 264, 265, or 361

Dual Concentration

If a student is interested in studying in more than one area, they may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a non-thesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students take 23 credits in the first area of concentration and 15 credits in the second area of concentration. Drawing is only available as a second area of concentration.

The required courses for the dual concentration are:

**First Area of Concentration**

**Total Credits**

**Painting**: ART 121, 221, 321, 421, 422

**Sculpture**: ART 141, 241, 341, 441, 442

**Printmaking**: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 431, 432

**Photography**: ART 161, 261, 263, 461, 462

**Second Area of Concentration**

**Total Credits**

**Drawing**: ART 151, 152, 251, 252, independent study

**Painting**: ART 121, 221, 321, 322

**Sculpture**: ART 141, 241, 341, 342

**Printmaking**: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331

**Photography**: ART 161, 261, 263, 461

**Note**: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Concentration

The combined media concentration enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music, theatre, and dance, etc.

Students must file an approved "Area of Concentration" form. In addition to the courses required of all BFA majors during their first and second year (see BFA curriculum), students must take two studios at a 200 level or 300 level, a minimum of 2 'Out of College' studio electives (OCE Studio) of 3-4 credits each, ART 481/Pre-Thesis Combined Media and ART/482 Thesis Combined Media.

Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their academic record.

Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty adviser, the Art Department adviser, and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. (Under special circumstances, seniors may petition to attend the Rome Program.) Only under exceptional circumstances and with prior petition and approval, are seniors allowed to attend the Rome Program. Students wishing to spend two consecutive semesters in Rome must petition which should include the proposed course schedule for both semesters and must have appropriate faculty approval.

Rome Curriculum

**ART 400** Rome Studio

Fulfills 4 credits of concentration

**ART 312** Modern Art in Italy

**ART 317** History of Art in Rome: Early Christian to the Baroque Age

**ART 318** History of Art in Rome: Renaissance to the Baroque Age

**ITALA 111/112** Italian Language

**ARCH 317** Contemporary Italian Film

16 Total

Students may petition to take more than 16 credits per semester in the Rome Program. Students may study in Rome for one or two academic semesters.

*Fulfills 300-level Theory and Criticism requirement.

Out-of-College Requirements

A minimum of 57 electives credits must be taken outside of the college. In the first year, students must take two freshman writing seminars. Students are required to take courses from among three groups, which include: Physical and Biological Sciences (minimum of two courses, of at least 3 credits each), Social Sciences (minimum of three courses, of at least 3 credits each), and Humanities and Expressive Arts (minimum of three courses, of at least 3 credits each). All B.F.A. students are required to take 20 credits in the History of Art. One course must be taken in each of the following areas:

Three electives: any art history elective at the 300 level or above or any architectural history elective. (Note: course offerings may vary each semester. Students are encouraged to consult with their adviser. Students may petition to substitute courses of similar content.)

The university requirement of two terms in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two terms of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1962. No student may study in absence for more than two terms.

Students who transfer into the undergraduate degree program in art must complete a minimum of four terms in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four terms of studio work.

For those students matriculating in fall of 2001:

Students are required to take ART 111, Introductory Art Seminar; ART 121, Introductory Painting; or ART 141, Introductory Sculpture; Art History Elective; and a Freshman Writing Seminar during the fall semester of the freshman year. An Art History Elective, ART 171, Electronic Imaging in Art, and an additional Freshman Writing Seminar must be taken during the spring semester of the freshman year. A 300-level course in Theory and Criticism must be taken sometime during the junior or senior year.

Courses that will fulfill Theory and Criticism requirement (note: offerings may change from year to year. Check the current course catalog):

The M.F.A. Program

The Master of Fine Arts program requires four terms of full-time study, equal to a minimum of 60 credits. Graduate work done elsewhere or in the summer session is not applicable to the M.F.A. degree. The curriculum leading to the master’s degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students allows an exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to studios and labs.

Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university. Fifteen credits are required in each term; of these, nine credits are in studio work, and three credits are in Graduate Seminar (ART 611, 612, 613, 614). Students are required to take at least twelve credits of academic work outside the Department of Art during their four terms in residence. Candidates for the Master of Fine Arts degree must have completed eighteen credits in the history of art in the course of their graduate and/or undergraduate study. Every M.F.A. candidate must prepare a written statement, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the written statement and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

Course Information

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor.

Fees are charged for all studio courses. See the specific course description for course fees.

To take advantage of the special opportunities afforded by summer study, there are several course offerings during summer session.

Guidelines for Independent Study

A student who wants to undertake Independent Study must be a junior and in good academic standing. Fine Arts students must have completed two years of the curriculum, including all first- and second-year studios and four semesters of drawing. Students must have prior approval to have an independent study count as a drawing requirement. All students must have taken a minimum of one Cornell Art Department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor. Independent studies must be petitioned to count toward required studio courses. Credit hours are variable up to a maximum of four.

Courses in Theory and Criticism

<table>

</tr>
</tbody>
</table>
ART 312 Modern Art in Italy  
Fall or spring. 3 credits. Rome Program only. This course is designed to introduce students to contemporary developments in Italian art and to major issues concerning the art world. Significant movements of the twentieth century, including Futurism, Metaphysical painting, and Magic Realism will be discussed. Post-war painting and sculpture will be emphasized. Visits with artists in studios, galleries, and museums introduce students to the exchange between artists, dealers, and critics. Fulfills 300-level Theory and Criticism requirement for Fine Arts majors.

ART 317 History of Art in Rome: Early Christian to the Baroque Age  
Fall. 4 credits. Rome Program only. General survey of the early Christian period to the fantastic vision of Piranesi in the eighteenth century. Special emphasis is placed on the developments of the Renaissance and Baroque periods. Weekly lecture and field trips.

ART 318 History of Art in Rome: Renaissance in Rome and Florence  
Spring. 4 credits. Rome Program only. A direct knowledge of art in its historical context is the aim of this course. Open both to students interested in history and to those concentrating on the visual impact of art. Included are lectures and field trips.

ART 419 Independent Study/Supervised Readings in Art  
Fall, spring, or summer. Credits variable (maximum 4). Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the supervision of a faculty member.

ART 611 Professional Skills for the Visual Artist  
Fall. 3 credits. Limited to M.F.A. students. This seminar provides graduate students with professional skills that will assist them in their careers as practicing artists and in their work as art-related employment. Students will complete a resource notebook that will be useful to them in the years after they graduate. Topics include: funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

ART 612 Recent Practice in the Visual Arts  
Spring. 3 credits. Limited to M.F.A. students. This seminar is designed to provide graduate students with an overview of recent visual artwork. Students will study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as Documenta, La Biennale di Venezia, and the Whitney Biennial are discussed. Students will be encouraged to travel to nearby cities to look at contemporary work.

ART 613 On-Line Publication for the Visual Artist  
Fall. 3 credits. Limited to M.F.A. students. This seminar is designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist’s work and combined in an on-line magazine. Additionally each student learns to create a home page on the web.

ART 614 Contemporary Theory in the Visual Arts  
Spring. 3 credits. Limited to M.F.A. students. This seminar explores selected writings on the current issues represented within the visual arts. It is designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

Studio Courses in Painting

**ART 121 Introductory Painting**  
Fall, spring, or summer. 3 credits. The study of the language of painting through color, form, materials, and techniques. Aspects of traditional and modern pictorial composition are studied including proportion, space, and color theory through the representation of a variety of subjects.

**ART 221 Painting II**  
Fall or spring. 4 credits. Prerequisite: ART 121 or permission of instructor. A continuation of the study of aspects of pictorial composition initiated in ART 121, focusing on problems relating to the depiction of the figure, space, and light. Topics explored within the context of historical and contemporary artistic expression.

**ART 321 Painting III**  
Fall or spring. 4 credits. Prerequisite: ART 221 or permission of instructor. An intensive study of painting materials and techniques to express pictorial ideas. A variety of traditional painting techniques are explored including egg tempera, fresco, gouache, encaustic, and oil. In addition, paints and associated techniques developed in the twentieth century are used as well as developing technologies applicable to the painting process.

**ART 322 Painting IV**  
Fall or spring. 4 credits. Prerequisite: ART 321 or permission of instructor. An advanced course centered on issues of artistic expression. A variety of painting media are used to address conceptual issues through representation as well as abstraction.

**ART 421 Pre-Thesis in Painting**  
Fall or spring. 6 credits. Prerequisite: ART 322. Advanced study of painting through assigned and independent projects using a variety of materials leading to the formulation of a thesis project.

**ART 422 Thesis in Painting**  
Fall or spring. 6 credits. Prerequisite: ART 421. A focused independent project demonstrating creative ability and technical proficiency. Projects are exhibited in an appropriate space at the end of the term.

**ART 429 Independent Studio in Painting**  
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Independent studio in painting allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 721-722, 821-822 Graduate Painting**  
Fall, 721; spring, 722; first-year M.F.A. students. 9 credits. 821, fall; 822, spring; second-year M.F.A. students. 9 credits. Students are responsible for their own direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation.

Studio Courses in Printmaking

**ART 131 Introductory Intaglio**  
Fall and spring. 3 credits. A basic introduction to etching techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

**ART 132 Introductory Graphics**  
Fall and spring. 3 credits. An introduction to the two-dimensional thought process and the language of vision. Students will explore design projects and the use of graphic materials, including collage, pochir, and screen printing.

**ART 133 Introductory Lithography**  
Fall and spring. 3 credits. The theory and practice of lithographic printing, using limestone block and aluminum plate. Basic lithographic techniques of crayon, wash, and transfer drawing are studied.

**ART 231 Intaglio II**  
Spring. 4 credits. Prerequisite: ART 131. A studio course in advanced etching techniques. Refinement of processes and ideas through the uses of acquatint, spit bite, lift ground, soft ground, and dry point in black and white with an introduction to multiple plate color printmaking.

**ART 232 Advanced Screen Printing**  
Fall. 4 credits. Prerequisite: ART 132. An exploration of the screen printing process as it applies to the fine arts. Students develop skills in multicolor printing using transparent inks and additives. Stencils are made by the handcut and the photo process.

**ART 233 Lithography II**  
Spring. 4 credits. Prerequisite: ART 133. The theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photolithography using kodalph and computer-generated transparencies.
ART 331 Printmaking III
Fall or spring. 4 credits. Prerequisite: ART 231, 232, or 233 or permission of instructor.
Study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

ART 332 Printmaking IV
Fall. 4 credits. Prerequisite: ART 331 or permission of instructor.
Continuation and expansion of ART 331.

ART 431 Pre-Thesis in Printmaking
Fall or spring. 6 credits. Prerequisite: ART 332.
Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

ART 432 Sculpture IV
Fall or spring. 4 credits. Prerequisite: ART 341 or permission of instructor.
Continuation and expansion of ART 341. Special projects may include site-specific and/or large-scale installations.

ART 343 Sculpture V
Fall or spring. 4 credits. Prerequisite: ART 342 or permission of instructor.
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 441 Pre-Thesis in Sculpture
Fall or spring. 6 credits. Prerequisite: ART 343.
Further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through bi-monthly group discussions and individual criticism. Students complete a body of work through an approved statement of purpose and proposed schedule.

ART 442 Thesis in Sculpture
Fall or spring. 6 credits. Prerequisite: ART 441.
Advanced sculpture project to demonstrate creative ability and technical proficiency culminating in a cohesive B.F.A. thesis exhibition.

ART 449 Independent Studio in Sculpture
Fall, spring, or summer. 4 credits variable.
Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Independent studio in sculpting allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 731-732, 831-832 Graduate Printmaking
Fall, 731, 831; spring, 732, 832; first-year M.F.A. students. 9 credits. 831; fall, 832, spring; second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation; discussion sessions of work in progress are held.

ART 141 Introductory Sculpture
Fall, spring, or summer. 3 credits.
A series of studio problems introduce the student to the basic principles of artistic expression in three-dimensions, i.e., clay modeling, direct plaster, plaster casting, and construction in wood, metal, and other materials.

ART 241 Sculpture II
Fall or spring. 4 credits. Prerequisites: ART 141, or an architecture design studio, or permission of instructor.
Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore bronze/metal casting processes. The sculpture program, which is housed in its own building, contains a fully equipped bronze casting foundry.

ART 341 Sculpture III
Fall or spring. 4 credits. Prerequisite: ART 241 or permission of instructor.
Continued study of the principles of sculpture and conceptual development. Each student explores the selection and expressive use of materials, media, scale and content. Group discussions and individual criticism. Experimentation is encouraged.

ART 342 Sculpture IV
Fall or spring. 4 credits. Prerequisite: ART 341 or permission of instructor.
Continuation and expansion of ART 341. Special projects may include site-specific and/or large-scale installations.

ART 441 Pre-Thesis in Sculpture
Fall or spring. 6 credits. Prerequisite: ART 343.
Further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through bi-monthly group discussions and individual criticism. Students complete a body of work through an approved statement of purpose and proposed schedule.

ART 442 Thesis in Sculpture
Fall or spring. 6 credits. Prerequisite: ART 441.
Advanced sculpture project to demonstrate creative ability and technical proficiency culminating in a cohesive B.F.A. thesis exhibition.

ART 449 Independent Studio in Sculpture
Fall, spring, or summer. 4 credits variable.
Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Independent studio in sculpting allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 741-742, 841-842 Graduate Sculpture
Fall, 741, 841; spring, 742, 842; first-year M.F.A. students. 9 credits. 841, fall; 842, spring; second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation. Weekly discussion sessions of works in progress are held.

Fee for an additional color course taken the same term: $135

ART 161 Photography I (also ARCH 251)
Fall, spring, or summer. 3 credits.
A basic lecture-studio course in black and white photography for beginners. Emphasis is on camera skills, darkroom techniques, and understanding of photographic imagery.

ART 168 Black-and-White Photography
Summer. 3 credits. 3-week session only.
Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

ART 261 Photography II (also ARCH 351)
Fall, spring, or summer. 4 credits.
Prerequisite: ART 161 or ARCH 251, or permission of instructor.
A continuation of Photography I concentrating on black and white photographic processes, history and theory of creative practice, and individual projects.

ART 263 Color Photography
Fall, spring, or summer. 4 credits.
Prerequisite: ART 161 or ARCH 251, or permission of instructor.
A studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.

ART 264 Photo Processes
Fall, spring, or summer. 4 credits.
Prerequisite: ART 161 or ARCH 251, or permission of instructor.
A studio course in alternative and nonsilver photographic processes. Emphasis is on camera skill, basic techniques and processes, image content, and creative use of photo processes.

ART 265 Studio Photography
Fall or spring. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor.
A course in the use of medium- and large-format cameras that explores technique, lighting, and the use of larger-format cameras for personal expression both in the studio and outdoors.

ART 361 Photography III
Fall, spring, or summer. 4 credits.
Prerequisite: ART 161, 261, or permission of instructor.
Continued study of creative use of photography, with emphasis on specialized individual projects.

ART 461 Pre-Thesis in Photography
Fall or spring. 6 credits. Prerequisite: ART 261, 265.
A studio course intended for photography majors and other qualified students.

ART 462 Thesis in Photography
Fall or spring. 6 credits. Prerequisite: ART 461.
A studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

ART 361 Photography III
Fall, spring, or summer. 4 credits.
Prerequisite: ART 161, 261, or permission of instructor.
Continued study of creative use of photography, with emphasis on specialized individual projects.

ART 461 Pre-Thesis in Photography
Fall or spring. 6 credits. Prerequisite: ART 461.
A studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.
ART 469 Independent Studio in Photography
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor.
Independent studio in photography allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 761-762, 861-862 Graduate Photography
761, fall, 762, spring; first-year M.F.A. students 9 credits, second-year M.F.A. students 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation. Discussion sessions of work in progress are held.

Studio Courses in Drawing
Fees for all drawing courses: $25

ART 151 Drawing I
Fall, spring, or summer. 3 credits. A course that is general in nature and introduces students to principles and techniques of representation. Emphasis will be on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. In addition, students have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink and wash, etc.

ART 152 Drawing II
Spring. 3 credits. Prerequisite: ART 151. A general course in drawing that emphasizes figure study and life drawing. This course will build on the foundation of ART 151 and concentrates on the analytical study of the figure. Students explore a variety of materials, traditional and contemporary.

ART 158 Conceptual Drawing
Summer. 3 credits. 6-week session only. Emphasis on drawing from the imagination. The generation of ideas and their development in sketches is stressed. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

ART 159 Life and Still-Life Drawing
Summer. 3 credits. 6-week session only. The human figure and still life are studied both as isolated phenomena and in relation to their environment. Focuses are on helping the student observe and discover.

ART 251 Drawing III
Fall. 3 credits. Prerequisite: ART 152. An intermediate drawing course where students study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials are stressed.

ART 252 Drawing IV
Spring. 3 credits. Prerequisite: ART 251. Advanced drawing with an emphasis on life drawing and figure composition. Individual expression is encouraged along with creative investigation of materials and processes.

ART 459 Independent Studio in Drawing
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Independent studio in drawing allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 171 Electronic Imaging in Art
Fall or spring. 3 credits. An introductory studio course using the computer as a tool for making art. Students explore various approaches to 2- and 3-D web art using software programs and various functions. Intro to the web.

ART 271 Electronic 3-D Modeling and Animation
Fall or spring. 4 credits. Prerequisite: ART 171. A studio course in creating 2- and 3-D still and animated visualizations using computers and 3-D software for object modeling, animation, and rendering. Concentration on the web.

ART 272 Digital Video and Sound
Fall or spring. 4 credits. Prerequisite: ART 171. A studio course that introduces students to digital video including capture stills, animation, video, and sound with an introduction to interactive presentation and CD ROM production. Concentration on the web.

ART 372 Special Topics in Art Studio
Fall, spring, or summer. 4 credits variable. An exploration of a particular theme or project.

ART 379 Independent Studio in Rome
Fall and spring. 4 credits variable. Prerequisite: student must be a junior in good academic standing, and have the written permission of the instructor. Rome Program only. Independent studio in Rome allows non-art majors the opportunity to pursue special interests in fine arts not regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide their progress and evaluate the results.

ART 391 Media Arts Studio I
Fall. 3 credits. Prerequisite: one of the following courses: ART 171, THETR 277, THETR 577, MUSIC 120, or equivalent. Prerequisite: student must be a junior and have permission of the instructor. Lab fee $50. A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, dance, film, and video. Group projects and discussions also investigate the artistic and interactive potential of a high-speed Intranet connecting arts spaces on campus, including virtual and performative events.

ART 392 Media Arts Studio II
Spring. 3 credits. Prerequisite: one of the following courses: ART 171, THETR 277, THETR 577, MUSIC 120, or equivalent. Prerequisite: student must be a junior and have permission of the instructor. Lab fee $50. A continuation of ART 391. A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, dance, film, and video. Group projects and discussions also investigate the artistic and interactive potential of a high-speed Intranet connecting arts spaces on campus, including virtual and performative events.

ART 400 Rome Studio
Fall or spring. 4 credits. Rome Program only. Prerequisite: permission of instructor. Lab fee: $25. The content for the Rome studio is determined by the instructor. Emphasis is divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor. ART 400 fulfills four credits of the concentration requirement.

ART 479 Independent Studio in Electronic Imaging
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good academic standing and have the written permission of the instructor. Independent studio in electronic imaging allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 481 Pre-Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: written permission of instructor on a combined media thesis form must be received in the art department prior to enrollment in the course. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Projects should reflect experiences gained by exploring and combining various media, including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 482 Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: ART 481 and written permission of instructor on a combined media thesis form must be received in the art department prior to enrollment in this course. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media, including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 489 Independent Studio in Combined Media
Fall, spring, or summer. Credits variable (maximum 4). Prerequisite: student must be a junior in good academic standing and
have the written permission of the instructor. Independent studio in combined media allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

CITY AND REGIONAL PLANNING

The department offers several programs of study at both the undergraduate and graduate levels.

The Undergraduate Program in Urban and Regional Studies

The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Students who graduate from the program receive a Bachelor of Science degree. The program provides both an excellent liberal arts education and a strong concentration of studies respecting urban and regional issues. The urban and regional studies courses in the program provide students with a broad understanding of relevant issues, the ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary. Students learn to evaluate urban and regional problems by using a wide range of analytic tools and disciplinary perspectives.

Basic Degree Requirements

Requirements for Graduation: URS requirements include: (1) eight semesters of residence; (2) 120 credits; (3) two freshman seminars; (4) qualification in one foreign language; (5) four groups of distribution requirements; (6) required courses for major; (7) area requirements for major; (8) free electives; (9) a minimum of 34 courses; and (10) completion of the university requirement of two one-credit nonacademic courses in physical education. Please note that physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester. Please note that no course may satisfy more than one requirement.

1. General education
   a. Freshman writing seminars: 2 courses
   b. Foreign language: 3 courses or qualification in one foreign language
   c. Distribution Requirements: 9 courses

2. Required Courses for the Major in Urban and Regional Studies: 5 courses

   CRP 100: The American City
   CRP 101: The Global City: People, Production, and Planning in the Third World
   CRP 223: Introduction to Statistical Reasoning for Urban and Regional Analysis or from the following list:
      ARME 210: Introduction to Statistics
      ILRST 210: Statistical Reasoning I
   Microeconomics course (at least 3 credits, from approved list)
   Architecture course (at least 3 credits, from approved list)
   Approved List of Microeconomics and Architecture Courses
   Micro Economics:
      ARME 250: Introduction to Statistics
      PAM 200: Intermediate Microeconomics
      ECON 101: Introduction to Microeconomics
      ECON 301: Microeconomics
      ARCH 131: An Introduction to Architecture I
      ARCH 132: An Introduction to Architecture II
      ARCH 181: History of Architecture I
      ARCH 182: History of Architecture II
      ARCH 399: Special Topics: Architectural History (Rome)

3. Area Requirements for the Major in Urban and Regional Studies: 11 courses

   A. Students must take one listed CRP course in each of the following 6 areas:
      Design, Economics, Environment, History, Politics/Policy, Quantitative Analysis
      a. Design
      CRP 381: Principles of Spatial Design and Aesthetics
      b. Economics
      CRP 370: Regional Question: The Case of Italy (Rome)
      CRP 401: Seminar in Urban Political Economy
      CRP 404: Urban Economics
      c. Environment
      CRP 380: Environmental Politics
      CRP 395.15: Recycling & Solid Waste
      CRP 395.31: Green Cities
      CRP 443: Emerging Global Environmental Trends
      *CRP 444: Resource Management & Environmental Law
      *CRP 451: Environmental Law
      *CRP 453: Environmental Aspects of International Planning
      *Meets requirement only with instructor’s permission.
      d. History
      CRP 261: Urban Archaeology
      CRP 360: Pre-Industrial Cities and Towns of North America
      CRP 361: Seminar in American Urban History
      ARCH 399: Special Topics: Architectural History (Rome)
      ART 317.20: Art History: Early Christian, Romanesque, and Gothic Art in Rome and Central Italy (Rome)
      ART 318.20: Art History: Renaissance in Rome (Rome)
      HIST 419: Seminar in American Social History: Race, Class, and the American City (Cornell-in-Washington)
      e. Politics/Policy
      CRP 293: Inequality, Diversity, and Justice
      CRP 314: Planning, Power, and Decision Making
      CRP 318: Politics of Community Development
      CRP 363: American Indians, Planners, and Public Policy
      CRP 371: Cuba: The Search for Developing Alternatives
      CRP 395.30: Latin American Cities
      CRP 412: Devolution and Public Sector Restructuring
      CRP 416: European City-Urban Political Economy (Rome)
      CRP 418: Local Government Restructuring in New York
CRP 448: Social Policy and Social Welfare (also Cornell-in-Washington)

CRP 474: The Third World
Urbanization

GOVT 500: Politics/Policy: Theory, Research, and Practice (Cornell-in-Washington)

(4 credits of the 8-credit course—see B below)

f. Quantitative Analysis
CRP 321: Introduction to Quantitative Methods for the Analysis of Public Policy

CRP 328: Overview: Quantitative Methods Policy Analysis

CRP 529: Mathematics for Planners

ILRST 211: Quantitative Reasoning II

B. Students must take any additional 5 CRP courses (of at least 3 credits each, letter grade only)

NOTE: Cornell-in-Washington Program: GOVT 500: Politics/Policy: Theory, Research, and Practice can be used to fulfill four credits.

4. Free Electives: 6-9 courses

5. Physical Education (2 terms of PE)

Required courses for graduation: 34

Required credits: 120

Honors Program

Each year a few well-qualified juniors may join the honors program. Each honors student develops and writes an honors thesis under the guidance of his or her faculty adviser.

Concentrations

The department recognizes concentrations earned within the university (accepting standards set by various colleges). Students may apply for concentrations in any college (e.g. Africana Studies, Architecture, Latino Studies, Southeast Asian Studies, Women's Studies, etc.). When a student satisfies the requirements for a concentration, and formal notification is received by the AAP Registrar, the concentration will be recorded on the student's official transcript.

Off-Campus Opportunities

Cornell-in-Washington Program. Students in good standing may earn degree credits in the Cornell-in-Washington program through course work and an urban-oriented externship in Washington, D.C. Students may work as externs with congressional offices, executive-branch agencies, interest groups, research institutions, and other organizations involved in the political process and public policy. Students also select one or two other seminars from such fields as government, history, economics, human development, architectural history, natural resources, and social policy. Cornell faculty members teach these seminars, which provide credit toward fulfillment of major, distribution, and other academic requirements.

Cornell Abroad. Qualified undergraduates are encouraged to study abroad because exposure to foreign cultures can be an eye-opening aspect of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. Study abroad opportunities are continually being developed. Current programs are available in Great Britain, Spain, and Germany. Opportunities in Asia, the Middle East, and France should be forthcoming. We encourage Urs students to explore these opportunities.

Cornell-in-Rome Program. The College of Architecture, Art, and Planning has a teaching facility in Rome located in the sixteenth-century Palazzo Massimo. Students in good standing can earn degree credits through courses taken with Cornell faculty assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and art.

Research and fieldwork. Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

Additional Degree Options

Linked degree options. Urban and regional studies students may earn both a Bachelor of Science degree and a Master of Regional Planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 30 credits and a master's thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

Dual degree option. A student accepted in the Cornell College of Arts and Sciences may earn both a B.A. in a College of Arts and Sciences major and a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual degree program. Cornell students interested in pursuing the dual degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

Admissions Requirements and Procedures

Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application.

Transfer Students

In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed college requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the Director of Admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, NY 14850–2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.

Prospective transfers should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics.

Applicants whose previous course work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus. Applicants who want further information regarding the Urban and Regional Studies Program may contact Professor William W. Goldsmith, Program Director, Urban and Regional Studies Program, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853–6701 (telephone: 607–255–4613).

The Graduate Program in City and Regional Planning

There are five graduate degree programs in the city and regional planning department. The Master of Regional Planning program stresses skills basic to professional planning practice and responds to individual needs and interests. The faculty strongly recommends that students concentrate in one of three areas of planning. The Land Use and Environmental Planning concentration focuses on the forces and actions that directly affect the physical character, transformation, rehabilitation, and preservation of cities and regions. Economic Development Planning: Communities and Regions focuses on the economies of neighborhoods, cities, and regions with the intent of producing informed and effective economic development policy.

International Studies in Planning (ISP) focuses on urban, regional, and international development processes and their implications for people's lives and livelihoods in diverse international contexts.

The Master of Professional Studies in International Development (MPS/ID) degree is administered jointly with the Cornell International Institute for Food, Agriculture, and Development (CIIFAD). Is it intended to meet the specific training needs of experienced planners or mid-career professionals in related fields.

The 60-credit Master of Arts (MA) in Historic Preservation Planning prepares students for professional work in the creative preservation and utilization of our physical heritage.

The Master of Science (MS) or Master of Arts (MA) in Regional Science is the study of regional economies and their interactions with each other. Central issues include capital flows, trade, location of economic activity, growth, and regional conflicts. Graduates are positioned for careers as researchers and policy analysts at the highest levels in national
governments, corporations, and international organizations.
The Doctor of Philosophy (PhD) program is for those who seek advanced, specialized education for a career in teaching, research, or policy making.

Off-Campus Opportunities
Rome Program. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell’s center at the Palazzo Massimo. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

Course Information
Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor. The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

Undergraduate Program in Urban and Regional Studies
CRP 100 The American City
Fall. 3 credits. S-U grades optional for out-of-department students only.
An introductory course on the evolution of urban problems and opportunities facing the majority of this country’s population as we enter the first decade of the twenty-first century. Readings, discussions, and brief papers explore topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new economy. Attention is paid to theories that purport to explain the development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new economy. Attention is paid to theories that purport to explain the development of giant cities in the Third World. Their origins, roles, contributions, and weaknesses are examined. Their place in economic and regional studies only. Rome Program only. Fall. 3 credits. For description, see LA 263.

CRP 101 The Global City: People, Production, and Planning in the Third World
Spring. 3 credits. S-U grades optional for out-of-department students only.
A critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

CRP 223 Introduction to Statistical Reasoning
Fall. 4 credits. Letter grade.
An introduction to the role and use of quantitative methods in the study of urban and regional issues. Emphasis is on statistical and related computer methods for the formulation, analysis, and testing of hypotheses and models of social, economic, and physical phenomena of cities and regions. This course covers applicable methods in probability, descriptive statistics, estimation, hypothesis testing, and regression.

CRP 261 Fieldwork in Urban Archaeology
Fall. 3 credits.
For description, see LA 261.

CRP 293 Inequality, Diversity and Justice (also GOVT 293, PHIL 193, SOC 293)
Fall. 4 credits.
For description, see PHIL 193.

CRP 314 Planning, Power, and Decision Making
Fall. 3 credits.
This seminar examines various bases of political and professional power. What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups? The seminar addresses these questions and many others.

CRP 316 Politics of Community Development (also CRP 518)
Spring. 3 credits. Letter grade.
A seminar on city economic development and community institutions. Attention to issues of local politics, planning, housing, and economics. Term papers, assignments, and field investigations are encouraged. Topics vary from year to year.

CRP 321 Introduction to Quantitative Methods for the Analysis of Social Policy (also CRP 546)
Spring. 3 credits.
An introduction to the role and use of quantitative methods in the study of urban and regional issues. This course focuses on various types of models commonly used to analyze urban and regional policy, including regression models, cost-benefit analysis, simulation, and others. Strengths and weaknesses of those methods are also be considered.

CRP 350 Pre-Industrial Cities and Towns of North America (also LA 260/LA 266 and CRP 666)
For description, see LA 260.

CRP 351 Seminar in American Urban History (also CRP 662)
Fall or spring. 3 credits. Prerequisite: permission of instructor.
Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

CRP 354 Urban Indians, Planners, and Public Policy (also CRP 547 and LA 263/LA 547)
Spring. 3 credits.
For description, see LA 263.

CRP 375 The Regional Question: The Case of Italy
Fall. 3 credits.
For majors in urban and regional studies only. Rome Program only. The “southern problem” in Italy has long been a symbol of the revolution, altered its course in the 1970s and 1980s, and led to profound experimentation and a renewed search for authenticity in the 1990s.

CRP 376 Environmental Politics
Spring. 4 credits.
Examines the politics of public decisions affecting the environment. Focuses on the roles played by different political actors, the powers of various interest groups, methods for influencing environmental decisions, and the political and social impacts of those decisions.

CRP 381 Principles of Spatial Design and Aesthetics (also CRP 581)
Fall. 3 credits. Course enrollment requires special permission of instructor and is limited to 50 students.
A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are the design methods and applications in the contemporary urban context of Europe and North America.

CRP 395 Special Topics
Fall, spring, summer. 4 credits. Hours to be arranged.
For description, see department coordinator, 106 West Sibley.

CRP 395.03 Wilderness and Wildlands: Issues in Policy and Planning (also CRP 679.03)
Fall. 2–3 credits variable. Graduate seminar open to juniors and seniors. Not offered every year.
Wilderness and Wildlands resources have been under assault by the Congress, the “Wise Use” movement, property rights activists, polluters, and the actual users. This seminar will consider historical and philosophical foundations and political factors that impact decisions about wilderness policies, planning, acquisition, protection and management. The role of government, professional planners and managers, organized special interests, legal system, citizens, and user groups will be examined. Practical exposure to planning and policy development through readings, discussions, guest practitioners, and field trips to Finger Lakes National Forest. Optional weekend trip to Adirondack Park Wilderness area.

CRP 395.40 The History of Urban Form in America (also CRP 669.40)
Fall. 3 credits.
This course covers the history of city planning in America from colonial times to the early 20th century including brief reviews of European influences on urban form. Lectures, discussions, and short papers.
An examination of the social, economic, and political life of the European city, particularly Italian cities, especially Rome. Study of the socio-economic underpinnings of the city. How are cities related to the state, the city to the nation, the nation to the global market? How and where do different groups of people live? How do they travel, inside the city and from city to city? How are new parts of the city developed and old ones preserved, transformed, or destroyed? What public services do people expect, and how are they delivered? What is the role of private business? How do Italians/ Europeans confront problems of the urban environment, poor neighborhood services, and impoverished immigrants? In all these cases, how do Italian (or European) conditions and policies differ from those in the United States (or elsewhere)? All of these questions are covered.

CRP 417 Industrial Restructuring: Implications for State and Local Policy (also CRP 517)
Fall. 4 credits.
A basic introduction to new issues arising from the way in which national and international economic shifts are affecting diverse United States entities. The course focuses on intra-industry restructuring, the location of economic activities, and state and local economic policy. Cases are drawn from a variety of industries and national situations, with specific application to New York and other Northeast locations.

CRP 442 The Sociology of Science
Fall. 4 credits.
Prerequisite: CRP 412/612.
Spring, 3 credits. Letter grade only. Limited to 15 students. Open to juniors, seniors, and graduate students, and by permission of instructor required.

CRP 443 Emerging Global Environmental Trends (also S&TS 463)
Spring, 3 credits. Letter grade only. Limited to 20 students. Open to juniors, seniors, and graduate students, and by permission of instructor.

CRP 444 Resource Management and Environmental Law (also CRP 544)
Spring, 4 credits.
Letter grade. Open to juniors, seniors, and graduate students, and by permission of instructor.

CRP 461 Methods of Archival Research
Spring, 3 credits.
Examine methods of using archival materials, including documents in the Cornell archives and regional history collection, for research in the history of architecture, historic wildlife, wetlands, and critical resources on public lands, and the conflicts inherent in government attempts to regulate important natural resources on private lands.
CRP 474 Third World Urbanization (also CRP 674)
Spring. 4 credits. S-U grades optional. Colonialism and economic globalization have profoundly affected urban Third World societies and landscapes often by reallocating everyday urban life to the margins and shrouding it in illegitimacy. This course explores social, political, and spatial dimensions of these processes. Covered are rural-urban dynamics and their implications for the structure of urban space and for concepts of state and citizenship. The position of Third World cities in the global economy and implications for employment are assessed, paying special attention to women workers and urban environment. The second half of the course focuses on responses to these massive changes: violence and repression, social movements, and transmigration.

CRP 477 Issues in African Development (also CRP 677)
Fall and spring. 1 credit. S-U only. This course examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

CRP 490 Student-Faculty Research
Fall or spring. 1-4 credits. Limited to undergraduate students in the Urban and Regional Studies Program. S-U grades only. Research, reading and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

CRP 491 Rome Wasn't Built in a Day
Spring. 3 credits. Letter grade. In this electronic course, students learn about how the form and spatial structure of the city of Rome has evolved through time. Using the interactive CD-ROM, Layers of Rome as a digital text, the course engages participants in the investigations of urban design in Rome both as a case study and as a vehicle for exploring concepts applicable to many contemporary cities worldwide. The material focuses on the intersection between historical studies of urban space, architectural geography, urban landscape formation, and the design of cities. Lectures, research, readings, and exercises are developed using the Layers of Rome CD, web searches, digital networking, and various interactive learning technologies geared toward urban analysis and visual design media.

CRP 492 Honors Thesis Research
Fall or spring. 4 credits. Limited to Urban and Regional Studies Program majors who have been selected as honor students by the department faculty. Each selected student works with his or her thesis advisor.

CRP 493 Honors Thesis Writing
Fall or spring. 4 credits. Prerequisite: completion of CRP 492. Each selected student works with his or her thesis advisor.

CRP 497 Supervised Readings
Fall or spring. Variable 4 credits. Limited to juniors and seniors. Prerequisite: permission of instructor.

Graduate Courses and Seminars
Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upperclass undergraduate courses are numbered from 300 to 399. (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.)

CRP 504 Urban Economics (also CRP 404)
Spring. 4 credits. Prerequisite: microeconomics. For description, see CRP 404.

CRP 508 Introduction to Urban Geographic Information Systems (GIS) (also CRP 408)
Spring. 4 credits. Letter grade. For description, see CRP 408.

CRP 512 Public and Spatial Economics for Planners
Fall. 3 credits. Letter grade. No prior knowledge of economics necessary. Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. Both space and the public-nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course also covers the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

CRP 513 Planning Practice and Urban Structure Seminar
Fall. 4 credits. This introductory graduate seminar has several objectives. It exposes students to the theory and history of: (1) planning, administration, and related public intervention in urban affairs; (2) the growth and development of cities; and (3) the built environment. Topics are analyzed from the perspective of political economy. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing short papers, and explore one research topic in depth.

CRP 517 Industrial Restructuring: Implications for State and Local Policy (also CRP 417)
Fall. 4 credits. For description, see CRP 417.

CRP 518 Politics of Community Development (also CRP 318)
Spring. 3 credits. Letter grade. For description, see CRP 318.

CRP 519 Urban Theory and Spatial Development
Spring. 3 credits. Letter grade. This course complements theories of urbanization and spatial development with an introduction to issues of governance within urban regions in the United States and Western Europe. Topics include economic and political institutions and actors as they shape the spatial form of cities. The work of authors such as Patsy Healey, Margit Mayer, David Harvey, Mike Davis, and Susan Fainstein are discussed.

CRP 520 Statistical and Mathematical Concepts for Planning
Fall. 3 or 4 credits. An introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics include matrix algebra, probability, sampling, estimation, and regression, and the use of a microcomputer statistical package.

CRP 521 Mathematical Foundation for Planning Analysis
Fall. 1 credit. S-U grades only. Meets for two hours, once each week, for approximately half the semester. Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis. Departmental permission required.

CRP 525 Introductory Methods of Planning Analysis
Fall. 4 credits. Letter grade. A course on quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from various regions of the United States, but tools are applicable throughout the world. They include: descriptive and inferential statistics, mapping, and observation. Required lab exposes students to essential microcomputer applications and builds skills in writing and analysis.

CRP 529 Mathematics for Planners
Fall. 4 credits variable. S-U grades optional. The course covers basic mathematical concepts and techniques—with an emphasis on calculus—needed by the student who wishes to take intermediate-level courses in economics, urban and regional analysis, quantitative methods for the social sciences, and policy analysis. Topics include: matrix algebra, set theory, functions, differentiation, and integration.

CRP 532 Real Estate Development Process
Fall. 3 credits. Examination of various forms of development as well as the role of major participants in the processes. Reviews issues in residential, retail, industrial, office, and low-income housing projects. Guest speakers and case studies included.

CRP 533 Real Estate Marketing and Management
Fall. 3 credits. The course focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of property are reviewed. Topics include examination of tenant types, factors creating preferred locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies included.

CRP 537 Real Estate Seminar Series
Fall and spring. 1/2 credit per term. S-U grades only. Restricted to MPS/RE students. A one-credit course designed to bring students weekly into direct contact with real estate professionals mainly through the use of
CRP 543 Emerging Global Environmental Trends (also CRP 443)
Spring. 3 credits. Letter grade. Limited to 20 students.
For description, see CRP 443.

CRP 544 Resource Management and Environmental Law (also CRP 444)
Spring. 4 credits. Letter grade.
For description, see CRP 444.

CRP 545 Introduction to Quantitative Methods for the Analysis of Public Policy (also CRP 321)
Spring. 3 credits.
For description, see CRP 321.

CRP 546 Introduction to Community and Environmental Dispute Resolution
Fall. 3 credits.
This course explores the theories and techniques of dispute resolution as they apply to community, environmental, and related public policy disputes. Analysis complements skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 547 American Indians, Planners, and Public Policy (also CRP 365 and LA 263/LA 547)
Spring. 3 credits.
For description, see LA 263.

CRP 548 Social Policy and Social Welfare (also CRP 448)
Spring. 4 credits.
For description, see CRP 448.

CRP 549 Ethics and Practical Judgment in Planning
Spring. 4 credits variable.
An introduction to problems of practical judgment and ethics as they arise in planning and public-serving professional practice. Issues such as consent, interests, deliberation, and legitimacy are central concerns.

CRP 551 Environmental Law (also CRP 451)
Fall. 4 credits.
For description, see CRP 451.

CRP 552 Urban Land-Use Planning I
Fall. 3 credits.
Surveys, analyses, and plan-making techniques for guiding physical development of urban areas; location requirements, space needs, and interrelations of land uses. Emphasis is on residential, commercial, and industrial activities and community facilities, and housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 553 Urban Land-Use Planning II
Spring. 3 credits. Prerequisite: CRP 552 or permission of instructor.
Seminar covering the essentials of growth management, zoning, and subdivision, and the main tools for implementing a land-use plan. Covers agricultural and open space preservation, infrastructure timing controls, redevelopment, planned unit development, and much more.

CRP 555 Urban Systems Studio (also LA 701)
Fall. 5 credits. Prerequisite: permission of instructor.
Application of urban design and town planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions involving the street, square, block, garden, and park systems. Topics covered in the studio include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban-design plans. Computer modeling and digital design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

CRP 557 City Planning Design Studio
Spring. 4 credits. Prerequisite: previous design courses or permission of instructor.
A series of individual and team small area design projects at district, neighborhood, and project scale. The course objective is to develop an understanding of the spatial issues, knowledge, and skills needed to design for the functional, aesthetic, social, and cost needs of urban communities. Studio projects, field trips, and reading.

CRP 558 City and Regional Planning Workshop
Fall and spring. 4 credits. S-U grades only. Students work on urban issues, such as housing, traffic and parking, economic development, zoning, and related planning issues with public or non-profit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work individually or in teams.

CRP 559 Documentation for Preservation (also ARCH 586)
Fall or spring. 3 credits. Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 560 Historic Preservation Planning Workshop: Surveys and Analyses (also ARCH 588)
Fall or spring. 4 credits. Course covers: techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of local historic resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

CRP 561 Perspectives on Preservation (also ARCH 583)
Fall. 3 credits.
Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

CRP 562 Problems in Contemporary Preservation Practice (also ARCH 584)
Spring. Variable credit.
A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 564 Building Materials Conservation (also ARCH 587)
Spring. 3 credits. Open to juniors, seniors, and graduate students.
A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

CRP 566 Fieldwork or Workshop in History and Preservation
Fall or spring. Variable credit.
Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 567 Measured Drawing (also ARCH 583)
Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor.
Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

CRP 569 Archaeology in Preservation Planning and Site Design (also LA 569)
Spring. 3 credits. Not offered 2001-2002. For description, see LA 569.

CRP 581 Principles of Spatial Design and Aesthetics (also CRP 381)
Fall. 3 credits. Prerequisite: special permission of instructor. Limited to 30 students.
For description, see CRP 381.

CRP 591 Urban Public Finance
Fall. 4 credits. Letter grade. Prerequisite: prior exposure to microeconomics.
An overview of neoclassical public economics theory, particularly those aspects of the theory that are central to urban public finance. The unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Also presented is the public finance theory of taxation. Major taxes and other revenue sources used by large municipalities are described and analyzed. The heart of the matter is the measurement and analysis of the fiscal condition of cities.

CRP 605 GIS Applications Workshop
Spring. 3 credits. Letter grade. Prerequisites: a basic GIS course and knowledge of ArcView or ArcInfo. Students with exceptional programming and web design skills can take the class with permission of instructor. Not offered 2001-2002.
This course is an advanced GIS class that focuses upon GIS applications and projects for one or more clients. Clients may be out-of-state so travel for meetings and/or site visits for data collection may be required. Contact the instructor directly to learn about project options for the current semester.

CRP 612 Devolution and Public Sector Restructuring (also CRP 412)
Fall. 3 credits S-U grades optional.
For description, see CRP 412.

CRP 614 Gender and International Development (also WOMNS 614)
Spring. 3 credits.
This course has four main objectives: (1) to provide an analysis of the location of women in processes of development and to understand the centrality of gender in each case; (2) to examine theoretical and conceptual frameworks for the analysis, including an understanding of gender divisions and their...
interaction with other forms of inequality such as class, race, and ethnicity; (3) to reflect upon the linkages between the global economy and the gendered macro and micro processes of development; and (4) to provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.

**CRP 616 Globalization and Development**
Spring. 3 credits. Letter grade only.
This course concentrates on the current dynamics of national and international development, the globalization of national economies, and the forces and trends that are shaping this process. Beginning with an analysis of economic restructuring taking place since the late 1980s, the emphasis is on the factors affecting the new international division of labor and production, the labor market, consumption, trade, and finance, and the distribution of resources. This includes the analysis of processes through which the current neoliberal model is being built, such as: trade liberalization, labor market flexibility, the erosion of state as economic units, and the formation of trade blocks and global institutions.

**CRP 618 Local Government Workshop**
(also CRP 418)
Spring. 4 credits. Letter grade optional. Prerequisite: CRP 412/612. For description, see CRP 418.

**CRP 621 Quantitative Techniques for Policy Analysis and Program Management**
Spring. 4 credits. Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

**CRP 631 Local Economic Policy—Field Workshop**
Fall. 4 credits.
A group policy analysis exercise in a city in upstate New York. Students do a combination of data analysis, interviews with labor, business, and public leaders, and problem papers addressed to current issues presented by a client group. Individual work is synthesized into a comprehensive report at the end of the semester.

**CRP 632 Methods of Regional Science and Planning I**
Spring. 4 credits variable.
An introduction to some of the major methods and models used in regional science and planning. This course is half of a two-semester sequence (see CRP 731). Either course may be taken first. Both courses cover topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning. Where appropriate, computer implementation is considered. CRP 730 emphasizes statistical and econometric models.

**CRP 633 Methods of Regional Science and Planning II**
Fall. 4 credits. Not offered 2001-2002. See CRP 652. CRP 653 will provide an introduction to deterministic methods and models such as input/output models, social accounting models, and optimization models.

**CRP 635 Workshop: State Economic Development Strategies**
Spring. 4 credits. S-U grades optional. The purpose of this workshop is twofold: (1) to provide students with research tools useful in developing state-level economic development strategies; and (2) to provide a critical understanding of the primary economic development strategy used by U.S. state policymakers: firm-specific subsidies. The course consists of lecture and discussion meetings. The workshop sessions include exercises in qualitative information gathering on economic development topics; use of the census in combination with geographic information systems for analysis and presentation; and shift-share analysis.

**CRP 639.05 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World I: Historical and Theoretical Perspective**
Fall. 4 credits variable. Historical and conceptual background, and relevant case material, for dealing with urban and regional development using production analysis with a focus on the Third World. Consequences of the organization of production for national and regional interactions are emphasized. This historically oriented theoretical framework is compared to location, central place, and interregional feedback theories.

**CRP 639.06 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World II: Current Policy Perspective**
Spring. 4 credits variable. The course focuses on what the market can or cannot accomplish in terms of guiding economic individual, and regional development. Points of view represented range from completely unrestricted market operations to proactive industrial development policies in market contexts. Lessons are devised for Third World regional development policy drawn from the experience.

**CRP 642 Critical Theory and the Micro-Politics of Cities**
Spring. 4 credits variable. In trying to solve problems, planners and policy analysts set agendas, shape participation, and negotiate relations of power. This seminar explores theories illuminating the communicative micro-politics of their daily practice. Issues of power and discourse, practical judgment and deliberation, productive and reproductive aspects of pronomics, political speech, and action in diverse practical settings are explored.

**CRP 653 Legal Aspects of Land-Use Planning**
Spring. 3 credits. Not offered every year. Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

**CRP 655 Real Estate Project Workshop**
Spring. 4 credits. Permission of instructor required. Students are asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships are required. A range of types of problems that may be encountered in the real estate field are addressed, including project feasibility, marketing, planning and design, legal constraints and concerns, and others. Projects focus on real world case studies and require professional level reports suitable for oral and written presentations.

**CRP 657 Real Estate Law**
Fall. 3 credits. Letter grade. Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus is on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Current legal issues affecting the real estate industry are discussed.

**CRP 658 Residential Development**
Spring. 3 credits. Letter grade. The course explores the residential development process from site acquisition through delivery and servicing of the finished product. Topics covered include: market feasibility, land planning and acquisition, product selection and design considerations, project financing and feasibility, tax incentives and budgetary controls, controls and construction issues, marketing and sales activities, and customer service. Current issues in providing competitive housing products in today's markets are also explored. Composition of the residential development project team is discussed, and classes are supplemented by presentations from visiting professionals as well as at least one visit to an actual project.

**CRP 661 Historic Preservation Planning Workshop: Plans and Programs**
Fall or spring. 1-4 credits. Prerequisite: CRP 561.
Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

**CRP 662 Seminar in American Urban History (also CRP 361)**
Fall or spring. 3 credits. Prerequisite: permission of instructor.
For description, see CRP 361.

**CRP 663 Historic Preservation Law**
Spring. 3 credits. Offered alternate years. The course covers: law of historic district and landmark designation; tools for preservation (such as police power, taxation, eminent domain); and recent developments in state and federal historic preservation.

**CRP 664 Economics and Financing of Neighborhood Conservation and Preservation**
Spring. 3 credits. The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public financing, selected issues in urban economics, real estate economics, and private financing of real estate projects.

**CRP 665 Preservation Planning and Urban Change**
Fall. 3 credits. An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.
CRP 669.40 The History of Urban Form in North America (also CRP 395.40)
Fall. 3 credits. For description, see CRP 395.40.

CRP 670 Regional Planning and Development Through Urbanization and in the International Planning Lecture Series
Fall or spring. 4 credits. Prerequisite: second-year graduate standing. Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

CRP 671 Seminar in International Planning
Spring. 1 credit. S-U grades only. The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

CRP 672 International Institutions
Fall. 3 credits. Letter grade. Study of major international organizations of the post-WWII period like the UN, ILO, GATT-WTO, World Bank and IMF, and Bretton Woods. The course covers how they functioned during and after the globalizing international economy. The weaknesses in global governance and in the international financial systems are explored, and current debates and proposals for reform are assessed.

CRP 674 Third World Urbanization (also CRP 474)
Spring. 4 credits. S-U grades optional. For description, see CRP 474.

CRP 675 Seminar in Project Planning in Developing Countries
Fall. 4 credits. An examination of the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social impact analysis, and policy relevance, as well as techniques for effective preparation of proposals. The course is organized as a seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

CRP 677 Issues in African Development (also CRP 477)
Fall or spring. 1 credit. S-U only. For description, see CRP 477.

CRP 679.03 Wilderness and Wildlands: Issues in Policy and Planning (also CRP 395.03)
Fall. 2-3 credits variable. Graduate seminar open to juniors and seniors. Not offered every year. For description, see CRP 395.03.

CRP 683 Environmental Aspects of International Planning (also CRP 453)
Fall. 3 credits. For description, see CRP 453.

CRP 703 Contemporary Theories of Regional Development
Fall or spring. 4 credits. An advanced seminar, mainly for doctoral candidates, to review recent contributions to the literature. After a fast-paced review of basic material in political economy, students read and present summaries of works by major contemporary theorists. A final paper is required.

CRP 711 Planning and Organization Theory
Fall or spring. 4 credits. Advanced seminar on theoretical models of planning, organization, and urban structure. The first part of the course, which may be taken separately for one credit, provides an overview of administrative issues affecting planning. Next, attention is given to theories of organizational structure, growth, and change. Final sessions are devoted to the influence of urban and regional structures as context. Critical reading, short papers, and seminar discussion characterize the course.

CRP 732 Methods of Regional Science and Planning III
Fall or spring. 3 credits. Prerequisites: CRP 632 and CRP 633 or permission of the instructor. An introduction to the design and implementation of Social Accounting Matrix and Computable General Equilibrium models and their uses, primarily in a regional context, for planning and policy analysis. The use of econometric methods and CCE models are discussed. The GAMS software package is used in related computer exercises.

CRP 733 Seminar in Regional Models
Fall or spring. 3 credits. S-U grades optional. Prerequisites: sufficient methodological background to read the current literature. A review of the classical and important current literature on socioeconomic and/or environmental models of subnational regions. Each student is expected to identify his or her own area of interest and critically review and report to the class on important papers in that area.

CRP 790 Professional Planning Colloquium I
Fall. 1 credit. Visiting lecturers address problems and opportunities in the practice of planning. Topics to be announced. The only formal requirements for the course are attendance and a brief evaluation at the semester's end.

CRP 791 Master's Thesis in Regional Science
Fall or spring. 12 credits variable. S-U grades optional. Hours to be arranged. Regional Science faculty.

CRP 792 Master's Thesis, Project, or Research Paper
Fall or spring. 10 credits variable. S-U grades optional.

CRP 794 Planning Internships
Fall, spring, or summer. 1-12 credits variable.

CRP 830 Seminar in Regional Science, Planning, and Policy Analysis
Fall or spring. 2 credits. A review of the theory of urban spatial organization. Economic, technological, and social factors leading to urbanization and various kinds of spatial organizations are explored. Major theoretical contributions to the understanding of intraregional and intracity distribution of population and economic activity are reviewed.

CRP 890 Planning Research Seminar I
Fall or spring. 2 credits.

Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.
Dual Degree Options
Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information
Note: All of the following courses are offered through the College of Agriculture and Life Sciences except LANAR 497, 524, and 525.

LANAR 497 Individual Study in Landscape Architecture
Fall or spring. 1–3 credits.

LANAR 524 History of European Landscape Architecture
Fall. 3 credits. L. Mirin.
A survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which gardens, streets, plazas, parks, and new towns reflect in their built form, a range of responses to demands of culture, economics, technology, security, the law, and ecology.

LANAR 525 History of American Landscape Architecture
Spring. 3 credits. L. Mirin.
Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms made to the manner in which gardens, streets, plazas, parks, and new towns reflect in their built form, a range of responses to demands of culture, economics, technology, security, the law, and ecology.

LANAR 526 Pre-Industrial Cities and Towns of North America (also CRP 360, CRP 666 and LA 566)
Fall. 3 credits. Not offered 2001–2002.

LANAR 528 Laboratory in Landscape Archaeology (also ARKEO 262)
Fall. 3 credits.

LANAR 545 The Parks and Fora of Imperial Rome
Spring. 3 credits.

LANAR 547 Americans, Indians, Planners, and Public Policy (also CRP 363/547 and LA 547)
Spring. 3 credits.

LANAR 590 Theory Seminar
Spring. 3 credits.

LA 490 Rome Wasn’t Built in a Day
Spring. 3 credits.

LA 491 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 491)
Fall. 4 credits.

LA 492 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment
Spring. 4 credits.

LA 494 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits.

LA 501 Composition and Theory
Fall. 5 credits.

LA 502 Composition and Theory
Spring. 5 credits.

LA 505 Graphic Communication I
Fall. 3 credits.

LA 506 Graphic Communication II
Spring. 3 credits.

LANAR 529 Landscape Architecture
Spring. 3 credits.

LANAR 569 Archaeology in Preservation Planning and Site Design (also CRP 569)

LA 582 The American Landscape
Fall. 3 credits.

LA 590 Theory Seminar
Spring. 3 credits.

Woods, Mary N., Ph.D., Columbia U. Assoc. Prof., Architecture
Zissovici, John, M.Arch., Cornell U. Assoc. Prof., Architecture
BIOLOGICAL SCIENCES

The biology major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell. Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the Announcement of the Graduate School.

ORGANIZATION

Many different departments participate in the biology major.

Student services are provided by the Office of Undergraduate Biology (OUB), www.bio.cornell.edu, which includes the Behrman Biology Advising Center. Co-located in Stimson Hall, the professional and student advisers provide academic and career advising, as well as help undergraduates find research opportunities on campus. Advisers in the OUB also follow the progress of biology majors and work closely with faculty advisers. Additional services and resources of the Biology Center include tutoring, lecture tapes, examination files, and extensive information on summer research opportunities and graduate programs. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides academic and career advising for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner Westward of brigantine Cornith Cramer.

DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the biological sciences distribution requirement (Group B) is a minimum of 9 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109–110, 105–106, or 101 and 103 plus 102 and 104, or 107–108. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) may be applied to the Group 1 distribution area in accordance with regulations stipulated by the Arts College.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from BIO G 109–110, 105–106, or 101 and 103 plus 102 and 104, or 107–108 or from specified courses in chemistry or physics. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) also satisfies the distribution requirement in the natural sciences.

Switching from one introductory biology sequence to another at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse order is strongly discouraged.

USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY

Students wishing to enroll in biology ("BIO") courses should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty of the Division of Biological Sciences in 1988, and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching."

2. "Courses bearing the "BIO" description conform to the rules for the care of such animals as outlined in Guiding Principles in the Care and Use of Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals. (DHFW publication 86–23, revised 1996; see p. 14, Courses of Study), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge."

3. "Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC)."

4. "Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Fred Quimby, at 253–5520. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous."

5. "Enrollies in those courses in the biological sciences in which animal use is a component may, at the professor's discretion, be asked to sign copies of this statement "USE OF ANIMALS..." at the first meeting of the course."

ADVANCED PLACEMENT

For information on credit for advanced placement in Biological Sciences, please see the section on Advanced Placement in the front of this publication.

THE MAJOR

The major of biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges by the Office of Undergraduate Biology. By completion of the sophomore year, all students who intend to major in biological sciences must declare the major and a program of study through the Office of Undergraduate Biology, in 216 Stimson Hall.

Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Biology majors should regularly monitor their progress in the major, and should assess as realistically as possible the likelihood of achieving at a level that is consistent with their academic and personal goals. Weak performance in core courses, particularly after the freshman year, may indicate a need to re-evaluate aptitude and genuine interest in the major. Students with questions, particularly with concerns about their ability to complete the major, are encouraged to consult with their biology adviser, and to take advantage of the advising and counseling resources of the Office of Undergraduate Biology as well as those of the university and their college.

The requirements for the biological sciences major are listed below. Requirements 1-8
must be taken for a letter grade. Courses taken for the program of study should be taken for a letter grade unless the course is offered for S-U only or if the student’s adviser grants permission.

1) **Introductory biology for majors**
   (one year): BIO G 101 and 103 plus 102 and 104, or 105–106. BIO G 107–108, offered during the eight-week Cornell Summer Session for eight credits, also satisfies the introductory biology requirement for majors. Students may choose to accept advanced placement credit if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (CEEB). Students with a score of 4 must fulfill the introductory biology requirement by taking BIO G 101–102, 101 and 103, 102 and 104, 103–104, or 105 or 106. These students should consult information available in the respective course offices and in the Office of Undergraduate Biology (216 Stimson Hall) to determine which semester to complete the introductory biology requirement. For students in doubt, completion of BIO G 101 and 103 is advised. These students receive a total of eight introductory biology credits (four AP credits plus four course credits).

2) **General chemistry** (one year): Chemistry 207–208,* or 205–208, or 215–216.*

3) **College mathematics** (one year): one semester of calculus (Mathematics 106, 111, 191 or their equivalents) plus one semester selected from the following:
   a. a second semester of calculus (Mathematics 112, 192, or their equivalents).
   b. a course in finite mathematics (Biomiti 101, 417, Mathematics 105, 231).
   c. a course in statistics (Biometry 261, Mathematics 171, Agriculture and Resource Management 210, Psychology 122, Industrial and Labor Relations 210 and 211).

4) **Organic chemistry:** Chemistry 257 and 251, or 357–358 and 251, or 357–358 and 301, or 359–360 and 251, or 359–360 and 301.

5) **Physics:** Physics 207–208,* or 112–213,* or 101–213. Those who take Physics 112–213 are advised to complete Physics 214 as well.

6) **Genetics:** BIOGD 281.

7) **Biochemistry:** BIOBM 330, or 331 and 332, or 333.

8) **Evolutionary Biology:** BIOEE 278 or BIOPL 488. Note: BIOPL 241, Botany, is a prerequisite course to BIOPL 488.

9) **A program of study** selected from the outline below.

10) **Foreign language:** Students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement for the biology major by (a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) achieving “qualification” status in a language as defined by the College of Arts and Sciences or (c) successfully completing at least six college credits in the foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

Since modern biology has an important physical and quantitative orientation, students are advised to undertake courses that emphasize this approach. Asterisks in the above list indicate the courses that provide this orientation, but all courses listed are acceptable.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

Note: Core courses cannot count toward the Program of Study Requirements.

**Programs of Study and Requirements**

As noted in the list of requirements above, students accepted into the biological sciences major must complete the introductory biology requirement. Students with a score of 4 must fulfill the introductory biology requirement by taking BIO G 101–102, 101 and 103, or 101 and 105. Students may choose to accept advanced placement credit if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (CEEB). Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

Note: Core courses cannot count toward the Program of Study Requirements.

2) **Biochemistry:** Chemistry 300, Quantitative Chemistry; six credits of organic chemistry (Chemistry 357–358 or 359–360); a minimum of four credits of organic chemistry laboratory (Chemistry 301–302 or 251–252–302 or 301 or 251–252); four credits of biochemistry laboratory courses (BIOPL 430); and 8 credits of Chemistry 389–390 or 287–288 or 287–390 or 389–288. Note: Chemistry 288 is designed for biologists. Five hours of Biochemistry are recommended (331 and 332 or 330 and 334 or 333 and 334) and students interested in graduate work in biochemistry should take Physics 207–208 and consider taking a third semester of Calculus in preparation for CHEM 389–390. Be sure to complete CHEM 207–208 or 215–216 during the freshman year.

Note: Biology majors in the College of Agriculture and Life Sciences who select this program of study are allowed to take up to 61 credit hours in the endowed colleges due to the high number of required endowed courses for Biochemistry.

3) **Computational Biology:** One course in computer programming (COM S 100, Introduction to Computer Programming or ABEN 151, Introduction to Computing), one course in mathematics (MATH 221, Linear Algebra and Calculus, MATH 231, Linear Algebra, MATH 294, Engineering Mathematics; MATH 420, Differential Equations and Dynamical Systems; BTRY 408, Theory of Probability; or BTRY 421, Matrix Computation), a bridging course, i.e., one course in mathematical modeling applied to biology (BIOEE 460, Theoretical Ecology; or BIOBM 521, Numerical Methods in Computational Molecular Biology), and one course from the following list of advanced courses:

- BIOM 631, Protein Structure and Function;
- BIOPL 481, Population Genetics;
- BIOPL 484, Molecular Evolution;
- BIOPL 422, General Microbiology;
- BIOPL 407, Nature of Sensing and Response;
- BIOPL 430, Developmental Biology;
- BIOPL 483 Molar Aspects of Development;
- BIOM 322, Hormones and Behavior;
- BIOM 325, Neuroendocrine-Molecular Aspects; and
- BIOM 326, The Visual System; and
- BIOPL 492, Sensory Function; and
- NS 331, Physiological and Biochemical Bases of Human Nutrition.

b) Laboratory courses: AN SC 301 Animal Reproduction and Development; BIO G 401 Introduction to Scanning Microscopy; BIO G 403 Transmission Electron Microscopy for Biologists; BIOAP 313 Histology: The Biology of the Tissues; BIOAP 319 Animal Physiology Laboratory; BIOBM 440 Experimental Molecular Biology; BIOPL 441 Experimental Proteins and Enzymology; BIOPL 442 Experimental Cell Biology; BIOBM 443 Experimental Molecular Neurobiology; BIOPL 491 Principles of Neurophysiology.

Note: MATH 112, Calculus should be used to fulfill the core requirement for a second term of math.

Note: Bridging courses require linear algebra (MATH 221, Linear Algebra and Calculus; or MATH 231, Linear Algebra; or MATH 294, Engineering Mathematics; or BTRY 421, Matrix Computation). For bridging course BIOEE 460 Theoretical Ecology, MATH 420 Differential Equations and Dynamical Systems will also serve as a prerequisite.

Note: BTRY 408 and MATH 420 can satisfy either the math requirement or a requirement for an additional course.

Note: Students who use BTRY 408 to fulfill the additional mathematics requirement should not use OR&IE 360, Engineering Probability and Statistics II to fulfill the requirement for an additional course.

4) Ecology and Evolutionary Biology

BioEE 261, Ecology and the Environment, and 10 credits from the following course lists, including at least one course from each group:

(a) BioEE 241, Introductory Botany; BioEE 274, The Vertebrates: Structure, Function, and Evolution; BioEE 373, Biology of the Marine Invertebrates; BioEE 415, Bacterial Diversity; BioEE 471, Mammalogy; BioEE 472, Herpetology; BioEE 475, Ornithology; BioEE 476, Biology of Fishes; Entom 212, Insect Biology.

(b) BioEE 263, Field Ecology; BioEE 447, Molecular Systematics; BioEE 448, Plant Evolution and the Fossil Record; BioEE 452, Herivores and Primate Ecology and Coevolution; BioEE 455, Insect Ecology; BioEE 456, Stream Ecology; BioEE 457 and 459, Limnology: Ecology of Lakes, Lectures and Laboratory; BioEE 460, Theoretical Ecology; BioEE 462, Marine Ecology; BioEE 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; BioEE 464, Macromolecules; BioEE 466 and 468, Physiological Plant Ecology, Lectures and Laboratory; BioEE 473, Ecology of Agricultural Systems; BioEE 478, Ecosystem Biology; BioEE 479, Paleobiology; BioEE 481, Population Genetics; BioEE 484, Molecular Evolution.

Note: One 400-level, four-credit course (including four credits from BIOSS 604) offered at Shulls Marine Laboratory may be applied toward the 10 credits. Students are encouraged to gain experience in some aspect of field biology through course work at a biological field station or work experience.

Note: The Ecology and Evolutionary Biology program of study offers an undergraduate specialization in Marine Biology and Oceanography. A description of this specialization can be found in the section entitled COURSES IN MARINE SCIENCE.

Note: The Organization for Tropical Studies (OTS) offers an Undergraduate Semester Program, featuring two courses in biology (Fundamentals of Tropical Biology and Field Research in Tropical Biology) and one course each in Environmental Policy and Latin American Culture. Cornell biology majors in the Ecology and Evolutionary Biology Program of Study who complete the OTS Program as part of Cornell Abroad can substitute the credit earned from the biology courses for two three-credit courses at the 400 level from list b. The OTS Program is administered through Duke University. Applications are available at Cornell Abroad, 474 Uris Hall.

5) General Biology: The Program of Study in General Biology requires a minimum of 13 credit hours in addition to courses counted toward requirements 1–10 on page 144. These 13 credits must include:

a) One course from each of three different programs of study in biology. Only those courses specifically listed as fulfilling a program of study requirement are acceptable without permission of adviser.

b) A course with a laboratory.

c) And, a minimum of two upper-level (500 and above) courses of two or more credits each.

100-level courses are not acceptable for meeting any of these requirements. BioO 341 may not count as the lab course; Bio G 498 may not be used to fulfill the requirements of this program of study. Bio G 499 (minimum of two credits, but no more than three credits) may count as one of the upper-level courses, and may count as the laboratory course with approval of the adviser, but it cannot count as a course representing a program of study.

Note: It is possible to use a single course to fulfill more than one requirement. For example, BioA 313, Histology, could count in all three areas: as a course in the Animal Physiology program of study, as an upper level course, and as a course with a lab.

6) Genetics and Development: A minimum of 13 credits, usually chosen from the following courses:

Students may also choose from the following courses to complete the 13-credit requirement:

BioG 682, Fertilization and Early Development; BioG 684, Advanced Topics in Population Genetics; BioG 687, Developmental Genetics; BioBM 633, Biosynthesis of Macromolecules; BioBM 639, The Nucleus; BioEE 663, Theoretical Population Genetics; BioM 694, Genetics of Diverse Bacteria; BioP 641, Laboratory in Plant Molecular Biology; BioP 644, Plant Growth and Development; BioP 652, Plant Molecular Biology II; BioP 653, Plant Molecular Biology I, PL BR 606, Advanced Plant Genetics.

Up to three credits for this program of study may be chosen from other biological sciences courses, including BIO G 499, Undergraduate Research in Biology, with approval of the faculty adviser.

7) Microbiology: At least 13 credits including: BioM 290, General Microbiology, Lectures; BioM 291, General Microbiology, Laboratory; either BioM 414, Bacterial Diversity or BioM 416, Bacterial Physiology, and at least 2 courses from the following list:

BioM 391, Advanced Microbiology, Laboratory; BioM 418, Microbial Ecology; BioM 420, Microbial Genomics; or BioM 485, Bacterial Genetics.

8) Molecular and Cellular Biology: Chemistry 357–358 or 359–360; BioBM 432, Survey of Cell Biology; four credits of BioBM 430, Lab Techniques in Biotechnology, Molecular and Cell Biology, and at least seven additional credits of courses that have a cell biological or molecular biological orientation. The seven additional hours should include at least two courses from the following list:

BioA 619, Lipids; BioAP 658, Molecular Mechanisms of Hormone Action; BioBM 407, Nature of Sensing and Response: Signal Transduction in Biological Systems; BioBM 434, Applications of Molecular Biology; BioBM 437, Eukaryotic Cell Proliferation; BioM 459, Molecular Basis of Human Disease; BioM 651, Protein Structure and Function; BioM 652, Membranes and Bioenergetics; BioM 653, Biosynthesis of Macromolecules; BioM 655, Mechanisms of Metabolic Regulation and Mammalian Gene Expression; BioBM 656, Advanced Cell Biology; BioM 639, The Nucleus; BioG 305, Immunology; BioG 385, Developmental Biology; BioG 483, Molecular Aspects of Development; BioG 484, Molecular Evolution; BioG 486, Advanced Eukaryotic Genetics; BioG 682, Fertilization and the Early Embryo; BioM 290, General Microbiology, Lectures, BioM 408, Viruses and Disease; BioM 409, Viruses and Disease II; BioM 485, Bacterial Genetics; BioNB 222, Neurobiology and Behavior II: Introduction to Neurobiology; BioNB 325, Neurobiological Approaches to Neurosciences; BioP 315, Molecular Biology and Genetic Approaches to Neurosciences; BioP 343, Molecular Biology and Genetic Approaches to Neurosciences; BioP 415, Molecular Biology and Genetic Approaches to Neurosciences; BioP 543, Molecular Biology and Genetic Approaches to Neurosciences.
GENETIC ENGINEERING OF PLANTS: BIOPH 347, Lab in Molecular Biology and Genetic Engineering of Plants; BIOPH 444, Plant Cell Biology; BIOPH 448, Plant Molecular Biology. BIOPH 452, Plant Molecular Biology II. Five hours of biochemistry are recommended (BIOBMB 331 and 352, or 330 and 334). CHEM 207-208 or 215-216 should be completed during the freshman year.

9) Neurobiology and Behavior: The two-semester introductory course sequence, Neurobiology and Behavior I and II (BIONB 221 and 222) with discussion section (four-credit per term), and seven additional credits. These additional credits must include a course from the neurobiology and behavior offerings (this course can NOT be BIONB 420, 720, or BIOG 499). However, BIONB 420, 720 and BIOG 499 MAY be used to supplement this neurobiology and behavior course to fulfill the seven additional credits. Students must consult their adviser for courses that may be applied toward the seven additional credits that are not listed in the Biological Sciences course offerings. BIOG 499 may not be used to fulfill the requirements of this program of study.

Note: Students who declare the Program of Study in Neurobiology and Behavior after taking BIONB 221 or 222 for only three credits must still take the 1 credit discussion section in BIONB 221 and 222. To arrange this, the student should consult the professors in charge of the two courses. In the event that a student cannot take the discussion sections, he or she should contact the department Director of Undergraduate Studies to determine what course(s) to use to address the deficiency.

10) Nutrition: NS 331, Physiological and Biochemical Bases of Human Nutrition (4 credits) and at least nine credits of additional coursework in the biological aspects of nutrition, such as NS 315, Obes. and the Regulation of Body Weight; NS 332, Methods in Nutritional Sciences; NS 431, Mineral Nutrition and Chronic Disease; NS 441, Nutrition and Disease; NS 442, Molecular Nutrition and Development; NS 602, Lipids; NS 604, The Vitamins; and NS 614, Topics in Maternal and Child Nutrition. Some courses require NS 115 Nutrition and Health: Concepts and Controversies, which may be used as part of the additional nine credits.

Note: For students in the College of Agriculture and Life Sciences, credits in NS courses count towards the required 55 CALS credits. For students in the College of Arts and Sciences, NS credits will count toward the 100 hours required in A&S if those credits fulfill major requirements.

11) Plant Biology: Students choose one area of study from the following two options:

   Option (a) Botany: Students are required to take Introductory Botany (BIOPH 241). Students should then choose, with the aid of their faculty adviser, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botany training: BIOPH 242 and 244, Plant Function and Growth, Lectures and Laboratory; BIOPH 247, Ethnobiology; BIOPH 248, Taxonomy of Vascular Plants; BIOPH 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPH 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory; BIOPH 345, Plant Anatomy; BIOPH 445, Photosynthesis; BIOPH 447, Molecular Systematics; BIOPH 448, Plant Evolution and the Fossil Record; BIOE 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; or BIOEE 460 and 468, Physiological Plant Ecology, Lectures and Laboratory.

   Option (b) Plant Biotechnology: Students are required to take BIOPH 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory; BIOPH 349, Plant Cell Biology; BIOPH 445, Photosynthesis; BIOPH 447, Molecular Systematics; BIOPH 448, Plant Evolution and the Fossil Record; BIOE 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; or BIOEE 460 and 468, Physiological Plant Ecology, Lectures and Laboratory.

12) Systematics and Biotic Diversity: A minimum of 13 credits from the following two groups, including at least seven credits from group (a), and three from group (b), and at least two laboratory courses (marked with *). BIOG 499, Undergraduate Research in Biology, with approval of the adviser, can be used in fulfillment of up to four credits in group (a), and can count as one laboratory course if it has a laboratory component of two or more credits.

   (a) *BIOE 274, The Vertebrates: Structure, Function, and Evolution; *BIOE 371, Human Paleontology; *BIOE 373, The Vertebrates: Form, Function, and Evolution; *BIOE 471, Mammalogy; *BIOE 472, Herpetology; *BIOE 475, Ornithology; *BIOE 476, Biology of Fishes; BIOM 290, General Microbiology, Lectures; BIOM 291, General Microbiology, Laboratory; BIOM 415, Bacterial Diversity, Lectures; *BIOPH 241, Introductory Botany; *BIOPH 243, Taxonomy of Cultivated Plants; BIOPH 247, Plants and Their Environment; BIOPH 248, Taxonomy of Vascular Plants; BIOPH 343, The Healing Forest; BIOPH 645, Families of Tropical Planting Plants, Lectures; *BIOPH 464, Families of Tropical Planting Plants; *ENTOM 212, Insect Biology; ENTOM 215, Spider Biology; Life on a Silken Thread; *ENTOM 323, Insect Morphology; *ENTOM 331, Introductory Insect Systematics; *ENTOM 471, Freshwater Invertebrate Biology; *ENTOM 631, Systematics of the Coleoptera; *PL 309, Introductory Mycology; *PL 319, Field Mycology.
the Honors program are required to participate in honors research seminars during both semesters of their senior year; submit an acceptable honors thesis; complete all major requirements; and maintain a 3.00 Cornell cumulative and science grade-point average through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level honors is the responsibility of the Honors Program Committee. The student's final grade point average is a factor in determining the level of honors recommended.

Students interested in the honors program are strongly encouraged to begin their research projects in their junior year and to consider spending the following summer here at Cornell engaged in full-time research. Students interested in staying for the summer also are encouraged to apply to the Cornell Hughes Scholars Program.

Biology majors who are considering study abroad and graduating with honors are encouraged to meet with their academic adviser during their sophomore year to carefully plan their academic schedule to meet the requirements of the Honors program.

Application forms, requirements, deadline dates for the Honors Program and the Hughes Scholars Program, and information pertaining to faculty research may be obtained at the Office of Undergraduate Biology, 216 Stimson Hall.

CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum and to the programs of study are made by the Biology Curriculum Committee. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested parties.

ADVISING

Students in need of academic advice are encouraged to consult their advisers or come to the Office of Undergraduate Biology, 216 Stimson Hall.

Students interested in marine biology should visit the Shoals Marine Laboratory Office, G14 Stimson Hall.

Students interested in the multidisciplinary program of Biology and Society should see "Special Programs and Interdisciplinary Studies," in the College of Arts and Sciences section of this catalog.

INDEX OF COURSES

The following course identifiers are used to denote biological sciences courses in specific areas: General Courses, BIO G; Animal Physiology, BIOAP; Biochemistry, Molecular and Cell Biology, BIOBM; Ecology and Evolutionary Biology, BIOEE; Genetics and Development, BIOGD; Microbiology, BIOMI; Neurobiology and Behavior, BIONB; Plant Biology, BIOPL; Shoals Marine Laboratory, BIOSM.

Note: Biological sciences ("BIO") courses count as agriculture and life sciences credits.

for students in the College of Agriculture and Life Sciences and as arts and sciences credits for students in the College of Arts and Sciences.

</table>
Three introductory biology course sequences are taught during the academic year: BIO G 101-104, BIO G 105-106, and BIO G 109-110, and one during the eight-week summer session: BIO G 107-108. BIO G 101-104, 105-106, and 109-110 are intended for biological sciences majors and other students needing eight credits from an introductory sequence to meet the prerequisite for upper-division biology for majors. BIO G 107-108 fulfills the introductory biology requirement for nonmajors, and meets the prerequisite for many, but not all, upper-level courses listing "one year of introductory biology" as a prerequisite. Students can earn a maximum of eight credits in introductory biology (including advanced placement credits).

**BIO G 101-102 Biological Sciences, Lectures**

101, fall; 102, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 105 (fall) or 106 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless permission is obtained from instructor. May not be taken for credit after BIO G 105-106 or 109-110. S-U grades optional, with permission of instructor. Lects, M W F 9:05 or 10:10. 2 lecs each week; to accommodate these, students must reserve all 3 days. Evening prelims: fall, Sept. 25 and Nov. 6; spring, Feb. 21 and Apr. 4. Staff.

Designed both for students who intend to specialize in biological sciences and for those who want to obtain a thorough knowledge of biology as part of their general education. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in terms of modern evolutionary theory, and discussions of plant and animal systems are integrated. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

**BIO G 103-104 Biological Sciences, Laboratory**

103, fall, 104, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 101 (fall) or 102 (spring). 103 is prerequisite to 104 unless permission is obtained from instructor. No admittance after second week of classes. S-U grades optional, with permission of instructor. Lab, M T W or R 1:25-4:25, M or W 7:30-10:30 p.m., or T or R 8-11. One 3-hour lab each week and a weekly lec for discs, special lecs, etc. J. C. Glase, P. R. Ecklund, and staff.

BIO G 103-104 is designed to provide laboratory experience with major biological phenomena in order to support an understanding of the important concepts, principles, and theories of modern biology. A second objective of the laboratory course is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and behavior. In the second semester, laboratory experience is provided in the areas of genetics, biotechnology, invertebrate diversity, plant and animal development, and ecology. During the first semester, dissection of a double-pitted frog is included. Pithing is done by the instructor. Dissection of several invertebrates occurs during the second semester. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

**BIO G 105-106 Introductory Biology**

105, fall; 106, spring. 4 credits each term (or 2 credits, with permission of instructor). Enrollment limited to 200 students. Prerequisite: 105 is prerequisite to 106, unless written permission is obtained from instructor. May not be taken for credit after BIO G 101-104 or 109-110. No admittance after first week of classes. Lecs, T 9:05 (first lec: of fall term, R 8/30 9:05); additional study and lab hours TBA. C. H. McFadden and staff.

Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy (accompanied by preserved vertebrate dissection), and biochemistry are strongly emphasized in the fall semester. Subjects in the spring semester include genetics, development, ecology, evolution, behavior, and the diversity of organisms (accompanied by preserved and anesthetized invertebrate dissection). Students who plan to concentrate in anatomy and physiology should consider taking this course because of the strong emphasis on organismal biology. Because some testing involves the use of predesigned specimens, students who object to dissections should take BIO G 101-104. The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who elect to take the course must be able to meet deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam.

**BIO G 107-108 General Biology**

Summer (8-week session); 107, weeks 1-4; 108, weeks 5-8. 4 credits each. Prerequisite: one year of college or permission of instructor; BIO G 101, 103, 105, or 107 is a prerequisite for 108. Fee, $25 for weeks 1-4; $15 for weeks 5-8. Lecs, M-R 9-12; labs, M T R 1:30-4:30, M W F 12-2. Staff.

Designed for students who plan further study in biology and for students who want a broad course in biology as part of their general education. BIO G 107 covers biological metabolism, first at the molecular level and then progressively to the organism level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. BIO G 108 seeks to integrate the topics of genetics, developmental biology, population biology, and ecology in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in BIO G 107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. BIO G 107-108 fulfills the introductory biology requirement for majors and forms a suitable introductory biology course sequence for students intending to go to medical school. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.
BIO G 109-110 Biological Principles
109, fall; 110, spring. 3 credits each term. Limited to 600 students. A passing grade in BIO 109, AY2000 or later, is prerequisite to BIO 110 unless permission is obtained from the instructor. Since BIO G 109–110 together constitute an integrated survey, 109 cannot be used to satisfy the College of Arts and Sciences or College of Agriculture and Life Sciences distribution requirement unless it is followed by 110 or equivalent. Due to overlap in content, BIO G 109 may not be taken after BIO G 102/104 or BIO G 106. BIO G 110 may not be taken after BIO G 101–102 or BIO G 105. This course sequence may be used to fulfill the distribution requirement in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology but may not be used as an introductory course for the major in biological sciences or as introductory biology for premedical requirements. Note that this course satisfies the prerequisite for many, but not all second- and third-level courses in biology. Letter grade only. Students do not choose lab sections during course enrollment; lab assignments are made during the first day of classes. Evenings: prev.: fall, Sept. 25 and Nov. 6; spring, Feb. 21 and Apr. 4. Lecs, M W F 9:05 or 10:10; lab meets alternate M T W R or F 2-4:25 or T 10:10-12:35. H. Greene, R. Turgeon, C. Eberhard and staff.

Students who do not plan to major in biology may take this broad introductory course. The content is designed to appeal to anyone who seeks a comprehensive understanding of biology as part of a general education. Broad goals of the course encompass an understanding of the potential benefits and limitations of science, the complexity and workings of the natural world, and the internal machinery of life—how our bodies and those of other animals and plants work. Fall semester covers biological diversity, genetics, evolution, ecology, behavior and conservation biology; spring semester covers microbiology, plant development, genetic engineering, infectious diseases, and human health. Laboratory sections enable small groups of students to meet with course staff and are used for problem-solving experiments, demonstrations, and discussions. There are dissections of preserved vertebrate, invertebrate, and plant materials; for those students who object to dissection, alternative materials are available for study and there is no grade penalty for omitting dissection or observation of animals. Testing, for students choosing to be tested, will involve identification of important structures in real organisms.

BIO G 170 Evolution of the Earth and Life (also EAS 102)
Spring. 3 credits. S-U grades optional. Lecs, T R 9:05 or 11:15; lab, M W or R 2:00–4:25; field trips during lab. J. L. Gruen.

Earth systems and their evolution. Earth history's astronomical context. Plate tectonics, continental drift, and their implications for climate and evolution of life and the atmosphere. Precedents for ongoing global change. The course covers dinosaurs, mass extinctions, and human ancestry. Laboratories include work on reconstructing geological history and mapping ancient geography. Possible field trips on field trips.

BIO G 200 Special Studies in Biology
Fall, spring, or summer. 1–3 credits. Prerequisites: written permission from the Office of Undergraduate Biology. Students must register in 216 Stimson Hall. S-U grades optional. Permission of instructor. Hours TBA. Staff. A registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 100-level courses and may not be used in fulfillment of college distribution requirements except by permission from the Office of Undergraduate Biology.

BIO G 202 The Diversity of Life
Fall. 3 credits. S-U grades optional. Lecs, M W F 2:30. Not offered 2001–2002. J. J. Davis, J. J. Doyle, E. Rodriguez. The main focus of this course is on the diversity of living species. This diversity is examined from an evolutionary perspective, with attention to the principles employed in the discovery of species and in the analysis of relationships among them. Interactions between different species are examined during the latter portion of the semester.

BIO G 209 Introduction to Natural Science Illustration
Summer (6-week session). 2 credits. Limited to 12 students. Prerequisite: free-hand drawing or permission of instructor. S-U grades optional. Lecs and labs, T R 6:30–9:30 p.m. B. S. King. An introduction to the art of natural science illustration for publication, and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratchboard, and carbon dust. Potentials and limitations of line and half-tone reproduction, copyright, and portfolio presentation are discussed.

BIO G 305 Basic Immunology Lectures (also VETMI 315)
Fall. 3 credits. Strongly recommended: basic biology, immunology, microbiology, and genetics. S-U grades optional, with permission of instructor. Lecs, T R 8:30–9:55. J. A. Marsh. A survey of immunology, with emphasis on the biological functions of the immune response.

BIO G 400 Undergraduate Seminar in Biology
Fall or spring. Variable credit (1–3 credits assigned for individual seminar offerings). Prerequisites: written permission from the instructor. S-U grades optional. Seminar TBA. Staff. For students interested in Biochemistry, Immunology, Microbiology, or Neuroscience. Please see descriptions under the appropriate section.

BIO G 401 Introduction to Scanning Electron Microscopy
Fall or spring, weeks 1-8. 1 credit. Limited to 8 students (fall), 12 students (spring). S-U grades optional. Fee may be charged. Lect, M 10:10, lab, T R or F 9:05-12:15 or T W or R 1:25-4:25. M. V. Parthasarathy.

An introductory course that includes the principle and use of the scanning electron microscope. Students use biological material to explore and understand some of the fine biological architecture. In addition to preparing the scanning electron microscope to study and obtain micrographs of features that interest them.

BIO G 403 Transmission Electron Microscopy for Biologists
Fall. 1, 3, or 4 credits (4 credits if student takes both sections). Limited to 12 students. Prerequisites: BIOAP 315, BIOPL 345 or 443. S-U grades optional. Two sections: Sec 01, 1 credit, weeks 1-4; sec 02, 3 credits, weeks 5-12. Students may register for one or both sections. Fee may be charged. Lec, T 11:15; labs, M W or T R 12:54-2:25. M. V. Parthasarathy. Section 01, 1 credit, weeks 1-4, covers the principles and use of the transmission electron microscopy (TEM), with emphasis on proper operation of the instrument and interpretation of images obtained. Negatively stained materials are used for viewing with the transmission electron microscope. Section 02, 3 credits, weeks 5-12, covers the principles and techniques of preparing biological material for transmission electron microscopy. Using animal, plant, and microbe materials, this section studies chemical fixation, cryofixations, ultrathin sectioning, immunogold localization, quantitative microscopy, and metal shadowing techniques. Students have two additional weeks to complete laboratory assignments at the end of each section.

BIO G 408 Presentation Skills for Biologists
Spring. 1 credit. Prerequisites: previous research experience. Preference given to students accepted into the Honors Program. L. Southard and G. Hess. This course will cover oral and written communication skills used in presenting research to other scientists. Topics covered will include organization of scientific papers, presentation tips for research seminars, and preparation of visual aids using Power Point. All students will present a 10-minute seminar on their research and will evaluate other presentations.

BIO G 410 Teaching Contemporary Biology
Fall. 3 credits. Prerequisite: one year introductory biology permission of instructor. L. Southard and S. Merkel. This course provides students with the opportunity to experience teaching high school science. Students will concentrate on a topic of current public interest, then develop teaching plans appropriate for high school students. The first part of the course consists of lectures, discussion, and laboratory experiments, which will familiarize the students with the scientific content of the course. Students will then work in teams with high school teachers to develop their presentations. The final part of the course will include practice presentations and teaching at regional high schools.

BIO G 431 Frontiers in Biophysics
Fall. 1/2 credit. S-U grades only. Lec TBA. G. Ferguson and staff. A day of lectures on Saturday TBA giving an overview of current research in biophysics at Cornell by faculty from different departments.
across the university. Designed for under­
graduates who are considering a career in
biophysics and for graduate students who are
interested in biophysics research opportunities
at Cornell.

**BIO G 450 Light and Video Microscopy for Biologists**

Spring. 3 credits. Limited to 12 students.
Theoretical and practical aspects of light microscopy, including brightfield, darkfield, phase-contrast, polarization, Hoffman-modulation contrast, interference, differential-interference contrast, and fluorescence microscopy, as well as video- and computer-based digital image enhancement, are studied. Students learn both qualitative and quantitative techniques to probe noninvasively the structure and function of living cells.

**BIO G 498 Teaching Experience**

Fall or spring. 1–4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent. Arts students may not count this course toward graduation. They may, however, upon petition to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility, but not eligibility for graduating with distinction. S-U grades optional, with permission of instructor. Hours TBA. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological sciences courses currently offering such experience include BIO G 105–106; BIOAP 311, 313, 319; BIOBM 330, 331; BIOEE 274, 475; BIOGD 281; and BIOI 291, 292.

**BIO G 499 Undergraduate Research in Biology**

Fall or spring. Variable credit. Students in the College of Arts and Sciences may not register for more than 6 credits per term with one supervisor or 8 credits per term with more than one supervisor. Prerequisite: written permission of staff member who supervises the work and assigns the grade. Students must register in the Office of Undergraduate Research in Biology in 216 Stimson Hall. Each student must submit an independent study statement describing the proposed research project during course registration. Applications are available in the college offices and in 216 Stimson Hall. Any faculty member in Biological Sciences may act as a supervisor. Supervisors outside of Cornell are not acceptable. S-U grades optional. Hours TBA. Staff.

Practice in planning, conducting, and reporting independent laboratory and library research programs. Up to three credits of research may be used to complete the Programs of Study in general biology, genetics and development, and systematics and biotic diversity, and four credits of research in neurobiology and behavior.

**BIO G 663 Nanobiotechnology (also AEP 663)**

Spring. 3 credits. Prerequisite: permission of instructor. Letter grade. Lecs, T R 1:25–2:40. Nanobiotechnology faculty.

Nanobiotechnology is the application of nano- and microfabrication methods to build tools for exploring the mysteries of biological systems. It is a graduate-level course that will cover the basics of biology and the principles and practice of microfabrication techniques with a focus on applications in biomedical and biological research. One objective of the course is to facilitate a means through which biologists and engineers can interact. A team design project stresses interdisciplinary communication and problem solving will be one of the course requirements.

**BIO G 705 Advanced Immunology Lectures (also VETMI 705)**

Spring. 4 credits. Prerequisite: BIO G 305 or permission of instructor. Offered alternate years. Next offered spring 2002. Lecs, M W F 9:05. Coordinator: E. J. Pearce.

Coverage at an advanced level of molecular and cellular immunology.

**BIO G 706 Immunology of Infectious Diseases (also VETMI 719)**

Spring. 2 credits. Prerequisite: BIO G 305 or permission of instructor. S-U grades optional, with permission of instructor. Lec, R 10:10–12:05. Offered alternate years. Coordinator: E. Danke.

Coverage at an advanced level of the immunology of diseases caused by selected bacterial, viral, protozoan, and helminthic parasites.

**Related Courses in Other Departments**

**The Sea: An Introduction to Oceanography**
(Biological Sciences [BIOEE] 154 Medicine and Civilization (Biology and Society 322))

Pathogenic Bacteriology and Mycology (Biology Sciences [BIOM] 404 and Veterinary Microbiology 318)

Viruses and Disease (Biology Sciences [BIOM] 408 and Veterinary Microbiology 408)

**ANIMAL PHYSIOLOGY (BIOAP)**

**BIOAP 212 Human Physiology for Non-Biology Majors**

Spring. 3 credits. May not be taken for credit after BIOAP 311. Limited to 130 students. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements of a program of study in the biological sciences major. Lecs, M W F 1:25; disc, M W or F 2:15. M. D. Baustian.

Introduction to the principles of physiology governing the function of the human body. Emphasis will be placed on reproduction, pregnancy and parturition, and immunology and the defense of the organism against disease. Major organ systems will be surveyed to illustrate how physiologists study the function of living systems, and how this knowledge has shaped the management of health and disease. The contribution of information based sciences of genetics, molecular biology, and the emerging biotechnologies to the study of human physiology will be covered.

**BIOAP 214 Biological Basis of Sex Differences (also B&SOC 214 and WOMNS 214)**

The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction; where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental, and physical capabilities) is discussed.

The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

**BIOAP 311 Introductory Animal Physiology, Lectures (also VETPH 3488)**

Fall. 3 credits. Prerequisites: one year of college biology, chemistry, and mathematics. Recommended: previous or concurrent course in physics. S-U grades optional, with permission of instructor. Evening prelims. Lecs, M W F 11:15. E. R. Loew.

A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living organisms. Topics include cellular and organ systems at the organismal level. Structure/function relationships are stressed along with underlying biochemical mechanisms.

**BIOAP 312 Farm Animal Behavior (also ANSC 305)**

Spring. 2 credits. Prerequisites: introductory animal physiology (AN SC 100 and 150 or equivalent). Recommended: at least one animal production course or equivalent experience. S-U grades optional. Lecs, T R 11:15. E. A. Oltenacu, K. A. Houpt.

The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals, and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

**BIOAP 313 Histology: The Biology of the Tissues**

Spring. 4 credits. Prerequisite: one year of introductory biology. Recommended: BIOBM 330 or 331, or their equivalents; and previous or concurrent enrollment in BIOAP 311. S-U grades optional, with permission of instructor. Evening prelims. Lecs, M W 12:20, labs, M W 1:25–4:25. Staff.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates, as well as methods of analytic morphology at the cell and tissue levels. Dynamic interrelations of structure, composition, and function in cells and tissues are emphasized. The course may include work with vertebrate animals.

**BIOAP 316 Cellular Physiology**

Spring. 4 credits. Limited to 72 students, with preference given to students studying in animal physiology. Each lab limited to 36 students. Prerequisite: concurrent or previous enrollment in BIOBM 350 or 351 and 352 or 353. Evening prelims. Lecs, M
mammalian fluid compartments; homeostasis; biological systems; recurrent themes in topics include: basic functional elements of

BIOP 319 Animal Physiology
Experimentation
Fall. 4 credits. Designed for upper-level undergraduate and graduate students studying in physiology, and other students interested in biomedically related professions. Graduate students in the field of Physiology and related fields without equivalent background are strongly encouraged to enroll. Each of 2 afternoon laboratory sections is limited to 40 students. Prerequisite: concurrent or previous enrollment in BIOP 311 or permission of instructor. Lec, R 12:20; lab, M or W 12:20-5:00 (includes disc section). E. R. Loew and staff.

A series of student-conducted in vitro and in vivo experiments designed to illustrate basic physiological processes in animals, with emphasis on relevance to humans, and to introduce students to physiology research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, vivisection under anesthesia, and real-time computer recording and analysis of data. Experiments with living tissues and live animals examine properties of blood, muscle, and nerves; cardiovascular, respiratory, and renal functions; and endocrine regulation of renal, cardiovascular, and reproductive tissue activity. Experimental resources include live animals, frogs, rats, rabbits, and sheep which are not always authorized after the laboratory exercises. Written reports of laboratory activities are required. Grading is based on evaluation of these reports, take-home case studies, laboratory performance, and weekly quizzes.

BIOP 427 Fundamentals of Endocrinology (also AN SC 427)
Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor. Lecs, M W F 9:05. P. A. Johnson. For description, see AN SC 427.

BIOP 458 Mammalian Physiology
Spring. 3 credits. Enrollment limited. Graduate student auditors allowed. Prerequisite: BIOP 311 or equivalent. Students not meeting this prerequisite must obtain written permission of instructor in T 814 Vet Research Tower before the first class. Even class. Tuesdays. Lecs, M W F 10:10. K. W. Beyenbach and staff.

The course offers an in-depth treatment of selected topics in mammalian and human physiology. Emphasis is on concepts and a working knowledge of physiology. Selected topics include: basic functional elements of biological systems; recurrent themes in physiology; design of multicellular animals; mammalian fluid compartments; homeostasis; membrane and epithelial transport; electrophysiology; cardiovascular physiology; gastrointestinal physiology; renal physiology; and acid/base physiology. The lectures incorporate clinical correlations whenever appropriate. The instructor will discuss topics related to work and careers in basic research and/or clinical medicine. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science.

BIOP 475 Mechanisms Underlying Mammalian Developmental Defects (also NS 475)
Spring. 3 credits. Prerequisites: BIOBM 330, 331-332, or 333 (may be taken concurrently). M W 9:10; lab, R 2:00. D. Noden and P. Stover.

For description, see NS 475.

BIOP 619 Lipids (also NS 602)
Fall. 2 credits. Lecs, T R 11:15. A. Bensadoun.

Course includes biochemical, metabolic, and nutritional aspects of lipids. Emphasis is placed on critical analysis of current topics in lipid methodology, lipid absorption, lipoprotein secretion, molecular structure, and catabolism; molecular biology, function and regulation of lipoprotein receptors; mechanism of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

BIOP 710-718 Special Topics in Physiology
Fall or spring. 1 or 2 credits for each topic. May be repeated 4 times for credit. Enrollment in each topic may be limited. S-U grades optional, with permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics.

BIOP 711 Readings in Applied Animal Behavior
Fall. 1 credit. Prerequisite: BIOP 311 or equivalent. Offered alternate years. Next offered in 2002. Lec, 1 hour each week TBA. K. A. Houpt.

BIOP 712 Thermoregulation and Exercise
Fall. 1 credit. Offered alternate years. D. Robertshaw.

An examination of the competing demands on the body of exercise and heat exposure with particular emphasis on the cardiopulmonary system and integration of thermoregulatory reflexes.

BIOP 713 The Physiology of Digestive Behavior: Food and Water Intake

A series of 1 to 1.5 hour weekly sessions in which the physiological mechanisms of hunger and thirst, primarily in mammals, will be considered by the group. There will be a mix of background readings, individual reports, and general discussion.

BIOP 714 Cardiac Electrophysiology
Fall. 1 credit. Offered alternate years. Next offered fall 2002. R. Gilmour.

Survey of cardiac potentials, passive membrane properties, ion channels, and cardiac arrhythmias. Emphasis on nonlinear dynamical aspects of cardiac electrophysiology and cardiac arrhythmias.

BIOP 715 Stress Physiology: To Be Discussed as Part of Animal Welfare
Fall. 1 credit. Prerequisite: BIOP 311 or equivalent required. Offered alternate years. Next offered fall 2002. K. A. Houpt. The emphasis will be on physiological assessment of stress.

BIOP 719 Graduate Research in Animal Physiology (also VETPH 528)
Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the staff member who supervises the work and assigns the grade. Graduate level. S-U grades optional. Lab, R 10:10-12:05. Offered alternate years. J. E. Fortune, W. R. Butler, and staff.

A team-taught survey course in reproductive endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function); female reproductive function (endocrinology, ovarian development and functions, oocyte physiology/function); fertilization and early embryo development; pregnancy; parturition; puberty; and reproductive technology. Student participation in the form of discussions and/or presentations.

BIOP 811 Advanced Physiological Methods I
Fall. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. Coordinator: J. Ray. This is a course for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of faculty members in the Field of Physiology to acquaint graduate students with the latest techniques/methods in biomedical/physiological research. Three modules are offered each semester by arrangement with the course coordinator.

BIOP 812 Advanced Physiological Methods II
Spring. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. Coordinator: J. Ray. This is a course for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of faculty members in the Field of Physiology to acquaint graduate students with the latest techniques/methods in biomedical/physiological research. Three modules are offered each semester by arrangement with the course coordinator.

Adaptations of Marine Organisms (Biological Sciences [BIOE] 413)
Advanced Work in Animal Parasitology (Veterinary Microbiology 737)
Animal Development (Veterinary Anatomy 507)
Animal Reproduction and Development (Animal Science 300)
some familiarity with iteration, arrays, and procedures.
For course description see COM S 321.

**BIOBM 330-332 Principles of Biochemistry**
Introductory biochemistry is offered in three formats: individualized instruction (330) and lectures (331 and 332) during the academic year, and lectures (333) during the summer. Individualized instruction is offered to a maximum of 250 students each semester. Lectures are given fall semester (331), spring semester (332), and summer (333).

**BIOBM 330 Principles of Biochemistry, Individualized Instruction**
Fall or spring, 4 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 257 or 357-358 (CHEM 358 may be taken concurrently) or equivalent, or permission of instructor. Concurrent registration in BIOBM 334 is encouraged. May not be taken for credit after BIOBM 331, 332, or 333. S-U grade optional for graduate students only. Evening prelims: fall, Oct. 11 and Nov. 8; spring, Feb. 20 and Apr. 4. M W F 11:25-12:20. J. E. Blankenship, P. C. Hinkle, and staff.

Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures, autotutorial format.

**BIOBM 331 Principles of Biochemistry: Proteins and Metabolism**
Fall, 3 credits. Prerequisites: one year of introductory biology for majors, one year of general chemistry, and CHEM 257 or 357-358 (CHEM 257 or 357 should not be taken concurrently) or equivalent, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades with permission of instructor. Evening prelim: Oct. 25. Lecs M W F 10:10. G. W. Feigenson.

The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated format. Topics include protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

**BIOBM 332 Principles of Biochemistry: Molecular Biology**
Spring, 2 credits. Prerequisites: one year of introductory biology for majors and previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit after BIOBM 330 or 331. S-U grades optional, with permission of instructor. Lecs T R 12:20. B. K. Tye.

A comprehensive course in molecular biology that covers the structure and properties of DNA, mRNA transcription and recombination, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and uses of recombinant DNA technologies.

**BIOBM 333 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology**
Summer (8-week session), 4 credits. Prerequisites: one year of introductory biology for majors, one year general chemistry, and CHEM 257, or 357-358, or equivalents, or permission of the instructor. May not be taken for credit after BIOBM 330, 331, or 332. Lecs. M W F 11:00-12:00. S. Ely or H. T. Nivison.

The content of this course is similar to that of BIOBM 330, however, it is presented in lecture format rather than as individualized instruction. The topics include enzyme structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.

**BIOBM 334 Computer Graphics and Molecular Biology**
Fall or spring, 1 credit. Prerequisite: concurrent registration in BIOBM 330. If space permits, students who have completed BIOBM 331 or 333 and have either taken or are concurrently taking, BIOBM 332 will be permitted to register during the first week of classes.

**BIOBM 407 Nature of Sensing and Response: Signal Transduction in Biological Systems (also PLPA 407)**
Spring, 3 credits. Prerequisite: BIOBM 330 or 333 or 331 and previous or concurrent registration in 332. Recommended: BIOGD 281. S-U grades optional. Lecs T R 10:10-11:25. T. P. Delaney.

The responses of organisms and cells to their surroundings are examined to illustrate how biological systems sense their biotic and abiotic environment and communicate sensing into appropriate responses. A wide variety of response systems will be explored to identify their unique features and to illustrate how similar processes are utilized by widely divergent organisms. Examples are drawn from prokaryote, plant, and animal systems for environmental sensing, control of development, and responses during disease. Discussion will also examine the role of genetics and biochemistry in understanding signal transduction pathways, as well as the way these systems are perturbed by mutation and disease.

**BIOBM 432 Survey of Cell Biology**
Spring, 3 credits. Prerequisite: BIOBM 330, 333, or 331, and previous or concurrent registration in 332, or equivalent. Recommended: BIOGD 281. S-U grades optional for graduate students only. Lecs. M W 8:40-9:55, W, J. Brown, V. M. Vogt. A survey of a wide array of topics focusing on the general properties of eucaryotic cells. The topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and others. Some of the material is covered in greater depth in BIOBM 437: BIOGD 483 and BIOBM 632, 656, and 659.

**BIOBM 434 Applications of Molecular Biology to Medicine, Agriculture, and Industry**
Fall, 3 credits. Enrollment limited to 36 students. Prerequisites: BIOBM 330 or 333 or 331 and 332. Recommended: BIOGD 281. S-U grades optional. Lecs. M W F 11:15. J. M. Galvo, S. Ely. Lecture topics include large scale sequencing of genomes, drug discovery based upon genomics, pharmaco-genomics, mapping and cloning human disease genes, DNA and edible vaccines, transgenic animals, engineering...
plants resistant to insects, and gene therapy. Discussions will relate to problem sets and to some implications of molecular biology to society.

**BIOBM 435-436 Undergraduate Biochemistry Seminar**

435, Fall; 436, Spring. 1 credit each term. May be repeated for credit. Limited to upperclass students. Prerequisites: BIOBM 330, 333, or 331 and 332 or written permission of instructor. S-U grades only. Seminar time TBA. Organizational meeting first W of each semester at 4 p.m. Next offered fall 2002. Fall: G. P. Hess; spring: staff.

Selected papers from the literature on a given topic are evaluated critically during six or seven two-hour meetings.

**BIOBM 437 Eukaryotic Cell Proliferation**

(also TOX 437)

Fall. Variable credits. Students may take lectures for 2 credits, or take both lectures and discussions for 3 credits. Enrollment for discussion section is limited to 20 students, with preference given to graduate students. Prerequisite: BIOG 101-102 or BIOG 105-106 and BIOBM 330 or BIOBM 331-332 recommended. BIOGD 281 and BIOGM 432. S-U grades optional. Lecs. T R 12:20-1:10. Disc. TBA. R-H. Chen

The course covers a wide spectrum of issues related to cell proliferation in eukaryotes. Lectures include various aspects of the regulation of cell division cycle and signal transduction pathways, with additional topics on oncogenesis, cell aging, and cell death. The facts as well as concepts and logics behind findings are presented in the lectures. Research articles are analyzed and discussed in depth during discussion section.

**BIOBM 438 Seminar in Applied Molecular Biology**

A seminar course focusing on topics such as: drugs that extend the life of AIDS patients; applications of human embryonic stem cells technology; genetically engineering plants for resistance to insects; bringing erythropoetin to market; mining genetic variation within isolated human populations; and benefits from stimulating and blocking angiogenesis. Groups of students will explore the underlying science and will also consider some business and/or social implications for these topics.

**BIOBM 439 Molecular Basis of Human Disease**

Fall. 2 credits. Prerequisites: BIOBM 330 or BIOBM 331-332 and genetics (e.g., BIOGD 280) or permission from instructor. Recommended: cell biology (e.g., BIOBM 432 or BIOAP 316) and physiology (e.g., BIOAP 311 or BIOAP 458). S-U grades optional. Lecs. T R 11:15. W. R. Krause.

This course will examine how changes in the normal expression, structure, and activity of gene products caused by genetic mutations and environmental agents lead to human diseases. The material will focus on how proteins with modified structures and biochemical activities contribute to alterations in normal cellular processes, as well as the physiological consequences of these changes. Topics will be selected from hormone insensitivity syndromes, inborn errors of metabolism, gene fusions resulting in hybrid proteins, gene amplification, gene inactivation, disruption of signaling pathways, disruption of metabolic pathways, and the molecular actions of enzymes and toxins. Examples of diseases will be selected to emphasize various aspects of cell biology, physiology, and immunology that have been presented in other courses. In addition, the methods used to identify the underlying biochemical and genetic basis of the diseases, as well as possible pharmacological and genetic therapies for treating the diseases, will be presented.

**BIOBM 440-443 Laboratories in Molecular Biology, Biochemistry, Cell Biology and Molecular Neurobiology**

Laboratory instruction in these areas is organized as a set of 2 credit modules, each module is taught for half a semester during the academic year and some modules are taught during the summer. Students must sign up for two courses for a total of 4 credits; limited space is available for students taking one course for 2 credits. Which courses are offered in each semester depends on scheduling constraints and student preferences. Enrollment limited, with preference given to undergraduates having Biochemistry or Molecular and Cell Biology of Study and to graduate students with a minor in the Field of Biochemistry, Molecular and Cell Biology. Prerequisites: BIOBM 330, or 333, or 331 and previous or concurrent enrollment in 352, or 332 and previous or concurrent enrollment in 351, and permission of instructor. Form to apply for admission to this course is found on the web [http:// 132.236.135.25/singup.html](http:// 132.236.135.25/singup.html),; for Fall semester courses, apply from February 15 until one week before CoursesEnroll begins; for Spring semester courses, apply from September 15 until one week before CoursesEnroll begins.

**BIOBM 440 Experimental Molecular Biology**

2 credits. S. Ely or H. T. Nivison. Experiments include cloning of DNA fragments, restriction mapping, DNA sequencing, Southern blotting, and PCR. The experiments emphasize quantitative aspects as well as experimental design.

**BIOBM 441 Experimental Proteins and Enzymology**

2 credits. S. Ely or H. T. Nivison. Experiments include purification of enzymes by salt fractionation, ion exchange chromatography, affinity chromatography, determination of kinetic parameters for an enzyme, analysis of proteins by rate zonal sedimentation, SDS-polyacrylamide gel electrophoresis, and immunoblotting.

**BIOBM 442 Experimental Cell Biology**

Spring only. 2 credits. T. Hoffaker. Includes experiments with cell culture, cell proliferation, and analysis of cell subcellular components, immunofluorescence and electron microscopy, and *in vitro* assays.

**BIOBM 443 Experimental Molecular Neurobiology (also BIOM 430)**

Experiments include PCR, cloning of DNA fragments, RNA purification, restriction digests, bacterial transformation, and DNA sequencing. Experiments emphasize how molecular techniques can be applied to studying neurobiological problems.

**BIOBM 450 Lab Projects in Molecular Biology and Biochemistry**

Spring. 3 credits. Enrollment limited to 10 students. Prerequisites: 4 credits from any of the following lab courses: BIOBM 440, 441, 442, or 443 plus permission of instructor. Letter grade only. Lab. R 12:20-4:25 plus at least 3 additional lab hours by individual arrangement with the instructor. Disc. T 230. S. Ely.

Students work individually on projects of their choice pertaining to a common theme. Skills developed include literature and database searching, project and experimental design, keeping a legal notebook, weekly communication of results, and an oral presentation. Experimental techniques may include site-directed mutagenesis, affinity purification, whole-genome expression systems, molecular evolution of a compound, and exploration of the human genome.

**BIOBM 631 Protein Structure and Function**

Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332 and organic chemistry. Recommended: physical chemistry. S-U grades optional. Lecs. M W F 9:05. L. Nicholson.

Presentations on the principles of protein structure and the nature of enzymatic catalysis. Specific topics include protein folding, stability, dynamics and evolution, folded conformations and structure prediction, ligand binding energetics, and the structural basis of catalysis.

**BIOBM 632 Membranes and Bioenergetics**

Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Lecs. T R 11:15. Offered alternate years. P. C. Hinkle.

Structure and dynamics of biological membranes, physical methods, model membranes, ionophores, ion-transport ATPases, mitochondrial and chloroplast electron transfer chains, and examples of transport from plants, animals, and bacteria. Emphasis given to structure of membrane proteins.

**BIOBM 633 Biosynthesis of Macromolecules**

Fall. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332. Recommended: BIOGD 281. Lecs. T R 9:05. J. W. Roberts, D. R. Wilson.

Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

**BIOBM 636 Advanced Cell Biology**

Spring. 2 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332, or 432, or their equivalents. Lecs. T 9:05-9:55. A. P. Bretcher.

With the availability of whole genome sequences, new families of genes are being identified. It is the goal of functional genomics
to elucidate the role of the gene products in the functional organization of cells. This course provides an integrated view of how this can be achieved employing molecular, genetic, and cell biological approaches. The discussion will center around a detailed discussion of topics such as the cytoskeleton, secretion, endocytosis, cell polarity, and related topics. Together with BIOBM 437, 632, and 639 this course provides broad coverage of the cell biology subject area.

**BIOBM 639 The Nucleus**  
Spring. 2 credits. Prerequisite: BIOBM 330 or 353 or 351 and 352, and 434, or their equivalent. Recommended: BDGE 281. Lect, T R 10:10. J. T. Liss.  
Lectures on topics of eucaryotic gene organization, regulation of gene expression, RNA processing, chromatin structure, the structure and function of chromosome systems. Additional lab time is required to provide broad coverage of the cell biology subject area.

**BIOBM 641 Laboratory in Plant Molecular Biology (also BIOPL 641)**  
Fall. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor. S-U grades with permission of instructor. Lab, T 9:05-10:40. J. B. Nasrallah, M. R. Hanson.  
Selected experiments on gene expression, gene transfer, and assay of reporter genes in plants. The course emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

**BIOBM 711 Protein NMR Spectroscopy (also VETD 730)**  
Spring. 2 credits. Prerequisites: CHEM 399 and 390 or CHEM 287 and 288 or permission of instructor. S-U grades optional. Lect, TBA. L. K. Nicholson, R. G. Oas, J. T. Liss.  
The student acquires the tools necessary for in-depth understanding of multidimensional multinuclear NMR experiments. Schemes for magnetization transfer, selective excitation, water suppression, decoupling, and others are presented. The application of these techniques to proteins for resonance assignment, structure determination, and dynamics' characterization is studied.

**BIOBM 732-737 Current Topics in Biochemistry**  
Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. Prerequisites: BIOBM 330 or 333 and 332 or equivalent. S-U grades only. Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each term.

**BIOBM 751 Ethical Issues and Professional Responsibilities**  
Spring. 1 credit. Limited to graduate students beyond first year. S-U grades only. Organizational meeting will be held on the first W of the semester. Sem, W 3:35-4:25. Additional sections may be offered. P. Hinkle. Ethical issues in research and the professional responsibilities of scientists are discussed in a case-study format. Topics to be discussed include: regulations, representation, fraud, misconduct, whistle-blowing, conflicts of interest and commitment, authorship, ownership, and intellectual properties, peer review and confidentiality, response to external pressure, legal liabilities, and professional codes of ethics.

**BIOBM 761 Topics in Cancer Cell Biology (also VETM 761)**  
Spring. Series of 1 credit graduate sections that reflect the "cancer expertise" of the Cornell faculty. (Course Director: Dr. B. U. Paul).  
For description, see VETM 761.

**BIOBM 830 Biochemistry Seminar**  
Fall or spring. No credit. Sem, F 4:00. Staff. Lectures on current research in biochemistry, presented by distinguished visitors and staff members. Lectures are open to everyone, but registration is limited to graduate students in Biochemistry. Molecular and Cell Biology.

**BIOBM 831 Advanced Biochemical Methods I**  
Fall. 6 credits. Required of, and limited to, first year graduate students in the Field of Biochemistry. Molecular and Cell Biology. S-U grades only. Labs and discussions 12 hours each week TBA. Organizational meeting first R of semester, 10:10. V. M. Vogt and staff. The first half of this course comprises an intensive laboratory covering fundamental aspects of modern molecular biology and cell biology. The second half of the course compromises research in the laboratory of a professor chosen by the student (See BIOBM 832). Students must enroll separately for each half.

**BIOBM 832 Advanced Biochemical Methods II**  
Spring. 6 credits. Required of, and limited to, first year graduate students in the Field of Biochemistry. Molecular and Cell Biology. S-U grades only. Lab TBA. Staff. Research in the laboratories of two different professors chosen by the student. Arrangements are made jointly between the Director of Graduate Studies and the research adviser.

**BIOEE 207 Evolution (also HIST 287 and S&T 287)**  
Fall or summer. 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOEE 278. Does not meet the evolutionary biology requirement for the biological sciences major. S-U grades optional. Fall: Lects, T R 10:10; disc, 1 hour each week TBA. Summer (6-week session): Lects and discs, M W 6:00-9:00 P.M. W. B. Provine. Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolutionary biology, and explore the implications of evolution for culture. Lectures and discussions will form the basis for student presentations on the historical development of evolutionary theory and its development in different disciplines. Fall: Lects, M W 3:35:4:25, T R 1:25, 2:30, or 3:35. N. M. Hairston and staff. An introduction to the science of ecology, the study of interactions between organisms and their environments. Major topics include demography, succession, biodiversity, biogeography, and the evolution of adaptations. The influences of enemies, competitors, and mutualists on majoring in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Sem and disc TBA. Fall: G. P. Hess; spring: J. Roberts. A seminar course with critical discussion by students of original research papers. A variety of topics in biochemistry, molecular and cell biology are covered.

**ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOEE)**

**BIOEE 154 The Sea: An Introduction to Oceanography (also EAS 104)**  
Spring. 3 or 4 credits (4-credit option includes one 2 1/2 hour laboratory each week). S-U grades optional. Lects, T R 11:40-12:55; lab, M or W 2:00-4:25, or M 9:30-9:55 P.M. C. H. Greene, W. M. White. A survey of the physics, chemistry, and biology of the ocean for both science and non-science majors. Topics include sea-floor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate, ocean ecology, coastal processes, marine pollution, and marine resources.

**BIOEE 207 Evolution (also HIST 287 and S&T 287)**  
Fall or summer. 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOEE 278. Does not meet the evolution­
ary biology requirement for the biological sciences major. S-U grades optional. Fall: Lects, T R 10:10; disc, 1 hour each week TBA. Summer (6-week session): Lects and discs, M W 6:00-9:00 P.M. W. B. Provine.
populations and communities are discussed. The effects of climate and human activities on ecological processes are also considered. Ecological principles are used to explain the issues associated with several environmental problems.

**BIOEE 263 Field Ecology**  
Fall. 3 credits. Limited to 25 students. Prerequisite: concurrent or previous enrollment in BIOEE 261. Lec. R 1:25; lab, F 1:20-4:45. 1 weekend field trip to the Hudson Valley. P. L. Marks.  
Field exercises designed to give students direct experience with field work, with emphasis on field identification skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.

**BIOEE 264 Birds in Biology**  
Fall. 3 credits. Limited to 25 students. May not be taken for credit after BIOEE 475.  
This course explores exciting new insights in biology using detailed examples drawn from bird studies. Subject matter is suitable for nonmajors, but of interest to majors as well. Topics will be drawn from a variety of biological disciplines. These include behavioral ecology (mating systems, territorial behavior, song), population ecology (migration, population limitation, micro-evolution, competition), evolutionary biology (trade-offs in life histories, optimal clutch size), and conservation biology (habitat fragmentation, inbreeding, acid rain). Lectures will be interspersed with discussion of selected papers.

**BIOEE 267 Introduction to Conservation Biology**  
Fall. 3 credits. May not be taken for credit after NTRES 450. Intended for both science and non-science majors. Completion of BIOEE 267 is not required for NTRES 450. S-U grades optional. Lecs, M W 9:05; disc, F 9:05 or R 8:25; 1 Saturday field trip. A. S. Flecker, J. W. Fitzpatrick.  
An exploration of biological concepts related to conserving the earth's biodiversity, introducing ecological and evolutionary principles important for understanding major conservation problems. Topics include patterns of species and ecosystem diversity, causes of extinction, genetic risks of small populations, design of nature preserves, strategies for protecting endangered species, ecosystem restoration, and the value of biodiversity.

**BIOEE 274 The Vertebrates: Structure, Function, and Evolution**  
An introductory course in vertebrate organismal biology which explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures will cover topics such as the origin and evolution of various vertebrate groups, sensory systems, thermoregulation, life history, locomotion, feeding, size, and scaling. Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations.  

**BIOEE 275 Human Biology and Evolution (also ANTHR 275 and NS 275)**  
Fall. 3 credits. S-U grades optional, with permission of either instructor. Lecs, M W F 10:10; disc, T R. Lecs every W and F; occasional lectures on M. Offered alternate years. Not offered 2001–2002. K. A. Kennedy, J. D. Haas.  
An introduction to the biology of Homo sapiens through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Pliodnau fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology.

**BIOEE 278 Evolutionary Biology**  
Fall or spring. 3 or 4 credits. (4-credit option involves writing component and two discussion sections per week; limited to 20 students per section each semester. Students may not preregister for the 4-credit option; interested students complete an application form on the first day of class.) Limited to 300 students. Prerequisite: 1 year of introductory biology or permission of instructor. S-U grades optional. Evening prelims: fall, Sept. 27 and Nov. 1; spring, Feb. 28 and Apr. 2. Lecs, T R 9:05; disc, 1 hour each week TBA. Fall, M. Geber; spring, M. Shulman.  
The course considers explanations for patterns of diversity and for the apparent "good fit" of organisms to the environment. Topics covered include the genetic and developmental basis of evolutionary change, processes at the population level, the nature of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the four-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelims.

**BIOEE 371 Human Paleontology (also ANTHR 371)**  
Fall. 4 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lecs, M W F 2:30; lab, 1 hour each week. TBA; occasional field trips. Offered alternate years. Not offered 2001–2002. K. A. Kennedy.  
A broad survey of the fossil evidence for human evolution with special attention to skeletal and dental morphology, geologic contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.

**BIOEE 373 Biology of the Marine Invertebrates**  
Fall (but course must be taken in the previous summer at the Sholes Marine Laboratory [SML]). 5 credits. Limited to 24 students. Prerequisite: one year of introductory biology for majors. Permission of faculty required because it is off campus. Students in BIOEE 373 are strongly encouraged to take BIOEE 477. Three week, full time course. Daily and evening lectures, laboratories, and field work. Course is taken during the summer; enroll for credit during the subsequent fall semester. Total cost for room, board, and overhead at SML: $1,150. Offered alternate years. C. D. Harvel, J. G. Monn.  
An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. The Shoals Marine Laboratory exposes students to a wealth of marine and terrestrial invertebrates in their natural habitats. Regular field excursions allow an excellent opportunity to study freshly collected and in situ representatives of most of the major phyla.

**BIOEE 405 Biology of the Neotropics**  
Fall. 2 credits. Prerequisite: introductory biology (majors, non-majors, or equivalent), or permission of instructor. S-U grades optional. Field disc and lab, T R 7:30–9:30 r.m. P. H. Wreege, A. S. Flecker.  
This course is an introductory survey of the biology of the New World tropics, with primary focus on moist lowland forests. The objectives are to learn basic characteristics and phenomena important to understanding neotropical biology, to gain firsthand knowledge of the resources in tropical biology available at Cornell, and to learn how to organize and execute a meaningful seminar presentation.

**BIOEE 452 Herbivores and Plants: Chemical Ecology and Coevolution (also ENTOM 452)**  
Spring. 3 credits. Prerequisites: one year of introductory biology, BIOEE 261, CHEM 257 or 357/358 and 251 or 201, or permission of instructor. S-U grades optional. Field trips, additional lectures, or laboratory demonstrations may be held in place of F lecture. Lecs, M W F 11:15. Offered alternate years. Not offered 2001–2002. P. P. Feeny.  
Topics include: significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; and implications for human food and agriculture.

**BIOEE 455 Insect Ecology (also ENTOM 455)**  
Fall. 3 credits. Prerequisites: BIOEE 261 or equivalent and ENTOM 212 or knowledge of another taxon. S-U grades optional. Lecs, M W F 11:15. Offered alternate years. R. B. Root.  
Topics include: the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.
[BIOEE 456 Stream Ecology (also ENTM 456 and NTRES 456)]
Spring. 4 credits. Limited to 60 students. Recommended: BIOEE 261. S-U grades optional. Field project with lab papers. Lecs, T R 9:05; lab, T W or R 1:25–4:25. Offered alternate years. Not offered 2001–2002. B. I. Peckarsky. Lecture: addresses the patterns and processes occurring in stream ecosystems, including channel formation; water chemistry; watershed influences; plant, invertebrate, and fish community structure; nutrient cycling; trophic dynamics; colonization; and succession; community dynamics; conservation; and the impacts of disturbances. Lab: field projects include experiments, data collection, techniques, hypotheses testing, and writing of scientific papers related to environmental assessment.

[BIOEE 457 Limnology: Ecology of Lakes, Lectures]
Fall. 3 credits. Prerequisite: BIOEE 261 or written permission of instructor. Recommended: introductory chemistry. Letter grade, S-U by permission only. Lecs, M W F 11:15. Offered alternate years. Not offered 2001–2002. N. G. Hairston, Jr. Limnology is the study of inland fresh waters and other, nonmarine, environments. This course focuses on lakes and ponds, which are discussed as distinct aquatic environments with clear terrestrial boundaries, and within which ecological interactions are especially evident. In lakes, interactions between organisms are often strong and adaptations easily recognized. Physical and chemical properties of the environment impact organisms in important ways and organisms, likewise, influence physics and chemistry. As a result, lab experiments for understanding the links between physical and mixing, chemical properties, and organismal dynamics. Lakes are exciting environments for study in their own right, and for gaining perspective on terrestrial and aquatic processes in general.

[BIOEE 459 Limnology: Ecology of Lakes, Laboratory]
Fall. 2 credits. Prerequisite: concurrent or previous enrollment in BIOEE 457. Letter grade, S-U by permission only. Lab, T W or R 1:25 and 1 weekend field trip. Fee, $12 (for food on field trip). Offered alternate years. Not offered 2001–2002. N. G. Hairston, Jr. and staff. Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Exercises focus on understanding the freshwater environment, on experimentation, and on understanding ecological processes within lakes. Optional vertebrate dissection (fish) during one laboratory exercise and during a portion of the weekend field trip.

[BIOEE 460 Theoretical Ecology]
Spring. 4 credits. Enrollment limited. Prerequisites: completion of the Biological Sciences mathematics requirement or equivalent, and either one additional semester of mathematics, statistics or modeling (e.g. ABEN 250, ABEN 367, NTRES 305, NTRES 340, NTRES 410, BIONB 422) or permission of instructor. S-U grades optional. Lecs, T R 1:25–4:25. Offered alternate years. Not offered 2001–2002. S. P. Ellner. An introduction to the models used to construct ecological theory and analyze data on ecological dynamics, and to the mathematical and computer methods used to analyze these models. Applications from individual decision-making through multispecies and spatial dynamics. Main themes in theoretical ecology: optimization, dynamics, and the links between process and pattern. The lab includes instruction in computer programming and review of mathematical methods.

[BIOEE 462 Marine Ecology (also EAS 462)]
Spring. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Lecs and discs, M W F 10:10. Offered alternate years. Not offered 2001–2002. C. D. Harvell. Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of the patterns and processes of organismal, population, community, ecosystem, and biogeochemical research. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

[BIOEE 463 Plant Ecology and Population Biology, Lectures]
Fall. 3 credits. Prerequisite: BIOEE 261 or 278 or equivalent. Letter grade, S-U by permission only. Instructor: recommended: some taxonomic familiarity with vascular plants and concurrent enrollment in BIOEE 465. Lecs, M W F 11:15. Offered alternate years. Not offered 2001–2002. M. A. Geber, P. L. Marks. This course examines the biological and historical factors affecting the structure of plant communities, and the distribution, abundance, and population dynamics of individual species. The influence of the environment, disturbance history, competition, and herbivory on the organization of plant communities is considered. Plant populations are also studied through an analysis of plant life histories and plant-plant and plant-animal interactions. Throughout the course an attempt is made to blend empirical patterns, experimental results, and theory. Readings are drawn from the primary literature.

[BIOEE 464 Macroevolution]
Spring. 4 credits. Limited to 25 students. Prerequisite: BIOEE 278 or permission of instructor. S-U grades optional, with permission of instructor. Lecs, T R 10:10–11:25; disc, 1 hour each week TBA. Offered alternate years. A. R. McCune. An advanced course in evolutionary biology centered on large-scale forces of evolution. Areas of emphasis include patterns and processes of speciation, phylogenetic reconstruction, the origin of variation, causes of major evolutionary transitions, and patterns of diversification and extinction in the fossil record. Discussion problems involve data and approaches from genetics, morphodology, systematics, paleobiology, development, and ecology.

[BIOEE 465 Plant Ecology and Population Biology, Laboratory]
Fall. 1 credit. Prerequisite: concurrent enrollment in BIOEE 463. Lab, F 12:05–5:00. Offered alternate years. Not offered 2001–2002. M. A. Seher, P. L. Marks. Field and laboratory exercises designed to give firsthand experience with the ecology and population biology of plants. Emphasis is on making observations and measurements of plants in the field and greenhouse, and on data analysis.

[BIOEE 466 Physiological Plant Ecology, Lectures]
Spring. 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or introductory plant physiology. S-U grades optional, with permission of instructor. Lecs, M W 8:40–9:55; optional disc TBA. Offered alternate years. Not offered 2001–2002. Staff. A detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore: physiological adaptation; limiting factors; resource acquisition and allocation; photosynthesis, carbon, and energy balance; water use and water relations; nutrient relations; linking physiology, development, and morphology; stress physiology; life history and physiology; the measurement of photosynthetic and physiology at the population, community, and ecosystem levels. Readings drawn from the primary literature and textbooks.

[BIOEE 467 Seminar in the History of Biology (also HIST 415, B&SOC 447, and S&T S 447)]
Summer (6-week session). 4 credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOEE 466. Lab, W 1:25–4:25, plus additional lab hours TBA. Offered alternate years. Not offered 2001–2002. Staff. A detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Laboratories apply physiological techniques to specific ecological problems and cover aspects of experimental design and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of three hours/week in additional lab time for this course.

[BIOEE 469 Food, Agriculture, and Society (also B&SOC 469 and S&T S 469)]
Spring. 3 credits. Limited to 20 students. Prerequisite: an introductory ecology course or permission of instructor. S-U grades optional. Lecs, T R 1:25–2:40. Not offered 2001–2002. A. G. Power. A multidisciplinary course dealing with the social and environmental impact of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, plant genetic resources, biotechnology, and sustainable development.

[BIOEE 471 Mammalogy]
Fall. 3 credits. Recommended: BIOEE 274. S-U grades optional, with permission of instructor. Carpooling to the Vertebrate
Collections at Cornell Business and Technology Park is necessary several times during the semester. Fee, $15. Lees, M W F 12:20; lab, M T or W 1:25–4:25, 1 weekend field trip required. Offered alternate years. Not offered 2001–2002. Staff.

Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systematics, ecology, and natural history of mammals of the world, with primary emphasis on the North American fauna. Systematics laboratory exercises are based on museum specimens. The systematics laboratory exercises are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.

**BIOEE 472 Herpetology**

Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology. Laboratory exercises include systematics, morphology, and behavior. Live animals are studied in the field and are used in the laboratory for nondestructive demonstrations and experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.

**BIOEE 473 Ecology of Agricultural Systems (also CSS 473)**

Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. During the first 6 weeks of class, the Thursday meetings may run to 5:00 because of field trips. Lees and discs, T R 2:30–3:45. Offered alternate years. Not offered 2001–2002. A. G. Power, E. C. M. Fernandez.

Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions among organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-plant interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

**BIOEE 474 Laboratory and Field Methods in Human Biology (also ANTHR 474)**

Spring. 5 credits. Limited to 16 students. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Recommended: permission of instructor by preregistering in E235 Corson. Recommended: research or term paper project required. Lees and labs, T R 10:10–12:05; additional hours TBA. Offered alternate years. Not offered 2001–2002. K. A. R. Kennedy.

Practical exercises and demonstrations of modern approaches to the methodology of biological anthropology. Emphasis on comparative human anatomy, osteology, description of skeletal subjects, paleopathology, skeletal maturations, and relevant field techniques for the archaeologist and forensic anthropologist.

**BIOEE 475 Ornithology**

Spring. 4 credits. Limited to 30 students. Prerequisite: permission of instructor by preregistering in E235 Corson. Recommended: BIOEE 274. S-U grades optional, with permission of instructor. Fee, $15. Lecs and labs, T R 12:20–4:25; occasional field trips and special projects. Offered alternate years. D. W. Winkele.

Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.

**BIOEE 476 Biology of Fishes**

An introduction to the study of fishes: their structure, evolution, distribution, ecology, physiology, behavior, classification, and identification, with emphasis on local species. Two field trips, including one full-day weekend trip required. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratory exercises are based on preserved specimens.

**BIOEE 477 Marine Invertebrates Seminar**

Fall. 1 credit. Prerequisite: BIOEE 375 or permission of instructor. Sem, 1 hour each week TBA. Offered alternate years. C. D. Harvell, J. G. Morin.

Discussions and directed readings centered around current research themes in Invertebrate Biology. Designed as an on-campus companion course to the field-based BIOEE 373, Biology of the Marine Invertebrates. Students will write individual research essays based on projects done in the field.

**BIOEE 478 Ecosystem Biology**

Analysis of ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach to the experimental aspects of terrestrial, freshwater, and marine ecosystems. Consideration of anthropogenic effects on ecosystems, such as from acid precipitation and offshore oil pollution. Analysis of climate change and regional environmental change from an ecosystem perspective.

**BIOEE 479 Paleobiology (also EAS 479)**

Fall. 4 credits. Prerequisite: one year of introductory biology for majors and either BIOEE 274, EAS 375, BIOEE 373, or permission of instructor. S-U grades optional. Lees, M W F 12:20, lab W 2:00–4:25. W. Altmann.

A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of earth and atmospheric science students concerning the nature and significance of the fossil record for their respective studies.

**BIOEE 490 Topics in Marine Biology**

Seminar courses on selected topics in marine biology may include laboratory or field trips. Topics and time of organizational meeting are shown in departmental course offerings listed on the web site.

**BIOEE 660 Field Studies in Ecology and Systematics**

Fall or spring. Variable credit. Prerequisites: BIOEE 261, a taxon-oriented course, and permission of instructor. S-U grades optional, with permission of instructor. Lees and field trips TBA. Estimated costs: TBA. Staff.

This course provides students with opportunities to learn field techniques and new biotas by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

**Section 01: Life Histories of Marine and Freshwater Invertebrates**

Fall. 2 credits. Prerequisite: undergraduates must have previous experience or course work with marine or freshwater invertebrates. Two extended weekend field trips in either early September and October or over winter break. Fee, TBA (to help cover transportation and housing). Offered alternate years. Not offered 2001–2002. C. D. Harvell, N. G. Hairston, Jr.

Field trips to either the Shoals Marine Laboratory and Shackleton Point Field Station or to the coast of Mexico. Students employ experimental approaches to study the evolution of invertebrate life histories.

**Section 02: Graduate Field Course in Ecology**

Spring. 3 credits. Restricted to graduate students. A fee will be required to help cover food and lodging for trip to Florida. Offered alternate years. P. L. Marks, R. B. Root.

The course is designed to give graduate students experience in defining questions and designing field investigations. The class is based at the Archbold Biological Station in central Florida over spring break and during the following week. The class visits several ecosystems including sand pine scrub, cattail ranches, cypress swamps, everglades, and coral reefs.

**BIOEE 661 Environmental Policy (also ALS 661 and B&SOC 461)**

Fall and spring. 3 credits each term. (Students must register for 6 credits each term, since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem, R 2:30–4:30. D. Pimentel.
This course focuses on complex environmental issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience. Thus far, every study has been published.

[BIOEE 665 Limnology Seminar
Spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem TBA. Offered alternate years. Not offered 2001-2002. N. G. Hairston, Jr. A seminar course on advanced topics in freshwater ecology.]

[BIOEE 666 Principles of Biogeochemistry
Spring. 4 credits. Limited to 20 students. Prerequisite: solid background in ecology, environmental chemistry, or related environmental science. Permission of instructor required for undergraduates. S-U grades optional. Lects and disc. T R 10:10-12:05. Offered alternate years. L. O. Hedin, staff. Lectures cover the biotic controls on the chemistry of the environment and the chemical control of ecosystem function. Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes and soils.

[BIOEE 669 Plant Ecology Seminar
Spring. 1 credit. May be repeated for credit. Suggested for students majoring or minoring in plant ecology. S-U grades optional. Sem TBA. Not offered 2001-2002. Staff. Individual review of current literature, student research, and selected topics of interest to participants.]

[BIOEE 670 Graduate Seminar in Vertebrate Biology
Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades only. Sem TBA. Staff. Seminar presentations and discussions by students on areas of current research in vertebrate biology. Topics vary from semester to semester.

Section 01: Mating Systems, Parentage, and Sexual Selection in Plants and Animals
Fall. 1 credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades only. Sem TBA. K. R. Zamudio, M. A. Geber.

[BIOEE 673 Human Evolution: Concepts, History, and Theory (also ANTHR 673)
Fall. 3 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lect, M 2-30; sem and disc. W 7:30-9:30. Offered alternate years. Not offered 2001-2002. K. A. R. Kennedy. A survey of the historical background of present-day concepts of human evolutionary variations and adaptations in space and time. The formation of biological anthropology as an area of scientific inquiry within the social and biological sciences is reviewed. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature.]

[BIOEE 760 Special Topics in Evolution and Ecology
Fall or spring. 1-3 credits. May be repeated for credit. Limited to 15 students. Prerequisite: BIOEE 668. S-U grades only. Seminar and disc. TBA. Staff. Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

[BIOEE 761 Current Topics in Ecology and Evolutionary Biology
Fall or spring. 1 credit. May be repeated for credit. Limited to 15 students. Prerequisite: BIOEE 668. S-U grades only. Lects and disc. T R 10:10-12:05. Staff. Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

[BIOEE 999 M.S. Thesis Research
Fall or spring. 1-15 credits. Prerequisite: admission to the Field of Ecology and Evolutionary Biology. S-U grades optional. Sem TBA. E&EB field faculty. Thesis research conducted by a M.S. student in the Field of Ecology and Evolutionary Biology with advice and consultation of a major professor who is a member of the Field.

[BIOEE 999 Ph.D. Dissertation Research
Fall or spring. 1-15 credits. Prerequisite: admission to the Field of Ecology and Evolutionary Biology as a Ph.D. student. S-U grades optional. Sem TBA. E&EB field faculty. Dissertation research conducted by a Ph.D. student in the Field of Ecology and Evolutionary Biology with advice and consultation of a major professor who is a member of the Field.

GENETICS AND DEVELOPMENT (BIODG)

[BIOGD 184 Understanding Genetics
Spring. 3 credits. Not be taken for credit after BIOGD 281 or 282. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements for any program of study in the biological sciences major. S-U grades optional. Lect, M W F 2:30. Offered alternate years. Not offered 2003. T. D. Fox. An introduction to genetics for students majoring in fields other than biology. Genetics is a rapidly developing science that provides insight into all aspects of biology and practical tools which increasingly affect our lives. This course shows how major conclusions about inheritance have been derived from the experimental evidence, drawing on examples from the biology of humans, other animals, plants, fungi, and bacteria. It also illustrates current and future applications of genetic discoveries. For example, the basic principles of inheritance, in conjunction with methods for the isolation and detection of specific gene fragments, is used to understand the detection of genetic diseases and the identification of individuals (DNA fingerprinting). Other topics to be covered include the origin of mutations, use of genetic methods to alter the properties of organisms and the influence of inheritance on behavior.]

BIOGD 281 Genetics
Fall, spring, or summer (8-week session). 5 credits. Not open to freshmen in fall semester. Enrollment may be limited to 200 students. Prerequisite: one year of introductory biology or equivalent. No admittance at first week of classes. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Lect, T R 10:10-12:05; lab, T or W or R or F 2:30-4:25. Problem-solving sessions strongly recommended, T or W 8:30-9:45 (additional session by arrangement). T. D. Fox, M. L. Goldberg, R. J. MacIntyre. A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions of gene transmission, gene action and interaction, gene linkage and recombination, gene structure, gene and chromosome mutations, genes in populations, and extrachromosomal inheritance. Aspects of recombinant DNA technology are discussed. In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in Drosophila.
BIOGD 282 Human Genetics
Spring. 2 or 3 credits (2 credits if taken after BIOGD 281). Each discussion limited to 25 students. Prerequisites: 1 year of introductory biology or equivalent. Permission of instructor required for students who have taken BIOGD 281. S-U grades optional. Lecs, M W F 10:10; disc, R 10:10 or F 10:10 or 11:15. Staff. A course designed for nonmajors. Lecturers provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

BIOGD 385 Developmental Biology
Fall. 3 credits. Prerequisite: BIOGD 281. Lecs, M W F 11:15. K. J. Kemphues. An introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

BIOGD 387 Developmental Aspects of Evolution
Fall. 2 credits. Prerequisite: BIOGD 281. S-U grades optional. Lecs, T R TBA. A. W. Blackler. An examination of the developmental mechanisms that underlie evolutionary change and organismal diversity and of the developmental constraints that contribute to evolutionary conservatism.

BIOGD 389 Embryology
Spring. 3 credits. Preference given to seniors. Prerequisites: 1 year of introductory biology and a knowledge of mammalian adult anatomy. Lecs, T R 10:10, labs, T or R 2-4:25. A. W. Blackler. A course in the embryonic development of vertebrate animals, with emphasis on the comparative aspects of morphogenesis and function at the tissue and organ levels. The laboratory has a strong morphogenetic bias, emphasizing the comparative aspects of developmental anatomy and preparation for medical studies.

BIOGD 394 Circadian Rhythms (also ENTM 394 and BIOM 394)
Fall. 2 credits. Prerequisite: ENTM 212, or BIOGD 281, or BIOM 221 or 222, or permission of instructor. S-U grades optional. Lec, W 7:30-9:10 P.M. Offered alternate years. J. Ewer. For description, see ENTM 394.

BIOGD 450 Vertebrate Development
Spring. 3 credits. Prerequisite: introductory biology, S-U and letter grades. Lecs, T R 11:40-12:55. S. M. Elser. This course is designed to examine the development of characteristics that make vertebrates unique. The course will start with an introduction to recent evolutionary and molecular approaches to understanding the rise of vertebrate structures. The development of vertebrate structures, such as neural crest, specialized sense organs, and limbs, will be examined in detail with emphasis on the cellular and molecular events controlling their development.

BIOGD 480 Seminar in Developmental Biology
Spring. 1 credit. May be repeated for credit. Limited to juniors and seniors. Prerequisite: BIOGD 281. S-U grades only. Seminar TBA. Staff.

BIOGD 481 Population Genetics
Fall. 4 credits. Prerequisite: BIOGD 281, BIOEE 278, or equivalents. Lecs, M W F 10:10; disc, M 2:30 or T 1:25. C. F. Aquadro. Population genetics is the study of the transmission of genetic variation through time and space. The class explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation, and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microorganisms.

BIOGD 482 Human Genetics and Society
Fall. 4 credits. Limited to 24 senior biological sciences majors, with preference given to students studying molecular biology and genetics. Prerequisites: BIOGD 281 and BIOM 330 or 335 or 331 and 332, and permission of instructor. S-U grades optional. Disc, T R 2:30-4:25. R. A. Calvo. Presentation of some of the science and technology of human genetics, plus discussion of the ethical, social, and legal implications of recent advances in the field. Among the topics considered are assisted reproductive strategies, eugenics, genetic counseling, genetic screening (pre-implantation, prenatal, neonatal, pre-symptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, human cloning, and therapy for genetic diseases. Students lead many discussions. There is a major writing component to the course.

BIOGD 483 Advanced Developmental Biology
Spring. 3 credits. Prerequisites: BIOGD 281, BIOM 332 or 330 or 333; and BIOGD 385 or permission of instructor. Lecs, T R 2:30-4:00. Offered alternate years. M. F. Wolner. An advanced course in developmental biology, with emphasis on the molecular events underlying developmental processes. Simultaneously, a molecular biology course that focuses on how development modulates and uses transcriptional, post-transcriptional, translational, and post-translational regulation of gene expression and cellular events such as signal transduction and cell-cell communication. Numerous developmental systems are discussed in microorganisms, plants and, especially, animals including fruit flies, nematode worms, and vertebrates such as mice, frogs, and humans. Course readings include original research articles. Discussion emphasizes specific experiments and approaches, and results and their interpretation.

BIOGD 484 Molecular Evolution
Spring. 3 credits. Prerequisites: BIOGD 281 and organic chemistry. Lecs, M W 8:40-9:55. Offered alternate years. R. J. Maklarsky. An analysis of evolutionary changes in genes and their protein products. Theories on the evolution of the genetic code, the construction of phylogenetic trees from biochemical data and the role of gene duplications in evolution are discussed. The second half of the course concerns the evolution and the organization of genomes from viruses to higher eukaryotes, including the evolution of satellite DNA sequences and transposable elements.

BIOGD 485 Bacterial Genetics (also BIOMI 485)
Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOM 330 or 331 and 332. 3.5 credits optional. Lecs, T R 12:20-2:15 and R 12:20-2:10; disc, R 1:25-2:15 or F 11:15-12:05. Next offered spring 2003. E. F. Alani. The course develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as chromosome segregation. The basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, pathogen resistance in plants, and human genetics.

BIOGD 600 Development of Sensory Systems
Spring. 2 credits. Prerequisites: introductory biology, genetics, development, and neurobiology, or permission of instructor. S-U or letter grades. Lec, M 7:00-8:40 P.M. Offered alternate years. Next offered spring 2003. K. White. This course will explore the unique and shared mechanisms used in sensory system development of both vertebrates and invertebrates. The first class of the course will provide a general introduction to the development of sensory systems in vertebrates and invertebrates. Following classes will involve the reading of current and classic papers in sensory system development. Students will choose a topic and articles from a list provided by the instructor. Students will be responsible for an oral presentation and short paper.

BIOGD 682 Fertilization and the Early Embryo
Spring. 2 credits. Prerequisites: BIOGD 281; BIOM 332 or 330 or 333; and BIOGD 385 or permission of instructor. Lec, R 2:30-4:25. Offered alternate years. M. F. Wolner. This course treats the earliest events in the formation of a new organism. The methods and findings of genetic, developmental, and molecular analyses are thoroughly discussed. Readings in the recent literature and discussions focus on pre-gastrulation embryos from several animal species. Topics include fertilization (sperm/egg binding, sperm entry into egg), pro-
Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

BIODG 787 Seminar in Genetics and Development
Fall and spring. 1 credit. Limited to graduate students in Genetics and Development. S-U grades only. Sem, M 4-5:00. Staff.

Seminars in current research in genetics and development of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics are announced the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.

BIODG 685 Advanced Bacterial Genetics (BIOMI 485)
Fall. 2 credits. Limited to graduate students in Biological Sciences; see BIOMI 485. Prerequisites: BIODG 281 or equivalent, BIOMI 330 or 331 or 332 or equivalent, and permission of instructor. Recommended: BIOMI 290 or equivalent. Lec, M W T 7:30-9:25; disc, R 10:10-11:00. Not offered 2001-2002. Next offered fall 2002. Staff. For course description, see BIOMI 485.

BIODG 687 Developmental Genetics
Fall. 2 credits. Limited to 20 students. Prerequisites: BIODG 281 and 385 or their equivalents. S-U grades optional. Lec: TBA. Offered alternate years. Not offered 2001-2002. K. J. Kemphues. Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in fruitflies, nematodes, mice and fish. Possible topics include pattern formation, cell lineage, neural development, maternal information in development, germ cell development, sex determination, and intercellular communication. Students read current literature and are encouraged to discuss each topic in class.

BIODG 780 Current Topics in Genetics
Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics, written permission of instructor required for undergraduates. Limited to 20 students. No auditors. S-U grades optional, with permission of instructor. Seminar TBA. Staff.

BIODG 781 Problems in Genetics and Development
Fall. 2 credits. Limited to first-year graduate students in the Field of Genetics and Development. Disc: TBA. Staff. An introduction to the research literature in selected areas through weekly problem sets and discussions.

BIODG 782-783 Current Genetics/Development Topics
Spring. 1/2 or 1 credit for each topic. May be repeated for credit. S-U grades only. Lectures and seminars on specialized topics to be announced. Staff.

BIODG 786 Research Seminar in Genetics and Development
Fall and spring. 1 credit. Limited to and required of second-, third-, and fourth-year graduate students in Genetics and Development. S-U grades only. Sem, W 12:20-1:30. Staff.

BIOMI 192 Microorganisms on the Planet Earth
Summer. 3 credits. May not be taken for credit after BIOMI 290. S-U grades optional. Lecs. M W 10:00-11:15. R. P. Mortlock.

A course in microbiology designed to introduce students, who have a limited background in science, to the microorganisms that populate our planet earth. Among the microorganisms studied are the bacteria, the archaeabacteria, some of the single-celled plants and animals, and the viruses. Topics covered are the biology of microorganisms, their evolution on earth, their composition and growth, their role in the ecology of this planet, their role in human history and disease, and their use in bioengineering. This course is not a prerequisite for advanced courses in microbiology.

BIOMI 290 General Microbiology
Lectures
Fall, spring, or summer (6-week session). 2 or 3 credits. Prerequisites: BIOMI 192. Recomended: concurrent registration in BIOMI 291. Lecs. M W F 11:15-12:10. Staff. A comprehensive overview of the biology of microorganisms, with emphasis on bacteria. Topics include microbial cell structure and function, physiology, metabolism, genetics, diversity, and ecology. Applied aspects of microbiology are also covered such as biotechnology, the role of microorganisms in environmental processes, and medical microbiology.

BIOMI 291 General Microbiology Laboratory
Fall or spring. 2 credits. Summer (6-week session). 2 credits. Prerequisite: concurrent or previous enrollment in BIOMI 290. Lecs. M W F 12:20-12:45 or 12:15-12:45, or T R 12:00-12:25, 12:20-12:45, or 12:30-12:55. C. M. Rehukger.

A study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

BIOMI 331 General Parasitology (also VETMI 331)

An introduction to the basic animal parasites, stressing systematics, taxonomy, general biology, ecological interactions, and behavior of non-medically important groups. The course will introduce the major animal parasites, protozoan, nematode, platyhelminth, acanthocephalan, annelid, and arthropod.

BIOMI 391 Advanced Microbiology Laboratory
Fall. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331 or 333. Preference given to biological sciences students in the microbiology program of study. Labs. M W 1:25-2:25. Staff. A laboratory course that illustrates basic principles of experimental microbiology. The course is organized into four modules which last three weeks each: (1) ecology, (2) physiology, (3) genetics, and (4) structure and function. Students are encouraged to take this course during their third year of study.

BIOMI 394 Applied and Food Microbiology (also FOOD 384)
Fall. 3 credits. Prerequisites: BIOMI 290-291. M W F 12:20-1:10. C. A. Batt. Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course will present a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. Issues
related to the biochemistry, genetics, and physiology of microorganisms important in these processes will be reviewed. A two-credit core section on food microbiology is complemented by a one-credit section on industrial/biotechnology applications.

**BIOMI 397 Environmental Microbiology (also CSS 398)**
Fall. 3 credits. Prerequisites: BIODE 261 or BIOMI 290 or CSS (SCAS) 260 or permission of instructor. Lecs, M W F 10:10.
W. C. Ghiorse, E. L. Madsen.
The biological properties, evolution, and behavior of microorganisms in natural systems are discussed in relation to past and present environmental conditions on Earth and other living planets. The functional role of microorganisms in environmental biotechnology and astrobiology is considered.

**[BIOMI 404 Pathogenic Bacteriology and Mycology (also VETMI 404)]**
Spring. 2 credits (with lecture and seminar with permission of instructor for undergraduates). Prerequisites: BIOMI 290 and 291. Strongly recommended: BIO G 305. Lecs, M W F 10:10; sem, F 10:10.
This is a course in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary medicine. The emphasis of this course is infection and disease pathogenesis. Topics include disease causality; interactions of host, pathogen and environment, including immunity to bacteria and fungi; and principles of antimicrobial therapy and drug resistance. A companion seminar addresses the current and classic literature related to microbial pathophysiology on the cellular and molecular level.

**BIOMI 408 Viruses and Disease I (also VETMI 408)**
Spring. 2 credits. Prerequisites: BIOMI 290, 291, 298, and permission of instructor. Recommended: BIOG 281.
Lecs, M W 7:30 P.M. Offered alternate even years. J. Casey.
The course covers basic concepts in virology with emphasis on virus-host interactions, strategies for virulence, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasia are highlighted in the context of approaches to prevent or reduce the severity of diseases.

**[BIOMI 414 Bacterial Diversity]**
Spring. 3 credits. Prerequisites: BIOMI 290, and 291, BIOMI 330 or 331 or 333. Recommended: Lecs, M W F 11:15. Offered alternate odd years. Next offered spring 2003. S. H. Zinder.
A consideration of the evolutionary biology, physiology, ecology, genetics, and practical potential of important groups of bacteria. Topics include ecological methods for determining bacterial phylogeny, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

**BIOMI 416 Bacterial Physiology**
Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331 or 333, or their equivalents. Lecs, M W F 11:00.
Offered alternate even years.
J. P. Shapleigh.
The focus of the course is on physiological and metabolic functions of bacteria. Consideration is given to cellular structure, regulation, growth, and energy metabolism. Special attention is given to those aspects of bacterial metabolism not normally studied in biochemistry courses.

**BIOMI 417 Medical Parasitology (also VETMI 431)**
Fall. 2 credits. Prerequisites: courses pertaining to microbiology and biology. Lecs, T R 3:35–4:25. D. Bowman.
A systematic study of anthropod, protozoan, and helminth parasites of public health importance with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasites.

**BIOMI 418 Microbial Ecology**
Spring. 3 credits. Prerequisites: BIOMI 290 and 291, or BIOMI 398 and instructor's permission, and BIOMI 330 or 331 and 332. Lecs, M W F 10:10–11:15. E. R. Angert.
Understanding the role of microorganisms in natural environments is one of the greatest challenges facing microbiologists. This course will introduce current biochemical and macromolecule sequence-based methods to assess community diversity and microbial activity in a variety of ecosystems. Other topics discussed include bacterial growth and survival, population biology, and microbial interactions.

**BIOMI 420 Microbial Genomics**
J. P. Shapleigh and J. D. Helmann.
Genomic information is revolutionizing biology. We will discuss the impact of genomic information on the study of microbial physiology, evolution, and biotechnology. Topics will include large-scale gene annotations (automated DNA sequencing, assembly, annotation, DNA chips) and applications (genome-wide analysis of transcription, functional genomics).

**BIOMI 485 Bacterial Genetics**
Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIOG 281.
Concepts and principles of formal genetic analysis as applied to prokaryotes, with emphasis on enterobacteria and their viruses. Topics include mutagenesis and isolation of mutants; genetic exchange, recombination and mapping; complementation, epistasis and suppression; transposons; gene expression and regulation; and genetics of bacterial pathogenesis.

**BIOMI 610 Introduction to Chemical and Environmental Toxicology (also TOX 610)**
Fall. 3 credits. Prerequisite: graduate standing in the field or consent of the instructor. Letter grades. Lecs, M W F 11:15–12:05.
Introduction to the general principles of toxicology including the sources, mechanisms, and targets of toxic agents. Special attention will be given to the interaction between toxic agents and biological systems at both the organismal and ecological level. The effects of both anthropogenic and natural toxins will be examined with respect to genetic and developmental toxicity as well as carcinogenesis and specific organ toxicity.

**BIOMI 652 (Section 02) Molecular Plant-Microbe Interactions (BIOIPL 652, SEC 02)**
Spring. 1 credit. Prerequisites: BIOGD 281, BIOMI 330 or 331, and BIOMI 653 (section 01) or their equivalents. S–U grades optional. Lecs, M W F 12:20 (12/lec) Jan.–Feb. 15. S. C. Winans.
Course for description, see BIOEPL 652, Sec 02.

**BIOMI 690 Prokaryotic Biology**
Fall and spring. 4 weeks/8 lectures.
1 credit/section to be offered. T.R. Time TBA.

Section 1 — Microbial Structure and Function
Fall. J. P. Shapleigh.
Discussion of those macromolecules and assemblages of macromolecules that together define the structure of the prokaryotic cell. This will include external structures, such as cell wall, flagella, pili, and peptidoglycan and internal structures such as specialized vesicles and other large complexes.

Section 2 — Microbial Genetics
Fall. J. D. Helmann.
Reviews the fundamental concepts of microbial genetics including mutations and their analysis, plasmids, conjugation, transformation, transduction, transposition, recombination, repair, and mutagenesis.

Section 3 — Microbial Physiology/ Diversity
Fall. S. H. Zinder.
The major energy conserving modes of metabolism and their phylogenetic distributions among both bacteria and archaea are reviewed. Topics include fermentation, respiration, photosynthesis, and pathways of carbon and nitrogen fixation.

Section 4 — Microbial Pathogenesis
Spring. S. C. Winans.
An introduction to the fundamental concepts of bacterial pathogenesis including the normal flora, pathogen entry and colonization, the production and regulation of toxins, horizontal transfer of pathogenesis determinants, and the roles of both specific and non-specific host defenses. Examples will include bacterial pathogens of both animals and plants.

Section 5 — Environmental Microbiology
Spring. E. L. Madsen.
A core course of concepts, methods, and current literature that reveals the multidisciplinary nature of environmental microbiology and its relationship to prokary-
The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their oral presentation skills. Students will be asked to present topical seminars that will be critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations will be emphasized. Tackled by students in the Graduate Field of Microbiology during their first two semesters, a third semester is optional.

### BIOMI 798 Graduate Research Seminar in Microbiology
Fall and spring. 1 credit each semester. F 2:30-3:20.

The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their oral presentation skills. Students will be asked to present topical seminars that will be critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations will be emphasized. Taken by students in the Graduate Field of Microbiology during their first two semesters, a third semester is optional.

### BIOMI 799 Microbiology Seminar
Fall and spring. Required of all graduate students in the Graduate Field of Microbiology. S-U grades only. F 1:25-2:15, Staff.

All graduate students in the Field of Microbiology are required to attend BIOMI 798 and are required to present a seminar concerning their research at least once each year.

### BIOMI 797 Scientific Communication Skills
Fall and spring. 1 credit each semester. F 2:30-3:20.

The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their oral presentation skills. Students will be asked to present topical seminars that will be critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations will be emphasized. Taken by students in the Graduate Field of Microbiology during their first two semesters, a third semester is optional.

### BIOMI 795-796 Current Topics in Microbiology
Fall. 795, Spring. 796. 1/2 or 1 credit for each topic. May be repeated for credit. Designed primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lecs TBA. Staff. Lectures and seminars on special topics in microbiology.

### BIOMI 797 Scientific Communication Skills
Fall and spring. 1 credit each semester. F 2:30-3:20.

The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their oral presentation skills. Students will be asked to present topical seminars that will be critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations will be emphasized. Taken by students in the Graduate Field of Microbiology during their first two semesters, a third semester is optional.

### BIOMI 798 Graduate Research Seminar in Microbiology
Fall and spring. 1 credit each semester. Required of all graduate students in the Graduate Field of Microbiology. S-U grades only. F 1:25-2:15, Staff.

All graduate students in the Field of Microbiology are required to attend BIOMI 798 and are required to present a seminar concerning their research at least once each year.

### BIOMI 799 Microbiology Seminar
Fall and spring. Required of all graduate students in the Graduate Field of Microbiology and open to all who are interested. Sem TBA. Staff.

### Plant Virology (Plant Pathology 645)

### Principles of Biogeochemistry (Biological Sciences [BIOEE] 668)

### The Soil Ecosystem (Crop and Soil Science 366)

### NEUROBIOLOGY AND BEHAVIOR (BIONB)

#### BIONB 111 Brain Mind and Behavior (also PSYCH 111 and COGST 111)
Fall. 3 credits. Prerequisite: one year of chemistry. May be taken independently of chemistry. Does not count toward a major in biological sciences. S-U grades only. Lee, M W F 9:05. E. Adkins Regan and R. R. Hoy. See COGST 111 for description.

#### BIONB 221 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3 or 4 credits. Prerequisite: one year of chemistry with two discussions per week. 4 credits with two discussions per week and participation in the Writing in the Majors program. 4- or 5-credit option required of students in the neurobiology and behavior program of study. Each 4-credit discussion section is limited to 20 students, with preference given to students studying neurobiology and behavior. Enrollment in the 5-credit option is limited to 12 students. Students may not preregister for the 5-credit option; interested students complete an application form on the first day of class. Not open to freshmen. Prerequisites: 1 year of introductory biology for majors. May be taken independently of BIONB 222. S-U grades optional. Lee, M W F 12:20; disc TBA. P. W. Sherman and staff.

A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, rhythm, motor systems, and hormonal mechanisms of behavior.

#### BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits. Prerequisite: BIONB 221 and permission of instructor. S-U grades optional. Lee, M W F 10:10; disc, 1 hour each week TBA. Offered alternate years. R. C. Howland. The neural basis of behavior is discussed in breadth and depth as well as some aspects of invertebrate vision. Topics covered include the optics and anatomy of the eye, retinal neurophysiology, structure and function of higher visual centers, ocular motility and ocular and visual system development.

#### BIONB 326 Evolutionary Perspectives on Human Behavior
Fall. 3 credits. Prerequisites: BIONB 221 and permission of instructor required. Letter grades only. T R 2:55-4:10. S. T. Kemlen.

A Socratically taught, discussion-based course dealing with evolutionary perspectives on human behavior. Each fall a different topic is selected for study. All class members read and discuss primary papers and recent books. Each student is responsible for leading

### BIONB 322 Hormones and Behavior (also PSYCH 322)
Fall. 3 credits. Prerequisites: laboratory experience in biology or psychology, BIONB 221 and 222 or PSYCH 123 and 222, and permission of instructor. Labs, T R 1:25-2:30. T. Podleski. See PSYCH 324 for description.

### BIONB 325 Neurodiseases—Molecular Aspects
Fall. 3 credits. Prerequisites: two courses from BIONB 222, BIOG 281, BIONB 330, or 331, and co-registration in one of the two is acceptable. S-U grades optional. Lees, M W F 9:05, disc T R 12:25, 2:30, or 3:35. T. R. Podleski.

The intent of this course is to teach students how to use recombinant DNA techniques for the study of neurodiseases. How are genes responsible for diseases identified and how are the functions of these genes studied? Attention is focused on those neural diseases in which significant advances have been made using these techniques, for example, Alzheimer’s, Huntington’s, Prion diseases, schizophrenia, depression, and disorders affecting ion channels and muscular dystrophies. Emphasis is placed on how these studies provide a useful approach to studying the mammalian nervous system by exposing the functions of genes that would be difficult to identify in other ways.

### BIONB 326 The Visual System

The visual systems of vertebrates are discussed in breadth and depth as well as some aspects of invertebrate vision. Topics covered include the optics and anatomy of the eye, retinal neurophysiology, structure and function of higher visual centers, ocular motility and ocular and visual system development.

### BIONB 327 Evolutionary Perspectives on Human Behavior
Fall. 3 credits. Prerequisites: BIONB 221 and permission of instructor. Letter grades only. T R 2:55-4:10. S. T. Kemlen.

A Socratically taught, discussion-based course dealing with evolutionary perspectives on human behavior. Each fall a different topic is selected for study. All class members read and discuss primary papers and recent books. Each student is responsible for leading
multiple discussions, for writing an original paper, and for peer-reviewing papers of other class members.

BIONB 328 Biopsychology of Learning and Memory (also PSYCH 332)
Spring. 3 credits. Prerequisites: Permission of instructor. 1 year of biology and either a course in biopsychology or BIONB 222. S-U grades optional. Lecs, M W F 11:15. T. DeVoogd. See PSYCH 332 for description.

BIONB 329 Ecology of Animal Behavior (also BIOISM 329)
Summer. 4 credits. Prerequisites: BIONB 222 or equivalent course in neurobiology with permission of instructor. A knowledge of biochemistry is useful but not required. S-U grades optional. A special 2-week course offered at Cornell's Shaws Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty. See BIOSM 329 for description.

BIONB 392 Drugs and the Brain
Spring. 4 credits. Prerequisites: BIONB 222 or equivalent course in neurobiology with permission of instructor. A knowledge of biochemistry is useful but not required. S-U grades optional. T R 10:10—11:25; disc TBA. Offered alternate years. Not offered 2001–2002. T. Renn-Warntch.
An introduction to neuropharmacology, with an emphasis on the neural mechanisms of psychoactive drugs. Topics include a brief introduction to neuropharmacology and a discussion of the major neurotransmitter families. The rest of the course will cover the major psychoactive drugs, including cocaine, heroin, psychedelics, marijuana and alcohol, as well as pharmaceuticals for the treatment of anxiety, schizophrenia and depression. The course will include a term paper in the form of a grant proposal to study a current problem in neuropharmacology.

BIONB 394 Circadian Rhythms (also BIOISM 394)
Fall. 2 credits. Prerequisite: ENTOM 212, or BIOGD 281, or BIONB 221 or 222, or permission of instructor. S-U grades optional. Lec, W 7:30-9:10 m. Offered alternate years. J. Ewer.
For description, see ENTOM 394.

BIONB 396 Introduction to Sensory Systems (also PSYCH 396 and ENTM 397)
Spring. 4 credits. Limited to 25 students. Prerequisites: an introductory course in biology or biopsychology, plus a second course in behavior, biopsychology, cognitive science, neuroscience, or perception. Students are expected to have knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Lecs, M W F 10:10. Offered alternate years. B. Halpert. See PSYCH 396 for description.

BIONB 420/421 Topics in Neurobiology and Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S-U grades optional. TBA. Staff Courses on selected topics in neurobiology and behavior. May include lecture and seminar courses; may include laboratory. Past topics have included animal orientation, insect behavior, biochemistry, and communication. Topics, instructors, and time of organizational meeting are listed in the division's catalog supplement issued at the beginning of each semester.

BIONB 421 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 421 and CHEM 421)
Fall. 3 or 4 credits. The 4-credit option involves a term paper or creation of a relevant web site. Limited to 25 students. Prerequisites: an introductory course in biology or psychology plus a second course in perception or neurobiology or cognitive science or biopsychology. T R 10:10–11:25. Not offered 2001–2002. B. P. Halpern.
For description see PSYCH 431.

BIONB 422 Modeling Behavioral Evolution
Spring. 4 credits. Limited to 25 students. Prerequisites: BIONB 221, 1 year of calculus, 1 course in probability or statistics, and permission of instructor (Office: W309 Mudd Hall; phone: 254-4592). This course is open to advanced undergraduates and graduate students. S-U grades optional. Lecs, T R 2:30–4:00; computer lab, 1 class period per week TBA. Offered alternate years. H. K. Reeve.
This is an intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Population-genetic (including quantitative-genetic), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by application to problems in optimal foraging, sexual selection, sex ratio evolution, animal communication, and the evolution of cooperation and conflict within animal social groups. Students will critically review recent evolutionary theories of animal behavior, as well as to develop their own testable models for biological systems of interest or to extend pre-existing models in novel directions. The Mathematica software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required).

BIONB 424 Neuroethology (also PSYCH 424)
Spring. 4 credits. Prerequisites: BIONB 221 or 222, or 1 year of introductory biology for majors and permission of instructor. S-U grades optional. M W F 11:15; disc, 1 hour each week TBA. C. D. Hopkins.
Neuroethologists take a comparative and evolutionary approach to study the nervous system. They ask, how do brains of animals compare and how did they come about through the process of evolution? How are neural circuits adapted to species-typical behavior? What is the hope and interest in the study of a large diversity of animals, compared to a specific just a few mammalian species? Can we hope to understand how animals with specialized behaviors have specialized nervous systems? What is the sensory world of a real animal and how does it vary from species to species? These and other questions will derive this introductory survey of neuroethology including: exotic senses; amazing motor programs; surprising integration.

BIONB 425 Molecular Neurophysiology
Course focuses on ion channels, the primary proteins generating cellular electrical signals function in nerve cells and other excitable cells (e.g., muscle, heart, glands). The latest electrophysiological and molecular genetic experiments will be reviewed. Diversity of electrophysiology deriving from channel structure and expression patterns will be considered in the contexts of behavior and behavioral plasticity (learning), neural development, and changes in evolution. Course format includes written and oral presentations, reviewing scientific literature in selected areas, and proposing new experiments.

BIONB 426 Animal Communication
Spring. 4 credits. Prerequisites: BIONB 221. Letter grade only. T R 2:55–4:10; disc, 1 hour each week TBA. J. Bradbury, S. Vein-Camp.
An integrated approach to animal communication, organized into three parts: 1) the physics and physiology of producing, transmitting, and receiving signals; 2) optimal strategies for encoding information, using information to make decisions, and designing signals; and 3) the behavioral ecology of signal evolution.

BIONB 427 Animal Social Behavior
Spring. 4 credits. Limited to 30 students. Prerequisites: BIONB 221 and BIOEE 261 or 278, and advance permission of instructor. S-U grades optional, with permission of instructor. Lecs and discs, T R 2:30–4:25. Offered alternate years. T. D. Seeley.
An intensive course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations emphasized. Topics include adaptation, communication, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, altruism, kin recognition, and conflict and cooperation in animal societies.

BIONB 428 Topics in Behavior
Fall or spring. 2–4 credits. (Credits based on number of lectures/participation in exercises as outlined in the division's catalog course supplement and subject to approval through the associate director's office.) May be repeated for credit. Primarily for undergraduates. S-U grades optional. Not offered 2001–2002. Staff. Courses on selected topics in behavior; can include lecture and seminar courses; may include laboratory. Past topics have included animal orientation, insect behavior, biochemistry, and communication. Topics, instructors, and time of organizational meeting are listed in the division's catalog supplement issued at the beginning of each semester.

BIONB 429 Offalction and Taste: Structure and Function (also PSYCH 429)
Spring. 3 or 4 credits (4 credits with term paper or research project, which can, but need not, study nonhuman vertebrates). Preference given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 620. Prerequisite: Completion of a 300-level course in biopsychology or equivalent. Lecs, T R 9:05. Offered alternate years. Not offered 2001–2002. B. P. Halpern. See PSYCH 429 for description.

BIONB 430 Experimental Molecular Neurobiology (also BIOBM 443)
Spring. 2 credits variable. Limited to 12 students. Prerequisites: co-meeting with BIOBM 430 lab. Mandatory registration via
The course will emphasize understanding of the electronic basis of neurons. Examples drawn from practical neurobiology, simulation, and construction of circuit systems will enable students to build instrumentation to study the nervous system. It will be taught by mathematical analysis, instrumentation to study the nervous system. It will give a basic understanding of the electrical functioning of the nervous system. Techniques used for coupling a biological system to a computer. It will include lectures covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, how do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development is discussed. Readings are taken from original journal articles.

This course is an introduction to computer instrumentation techniques and data reduction. It will give a basic understanding of the techniques used for coupling a biological experiment to a computer. It will include techniques to transform raw data to scientific visualization. Some computer modeling examples drawn from practical neurobiological problems will be done.

Biophysical Methods (also A&EP 470 and VETPR 470)

Spring. 3 credits. Prerequisites: basic knowledge of and interest in physics and mathematics is expected, but strong efforts are made to give an intuitive understanding of the mathematics and physics involved. Some knowledge of physical chemistry, molecular and cellular biology, or neuroscience is helpful. Depending on individual background, all students will find certain aspects easy and other aspects demanding. Letter grades only. Lecs, T R 8:40-9:55, M. Lindau.

BION 491 Principles of Neurophysiology

Spring. 4 credits. Limited to 20 students. Prerequisite: BION 222 or written permission of instructor. S-U grades for graduate students with permission of instructor. Lecs, M W 10:10; lab, M or T 12:20-4:25, additional hours TBA. B. R. Johnson.

A laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology. Lecture time is used to introduce laboratory exercises and discuss results to supplement laboratory topics, and for discussion of primary research papers. Extracellular and intracellular recording and voltage clamp techniques are used to analyze motor neuron and sensory receptor firing properties, and to chart the cellular basis for resting and action potentials and synaptic transmission. Invertebrate preparations are used as model systems. Computer acquisition and analysis of laboratory results are emphasized.

BION 492 Sensory Function (also PSYCH 492 and 692)

Spring. 4 credits. Limited to 25 students. Prerequisite: a 300-level course in biopsychology, or BION 222, or BIOAP 311, or equivalent. Students are expected to have knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Lecs, M W 10:10. Offered alternate years. Not offered 2001-2002. D. L. Deitcher.

See PSYCH 492 for description.

BION 493 Developmental Neurobiology

Fall. 3 credits. Prerequisite: BION 222 or permission of instructor. S-U grades optional, with permission of instructor. Lecs, T 2:55-4:10. Offered alternate years. Not offered 2001-2002. R. Booker.

Lectures covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, how do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development is discussed. Readings are taken from original journal articles.

BION 494 Comparative Vertebrate Neuroanatomy

Organization and evolution of neuroanatomical pathways as substrates for species-specific vertebrate behaviors. The course is divided into three major sections: development, general principles of brain organization, and co-evolution of vertebrate brain and behavior.

BION 495 Molecular and Genetic Approaches to Neuroscience

Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: BION 222 and BIOIN 313 or 330 or 332. Letter grade only. Lecs, T R 2:55-4:10. Offered alternate years. Not offered 2001-2002. D. Deitcher.

Focus of the course is on how different molecular and genetic approaches have led to major advances in neuroscience. Lectures, student presentations, and discussions examine original research articles. Topics include ligand-gated and voltage-gated ion channels, seven membrane spanning receptors, development of the neuromuscular junction, neurotransmitter release, second messengers, and learning and memory.

BION 496 Bioacoustic Signals in Animals and Man

Fall. 3 credits. Limited to 12 junior, senior, and graduate students. Prerequisites: 1 year of introductory biology, PHYS 101-102 or 207-208, and permission of instructor. S-U grades optional. Lecs, M W 9:05; lab TBA. Offered alternate years. C. W. Clark.

Humans and animals live in a world of sound. Mechanisms for sound production and perception are extremely varied. Acoustic signals mediate social interactions, and are used to scan the environment for food and to aid in navigation. For many species acoustic sensing plays a critical role in predator detection and avoidance. This course teaches students about animal acoustic signaling by introducing them to various animal acoustic systems. The course presents the physical properties of sound, physiological mechanisms for sound production and hearing, and the behavioral contexts in which sounds are used. Acoustic techniques are provided in the laboratory where students learn how to record, synthesize, and analyze sounds with the aid of recorders and Mac and/or PC computers running customized software. Labs are designed around the lecture material and provide practical "real-world" exercises designed to stimulate discovery of fundamental principles described in lectures. Class research projects on a selected topic in bioacoustics are required. Engineering students with interests in music, audio analysis, and digital signal processing are encouraged.

BION 531 From Signals to Syntax (also COGST 531, LING 531, PSYCH 531, COM 531)

See COGST 531 for description.

BION 622 Chemical Communication (also CHEM 622)

Fall. 3 credits. Primarily for research-oriented students. Limited to 30 students. Prerequisites: 1 year of introductory biology for majors or equivalent, course work in biochemistry, and CHEM 358 or equivalent. S-U grades optional. Lecs, M W 10:10; disc, F 10:10. Offered alternate years. Not offered 2001-2002. T. Eisner, J. Meinwald, W. L. Roelofs, and guest lecturers.

The production, transmission, and reception of chemical signals in communicative interactions of animals, plants, and microorganisms. Studies of insects are emphasized. Specific topics are treated with varying emphasis on chemical, biochemical, ecological, behavioral, and evolutionary principles.

BION 720 Seminar in Advanced Topics in Neurobiology and Behavior

Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem TBA. Staff and students.

Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics should be submitted by faculty or students to the chair of the Department of Neurobiology and Behavior.

BION 721 Introductory Graduate Survey in Neurobiology and Behavior

Fall. 2 credits. Required of graduate students majoring in neurobiology and behavior. Concurrent registration in BION 221 and 222 is required. S-U grades only. Lecs and disc, TBA. S. Edelman.
[BIONB 723 Advanced Topics in Animal Behavior]
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem and fieldwork TBA. Not offered 2001–2002. Staff.
A seminar on a specific topic in animal behavior. The instructor presents lectures during the first few course meetings; the remainder of the course is devoted to student presentations. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 724 Field Methods in Animal Behavior]
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem and fieldwork TBA. Not offered 2001–2002. Staff.
A seminar-field experience course designed for first-year graduate students in animal behavior. Weekly seminars discussing field methodology, data collection, and hypothesis testing are followed by an intensive period (10 days to two weeks) in the field. Specific topics and field sites vary from semester to semester. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 725 Behavioral Ecology Workshop]
Fall. 2 credits. May be repeated for credit. Primarily for graduate students in biology. Prerequisite: permission of instructor required for undergraduates. S-U grades only. Seminar TBA. Offered alternate years. Not offered 2001–2002. J. W. Bradbury, S. L. Vehrencamp.
A hands-on workshop designed to familiarize graduate students with quantitative techniques as applied to behavioral ecology. Only one technique is covered each year. Possible areas include spatial statistics, multivariate statistics, bioacoustical analysis, and event analysis. The material covered in the first weeks will attempt to bring everyone, regardless of background, and up to a common starting point. All participants will do weekly homework, prepare an introduction to one sub-area, and create homework problems for that sub-area. The topic for a given semester is listed in the catalog supplement issued at the beginning of the semester.

[BIONB 792 Advanced Laboratory in Cellular and Molecular Neurobiology]
Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students. Prerequisites: BIOBM 330 or 331 or equivalent, BIONB 491 or equivalent, and written permission of instructor. S-U grades optional. Lab TBA. Not offered 2001–2002. Staff.
A two-week intensive laboratory course designed to provide experience with a specific technique currently used in cellular and molecular neurobiology. The technique under study and instructor in charge vary from semester to semester and are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 793 Advanced Topics in Integrative Neurobiology]
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Lect and discs TBA. Not offered 2001–2002. Staff.
A course designed to provide in-depth knowledge of current research in anatomical and physiological bases of vertebrate and invertebrate behavior. Readings are primarily from specialty books and selected journal articles. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 794 Advanced Laboratory Techniques in Integrative Neurobiology]
Fall or spring. Variable credit. May be repeated for credit. Prerequisite: permission of instructor based upon a personal interview. Lab TBA. Not offered 2001–2002. Staff.
A laboratory in the integrative, or neuroethological, approach to studies of animal behavior. Designed to provide practical working knowledge of research methods in anatomical, physiological, and behavioral approaches to studies of vertebrate and invertebrate behavior. Laboratory technique to be covered and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

PLANT BIOLOGY 169

[BIOPL 240 Green World/Blue Planet]
This course focuses on helping individuals understand how scientific information relates to the issues they face as citizens, in management decision making, and in public policy. To what extent should genetic engineering of crop plants be permitted? Should we place limits on fossil fuel consumption as a means of limiting global warming and global climate change? Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.

[BIOPL 241 Introductory Botany]
Fall. 3 credits. Lecs, T R 9:05; lab, M T W or R 1:25–4:25, or M W 7:30–10:30 P.M. K. J. Niklas.
Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

[BIOPL 242 Plant Function and Growth]
Spring. 3 credits. S-U grades optional. Primarily for undergraduates in agricultural sciences. First and second weeks of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

[BIOPL 244 Advanced Botany]
Spring. 3 credits. Required of plant science undergraduates and highly recommended for other science majors. Not be taken for credit after BIOPL 342 except by written permission of instructor. Evening prelims Feb. 21 and March 28. Lecs, M W F 10:10. P. J. Davies.
How plants function and grow. Examples deal with crop plants or other plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth, development—hormones, responses to light, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering of plants.

[BIOPL 243 Taxonomy of Cultivated Plants (also HORT 243)]
Fall. 4 credits. Prerequisite: 1 year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Lecs, M W F 10:10; labs, M or W 2–4:25. Offered alternate years. Not offered 2001–2002. M. A. Luckow.
A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

**BIOL 244 Plant Function and Growth, Laboratory**
Spring. 2 credits. Prerequisite: concurrent enrollment in BIOL 242. May not be taken for credit after BIOL 344. Disc and lab, M T or W 12:20-4:25. T. Silva. Experiments exemplify concepts covered in BIOL 242 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level.

**BIOL 245 Plant Biology**
Summer (6-week session). 3 credits. Limited to 24 students. Lecs, M-F 11:30-12:45; labs, M W 2-5:00. T. Silva. Introductory botany, including plant identification. Emphasis on structure, reproduction, and classification of flowering plants. Much of the laboratory work is conducted outdoors taking advantage of several outstanding natural areas which are available for study. Those who lack college-level biology are expected to work closely with the instructor on supplemental instructional materials.

**BIOL 247 Ethnobiology**
Fall. 3 credits. S-U grades optional. Lecs, T R 11:15; disc, R 12:20 or 1:25, or F 12:20. D. M. Bates. A consideration of the principles, methods, and issues of ethnobiology. Emphasis is on the past and present biological, evolutionary, economic, and cultural interrelationships of humans in traditional and lay societies with their plants and animals, as a means of understanding the place and future of humans in the biosphere. Traditional medicines, underutilized organisms, resource management, and ownership of nature, and methodology are among the topics covered.

**BIOL 248 Taxonomy of Vascular Plants**
Spring. 4 credits. Prerequisite: 1 year of introductory biology. May not be taken for credit after BIOL 243. S-U grades optional. Lecs, T R 11:15; lab, W 12:25-3:45. J. Davis. An introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory concentrates on methods of plant identification and presents an overview of vascular plant diversity, with particular attention to the flowering plants.

**BIOL 340 Methods in Chemical Prospecting**
Spring. 2 credits. Prerequisites: Intro Biology (BIOL 101–104, 105–106, or 107–108) required. Completion or concurrent enrollment in organic chemistry, recommended. TBA. Offered alternate years. Not offered 2001–2002. E. Rodriguez and M. Arellano. Student participants will learn theory and methodologies in ethnobotany, chemical ecology and zooxanthecology as they apply in a multidisciplinary fashion to chemical prospecting. The use of techniques in the chemistry of natural products and biological assays in the discovery of chemicals and their role in nature will be described. Classical examples of chemomorphology (from quinine to taxol), in the course of chemical prospecting will be discussed. An overall medicinal purpose in chemoprospecting will be emphasized, with mention of specific worldwide spread of diseases pressing for new drugs.

**BIOL 342 Plant Physiology, Lectures**
Spring. 3 credits. Prerequisites: 1 year of introductory biology and either concurrent enrollment in BIOL 344 or written permission of instructor. May not be taken for credit after BIOL 242 unless written permission is obtained from instructor. Lecs, T R 10:10-11:25. T. G. Owens. An integrated and interdisciplinary study of the processes that contribute to the growth, competition, and reproduction of plants. Topics include, but are not limited to, plant water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

**BIOL 343 Molecular Biology and Genetic Engineering of Plants**
Spring. 2 credits. Prerequisite: 1 year general biology or permission of instructor. S-U grades optional. Lecs, T R 11:15. M. E. Nasrallah. An introduction to current studies involving recombinant DNA technology and its application to the improvement of plants. The course emphasizes genetic transformation methodology, gene expression systems, and strategies for increasing productivity. The course is directed towards undergraduates who wish to become familiar with the theory and practice of plant biotechnology.

**BIOL 344 Plant Physiology, Laboratory**
Spring. 2 credits. Prerequisite: concurrent enrollment in BIOL 342. May not be taken for credit after BIOL 244. Similar to BIOL 244 at an advanced level. Lab, R 1:25-4:25; disc, R 12:20. T. Silva. Experiments exemplify concepts covered in BIOL 342 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level, with emphasis on experimental design.

**BIOL 345 Plant Anatomy**
Fall. 4 credits. Limited to 15 students. Prerequisite: 1 year of introductory biology or a semester of botany. Lecs, M W 9:05; labs, M W 2-4:25. Offered alternate years. Not offered 2001–2002. Staff. A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

**BIOL 347 Laboratory in Molecular Biology and Genetic Engineering of Plants**
Spring. 2 credits. Limited to 24 students. Prerequisite: BIOL 343 or permission of instructor. Concurrent enrollment is BIOL 343 is encouraged. S-U grades optional. Lab, W 12:25-4:25. M. E. Nasrallah.

A companion to BIOL 343 with laboratory activities that focus on the practice of plant biotechnology. Students will transfer genes to plants by a variety of methods, and will analyze their expression in the host genome by use of reporter gene assays, and by the preparation and analysis of nucleic acids.

**BIOL 348 The Healing Forest**
Spring. 2 credits. Prerequisites: introductory biology or plant biology, or permission of instructor. Lect/disc, R 2:30-4:25. Offered alternate years. D. M. Bates, E. Rodriguez. An ethnobotanical consideration of the role of plants in traditional and western medicine. Studies of indigenous and lay societies illustrate the ecological, systematic, biochemical, and cultural aspects of herbal medicines and are placed in the broader context of such interdependent themes as the conservation of biological and cultural diversity, human health, bioprospecting, compensation for indigenous knowledge, and sustainable development.

**BIOL 404 Crop Evolution, Domestication and Diversity (also PL BR 404)**
Spring. 2 credits. S-U letter. Prerequisites: Genetics 281 or Plant Breeding 225 or permission of the instructor. Lecs, T R 9:05-12:45. S. Kresovich. See PL BR 404, for description.

**BIOL 440 Phylogenic Systematics**
Spring. 4 credits. Limited to 24 students. Prerequisite: introductory biology or permission of instructor. Lecs, T R 10:10; labs, T R 2:00-4:25. Offered alternate years. Not offered 2001–2002. K. C. Nixon. Basic and advanced principles and methods of phylogenetic analysis. Students are introduced to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics discussed include applications of phylogenetic methods to biogeography and evolutionary studies.

**BIOL 441 Systematics and Evolution of Crops**
Fall. 2 credits. Prerequisite: an advanced-level course in the plant sciences with taxonomic content or permission of instructor. Lecs, R 12:20-2:15. Offered alternate years. Not offered 2001–2002. Staff. An integrated study of the systematics and evolution of agronomic and horticultural species. Processes of domestication, the evolutionary history of selected cultigens, the nature of weeds and land races, classification and nomenclature as applied to cultivated plants, and underexploited plant resources are among the topics considered.

**BIOL 442 Current Topics In Ethnobiology**
Fall. 2 or 4 credits (4 credits with an independent research component and term paper). Prerequisites: BIOL 247, 348, or permission of instructor. Lect/disc, T 2:30-4:25. Offered alternate years. Not offered 2001–2002. E. Rodriguez, D. M. Bates. Explorations of the interrelationships of plants and animals with humans from a wide range of perspectives. Topics considered are contemporary issues, theory, and methodology of ethnobotany and ethnozoology, and the role of plants and animals in human lives, in subsistence and exchange, and in thought.
BIOL 443 Topics and Research Methods in Systematics
Fall or spring. 1–2 credits (1 credit per section). Prerequisite: written permission of instructor. S-U grades optional. Staff.
A series of one-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taken every semester. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester.

BIOL 444 Plant Cell Biology
Fall. 4 credits. Limited to 24 students. Prerequisites: 1 year of introductory biology or permission of instructor. Lecs, M W F 9:05; lab, M or W 1:25–4:25, R. O. Wayne.
Evidence from microscopy, physiology, biochemistry, and molecular biology is used to try to unravel the mystery of the living cell. The dynamics of protoplasm, membranes, and the various organelles are studied. The mechanism of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

BIOL 445 Photosynthesis
Fall. 3 credits. Prerequisites: 1 year of college chemistry and mathematics. Recommended: 1 year of college physics and plant physiology. Lecs. M W F 10:10.
An introduction to the processes of photosynthesis in plants, algae and bacteria. An interdisciplinary approach is emphasized incorporating biochemical, biophysical, physiological and molecular perspectives. The course covers the range of processes involved in photosynthesis beginning with light harvesting and primary photochemistry through electron transport and inorganic carbon fixation. Emphasis is placed on the regulation of photosynthesis from the cellular to the whole-plant level.

BIOL 447 Molecular Systematics
Fall. 3 credits. Prerequisites: BIOEE 278 or BIOLGD 281 or BIOLBM 350, or BIOLBM 352, or written permission of instructor. Lecs, T R 8:30–9:55.
Offered alternate years. J. J. Doyle.
The theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organelle genomes is described from the standpoint of their suitability for systematic and evolutionary studies.

BIOL 448 Plant Evolution and the Fossil Record
Spring. 3 credits. Prerequisite: BIOL 241 or equivalent, or permission of instructor. Lecs, T R 9:05; lab, R 12:20–1:15.
An introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecoligic settings, and evolutionary theory as it relates to plants.

BIOL 449 Green Signals and Triggers—The Plant Hormones (also HORT 449)
Fall. 1 credit. S-U grades optional.
Prerequisite: 1 year of introductory biology and permission of instructor. F 1:25–2:15.
Offered alternate years. P. J. Davies.
A study of plant hormones and how they regulate plant growth and development. Topics covered include the discovery, role in growth and development, mode of action, and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.

BIOL 452 Systematics of Tropical Plants
Spring. 3 credits. Prerequisite: BIOL 243 or BIOL 248. Letter grades only. Lecs. M W 10:10; lab, T 1:25–4:25.
The families of plants encountered solely or chiefly in tropical regions are considered in a phylogenetic context. Emphasis will be placed on the taxonomic value of general morphological and phytochemical characters.

BIOL 453 Principles and Practice of Historical Biogeography (also ENTM 453)
Fall. 3 credits. Prerequisite: a course in systematics or permission of instructors. S-U grades optional. Lecs, T R 10:10; lab T 1:25–4:25.
Offered alternate years. J. K. Liebherr and M. A. Luckow.
A survey of techniques in historical biogeography, and the development of modern biogeographic theory in the context of classical, ecological, and phylogenetic analytical methods. Geological and paleontological aspects of biogeography will be presented, and large-scale biogeographic patterns discussed. Laboratories will focus on computer applications and discussion of controversial issues.

BIOL 454 Systematics of Tropical Plants: Field Laboratory
Spring break. 1 credit. Limited to 15 students. Prerequisite: concurrent enrollment in BIOL 452 or permission of instructor. Letter grades only. For more details and application, contact the L. H. Bailey Hortorium, 467 Mann Library.
An intensive orientation to families of tropical flowering plants represented in forests of the American Tropics. Emphasis on field identification combined with laboratory analysis of available materials in a "whole-biology" context.

BIOL 456 Biomechanics of Plants (also ABEN 456)
Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology and one year of calculus, permission of instructor. S–U or letter grade optional. Lecs, T R 11:15–12:05; disc, W 2:30–3:20. J. R. Cooke and K. J. Niklas.
See ABEN 456, for description.

BIOL 641 Laboratory in Plant Molecular Biology (also BIOLBM 641)
Fall. 4 credits. Prerequisites: BIOLGD 281 or equivalent, BIOLBM 330 or 331, or equivalent, and permission of instructor. S-U grades with permission of instructor.
Selected experiments on gene expression, gene transfer, and assay of reporter genes in plants. The course emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

BIOL 642 Plant Mineral Nutrition (also CSS SCAS 642)
Spring. 3 credits. Prerequisite: BIOL 342 or equivalent. Lecs, M W F 10:10.
A detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include: the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and the nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements are emphasized to illustrate these topics.

BIOL 644 Regulatory Factors in Plant Growth and Development
Fall. 1–2 credits (1 credit per section). Prerequisites: BIOL 242 or equivalent, or permission of instructor. S-U grades optional. Offered alternate years. P. J. Davies.
A study of the regulation of plant growth and development by light as perceived through the pigments phytochrome and cryptochrome. This will include the biochemical and molecular biology of phytochrome and the way in which phytochrome modulates plant growth, including molecular and genetic analysis of its effects, and the mechanisms by which it acts. The role of phytochrome in detecting and modulating growth in natural and agricultural environments will also be covered.

BIOL 647 Seminar in Systematic Botany
Fall or spring. 1 credit. May be repeated for credit. Prerequisite: written permission of course coordinator required for undergraduates. S-U grades optional. Sem. T 12:20. Bailey Hortorium staff.
Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

BIOL 648 Plant Biochemistry
Spring. 3 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. Lecs, M W F 9:05.
Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates, and proteins; nitrogen and sulfur assimilation; respiration; photosynthesis; development and replication of chloroplasts; and cell-wall composition and properties. Attention is paid to the operation of control mechanisms.

**BIOP 649 Physiology of Ion and Water Transport in Plants**
1 credit. Lecs T R 10:10–11:30 (9 lecs). Aug. 30–Sept. 27. The topic of this section is the biophysical basis of ion transport across cell membranes, including membrane structure, ionic fluxes and their measurement, the thermodynamic criterion for active transport, and the relationship between ion transport and the electrical properties of cell membranes.

**Section 01 Basic Principles of Ion Transport and Electrophysiology**
1 credit. Lecs T R 10:10–11:30 (9 lecs). Oct. 2–Oct. 30. Topics include: transport of the major ions in plant cells and whole plants; properties of proton ATPases and their relationship to the transport of ions, sugars, and amino acids at the plasma membrane and tonoplast; ion channels in plant cell membranes, intercellular ion transport via plasmodesmata; and long distance ion transport in higher plants.

**Section 02 Ion Transport in Plants**
1 credit. Lecs T R 10:10–11:30 (11 lecs). Nov. 1–Dec. 6. Topics include: water relations of plant cells and tissues using potential terminology; permeability of plant cells to water and the role of aquaporins; and transport of water through whole plants, including transpiration, stomatal physiology and the effects of water stress.

**BIOP 651 Quantitative Whole-Plant Physiology**
Fall. 3 credits. Prerequisites: introductory physics, calculus, and plant physiology. S-U grades only. Lecs. T R 10:10–11:30. Offered alternate years. Not offered 2001–2002. R. M. Sparrow. An exploration of the extent to which physiological processes and their interactions can be formulated in a quantitative manner and integrated to describe various aspects of plant behavior, including growth and yield. Consideration is given to characterization of the plant environment, energy balance, gas exchange, water relations, photosynthesis, respiration, translocation, nutrient supply, and the timing of developmental events.

**BIOP 652 Plant Molecular Biology II**
Spring. 1–2 credits (1 credit per section). Prerequisites: BIOG 281 and BIOMB 330 or 332, or their equivalents. Recommended: BIOMB 331. S-U grades optional. A series of four-week modules on specialized topics. Coordinator: J. B. Nasrallah.

**Section 01 Molecular Plant-Pathogen Interactions (also PLPA 662)**
1 credit. Lecs. M W F 10:10–12 (12 lecs) Jan. 21–Feb. 15. T. P. Delaney, A. R. Collmer, S. G. Lazarowitz. An examination of the molecular properties that control the development of host-parasite interactions in both microorganisms (bacteria, viruses, and fungi) and higher plants. Contemporary approach that is needed for different experiments.

**Section 02 Molecular Plant-Microbe Interactions (BIOM 652)**
1 credit. S-U grades optional. Lecs. M W F 12:20 (12 lecs) Jan. 21–Feb. 15. Offered alternate years. S. C. Winans. Course focuses on the interactions of *Agrobacteria* and *Rhizobia* with plants. Topics on *Agrobacterium*-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer, oncogenesis, and use of *Agrobacterium* to produce transgenic plants. Topics on *Rhizobium*-plant interactions include regulation of nitrogenase activity and expression, organization and function of the sym plasmid, nodule development, and plant genetics involved in plant-microbe interaction.

**Section 03 Molecular Aspects of Plant Development II**
1 credit. S-U grades optional. Lecs. M W F 10:10 (12 lecs) Not offered 2001–2002. Staff. The molecular genetics of plant development. This module focuses on vegetative development and includes topics such as the development of the shoot, root, and vasculature, and the operation of the vegetative shoot apical meristem. The module is a companion to BIOP 653, Sec 04 (Plant Development I).
Application of DNA markers to the identification, manipulation and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.

[BIOPL 654] Botanical Nomenclature
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Lec and disc TBA. Offered alternate years. Not offered 2001–2002. Staff.

An analysis of the International Code of Botanical Nomenclature and its application to various plant groups.

[BIOPL 656] Topics In Plant Evolution
Spring. 1 credit. Prerequisite: BIOPL 448 or equivalent background in evolution, or written permission of instructor. Lab and disc TBA. Offered alternate years. K. J. Nijkas.

A series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

[BIOPL 740] Plant Biology Seminar
Fall and spring. No credit (no official registration). Required of graduate students doing research in plant biology. Sem, F 11:15. Staff.

Lectures on current research in plant biology, presented by visitors and staff.

[BIOPL 741] Problems In Plant Cell and Molecular Biology
Fall. 2 credits. Limited to first- and second-year graduate students in the Plant Cell and Molecular Biology Program. Disc TBA.

An introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

[BIOPL 742] Current Topics In Plant Molecular Biology
Fall or spring. 1 credit. Enrollment is limited. Primarily for graduate students, with preference given to majors or minors in plant molecular biology. Written permission of instructor required for undergraduates. S-U grades only. Sem, 1 hour each week TBA.

[BIOPL 743] Current Research In Plant Cell and Molecular Biology
Fall. 1 credit. Limited to graduate students; written permission from a member of the Plant Cell and Molecular Biology Program or by permission of coordinator required for undergraduates. Disc TBA.

An introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

[BIOPL 745] Current Topics In Systematics
Fall. 1 credit. Limited to graduate students, except by permission of instructor. S-U grades optional. Disc, T 12:20. Bailey Hortorium staff.

A seminar with presentations and discussion by students of original research papers in systematic biology.

[BIOPL 746] Research Seminar In Systematic Botany
Spring. 1 credit. Limited to graduate students, except by permission of instructor. Disc, T 12:20. Bailey Hortorium staff.

A student-led seminar presentation based on his or her thesis research or a related topic.

[BIOPL 749] Graduate Research In Botany
Fall or spring. Variable credit. May be repeated for credit. S-U grades optional. Hours TBA.

Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

[BIOPL 840] Current Topics in Plant Physiology
Fall or spring. 2 credits. May be repeated for credit. S-U grades only. Sem TBA. Not offered 2001–2002. Staff.

Molecular aspects of plant hormone biosynthesis, signal transduction and action. Seminar reports by graduate students on current literature in experimental plant physiology or related areas.

COURSES IN MARINE SCIENCE

Cornell offers an extensive listing of undergraduate courses in marine science.

Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in Marine Biology offered through the Division of Biological Sciences, the undergraduate specialization in Ocean Sciences offered through the Science of Earth Systems Program, and the summer program of courses offered by the Shoals Marine Laboratory. Further information on these programs can be found at the Cornell Marine Programs Office, G14 Stimson Hall, or on their web site, www.sml.cornell.edu.

Undergraduate Specialization in Marine Biology and Oceanography
Biological Sciences majors in the ecology and evolutionary biology program of study have the option of specializing their program of study in the area of marine biology. This specialization is intended for students with interests in understanding the unique aspects of organismal biology in the marine environment. In addition to fulfilling the major and the ecology and evolutionary biology program of study requirements, students in marine biology are encouraged to enroll in the following courses:

1) BIOEE 154, The Sea: An Introduction to Oceanography
2) BIOSM 364, Field Marine Science, BIOSM 375 Field Marine Biology and Ecology, or a 400-level BIOSM field course at the Shoals Marine Laboratory
3) BIOEE 462, Marine Ecology

Undergraduate Specialization in Ocean Sciences
Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four advanced courses from the following list to fulfill their major requirements:

1) BIOEE 373 Biology of the Marine Invertebrates
2) BIOEE 457 Limnology
3) BIOEE 462 Marine Ecology
4) BIOEE 478 Ecosystem Biology
5) BIOES 490 Topics in Marine Biology
6) BIOSM 303 Ecology of Marine Fishes
7) BIOSM 308 Marine Microbial Ecology
8) BIOSM 309 Climates and Ecosystems
9) BIOSM 329 Ecology of Animal Behavior
10) BIOSM 364 Field Marine Science
11) BIOSM 365 Underwater Research
12) BIOSM 374 An Introduction to Field Ornithology
13) BIOSM 375 Field Marine Biology and Ecology
14) BIOSM 413 Experimental Marine Ecology
15) BIOSM 418 Tropical Marine Science
16) BIOSM 449 Seaweeds, Plankton and Seagrass
17) BIOSM 376 Marine Invertebrate Zoology (note: not the same as BIOEE 373)
18) BIOSM 477 Marine Vertebrates
19) EAS 375 Sedimentology and Stratigraphy
20) EAS 455 Geochemistry
21) EAS 475 Special Topics in Oceanography
22) EAS 479 Paleobiology
23) NTRES 306 Coastal and Oceanic Law and Policy
24) NTRES 417 Wetland Resources

Sea Semester
BIOSM 366 SEA: Introduction to Oceanography
BIOSM 367 SEA: Introduction to Maritime Studies
BIOSM 368 SEA: Introduction to Nautical Science
BIOSM 369 SEA: Practical Oceanography I
BIOSM 370 SEA: Practical Oceanography II

These courses must be taken concurrently. Special program run by the Sea Education
The objective of the Shoals Marine Laboratory (SML) is to provide undergraduates and other interested adults a unique opportunity to explore marine sciences in an island setting. Participants and faculty members can literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences. Courses may be taken sequentially, but not concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands and the mainland, and collecting and research excursions aboard the Laboratory’s 47-foot research vessel, John M. Kingsbury. Field experience is an integral component of all courses, using Appledore’s extensive intertidal and subtidal zones, wading bird rookeries, and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected not only based on their academic excellence, but also on their teaching ability in the field. In addition, there are numerous guest lecturers including engineers, coastal planners, and specialists from private industry, government, and the academic community.

The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs Office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on undergraduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association (SEA).

The following marine sciences courses are currently administered by the Cornell Marine Programs Office.

**BIOSM 160 The Oceanography of the Gulf of Maine**

Summer. 4 credits. Limited to 24 students. A special 2-week course offered aboard a Sea Education Association's sailing vessel and at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, contact the SML office, G14 Stimson Hall or the Sea Education Association office at P.O. Box 6, Woods Hole, MA, 02543. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty. An exciting opportunity to explore the offshore and near-coastal environments of the Gulf of Maine for pre-college and first-year non-science majors. Students spend 10 days aboard the Sea Education Association's sailing vessels round trip between Woods Hole, Mass., and the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven days at the Shoals Marine Laboratory collecting data characteristic of the Isles of Shoals coastal environment.

**BIOSM 161 Introduction to Field Marine Science**

Summer. 4 credits. S/U grades optional. A special 2-week course offered in cooperation with Rider University at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. Apply directly to Rider University, College of Continuing Studies. Contact Dr. Richard Alexander for application and information at: Alexander@enigma.rider.edu, (609) 895-5422. Offered alternate years.

This course allows students who are not biology majors to experience the breadth of the marine sciences under field conditions at an island laboratory. Aspects of biology, geology, earth science, chemistry, and physics are included. Specific topics include: beach, salt marsh, tidal mud flat, tide pool, and benthic offshore identification of marine plants and animals; chemical and physical oceanography; marine geology; and ecology of kelp beds and urchin bens.

**BIOSM 204 Biological Illustration**

Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily sessions for 1 week. SML faculty.

General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. The course provides the scientist or student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife-related methods to acquaint the student and prepare for studying a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

**BIOSM 303 Ecology of Marine Fishes**

Summer. 4 credits. Prerequisite: 1 year of college-level biology. SCUBA certification recommended, but not required. S-U grades optional. A special 2-week course offered at Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs and fieldwork. SML staff.

This course presents principles, models, and methods for analysis of dynamics of fish populations and communities, and analysis of current research emphasizing theory and its potential uses in fisheries' management. Lab and field activities emphasize collection and analysis of data from the Gulf of Maine and adjacent estuarine habitats.

**BIOSM 308 Marine Microbial Ecology**

Summer. 4 credits. Prerequisite: 1 year of college-level biology. S-U grades optional. A special 2-week course offered at Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs and fieldwork for 2 weeks. SML staff.

This course examines the fundamental role of marine microbial communities in the function of the biosphere. Lectures survey bacteriology, protozoan, and micrometazoan assemblages from Arctic to deep sea vent communities. Laboratory exercises cover several principal techniques of field microbial ecology and explore the rich marine microbial environment surrounding the Isles of Shoals.

**BIOSM 309 Climates and Ecosystems**

Summer. 4 credits. Prerequisite: 1 year of college-level biology, background in physics/physical geography. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

A study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including solar radiation, temperature, atmospheric moisture, precipital wind, and currents. On-site exploration of the dynamics of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

**BIOSM 329 Ecology of Animal Behavior**

Summer. 4 credits. Prerequisite: 1 year of introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

**BIOSM 363 Marine Biology for Teachers**

Summer. 3 or 4 credits (4-credit option: additional 4 days of research). Primarily for teachers, grades 6 through 12, but open to others with teaching experience. Prerequisite: 1 year of introductory college biology. S-U grades optional. A special 10-day course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML.

Designing a research proposal: This course provides an overview of the steps involved in the development of a research proposal. Topics include identification of research questions, literature review, and writing a proposal. Students will work in groups to develop a proposal for a research project.

BIOSM 364 Field Marine Science (FMS) Summer. 6 credits. Prerequisites: 1 year of college biology. S-U grades optional. A 4-week course offered each June at Cornell's Shoals Marine Laboratory (HSL), on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. SML faculty.

Designed for students seeking an introduction to marine science. Requires some background in college-level biology and chemistry or permission of the instructor. Special 2-week course offered at Cornell's Shoals Marine Laboratory. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. SML faculty.

An introduction to field ornithology focusing on the biology, ecology, and behavior of the avifauna on the Isles of Shoals. The course focuses on field work designed to observe and study marine ecosystems. Students will participate in the classroom setting including territoriality, breeding biology, and survival. Students learn and apply numerous ornithological field methods including various census techniques, territory mapping, banding, behavioral observations, and creating a field notebook.

BIOSM 375 Field Marine Biology and Ecology (FMBE) Summer. 6 credits. Prerequisites: 1 full year of college level biology. S-U grades optional. A 4-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. SML faculty.

Designed for students seeking an introduction to the marine sciences and marine ecology. FMBE emphasizes field work in natural habitats. Examines aspects of the biology and ecology of marine organisms, including intertidal plants and invertebrates, fishes, marine mammals and birds, biological oceanography, ichthyology, and fisheries. Attention is given to introductory physical and chemical oceanography and marine geology. Marine ecology and the effects of human activity on the marine environment are included. Students apply this knowledge by conducting a transect study toward the end of the course. FMBE places emphasis on ichthyology, fisheries biology, general oceanography (biological, physical, and chemical) and marine geology. FMBE (BIOSM 375) places additional emphasis on ecology, especially in the intertidal zone; ecological, evolutionary and physiological adaptations of marine organisms; and field experiments.

BIOSM 365 Underwater Research Summer. 4 credits. Prerequisites: 1 year of college-level biology, recognized scuba certification, and a medical examination. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs and fieldwork for 2 weeks. Team-taught by 5 faculty members with occasional guest lecturers. Not for recreational divers.

Course covers the philosophy of research, hypothesis testing and experimental design, sampling techniques, and an introduction to the use of underwater techniques, diving physics and physiology, and transport and use of dive tables. Emphasis is on subtidal zone problems, marine fisheries, economics of marine organisms, and educational resources of the marine environment.

BIOSM 413 Experimental Marine Ecology Summer. 6 credits. Prerequisite: 1 year of college level biology. Experience in ecology or physiology recommended. S-U grades optional. A special 6-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 6 weeks. SML faculty.

An introduction to the physiological ecology and functional morphology of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics covered include photosynthesis in the marine environment; respiration in intertidal organisms; carbohydrates, proteins, and lipids as nutrients in the sea; and the effects of temperature, light, salinity, and nutrient levels, and in situ functional analyses of metabolic phenomena. The process of scientific investigation is the predominant theme of the course.

BIOSM 418 Tropical Marine Science Summer. 8 credits and 4 credits of research. Limited to 12 students. Prerequisites: 1 year college level biology, recognized SCUBA certification; medical exam; and permission of instructor. A special 8-week course offered at Akumal, Mexico. For more details, contact Shoals Marine Laboratory, G-14 Stimson Hall, 255-3717. For certified divers only. Lab/field, 2 weeks, 6 weeks monitoring study and individual research projects, including data analysis on computers. SML faculty. In addition to lectures and laboratories covering the basic principles of coral reef ecology, students participate in a coral reef monitoring survey. Following two weeks of course work, students engage in independent research projects.

BIOSM 449 Seaweeds, Planton and Seagrass: the Ecology and Systematics of Marine Plants Summer. 4 credits. Prerequisite: BIOSM 364 or 1 year of introductory biology. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

An overview of the major marine algal groups, including aspects of anatomy, morphology, life histories, and individual research projects, including metabolism of microalgae. Applebrook Island's unique location provides an excellent venue for the study of freshly collected and in situ representatives of most of the major phyla.

BIOSM 402 Marine Pollution Summer. 4 credits. Prerequisites: 1 year of college-level biology and chemistry or permission of instructor. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

An introduction to marine pollutants; their sources and control/treatment; the effects of marine pollution on coastal ecosystems; and federal and state water pollution regulatory programs. Laboratories include training in field collection of water samples, measurement and modeling of effluent plume dispersion, and measurement of microbial indicators of water quality, dissolved nutrients, BOD, dissolved oxygen, and toxicity.

EAS 475 Special Topics in Oceanography: Satellite Remote Sensing in Biological Oceanography Summer. 6 credits. Prerequisites: 1 course in oceanography and/or marine biology, or permission of the instructor. Strong computer skills are required. S-U grades optional. A special 4-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H.
and on campus at Cornell University. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. Offered alternative years. SML faculty.

"Remote Sensing" provides hands-on research experience in hydrologic optics and satellite remote sensing. Two credits to the theory and measurement of seawater optical properties, emphasizing the depen­
ding the Isles of Shoals. Part 1 will be devoted to the theory and measurement of seawater optical properties, emphasizing the depen­
dency of apparent optical property on chlorophyll and dissolved organic matter concentrations. Parts 2-4 (19 days) will be conducted at Shoals Marine Laboratory and aboard the R/V Kingsbury in waters surround­
ing the Isles of Shoals. Part 1 will be devoted to the topics of independent projects, emphasizing the depen­
dency of apparent optical property on chlorophyll and dissolved organic matter concentrations. Parts 2-4 (19 days) will be conducted at the Science of Earth Systems' computer laboratory on the Cornell campus. Part 2 will cover satellite remote sensing of the apparent optical properties of seawater with an emphasis on processing SeaWiFS data using SeaDAS software and IDL programming languages. Part 3 satellite remote sensing of physical oceanographic processes that influence ecosystem dynamics with an emphasis on AVHRR-derived sea-surface temperature and SST -1 derived ocean winds. Part 4 is devoted projects, student will attempt to integrate SeaWiFS, AVHRR, and SSTM data in order to address questions of biological-physical interactions.

BIOSM 477 Marine Vertebrates
Summer. 6 credits. Prerequisites: a course in vertebrate biology. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics covered include: systematic of fishes of the Gulf of Maine; elasmobranch phylogeny; intertidal life history and parameters from otolith microstructure; teleost skeleton and function; population biology and the contemporary Gulf of Maine fishery; Mesozoic marine reptiles, the biology of sea turtles in cold water; coloniality in sea birds; avian adaptation and breeding at sea; evolution and systematics of marine mammals; diving physiology; and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

BIOSM 490 Topics in Marine Biology
Summer. 1–2 credits. Prerequisite: 1 year of introductory biology and permission of instructors. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

Seminar courses on selected topics in marine biology. Students and faculty explore recent research through reading of the primary literature. The course may also include a lab or field trips. Offered in spring semester for two credits with a two-hour discussion per week. Offered at the Shoals Marine Laboratory (summer) for one credit with four one-hour discussions per week for four weeks.

BIOSM 495 Research Methods in Marine Biology
Summer. 1 credit. Prerequisite: concurrent enrollment in BIOSM 490, or permission of instructor. Primarily for undergraduates. A special 8-week course offered at the Shoals Marine Laboratory (SML). For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, fieldwork for 8 weeks. J. G. Morin and M. J. Shulman. Seminar course on research methodology, experimental design, statistical analyses, and scientific writing. The course is designed to assist students in the research the they are conducting while enrolled in BIOSM 495.

BIOSM 499 Research in Biology
Summer. Credits variable (2 credits/7 days on site). For more details and an application, consult the SML Office, G14 Stimson Hall.

Section A: Independent Biological Research: Independent study with a member of the Shoals Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be sent with application materials.

Research Experiences for Undergraduates (REU)
0 credit. The National Science Foundation (NSF) Research Experiences for Undergraduates (REU) program provides support for undergraduate students to pursue supervised, independent research projects at the Shoals Marine Laboratory. Nine students will be selected from a competitive, national pool to participate in the eight-week summer program. For more information and an application, please contact the SML office, G14 Stimson Hall, or view SML's web site at: www.smlcornell.edu

[ARKEO 319 Archaeology Underwater Summer. 2 credits. Prerequisites: recognized scuba certification and a medical examination required for students engaging in any research; also open to non-divers. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details or an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 1 week. Offered alternate years. Not offered 2001–2002. SML faculty.

An introduction to the subject and a review of the prehistoric archaeology of underwater sites with a strong potential for actual on-site examination. The course also covers the legal aspects of underwater research, and the worldwide potential of the field. Since any archaeological research project involves a great deal more than digging, the course looks at the technical aspects of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. By being taught at the Shoals Marine Laboratory, students are exposed to a wealth of marine and terrestrial invertebrates
in their natural habitats. Regular field excursions allow an excellent opportunity to study freshly collected and in situ representatives of most of the major phyla.

**BIOSM 366-372 SEA Semester**
In cooperation with the Sea Education Association (SEA), the Sholes Marine Laboratory offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. This sequence is repeated approximately once every two months throughout the year. Students spend the first half of SEA Semester (a six-week shore component) in Woods Hole, MA, receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (a six-week sea component) is spent at sea aboard the R/V *Westward* or the R/V *Corwith Cramer*.

Enrollment is open to both men and women judged capable of benefiting from SEA semester, a student must have successfully completed at least one college-level laboratory science course (or its equivalent) in order to be admitted to SEA Semester or SEA Summer Session. No prior sailing experience is necessary. Cornell students enrolled in the SEA Semester must take the entire sequence.

For more information, contact the Sholes Marine Laboratory office, G14 Stimson Hall, or call SEA directly at 800-552-3633. Program costs are to be paid in place of regular Cornell tuition and fees: tuition for the entire 17-credit SEA Semester, approximately $14,000 which includes room and board at SEA.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

**Shore Component (six weeks)**

**BIOSM 366 SEA Introduction to Oceanography**
3 credits. Prerequisite: concurrent enrollment in BIOSM 367 and 368. A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced and developed from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

**BIOSM 367 SEA Introduction to Maritime Studies**
3 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 368. An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

**BIOSM 368 SEA Introduction to Nautical Science**
3 credits. Prerequisites: concurrent enrollment in BIOSM 366 and 367. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

**Sea Component (six weeks)**
Courses 369, 370 and 372 take place aboard the R/V *Westward*, a 125-foot steel auxiliary-powered staysail schooner built in 1961, or the R/V *Corwith Cramer*, a 134-foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship's company of 34. The professional staff of nine includes the captain, the chief scientist, three science watch officers, three deck watch officers, an engineer, and a steward. In addition, one or more visiting investigators are frequently aboard. Up to 24 students round out the complement.

**BIOSM 359 SEA Practical Oceanography I**
4 credits. Prerequisite: BIOSM 366. Theories and problems raised in the shore component are explored in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment; in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

**BIOSM 370 SEA Practical Oceanography II**
4 credits. Prerequisites: BIOSM 368 and 369. Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

**BIOSM 372 SEA Practical Oceanography III**
Summer. 3 credits. Prerequisites: BIOSM 360, 367, and 368. Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, analysis, and reduction of oceanographic data; and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

Richard Cleary, associate dean for undergraduate programs (term ending June 2001)

FACILITIES AND SPECIAL PROGRAMS
Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. Facilities for applied and engineering physics are located in Clark Hall on the College of Arts and Sciences campus, and facilities for agricultural and biological engineering are centered in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.

Cornell programs and centers of special interest in engineering include the following:

Center for Applied Mathematics: A cross-disciplinary center that administers a graduate program.
Center for Manufacturing Enterprise: A joint venture of Cornell, industrial organizations, and the federal government to encourage the development and implementation of modern manufacturing systems.

Center for Radiophysics and Space Research: An interdisciplinary unit that facilitates research in astrophysics and the space sciences.
Center for Theory and Simulation in Science and Engineering: A supercomputer facility used for advanced research in engineering and the physical and biological sciences.

Cornell Electronic Packaging Alliance: A cooperative venture involving Cornell and several corporations in the areas of computing and microelectronics, organized to undertake precompetitive, interdisciplinary research in electronic packaging.

Cornell High Energy Synchronous Source (CHESS): A high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring. Current research projects at CHESS are mainly in areas of structural biology, chemistry, materials science, and physics.

Cornell Nanofabrication Facility (part of the National Science Foundation funded National Nanofabrication Users Network): A center that provides equipment and services for research in the science, engineering, and technology of nanometer scale structures for electronic, chemical, physical, and biological applications.

Cornell Waste Management Institute: A research, teaching, and extension program within the Center for Environmental Research that addresses the environmental, technical, and economic issues associated with solid waste; one facility supported by the institute is the Combustion Simulation Laboratory in the Sibley School of Mechanical and Aerospace Engineering.

Institute for the Study of the Continents: An interdisciplinary organization that promotes research on the structure, composition, and evolution of the continents.

Laboratory of Plasma Studies: A center for interdisciplinary research in plasma physics and lasers.

Cornell Center for Materials Research: An interdisciplinary facility with substantial support from the National Science Foundation, providing sophisticated scientific measurement and characterization equipment.

National Astronomy and Ionosphere Center: The world's largest radio-radar telescope facility, operated by Cornell in Arecibo, Puerto Rico.

National Earthquake Engineering Research Center: A facility recently established by the National Science Foundation and a group of universities in New York State to study response and design of structures in earthquake environments.

National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics: A resource that develops novel measurement and optical instrumentation for solving biophysical problems.

Power Systems Engineering Research Center: A research and instructional program in a laboratory that has a complete real-time model of an electric power system.

Program of Computer Graphics: An interdisciplinary research program that operates one of the most advanced computer graphics laboratories in the United States.

Program on Science, Technology, and Society: A cross-disciplinary unit that sponsors courses and promotes research on the interaction of science, technology, and society.

SRC Program on Microscience and Technology: A center sponsored by the Semiconductor Research Corporation to promote research essential to the development of VLSI devices and circuits.

Ward Laboratory of Nuclear Engineering: Irradiation, isotope production, and activation analysis facilities for interdisciplinary research.

The programs listed on this page are sponsored by College of Engineering units and several industry affiliates. These are in the areas of injection molding, computer science, materials science, geologic study of the continents, and nanometer scale structures.

DEGREE PROGRAMS
Cornell programs in engineering and applied science lead to the degrees of Bachelor of Science, Master of Engineering (with field designation), Master of Science, and Doctor of Philosophy.

General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to the Master of Science and Doctor of Philosophy degrees are administered by the Graduate School. They are described in the Annoucement of the Graduate School and the special announcement "Graduate Study in Engineering and Applied Science." The professional Master of Engineering programs and cooperative programs with the Johnson Graduate School of Management are described below.

UNDERGRADUATE STUDY
Bachelor of Science (B.S.) degrees are offered in the following areas:

Agricultural and Biological Engineering
Chemical Engineering
Civil Engineering
College Program
Computer Science
Electrical and Computer Engineering
Engineering Physics
Earth and Atmospheric Sciences
Materials Science and Engineering
Mechanical Engineering
Operations Research and Engineering

Students in the College of Engineering begin their undergraduate studies in the Common Curriculum, which is administered by the faculty members of the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and the Engineering Advising office. Subsequently most students enter field programs, which are described separately for each academic area. Criteria for entrance into the field programs are described in the section titled "Affiliation with a Field Program."

Alternatively students may enter the College Program (described below), which permits them to pursue a course of study adapted to individual interests.
Students interested in bioengineering may arrange a suitable curriculum through the bioengineering option, the bioengineering minor, the biomedical minor or the College Program. Students interested in supplementing their field program with formal study in another traditional area of engineering may wish to consider one of the engineering minors offered by the college. Information about both the bioengineering option and engineering minors is available in the Engineering Advising Office, 167 Olin Hall. Students interested in environmental engineering and science may pursue the environment option offered by the School of Civil and Environmental Engineering and the Department of Agricultural and Biological Engineering, or the science of earth systems (SES) option offered by the Department of Geological Sciences.

1) Agricultural and biological engineering, chemical engineering, civil engineering, electrical engineering, engineering physics, materials science and engineering, mechanical engineering, and operations research and engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

2) Physics (depending on field) 8-12
3) Chemistry (depending on field) 4-8
4) First-Year writing seminar* 6
5) Computer programming 4
6) Engineering distribution (3 courses)
   a. One Introduction to Engineering 
      (ENGR) 3
   b. Two other engineering distribution courses 
      (ENGRD) 6
7) Liberal studies distribution 
   (6 courses min.) 18 (min.)
8) Approved electives 6
9) Field program
   a. Field required courses 30 cr. min.
   b. Field approved electives 9
   c. Courses outside the field

*One writing-intensive technical course or a course in technical or scientific writing must also be taken; this course may simultaneously satisfy some other requirement.

†One approved course in computing applications must also be taken, this course may simultaneously satisfy some other requirement, such as an engineering distribution course, an approved elective, or a field program course.

From 123 to 133 credits are required for graduation; the specific number of required credits vary depending on which field program is chosen (see field curricula for specific field requirements). Two terms of physical education must be taken in the freshman year and students must demonstrate proficiency in swimming to satisfy a university requirement.

Mathematics

The normal program in mathematics includes MATH 191 (or 190), 192, 293, and 294. Every student must attain a grade of at least C- in MATH 191 (or 190), 192, 293, and 294, or other courses that may be approved as substitutes for these courses. If this requirement is not met the first time a course is taken, the course must be repeated immediately and a satisfactory grade attained before the next course in the sequence may be taken. Failure to achieve at least a C- the second time around will generally result in withdrawal from the engineering program. Courses that are taken a second time in order to meet this requirement do not yield additional credit toward a degree.

Physics

The normal program in physics includes PHYS 112, 213, and 214 or the corresponding honors courses (PHYS 116, 217, and 218). Engineering students are required to have attained a minimum grade of C- in MATH 191 or equivalent before taking PHYS 112. The same minimum grade is required in each subsequent mathematics course before taking the physics course for which it is a prerequisite (e.g., C- in MATH 192 before taking PHYS 213, or C- in MATH 293 before taking PHYS 214). Students in the field programs of ABEN, CHEM, CEE, COM S, EAS (geoscience and SES options), or OR&E may substitute CHEM 208 for PHYS 214.

Chemistry

CHEM 211 or 207 is required for all students. CHEM 211 is a course designed for students who do not intend any further study in chemistry. Typically, CHEM 211 is taken during the freshman year, but students who wish to complete the physics program (PHYS 112, 213, and 214) first may postpone CHEM 211 until the sophomore year.

In general, students intending to affiliate with the following departments and schools usually take CHEM 211: Applied and Engineering Physics, Civil Engineering (not students in the environmental engineering option), Computer Science, Electrical and Computer Engineering, Materials Science and Engineering, Mechanical and Aerospace Engineering, and Operations Research and Industrial Engineering. Students considering Chemical Engineering must take CHEM 207 in the fall of their freshman year, to be followed by CHEM 208 in the spring term. All students considering the environmental option in Civil Engineering, Agricultural and Biological Engineering, the science of earth systems option in Earth and Atmospheric Sciences, or a health-related career such as medicine, should take the CHEM 207-208 sequence.

First-Year Writing Seminars

Each semester of their freshman year, students choose a First-Year Writing Seminar from among more than one hundred courses offered by over thirty different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

Technical Writing

The ability to communicate is essential to successful professional practice. In addition to taking two First-Year Writing Seminars, engineering students must have a significant amount of instruction and practice in technical or scientific writing. They can fulfill this technical-writing requirement by enrolling in an Engineering Communications course (e.g., ENGR/C 334 or ENGR/C 350), selected courses in the Communications department (COMM 260, 263, or 352), or an approved writing-intensive engineering course, including

- ABEN 489
- ABEN 493 (with coregistration in ABEN 450 or ABEN 473)
- ENGRD/A&EP 264
- CHEM 432
- M&AE 427
- MS&E 403-404
- MS&E 405-406

For information about other options for fulfilling the writing requirement, please consult the Engineering Advising Office, 167 Olin Hall or contact the Engineering Communications Program, 465 Hollister Hall.

Computing

In either the first or second term of their freshman year, students normally take COM S 100, Introduction to Computer Programming. Before graduation they must take an additional course with a significant amount of computing applications; this course may also be used to meet another graduation requirement. Courses that satisfy this requirement are ABEN 453, ABEN 475, ENGRD/COM S 211, ENGRD/COM S 322, ENGRD/CEE 241, ENGRD/A&EP 264, ECE 423, M&AE 470, M&AE 479, M&AE 575, and M&AE 578. The recommended choice for students intending to enter the field program in Engineering Physics is ENGRD 264; in Chemical Engineering, ENGRD 211, 322, or 241; in Civil Engineering, ENGRD 241; in Computer Science, ENGRD 211; in Electrical and Computer Engineering, ENGRD 211; in Mechanical Engineering, M&AE 470, M&AE 479, M&AE 575, or M&AE 578; and in Operations Research and Engineering, ENGRD 211.

Engineering Distribution

Three engineering distribution courses (nine credits) are required. One course must be an Introduction to Engineering Course (designated by ENGRD) to be taken by the student during their freshman year. The Introduction to Engineering course will introduce students
to the engineering process and provide a substantive experience in an open-ended problem solving context. See the Introduction to Engineering Course listing for current course offerings.

The other two distribution courses must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

1) **Scientific computing**
- ENGRD 211, Computers and Programming
- ENGRD 241, Engineering Computation
- ENGRD 322, Introduction to Scientific Computation

2) **Materials science**
- ENGRD 261, Introduction to Mechanical Properties of Materials

3) **Mechanics**
- ENGRD 202, Mechanics of Solids
- ENGRD 203, Dynamics

Students in the field program in Engineering Physics may substitute A&EP 333 for ENGRD 203.

4) **Probability and statistics**
- ENGRD 270, Basic Engineering Probability and Statistics

Students in the field program in Electrical and Computer Engineering may substitute ECE 310 for ENGRD 270. Students in the field program in Engineering Physics may substitute ECE 310 or MATH 471 for ENGRD 270. Students in the field programs in Civil Engineering and Agricultural and Biological Engineering may substitute CEE 304 for ENGRD 270.

5) **Electrical sciences**
- ENGRD 210, Introduction to Circuits for Electrical and Computer Engineers
- ENGRD 231, Introduction to Digital Systems
- ENGRD 264, Computer-Instrumentation Design

6) **Thermodynamics and energy balances**
- ENGRD 219, Mass and Energy Balances
- ENGRD 221, Thermodynamics

7) **Earth and life sciences**
- ENGRD 201, Introduction to the Physics and Chemistry of the Earth
- ENGRD 250, Engineering Applications in Biological Systems

8) **Biology and chemistry**
- BIO G 101 and 103, Biological Sciences, Lecture and Laboratory
- BIO G 105, Introductory Biology
- BIO G 107, General Biology (summer only)
- CHEM 389, Physical Chemistry I

Some fields require a specific engineering distribution course as a prerequisite for the upperclass course sequence. These requirements are:

- Agricultural and Biological Engineering: ENGRD 202
- Chemical Engineering: ENGRD 219
- Civil Engineering: ENGRD 202
- Computer Science: ENGRD 211 (co-enrollment in COM S 212 strongly recommended)

**Electrical and Computer Engineering:** ENGRD 231 (co-enrollment in ECE 232 strongly recommended)

**Earth and Atmospheric Sciences:** ENGRD 201

**Materials Science and Engineering:** ENGRD 261

**Mechanical Engineering:** ENGRD 202

**Operations Research and Engineering:** ENGRD 270

### Liberal Studies Distribution

A minimum of six required liberal studies courses (totaling at least 18 credits) may be chosen from approved courses in four categories: (a) humanities or history, (b) social sciences, (c) foreign languages, and (d) expressive arts. (No First-Year Writing Seminar may be used to meet the liberal studies requirement.)

- At least two courses must be chosen from category (a).
- At least two courses in either category (a), (b), or (d) must be from the same field of study and in the same category. One of these courses must be at or above the 200-level or be an explicit prerequisite of the other.

Following each category is a list of approved courses. Every effort has been made to keep the lists up to date, but errors sometimes occur. Students who wish to use a course that seems to fit the category description but is not listed should contact the Engineering Advising Office.

#### a) Humanities or History
**American Studies**
- 101, 201, 202

**Architecture**
- 313, 312, 181, 182, 382

**Art**
- 317, 318

**Africana Studies**
- 202, 204, 205, 211, 280, 285, 304, 310, 361, 370, 381, 404, 422, 425, 431, 432, 435, 455, 475, 483

**Anthropology**
- 290, 451, 452, 453, 455

**Archeology**
- (courses in Old World Archeology and 493)

**Asian Studies**
- (courses in Asian art, literature, religion, or cultural history)

**Biology and Society**
- 205, 206

**Classics**
- (all courses except 285, 356, 360, 361, and language courses)

**Collective Bargaining, Labor Law, and Labor History**
- 100, 101, 384, 385, 386, 482, 488

**Communication**
- 426

**Comparative Literature**
- (all courses)

**Economics**
- 323, 324, 325, 326, 417

**Engineering ENGRG 198, 250, 296**

**English**
- (all courses except ENGL 285 and writing courses, whose numbers end in the 80s; e.g., 288, 289, 282, etc.)

**French Literature**
- (all courses)

**German Literature**
- (all courses)

**History**
- (all courses)

**History of Art**
- (all courses except ART H 200)

**Industrial and Labor Relations Interdepartmental Course**
- 451

**International and Comparative Labor Relations**
- 430

**Italian Literature**
- (all courses)

**Jewish Studies**
- 274, 351, 352

**Labor Economics**
- 448

**Linguistics**
- 109

**Music**
- (only introductory, music theory, music history, and digital music courses)

**Natural Resources**
- 407

**Near Eastern Studies**
- (courses listed under history, civilization, or literature)

**Philosophy**
- (all courses except courses in logic and PHIL 383)

**Religious Studies**
- 101

**Russian Literature**
- (all courses)

**Science and Technology Studies**
- 201, 205, 206, 233, 250, 281, 282, 283, 287, 292, 355, 360, 433, 444, 447, 525, 687, 711

**Spanish Literature**
- (all courses)

**Theater Arts**
- (only courses in Theater Studies, film analysis, and history)

**Women's Studies**

#### b) Social Sciences

**African Studies**

**Agricultural Economics (ARME)**
- 100, 250, 430, 431, 432, 450, 451, 464

**Anthropology**
- (all courses except 101 and courses in Biological and Ecological Anthropology)

**Archeology**
- (all courses except those in Methodology and Technology)

**Architecture**
- 342

**Asian American Studies**
- 110

**Asian Studies**
- (courses in Asian anthropology, economics, government, linguistics, or sociology)

**Biological and Society**
- 201, 301, 406, 407

**City and Regional Planning**
- 100, 101, 314, 361, 382, 404, 442

**Communication**
- 116, 120, 240, 410, 420

**Design and Environmental Analysis**
- 150, 250

**Economics**
- (all courses except 315, 317, 318, 319, 320, 321, 326. Engineering students should generally take ECON 301–302 and not 101–102, unless they have had no calculus.)

**Education**
- 210, 212, 271, 311, 317, 322, 360, 413, 477

**Government**
- (all courses)

**Human Development and Family Studies**
- (all courses)

**International and Comparative Labor Relations**
- (all courses)

**Labor Economics**
- (all courses except 345 and 448)

**Linguistics**
- (all courses)

**Natural Resources**
- 350, 400

**Organizational Behavior**
- (all courses)

**Policy Analysis and Management**
- (all courses except 305, 323, 326, 371, 424, 425, 606, and 607)
Courses and Minimum Grades

Rural Sociology (all courses)

Sociology (all courses)
Textiles and Apparel 245

Foreign Language
This category includes all foreign language courses, if two or more foreign language courses are used to fulfill part of the liberal studies requirement, they must be a sequence of courses in the same language. The rules for placement and advanced placement credit in languages are those of the College of Arts and Sciences. Students may obtain up to six advanced placement credits equal to two courses according to these rules.

Expressive Arts
African Studies 303, 425, 430

Art (studio courses)
Biological Sciences 208, 209

Communications (all courses except 116, 120, 314, 410, 416, 420, 426, 465)

Design and Environmental Analysis 101, 102

Engineering (all Engineering Communications courses, which are designated ENGR)

English (expository and creative writing courses, whose numbers end in the 80's, e.g., 288, 289, 382, etc.)

Floriculture (courses in Freehand Drawing and Scientific Illustration)

Industrial and Labor Relations 452

Music (courses in musical performance, musical organizations and ensembles; three one-credit courses equals one course)

Science and Technology Studies 352

Theater Arts (all courses except those listed in category (a) above)

Electives
- Approved electives—six credits required
- Approved electives—nine credits
- Approved electives—nine credits
- Approved electives—nine credits

Social Issues of Technology

Engineering Advising Office
From the time that students enter the college as freshmen until they are affiliated with a major field or the College Program before the second term of the sophomore year, they are under the administration of the Engineering Advising Office, which implements the academic policies of the College Curriculum Governing Board. The office offers general advising and counseling services and serves as the primary resource center for undergraduate students in the college. The Engineering Minority Programs office and the Women's Programs in Engineering office provide additional specialized services.

Freshman Year Requirements

Students expected to complete courses (or receive credit for) the following core requirements:

- MATH 191 (or 190) and MATH 192
- Two of the following: CHEM 201, 207, 208, PHYS 112, 213, 214*
- COM S 100
- Two First-Year Writing Seminars
- One Introduction to Engineering course (ENGR designation)
- Two Physical Education courses

*Students with an interest in pre-med (or other health-related careers), Agricultural and Biological Engineering, Chemical Engineering, the environmental option in Civil Engineering, or the science of earth systems option in Earth and Atmospheric Sciences should enroll in the CHEM 207-208 sequence during their freshman year.

Affiliation with a Field Program

Students must apply for affiliation with a field program during the first term of their sophomore year, although earlier affiliation may be granted at the discretion of the field.

Field Affiliation form. To affiliate with a field program, students must (1) have a 2.0 cumulative grade point average and (2) have satisfied the field's coursework and grade requirements as specified below:

(Active note that fields may impose alternative affiliation requirements for students applying for affiliation later than the first semester of the sophomore year.)

Field Program Courses and Minimum Grade Requirements

Agricultural & Chemical Engineering
No more than one grade below C- in mathematics and science courses and ABEN 151 or equivalent

Engineering
No more than one grade below C- in chemistry, mathematics, physics, or chemical engineering courses and a 2.2 GPA in mathematics, science, and chemical engineering courses

Civil Engineering
A 2.0 GPA in all engineering and science courses and a grade of C- or better in ENGRD 202 (for students in the environmental option who do not take ENGRD 202 prior to affiliation, a grade of C- or better in CHEM 208 is required)

Computer Science
Completion of MATH 293, ENGRD/COM S 211, COM S 212 and COM S 280; a grade of C or better in all COM S courses (excluding COM S 100), with the overall average of these courses being not less than 2.7; a grade of C or better in all MATH courses, with an overall average of these courses being no less than 2.7; an overall GPA of 2.5 or better recommended. (In the event of repeated courses, both grades will be counted in the averages used for affiliation.)

NOTE: COM S 212 required for class of 2004 and later.

Electrical & Computer Engineering
Good academic standing in the College of Engineering

Must have completed MATH 293, PHYS 213, and one of ENGRD 210 or ENGRD 231

Must have a minimum grade of C+ and an average of 2.5 in all math, physics and engineering courses

The best grade obtained in repeated course will be used to satisfy the minimum grade requirement and all grades (including repeats) will be used to compute the average.

Engineering Physics
A grade of B- or better in all required mathematics and physics courses
Geological Sciences  Good academic standing in the College of Engineering
Materials Science & Engineering  A grade of C- or better in all physics and chemistry courses and a grade of C or better in ENGRD 201.
Mechanical Engineering  A grade of C- or better in mathematics and science courses and ENGRD 202.
Operations Research & Engineering  A grade of C- or better in MATH 191 and 192, and a 2.0 GPA in all mathematics, science, and engineering courses (both overall and in the term immediately prior to affiliation).

Students must be affiliated or conditionally affiliated by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.

SPECIAL PROGRAMS

Dual Degree Option
A special academic option, intended for superior students, is the dual degree program, in which both a Bachelor of Science and either a Bachelor of Arts or Bachelor of Fine Arts degree can be earned in about five years. Students registered in the College of Engineering, the College of Arts and Sciences, or the College of Architecture, Art, and Planning may apply and, after acceptance of their application, begin the dual degree program in their second or third year. Those interested should contact the appropriate coordinators of dual degree programs at the following locations: 55 Goldwin Smith Hall (for Arts and Sciences) or 135 East Sibley (for Architecture, Art, and Planning), and the Director of Engineering Advising, 167 Olin Hall.

Double Major in Engineering
The Double Major option, which makes it possible to develop expertise in two allied fields of engineering, generally requires at least one semester beyond the usual four years. Students affiliate with one field following normal procedures and then petition to enter a second field before the end of their junior year. All the requirements of both fields must be satisfied. Further information is available from the Engineering Advising Office, 167 Olin Hall, and the individual field consultant offices.

College Program
Individually arranged courses of study under the College Program are possible for those well-qualified students whose educational objectives cannot be met by one of the regular field programs. Often the desired curriculum is in an interdisciplinary area. Each program is developed by the student in consultation with faculty advisers and must be approved by the College Program Committee, which is responsible for supervising the student's work. Students apply to enter the College Program by the end of the first term of the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed major and minor subject areas. If approved, the program is the curricular contract to which the student must adhere. Normally, students applying to the College Program should have a 3.0 cumulative grade point average.

Every curriculum in the College Program, with the exception of certain faculty-sponsored programs, must include an engineering major and an educationally related minor. The major may be in any subject area offered by schools or departments of the college; the minor may be in a second engineering subject area or in a logically connected nonengineering area. The combinations must clearly form an engineering education in scope and in substance and should include engineering design and synthesis as well as engineering sciences. In addition to 48 credits in the major and minor subjects, including at least 32 credits in engineering courses, each program includes the normally required courses in humanities and social sciences and approved electives.

Further information about the College Program may be obtained from the Director of Engineering Advising, 167 Olin Hall.

Important note: because no single standardized curriculum exists, the College Program is not accredited. College Program students who intend to seek legal licensing as a Professional Engineer should be aware that this non-accredited degree program will require additional education, work, and/or experience to qualify for eligibility to take the Fundamentals of Engineering examination, and may affect acceptance into engineering graduate programs.

Engineering Minors
The Engineering Minor is a supplement to the regular bachelor degree programs in the college, including the College Program, and recognizes formal study of a particular technical subject area in engineering normally outside the student's major. Therefore, it may be necessary for some students choosing to complete the requirements for an engineering minor to spend more than the traditional eight semesters to complete their studies at Cornell. In many cases, however, courses fulfilling minor requirements may also satisfy other degree requirements (e.g., distribution courses, approved electives, or field-approved electives). Students undertaking a minor are expected to complete the requirements during the time of their continuous undergraduate enrollment at Cornell.

To complete an engineering minor, an undergraduate engineering student must:
• be enrolled in a major field program that approves the participation of its affiliates in the desired minor.
• successfully complete all the requirements for a bachelor of science degree in engineering.
• satisfactorily complete six courses (18 credit minimum) as stipulated in a college-approved minor offered by an engineering school or department other than that which offers the student's major.

Students may apply for certification of an engineering minor at any time after the necessary coursework has been completed in accordance with published standards. Students who receive certification in an approved engineering minor will be recognized by means of an official notation on their Cornell transcript following graduation.

The College of Engineering currently offers minors in the following areas (offering departments are indicated in parentheses):
Applied Mathematics (T&AM)
Biological Engineering (ABEN)
Biomedical Engineering (T&AM)
Civil Infrastructure (CEE)
Computer Science (COM S)
Electrical and Computer Engineering (ECE)
Engineering Management (CEE)
Engineering Statistics (OR&IE)
Environmental Engineering (ABEN/CEE)
Geological Sciences (EAS)
Industrial Systems and Information Technology (OR&IE)
Materials Science and Engineering (MS&E)
Mechanical Engineering (M&AE)
Operations Research and Management Science (OR&IE)

Additional information on specific minors can be found in the departmental sections of this publication, The Engineering Undergraduate Handbook, the undergraduate field office of the department offering the minor, and the Engineering Advising Office.

The Bioengineering Option and the Biological Engineering and Biomedical Engineering Minors
Students wishing to apply the concepts and methods of the engineering, computational, and physical sciences to living systems or health issues may pursue one of three courses of study.

(1) the bioengineering option, requiring completion of four bioengineering courses (12 credit hours minimum) and one credit hour of Bioengineering Seminar (ENGRG 501). The student will receive official notation on their transcript. Further information is available in the Engineering Advising Office, 167 Olin Hall.

(2) the bioengineering minor, requiring six courses (18 credit hours minimum) including ABEN 350, two analysis courses, two application courses and one basic science course (see p. ). This minor provides the student an opportunity to further their understanding of living systems and the basic transport processes that occur in these systems. Further information is available from the ABEN Program Coordinator, 207 Riley-Robb Hall.

(3) the biomedical minor, requiring six courses (18 credit hours minimum) from five different groups—Biomaterials and Biomechanics, Biomedical Systems, Instrumentation, Molecular and Cellular Biology, and Physiology (see p. ). Further information is available from the T&AM Field Consultant, 221 Kimball Hall.

International Programs
All students who plan to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study.
An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important to today's engineers. In keeping with the American goals of internationalizing the curriculum, the College of Engineering encourages students to study or work abroad during their undergraduate years. For further information on these and other opportunities to add an international dimension to your undergraduate education, see the staff in the Engineering Advising Office, 167 Olin Hall. Students who seek advice on obtaining an international co-op work experience may visit the Engineering Cooperative Education and Career Services office, 201 Carpenter Hall.

Engineering Communications Program

The Engineering Communications Program (ECP) provides instruction in the written, oral, and visual presentation of technical and scientific information. Engineering Communications in Engineering (ENGRG 350), and Communications for Engineering Majors (ENGRG 355), are three-credit seminars that give students a thorough introduction to these areas. These courses use material from the engineering and business workplace, and many assignments are based on actual events and professional situations. Students learn to direct their writing and presentations to different audiences that have varying roles and levels of expertise. They learn about effective teamwork and deal with organizational and ethical issues in the communications they encounter and produce. Classes have lively discussion, and the limited size of sections ensures close attention to individual students' work. Occasionally, the program's instructors offer courses or independent studies in topics of special interest. ECP courses fulfill the college's technical writing requirement (see Requirements for Graduation).

In addition to offering communications seminars, the program works with the engineering fields to integrate communications instruction into technical courses. The program presents workshops and lectures on relevant communications topics and helps to develop assignments, instructional materials, and assessment strategies for writing and oral presentations. The goal of these writing-intensive efforts is to strengthen students' understanding of engineering course material and increase their ability to communicate it. The ECP also gives presentations to student groups on effective writing, oral communication, and teamwork and has been involved in innovative educational projects such as Peer Teaching in Engineering (ENGRG 470), a collaborative learning initiative in physics, mathematics, chemistry, and engineering design. The program awards several annual prizes for outstanding writing, oral presentation, and teamwork. For further information, contact the director, 465 Hollister Hall.

Engineering Cooperative Education Program

A special program for undergraduates in most fields of engineering is the Engineering Cooperative Education Program, which provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession.

To be eligible, a student must have been enrolled at Cornell for four semesters prior to working, with a cumulative GPA of 2.7 or higher. (Students in Computer Science and Agricultural and Biological Engineering are eligible, even though they may not be registered in the College of Engineering.) Applicants are interviewed by representatives of participating employers and select their work assignments from any offers they receive. Those students who are offered assignments and elect to join the program usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin the first co-op work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same company the following summer. Co-op students return to campus for their senior year and graduate with their class. Further information may be obtained from the Engineering Cooperative Education and Career Services office, 201 Carpenter Hall.

MASTER OF ENGINEERING DEGREE PROGRAMS

One-year Master of Engineering (M.Eng.) programs are offered in 13 fields. These programs are discussed in this announcement in connection with the corresponding upperclass engineering field programs because the curricula are integrated. Cornell baccalaureate engineering graduates frequently continue their studies in the M.Eng. program, although the program is also open to qualified graduates of other schools. More information is available through the Master of Engineering website: www.engineering.cornell.edu/grad. The M.Eng. degrees and the academic fields under which they are described are listed below.

M.Eng. (Aerospace): Mechanical and Aerospace Engineering
M.Eng. (Agricultural and Biological): Agricultural and Biological Engineering
M.Eng. (Chemical): Chemical Engineering
M.Eng. (Civil & Environmental): Civil and Environmental Engineering
M.Eng. (Computer Science): Computer Science
M.Eng. (Electrical): Electrical and Computer Engineering
M.Eng. (Engineering Physics): Applied and Engineering Physics
M.Eng. (Geology): Earth and Atmospheric Sciences
M.Eng. (Materials): Materials Science and Engineering
M.Eng. (Mechanical): Mechanical and Aerospace Engineering
M.Eng. (Nuclear): Nuclear Science and Engineering
M.Eng. (ORIE): Operations Research and Industrial Engineering

Candidates for a professional master's degree who wish to specialize in areas related to manufacturing may avail themselves of two special programs. The manufacturing systems engineering option may be centered in any one of the fields listed above. This option is attested to by a Dean's Certificate in addition to a diploma at the time of graduation. An industrial internship program provides opportunities to combine on-campus education with off-campus industrial experience.

For further information, contact the director, 465 Hollister Hall.

Cooperative Programs with the Johnson Graduate School of Management

Students interested in deferring admissions to the Johnson Graduate School of Business Management may be eligible for the Knight Scholarship Award. Upon completion of the M.Eng. degree, Knight Program students spend three to five years in relevant full-time work experience before starting the M.B.A. program. More information about the Knight program or admission to the joint degree programs may be obtained from the Office of Research, Graduate Studies, and Professional Education, 146 Olin Hall.

Outstanding students with relevant work experience may be admitted to one of two joint Master of Engineering and Master of Business Administration degree programs. One, which Cornell students enter during their undergraduate career, makes it possible to earn the B.S., M.Eng., and M.B.A. in six years—one year less than such a program would normally require. The second program, which is available to students who already
hold baccalaureate degrees from Cornell or other institutions, requires five semesters and leads to both the M.Eng. and M.B.A. Students are required to apply for admission to both the College of Engineering and the Johnson Graduate School of Business Management.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering freshmen who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:

1. Advanced placement examinations given and scored by the College Entrance Examination Board (CEEB);
2. General Certificate of Education (GCE) Advanced ("A") Level Examinations;
3. International Baccalaureate (IB) Higher Level Examinations; or
4. Cornell's departmental placement examinations, given during orientation week prior to the beginning of fall-term classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways.

1. They may enroll in a more advanced course in the same subject right away.
2. They may substitute an elective course from a different area.
3. They may enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores for CEEB or Cornell Departmental AP Exams

The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

Mathematics: MATH 191 (or 190), 192, 293, and 294 are required.

First-term math (MATH 191). AP credit may be earned by:

- a score of 3, 4, or 5 on the CEEB BC exam, or
- a score of 5 on the CEEB AB exam, or
- a passing score on the Cornell departmental exam for first-term math.

First-year math (through MATH 192). AP credit may be earned by:

- a passing score on the Cornell departmental exam for first-year math.

Physics: PHYS 112 and 213 are required.

PHYS 112. AP credit may be earned by:

- a score of 4 or 5 on the mechanics portion of the CEEB C exam, or
- a score of 5 on the CEEB B exam only if the student has at least one semester of AP or transfer credit in first-term mathematics at the time of matriculation, or
- a passing score on the Cornell departmental exam for PHYS 112.

Note: Students who have received credit for PHYS 112 may not enroll in PHYS 213 unless concurrently enrolled in MATH 292.

PHYS 213. Students receiving a 5 on the Electricity and Magnetism portion of the C exam may choose to accept AP credit for PHYS 213 or placement in PHYS 217 with no AP credit for PHYS 215. For advice or more information contact the departmental representative at 607 255-6016.

Chemistry: CHEM 207 or CHEM 211 is required.

CHEM 207 or CHEM 211. AP credits may be earned by:

- a score of 5 on the CEEB AP exam, or
- a passing score on the Cornell departmental exam for Chemistry.

Note: students who are successful in obtaining AP credit for CHEM 207 and who are considering majors in Chemical Engineering or Materials Science and Engineering should consider enrolling in CHEM 215. Those who are offered AP credit for CHEM 207 can elect to take CHEM 215 and will receive academic credit for CHEM 207. You may want to discuss this option with your faculty adviser.

Computing: COM S 100 is required. AP credit may be earned by:

- a score of 4 or 5 on the CEEB A or AB exam, or
- a passing score on the Cornell departmental exam for COM S 100.

Biology: Biology is not required of engineering students, although it is a popular option as an elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:

- eight credits will be offered to students who receive a 5 on the CEEB AP exam;
- six credits will be offered to students who receive a 4 on the CEEB AP.

Those who want to study more biology should contact the Office of Undergraduate Biology, 200 Stimson Hall, to discuss proper placement.

First-Year Writing Seminar: Two First-Year Writing Seminars (for a total of six credits) are required.

AP credit for one First-Year Writing Seminar may be earned by a score of 5 on either of the CEEB AP English exams. Students who earn a score of 4 on the AP English Language and Composition exam will be offered three credits which may be applied toward the Humanities/History category of the Liberal Studies distribution requirement. Students who earn a score of 4 on the AP English Language and Composition exam will be offered three credits which may be applied toward the Expressive Arts category of the Liberal Studies distribution requirement.

Liberal Studies Distribution: Six courses beyond two First-Year Writing Seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CEEB) AP tests. AP credits earned in the humanities or social sciences cannot be used to fulfill the "upper level" liberal studies requirements.

Modern Languages: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test are entitled to three credits. In order to qualify for the CASE exam, the student must score at least 650 on a College Placement Test (taken either in high school or at Cornell during Orientation Week). A score of 2 on the CASE entitles the student to three credits, and a score of 3 entitles the student to six credits which are equivalent to two courses. Modern language AP credits may be used to satisfy the foreign language category of the liberal studies distribution, or may meet an approved elective requirement, contingent on discussions with the faculty adviser.

Advanced Placement and Credit for International Credentials

Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

General Certificate of Education Advanced Level Examination (GCE "A")

Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Level Certificate of Education in Malaysia and Singapore—principal passes only—are considered equivalent in standard to GCE "A" Levels.

Subject | Marks | Credit
--- | --- | ---
Biology | A or B | 8 credits
Chemistry | A | 8 credits (CHEM 207 and 208)
 | B | 4 credits (CHEM 207)
Mathematics | A or B | 8 credits (MATH 191/190 and 192)
 | C | 4 credits (MATH 191/190)
Physics | A or B | 4 credits for PHYS 112; 4 additional credits for PHYS 213 are granted to a combination of grades of A or B and a minimum of 8 Advanced Placement (or advanced standing) credits in mathematics.

International Baccalaureate (IB) Higher Level Examination

Subject | Marks | Credit
--- | --- | ---
Biology | 7 | 8 credits
 | 6 | 6 credits
Chemistry | 6 or 7 | 4 credits (CHEM 207 or CHEM 211)
the offering institution (bearing the institutional seal and registrar's signature) must be sent to the Engineering Registrar's office before official transfer credit will be awarded.

- To apply for transfer credit to satisfy requirements in mathematics, science, engineering, and liberal studies distribution requirements, a student must receive approval from the department offering an equivalent course at Cornell. The department certifying the course may require course materials, textbooks used, etc., in addition to the course description before approving the course.

- Departmental approval is not required to apply for transfer credit which satisfies liberal studies distribution requirements. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASPAC) in the Engineering Advising Office.

- Cornell does not award credit for courses in which a student has earned a grade of less than C; schools and departments may stipulate a higher minimum grade.

- College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency by taking the appropriate AP or Cornell departmental placement examination, as described in the Academic Credit section.

- Following matriculation, students may apply up to 18 credits of transfer and/or Cornell extramural credit toward bachelor's degree requirements.

- Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements.

- No more than 72 total transfer credits (combination of those taken both before and after matriculation) may be used to meet graduation requirements.

- Summer session courses taken at Cornell are not considered transfer credit.

- A more detailed description of the college's regulations governing transfer credit may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students, which may be obtained from the Engineering Advising Office, 167 Olin Hall.

Transfer Credit

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma and must be documented as such in writing by the secondary institution.

Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell. Transfer credit will not be awarded for courses taken during a semester in which the student is enrolled at Cornell.

- To apply for transfer credit, students must complete and submit a Transfer Credit Form (one form for each request), accompanied by a course description (Transfer Credit Forms are available from the Engineering Advising or Registrar's offices and should be submitted prior to enrollment.) An official transcript from

Requirements for freshman engineering students to be in good standing at the end of the first semester are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 12 credits passed, including at least two courses from mathematics, science, and/or engineering

2. A C- or better in the mathematics course

3. A semester average of 2.0 or higher

4. No F, U, or INC grades

Requirements for second-semester freshman and first-semester sophomores to be in good standing are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 14 credits passed in courses that meet engineering degree requirements

2. A C- or better in the mathematics course, if one was taken

3. A semester average of 2.0 or higher

4. No F, U, or INC grades

Academic Progress

The total number of credits required for graduation range from 123 to 133, depending on the field program. Therefore, an average semester credit load ranges from approximately 15 to 17 credits.

Because mathematics is pivotal to the study and practice of engineering, students must earn a grade of C- or better in MATH 191 (or 190), 192, 293, and 294.

Those who fail to meet this standard are allowed to repeat a course once in the following semester. Failure to achieve at least a C- the second time will generally result in withdrawal from the College of Engineering. Physics and advanced mathematics courses often have mathematics prerequisites, and having to repeat the prerequisite course may delay progress in the physics and mathematics curricula.

Dean's List

Dean's List citations are presented each semester to engineering students with exemplary academic records. The criteria for this honor are determined by the dean of the college.

- For 2001–2002, the requirement is a semester average of 3.4 or higher (without rounding); no failing, unsatisfactory, missing, or incomplete grades (even in physical education); and at least 12 letter-grade credits (not S-U). Students may earn Dean's List status retroactively if they meet these criteria after making up incomplete grades. Students who earn Dean's List status receive certificates from the Engineering Registrar's Office, and the honor is noted on the transcript.

Graduating with Distinction and Honors Program

Graduating with Distinction

Meritorious students graduating with a Bachelor of Science degree from the College of Engineering may also be designated cum laude, magna cum laude, or summa cum laude.
To be eligible for field honors, a student must both the GPA and program requirements be met. Each student who enters a program with and maintains a GPA greater than or equal to 3.75 in their last semester and meets the conditions above in the prior four semesters.

Magnae cum laude will be awarded to all engineering students with an overall GPA greater than or equal to 3.75. If the student's major field has an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the field may recommend that a student graduate with the additional diploma and transcript notation of "With Honors." For more specific information, see the field program outline in this catalog.

Field Honors Program

To be eligible for field honors, a student must enter a program with and maintain a cumulative GPA of greater than or equal to 3.75. If the student's major field has an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the field may recommend that a student graduate with the additional diploma and transcript notation of "With Honors." For more specific information, see the field program outline in this catalog.

S-U Grades

Many courses offered by the university may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Under the S-U option, students earning the letter grade equivalent of C- or better in a course will receive a grade of S; those earning less than C- will receive a grade of U. (Any course in which a U grade is received does not count toward graduation requirements.)

Engineering students may choose to receive an S-U grade option under the following conditions:

- The course in question must be offered with an S-U option.
- The student must have previously completed at least one full semester of study at Cornell.
- The proposed S-U option must count as either a liberal studies distribution or an approved elective in the engineering curriculum.
- Students may only elect to enroll S-U in one course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U only" may be taken in the same semester as the "elected S-U" course.)

The choice of grading option for any course is initially made during the pre-enrollment period. Grading options may be changed, however, by submitting a properly completed Add/Drop Form to the Engineering Registrar by the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which they were previously enrolled (in the current semester) under a different grade option.

Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least one semester or an equivalent period of instruction as full-time students at Cornell. They must also spend at least three semesters of this time affiliated with an engineering field program or with the College Program.

Students who are on a voluntary leave of absence are permitted to register for courses extramurally only with the approval of their field (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) after matriculation may be used to satisfy the requirements for the bachelor's degree in engineering.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad Office, 474 Uris Hall. Programs should be planned in consultation with the staff of the Engineering Advising Office, who can provide information on credit-evaluation policies and assist in the petitioning process.

Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The office responsible for assisting students with the transfer process is the Internal Transfer Division Office. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with the Engineering Advising Office.

Students who wish to transfer into the College of Engineering can apply at the Engineering Advising Office. Students must complete and return the transfer application form available in 167 Olin Hall. Students who enter the college as second-semester sophomores or later must be accepted by a field program as part of the admission process. Students who enter as a second-semester freshman or first-semester sophomore may be accepted into the college without the requirement of field affiliation but must be sponsored by a field program.

Students who hope to transfer into engineering should take courses in mathematics, chemistry, computer science, physics, and engineering that conform to the requirements of the Common Curriculum. Interested students should discuss their eligibility with an adviser in the Engineering Advising Office, 167 Olin Hall.

Leaves of Absence

A leave of absence may be voluntary, medical, or required. A description of each follows:

Voluntary Leave: Students sometimes find it necessary to suspend their studies. To do this, students must petition for a leave of absence for a specified period of time and receive written approval.

Affiliated students request leave through their fields. Unaffiliated students request leave through the Engineering Advising Office; the first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a field and while not in good standing may be given a "conditional leave." This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

Leaves of absence are not generally granted for more than two years. A leave of absence granted during a semester goes into effect on the day it is requested and lasts for a minimum of six months. If a leave is requested after the twelfth week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a "W" will appear on the transcript for each course). Students who owe money to the university are ineligible for leaves of absence. If courses taken during a leave are to satisfy Cornell degree requirements, they must be approved in advance through a formal transfer petition. (See previous section of Transer Credit for details.)

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications, which is especially true for those who have taken out educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing, at least six weeks before the beginning of the semester the student plans to return.

Medical Leave: Medical leaves are granted by the college only upon recommendation by a physician from Gannett Health Center. Such leaves are granted for at least six months and up to five years, during which time the student may return at the beginning of any term after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before the leave will be reinstated. The student's academic standing will also be subject to review both at the time the leave is granted and upon the student's return.

Required Leave: A required leave of absence is imposed in cases where the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example where a leave of absence would be required might be failure in several courses in a semester. Unless the student is ahead in the curriculum, the leave would be required. If the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are only offered in the fall or the spring semester. Leaves are given when the probable success is increased by deferring the student's return by one semester (or, in unusual circumstances, one year).

Rejoining the College

Students wishing to rejoin the college who have not yet affiliated with a field should request permission to rejoin in a letter to the Engineering Advising Office; affiliated students should contact their field office. This must be
done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student's activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

Withdrawal from the College

A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

Voluntary Withdrawal: Students who voluntarily withdraw from the engineering degree program sever all connection with the college. Unaffiliated students who wish to withdraw should do so through the Engineering Advising Office. Affiliated students should contact their field office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.

Any student who fails to register in the first three weeks of the semester, without benefit of a leave of absence or permission for study in absence, will be deemed to have withdrawn.

Students who withdraw from the College of Engineering are eligible to apply for admission to one of the other six colleges at Cornell. The intra-university transfer process should be followed.

If students who have withdrawn subsequently wish to return, they must make a formal application for readmission. This is rarely granted. It is subject to a review of the student's academic background and depends on available space in the college and in the student's major field.

Required Withdrawal: Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action only withdraws them from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university.

ENGINEERING, COOPERATIVE EDUCATION, AND CAREER SERVICES

This office assists engineering students (freshmen through Ph.D.) in career development and job search issues, and administers the Engineering Cooperative Education Program (see separate entry under the Engineering Special Programs section). Individual advising and group seminars are available, and more than 300 national employers visit the office annually to recruit technical students and graduates; additional job opportunities are posted electronically. Both undergraduate and graduate students can use these services to pursue permanent or summer employment opportunities; however, students seeking co-op opportunities must meet specific requirements. Further information on all services is available from the Engineering Cooperative Education and Career Services Office, 201 Carpenter Hall (255-5000), and on the web at www.career.cornell.edu and www.engr.cornell.edu/coop.

AGRICULTURAL AND BIOLOGICAL ENGINEERING

Bachelor of Science Curriculum

Agricultural and Biological Engineering is at the focus of three great challenges facing humanity today: engineering an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, energy and biodiversity; and developing engineering systems that monitor, replace, or intervene in the biology of living organisms. The undergraduate engineering program in the Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, application courses, and liberal studies. The program leads to a Bachelor of Science degree and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Two concentrations in Agricultural and Biological Engineering are offered: biological engineering and environmental engineering. All students, regardless of concentration, take courses in mathematics, statistics, computer science, physics, chemistry, biology, and advanced biological, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. Students select application courses in the department in areas that include bioprocessing, soil and water management, bioenvironmental and facilities engineering, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students select other courses in the College of Engineering that strengthen their program, such as environmental sciences or biomedical engineering. Students planning for medical school should take additional laboratory courses in biology and organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills.

Many undergraduate students participate in teaching assistanship, research assistantships, design teams, Engineering Coop, and study abroad. Students should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology. The department also participates in the interdisciplinary major, Science of Earth Systems (SES). Students in the joint program may minor in SES by taking 18 credits of engineering and science electives as part of their engineering program.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate and professional programs in engineering, science, medicine, law, and other fields. In recent years, graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international development.

The living world is all around us, and within us. The biological revolution continues and it has given rise to a growing demand for engineers who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who are sensitive to the needs of people and who are interested in the challenges facing society. Agricultural and Biological Engineering is educating the next generation of engineers to meet these challenges.

The department of Agricultural and Biological Engineering is located in Riley-Robb Hall and operates specialized facilities that are among the largest and most complete of their kind in the world. For further details see the department's undergraduate programs publication, available at 207 Riley-Robb Hall, or contact the field's advising coordinator, Professor Jim Bartisch, at 255-2800.

The field program requirements for those students joining the program in 2001-2002 are outlined below.

Total (minimum) 123

*Basic accredited curriculum. Specializations (options or pre-professional study) may be accommodated by selection of alternative or additional courses in the indicated area(s). For further information, please contact the undergraduate program office, 207 Riley Robb.
Hall or contact the field's advising coordinator, Professor Jim Bartsch at jab35@cornell.edu.

**Agricultural and Biological Engineering Honors Program**

**Eligibility**
The Bachelor of Science degree with honors will be granted to engineering students who, in addition to having completed the requirements for a bachelor's degree, have satisfactorily completed the honors program in the Department of Agricultural and Biological Engineering and have been recommended for the degree by the honors committee of the department. An honor's program student must enter with and maintain a cumulative GPA ≥ 3.5.

**Content**
An ABEN honors program shall consist of at least nine credits beyond the 123 credit minimum required for graduation in ABEN. These nine credits shall be drawn from one or more of the following with at least four credit hours in the first category:

- A significant research experience or honors project under the direct supervision of an ABEN faculty member using ABEN 499, Undergraduate Research. A written senior honors thesis must be submitted as part of this component.

- A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department (e.g., ABEN 151 or 250) under ABEN 498, Undergraduate Teaching.

- Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, mathematics, biology, chemistry and physics at the 400+ and graduate level.

Note: no research, independent study, or teaching for which the student is paid may be counted toward the honors program.

**Timing**
All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

**Procedures**
Applications are available in the ABEN undergraduate program office, 207 Riley Robb. Each applicant to the ABEN honors program must have an ABEN faculty adviser to supervise the honors program. Written approval of the faculty member who will direct the research is required.

**Option in Environmental Engineering**
The Environmental Engineering Option provides ABEN students the opportunity to follow a structured environmental engineering curriculum. The curriculum was developed and approved jointly by the faculty of ABEN and Civil and Environmental Engineering (CEE). The Environmental Engineering Option in ABEN and CEE share a common core of courses.

Students complete a prescribed program of courses within the framework of the ABEN curriculum (See pp. XX)

**CHEM 211/257 or CHEM 207/208.** They must also satisfy the ABEN organic chemistry requirement, either by taking organic chemistry as one of the two required chemistry courses (i.e., CHEM 257) or by taking CEE 451. The microbiology requirement of the Environmental Engineering option can also be met by taking CEE 451.

Chemistry: CHEM 211/257 or CHEM 207/208

Organic chemistry: CHEM 257 or CEE 451

Microbiology: CEE 451 or BIOMI 290

Fluid Mechanics: CEE 331 Probability and Statistics: CEE 304

**Environmental Engineering: CEE 351**

Environmental Quality Engineering: CEE 453

Laboratory Experience in Environmental Engineering: ABEN 473 or 475: Watershed Engineering or Environmental Systems Analysis

Remaining program requirements are stated on pp. XX.

Inquiries regarding this option should be addressed to the student's adviser or to Jim Bartsch, Undergraduate Advising Coordinator at jab35@cornell.edu.

**Minor in Biological Engineering**

**Eligibility**
Engineering undergraduates affiliated with the following fields are eligible to participate in the Biological Engineering minor: A&EP, CEE, CHEME, COM S, EAS, ECE, M&AE, MS&E, and OR&IE. (Students may participate in either the Bioengineering Option or the Biological Engineering minor, but not both.)

Note: Students should meet with the ABEN Program Coordinator as soon as they decide to pursue the minor. Then they will receive an ABEN faculty adviser, who will assist them in completing the minor program.

Biological Engineering is the application of engineering to living systems. Examples of engineering efforts in this field include the development of new biosensor technologies, study and control of biologically based matter transformation systems, and development of engineered devices to study and regulate fundamental biological processes. The Biological Engineering minor is an opportunity for students to further their understanding of living systems and to increase their knowledge of the basic transport processes that occur within these systems. Courses in the minor provide opportunities to analyze and manipulate living systems at the molecular, cellular and system levels.

**Requirements**
To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), which meet the following requirements:

Required Course: ABEN 350, Biological & Environmental Transport Processes

**I. Analysis: Require two (2) from the following courses:**

- MS&E 304 (3)
- CHEM 313 (3)
- CHEM 390 (3)
- ABEN 411 (3)
- CEE 437 (3)
- ABEN 685 (4)

**II. Application: Require two (2) from the following courses:**

- ABEN 450 (4)
- ABEN 453 (3)
- ABEN 454 (3)
- ABEN 458 (3)
- ABEN 482 (3)
- ABEN 655 (3)
- ABEN 658 (3)
- CHEM 463 (3)

**III. Basic Sciences: One (1) from the following courses:**

- BIOMI 233 (3)
- BIOMI 290 (3)
- BIOMI 330–333 (2-4)
- BIOMI 434 (3)
- BIOMI 470 (3)

Academic Standards: A letter grade of C- or better for each course in the minor.

**Minor in Environmental Engineering**
Obligated in cooperation with the School of Civil and Environmental Engineering.

**Eligibility**
Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: A&EP, CHEME, COM S, EAS, ECE, M&AE, MS&E, OR&IE. A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation's resources, the air in our cities, and use and quality of water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues. The requirements for the environmental engineering minor are outlined below. For further details consult the Agricultural and Biological Engineering Undergraduate Programs Office, 207 Riley-
Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows.
Students must select courses from the following group listings, with at least one course from each group.

Group A. Environmental Engineering Processes:
- CEE 351 Environmental Quality Engineering
- CEE 352 Water Supply Engineering
- CEE 451 Microbiology for Environmental Engineering
- CEE 453 Laboratory Research in Environmental Engineering
- ABEN 476 Solid Waste Engineering
- ABEN 478 Ecological Engineering
- CEE 644 Environmental Applications of Geotechnical Engineering
- ABEN 651 Bioremediation
- CEE 653 Water Chemistry for Environmental Engineering
- CEE 655 Pollutant Transport and Transformation in the Environment
- CEE 658 Sludge Treatment, Utilization, and Disposal
- CEE 654 Aquatic Chemistry

Group B. Environmental Systems:
- ENGRD 113 A Introduction to Environmental Systems (*May count only if taken before the student’s junior year.)
- ABEN 475 Environmental Systems Analysis
- CEE 529 Water and Environmental Resources Problems and Policies
- CEE 597 Risk Analysis and Management
- CEE 623 Environmental Quality Systems Engineering
- ABEN 678 Nonpoint Source Models

Group C. Hydraulics, Hydrology, and Environmental Fluid Mechanics:
- CEE 331 Fluid Mechanics (CHEME 323 or MAE 323 may be substituted for CEE 331)
- CEE 332 Hydraulic Engineering
- ABEN 371 Hydrology and the Environment
- CEE 431/471 Geohydrology
- CEE 432 Hydrology
- CEE 435 Coastal Engineering
- CEE 437 Experimental Methods in Fluid Dynamics
- ABEN 473 Watershed Engineering
- ABEN 474 Drainage and Irrigation Systems
- CEE 633 Flow in Porous Media and Groundwater
- CEE 655 Pollutant Transport and Transformation in the Environment
- ABEN 671 Analysis of the Flow of Water and Chemicals in Soils
- ABEN 672 Drainage

Academic Standards: A letter grade of C- or better in each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Master of Engineering (Agricultural and Biological) Degree Program
The program for the M.Eng. (Agricultural and Biological) degree is intended primarily for those students who plan to enter engineering practice. The curriculum is planned as an extension of an undergraduate program in agricultural and biological engineering but can accommodate graduates of other engineering disciplines. To confine the program, 30 credits of courses intended to strengthen the students' fundamental knowledge of engineering and develop their design skills. At least three to nine of the required 30 credits are earned for an engineering design project that culminates in a written and oral report. The program is designed to be flexible so that the candidate may concentrate in any of a variety of specialty areas: biological engineering, energy, environmental engineering, environmental management, food processing engineering, international agriculture, local roads, machine systems, soil and water engineering, and structures and environment. Elective courses are chosen from among engineering subject areas relevant to the student's interests and design project. Courses in technical communication, mathematics, biology, and the physical sciences may also be taken as part of a coherent program. Master of Engineering students in Agricultural and Biological Engineering can qualify for the Dean's Certificate in energy, manufacturing, or bioscience by choosing their design project and a number of electives from the designated topic areas. More information is available from the ABEN Student Services Office, 207 Riley Robb Hall (255-2173), or by e-mail at abengradfield@cornell.edu.

APPLIED AND ENGINEERING PHYSICS

Bachelor of Science Curriculum
The undergraduate engineering physics curriculum is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and mathematics fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration, the students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for engineering physics graduates with baccalaureates is high, and many students go directly to industrial positions where they work in a variety of areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state device development, technical management, and financial consulting. A number of our graduates go on for advanced study in all areas of basic and applied physics, as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric science, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mechanical engineering, medical physics, mathematics, medicine, nuclear engineering, oceanography, and physics. The undergraduate program can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The Engineering Physics program fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGRD 110, The Laser and Its Applications in Science, Technology, and Medicine (a freshman Introduction to Engineering course); ENGRD/A&EP 264, Computer-Instrumentation Design (a recommended sophomore engineering distribution course); A&EP 330, Modern Experimental Optics (a senior/junior course); A&EP 363, Electronic Circuits (a sophomore/junior course); PHYS 410, Advanced Experimental Physics; and A&EP 438, Computational Engineering Physics (a senior computer laboratory).

Undergraduates who plan to enter the field program in Engineering Physics are advised to arrange their Common Curriculum with their developing career goals in mind. Students are also encouraged to take PHYS 112 or PHYS 110 during their first semester (or their advanced placement credits permit) and are recommended to satisfy the computing applications or technical writing requirement with the engineering distribution course ENGRD 264. Engineering physics students need to take only two engineering distribution courses, since A&EP 333, which they take in their junior year, counts as a third member of this category. Engineering Physics students are advised to take A&EP 365 in the spring semester of the sophomore year. Students with one semester of advanced placement in math, who have received a grade of A- or better in MATH 192, may wish to explore accelerating their mathematics requirements so as to enroll in A&EP 321 and 322 in the sophomore year. For advice on this option, consult with the A&EP associate director.
Choosing elective courses. A distinctive aspect of the Engineering Physics curriculum is the strong opportunity it provides students to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of a dual major or the development of a broad expertise in one or more of a number of advanced technical and scientific areas. With at least seven technical and approved electives in the sophomore, junior, and senior years, Engineering Physics students are encouraged to work closely with their adviser to develop a coherent academic program that is in accordance with those goals. For those students who look toward an industrial position after graduation, these electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate study, the electives provide an excellent opportunity to explore upper-level and graduate courses, and to prepare themselves particularly well for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of Applied and Engineering Physics, Clark Hall. Students interested in these options are advised to consult with their EP adviser, a professor active in their area of interest, or with the associate director of the school, Professor Frank W. Wise.

Electives need not be all formal course work: qualified students are encouraged to undertake independent study under the direction of a member of the faculty (A&EP 490). This may include research or design projects in areas in which faculty members are active.

The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

The Engineering Physics Program requires that a minimum GPA of 2.7 (B-) be attained in all physics and mathematics courses taken by a student before entering the Engineering Physics field unless approval is obtained from the A&EP associate director. To remain in good standing in the field, the engineering physics student is expected to pass every course for which he or she is registered, to earn a grade of C- or better in specifically required courses, and to attain each semester a grade-point average for that semester of at least 2.3.

Engineering Physics Honors Program

Eligibility

The Bachelor of Science degree with honors will be conferred upon those students who, while completing the requirements for a bachelor degree, have satisfactorily completed the honors program in the Department of Engineering Physics and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.5.

Content

The student must

1. Complete at least eight credits of field approved electives at the 400-level or higher and receive a minimum grade of an A- in each of the courses taken to fulfill this eight-credit requirement. These eight credits are in addition to the credits obtained by completing the senior thesis or special project requirement as discussed in item 2.

2. Enroll in A&EP 490 or an equivalent course over two semesters for the purpose of completing an independent research project or senior thesis under the supervision of a Cornell engineering or science faculty member. The minimum enrollment is to be two credits in the first semester and four credits in the second. The level of work required for a successful completion of this project or thesis is to be consistent with the amount of academic credit granted.

Timing

All interested students must complete a written application no later than the end of the third week of the semester in which they begin their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures

Before enrolling in A&EP 490, or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the proposed project or thesis and a faculty supervisor's written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the A&EP Honors Committee and either approved or returned to the candidate to correct deficiencies in the proposal. The proposed research project or senior thesis is to consist of a research, development, or design project and must go beyond a literature search. The final steps in completing the honors project are a written and oral report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee. Following the completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee, and at least one other departmental faculty member, along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor, following the oral presentation and after consultation with the chair of the Honors Committee. A minimum grade of A- is necessary for successful completion of the honors requirement.

Master of Engineering (Engineering Physics) Degree Program

The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanoscience, and nanotechnology, device physics, materials characterization, or software engineering.
wide latitude is allowed in the choice of the required design project.

One example of a specific area of study is solid-state physics and chemistry as applied to nano-structure science and technology. Core courses in this specialty include the micro-characterization of materials (A&EE 561) and the micro-processing and microfabrication of materials (A&EE 662). The design project may focus on such areas as semiconductor materials, device physics, nanostructure technology, or optoelectronics. Another area of study may be applied optics where core courses can be chosen from applied physics, electrical engineering, and physics.

Each individual program is planned by the student in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. All students granted the degree will have demonstrated competence in an appropriate core of basic physics; if this has not been accomplished at the undergraduate level, subjects such as electricity and magnetism, or classical, quantum, and statistical mechanics should be included in the program.

The general requirement for the degree is a total of 30 credits for graduate-level courses or their equivalent, earned with a grade of C or better and distributed as follows:

1) a design project in applied science or engineering with a written final report (not less than 6 nor more than 12 credits)
2) an integrated program of graduate-level courses, as discussed below (17 to 23 credits)
3) a required special-topics seminar course (one credit)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. It's purpose is to provide an appropriate combination of physics and physics-related courses (applied mathematics, statistical mechanics, applied quantum mechanics) and engineering electives (such as courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but are not credited toward the degree.

Students interested in the M.Eng. (Engineering Physics) degree program should contact Professor Bruce Kusse.

**APPLIED MATHEMATICS**

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research in a wide range of the mathematical sciences. For detailed information on opportunities for graduate study in applied mathematics, contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in application-oriented mathematics may select an appropriate program in the Department of Mathematics or one of the departments in the College of Engineering.

A list of selected graduate courses in applied mathematics may be found in the description of the Center for Applied Mathematics, in the section "Interdisciplinary Centers and Programs."

**CHEMICAL ENGINEERING**

**Bachelor of Science Curriculum**

The undergraduate field program in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Special programs in biochemical engineering and polymeric materials are available. Students who plan to enter the field program take CHEM 208 during the freshman year. The program for the last three years, for students who have taken an Introduction to Engineering course during the first year is as follows:

*The electives in semester seven and eight compose six credits of field application-oriented electives, and six credits of advanced CHEME electives. Advanced CHEME electives include any CHEME course 400-level, except CHEME 490, 491, 492, 520, and 572.*

**Bachelor of Science Electives**

- Advanced science electives include BIOMI 290, General Microbiology Lectures; BIOMI 350, 351, 352, and 335, Principles of Biochemistry; CEE 654, Aquatic Chemistry; CHEME 480, Chemical Processing of Electronic Materials; CHEME 481, Biomedical Engineering; CHEME 640, Polymeric Materials; CHEME 643, Introduction to Bioprocess Engineering; FOOD 417, Food Chemistry I; MSE 206, Atomic and Molecular Structure of Matter; MSE 305, Electronic Structure of Matter; MSE 306, Electrical, Optical, and Magnetic Properties of Materials; MSE 541, Microprocessing of Materials; MSE 531, Introduction to Ceramics, MSE 521, Properties of Solid Polymers; T&M 310, Advanced Engineering Analysis I; any A&EE course number 333 or above; any CHEM course numbered 301 or above; any PHYS course numbered 300 or above.

**Master of Engineering (Chemical) Degree Program**

The professional master's degree, M.Eng. (Chemical), is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, mathematics, chemistry, physics, and business administration. Courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described in the college's introductory section.

Specific requirements include

1) two courses in advanced chemical engineering fundamentals chosen from CHEME 711, 713, 731, 732, and 751
2) two courses in applied chemical engineering science chosen from CHEME 480, 520, 564, 566, 640, 643, 506, and 661
3) a minimum of three credits of a design project, CHEME 565

Dean's certificate programs in Bioengineering, Engineering Management, Energy Engineering,
and Manufacturing are available. A program offered jointly with the Food Science Department is also available, leading to both the Master of Engineering and the Master of Professional Studies degrees.

CIVIL AND ENVIRONMENTAL ENGINEERING

Department is also available, leading to both Civil and Environmental Engineering. Within civil engineering, while it is not necessary to do so, students may concentrate in structural engineering, geotechnical engineering, fluid mechanics and hydrology, water resource systems, or transportation. The environmental engineering curriculum emphasizes study of environmental engineering, water resource systems, and fluid mechanics and hydrology. Sample curricula are available in the CEE Undergraduate Program Office, 221 Hollister Hall.

Requirements for Admission to the Field:

Students planning to enter the field program in Civil and Environmental Engineering are required to complete the following courses before or during the first semester of the sophomore year with a grade of C- or better:

- ENGRD 221 Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology;
- ENGRD 221, Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology;
- ENGRD 211, Computers and Programming, for students interested in transportation;
- ENGRD 241, Engineering Computation,* for all students.

Field Program:

Civil Engineering Option

For the field program in Civil Engineering, students may elect to substitute CHEM 208 for PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum.

Core Courses

<table>
<thead>
<tr>
<th>Course</th>

</tbody>
</table>

Additional requirements include a set of two field-approved electives and three design electives from an approved list of courses that is available in the CEE Undergraduate Program Office. In addition, students must complete one technical communications course from among the courses designated ENGRG or approved communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective.

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Civil and Environmental Engineering and have been recommended for the degree by the faculty of the school. An honors program student must enter with and maintain a cumulative GPA of 3.5.

Content

A CEE honors program shall consist of at least nine credits beyond the minimum required for graduation in CEE. These nine credits shall be drawn from one or more of the following components:

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 490: Senior Honors Thesis (1–6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component.
II. Additional Courses: choose any 5
(groupings are for information only)*

Geotechnical Engineering
CEE 341 Introduction to Geotechnical Engineering and Analysis
CEE 640 Foundation Engineering
CEE 641 Retaining Structures and Slopes
CEE 644 Environmental Applications of Geotechnical Engineering

Structural Engineering
CEE 371 Modeling of Structural Systems
CEE 372 Fundamentals of Structural Mechanics
CEE 376 Physical and Computational Material Simulation
CEE 473 Design of Concrete Structures
CEE 474 Design of Steel Structures
CEE 481 LRFD-Based Engineering of Wood Structures
CEE 672 Fundamentals of Structural Mechanics
CEE 673 Advanced Structural Analysis

Other Related Courses
CEE 332 Hydraulic Engineering
CEE 361 Introduction to Transportation Engineering
CEE 595 Construction Planning and Operations

*Courts CEE courses approved by petition in advance.

Academic Standards: A letter grade of C or better for each course in the minor.

Minor in Engineering Management

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the engineering management minor: ABEN, A&EP, CHEME, COM S, EAS, ECE, M&AE, MS&E, OR&IE.

This minor focuses on giving engineering students a basic understanding of engineering economics, accounting, statistics, project management methods, and analysis tools necessary to manage technical operations and projects effectively. The minor provides an important set of collateral skills for students in any engineering discipline.

The requirements for the engineering management minor are outlined below. For further details, consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

1. Required Courses: ENGRD 202 Mechanics of Solids

II. Additional Courses: choose any 3*

CE 323 Engineering Economics and Management
OR &IE 350 Financial and Managerial Accounting

*Other courses approved by petition in advance.

T&M 310 may not be substituted for CEE 304.

Academic Standards: a letter grade of C or better for each course in the minor.

Minor in Environmental Engineering

(Offers in cooperation with the Department of Agricultural and Biological Engineering)

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: A&EP, CHEME, COM S, EAS, ECE, M&AE, MS&E, OR&IE.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be stewards and managers of our nation’s resources, the air in our cities, and use and quality of water in our aquifers, streams, estuaries and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

The requirements for the environmental engineering minor are outlined below. For further details consult the Civil and Environmental Engineering Undergraduate Programs Office, 221 Hollister Hall, or the Agricultural and Biological Engineering Undergraduate Programs Office, 207 Riley-Robb Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

1. Required Courses (3):
   CEE 304 Uncertainty Analysis in Engineering
   or ENGRD 270 Basic Engineering Probability and Statistics
   or ECE 310 Introduction to Probability and Random Signals
II. Students must select courses from the following group listings, with at least one course from each group.

**Group A. Environmental Engineering Processes:**
- CEE 351 Environmental Quality Engineering
- CEE 352 Water Supply Engineering
- CEE 451 Microbiology for Environmental Engineering
- CEE 453 Laboratory Research in Environmental Engineering
- ABEN 476 Solid Waste Engineering
- ABEN 478 Ecological Engineering
- CEE 644 Environmental Applications of Geotechnical Engineering
- ABEN 651 Bioremediation
- CEE 653 Water Chemistry for Environmental Engineering
- CEE 655 Pollutant Transport and Transformation in the Environment
- CEE 658 Sludge Treatment, Utilization and Disposal
- CEE 654 Aquatic Chemistry

**Group B. Environmental Systems:**
- ENGR 115/CEE 115* Environmental Engineering for the Megalopolis (*May count only if taken before the student’s junior year.)
- ABEN 475 Environmental Systems Analysis
- CEE 529 Water and Environmental Resources Problems and Policies
- CEE 597 Risk Analysis and Management
- CEE 623 Environmental Quality Systems Engineering
- ABEN 678 Nonpoint Source Models

**Group C. Hydraulics, Hydrology, and Environmental Fluid Mechanics:**
- CEE 331 Fluid Mechanics (CHEME 323 or M&AE 323 may be substituted for CEE 331)
- CEE 332 Hydraulic Engineering
- ABEN 371 Hydrology and the Environment
- CEE 431/ABEN 471 Geohydrology
- CEE 432 Hydrology
- CEE 435 Coastal Engineering
- CEE 436 Case Studies in Environmental Fluid Mechanics
- CEE 437 Experimental Methods in Fluid Dynamics
- ABEN 473 Watershed Engineering
- ABEN 474 Drainage and Irrigation Systems
- CEE 631 Flow and Contaminant Transport Modeling in Groundwater
- CEE 633 Flow in Porous Media and Groundwater
- CEE 655 Transport, Mixing, and Transformation in the Environment
- ABEN 671 Analysis of the Flow of Water and Chemicals in Soils
- ABEN 672 Drainage

Academic Standards: A letter grade of C- or better in each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

**Master of Engineering (Civil) Degree Program**

The M.Eng. (Civil) degree program is a 30-credit (usually 10-course) curriculum designed to prepare students for professional practice.

There are two options in this program: one in civil and environmental engineering design and one in engineering management. Both options require a broad-based background in an engineering field. Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering automatically satisfy this requirement. Those without such preparation will require course work beyond the graduate program's 30-credit minimum to fulfill the engineering preparation requirement. Both options also require one course in professional (design-option) or managerial (management-option) practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, with some options indicating an intensive, full-time session between semesters. The general degree requirements and admissions information are described above in the section entitled "Master of Engineering Degree Programs." Each student’s program of study is designed individually in consultation with an academic adviser and then submitted to the school’s Professional Degree Committee for approval.

For the M.Eng. (Civil) program in civil and environmental engineering design options, the requirements are:

1) Three courses, one in professional engineering practice (CEE 590) and a two-course design project (CEE 501 and 502).
2) Specialization in a major concentration area—three to five courses in either environmental engineering, environmental fluid mechanics/hydrology, geotechnical engineering, structural engineering, transportation management, or water resources and environmental systems engineering.
3) Technical electives.
4) Study in a related area or areas.

Courses taken as technical electives or in the related subject area(s) may consist of graduate or advanced courses in fields related to the major concentration area, either inside or outside of the school.

For the M.Eng. (Civil) program in the engineering management option, the requirements are:

1) Five courses: Project Management (CEE 590), Engineering Management Methods (CEE 593 and 594), and the Management Project (CEE 591 and 592).
2) One course in finance, accounting, or engineering economics, as appropriate given a student's background.
3) One course in individual and/or organizational behavior from a recommended list.
4) Three courses from a disciplinary or functional specialization, subject to adviser's approval.

The School of Civil and Environmental Engineering cooperates with the the Johnson Graduate School of Management in two joint programs leading to both Master of Engineering and Master of Business Administration degrees. See the introductory section under College of Engineering for details.

**COMPUTER SCIENCE**

**Bachelor of Science Curriculum**

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.

For the most current and accurate details, visit our web site at www.cs.cornell.edu/ugrad

**The Major**

Computer Science majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:

- four semesters of calculus (MATH 191—192—293—294 or 111—122 (or 112)–221–222)
- two semesters of introductory computer programming (COM S 100 and ENGRD 211)
- a one-credit project (COM S 212)
- a seven-course computer science core (COM S 280, 314, 321 or 322 or 421, 581, 414, and 482)
- two 400+ computer science electives, totaling at least six credits
- a computer science project course (COM S 413, 415, 418, 433, 473, 501, 514, 519, or 664)
- a mathematical elective course (ORIE 270, MATH 300+, TAM 310, etc.)
- two 300+ courses (field approved electives) that are technical in nature and total at least six credits
- a three-course specialization in a topic area other than computer science. These courses must be numbered 300-level or greater.

Note: All of the field electives described above must be courses of three or more credit hours, with the exception of the COM S project course, which may be two credits.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study and employment in any technical area and any professional area such as business, law, or...
Computer Science Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have:

- qualified for Latin honors in the College of Engineering (basically, a cumulative GPA ≥ 3.5)
- at least eight credits of COM S course work at or above the 500-level (graded courses only; no seminars or two-credit project courses)
- at least six credits of COM S 490 (independent research) spread over two semesters, with a grade of A- or better each term.

See the COM S undergraduate web site for more information on eligibility: www.cs.cornell.edu/ugrad

Content

Honors courses may not be used to satisfy the COM S 400+ elective requirement, the COM S project requirement, the math or field approved electives, or the specialization.

Timing

Honors' determinations are made during the senior year. Students wanting to be considered for field honors should notify the Undergraduate Office in the Department of Computer Science via electronic mail at the following address: ugrad@cs.cornell.edu. The subject line for this message should read "HONORS TRACK." Related questions may be addressed to the ugrad e-mail alias, or candidates can call or stop by 305 Upson Hall, 255-0982.

Preparation

Arrangements for doing COM S 490 research should be made directly with faculty members in the department. Students are encouraged to discuss potential contacts with their advisers and/or browse the department's web page at www.cs.cornell.edu for specific leads on research opportunities.

The Department of Computer Science reserves the right to make changes to the honors program requirements at any time. Generally speaking, all members of the same graduating class in COM S will be subject to the same honors criteria.

Minor in Computer Science

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the Computer Science minor: ABEN, A&EP, CEE, CHEM, EAS, ECE, M&AE, MS&E, and OR&IE.

This minor is for students who anticipate that computer science will play a prominent role in their academic and professional career.

Requirements

To complete the minor, the student must take at least six (6) courses (18 credit minimum) chosen as follows:

I. Required Courses

- COM S/ENGRD 211
- COM S 321
- Numerical Methods in Computational Biology

or COM S/ENGRD 322

- Introduction to Scientific Computing

or COM S 421

- Numerical Analysis

II. Additional Courses

Three (3) COM S courses numbered 280 or higher (excluding seminars and practicums)

Academic Standards: A letter grade of C or better for each course in the minor.

Note: Computing courses offered by other departments cannot be applied toward the Computer Science minor, with the exception of ECE 314.

Master of Engineering (Computer Science) Degree Program

The M.Eng. program in computer science is a one-year program that can be started in either the fall or spring semester. This program is designed to develop expertise in system design and implementation in many areas of computer science, including computer networks, Internet architecture, fault-tolerant and secure systems, distributed and parallel computing, high performance computer architecture, databases and data mining, multimedia systems, computer vision, computational tools for finance, computational biology (including genomics), software engineering, programming environments, and artificial intelligence.

A typical program in computer science includes several upper-division and graduate courses and a faculty-supervised project. The course and project requirements are flexible and allow students to build up a program that closely matches their interests. In particular, slightly under half the courses may be taken outside the computer science department (for example, many students choose to take several business administration courses). Project work, which may be done individually or in a small group, can often be associated with ongoing research in the Department of Computer Science in one of the areas listed above.

Cornell seniors may use the early admission option to effectively co-register for the M.Eng. program while completing the undergraduate degree. This option can be started in either the fall or spring semester. It applies to students who have at least one credit and no more than eight credits remaining to complete their undergraduate program. All remaining undergraduate degree requirements must be satisfied by the end of the first semester the student is enrolled in the M.Eng. "early admit" program.

For more information about the M.Eng. program in computer science and the early admission option for Cornell seniors, please consult our web page at www.cs.cornell.edu/grad/meng.

Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (Computer Science), and M.B.A. degrees. This program, which is sponsored jointly by the College of Engineering and the Johnson Graduate School of Management, enables students to study several subjects required for the M.B.A. degree as part of their undergraduate curriculum. Planning must begin early; however, if all requirements are to be completed on schedule.

For further details and assistance in planning a curriculum, students can consult with their adviser, the undergraduate office in 503 Upson Hall, or the Johnson School directly.

Bachelor of Science Curriculum

We live on a planet with finite resources and a finite capacity to recover quickly from human-induced environmental stresses. It is also a powerful planet, with geologic hazards such as earthquakes, hurricanes, and volcanic eruptions that alter the course of history with little prior warning. As the human population grows, understanding the earth and its resources becomes progressively more important for both future policymakers and ordinary citizens. Because the human need to understand the earth is so pervasive, we provide our students with three tracks covering the spectrum of modern earth sciences.

The Department of Earth and Atmospheric Sciences offers an undergraduate engineering program which permits students to pursue one of three options leading to a B.S. degree in geological sciences: the geoscience option, the atmospheric science option, and the science of earth systems (SES) option. The geoscience option emphasizes the structure, composition, and evolution of our planet; the atmospheric science option covers the planetary processes producing weather and climate; and the SES option is concerned with processes on and near the earth's surface where the interactions of water, life, rock, and air produce our planetary environment. An engineering minor is available in one or a combination of these programs.

Atmospheric Science Option

Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum...
emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes, and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. The atmospheric science option satisfies both the curricular guidelines of the American Meteorological Society and the educational requirements of the National Weather Service for employment as a meteorologist, which also qualifies graduates for positions in private-sector forecasting and environmental consulting firms. The option also provides excellent preparation for graduate work in atmospheric science and related fields.

Students following the atmospheric science option are required to take ENGRD 270 as the engineering distribution course. The field program includes required introductory courses in atmospheric science (EAS 131) and EAS 250 (Instrumentation and Observations). Many of the upper division field courses require EAS 341 (Atmospheric Thermodynamics and Hydrosstatics) and EAS 342 (Atmospheric Dynamics) as prerequisites, which are normally taken in the junior year. The additional required field program courses are EAS 331 (Climate Dynamics), EAS 352 (Synoptic Meteorology I), EAS 451 (Synoptic Meteorology II), EAS 455 (Statistical Methods in Meteorology), and EAS 447 (Physical Meteorology). 

Field-approved electives may be chosen from offerings in other science or approved electives outside the field may be used to fulfill the outdoor field requirement. Undergraduate Research, for a fourth-year credit of EAS 491 or 492 using geophysical methods, 3 credits) plus at least one credit of EAS 491 or 492 using geophysical techniques from (a) EAS 491-492 (Undergraduate Research, two credits each) with a significant component of field work; or (d) an approved outdoor field course taught by another college or university (four-credit minimum).

A selection of field-approved electives may provide specializations in geophysics, geochemistry (including petrology and mineralogy), geobiology (paleontology), and geology applied to mineral and petroleum industries, environmental problems, hydrology, and civil engineering. Students intending to specialize in economic geology or pursue careers in the mining industries or mineral exploration should consider including economics courses among their liberal studies distribution courses. Students who want a more general overview of geosciences or want to remain uncommitted with regard to specialty must choose at least two of their field-approved electives from the following:

- (a) EAS 491 and 492, Undergraduate Research, for a fourth-year field-approved elective but not if it is being used to fulfill the outdoor field requirement.
- (b) EAS 437 (Geophysical Field Methods, 3 credits) plus at least one elective in the geosciences.
- (c) EAS 491-492 (Undergraduate Research, two credits each) with a significant component of field work; or
- (d) an approved outdoor field course taught by another college or university (four-credit minimum).

A selection of field-approved electives may provide specializations in geophysics, geochemistry (including petrology and mineralogy), geobiology (paleontology), and geology applied to mineral and petroleum industries, environmental problems, hydrology, and civil engineering. Students intending to specialize in economic geology or pursue careers in the mining industries or mineral exploration should consider including economics courses among their liberal studies distribution courses. Students who want a more general overview of geosciences or want to remain uncommitted with regard to specialty must choose at least two of their field-approved electives from the following:

- (a) EAS 491 and 492, Undergraduate Research, for a fourth-year field-approved elective but not if it is being used to fulfill the outdoor field requirement.
- (b) EAS 437 (Geophysical Field Methods, 3 credits) plus at least one elective in the geosciences.
- (c) EAS 491-492 (Undergraduate Research, two credits each) with a significant component of field work; or
- (d) an approved outdoor field course taught by another college or university (four-credit minimum).

A selection of field-approved electives may provide specializations in geophysics, geochemistry (including petrology and mineralogy), geobiology (paleontology), and geology applied to mineral and petroleum industries, environmental problems, hydrology, and civil engineering. Students intending to specialize in economic geology or pursue careers in the mining industries or mineral exploration should consider including economics courses among their liberal studies distribution courses. Students who want a more general overview of geosciences or want to remain uncommitted with regard to specialty must choose at least two of their field-approved electives from the following:

- (a) EAS 491 and 492, Undergraduate Research, for a fourth-year field-approved elective but not if it is being used to fulfill the outdoor field requirement.
- (b) EAS 437 (Geophysical Field Methods, 3 credits) plus at least one elective in the geosciences.
- (c) EAS 491-492 (Undergraduate Research, two credits each) with a significant component of field work; or
- (d) an approved outdoor field course taught by another college or university (four-credit minimum).

A selection of field-approved electives may provide specializations in geophysics, geochemistry (including petrology and mineralogy), geobiology (paleontology), and geology applied to mineral and petroleum industries, environmental problems, hydrology, and civil engineering. Students intending to specialize in economic geology or pursue careers in the mining industries or mineral exploration should consider including economics courses among their liberal studies distribution courses. Students who want a more general overview of geosciences or want to remain uncommitted with regard to specialty must choose at least two of their field-approved electives from the following:

- (a) EAS 491 and 492, Undergraduate Research, for a fourth-year field-approved elective but not if it is being used to fulfill the outdoor field requirement.
- (b) EAS 437 (Geophysical Field Methods, 3 credits) plus at least one elective in the geosciences. 
- (c) EAS 491-492 (Undergraduate Research, two credits each) with a significant component of field work; or
- (d) an approved outdoor field course taught by another college or university (four-credit minimum).
Content
In addition to the minimum requirements, a student must
1. take at least nine credits above the minimum required for graduating and approved by the upperclass adviser;
2. have a written proposal of the honors project accepted by his or her faculty adviser and the director of undergraduate studies;
3. complete an honors thesis involving research (EAS 491-492 or 499, two or more credits each) of breadth, depth, and quality.

Timing
A student interested in completing an honors thesis must, by the beginning of the seventh semester, have a written proposal of the honors project accepted by the student's adviser and the director of undergraduate studies.

Procedures
Each applicant to the Earth and Atmospheric Sciences honors program must have a faculty adviser to supervise the honors thesis research. Written approval by the faculty member who will direct the research is required. After the college verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Minor in Geological Sciences
Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the Geological Sciences minor: ABEN, A&EP, CEE, CHEME, COM S, ECE, M&AE, MS&E, OR&IE.

Whereas many engineering students will encounter and have to understand the natural operating systems of Earth in their professions, the tools and techniques used by earth scientists to understand these solid and fluid systems over the widest scales of space and time are of use to a wide cross-section of engineering students. This minor is designed to provide a flexible set of options for students looking to complement training in their major field with a core education in Geological Sciences.

The requirements for the Geological Sciences minor are outlined below. For further details consult the Undergraduate Programs Office, 2122 Snee Hall, or www.eas.cornell.edu.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:
I. Choose one or two of these three courses:
   - ENGRD 201 Introduction to the Physics and Chemistry of the Earth
   - EAS 210 Introduction to Field Methods in Geological Sciences
   - EAS 203 Natural Hazards and the Science of Complexity

II. Choose at least two courses from the following list of core courses:
   - EAS 302 Evolution of the Earth System
   - EAS 321 Introduction to Biogeochemistry
   - EAS 326 Structural Geology

III. To complete the minor, these three to four courses are to be supplemented with two to three additional EAS courses at the 300-level or higher. These may include, for example, additional courses from the above list of core courses, undergraduate research courses, and outdoor field courses.

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

ELECTRICAL AND COMPUTER ENGINEERING

Bachelor of Science Curriculum
The Department of Electrical and Computer Engineering offers an undergraduate field program which leads to a B.S. degree in electrical engineering. The curriculum provides a foundation which reflects the broad scope of this engineering discipline.

Concentrations include computer engineering and digital systems; control systems; electronic circuit design; experimental methods in electrical engineering; signal processing and decision theory; microwave electronics; plasma physics; power and energy systems; quantum and optical electronics; radio and atmospheric and space physics; and semiconductor devices and applications.

Field Program
Students planning to enter the field program in Electrical and Computer Engineering must take ENGRD 231 as an engineering distribution course. The fall of the sophomore year is the preferred term for ENGRD 231/ECE 232 for students without advanced standing in mathematics. Electrical and Computer Engineering students with an interest in computer engineering are encouraged to take ENGRD 211 as an engineering distribution course prior to entry into the field program. In addition, the field program normally begins in the spring of the sophomore year, as shown below. All of these courses (except ECE 210 and ENGRD 231) are taught only once each academic year, either spring or fall, as indicated in the course descriptions.

Course | Credits
-------|--------
Field Required Courses
ECE 210, Introduction to Circuits for Electrical and Computer Engineers | 3

Field Approved Electives (32-credit minimum in the following categories)
- Advanced Electrical and Computer Engineering Electives (7 courses)
- Outside ECE Electives (3 courses)

Total minimum field credits 53

ECE 310 can be taken in place of ENGRD 270 or T&MAM 310 to satisfy the college application of probability and statistics requirement.

These electives must include two 400-level electrical and computer engineering laboratory courses and at least two additional courses at the 400-level or above. The remaining electives may not include independent research courses, such as ECE 391, 392, 491, or 492, and must be at the 300-level or above in Electrical and Computer Engineering.

Courses that meet the laboratory requirement are described in the online ECE Handbook. (The list is dynamic and changes frequently. Always refer to the latest information on the ECE Web Handbook.) All courses must have a course-level prerequisite.

Must include one course at the 300-level or above (See Electrical and Computer Engineering Web Handbook for details).

All students graduating with a B.S. degree must fulfill the engineering design requirement and the college technical requirement. To meet this requirement, students must demonstrate that they have completed courses that contain at least 16 credits of engineering design. A table listing the engineering design content of all relevant electrical and computer engineering and computer science courses is available through the department web handbook pages at www.ece.cornell.edu. The technical writing requirement is discussed in the College of Engineering section of this book.

Undergraduate specialization is achieved through the various electrical and computer engineering elective courses, as well as other courses in related technical fields within engineering, mathematics, the physical sciences, and the analytical biological sciences. The School of Electrical and Computer Engineering offers more than 30 courses that are commonly taken as electives by undergraduates.

An electrical and computer engineering honors program also exists for those students who so desire and meet the program entrance requirements. The honors program requires an additional senior ECE course; a required senior year directed reading course; or a design project, or ENGRD 470; and completion of the honors seminar in the junior year. Details are available via the electrical and computer engineering homepage located through the web at www.ece.cornell.edu/ugradHandbook/honors.html.
All students majoring in electrical and computer engineering are expected to meet the following academic standards:

1. Students must achieve a grade-point average of at least 2.3 every semester.
2. No course with a grade of less than C- may be used to satisfy degree requirements in the field program or serve as a prerequisite for a subsequent electrical and computer engineering course.
3. Students must complete satisfactorily ECE 210, ECE 215, MATH 294, and PHY 214 by the end of the sophomore year in the field program of Electrical Engineering, and make adequate progress toward the degree in subsequent semesters.
4. Honors program students must meet the GPA and progress requirements specified in the Electrical and Computer Engineering Web Handbook and the college handbook to remain active participants.

Electrical and Computer Engineering Honors Program

Eligibility, Entry, and Continuation

A student must apply to enter the ECE Honors Program and may do so as early as the beginning of the fifth semester or as late as the end of the sixth semester. A student must have a cumulative GPA of at least 3.5 to apply for entry. A student in the honors program whose cumulative GPA falls below 3.5 at the end of any semester will be dropped from the honors program by College of Engineering regulations. There is an additional requirement (see Honors Seminar) for entry into the program after the end of the fifth semester.

Honors Seminar

Any student in the honors program is required to take (or to have taken) an honors seminar during his or her junior year. The Honors Seminar is a two-credit semester-course (offered spring only) consisting of a weekly series of introductory research lectures by Electrical and Computer Engineering faculty members. Each honors seminar enrollment will be required to write a number of short papers on topics covered in the lecture series. Many Electrical and Computer Engineering faculty members will give a lecture or short series of lectures as part of the Honors Seminar. Students in the honors program and students with a cumulative GPA of at least 3.5 who are considering entering the honors program must receive letter grades for the Honors Seminar.

Honors Project

Any student in the honors program is required to accumulate at least three credit hours from a senior honors project consisting either of design, ENGRD 470, or directed reading. All honors projects emphasize the development of communication skills. Design- and reading-oriented honors projects require explicitly a written submission summarizing and concluding the project.

Additional Coursework

Any student in the honors program is required to take at least three credit hours of advanced (senior level) ECE coursework that has at least a 300-level prerequisite. These credit hours are in addition to any credit hours required as part of the ECE field program.

The program described above requires honors program participants to amass at least nine credit hours over and above the 128 credit hours required for a B.S. degree; thus an honors degree requires a minimum of 137 credit hours.

Minor in Electrical and Computer Engineering

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the Electrical and Computer Engineering minor: ABEN, AEPE, CEE, CHEM, COM S, EAS, M&A, MS&E, OR & IE. (*MS&E students planning to pursue this minor must receive prior written approval from both MS&E and ECE, via petition.) The School of Electrical and Computer Engineering offers a minor to students who wish to complement their major field by obtaining a background in electrical and computer engineering. The minor offers the opportunity to study analog and digital circuits, signals and systems, electromagnetics, fields, and additionally specialize at higher levels in one of several different areas such as circuit design, electronic devices, communications, computer engineering, networks, or space engineering.

The requirements for the Electrical and Computer Engineering minor are outlined below. For further details consult the Electrical and Computer Engineering Undergraduate Programs Office, 222 Phillips Hall.

Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

I. Required Courses:
   - ECE 210 Introduction to Circuits for Electrical and Computer Engineers
   - ECE 215 Introductory Integrated Circuits Laboratory (ECE 210 and 215 count as one course)
   - ENGRD 231 Introduction to Digital Systems
   - ECE 232 Digital Systems Design Laboratory (ENGRD 231 and 232 count as one course)

II. Two of the following:
   - ECE 301 Signals and Systems
   - ECE 303 Electromagnetic Fields and Waves
   - ECE 315 Electronic Circuit Design

III. One other ECE course at the 300 level or above (3 credit minimum)

IV. One other ECE course at the 400 level or above (3 credit minimum)

Academic Standards: A letter grade of C- or better for each course to be counted in the minor and a cumulative GPA of 2.3 or better for each course to be counted in the minor.

Master of Engineering (Electrical) Degree Program

The M.Eng. (Electrical) degree program prepares students either for professional work in electrical engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the Master of Science degree mainly in its emphasis on professional skills, engineering design, and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, including a minimum of four courses in electrical and computer engineering. An electrical and computer engineering design project is also required and may account for three to eight credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may apply for a waiver of the eight-credit maximum and increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 11 credits of approved courses that have significant technical content, but are taught in disciplines other than engineering, mathematics, or the physical sciences.

Cornell undergraduate students with advanced standing frequently take one or more graduate-level courses prior to graduation and may actually begin accumulating credit toward the Master of Electrical and Computer Engineering program in their last semester of undergraduate work. Application of credits taken while an undergraduate at Cornell must be approved in advance of the last semester of undergraduate work.

Although admission to the M.Eng. (Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available from the Master of Electrical and Computer Engineering Program web site at www.ece.cornell.edu/MENG.html.

MATERIALS SCIENCE AND ENGINEERING

Bachelor of Science Curriculum

Students majoring in materials science and engineering are required to take ENGRD 261, Introduction to Mechanical Properties of Materials, before affiliating with the field. It is strongly recommended that this course be taken as an engineering distribution during the sophomore year. The field program develops a comprehensive understanding of the physics and chemistry underlying the unique properties of modern engineering materials and processes.

In the field, students are required to complete a series of electives to develop both breadth and specialization in sub-areas of the field including, for example, solid state, metallic materials, ceramic materials, polymeric materials, electronic materials, biomaterials, or computational materials science. These requirements are satisfied through a series of technical electives in the junior and senior years, selected from multiple engineering and science departments. Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current projects.
The requirements for a Bachelor of Science degree in materials science and engineering are:

1. Completion of the common engineering curriculum including liberal studies electives
2. ENGRD 261, Introduction to Mechanical Properties of Materials
3. Completion of 12 required field courses:
   - ENGRD 202 Mechanics of Solids
   - MS&E 204 Materials Chemistry
   - MS&E 206 Atomic and Molecular Structure of Matter
   - MS&E 302 Mechanical Properties of Materials, Processing, and Design
   - MS&E 303 Thermodynamics of Condensed Systems
   - MS&E 304 Kinetics, Diffusion, and Phase Transformations
   - MS&E 305 Electronic Structure of Matter
   - MS&E 306 Electronic, Optical, and Magnetic Properties of Materials
   - MS&E 403/405 Senior Materials Lab I or Senior Thesis I
   - MS&E 404/406 Senior Materials Lab II or Senior Thesis II
   - MS&E 407 Materials Design Concepts II
4. Depth in one specialization developed through three technical electives
5. Breadth developed through two technical electives in different specialization areas
6. One of the depth or breadth electives must be taken from outside MS&E
7. One additional outside technical elective

To continue in good standing in the Field of Materials Science and Engineering, students must:

1. Maintain a 2.0 term average for all semesters.
2. Maintain an average of 2.3, with no grade below C, in the department's core curriculum.
3. Complete ENGRD 261 with a minimum of C prior to affiliation.

The department's core curriculum consists of ENGRD 261, the 12 required field courses, and the five technical electives constituting the depth and breadth requirements.

An attractive and very challenging program combines the materials science and engineering curriculum with that of either electrical engineering or mechanical engineering, leading to a double major. Curricula leading to the double-major degree must be approved by both of the departments involved and students are urged to plan such curricula as early as possible to avoid scheduling conflicts.

Materials Science and Engineering Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in materials science and engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with, and maintain, a cumulative GPA above 3.5.

Content

The requirements for an honors degree in materials science and engineering are:

1. Students must complete at least nine credits beyond the minimum required for graduation in materials science and engineering. This increases the minimum number of credits for graduation with honors to 137. These additional courses must be technical in nature, i.e., in engineering, mathematics, chemistry, and physics at the 400- and graduate-level, with selected courses at the 300-level. All courses satisfying this requirement must be approved by the upper class adviser.
2. Senior honors thesis (MS&E 405/406) with a grade of at least A.

Note: Undergraduates typically enter the honors program at the beginning of their senior year (seventh semester) and must therefore have a cumulative GPA equal to or greater than 3.5 at that point.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of the senior year, but are encouraged to make arrangements with a faculty member to work on a senior honors thesis during the second semester of their junior year. A student must be in the program for at least two semesters prior to graduation.

Procedures

Each application to the materials science and engineering honors program must have a faculty adviser to supervise the honors program. Written approval of the faculty member who will direct the research is required. After the student's grade-point average is verified, the student will be officially enrolled in the honors program.

Minor in Materials Science and Engineering

Eligibility

Engineering undergraduates affiliated with the following programs are eligible to participate in the materials science and engineering minor:

- ABEN, A&EP, CEE, CHEM, COM S, EAS, ECE, M&AEE, OR&E

Material properties are the foundation of many engineering disciplines including chemical, civil, electrical, and mechanical engineering. This minor provides engineers in related fields with a fundamental understanding of mechanisms that determine the ultimate performance, properties, and processing characteristics of modern materials.

The requirements for the materials science and engineering minor are outlined below. For further details, consult the Materials Science and Engineering Undergraduate Program Office, 210 Bard Hall.

Requirements

To complete the minor, students must take at least six courses (minimum of 18 credits) chosen as follows:

1. ENGRD 261 Introduction to Mechanical Properties of Materials
Bachelor of Science Curriculum in Mechanical Engineering

The upperclass field program in Mechanical Engineering is designed to provide a broad background in the fundamentals of this discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. The program covers both major streams of the field of mechanical engineering.

Mechanical systems, design, and materials processing is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Particular areas of concentration are mechanical design and analysis, vehicle engineering, biomechanics, and materials processing and precision engineering. Other topics covered are computer-aided design, vibrations, control systems, and dynamics.

Engineering of fluids, energy, and heat transfer systems is concerned with the efficient conversion of energy in electric power generation and aerospace and surface transportation, the environmental impact of engineering activity (including pollutants and noise), aeronautics, and with the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering, heat, energy, and power engineering, and thermo-fluid sciences.

The undergraduate program is a coordinated sequence of courses beginning in the sophomore year. During the fall term sophomore students who plan to enter the Mechanical Engineering program take ENGRD 221 (also T&AM 202) as an engineering distribution course. They also are encouraged to take ENGRD 221 (also M&AE 221), which is a field requirement that may simultaneously satisfy Common Curriculum requirements as an engineering distribution course. Occasionally because of study abroad or requirements for second majors or pre-med, students cannot complete all of the required sophomore courses on schedule. In such cases students should delay ENGRD 221 until the first semester of the junior year. The Sibley School supports students with unusual requirements, but any delays or substitutions must be discussed with and receive approval from the student's adviser.

The course requirements for the degree of Bachelor of Science in Mechanical Engineering are as follows:

1. Completion of the Common Curriculum. During the upperclass years this will typically mean earning credit for five humanities or social science courses.
2. Completion of the field requirements, which consist of eleven required courses (beyond ENGRD 202 already mentioned), and five field approved elective courses.

The eleven required courses are:

- M&AE 212, Mechanical Properties and Processing of Engineering Materials
- M&AE 221, Thermodynamics
- M&AE 225, Mechanical Design and Synthesis
- T&AM 203, Dynamics
- ECE 210, Introduction to Circuits for Electrical and Computer Engineers
- M&AE 323, Introductory Fluid Mechanics
- M&AE 324, Heat Transfer
- M&AE 325, Mechanical Design and Analysis
- M&AE 326, System Dynamics
- M&AE 427, Fluids/Heat Transfer Laboratory
- M&AE 428, Engineering Design
- M&AE 479, Thermodynamics

Electives

Students should use the flexibility provided by the field approved electives, approved electives, and humanities/social sciences electives to develop a program to meet their specific goals.

Field Approved Electives

The upper-level program includes five field approved electives. Using these five courses, the student must satisfy the following requirements.

At least three of the courses must be upper-level (300+) M&AE courses. Of these three, two must satisfy a concentration chosen by the student. Typically these are two courses chosen from an appropriate subset of the school's upper-class offering. However, students may petition for approval of related courses to form a custom concentration.

The standard concentrations are:

- Thermal Systems Engineering, M&AE 423, 449, 453, 506, 543
- Materials Processing, M&AE 412, 514
- Mechanical Systems, M&AE 412, 417, 470, 478, 479, 525, 565
- Biomechanics, M&AE 463, 464, 565

Of the three upper-level M&AE courses, one must be an approved design elective. The design offerings may change from year to year.

Typically this list includes M&AE 401, 412, 426, 441, 470, 479, 486, 491 and 525.

Note that the design elective must be taken during the senior year. Note that a single course may satisfy both the design and concentration requirements, in which case the third course could be any upper level M&AE course.

One of the courses must be an approved upper-level mathematics course taken after MATH 294. The course must include some material on statistics. Currently, the approved courses are T&AM 310 and ORIE 270.

One of the field approved electives can be viewed as a technical elective and may be any course at an appropriate level, chosen from engineering, mathematics, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Note that courses in economics, business, and organizational behavior are not accepted. Advisers may approve such courses as approved electives.

Approved Electives

To maximize flexibility (i.e., the option for study abroad, COOP, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of approved electives until after term three. The faculty encourages students to consider the following as possible approved electives:

- any engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in informational science (mathematics, computer science)
- courses in methodology (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (economics, financial, legal, etc.)
- courses in organizational behavior
- courses in cognitive sciences.

The faculty recommendation on humanities/social sciences electives is that students build a program that includes studies in:

- history of technology
- societal impacts of technology
- foreign languages
- ethics
- communications
- political science
- aesthetics
- economics
- architecture

An additional graduation requirement of the field program is proof of elementary competence in technical drawing. The demonstration of competence is expected before completion of M&AE 325, Mechanical Design and Analysis. This proof may be given in a number of ways, including satisfactory completion of:

a. a technical drawing course in high school or in a community college,

b. ENGRG 102, Drawing and Engineering Design,

c. another technical drawing course at Cornell, or

d. a departmental examination.

The computer applications requirement of the Common Curriculum may be satisfied by several courses, including M&AE 470 and M&AE 479.

The technical writing requirement of the Common Curriculum is satisfied by M&AE 427.

Introduction to Circuits for Electrical and Computer Engineers (ECE 210) may be replaced or supplemented by Electronic Circuits (PHYS 360).

A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

More detailed materials describing the Mechanical Engineering Program can be obtained from the Sibley School of Mechanical and Aerospace Engineering, Upson Hall.
Minor in Mechanical Engineering

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the mechanical engineering minor: ABEN, A&F, CHEME, CEE, COM S, EAS, ECE, MS&F, ORXIE.

Requirements
To complete the minor, the student must choose at least six courses (minimum of 18 credits) from among the following: M&AE courses at the 200-level or above; ENGRD 202, Mechanics of Solids; ENGRD 203, Dynamics.

Rules for selecting courses:
1. The selection of courses must satisfy the following three requirements:
   a) At least two courses must be numbered above 300.
   b) At least one course must be either (1) numbered above 500 or (2) numbered above 526 and have as its prerequisite ENGRD 202, ENGRD 203, or an M&AE course.
   c) Each course must be worth at least three credits.
2. Substitution of courses other than M&AE (or ENGRD 202 and 203) will not be accepted as part of the M&AE minor. However, some instructors of M&AE courses will accept non-M&AE courses as substitute prerequisites for their courses, or may choose to waive prerequisites in some circumstances. Students should check with the course instructor.

Academic Standards: A letter grade of C- or better for each course in the minor.

Examples of typical minor programs are as follows:

Typical focus in Fluids/Thermal Systems:
The following four courses:
- ENGRD 202 Mechanics of Solids
- ENGRD 203 Dynamics
- ENGRD 221 Thermodynamics
- M&AE 323 Introductory Fluid Mechanics

Plus two of the following, of which at least one course must satisfy requirement 1b:
- M&AE 305 Introduction to Aeronautics
- M&AE 324 Heat Transfer
- M&AE 423 Intermediate Fluid Dynamics
- M&AE 427 Fluids/Heat Transfer Laboratory
- M&AE 449 Combustion Engines
- M&AE 490 Special Investigations in Mechanical and Aerospace Engineering
- M&AE 491 Design Projects in Mechanical and Aerospace Engineering
- M&AE 506 Aerospace Propulsion Systems
- M&AE 507 Dynamics of Flight Vehicles
- M&AE 543 Combustion Processes

Typical focus in Mechanical Systems/Design:
The following two courses:
- ENGRD 202 Mechanics of Solids
- ENGRD 203 Dynamics

One or more of the following:
- M&AE 212 Mechanical Properties and Processing of Engineering Materials
- M&AE 225 Mechanical Design and Synthesis
- M&AE 325 Mechanical Design and Analysis
- M&AE 326 System Dynamics

The remainder from this list, of which at least one course must satisfy requirement 1b:
- M&AE 306 Spacecraft Engineering
- M&AE 386/480 Automotive Engineering
- M&AE 412 Smash and Crash: Mechanics of Large Defonnations
- M&AE 417 Introduction to Robotics: Dynamics, Control, Design
- M&AE 464 Design for Manufacture
- M&AE 478 Feedback Control Systems
- M&AE 490 Special Investigations in Mechanical and Aerospace Engineering
- M&AE 491 Design Projects in Mechanical and Aerospace Engineering
- M&AE 514 Design for Manufacture and Assembly
- M&AE 565 Biomechanical Systems—Analysis and Design
- M&AE 570 Applied Dynamics

Preparation in Aerospace Engineering
Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by majoring in mechanical engineering and taking courses from the aerospace engineering concentration such as M&AE 305, 306, 506, and 507. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

Master of Engineering (Mechanical) Degree Program
The M.Eng. (Mechanical) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include biomechanical engineering, combustion, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, mechanical systems and design, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. Any subsequent changes must also be approved by the committee. An individual student’s curriculum includes a four- to eight-credit design course, a minimum of 12 credits in mechanical engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 28 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty or student interests or from collaboration with industry. All projects must have a mechanical engineering design focus and have the close supervision of a faculty member.

All courses that constitute the major concentration must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AE Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of six credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should check with the M&AE graduate field office (104 Upson Hall) for additional degree requirements.
ENGINEERING - 2001-2002

Credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should consult with the M&AE graduate field office (104 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Mechanical) degree program may take courses that also satisfy the requirements of the manufacturing, energy, or electronic packaging option programs leading to special dean’s certificates in those areas.

NUCLEAR SCIENCE AND ENGINEERING

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the curriculum include K. B. Cady, D. A. Hammer, R. W. Kay, V. O. Kostroun, and K. Unlu

Undergraduate Study

Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within regular field programs (such as those in engineering physics, materials science and engineering, computer science, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

Master of Engineering (Nuclear) Degree Program

The two-year curriculum leading to the M.Eng. (Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Center for Nuclear Sciences are described in the Announcement of the Graduate School.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college’s introductory section.

The following courses, or equivalents, are included in the 30-credit program:

Fall term

NS&E 509, Nuclear Physics for Applications
A&EP 612, Nuclear Reactor Theory
A&EP 633, Nuclear Engineering
Technical elective

Spring term

NS&E 551, Nuclear Measurements in Research
NS&E 545, Energy Seminar
Technical elective
Engineering design project
Mathematics or physics elective

Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

A&EP 606/ECE 581, Introduction to Plasma Physics (fall, 4 credits)
A&EP 607/ECE 582, Basic Plasma Physics (spring, 4 credits)
A&EP 661, Microcharacterization (fall, 3 credits)
ECE 457, Silicon Device Fundamentals (fall, 4 credits with lab)
ECE 471/M&EAE 478/CHEM 372, Feedback Control Systems (fall, 4 credits)
MS&E 459, Physics of Modern Materials Analysis (spring, 3 credits)
MS&E 603, Analytical Techniques for Materials Science (spring, 4 credits)
NS&E 484/A&EP 484/ECE 484/M&EAE 459, Introduction to Controlled Fusion: Principles and Technology (spring, 3 credits)
NS&E 521, Radiation Effects in Materials (fall, 1-3 credits)

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

Bachelor of Science Curriculum in Operations Research and Engineering

The program is designed to provide a broad education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. The program prepares students for a wide range of careers including operations research, industrial engineering, entrepreneurship, information technology, operations management, consulting, financial engineering, financial services, and management. The foundation of the B.S. curriculum is the development of basic skills in calculus, statistics, probability, mathematical problem-solving, and computer science. Required courses in manufacturing systems and simulation build on these skills and provide engineering design experiences. The curriculum culminates in a major engineering design experience in one of two required OR&IE electives, OR&IE 416 or 490.

Because of the wide range of career goals among our students, the B.S. program is designed with a minimum of required courses and a large number of required electives. Students should consult with their field advisers to select electives that best meet their future goals.

The program is accredited as a “nontraditional” program by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). The faculty have not sought accreditation of the B.S. curriculum as a program in industrial engineering. Industrial engineering curricula, while excellent for preparing industrial engineers, do not have the flexibility that the wide range of students requires. Nonetheless, by proper selection of field electives, graduates of the B.S. program can and do become highly successful and competent industrial engineers. (Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisers concerning an accelerated program of study.)

A student who intends to enter the field program in Operations Research and Engineering should plan to take Basic Engineering Probability and Statistics (ENGRD 270) after completing MATH 192. Early consultation with a faculty member of the school or with the associate director for undergraduate studies can be helpful in making appropriate choices. The required courses for the OR&E field program and the typical terms in which they are taken are as follows:

Term 2, 3, or 4

Credits

ENGRD 211, Computers & Programming 3

Term 5

OR&IE 320, Optimization I 4
OR&IE 350, Financial and Managerial Accounting 4
OR&IE 360, Engineering Probability and Statistics II 4
A course in humanities and social sciences 3
Field-approved elective 3

Term 6

OR&IE 310, Industrial Systems Analysis 4 (may be taken in term 4) 4
OR&IE 321, Optimization II 4
OR&IE 361, Introductory Engineering
Stochastic Processes I 4
Behavioral science (organizational behavior) 3
Course in humanities and social sciences 3

*The behavioral science requirement can be satisfied by any one of several courses, including the Johnson Graduate School of Management (JGSM) course, MNG 554 (offered only in the fall), which is recommended for those contemplating the pursuit of a graduate business degree, ILR 170, 171, and 350, and H ADM 115.
I. Required Courses:

1. ENGRG 470: Undergraduate Engineering Teaching.

II. Four courses (11 credits minimum) taken at least six courses (minimum of 18 credits), chosen as follows:

1. Required Courses:

   ENGRG 270 Basic Engineering Probability & Statistics
   OR&IE 360 or ECE 310 Basic Engineering Probability & Statistics II or Introduction to Probability & Random Signals

2. Four courses (11 credits minimum) taken from the following list:
   - OR&IE 361 or ECE 411 Introduction to Engineering Stochastic Processes I or Random Signals in Communications/Signal Processing
   - OR&IE 476 Applied Linear Statistical Models
   - OR&IE 576 Regression
   - OR&IE 563 Applied Time Series Analysis
   - OR&IE 565 Applied Financial Engineering
   - OR&IE 575 Experimental Design
   - OR&IE 577 Quality Control
   - OR&IE 581 Simulation Modeling
   - OR&IE 582 Simulation Analysis

   MATH 472 or BTRY 409 Basic Probability or Theory of Statistics
   BTRY 602 Statistical Methods II
   BTRY 603 or ILRST 411 Statistical Methods III or Statistical Analysis of Qualitative Data
   ILRST 310 Statistical Sampling
   ILRST 314 Graphical Methods for Data Analysis
   ILRST 410 Techniques of Multivariate Analysis

   Other course options approved by petition in advance. The student should be aware that some of these courses require others as prerequisites. All these courses are cross-listed under the Department of Statistical Science.

2. Advanced courses in OR&IE at the 500- or 400-level or above.
3. A significant research experience or honors project under the direct supervision of an OR&IE faculty member using OR&IE 499: OR&IE Project. A significant written report must be submitted as part of this component.
4. A significant teaching experience under the direct supervision of a faculty member in OR&IE using OR&IE 490: Teaching in OR&IE, or ENGRG 470: Undergraduate Engineering Teaching.

Timing
All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the first semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures
Each application to the OR&IE honors program must have a faculty adviser to supervise the honors program. The honors adviser need not be the student’s faculty adviser. The application to the program shall be a letter from the student describing the specific proposed honors program and including the explicit approval of the honors adviser. Each program must be approved by the associate director, and any changes to the student’s program must also be approved by the associate director of undergraduate studies.

Engineering Minor Programs
The School of Operations Research and Industrial Engineering offers three engineering minor programs: engineering statistics, industrial systems and information technology, and operations research and management science. (A student may not receive credit for more than one minor offered by the School of Operations Research and Industrial Engineering.) Descriptions and requirements for each program follow:

Minor in Engineering Statistics

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the industrial systems and information technology minor: ABEN, A&EP, CEE, CHEME, COM S, EAS, ECE, M&AE, MS&E.

The aim of this minor is to provide an in-depth education in the issues involved in the design and analysis of industrial systems, and the tools and information technology that have become an integral part of the manufacturing process. Students will become familiar with the problems, perspectives, and methods of modern industrial engineering and be prepared to work with industrial engineers in designing and managing manufacturing and service operations. That is, rather than providing a comprehensive view of the range of methodological foundations of operations research, this minor is designed to give the student a focused education in the application area most closely associated with these techniques.

The requirements for the industrial systems and information technology minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 202 Rhodes Hall.

Requirements
To complete the minor, the student must take all six courses (minimum of 18 credits), chosen as follows:

1. At least three of the following:
   - ENGRG 270 Basic Engineering Probability & Statistics
OR&IE 310 Industrial Systems Analysis
OR&IE 320 Optimization I
OR&IE 480 Information Technology for Operations Research and Industrial Technology

II. The remaining courses/credit hours from the following:
OR&IE 350 Financial and Managerial Accounting
OR&IE 416 Design of Manufacturing Systems
OR&IE 451 Economic Analysis of Engineering Systems
OR&IE 525 Production Planning and Scheduling Theory and Practice
OR&IE 552 Revenue Management
OR&IE 577 Quality Control
OR&IE 581 Simulation Modeling

Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Minor in Operations Research and Management Science

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the operations research and management science minor: ABEN, A&EP, CEE, CHEM, COM S, EAS, ECE, M&AIE, MS&E.

The field of operations research and management science (OR/MS) aims to provide rational bases for decision making by seeking to understand and model complex situations and to use this understanding to predict system behavior and improve system performance. This minor gives the student the opportunity to obtain a wide exposure to the core methodological tools for OR/MS, including mathematical programming, stochastic and statistical models, and simulation. The intent of this minor is that the student should obtain a broad knowledge of these fundamentals, rather than train the student in a particular application domain. This way the student can adjust their advanced courses and pursue either methodological or application oriented areas of greatest interest and relevance to the overall educational goals of their program.

The requirements for the operations research and management science minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs Office, 200 Rhodes Hall.

Requirements
To complete the minor, the student must take at least six courses (minimum of 18 credits), chosen as follows:

1. Choose three courses from the following list:
   - ENGRD 270 Basic Engineering Probability and Statistics
   - OR&IE 320 Optimization I
   - OR&IE 321 Optimization II
   - OR&IE 360 Engineering Probability and Statistics II

2. Choose three courses in the following list:
   - OR&IE 361 Introduction Engineering to Stochastic Processes I
   - OR&IE 561 Simulation Modeling
   - OR&IE 582 Simulation Analysis

II. These courses are to be supplemented with additional OR&IE courses at the 300 level or higher, so that entire program includes at least six courses and at least 18 credits. For example, taking the remaining three options on this list would suffice. Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Master of Engineering (OR&IE) Degree Program

This two-semester professional degree program stresses applications of operations research and industrial engineering. The centerpiece of the program is a team-based project on a real problem. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design or improvement of systems in manufacturing, information, finance, and nonprofit organizations.

General admission and degree requirements are described in the introductory "Degree Programs" section. The M.Eng. (OR&IE) program is intended for three groups of students: graduates of the undergraduate field program in OR&IE who wish to expand their practical knowledge of the field; Cornell undergraduates in other math-based fields who want to broaden their exposure to OR&IE; and qualified non-Cornellians with strong backgrounds from other programs in the United States and abroad.

To ensure completion of the program in two semesters, the entering student should have completed courses in probability and statistics and in computer science, as well as four semesters of mathematics, through differential equations, linear algebra, and multivariate calculus.

Program requirements include a core of OR&IE courses plus technical electives chosen from a broad array of offerings. The choice of a particular elective sequence plus a specific project course results in completion of one of several options within the program. These include the applied operations research option, the manufacturing option, the financial engineering option, the systems engineering option, the information technology concentration, and the Semester in Manufacturing. These options are offered jointly with various other Cornell departments and schools and provide the opportunity to interact on projects and in class with specialists in other engineering fields and business. Many students select the applied operations research option, offered only by OR&IE, which has project teams made up entirely of OR&IE M.Eng. students and offers the broadest choice of elective courses. Students interested in an option other than the applied operations research option should obtain further information from the following: manufacturing option, Center for Manufacturing Enterprise, 304 Sage Hall, 607-255-4691; systems engineering option, 218 Upson Hall, 607-255-0710.

I. For matriculants with preparation comparable to that provided by the undergraduate Field Program in Operations Research and Engineering:

Fall term Credits
OR&IE 516, Case Studies 1
OR&IE 893, Applied OR&IE Colloquium 1
M.Eng. Project 1
Technical electives 12
Spring term
OR&IE 894, Applied OR&IE Colloquium 1
M. Eng. Project minimum of 4
Technical electives 9

II. For matriculants from other fields who minimally fulfill the prerequisite requirements (students who have the equivalent of OR&IE 520, 523, and 560 will take other OR&IE electives in their place):

Fall term Credits
OR&IE 560, Engineering Probability and Statistics II 4
OR&IE 520, Optimization I 4
OR&IE 522, Topics in Linear Optimization 1
OR&IE 516, Case Studies 1
OR&IE 580, Design and Analysis of Simulated Systems 4
OR&IE 893, Applied OR&IE Colloquium 1
M. Eng. Project 1
Spring term
OR&IE 523, Introduction to Stochastic Processes I 4
OR&IE 894, Applied OR&IE Colloquium 1
M.Eng. Project minimum of 4
Technical electives 6

For both of the above pro forma schedules, at least 12 credit hours of the specified electives must be chosen from the list of courses offered by the School of Operations Research and Industrial Engineering. For scheduling reasons, some options may require an additional summer, depending on the student's preparations.

A minimum of 30 credit hours are required to complete this program. Additional program requirements exist and are described in the Master of Engineering Handbook, which is available in Room 201, Frank H. T. Rhodes Hall and on the web at www.orie.comell.edu.

The project requirement can be filled in a variety of ways. Common elements in all project experiences include working as part of a group of three to five students on an engineering design problem, meeting with a faculty member in a regular basis, and oral and written presentation of the results obtained. Most projects address problems that actually exist in manufacturing firms, financial firms, and service organizations such as hospitals.

Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in operations research and engineering may be interested in a cooperative program at Cornell that leads to
both Master of Engineering and Master of Business Administration (M.B.A.) degrees. With appropriate curriculum planning, such a combined B.S./M. Eng./M.B.A. program can be completed in six years at Cornell, with time out for work experience. For undergraduates from other schools, it may be feasible to complete the M. Eng./M.B.A. program in two years, possibly with an intervening summer or time out for work experience if they do not already have it on coming to Cornell. This accelerated program often incorporates the Twelve-Month M.B.A. Program of the Johnson Graduate School of Management (JGSM).

An advantage for OR&E majors is that, as part of their undergraduate and/or M. Eng. curriculum, they study several subjects that are required for the M.B.A. degree. (This is because modern management is concerned with the operation of production and service systems, and much of the analytical methodology required to deal with operating decisions is the same as that used by systems engineers in designing these systems.) This early start on meeting the business-degree requirements permits degrees in two years rather than the usual three years for such a combination.

The details of planning courses for this program should be discussed with the admissions office of the JGSM. Since 95 percent of the students in the JGSM have work experience, there will typically be a gap for work experience between the M. Eng. and M.B.A. portions of the program for students who do not already have it when beginning the M. Eng. portion.

Further details and application forms may be obtained at the office of the School of Operations Research and Industrial Engineering, 201 Frank H. T. Rhodes Hall, and at the admissions office of the Johnson Graduate School of Management.

The Knight Scholars program, open to Cornell engineering graduates, provides financial support for the M. Eng./M.B.A. combination. Further details are available in 146 Olin Hall, (607) 255-7413.

THEORETICAL AND APPLIED MECHANICS

Undergraduate Study

The Department of Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the Common Curriculum.

College Program in Engineering Science

A student may enroll in the College Program in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. The College Program is described in the section on undergraduate study in the College of Engineering.

Minor in Applied Mathematics

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the Applied Mathematics minor: ABEN, A&EP, CEE, CHEME, COM S, EAS, ECE, M&AE, MS&E, OR&IE.

Requirements

To complete the minor, the student must take at least six courses beyond MATH 294, to be chosen as follows:

- a) No more than one course may be chosen from any one of the groups 1, 2, 3, or 4.
- b) At least three courses must be chosen from groups 5 and 6.
- c) No more than one 200-level course may be chosen.
- d) No more than one course may be chosen as follows:

1. Analysis

| T&AM 310 Advanced Engineering Analysis I |
| MATH 321 Applicable Analysis |
| MATH 420 Applicable Analysis |
| A&EP 321 Mathematical Physics I |

2. Computational Methods

| COM S/ENGRD 222 Introduction to Scientific Computation |
| CEE/ENGRD 241 Engineering Computation |
| ABEN 449 Computational Tools for Engineers |
| OR&IE 320 Optimization I |

3. Probability and Statistics

| OR&IE/ENGRD 270 Basic Engineering Probability and Statistics |
| OR&IE 360 Engineering Probability and Statistics II |
| ECE 310 Introduction to Probability and Random Signals |
| CEE 304 Uncertainty Analysis in Engineering |

4. Applications

| A&EP 333 Mechanics of Particles and Solid Bodies |
| CHEME 323 Fluid Mechanics |
| CEE 331 Fluid Mechanics |
| CEE 371 Solid Mechanics |
| ECE 425 Digital Signal Processing |
| MS&E 303 Thermodynamics of Condensed Systems |
| M&AE 323 Introductory Fluid Mechanics |

5. Advanced Courses

- Only one of the following three may be chosen:
  - T&AM 311 Advanced Engineering Analysis II
  - MATH 422 Applicable Analysis II
  - A&EP 322 Mathematical Physics II

- Only one of the following two may be chosen:
  - ECE 411 Random Signals in Communications and Signal Processing
  - OR&IE 361 Introductory Engineering Stochastic Processes I

- Only one of the following two may be chosen:
  - COM S 381 Introduction to Theory of Computing
  - COM S 481 Introduction to Theory of Computing
  - COM S 482 Introduction to the Design of Algorithms
  - OR&IE 321 Optimization II
  - OR&IE 431 Discrete Models
  - OR&IE 435 Introduction to Game Theory
  - OR&IE 462 Introductory Engineering Stochastic Processes II
  - ECE 522 Nonlinear Systems: Analysis, Stability, Control, and Applications

- Only one of the following two may be chosen:
  - M&AE 571 Applied Dynamics
  - T&AM 570 Intermediate Dynamics
  - T&AM 578 Nonlinear Dynamics and Chaos

6. Math Courses—Any 300+ level course offered by the mathematics department in algebra, analysis, probability/statistics, geometry, or logic, with the following exceptions:

- 1) MATH 321 or MATH 420, if any course from group 1 is chosen
- 2) MATH 371, if any course from group 3 is chosen
- 3) MATH 422, if T&AM 311, MATH 422, or A&EP 322 are chosen from group 5

Academic Standards: A letter grade of C or better for each course in the minor.

Minor in Biomedical Engineering

Eligibility

All undergraduates in the College of Engineering are eligible to participate in the biomedical engineering minor, unless they are also pursuing the bioengineering option. (Students may participate in either the bioengineering option OR the biomedical engineering minor, but not both.)

Requirements

To complete the minor, the student must take at least six courses (minimum of 18 credits) from the five groups listed below, with at least one course from each group. At least four of the six courses must be from outside the student's major. In addition, all students must take ENGRG 501, Bioengineering Seminar (1 credit).
Academic Standards: A letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Note: ENGRG 605-606 and MAE 664 are graduate courses with limited enrollment. First preference will be given to graduate students.

**Master of Engineering (Engineering Mechanics) Degree Program**

Composite materials designed to meet specific requirements of weight, strength, and rigidity are used increasingly in the manufacture of everyday structures and components. The Master of Engineering (Engineering Mechanics) degree program focuses on the mechanical behavior of advanced composite materials and structures and prepares students to play a role in the development of this new technology. Students from diverse engineering backgrounds, such as mechanics, structures, and materials, as well as aerospace and biomedical engineering, can normally complete the requirements for the professional Master of Engineering degree in one year.

The degree program requires satisfactory completion of 30 credits of course work, including 12 credits of courses that involve analysis, computation, design, or laboratory experience. Of these 12 credits, at least six must be earned in T&AM. Up to 10 credits will be awarded for an individual project involving composites. The balance of the required credits may be earned in elective courses chosen from those in the course listing below or others approved by the student's adviser.

The Department of Theoretical and Applied Mechanics has several laboratories equipped for the fabrication and mechanical testing of composite materials and structures. Extensive computing resources are available for numerical computations, design, or other numerical- or simulation-research activities related to composites. The Materials Science Center, the Center for Theory and Simulation in Science and Engineering, and the Computer-Aided Design Instructional Facility provide additional state-of-the-art laboratories and computer resources.

**ENGINEERING COMMON COURSES**

**Engineering Communications Courses**

Courses in this category, offered by the Engineering Communications Program, develop writing and oral presentation skills relevant to engineers.

**ENGRC 301 Writing in Engineering**

TBA. 1 credit. Prerequisite: permission of instructor. Can be used to satisfy requirements in expressive arts as a free or approved elective. **This course can only be taken in conjunction with a “writing-intensive” engineering class.** Some “writing-intensive” engineering classes may require students to enroll in this supplementary course. Instructors from the Engineering Communications Program work with engineering faculty members to prepare students for writing assignments. Intended to strengthen understanding of the course content while enhancing communications skills. May be taken more than once, with different engineering courses.

**ENGRC 333 Topics in Engineering Communications**

TBA. 3 credits. Topics vary as the need and interest arise. Sample topics include introductory technical communications, graphic presentation of engineering material, desktop publishing, information technologies, advanced problems in engineering communications, technology, and the law. Fulfills the college technical writing requirement.

**ENGRC 334 Independent Study in Engineering Communications**

TBA. Variable credits (1–3). Students work closely with a Communications Program instructor to pursue an aspect of professional communications not available through regular course work. Projects may involve writing technical documentation, creating user manuals, analyzing and producing technical graphics, or reading and writing about problems in engineering practice. Interested students should contact the Engineering Communications Program.

**ENGRC 335 Communications For Engineering Managers**

TBA. 5 credits. Limited to 20 students per section. Prerequisite: two First-Year Writing Seminars. This interactive workshop focuses on communications in organizational contexts common to engineering graduates. ENGRC 335 helps students to produce effective business and technical communications—written, oral, and visual. Topics include internal and external communications, balancing visual and verbal elements in documents and presentations, teamwork and leadership, running and attending meetings, management strategies, communicating to colleagues, superiors, subordinates, and
courses. A few examples include:

- **Physics and Engineering**: Courses in this category typically require a basic understanding of physics and mathematics as prerequisites. They may cover topics such as thermodynamics, electromagnetism, and quantum mechanics. Students in these courses are usually expected to have a strong foundation in algebra and calculus.

- **Computer Science**: Courses in this category often require programming skills and knowledge of basic computer science concepts. They may include topics such as data structures, algorithms, and computer architecture. Some courses may also require familiarity with a specific programming language.

- **Mechanical Engineering**: Courses in this category are likely to require knowledge of basic mechanics, materials science, and possibly some fluid mechanics. They may cover topics such as structural analysis, heat transfer, and fluid dynamics.

- **Electrical Engineering**: Courses in this category typically require a strong background in mathematics, particularly calculus and differential equations. They may cover topics such as circuit theory, signal processing, and digital electronics.

- **Civil Engineering**: Courses in this category may require knowledge of basic mechanics and possibly some experience with computer software for structural analysis. They may cover topics such as structural analysis, soil mechanics, and water resources management.

- **Chemical Engineering**: Courses in this category are likely to require a strong background in mathematics, particularly calculus and differential equations. They may cover topics such as chemical kinetics, reaction engineering, and mass transfer.

These course descriptions highlight the importance of prerequisites and the interdisciplinary nature of engineering education. Students are encouraged to consult with academic advisors to ensure they have the necessary background to succeed in their chosen courses.
(ADC), digital to analog converters (DAC), thermistors, optical sensors, digital temperature control, nonlinear least squares curve fitting of experimental data, thermal diffusion, and viscosity of fluids. A second goal of this course is to develop effective written and oral communication skills in the context of science and engineering. A number of rhetorical principles are presented that can produce clarity in communication without oversimplifying scientific issues. Students prepare progress reports, technical reports, and formal articles based on the experiments.

ENGRD 270 Basic Engineering Probability and Statistics
Fall, spring, summer. 3 credits. Pre- or corequisite: MATH 293. Fall, D. Dalthorp; spring, L. Trotter.
This course gives students a working knowledge of basic probability and statistics and their application to engineering practice. Computer analysis of data and simulation are included. Topics include random variables, probability distributions, estimation, testing, experimental design, quality control, and regression.

ENGRD 321 Numerical Methods in Computational Molecular Biology (also BIOBIN 321 and COM S 231)
Fall. 3 credits. Prerequisites: at least one course in calculus such as MATH 106, 111, or 191 and a course in linear algebra such as MATH 221 or 294 or BTRY 417. COM S 100 or equivalent and some familiarity with iteration, arrays, and procedures.
An introduction to numerical computing using MATLAB organized around five applications: the analysis of protein shapes, dynamics, protein folding, score functions, and field equations. Students become adept at plotting, linear equation solving, least squares fitting, and cubic spline interpolation. More advanced problem-solving techniques that involve eigenvalue and eigenvector solutions of ordinary and partial differential equations, linear programming, and nonlinear minimization are also treated. The goal of the course is to develop a practical computational expertise with MATLAB beyond the basic mathematical intuition for the problems of molecular biology. COMA majors may use only one of the following towards their degree: COM S 321, 322, or 421.

ENGRD 322 Introduction to Scientific Computation (also COM S 322)
Spring, summer. 3 credits. Prerequisites: COM S 100 and (MATH 222 or 294).
An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Special lectures cover parallel computation.

Courses of General Interest
Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

ENGRG 102 Drawing and Engineering Design (also M&AE 102)
Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to 30 students each half-term. Recommended for students without mechanical engineering experience. Letter grade required for students majoring in M&AE; S/U grades optional for others. Introduction to drawing, and graphic techniques useful in design, analysis, and presentation of ideas. Computer-aided design is integral to the course work and final design project.

ENGRG 150 Engineering Seminar
Fall, spring, summer. 1 credit. First-year students only. S/U grades only.
Engineering freshmen meet weekly with their faculty advisors to discuss a range of engineering topics. Discussions may include the engineering curriculum and student programs, what different types of engineers do, the character of engineering careers, active research areas in the college and in engineering in general, and study and examination skills useful for engineering students. Groups may visit campus academic, engineering, and research facilities.

ENGRG 198 Introduction to the Electronic Revolution (also ECE 198)
Summer only. 3 credits. Cannot be taken in addition to ENGRG 298.
This course is an introductory survey of the development of information technologies in the United States from the 1830s to the present. Students focus on the themes of the social process of invention, the federal government's role in promoting and regulating technological change, and the relationship between technological and social change in regard to the history of the telegraph, telephone, radio, television, computers, and the Internet. The themes of gender and technology and the relationship between science and technology are addressed throughout the course. Laboratory demonstrations of current research in information technology at Cornell are given in some afternoon sessions.

ENGRG 250 Technology in Society (also ECE 250, HIST 250, S&TS 250)
Fall. 3 credits. Prerequisites: MATH 294 or equivalent. Undergraduates grades only.
This course is an introductory survey of the development of information technologies in the United States from the 1830s to the present. Students focus on the themes of the social process of invention, the federal government's role in promoting and regulating technological change, and the relationship between technological and social change in regard to the history of the telegraph, telephone, radio, television, computers, and the Internet. The themes of gender and technology and the relationship between science and technology are addressed throughout the course. Laboratory demonstrations of current research in information technology at Cornell are given in some afternoon sessions.

ENGRG 323 Engineering Economics and Management (also CEE 323)
Spring, usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors.
Introduction to engineering and business economics and to project management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternative engineering designs or projects. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems.

ENGRG 481 Entrepreneurship For Engineers (also M&AE 481)
Fall. 3 credits. Enrollment open to upper class engineers; others with permission of instructor.
For description, see M&AE 481.

ENGRG 501 Bioengineering Seminar
Fall, spring. 1 credit. For juniors, seniors, and graduate students only. K. H. Lee.
Breadth survey of all aspects of bioengineering, including biomedical, bioprocess, biological, and bioenvironmental engineering and aspects of biotechnology. Sessions may be technical presentations or discussions. Sessions may occasionally be held outside of scheduled times.

ENGRG 605 Fundamentals of Biomedical Engineering I (also CHEM 605)
Fall. 1–4 credits (1 credit per section).
Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor. S/U grades optional for students not majoring or minoring in biomedical engineering.
Coordinator: M. L. Shuler.
A series of four-week modules on specialized topics.

605.1 Cellular Dynamics and Cancer
1 credit. Meets first third of term.
W. L. Olbricht and staff.

605.2 Physiological Systems
1 credit. Meets second third of term.
W. L. Olbricht.
Emphasis is on development of physiologically-based pharmacokinetic models for drug delivery and on models of cardiovascular system, particularly blood flow.

605.3 Biomaterials
1 credit. Meets final third of term.
C. C. Chu.
The main objective of the biomaterials module is to provide students with an effective background in a wide range of biomaterials that include polymers, metals/alloys, and ceramics and that are currently used in human body repair. After completion of this module, students have the basic and some in-depth knowledge of what biomaterials are made of, how biomaterials contribute to the saving of human lives, the criteria of materials for biomedical use, biocompatibility, failure modes of biomaterials, the current R&D activities in biomaterials, challenges that
biomaterials are facing, and future direction of R&D in biomaterials.

605.4 Biomedical Engineering Project
1 credit. Meets final third of term.
M. L. Shuler.
Students work in teams on a design problem of their choice related to development of a biomedical device or procedure. Each team prepares a written report.

ENGRG 606 Fundamentals of Biomedical Engineering II (also B'CHEM 606)
Spring. 1-4 credits. Prerequisites: graduate standing in engineering or science; PHYS 213 and MATH 294 or equivalent.
Undergraduates must have permission of instructor. S-U grades optional for students not majoring or minoring in biomedical engineering. Coordinator: M. L. Shuler.
A series of one and two-credit modules on specialized topics.

606.1 Biomedical Instrumentation and Diagnosis
Spring. 1 credit. Lec. Meeting times TBA by instructor with the instructor before end of Fall 2011 term is required. C. D. Montemagno.
This course gives a perspective on the use of advanced instrumentation for the diagnosis and treatment of disease and the investigation of fundamental biological processes. The basic theory and application of different microscopic and spectroscopic methods, imaging tomographics, and micro-electromechanical devices to biological systems are explored. A two-day trip during spring break to Cornell University Medical Center to learn techniques of functional MRI is required.

606.2 Artificial Organs and Tissue Engineering
1 credit. Prerequisite: ENGRG 605, Section 03 (Biomaterials). Meets first third of term. W. M. Saltzman.
An introduction to the use of cells, biological molecules, and synthetic materials as the basis for building artificial organs and encouraging tissue regeneration. The section discusses the physiological and engineering issues underlying the use of synthetic, extracorporeal systems (e.g., membrane-based dialysis devices), composite implantable materials (e.g., drug-delivery systems and nerve regeneration guides), and hybrid cell/polymer implantable systems (e.g., engineered tissues).

606.3 Biomechanics of Musculoskeletal Systems
2 credits. Meets final third of term.
D. L. Bartel, C. E. Farnum.
Integrated lecture/laboratory experience. The anatomy and function of the canine hindlimb are explored in dissection laboratories and through demonstration of a non-invasive technique, computed tomography. Methods of approximating functional joint loads are discussed, and physical testing is demonstrated. A computer model of the stifle (knee) joint is created by combining knowledge of the anatomy and the mechanical environment.

ENGRG 690 Special Investigations in Bioengineering
Fall. 2 credits. Dr. Wang.
"Physics of Various Imaging Methods and Application to Medical Systems." This course introduces engineering students (at beginning graduate or advanced undergradate level) to the basic principles of biomedical imaging. The materials cover the fundamental concepts and applications of major biomedical imaging modalities including computerized tomography (CT), magnetic resonance imaging (MRI), nuclear medicine, and ultrasound (US). The prerequisite for this course consists of basic physics with calculus and fourier transform skills.

Introduction to Engineering Courses
Courses in this category are freshman-level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are always cross-listed with a department.

ENGR 10 The Laser and Its Applications in Science, Technology, and Medicine (also A&E 110)
Fall, spring. 3 credits.
The principles of laser action, types of laser systems, elements of laser design, and applications of lasers in science, technology, and medicine are discussed. In the laboratory students build and operate a nitrogen laser and a tunable dye laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser processing of materials, and Raman spectroscopy.

ENGR 111 Nanotechnology
Fall. 3 credits. E. Gannett.
Nanotechnology has been enabling the Information Revolution with the development of even-faster and more powerful devices for manipulation, storing, and transmitting information. In this hands-on course students learn how to design and manipulate materials to build devices and instruments in applications ranging from computers to telecommunication to biotechnology.

ENGR 112 Introduction to Chemical Engineering (also CHEM 112)
Fall. 3 credits. Limited to freshmen. T. M. Duncan.
Covers design and analysis of processes involving chemical units. Students learn strategies for design, such as creative thinking, conceptual block busting, and (re)definition of the design goal, in the context of contemporary chemical engineering. Includes methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGR 113 Environmental Engineering for the Megalopolis (also CEE 113)
Fall. 3 credits. Not open (without instructor's permission) to upper-division engineering students. M. L. Weber-Shirk.
Learn how to design: reservoirs to provide water during droughts, aqueducts to transport water, water treatment plants to prevent waterborne disease, and landfills to minimize contamination of the environment. Take field trips, build a miniature water treatment plant, and explore new technologies for making safe drinking water.

ENGR 114 An Introduction to Electrical Circuit Engineering Design
Spring. 3 credits. C. E. Seyler.
This course introduces students to the basic principles of electric circuit analysis and design. In the laboratory students work in pairs on a focused series of electronic circuit experiments which are relevant to the course design project. A team of four to five students will then design and construct a working AM radio transmitter-receiver system.

ENGR 115 Engineering Applications of Operations Research
Spring. 3 credits. Enrollment not open to ORE&E upper-class majors.
An introduction to the problems and methods of Operations Research and Industrial Engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems can be found, and several standard solution techniques. In the computer laboratory, students encounter problem simulations and use some standard software packages.

ENGR 116 Modern Structural Systems and Materials (also CEE 116)
Fall. 3 credits. K. C. Hover.
An introduction to the process of design, starting with assessing needs, defining performance, and evaluating materials. Discussions and exercises demonstrate how loads are carried not only through large structures, but also how those loads are carried through the micro-structure inside engineering materials. Students are introduced to the physics of structural behavior in bridges, dams, amusement park rides, Broadway and Las Vegas stage sets, and orbital structures. Here on earth students examine how loads like wind and gravity get from the structure to the ground, and how loads like earthquakes get from the ground to the structure. Materials range from traditional wood, metal, soil, rock, and concrete, to modern plastics and fiber composites.

ENGR 117 Introduction to Mechanical Engineering (also M&E 117)
Fall or spring, to be determined. 3 credits.
Two lectures and one lab per week.
An introduction to the wide range of topics of current interest in mechanical engineering.

ENGR 118 Design Integration: A Portable CD Player (also M&E 118 and T&M 118)
Spring. 3 credits. W. Sachse.
This course examines the roles of various engineering disciplines in the design of a portable compact disc (CD) player. Students are introduced to elements of mechanical, electrical, materials, environmental, manufacturing, and computer engineering as related to the CD player. Laboratory sessions and demonstrations are used to illustrate the principles of design.

ENGR 119 Biomaterials for the Skeletal System (also MSE & 119)
Fall. 3 credits. D. T. Grubb.
Biomaterials are at the intersection of biology and engineering. This course explores natural structural materials in the human body, their properties and microstructure, and how synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments are used as examples, with their metal, plastic, and ceramic replacements. Topics covered include strength, corrosion, fatigue, wear, and bio-compatibility. Case studies of design lead to consideration of regulatory approval requirements and legal liability issues.

ENGR 120 Introduction to Biomedical Engineering (also CHEM 120)
Fall. 3 credits. W. M. Saltzman.
Introduction to the fundamentals of science and engineering that spawned the biotechnology revolution—technologies of cell cultures, DNA, and antibodies—and the relationship between biomedical science, bioengineering,
and the growing biomedical product industry. Case studies of the development of biotechnical processes, from discovery to clinical use, include processes for vaccines, antibiotics, cancer chemotherapy, protein pharmaceuticals, and organ transplantation.

**ENGRI 121** Fusion, Fusion, and Radiation (also A&EP 121 and NS&E 121)

Spring. 3 credits. S-U grades optional for students outside the College of Engineering. K. B. Cady. Lecture-laboratory course on the physical nature and biological effects of nuclear radiation, benefits and hazards of nuclear energy; light-water reactors, breeder reactors, and fusion reactors; and uses of nuclear radiation in research. Laboratory demonstrations involve Cornell's research reactor, detection of nuclear radiation; activation analysis using gamma-ray spectroscopy; neutron radiography; and pulsed power generators for fusion research.

**ENGRI 122** Earthquake! (also EAS 122)

Spring. 3 credits. L. D. Brown. The science of natural hazards and strategic resources is explored. This course covers techniques for locating and characterizing earthquakes, and assessing the damage they cause; methods of using sound waves to image the earth's interior to search for strategic materials; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

**ENGRI 124** Designing Materials for the Computer (also MS&E 124)

Spring. 3 credits. 3 lectures. Not offered spring 2002. C. K. Ober. Introduces the materials, processes and properties of the modern semiconductor, ceramic, and electronic materials used in the microelectronics industry to form integrated circuits, electronic devices, and displays. This course examines lithographic processing, metallization, diffusion, implantation, oxidation, and other processes used in fabricating electronic devices and their packages. The technology of displays is discussed including liquid crystal displays and light emitting devices.

**ENGRI 126** Introduction to Telecommunications

Fall. 3 credits. S. H. Wicker, staff. This course introduces the technologies that underlie wired and wireless telecommunications systems. The course begins with an introduction to telephony and the public switched telephone network. Moderns and cellular telephony are then introduced, along with ISDN and BISDN. The course concludes with an introduction to ATM and TCP/IP. The course includes both lectures and laboratory demonstrations. Students have the opportunity to design communication systems, and to determine their performance through simulations.

**ENGRI 127** Introduction to Entrepreneurship and Enterprise Engineering (also M&AE 127)

Spring. 3 credits. Open to all Cornell students regardless of major; no prerequisites. This course provides a solid introduction to the entrepreneurial process to students in engineering. The main objective is to identify and to begin to develop skills in the engineer-

**Agricultural and Biological Engineering**

For complete course descriptions, see the Agricultural and Biological Engineering listing in the College of Agriculture and Life Sciences section or visit the department website, www.aben.cornell.edu.

**ABEN 151** Introduction to Computing

Fall. 4 credits. Prerequisite: MATH 191 or equivalent (coregistration permissible). Each lab and recitation section limited to 22 students.

**ABEN 152** Computer Applications for Engineers

Spring. 3 credits. Prerequisites: ABEN 151 or equivalent (coregistration permissible). Course is comprised of three one-credit modules: (1) MATLAB; (2) spreadsheets; and (3) presentation graphics.

**ABEN 200** The ABEN Experience

Spring. 1 credit.

**ABEN 250** Engineering Applications in Biological Systems (also ENGRD 250)

Fall. 3 credits. Corequisite: MATH 293. Recommended for the sophomore year. For description, see ENGRD 250.

**ABEN 299** Sustainable Development: A Web-Based Course

Spring. 3 credits. Prerequisite: sophomore standing and above. S-U grades optional.

**ABEN 301** Energy Systems

Spring. 3 credits. Prerequisite: college physics.

**ABEN 350** Biological and Environmental Transport Processes

Fall. 3 credits. Prerequisites: MATH 294 and fluid mechanics (coregistration permissible).

**ABEN 365** Properties of Biological Materials

Spring. 3 credits. Prerequisites: ENGRD 202 (coregistration permissible).

**ABEN 371** Hydrology and the Environment

Spring. 3 credits. Prerequisite: 1 course in calculus.

**ABEN 411** Biomass Processing: Modelling and Analysis

Spring. 3 credits. Prerequisites: ABEN 250, ABEN 350 (or any course in heat and mass transport), BIOBM 331, 332, or BIOMI 290. Not offered 2001-2002.

**ABEN 425** Science and Technology of Environmental Management

Fall. 3 credits. Open to seniors and graduate students only. Letter grades only.

**ABEN 427** Water Sampling and Measurement

Fall. 3 credits. Prerequisites: soils and/or fluids or hydrology courses and MATH 191.

**ABEN 435** Principles of Aquaculture

Spring. 3 credits. Prerequisite: minimum junior standing.

**ABEN 436** Aquaculture Using Recirculating Water Reuse Technology

Spring. 1 credit. Prerequisite: ABEN 435 (co-registration permissible).

**ABEN 450** Biomation

Spring. 4 credits. Prerequisites: linear differential equations, physics or electrical science, computer programming, and use of spreadsheets.

**ABEN 453** Computer-Aided Engineering: Applications to Biomedical and Food Processes (also M&AE 453)

Spring. 3 credits. Prerequisite: computer programming (ABEN 151 or COM S 100) and heat and mass transfer (ABEN 350 or equivalent).

**ABEN 454** Physiological Engineering

Fall. 3 credits. Corequisite: fluid mechanics.

**ABEN 456** Biomechanics of Plants (also BIO PL 456)

Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology, and 1 year of calculus, or permission of instructor. S-U grades optional.

**ABEN 458** Introduction to Biotechnology

Fall. 4 credits. Prerequisites: ABEN 350 (coregistration permissible), biochemistry, microbiology, fluid mechanics, or permission of instructor.

**ABEN 471** Geohydrology (also CEE 431 and GEOL/EAS 445)

Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202. For description, see CEE 431.

**ABEN 473** Watershed Engineering

Fall. 3 credits. Prerequisite: fluid mechanics or hydrology.

**ABEN 474** Drainage and Irrigation Design

Spring. 3 credits. Prerequisites: fluid mechanics or hydrology.

**ABEN 475** Environmental Systems Analysis

Fall, spring. 3 credits. Prerequisites: MATLAB and 2 years of calculus. Will not be offered fall 2001 but will be offered spring 2002.
ABEN 493 Technical Writing for Engineers
Fall. 1 credit. Prerequisites: ABEN 473.

ABEN 494 Special Topics in Agricultural and Biological Engineering
Fall, spring. 1–4 credits. S-U grades optional.

ABEN 495 ABEN Honors Research
Fall. 1–6 credits. Prerequisites: enrollment in the ABEN Honors Research Program.

ABEN 496 Capstone Design in Agricultural and Geological Engineering
Fall, spring. 1–3 credits. Prerequisite: upper two-fifths of their class. S-U grades only.

ABEN 497 Individual Study in Agricultural and Biological Engineering
Fall, spring. 1–4 credits. S-U grades only.

ABEN 498 Undergraduate Teaching
Fall, spring. 1–4 credits. Prerequisite: permission of instructor.

ABEN 499 Undergraduate Research
Fall, spring. 1–3 credits. Prerequisite: permission of instructor.

ABEN 551/552 Agricultural and Biological Engineering Design Project
Fall. 551; spring, 552. 3–6 credits. Prerequisite: permission of instructor.

ABEN 561 Bioremediation: Engineering Organisms to Clean Up the Environment
Spring. 3 credits. Prerequisites: BIOM 290 or BIOM 508 or BIOM 351 or permission of instructor.

ABEN 562 Instrumentation: Sensors and Transducers
Spring. 3 credits. Prerequisites: linear differential equations, introductory chemistry and introductory physics, or permission of instructor.

[ABEN 655 Thermodynamics and Its Applications
Spring. 3 credits. Prerequisite: MATH 293 or equivalent. Not offered 2001–2002.]

ABEN 658 Biosensors and Bioanalytical Techniques
Spring. 4 credits. Prerequisite: biochemistry and permission of instructor.

[ABEN 671 Analysis of the Flow of Water and Chemicals in Soils
Fall. 3 credits. Prerequisites: 4 calculus courses and fluid mechanics. Not offered 2001–2002.]

ABEN 672 Drainage
Spring. 4 credits. Prerequisites: ABEN 471 or ABEN 473. S-U grades optional.

ABEN 673 Sustainable Development Seminar (also NBA 573)
Spring. 1–3 credits. Prerequisite: upper division undergraduate and graduate students or permission of instructor.

ABEN 678 Nonpoint Source Models
Spring. 3 credits. Prerequisites: computer programming and calculus.

ABEN 685 Biological Engineering Analysis
Spring. 4 credits. Prerequisite: T&AM 310 or permission of instructor.

ABEN 694 Graduate Special Topics in Agricultural and Biological Engineering
Fall, spring. 1–4 credits. S-U grades optional.

ABEN 697 Graduate Individual Study in Agricultural and Biological Engineering
Fall, spring. 1–6 credits. Prerequisite: permission of instructor. S-U grades only.

ABEN 700 General Seminar
Fall. 1 credit. S-U grades only.

ABEN 750 Orientation to Graduate Study
Fall. 1 credit. S-U grades only. Limited to newly joining graduate students.

ABEN 754 Watershed Management
Spring. 2–3 credits. Prerequisite: graduate standing or permission of instructor.

ABEN 771 Soil and Water Engineering Seminar
Fall, spring. 1–3 credits. Prerequisite: graduate standing or permission of instructor. S-U grades optional.

ABEN 781 Structures and Related Topics Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

APPLIED AND ENGINEERING PHYSICS

A&EP 110 The Laser and Its Applications in Science, Technology, and Medicine (also ENGR 110)
Fall, spring. 3 credits. This is a course in the Introduction to Engineering series. For description, see ENGR 110.

A&EP 121 Fission, Fusion, and Radiation (also ENGR 121 and NS&E 121)
Spring. 3 credits. S-U grades optional for students outside the College of Engineer­ing. K. B. Cady. This is a course in the Introduction to Engineering series. For description, see ENGR 121.

A&EP 217 Electricity and Magnetism (also PHYS 217)
Fall, spring. 4 credits. Prerequisites: approval of student's adviser and permission of the instructor; coregistration in PHYS 216 or knowledge of special relativity at the level of PHYS 116; MATH 192 or equivalent and coregistration in MATH 293 or equivalent. Staff. Intended for students who have done well in PHYS 112 or 116 (or the equivalent) and in mathematics who desire a more analytic treatment than that of PHYS 213. At the level of Electricity and Magnetism, by Purcell. Recommended for prospective engineering physics majors. A placement quiz may be given early in the semester, permitting those students who find the material too abstract or analytical to transfer into PHYS 213 without difficulty.

AEP 252 The Physics of Life (also ENGRD 252)
Fall. Prerequisites: Math 192, Chem 207 or 211, and co-registration in or completion of Phys 213. This course introduces the physics of biological macromolecules (e.g., proteins, DNA, RNA) to students of the physical sciences or engineering who have little or no background in biology. The macromolecules are studied from three perspectives. First, the biological role or function of each class of macromolecules is considered. Second, a quantitative description of the physical interactions that determine the behavior of these systems is provided. Finally, techniques
that are commonly used to probe these systems, with an emphasis on current research, are discussed.

A&EP 264 Computer-Instrumentation Design (also ENGRD 264)
Fall, spring. 3 credits. Prerequisites: COM S 100. 1lec, 1 lab.
For description, see ENGRD 264.

A&EP 321 Mathematical Physics I
Fall, summer. 4 credits. Prerequisite: MATH 294. Intended for upper-level undergraduates in physics, engineering, and chemistry.
Review of vector analysis; complex variable theory; Cauchy-Riemann conditions; complex Taylor and Laurent series; Cauchy integral formula and residue techniques; conformal mapping; Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: Mathematical Methods for Physicists, by Arfken; Mathematical Physics, by Butkov.

A&EP 322 Mathematical Physics II
Spring. 4 credits. Prerequisite: A&EP 321. Second of the 2-course sequence in mathematical physics intended for upper-level undergraduates in the physical sciences.
Topics: partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz, Poisson's Equations, transform techniques, Green's functions, integral equations, Fredholm equations, kernels; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent, tensors, contravariant, and covariant representations; group theory; matrix representations, class and character. Texts: Mathematical Methods for Physicists, by Arfken; Mathematical Physics, by Butkov.

A&EP 330 Modern Experimental Optics (see also PHYS 330)
Fall. 4 credits. Enrollment limited. Prerequisites: PHYS 214 or equivalent. E. Bodenschutz.
A practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. Students are also introduced to digital imaging and image processing techniques.

A&EP 333 Mechanics of Particles and Solid Bodies
Fall, summer. 4 credits. Prerequisites: PHYS 112 or 116 and coregistration in A&EP 321 or equivalent or permission of instructor.
This course covers: Newton's mechanics; constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; and basic introduction to relativistic mechanics. Emphasis is on mathematical treatments, physical concepts, and applications. (On the level of Classical Dynamics, by Marion and Thorton.)

A&EP 355 Intermediate Electromagnetism
Fall, summer. 4 credits. Prerequisites: PHYS 214 or 217 and coregistration in A&EP 321 or equivalent, or permission of instructor.
Topics: vector calculus, electrostatics, analytic and numerical solutions to Laplace's equation in various geometries, electric and magnetic multipoles, electric and magnetic materials, energy in fields, quasistatic and magnetic circuit design. Emphasis is on developing proficiency with analytical and numerical solution techniques in order to solve real-world design problems.

A&EP 356 Intermediate Electrodynamics
Spring, 4 credits. Prerequisite: A&EP 355 and coregistration in A&EP 322 or equivalent or permission of instructor.
Topics: electromagnetic waves, waveguides, transmission lines, dispersive media, radiation, special relativity, interference phenomena. Emphasis is on physical concepts and developing ability to design micro-wave circuits and antenna arrays.

A&EP 361 Introductory Quantum Mechanics
Spring, 4 credits. Prerequisites: A&EP 333 or PHYS 318; coregistration in A&EP 322 or equivalent and in A&EP 356 or PHYS 326.
A first course in the systematic theory of quantum phenomena. Topics include wave mechanics, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory.

A&EP 363 Electronic Circuits (also PHYS 360)
Fall, spring. 4 credits. Prerequisites: PHYS 208 or 213 or permission of the instructor. No previous experience with electronics assumed; however, the course moves quickly through some introductory topics such as basic DC circuits. Fall term usually less crowded. 1lec, 2labs. Fall: E. Kirkland; spring: J. Alexander.
Analyze, design, build and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: operational amplifiers, optical phase contrast, resonance (linear amplifiers with feedback, oscillators, comparators), filters, diodes and transistors. Digital circuits: combinational (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

A&EP 403 Introduction to Nuclear Science and Engineering (also ECE 403, M&A 458, and NS&E 403)
Fall. 3 credits. Prerequisite: PHYS 214 and MATH 295. For description see NS&E 403.

A&EP 423 Statistical Thermodynamics
Fall. 4 credits. Prerequisite: introductory 3-semester physics sequence plus 1 year of junior-level mathematics.
Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of Thermal Physics, by Kittel and Kroemer, and Statistical Physics, by Rossler.

A&EP 434 Continuum Physics
Spring. 4 credits. Prerequisites: A&EP 333 and 356 or equivalent.

A&EP 438 Computational Engineering Physics
Spring. 3 credits. Prerequisites: COM S 100, A&EP 321, 333, 356, or equivalent, or permission of instructor; coregistration in A&EP 356 or PHYS 326.
Numerical computation (derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods, etc.) is introduced and applied to engineering physics problems that cannot by solved analytically (three-body problem, electrostatic fields, quantum energy levels, etc.). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

A&EP 440 Quantum and Nonlinear Optics
An introduction to the fundamentals of the interaction of laser light with matter. Topics include the propagation of laser beams in bulk media and guided-wave structures, the origins of optical nonlinearities, harmonic generation, self-focusing, optical stability, propagation of ultrashort pulses, solitons, optical phase conjugation, topological phase and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and simulated scattering, and ultra-intense laser-matter interactions.

A&EP 450 Introductory Solid State Physics (also PHYS 454)
Fall. 4 credits. Prerequisites: some exposure to quantum mechanics at the level of PHYS 443, A&EP 361, or CHEM 793 is highly desirable but not absolutely required.
An introduction to the physics of crystalline solids: conventional structures, electronic states; lattice vibrations; and metals, insulators, and semiconductors. Computer simulations of the dynamics of electrons and ions in solids. Optical properties, magnetism, and superconductivity are covered as time allows. The majority of the course addresses the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum size effects. At the level of Introduction to Solid State Physics by Kittel, or Solid State Physics by Ashcroft and Mermin.
A&EP 470 Biophysical Methods (also BIONB 470)  
Spring. 3 credits. Prerequisites: solid knowledge of basic physics and mathemat­ics through the sophomore level; some knowledge of cellular biology helpful but not required. Letter grades only. An overview of the diversity of modern biophysical experimental techniques used in the study of biological systems at the cellular and molecular level. Topics covered include methods that examine both structure and function of biological systems, with emphasis on the applications of these methods to biochemical problems. The course format includes assigned literature reviews by the students on specific biophysics topics and individual student presentations on these topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduc­tion to modern biophysical experimental methods.

A&EP 484 Introduction to Controlled Fusion: Principles and Technology (also ECE 484, M&AIE 459, and NS&E 484)  
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in elect­ricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. Offered on demand. For description, see NS&E 484.

A&EP 490 Independent Study in Engineering Physics  
Fall, spring. Credit THA. Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design and analysis. Details TBA with respective faculty member.

Spring. 3 credits. Prerequisites: A&EP 356, M&AIE 452, 453, 450 (or equivalent). Directed at students who have had an introductory course in solid state physics at the level of Kittel. This course concentrates on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices, and mesoscopic quantum mechanical effects. The course stresses the basic fundamental physics underlying the applica­tions rather than the applications themselves. At the level of Introduction to Applied Solid State Physics by Dalven.

A&EP 600 Introduction to Plasma Physics (also ECE 581)  
Fall. 4 credits. Prerequisites: ECE 303 or equivalent. First-year graduate-level course; open to exceptional seniors. For description, see ECE 581.

A&EP 607 Advanced Plasma Physics (also ECE 582)  
Spring. 4 credits. Prerequisites: ECE 581 and A&EP 600. Offered on demand. For description, see ECE 582.

A&EP 633 Nuclear Reactor Engineering (also NS&E 633)  
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cadle. For description, see NS&E 633.

A&EP 661 Microcharacterization  
Fall. 3 credits. Prerequisites: introductory 3-semester physics sequence or an introductory course in modern physics. At the senior/first-year graduate level. The basic physical principles underlying the many modern microanalytical techniques available for characterizing materials from volumes less than a cubic micron. Discussion centers on the physics of the interaction process by which the characterization is performed, the methodology used in performing the characterization, the advan­tages and limitations of each technique, and the instrumentation involved in each characterization method.

A&EP 662 Micro/Nano-fabrication and Processing  
Spring. 3 credits. An introduction to the fundamentals of micro and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic and optical materials, micro­mechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

A&EP 663 Nanobiotechnology (also BIO G 663 and MS&E 563)  
Spring. 3 credits. Letter grade only. C. Batt and H. Craighead. A graduate-level course that covers the basics of biology and the principles and practice of micro­fabrication techniques. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course is held twice weekly with 75-minute classes. All lectures are teleconferenced to our NBTC associate institutes.

A&EP 711 Principles of Diffraction (also MS&E 671)  
Spring. 3 credits. Letter grades only. J. D. Brock. This course is a graduate-level introduction to diffraction/scattering phenomena in the context of solid-state and soft condensed­matter systems. The primary topic is using the scattering and absorption of neutron, electron, and X-ray beams to study physical systems. Particular emphasis is placed on issues related to synchrotron X-ray sources. Specific topics that are covered in the course include: elastic and inelastic scattering, diffraction from two­ and three-dimensional periodic lattices; the Fourier representation of scattering centers and the effects of thermal vibrations and disorder; diffraction, reflectivity, or scattering from surface layers; diffraction or scattering from gases and amorphous materials; small angle scattering; X-ray absorption spectroscopy; resonant (e.g., magnetic) scattering; novel techniques using coherent X-ray beams; and a survey of dynamical diffraction from perfect and imperfect lattices.

A&EP 751 M ENG Project  
Fall, spring. 6–12 credits TBA. Required for candidates for the M.Eng. (Engineering Physics) degree. Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

A&EP 753 Special Topics Seminar in Applied Physics  
Fall. 1 credit. Prerequisite: undergraduate physics. Required for candidates for the M.Eng. (Engineering Physics) degree and recommended for seniors in engineering physics. Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

CHEMICAL ENGINEERING

CHEME 112 Introduction to Chemical Engineering (also ENGRI 112)  
Fall. 3 credits. Limited to freshmen. T. M. Duncan. This is a course in the Introduction to Engineering series. For description, see ENGRI 112.

CHEME 120 Introduction to Biomedical Engineering (also ENGRI 120)  
Fall. 3 credits. W. M. Saltzman. This is a course in the Introduction to Engineering series. For description, see ENGRI 120.

CHEME 219 Mass and Energy Balances (also ENGRD 219)  
Fall. 3 credits. Corequisite: physical or organic chemistry or permission of instructor. K. H. Lee. For description, see ENGRD 219.

CHEME 301 Nonresident Lectures  
Spring. 1 credit. M. Ackley. Lectures from industry and from selected departments of the university provide information to assist students in their post­graduate plans.

CHEME 313 Chemical Engineering Thermodynamics  
Fall. 4 credits. Corequisite: physical or organic chemistry. F. A. Escobedo. A study of the first and second laws and their consequences for chemical systems. Thermo­dynamic properties of pure fluids, solids, and mixtures, phase and chemical reaction equilibrium; heat effects in batch and flow processes; and power cycles and refrigeration.

CHEME 323 Fluid Mechanics  
Fall. 3 credits. Prerequisites: CHEME 219 and engineering mathematics sequence. W. L. Olbricht. Fundamentals of fluid mechanics. Macroscopic and microscopic balances. Applications to problems involving viscous flow.
CHEM 324 Heat and Mass Transfer
Spring. 3 credits. Prerequisite: CHEM 323. C. Cohen.
Fundamentals of heat and mass transfer, macroscopic and microscopic balances. Applications to problems involving conduction, convection, and diffusion.

CHEM 332 Analysis of Separation Processes
Spring. 3 credits. Prerequisites: CHEM 313 and 323. A. B. Anton.
Analysis of separation processes involving phase equilibria and mass transfer: covers phase equilibria, binary and multicomponent distillation, liquid-liquid extraction, gas absorption, adsorption, membrane separations.

CHEM 372 Introduction to Process Dynamics and Control
Spring. 1 credit. Prerequisites: CHEM 313 and 323. J. R. Engstrom.
A study of chemical reaction kinetics and principles of reactor design for chemical processes.

CHEM 391 Physical Chemistry II (also CHEM 391)
Spring. 4 credits. Limited to engineering students. T. M. Duncan.
For description, see CHEM 391.

CHEM 432 Chemical Engineering Laboratory
Fall. 4 credits. Prerequisites: CHEM 323, 324, 332, and 390. K. E. Ackley and staff.
Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.

CHEM 462 Chemical Process Design
Spring. 4 credits. Prerequisite: CHEM 432. K. E. Ackley and staff.
A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEM 472 Feedback Control Systems (also CHEM 471 and M&AE 478)
Fall. 4 credits. Prerequisites: CHEM 372, ECE 301, M&AE 326, or permission of instructor. A. B. Anton and R. D’Andrea.
For description, see M&AE 478.

CHEM 480 Chemical Processing of Electronic Materials
Introduction to chemical processing of semiconductor materials for the manufacture of microelectronic devices, with specific emphasis on thermodynamics, transport phenomena, and kinetics. Topics include semiconductor properties and behavior, microelectronic device operation, thermochimistry of deposition and etching reactions, vacuum transport, plasmas, PVD, oxidation, diffusion, CVD, and statistical process control.

CHEM 481 Biomedical Engineering
Spring. 3 credits. Prerequisite: CHEM 324 or equivalent or permission of instructor. W. M. Saltzman.
Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, biomedical transducers (EGG and pace makers), and analysis of physiological processes such as adhesion, mobility, secretion, and growth.

CHEM 490 Undergraduate Projects in Chemical Engineering
Fall, spring. Variable credit.
Research or studies on special problems in chemical engineering.

CHEM 491 Undergraduate Teaching in Chemical Engineering
Fall. 1 credit. T. M. Duncan and M. Ackley.
Methods of instruction in chemical engineering acquired through discussions with faculty and by assisting with the instruction of freshmen and sophomores.

CHEM 520 Chemical, Polymer, Biomedical, and Electronic Materials Processing
Fall, spring. 1-6 credits (1 credit per section).
520.1 An Overview of Chemical Processing
Spring. 1 credit. Meets first third of term. Limited to non-chemical engineers. T. M. Duncan.
An introduction to chemical engineering design and analysis—mathematical modeling, graphical methods and dynamic scaling. Open to nonchemical engineers only.

520.2 Introduction to Biomedical Engineering
Spring. 1 credit. Meets first third of term. W. M. Saltzman.
Meets concurrently with CHEM 481.

520.3 Introduction to Electronic Materials Processing
Spring. 1 credit. Meets first third of term. A. B. Anton.
Meets concurrently with CHEM 480.

520.4 Introduction to Polymer Processing
Spring. 1 credit. Meets final third of term. K. E. Ackley and A. M. Center.
Overview and simple quantitative analyses of several plastic processes with an emphasis on the role of rheology in polymer processing.

520.5 Chemical Engineering Processing Units and Equipment
Spring. 1 credit. Meets second third of term. K. E. Ackley and A. M. Center.
A hands-on survey of standard chemical processing equipment—structure and operational techniques—with emphasis on trouble-shooting techniques.

520.6 Petroleum Refining
Spring. 1 credit. Meets final third of term. A. M. Center.
The technical and business aspects of petroleum refining. Applications of chemical engineering principles for practical solutions to business needs.

520.7 Process Control Strategies
Fall. 1 credit. Meets second third of term. A. M. Center.
Analysis of multiple interacting dynamic systems in chemical processes. Measurement of process variables, examples of measurement and control applications, and determining optimal monitoring and control strategy.

CHEM 562 Managing Chemical Process Design
Spring. 1 or 2 credits. Prerequisite: CHEM 462. K. E. Ackley.
Guidance and evaluation of chemical process designs developed by teams of chemical engineers.

CHEM 564 Design of Chemical Reactors
Spring. 3 credits. Prerequisite: CHEM 390 or equivalent. Offered alternate years; not offered 2001-2002. P. Harriott.
Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and nonideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

CHEM 565 Design Project
Fall, spring. 3 or 6 credits. Required for students in the M.Eng. (Chemical) program.
Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

CHEM 572 Managing Business Development Solutions
Fall. 3 credits. Prerequisites: graduate standing; undergraduates must have permission of instructor. A. M. Center.
A case study approach introduces the typical fundamental factors driving a business venture, examines how to develop implementation strategies for the venture, and teaches the project management skills necessary to successfully implement the venture.

CHEM 590 Special Projects in Chemical Engineering
Fall, spring. Variable credit. Limited to graduate students.
Non-thesis research or studies on special problems in chemical engineering.

CHEM 596 Systems on a Chip (also ECE 596, M&AE 594)
Fundamentals of electronic chip fabrication processes for systems on a chip, the complexities of building devices on dissimilar substrates (e.g. Si on plastics), the creation of organic optoelectronic devices, and functional design integration issues. Applications to lab on a chip systems. Group design project required.

CHEM 605 Fundamentals in Biomedical Engineering I (also ENGRG 605)
Fall. 1-4 credits (1 credit per section). Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering.
For description, see ENGRG 605.

CHEM 606 Fundamentals in Biomedical Engineering II (also ENGRG 606)
Spring. 1-4 credits. Prerequisites: graduate standing in engineering or science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&AE 465. S-U grades

CHEM 552 Chemical Engineering II (also CHEM 552)
Fall, spring. 4 credits. Limited to engineering students. T. M. Duncan.
For description, see CHEM 552.

CHEM 554 Chemical Engineering Laboratory
Fall. 4 credits. Prerequisites: CHEM 323, 324, 332, and 390. K. E. Ackley and staff.
Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.

CHEM 556 Chemical Processing of Electronic Materials
Spring. 4 credits. Prerequisite: CHEM 432. K. E. Ackley and staff.
A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEM 572 Chemical Engineering Laboratory
Fall. 4 credits. Prerequisites: CHEM 323, 324, 332, and 390. K. E. Ackley and staff.
Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.

CHEM 578 Chemical Engineering Laboratory
Fall. 4 credits. Prerequisites: CHEM 323, 324, 332, and 390. K. E. Ackley and staff.
Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.

CHEM 580 Chemical Processing of Electronic Materials
Spring. 4 credits. Prerequisite: CHEM 432. K. E. Ackley and staff.
A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEM 582 Chemical Processing of Electronic Materials
Spring. 4 credits. Prerequisite: CHEM 432. K. E. Ackley and staff.
A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEM 584 Chemical Processing of Electronic Materials
Spring. 4 credits. Prerequisite: CHEM 432. K. E. Ackley and staff.
A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEM 586 Chemical Processing of Electronic Materials
Spring. 4 credits. Prerequisite: CHEM 432. K. E. Ackley and staff.
A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEM 588 Chemical Processing of Electronic Materials
Spring. 4 credits. Prerequisite: CHEM 432. K. E. Ackley and staff.
A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEM 590 Special Projects in Chemical Engineering
Fall, spring. Variable credit. Limited to graduate students.
Non-thesis research or studies on special problems in chemical engineering.

CHEM 596 Systems on a Chip (also ECE 596, M&AE 594)
Fundamentals of electronic chip fabrication processes for systems on a chip, the complexities of building devices on dissimilar substrates (e.g. Si on plastics), the creation of organic optoelectronic devices, and functional design integration issues. Applications to lab on a chip systems. Group design project required.

CHEM 605 Fundamentals in Biomedical Engineering I (also ENGRG 605)
Fall. 1-4 credits (1 credit per section). Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering.
For description, see ENGRG 605.

CHEM 606 Fundamentals in Biomedical Engineering II (also ENGRG 606)
Spring. 1-4 credits. Prerequisites: graduate standing in engineering or science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&AE 465. S-U grades
optional for students not majoring or minor in biomedical engineering. For description, see ENGRG 606.

CHEM 640 Polymeric Materials
Fall. 3 credits. F. Rodriguez
Chemistry and physics of the formation and characterization of polymers. Principles of fabrication.

CHEM 643 Introduction to Bioprocess Engineering
Fall. 3 credits. Prerequisite: CHEM 390 or permission of instructor. No prior background in the biological sciences required. M. L. Shuler
A discussion of principles involved in using microorganisms, tissue cultures, and enzymes for processing. Application to food, fermentation, and pharmaceutical industries and to biological waste treatment.

CHEM 656 Separations Using Membranes or Porous Solids
Spring. 3 credits. Prerequisites: CHEM 324 and 332. Offered alternate years; not offered 2002–2003.
Diffusion of small molecules in gases, liquids, and solids. Membrane separation processes including gas separation, pervaporation, reverse osmosis, and ultrafiltration. Purification of gases and liquids by adsorption, ion exchange, and chromatography.

CHEM 661 Air Pollution Control
Spring. 3 credits.

CHEM 675 Synthetic Polymer Chemistry (also MS&E 622 and CHEM 671)
Fall. 4 credits. Prerequisites: CHEM 359–360 or equivalent or permission of instructor.
For description, see CHEM 671.

CHEM 711 Advanced Chemical Engineering Thermodynamics
Fall. 3 credits. Prerequisite: CHEM 313 or equivalent.

CHEM 713 Chemical Kinetics and Dynamics
Spring. 3 credits. Prerequisite: CHEM 390 or equivalent. F. Escobedo.
Topics include: microscopic and macroscopic viewpoints; connections between phenomenological chemical kinetics and molecular reaction dynamics; reaction cross sections, potential energy surfaces, and dynamics of bimolecular collisions; molecular beam scattering; transition state theory. Unimolecular reaction dynamics; complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcation; reactions in heterogeneous media; and free-radical mechanisms in combustion and pyrolysis.

CHEM 731 Advanced Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: CHEM 323 and 324 or equivalent. D. L. Koch.
Topics include: derivation of the equations of motion for Newtonian fluids; low Reynolds number fluid dynamics, lubrication theory, inviscid fluid dynamics; boundary layer theory, and convective and conductive heat transfer.

CHEM 732 Diffusion and Mass Transfer
Spring. 2 credits. Prerequisite: CHEM 731 or equivalent. P. H. Steen.
Conservation equations in multicomponent systems, irreversible thermodynamics, dispersion, and Brownian diffusion. Mass transfer for convective diffusion in liquids. Application to a variety of problems such as coagulation of aerosols, diffusion through films and membranes, liquid-liquid extraction, chemical vapor deposition, polymer rheology and diffusion, and reaction-diffusion systems.

CHEM 741 Selected Topics in Biochemical Engineering
Fall. spring. 1 credit (may be repeated for credit). Prerequisite: permission of instructor. K. H. Lee, M. L. Shuler, and W. M. Saltzman.
Discussion of current topics and research in biochemical engineering for graduate students.

CHEM 745 Physical Polymer Science I
Fall. 3 credits. Prerequisite: CHEM 711 or equivalent. Offered alternate years; not offered 2002–2003. C. Cohen.

CHEM 747 Physical Polymer Science II
Fall. 3 credits. Corequisite: CHEM 711 or equivalent. Offered alternate years; not offered 2002–2003. P. H. Steen.

CHEM 751 Mathematical Methods of Chemical Engineering Analysis
Fall. 4 credits. A. B. Anton.
Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, linear and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

CHEM 753 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
Fall. 3 credits. Prerequisite: CHEM 751 or equivalent. Offered alternate years; not offered 2002–2003. P. H. Steen.
Topics covered include: elements of stability and bifurcation theory; branch-following techniques; stability of discrete and continuous systems; and application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems.

CHEM 790 Seminar
Fall, spring. 1 credit each term.
General chemical engineering seminar required of all graduate students in the field of chemical engineering.

CHEM 792 Principles and Practices of Graduate Research
Fall, spring. 1 credit. T. M. Duncan and staff.
A colloquium/discussion group series for first-year graduate students. Topics include the culture and responsibilities of graduate research and the professional community; the mechanics of conducting research (experimental design, data analysis, serendipity in research, avoiding self-deception), documenting research (lab notebooks, computer files), and reporting research (writing a technical paper and oral presentations).

CHEM 890 Thesis Research
Fall, spring. Variable credit.
Thesis research for the M.S. degree in chemical engineering.

CHEM 990 Thesis Research
Fall, spring. Variable credit.
Thesis research for the Ph.D. degree in chemical engineering.

CIVIL AND ENVIRONMENTAL ENGINEERING
Courses in the School of Civil and Environmental Engineering are offered in three broad mission areas: Civil Infrastructure, Environment, and Systems Engineering and Information Technology. Within each mission area are several areas of specialization. The following are the course numbers and titles listed by specialization within each mission area. Some courses are listed in two or more mission areas because the course content is relevant to multiple areas. The school also offers a number of general courses that are not unique to one mission area. Full course descriptions follow in the subsequent section and are listed in numerical order.

General
CEE 113 Environmental Engineering for the Megalopolis (also ENGRG 113) (F,3cr.)
CEE 116 Modern Structural Systems and Materials (also ENGRG 116) (F,3cr.)
CEE 241 Engineering Computation (also ENGRD 241) (F,3cr.)
CEE 304 Uncertainty Analysis in Engineering (F,4cr.)
CEE 308 Introduction to CADD (F,3cr.)
CEE 309 Special Topics in Civil and Environmental Engineering (F,3var.)
CEE 325 Engineering Economics and Management (also ENGRG 323) (S,Su,3cr.)
CEE 400 Senior Honors Thesis (F,3cr.)
CEE 401 Undergraduate Engineering Teaching in CEE (F,3cr.)

Civil Infrastructure
See also: CEE 116, CEE 241, CEE 304, CEE 308, CEE 503, and CEE 595
Geotechnical Engineering
CEE 341 Introduction to Geotechnical Engineering and Analysis (S,4cr.)
CEE 501/502 Design Project in Geotech/Structures (F,3cr.)
CEE 602 Civil Infrastructure Seminar (F,1cr.)
CEE 640 Foundation Engineering (F,3cr.)
CEE 641 Retaining Structures and Slopes (S,3cr.)
CEE 644 Environmental Applications of Geotechnical Engineering (S,3cr.)
CEE 649 Special Topics in Geotechnical Engineering (F,S,Var.)
CEE 740 Engineering Behavior of Soils (F,3cr.)
CEE 741 Rock Engineering (S,3cr.)
CEE 744 Advanced Foundation Engineering (S,2cr.)
CEE 745 Soil Dynamics (S,3cr.)
CEE 746 Embankment Dam Engineering (S,2cr.)
CEE 749 Research in Geotechnical Engineering (F,S,Var.)
CEE 840 Thesis—Geotechnical Engineering (F,S,Var.)

**Structural Engineering**
CEE 116 Modern Structural Systems and Materials (F,3cr.)
CEE 371 Modeling of Structural Systems (S,4cr.)
CEE 372 Fundamentals of Structural Mechanics (F,3cr.)
CEE 376 Physical and Computational Material Simulation
CEE 473 Design of Concrete Structures (S,4cr.)
CEE 474 Design of Steel Structures (S,4cr.)
CEE 475 Introduction to Composite Materials (S,4cr.)
CEE 479 Collaborative Distance Design of Structural Systems
CEE 501/502 Design Project in Geotech/Structures (F,S,3cr.)
CEE 602 Civil Infrastructure Seminar (F,S,1cr.)
CEE 671 Random Vibration (F,3cr.)
CEE 672 Fundamentals of Structural Mechanics (F,4cr.)
CEE 673 Engineering Analysis (F,3cr.)
CEE 674 Finite Element Modeling of Civil Infrastructure (S,3cr.)
CEE 675 Concrete Materials and Construction (S,3cr.)
CEE 677 Stochastic Problems in Science and Engineering (F,3cr.)
CEE 770 Engineering Fracture Mechanics (F,3cr.)
CEE 772 Finite Element Analysis for Mechanical, Structural, and Aerospace Applications (S,3cr.)
CEE 774 Advanced Structural Concrete (F,3cr.)
CEE 775 Structural Concrete Systems (S,3cr.)
CEE 776 Advanced Design of Metal Structures (F,3cr.)
CEE 777 Advanced Behavior of Metal Structures (S,3cr.)
CEE 779 Structural Dynamics and Earthquake Engineering (S,3cr.)
CEE 783 Civil and Environmental Engineering Materials Project (F,S,Var.)
CEE 785 Research in Structural Engineering (F,S,Var.)
CEE 786 Special Topics in Structural Engineering (F,S,Var.)
CEE 880 Thesis—Structural Engineering (F,S,Var.)

**Environment**
See also CEE 113, CEE 241, and CEE 304
CEE 113 Environmental Engineering for the Megalopolis (F,3cr.)
CEE 351 Environmental Quality Engineering (S,3cr.)
CEE 352 Water Supply Engineering (F,3cr.)
CEE 451 Microbiology for Environmental Engineering (F,3cr.)
CEE 453 Laboratory Research in Environmental Engineering (S,3cr.)
CEE 501/502 Design Project in Environmental Engineering (F,S,3cr.)
CEE 601 Water Resources and Environmental Engineering Seminar (F,1cr.)
CEE 653 Water Chemistry for Environmental Engineering (F,3cr.)
CEE 654 Aquatic Chemistry (S,3cr.)
CEE 655 Transport, Mixing, and Transformation in the Environment (F,3cr.)
CEE 658 Sludge Treatment, Utilization, and Disposal (S,3cr.)
CEE 659 Environmental Quality Engineering Seminar (S,1cr.)
CEE 750 Research in Environmental Engineering (F,S,Var.)
CEE 755 Physical/Chemical Processes (F,3cr.)
CEE 756 Biological Processes (S,3cr.)
CEE 757 Physical/Chemical Processes Laboratory (F,2cr.)
CEE 758 Biological Processes Laboratory (S,2cr.)
CEE 759 Special Topics in Environmental Engineering (F,S,Var.)
CEE 850 Thesis—Environmental Engineering (F,S,Var.)

**Environmental Systems**
See Systems Engineering and Information Technology mission areas for a listing of courses in Environmental and Public Systems.
CEE 331 Fluid Mechanics (F,Su,4cr.)
CEE 332 Hydraulic Engineering (S,4cr.)
CEE 431 Geohydrology (also GEOG 445 and ABEN 471) (F,3cr.)
CEE 432 Hydrology (S,3cr.)
CEE 435 Coastal Engineering (S,4cr.)
CEE 436 Case Studies in Environmental Fluid Mechanics (S,4cr.)
CEE 437 Experimental Methods in Fluid Dynamics (S,3cr.)
CEE 501/502 Design Project in Fluid Mechanics and Hydrology (F,S,3cr.)
CEE 601 Water Resources and Environmental Engineering Seminar (F,1cr.)
CEE 630 Advanced Fluid Mechanics (F,3cr.)
CEE 631 Flow and Contaminant Transport Modeling in Groundwater (S,3cr.)
CEE 632 Hydrology (S,3cr.)
CEE 633 Flow in Porous Media and Groundwater (F,3cr.)
CEE 634 Boundary Layer Meteorology (F,3cr.)
CEE 635 Small and Finite Amplitude Water Waves (S,3cr.)
CEE 636 Environmental Fluid Mechanics (S,3cr.)
CEE 637 Experimental Methods in Fluid Dynamics (S,4cr.)
CEE 638 Hydraulics Seminar (S,1cr.)
CEE 639 Special Topics in Hydraulics (F,S,Var.)
CEE 655 Transport, Mixing, and Transformation in the Environment (F,3cr.)
CEE 732 Computational Hydraulics (F,3cr.)
CEE 735 Research in Hydraulics (F,S,Var.)
CEE 830 Thesis—Fluid Mechanics and Hydrology (F,S,Var.)

**Systems Engineering and Information Technology**
See also CEE 113, CEE 241, and CEE 304
CEE 490 Management Practice in Project Engineering (S,3cr.)
CEE 590 Project Management (F,S,4cr.)
CEE 591 Engineering Management Project (F,3cr.)
CEE 592 Engineering Management Project (S,3cr.)
CEE 593 Engineering Management Methods I: Data, Information, and Modeling (F,3cr.)
CEE 594 Engineering Management Methods II: Managing Uncertain Systems (S,3cr.)
CEE 595 Construction Planning and Operations (F,3cr.)
CEE 596 Current Topics in Construction Management (S,3cr.)
CEE 597 Risk Analysis and Management (S,3cr.)
CEE 598 Introduction to Decision Analysis (F,4cr.)
CEE 692 Special Topics in Engineering Management (F,S,Var.)
CEE 694 Research in Engineering Management (F,S,Var.)
CEE 696 Current Topics in Construction Management (S,3cr.)
CEE 697 Risk Analysis and Management (S,3cr.)
CEE 830 Thesis—Fluid Mechanics and Hydrology (F,S,Var.)

**Environmental and Public Systems**
CEE 323 Engineering Economics and Management (also ENGRG 323) (S,Su,3cr.)
CEE 501/502 Design Project in Environmental Systems (F,S,3cr.)
CEE 528 Public Political Economy (also ECON 569) (S,4cr.)
CEE 529 Water and Environmental Resources Problems and Policies (F,3cr.)
CEE 597 Risk Analysis and Management (S,3cr.)
CEE 620 Water Resources Systems Engineering (S,3cr.)
CEE 621 Stochastic Hydrology (S,3cr.)
CEE 623 Environmental Systems Engineering (S,3cr.)
CEE 628 Environmental and Water Resources Systems Analysis Seminar (S,1cr.)
CIVIL AND ENVIRONMENTAL ENGINEERING 219

CEE 722 Environmental and Water Resources Systems Analysis Research (F,S,VAR.)
CEE 729 Special Topics in Environmental and Water Resources Systems Analysis (F,S,VAR.)
CEE 820 Thesis—Environmental and Water Resources Systems (F,S,VAR.)

Remote Sensing
CEE 411 Remote Sensing, Environmental Applications (also SCAS 411) (S,3cr.)
CEE 610 Remote Sensing Fundamentals (F,3cr.)
CEE 615 Digital Image Processing (S,3cr.)
CEE 617 Project—Remote Sensing (F,S,VAR.)
CEE 618 Special Topics—Remote Sensing (F,S,VAR.)
CEE 810 Thesis—Remote Sensing (F,S,VAR.)

Systems Engineering
CEE 504 Applied Systems Engineering (also M&AE 591, ECE 595, ORIE 512) (F,3cr.)
CEE 505 Applied Systems Engineering II (S,4cr.)
CEE 506 Civil and Environmental Systems (S,3cr.)
CEE 509 Heuristic Methods of Optimization (also COM S 574) (S,3cr.)
CEE 603 Systems Engineering and Information Technology Seminar (F,1cr.)

Transportation
CEE 361 Introduction to Transportation Engineering (S,3cr.)
CEE 463 Transportation and Information Technology (F,3cr.)
CEE 464 Transportation Systems Design (S,3cr.)
CEE 501/502 Design Project in Transportation (F,S,3cr.)
CEE 561 Urban Transportation Planning and Modeling (F,3cr.)
CEE 663 Transportation Network Analysis (S,3cr.)
CEE 762 Transportation Research (F,S,VAR.)
CEE 764 Special Topics in Transportation (F,S,VAR.)
CEE 860 Thesis—Transportation Engineering (F,S,VAR.)

CEE 113 Environmental Engineering for the Megalopolis (also ENGR 113)
Fall. 3 credits. Not open (without instructor's permission) to upper-division engineering students. M. Weber-Shirk. This is a course in the Introduction to Engineering series. For description, see ENGR 113.

CEE 116 Modern Structural Systems and Materials (also ENGR 116)
Fall. 3 credits. K. C. Hower. This is a course in the Introduction to Engineering series. For description, see ENGR 116.

CEE 241 Engineering Computation (also ENGR 241)
Fall. Spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294 (completion of MATH 294 is suggested). J. F. Abel. For description, see ENGR 241.

CEE 304 Uncertainty Analysis in Engineering
Fall. 4 credits. CEE Engineering Co-op students may substitute summer ENGRD 270. Prerequisite: first-year calculus. J. R. Redinger.
Introduction to probability theory and statistical techniques, with examples from civil, environmental, agricultural, and related disciplines. Course covers data presentation, commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, windspeed/flood distributions, and models of vehicle arrivals.

CEE 308 Introduction to CADD
Fall, spring. 1 credit. Prerequisite: permission of instructor; enrollment by application only, due the end of the first week of classes; obtain applications in 220 Hollister. J. F. Abel.
Learn to use Computer Aided Design and Drafting (CADD) to construct 2D drawings and 3D models using a variety of AutoCAD 2000 techniques. Alternative software tools for solid modeling are introduced. Course meets in ACCEL once per week for eleven weeks, and grades are based on attendance; weekly exercises completed in class, and a semester project.

CEE 309 Special Topics in Civil and Environmental Engineering
Fall, spring. 1-6 credits. Staff. Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

CEE 323 Engineering Economics and Management (also ENGRG 323)
Spring; usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. D. P. Lucas.
For description, see ENGRG 323.

CEE 331 Fluid Mechanics
Fall, usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: ENGRD 202 (may be taken concurrently). E. A. Cowen.
Covers: hydrostatics, the basic equations of incompressible fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, laminar and turbulence boundary layer, flows around obstacles, and open-channel flow.

CEE 332 Hydraulic Engineering
Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, water-distribution systems, open-channel design, river engineering, and pollutant dispersal. Lectures supplemented by laboratory work and a design project. See www.cee.cornell.edu/cee332/ for details.

CEE 341 Introduction to Geotechnical Engineering and Analysis
Spring. 4 credits. Letter grade only. Prerequisites: ENGRD 202, CEE 331 (or equivalent), or permission of instructor. H. E. Stewart.
Fundamentals of geotechnical engineering. Topics covered include: rigids and descriptions of soil and rock as engineering materials, subsurface exploration methods, principles of effective stresses, stress distribution and ground settlements, surfactant loads, steady-state and time-dependent subsurface fluid flow, soil strength and failure criteria, geoenvironmental applications, and introduction to hazardous waste containment systems.

CEE 351 Environmental Quality Engineering
Spring. 3 credits. J. J. Bisogni.
Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for water and wastewater treatment.

CEE 352 Water Supply Engineering
Fall. 3 credits. Prerequisites: CEE 351 and previous/current enrollment in CEE 451 or BIOM 290. R. I. Dick.

CEE 361 Introduction to Transportation Engineering
Spring; usually offered in summer for Engineering Co-op Program. 3 credits. J. Mbwana and A. H. Meyburg.
Introduction to technological, economic, and social aspects of transportation. Emphasis is on design and functioning of transportation systems and their components. Covers: supply-demand interactions; system planning, design, and management; traffic flow and control intersection and network analysis; institutional and energy issues; and environmental impacts.

CEE 371 Modeling of Structural Systems
Spring. 4 credits. Prerequisite: ENGRD 202. K. D. Papoulias.
Analytical and computational modeling of structural systems. The course is built on case studies involving different scales and different materials such as modern steel bridges, soil-foundation-structure systems, micro-electro-mechanical structures (MEMS), and aerospace vehicle structures. Topics include: analytical methods for solving statically determinate systems; virtual work principles for determination of kinematic and static unknowns; matrix formulation of the flexibility and stiffness methods of structural analysis for statically indeterminate systems; linear members (2D truss, frame); and an introduction to finite element modeling of continua.

CEE 372 Fundamentals of Structural Mechanics
Fall. 3 credits. Prerequisites: ENGRD 202, MATH 294. K. D. Papoulias.
The course covers geometric definitions of deformation, rotation and strain; small-strain theory; and the concept of stress. Students will learn about equilibrium and conservation of energy and the concept of virtual work. Other course topics include elasticity, basic plasticity, failure criteria for design; plane stress and plane strain; stress function solutions; torsion; beam and plate theory; buckling. There will be two lectures and a recitation per week. This class is a subset of, and meets concurrently with CEE 672.
based studies ( Cayuga Lake, and Fall, Six-mile, and Cascadilla Creeks) and case studies. Topics include surface and internal wave dynamics, sediment and nutrient contaminant transport, and interfacial transfer. Lectures are based on laboratory/field projects. Course includes a design project.

CEE 437 Experimental Methods in Fluid Dynamics
Spring. 3 credits. E. A. Cowen.
Same as CEE 657 but no project is required. For description, see CEE 657.

CEE 451 Microbiology for Environmental Engineering
Fall. 3 credits. Prerequisite: 2 semesters of college chemistry. J. M. Gossett.
An introduction to fundamental aspects of microbiology, organic chemistry, and biochemistry pertinent to environmental engineering. Topics include: nomenclature and principal reactions of organic compounds; characteristics of bacteria, fungi, algae, protozoa, and viruses relevant to water and wastewater; pathogen, disease, and immunity; environmental influences on microorganisms, bioenergetics, enzymes metabolism; microbial genetics; and microbial ecology.
This is an introductory course; consequently, it is inappropriate for those who have taken BIOMI 290 or equivalent.

CEE 453 Laboratory Research in Environmental Engineering
Spring. 3 credits. Prerequisites: CEE 351 or permission of instructor. M. L. Weber-Shirk.
Laboratory investigations of reactor flow characteristics; acid rain/lake chemistry; contaminated soil-site assessment, risk assessment, and remediation; pollutant dispersion/transport in rivers; drinking water filtration for pathogen removal; oxygen sag in rivers, and biodegradation in landfills. Design of laboratory experiments, development of laboratory methods, and use of experimental data are emphasized. See www.cee.cornell.edu/cee453/ for more information.

CEE 463 Transportation and Information Technology
Fall. 3 credits. J. R. Mbwana.
Improvements in the use of existing facilities has become an important objective in transportation planning. This course examines the role of computer and telecommunications technologies to achieve these improvements. Specific attention is focused on the development of analyses to evaluate the benefits of inclusion of these technologies in transportation systems.

CEE 464 Transportation Systems Design
Spring. 3 credits. Prerequisite: CEE 361.
Staff.
Advanced techniques for physical and operational design of transportation systems, including analytical modeling techniques underlying design decisions, evaluation of alternative designs. Management and operating policies, including investment strategies. Facility location decisions, networks, and passenger and freight terminals.

CEE 473 Design of Concrete Structures
Spring. 4 credits. Corequisites: CEE 372 or permission of instructor. K. C. Hover.
Behavior and design of reinforced concrete and structures. Discussion of how forces are transferred through elements of building system. Includes a semester project requiring the design of a reinforced concrete structure.

CEE 474 Design of Steel Structures
Spring. 4 credits. Prerequisite: CEE 372 or permission of instructor. T. Pekoz.
Behavior and design of steel members, connections, and structures. Discussion of structural systems for buildings and bridges.

CEE 475 Introduction to Composite Materials (also M&AE 455, MS&E 555, and T&AM 455)
Spring. 4 credits. L. Phoenix.
For description, see T&AM 455.

CEE 479 Collaborative, Distance Design of Structural Systems I and II (also MAE 491)
Fall, spring. 8 credit hours. Students who enroll in CEE 479 are expected to take it in fall and spring semesters. A. Ingraffea, R. Davidson, M. Grigoriu, T. Pekoz.
This is a new senior-level design course, funded by NASA and the State of NY, and taught jointly with Syracuse University. It emphasizes teamwork, collaboration at a distance, and multidisciplinary activities. The project is based on structural systems for a reusable launch vehicle. The course involves design, analysis, simulation, testing, virtual reality, and synchronous and asynchronous learning environments. First semester covers conceptual design, study of advanced mechanics, materials, software applications, risk and cost analysis. The second semester involves detailed design, construction, testing, and simulation.

CEE 481 LRFD-Based Engineering of Wood Structures (also ABEN 481)
Spring. 3 credits. Prerequisite: ENGRD 202.
For description see ABEN 481, in the College of Agriculture and Life Sciences section of this catalog.

CEE 490 Management Practice in Project Engineering
Spring. 3 credits. Prerequisite: permission of instructor. K. C. Hover.
An introduction to the principles of project management. Planning, organizing, communicating, scheduling, and controlling of engineering work done in project teams.

CEE 501/502 Design Project
Fall, spring. 3 credits each term. Required for students in the M.Eng. ( Civil) program.
Staff.
CEE design projects present students with an exemplary design experience that reflects those carried out in the course of professional practice. Projects are typically performed by student design groups and the topics reflect the diverse specialty areas of the Civil and Environmental engineering field as described below.

CEE 501/502 Design Project in Geotech Structures
Design of major civil engineering project. Planning and preliminary design during the fall term; final design completed in January intersession.

CEE 501/502 Design Project in Environmental Fluid Mechanics and Hydrology
Design of a major fluid mechanics/hydrology project.

CEE 501/502 Design Project in Environmental Engineering
Design of a major environmental engineering project.
CIVIL AND ENVIRONMENTAL ENGINEERING

CEE 501/502 Design Project in Environmental Systems
Design of a major environmental systems project.

CEE 501/502 Design Project in Transportation Systems
Design of a major transportation systems project. May work in conjunction with CEE 591/592 Engineering Management Project design group.

CEE 504 Applied Systems Engineering I (also COM S 504, ECE 512, M & AE 591, OR & IE 512)
Fall. 3 credits. Prerequisite: permission of instructor. Staff.
For description, see M & AE 591.

CEE 505 Applied Systems Engineering II (also COM S 505, ECE 513, M & AE 592, OR & IE 513)
Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ECE 512, M & AE 591, or OR & IE 512). M. A. Turnquist, P. Jackson, and R. Thomas.
For description, see M & AE 592.

CEE 506 Civil and Environmental Systems
Spring. 3 credits. Prerequisites: CEE 304 (or equivalent) and CEE 323 (or equivalent). Letter or S-U. R. Davidson.
Introduction to framing and solutions of a variety of civil and environmental engineering problems using a systems engineering approach. Case studies in structural, geotechnical, environmental, and transportation engineering. Systems tools include optimization, life-cycle cost analysis, simulation, and risk analysis.

CEE 509 Heuristic Methods for Optimization (also COM S 574)
Spring. 3 or 4 credits. Prerequisites: CEE/ ENGRD 241 or COM S/ENGRD 211 or 222 or graduate standing, or permission of instructor. Not offered every year.
C. A. Shoemaker and B. Selman.
This course describes a variety of heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, random walk, and direct search algorithms. Algorithms are used to find fixed values of discrete and/or continuous variables arising in optimization and model fitting. Applications are discussed in a range of areas including some of the following: artificial intelligence, scheduling, protein folding, economic planning, water quality protection, telecommunications, and robotics. The advantages and disadvantages of heuristic search methods for both serial and parallel computation are discussed in comparison to other optimization algorithms.

CEE 528 Public Political Economy (also ECON 539)
Spring. 4 credits. R. E. Schuler.
For description, see ECON 539.

CEE 529 Water and Environmental Resources Problems and Policies
Fall. 3 credits. Intended primarily for graduate engineering and non-engineering students but open to qualified juniors and seniors. Prerequisite: permission of instructor. Not offered 2001-2002.
D. J. Allee and L. B. Dworsky.
Evaluation, appraisal, and prospects for problems involving water and environmental resources. Organization and public policies in the federal system.

CEE 561 Urban Transportation Planning and Modeling
Fall. 3 credits. Prerequisites: CEE 361, statistics and probability, or permission of instructor. Designed for seniors with appropriate background and graduate students from CEE, CRP, and CIPA. Not offered 2001-2002. A. H. Meyburg.
This course exposes students to modern transportation planning practice and to the analytical tools necessary to engage in this field. Emphasis is on passenger transportation in the urban context. The course discusses the legislative, political, and economic contexts of urban transportation planning (UTP). It presents the travel demand estimation process and the associated models and approaches. Finally, it evaluates the forecasting results and assesses energy and environmental impacts. Student projects are an important element of the course.

CEE 591 Engineering Management Project
Fall. 3 credits. Prerequisite: permission of instructor. A. H. Meyburg and F. J. Wayne.
A core graduate course in project management for people who will manage technical or engineering projects. Focuses both on the "technical" tools of project management (methods for planning, scheduling, and control) and the "human" side (forming a project team, managing performance, resolving conflicts, etc.), with somewhat greater emphasis on the latter.

CEE 592 Engineering Management Project
Spring. 3 credits. Prerequisite: permission of instructor. Staff.
A continuation of CEE 591.

CEE 593 Engineering Management Methods I: Data, Information, and Modeling
Fall. 3 credits. Prerequisites: CEE 323 and CEE 304 or equivalent. M. A. Turnquist.
Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in project design, scheduling, operation, quality control, forecasting, and resource allocation.

CEE 594 Engineering Management Methods II: Managing Uncertain Systems
Spring. 3 credits. Prerequisite: CEE 593 or permission of instructor. M. A. Turnquist.
This course covers: modeling and managing systems in which uncertainty is a major determinant of system behavior; systems which are subject to breakdown, deterioration, and queuing; and simulation as a tool for analyzing uncertain systems. Projects and case studies are used to illustrate application of the methods.

CEE 595 Construction Planning and Operations
Fall. 3 credits. P. Carr.
A course on the fundamentals of construction planning: organization of the worksite, construction planning, scheduling, and cost estimating, bidding, temporary structures, applications of computer methods, and the relationships among owners, designers, contractors, suppliers, and developers.

CEE 596 Current Topics in Construction Management
Spring. 3 credits. Prerequisite: CEE 595 or equivalent. Not offered 2001-2002. Staff.
This course focuses on recent trends in the professional management of construction projects and organizations. It draws from literature, practicing construction managers, software producers, and research. The course seeks to identify and evaluate trends and prepare students for management positions in engineering design and construction.

CEE 597 Risk Analysis and Management
Spring. 3 credits. Prerequisite: An introduction to Probability and Statistics course such as: CEE 304, ENGRD 270, ILRST 210, BTRY 261 or AEM (ARME) 210; and two semesters of calculus.
J. R. Stedinger.
Course develops a working knowledge of risk terminology and reliability engineering, analytic tools and models used to analyze environmental and technological risks, and social and psychological risk issues. Discussions address life risks in the United States, transportation risks, industrial accidents, waste incineration, air pollution modeling, public health, regulatory policy, risk communication, and risk management.

CEE 598 Introduction to Decision Analysis
Fall. 3 credits. R. Davidson.
Framework to structure the way we think about decision situations that are complicated by uncertainty, complexity, and competing objectives. Specific decision analysis concepts and tools, such as influence diagrams, decision trees, sensitivity analysis, value of information, and utility theory. Applications to all areas of engineering and life.

CEE 601 Water Resources and Environmental Engineering Seminar
Fall. 1 credit. J. Gossett.
Presentation of topics of current interest.

CEE 602 Civil Infrastructure Seminar
Fall, spring. 1 credit. Required for first-year graduate students. Staff.
Presentation of topics of current interest.

CEE 603 Systems Engineering and Information Technology Seminar
Fall, spring. 1 credit. Staff.
Presentation of topics of current interest.

CEE 605 Issues in Risk Analysis Seminar
Fall. 1 credit. S-U option. Staff.
Discussion of current issues and ongoing research on risk analysis issues from many perspectives with an emphasis on environmental risk analysis. Speakers address problem formulation, quantitative/qualitative methods in assessment of risk, communication issues, and challenges to risk assessment methodologies. Some sessions held jointly with other seminar series. Enrollment in seminar requires short reports and participation in two required discussion meetings for class members designed to integrate the issues raised during the semester.
CCE 610 Remote Sensing Fundamentals (also SCAS 660)
Fall. 3 credits. Prerequisite: permission of instructor. W. D. Philpot.
An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

CCE 615 Digital Image Processing
Spring. 3 credits. Prerequisites: facility with algebra and trigonometry (e.g., MATH 109) and statistics (e.g., CEE 304 or ARME 310), or permission of instructor. W. D. Philpot.
An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification, with an introduction to hyperspectral data analysis. Assignments require the use of image-processing software and graphics.

CCE 617 Project—Remote Sensing
On demand. 1–6 credits. W. D. Philpot.
Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CCE 618 Special Topics—Remote Sensing
On demand. 1–6 credits. W. D. Philpot.
Supervised study in small groups on one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.

CCE 620 Water-Resources Systems Engineering
Spring. 3 credits. Prerequisites: CEE 323 and CEE 593 D. P. Loucks.
Development and application of deterministic and stochastic optimization and simulation models for water-resources planning and management. Covers river-basin modeling, including reservoir design and operation, irrigation planning and operation, hydro-power-capacity development, flow augmentation, flood control and protection, and water-quality prediction and control.

CCE 621 Stochastic Hydrology
Spring. 3 credits. Prerequisites: CEE 304 or permission of instructor. J. R. Stedinger.
The course examines statistical, time series, and stochastic optimization methods used to address water resources planning and management problems involving uncertainty objectives and hydrologic inputs. Statistical issues include: maximum likelihood and moment estimators; censored datasets and historical information; probability plotting; Bayesian inference; regionalization methods; ARMA models; multivariate stochastic streamflow models; stochastic simulation; and stochastic reservoir-operation optimization models.

CCE 623 Environmental Quality Systems Engineering
Fall. 3 credits. Prerequisites: MATH 294, optimization, and graduate standing or permission of instructor. Not offered 2001–2002. C. A. Shoemaker.
Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution. Case studies include: regional waste and wastewater treatment, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated groundwater. Applications use linear programming, integer, dynamic, nonlinear programming, and sensitivity analysis.

CCE 628 Environmental and Water Resources Systems Analysis Seminar
Spring. 1 credit. Prerequisite: permission of instructor. Staff.
Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

CCE 630 Advanced Fluid Mechanics
Fall. 3 credits. Prerequisite: CEE 331. Not offered 2001–2002. Staff.
Introduction to tensor analysis; conservation of mass, momentum, and energy. Rigorous treatment includes study of exact solutions of Navier-Stokes equations; asymptotic approximations at low and high Reynolds numbers; similarity and modeling; and laminar diffusion of momentum, mass, and heat.

CCE 631 Flow and Contaminant Transport Modeling in Groundwater
Potential flows and the calculation of Numerical methods include finite difference, finite elements, and boundary elements. Covers: fundamental equations of saturated and unsaturated flow in porous media; flow in fractured media; numerical modeling of transport in porous media; diffusion and advective diffusion in one, two, and three dimensions; anisotropy; and additional terms for reactive substances. The course includes the use of computer programs.

CCE 632 Hydrology
Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers and scientists. Covers: physical and statistical prediction methods for design related to hydrologic processes; hydrometeorology and evaporation; infiltration and base flow; surface runoff and channel routing; linear and nonlinear hydrologic systems; and storage routing and unit hydrograph methods.

CCE 633 Flow in Porous Media and Groundwater
Fall. 3 credits. Prerequisite: CEE 331 W. H. Brutsaert.
Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications include aquifer hydraulics, pumping wells, drought flows, infiltration, groundwater recharge; land subsidence; seawater intrusion, miscible displacement; and transient seepage in unsaturated materials.

CCE 634 Boundary Layer Meteorology
Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor. Not offered 2001–2002. W. H. Brutsaert.
Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transport from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

CCE 635 Small and Finite Amplitude Water Waves
Review of linear and nonlinear theories of ocean waves. Discussions on the applicability of different wave theories to engineering problems.

CCE 636 Environmental Fluid Mechanics
The course covers: analytic and modeling perspectives of environmental flows, mechanics of layered and continuously stratified fluids: internal waves, density currents, baroclinic motions, and turbulence; jets and plumes and their behavior in the environment; turbulent diffusion, shear flow dispersion, and water-induced mixing processes; and applications to mixing processes in rivers, lakes, estuaries and the coastal ocean.

CCE 637 Experimental Methods in Fluid Dynamics
Spring. 4 credits. E. A. Cowen.
Introduction to experimental data collection and analysis, in the particular, as they pertain to fluid flows. Covers: computer-based experimental control, analog and digital data acquisition, discrete sampling theory, digital signal processing, uncertainty analysis. Also covers: analog transducers, acoustic and laser Doppler velocimetry, full-field (2-D) quantitative imaging techniques. Includes laboratory experiments and a project.

CCE 638 Hydraulics Seminar
Spring. 1 credit. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering. Staff.
Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

CCE 639 Special Topics in Hydraulics
On demand. 1–6 credits. Staff.
Special topics in fluid mechanics, hydraulic engineering, or hydrology.

CCE 640 Foundation Engineering
Fall. 3 credits. Prerequisite: CEE 341. F. H. Kulhawy.
The course covers: soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CCE 641 Retaining Structures and Slopes
Spring. 3 credits. Prerequisite: CEE 341. T. D. O'Rourke.
The course covers: Earth pressure theories; design of rigid, flexible, braced, tied-back, slurry, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

CCE 644 Environmental Applications of Geotechnical Engineering
Spring. 3 credits. Prerequisite: CEE 341 or equivalent. T. D. O'Rourke.
The course covers: principles of hydrogeology, contaminant migration, and remediation technologies
related to geotechnical and environmental engineering. Emphasis is on environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

CxEE 649 Special Topics in Geotechnical Engineering
On demand. 1-6 credits. Staff. Supervised study of special topics not covered in the formal courses.

CxEE 653 Water Chemistry for Environmental Engineering
Fall. 3 credits. Prerequisite: 1 semester of college chemistry or permission of instructor. L. W. Lion. Principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. The focus of the course is on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

CxEE 654 Aquatic Chemistry

CxEE 655 Transport, Mixing, and Transformation in the Environment
Fall. 3 credits. Prerequisite: CxEE 331 J. J. Bisogni. Application of fluid mechanics to problems of transport, mixing, and transformation in the water environment. Introduction to advective, diffusive, and dispersive processes in the environment. Boundary interactions: air-water and sediment-water processes. Introduction to chemical and biochemical transformation processes. Applications to transport, mixing, and transformation in rivers, lakes, and coastal waters.

CxEE 658 Sludge Treatment, Utilization, and Disposal
Spring. 3 credits. Prerequisite: CxEE 352 or permission of instructor. Not offered 2001–2002. R. I. Dick. Analysis of the quantity and quality of residues produced from municipal and industrial water-supply and pollution-control facilities and other residue-producing processes. Alternatives for reclaiming or disposing of hazardous and nonhazardous residuals. Performance of treatment processes for altering sludge properties prior to reuse or ultimate disposal. Considerations in selecting and integrating of sludge-management processes.

CxEE 659 Environmental Quality Engineering Seminar
Spring. 1 credit. Prerequisite: enrollment as graduate student in environmental engineering. R. I. Dick. Presentation and discussion of current research in environmental engineering.

CxEE 663 Transportation Network Analysis
Spring. 3 credits. Prerequisites: CxEE 463 or CxEE 464, or permission of instructor. Not offered 2001–2002. M. A. Turnquist. Topics in flow prediction and estimation for transportation networks, including equilibrium assignment, stochastic network loading, trip table estimation, dynamic vehicle allocation, and routing/scheduling models.

CxEE 671 Random Vibration
Fall. 3 credits. Prerequisites: M&AE 326, CxEE 779, and OR&IE 260; or equivalent and permission of the instructor. Not offered 2001–2002. M. D. Grigoriu. Review of random-process theory, simulation, and first-passage time. Linear random vibration: second-moment response descriptors and applications from fatigue, seismic analysis, and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration: linearization techniques, perturbation techniques, Fokker-Planck and Kolmogorov equations, i.i.d. calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.

CxEE 672 Fundamentals of Structural Mechanics

CxEE 673 Engineering Analysis
Fall. 3 credits. Prerequisite: instructor permission. M. D. Grigoriu. Vector spaces, linear transformations and eigenvalue problems with applications to matrix structural analysis, linear dynamics, stability, and principal stresses, strains, and moments of inertia. Fourier analysis for periodic and non-periodic functions, with applications to the solution of ordinary differential equations, beams, plates, and other structural mechanics problems. Partial differential equations with applications to the analysis of static and dynamic response of continuous systems and transport problems.

CxEE 674 Finite Element Modelling of Civil Infrastructure
Spring. 3 credits. Prerequisites: CxEE 371 and either CxEE 372 or CxEE 677. K. D. Papoulia. Matrix methods of structural analysis; truss and frame analysis; computer programming of displacement (stiffness) method. Covers the finite element method as an extension of the displacement method of structural analysis; basic two- and three-dimensional continuum elements. Introduction to nonlinear analysis. Emphasis is on applications in Civil Infrastructure design. The course develops the knowledge base for intelligent usage of finite element programs for structural and geotechnical engineers. Brief exposition of the theory and informed use of commercial codes on more advanced topics: shell elements, material and geometric nonlinearity. Also includes: applications to concrete, steel and soil structures; solution methods; transient problems.

CxEE 675 Concrete Materials and Construction
Spring. 3 credits. Prerequisite: CxEE 376 or equivalent. Not offered 2001–2002. K. C.Hover. Materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CxEE 677 Stochastic Problems in Science and Engineering
Fall. 3 credits. Prerequisites: permission of Instructor. M. D. Grigoriu. Review of probability theory, stochastic processes, and Ito formula with illustrations by Monte Carlo Simulation. Analytical and numerical methods for solving stochastic problems defined by algebraic, differential, and integral equations; deterministic coefficients and random/deterministic input. Applications include: solution of Laplace, transport, Schrodinger, and other deterministic partial differential equations; dynamic systems subjected to Gaussian and non-Gaussian noise; random eigenvalue problems; and homogenization, structure evolution, and pattern formation for random heterogeneous materials.

CxEE 692 Special Topics in Engineering Management
On demand. 1-6 credits. Staff. Individually supervised study of one or more specialized topics not covered in regular courses.

CxEE 694 Research in Engineering Management
On demand. 1-6 credits. Staff. The student may select an area of investigation in engineering management. Research should be submitted to the instructor in charge in the form of a research report.

CxEE 710 Research—Remote Sensing
On demand. 1-6 credits. W. D. Philpot. For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CxEE 722 Environmental and Water Resources Systems Analysis Research
On demand. 1-6 credits. Prerequisite: permission of instructor. Preparation must be suitable to the investigation to be undertaken. Staff. Investigations of particular environmental or water resources systems problems.

CxEE 729 Special Topics in Environmental or Water Resources Systems Analysis
On demand. 1-6 credits. Staff. Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.
[**CEE 732** Computational Hydraulics]  
Fall, 3 credits. Prerequisite: elementary fluid mechanics or permission of instructor. Offered alternate years. Not offered 2001–2002. Staff.  
This course covers: numerical methods for solving hydraulics and fluid-mechanics problems; solutions for elliptic, parabolic, and hyperbolic equations; and finite-difference, finite-element, and boundary-integral methods. 

[**CEE 735** Research in Hydraulics]  
On demand. 1–6 credits. Staff.  
The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

[**CEE 740** Engineering Behavior of Soils]  
Fall, 3 credits. Prerequisite: CEE 341. H. E. Stewart.  

[**CEE 741** Rock Engineering]  
Spring, 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology. T. D. O’Rourke.  
Geological and engineering classifications of intact rock, discontinuities, and rock masses. Includes laboratory and field evaluation of properties. Geomechanical states and stress analysis, design of foundations on, and openings in, rock masses; and analysis of the stability of rock slopes.

[**CEE 744** Advanced Foundation Engineering]  
A continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures. 

[**CEE 745** Soil Dynamics]  
Spring, 3 credits. Prerequisite: permission of instructor. H. E. Stewart.  
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Covers design of embankments and retaining structures under dynamic loading conditions.

[**CEE 746** Embankment Dam Engineering]  
Spring, 2 credits. Prerequisites: CEE 641 and 741, or permission of instructor. F. H. Kulhawy.  
Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.

[**CEE 749** Research in Geotechnical Engineering]  
On demand. 1–6 credits. Staff.  
For students who want to pursue a particular geotechnical topic in considerable depth.

[**CEE 750** Research in Environmental Engineering]  
On demand. 1–6 credits. Staff.  
For students who want to study a particular area in depth. The work may take the form of laboratory investigations, field study, theoretical analysis, or development of design and analysis procedures.

[**CEE 755** Physical/Chemical Processes]  
Fall, 3 credits. Prerequisite: previous or concurrent enrollment in CEE 653 or permission of instructor. J. J. Bisogni.  
Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Analysis and design of treatment processes and systems.

[**CEE 756** Biological Processes]  
Spring, 3 credits. Prerequisites: an introductory course in microbiology and CEE 755, or permission of instructor. J. M. Gossett.  
Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Biokinetic analysis and design of biological treatment process.

[**CEE 757** Environmental Engineering Process Laboratory I]  
Fall, 2 credits. Prerequisite: concurrent enrollment in CEE 653 and CEE 755. M. Weber-Shirk.  
Laboratory studies of aquatic chemistry and physical/chemical processes of environmental engineering. Topics include: gravimetric analyses; acids/bases; alkalinity; gas chromatography; UV-visible and atomic absorption spectrophotometry; adsorption; filtration; ion exchange; gas transfer; sedimentation; characterization of reactor mixing regimes; and coagulation.

[**CEE 758** Biological Processes Laboratory]  
Spring, 2 credits. Prerequisite: concurrent enrollment in CEE 756. J. M. Gossett.  
Laboratory studies of microbiological phenomena and environmental engineering processes. Topics include microscopy; biochemical and chemical oxygen demand; biological treatability studies; and enumeration of bacteria.

[**CEE 759** Special Topics in Environmental Engineering]  
On demand. 1–6 credits. Staff.  
Supervised study in special topics not covered in formal courses.

[**CEE 762** Transportation Research]  
On demand. 1–6 credits. Staff.  
In-depth investigation of a particular transportation planning or engineering problem mutually agreed upon between the student and one or more faculty members.

[**CEE 764** Special Topics in Transportation]  
On demand. 1–6 credits. Staff.  
Advanced subject matter not covered in depth in other regular courses.

[**CEE 770** Engineering Fracture Mechanics]  
Spring, 3 credits. Prerequisite: CEE 674 or CEE 772 (MAE 680/T&AM 666) and T&AM 753, or permission of instructor. Offered alternate years. Not offered 2002–2003. A. Ingraffea.  
Computational and physical modeling of crack growth processes. Finite and boundary element based simulation of fatigue crack initiation and propagation, fatigue crack growth, and elastic-plastic and cohesive approaches to inelastic crack growth. Element formulation, meshing and remeshing, interactive steering. Case studies across scales from geomechanics to micromechanics, and including metals, ceramics, and polymers. Laboratory techniques for fracture toughness, crack growth rate, and trajectory testing.

[**CEE 772** Finite Element Analysis (also M&AE 680 and T&AM 666)]  
Spring, 3 credits. Prerequisites: T&AM 663 or equivalent. Staff.  
For description, see M&AE 680.

[**CEE 773** Structural Reliability]  
Review of probability theory, practical measures for structural reliability, second-moment reliability indices, probability models for strength and loads, probability-based design codes, reliability of structural systems, imperfection-sensitive structures, fatigue, stochastic finite-element techniques, and elementary concepts of probabilistic fracture mechanics.

[**CEE 774** Advanced Structural Concrete]  
Fall, 3 credits. Prerequisite: undergraduate concrete design course. S. Billington.  
Advanced behavior, analysis and design of structural concrete with an introduction to prestressing. Emphasis is on modeling for flexure, shear, torsion and in particular disturbed regions. Includes a course project.

[**CEE 775** Structural Concrete Systems]  
Spring, 3 credits. Offered alternate years. Prerequisite: CEE 774. Topics include: behavior and design of structural concrete building and bridge systems; integration of material, component and system modeling and simulation with structural design; and repair and retrofit of structures. Includes a course project.

[**CEE 776** Advanced Design of Metal Structures]  
Fall, 3 credits. Prerequisite: CEE 374 or equivalent. T. Pekoz.  
Preliminary design of structural systems. Behavior and design of members and connections. Behavior and computer-aided design of building frames.

[**CEE 777** Advanced Behavior of Metal Structures]  
Analysis of elastic and inelastic stability. Behavior and design of hot-rolled and cold-rolled steel and aluminum members, elements, and frames. Critical review of design specifications.]
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

EEE 850 Thesis—Transportation Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

EEE 880 Thesis—Structural Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

COMPUTER SCIENCE
The Department of Computer Science is part of both the College of Arts and Sciences and the College of Engineering.

COM S 099 Fundamental Programming Concepts
Fall, summer. 2 credits. No prerequisites. S-U grades only. Credit cannot be applied toward the Engineering degree. Freshmen only.
This course is designed for students who intend to take COM S 100 but are not adequately prepared for that course. Basic programming concepts and problem analysis are studied. An appropriate high-level programming language is used. Students with previous programming experience and students who do not intend to take COM S 100 should not take this course.

COM S 100 Introduction to Computer Programming
Fall, spring, summer. 4 credits.
An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and the development of algorithms and programs. There are two versions of the course. Both provide adequate preparation for COM S/ENGRD 211. Both versions are not offered every semester.

COM S 100M Introduction to Computer Programming
Corequisite: MATH 111, 191, or equivalent. This version starts with a seven-week introduction to programming in MATLAB. Iteration, functions, and arrays are introduced. During the second seven weeks of the course, students examine how these ideas are handled in the object-oriented framework provided by the Java programming language. Throughout the course, examples and assignments are chosen to give the student an appreciation for computational science and engineering. The pace of the course assumes that the student has no prior programming experience.

COM S 100J Introduction to Computer Programming
This course is an introduction to programming using the Java programming language. A two-week unit on MATLAB is included. Topics include algorithms, language concepts, selection, repetition, functions, objects and classes, arrays, strings, and inheritance. Principles of software development and style are emphasized. The course assumes basic high school mathematics (no calculus) but no programming experience.

COM S 101 Introduction to Cognitive Science (also COGST 101, LING 170, and PSYCH 102)
Fall. 3 credits.
For description, see COGST 101.

COM S 113 Introduction to C
Fall, spring. 1 credit. Usually weeks 1-4. Prerequisite: COM S 100 or equivalent programming experience. Credit is granted for both COM S 113 and 213 only if 113 is taken first. S-U grades only.
A brief introduction to the C programming language and standard libraries. Unix accounts are made available for students wishing to use that system for projects, but familiarity with Unix is not required. Projects may be done using any modern implementation of C.
COM S 213 (C++ Programming) includes much of the material covered in 113. Students planning to take COM S 213 normally do not need to take 113.

COM S 114 Unix Tools
Fall. 1 credit. Usually weeks 5-8. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.
An introduction to Unix, emphasizing tools for file management, communication, process control, managing your Unix environment and rudimentary shell scripts. Knowledge of at least one programming language is encouraged. Projects assume no previous knowledge of Unix or expertise in any particular language.

COM S 130 Creating Web Documents
Fall. 3 credits. No prerequisites.
Interactive on-line media such as the World Wide Web are revolutionizing the way we communicate. This course introduces students having little or no computer background to tools and techniques for creating interactive documents. Questions of both design and technical issues are emphasized. Students must think seriously about digital graphic impact and must learn how to do some relatively simple programming with a scripting language (such as JavaScript). Topics covered include HTML, JavaScript, interaction techniques (elementary DHTML), ways of coping with slow connections, the incorporation of sound, video, and images in web documents; animation techniques (Flash 5); ethics; and e-commerce.

COM S 191 Media Arts Studio I (also ART 391, THETR 391)
Fall. 3 hours. Prerequisites: one of the following courses: ART 171, THETR 277, 377, MUSIC 120, or equivalent. Also must be a junior and have permission of instructor. Lab fee $50.
For description, see ART 391.

COM S 201 Cognitive Science in Context Laboratory (also COGST 201 and PSYCH 201)
Fall or spring. 4 credits. Limited to 24 students. Prerequisite: concurrent or prior registration in Introduction to Cognitive Science (PSYCH 102/COGST 101/COM S 101/LING 170/PHIL 191) is suggested but not required. Knowledge of programming languages is not assumed. Fall, B. Halpern and staff; spring, D. Field and staff.
For description, see COGST 201.
COM S 202 Transition to Java
Fall, spring. Course usually weeks 1–4. 1 credit. Prerequisite: one semester-long programming course.
A brisk introduction to the Java programming language that assumes programming knowledge in at least one other object-oriented language.

COM S 211 Computers and Programming (also ENGRD 211)
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or an equivalent course in Java or C++.
Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, modules (classes), program development, proofs of program correctness, recursion, data structures and types (lists, stacks, queues, trees), object-oriented and functional programming, and the use of algorithms, and an introduction to elementary graph theory and graph algorithms. Java is the principal programming language. Knowledge of classes and objects is assumed.

COM S 212 Java Practicum
Fall, spring. 1 credit. Letter grade only. Pre- or corequisite: COM S/ENGRD 211.
A project course that introduces students to the ways of software engineering using the Java programming language. The course requires the design and implementation of several large programs.

COM S 213 C++ Programming
Fall, spring. 2 credits. Prerequisite: COM S 100 or equivalent programming experience. Students who plan to take COM S 113 and 213 must take 113 first. S/U grades only.
An intermediate-level introduction to the C++ programming language and the C/C++ standard libraries. Topics include basic statements, declarations, and types; stream 1/0; user-defined classes and types; derived classes, inheritance, and object-oriented programming; exceptions and templates.
Recommends for students who plan to take advanced courses in computer science that require familiarity with C++ or C. Students planning to take COM S 213 normally do not need to take COM S 113; 213 includes most of the material taught in 113.

COM S 214 Advanced UNIX Programming and Tools
Spring. 1 credit. S-U grade only. Prerequisite: COM S 213 or equivalent.
A focus on Unix as a programming environment for people with a basic knowledge of Unix and experience programming in at least one language. Projects cover advanced shell scripts (sh, ksh, csh). Makefiles, programming and debugging tools for C and other languages, and more modern scripting languages such as Perl and Python. Students with little or no experience with Unix should take COM S 114 first.

COM S 230 Intermediate Web Design
Spring. 3 credits. Enrollment may be limited. Prerequisite: COM S 130 or equivalent. Not offered every year; will be offered spring 2002.
Web programming requires the cooperation of two machines: the one in front of the viewer (client) and the one delivering the content (server). COM S 230 concentrates almost exclusively on the client side. The main emphasis in COM S 230 is learning about server-side processing. Students begin by looking at interactions with databases, learning about querying both on paper and via SQL, and then, through a succession of projects, learn how to apply this understanding to the creation of an interactive data-driven site via the use of an integrated web site development tool such as ColdFusion. Also considered are techniques to enhance security, privacy, and reliability, and ways of incorporating other programs. Towards the end of the course, students are shown how these development tools in linear programming. Design issues are emphasized. A major component of the course is the creation of a substantial web site.

COM S 280 Discrete Structures
Fall, spring. 4 credits. Pre- or corequisite: COM S/ENGRD 211 or permission of instructor.
Covers mathematical aspects of programming and computing. Topics are chosen from the following: mathematical induction, logical proof; propositional and predicate calculus; combinatorics and discrete mathematics; covering manipulations of sums, recurrence relations, and generating functions; basic number theory; sets, functions, and relations; partially ordered sets; graphs; and algebraic structures.

COM S 312 Data Structures and Functional Programming
Fall, spring. 4 credits. Prerequisite: COM S 211/212 or equivalent programming experience.
A challenging introduction to the science of programming that emphasizes data structures and alternative modes of algorithmic expression. Students learn about the advanced data structures that computer scientists use in day-to-day tasks, such as balanced trees, hash tables, and priority queues. In addition, students are exposed to alternative language models (e.g., functional programming) and alternative type systems (e.g., parametric polymorphism) to give them a broader base for understanding the principles of programming. Topics include advanced data structures, recursive and higher-order procedures, performance analysis of algorithms, models of computation, program correctness, abstract data types, polymorphic functions, and the interpretation of languages.

COM S 314 Computer Organization (also ECE 314)
Fall, spring. 4 credits. Prerequisite: COM S 211, 212; COM S 312 or ENGRD 231/ECE 232 are recommended but not required.
Basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, datapath design, memory hierarchies including caches and virtual memory, I/O devices, and bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor.

COM S 321 Numerical Methods in Computational Molecular Biology (also BIO BM 321 and ENGRD 321)
Fall. 3 credits. Prerequisite: At least one course in calculus, such as MATH 106, 111, or 119 and a course in linear algebra, such as MATH 221 or 294 or BTRY 417. COM S 100 or equivalent and some familiarity with iteration, arrays, and procedures.
An introduction to numerical computing using MATLAB organized around five applications: the analysis of protein shapes, dynamics, protein folding, score functions, and field equations. Students become adept at plotting linear equation solving, least squares fitting, and cubic spline interpolation. More advanced problem-solving techniques that involve eigenvalue analysis, the solution of ordinary and partial differential equations, linear programming, and nonlinear optimization will also be treated. The goal of the course is to develop a practical computational expertise with MATLAB and to build mathematical intuition for the problems of molecular biology. COM S majors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 322 Introduction to Scientific Computation (also ENGRD 322)
Spring, summer. 3 credits. Prerequisites: COM S 100 and (MATH 222 or MATH 294).
An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Includes special lectures on parallel computation. COM S majors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 324 Computational Linguistics (also COGST 424, LING 424)
Spring. 4 credits. Prerequisites: LING 203; labs involve work in the Unix environment. COM S 114 is recommended. For description, see LING 424.

COM S 381 Introduction to Theory of Computing
Fall, summer. 4 credits. Prerequisite: COM S 280 or permission of instructor.
Credit will not be granted for both COM S 381 and COM S 481. Corrective transfers between COM S 381 and COM S 481 (in either direction) are encouraged during the first few weeks of instruction.
An introduction to the modern theory of computing: automata theory, formal languages, and effective computability.

COM S 392 Topics in High-level Vision (also COGST 465, PSYCH 465)
Spring. 4 credits.
For description, see PSYCH 465.

COM S 400 The Science of Programming
Spring. 4 credits. Prerequisite: COM S 280 or equivalent. Not offered every year; next offering TBD.
The practical development of correct programs based on the concrete application of principles that are derived from a mathematical notion of program correctness. Besides dealing with conventional sequential programs, the course covers implementations of abstract data types and contains an introduction to programming with concurrency. Issues in programming-language design that arise from program correctness are discussed. Programs are written but not run on a computer.

COM S 409 Data Structures and Algorithms for Computational Biology
Spring. 4 credits. Prerequisite: COM S 211 or equivalent programming experience.
This course is not open to COM S majors. Not offered every year.
Covers data structures and algorithms with emphasis on those useful for computational
science. This course is intended for students outside of the Department of Computer Science whose work involves a significant amount of computing. Topics include basic data structures as well as more advanced topics. Emphasis is placed on the use of abstract data types and on how best to select appropriate data structures.

COM S 411 Programming Languages and Logics
Fall. 4 credits. Prerequisite: COM S 312 or permission of instructor. Not offered every year. Covers the major concepts of programming languages, with emphasis on syntax and semantics; functional programming; and logic programming; design and criticism of programming languages; and type theory and typed lambda-calculus. Includes exercises in several unusual programming languages.

COM S 412 Introduction to Compilers
Spring. 3 credits. Prerequisites: COM S 312 (or permission of instructor) and COM S 314. Corequisite: COM S 413. An introduction to the specification and implementation of modern compilers. Topics covered include lexical processing, parsing, type checking, code generation and translation, an introduction to optimization, and the implementation of modern programming languages. The course entails a substantial compiler implementation project.

COM S 413 Practicum in Compilers
Spring. 2 credits. Corequisite: COM S 412. A compiler implementation project related to COM S 412.

COM S 414 Systems Programming and Operating Systems
Fall, spring, summer. 3 credits. Prerequisites: COM S 211, 212, 312 (or permission of instructor), and 314. Corequisite: COM S 415 in spring only. An introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

COM S 415 Practicum in Operating Systems
Fall, spring. 2 credits. Corequisite: COM S 414. The practical aspects of operating systems are studied through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

COM S 417 Computer Graphics and Visualization (also ARCH 375)
Spring. 3 credits. Prerequisite: COM S/ENGRD 211. An introduction to the principles of interactive computer graphics and scientific visualization. Topics include surface modeling, animation, perspective transformations, hidden-line and hidden-surface algorithms, lighting models, image synthesis, and application to scientific data analysis.

COM S 418 Practicum in Computer Graphics (also ARCH 375)

COM S 421 Numerical Analysis
Fall. 4 credits. Prerequisites: MATH 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming. Modern algorithms for systems of linear equations, systems of nonlinear equations, numerical optimization, and numerical solution of differential equations. Some discussion of methods suitable for parallel computation. This course requires more mathematical sophistication than COM S 322. COM S majors may use only one of the following toward their degree: COM S 321, 322 or 421.

COM S 430 Information Discovery
Spring. 3 credits. Prerequisite: COM S 211 or equivalent. This course looks at the methods used to search for and discover information in digital libraries and web information systems. Methods that are covered include information retrieval, which includes: techniques for searching, browsing, and filtering information; the use of classification systems and thesauruses; and web search systems.

COM S 432 Introduction to Database Systems
Fall. 3 credits. Prerequisites: COM S 312, or 211/212, and permission of instructor. Recommended: COM S 213 and strong programming skills in C or C++. An introduction to modern relational database systems. Concepts covered include storage structures, access methods, query languages, query processing and optimization, transaction processing, and database design theory. The course primarily covers the internals of database systems and includes four large programming assignments in C++.

COM S 433 Practicum in Database Systems
Fall. 2 credits. Corequisite: COM S 432. An introduction to building web-database applications. Students implement a small e-commerce system using Active Server Pages, Java Server Pages, Cookies, and Servlets. The practicum also introduces technologies such as XML/XPath/XSLT and WAP.

COM S 437 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: COM S/ENGRD 211 and COM S 280 (or equivalent). A challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Corequisite: COM S 472. Project portion of COM S 472. Topics include knowledge representation systems, search procedures, game-playing, automated reasoning, concept learning, reinforcement learning, neural nets, genetic algorithms, planning, and truth maintenance.

COM S 474 Introduction to Natural Language Processing (also COGST 474, LING 474)
Spring. 4 credits. Prerequisites: COM S 211. The course presents formalisms, algorithms, and methodology for manipulating natural languages computationally. It emphasizes parts of natural language (syntax and morphology, but not semantics) where algorithms and scientific understanding make it possible for us to create and implement approximately complete accounts of linguistic phenomena and also manipulate large samples of language use (a million or a billion words). Most of the methods are not only useful for engineering applications but also advance our scientific understanding of human languages.

COM S 478 Machine Learning
Spring. 4 credits. Prerequisites: COM S 280, 312, and basic knowledge of linear algebra and probability theory. Learning and classifying are two of our basic abilities. Machine learning is concerned with the question of how to train computers to learn from experience, to adapt and make decisions accordingly. This course introduces the set of techniques and algorithms that constitute machine learning as of today, including: inductive inference of decision trees, the parametric-based Bayesian learning approach, Bayesian belief networks and Hidden Markov Models, non-parametric methods, discriminant functions and support vector machines, neural networks, stochastic methods such as genetic algorithms, unsupervised learning and clustering, and other issues in the theory of machine learning. These techniques are used today to automate procedures that were previously performed by humans, as well as to explore untouched domains of science.

COM S 481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481. Corrective transfers between COM S 481 and 381 (in either direction) are encouraged during the first few weeks of instruction. A faster-moving and deeper version of COM S 381.

COM S 482 Introduction to Analysis of Algorithms
Spring, summer. 4 credits. Prerequisites: COM S 280, 312, and either 381 or 481, or permission of instructor. Techniques used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

COM S 483 Quantum Information Processing (also PHYS 481 and 681)
Spring. 2 credits. Prerequisite: familiarity with the theory of vector spaces over the complex numbers. For description, see PHYS 481.

COM S 486 Applied Logic (also MATH 486)
Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (such as MATH 332, 432, 434, 481), and some additional course in mathematics or theoretical computer science.

**COM S 490 Independent Reading and Research**
Fall, spring. 1–4 credits. Independent reading and research for undergraduates.

**COM S 501 Software Engineering**
Spring. 4 credits. Prerequisite: COM S 211 or equivalent experience programming in Java or C++. An introduction to the practical problems of specifying, designing, and building large, reliable software systems. Students work in teams on projects for real clients. This work includes a feasibility study, requirements analysis, object-oriented design, implementation, testing, and delivery to the client. Additional topics covered in lectures include professionalism, project management, and the legal framework for software development.

**COM S 502 Computing Methods for Digital Libraries**
Spring. 3 credits. Prerequisite: COM S 211 and some familiarity with the technology of web sites. This course examines the application of computer science methods in digital libraries. A central topic is the representation of complex information in computer systems, including object models and metadata. Closely related topics include how to discover and deliver information over heterogeneous distributed systems and how to preserve intellectual information over worldwide networks for long periods of time. A theme that runs through the course is the interplay between computing and people, including the legal, social, and economic context.

**COM S 504 Applied Systems Engineering I (also CEE 504, ECE 512, M&E 591, OR&E 512)**
Fall. 3 credits. Prerequisite: permission of instructor. May not be used to fulfill the COM S 400+ electives. For description, see M&E 591.

**COM S 505 Applied Systems Engineering II (also CEE 505, ECE 513, M&E 592, OR&E 513)**
Spring. 3 credits. Prerequisite: Applied System Engineering I (CEE 504, COM S 504, ECE 512, M&E 591, OR&E 512). May not be used to fulfill the COM S 400+ electives. For description, see M&E 592.

**COM S 513 System Security**
Spring. 4 credits. Prerequisites: COM S 414 or 519 and familiarity with JAVA programming language. This course discusses security and survivability for computers and communications networks. The course includes discussions of policy issues (e.g., the national debates on cryptography policy) as well as the discussions of the technical alternatives for implementing the properties that comprise "trustworthiness" in a computing system. Mechanisms for authentication and authorization as well as cryptographic protocols are covered.

**COM S 514 Intermediate Computer Systems**
Fall or spring. 4 credits. Prerequisites: COM S 414 or permission of instructor. This course focuses on practical issues in designing and implementing distributed software. Topics include programming an instructor. Recent offerings have covered object-oriented software development methodologies and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by coregistering in COM S 490, 515, or 790.

**COM S 515 Practicum In Systems**
Fall or spring. 1–2 credits. Corequisite: COM S 514. The practical aspects of modern software systems are studied through the design and implementation of a significant system. Students may work alone or in teams. The project varies from year to year at the discretion of the instructor. Some students take COM S 490 or 790 instead of COM S 515.

**COM S 519 Computer Networks**
Spring. 4 credits. Prerequisites: COM S 314 or permission of instructor. Not offered every year. Introduction to computer networks with an emphasis on evolving Internet standards. Detailed introduction to networking protocols for reliable data transfer, flow control, congestion control, naming and addressing, routing, error control, and multiple access. Fundamentals of layered protocols and techniques for protocol design and implementation. The course is project-oriented and requires substantial programming experience.

**COM S 522 Computational Tools and Methods for Finance**
Spring. 4 credits. Prerequisites: programming experience (e.g., C, FORTRAN, or MATLAB), some knowledge of numerical methods, especially numerical linear algebra. Not offered every year. This course provides a hands-on introduction to computational methods and tools used in finance. Students study both the underlying methods and efficient implementation. The MATLAB Financial Toolbox, along with additional MATLAB tools, are used extensively. The underlying numerical techniques discussed include: nonlinear least-squares procedures (regression), basic linear algebra, linear and nonlinear optimization, finite-difference methods for PDEs, quadrate programming (and linear complementarity problems), and specialized tree (and lattice) evaluation methods.

**COM S 574 Heuristic Methods for Optimization (also CEE 509)**
Spring. 3 or 4 credits. Prerequisites: COM S/ENG 211 or 322 or CEE/ENG 291, or graduate standing, or permission of instructor. Not offered every year. This course describes a variety of heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, random walk, and direct search algorithms. Algorithms are used to find values of discrete and/or continuous variables arising in optimization and model fitting. Applications are discussed in a range of areas including some of the following: artificial intelligence, scheduling, protein folding, economic planning, water quality protection, telecommunications, and robotics. The advantages and disadvantages of heuristic search methods for both serial and parallel computation are discussed in comparison to other optimization algorithms.

**COM S 501 System Concepts**
Fall. 3 credits. Prerequisites: open to students enrolled in the COM S Ph.D. program. This course teaches broadly applicable principles of computing system design and analysis. For example, the principle of locality of reference used in caching, virtual memory, and network service hints. Such broadly applicable abstractions are discussed along with their implementations in a variety of settings. Case studies from the systems literature are employed throughout.

**COM S 611 Advanced Programming Languages**
Fall. 4 credits. Graduate standing or permission of instructor. A study of programming paradigms: functional, imperative, concurrent, and logic programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program transformations, programming logic, and applications to programming methodology.

**COM S 612 Compiler Design for High-Performance Architectures**
Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor. Compiler design for pipelined and parallel architectures. Program analysis: data and control dependencies, dataflow analysis, efficient solution of dataflow equations, dependency tests, solution of Diophantine equations. Architecture and code generation for instruction-level parallel (ILP) processors: pipelined, VLIW and superscalar architectures, code reorganization and software pipelining. Architecture and code generation for multiprocessors: shared- and distributed-memory architectures, latency tolerance and avoidance, locality transformations, benchmark parallelism, and locality reference.

**COM S 613 Concurrent Programming**
Spring. 4 credits. Prerequisites: COM S 414 or 519 and permission of instructor. Not offered every year. Advanced techniques in, and models of, concurrent systems. Covers synchronization of concurrent processes; parallel programming languages; deadlock; and verification.

**COM S 614 Advanced Systems**
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. An advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

**COM S 615 Adaptive Systems**
Fall. 4 credits. Prerequisites: COM S 614 recommended. This course examines adaptation in operating systems and applications. It focuses mainly on extensible systems, that is, systems whose interface or implementation can be modified dynamically by applications to suit application-specific needs. This discussion is supplemented with examples of domain-
specific adaptation drawn from mobile computing.

COM S 621 Matrix Computations
Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor. Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The MATLAB system is used extensively.

[COM S 622 Numerical Optimization and Nonlinear Algebraic Equations]
Spring. 4 credits. Prerequisite: COM S 621. Offered odd-numbered years only.

Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton algorithms, and trust-region algorithms. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

COM S 624 Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisites: previous exposure to numerical analysis (e.g., COM S 421 or 621) and differential equations, and knowledge of MATLAB. Offered in even-numbered years.

Finite difference methods for the solution of ordinary and partial differential equations. A fast-moving course that begins with a three-week survey of numerical methods for ODEs, then moves on to Fourier analysis and methods for PDEs, especially parabolic and hyperbolic equations. Other topics covered include numerical stability, finite element methods, Hamiltonian problems, and computational issues such as mesh generation and sparse matrix computation for PDEs.

COM S 625 Computational Molecular Biology
Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations, and knowledge of MATLAB. Offered in odd-numbered years.

Computational methods in molecular biology. Topics include: sequences (alignment, scoring functions, complexity of searches and alignment, secondary structure prediction, families, and function), the protein folding problem, lattice models, numerical stability, finite element methods, Hamiltonian problems, and computational issues such as mesh generation and sparse matrix computation for PDEs.

COM S 632 Advanced Database Systems
Spring. 4 credits. Prerequisite: COM S 432/433 or permission of instructor.

A variety of advanced issues ranging from transaction management to query processing to data mining. Extensive paper reading and discussion. Development of a term project with research content is required.

COM S 664 Machine Vision
Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 221 or equivalent.

An introduction to computer vision, with an emphasis on discrete optimization algorithms and on applications in medical imaging. The following topics are covered: edge detection, image segmentation, stereopsis, motion and optical flow, active contours, and the Hausdorff distance. Students are required to implement several of the algorithms covered in the course and complete a final project.

COM S 671 Introduction to Automated Reasoning
Fall. 4 credits. Prerequisite: (COM S 611 and graduate standing) or permission of instructor.

Topics in modern logic needed to understand and use automated reasoning systems such as HOL, Nuprl, and PVS. Specific emphasis is on type theory and logic, and on tactic-oriented theorem proving.

COM S 672 Advanced Artificial Intelligence
Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor.

Artificial intelligence (AI) provides many computational challenges. This course covers a variety of areas in AI, including knowledge representation, automated reasoning, learning, game-playing, and planning, with an emphasis on computational issues. Specific topics include stochastic reasoning and search procedures, proof of problem encodings, issues of syntax and semantics in knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

COM S 674 Natural Language Understanding
Spring. 3 credits. Prerequisites: COM S 472 or permission of instructor. Not offered every year.

This course presents an introduction to natural language processing, the primary concern of which is the study of human language use from a computational perspective. The course covers syntactic analysis, semantic interpretation, and discourse processing, via symbolic and statistical approaches. Possible topics include information extraction, natural language generation, memory models, ambiguity resolution, inference, and machine translation.

COM S 676 Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Offered even-numbered years; not offered 2001–2002.

Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues include: common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, modeling resource-bounded reasoning, and connections to game theory.

COM S 677 Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Not offered 2001–2002.

Examines formalizing reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logics of probability, combining knowledge and probability, probability and adversarial, conditional logics of nonmonotonic, Bayesian networks, qualitative approaches to uncertainty, going from statistical information to degrees of belief, and decision theory.

COM S 681 Analysis of Algorithms
Fall. 4 credits. Prerequisite: COM S 482 or graduate standing.

Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polyno­mial-time algorithms, randomized algorithms, NP-completeness, and randomized reducibilities. Also covers topics such as parallel algorithms and efficient data structures.

COM S 682 Theory of Computing
Spring. 4 credits. Prerequisites: (COM S 481 or 482) and (COM S 482 or 681) or permission of instructor.

Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

COM S 683 Advanced Design and Analysis of Algorithms
Spring. 4 credits. Prerequisites: COM S 681 or permission of instructor.

An advanced study of current topics in the design of discrete algorithms. Topics include randomization, clustering and graph partitioning, and techniques from high-dimensional geometry. The course emphasizes algorithmic problems in a range of areas including networks, large datasets, lattices, and the design of heuristics.

COM S 684 Approximation and Network Algorithms
Fall. 4 credits. Prerequisites: COM S 681 or permission of instructor.

An advanced study of current topics in the design of discrete algorithms. Topics include network flow algorithms, development of approximation algorithms for computationally intractable problems, role of game-theoretic concepts in algorithms, and the use of linear programming in combinatorial optimization. The course emphasizes algorithmic problems in a range of areas including networks, large datasets, and the design of heuristics.

COM S 686 Logics of Programs
Spring. 4 credits. Prerequisites: COM S 481, 682, and MATH 481 or MATH/COM S 486.

Topics in logics of programs and program verification. Possible topics include: Floyd/ Hoare logic, modal logic, dynamic logic, temporal logic, process logic, automata on infinite objects and their relation to program logics, the Rabin tree theorem, the modal mu-calculus, games and alternating automata, applications to type inference, set constraints, and Kleene algebra.

COM S 709 Computer Science Colloquium
Fall, spring. 1 credit. S/U grades only. For staff, visitors, and graduate students interested in computer science.

A weekly meeting for the discussion and study of important topics in the field.

**EARTH AND ATMOSPHERIC SCIENCES**

(Course listings formerly under Geological Sciences and Soil, Crop, and Atmospheric Sciences)

**Courses**

For complete course descriptions, see the Earth and Atmospheric Sciences listing in the College of Arts and Sciences or the College of Agriculture and Life Sciences section.

**EAS 101 Introductory Geological Sciences**

Fall, spring, summer. 3 credits. Fall, spring, A. Moore; summer, W. Brice.

**EAS 102 Evolution of the Earth and Life (also offered as BIO G 170)**

Spring. 3 credits. J. L. Casner.

**EAS 104 The Sea: An Introduction to Oceanography (also offered as BIO EE 154)**

Spring, summer. 3–4 credits (4 credits with lab section). Spring: C. H. Greene, W. M. White; summer: J. Chiment.

**EAS 105 Writing on Rocks (First-Year Writing Seminar)**

Fall, spring. 3 credits. J. Chiment. See First-Year Seminar Handbook for description.

**EAS 106 Vertebrate Fossil Preparation**

Fall, spring. 1 credit. S-U grades only. Prerequisites: 1 introductory geology course or concurrent enrollment, class size is limited. J. Chiment.

**EAS 107 How the Earth Works**

Fall. 1 credit. J. L. Casner.

**EAS 109 Dinosaurs**

Fall. 1 credit. J. L. Casner.

**EAS 111 To Know the Earth and Build a Habitable Planet**

Fall. 3 credits. J. M. Bird.

**EAS 122 Earthquake!**

Spring. 3 credits. L. D. Brown. This is a course in the Introduction to Engineering series. For description, see ENGRI 122.

**EAS 131 Basic Principles of Meteorology**

Fall. 3 credits. M. W. Wysocki.

**EAS 150 Introduction to FORTRAN Programming**

Fall. 3 credits. M. W. Wysocki.

**EAS 200 Art, Archaeology, and Analysis (also offered as ARKEO 285, ARTH 200, ENGRI 185, or PHYS 200)**

Spring. 3 credits. R. W. Kay. This is a course in the Introduction to Engineering series. For description, see ENGRI 185.

**EAS 201 Introduction to the Physics and Chemistry of the Earth (also offered as ENGRD 201)**

Fall. 3 credits. Prerequisites: PHYS 112 or 207. L. M. Cahills.

**EAS 203 Natural Hazards and the Science of Complexity**

**EAS 210 Introduction to Field Methods in Geological Sciences**

Fall. 3 credits. Prerequisites: EAS 101 or 201, or permission of instructor. 1 lecture, Saturday field trips. R. W. Allmendinger.

**EAS 212 Caribbean Field Trip**

Spring. 2 credits. Prerequisite: permission of instructor. Enrollment limited to 15. Approximate cost $1,100. L. D. Brown.

**EAS 213 Marine and Coastal Geology**

Summer. 2 credits. Prerequisite: an introductory course in geology or permission of instructor. Staff.

**EAS 250 Meteorological Observations and Instruments**

Spring. 3 credits. Prerequisite: EAS 131. M. W. Wysocki.

**EAS 260 Soil Science (also CSS 260)**

Fall. 4 credits. S. J. Riha.

**EAS 268 Climate and Global Warming**

Spring. 3 credits. A. T. DeGaetano.

**EAS 296 Forecasting Competition**

Fall and spring. 1 credit. S-U grades only. Prerequisite: sophomore undergraduate standing in atmospheric science, or permission of instructor. D. S. Wilks.

**EAS 302 Evolution of the Earth System**

Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. W. M. White, W. D. Allmon, B. L. Isacks.

**EAS 315 Geomorphology**

Fall. 4 credits. Prerequisite: one course in geology, hydrology, or soil science. T. E. Jordan and B. L. Isacks.

**EAS 321 Introduction to Biogeochimistry (also offered as NTRES 321)**

Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus a course in biology and/or geology. L. A. Derry, J. Yavitt.

**EAS 326 Structural Geology**

Spring. 4 credits. Prerequisite: MATH 112, EAS 101, or 201, or permission of instructor. R. W. Allmendinger.

**EAS 331 Climate Dynamics (also offered as ASTRO 331)**

Fall. 4 credits. Prerequisite: MATH 112 or 192 or equivalent. K. H. Cook, P. J. Gierasch.

**EAS 334 Microclimatology**

Spring. 3 credits. Prerequisite: a course in physics. Offered alternate years. D. S. Wilks.
EAS 341 Atmospheric Thermodynamics and Hydrostatics  
Fall. 3 credits. Prerequisites: 1 year of calculus and 1 semester of physics. M. M. Wysocki.

EAS 342 Atmospheric Dynamics  
Spring. 3 credits. Prerequisites: EAS 341 and concurrent enrollment in EAS 342. M. W. Wysocki.

EAS 352 Synoptic Meteorology I  
Spring. 3 credits. Prerequisites: EAS 341 and concurrent enrollment in EAS 342. M. W. Wysocki.

EAS 355 Mineralogy  
Fall. 4 credits. Prerequisite: EAS 101 or 201 and CHEM 207 or permission of instructor. S. Mahlburg Kay.

EAS 356 Petrology and Geochemistry  
Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay.

EAS 375 Sedimentology and Stratigraphy  
Fall. 4 credits. Prerequisite: EAS 101 or 201. J. L. Cane.

EAS 388 Geophysics and Geotectonics  
Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. B. L. Isacks.

EAS 417 Field Mapping in Argentina  
Summer. 3 credits. Prerequisites: EAS 210 and 326; Spanish desirable, but not required. S. Mahlburg Kay.

EAS 434 Reflection Seismology  
Fall. 4 credits. Prerequisite: MATH 192 and PHY 208, 213, or equivalent. L. D. Brown.

EAS 435 Statistical Methods in Meteorology and Climatology  
Fall. 3 credits. Prerequisites: an introductory course in statistics (e.g., AEM 210) and calculus. D. S. Wilks.

EAS 437 Geophysical Field Methods  
Fall. 3 credits. Prerequisite: PHYS 215 or 208, or permission of instructor. L. D. Brown.

EAS 447 Physical Meteorology  
Fall. 3 credits. Prerequisites: 1 year each of calculus and physics. Offered alternate years. A. T. DeGaetano.

EAS 451 Synoptic Meteorology II  
Fall. 3 credits. Prerequisites: EAS 341 and 342. S. J. Colucci.

[EAS 453 Advanced Petrology]  

EAS 454 Advanced Mineralogy  
Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. S. M. Kay.

EAS 455 Geochemistry  
Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended: EAS 356. Offered alternate years. W. M. White.

EAS 456 Mesoscale Meteorology  
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years.

[EAS 457 Atmospheric Air Pollution]  
Fall. 3 credits. Prerequisites: EAS 341 or 1 course in thermodynamics, and one semester of chemistry, or permission of instructor. Offered alternate years. Not offered 2001-2002. M. W. Wysocki.

EAS 458 Volcanology  
Spring. 3 credits. Corequisite: EAS 356 or equivalent. Offered alternate years. R. W. Kay and W. M. White.

[EAS 462 Marine Ecology (also offered as BIOEE 462)]  

EAS 475 Special Topics in Oceanography  
Spring, summer. 2-5 var. credits. Prerequisites: EAS 104 or BIOEE 154, and permission of instructor. C. H. Greene.

[EAS 476 Sedimentary Basins: Tectonics and Mechanics]  
Fall. 3 credits. Offered alternate years. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. T. E. Jordan.

EAS 478 Advanced Stratigraphy  
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. T. E. Jordan.

EAS 479 Paleobiology (also offered as BIOEE 479)  
Fall. 4 credits. Prerequisites: 1 year of introductory biology for majors and either BIOEE 274, 375, EAS 375, or permission of instructor. W. Allmon.

EAS 481 Senior Survey of Earth Systems  
Fall. 3 credits. Limited to seniors majoring in geological science. J. M. Bird.

[EAS 483 Environmental Biophysics]  
Spring. 3 credits. Prerequisite: EAS/CSS 260 or equivalent, or permission of instructor. Offered alternate years. Not offered 2001-2002. S. J. Riha.

EAS 491-492 Undergraduate Research  
Fall, spring. 1-4 credits. Staff.

EAS 494 Special Topics in Atmospheric Science  
Fall, spring. 8 credits maximum. S-U grades optional. Undergraduate level.

EAS 496 Internship Experience  
Fall. spring. 1-2 credits. S-U grades only.

EAS 497 Individual Study in Atmospheric Science  
Fall, spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form.

EAS 498 Teaching Experience in Atmospheric Science  
Fall, spring. Credit by arrangement. Students must register with an Independent Study form.

EAS 499 Undergraduate Research in Atmospheric Science  
Fall, spring. 1-6 credits. S-U grades optional. Staff.

EAS 500 Design Project in Geohydrology  
Fall, spring. 5-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over two or more semesters. L. M. Cathles.

EAS 502 Case Histories in Groundwater Analysis  
Spring. 4 credits. L. M. Cathles.

EAS 622 Advanced Structural Geology I  
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.

[EAS 624 Advanced Structural Geology II]  
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years; not offered 2001-2002. R. W. Allmendinger.

EAS 628 Geology of Orogenic Belts  
Spring. 3 credits. Prerequisite: permission of instructor. J. M. Bird.

[EAS 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics]  
Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years; not offered 2001-2002. D. L. Turcotte.

EAS 635 Advanced Statistical Meteorology and Climatology  
Fall. 3 credits. Prerequisites: coursework in or elementary knowledge of statistics, calculus, matrix algebra, and computer programming. D. S. Wilks.

[EAS 636 Advanced Geophysics II: Quantitative Geodynamics]  
Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years; not offered 2001-2002. D. L. Turcotte.

[EAS 641 Analysis of Biogeochemical Systems]  
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years; not offered 2001-2002. L. A. Derry.

[EAS 651 Atmospheric Physics (also ASTRO 651)]  
Fall. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. Not offered 2001-2002. S. J. Colucci, K. H. Cook, P. J. Giersch.

[EAS 652 Advanced Atmospheric Dynamics]  
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. Not offered 2001-2002. S. J. Colucci, K. H. Cook, P. J. Giersch.

EAS 656 Isotope Geochemistry  
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years. W. M. White.

EAS 675 Modeling the Soil-Plant-Atmosphere System  
Spring. 3 credits. Prerequisite: EAS/CSS 483 or equivalent. Offered alternate years. S. J. Riha.

EAS 692 Special Topics in Atmospheric Science  
Fall, spring. 1-6 credits. S-U grades optional. Staff.
EAS 695  Computer Methods in Geological Sciences  Fall, spring. 3 credits. L. Brown, B. L. Isacks.

EAS 700-799 Seminars and Special Work  Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff. Advanced work on original investigations in earth and atmospheric sciences. Topics change from term to term.

EAS 731  Plate Tectonics and Geology  J. M. Bird.

EAS 751  Petrology and Geochemistry  R. W. Kay.

EAS 755  Advanced Topics in Petrology and Geochemistry  J. M. Bird, W. A. Bassett.

EAS 757  Current Research in Petrology and Geochemistry  S. Mahlburg Kay, R. W. Kay.

EAS 762  Advanced Topics in Paleobiology  W. D. Allmon.

EAS 771  Advanced Topics in Sedimentology and Stratigraphy  T. E. Jordan.

EAS 773  Paleobiology  J. L. Cisne.

EAS 775  Advanced Topics in Oceanography  Spring, C. H. Greene.

EAS 780  Earthquake Record Reading  Fall. M. Barazangi.

EAS 783  Advanced Topics in Geophysics  B. L. Isacks.

EAS 795  Low Temperature Geochemistry  Offered spring 2001 only. L. A. Derry.

EAS 796  Geochemistry of the Solid Earth  W. M. White.

EAS 797  Fluid-Rock Interactions  L. M. Cathles.

EAS 850  Master's-Level Thesis Research in Atmospheric Science  Fall, spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

EAS 950  Graduate-Level Dissertation Research in Atmospheric Science  Fall, spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty.

ELECTRICAL AND COMPUTER ENGINEERING

ECE 198  Introduction to the Electronic Revolution (also ENGRG 198)  Fall, winter. 3 credits. Cannot be taken in addition to ENGRG 298. For description, see ENGRG 198.

ECE 210  Introduction to Circuits for Electrical and Computer Engineers (also ENGRG 210)  Fall, spring. 3 credits. Corequisites: MATH 293 and PHYS 213, C. E. Seyler. For description, see ENGRG 210.

ECE 215  Introductory Integrated Circuits Laboratory  Fall, spring. 1 credit. Pre- or corequisite: ENGRG 210. A. Phillips, Jr. Laboratory course to develop skills with modern instrumentation, and to explore the design and operation of electrical circuits used in computers, amplifiers, and signal processing.

ECE 232  Digital Systems Design Laboratory  Fall, spring. 1 credit. Pre- or corequisite: ENGRG 231. W. E. Speight. An introduction to digital systems design using computer-aided design (CAD) tools. Students complete a sequence of four experiments covering combinational logic, sequential circuits, counters, data transfer and microcontroller design. Hands-on experience is provided by designing, implementing and testing an 8 bit microcontroller using a field programmable gate array (FPGA).

ECE 250  Technology in Society (also ENGRG 250, HIST 250 and S & TS 250)  Fall. 3 credits. A humanities elective for engineering students. R. R. Kline. For description, see ENGRG 250.

ECE 291-292  Sophomore Electrical and Computer Engineering Project  Fall, spring. 2 credits. Limited to sophomores in Engineering. Staff. Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration and submit a request for Independent Project Form to the Electrical and Computer Engineering Undergraduate Office.

ECE 298  Inventing an Information Society (also ENGRG 298 and S & TS 292)  Spring. 3 credits. Approved for humanities distribution. For description, see ENGRG 298.

ECE 301  Signals and Systems I  Fall, summer. 4 credits. Prerequisites: a grade of at least C+ in ENGRG 210, and C in MATH 294 and 294. D. F. Delchamps. Covers continuous-time signals and linear time-invariant systems, continuous-time convolution and impulse response, Fourier series and transforms of continuous-time signals, the Sampling Theorem, amplitude modulation and time- and frequency-division multiplexing, bilateral Laplace transforms and applications, and discrete-time convolution and z-transforms with applications to discrete-time linear time-invariant systems.

ECE 302  Signals and Systems II: Discrete-Time Systems and Signal Processing  Spring. 4 credits. Prerequisite: ECE 301. D. F. Delchamps. Review of discrete-time convolution and bilateral z-transforms with discrete-time linear time-invariant systems applications. Unilateral z-transforms and difference equations. Discrete-time Fourier transforms. Sampling and reconstruction of continuous-time signals. DFTs and FFTs and attendant computational issues. Introduction to digital filter design techniques and special emphasis on linear-phase FIR filters; FIR filter design using windowing, frequency sampling, and least squares; and IIR filter design using impulse invariance and bilinear transformation.

ECE 303  Electromagnetic Fields and Waves  Fall, summer. 4 credits. Prerequisites: grades of C or better in PHYS 213, 214, and MATH 294. M. C. Kelley. Maxwell's equations in differential form; wave equation; plane electromagnetic waves; phase and group velocities; Poynting's theorem, complex dielectric constant; wave reflection and transmission; guided waves on transmission lines; transient pulse propagation; and elementary dipole antenna; analysis of wireless communication links.

ECE 306  Fundamentals of Quantum and Solid-State Electronics  Spring. 4 credits. Prerequisites: PHYS 214 and MATH 294. C. L. Tang. Introductory quantum mechanics and solid-state physics necessary for modern solid-state electronic devices. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Permi-Dirac statistics, and the basic physics of semiconductors. Applications include quantum wells and the p-n junction.

ECE 310  Introduction to Probability and Random Signals  Spring. 4 credits. Prerequisite: MATH 294. T. L. Fine. An introduction to the theory of probability as a basis for modeling random phenomena and signals, calculation of expected values of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications are given in such areas as communications, and device modeling, probability, and characterisic functions; nonlinear transformations of data; expectation and correlation, and the central limit theorem.
ECE 311 Electrical and Computer Engineering Honors Seminar
Spring. 2 credits. Prerequisite: A. P. Reeves. Students registered for this course are required to attend all of the colloquia lectures. Summary papers are required. Honors students who take the seminar for letter grade are required to write two summary papers for two credits. Non-honors students, who must take the seminar pass/fail, are required to write one summary paper for one credit. Each summary paper reviews a topic presented during the term.

ECE 314 Computer Organization (also COM S 314)
Spring. 4 credits. Prerequisites: COM S/ ENGRD 231/ECE 232 are required. Fall, J. G. Morrisett, spring, M. A. Heinrich.
Course description for spring offering: basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, microcoded and pipelined datapath design, memory hierarchies including caches and virtual memory, I/O devices, bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor. For fall description, see COM S 314.

ECE 315 Introduction to Microelectronics
Fall, spring. 4 credits. Prerequisites: ECE 210 and ECE 215, Fall, J. M. Ballantyne, spring, J. R. Shelly.
Design of digital and analog electronic circuits in the context of modern integrated circuit technology. Course coverage includes the building blocks of integrated circuits: introductory physics of semiconductors, MOS and junction transistors; digital electronics—inverters, logic circuits and memory; and analog circuits—multi-stage and differential amplifiers.

ECE 318 Electronic Power Switching Circuits
Summer only. 3 credits. Limited to 24 engineering coop students. J. C. Bellina.
This course covers the basic theory and practice for the control of power using transistorized switching techniques. The primary application is high-efficiency audio amplifier design. Topics include: transistors in linear-mode and switching-mode, power regulation, beginning audio amplifier architectures, pulse width modulation (PWM) and the H-Bridge, distortion reduction techniques and feedback, and integrated options for audio amplification, powered subwoofers. Taught at the level of Electrical Circuits by N. R. Malik.

ECE 319 Systems in Communication and Control
Spring. 3 credits. Prerequisite: ECE 301. Not offered 2001-2002.
Task-driven introduction to discrete-time dynamic system analysis and design, with emphasis on digital communication and control systems. Format is to introduce a particular design task, abstract it to a linear algebra problem, solve it numerically using MATLAB, and study solution in terms of original application. Applications of interest: network and modern echo cancellation for full-duplex transmission, terrestrial microwave radio channel multipath equalization for wireless communication, satellite-tracking antenna azimuth control, and effect of retransmit protocols on distribution of steady-state communication network flows.

ECE 391–392 Junior Electrical and Computer Engineering Project
Fall, 391; spring, 392. 1–8 credits. Limited to juniors in ECE. Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member supervising the project. An engineering report on the project required. Students must make individual arrangements with a faculty sponsor prior to registration and submit a Request for Independent Project form to the Electrical Engineering Undergraduate Office.

ECE 400 Practicum in Systems Engineering
Spring. 3 credits. 1 credit of Engineering Design/Research.
Concepts involved with bringing an engineering product to reality. The course employs techniques from Systems Engineering along with a knowledge of the Internet, computer networks, microprocessor systems, and semiconductor devices, to create a plan for a specific engineered product: a wireless home theatre, control, and monitoring device. Students will be familiar with the knowledge of system design concepts including product cycle, design cycle, product specification, UL safety issues, new product testing, RFI, and product test. They develop the full details of a business plan through product launch and support. A final team product mock-up is required as are weekly team presentations. Teams must contain students from ECE, M&E, ORIE, and COM S. Each 490 student must also present at least one weekly lecture on an assigned topic.

ECE 403 Introduction to Nuclear Science and Engineering (also A&E 403, M&E 458, and NS&E 403)
Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294. K. B. Cady.
For description, see NS&E 403.

ECE 411 Random Signals in Communications and Signal Processing
Fall. 3 credits. Prerequisite: ECE 301 and 310 or equivalent. T. Berger.
Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson process, queuing processes, power spectra, and random processes. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

ECE 412-413 Hybrid Electric Vehicle
Spring. 412, fall, 413. 1–4 credits.
J. R. Callister.
The Cornell Hybrid Electric Vehicle (CHEV) Project focuses on the design, development, testing, and competition of a Hybrid Electric Vehicle through a team structure. Students work in teams that include powertrain, business, marketing, ergonomics, control, alternate power unit, and suspension. Students are required to design an entire vehicle and to plan and execute its manufacture. The vehicle is competed in a national competition, usually in late May each year. There are two to five design reviews, weekly presentations and team leader meetings in addition to any meetings the teams require to complete the project. There is a team selection process so students interested in the project should contact team leaders or a faculty adviser prior to registering for the course.

ECE 415 Global Position System Theory and Design (also M&E 415)
Fall. 4 credits. Prerequisites: ECE 301 and ECE 303 or permission of the instructor. P. M. Kintner.
A laboratory course using the Global Positioning System as a model for examining space-based engineering systems. The course consists of lectures, laboratories, and a design project. The laboratory projects include GPS engine development system and covers the navigation solution, receiver design and function, and differential GPS.

ECE 423 Computer Methods in Digital Signal Processing
Spring. 4 credits. Prerequisite: ECE 301 or ECE 326; basic knowledge of C/C++ helpful. Satisfies undergraduate computer-applications requirement. Not offered 2001-2002.

ECE 425 Digital Signal Processing
Fall. 4 credits. Prerequisites: ECE 301, ECE 302, and ECE 310. T. W. Parks.
An advanced course in digital signal processing. Topics include sampling, A/D and D/A conversion, digital filter design and implementation, multirate DSP including sampling rate conversion and filter bank theory, Wiener filtering, spectral estimation, introduction to two-dimensional sampling, and Fourier techniques.

ECE 426 Applications of Signal Processing
Spring. 3 or 4 credits. Prerequisite: ECE 425. B. A. Hutchins.
Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

ECE 430 Lasers and Optical Electronics
Fall. 4 credits with lab; may be taken for 3 credits without lab. Prerequisite: ECE 303 or equivalent. C. L. Tang.
An introduction to the operation and application of lasers. Material covered includes diffraction-limited optics, Gaussian beams, optical resonators, interaction of radiation with matter, physics of laser operation, and laser design. Applications of coherent radiation to nonlinear optics, communication, and research are discussed.

ECE 432 MicroElectro Mechanical Systems (MEMS)
Spring. 3 credits. Prerequisite: ECE 315 or permission of instructor. E. C. Kan.
Introductory course to MEMS: microsensors, microactuators, and microbots. Fundamentals of MEMS including materials, microstructures, devices and simple microelectromechanical systems, scaling electronic and mechanical systems to the micro/nano scale.
scale, material issues, and the integration of micromechanical structures and actuators with simple electronics. This is an interdisciplinary course drawing content from mechanics, materials, structural, electronic systems, and the disciplines of physics and chemistry.

**ECE 433 Microwave Integrated Circuits**
Fall. 4 credits; may be taken for 3 credits without laboratory. Prerequisites: ECE 303 and ECE 306. M. G. Spencer.

An introduction to the design and testing of high-speed circuits (frequencies above 1 GHz). Topics include modeling, design, automated microwave measurement techniques, optoelectronic applications, and GaAs monolithic microwave integrated circuits. Six two-week labs cover the basics of designing, fabricating, and testing microwave integrated circuits.

**ECE 445 Computer Networks and Telecommunications**
Fall. 4 credits. Prerequisites: ECE 314 (or COM S 314) and a course in probability. Z. Haas.

Design, analysis, and implementation of computer and communication networks and systems. Thorough course in networking. Examples of topics that are covered include data transmission and data encoding, data link control, circuit vs. packet switching. Asynchronous Transfer Mode, local area network technology, network interconnections, protocol design (OSI and IP), network security, and multimedia. Emphasis is placed on performance evaluation.

**ECE 450 Electric Power Systems**
Spring. 3 credits. Not offered 2001–2002. Acquaint students with modern electric power system operation and control. Aspects of the restructuring of the industry and its implications for planning and operation objectives and methods are explored. Topics include unit commitment, economic dispatch, optimal power flow, control of generation, system security and reliability, state-estimation, analysis of system dynamics, and system protection.

**ECE 453 Analog Integrated Circuit Design**
Fall. 4 credits. Prerequisites: ECE 301 and ECE 315 or equivalent. ECE 457 recommended as a corequisite. B. A. Minch.

Overview of devices available to analog integrated circuit designers in modern CMOS and BiCMOS processes: resistors, capacitors, MOS transistors, and bipolar transistors. Basic building blocks for linear analog integrated circuits: single-stage amplifiers, current mirrors, and differential pairs. Transistor-level design of linear analog integrated circuits, such as operational amplifiers and operational transconductance amplifiers. Layout techniques for analog integrated circuits. Throughout the course, emphasis is placed on design-oriented analysis techniques.

**ECE 457 Silicon Device Fundamentals**
Fall. 4 credits with lab. Prerequisite: ECE 315 and ECE 306 or equivalent. E. C. Kan.

Fundamentals on semiconductor carrier statistics, band diagrams, and transport. The device physics, modeling, simulation, and measurement on p-n junction diodes, Schottky diodes, photodiodes, MOS capacitor, MOSFET, and bipolar transistors (BJT). Emphasis is put on the MOSFET physics for advanced VLSI technology. Six labs cover detailed IV and CV measurements and modeling on devices in the wafer level and in standard packages.

**ECE 462 Artificial Intelligence and Expert Systems for Telecommunication Networks**
Spring. 3 credits. Prerequisite: ECE 310 or some familiarity with random variables. Not offered 2001–2002.

In the last two or three years a surprising number of connections between AI and telecommunications have been identified. Significant discoveries in the area of wireless systems (e.g., a variety of network control algorithms) have been found to be straightforward restatements of old results from the field of Artificial Intelligence. (We may hope that the reverse is the case, as well.) It also is becoming clear that, to provide an acceptable level of performance, the next generation of wireless multimedia systems will need some degree of predictive "cognitive" capacity. This senior/introductory graduate course focuses on the expert system side of AI. It has been designed to provide a foundation in the development and analysis of expert systems with an emphasis on telecommunications engineering applications. Students develop a background in the theory of expert systems, and then are given an opportunity to apply their knowledge in an area of their choice. Areas of discussion include: rule-based expert systems, probabilistic systems, Bayesian networks, and the propagation of evidence.

**ECE 467 Telecommunication Systems I**
Fall. 4 credits. Prerequisites: ECE 301 and ECE 302. C. R. Johnson.

An introduction to modulation and demodulation techniques. Topics include: signal representation and filtering; amplitude modulation (AM); frequency modulation (FM); pulse amplitude modulation (PAM); pulse-code modulation (PCM); channel noise effects; and synchronization.

**ECE 468 Telecommunication Systems II**
Spring. 4 credits: ECE 467 or permission of instructor. Suggested prerequisite: ECE 411. C. R. Johnson, A. Scaglione.

Fundamentals of digital communications. Topics include: digital source coding, Huffman coding, sampling, analog source coding; optimum receivers for digital transmission through additive white Gaussian noise (AWGN) channels, matched filters; channel capacity and error control coding; digital transmission through bandlimited AWGN channels, inter-symbol interference (ISI), equalization techniques; phase-locked loops (PLL); trellis-coded modulation (TCM); and spread-spectrum communication systems.

**ECE 471 Feedback Control Systems (also CHEME 472 and M&A 478)**
Fall. 4 credits. Prerequisites: CHEME 372, ECE 301, M&A 326, or permission of instructor. R. D'Andrea and A. B. Anton.

For description, see M&A 478.

**ECE 474 Digital VLSI Design**
Fall and spring. 5 credits (Fall 4, spring 1). Prerequisites: ECE 231/232, ECE/CS 314. Students will receive an R grade until they test their chips in the spring. R. Manohar.

Introduction to digital VLSI design. Topics include basic transistor physics, switching networks and transistors, combinational and sequential logic, latches, clocking strategies, domino logic, PLAs, memories, physical design, floor planning, CMOS scaling, and performance and power considerations, etc. Lecture and homework topics emphasize disciplined design, and include: CMOS logic, layout, and timing; computer-aided design and analysis tools; and electrical and performance considerations. Students tape out a small project that is tested in the following semester. The course also includes an introduction to asynchronous design.

**ECE 475 Computer Architecture**
Fall. 4 credits. Prerequisites: ECE 314 or COM S 314. M. Burshtein.

Topics include instruction set principles, advanced pipelining, data and control hazards, multi-cycle instructions, dynamic scheduling, out-of-order execution, speculation branch prediction, instruction-level parallelism, and high-performance memory hierarchies. Students learn the issues and tradeoffs involved in the design of modern microprocessors. Labs involve the design of a processor and cache subsystem at the RTL level.

**ECE 476 Digital Systems Design Using Microcontrollers**
Spring. 4 credits. Prerequisite: ECE 314 or COM S 314 (ECE 315 strongly recommended).

Design of real-time digital systems using microprocessor-based embedded controllers. Students working in pairs design, debug, and construct several smaller systems that illustrate and employ the techniques of digital system design acquired in previous courses. The content focuses on the laboratory work. The lectures are used primarily for the introduction of examples, design modules to be designed, and instruction in the hardware and high-level design tools to be employed.

**ECE 482 Plasma Processing of Electronic Materials (also MS&E 544)**
Spring. 3 credits. Prerequisites: PHYS 213 and 214 or their equivalents. Offered on demand. Staff.

Fundamental principles that govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials. Topics include: simple models of low pressure, partially ionized plasmas, collision phenomena, diffusive processes, plasma chemistry, and surface processes. Examples and their applications to electronic materials processing are discussed in detail.

**ECE 484 Introduction to Controlled Fusion: Principles and Technology (also M&A 456, and NS&E 484)**
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. Offered on demand.

For description, see NS&E 484.

**ECE 486 Electromagnetic Waves and Communication**

This course is recommended for students who wish to obtain a greater understanding of the fundamentals of guided waves, high data rate electronics and wireless communication. Topics covered will include: vector and scalar potentials, transmission lines, waveguides, fiber optics, antenna arrays, and propagation in different environments including interference and diffraction.
ECE 487 Introduction to Antennas and Radar
Fall. 3 credits. Prerequisites: ECE 301 and ECE 486 (or a grade of B or better in ECE 301). D. T. Farrell.
Fundamentals of antenna theory, including gain and effective area, near and far fields, phased arrays, and aperture antennas and aperture synthesis. Fundamentals of radar, including distance and Doppler shifts, sampling, and range and frequency aliasing. Synthetic aperture radars and remote sensing from aircraft and satellites; over-the-horizon (OTH) radars and ionospheric propagation effects; and radar astronomy techniques.

ECE 488 RF Circuits and Systems
Spring. 3 credits. Prerequisites: ECE 315 or equivalent. 2 design credits. Lab credit. Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio, and radar astronomy. Computer-aided circuit analysis. Five laboratory sessions.

ECE 491-492 Senior Electrical and Computer Engineering Project
Fall, spring. 492 1–8 credits. Limited to seniors in Engineering. Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration for this course and submit a request for an independent project form to the Electrical Engineering undergraduate office.

ECE 498 Global Position System Projects
Fall, spring. Variable credits. Prerequisite: ECE 415 or permission of instructor. Not offered 2001–2002.
Projects using the Global Positioning System or GPS receivers are offered. Projects vary from semester to semester and typically either explore receiver design, hardware issues, or hardware and system performance. Students are welcome to suggest their own projects.

ECE 511 Bioelectric Signal Analysis and Processing
Fall. 3 credits. Prerequisites: some knowledge of basic analog circuit design, and a simple, working knowledge of MATLAB. J. C. Belina.
Measurement and computer-aided analysis of low-level biological signals in the presence of background noise: A/D conversion, filtering, signal conditioning, and data compression techniques are investigated. The human surface ECG for far-field signal source in much of the course, and so basic electrocardiography is covered. Pattern classification and nonlinear dynamical system analysis are introduced. Four major team design and analysis projects are required in lieu of examinations.

ECE 512 Applied Systems Engineering I (also CEE 504, COM S 504, M&AE 591, OR&E 512)
Fall. 3 credits. Prerequisite: permission of instructor. A. R. George, R. O. Roundy. For description, see M&AE 592.

ECE 513 Applied Systems Engineering II (also CEE 505, COM S 505, M&AE 592, OR&E 513)
Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ECE 512, M&AE 591, or OR&E 512). For description, see M&AE 592.

ECE 515-516 Applied Signal Processing Systems Design
515, fall; 516, spring. Variable credits. B. A. Hutchins.
Project-level design of systems in the area of signal processing for general instrumentation, including digital signal processing hardware, audio, speech, and analog interfacing. Students pursue individual projects and coordinate ideas and resources with other students with related interest.

ECE 521 Theory of Linear Systems
Fall. 4 credits. Prerequisite: ECE 302 or permission of instructor. Recommended: a good background in linear algebra and linear differential equations. Not offered 2001–2002.

ECE 522 Nonlinear Systems: Analysis, Stability, Control, and Applications
Spring. 4 credits. Prerequisites: ECE 521 or a solid background in linear algebra and real analysis strongly recommended but not required. Not offered 2001–2002.
A rigorous introduction to nonlinear systems, including: nonlinear differential equations, flows, phase-plane analysis, fundamentals of Lyapunov theory, LaSalle’s Theorem, regions of attraction, slowly varying systems, advanced stability theory, Lyapunov redesign, applied nonlinear control, describing functions, singular perturbations, and bifurcation analysis and control and application to physical systems.

ECE 525 Adaptive Filtering in Communication Systems
Fundamentals of theory for adaptive filters intended for digital communication systems applications. Wired and wireless communication systems tasks (such as channel equalization, echo cancellation, smart antennas, and interference rejection) are used to motivate adaptive filter design issues of current interest. Assignments consist of reports on adaptive digital filter algorithms and their simulated evaluation.

ECE 526 Signal Representation and Modelling
Sampling and signal reconstruction. Approximation theory. Linear inversion theory. Exponential signal modelling. Multirate filter banks, wavelets, and lifting. Laboratory experiments with speech and image signals.

ECE 530 Fiber and Integrated Optics
Spring. 4 credits with lab. Prerequisite: ECE 303 or equivalent. Not offered 2001–2002.
Physical principles of optical waveguides, optical sources and detectors, noise, modulators, and sensing. Wave equation solutions to the mode structure in waveguides, mode coupling, dispersion and bandwidth limitations, optical sources based on semiconductors, detectors and noise, modulation techniques, nonlinear effects in optical waveguides, and optical sensors.

ECE 531 Quantum Electronics I
Fall. 4 credits. Prerequisites: ECE 306 and 407, or PHYS 443. Not offered 2001–2002.
A detailed treatment of the physical principles underlying lasers, related fields, and applications. Topics include the interaction of radiation and matter, including emission, absorption, scattering, and basic specoscopic properties of key laser media; theory of the laser, including methods of achieving population inversions, dispersive effects, and laser oscillation spectrum.

ECE 533 Semiconductor Lasers
Spring. 3 credits. Prerequisites: ECE 430, ECE 457, or permission of instructor. Not offered 2001–2002.
Study of principles and characteristics of semiconductor lasers. Topics cover laser dynamics, noise, quantum confined structures, single-frequency lasers, traveling-wave lasers, surface-emitting lasers, reliability, and emerging research subjects. A term project and paper are required.

ECE 535 Semiconductor Physics
Fall. 4 credits. Prerequisites: ECE 457 and 407, or permission of instructor. S. Tiwari.
Physics of materials and structures useful in semiconductor electronic and photonic devices, including: crystal structure, energy bands, effective mass, phonons, classical low-field transport, high-field and ballistic charge carrier transport, electron scattering by phonons, optical absorption, reflection, optical emissions, deep levels as charge carrier traps, and surface and interface effects. On the level of Compound Semiconductor Device Physics by S. Tiwari.

ECE 536 Micro/Nanofabrication Technology
Spring. 4 credits. 3 credits without lab with permission. Prerequisites: ECE 453, or ECE 457 or ECE 439 or equivalent, or permission of instructor.
Fabrication of ultra-large scale integrated circuits (ULSI), microelectromechanics (MEMS), active matrix liquid crystal displays (AMLCD), and optoelectronic integrated circuits (OEIC). Topics include: lithography, diffusion, ion implantation, thin film deposition, etching, metallization, and precision assembly. Process integration for CMOS, BiCMOS, ECL, MEMS, AMLCD’s, and OEIC’s. Hands-on microfabrication laboratory with full MOS/MEMS process.

ECE 537 Electronic System Packaging
Fall. 4 credits. 3 credits without project with permission of instructor. Prerequisites: ENGRD 231 and ECE 315 or ECE 453 or ECE 457 or ECE 439 or equivalent or permission of instructor. J. P. Krauss.
Physical integration of circuits, chips, packages, modules, boards, and cabinets into electronic systems. Computer, communication, and wireless systems. Portable, desktop, and cabinet level computers. Handset, base station, and switch level communication systems. Physical architecture, phonons, classical and optical signal distribution; power and ground distribution; signal integrity, electromagnetic interference (EMI), and electromagnetic compatibility (EMC); low power and mixed
ECE 542 Parallel Processing
Spring. 3 credits. Not offered 2001–2002. Parallel computer systems that are designed to provide a high computation rate for large, specific problems are studied. Topics include computer architecture, interconnection networks, performance characterization, basic algorithms, and parallel programming techniques. Recent advances in supercomputers and massively parallel processors are also discussed.

ECE 546 Introduction to Color Imaging Science
Spring. 4 credits. Prerequisite: ECE 302. An introduction to the acquisition, processing, and display of digital color images. This course covers computer color theory, color reproduction, color matching functions, color spaces, calibration of scanners, printers, and digital cameras.

ECE 547 Computer Vision
Fall. 4 credits. Prerequisite: ECE 302 or COM S 280 and 314 or consent of instructor. A. P. Reeves. Computer acquisition and analysis of image data with emphasis on techniques for robot vision. This course concentrates on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of images and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms is required.

ECE 548 Digital Image Processing
Spring. 3 credits. Prerequisite: ECE 411, ECE 425, or consent of instructor. Not offered 2001–2002. Introduction to image processing through seven major topics: perception, statistical modeling, transforms, enhancement, analysis, compression, and restoration. Special attention is allocated to compression. Equal emphasis is placed on gaining a mathematical and an intuitive understanding of algorithms through actual image manipulation and viewing.

ECE 549 Visual Motion Seminar
Spring. 1 credit. Not offered 2001–2002. This seminar provides an overview of motion as used in both coding and analysis of digital video, through examination of motion estimation and motion segmentation techniques. Topics include an introduction to digital video, techniques for computing motion, both block-based and pixel-based motion estimation, MPEG motion coding, Hausdorff-based motion estimation, motion-based tracking, and various techniques for motion segmentation. Emphasis is placed on recent research results.

ECE 551 Electric Systems Engineering and Economics (Electricity Markets) [Also AEM (ARME) 655]
Fall. 2 credits. Prerequisites: basic calculus, microeconomics. R. J. Thomas. This course is designed to explore new arrangements in power system planning and operation brought about by the current restructuring of the electric industry. The course is organized around lectures on 1) how basic economic principles interact with basic engineering principles used to determine the physical and operational makeup of the system; and 2) the principles and techniques of optimization and their applications to emerging institutional arrangements in the power industry. The course involves extensive laboratory work designed to test the principles under discussion. A final project is assigned, requiring building an intelligent software agent capable of performing in a competitive market with rules similar to those being set up in the electric power business today. The agents are exercised in a class competition.

ECE 554 Advanced Analog VLSI Circuit Design
Spring. 4 credits. Prerequisite: ECE 453. Advanced analog integrated circuit and system design. Topics include integrated continuous-time filter design, translinear circuits and systems, dynamic analog techniques, integrated discrete-time filter design, and Nyquist-rate data converter design.

ECE 558 Compound Semiconductor Electronics
Spring. 4 credits with lab. Prerequisite: ECE 457 or equivalent. Electronic properties of advanced semiconductor structures using compound semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Propagation and bandgap semiconductors and quantum wells. Advanced semiconductor devices including metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices: Includes six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characterization of compound semiconductor devices.

ECE 561 Error-Control Codes
Spring. 4 credits. Prerequisite: ECE 301 or ECE 521 or equivalent. A strong familiarity with linear algebra is assumed. Not offered 2001–2002. An introduction to the theory of algebraic error-control codes. Topics include: Hamming coding group codes, the standard array, minimum-distance decoding, cyclic codes, and the dual of a linear block code. Hamming and Singleton bounds for error-correcting codes. The construction and decoding of Bose-Ray Chaudhuri-Hocquenghem (BCH) and Reed-Solomon (RS) codes. Computer methods for the study of the structure and algorithms for error-control are used.

ECE 562 Fundamental Information Theory
Fall. 4 credits. Prerequisite: ECE 310 or equivalent. T. Berger. Fundamentals of fundamental information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

ECE 563 Communication Networks
Spring. 4 credits. Prerequisite: ECE 411 or permission of instructor. Classical line-switched communication networks: point-process models for offered traffic; blocking, and queuing analyses.

ECE 565 Statistical Signal Processing
Fall. 4 credits. Prerequisite: ECE 411. Not offered 2001–2002. This course introduces basic theory and techniques in parameter estimation and statistical signal processing. For estimating deterministic parameters, students consider minimum variance unbiased estimation, Cramer-Rao lower bound, linear models, best linear unbiased estimators, maximum likelihood (ML) estimation, least squares methods, recursive estimation, and methods of moments. For estimating random parameters, the course covers minimum mean square error (MMSE) estimation, and maximum a posteriori (MAP) estimation, Wold decomposition and spectral factorization, and Wiener and Kalman filters. Finally, as applications of basic estimation theory, channel and signal estimation techniques for digital communications are examined. Applications in array signal processing and frequency estimation are discussed throughout the course.

ECE 566 Wireless Networks
Spring. 4 credits. Prerequisites: ECE 445 and ECE 411. An introductory course in mobile and wireless networks. The course is targeted mainly at the graduate level, but is open to undergraduates as well. The course covers fundamental techniques and protocols in the design and operation of the first, second, and third generation of wireless networks. Examples of related topics include cellular systems, medium access control, control of a mobile session and a mobile call, signaling in mobile networks, mobility management techniques, common air interfaces (AMPS, IS-136, IS-95, GSM), wireless data (CDPD, Mobitex), satellite communication, ad hoc networks (Bluetooth), Internet Mobility, Personal Communication Services (PCS), and so on.

ECE 567 Topics in Digital Communications
Spring. 4 credits. Prerequisites: ECE 456 and ECE 411. Not offered 2001–2002. Fundamental topics in modern digital communication. Analytical and computational tools required to understand modern data conversion, transmission, and storage systems. Possible topics include: PCM, DPCM, PAM, PSK, FSK, matched filtering, equalization, line codes, trellis codes, Viterbi decoding, applications to audio, video, and magnetic recording. Vector quantization and universal data compression including LZW, LZW, and arithmetic coding, applied to files, speech, images, and video.

ECE 568 Mobile Communication Systems
Spring. 4 credits. Prerequisites: ECE 411 and ECE 467; corequisite: ECE 468. Not offered 2001–2002. Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include: cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations.
ECE 572 Parallel Computer Architecture
Fall. 3 credits. Prerequisite/corequisite: ECE 475. M. A. Heinrich.
Principles and tradeoffs in the design of parallel architectures is on latency, bandwidth, and synchronization in parallel machines. Case studies illustrate the history and techniques of shared-memory, message-passing, dataflow, and data-parallel architectures.

ECE 574 Advanced Digital VLSI Design
Spring. 4 credits. Prerequisites: ECE 474, ECE 475. R. Manohar.
Top-down approach to asynchronous design and the relation between computer architecture and VLSI design. For the asynchronous design component: high-level synthesis, design by program transformations, and correctness by construction. Topics include delay-insensitive design techniques, description of circuits as concurrent programs, circuit compilation, and electrical optimizations.

ECE 575 High-Performance Processor Architecture
Spring. 3 credits. Prerequisite: ECE 475. M. Burscher.
This course provides in-depth coverage of the advanced architectural features of current and next-generation high-performance microprocessors. Topics include superscalar design, out-of-order execution, register renaming, caching, value prediction, confidence estimation, branch prediction, predication, control speculation, multithreading, compiler optimizations, and case studies of existing processors. Projects involve writing simulators to evaluate the performance of various microprocessor components.

ECE 576 Advanced Digital VLSI Design Project
Fall, spring (2-semester course). 5 credits (fall 4, spring 1). Prerequisites: ECE 474, ECE 475. Groups receive an R in ECE 576 until they fabricate and test their chips the following fall. Offered spring 2002 and fall 2002. R. Manohar.
For description, see ECE 574.

ECE 577 Feedforward Neural Networks
Fall. 4 credits. Prerequisite: ECE 310. T. L. Fine.
Feedforward neural networks (multi-layer perceptrons) are computing systems formed out of many highly interconnected nonlinear memoryless elements that are arranged in a parallel architecture that is loosely modeled on that of the brain. Focus is on their roles as pattern classifiers, signal processors, estimators, and forecasters and on their role in communication systems. Includes exploration of neural networks through mathematical analyses and extensive simulation studies using MATLAB.

ECE 578 Radio Frequency (RF) Integrated Circuit Design
Fall and spring. 6 credits. Prerequisites: ECE 453, ECE 455, and ECE 488.
K. Ron Bissett.
This two semester, 6 credit course covers practical knowledge of advanced concepts related to the design radio-frequency (RF) integrated circuits in state-of-the-art silicon germanium (SiGe) technology. Emphasis is on the circuit architecture, design, trade-offs, optimization, and layout of RF integrated circuits for use in wireless applications. Special attention is devoted to the most important challenges facing RF circuit designers today, such as the impact of noise, power distribution, and consumption. Low noise amplifier, voltage controlled oscillator (VCO), phase-lock loop, and high performance mixer design are emphasized. The basic receiver/transmitter building blocks are covered and students learn how to design and assemble them to form single chip wireless systems.

ECE 581 Introduction to Plasma Physics (also A&EP 606)
Fall. 4 credits. Prerequisite: ECE 303 or equivalent. First-year graduate-level course open to exceptional seniors.
D. A. Hammer.
Topics covered include: plasma state; motion of charged particles in fields; drift-orbit theory; coldoulm scattering, collisions; ambiapol diffusion, elementary transport theory; fluid and hydrodynamic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability, and elementary applications to space physics, plasma technology, and controlled fusion.

ECE 587 Energy Seminar (also NS&E 545 and M&AE 545)
Fall, spring. 1 credit. May be taken for credit both semesters.
K. Unlu.
For description, see NS&E 545.

ECE 594 Nonlinear Computation and Applications in Circuits, Signals, and Systems
Spring. 3 credits. Prerequisites: MATH 293 and MATH 294. Not offered 2001-2002.
This project-oriented seminar gives students with the many applications of nonlinear analysis in today's engineering design world. The course stresses concepts in relation to contemporary design problems. Applications to information technologies, neural networks, digital communication systems that use chaos techniques, stability of nonlinear systems, and human EEG arrhythmia analysis and prediction demonstrate the range of engineering analysis and design situations to which these techniques apply.

ECE 602 Graduate Seminar in Telecommunication and Information Processing
This seminar discusses material at the level of current engineering publications. Faculty sponsors prepare a listing of appropriate subject areas and suggest certain papers for discussion. Students are required to lead discussions on one or two topics as required and are graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

ECE 604 Graduate Seminar in RF, Antenna, and Space Science Systems
This seminar discusses material at the level of current engineering publications. Faculty sponsors prepare a listing of appropriate subject areas and suggest certain papers for discussion. Students are required to lead discussions on one or two topics as required and are graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

ECE 606 Graduate Seminar in Semiconductor and Microelectromechanical Systems
This seminar discusses material at the level of current engineering publications. Faculty sponsors prepare a listing of appropriate subject areas and suggest certain papers for discussion. Students are required to lead discussions on one or two topics as required and are graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

ECE 608 Graduate Seminar in Computer and Digital Systems
This seminar discusses material at the level of current engineering publications. Faculty sponsors prepare a listing of appropriate subject areas and suggest certain papers for discussion. Students are required to lead discussions on one or two topics as required and are graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

ECE 610 Graduate Seminar in Medical Electronics and Analysis Systems
This seminar discusses material at the level of current engineering publications. Faculty sponsors prepare a listing of appropriate subject areas and suggest certain papers for discussion. Students are required to lead discussions on one or two topics as required and are graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

ECE 658 Advanced Device Physics and Device Integration
Fall, spring. 4 credits. Prerequisites: ECE 457 and 535, or permission of instructor.
An integrated study of properties of micro- and nano-scale silicon-based electronic devices with emphasis on implementation in circuits. Topics include fundamental properties, scaling and limits, effect of design on digital and analog operation, effect of variations, nano-scale quantum and size effects, unified understanding of the needs of circuits (integration, low power, high speed, etc.) with device behavior. Devices include field-effect and bipolar transistors, memories, and nanostuctures in silicon, silicon-germanium, and silicon-on-insulator.
ECE 672 Distributed Systems  
Spring. 3 credits. Prerequisite: ECE 475. W. E. Speight.  
Design of distributed systems, with particular emphasis on the field of cluster-based architectures. Students read papers, discuss topics in class, make presentations to the class, and complete a major software design project. Topics include runtime system design, coherence protocols for software distributed shared memory systems, fault tolerant systems, file access, emerging interconnection networks, process and thread migration, adaptive systems, and cluster-based solutions for web servers and multimedia applications.

ECE 691-692 Electrical and Computer Engineering Colloquium  
Fall, 691; spring, 692. 1 credit each term. For students enrolled in the graduate field of Electrical and Computer Engineering. J. C. Belina.  
Lectures by staff, graduate students, and visiting authorities. A weekly meeting for the presentation and discussion of important current topics in the field. Reports required.

ECE 693-694 Master of Engineering Design  
Fall, 693; spring, 694. 1-8 credits. For students enrolled in the M.Eng. (Electrical) degree program. Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

ECE 695 Topics in Integrated Systems  
Fall. 1 credit. S-U grades only. E. C. Kan.  
This topic series investigates recent trends in integrated systems, spanning from digital, analog, MEMS, RF, optical and mixed-signal design based on present and novel Si technology. Active participation from students is expected in the form of presentations, discussions and reports.

ECE 791-792 Thesis Research  
Fall, 791; spring, 792. 1-15 credits. For students enrolled in the master’s or doctoral program.

MATERIALS SCIENCE AND ENGINEERING

Undergraduate Courses

MS&E 111 Nanotechnology (also ENGR 111)  
Fall. 3 credits. E. Giannelis.  
This is a course in the Introduction to Engineering series. For description, see ENGR 111.

MS&E 118 Design Integration: A Portable CD Player (also ENGR 118 and T&M 118)  
Spring. 3 credits. W. Sache.  
This is a course in the Introduction to Engineering series. For description, see ENGR 118.

MS&E 119 Biomaterials for the Skeletal Systems (also ENGR 119)  
Fall. 3 credits. D. T. Grubb.  
This is a course in the Introduction to Engineering series. For description, see ENGR 119.

[MS&E 124 Designing Materials for the Computer  
This is a course in the Introduction to Engineering series. For description, see ENGR 124.]

MS&E 204 Materials Chemistry  
Spring. 3 credits. U. B. Wiesner.  
This course is designed to give a molecular understanding of materials properties with emphasis on general concepts. In the first part, the structure of atoms is discussed introducing fundamental concepts of quantum chemistry. In the second part the transition from atoms to molecules is made discussing symmetry aspects of chemical bonding. The last part describes the transition from molecules to materials. Materials classes covered include modern examples of polymers, organic semiconductors, ceramics, organic-inorganic hybrids, and superconductors emphasizing the interdisciplinary nature of materials science. Examples illustrate current materials research involving nanobiotechnology, organic optoelectronics, self-assembling materials, or nano-ceramic.

MS&E 206 Atomic and Molecular Structure of Matter  
Spring. 3 credits. S. L. Sass.  

MS&E 261 Introduction to Mechanical Properties of Materials (also ENGRD 261)  
Fall. 3 credits. S. P. Baker.  
For description, see ENGRD 261.

MS&E 262 Introduction to the Electronic Properties of Materials (also ENGRD 262)  
Fall. 3 credits. Prerequisite MATH 192. Corequisite PHYS 213 or permission of instructor. G. Malliaras.  
For description, see ENGRD 262.

MS&E 265 Biological Materials and Their Synthetic Replacements  
Spring. 3 credits. D. Grubb.  
From contact lenses and false teeth to arterial implants and hip joints, a tremendous range of synthetic materials are used in contact with the body to replace or supplement natural biological materials. The course considers a number of biological systems and describe the properties and structure of the natural materials. Requirements for candidate replacement materials are discussed, with historical and current solutions. These involve material properties such as strength and corrosion resistance as well as toxicity and biocompatibility. Design constraints, including methods of production, economics, regulatory approval, and legal liabilities are also considered.

MS&E 261 The Substance of Civilization—Materials through the Ages  
Fall. 3 credits. 2 lectures, 1 lab. S. L. Sass.  
Materials have enabled revolutionary advances in how we live, work, fight, travel, and play; hence the naming of eras after them—Stone, Bronzoe, and Iron Ages. This course explores the role of materials in the development of the modern industrial Western civilization by putting technology into a historical context and examining the advances made possible by innovations with materials, starting with the Stone Age. Interconnections between crucial innovations and historical events are identified and explored. Lectures, demonstrations, and hands-on laboratory experiments elucidate the origin of the unique properties of materials such as polymers, ceramics, metals, and glass. This course is designed to fulfill the science requirement in the College of Arts and Sciences.

MS&E 291-292 Research Involvement I and II  
291, fall; 292, spring. 3 credits each term. Prerequisite: approval of department. Staff. Supervised independent research project in association with faculty members and faculty research groups of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized. Each semester may be taken as a continuation of a previous project or as a one-term affiliation with a research group.

MS&E 302 Mechanical Properties of Materials, Processing, and Design (also MS&E 582)  
Spring. 3 credits. Prerequisite: MS&E 206. Corequisite: MS&E 304, or permission of instructor. A. L. Ruoff.  
Stress, strain, and the basics of concepts in deformation and fracture for metals, polymers, and ceramics. Analysis of important mechanical properties such as plastic flow, creep, fatigue, fracture toughness, and rupture. Application of these principles to the design of improved materials and engineering structures.

MS&E 303 Thermodynamics of Condensed Systems (also MS&E 583)  
Fall. 4 credits. Prerequisites: PHYS 214 and MATH 294. A. Ruoff.  
The three laws of thermodynamics are introduced as the fundamental basis for thermal and chemical equilibrium. Statistical mechanics extensions are developed for calculations of entropy and specific heat capacities. These principles are applied to understanding phase equilibria and phase diagrams, heterogeneous reactions, solutions, electrochemical processes, surfaces, and defects.

MS&E 304 Kinetics, Diffusion, and Phase Transformation (also MS&E 584)  
Spring. 4 credits. Prerequisite: MS&E 303 or permission of instructor. R. Dieckmann.  
Topics include: electrochemistry (electrode potentials, EMF, Pourbaix diagram); phenomenological and atomistic theories of diffusion; diffusion in metals, alloys, and non-metals; diffusion in the presence of driving forces; fast diffusion paths; thermo and electrotransport; interfaces and microstructure; nucleation and growth; solidification of alloys; and diffusion and diffusionless transformations in solids.

MS&E 305 Electronic Structure of Matter (also MS&E 585)  
Fall. 3 credits. Prerequisite: MS&E 206 or permission of instructor. J. M. Blakely.  
This course covers quantum theory and electronic structure as it applies to electron conduction. Basic principles of wave mechanics. Electrons in crystals. Electronic structure of metals, semiconductors, and insulators. Conductivity of solids: electronic
and ionic contributions; effects of an electric field on electrons in periodic potentials; sources of electron scattering, atomic vibrations, and defects.

MS&E 406 Electronic, Optical, and Magnetic Properties of Materials (also MS&E 566)
Spring, 3 credits. Prerequisites: MS&E 305 or permission of instructor. Y. Suzuki.
This course covers electrical, optical, and magnetic phenomena that are found in crystalline solid materials. Conduction in metals, semiconductors, and insulators. Design of semiconductor properties by doping. Properties of semiconductor devices (p-n junctions and transistors). Absorption, emission, luminescence. Principles and design of magnetic and superconducting materials for relevant applications. Dielectric properties. Ionic conductivity.

MS&E 307 Materials Design Concept I
Fall, 1 credit. Y. Suzuki. For description, see MS&E 407.

MS&E 391-392 Research Involvement IIa and IIb
391, fall; 392, spring, 3 credits each term. Prerequisite: approval of department. Staff. For description, see MS&E 291. May be continuation or a 1-term affiliation with a research group.

MS&E 403-404 Senior Materials Laboratory I and II
403, fall; 404, spring, 3 credits each term. D. T. Grubb.
Practical laboratory covering the analysis and characterization of materials and processing. Emphasis is on design of experiments for evaluation of materials' properties and performance as related to processing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, magnetic properties, and electron microscopy.

MS&E 405-406 Senior Thesis I and II
405, fall; 406, spring, 4 credits each term. D. T. Grubb.
Open to advanced undergraduates in lieu of the senior materials laboratory. Proposals for thesis topics should be approved by the supervising faculty member prior to beginning the senior year. Approved thesis topics normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required. Both semesters must be taken to complete the laboratory requirement. This course is required for graduation with honors.

MS&E 407 Materials Design Concepts II
Fall, 2 credits. Y. Suzuki.
Develops design in the field of materials science using Dieter's Engineering Design, Ashby's Materials Selection in Engineering Design, and other sources. Innovation, patent searching, and ASTM standards. Speakers from industry and other institutions lecture on case studies of design problems. Students give short oral presentations and written reports. Study includes prior art literature, materials selection, and some modeling, as well as discussion of broader economic, regulatory, environmental, and liability concerns that may arise. Students are required to develop a design-study project.

MS&E 491-492 Research Involvement IVA and IVB
491 fall, 492, spring, 3 credits each term. Prerequisite: approval of department. Staff. For description, see MS&E 291.
May be continuation or a one-term affiliation with a research group.

MS&E 495 Undergraduate Teaching Involvement
Fall, spring, Variable credit. Staff. This course will give credit to students who help in the laboratory portions of ENGR 111, 119 or 124, ENGRD 261 or MS&E 281. The number of credits earned will be determined by the teaching load and will typically be 1-3 credits.

MS&E 512 Mechanical Properties of Thin Films
Spring, 3 credits. Offered alternate years. S. P. Baker.
Mechanical properties which are unique to materials in the form of thin films (typical thickness 1 micrometer and less) and micrometer scale structures. Mechanics of two-dimensional structures. Stress and mechanical property measurement methods in small dimensions. Microstructural development in thin films. Elastic, plastic, and fracture response of films and constrained volumes.

MS&E 521 Properties of Solid Polymers
Fall, 3 credits. Prerequisite: ENGRD 261. Corequisite: MS&E 303 or permission of instructor. U. B. Wiesner.

MS&E 523 Physics of Soft Materials
Fall, 3 credits. Offered alternate years. U. B. Wiesner.
The course covers general aspects of structure, order and dynamics of soft materials. Typical representatives of this class of materials are polymers, liquid crystals, gels and surfactant solutions. A general formalism for the description of order in terms of orientation distribution functions is introduced. Examples are given for the measurement of order parameters for partially ordered materials. Finally, the dynamics of soft materials is discussed. Besides transport and flow behavior aspects of the local dynamics of soft materials are presented. Emphasis is put on the discussion of various techniques frequently used (and available at Cornell) for the characterization of structure, order and dynamics of soft materials such as NMR or various scattering techniques. Using examples of modern multidimensional spectroscopic methods the issue of heterogeneous dynamics at the glass transition of amorphous liquids is presented at the end of the class.

MS&E 524 Materials Chemistry of Synthetic Polymeric Materials
Fall, 3 credits. Prerequisite: MS&E 521 or permission of instructor. Offered alternate years. C. K. Ober.
Preparation of synthetic polymers by step- and chain-growth polymerization: condensation, free radical, anionic, and cationic mechanisms; ring opening and coordination routes. Statistical and kinetic aspects of homopolymer and copolymer formation. Stereochemistry of polymers and spectroscopic methods for polymer analysis. Molecular aspects of polymer design for properties such as conductivity, elasticity, thermal stability, and engineering properties. Special topics include liquid crystalline polymers, photoresists, and supramolecular chemistry. At the level of Principles of Polymerization, by Odian.

MS&E 525 Organic Optoelectronics
Fall, 3 credits. Offered alternate years. G. G. Malliaras.
Overview of relevant materials from small aromatic molecules to conjugated polymers. Focuses on optoelectronic properties including photophysics (absorption, emission, photogeneration, recombination), charge transport (doping, hopping, disorder, charge injection), and elements of nonlinear optics. Optoelectronics applications (such as electrophotography, light emitting diodes, lasers, photovoltaic cells, thin film transistors) are also discussed.

MS&E 531 Introduction to Ceramics
Fall, 3 credits. R. Dieckman.
This course covers ceramic processes and products, crystal structure of glass, glasses, point defects (point-defect chemistry and relation to non-stoichiometry), line defects, grain boundaries, diffusion in ionic materials (emphasis on the relationships between diffusion and point-defect structure), phase diagrams, phase transformations, kinetics of solid-state reactions (reactions with and between solids; heterogeneous reactions, reactions between different solids; point-defect relaxation, internal reactions), grain growth, and sintering. Physics-chemical aspects are emphasized.

MS&E 532 Glass, Ceramic, and Glass-Ceramic Materials: Critical Components in Technologies
Spring, 3 credits. Offered alternate years. Staff.
Conventional and unconventional techniques for processing glass, glass-ceramic, and ceramic materials. Case studies illustrate the design, engineering, and scientific aspects of such processes. Vapor processes for high-purity optical fibers, hot-processing of ceramic turbine blades, photoreactive materials, and powder processing and sintering of ceramics are discussed. Course taught with industrial participation.

MS&E 541 Microprocessing of Materials
Spring, 3, 4, or 5 credits. P. Kruisius and D. Ast.
The previous material science course in microprocessing has been combined with EE356 and is taught jointly with EE. The course consists of a 2 lecture, 3 credit core course providing an introduction to the materials and processes used to fabricate integrated circuits and micro mechanical systems. An optional extension is a hands-on, 1 credit, laboratory in which students fabricate transistors, simple integrated circuits, and MEMS structures. Students enrolled in MS&E 541 must enroll in the advanced topic, 1 credit, section of the course. Enrollment in the advanced credit section is optional for students registered in EE 536. The recommended textbook is "The Science and Engineering of Microfabrication" By Campbell. Course notes available to registered students on a password protected web site.
MS&E 542 Materials Design in Electronic Packaging
Spring. 3 credits. Staff.
Design, materials, and manufacturing needs for packaging technology from chip to board. Principles involve key areas of materials science and other engineering disciplines. Packaging materials to be discussed include metals, ceramics, and polymers.

MS&E 543 Thin-Film Material Science
Fall. 3 credits. Offered alternate years. D. G. Ast.
This course provides fundamental information on the deposition processes, reaction and evaluation of thin films. Topics covered include: deposition techniques, surface energies, stress in thin films, surface kinetics, homoepitaxy, heteroepitaxy and superlattices, electrical and optical properties. Schottky barriers, solid phase regrowth, interdiffusion, thin film reactions, and electromigration. The recommended textbook is "Electronic Thin Film Science for Electrical Engineers and Material Scientists" by Tu, Mayer, and Feldman.

MS&E 544 Plasma Processing of Electronic Materials (also ECE 482)
Spring. 3 credits. Prerequisites: PHYS 213 and 214 or their equivalents. Offered on demand. Staff.
For description, see ECE 482.

MS&E 545 Magnetic Materials
Fall. 3 credits. Prerequisites: PHYS 213 and 214, or equivalent. Offered alternate years. Y. Suzuki.
This course covers the fundamentals of magnetic phenomena and specific magnetic materials and their use in modern applications. Magnetization phenomena, the origin of magnetism in a material, magnetic domains, and magnetic anisotropy are included in the fundamentals. Specific magnetic materials and their applications include: ferromagnetism in thin films and fine particles, amorphous magnetic materials; magnetic recording, magnetic circuits.

MS&E 546 Solar Cells: Energy from the Environment
Fall. 2 or 3 credits. Lec. 2 credits. Lab. 1 credit. Laboratory enrollment is limited to 10 students. No prerequisites. D. G. Ast.
Solar cells provide power to satellites but are increasingly used for other applications, including the generation of electricity to power homes, and even cars and airplanes. This course introduces the physics, design, manufacturing, testing, applications, and long term reliability of solar cells. Topics include the energy distribution of the solar spectrum in space and at the surface of the earth, the physics of converting light into electricity, the ideal conversion efficiency of solar cells, solar cell design, the economical fabrication of solar cells, testing and government regulations, and the long term reliability of solar cells. The course covers mostly classical solid state solar cells but provides an introduction to emerging competing technologies using polymers and organic dyes. In the laboratory, students fabricate and test a solar cell. The instructor provides special recitations, as needed, for students lacking a semiconductor background but interested in the subject of solar cells. The recommended textbook is "Solar Cells, Operating Principles, Technology and Systems Applications" by Martin Green.

MS&E 555 Introduction to Composite Materials (also CEE 475, M&E 455, and T&AM 455)
Spring. 4 credits. For description, see T&AM 455.

MS&E 563 Nanobiotechnology (also A&EB 663 and BIO G 663)
Spring. 3 credits. Prerequisites: A&EB 560 or permission of instructor. For description, see A&EB 663.

MS&E 571 Physics of Modern Materials Analysis
Spring. 3 credits. D. T. Grubb.
Survey of modern analytical techniques used to determine composition and structure of near-surface and bulk materials. Interaction of ions, electrons, and photons with solids; characteristics of the emergent radiation. Techniques covered include: Auger electron spectroscopy, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopies, and X-ray techniques. Selection and design of experiments.

MS&E 575 Introduction to Point and Space Groups (also ECE 495)
Fall. 2 credits. S-U grades only. R. L. Liboff. For description, see ECE 495.

Graduate Professional Courses

MS&E 501-502 Special Project
501, fall; 502, spring. 6 credits each term. Master of Engineering research project.

MS&E 582 Mechanical Properties of Materials (also ECE 495)
Spring. 3 credits. Corequisite: MS&E 584, or permission of instructor. A. L. Ruoff. For description, see MS&E 502.

MS&E 583 Thermodynamics of Condensed Systems (also MS&E 303)
Fall. 4 credits. M. O. Thompson. For description, see MS&E 503.

MS&E 584 Kinetics, Diffusion, and Phase Transformation (also MS&E 304)
Spring. 4 credits. Prerequisite: MS&E 583 or permission of instructor. R. Dieckmann. For description, see MS&E 504.

MS&E 585 Electronic Structure of Matter (also MS&E 305)
Fall. 3 credits. J. M. Blakely. For description, see MS&E 505.

MS&E 586 Electronic, Optical, and Magnetic Properties of Materials (also MS&E 306)
Spring. 3 credits. Prerequisite: MS&E 585 or permission of instructor. Y. Suzuki. For description, see MS&E 506.

Graduate Core Courses

MS&E 601 Thermodynamics of Materials
Fall. 3 credits. Prerequisite: course in thermodynamics at level of MS&E 303. M. O. Thompson.
Topics covered include: basic statistical thermodynamics, partition functions and thermodynamic state functions, distributions, laws of thermodynamics, free-energy functions and conditions of equilibrium, chemical reactions, statistics of electrons in crystals, heat capacity, heterogeneous systems and phase transitions, and lattice models of 1-, 2-, and 3-dimensional interacting systems. Also covers statistical thermodynamics of alloys, free-energy and phase diagrams, order-disorder phenomena, point defects in crystals, and statistical thermodynamics of interfaces.

MS&E 602 Elasticity, Plasticity, and Fracture
Spring. 3 credits. Offered alternate years. S. P. Baker.
An advanced overview of mechanical properties of materials combining concepts from continuum mechanics, atomic structure, thermodynamics, and kinetics. Topics include: elastic properties of crystals, glasses, and polymers; mechanical damping; plastic deformation in metals and polymers; creep deformation; fracture of brittle and ductile materials; the effects of temperature, time, and thermomechanical history on properties; metals, ceramics, polymers, and composites, and models and scaling laws for mechanical behavior.

MS&E 603 Analytical Techniques for Materials Science (also MS&E 571)
Spring. 3 credits. D. T. Grubb. For description, see MS&E 571.

MS&E 604 Kinetics of Reactions in Condensed Matter
Fall. 3 credits. A. L. Ruoff.
Phenomenology and microscopic aspects of diffusion in fluids, both simple and polymeric, and in metallic and ionic solids. Covers: phase stability and transformation; nucleation and growth, spinodal decomposition and disipacive transformations; phase coarsening processes, recrystallization, and grain growth; diffusion-controlled growth, interfacial reactions, moving boundary problems, and grain-boundary migration controlled kinetics. At the level of Diffusion in the Condensed State, by Kirkaldy and Young.

Related Course in Another Department
Introductory Solid-State Physics (PHYS 454)

Further Graduate Courses

MS&E 621 Advanced Inorganic Chemistry III: Solid-State Chemistry (also CHEM 607)
Spring. 4 credits. Prerequisite: CHEM 605 or permission of instructor. F. DiSalvo. For description, see CHEM 607.

MS&E 622 Synthetic Polymer Chemistry (also CHEM 675 and CHEM 671)
Spring. 4 credits. Prerequisites: CHEM 359-360 or equivalent permission of instructor. Staff. For description, see CHEM 671.

MS&E 631 Solid-State Reactions
Fall. 3 credits. Offered alternate years. R. Dieckmann.
Topics include: point defects (thermal disorder, component activity-dependent disorder, influence of dopants, different kinds of associates, Coulomb interaction between point defects), dislocations, grain boundaries; transport in solids (definition and different types of diffusion coefficients, reference frames, mechanisms of electrical conduction, elementary diffusion mechanisms, atomic theory of transport, correlation effects, phenomenological theory of transport including some aspects of thermodynamics of irreversible processes, Fick's laws; point-defect relaxation (migration controlled, phase-boundary-reaction controlled); inter-diffusion; solid-state reactions involving compound formation (oxidation of metals, reactions between solids); and de-mixing of materials in...
Potential gradients, and selected solid-state processes (internal reactions, etc.).

MS&E 532 Solid State Electrochemistry
Fall. 3 credits. Prerequisite: MS&E 631 or permission of instructor. Not offered 2001-2002. R. Dieckmann. Topics include: disorder in solids; thermodynamic quantities or quasi-free electrons and electron defects in semiconductors; mobility, diffusion, and partial conductivity of ions and electrons; solid ionic conductors, solid electrolytes, and solid solution electrodes; galvanic cells with solid electrolytes for thermodynamic investigations; and technical applications of solid electrolytes. At the level of Electrochemistry of Solids by H. Rickett.

MS&E 655 Composite Materials (also M&A 655 and T&AM 655)
Spring. 4 credits. Staff. For description, see T&AM 655.

MS&E 671 Principles of Diffraction (also A&EP 711)
Spring. 3 credits. Letter grades only. J. D. Brock. For description, see A&EP 711.

MS&E 672 Transmission Electron Microscopy
Spring. 3 credits. Prerequisite: MS&E 205 or equivalent. Offered alternate years. S. L. Sass.

This course covers the theory and practice of obtaining and interpreting TEM data from crystalline materials. Topics include microscope optics and conventional and high resolution image formation. Special emphasis is placed on electron diffraction (formation and analysis of spore patterns, Kikuchi patterns, and convergent beam patterns), and obtaining useful images of crystal defects. Practical requirements for high-resolution imaging of crystal lattices and interfaces are also covered. Associated theoretical topics include kinematical and dynamical diffraction theories, the contrast transfer function theory of phase contrast, and image modeling and image analysis for quantitative interpretation of data. Current text is Transmission Electron Microscopy by D. B. Williams and C. B. Carter.

MS&E 681 Surfaces and Interfaces in Materials
Spring. 3 credits. Offered alternate years. J. M. Blakely.

This course deals with special topics in the field of surface and interface science. Some knowledge of basic statistical thermodynamics, crystallography, elementary quantum mechanics, and theory of rate processes is assumed. The following are the main topics: statistical thermodynamics of interfaces, morphological stability, atomic structure, energetics and structure determination, electronic structure of interfaces, charge and potential distributions, surface steps, adsorption and segregation, atomic transport and growth processes at surfaces, oxidation, and other surface reactions.

Specialty Courses

MS&E 600 Research in Materials Science
Fall, spring. Credit to be arranged. Staff. Independent research in materials science under the guidance of a member of the staff.

MS&E 601 Materials Science and Engineering Colloquium
Fall and spring. 1 credit each term. Credit limited to graduate students. Staff. Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

MS&E 602 Materials Science Research Seminars
Fall, spring. 2 credits each term. For graduate students involved in research projects. Staff. Short presentations on research in progress by students and staff.

MECHANICAL AND AEROSPACE ENGINEERING

General and Required Courses

M&E 101 Naval Ship Systems
For description, see NAV S 202.

M&E 102 Drawing and Engineering Design (also ENGRG 102)
Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to 30 students each half term. Recommended for students without previous mechanical drawing experience. Letter grades required for students majoring in M&E; S-U grades optional for all others. For description, see ENGRG 102.

M&E 117 Introduction to Mechanical Engineering (also ENGRG 117)
Fall or spring, to be determined. 3 credits. 2 lectures and 1 lab per week. This is a course in the Introduction to Engineering series. For description, see ENGRG 117.

M&E 127 Introduction to Entrepreneurship and Enterprise Engineering (also ENGRG 127)
Spring. 3 credits. Open to all Cornell students regardless of major, no prerequisites. This course is considered an "Introduction to Engineering" course by the College of Engineering, and satisfies the curricular requirement for such a course. For description, see ENGRG 127.

M&E 212 Mechanical Properties and Processing of Engineering Materials
Spring. 4 credits. Prerequisite: ENGRG 202. Introduction to the broad range of mechanical behavior of materials and their processing; atomic bonding and crystalline structures, point and line defects, plastic deformation of crystals and polycrystals, hardening behavior and basic elements of plasticity, equilibrium microstructural development and time-dependent phase transformations; bulk deformation processes; the ideal work and strain analysis methods; failure of materials, and materials selection.

M&E 221 Thermodynamics (also ENGRG 221)
Fall, spring. may be offered summer. 3 credits. Prerequisites: MATH 192 and PHYS 112. For description, see ENGRG 221.

M&E 225 Mechanical Synthesis
Spring. 3 credits. Prerequisite: ENGRG 202. Pre- or corequisites: ENGRG 203 and ENGRG 221. Lab fee. A hands-on introduction to the mechanical design process. Basic prototyping skills developed using mechanical dissection used to demonstrate successful product design and function. Design projects provide experience from conceptualization through prototype construction and testing.

M&E 323 Introductory Fluid Mechanics
Fall. Usually offered in Engineering Cooperative Program also. 4 credits. Prerequisites: ENGRG 202 and 203 and coregistration in 221, or permission of instructor. Topics covered include: physical properties of fluids, hydrostatics, conservation laws using control volume analysis and using differential analysis, Bernoulli's equation, potential flows, simple viscous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers, introduction to compressible flow.

M&E 325 Mechanical Design and Analysis
Fall. Usually offered in Engineering Cooperative Program also. 4 credits. Prerequisites: ENGRG 202, ENGRG 203, M&A 212, and M&E 225. Lab fee. Application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems.

M&E 326 System Dynamics
Spring. May be offered in Engineering Cooperative Program. 4 credits. Prerequisite: MATH 294, ENGRG 203. Junior standing required. Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems. Computer simulation and experimental studies of vibration and control systems.

M&E 427 Fluids/Heat Transfer Laboratory
Fall. 2 credits. Prerequisites: M&AE 323, 342. 324. Follows the technical writing requirement. Laboratory exercises in methods, techniques, and instrumentation used in fluid mechanics and the thermal sciences. Measurements of temperature, heat transfer, viscosity, drag, fluid-flow rate, effects of turbulence, air foil stall, and spark ignition engine performance. Biweekly written assignments.

M&A 428 Seminar on Engineering Design
Fall. 2 credits. Prerequisite: completion of 6 semesters in mechanical engineering or equivalent. S-U grades only. This course is offered to illustrate the design process in action. It consists of seminars by industrial and academic practitioners of design. Case studies are presented in weekly invited
lectures from a wide range of disciplines, including thermo-fluid processes, manufacturing, energy, mechanical design, aerospace, and biological sciences. The invited lectures are supplemented by one or more design projects in the semester.

**M&AE 591 Applied Systems Engineering I (also CEE 504, COM S 504, ECE 512, OR&E 512)**
Fall. 3 credits. Prerequisite: permission of instructor, and concurrent enrollment in a group-based project that has a strong system design component and is approved by an A&SE instructor. Fundamental ideas of systems engineering, and their application to design and development of various types of engineered systems. Defining system requirements, creating and their application to design and development of various types of engineered systems. Defining system requirements, creating system life cycle.

**M&AE 592 Applied Systems Engineering II (also CEE 505, COM S 505, ECE 513, OR&E 513)**
Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ECE 512, M&AE 591, or OR&E 512). An advanced course in the application of the systems engineering process to the design and operation of complex systems. It focuses on the descriptive and analytical tools of systems engineering including schematic databases, optimization, discrete event simulation, statistics for design and control, and decision analysis. Case studies are presented in the application of these techniques to space transportation, power, manufacturing, transportation, nuclear power licensing, and military systems.

**Mechanical Systems, Design, Materials Processing, and Precision Engineering**

**M&AE 103 Introduction to Computer Numerical Control (CNC) Programming**
Fall. Spring. 1 credit, approximately 8 weeks (total 15 hrs. of instruction and 15 hrs. of lab). Prerequisite: M&AE 225, equivalent experience, or permission of instructor.

M&AE 103 introduces students to the fundamentals of computer numerical control (CNC) programming using G codes and SmartCAM® modeling software. Students learn setup, tool selection and operation of CNC mills and lathes. They also receive an introduction to the CNC machine tool as an electro-mechanical system. This course is required for students wishing to use the CNC equipment in the Emerson Lab's Product Realization Facility for team or research projects.

**M&AE 386 Automotive Engineering**
Spring. 3 credits. Prerequisite: M&AE 325 or permission of instructor.

Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles, trucks, and related vehicles. Power plant, drive line, brakes, aerodynamics, suspension, and structure. Other types of vehicles may be considered.

**M&AE 412 Smash and Crash: Mechanics of Large Deformations**
Fall. 4 credits. Prerequisites: M&AE 212, T&AM 202. Fulfills field design requirement. Severe loading is a defining feature of both materials processing and crash worthiness. Materials intentionally are stressed beyond their elastic limits, resulting in deformations that are not reversible. In materials processing, the desire is to change the shape to manufacture components; in crash worthiness, it is to absorb the vehicle's energy. In this course the fundamentals of plasticity are covered; yielding, flow laws, work hardening. Various solution methods, including bound theorems, are presented. The fundamentals are applied to localization, primary and secondary forming operations, and plastic buckling. Laboratory experiments deal with these topics and conclude with the individual design, construction, and testing of a crash cage.

**M&AE 415 Global Position System Theory and Design (also ECE 415)**
Fall. 4 credits. Prerequisites: ECE 301 and ECE 303 or permission of instructor. For description, see ECE 415.

**M&AE 417 Introduction to Robotics: Dynamics, Control, Design**
Spring. 3 credits. Introductory course in the analysis and control of mechanical manipulators. Topics include: spatial descriptions and transformations, manipulator kinematics and inverse kinematics, differential relationships and static forces, manipulator dynamics, trajectory generation, sensors and actuators, trajectory control, and compliant motion control. Several experiments with a five axis manipulator arm as well as simulation and design using MATLAB and multibody codes are used.

**M&AE 425 FSAE Automotive Design Project**
Fall. Spring. 3 or 4 credits. Intended for M&AE or ECE juniors and seniors, or by arrangement with instructor. Usually 3 credits. Permission of instructor only. Project course to research, design, build, develop, and compete with a Formula SAE car for intercollegiate competition. Students work in interdisciplinary teams using concurrent engineering and systems engineering principles applied to complex mechanical, electromechanical, and electronic systems.

**M&AE 426 FSAE Auto Design Project (Design Option)**
Fall, spring. 3 or 4 credits. Limited to M&AE seniors; permission of instructor only. Senior design version of M&AE 425. For description, see M&AE 425.

**M&AE 440 Hybrid Electric Vehicle**
Fall. Spring. 3 credits for team members; 4 credits for team leaders. Enrollment limited to a maximum of 4 semesters. Permission of instructor only. Team work on the design and fabrication of a hybrid vehicle for national competition.

**M&AE 441 Hybrid Electric Vehicle (Design Option)**
Fall, spring. 3 or 4 credits. Limited to M&AE seniors; permission of instructor only. Senior design version of M&AE 440. For description, see M&AE 440.

**M&AE 455 Introduction to Composite Materials (also CEE 475, MS&E 555, and T&AM 455)**
Spring. 4 credits. For description, see T&AM 455.

**M&AE 461 Entrepreneurship For Engineers (also ENGRG 461)**
Fall. 3 credits. Enrollment open to upper class engineers; others with permission of instructor. This course develops skills necessary to identify, evaluate, and begin new businesses. Topics include intellectual property, competition, strategy, business plans, technology forecasting, finance and accounting, and sources of capital. A rigorous, quantitative approach is stressed throughout, and students create financial documents and plans, analyze human resource models, and work with sophisticated valuation methods, complicated equity structures, and legal and business documents. As such, this course represents the "red meat" of entrepreneurship, and the soft skills are left for other courses. Coursework consists of discussions, assignments, and the preparation and presentation of a complete business plan.

**M&AE 463 Neuromuscular Biomechanics**
Spring. 3 credits. Prerequisites: ENGRD 202 and 203, or permission of instructor. Offered alternate years. Modeling and simulation of biomechanical systems using mechanics, dynamics, and control principles. Physiology of neurons and muscles introduced and related to the production of force and movement in biological systems. Application of the laws of neuromuscular systems as simultaneous equations. Exploration of the muscular redundancy problem using optimization methods and general-purpose languages (such as Mathematica or MATLAB). Selected clinical applications.

**M&AE 469 Orthopaedic Tissue Mechanics**
Spring. 3 credits. Prerequisites: ENGRD 202 and M&AE 325 or permission of instructor. Offered alternate years. Not offered 2001–2002. Applications of mechanics and materials principles to orthopaedic tissues. Physiology of bone, cartilage, ligament, and tendon introduced and related to mechanical function. Mechanical behavior of skeletal tissues in the laboratory. Functional adaptation of these tissues to their mechanical environment. Tissue engineering of replacement structures.

**M&AE 470 Finite Element Analysis for Mechanical and Aerospace Design**
Spring. 3–4 credits. (4 credits as M&AE design elective for M&AE seniors) Prerequisite: senior standing or permission of instructor. Evening examinations. Term project. Fulfills computer applications requirement for M&AE students. Introduction to linear finite element static and dynamic analysis for discrete and distributed mechanical and aerospace structures. Prediction of load, deflection, stress, strain, and temperature distributions. Major emphasis on underlying mechanics and numerical methods. Introduction to computational aspects via educational and commercial software (such as intuitive FEM, MATLAB, and ANSYS). Selected mechanical and aerospace applications.
M&AE 478 Feedback Control Systems (also CHEM 472 and ECE 471)
Fall. 4 credits. Prerequisites: one of the following: CHME 372, ECE 301, M&AE 326, or permission of instructor. Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the principal mathematical tools. Design techniques include root-locus and frequency response methods. Includes laboratory that examines modeling and control of representative dynamic processes.

M&AE 479 Modeling and Simulation of Mechanical and Aerospace Systems (also M&AE 579)
Fall. 3 or 4 credits. Prerequisite: senior standing or permission of instructor. Evening examinations. Fulfills M&AE design elective if taken for 4 credits. Fulfills computer applications requirement for M&AE students. Limited enrollment of M.Eng. students by permission of instructor only. F. Valero-Cuevas.
Analysis and simulation of linear and nonlinear systems. Representation of discrete and distributed dynamical systems by state-variable models. Time- and frequency-domain simulation via general-purpose languages (such as MATLAB or Mathematica) and special-purpose simulation software (such as Simulink). Selected applications from diverse fields.

M&AE 486 Automotive Engineering Design
Spring. 4 credits. Prerequisite: senior standing. Fulfills field design requirement. For description, see M&AE 380.

M&AE 514 Design for Manufacture and Assembly
Spring. 3 or 4 credits; (4 credit option provides design credit for M&AE seniors). Prerequisites: ENGRG 102 and M&AE 212 or 412, and introductory probability and statistics, or permission of instructor. Nominal DFMA (Design for Manufacture & Assembly) and variational DFMA are covered in two parallel streams. The nominal stream is based on a readable text that surveys the characteristics of manufacturing and assembly processes that influence the design of parts and products. The second stream, covered through lectures and diverse readings, takes a functional approach to the design process. The functional approach considers the interdependence of the design with production aspects of statistical quality and process control.

M&AE 525 Mechatronics Systems Engineering Project
Fall, spring. 4 credits each term (must be taken for 3 credits). Limited enrollment, engineering seniors and Master of Engineering students only. Corequisite: Applied Systems Engineering I or permission of instructor. Fulfills Master of Engineering requirement. Systems Engineering Option project requirement, and undergraduate design elective. Project-based introduction to systems engineering with a focus on system design, systems and technology integration, and systems analysis. Approximately 30 students from the various engineering disciplines design, construct, and fully test several teams of fully autonomous, mobile robots. These teams engage in head to head competitions at the end of the spring semester. There are approximately six lectures per semester, and weekly group meetings with the instructor. The project involves vehicle design, real-time feedback control and trajectory generation, microcontroller-based control, real-time motion planning, wireless communication, computer vision, and artificial intelligence.

M&AE 565 Biomechanical Systems—Analysis and Design
Fall. 3 or 4 credits. Prerequisites: undergraduate courses in dynamics and strength of materials, (e.g. T&AM/ENGRD 202 and 203) and senior or graduate standing, or permission of instructor. Selected topics from the study of the human body as a mechanical system. Emphasis on the modeling, analysis, and design of biomechanical systems frequently encountered in orthopaedic engineering, especially bone-implant systems.

M&AE 570 Simulation of Mechanical and Aerospace Systems (also M&AE 470)
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Evening examinations. Term project. Graduate version of M&AE 470. For description, see M&AE 470.

M&AE 571 Applied Dynamics
Fall. 3 credits. Prerequisites: graduate standing, seniors with T&AM/ENGRD 203, M&AE 326 or permission of instructor. 2 lectures. Not offered 2001–2002.
Introduction to multibody dynamics; dynamics of rigid bodies; Newton-Euler methods, Lagrangian dynamics, principle of virtual power (Kane-Jourdain methods); and applications to robotics, space dynamics of satellites, electro-mechanical systems.

M&AE 579 Modeling and Simulation of Mechanical and Aerospace Systems
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Even examinations. Term project. For description, see M&AE 479.

M&AE 612 Materials Processing: Theory and Applications

M&AE 613 Computational Methods in Materials Processing
Spring. 4 credits. Prerequisite: M&AE 612 or permission of instructor. Not offered 2001–2002.

M&AE 615 Experiments in Materials Processing
Fall. 4 credits. Prerequisite: M&AE 680 (finite elements) or permission of instructor.
This course focuses on experiments and simulations related to the mechanical properties of materials and materials processing. A general introduction to sensors and instrumentation for engineering measurements is also included. Testing for mechanical properties/model parameter characterization and simple boundary value problems: linear elasticity, inelastic deformation, fatigue, and fracture, including rate and temperature effects. Process simulation and experiments including forging, extrusion, rolling, and ironing may also be conducted. In addition, an emphasis is placed on the experiment/simulation interface. Students perform analyses including finite element modeling to correlate and predict material behaviors observed in the experiments. These analyses include linear elasticity behavior, state variable plasticity modeling, and fracture mechanics.

M&AE 655 Composite Materials (also M&AE 655 and T&AM 655)
Spring. 4 credits. For description, see T&AM 655.

M&AE 663 Advanced Topics in Neuromuscular Biomechanics
Advanced topics in modeling and simulation of biomechanical systems using mechanics, dynamics, and control principles. Mathematical representation of the functional interactions among neurons, muscles, and skeletal structures. Numerical prediction of force and movement in biological systems, and exploitation of muscle coordination using optimization methods and general-purpose languages (such as Mathematica or MATLAB). Project-based investigation of clinically relevant topics.

M&AE 664 Mechanics of Bone
Spring. 3 credits. Prerequisites: graduate standing or permission of instructor. Offered alternate years.
This course focuses on current methods and results in skeletal research, focusing on bone. Topics include skeletal anatomy and physiology, experimental and analytical methods for determination of skeletal behavior, mechanical design and bone tissue, and skeletal functional adaptation to mechanics.

M&AE 676 Model-Based Estimation
Fall. 3 credits. Prerequisites: linear algebra, differential equations, and MATLAB programming. Open to M.S./Ph.D.: others by permission of the instructor. This course covers a variety of ways in which models and experimental data can be used to estimate model quantities that are not directly measured. The two main estimation methods that are presented are least-squares estimation.
Introduction to aero-dynamics. Principles of incompressible and compressible aero-dynamics, boundary layers, and wing theory. Description and performance of reciprocating and jet propulsion engines, propeller theory, and design analyses focus on transonic passenger airplanes and small supersonic jets.

M&AE 306 Spacecraft Engineering
Spring. 3 credits. Introduction to spacecraft design from launch, through orbital operation, to re-entry. Topics covered include space missions, space environment, orbital mechanics, rocket theory, and re-entry. Emphasis on satellites orbiting the Earth. Discussions of current problems and trends in spacecraft operation and development.

M&AE 400 Components and Systems: Engineering in a Social Context (also SAES 400)
Spring. 3 credits. Prerequisites: upperclass standing, 2 years of college physics. Serves as an approved elective but not as a field elective in mechanical engineering. Offered alternate years.

This course addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), the National Missile Defense, supersonic transport, and the automobile and its effect on the environment, we investigate interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems.

M&AE 401 Components and Systems: Engineering in a Social Context
Spring. 4 credits. Prerequisites: senior standing, 2 years of college physics. Fulfills field design requirement. Offered alternate years.

For description, see M&AE 400.

M&AE 423 Intermediate Fluid Dynamics
Spring. 3 credits. Prerequisites: M&AE 323. This course builds on the foundations of M&AE 323. Emphasis is on the calculation of real flows (both engineering and environmental) and fundamental principles. Topics covered include some exact solutions to the Navier-Stokes equations, boundary layers, wakes and jets, separation, convection, stratified and rotating flows, fluid instabilities, turbulence, and chaos.

M&AE 449 Combustion Engines
Spring. 3 credits. Prerequisites: ENGRD 221 and M&AE 323.

Introduction to combustion engines, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance. Chemical equilibrium and kinetics, ideal-cycle analyses, deviations from ideal processes, engine breathing, combustion knock, formation and control of undesirable exhaust emissions.

M&AE 453 Computer-Aided Engineering: Applications To Biomedical and Food Processes
Spring. 3 credits. Prerequisites: computer programming (ABEN 151 or COM S 100) and heat and mass transfer (ABEN 350 or equivalent).

M&AE 458 Introduction to Nuclear Science and Engineering (also A&EP 403, ECE 403 and M&AE 403)
Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294.

For description, see NS&IE 403.

M&AE 459 Introduction to Controlled Fusion: Principles and Technology (also A&EP 484, ECE 484, and NS&IE 484)
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Offered alternately for seniors and graduate students. Offered on demand.

For description, see NS&IE 484.

M&AE 506 Aerospace Propulsion Systems
Spring. 3 credits. Prerequisite: M&AE 323 or permission of instructor. Offered alternate years.

Application of thermodynamic and fluid-mechanic principles to design and performance analysis of advanced jet propulsion systems, including rockets. Electric propulsion. Future possibilities for improved performance.

[MAE 507 Dynamics of Flight Vehicles
Spring. 3 credits. Prerequisites: M&AE 305 and M&AE 323 or permission of instructor. Offered alternate years. Not offered 2001-2002.

M&AE 523 Intermediate Fluid Dynamics with CFD
Spring. 3 credits. Prerequisites: graduate standing or permission of instructor.

This course is intended for M.Eng. students who wish to take a single fluid dynamics course. Students desiring more intensive treatment should consider M&AE 601 and one or more of M&AE 636, M&AE 736, and M&AE 737. This class co-meets with M&AE 423. This course includes an extensive CFD design project.

M&AE 543 Combustion Processes
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Topics covered include: thermochemistry, kinetics, vessel explosions, laminar premixed and diffusion flames, droplet combustion, and combustion of solids.

M&AE 601 Foundations of Fluid Dynamics and Aerodynamics
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

Foundations of fluid mechanics from an advanced viewpoint, including: formulation of continuum fluid dynamics; surface phenomena and boundary conditions at interfaces, fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for
compressible fluids; and sound waves, viscous flows, boundary layers, and potential flows.

[M&AE 602 Fluid Dynamics At High Reynolds Numbers]
Analysis and discussion of a wide range of specific flows and flow regimes characterized by high Reynolds number are provided. Potential flows, conformal transformations, slender-body theory and Kelvin’s impulse are included. Laminar viscous flows are studied, including fully-diffused flows, “exact” solutions, and boundary layers. Compressible flows are treated, including propagation and viscous decay of sound and shock waves and their decay, and the method of characteristics for analysis of such problems. Stratified flows, especially gravity and capillary waves, are analyzed. Various stability problems associated with high Reynolds number flows are discussed, and, time permitting, isotropic turbulence, Reynolds stress, and mixing-length ideas may be treated briefly.

[M&AE 603 Compressible Fluid Dynamics]
Fall. 4 credits. Graduate standing or permission of instructor. Not offered 2001–2002.
Fundamentals of compressible gas dynamics are described using thermodynamics and fluid properties, together with isentropic and viscous anisothermal flow theories; normal and oblique shock-waves; Prandtl-Meyer expansion fans; sound waves and acoustics; and duct flows including effects of area, friction, and heat interaction. Applications include high-speed aerodynamics, including hypersonic combuster design.

[M&AE 608 Physics of Fluids]
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Not offered 2001–2002.

[M&AE 636 Elements of Computational Aerodynamics]
Fall. 4 credits. Prerequisites: graduate standing and a graduate-level course in fluid mechanics. Not offered 2001–2002.
Topics relevant to numerical solution of problems in aerodynamics and fluid mechanics. Analysis and application of computational techniques appropriate for solution of inviscid or high Reynolds number fluid flow problems. Course has common lectures with M&AE 736, but is more applications oriented and uses commercial software for all computational exercises.

[M&AE 643 Laminar Flames]
Spring. 2 credits. Prerequisite: graduate standing or permission of instructor. Laminar flames are of practical importance in combustion systems, and they provide a complex example of laminar reactive flows. This course examines the behavior of laminar flames and the chemical and transport processes involved. The emphasis of the course is on using computational tools to calculate flame properties. The topics covered include thermodynamic equilibrium, chemical kinetics, reactor models, conservation equations, transport properties, premixed flames, and nonpremixed flames.

[M&AE 645 Turbulent Reactive Flows]
Fall. 2 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; Not offered 2001–2002.
Large turbulent reactive flows occur in combustion devices, the chemical process industry, the atmosphere, oceans, and elsewhere. In the last decade, substantial progress has been made in the understanding of these flows, through both experimental and computational approaches. This course focuses on turbulent, nonpremixed combustion and describes: the different phenomena involved, the basic processes and governing equations, experimental techniques and observations, a broad range of modeling approaches. The material covered is relevant to other single-phase turbulent reactive flows. Class meets, on average, once per week.

[M&AE 651 Conduction and Radiation Heat Transfer]
Fall, weeks 1–7. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor. K. E. Torrance.

[M&AE 652 Convection Heat Transfer]
Fall, weeks 8–14. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor. K. E. Torrance.

[M&AE 732 Analysis of Turbulent Flows]
Spring. 4 credits. Prerequisite: M&AE 601 or permission of instructor. Offered alternate years. Not offered 2001–2002.

[M&AE 733 Stability of Fluid Flow]
Fall, on demand. 4 credits. S-U grades only. Prerequisite: graduate standing or permission of instructor. Not offered 2001–2002.

[M&AE 734 Turbulence and Turbulent Flow]
Fall. 4 credits. Prerequisite: M&AE 601, graduate standing, or permission of instructor.
Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

[M&AE 736 Theory of Computational Aerodynamics]
Fall. 4 credits. Prerequisites: graduate standing, an advanced course in continuum mechanics or fluid mechanics, and some FORTRAN programming experience. Not offered 2001–2002.
Numerical methods to solve inviscid and high-Reynolds-number fluid-dynamics problems, including finite-difference, finite-volume, and surface-singularity methods. Accuracy, convergence, and stability, treatment of boundary conditions and grid generation. Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic (steady transonic flow) problems. Assignments require programming a digital computer.

[M&AE 737 Computational Fluid Mechanics and Heat Transfer]
Fall. 4 credits. Prerequisites: graduate standing; an advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some FORTRAN, C, or C++ programming experience. Not offered 2001–2002.
Numerical methods are developed for the elliptic and parabolic partial differential equations that arise in fluid flow and heat transfer when convection and diffusion are present. Finite-difference, finite-volume, and some spectral methods are considered, together with issues of accuracy, stability, convergence, and conservation. Current methods are reviewed. Emphasis is on steady and unsteady essentially incompressible flows. Assigned problems are solved on a digital computer.

Special Offerings

[M&AE 490 Special Investigations in Mechanical and Aerospace Engineering]
Fall, spring. Credit 1–6. Limited to undergraduate students. Prerequisite: permission of instructor.
Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.
M&AE 491 Design Projects in Mechanical and Aerospace Engineering
Fall, spring. Credit TBA. Prerequisite or corequisite: M&AE 428. Fulfills field design requirement. Intended for individual students or small groups of students who want to pursue particular design projects outside of regular courses. For description, see NS&E 454.

M&AE 545 Energy Seminar (also ECE 587 and NS&E 545)
Fall, spring. 1 credit. May be taken for credit both semesters.

M&AE 594 Manufacturing Seminar (also OR&E 893-894)
Fall, spring. 1 credit. For description, see OR&E 893-894.

M&AE 595 Special Topics in Mechanical and Aerospace Engineering
Fall, spring. Credit TBA. Limited to graduate students.

M&AE 599 Independent Study
Fall, spring. Credit TBA. Limited to graduate students. For description, see M&AE 594.

M&AE 699 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit TBA. Limited to graduate students.

M&AE 699 Mechanical and Aerospace Engineering Colloquium
Fall, spring. 1 credit each term. S-U grades only. For graduate students involved in research projects. Presentations on research in progress by faculty and students.

M&AE 791 Mechanical and Aerospace Research Conference
Fall, spring. 1 credit each term. S-U grades only. For graduate students involved in research projects. Special lectures by faculty members on topics of current research.

M&AE 799 Mechanical and Aerospace Engineering Colloquium
Fall, spring. 1 credit each term. Credit limited to graduate students. All students and staff invited to attend. Lectures by visiting scientists and Cornell faculty and staff. Members on research topics of current interest in mechanical and aerospace engineering, especially in connection with new research.

M&AE 890 Research in Mechanical and Aerospace Engineering
Credit TBA. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

M&AE 890 Research in Mechanical and Aerospace Engineering
Credit TBA. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

NUCLEAR SCIENCE AND ENGINEERING

NS&E 403 Introduction to Nuclear Science and Engineering (also A&EP 403, ECE 403, and M&AE 450)
Fall, spring. 3 credits. Prerequisites: PHYS 214 and MATH 294. K. B. Cady. This course is designed for juniors or seniors from any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. It can also serve as a basic course for those who do not intend to continue in the field. Introduction to the fundamentals of nuclear reactions. Topics include: an overview of the field of nuclear engineering; nuclear structure, radioactivity, and reactions; interaction of radiation and matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics. At the level of Introduction to Nuclear Engineering, by Lamarch, third edition.

NS&E 484 Introduction to Controlled Fusion: Principles and Technology (also A&EP 484, ECE 484, and M&AE 459)
Spring, 3 credits. Prerequisites: PHYS 112, 215, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. Offered on demand. D. A. Hammer. An introduction to the physical principles and engineering aspects underlying power generation by controlled fusion. Topics include: fuels and conditions required for fusion power, and basic fusion-reactor concepts; fundamental aspects of plasma physics relevant to fusion plasmas, and basic engineering problems for a fusion reactor; and an engineering analysis of proposed magnetic and/or inertial confinement fusion-reactor designs.

NS&E 509 Nuclear Physics for Applications
Fall, 3 credits. Prerequisites: sophomore physics and math, or permission of instructor. Some upper-division physics is desirable. Primarily for graduate students, especially those with a major in or minor in Nuclear Science and Engineering; also open to qualified undergraduates. V. O. Kostroun. A first course in nuclear physics. Systematic presentation of nuclear phenomena and processes that underlie applications ranging from nuclear power (fission and fusion), to nuclear astrophysics, to nuclear analytical methods for research in nonnuclear fields. Radioactivity, nuclear reactions, and interaction of radiation with matter. At the level of Radiochemistry and Nuclear Methods of Analysis, by Ehnman and Vance.

NS&E 590 Independent Study
Fall, spring. 1-4 credits. Grade option letter or S-U. Independent study or project under guidance of a faculty member.

NS&E 591 Project
Fall, spring. 1-6 credits. Master of Engineering or other project under guidance of a faculty member.

NS&E 612 Nuclear Reactor Theory
Fall, 4 credits. Prerequisites: 1 year of advanced calculus and some nuclear physics. K. B. Cady. Physical theory of fission reactors; fission and neutron interactions with matter; theory of neutron diffusion; slowing down and thermalization; calculations of criticality and neutron-flux distribution in nuclear reactors; and reactor kinetics. At the level of Nuclear Reactor Theory, by Lamarch.

NS&E 633 Nuclear Reactor Engineering (also A&EP 633)
Fall, 4 credits. Prerequisites: introductory course in nuclear engineering. Offered on demand. K. B. Cady. The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, environmental effects, and radiation protection.

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

OR&E 310 Industrial Systems Analysis
Spring, 4 credits. Prerequisite: ENGRD 270, or permission of instructor. J. Callister. Design of production facilities, including engineering economy, materials handling.
process design, and facility layout. Covers operations analysis, including process scheduling, process evaluation, procedural analysis, project management, methods analysis and design, work measurement, inventory control, job evaluation, and quality engineering and control.

**OR&IE 320 Optimization I**

Fall. 4 credits. Prerequisite: MATH 221 or 294. R. Bland.

Formulation of linear programming problems and solutions by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning. Introduction to interior-point methods for linear programming.

**OR&IE 321 Optimization II**

Spring. 4 credits. Prerequisite: OR&IE 320 or equivalent. D. Shmoys.

A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed as well as numerous applications.

**OR&IE 350 Financial and Managerial Accounting**

Fall. 4 credits. J. Callister.

Course covers: principles of accounting, financial reports, financial-transactions analysis, financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, and economic analysis of short-term decisions.

**OR&IE 360 Engineering Probability and Statistics II**

Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent. P. Protter.

This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate models for these models. Specific topics include: random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

**OR&IE 361 Introductory Engineering Stochastic Processes I**

Spring. 4 credits. Prerequisite: OR&IE 360 or equivalent. K. Athreya.

Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing, and reliability.

**OR&IE 414 Using Simulation Models for Engineering Design**

Spring. 4 credits. Prerequisites: an undergraduate course in probability and statistics through regression analysis, computer programming skills with a working knowledge of or willingness to learn Java, C++, or C. Corequisites: graduate or senior level course in discrete event simulation. Not offered 2001–2002. This course examines ways for engineers to exercise simulation models efficiently to gain information. The lectures survey general techniques that are useful in most engineering and manufacturing disciplines; some specialized techniques are also presented such as Infinitesimal Perturbation Analysis Gradient Estimation, Frequency Domain Screening, Multivariate Adaptive Regression Splines and Wavelets. Students become familiar with a broad range of modeling strategies.

**OR&IE 416 Design of Manufacturing Systems**

Fall. 4 credits. Senior OR&IE students only. Others by permission of instructor only. A. Muckstadt/R. Roundy.

This is a project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisers are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance are presented in lectures. Lab fee $15.

**OR&IE 431 Discrete Models**

Fall. 4 credits. Prerequisites: OR&IE 320 and COM S 211, or permission of instructor. Not offered 2001–2002. Course covers basic concepts of graphs, networks, and discrete optimization. Fundamental models and algorithms, and algorithmic techniques for their analysis. Special optimization models studied include flows in networks, the traveling salesman problem, and network design.

**OR&IE 432 Nonlinear Optimization**

Fall. 4 credits. Prerequisite: OR&IE 320. J. Renegar.

This course is an introduction to the practical and theoretical aspects of nonlinear optimization. Attention is given to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming; e.g., interior-point methods. Methods of numerical linear algebra are introduced as needed.

**OR&IE 434 Optimization Modeling**

Fall. 3 credits. Prerequisite: a grade of at least B- in OR&IE 321/521. Not offered 2001–2002. Emphasis is on modeling complicated decision problems as linear programs, integer programs, or highly-structured nonlinear programs. Besides modeling, students are required to assimilate articles from the professional literature and to master relevant software.

**OR&IE 435 Introduction to Game Theory**

**OR&IE 436 A Mathematical Examination of Fair Payroll Scheduling**

Spring. 3 credits. Prerequisites: MATH 222 or 294 or permission of instructor. R. Bland.

This course covers the mathematical aspects of the political problem of fair apportionment. The most recognizable form (in the United States) of apportionment is the determination of the number of seats in the U.S. House of Representatives awarded to each state. The constitution indicates that the apportionment should reflect the relative populations, but it does not prescribe a specific method. At first blush it appears that there is a straightforward approach that must lead to a fair, or fairest, apportionment, for any fixed house size and known populations. However, indivisibility of seats leads us to interesting mathematical questions and a long, rich, and fractious political history involving many famous figures. The basic ideas extend beyond apportionment of legislatures (in both federal systems and proportional representation systems) to some other realms where indivisible resources are to be allocated among competing constituencies.

**OR&IE 451 Economic Analysis of Engineering Systems**

Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350. T. Lybbert.

Course topics include: financial planning, including cash-flow analysis and inventory valuation models; engineering economic analysis, including discounted cash flows and taxation effects; application of optimization techniques, as in equipment replacement or capacity expansion models, and issues in designing manufacturing systems. Includes a student group project.

**OR&IE 452 Entrepreneurship for Engineers (also MAE 461 and ENGRG 461)**

Fall. 3 credits. Enrollment open to upper class engineers, others with permission of instructor. J. Callister.

For description see MAE 461.

**OR&IE 462 Introductory Engineering Stochastic Processes II**

Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent. G. Samorodnitsky.

Course topics include: stationary processes, martingales, random walks, and gambler's ruin problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.

**OR&IE 473 Empirical Research Methods in Financial Engineering**

Spring. 3 credits. Prerequisites: ENGRD 270, OR&IE 360 and 361, or their equivalents. D. Ruppert.

This course represents an advanced study of empirical research methods in financial economics. Focus is on the empirical techniques used most often in the analysis of financial markets and how they are applied to actual market data.

**OR&IE 474 Statistical Data Mining**

Fall. 3 credits. Prerequisites: OR&IE 360 and MATH 294 or equivalent, or permission of instructor. W. Jiang.

This course examines the statistical aspects of data mining, the effective analysis of large data sets. The first half of the course covers the process of building and interpreting statistical models in a variety of settings including multiple regression and logistic regression. The second half connects these ideas to techniques being developed to handle the large data sets that are now routinely encountered in scientific and business applications. Assignments are done
using one or more statistical computing packages.

**OR&IE 476 Applied Linear Statistical Models**  
Spring; weeks 1–7. 2 credits. Prerequisite: ENGRD 270. Staff.  
Course topics include: multiple linear regression, diagnostics, model selection, inference, one and two factor analysis of variance. Theory and applications both treated. Use of MINITAB stressed.

**OR&IE 480 Information Technology**  
Fall. 4 credits. Pre- or corequisites: COM S/ENGRD 211, plus either OR&IE 310 or OR&IE 350. M. Eisner.  
This course views information technology as the means by which computer science, operations research, and industrial engineering are brought to serve the operational and strategic needs of enterprises. As such, information technology encompasses: communications systems, information architectures, data management, development methodologies, implementation projects (with the attendant organizational design, business process analyses, requirements analysis, systems and organizational design, and implementation planning steps), operations management, electronic commerce, and more. The course takes the perspective of a professional who accesses existing computer data to analyze a problem or opportunity, uses computer tools to manage the data, develops an effective solution, and employs a computer application to implement the solution. This perspective introduces students to the ways in which information technology is currently being used throughout enterprises and how these uses are changing with the explosive growth of the Internet. Includes lectures (including guest lectures by practitioners), cases, and laboratory exercises intended to make the general concepts concrete. The course centers around a design project, in which student teams develop a solution to a business problem of their choosing and prepare a memorandum with supporting technical, financial, and process detail.

**OR&IE 481 Delivering OR Solutions with Information Technology**  
Spring; weeks 8–14. 2 credits. Prerequisites: OR&IE 480. M. Eisner.  
Study of ways in which information technology is used to deliver operations research methodology in real applications, including decision support systems, embedded operations research techniques, packaged software, web-based techniques, collaborative software, and expert systems. Several real applications are investigated.

**OR&IE 490 Teaching in OR&IE**  
Fall, spring. Varying credit. Prerequisite: permission of instructor.  
This course involves working as a TA in an OR&IE course. The course instructor assigns credits (the guideline is 1 credit per 4 hours/week of work with a limit of 3 credits).

**OR&IE 499 OR&IE Project**  
Fall, spring. Varying credit. Prerequisite: permission of instructor.  
Project-type work, under faculty supervision, on a real problem existing in some firm or institution. Opportunities in the course may be discussed with the Associate Director.

**OR&IE 512 Applied Systems Engineering I** (also CEE 504, COM S 504, ECE 512, M&AE 591)  
Fall. 3 credits. Prerequisite: permission of instructor. R. Roundy.  
For description, see M&AE 591.

**OR&IE 513 Applied Systems Engineering II** (also CEE 505, COM S 505, ECE 513, M&AE 592)  
Spring. 3 credits. Prerequisite: Applied Systems Engineering I (CEE 504, COM S 504, ECE 512, M&AE 592, or OR&IE 512). Staff.  
For description, see M&AE 592.

**OR&IE 515 Design of Manufacturing Systems**  
Fall. 4 credits. Prerequisite: one of the following OR&IE 310, OR&IE 416, OR&IE 525, or OR&IE 562. J. Muckstadt.  
A supply chain is the scope of activities that convert raw materials (i.e., wheat to finished products delivered to the end consumer (i.e., a box of cereal at the local P&C), usually spanning several corporations. Supply chain management focuses on the flow of products, information, and money through the supply chain. An overview of issues, opportunities, tools, and approaches. Emphasis is on business processes, system dynamics, control, design, re-engineering. Covers the relationship between the supply chain and the company's strategic position in the market and its competition. Considers dimensions of inter-organizational relationships with partners, including decision-making, incentives, and risk.

**OR&IE 520 Operations Research I: Optimization I**  
For description, see OR&IE 320.

**OR&IE 521 Optimization II**  
For description, see OR&IE 321.

**OR&IE 522 Operations Research I: Topics in Linear Optimization**  
Fall. 1 credit. Pre- or corequisite: OR&IE 520. Students who have already taken OR&IE 521 or 522 should not enroll. Limited to M.Eng. students in OR&IE. Staff.  
An extension of OR&IE 520 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

**OR&IE 523 Operations Research II: Introduction to Stochastic Processes I**  
For description, see OR&IE 361.

**OR&IE 524 Design of Manufacturing Systems II**  
Spring; weeks 8–14. 2 credits. Prerequisites: OR&IE 562, OR&IE 416; or by permission of instructor. Not offered 2001–2002

This project course focuses on the design and analysis of a global corporation's operations. Working in teams, students examine issues pertaining to a prototype company on the following topics: information system design, marketing, strategy, location of facilities, organization design, manufacturing capacity, planning logistics, production planning, scheduling, inventory control, and financial analysis. Meetings between project teams and faculty are substituted for some lectures or laboratories. Analytical methods appropriate for conducting analysis are discussed in lectures.

**OR&IE 525 Production Planning and Scheduling Theory and Practice**  
Spring. 4 credits. Corequisite: OR&IE 320, OR&IE 360. R. Roundy.  
Topics covered include: production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus is on setup time as a determinant of plans and schedules.

**OR&IE 528–529 Selected Topics in Applied Operations Research**  
Fall, spring. Varying credit. Prerequisite: permission of instructor.  
Current topics dealing with applications of operations research.

**OR&IE 551 Economic Analysis of Engineering Systems**  
Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350.  
Lectures concurrent with OR&IE 451. For description see OR&IE 451.

**OR&IE 552 Revenue Management**  
Spring; weeks 8–14. 2 credits. Prerequisites: thorough knowledge of OR&IE 360, familiarity and appreciation of time series and regression methods, and graduate standing. OR&IE 320/321 helpful but not required. Others by permission of instructor. Not offered 2001–2002.  
Course covers: Revenue Management (RM) concepts, models used in practice, and possible extensions; forecasting techniques, including time series methods, booking curves, and customer preference models; demand un censoring; overbooking, optimization with emphasis on stochastic models of demand; benefit measurement; computational and technological issues; examples from the airline and other industries.

**OR&IE 560 Engineering Probability and Statistics II**  
For description, see OR&IE 360.

**OR&IE 561 Queuing Theory and Its Applications**  
Fall. 3 credits. Prerequisite: OR&IE 361 or permission of instructor. Not offered 2001–2002.  
Course covers: basic queuing models; delay and loss systems; finite source, finite capacity, balking, reneging; systems in series and in parallel; FCFS versus LIFO; busy period; problems; output control and control problems; priority queues; queueing networks: the product formula; time sharing; server vacations; and applications to equipment maintenance, computer operations, and flexible manufacturing systems.
A rigorous treatment of the theory and computational techniques of linear programming and its extensions, including: formulation, duality theory, algorithms; sensitivity analysis; network flow problems; and algorithms; theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' Lemma; and exploiting special structure in the simplex method, and computational implementation.

OR&IE 631 Mathematical Programming II
Spring. 4 credits. Prerequisite: OR&IE 630. L. Trotter.
A continuation of OR&IE 630. Introduction to nonlinear programming, interior-point methods for linear programming, complexity theory, and integer programming. Includes some discussion of dynamic programming and elementary polyhedral theory.

OR&IE 632 Nonlinear Programming
Necessary and sufficient conditions for unconstrained and constrained optima. Topics include the duality theory, computational methods for unconstrained problems (e.g., quasi-Newton algorithms), linearly constrained problems (e.g., active set methods), and nonlinearly constrained problems (e.g., successive quadratic programming, penalty, and barrier methods).

OR&IE 633 Graph Theory and Network Flows
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 2001–2002.
Topics covered include: directed and undirected graphs; bipartite graphs; hamilton cycles and Euler tours; connectedness, matching, and coloring; flows in capacity-constrained networks; and maximum flow and minimum cost flow problems.

OR&IE 634 Combinatorial Optimization
Fall. 3 credits. D. Shmoys.
Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms.

OR&IE 635 Interior-Point Methods for Mathematical Programming
Spring. 3 credits. Prerequisites: MATH 411 and OR&IE 630, or permission of instructor. J. Renegar.
Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming. Discussion of the basic ingredients—barrier functions, central paths, and potential functions—that go into the construction of polynomial-time algorithms, and various ways of combining them. Emphasis on recent mathematical theory and the most modern viewpoints.

OR&IE 636 Integer Programming
Spring. 3 credits. Prerequisite: OR&IE 630.
Topics covered include: discrete optimization, linear programming in which the variables must assume integral values; theory, algorithms, and applications; and cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.

OR&IE 637 Semidefinite Programming
Course covers: linear optimization over the cone of positive semidefinite symmetric matrices; applications to control theory, eigenvalue optimization, and strong relaxations of combinatorial optimization problems; duality, computational methods, particularly interior-point algorithms.

**OR&IE 639 Polyhedral Convexity**
Spring. 3 credits. Prerequisite: basic knowledge of linear algebra. Not offered 2001-2002.
A comprehensive introduction to the geometry and combinatorics of polyhedral convex sets. Also, linear inequalities, supporting and separating hyperplanes, polarity; convex hulls, facets, and vertices; face lattices; convex cones and polytopes; min-kowski sums; gale transforms; simplicial and polyhedral subdivision; and applications to linear programming.

**OR&IE 650 Applied Stochastic Processes**
Fall. 4 credits. Prerequisite: a 1-semester calculus-based probability course.
S. Resnick.
An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include: Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

**OR&IE 651 Probability**
Spring. 4 credits. Prerequisite: real analysis at the level of MATH 413 and a previous 1-semester course in calculus-based probability. K. Athreya.
Course covers: sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, and conditioning.

**OR&IE 662 Advanced Stochastic Processes**
Fall. 3 credits. Prerequisite: OR&IE 651 or equivalent. G. Samorodnitsky.
Course topics include Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Levy processes, regenerative phenomena, random walks, and stochastic integrals.

**OR&IE 670 Statistical Principles**
Fall. 4 credits. Corequisite: OR&IE 650 or equivalent. D. Ruppert.
Topics include: review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation, maximum likelihood and Bayes estimation; basic principles of hypothesis testing; Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; and introduction to linear models.

**OR&IE 671 Intermediate Applied Statistics**
Spring. 3 credits. Prerequisite: OR&IE 670 or equivalent. W. Jiang.
Course topics include: statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; and simultaneous inference. Applications in regression analysis and ANOVA models. Covers variance components and mixed models. Use of the computer as a tool for statistics is stressed.

**OR&IE 677 Sequential Methods in Statistics**
The statistical theory of sequential design and analysis of experiments has many applications, including monitoring data from clinical trials in medical studies and quality control in manufacturing operations. Topics in this course include: classical sequential hypothesis tests, Wald's SPRT, stopping rules, Kiefer-Weiss test, optimality, group sequential methods, estimation, repeated confidence intervals, stochastic curtailment, adaptive designs, and bayesian and decision theoretic approaches.

**OR&IE 680 Simulation**
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2001-2002.
An advanced version of OR&IE 581 and 582, intended for Ph.D. level students.

**OR&IE 728-729 Selected Topics in Applied Operations Research**
Fall, spring. Credit TBA.
Current research topics dealing with applications of operations research.

**OR&IE 738-739 Selected Topics in Mathematical Programming**
Fall, spring. Credit TBA.
Current research topics in mathematical programming.

**OR&IE 768-769 Selected Topics in Applied Probability**
Fall, spring. Credit TBA.
Topics are chosen from current literature and research areas of the staff.

**OR&IE 778-779 Selected Topics in Applied Statistics**
Fall, spring. Credits TBA.
Topics chosen from current literature and research of the staff.

**OR&IE 790 Special Investigations**
Fall, spring. Credit TBA.
For individuals or small groups. Study of special topics or problems.

**OR&IE 799 Thesis Research**
Fall, spring. Credit TBA.
For individuals doing thesis research for master's or doctoral degrees.

**OR&IE 891 Operations Research Graduate Colloquium**
Fall, spring. 1 credit. Staff.
A weekly 1-1/2 hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

**OR&IE 893-894 Applied OR&IE Colloquium (also M&AE 594)**
893, fall; 894, spring. 1 credit each term.
A weekly meeting for Master of Engineering students. Discussion of various topics on manufacturing with faculty members and outside speakers.

---

**THEORETICAL AND APPLIED MECHANICS**

**Basics in Engineering Mathematics and Mechanics**

**T&M 118 Design Integration: A Portable CD Player (also ENGR 118 and MSAE 118)**
Spring. 3 credits.
This is a course in the Introduction to Engineering series. For description, see ENGR 118.

**T&M 202 Mechanics of Solids (also ENGRD 202)**
Fall, spring. 3 credits. Prerequisite: PHYS 112, coregistration in MATH 293 or permission of instructor.
For description, see ENGRD 202.

**T&M 203 Dynamics (also ENGRD 203)**
Fall, spring. 3 credits. Prerequisite: T&M 202, coregistration in MATH 294, or permission of instructor.
For description, see ENGRD 203.

**Engineering Mathematics**

**T&M 190 Calculus for Engineers (also MATH 190)**
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry and logarithms.
For description, see MATH 190.

**T&M 191 Calculus for Engineers (also MATH 191)**
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry.
For description, see MATH 191.

**T&M 192 Calculus for Engineers (also MATH 192)**
Fall, spring, or summer. 4 credits.
Prerequisite: MATH/T&M 191.
For description, see MATH 192.

**T&M 293 Engineering Mathematics (also MATH 293)**
Fall, spring. 4 credits. Prerequisite: MATH/T&M 192 plus a knowledge of computer programming equivalent to that taught in COM S 100.
For description, see MATH 293.

**T&M 294 Engineering Mathematics (also MATH 294)**
Fall, spring. 4 credits. Prerequisite: MATH/T&M 293.
For description, see MATH 294.

**T&M 310 Advanced Engineering Analysis I**
Fall, spring. 3 credits. Prerequisite: MATH/T&M 294 or equivalent.
Course covers: initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Also covers: special functions, linear partial differential equations. This is an introduction to probability and statistics. Use of computers to solve problems is emphasized.

**T&M 311 Advanced Engineering Analysis II**
Spring. 3 credits. Prerequisite: MATH/T&M 294 or equivalent (T&M 311 can be taken without T&M 310).
Mathematical modeling of physical and biological systems. Examples range from molecular diffusion, crystal growth, and physiological flows, to bird flight. The mathematics necessary to understand these phenomena is discussed in depth. They include probability theory, PDEs, stability analysis, complex variable analysis, and numerical analysis.

**T&AM 610 Methods of Applied Mathematics I**
Fall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates (see T&AM 310-311) but open to exceptional undergraduates with permission of instructor. Emphasis is on applications. Course covers: linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, and complex variables.

**T&AM 611 Methods of Applied Mathematics II**
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent. Emphasis is on applications. Course covers: partial differential equations, transform techniques, tensor analysis, calculus of variations.

**T&AM 612 Methods of Applied Mathematics III**
Fall. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent. Course topics include: integral transform methods, Wiener-Hopf technique, solutions of integral equations and partial differential equations. Problems are drawn from electromagnetics, elasticity, fluid mechanics, heat transfer, and acoustics.

**T&AM 613 Methods of Applied Mathematics IV**
Spring. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent. Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB boundary layer and multiple-scale methods) and asymptotic expansion of integrals (method of steepest descent, stationary phase and Laplace methods). Also covers regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include: normal forms, center manifolds, Liapunov-Schmidt reductors, and Stokes phenomenon. The course may also include computer exercises at the option of the instructor.

**Continuum Mechanics**

**T&AM 455 Introduction to Composite Materials (also CEE 475, M&E 455 and M&AE 555)**
Spring. 4 credits. Course topics include: introduction to composite materials, varieties and properties of fiber reinforcements and matrix materials; micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays; orthotropic elasticity applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates including computer software for design; and manufacturing methods and applications for composites. There is a group component design and manufacturing paper required, and a group laboratory on laminated component fabrication.

**T&AM 591 Master of Engineering Design Project I**
Fall. 3-6 credits. M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

**T&AM 592 Master of Engineering Design Project II**
Spring. 5-15 credits. M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

**T&AM 655 Composite Materials (also M&AE 655 and M&AE 655)**
Spring. 4 credits. Taught jointly with T&AM 455 using same lecture material, but also includes more advanced material and homeworks through additional lectures. Additional material includes: shear-lag models of stress transfer around arrays of fiber breaks including viscoelastic effects; cracks and dislocations of composite strength and failure; stress distributions around holes and cuts in composite laminates; and compressive strength of composites. Laboratory on effects of holes and notches in composites.

**T&AM 663 Solid Mechanics I**
Fall. 4 credits. Rigorous introduction to solid mechanics emphasizing: linear elasticity; tensors; deformations, rotations and strains; balance principles; stress; small-strain theory; linear elasticity, anisotropic and isotropic; basic theorems of elastostatics; and boundary-value problems, e.g. plates, St. Venant solutions.

**T&AM 664 Solid Mechanics II**
Spring. 4 credits. Prerequisites: MATH 610 and T&AM 663, or equivalent. Preparation for advanced courses in solid mechanics. Topics include: singular solutions in linear elasticity; plane stress, plane strain, anti-plane shear, airy stress functions; linear viscoelastic effects, statistical theories of composite strength and failure; stress distributions around holes and cuts in composite laminates; and compressive strength of composites. Laboratory on effects of holes and notches in composites.

**T&AM 666 Finite Element Analysis (also M&AE 680 and CEE 772)**
Spring. 3 credits. Prerequisites: T&AM 663 or equivalent. For description, see M&AE 680.

**T&AM 751 Continuum Mechanics and Thermodynamics**
Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Course topics include: kinematics; conservation laws; the entropy inequality; constitutive relations: frame indifference, material symmetry, and finite elasticity, rate-dependent materials, and materials with internal state variables.

**T&AM 752 Nonlinear Elasticity**
Spring. 3 credits. Prerequisites: T&AM 610, 611, and 751 or equivalents. Offered alternate years. Review of governing equations. Topics include: linearization and stability; constitutive inequalities; exact solution of special problems; nonlinear string and rod theories; phase transformations and crystal defects.

**T&AM 753 Fracture**
Fall. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents. Offered alternate years. Course covers: fundamentals of linear elastic fracture mechanics, K, small-scale yielding, solutions of elastic crack problems, energy concepts, J-integral. Also covers: nonlinear, rate-independent, small-deformation, fracture mechanics: plastic fracture, J-integral, small-scale yielding, fields for stationary and growing cracks; failure mechanisms of polymers, ceramics, composites, and metals: void growth, load transfer between fibers, crazing; fracture testing; fatigue fracture; computation of stress intensity factors; and plate theory and fracture.

**T&AM 757 Inelasticity**
Spring. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 2001-2002. Course covers: plasticity: dislocation slip systems; early experimental observations; general principles; limit analysis; and solution of boundary-value problems. Also covers viscoelasticity: general principles, solution of boundary-value problems.

**T&AM 759 Boundary Element Methods**
Fall. 4 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 2001-2002. Introduction to boundary element methods. Solutions for potential theory, linear elasticity, diffusion, material and/or geometric nonlinearities. Modern developments: hypersingular integrals, the boundary contour methods, sensitivity analysis.

**Dynamics and Space Mechanics**

**T&AM 570 Intermediate Dynamics**
Fall. 3 credits. Course topics include: Newtonian mechanics; motion in rotating coordinate systems; introduction to analytical mechanics; virtual work, Lagrangian mechanics; Hamilton's principle; small vibration and stability theory. Newtonian-Eulerian mechanics of rigid bodies; and gyroscopes.

**T&AM 578 Nonlinear Dynamics and Chaos**
Fall. 3 credits. Prerequisite: MATH/T&AM 293 or equivalent. Introduction to nonlinear dynamics, with applications to physics, engineering, biology, and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics: one-dimensional systems, bifurcations; phase plane, nonlinear oscillators; and Lorenz equations, chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

**T&AM 671 Hamiltonian Dynamics**
Spring. 3 credits. Prerequisite: T&AM 570 or equivalent. Offered alternate years. Course topics include: review of Lagrangian mechanics, Kane's equations; Hamilton's principle, the principle of least action, and related topics from the calculus of variations; Hamilton's canonical equations; approximate methods for two-degrees-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theory, KAM theory; and Melnikov's method.
[T&AM 672] Celestial Mechanics (also ASTRO 579)
Fall. 3 credits. Offered alternate years. Not offered 2001–2002.
Course topics include: description of orbits; 2-body, 3-body, and n-body problems; Hill curves, libration points and their stability; capture problems; oscillating orbital elements, perturbation equations; effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits; and secular perturbations, resonances, mechanics of planetary rings.

[T&AM 673] Mechanics of the Solar System (also ASTRO 571)
Spring. 3 credits. Prerequisite: an advanced undergraduate course in dynamics. Offered alternate years; Not offered 2001–2002.
Course topics include: gravitational potentials, planetary gravity fields; free and forced rotations; Chandler wobble, polar wander, and damping of nutation; equilibrium tidal theory, tidal heating; orbital evolution of natural satellites, resonances, spin-orbit coupling, Cassini states; long-term variations in planetary orbits; dust dynamics; dynamics of ring systems; and physics of interiors, seismic waves, free oscillations. Illustrative examples are drawn from contemporary research.

[T&AM 675] Nonlinear Vibrations
Fall. 3 credits. Prerequisite: T&AM 578 or equivalent. Offered alternate years; not offered 2001–2002.
Quantitative analysis of weakly nonlinear systems in free and forced vibrations, perturbation methods, averaging method. Applications to problems in mechanics, physics, and biology. Additional topics may include Hopf bifurcation, Invariant manifolds, coupled oscillators, vibrations in continuous media, normal forms, and exploitation of symmetry.

[T&AM 678] Complex Systems
Spring. 3 credits. Prerequisites: T&AM 578 or equivalent. Offered alternate years; not offered 2001–2002.

[T&AM 767] Applied Dynamical Systems (also MATH 717)
For description, see MATH 717.

Special Courses, Projects, and Thesis Research

T&AM 491-492 Project in Engineering Science
Fall, spring. 491. 1–4 credits, as arranged.
Projects for undergraduates under the guidance of a faculty member.

T&AM 796-800 Topics in Theoretical and Applied Mechanics
Fall, spring. 1–3 credits, as arranged. Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

T&AM 890 Master's Degree Research in Theoretical and Applied Mechanics
Fall, spring. 1–15 credits, as arranged. S-U grades optional.
Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

T&AM 990 Doctoral Research in Theoretical and Applied Mechanics
Fall, spring. 1–15 credits, as arranged. S-U grades optional.
Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

FACULTY ROSTER
Abel, John F., Ph.D., U. of California at Berkeley. Prof., Civil and Environmental Engineering
Ahner, Beth A., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Agricultural and Biological Engineering
Albright, Louis D., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering
Almgren, Richard D., Ph.D., Stanford U. Prof., Earth and Atmospheric Sciences
Anchises, Daniel J., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
Anton, A. Brad, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical Engineering
Archer, Lynden A., Ph.D., Stanford U. Prof., Chemical Engineering
Arn, William, Ph.D., U. of Sussex. Prof., Computer Science
Ast, Dieter G., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering
Athreya, Krishna B., Ph.D., Stanford U. Prof., Computer Science
Baeumner, Antje J., Ph.D., Universitat Stuttgart. Prof., Biological Engineering
Bailey, Graeme, Ph.D., U. of Birmingham. Prof., Computer Science
Baker, Sherrif F., Ph.D., Stanford U. Prof., Materials Science and Engineering
Ballantyne, Joseph M., Ph.D., Massachusetts Inst. of Technology. Prof., Electrical and Computer Engineering
Baranzangi, Muawia, Ph.D., Columbia U. Prof., Earth and Atmospheric Sciences
Bartel, Donald L., Ph.D., U. of Iowa. Prof., Mechanical and Aerospace Engineering
Bartsh, James A., Ph.D., Purdue U. Assoc. Prof., Agricultural and Biological Engineering
Batterman, Boris W., Ph.D., Massachusetts Inst. of Technology. Jr. Professorship in Engineering. Applied and Engineering Physics
Berger, Toby P., Ph.D., Harvard U. Irwin and Joan Jacobs Professor of Engineering, Electrical and Computer Engineering
Billington, Sarah, Ph.D., U. of Texas at Austin. Asst. Prof., Civil and Environmental Engineering
Bird, John M., Ph.D., Rensselaer Polytechnic Inst. Prof., Earth and Atmospheric Sciences
Bisogni, James J., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering
Blackley, John M., Ph.D., Glasgow U. (Scotland). Herbert Fisk Johnson Professor of Engineering, Materials Science and Engineering
Bland, Robert G., Ph.D., Cornell U. Prof., Operations Research and Industrial Engineering
Bojczynsky, Adam W., Ph.D., U. of Warsaw (Poland). Assoc. Prof., Electrical and Computer Engineering
Booker, John F., Ph.D., Cornell U. Prof., Mechanical and Aerospace Engineering
Brock, Joel D. Ph.D., Massachusetts Inst. of Technology. Director and Assoc. Prof., Applied and Engineering Physics
Brown, Larry D., Ph.D., Cornell U. Prof., Earth and Atmospheric Sciences
Brunner, W., Ph.D., U. of California at Davis. William L. Lewis Prof. of Engineering, Civil and Environmental Engineering
Buhman, Robert A., Ph.D., Cornell U. John Edson Sweet Professor of Engineering, Applied and Engineering Physics
Burns, Joseph A., Ph.D., Cornell U. Irving Porter Church Professor of Engineering, Astronomy and Theoretical and Applied Mechanics
Burtscher, Martin, Ph.D., U. of Colorado at Boulder. Asst. Prof., Electrical and Computer Engineering
Cady, K. Bingham, Ph.D., Massachusetts Inst. of Technology. Prof., Theoretical and Applied Mechanics
Callister, John R., Ph.D., Cornell U. Kinzelberg Director of Entrepreneurship in Engineering
Campbell, Mark E., Ph.D., Massachusetts Inst. of Technology. Prof., Mechanical and Aerospace Engineering
Cardie, Claire T., Ph.D. U. of Massachusetts at Amherst. Assoc. Prof., Computer Sciences
Carr, Paul, Ph.D., Virginia Polytechnic Inst. Visiting Prof., Civil and Environmental Engineering
Castillo-Chavez, Carlos, Ph.D., U. of Wisconsin at Madison. Prof., Theoretical and Applied Mechanics, Biomath, Applied Mathematics, Ecology and Evolutionary Biology, Statistics, Epidemiology, Latin American Studies
Cathles, Lawrence M. III, Ph.D., Princeton U. Prof., Earth and Atmospheric Sciences
Caughey, David A., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Chang, Hsiao-En, Ph.D. U. of California at Berkeley. Prof., Electrical and Computer Engineering
Cisne, John L., Ph.D., U. of Chicago. Prof., Earth and Atmospheric Sciences
Cohen, Claude, Ph.D., Princeton U. Prof., Chemical Engineering
Cohen, Thomas F., Ph.D., U. of Waterloo. Prof., Computer Science
Colucci, Stephen J., Ph.D., SUNY. Assoc. Prof., Earth and Atmospheric Sciences
Constable, Robert L., Ph.D., U. of Wisconsin. Prof., Computer Science
Conway, Harry D., Ph.D., London U. Prof., Theoretical and Applied Mechanics
Cook, Kerry H., Ph.D., North Carolina State U. Assoc. Prof., Earth and Atmospheric Sciences
Cook, J. Robert, Ph.D., North Carolina State U. Prof., Agricultural and Biological Engineering
Cool, Terrill A., Ph.D., California Inst. of Technology. Prof., Applied and Engineering Physics

[252]
Morrisset, Greg J., Ph.D., Carnegie Mellon.
Asst. Prof., Computer Science

Acheson-Laibe Prof., Operations Research and Industrial Engineering

Mukherjee, Subrata, Ph.D., Stanford U. Prof., Theoretical and Applied Mechanics and Mechanical and Aerospace Engineering

Myers, Andrew, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science

Nozick, Linda K., Ph.D., U. of Pennsylvania. Assoc. Prof., Civil and Environmental Engineering

Ober, Christopher K., Ph.D., U. of Massachusetts. Francis Norwood Bard Professor, Materials Science and Engineering

Olbright, William L., Ph.D., California Inst. of Technology. Prof., Chemical Engineering

O'Rourke, Thomas D., Ph.D., U. of Illinois. Thomas R. Briggs Professor in Engineering, Civil and Environmental Engineering

Papoula, Katerina D., Ph.D., U. of California Berkeley. Asst. Prof., Civil and Environmental Engineering

Parks, Thomas W., Ph.D., Cornell U. Prof., Electrical and Computer Engineering

Parlangue, Jean-Yves, Ph.D., Brown U. Prof., Agricultural and Biological Engineering

Peköz, Erol A., Ph.D., Cornell U. Prof., Civil and Environmental Engineering

Phillips, Jr., Alfred, Ph.D., Howard U. Assoc. Prof., Electrical and Computer Engineering

Philpot, William D., Ph.D., U. of Delaware. Assoc. Prof., Civil and Environmental Engineering

Phoenix, S. Leigh, Ph.D., Cornell U. Prof., Theoretical and Applied Mechanics Engineering and Mechanical and Aerospace Engineering

Pingshi, Keshav K., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Computer Science

Pollack, Lois, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Applied and Engineering Physics

Pollock, Clifford R., Ph.D., Rice U. Iilda and Charles Lee Prof. of Engineering, Electrical and Computer Engineering

Pope, Stephen B., Ph.D., Imperial College of Science and Technology (England). Sibley College Prof. of Mechanical Engineering, Mechanical and Aerospace Engineering

Proctor, Philip, Ph.D., U. of California at San Diego. Prof., Operations Research and Industrial Engineering

Psaki, Mark L., Ph.D., Princeton U. Assoc. Prof., Mechanical and Aerospace Engineering

Rand, Richard H., Sc.D., Columbia U. Prof., Theoretical and Applied Mechanics

Reeves, Anthony P., Ph.D., U. of Kent at Canterbury (England). Assoc. Prof., Electrical and Computer Engineering

Renegar, James, Ph.D., U. of California at Berkeley. Prof., Operations Research and Industrial Engineering

Resnick, Sidney, Ph.D., Purdue U. Prof., Operations Research and Industrial Engineering

Rhodes, Frank H. T., Ph.D., U. of Birmingham (England). Prof., Earth and Atmospheric Sciences

Riha, Susan, Ph.D, Washington State U. Prof., Earth and Atmospheric Sciences

Rosakis, Phebus, Ph.D., California Inst. of Technology. Assoc. Prof., Theoretical and Applied Mechanics

Roundy, Robin, Ph.D., Stanford U. Assoc. Prof., Operations Research and Industrial Engineering

Ruina, Andy L., Ph.D., Brown U. Prof., Theoretical and Applied Mechanics and Mechanical and Aerospace Engineering

Rufou, Arthur L., Ph.D., U. of Utah. Class of 1912 Professor, Materials Science and Engineering

Rogers, E. Van, Ph.D., Michigan State U. Prof., Operations Research and Industrial Engineering

Sachse, Wolfgang H., Ph.D., Johns Hopkins U. Meining Family Prof. of Engineering, Theoretical and Applied Mechanics and Mechanical and Aerospace Engineering

Saltzmann, W. Mark, Ph.D., Massachusetts Inst. of Technology/Harvard U. BP Amoco/H. Laurence Fuller Professor, Chemical Engineering

Sanzo, Jordi, J.D., Technion-Israel Inst. of Technology, Prof., Operations Research and Industrial Engineering

Sansalone, Mary J., Ph.D., Cornell U. Prof., Civil and Environmental Engineering

Sastri, Stephen D., Ph.D., Northwestern U. Prof., Earth and Atmospheric Sciences

GRADUATE SCHOOL

Walter Cohen, dean
Alison G. Power, associate dean
Terry D. Plater, associate dean
Sarah S. Hale, assistant dean

Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, or through the various graduate professional schools and colleges.

GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements as best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee and usually has the primary responsibility for directing the student's thesis or dissertation research.

REQUIREMENTS FOR ADMISSION

To be admitted to the Graduate School, an applicant should:

1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) take the Graduate Record Examinations General Test, or other specific examinations, for those fields that require these examinations.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be:

1) a minimum Test of English as a Foreign Language (TOEFL) score of 550 on the paper-based test or 213 on the computer-based test (higher for some fields);
2) evidence of two or more years study in, or a degree from, a college or university in a country where both the language of instruction and the native language is English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, NJ 08541, U.S.A.

Applications for fall admission to the Graduate School should be received by the deadline of the field to which one applies. The earliest deadline is December 1. Many fields, however, have different deadlines. Applicants should consult the Graduate School's application booklet for the specific closing date for each field.

Inquiries regarding admission should be addressed to the specific graduate field office or to the Graduate School Admissions Office, Cornell University, Caldwell Hall, Ithaca, N.Y. 14853–2602.

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for fellowships and teaching and research assistantships should be addressed to the particular graduate field of interest.

More detailed information is contained in the application for admission to the Graduate School and in the Graduate School Catalog. Both may be viewed on the Web at <www.gradschool.cornell.edu/>. An interactive application is available through this site, and application forms may be downloaded and printed directly from the Web. Both the application and the Catalog may be received through the mail by contacting either the individual graduate field office or the Graduate School, Caldwell Hall, Cornell University, Ithaca, NY 14853–2602. (The application is mailed world-wide; the Catalog is mailed to addresses within the U.S.)

Note: Programs leading to the degrees of Doctor of Law (J.D.), Master of Laws (LL.M.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School. Information on those programs can be obtained from the Law School, the Weill Medical College of Cornell University (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management respectively.
ADMINISTRATION

David W. Butler, dean
Leo Renaghan, associate dean for academic affairs
Thomas Cullen, associate dean for industry and international affairs
Cathy A. Enz, executive director, Center for Hospitality Research
Daphne A. Jameson, Richard J. and Monene P. Bradley director for graduate studies
Timothy Hinkin, director of undergraduate studies
Donald C. Bishop, associate dean of students and enrollment management
Margaret Haley Ferguson, director of financial services
James E. Hisle, managing director of the Statler Hotel and J. Willard Marriott Executive Education Center
Cheryl S. Farrell, director of admissions and student services
Neoma Mullens, director of multicultural programs
Katherine S. Margolis, director of library
Philippus Miller III, director of alumni affairs
Timothy J. Durnford, director of instructional support
Millie Reed, director of career services
Glenn Withiam, director of publications
Fred Conner, senior editor of the Cornell Hotel and Restaurant Administration Quarterly
Mark Adams, director of communications

FACILITIES

Statler Hall. Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a computer center, a beverage-management center, an auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed expressly for the school's academic and executive-education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation.

The School of Hotel Administration's Nestle Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 25,000 books, 1,000 videotapes, numerous ephemera and memorabilia (such as photographs, menus, and rare books), and more than 800 journal, magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, and general business topics comprise the core of the library's collections. Among the library's special features are numerous computerized information resources, including NEXIS, Dow Jones, ABI/INFORM, and The International Hospitality and Tourism Database; an extensive and unique index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library's HOSTLINE service. In addition to offering an excellent collection of materials and a dignified and refined study space, the Hotel School library extends quality service to every student.

Statler Hotel and J. Willard Marriott Executive Education Center. The Statler Hotel comprises 150 guest rooms, an executive education center, restaurants, a lounge, and the university's faculty and staff club. It demonstrates the very finest in hospitality and hospitality-education practices. The Statler is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the local community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the hotel is a practice-management facility for certain classes, internships, and independent-study projects. It offers part-time jobs to approximately 300 students each semester with preference given to students in the hotel school.

Requirements for Graduation

The requirements for the degree of Bachelor of Science. The requirements for that degree are:

1) completion of eight terms in residence for those who entered as freshmen; terms of residence for transfer students are determined by the amount of transfer credit awarded;

2) completion, with a minimum cumulative grade-point average of 2.0 (including a grade-point average of 2.0 in a full-time schedule of courses on campus in the final semester), of 120 required and elective credits, as set forth in the table on the following page;

3) qualification in one language other than English. This requirement may be met by any one of the following: (1) three years of high school study of one foreign language; (2) score of 560 on Cornell Placement Test; (3) pass language 121 and 122 (eight credits) or the equivalent, and attain a minimum grade of at least C- or "Satisfactory" in each (C or above for transfer credit from other institutions); or (4) pass 123 or the equivalent;

4) completion of two units of practice credit prior to the last two terms of residence, as defined on the following page;

5) completion of the university requirement in physical education.

Suggested course programs appear on the following pages. The core courses account for 72 of the 120 credits needed for graduation, the hotel electives account for 12 credits, and 18 credits are allotted for distributive electives. The remaining 18 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval-science courses may be counted in the 18-credit group of free electives. No credit toward the degree is allowed for "0"-level courses, such as Educ 005.

Transfer Credit Policy

Transfer students are required to complete all degree requirements with at least 75 credits at Cornell University, of which a minimum of 60 must be in courses offered by the Hotel School, and nine must be in distributive electives taken outside the Hotel School. Thus, a maximum of 45 hours in transfer credit may be allowed from other accredited colleges or universities as follows:
Credits
Core 18
Hotel Electives 0
Distributive Electives 9
Free Electives 18
45

In the core, transfer credit may be allowed against basic courses only (for example, HA 121, HA 136, Economics). Others generally are waived, and an upper-level course in the area substituted. For instance, if HA 243 were waived, another marketing course would be required in its place. The communication courses (HA 165 and HA 365) are tailored specifically to the School of Hotel Administration, and, thus, communication courses taken elsewhere generally are not accepted against core courses.

Distributive electives must not transfer. Distributive electives ensure that Hotel students are exposed to other courses at Cornell, and, thus, only nine credits may transfer. The remaining nine must be taken at Cornell but may be distributed in any combination of humanities, social sciences, or natural sciences provided at least three credits are taken (at Cornell or transferred from elsewhere) in each area. A maximum of six credits, but no more than four per semester, of distributive electives may be taken on an S-U basis. For more information on the distribution requirement, see the handbook available in the student services office, room 178 Statler Hall.

Eighteen credits in free electives may transfer.

Concentration
While completing the hotel elective courses, undergraduates in the school may select a concentration.

When students select a field of concentration, they should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of courses that will best fit their program.

Upon completion, the concentration will be noted on the transcript, provided a cumulative GPA of 3.0 in the concentration was attained.

Foreign Languages
Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, the second language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found in this book in the College of Arts and Sciences program description under the Modern Languages, Literature, and Linguistics section, and also under the section Advanced Placement for Freshmen.

Independent Study
Students may conduct independent study projects in any academic area of the school under the direction of a resident faculty member. Credit is arranged on an individual basis. To enroll in an independent study project, students must obtain written permission from the school before the add deadline. See H ADM 499 or 699 for more details.

Practice-Credit Requirement
As part of the degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice-credit requirement and submit verification thereof prior to registering for the last two semesters. Further details are set forth in the Practice Credit Handbook for Undergraduates in the School of Hotel Administration, available in the school’s Career Services Office, room 255 Statler Hall.

Management-Intern Program
Hotel School juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the management-intern program. Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced and students receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Sponsors include, but are not limited to, hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See H ADM 493 and 494 for more details. More information about the management intern program also is available in the Career Services Office, 255 Statler Hall.

Study Abroad
All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study.

Programs providing an opportunity to study in a foreign country and develop an awareness of the international component of the hospitality industry can contribute to each student’s total educational experience. Students in recent years have studied in Italy, Spain, France, England, Australia, and many other countries. Information on the study-abroad programs operating during the summer and academic year is available at the Cornell Abroad Office (in Uris Hall).

Students should discuss their plans with the school’s director of student services so that all petition and credit-evaluation procedures are followed.

Part-Time Study
Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or other extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last term of study. Further details on part-time study may be found in the school’s student handbook (available in room 174 Statler Hall).

Grading System
Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each term average as follows: A is equivalent to 4.0; B to 3.0, C to 2.0; D to 1.0; F to 0. For good standing, the student must maintain a minimum average of 2.0. A maximum of four credits each term may be taken on a “satisfactory-unsatisfactory” (S-U) basis. Students should be aware that a satisfactory grade equals “C-” or above and an unsatisfactory grade equals “D+” or lower.

Students whose term averages are at least 3.3 and who took at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean’s List.

GRADUATE CURRICULUM
The school's programs for advanced degrees include those of Master of Management in Hospitality, Master of Science, and Doctor of Philosophy. For further information on graduate programs, consult the school's graduate catalog (available in room 172 Statler Hall); contact the school's graduate services office in room 178 Statler Hall, telephone 255-3076. For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school student services office in room 178 Statler Hall, telephone 255-3076.

Required Program for Professional Master's Students
Required courses Credit
H ADM 701, Competitive Strategies for the Hospitality Industry 3
H ADM 702, Human Behavior in Organizations 3
H ADM 711, Human Resources Management 3
H ADM 721, Financial Economics 3
H ADM 722, Hospitality Financial Management 3
H ADM 731, Food and Beverage Management 3
H ADM 741, Marketing Management 3
H ADM 751, Properties Development and Planning 3
H ADM 761, MMH Managerial Communication 0
H ADM 771, Quantitative Methods 3
H ADM 772, Information Technology for Hospitality Managers 3
H ADM 791, Creating and Managing for Service Excellence 3
H ADM 793, Industry Mentorship Program 0
H ADM 794, Management Development Component I and II 0

Course Schedule Information
For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school student services office in room 178 Statler Hall, telephone 255-3076.

Total credits required for the Master of Management in Hospitality program 64

MANAGEMENT OPERATION COURSES

H ADM 100  Principles of Management
Fall and spring. 3 credits. Limited to non-hotel students. Elective. Not offered fall 2001. R. James.
An introductory survey course in management with orientation to the hospitality industry. The course is organized around the traditional management functions of planning, organizing, commanding, coordinating, and controlling.

H ADM 105  Introduction to Lodging
Fall and spring. 3 credits. Limited to hotel and sponsored internal transfer division students. Elective. R. McCarthy.

H ADM 102  Distinguished Management Lectures
Fall. 1 credit. Elective. D. Butler.
The Dean's Distinguished Lecture Series is a long-standing Hotel School tradition that provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. In its 40-year history, the Dean's Distinguished Lecture Series has hosted the most influential and accomplished leaders from every segment of the hospitality industry. Speakers share their views about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unparalleled opportunity to learn and question how hospitality leaders view the current and future status of the industry.

H ADM 109  Hospitality Management Seminar
Fall. 1 credit. Elective. D. Butler.
This course is designed to provide students with a comprehensive understanding of the operation and management of the hospitality industry. The course will begin with an overview of the industry and will focus on the managerial aspects of the industry. Topics include revenue management, forecasting, budgeting, measuring performance, transient versus group displacement, pricing and inventory management, service quality, ethics, and technology. Students will apply what they have learned in class while operating their own virtual 250-room hotel using a CHESS computer simulation. Guest lecturers will provide students with insight on various career opportunities in the industry.

H ADM 303  Club Management
Fall and spring. 3 credits. Limited to non-hotel students. Elective. R. James.
The study of private membership clubs and club administration. The application of current management principles in a not-for-profit environment is discussed and club management is compared to other areas of the hospitality industry. Topical coverage includes: tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and resource consideration; marketing, pricing policies, and quality standards. The deadline to drop is the mid-point of the course.

H ADM 306  Franchising in the Hospitality Industry
Fall. 3 credits. Not open to freshmen. Elective. M. Noden.
This course looks at relationships between franchisor and franchisee, advantages and disadvantages of franchising, and structure and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. Guest speakers from the franchising industry.

H ADM 401  Strategic Management
Fall and spring. 3 credits. Prerequisites: H ADM 105, 115, 211, and 321, or equivalents. Elective. R. Chase, T. Cullen, C. Enz.
This is a senior management, broadly based and encompassing course. It will incorporate almost all functional areas including marketing, human resources, finance, rooms operation, accounting, economics, and asset management. The issues of strategic management necessitate total enterprise and competitive perspectives. Strategic skills involve judging how relevant factors affect the business organization. The course will introduce a number of models, methods, and techniques used to develop strategic thought, to generate action plans, and to assess changes. These introductions and the course project will stress the need for continuous review of environmental opportunities to maximize the well being of all stakeholders. Because of the group nature of the course, the absolute drop deadlines are September 7 in the fall and January 25 in the spring.

H ADM 402  Hospitality Management Seminar
Fall. 1 credit. Limited to 30 seniors and graduate students by permission. Students will be expected to register for H ADM 102. Elective. D. Butler.
This course complements H ADM 102 by providing students an opportunity to personally interact with guest speakers, and to actively participate in roundtable discussions.
on issues relating to the hospitality industry. The open dialogue provides students with a better understanding of industry trends, challenges, and opportunities.

H ADM 403 Resort and Condominium Management
Fall. Students may enroll in first seven weeks, second seven weeks, or both. 2 credits. Limited to seniors and graduate students, others by permission of instructor. Mandatory attendance in all class periods. Elective. M. Noden.

First Seven Weeks: Resort Management: A lecture course in the development, operations, and management of the resort property. Resorts of various types, seasons, and economic levels are considered. Emphasis is on the financing and environmental considerations of the resort development cycle. Regulatory issues are examined, and relationships with host communities and governmental bodies are explored. Special consideration is given to the promotion of business, the provision of facilities, services and guest entertainment. Contract and noncontract relationships with the travel industry are reviewed.

Second Seven Weeks: Resort Condominium Management: A lecture course in the development, financing, and management of secondary-residential hotel condominiums. Contemporary state regulatory requirements, S.E.C. regulations and prospectus rules are reviewed for application in the managerial portfolio. Federal land use controls are examined and explained. Individual financing of units, and management contracts are fully reviewed, and students will be exposed to typical management contract requirements and protocols. Rental pooling and its effects upon management and owners will be fully explored. Applications of the condominium concept, including such by-products as time sharing, will be examined from a managerial perspective.

H ADM 404 Entrepreneurship
Fall and spring. 3 credits. Limited to 40 juniors, seniors, and graduate students. Prerequisite: H ADM 321 or equivalent. Elective. Not offered fall 2001. Faculty. Emphasizes starting a new business, not franchising or buying an existing business. Topics will cover how to conceptualize an idea, how to evaluate and articulate the plan, and how to sell the plan to investors, customers, partners, and employees. Students work in teams to develop and present a business plan to a panel of judges at the end of the course. Case studies, guest lecturers. Because of the group project nature of the course, the absolute drop deadline for all students is the last day of the first week of classes.

H ADM 405 Quality Planning in the Hospitality Industry
Spring. 3 credits. Limited to 25 seniors and graduate students. Prerequisites: all required hotel undergraduate courses at the 100, 200, and 300 levels. Elective. T. Hinkin. Focuses on the analysis of work processes and examines organizations from three perspectives: the customer, the employee, and management. Provides students with a systematic approach to identifying, prioritizing, and improving key job functions and work processes utilizing the tools of quality management. Readings, case analyses.

H ADM 407 Seminar in Hotel Operations
Spring. 3 credits. Limited to 25 juniors and seniors with permission of instructor. Estimated cost of field trip, $200. Elective. R. McCarthy. Seminar course applies management theory to actual hotel operations via semester-long interactions and visits with the department heads and general manager of a medium-size hotel. Field trip includes attendance at executive committee meetings, presentations by various department heads, and half-day "shadow assignments."

H ADM 408 Seminar in Casino Operations
Fall. 2 credits. Limited to hotel juniors and seniors. Estimated cost of field trip, $200. Elective. R. McCarthy. A vital part of the hospitality industry, casino gaming is one of the most exciting and fastest growing industries. This course focuses primarily on the operation and ownership of commercial casinos and the hotels associated to them. The course introduces students to the internal and external casino environment. The historical development of gaming in America to understand how the industry has evolved to its present form will be examined. By the end of the course students will possess an rudimental structure of a casino hotel, how it operates, and how it makes money. Students will also gain an understanding of the different companies that own casino hotels and the current issues facing these companies. Casino marketing strategies, player rating systems, the social and economic impact of gaming and the various regulatory environments within which casinos operate will be examined. Students will learn how common casino games are played, and come to understand the mathematics of the various games. Students will build on their food and beverage and hotel knowledge to better understand the specific challenges facing casino hotel operations.

H ADM 409 Airline Management
Spring. 3 credits. Elective. Offered alternate years. Next offered 2003, 2005. M. Noden. Focuses on domestic and international airline industries and explores both pre- and post-regulatory climates. Emphasis is on dynamic organizational change in response to fluctuating economic and legal conditions. Topics include airline organization, comparative corporate strategies, marketing and distribution networks, operations and service management, union relations, finance, government regulation, and air transport. Case studies and guest lecturers will be used. Also, using the computer-driven simulation exercise called AIRLINE, student teams will operate a small regional carrier.

H ADM 602 Managing Across Cultural Boundaries
Spring. 3 credits. First seven weeks of the semester. Limited to seniors with H ADM 121, 165, 321, 401, or graduate student status. The deadline to drop is the midpoint of the course. Elective. J. Katz. Contributes to the development of knowledge and skills needed to manage effectively in other cultures. Objectives are to develop awareness of the pervasive and hidden influence of culture on behavior, particularly with respect to management and management practices; to develop familiarity with the types of situations and issues that often confront managers working in foreign countries; and to develop an appreciation of the impact on personal behavior of living and working in another culture. Readings, case studies.

H ADM 701 Competitive Strategies for the Hospitality Industry
Fall. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. T. Cullen. An integration and application of management concepts, theories, and practices to business situations. Students analyze current problems, formulate strategies, and implement policies.

H ADM 702 Human Behavior in Organizations
Fall. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. T. Hinkin. Focuses on manager and member behavior in organizations. Ideas and models about persons, interpersonal relationships, small groups, and organizations will provide the basis for understanding the dynamics of effective organizational behavior. Learning will occur primarily through readings, case discussions, and self-reflective teamwork.

[H ADM 801 Seminar in Hospitality and Service Inquiry
Fall. 3 credits. Elective. Offered alternate years. Next offered 2002, 2004. C. Lundberg. This seminar introduces academic graduate students to the major alternative ways of conceptualizing and designing research, and acquiring, interpreting, and disseminating findings. The implications and consequences of one's choices and trade-offs among the alternative philosophical, ideological, and pragmatic perspectives and approaches to inquiry will be emphasized.]

HUMAN RESOURCES MANAGEMENT

H ADM 115 Organizational Behavior and Interpersonal Skills
Fall and spring. 3 credits. Required. C. Lundberg, K. Walsh. Focuses on managing people in the workplace. Students develop theoretical lenses for understanding people and organizations and practical tools for accomplishing personal and organizational goals. Topics include individual differences, conflict management, problem solving, power and influence, motivation, leadership, coaching and counseling, and group process. Self-assessments, experiential exercises, reading, discussions, papers, and group activities.

H ADM 210 The Management of Human Resources
Fall and spring. 3 credits. Limited to 40 non-hotel students, no freshmen. Elective. Not offered fall 2001. Faculty. Examines the role of human resources management, starting with an introduction to the personnel function and an analysis of the social, legal, international, and competitive factors. Examines recruitment, selection, training, motivation, development, compensation, performance appraisal, and labor relations. Class discussion and case analyses are emphasized.
H ADM 211 Human Resources Management
Fall and spring. 3 credits. Limited to 60 hotel students per lecture, no freshmen or graduate students. Prerequisites: H ADM 105 and 115 (co-registration in 115 allowed). Required. M. Sturman, B. Tracey. Provides students with an overview of the human resources management (HRM) field and shows them the link between specific HRM activities and substantive issues/situations they will face as future hospitality managers. Integrates information and knowledge acquired in previous courses. Students will examine the interrelationship between compensation and benefit activities and job design, motivation, and reward structures. Upon completion, students will (1) understand the interrelationship of HRM activities, as well as the relationship between HRM and other functional areas within hospitality organizations; and (2) understand how to effectively attract, retain, and motivate hospitality employees.

H ADM 313 Training in the Hospitality Industry
Fall. 3 credits. Limited to 24 students. Prerequisite: H ADM 211. Estimated cost of field trip participant: B. Tracy. Training is one of the primary activities for coping with a continuously changing environment. It is also one of the fundamental responsibilities of all hospitality managers. In this course, students learn the major theoretical and practical issues associated with program design, development, implementation, and evaluation. In addition, students apply their knowledge in a semester-long project with one or more hospitality organizations.

H ADM 411 Negotiations in the Hospitality Industry
Spring. 3 credits. Limited to 30 undergraduate students. Prerequisites: H ADM 115, or equivalent. Elective. T. Simons. Negotiation skills are crucial to business success. This course provides hands-on experience in negotiation in the hospitality field. Writing, role-playing exercises, and discussions are used to develop students' negotiation skills. Students will improve their comfort level with negotiating as well as develop their personal style. Students will also learn how to adjust their negotiating style to respond appropriately to different personalities and negotiation tactics.

H ADM 412 Managing Organizational Change
Spring. 3 credits. Prerequisite: H ADM 211 or equivalent. Elective. C. Lundberg. Facilitating and managing change in organizations. Topics include change processes, organizational diagnosis, action planning, and consultancy. Individual and team projects.

H ADM 415 Managerial Leadership in the 21st Century
Spring. 1 credit. Weekend course. Dates TBA. Elective. Required notebook $25. K. Blanchard. Students become participant observers in their own lives by studying the field of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop quality relationships between themselves and the people they support and depend upon (boss, staff, internal peer/associates, and customers). Because of the popularity of this class, priority will be given in the following order: seniors, juniors, non-employee extramural students, sophomores, freshmen, and Cornell employees. The absolute deadline for adding or dropping the course is 12:00 noon on the first day of class.

H ADM 416 Special Studies in the Management of Human Resources: Service Cultures
Spring. 2 credits. Limited to juniors, seniors, and graduate students. Prerequisite: H ADM 211 or equivalent. Elective. C. Lundberg.

First Seven Weeks—Service Cultures. This course will assist students in understanding the organization and practice of service-driven operations. Emphasis will be placed on the design and delivery of human resource initiatives aimed at creating effective service cultures and improving organizational performance. Topics covered include the management of employment, monitoring and measuring the corporate culture for service, and the linkage of human resource practices to service vision, organizational design, and strategic objectives. Students will develop and conduct a culture audit in a business. The seminar format is intended to encourage class discussion, case analysis, and field experience.

Second Seven Weeks—Service Organization Design. Since the earliest organizations, questions of how to best organize activities and resources have challenged managers. Traditional structures, e.g., those organized by functions, products, territories, seem to work less effectively as time goes on. The contemporary management challenge is to design and use a more responsive, and flexible organizations—especially in the service sector. It is important to understand the effects of different organizational designs and systems on behavior and efficiency. This course will therefore carefully explore the components, processes, and issues associated with known and probable design options. We will operate as a seminar with several application classes.

H ADM 418 Innovation and Dynamic Management (also ARME 328)
Spring. 3 credits. Limited to juniors and seniors. Elective. C. Enz. A university-wide course that investigates the innovation process and how to develop good management practices. Innovative firms are service-driven operations. Emphasis will be placed on examining how businesses and managers can build profitable organizations through a process of rethinking, reevaluating, and discarding existing practices. The class will operate as a seminar with several hands-on experiences in innovation.

H ADM 611 Negotiations in the Hospitality Industry
Spring. 3 credits. Limited to 30 graduate students. Prerequisite: H ADM 702 or equivalent. Elective. T. Simons.

Negotiation skills are crucial to business success. This course provides hands-on experience in negotiation in the hospitality field. Writing, role-playing exercises, and discussions are used to develop students' negotiation skills. Students will improve their comfort level with negotiating as well as develop their personal style. Students will also learn how to adjust their negotiating style to respond appropriately to different personalities and negotiation tactics.

H ADM 614 Leadership and Small Group Processes
Fall. 3 credits. Limited to 30 hotel seniors and graduate students. Elective. T. Simons. Theoretical and practical applications of organizational behavior will be explored through lectures, case studies, and management games and exercises. Students will participate in experiential labs aimed at enhancing their effectiveness as members or leaders of groups. Topics include leadership, decision making, motivation, power, and organizational change.

H ADM 711 Human Resources Management
Spring. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. B. Tracey. Addresses the policies and procedures that are required to attract, develop, and retain quality employees. Attention will be given to both strategies and tactics that influence HR decisions, as well as individual and organizational performance. A variety of learning methodologies will be used and students will have the opportunity to apply knowledge and skills in a semester-long project.

FINANCIAL MANAGEMENT

H ADM 120 Personal Financial Planning
Fall. 2 credits. Limited to non-hotel students. Elective. L. Hensley. An overview of personal financial planning including money management, tax planning, use of credit, insurance, investing, retirement, and estate planning.

H ADM 121 Financial Accounting
Fall and spring. 3 credits. Limited to hotel students. Required. D. Dittman. The basic principles of accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 122 Financial Accounting Principles
Fall and spring. 3 credits. Limited to non-hotel students. Elective. P. Sinha. An in-depth introduction to the principles of financial accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 125 Finance
Fall and spring. 3 credits. Limited to non-hotel students. Elective. L. Canina. This course examines in depth corporate finance topics including time value of money, risk and return, valuation models, cost of capital, capital budgeting, capital structure, and dividend policy.

H ADM 221 Managerial Accounting
Fall. 3 credits. Prerequisites: H ADM 121 and 174, or equivalents. Required. G. Potter. The focus of this course is on the use of accounting information for management decision making and control. Topics include
product costing, management control systems, and performance measurement. There will be one common exam at the end of the semester.

H ADM 222 Finance
Spring. 3 credits. Prerequisite: H ADM 121, 221, or equivalents. Required. S. Carvell.
Provides students with accounting cash flow information for financial planning, capital structure decisions, capital budgeting evaluation, and short-term and long-term financial decision making. Topics include current asset management, short-term financing, capital budgeting, long-term financing, conversion, and problems in international finance.

H ADM 321 Hospitality Financial Management
Fall. 3 credits. Prerequisites: H ADM 121, 221, and 222, or permission of instructor. Required. N. Geller.
Integrates the areas of financial accounting, managerial accounting, and finance and applies the interpretive and analytical skills of each to hospitality-industry situations. Topics include uniform system of accounts, revenue and expense tracking and internal control, accounting systems, ratio and comparative analysis, cost-volume-profit analysis, pricing, operational budgeting, project capital budgeting, decision making, equity and debt financing structures, and operating agreement forms.

H ADM 322 Principles of Investment Management
Fall and spring. Limited to non-hotel students. Hotel students or those with a background in economics, quantitative analysis, and computers are advised to enroll in H ADM 424. Elective.
C. Gadzinski
An introductory course covering institutional and analytical aspects of security analysis and investment portfolio management including valuation models and practical strategies for stocks, bonds, and mutual fund selection and trading. Computer-assisted analysis, including student participation in an investment game, is discussed and applied in a realistic manner.

H ADM 323 Hospitality Real-Estate Finance
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: H ADM 321 or equivalent. Elective. J. deRooes, D. Quan.
Focusses on real estate financing for hospitality-oriented projects. Topics include methods of measuring rates of return, feasibility and appraisal processes, equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, participating, convertible, and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises; and trends in international hotel franchising. Presentations by hospitality industry real estate practitioners will be made.

H ADM 324 International Financial Management
Fall and spring. 3 credits. Prerequisites: H ADM 121, 221, 222, or equivalents, and micro and macroeconomics. Elective.
D. Ferguson
Focusses on the international aspects of financial management important to the hospitality industry with the intention of providing an understanding of and confidence in dealing with the economic issues faced by the multinational corporation. Areas covered are the international financial management environment, the management of foreign exchange risk, international asset management, and international sources of funds.

H ADM 326 Corporate Finance
Fall. 3 credits. Limited to juniors and seniors. Prerequisite: H ADM 321. Elective.
S. Carwell
In-depth analysis of corporate financial management, including financing alternatives and capital structure decisions, cash management, capital budgeting decisions, risk analysis, and working capital management. Although approached from the perspective of preventing fraud and embezzlement; the design and distribution of production, acquisition, and supervisory tasks are studied in a manner that will ensure effective internal control and verifiable audit trails. Case studies.

H ADM 421 Internal Control in Hospitality Operations
Spring. 3 credits. Limited to 30 students. Prerequisite: H ADM 321, 722, or equivalents. Elective. N. Geller.
Hotel and restaurant operations are analyzed from the perspective of preventing fraud and embezzlement. The design and distribution of production, acquisition, and supervisory tasks are studied in a manner that will ensure effective internal control and verifiable audit trails. Case studies.

H ADM 422 Taxation and Management Decisions
Fall. 3 credits. Limited to 50 juniors, seniors, and graduate students. Elective.
A. Sciamabba
Introduction to tax advantages and disadvantages of various organizational structures, including corporations, partnerships, and subchapter "S" corporations; financial information reporting to tax authorities and shareholders and how they differ; use of depreciation methods to achieve tax reductions; syndication techniques; and the role tax laws play in promoting private investments and development.

H ADM 423 Financial Management Policy
Fall and spring. 3 credits. Limited to 30 students; non-hotel students by permission of instructor. Prerequisite: H ADM 326 or 721. Elective. S. Gibson.
Covers numerous policy issues in financial management. Each of these issues will affect the potential profitability and survivability of the firm under conditions of uncertainty. The course will concentrate on nine major policy issues including capital structure, dividend policy, lease vs. buy analysis, and working capital financing.

H ADM 424 Security Analysis and Portfolio Management
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: macro and micro economics, introductory course in statistics and/or quantitative analysis, and knowledge of computers beyond word processing. Elective.
C. Gadzinski
An in-depth analysis of financial instruments, investments and portfolio management including fixed income, equity securities, advanced valuation models, risk-return analysis, screening techniques, asset allocation, and active portfolio management and trading. Recent developments in investments research are covered, and large financial databases are used for practical applications of the concepts and techniques presented.

H ADM 525 Securitization and Structured Financial Products
Fall. 3 credits. Limited to seniors and graduate students. Prerequisites: H ADM 222 or 721 and 424, or by permission. Elective. D. Quan.
Deals with the structure and analysis of securitized financial products with an emphasis on residential and commercial mortgage-backed securities (MBS). Intended for those who wish to acquire a working knowledge in the analysis of such securities (such as collateralized securities) and a deep understanding of the securitization process. Necessitates a highly analytic and quantitative approach. Students are required to have a strong background in finance and economics.

H ADM 528 Advanced Topics in Real Estate and Finance
Spring. First seven weeks. 2 credits. Limited to 20 seniors and graduate students or permission of the instructor.
Prerequisite: H ADM 323, H ADM 458, or H ADM 621. Elective.
This is an intense seven-week course which takes an analytically oriented approach to understanding advanced real estate finance topics. It is intended for students who are highly motivated by new techniques and are not afraid of mathematical rigor. The course emphasizes the use of financial and economic principles and makes extensive use of statistics and mathematics. Students are required to have a solid background in the basics of finance, microeconomics, and macroeconomics. Note: the deadline to drop a seven-week course is the mid-point of the course.

H ADM 621 Hospitality Real Estate Finance
Spring. 3 credits. Limited to graduate students. Prerequisite(s): a course in principles of corporate finance (for graduate students, HA 721 or its equivalent; for undergraduate students, HA 722 and permission). Elective. J. deRooes.
For description, see H ADM 323. This graduate course includes the H ADM 323 lectures plus an hour-long discussion session each week which features guest speakers from industry, faculty from other colleges, and case studies.

H ADM 622 Capital Investment Analysis
Spring. 3 credits. Prerequisite(s): a course in principles of corporate finance (for graduate students, HA 721 or its equivalent; for undergraduate students, HA 722 and permission). Elective. D. Quan.
Students learn about the capital budgeting process and acquire specific skills enabling them to evaluate capital projects; e.g., net present value, discounted cash flow and risk analysis. For the latter, students learn how equity and debt securities are priced in a dynamic capital market and how the firm's capital cost and structure are linked with shareholder wealth maximization. Cases are used to illustrate theory and industry guest speakers conduct occasional seminars.

H ADM 624 Reporting and Analysis for Financial Statements
Fall and spring. 3 credits. Limited to 30 seniors and graduate students. Elective. P. Sinha.
This course is designed to provide understanding of the basic accounting model, the underlying concepts for income measurement, and the accounting rules for the valuation of assets, liabilities, and owners' equity. Emphasis will be placed on understanding the economic substance of the transactions and the implications of using alternate accounting rules on the resulting numbers, especially in assessing the "earnings quality." Focus is placed on an outsider's view of the company, and the students should be able to evaluate and interpret the published financial information, specifically in the context of valuation, debt and compensation contracts, and credit assessment.

H ADM 721 Financial Economics
Fall. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of preenrollment.

L. Canina

Integrates corporate finance with the framework of value maximization and the competitive analysis of product and factor markets in the hospitality industry. Topics include short-term asset management, strategic valuation, capital budgeting analysis, capital structure decisions, leasing, and international financial management.

H ADM 722 Hospitality Financial Management
Spring. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of preenrollment.

G. Potter

Covers both managerial accounting and financial management as they are practiced in the hospitality industry. Topics include hospitality accounting systems and internal control, financial statement analysis and interpretation, operational analysis, cost behavior, budgeting and forecasting, pricing, and feasibility analysis.

FOOD AND BEVERAGE MANAGEMENT

H ADM 136 Introduction to Food Service Operations
Fall and spring. 4 credits. Limited to hotel students. Required. G. Norkus, D. Reynolds, A. Susskind.

An introduction to the principles of food and beverage management, beginning with an overview of the food service industry at large. Attention is focused on major industry segments, business practices, and trends. Detailed consideration is given to the components of the food service system: marketing, menu planning, logistical support, production, sales forecasting, controlling, and quality assurance. Product and systems differentiation in various industry segments is emphasized.

H ADM 230 Introduction to Culinary Arts
Fall and spring. 2 credits. Limited to non-hotel students. Priority given to seniors and graduate students. S-U grades only. Attendance at first class is mandatory.

Absolute drop deadline for fall is September 7; spring drop deadline is February 1. Elective. There will be a course fee of $60 which includes the cost of a uniform and uniform cleaning. S. Gould, T. O'Connor, R. White.

Studies of food groups, their respective methods of preparation, cooking, presentation, and holding. Designed for non-hotel students interested in learning the professional approach to food preparation and service with hands-on practice. Food product identification, preparation and service methods, and professional language of food and cooking.

H ADM 236 Culinary Theory and Practice
Fall and spring. 4 credits. Prerequisite: H ADM 136. Attendance at first class is mandatory. Required. T. O'Connor, R. Spies, R. White.

Designed to introduce the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety and sanitation. Students will prepare recipes, menus, and production schedules and will develop the ability to recognize properly prepared foods by preparing, tasting, and evaluating foods. They will also plan menu and food recipes and produce them in a final project.

H ADM 332 Reviewing the Restaurant: The Consumer's View of the Dining Experience
Fall. 3 credits. Field trip $325. Limited to 20 students with written permission.

Prerequisites: H ADM 165 and 335, or permission of the instructor. Elective. G. Potter.

Trains the student to perform a comprehensive analysis of the restaurant dining experience. The role of the restaurant critic/reviewer will be discussed in depth. The student will examine and enhance his or her critical writing skills, as the course will require each student to complete approximately ten restaurant reviews.

H ADM 333 Current Issues in Food Safety and Sanitation
Fall. 2 credits. Three-credit registration limited to 12 students. Elective. Not offered fall 2001. Faculty.

A study of current issues in food safety and sanitation procedures and regulations that affect managerial decisions in food service and hospitality operations. Topics include risk assessment and hazard analysis; legal responsibilities related to food, food handlers, equipment and facilities; food-borne illness and other public-health concerns; and certification and training. Preparation for NIFI/NRA certification and the Food Protection (ETS) certification exam (optional) is offered.

H ADM 334 Wine and Food Pairing Principles and Promotion
Spring. 2 credits. Limited to 20 hotel juniors, seniors and graduate students. No out of college registration is permitted.

Prerequisites: H ADM 165 and permission of instructor. Elective. G. Pezzotti.

Focuses on the pairing and marketing of wine and food. Students develop an understanding of regional and varietal wine styles; how foods' flavors can change a wine's flavor, and the promotion of wine and food. Topics include wine and food pairing principles, cuisines and their flavor components, food trends in restaurants and in the home, special event planning, and wine list development.

H ADM 335 Restaurant Management
Fall and spring. 4 credits. Limited to 30 hotel school students per lab; others by permission of instructor. Prerequisites: H ADM 136 and 236. Approximate cost of utensils and manual, $85. Once enrolled, students may not drop the course without permission of instructor. Required. D. D'Aprea.

H ADM 338 Seminar in Culture and Cuisine
Fall. 3 credits. Limited to 20 students. Prerequisites: H ADM 165 and 230, or permission of instructor. Elective. R. Spies.

Explores various cuisines in terms of history, traditions, and foods peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines, enabling students to make comparisons among the foodways of different cultures. Students prepare research reports and oral presentations, and design menus and orchestrate their preparation.

H ADM 339 Wine in Culture and History
Fall and spring. 2 credits. Limited to 200 students. Fall regions: Germany, Italy, and Champagne. Spring regions: Bordeaux, Burgundy, and California. Elective. A. Nash.

This course provides students a cultural and historical perspective on wine and its place in society. Through lectures, videos, guided discussions, and readings students examine the history, people, culture, and production of wine in the world's great wine regions. Also covered are wine and health issues, wine and food pairing, and retail wine buying and storage strategies. Different regions are covered in the fall and spring so the course may be taken both terms. Neither term is a prerequisite for the other, nor are H ADM 430 Introduction to Wines and H ADM 339 prerequisites for the other. Students may not add this class after week two.

H ADM 430 Introduction to Wines
Fall and spring. 2 credits. Wine glass kit and course fee, $30.00. Limited to hotel school juniors, seniors, and graduate students, and seniors and graduate students in all other colleges. Hotel students encouraged to enroll in the fall. Students are exempt from the 21-year old age requirement under Section 65 of New York State Law. S-U grades only. Elective. S. Mutkoski, A. Nash.

An introduction to the major wine-producing regions of the world and what the consumer needs to know to purchase wines, spirits, and beers at retail outlets and in a restaurant setting. Topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wines, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.
I the course. The student must then follow the course and because a product is consumed, the absolute drop deadline for all students is September 14 in the fall and February 1, 2001 in the spring."

H ADM 431 Seminar in Independent Restaurant Operations Management
Fall and spring. 3 credits. Five field trips, $325. Limited to 20 students, with written permission of instructor. Elective.
G. Pezzotti.

Designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Students visit and analyze various independently owned restaurant operations. Analysis covers the restaurant’s concept, organization, ownership, management, physical structure, staff, front- and back-of-the-house operations, and fiscal integrity. Readings relevant to current topics in the restaurant industry are required. Classes alternate weekly with field trips and seminar/case presentations.

H ADM 432 Contemporary Healthy Foods
Fall. 3 credits. Field trip, $50. Limited to 25 seniors and graduate students, or by permission of instructor. Prerequisite: H ADM 335 or equivalent. Elective.
M. Tabacchi.
Builds a greater awareness and understanding among nutrition and food service professionals of the origins and manifestations of today’s health-conscious and educated food service patron. Topics include the marriage of nutrition and the cuisine demanded by today’s consumer, fresh produce, lean meats, and lack of fabricated diet foods. Menu design includes creativity and nutrient density of foods. Major emphasis is on preparation, marketing, merchandising, and selling of healthy menus in Statler’s outlets.

H ADM 433 Contract Services Management
Fall. 3 credits. Field trips, $25–50. Limited to 25 juniors, seniors, and graduate students. Prerequisites: H ADM 136 and 236. Elective.
D. Reynolds.
Operations in business and industry, healthcare, and education, as well as other on-site segments, represent more than one-fourth of total restaurant industry revenues. Addresses the major differences between on-site food service management and traditional restaurant management, with particular focus on organizational structure, competitive challenges, revenue enhancement/cost containment, labor issues, systems design, and branding. Readings, discussions with industry leaders, cases, site visits, and an integrated research project.

H ADM 434 Desserts Merchandising
Spring. 3 credits. Limited to 25 students. Prerequisite: H ADM 230, 235, or permission of the instructor. Elective.
R. White.

This course is designed especially for those who want to manage the dessert function of a restaurant or hotel. Lectures emphasize current trends in dessert menus as well as profitability considerations. Lab work concentrates on techniques necessary to produce a high-quality, profitable dessert menu.

H ADM 435 Selection, Procurement, and Supply Management
Fall. 2 credits. Students may enroll in Lecture 1 or Lecture 2, or both. Lec. 1: First seven weeks: Selection, Procurement and Supply Management I. Limited to 30 Hotel juniors, seniors, and graduate students, others by permission. First seven weeks of the semester, drop deadline is September 6, 2001. Lec. 2: Second seven weeks of the semester. Selection, Procurement and Supply Management II. Limited to 12 Hotel juniors, seniors, and graduate students, others by permission. Second seven weeks of the semester, drop deadline is October 25, 2001. Prerequisites: H ADM 136 and 236, or 731. Elective. G. Norkus.

Lec 01: Selection, Procurement and Supply Management I. This course deals with contemporary management issues related to the procurement activities of the hospitality industry. The course focuses on both the food distribution industry and the hospitality industry so that students understand the role that the distributor plays in the movement of food and supplies from the producer to the hospitality operator, and how the creation of distributor partnerships serves to improve efficiencies and reduce costs. Topics covered include: distribution channels and intermediaries in the supply chain, food distributor financial statement analysis, evaluation and selection of suppliers; buying strategies, purchase timing and inventory management; and the emerging role of the Internet and e-procurement service providers.

Lec 02: Selection, Procurement and Supply Management II. This course deals with the major "center of the plate" commodities used by the foodservice industry: beef, veal, lamb, pork, poultry, game, and seafood. The course focuses on the selection decisions that students will be faced with when managing the procurement of these products in a foodservice operation. Topics covered include: composition and structure; government inspection and grading activities; product identification, factors affecting palatability and safety, yield tests, cost analysis of fabrication; and sensory evaluation.

H ADM 436 Beverage Management
Fall and spring. 2 credits. Limited to 25 hotel school juniors, seniors, and graduate students. No out of college registration is permitted. Prerequisite: H ADM 430 (co-registration is not allowed). Elective.
S. Mutkoski, A. Nash.
Designed for students who intend to pursue food and beverage as a career. Deals specifically with the management of beverage operations. Lectures develop skills in and implementation, tactics and market responses, international expansion, breakpoints and breakthrough thinking. Each class period will be spent in student-organized discourse and exchange based upon their assigned written case analysis. Grading will be on individual case presentations, class participation and written case assignments.

H ADM 437 Specialty Food and Beverage Operations
Spring. 3 credits. Limited to 20 juniors, seniors, and graduate students. Prerequisite: H ADM 335 or 731. Elective.
G. Pezzotti, H. Winslow.

Designed for students with a strong food and beverage orientation, especially students considering careers in the hotel food and beverage environment. Students will anticipate interacting with current culinary trends. Working in groups, students market, organize, plan, produce, serve, and prepare the financial analysis and accounting relative to four guest chef specialty production nights for the Cornell community utilizing the Statler Hotel facility. Final project.

H ADM 438 Catering Management
Spring. 2 credits. Field trip, $180. Limited to 25 students. Prerequisite: H ADM 236 or permission of instructor. Elective.
R. Spies.
Examines on- and off-premise catering for business and social functions, as well as sports events and office catering. Topics include the organizational structure of catering operations; legal aspects of catering businesses; menu design for special functions and its operational implications; marketing from the catering provider’s perspective; function planning and management, staff recruitment, training, and supervision; and post-event analysis. Site visits and analyses of actual catering operations.

H ADM 530 Anheuser-Busch Seminar in Quality Brewing and Fine Beer
Fall. 1 credit. First 7 weeks of the semester. Prerequisite: H ADM 430. Elective. Local field trip, no cost. The deadline to drop is the mid-point of the course. G. Pezzotti.

Designed for upper-level students who intend to pursue food and beverage careers. Serves to advance one’s knowledge about beers in terms of managing such products in a restaurant setting or other food service outlet. Topics include the brewing process, sensory aspects of beer, international beer types and styles, marketing malt products, purchasing and distribution, storage and service, beer and food pairings, staff training and education, cost controls, and third party liability issues.

H ADM 631 Case Studies in Multi-unit Restaurant Management
Spring. 3 credits. Limited to 20 graduate students, seniors by permission. Elective. Faculty.
Case studies of multi-unit restaurant organizations will focus on topics such as: new venture planning, rapid growth and organizational change, market identification, service delivery and design, consumer demand, corporate culture, production planning and operations management, strategic planning and implementation, tactics and market responses, international expansion, breakpoints and breakthrough thinking. Each class period will be spent in student-organized discourse and exchange based upon their assigned written case analysis. Grading will be on individual case presentations, class participation and written case assignments.

H ADM 632 Spa and Spa Hotel and Resort Development and Management
Fall. 3 credits. Limited to 30 seniors and graduate students. Two field trips, $75–100. Prerequisite: previous courses in food and beverage management and marketing. Elective. M. Tabacchi.
This course emphasizes the development management and marketing aspects of spas, health clubs, and spa resorts. Topics include feasibility of success and marketing research necessary to establish new spas, design of menus, mental and physical fitness programs,
An introductory course in the study of tourism. The origins and evolution of contemporary tourism are examined. Students are familiarized with the various supply components of the tourism industrial base and their integration on an international scale. The effects of mass-volume tourism demand on destination development are explored through the use of selected limited case studies. Guest lectures highlight the economic operations and effects of tourism in both the public and private sectors.

H ADM 345 Hospitality Sales
Fall and spring. 3 credits. Limited to 24 students. Prerequisite: H ADM 243, 741, or equivalent. Elective. J. Sigauw.

An in-depth study of the promotional tool of personal selling, with an emphasis on identifying and meeting the needs of the customer. Course material encourages the use of intuition, judgment, logic, problem-solving methodology, and other tools as part of an overall sales mix. Class sessions involve lectures, role playing, videos, presentations, and guest lectures.

H ADM 347 Consumer Behavior
Spring. 3 credits. Limited to 45 juniors and seniors. Prerequisite: an introductory principles of marketing or marketing management course. Elective. M. Lynn.

Helps students become better at understanding, predicting, and influencing consumer behavior. Topics are motivation, perception, learning, decision making, persuasion, compliance, geo-demographics, and psychographics. Applications of the material to hospitality marketing issues such as guest frequency programs, menu design, advertising, personal selling, and promotion strategy will be stressed through class exercises, a term paper, and essay exams.

H ADM 442 Strategic Marketing
Fall. 3 credits. Limited to seniors. Prerequisite: a previous marketing course. Elective. C. Dev.

Offers theoretical and practical approaches addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles will be learned through lectures, discussion, case studies, and development of a strategic marketing report.

H ADM 444 Tourism I
Spring. 3 credits. Limited to 40 students. Prerequisite: a previous marketing course or permission of instructor. Elective. M. Noden.

An advanced course in the study of tourism. Emphasis is placed on the development of the tourism industrial base and development and financing of superstructure and infrastructure. Students are expected to engage in a wide range of discussions and analysis of the effects of tourists on various environments in social and economic terms. Case studies, occasional guest lectures.

H ADM 445 Services Marketing
Fall. 3 credits. Limited to 40 students. Prerequisite: a previous marketing course or permission of instructor. Elective. L. Renaghan.

Students preparing for management positions will develop an understanding of services marketing principles applicable to the hospitality industry. Topics include marketing strategies of service firms, new marketing approaches, and the reformulation of traditional marketing principles from consumers and industrial goods marketing. Case studies, guest speakers.

H ADM 446 Marketing Planning for Hotels
Fall. 3 credits. Prerequisites: H ADM 243, 741, or equivalent. Elective. L. Renaghan.

Students learn about the key variables in property-level management and their proper application in developing a marketing plan, e.g., marketing intelligence, demand analysis, supply and competitor analysis, segmentation analysis, resource allocation, sales strategies, and measurement of results. Test material, cases, relevant articles, lectures, and key speakers. Upon completion of the course, the student should be able to design, develop, and implement a comprehensive, targeted, and action-oriented marketing plan for a lodging property.

H ADM 447 Channels of Distribution in Tourism
Spring. 3 credits. Prerequisite: H ADM 243. Elective. M. Noden.

Examines the major elements of the structure, arrangement, management, and control of the channels of distribution in the tourism industries. Topics include emerging trends in electronic distribution, organizational structures of distributive consortia, and their effectiveness in service distribution. Significant readings, guest lectures.

H ADM 448 Marketing Communications
Spring. 3 credits. Prerequisite: a previous marketing course. Elective. C. Dev.

Provides students with a managerial understanding of the effective use of a variety of marketing communication media, including advertising, sales promotion, public relations, etc. Hospitality industry emphasized.

H ADM 641 Marketing Decision Models for Service Firms
Fall. 3 credits. Limited to 20 seniors and graduate students. Prerequisite: a previous marketing course and an introductory course in quantitative methods for management. Elective. Not offered fall 2001. Faculty.

Introduces students to advanced data analysis and modeling methods used for decision making in hospitality marketing.

H ADM 642 Strategic Marketing
Fall. 3 credits. Limited to graduate students. Prerequisite: a previous marketing course and permission of instructor. Elective. C. Dev.

Offers theoretical and practical approaches to addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles will be learned through lectures, discussion, and development of a strategic marketing report.

H ADM 643 Marketing Research
Fall and spring. 3 credits. Limited to 20 graduate students. Prerequisites: introductory principles of marketing or marketing management course and an introductory course in quantitative methods for management. Elective. Not offered fall 2001. Faculty.

This course provides an understanding of several analytical tools that can facilitate marketing decision making. Students will learn techniques for segmenting markets, identifying brand positioning, and developing and
revising product concepts. They will also learn how to develop reliable and valid instruments for measuring consumer reactions. The overall goal is to help future managers develop skills that will enable them to interact intelligently with information providers and to be better decision-makers.

H ADM 644 Food and Beverage Marketing Strategy
Spring. 3 credits. Limited to graduate students, seniors by permission. Prerequisite: prior 3-credit marketing course. Elective. Faculty.

Focuses on how to apply marketing, sales, and merchandising techniques to the commercial food and beverage industry. Addresses developing a market segmentation based on understanding the needs and wants of potential target markets, translating needs and wants into a viable food service concept, positioning strategy, and marketing strategies used to maintain and increase sales and market share. Recitation and analysis involves substantial use of the Consumer Report on Eating Share Trends (CREST) database.

H ADM 645 Services Marketing
Spring. 3 credits. Limited to graduate students. Prerequisite: previous marketing course, or permission of instructor. Elective. L. Renaghan.

Helps students preparing for ownership or management positions develop an understanding of services marketing principles applicable across the entire service sector. Marketing strategies of service firms from various service industries will be evaluated. New marketing approaches uniquely applicable to services are considered as well as the reformulation of traditional marketing principles from consumers and industrial goods marketing. Case studies, guest speakers.

H ADM 646 Marketing Planning for Hotels
Fall. 3 credits. Limited to graduate students. Prerequisite: H ADM 243, 741, or equivalent. Elective. Not offered fall 2001. Faculty.

For description, see 446. This course includes the H ADM 446 lectures plus a theoretical paper.

H ADM 647 Consumer Behavior

For description, see H ADM 347.

H ADM 741 Marketing Management
Spring. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. C. Dev.

Deals with the management of the marketing function in hospitality enterprises. Primary objectives are to introduce students to the basic concepts and principles underlying marketing decision making and to provide the skills needed to analyze and understand complex marketing situations in order to plan and implement marketing programs.

PROPERTY ASSET MANAGEMENT

H ADM 255 Hotel Development and Planning
Spring. 3 credits. Limited to 20 sophomores, juniors, and seniors per section. Required. R. Penner, S. Robson.

An introduction and management overview of the problems and opportunities inherent in the development and planning of hospitality facilities. Topics include the project development sequence; conceptual and space planning; architectural design criteria, construction management; the interpretation of architectural design and consultant drawings. Emphasis is on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

H ADM 350 Real Estate Management
Fall. 2 credits. First 7 weeks of the semester. Elective. Not offered fall 2001. J. deRoos

Introductory course designed for students interested in learning the principles of property management for residential and commercial real estate. Lectures will provide an overview of the different aspects of property management such as leases and management contracts (including landlord/tenant issues), accounting and finance, staffing, and building operations. Case studies.

H ADM 351 Hospitality Facilities Design
Fall. 4 credits. Prerequisite: H ADM 255 or 751 or permission of instructor. Elective. R. Penner, R. Redlin.

A lecture-studio course dealing with property development, planning, and design by focusing on the interpretation and analysis of hotel plans. Students learn basic graphic techniques and apply them to planning problems for hospitality facilities. Final project.

H ADM 352 Hotel Planning and Interior Design
Spring. 3 credits. Field trip, $250; drawing supplies, $100. Limited to 18 students. Prerequisite: H ADM 351 or permission of instructor. Elective. R. Penner.

A project course in which student teams develop operational criteria and a complete interior design presentation for a new hotel or major renovation. The early semester includes a number of short design exercises. A field trip to a northeastern city introduces students to the particular hotel and its requirements. During the rest of the term, the teams will re-plan the hotel public areas and guestrooms, develop conceptual designs, establish preliminary budgets, and assemble presentation boards to describe the design.

H ADM 353 Food Service Facilities Design
Fall and spring. 3 credits. Limited to 24 students. Prerequisites: H ADM 335 and 351 (co-registration is allowed) or food service experience or permission of instructor. Elective. S. Robson.

An introduction to the basic concepts of food service facilities design and planning. Students will determine space allocations for kitchens and their support areas; develop basic production work flow in the preparation and service areas; and select equipment utilizing standards for production capability, quality of construction, and ease of maintenance. Students will use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.

H ADM 354 Computer-Aided Design
Fall and spring. 2 credits. Limited to 18 students per lecture. Prerequisite: H ADM 351 or equivalent studio experience. Attendance at first class is mandatory. Elective. S. Curtis.

The operation of microcomputer-based computer-aided design (CAD) systems. Using AutoCAD on the IBM PC, the course presents an organized and logical sequence of commands, mode switching, drawing aids, and other characteristics of CAD. Students will learn the program in the school’s computer center and will develop a complete graphic presentation. Emphasis is on the use and operation of CAD systems in a commercial document production environment.

H ADM 355 Hospitality Facilities Operation
Fall. 3 credits. Limited to 20 students per section. Prerequisite: H ADM 255. Required. M. Redlin.

An overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering-maintenance departments. The renovation needs of hospitality facilities are examined and key managerial aspects of renovations considered.

H ADM 356 Hospitality Risk Management
Spring. 3 credits. Limited to sophomores, juniors, seniors, and graduate students. Elective. D. Stipanuk.

A comprehensive look at risk management within the hospitality industry. Addresses issues of loss control for hospitality firms. Using a risk management conceptual framework, issues in fire protection, customer and workplace safety, OSHA, and customer and corporate security are analyzed.

H ADM 357 Insurance and Risk Management
Fall and spring. 3 credits. Prerequisite: an introductory accounting or business course. Elective. G. Shankar.

A comprehensive look at risk management within a general business or institutional environment. Reviews insurance and non-insurance solutions to controlling loss, the general legal environment within which risk management processes work, and the integration of crisis management into the overall corporate risk management plan.

H ADM 450 Principles of Real Estate
Fall. 3 credits. Limited to juniors and seniors. Elective. Faculty.

Approaches real estate from four perspectives: legal, economic, financial, and business. Understanding these perspectives will enable students to make better investment and financing decisions, to use real estate resources wisely, to understand public-policy issues, and to be prepared for additional courses in real estate investment, finance, and development.

H ADM 452 Sustainable Development and the Global Hospitality Industry
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Elective. D. Stipanuk.

A multidimensional course integrating the global sustainability and environmental movements, their impact on the hospitality
industry, and responses to and opportunities associated with the sustainability movement. The course draws upon work in a number of disciplines for the ideas and concepts discussed. Readings will be drawn from the environmental sustainability, and hospitality literature. Students should be prepared to encounter conflicting views in the readings and in classroom discussions. The course attempts to portray a variety of viewpoints regarding issues of contemporary interest to society and the business community. Discussion of these issues is a key component of the course.

H ADM 454 Advanced Computer Aided Design
Spring. 3 credits. Limited to 18 students. Prerequisite: H ADM 354 or equivalent introductory AutoCAD course. Elective. Not offered spring 2002. S. Curtis. Computer aided design has grown beyond its traditional use as a tool to draw contract documents. This course will give students an understanding of the many advanced capabilities of AutoCAD, including raster image support, OLE, 3-D surface and solid modeling, and photorealistic rendering. The availability and capabilities of “third party” plug-ins to AutoCAD will also be explored. There will be weekly projects as well as a final project.

H ADM 456 Hospitality Facilities Management
Spring. 3 credits. Prerequisite: H ADM 355, 751, or permission of the instructor. Elective. D. Stipanuk. A managerial approach to hospitality facilities addressing issues of owning and operating, cost management, facilities services and delivery systems management, governmental regulatory compliance, and emerging issues. Emphasis on environmental issues such as indoor air quality, waste management, and energy conservation. Extensive use of the web.

H ADM 457 Advanced Development and Construction
Fall. 3 credits. Overnight field trip, $175. Limited to juniors with permission, seniors and graduate students. Elective. D. Stipanuk. Focuses on the management structure and systems, laws, regulations, and industry practices that most influence the successful development of commercial and residential real estate, including lodging and eating facilities. Topics include scheduling, budgeting, managing other professionals, and analysis of alternative materials and methods. Guest speakers, case studies, and group project.

H ADM 458 Hospitality Real Estate
Spring. 3 credits. Limited to 40 seniors or graduate students. Prerequisites: H ADM 325, 450, or permission of instructor. Elective. Faculty. Expands the student's understanding of the role of real estate in individual hospitality businesses and corporations. Designed for those who plan careers in the hospitality industry. Specific objectives are to develop an appreciation of real estate as a factor in the production of income for hospitality businesses; to develop an appreciation of real estate as an asset that can be managed, sold, and otherwise used to increase the wealth of hospitality corporation shareholders; and to understand the importance of valuing real estate, and the approaches to valuation and contemporary hospitality valuation issues.

H ADM 459 International Hospitality Development
Spring. 3 credits. Limited to 30 seniors and graduate students. Elective. J. Clark. A seminar course covering the strategic development of international hospitality projects. Topics will include corporate expansion strategies; the international development process; viewpoints of public and private stakeholders; and such development challenges as technology, infrastructure, environmental and public policy issues. Senior corporate guest lecturers will present and discuss new projects in such locations as Hawaii, Mexico, western and eastern Europe, Southeast Asia, and Latin America and in these opportunities with development in the United States.

H ADM 550 Principles of Timeshare Development and Operations
Fall. 2 credits. Second 7 weeks of the semester. Elective. The deadline to drop is the mid-point of the course. Not offered fall 2001. J. deBoos. Provides an introduction to the rapidly growing timeshare and vacation ownership industry. Students will learn who the four major business disciplines of financial management, real estate development, marketing and sales, and resort operations are specifically applied to the industry. Guest speakers, course project, and case studies.

H ADM 651 Principles of Real Estate
Fall. 3 credits. Limited to graduate students. Elective. Faculty. This survey course approaches real estate from four perspectives: investment, market, mortgage finance, and legal. Understanding these perspectives will enable students to make better investment and financing decisions, to use real estate resources wisely, to understand public policy issues, and to be prepared for additional courses in real estate investment, finance, and development. This course includes much of the material in H ADM 450 plus special topic sessions that feature guest speakers from the industry, faculty from other colleges, and case studies.

H ADM 658 Advanced Real Estate
Spring. 3 credits. Limited to 40 graduate students. Prerequisites: H ADM 323, 450, 621 or 651. Elective. D. Quan. Promotes sound real estate investment and finance decision making through the use of advanced theory and techniques in financial economics. Real estate investment decisions are made through applications of the after-tax discounted cash flow model which incorporates prevailing domestic and international economic conditions in real estate markets, tax rules, and government regulations. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options is considered including convertible, participating, and accrual mortgages. All types of residential and nonresidential real estate are analyzed, including hospitality properties.

H ADM 751 Properties Development and Planning
Spring. 3 credits. Professional master's requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. J. deBoos, M. Redlin.

Provides an overview of project development, hotel planning, and the construction process, including the role of the development team, feasibility, functional planning and design, interpretation of architectural drawings, architectural and engineering criteria, construction management, contracts, and scheduling. Student teams will prepare the program documentation for a new hotel or one undergoing major rehabilitation in conjunction with other professional master's core courses.

COMMUNICATION COURSES

H ADM 165 Managerial Communication I
Fall and spring. 3 credits. Each lecture limited to 16 students. Note: Students required to take this course generally may not delay it. If extenuating circumstances exist, student must petition to drop the course by the end of the first week of classes. This course must be taken within the first two semesters, including any ITD classes. Add/drop and section changes must be approved by the chairperson. Required. D. Jameson, S. Jones, Y. Kim, C. Snow, R. Steinacher.

An introduction to the role and importance of effective communication in managerial work, especially in the hospitality industry. Development of abilities in analytical thinking and clear written expression. The process of planning, preparing, and executing professional communications with an emphasis on written documents. Students write a series of business documents and give oral presentations.

H ADM 266 Intermediate French: Le Francais de l'HoteLerie et du Tourisme
Spring. 3 credits. Limited to 15 students. Prerequisite: French 123 or permission of instructor. Elective. S. Broun. Offers continuing study of the French language with specific emphasis on the hospitality industry. Material presented considers cultural, geographic, economic, historical, political, and social contexts within which the business functions. The course is conducted in French, emphasizing a conversational approach. Specialized situations and vocabulary are used in building general competence in practical usage. Students with special interest in the hospitality industry will be given priority for admission.

H ADM 364 Advanced Business Writing
Fall and spring. 3 credits. Limited to juniors, seniors, or graduate students, or written permission of instructor. Prerequisite: H ADM 363. Electives. G. Grand-Levy, Y. Kim, R. Steinacher. Focuses on communication challenging messages in business contexts. Writing assignments will emphasize delivering persuasive messages, working with tone and style, and developing different types of documents in professional contexts. Assignments include business letters and memos written for various contexts, procedures and policy statements, promotional materials, negative messages, and analytical reports requiring research.
H ADM 365 Managerial Communication II
Fall and spring. 3 credits. Limited to 22 juniors and seniors per lecture. Note: Students required to take this course generally may not drop it; however, students may be allowed to drop before the first class if the area has a wait list and the vacancy can be filled. Students may drop between the first and second class if they (1) check first with the course chair, and (2) can find a replacement for their place. Students may not drop after the second class unless they petition and present a case of extenuating circumstances. It is expected these cases would be rare. Prerequisites: Hotel under­graduates must have completed H ADM 165 and H ADM 115. Re: Fired, N. Dahl, Y. Kim, E. Roberts, C. Snow.

A broad study of communication in a management context. Emphasizes the significant role of communication in developing working relationships that enable managers to achieve their goals. It presents the theories and principles of communication that underlie effective performance. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally developing and presenting ideas to larger audiences.

H ADM 462 Communication and the Multicultural Organization
Fall and spring. 3 credits. Priority given to hotel students. Elective. S. Bryson. Influence of culture, perception, and gender on communication in multicultural organizations, including international and domestic businesses with diverse work forces. Focus is on human interaction at work. Special emphasis on the hospitality industry. Topics include values and beliefs, how race and gender affect language use, cultural differences in nonverbal communication, ethnocentrism and stereotyping, intercultural sensitivity and adjustment, cultural variables, persuasion, and ethics of communication in international business. Concepts are applied to practical management situations.

H ADM 463 Persuasive Communication in Organizations
Spring. 3 credits. Limited to 18 students. Prerequisites: H ADM 165 and 365 or permission of instructor.

Prepares students to communicate effectively in a variety of persuasive speaking contexts. Principles of persuasion will be thoroughly examined as they apply to managerial communication tasks. Emphasis on persuasive speaking, also relationship between written and oral communication. Studies the principles of persuasion, analyses case studies in the hospitality industry, and applies persuasive strategies in simulated workplace settings.

H ADM 475 Information Technology for Hospitality Managers
Fall and spring. 3 credits. Prerequisite: H ADM 174. Required. H ADM 274. R. Alvarez, M. McCarthy, R. Moore, M. Talbert. Composed of two blocks: (1) Lecture—the goal of this block is to provide the students with a broad-base knowledge of Information Technology (IT) management issues. (2) Laboratory—the goal of this block is to provide the students with advanced Excel model-building skills and concepts.

H ADM 274 Microcomputing
Fall and spring. 3 credits. Limited to 30 hotel students per section. Required. R. Alvarez, P. Clark, M. McCarthy, R. Moore.

This course is designed to aid students in building functional computer literacy. Students will develop their skills in five generic areas: text, graphics, spreadsheet, presentation, and listing processing. This portion of the class is taught in the Birenken computer lab, where students work with Microsoft Office and the Internet. In addition, students learn introductory statistical concepts, including descriptive statistics, correlation, and regression analysis. Course materials are presented through a combination of lectures and labs.

H ADM 371 Hospitality Quantitative Analysis
Fall and spring. 3 credits. Required. S. Choi, M. Freimer.

Introduces statistical and operations research methods appropriate for the hospitality industry. The overriding goal is to provide students with the skills and understanding necessary for decision making using quantitative data. Students will use computer spreadsheet software extensively. A key element is an ability to communicate the results of the analyses in a clear manner. Topics include probability, decision analysis, modeling, forecasting, quality management, process design, waiting lines, project management, and revenue management.

H ADM 375 Hotel Computing Applications
Spring. 3 credits. Prerequisite: H ADM 174 or equivalent. Elective. R. Moore.

This course exposes students to Internet technology based systems. Students will use computer systems, yield management systems, property management systems, communication networks (LANs and WANS), food service management systems including point-of-sale systems and sales and catering systems, system selection, and the area of customization. Laboratories provide students with hands on experience on systems widely used in the hospitality industry that are web based.
**H ADM 575** Internet Technologies  
Fall and spring. 3 credits. Elective. M. Talbert.  
This course will introduce students to many of the technical underpinnings of the Internet, such as web browsers, HTML/DHTML, XML, JavaScript, Java, CGI and multimedia file formats. The primary objectives of the course are to develop an understanding of existing and emerging Internet technologies relevant to business, and to gain proficiency with the implementation of these technologies. Students will select a suitable Internet business model to develop into a business-related web site. The course is entirely lab-based.

**H ADM 674** Service Operations Management  
Fall and spring. 3 credits. Limited to 25 graduate students. Prerequisite: H ADM 775 or equivalent. G. Piccoli.  
The objective of this course is to improve the understanding of the operations function of service organizations on the scale and nature of service operations, the relationship of operations to other business functions, and develops skills and provides techniques for the effective management of service operations. Topics include service design, bottleneck and layout analysis, capacity management, work force management, and quality management. Intended for graduate students interested in services management.

**H ADM 675** Yield Management  
Fall and spring. 3 credits. Limited to 40 students. Prerequisites: H ADM 571, 771, or equivalent. Elective. S. Choy.  
Students learn to effectively apply the principles of yield management. Focuses on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

**H ADM 676** Restaurant Revenue Management  
Spring. 2 credits. First 7 weeks. Limited to 30 graduate students, or undergrads with H ADM 355 and 371 by permission of the instructor. Prerequisites: H ADM 731 and 771. Elective. S. Kim.  
Revenue management is a method for profitably managing capacity. The objective of this course is to help students learn how to apply the principles of revenue management to restaurants. The course focuses on methods of managing duration and price with the intent of maximizing revenue per available seat-hour. Topics covered include forecasting, overbooking, reservations systems, information technology, process design, pricing, and management and marketing issues.

**H ADM 771** Graduate Quantitative Methods  
Fall. 3 credits. Professional master’s requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. M. Freimer.  
Covers statistical and operations research techniques which can be applied to the hospitality industry. Topics include descriptive statistics, probability, sampling, correlation and regression, forecasting and yield management. The emphasis is on hands-on application to hospitality problems.

**H ADM 772** Information Technology for Hospitality Managers  
Fall. 3 credits. Professional master’s requirement. Limited to MMH students except by written permission of the instructor in advance of pre-enrollment. G. Piccoli.  
Familiarizes students with issues surrounding the implementation of information technology in supporting hospitality operations from a guest services perspective and decision making from the viewpoint of management.

**H ADM 785** Business Law I  
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students outside the hotel school, and hotel students by permission of the instructor. Recommended for hotel students. H ADM 387 preferred. Elective. P. Wagner.  
Provides students with a presentation of three substantive areas of business law: contracts, intellectual property, and business organizations. Students will analyze cases, read and interpret statutes, and learn to identify issues, and analyze the issues by applying legal principles.

**H ADM 387** Business and Hospitality Law  
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students. Required. D. Sherwyn.  
An integrated presentation of employment discrimination, tort and contract concepts as they apply to the legal aspects of hospitality management. Relevant federal and state cases and statutes are examined. The overall objective is to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions.

**H ADM 485** Employment Discrimination Law and Union Management Relations  
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: H ADM 387 or permission of instructor. Elective. D. Sherwyn.  
Anti-discrimination statutes and union management relations are two of the most pervasive legal issues affecting the hospitality industry. Managers must take these issues into account whenever they make a personnel decision. This course will provide students with: (1) an understanding of the discrimination law; (2) a framework for complying with law; (3) methods of maintaining the law to maintain positive employment relations; and (4) an understanding of how to negotiate and administer a union contract.

**H ADM 487** Real Estate Law  
Fall and spring. 3 credits. Limited to non-hotel students, and hotel juniors, seniors, and graduate students. Recommended: completion of H ADM 387 preferred. Elective. A. Klausner.  
Provides students with an understanding of the legal issues surrounding the ownership, transfer, and use and development of real estate. Students will learn to recognize, evaluate legal issues in order to inform the decision-making process with respect to real estate, whether as a business executive, an entrepreneur, or in personal life.

**H ADM 589** The Law of the Internet and E-Commerce  
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective. A. Klausner.  
The Internet has created new and old business is done in the hospitality industry. The change has created numerous legal issues that courts and legislatures are grappling with. The purpose of this course is to allow students to identify and understand the rapid developments of the law of e-commerce. Specifically, this course focuses on six topics: how the Internet works; consumer protection; privacy; intellectual property (patent, trademark and copyright); personal jurisdiction in cyberspace; and online contracts and legal disclaimers. This course will introduce students to this emerging area of the law and enable them to identify issues so that they can intelligently seek counsel and understand the law as it continues evolve.

**H ADM 389** Microeconomics for the Service Industry  
Fall and spring. 3 credits. Limited to 60 hotel students per lecture, others by permission of instructor. Required. J. Wissink.

Introduces the basic principles of microeconomics and teaches students how they apply to managers of enterprises associated with the hospitality industry. Emphasis on methods of market segmentation in the service industries, analyzing economic incentives involved in franchise arrangements, and the nature of competition in various segments of the hospitality industry.

**H ADM 490** Housing and Feeding the Homeless  
Spring. Variable to 4 credits. Limited to juniors and seniors. Elective. T. O’Connor.

Explores the public and private sector partnership in addressing the issue of hunger and homelessness. Through lectures, class discussions, research, community service work, and a field placement practicum, students will explore the economic, social, and political issues of our country’s concern with housing and feeding disenfranchised and homeless people. Students will study the history of homelessness and the strategies to prevent and alleviate the problem. Explores public and private sector approaches to addressing the issue of hunger and homelessness. Through lectures, class discussions, research, community service work, and a field placement practicum, students will explore the economic, social, and political issues of our country’s concern with housing and feeding disenfranchised and homeless people. Students will study the history of homelessness and the strategies to prevent or alleviate the problem through public policy, housing programs, food assistance programs, and job training initiatives. This is a service learning course centered around community work experience. There are three options for involvement in this course. Students must choose one of the following options: (1) Four-credit option whereby students work in pairs or small groups with a local agency that provides services for homeless or disadvantaged people. They will analyze the agency’s mission and goals, identity managerial
challenges, and formulate an approach in the form of a product or service that is useful to the agency. This field practicum will provide approximately 60 hours of work during this semester, half of which will be in direct contact with the agency and its clients. (2) Four-credit option whereby students will participate in an ALTERNATIVE SPRING BREAK in an agency(ies) in Washington, DC. Students will work five full days in an agency that serves homeless, hungry, or disenfranchised people such as homeless shelters, community kitchens, or battered women’s housing units. Housing and transportation are arranged. On the return trip, students will participate in a reflection and focus exercise in a relaxing setting. This option may cost students up to $280. Students interested in this option MUST see the instructor at preregistration time. (3) Three-credit option whereby students do community work in the Ithaca area with an agency that serves homeless, hungry, incarcerated, or disenfranchised people. Students will work on a regular weekly basis for a minimum of 25 hours during this semester.

H ADM 491 Hotel Ezra Cornell
Fall and spring. Variable to 4 credits.
Prerequisite: written permission. Elective. Faculty.
Elected board members of Hotel Ezra Cornell receive credit for academic coursework, and the development, organization, and management of the April “Hotel-for-a-Weekend.” Students who are considering a board position may pre-enroll for the course and should speak with the instructor for additional information about board positions and required coursework. Elections will take place in April after Hotel Ezra Cornell Weekend, at which time the HA 491 course enrollment will be finalized. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term. Further information is available in the Student Services Office, 1788 Statler Hall.

H ADM 493 Management Intern Program I—Operations
Fall and spring. 6 credits. Limited to hotel juniors and seniors with approval of the MEP faculty committee. Prerequisite: students are expected to have completed H ADM 105, 115, 211, 221, 222, 136, 236, 243, 255, 165, and 174. In addition, completion of the following courses is strongly recommended: H ADM 321, 335, 355, and 365. Additional course work might be required for applicants considering specialized internships. A detailed plan for the completion of all remaining academic requirements must be approved prior to acceptance into the course. Must be taken in conjunction with H ADM 494. S-U grades only, based on six performance evaluations. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term. Elective. R. Chase.

H ADM 494 Management Intern Program II—Academic
Fall and spring. 6 credits. Must be taken in conjunction with H ADM 493. Letter grades only, based on submission of goals and objective statement, four management reports, journals, debriefing, and oral presentation. Students must be in good academic standing and have a GPA of at least 2.0 in the preceding term. Elective. R. Chase.

H ADM 495 Implementing Strategies for Tying Wellness Practices to Company Profit
Spring. 3 credits. Limited to 50 juniors, seniors, and graduate students. Elective. M. Tobacco
Designed to encourage future managers to evaluate the work environment and to enhance opportunities for diverse worker productivity which should increase the corporation’s competitive edge. Emerging fields of complementary and alternative medicines are explored as preventive and cost effective methods of improving workers’ health.

H ADM 498-499 Undergraduate Independent Study
Fall and spring. Variable, to 4 credits. Elective. Faculty.
Students are afforded an opportunity to pursue independent study projects under the direction of a resident faculty member. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Student Services Office. Independent study work must be performed in the term for which it is approved, and the usual add/drop policy applies. Retroactive credit for work commenced after an academic term has ended is not allowed.

H ADM 690 Honors Monograph
Year-long course. 4 credits. Limited to professional master’s students who: (1) either have a minimum GPA of 3.7 or are in the top 10 percent of the students in the year group in their first-year professional master’s courses; (2) have given evidence of being a good writer by meeting all components of the written communication benchmark; and (3) obtained the approval of a brief topic proposal from the potential adviser. Elective. Faculty.
A special integrative course for students who write well and desire to explore in depth a topic of mutual interest to them and a faculty advisor of their choice. The approval of a second reader is required for completion of the course. Special recognition of students who complete the course will be made at graduation. Applications available in the Graduate Office, Room 172 Statler.

H ADM 692 Industry Challenges and Trends
Spring. 3 credits. Limited to 15 seniors and graduate students. Elective. J. Clark.
A seminar approach will be used to discuss readings and studies selected to illustrate current challenges and future trends such as globalization, consolidation, etc., in the hospitality industry. The view will be futuristic and primarily from that of a multi-unit/ corporate perspective. An in-depth analysis of a few specific companies will be included using case studies and guest lecturers when appropriate. Students will research new topics and make presentations and final reports.

H ADM 698-699 Graduate Independent Research
Spring. 3 credits. Limited to 50 seniors, and graduate students. Elective. Faculty.
Student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Graduate Office, Room 172 Statler.

H ADM 791 Creating and Managing for Service Excellence
Fall. 3 credits. Professional master’s requirement. Limited to MMH students except by written permission of the instructor. To advance of pre-enrollment. L. Renaghan.
Covers the complex management practices and concepts necessary to deliver consistent value in the hospitality industry (determining customer expectations, integrating marketing into operations; managing customer satisfaction; and measuring and controlling costs). Cases, lectures, discussion, and industry experts will be used, with emphasis on translating the strategic understanding of value into management practice.

H ADM 793 Industry Mentorship Program
Spring. No credits. S-U grades only. Professional master’s requirement. M. Redlin.
Interaction with a senior hospitality industry executive. Objectives are to give the student an overview of the operating dynamics of a segment of the Hotel Industry to provide a realistic awareness of day-to-day working as an executive in the industry, and to develop an awareness of the skills, level of integration, and other factors required for success.

H ADM 794 Management Development
All first-year students in the Master of Management in Hospitality program must enroll in H ADM 794 both semesters. This requirement includes participation in the MMH Assessment Center, program benchmarking, team project, and other activities related to students’ professional development. Satisfactory completion of the second semester of H ADM 794 documents achievement of all program benchmarks.

H ADM 890 M.S. Thesis Research
Fall and spring. Credit to be arranged.

H ADM 990 Ph.D. Thesis Research
Fall and spring. Credit to be arranged.

FACULTY ROSTER
Alvarez, Roy, M.Ed., Auburn U. Senior Lecturer
Arbel, Avner, Ph.D., New York U. Prof.
Berger, Florence, Ph.D., Cornell U. Prof.
Brownell, Judith, Ph.D., Syracuse U. Prof.
Bryson, Susan, M.A., U. of Chicago. Lecturer
Butler, David W., Ph.D., U. of Wisconsin-Madison. Dean
Camina, Linda, Ph.D., New York U. Asst. Prof.
Carol, Steven A., Ph.D., SUNY Binghamton. Assoc. Prof.
Chase, Robert M., M.B.A., Cornell U. Prof.
Clark, John J., Jr., Ph.D., Cornell U. Prof.
Clark, Preston, M.S., Syracuse U. Lecturer
Cullen, Thomas, Ph.D., Cornell U. Assoc. Prof.
and Assoc. Dean for Industry and International Affairs
Curtis, Steven, B.L.A., Syracuse U. Lecturer
Dahl, Nicholas, M.A., Oregon State U. Lecturer
Dahl, David, B.S., Oregon School of Hotel Management. Lecturer
Delvecchio, Jan A., Ph.D., Cornell U. Hospitality Valuation Services Professor of Hotel Finance and Real Estate
Dev, Chekitan S., Ph.D., Virginia Polytechnic. Assoc. Prof.
Dittman, David A., Ph.D., Ohio State U. Herbert E. Westfall Professor of Accounting
Enz, Cathy A., Ph.D., Ohio State U. Prof. and
Lewis G. Schaeman, Jr. Professor of
Innovation and Dynamic Management and
Executive Director, Center for Hospitality
Research

White, Robert, A.O.S., Culinary Institute of
America. Teaching Support Specialist
The College of Human Ecology anticipates well-being, environmental design and responds to human needs in the areas of nutrition and health, economic and social well-being, environmental design and technology; as well as human development through education, basic and applied research, and the extension of knowledge. The college is distinctively characterized by the quality of its research in the natural and social sciences and the design arts, a global perspective in academic programs, a multidisciplinary departments and programs, development of leadership in students and citizens, and a commitment to diverse populations. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

COLLEGE FOCUS

The College of Human Ecology leads to the degrees of Bachelor of Science (B.S.), Master of Arts (M.A.), Master of Science (M.S.), Master of Professional Studies in Human Ecology (M.P.S.), Master of Health Services Administration (M.H.A.), and Doctor of Philosophy (Ph.D.).

DEGREE PROGRAMS

Cornell programs in Human Ecology lead to the degrees of Bachelor of Science (B.S.), Master of Arts (M.A.), Master of Science (M.S.), Master of Professional Studies in Human Ecology (M.P.S.), Master of Health Services Administration (M.H.A.), and Doctor of Philosophy (Ph.D.).

General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Courses leading to major and doctoral degrees are administered by the Graduate School. They are described in the Announcement of the Graduate School and in announcements published by the individual field offices (Design and Environmental Analysis, Human Development, Nutrition, Policy Analysis and Management, and Textiles and Apparel). For information regarding The Sloan Program in Health Services Administration, contact the Department of Policy Analysis and Management.

UNDERGRADUATE DEGREES

Bachelor of Science (B.S.) degrees are offered in the following areas:

- Biology and Society
- Design and Environmental Analysis
- Human Development
- Human Biology, Health, and Society
- Nutritional Sciences
- Policy Analysis and Management
- Textiles and Apparel
- Individual Curriculum

UNDERGRADUATE AFFAIRS

Persons interested in undergraduate study in human ecology should contact the admissions office, 170 Martha Van Rensselaer Hall (255-5471). Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty are listed at the beginning of the course descriptions for each department.

Counselors in the Office of Admission, Student, and Career Services (172 MVR) can provide information of interest to mature students. Mature students are permitted to enroll for as few as six credits without petitioning for permission and also are permitted to extend their residency beyond the normal eight terms. To find out about qualifying for prorated tuition, mature students must see the registrar before registration each semester.

Special Students

Students eligible for special status are those visiting from other institutions and interested in particular programs in the college, those with a bachelor's degree who are preparing for graduate study or jobs and careers in human ecology-related fields, or those who have interrupted their education and are considering completing degree programs. Students accepted in the nondegree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester. Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the statutory divisions of the university. Courses taken while a person is classified as a special student may be counted toward the requirements of the
DESIGN AND ENVIRONMENTAL ANALYSIS

The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing interior environments to satisfy human needs. Most people spend over 90 percent of their lives inside buildings. Those settings have substantial and far-reaching effects on the quality of our lives. The processes for creating and maintaining the built environment face enormous challenges, including frequent social and organizational changes, technological advances, new building methods, and finite resources. The program in DEA is dedicated to preparing professionals who can meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Excellent laboratory, shop, studio, and computer facilities permit exploration of innovative concepts for the design and management of interior environments. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the MVR gallery. The DEA Resource Center includes books, journals, newsletters, and material samples for student use.

Options

The department offers undergraduate education in three professional areas: interior design, facility planning and management, and human factors and ergonomics. The interior design option is accredited by the Foundation for Interior Design Education Research (FIDER). The Facility Planning and Management Program at Cornell is an "IFMA Recognized Program." This means that it meets the standards for recognition of programs established by the International Facility Management Association.

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option may need one or two extra semesters to complete the program.

Option I: Interior Design

The interior design option prepares students for professional careers in the planning and design of interior spaces and associated products. The program emphasizes a problem-solving approach based on knowledge of buildings and their associated systems, furnishings and interior products, human-environment relations, and design principles. Some students combine this program with another option.

Careers are available in interior design and space planning, interior architecture, facility planning, interior product design, and housing. This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and product design.

Option II: Facility Planning and Management

This option is designed to prepare students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, health-care institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate, and business administration with human factors, ergonomics, environmental psychology, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.

Excellent career opportunities exist in the facility management divisions of private companies, institutions, governments, nonprofit organizations, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

Option III: Human Factors and Ergonomics

Human factors and ergonomics focuses on the interaction between people and their physical surroundings. This option seeks to expand understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior. This knowledge is used to help architects, planners, interior and product designers, and facility managers design for human factors, ergonomics, environmental psychology, organizational effectiveness, and with private consulting firms specializing in human factors, ergonomics, and business administration with human factors, ergonomics, environmental psychology, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.

Excellent career opportunities exist in the facility management divisions of private companies, institutions, governments, nonprofit organizations, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

Academic Advising

All DEA majors are matched with a faculty adviser during their first semester by the director of undergraduate studies, William Sims, in E214 Martha Van Rensselaer Hall.

Consultation with faculty advisers about future goals, departmental requirements, sequences of courses, and electives inside or outside the college helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisers can make recommendations on what to include. Students are free to change advisers. Although advisers must sign the
schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that they meet graduation requirements for their major and college.

Ownership and Exhibition of Student Work
All design work done in studios as part of an academic requirement of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

HUMAN BIOLOGY, HEALTH, AND SOCIETY
The Human Biology, Health, and Society (HBHS) Program permits you to combine your interests in the biological sciences while exploring human health issues from the perspectives of both the biological and behavioral sciences. HBHS majors select the issues they want to explore in depth from Human Ecology courses that address health and the broad range of factors that influence human well-being. Examples of issues you can explore include: biology and behavior, metabolism, genetics, and health; biology, growth, and development; and food and health policy and health promotion. Most students in this program will proceed to programs of advanced study to pursue careers related to health. This major is offered by faculty in the Division of Nutritional Sciences. More information about this program can be found in a separate section of the catalog that describes the division's programs.

HUMAN DEVELOPMENT
Human Development majors explore the psychological, social, cultural, and biological development of people from conception to old age, focusing on the processes and mechanisms of growth and change over the life course. A wide range of issues are included in the study of human development, including biological, cognitive, and emotional development; the role of family, neighborhood, workplace, and culture in development; and the influence that developing humans have on their environment. The Human Development major provides an excellent foundation for many careers, such as medicine (particularly family medicine, pediatrics, and psychiatry), clinical psychology and other mental health professions, law, business (especially human resources), child and family advocacy, and education (from preschool and elementary school teaching to school administration). The major prepares students for academic careers as professors in human development, psychology, or sociology departments. Learning about human development also helps students understand more clearly their own development and the development of those around them.

The faculty of the Department of Human Development comes from several disciplines, including developmental and clinical psychology, sociology, and history. The diversity of faculty expertise results in a wide-ranging view of human development. The research of the department's faculty is extensive. It includes basic research on issues such as the neurobiology of personality, the role of childhood attachments in the development of adult romantic relationships, the acquisition of language in infants, and the effects of environmental toxins on children's cognitive development. It also includes applied research useful for the creation of public policy, such as studies of the causes and consequences of child maltreatment and studies of the effectiveness of reading programs for preschoolers, apprenticeship programs for high school students, and support programs for older adults moving into retirement communities.

Curriculum
Human Development is the most flexible major in the College of Human Ecology. While all students learn the fundamentals of human development, each student can focus on one or more areas of particular interest. The flexibility of the major also allows students ample opportunity to meet the requirements for admission to professional schools, including medical, dental, law, and business schools.

Requirements specified by the College of Human Ecology make up part of each student's curriculum, and include classes in the social and natural sciences, humanities, writing, and communication. In addition, there are requirements for the Human Development major. Students in this major can choose up to 14 elective courses from the broad range of offerings across the Cornell campus.

Special Opportunities
Beyond formal coursework, students have many other opportunities that involve ongoing individual work with Cornell faculty or other professionals. Academic credit can be earned through all of these. These opportunities include the following:

Field Placements. Human Development majors can arrange internships with Urban semester in New York City, Cornell-in-Washington, and Cornell Abroad programs and in local agencies. These have included hospitals, psychiatric hospitals, juvenile detention centers, retirement homes, and the department's on-campus Early Childhood Program. Students have also participated in projects with the Tompkins County Office of Aging, the Tompkins County Youth Bureau, and the Law Guardian's Office of Tompkins County.

Faculty Research. Many students work as research assistants on faculty projects. Students use research techniques ranging from laboratory procedures to family observations to large surveys. They assist in study design, data collection, and data analysis. Participation in faculty research provides the type of experience that many graduate and professional schools expect from their top applicants. Recent projects have included the study of parent-infant interactions, the transition of high school students into the world of work, and the study of recent trends in the composition of American families.

Independent Research. Under faculty supervision, advanced students complete an honors thesis in an area of personal interest by designing a study and collecting and analyzing data. Recent thesis topics have included marital quality in Asian and interracial couples, development in families that adopt school-age children, and connections between speed of visual processing in infants and later scores on intelligence tests.

Undergraduate Teaching Assistant. Advanced students can serve as undergraduate teaching assistants. This requires close work with the professor teaching the course as well as with students taking the course.

Teaching Certification. A cooperative education program exists between Human Development and Wells College. This program requires careful planning and course scheduling. It enables students to graduate with a Cornell Bachelor's Degree and New York State Certification to teach nursery school through sixth grade. This certification is honored by most other states.

The program requires a minimum of a three-semester commitment. Cornell HD students take four courses at Wells College and student teach their last semester at Cornell. Although there is a van transporation between Cornell and Wells College, it is important for students to have access to a car, especially while student teaching. Students will be registered at Cornell during the entire undergraduate program and usually maintain Ithaca housing. Wells College counts as Cornell courses and are used as electives, but do not get included in a student's GPA. The one-semester student teaching experience is typically based in the Ithaca area, though not necessarily within the City of Ithaca.

This program is open to HD majors only. You must have at least a 3.0 Cornell cumulative GPA upon application, and must maintain a 3.0 GPA to qualify for student teaching and to complete the program. For more information, contact Judith Ross-Bernstein in g56 MVR at 255-0826.

NUTRITIONAL SCIENCES
A major of Nutritional Sciences (NS) focuses on the complex interrelationships of food patterns, nutritional status, and health. This field draws upon chemistry, biology, and the social sciences to understand topics such as: How are nutrients used by the body? What factors influence human food choice? What nutrients and dietary patterns are recommended to promote growth, maintain health, or reduce the risk of chronic disease? Students in this program may also fulfill the courses required for professional membership in the American Dietetic Association, which will enable them to be employed as nutrition counselors, clinical nutritionists, sports nutritionists, or administrators of food and nutrition services. Students also may prepare for medical school and other types of advanced degree programs through this major. The requirements for this program are outlined in the section of this catalog that describes the division's programs.

Special Opportunities
Dietetics and Clinical Nutrition
Interested students should complete the academic requirements for the American Dietetic Association (ADA). Courses in foods, nutrition and disease, microbiology, management, statistics, and economics are added to the core curriculum (specific requirements). Evaluation of academic credentials for active
memberships and registration in ADA should be completed before graduation. Seniors should initiate this academic evaluation process in March if they will graduate in January or in September if they will graduate in May. All students will complete the academic requirements by graduation should participate in the evaluation process while at Cornell. Students who meet most but not all of the academic requirements are encouraged to have their academic work evaluated while they are at Cornell so that deficiencies can be identified and documented.

Advisors in the dietetics program can also help students plan to meet the experience or supervised practice component required for active membership and/or eligibility to take the Registration Examination to be certified as a registered dietitian (R.D.). For additional information about meeting ADA requirements, contact Marie Kamp (373 MVR, 255–2638).

Exercise Science Minor

Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in fitness measurements, exercise physiology, and biomechanics of human movement. Nutrition courses of special interest relate to growth and development, regulation of body weight, and community nutrition and health. For information about the Applied Exercise Science Concentration, contact the DNS Academic Affairs Office (309 MVR, 255–4110).

POLICY ANALYSIS AND MANAGEMENT

The Policy Analysis and Management (PAM) major produces graduates skilled in policy analysis, program planning, and evaluation possessing management skills applicable to the public, nonprofit, and private sectors. In addition, the Policy Analysis and Management graduate will have accumulated knowledge in one of three areas: family/social welfare, health, and consumer policy. Graduates are well-qualified for a wide variety of public, nonprofit, and private sector employment emphasizing either program analysis and evaluation or management. The major also attracts large numbers of pre-law students, pre-MBA students, and students intending to pursue graduate education in public affairs and policy analysis programs. The potential exists to pursue a five-year program resulting in a BS and a Master of Health Administration.

The PAM major combines theoretical understandings from economics, sociology, psychology, and government to critique and analyze the society’s values, laws, policies, and programs. It also gives students the knowledge to build management skills for use in public, nonprofit, and for-profit settings. Ideas of social justice, equity, and efficiency will be studied concurrently with strategic planning, human resources, supervision, and organizational development. Research methods, statistics, and planning and evaluation concepts will be learned and used to direct and aid in program planning, policy analysis, program evaluation, and management.

In addition to learning basic policy analysis and management skills, the student will be expected to apply these skills to a particular concentration—social welfare/family, health, or consumer policy. Social welfare/family policy and management includes a panoply of governmental and private sector income maintenance, social, and human service delivery programs and policies that range from child adoption, neglect, and abuse policies and antipoverty programs to policies and programs that impinge on or regulate marriage, divorce, and fertility. Health programs and policies include such politically sensitive programs and issues as health care access, Medicare, Medicaid, long-term care, health maintenance organizations, public health issues, and substance abuse policies.

Consumer programs and policies include the regulation and laws governing advertising, product safety, ethics, taxation policies, the regulation of credit, insurance, telecommunications, mortgage, housing, and public utility markets and also deal with issues such as the invasion of privacy, Internet security, and children’s television. A specific focus in the consumer concentration is the role of marketing and its relationship to consumer well-being and consumer behavior.

In addition to college requirements, all PAM majors are expected to take core courses: Introduction to Management, Introduction to Policy Analysis, Research Methods, Multivariate Statistics, Intermediate Microeconomics, and Public Finance. Students will also be expected to develop a concentration of three courses in either social welfare/family, health, or consumer policy. These concentrations may emphasize either policy analysis or management skills. Finally, PAM majors are encouraged to participate in experiential learning such as Cornell in Washington, the Capital Semester, or Urban Semester. Please check with the undergraduate advising coordinator, Professor Alan Mathios, for further details.

TEXTILES AND APPAREL

The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, durable and nondurable household goods, composites, geotechnical, and biomedical applications. Programs in the department, in keeping with the overall mission of the college, emphasize the use of materials to meet human needs.

The curriculum stresses the application of design principles, physical and materials science, economics and marketing, government policy/regulation, management of products and their delivery, and technological developments.

Practical problem-solving skills are developed in the department's laboratories and studios. Academic course work is further enhanced by field and international experiences. Gallery space provides the setting to design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource. Items from the collection are made available to students for classroom and special study use.

Academic Advising

All TXA majors are matched with a faculty adviser by the director of undergraduate studies, Anita Ramirez. Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty adviser. Students in apparel design must begin working with their advisers early to develop a professional portfolio of their work. Students are free to change advisers, changes must be recorded with the advising coordinator. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for their major and college.

Ownership and Exhibition of Student Work

All apparel design work done as part of the academic program is the property of the department until it has been released by the instructor. Certain exceptional work may be retained by the department to exhibit for academic purposes. The department is not responsible for the loss or theft of student work.

Course Fees

No grade will be given in a course unless the course fee has been paid by the last week of classes.

Options

Students may select options in apparel design, apparel/textile management, or fiber science. The curriculum is based on manipulation of form, color, and the physical characteristics and structures of fabric to solve functional and aesthetic apparel problems; the application of economic and marketing principles to consumer and industry problems in the textile/apparel sector; and the study of chemical, physical, and engineering properties of fibrous structures and polymers. Depending on previous course work, transfer students may need one or two extra semesters to fulfill the requirements of the major.

Option I: Apparel Design

The study of apparel design includes both aesthetic and functional considerations in the design of body coverings. The program emphasizes a problem-solving approach that enables the student to bring a background in apparel, textiles, and human factors to the design process.

Option II: Apparel/Textile Management

Apparel and textile management combines the fields of apparel and textiles with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, economics, business management, and communication, as well as practical field experiences. This provides students with the experience of working with professionals from a wide variety of disciplines. Students often combine this option with either Option I (Apparel Design) or III (Fiber Science).

Option III: Fiber Science

Applications for textile structures include advanced engineering composites, protective clothing for industrial and military environments, and biomedical materials, as well as the more traditional applications found in apparel and home furnishings. The fiber
science option provides a strong base in mathematics and the physical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

**Career Opportunities**

Graduates of programs in the Department of Textiles and Apparel have found challenging employment within the textile and apparel sector, in independent and government-sponsored research, and in community organizations. Recent graduates are working in the fields of design, management, new product development, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in fiber and polymer science, textile marketing, apparel design, textiles, or business and management.

**INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY**

Biology and Society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy. It is also designed for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises by including courses in the fields of mathematics, biology, humanities, and social sciences. In addition, majors are required to take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology may be selected from concentrations in: human development and the environment, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in consultation with a faculty adviser to accommodate each student’s individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see the Director of Undergraduate Studies in MVR 205.

**INDIVIDUAL CURRICULUM**

A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition to develop an individual curriculum. To be approved, the curriculum must be within the focus of the college and be interdisciplinary in design, include at least 40 credits in human ecology courses, and not exceed the normal number of credits allowed in the endowed divisions. A student develops an individual curriculum in consultation with faculty advisers from at least two subject-matter fields and the program coordinator, Patti Papapietro, Office of Admission, Student and Career Services (172 MVR).

Such a program of study should encompass a substantial part of the student’s undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made after the freshman year and must be made before the second semester of the junior year.

If an individual curriculum seems advisable, the individual curriculum coordinator will provide direction in formally developing a program of study. Although the coordinator must approve the course enrollment schedule during course enrollment each term, it is a student’s responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her adviser and the program coordinator before the program change.

**SPECIAL OPPORTUNITIES**

Several programs allow students to receive academic credit for fieldwork and internship experience, study abroad, study in absentia, college-wide certificate programs, and joint programs with other schools and colleges at Cornell. Students may petition the college registrar to have concentrations that are formally recognized elsewhere within the university noted on their transcripts when accompanied by appropriate documentation from the program.

**Study Abroad**

Each year nearly 100 Human Ecology students spend a semester or more off campus in places spanning the globe, such as Australia and Zaire. There they supplement their Cornell studies with a wide range of cross-cultural and academic experiences. Study abroad opportunities are available through Cornell Abroad, U.S. college-sponsored programs abroad, and individual applications at foreign universities.

All study abroad students must meet college study abroad requirements and remain registered at Cornell during the overseas study. Credits earned count towards the 60 Cornell credits required for graduation. Study abroad credits do not count toward the maximum number of endowed credits that Human Ecology students are permitted to earn. Typically, students considering study abroad begin their planning at least by September or October of their sophomore year.

To start:

- Carefully consider what it is you hope to get out of a study abroad experience (academically and culturally). The Cornell Abroad Center (474 Uris Hall) houses the largest on-campus collection of materials on programs around the world. The Human Ecology Career Development Center (159 MVR) has additional materials.
- Pick up an application from the Office of the Registrar (145 MVR).
- Meet with the college’s study abroad adviser (172 MVR). The adviser, with the college registrar, will help you complete the application, plan for your semester off campus, and secure the necessary signatures.
- Submit your application to the Office of the Registrar. Deadlines are early February for study abroad the following fall term, and early September for study abroad the following spring term. Please note that some programs fill up quickly and applications to these most popular programs should be submitted several months before these deadlines.

**Independent Research**

Research opportunities for undergraduates are extensive and valued as an important part of the learning experience. The opportunity to engage in substantive research with some of the leading scientists in their fields is so compelling that approximately half of the college’s undergraduates conduct research projects. Students may become involved in research with the guidance of faculty members by conducting research assigned in a class, joining a faculty member’s research group, completing an independent study research project, or carrying out an honors program project.

For further information, contact individual faculty members or the director of undergraduate studies (DUS) in your department.

**Honors Programs**

Students interested in college honors programs that lead to the degree “bachelor of science with honors” usually apply to the appropriate honors committee no later than the end of their sophomore year. Generally, a minimum grade point average of 3.3 and demonstrated potential for honors-level research is required. Students take approved courses in research methodology and evaluation, attend honors seminars, complete a written thesis, and defend it in an oral examination.

In addition to the college honors program, special programs are offered by the Department of Human Development and the Division of Nutritional Sciences.

If you are interested in the honors program, it is important to contact the director of undergraduate studies (DUS) in your department or division for information and guidelines.

**Field Study and Internships**

Field study and internships provide experiential learning opportunities in real-life circumstances where classroom knowledge is tested and applied. Students are able to master new skills, develop and implement plans of action, solve problems, interact in multicultural situations, and build networks for future job opportunities. By applying techniques of research, critical thinking, and self-directed learning, students learn to think conceptually while becoming agents of change.

Check with the Director of Undergraduate Studies for major specific information. The Career Development Center (159 MVR) can also provide resources and assistance in finding internships and other experiential opportunities.

**Concentration/Certificate in Gerontology**

For students interested in pursuing study related to aging, the College of Human Ecology, under the auspices of the
THE URBAN SEMESTER PROGRAM IN NEW YORK CITY

Multicultural Issues in Urban Affairs
Sam Beck, Ph.D., director

The Urban Semester Program is a set of courses spanning the entire year. Students choose either Fall or Spring semester and enroll in three classes focusing on the opportunities and barriers that a multicultural society presents and their relationship with professional, community, or public policy settings and concerns (15-credit residential program). They also intern three days each week in placements of their choosing. One day each week, students carry out community service in an inner city school (pre-K to high school). One day each week, students participate in site visits. Seminars are incorporated into these activities. All students reside in the Olin Hall dormitory of the Weill Medical College of Cornell University.

The two-week Winter Session course (two credits) enables students to carry out community service through a reflective practice and problem-solving curriculum. In the eight-week summer program (one to two credits), students carry out internships in placements of their choosing, including a new summer medical program. Students work with the program staff to locate internship placements. For information, contact the Urban Semester Program staff (159 MVR Hall, 607) 255-1846) or the Urban Semester Program in New York City at (212) 746-2273.

New York City offers a wide variety of internship settings. Many bilingual and bicultural internship settings are available in Chinese, Spanish, Creole, Russian, Yiddish, and other languages. Examples of internships follow:

Health and Medicine—New York Presbyterian Hospital/New York Weill Cornell Center, Queens Medical Center for Women and Children, South Bronx Health Center for Children and Families, Memorial Sloan Kettering Hospital for Special Surgery, Montefiore Hospital, Bellevue Hospital, Our Lady of Mercy Hospital

Private and Public Law—NOW Legal Defense and Education Fund, Agenda for Children Tomorrow, Skadden Arps, Slate, Meagher, & Flom, Lawyers for Children, DA’s Office, Legal Aid Society, AALDEF, Committee Against Anti-Asian Violence, Center for Immigrant Rights, NAAACPLDEF, Dorsey & Whitney

Government and community agencies—Cornell University Cooperative Extension, Senator Charles Schumer’s office, NYC Housing Authority, Dept. of Aging, Women’s Action Alliance, NYC Commission on the Status of Women, NYC Dept. of Consumer Affairs, The Center for Puerto Rican Studies, Manhattan Borough President’s office, Central Park Wildlife Center, Attorney General’s office, The Parks Dept., Dept. of Health

Private and public schools—Beginning with Children, Banana Kelly High School, East Harlem School at Exodus House, The Hetrick Matthes Institute, Nuestros Niños, Theodore Roosevelt High School, The Choir Academy of Harlem, El Puente, Genesis RKF Center, River East School, MS 118, Mott Haven Village

Other Off-Campus Programs

Capital Semester
Combine a full semester of Cornell credit with a three-day-a-week paid internship of $3,000. Students intern directly for New York State legislators in Albany to explore their interests in greater depth, doing research projects, meeting with lobbyists and constituents, writing reports for legislation and publication, and working on legislative hearings. This is great experience for law school, graduate school, and employment. It is available for the spring semester only with preference given to juniors. Visit the Career Development Center (159 MVR) for more information and applications.

Cornell-in-Washington
Students take courses from Cornell faculty, conduct individual research projects, and work as externs while taking advantage of the rich resources of the nation’s capital. For more information, visit the program office (471 Hollister Hall).

Courses at Ithaca College and Wells College
Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca or Wells College. Students pay regular full tuition to Cornell and only special fees to either Ithaca or Wells when applicable. Students are allowed to register for one course per term and a maximum of 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice teaching courses at Ithaca and Wells, and those students pursuing a concentration in exercise science through a specially arranged program with Ithaca College.
Cornell students are eligible to register only for Ithaca and Wells College courses that are relevant to their program and that do not duplicate Cornell courses. Ithaca and Wells College credit counts as Cornell credit, but not as Human Ecology credit, accepted on a space-available basis. Participation in this program is not guaranteed, and both Ithaca and Wells have the right to accept or reject students for any reason deemed appropriate. The program is available only during the fall and spring semesters. For further information, contact the college registrar (145 MVR, 255-2235).

Double-Registration Programs

Five-Year BS/MPS in Health Care Administration

Undergraduates from HBHS and PAM are eligible to apply to the Sloan Program in their junior year for a five-year B.S./M.P.S. degree. During their senior year, students will take first-year Sloan courses which will be counted twice to satisfy both undergraduate as well as graduate requirements. Also during this year, students will complete a graduate school application and take the GRE or GMAT test. At the end of their senior year, students will graduate with a B.S. degree. If the students' grades and test scores are competitive, they will be notified during the spring semester of their senior year that they have been formally accepted into the Sloan Program.

Those students accepted will participate in a health care administration residency during the summer after earning their BS. The following year they will complete the second year of required Sloan courses and earn a Masters in Professional Studies with Cornell certifying completion of requirements in a degree in health administration.

Double-Registration Program for Law

A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior year applicant follows the ordinary application procedures for Cornell Law School admission. Interested students should contact the Law School director of admissions (Myron Taylor Hall, 255-5141) to discuss the admissions criteria. Because students accepted to this program will be spending their senior year away from Human Ecology, they need to plan ahead to ensure that graduation requirements for the BS degree will be met. Successful applicants need the approval of the college registrar in Human Ecology.

ACADEMIC ADVISING AND STUDENT SERVICES

Faculty Advisers

Students who choose to major in a particular department are assigned an adviser whose special interests match their need. Students may change advisers as their own interests change by working with the director of undergraduate studies (DUS).

Faculty advisers are available to discuss course requirements and sequences, useful electives inside or outside the college, as well as future goals and career opportunities. Although advisers must provide the adviser key number (PIN) during course enrollment each term, it is the student's responsibility to make sure that his or her program meets graduation requirements for the major and the college. Directors of undergraduate studies in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors.

Office of Admission, Student, and Career Services

The Office of Admission, Student, and Career Services (ASCS) (172 MVR) is a center for student orientation activities; academic, personal, and career advising; study abroad; and minority student programs.

Personal counseling, including exploration of problems or concerns of a personal nature, is available to all ASCS counselors, however, are not psychiatrists or therapists; they are available to help you understand and navigate the Cornell system, and to offer support, assistance, and referral. Discussions are completely confidential. Appointments may be made through the receptionist in ASCS or by calling 255-2532.

In addition, ASCS provides support for several student organizations, including Human Ecology Ambassadors, the Mature Students Association, the Association for Students of Color, the Pre-professional Association towards Careers in Health, the Pre-law, Undergraduate Society, the Orientation Committee, and Human Ecology Voices. Primary responsibilities of the office are listed below.

Academic advisement. This service is provided to all students as an adjunct to faculty advising. Counselors can assist in course scheduling, planning, the selection of a major, graduation requirements, and related issues.

Undeclared majors. Students who have not yet declared a major are urged to work closely with student services staff to plan their program of study. For the period a student is undeclared, counselors will provide assistance during course enrollment.

Career counseling. Career counseling is designed to help students clarify the relationship between personal skills, abilities, and career goals. Services are offered on an individual or group basis. Counselors assist in identifying careers of the majors, discuss employment trends in various fields, and suggest course work appropriate to various career goals.

Post graduate advisement. Material pertaining to graduate and professional school programs, enrollment, career opportunities, and personal and professional growth trends is readily available.

Students with disabilities. The college is committed to assisting students with disabilities. Students who have special needs are urged to contact the Student Disability Services (420 CCC) when they arrive on campus.

Financial aid. Students who encounter financial difficulty may anticipate running short of funds may discuss their needs with a counselor. Complete information is available from the Office of Financial Aid, 201 Day Hall.

The Human Ecology Alumni Association Cash Award Fund. This fund provides small emergency grants to students in the college who have unexpected financial problems. Applications may be made through ASCS.

Office of the Registrar

The Office of the University Registrar (B7 Day Hall) maintains the official academic records for the university and provides students with their official university transcripts. Additional information is available on the university registrar's web site: www.sws.cornell.edu/our. The college registrar (145 MVR) maintains students' official academic records, including the audit of progress toward the degree. The college registrar also provides services such as adding and dropping classes, correct student records, issuing letters verifying that a student is registered, and approving the transfer of credit from other institutions.

Minority Programs

The College of Human Ecology at Cornell University believes that a diverse community enriches the educational process for all members of the college community. Consequently, the college focuses on particular efforts on a broad range of services for students of color. This includes not only recruitment but also services for students already on campus. Additionally, the college collaborates with university and New York State programs to assure Human Ecology students have access to the vast array of services available here.

The professional staff of Human Ecology's Office of Admission, Student, and Career Services includes a director of multicultural programs who assists in the recruitment, admission, and enrollment of the most qualified and appropriate EOP (a program for New York State residents), African American, Native American, Hispanic American, and Asian American students to the college. All EOP students are invited to special university-wide pre-freshman summer program that introduces accepted students to the Cornell campus and its classrooms. Services for current students include EOP/COSEP, academic, career, and personal counseling, recommendation letters for employment or graduate schools; and advising and support for student activities and programs.

The Human Ecology Partnership Program provides mentorship through a network of faculty and upper-class students to all incoming students of color, particularly during their first year. In addition, this office serves as a liaison to the Office of Minority Educational Affairs (GOSEP), State Programs (EOP), and the Learning Strategies Center. Students are also encouraged to visit the college's Career Development Center to enhance personal career exploration and decision making.

Selected programs include the following:

BBMTA (Black Biomedical and Technical Association). A university organization that provides enrichment activities for minority students interested in pursuing medical careers. For more information, contact Janice Turner (55 Goldwin Smith, 255-5004).
ASC (Association for Students of Color). With the motto "Yesterday's vision, today's reality, and tomorrow's hope," the ASC was created to bring together Human Ecology students to provide a supportive foundation for enrollment, retention, graduation, and career placement for students of color.

The goals of the ASC are to increase communication between students of color, administration, and faculty, to assist in increasing enrollment of students of color in Human Ecology, and assist in increasing the retention of students of color in Human Ecology and in their selected majors.

ASC's four committees are recruitment and retention, student relations, career development, and peer advising. For more information contact Verdene Lee (172 MVR, 255-2532).

Human Ecology Peer Partnership Program helps incoming students of color transition to the college and university. Small groups of freshmen, usually about six to eight students, are paired with faculty and upperclassmen. They meet weekly for discussions, guidance, and explorations of the Cornell campus and the Ithaca community. For more information, contact Verdene Lee (172 MVR, 255-2532), Gary Evans in the Department of Environmental Analysis (E306 MVR, 255-4775); or Lorraine Maxwell in the Department of Design and Environmental Analysis (E310 MVR, 255-1950).

CSTEP. The Collegiate Science and Technology Entry Program is the New York State program of enrichment activities and programs for pre-med and pre-law New York State residents. Services are targeted at populations who are historically underrepresented in scientific, technical, health-related, or licensed professions and/or who are economically disadvantaged and who demonstrate interest in, and potential for, a CSTEP-targeted profession. For more information, contact Verdene Lee (172 MVR, 255-2532).

Multicultural Education

Multicultural education broadens understanding of the world's many different societies as well as the various cultures of this country. Students take courses in the Cornell programs listed below that may be used to meet degree requirements. The college encourages students to incorporate courses from these cultural programs and from study abroad experiences in their degree programs. See information on study abroad opportunities.

- African Studies and Research Center
- American Indian Program
- Asian American Studies Program
- East Asia Program
- Gender and Global Change
- Institute for European Studies
- Languages and Linguistics
- Latin American Studies Program
- Latino Studies Program
- Peace Studies Program
- Program in Jewish Studies
- Program for Contemporary Near Eastern Studies
- Religious Studies

South Asia Program
Southeast Asia Program
Women's Studies Program

International Students

The International Students and Scholars Office (ISSO, B50 Caldwell Hall, 255-5243) provides a broad range of services to international students. All international students should maintain contact with the ISSO. Counselors in ASCS are also available for assistance.

International students in the College of Human Ecology are encouraged to meet with the college registrar to discuss any questions or concerns that they have about their academic record.

Career Planning, Gradate and Professional School, and Job Search Services

Counseling. The Office of Admission, Student, and Career Services (ASCs, 172 MVR, 255-2532) provides career counselors and resources in the Career Development Center to help students assess possible career outcomes and access educational and extracurricular programs and resources to prepare for their careers. Assistance is available through one-on-one advising or group programming. The office works with the Cornell Career Services (103 Barnes Hall, 255-5221) to facilitate access to larger, university-wide programs.

The Career Development Center (CDC, 159 MVR, 255-2532) is a starting point for students looking for career information. Selected resources about career planning and job search techniques, general directories to begin job or graduate school searches, and information for alumni networking are housed here. Also available are Cornell Career Services handouts and registration forms, graduate and professional school testing booklets and registration packets, study abroad, and Urban Semester program materials. Computer terminals provide access to web-based information regarding internship and employment opportunities, as well as graduate/professional schools.

The CDC is open most weekdays during class hours and closes at 4:00 p.m. on Fridays. Student career assistants are available during these hours to provide resume and cover letter critiques, conduct mock interviews on video, and help navigate the library resources. Final critiques can be provided by a career counselor once the student review has been completed.

Former Urban Semester Program participants comprise a portion of the CDC student staff and are available daily to answer questions about the program and its application process. Selected services are listed below. They will help you to investigate your interests, skills, and values as they relate to career options, provide you with useful information and tips for a successful summer or full-time job search, and provide access to employment opportunities. In addition, please refer to the college's career services web site: www.human.cornell.edu/student.

Prelaw or Premed. Students who consider themselves prelaw or premed are encouraged to join a student group affiliated with ASCS. Those interested in a law career can join PLUS (PreLaw Undergraduate Society) where information on applying to law school, preparing for the LSAT, and examining career opportunities in law is provided. Students interested in pursuing a health-related career are welcome to join PATCH (Pre-professional Association Toward Careers in Health) which serves as a link to the university health careers network and provides guidance as students prepare for the MCAT, apply to medical school, and explore the various specialties of medicine.

Extern Program. Spend one day to one week over winter break shadowing an alum in a career field of your choice. Observe day-to-day activities, discuss specific jobs and careers, and sometimes obtain limited hands-on experience. This service is available to sophomores, juniors, and seniors.

Internship and Employer Files. The CDC keeps files of more than 300 internships and hundreds of potential employers for student review.

Student Jobs and Internships. This is an electronic listing of information about internships and career-related summer and academic year employment that is exclusive to Cornellians.

Alumni Career Presentations. Alumni from the college come back to campus throughout the year to discuss their postgraduate or professional experiences. These meetings are ideal for exploring career outcomes of specific majors.

AlumNet. Students have access to Human Ecology alumni who can provide information on their careers and offer suggestions on a job search in their particular field or location. Students can query alumni on a host of variables and review selected alumni resumes to learn more about specific careers.

Job Search Workshops. The college hosts approximately 15 workshops every semester. These workshops are designed to help students market themselves for either summer or full-time job opportunities. Students learn how to conduct an effective job search, write a resume and cover letter, and interview successfully.

Jobtrak. Exclusively for Cornell students, Jobtrak provides a listing of job opportunities available. Most are full-time jobs, although some summer opportunities are listed. Search by career field, geographic location, or both.

On-campus Recruiting. This service provides access to on-campus interviews with employers interested specifically in Human Ecology students and employers looking for Cornell graduates in general. Interviews occur primarily in banking and financial services, retail sales and management, and consulting, along with a few nonprofit organizations. All activity regarding on-campus recruiting is handled through Interactive, our web-based listing of employers.

New York Recruiting Consortium. Available exclusively to Human Ecology and Arts and Sciences students, the New York Recruiting Consortium happens in New York City over winter break. It offers interviews for full-time employment with employers involved in banking and financial services, retail sales/management, advertising, law, and consulting.
Human Ecology courses used to satisfy distribution requirements in Category I:
1) WILL NOT count towards the 40-credit minimum in Category II.
2) Will satisfy the nine-credit requirement for course work outside the major.
   (Exception: B&S majors must refer to the "NOTE" on B&S curriculum sheets at the end of Category II requirements for appropriate guidelines.)

Elective Credits
- Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and faculty advisers are available to discuss which courses may interest students and best round out their education.
- Students should consult the index in this book to learn where different subjects are taught in the university. Some subjects are taught in more than one division.
- Elective credits can be earned in the endowed and statutory divisions of Cornell.

Endowed Colleges
- Africana Studies and Research Center
- College of Architecture, Art, and Planning
- College of Arts and Sciences
- College of Engineering
- School of Hotel Administration
- Johnson Graduate School of Management

Statutory Colleges
- College of Agriculture and Life Sciences
- College of Human Ecology
- School of Industrial Relations
- College of Veterinary Medicine
- Students are allowed 21 credits of endowed courses as electives or in their major; they may take more than 21, but will then be billed at the endowed rate of tuition for the extra credits.
- To the extent possible, courses taken in the endowed colleges will be counted to meet distribution requirements in Category I. More than 40 endowed credits taken in Category I, however, will count against the 21 allowed endowed elective credits.
- Endowed credits earned in Category II (even if the endowed courses are required for the major) and Category III will be counted against the 21.
- Required credits listed in the requirements charts for Categories I and II are the minimums; credits taken in excess of those minimums count toward the additional credits required in Category III to make a total of 120 credits (exclusive of physical education). An unlimited number of credits may be taken in the statutory colleges of Cornell. Students may choose to take additional statutory credits and graduate with more than 120 credits.

Elective credits in Category III earned in Cornell's endowed divisions during summer session, study abroad credits, in absentia credits, and transfer credits do not count against the 21 credits allowed in the endowed divisions.

Minimum Semester Requirements
- Students enrolling in the college as freshmen must complete at least 12 credits of Human Ecology courses by the end of the fourth semester, and at least 5 credits of Human Ecology courses must be taken in each of the freshman and sophomore years (ECON 101 and 102 may be used to fulfill this requirement).
- Students must carry 12 credits each semester, excluding physical education, to be matriculated as full-time students (Exception: mature students).

Requirements for Majors
- Students must fulfill the requirements specified for a major that are in effect at the time of their matriculation or thereafter.

Grade Point Average
- Students must earn a minimum cumulative grade point average of 1.7 (C-) or better to graduate.
- To be eligible for the Dean's List, students must have a semester GPA of 3.7 with no F or U grades. At least 12 credits of letter grades are required.

S-U Grade Options
- The S-U grading option may NOT be used for courses in Category I or required courses in Category II unless it is the only grade option offered for those courses.
- S-Us MAY be used for the nine credits of Human Ecology coursework outside of one's major and for electives in Category III.
- Students may apply no more than 12 credits of S-U towards graduation. If a required course is only offered S-U, it will not count towards this limit. Also, Honors Research 499 taken S-U does not count. Students may take more S-Us if they choose, but the additional credit cannot be applied towards graduation.

Special Studies
- Students may use only 12 credits of 400, 401, 402, or 403 courses toward graduation.
- Additional credits of 400, 401, 402, or 403 courses can be taken but will not be applied towards graduation.

Wells, Ithaca College, and Study Abroad Credits
- Any credits earned with the Wells or Ithaca College exchange program are considered Cornell credits for the purpose of fulfilling the 60 Cornell credit graduation requirement. They can not be used for Human Ecology credit. Study Abroad courses may also count as Cornell credit.
Extramural credit is administered by the Office of Continuing Education and Summer Sessions (B20 Day Hall, 255-4987). Extramural credit is charged by the credit hour at the endowed tuition rate. Students may count only 15 credits of extramural credit toward their degree requirements. A student may enroll for extramural credit during the fall or spring semester only if he or she is not registered in the College of Human Ecology. For example, some students enroll for extramural credit before matriculating at Cornell.

An exception to this rule is credit earned in the Ithaca College or Wells College exchange. Students enrolled in these programs simul­taneously maintain their status as students registered in the College of Human Ecology.

Humanities
Only certain classes will count for Category I.D. Humanities. To determine eligibility the college uses the following definition: The humanities include the study of literature, history (including art and design history), philosophy, religion, and archaeology. Critical, historical, and theoretical studies of the arts and design are considered humanities. Languages and creative or performing arts such as the writing of fiction or poetry, painting, sculpting, designing, composing or performing music, acting, directing, and dance are not considered humanities. Additionally, social science courses such as sociology, government, anthropology, and psychology are not considered humanities.

Specifically, courses in the following list will count as humanities:
- Africana Studies (literature and history)
- Archaeology
- Asian American Studies
- Asian and Near Eastern Studies (literature and history)
- Classics (literature and history)
- Comparative Literature
- English (literature only)
- History
- History of Art/History of Architecture
- LA 282
- Music and Theatre Arts (theory, literature, and history only)
- Natural Resources 407, 411
- Philosophy
- Religious Studies
- Rural Sociology 100, 175, 318, 442
- HD 241, 359, 417
- DEA 111, 243, 251, 443
- PM 631, 634, 652

PROCEDURES

Registration and Course Enrollment

Registration Requirements
University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communica­tion of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must complete course enrollment according to individual college requirements, settle all financial accounts including current semester tuition; satisfy New York State health requirements; and have no holds from the college, the office of the Judicial Administrator, Gannett Health Center, or the Bursar.

Individuals must become registered students by the end of the third week of the semester. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises.

Verification of Registration

Many insurance companies or scholarship funds require verification of full-time registration at Cornell. Should students need such verification, request an official letter from the Office of the University Registrar (B-7 Day Hall). Students who need letters of good standing should contact the Human Ecology Registrar's Office (145 MVR).

Bursar Bill

A bursar bill is sent to each student over the summer and winter breaks; it summarizes what is owed to the university. The bursar bill can also be viewed through Just the Facts. Any questions regarding the bursar bill can be directed to the Bursar's Office (260 Day Hall, 255-2336). Initial New York State residency eligibility is determined during the admissions process, but the Bursar's Office will handle any request for a status change after matriculation.

Late University Registration

A student clearing his or her financial obligations after the deadline date of the bursar's bill is considered late. Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due. According to university policy, all
students must be registered before the end of the third week of classes. If for any reason a student registers after that time, the Bursar’s Office will charge a late fee. Students who fail to register by the third week of the term may be withdrawn from the university. Should withdrawn students wish to return, they must reapply through the admissions committee.

Proration of Tuition
Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. (See the college registrar or counselors for more information.) Students of mature status may carry 6 to 11 credits without petitioning; but must request that their tuition be prorated. All requests should be made to the college registrar by the first week of classes and no later than the third week of the term.

Course Enrollment

Initiating the process
Students are expected to make course requests for the subsequent semester during a specified time in the current semester. Those dates are advertised publicly and available on the University Registrar’s web site (www.sws.cornell.edu/our). CoursesEnroll takes place electronically, using software available through Just the Facts. During this time, each student must meet with his or her faculty adviser to discuss academic plans and to obtain the advising PIN code required for finalizing course requests. A student may enter and hold courses prior to entering their PIN. Once the PIN number is entered, however, the schedule is locked and it is not possible to change until the add/drop period of the next term. Information on courses is readily available in this book and in the Course and Time Rooster for each semester. Both of these publications can be accessed on the web through CUNet.

Incoming students will receive tentative schedules upon their arrival to campus, and will meet with faculty advisers during the orientation period.

Course Loads
The normal course load in the college ranges from 12 to 18 credits, although there is no limit to the number of statutory credits a student may take each semester. Nonetheless, students should avoid planning excessive workloads, the time required to keep abreast of courses tends to increase as the semester progresses. Course loads cannot be withdrawn from after the seventh week of classes without petitioning and by substantiating extenuating circumstances. Students should avoid the need to drop courses by taking on a reasonable workload and using the drop period to make changes in their program.

Exception for those with mature student status, students must carry at least 12 credits (exclusive of physical education) to maintain full-time status. In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning and advice on how to proceed are available from the Office of Admission, Student, and Career Services (172 MVR).

Late Course Enrollment
Students who do not complete course enrollment during the CoursesEnroll period usually must wait until the beginning of the next semester’s add/drop period to enroll. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason should see the college registrar in 145 MVR as soon as possible. The college registrar can explain available options and course enrollment procedures under such circumstances.

Note: Students can review their course schedule via computer using Just the Facts. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade options, and other data. Errors must be corrected immediately. Procedures for correcting enrollment errors as well as for making optional changes are described below under Course Enrollment Changes.

Course Enrollment Changes
It is to the student’s advantage to make any necessary course enrollment changes as early in the term as possible. Adding new classes early makes it easier for the student to keep up with class work. Dropping a class early makes room in the class for other students who may need it for their academic programs.

Ideally, students evaluate their class workload carefully at the beginning of the term. If, in the first week or two, the instructors do not discuss the amount of material to be covered, and the extent of student assignments, students need to ask about course requirements.

Some procedures required for course enrollment are also required for course enrollment changes. For example, students must obtain the instructor’s permission for a course requiring it, and must complete the same forms for special studies courses. Aside from the procedures listed below for course enrollment changes, all drop/add forms for nutritional science majors must be signed by a faculty adviser.

Deadlines for Add/Drop and Grade Option Changes
- During the first three weeks of the term, courses may be added, dropped, or the grade option changed.
- From the fourth through the seventh week of the term, courses may be dropped. Grade option changes cannot be made at this point regardless of instructor’s permission.
- From the fourth week of the term, instructors have the right to consider students’ requests for course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.
- After the seventh week of the term, any requests for course changes must be made through the petition process.
- After the seventh week of the term, any student granted permission to drop a course after petitioning will automatically receive a grade of W (Withdrawn), and the course will remain on the official transcript, even if repeated in a later term.

Deadlines for Half-Term Courses
Students may drop half-term courses within the first three-and-one-half weeks of the course. Students may add a course after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course.

Procedures for Add/Drop and Grade Option Changes
To make course changes during the add/drop period, a student must take the following five steps:
1. Obtain an add/drop form from the Human Ecology Registrar’s Office (145 MVR).
2. Complete the form and take it to the appropriate office for a signature: for Human Ecology courses, the forms should be taken to the Human Ecology Registrar’s Office; for courses outside the college, the forms should be signed to the appropriate departmental office of the college.
3. Submit the completed form to the Division of Nutritional Sciences (172 MVR).
4. Receive carbon copies of each course change form at the time it is submitted. It is important for students to keep these copies to verify any changes.

To make course changes after the seventh week of the term, a student must file a general petition form. (See the section, Petition Process.) Students are expected to attend classes and to do assigned work until the petition has been formally approved or denied.

Time and Place for Add/Drop and Grade Option Changes
All students may adjust their schedules and grading options during the first three weeks of each semester. The university also holds a course exchange the day before fall classes begin where students have the opportunity to change their class enrollment in centralized locations. The Human Ecology Course Exchange is located in the MVR auditorium. For course exchange location for other colleges check the registration website each semester.

Permission of Instructor
Certain courses may be taken only with the permission of the instructor as indicated in this book. Undergraduates must obtain permission of the instructor to take any graduate course. Students must request the
instructor's permission during the CourseEnroll period by placing their name on a list maintained by the departmental advising assistant.

Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary (100 Olive Tjadan Hall) before enrolling in the course. Seniors who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student then files with that school's registrar in Sage Hall.

Course Enrollment while Studying Abroad
Students who plan to study abroad have several options available to enroll for their returning semester at Cornell. Students can consult with their faculty adviser before departure to consider the schedule of classes that they will take upon their return to campus. Once abroad, the student can use the web to access the University's Courses of Study and the Course and Time Roster for the upcoming term. The roster is available on the web in approximately the first week of October and the first week of March. Using these resources, the student can e-mail the course requests to the student's faculty adviser for approval; the faculty adviser can then e-mail them to the college registrar. A student who does not have access to the Internet while abroad can wait for the Course and Time Roster to arrive via airmail from the Cornell Abroad Office. The student can then e-mail, fax, or mail the course requests to their faculty adviser and ask the faculty adviser to submit the course requests to the college registrar. The Course and Time Roster becomes available only the day that pre-enrollment begins; thus, students who depend on receiving the mailed copy will experience some delay in submitting their course requests.

Oversubscribed Courses
Enrollment in many human ecology courses is limited. When a course is over enrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in this book. Students' professional goals may be considered. Those students not admitted to a course may be placed on a waiting list.

Course Wait List
The Human Ecology Registrar's Office maintains wait-listed courses to accommodate students who want to enroll in courses that have been filled. Course instructors are responsible for determining the criteria to fill their classes from waiting lists. Waiting lists are maintained for the first three weeks of each semester.

Limited Enrollment Classes
Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the course list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance.

Special Studies Courses
Each department in the College of Human Ecology (DEA, HD, DNS, PAM, and TXA) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of those courses, Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.

The other special studies courses are 400, Directed Readings; 401, Empirical Research; and 402, Supervised Work. Juniors and seniors normally take those courses, and a faculty member in the department in which the course is offered supervises work on an individual basis. It is important for students to use the appropriate course number (300, 400, 401, or 402) for a special project.

To register for a special studies course, a student obtains a special studies form from the departmental office where they plan to take the course. The student discusses the proposed course with the faculty member under whose supervision the student will work and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a special studies form and obtains signatures from the instructor, department chair, and faculty adviser before submitting the form to the Office of the College Registrar (145 MVR). The student must also submit a course registration form (add/drop form) to the Office of the College Registrar. Special studies forms are available in 145 MVR or in departmental offices. Add-drop forms are only available in 145 MVR.

Semester credits for special studies courses are determined by the number of contact hours the student has with the supervising faculty member (or a person designated by the faculty member). To earn one credit, a student must have the equivalent of three hours of contact time per week (or a total of 45 contact hours). For additional credits, multiply the number of credits to be earned by 45 to determine the number of contact hours needed for the course. A student can only use 12 of 400, 401, 402, or 403 courses towards graduation and only three 400-, 401-, or 402-credits can be used to satisfy the nine-credit-outside-the-major requirement. To register in a special studies course taught in a department outside the college, follow the procedures established by that department.

Changes in status

General Petition Process
The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations. In most cases, extenuating circumstances are necessary for a petition to be approved if it involves waiving a deadline. These situations are beyond a student's control, such as a documented medical emergency.

Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See the Course Enrollment Changes section above for some of the important deadlines. If unsure of a deadline, check with a counselor in the Office of Admission, Student, and Career Services (172 MVR) or with the Office of Registrar's staff (145 MVR).

A general petition may be needed to carry fewer than 12 credits, withdraw from a class after the seventh week deadline, add a course after the third week deadline, change a grade option after the third week deadline, be exempt from one or more of the college's graduation requirements, substitute a required course in one's major with another course, or stay an additional semester to complete the graduation requirements.

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor or the college registrar.
