Lec 07—Designed to provide students interested in the labor field with the skills necessary to understand and utilize social science research as it relates to the labor movement. The course has four major goals: 1) to develop the skills to critically evaluate a wide variety of research relating to unions and the workplace; 2) to provide an introduction to a number of both quantitative and qualitative research techniques utilized by unions and those who study the labor movement; 3) to familiarize students with the broad range of library and computer resources that can be utilized for labor and corporate research; and, 4) to provide students an opportunity to design and conduct a research project for a national or local union.

ILRCB 609 Special Topics: Labor Law Policy Seminar
Spring. 3 credits. K. Stone.
The United States' collective bargaining system, which had its origins during the New Deal period, has come under intense attack. The intellectual premises of the system have been challenged by scholars on both the right and the left, and at the same time the decline in the labor movement has undermined its political support. This seminar looks at the theoretical attacks on the New Deal collective bargaining system and at some of the current proposals for its replacement. Among the topics to be discussed are: the theory of regulation embodied in the National Labor Relations Act and its critique; alternative concepts of labor markets and their policy ramifications; the employers' role in the economy and its ramifications for domestic labor regulation. There are also discussions of...
alternative systems of labor regulation, such as is found in West Germany, Sweden, and Japan.

ILRCB 650 Service Work and Workers in Historical Perspective
Fall or spring. 3 credits. I. DeVault.
Takes a historical perspective on the development of the service economy in the United States. Readings include general and theoretical works, but the main focus is recent historical scholarship on specific occupations and situations in the "nonproductive" workforce. Students explore primary sources for research on the subject and write research papers.

ILRCB 651 Industrial Relations in Transition
Spring. 3 credits. Limited to seniors and graduate students. H. Katz.
Consider whether recent developments such as concession bargaining, worker participation programs, and the growth of nonunion firms represent a fundamental transformation in industrial relations practice. Reviews recent research and new law of arguing that such a transformation is occurring, including the work of Piore and Sabel, Bluestone and Harrison, and Kochan, McKersie, and Katz. Also reviews the counterarguments and evidence put forth by those who believe no such transformation is under way. Course material focuses on industrial relations practice in the private sector in the United States, although some attention is paid to developments in Western Europe, the United Kingdom, and Japan.

ILRCB 655 Employment Law I
Fall or spring. 3 credits. Permission required. Classroom presence and participation are mandatory. This course can be taken either before or after ILRCB 656. There are considerable reading responsibilities. L. Adler.
The approach taken is similar to ILRCB 655, but the subject matter differs. The subject studied includes employment at will and its exceptions; the role of the Constitution in the workplace; and electronic and traditional privacy at work; and the slowly evolving rights of contingent workers in the old and new economies. One study primarily reviews federal and state court decisions and focuses upon the way that employees' rights are advanced or constrained by law.

ILRCB 656 Employment Law II
Spring. 3 credits. Prerequisites: ILRCB 201, 501, or permission of instructor. Classroom presence and participation are mandatory. This course can be taken either before or after ILRCB 656. L. Adler.
The approach taken is similar to ILRCB 655, but the subject matter differs. The areas covered include the meaning and validity of pre-employment arbitration agreements; the critical distinctions in the status and thus the rights of employees, independent contractors, and contingent workers; what rights the working poor, the homeless, and workforce individuals have on the "job;" and the origin and application of the workers compensation laws that apply when people are injured or contract disease from their work. One study primarily reviews federal and state court decisions and focuses upon the way that employees' rights are advanced or constrained by the law. There are considerable reading responsibilities.

ILRCB 682 Seminar in Labor Relations Law and Legislation
Fall or spring. 3 credits. Limited enrollment. Prerequisite: permission of instructor. R. Lieberwitz.
This course covers legal problems in public employment and other areas of labor relations affecting the public interest.

ILRCB 683 Research Seminar in the History of Industrial Relations
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 100 and 101; graduate students, ILRCB 502. C. Daniel, I. DeVault, N. Salvatore.
Areas of study are determined each semester by the instructor offering the seminar.

ILRCB 684 Employment Discrimination and the Law
Fall or spring. 3 credits. Prerequisite: ILRCB 201/501 or equivalent. M. Gold, R. Lieberwitz.
An examination of the laws against employment discrimination based on race, color, religion, sex, national origin, age, and disability.

ILRCB 685 Research Seminar on Trade Unions
Fall or spring. 3 credits. Prerequisite: ILRCB 300 or 500; permission of instructor. S. Kuruvilla.
Designing to provide an analytical survey of research on trade unions in the United States. Major topics include unions in politics, unions as complex organizations, public opinion and attitudes toward unions, determinants of union growth and decline, economic and noneconomic effects of unionization, internal union government, and commitment and participation in union trade activity. This is a research-oriented course.

ILRCB 686 Collective Bargaining in the Public Sector
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 300 and 201; graduates, 500 and 501. Staff.
An examination of the development, practice, and extent of collective bargaining between federal, state, and local governments and their employees. The variety of legislative approaches to various situations is discussed. The effects of unionization rights, unfair practices, scope of bargaining, impasse procedures, and the strike against government are considered along with implications of collective bargaining for public policy and its formulation.

ILRCB 689 Constitutional Aspects of Labor Law
Fall or spring. 3 credits. R. Lieberwitz.
In-depth analysis of the Supreme Court decisions that interpret the United States Constitution as it applies in the workplace. This study focuses on the First Amendment, Fifth Amendment, Fourteenth Amendment, and Commerce Clause, with issues including freedom of speech and association, equal protection, due process, and other issues in the area of political and civil rights. The course entails a high level of student participation in class discussion, and assignments include a research paper.

ILRCB 703 Theory and Research in Collective Bargaining
Spring. 3 credits. Open to graduate students who have taken ILRCB 500 and ILRB 723 or their equivalents. Recommended: a statistics course beyond the level of ILRST 510. Staff.
This is a second-level course in collective bargaining that builds on the institutional research covered in ILRCB 500. The existing literature in the area of collective bargaining is appraised for its theoretical and empirical content. Efforts are made to explore the appropriate role for theory and empirical analysis in moving research in collective bargaining toward a more analytical perspective, and to identify and critique the underlying paradigms used to study collective bargaining-related issues.

ILRCB 705 The Economics of Collective Bargaining
Spring. 3 credits. Prerequisites: ILRCB 500: ILRLE 540 (or their equivalents) and an understanding of multiple regression analysis; or permission of instructor. Staff.
Focuses on both the economic analysis of unions and collective bargaining in our economy and on the economic forces that affect collective bargaining. The method is to identify and conceptualize the structural determinants of relative bargaining power. On this basis, the course examines both the economic outcomes of collective bargaining and current bargaining trends in a variety of industries. Tentative reference disciplines (neoclassical, institutionalist) are compared. The statistical techniques and empirical results of research on the union effect on economic outcomes (wages, prices, inflation, profits, productivity, inequality) are also evaluated. The effect of technology, corporate structures, and public policy on union bargaining power is outlined, and a number of case studies of collective bargaining in the private sector are reviewed. A term paper is required.

ILRCB 708 Negotiations in Practice (also LAW 672)
Fall. 3 credits. S. Kuruvilla.
This course aims to provide opportunities for class participants to develop their negotiating abilities for use in organizational and other settings. The course is premised on the assumption that negotiating concepts are best learned through practice which is grounded in rigorous analysis and reflection. While theoretical principles and concepts from various reference disciplines (such as social psychology, sociology, and economics) are presented through lectures and readings, this course focuses primarily on improving practical skills. Class participants not only learn to enhance their individual abilities in dyadic and group situations, but also learn to analyze contexts for the most effective application of these skills.

ILRCB 783 Seminar in American Labor History (also HIST 683)
3 credits. Graduate students only. Permission of instructor required. A research paper is required. N. Salvatore.
This course explores the relationship of scholarly biographical writing to the field of American social history. More and more historical biographies turn to incorporate social analyses at the center of their biographical structures. Students read, discuss, and analyze the varied strengths and weaknesses of a number of these efforts. The author's understanding of the play between biographical subject and the larger social context, and its meaning for the structure of the book, are a point of inquiry that encourage numerous approaches and interpretations.
ILRRC 790 ILR M.P.S. Program
Fall and spring. 1-9 credits. Staff. Supervised research only for those enrolled in the ILR M.P.S. program.

ILRRC 798 Internship
Fall and spring. 1-3 credits. Designed to grant credit for individual research under direction of a faculty member by graduate students who have been selected for an internship. All requests for permission to register for ILRRC 798 must be approved by the faculty member who will supervise the project.

ILRRC 799 Directed Studies
Fall and spring. TBA. For individual research conducted under the direction of a member of the faculty.

ILRRC 980 Workshop in Collective Bargaining, Labor Law, and Labor History
Fall and spring. 2 credits. Limited to M.S. and Ph.D. candidates in the department. S/U grades only. Staff. Designed to provide a forum for the presentation of current research being undertaken by faculty members and graduate students in the Department of Collective Bargaining, Labor Law, and Labor History, and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student in the course is expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of that student's thesis research.

HUMAN RESOURCE STUDIES

ILRHR 260 Human Resource Management
Fall. 3 credits. Open only to ILR students; others by permission. Staff. Intended to introduce students to the field of human resource management (HRM). Students learn theories and applications involved in effectively managing people in organizations. In addition, this course covers current topics in HRM that have resulted from environmental and organizational challenges—e.g., technology, globalization, legislation, restructuring, work/life balance, changing labor markets, and so on. Emphasis is placed on developing relevant problem solving and critical thinking skills, as the basic concepts of HRM and the skills developed in this course are applicable to all types of organizations and jobs in which students will eventually work.

ILRHR 266 Personal Computer Basics
Fall, spring, and summer. 2 credits. Limited. C. Hemphugh. Provides basic skills in the use of personal computers using the (PC) Windows environment. Course covers the basics of Lexis Nexis, Windows, Microsoft Excel, Access, and Powerpoint. Emphasis is placed on hands-on experience using examples demonstrating human resource issues and PC-based solutions. The course is a prerequisite to several advanced Human Resource Management electives.

ILRHR 360 Human Resource Economics and Public Policy
Fall and spring. 3 credits. Open to sophomores, juniors, and seniors. V. Briggs; H. Bishop. A review of labor-market trends, data collection systems, and theories pertaining to public efforts to develop the employment potential of the nation's human resources and to combat unemployment. The major segments of the nation's educational training enterprise (e.g., public education, higher education, employer-sponsored training, apprenticeship, and special training programs for the economically disadvantaged) are examined. The course examines programmatic issues pertaining to such groups as youth and disabled rural workers. It also covers public policies pertaining to welfare reform, direct job creation, worker relocation, economic development, targeted tax credits, and "empowerment zone" proposals. Comparisons are made with other industrialized nations.

ILRHR 362 Career Development: Theory and Practice
Fall, spring. 2 credits. 7 weeks. Limited to 30 S/U only. L. Gasser. Covers the components of career management, individual factors and organizational realities in the development of both careers and organized programs for career management. Two complementary learning tasks are required, information-gathering for career decision making based on self-assessment activities, and comprehension of organizational circumstances and practices encountered as careers develop. Grades are based on short writing assignments and a research paper.

ILRHR 366 Women at Work
Spring. 3 or 4 credits. Prerequisite: ILRHR 260 or equivalent. J. Farley. This course covers various aspects of female occupational roles in twentieth-century United States. Historical, social, and legal factors that influence women's choice of careers, work socialization and training, and subsequent labor-market experience are considered. Working women's entry-level jobs, opportunities for advancement, and income are compared to men's.

ILRHR 456 International Human Resource Management
Fall. 3 credits. Staff. Provides an examination of international human resource management issues in multinational enterprises. The course has two major objectives: to enhance understanding of key strategic and functional issues related to IHRM, and to develop analysis of practical IHRM issues in multinational enterprises. Includes topics such as strategic issues for IHRM, cross-cultural issues, coordination issues, and expatriate management.

ILRHR 460 Human Resource Strategies for Entrepreneurial Firms
Spring. 3 credits. Open to juniors and seniors. Prerequisites: ILRHR 260 or permission of instructor. C. Collins. Explores the human resource problems and solutions specific to start-up firms and growing entrepreneurial organizations. Over the course of the semester, students integrate their knowledge of the functional areas of human resource management with general management, business strategy, entrepreneurship, accountancy/finance, marketing, public relations, and small business management. Course material and creative solutions to problems are communicated to the class through lectures, case studies, class and group discussions, and formal presentations. The emphasis for the course is on the integration of concepts, application to real-life business situations, and the acquisition of general management skills and knowledge.

ILRHR 461 The Organization of Work: Comparative International Perspectives
Fall, spring. 3 credits. Prerequisite: ILRHR 260 or equivalent. Open to juniors and seniors. R. Batt. Considers classic texts on the organization of work and workers' experiences at work. Includes such topics as mass production, flexible specialization, team-based systems, and lean production. Changes at work are explored in the context of changing product and labor market institutions and national contexts. Student presentations focus on the experience of firms and workers in specific industries and occupations.

ILRHR 462 Staffing, Training, and Development
Spring. 3 credits. Prerequisites: ILRHR 260 or permission of the instructor. C. Collins. This course provides an overview of the staffing, training, and development functions in organizations. The first half of the semester focuses on the process by which organizations fill positions. Topics include legal issues, job/competency analysis and planning, external selection practices, and internal staffing decisions. The second half of the semester focuses on the process by which organizations train and develop employees. Topics include training needs assessment, program design, training evaluation, and development practices. Throughout the semester students examine the relationship between the staffing and training/development functions.

ILRHR 463 Diversity and Employee Relations
Fall. 3 credits. Q. Roberson. Explores the policies, programs and practices used by employers to promote the fair treatment of employees, especially those not covered by collective bargaining contracts. Includes such policies as organizational climate and the protection of employee rights of such programs as work/life balance, and worker health and safety; and elements of such practices as employee communication and conflict resolution. Also examines individual and organization climate factors that are important to the management of diversity in business organizations. Considers variations in employee relations and diversity management practices and the effects of these practices on relevant individual and organization outcomes.

ILRHR 464 Business Strategy
Fall. 3 credits. C. Collins. Intended to be an integrative course focusing on strategic management. The main purpose of the course is to provide an opportunity for students to study and analyze issues associated with strategic thinking in complex business situations, top management decision making, and the functions of corporations as a whole. Allows students to bring together all of the functional skills they have learned in other business or related classes (e.g., marketing, accounting, finance, human resources, etc.).
ILRHR 465 The Globalization of Services.
Fall, spring, 3 credits. Prerequisite: ILRHR 260 or equivalent. R. Batt.

Deregulation, privatization, immigration, and advances in communication technology have profoundly affected service sector activities, which now comprise two-thirds of advanced economies. This course considers how firms are responding to globalization in services research, marketing, human resources, and unions are affected. Student papers and presentations compare the process and outcomes of restructuring in a range of service industries and occupations across advanced economies.

ILRHR 466 Comparative Human Resource Management
Provides a survey of human resource management practices in two key regions: Europe and the Asia-Pacific region. Focus of this course is on HRM issues such as selection and staffing, training and development, and appraisal and reward systems. Special attention is given to HRM trends and developments. Issues of transferability of HRM practices, and implications for multinational enterprises operating in those regions, is also discussed.

ILRHR 468 Human Resources Management Simulation
Spring, 2 credits. Limited to 30 juniors and seniors. Prerequisite: ILRHR 260 or equivalent. 7 weeks. W. Wasmuth.
Uses a simulation model and an open-systems approach as means to enhance students' skills in strategic planning and managerial decision making. Attention is given to the implications and efforts of strategic human resource managerial and supervisory decisions as measured by 10 organizational performance indicators, including quality of work life, employee productivity, customer satisfaction, employee retention, internal control, and the bottom line. Each student is assigned to a group (teams) of four students and must be committed to the work of that group. An individual research paper is also required. Regular attendance is required.

ILRHR 469 Immigration and the American Labor Force
Fall and spring, 3 credits. V. Briggs.
Assesses the role that immigration policy plays as an instrument of human resource development in the United States. Immigration policy will be placed in an evolutionary context but primary attention will be given to the post-1965 revival of immigration. In addition to legal immigration, policies pertaining to illegal immigration, border commutes, “maquiladoras,” refugees, asylees, and nonimmigrant workers are also examined. Comparisons are also made with immigration systems of other nations.

ILRHR 495 Honors Program
Fall and spring (year-long course), 3 credits each term.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRHR 497-498 Internship
Fall and spring, 3 and 6 credits.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRHR 499 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRHR 560 Human Resource Management
Fall and spring, 3 credits. Open to graduate students only. Staff.
A survey course covering the major areas of the management of human behavior in work organizations. Consideration is given to aspects of strategic human resource management such as: staffing, training and development, performance management, compensation, and employee relations. Emphasis is on exploring these issues from both strategic and tactical levels to increase organizational effectiveness.

ILRHR 564 Human Resources Management in Effective Organizations
Fall or spring, 4 credits. Offered only in New York City for the M.P.S. Program. Staff.
This course offers the opportunity to become better prepared to make effective decisions about human resource practices. Successful organizations depend on people, their human resources. The first module examines strategic human resource management and the effects of HR decisions on organization success and fair treatment of people. The second module focuses on alternative systems used to staff and develop people. The third module focuses on compensating and rewarding people. The final module includes employee relations and alternative work systems. Case and field studies are used throughout the course.

ILRHR 565 Research on Education Reform and Human Resource Policy
Spring, 3 credits. J. Bishop.
State and local efforts to improve K-12 education are employing a variety of (sometimes contradictory) reform strategies. A research seminar that will critically examine the case that is made for (and against) each of the major reform proposals and review studies that provide objective evidence on their effectiveness. The education reform strategies that will be examined include: vouchers, charter schools, smaller classes, direct instruction versus discovery learning, extending the school day and year, better preparation and selection of new teachers, better professional development, ending tenure, merit pay; state standards and school accountability, ending social promotion, and externally set end-of-course examinations.

ILRHR 661 Applied Personal and Organization Development
Fall, 3 credits. Seniors and graduate students. C. Warzinski.
An experiential course that deals with OD and its role in the organizational change process. Combines the opportunity for hands-on practice in a workshop setting. Students are responsible for researching and writing a paper that examines a specific method, technique, or critical issue; preparing an in-class demonstration/presentation illustrating applications of human resource topics; and completing a final project requiring a comprehensive proposal that describes an appropriate and logically supported intervention strategy.

ILRHR 662 The Agile Organization: Exploring the Dynamics of Marketplace and Organizational Agility
Fall, 4 credits. Prerequisites: ILRHR 260/560 and additional course work in business and human resource strategy.
L. Dyer.
Increasingly, dynamic external environments are encouraging active experimentation with new (i.e., non-bureaucratic) organizational paradigms. One such paradigm is the agile organization. This course explores the dynamics of the agile organization with particular emphasis on: underlying justification and rationale, approaches to purification of marketplace agility, infrastructure designs and human resource strategies that promote organizational agility, new approaches to leadership, and societal implications and attendant public policy issues. Toward the end of the semester, the class applies what has been learned to design a course (ILRHR 663) to be conducted as an agile organization.

ILRHR 663 People in the Agile Organization
Spring, 4 credits. Prerequisites: ILRHR 662 and permission of instructor. L. Dyer.
Learning about the agile organization is one thing, learning to operate and live in one is another. This course is totally experimental. It is conducted as much like an agile organization as is possible in an academic setting. In pursuit of a vision and armed with a few basic principles, students function autonomously, albeit with accountability, to generate, share, absorb, and use knowledge and experiences to enhance their, and others' understanding and appreciation of the pluses and minuses of life in an agile organization.

ILRHR 664 "e-HR: Human Resource Management and the Web in The Information Age"
Fall. 3 credits. J. Boudreau, S. Basesky.
Designed to teach students skill-based techniques in HR research methodology. Students are taught to act as their own consultants in both a classroom and workforce setting as they access data and find statistical information to support their research topics. The first five weeks of the semester consist of weekly meetings with the reference librarians at the Martin P. Catherwood Library. These meetings cover a different research technique each week, and students are given readings and a hands-on assignment to gain practical experience on these techniques.

ILRHR 665 Business Strategy and Human Resources
Fall, 4 credits. Limited. Prerequisite: ILRHR 260/560 plus 3 other courses in human resource studies and permission of instructor.
J. Wernick.
As the capstone course in HR studies, students integrate the theories and practices learned in other courses, to explore the linkages between business strategy and HRM. Extensive fieldwork is involved. The field projects are designed to make students explore and understand business strategy and draw upon and integrate their course work in HR planning, staffing, development, compensation, and regard, and new work systems.

ILRHR 666 Strategic HR Metrics
Fall, 4 credits. Prerequisites: ILRHR 260/560 or equivalent, or course in statistics, one elective in human resource studies. J. Boudreau.
Explores how to account for the contribution of human resource management programs and decisions to achieving organizational goals. This course emphasizes a systematic decision-making system that organizes the discipline of human resource management and can assist in planning and evaluating programs. Topics include the role of financial-accounting statements in managing human resources, cost-benefit analysis for programs, managing human resources as a profit center, and identifying human resource management constituents to address their goals.

ILRHR 667 Diversity and Inclusion in Organizations
Spring. 4 credits. Prerequisites: ILRHR 260/560 or equivalent and permission of instructor. Q. Roberson.

Designed to explore diversity management and leadership strategies and the role of diversity in business organizations. The primary goals of the course are to increase students' knowledge of strategic and tactical uses of HR practices and policies to effectively manage organizational diversity. This course focuses on the course aims to develop students' skills in the practical management of diversity, particularly, linking diversity strategy to business strategy and developing diversity and inclusion initiatives to help improve organizational competitiveness and enhance bottom line outcomes. The course also assists students in developing sensitivity to differences among people and to the importance of promoting fair treatment among all employees.

ILRHR 668 Staffing Organizations
Spring. 3 credits. Prerequisites: ILRHR 260/560 and one course in statistics or permission of instructor. C. Collins.

Seminar providing an overview of the processes by which organizations staff positions with both internal and external applicants. Before staffing in business organizations, the primary goals of the course are to increase students' knowledge of strategic and tactical uses of HR practices and policies to effectively manage organizational diversity. This course focuses on the course aims to develop students' skills in the practical management of diversity, particularly, linking diversity strategy to business strategy and developing diversity and inclusion initiatives to help improve organizational competitiveness and enhance bottom line outcomes. The course also assists students in developing sensitivity to differences among people and to the importance of promoting fair treatment among all employees.

ILRHR 669 Managing Compensation
Spring. 4 credits. Limited to 30 students. Prerequisites: ILRHR 260/560 or equivalent, ILRHR 265 and basic statistics or permission of instructor. C. Bickel.

Focuses on managing employee compensation in contemporary organizations. The major objectives are: to examine the current state of compensation decision making, to examine how recent theoretical and research developments inform compensation decisions, and to offer an opportunity to develop competencies in making compensation decisions.

ILRHR 690 Comparative Human Resource Management
Fall. 3 credits. Prerequisites: ILRHR 260/560, or permission of instructor. Staff.

Surveys human resource practices in two key regions of the world: Western Europe and the Pacific Rim. The focus is on HR issues related to management of professional and managerial work force, such as selection and staffing, development, and appraisal and reward systems. Special attention is given to current changes and trends in the human resource management area (e.g., unification of Europe, transformation of Japanese firms). Implications for multinationals operating in these countries is also discussed.

ILRHR 692 Training the Displaced and Disadvantaged
Spring. 3 credits. Prerequisite: permission of instructor. J. Bishop.

Examines public and private efforts to lower unemployment and underemployment of displaced and disadvantaged workers. The seminar examines the problem, its causes, and why specific programs have worked and others have not. Topics covered include training for displaced workers, rehabilitation of the disabled, job-search training, tax credits for hiring, educational training, literacy instruction, EO/P, public service employment, assisting new business, and industrial policy. The seminar also investigates how the structure of the economy influences the ability of targeted training and job creation to achieve sustained reductions in unemployment and draws lessons from the experience of other societies.

ILRHR 693 Training and Development in Organizations
Spring. 3 credits. Prerequisites: ILRHR 260/560 or equivalent, one course in statistics or permission of instructor. B. Bell.

The purpose of this course is to acquaint students with aspects of learning in organizations. We begin by discussing organizational learning, and then focus more narrowly on specific ways in which learning is achieved through the training and development functions. Topics throughout the semester include: how learning is linked to organizational strategy, how to determine that training is needed, issues regarding the design of training programs, current training techniques, evaluation strategies, and management development practices.

ILRHR 694 Competing in Services
Fall, spring. 4 credits. Prerequisite: HR 560 or equivalent and consent of instructor. R. Batt.

Examines alternative service management strategies and outcomes, with particular focus on customer relationship management. Priority is given to analyzing the relationship between business strategy, marketing, customer segmentation, organizational structures, and human resource practices. Student projects focus on critical analysis of service management in particular companies and settings, using live cases where possible.

ILRHR 695 Education, Technology, and Productivity
Fall. 3 credits. J. Bishop.

This seminar investigates the nexus between the education and training in schools and at the workplace and the technological progressive-ness, productivity, and competitiveness of firms, individuals, and nations. Students investigate: how technological progress is changing the nature of work and what this implies for reform of education and training; why United States productivity has increased so little in the past two decades; how education and training contribute to growth and competitiveness; why educational achievement has declined; and how the responsibility for education and training should be apportioned among individuals, firms, private nonprofit organizations, and government.

ILRHR 696 Knowledge Management
Fall. 3 credits. Open to seniors and graduate students. S. Snell.

Designed to acquaint students with the systems and strategies used to manage a firm's intellectual capital. Focus is on foundation concepts and frameworks for intellectual capital (human, social, and organizational), knowledge management, and HRM. Discussions cover both the point of view of the organization (e.g., competitive challenges, core competencies) as well as the employees (e.g., psychological contracts, employment relationships). Ultimately, the goal is to integrate these views to develop a framework of how both the organization and the individual maximize value. Also explores the processes that drive knowledge management. In particular students focus on how firms create, transfer, and integrate knowledge to support learning and innovation. We discuss the managerial methods that support knowledge processes and cover various models and frameworks for integrating elements of knowledge management and intellectual capital.

ILRHR 697 Special Topics in Resource Studies
Fall or spring. 3 credits. Staff.

Areas of study are determined each semester by the instructor offering the seminar.

ILRHR 698 International Human Resource Policies and Institutions
Spring. 3 credits. J. Bishop.

A comparative study of human resource policies and institutions in Western Europe, North America, Japan, and Asia (with special emphasis on math and science education) and the effects of these institutions on productivity, growth, and equality of opportunity. The institutions studied include primary and secondary education, apprenticeship, employer training, and higher education. Data on the consequences of policies is presented and an effort made to understand how human resource policies and institutions have contributed to the rapid growth and low levels of inequality in Europe, and East Asia. An important focus of the course is understanding the causes of the low levels of achievement of American high school students relative to their counterparts abroad.

ILRHR 699 Advanced Desktop Applications
Spring. 1 credit. Letter grade only. Prerequisite: ILRHR 260 or significant experience (2-4 years) using office applications. C. Homrighouse.

Explores advanced topics for common desktop applications including Windows, Word, Excel, Access, PowerPoint, and basic HTML. The course is designed based on student input and instructor recommendations, covering those subjects that students feel would be most useful and relevant in the job market. Examples of areas include working with tables, columns or sections in Word, pivot tables in Excel, PowerPoint presentation "on the road" and using join tables to create relationships in Access.

ILRHR 760 Seminar in Human Resource Studies
Fall or spring. 3 credits. Prerequisites: ILRHR 260, ILRST 510/511, and ILRHR 669 and permission of instructor. Staff.

A "floating" seminar designed to give faculty and students an opportunity to pursue specific
topics in detail, with an emphasis on theory and research. Topics vary from semester to semester. Interested students should consult current course announcements for details.

ILRHR 763 Interdisciplinary Perspectives on the Organization of Work
Fall or spring. 4 credits. R. Batt
Ph.D. research seminar examining the evolution of the literature on the organization of work, group effectiveness, teams, and social capital, including recent critical and international perspectives. It reviews alternative theories and evidence from industrial psychology, social psychology, organization studies, sociology, economics, and industrial relations. Outcomes for firms and employees are debated.

ILRHR 765 International Compensation
Spring. 4 credits. G. Milkovich
Seminar focuses on international developments in employee compensation. Recent research, theoretical developments, and specific organizations' practices in a wide variety of countries are considered. Local national practices are the principal focus along with expatriates and others. The course draws upon research and theories from sociology, economics, psychology, and other disciplines. Four operative terms are seminar, comparative, compensation, and organization. Students should come to each session prepared to be active participants. The focus is on the organization level of analysis.

ILRHR 769 Topics in International Compensation Theory and Research
Spring. 4 credits. Prerequisite: ILRHR 669. G. Milkovich.
Examines recent developments in theory, research, and practice related to compensation. Discussion emphasizes the relevance of theory and research to compensation decision making. Students examine compensation and reward-related theories and research from supporting disciplines such as economics, psychology, sociology, and organizational behavior and evaluate their relevance to employee, managerial, executive, and international compensation.

ILRHR 790 ILR M.P.S. Program
Fall and spring. 1–9 credits.
Supervised research only for those enrolled in the ILR M.P.S. program.

ILRHR 798 Internship
For description, see section on Collective Bargaining, Labor Law, and Labor History.

ILRHR 799 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRHR 960 Workshop in Human Resource Studies
Fall and spring. 2 credits. Enrollment limited to M.S. and Ph.D. candidates. S-U grades only. Staff.
The workshop is designed to provide a forum for the presentation and critical discussion of current research being undertaken by graduate students, faculty members, and invited guests in the field of human resource studies. All M.S. and Ph.D. candidates in the Department of Human Resource Studies are urged to enroll, candidates in other departments are cordially invited. Each participant has an opportunity to benefit from the collective wisdom of the others in the formulation, design, and execution of his or her research, as well as to become current on the latest developments in the field.

ILRHR 961 Doctoral Research Seminar in Human Resource Management
Fall. 3 credits. Ph.D. candidates only. Staff. This seminar is aimed at reading, understanding, and conducting research in HRM. Students should obtain thorough understanding of the current research in traditional areas of HRM such as validation, job analysis, EEO, selection, performance appraisal, compensation, and training, and should develop the skills necessary to evaluate, criticize, and contribute to the literature on HRM.

ILRHR 962 Doctoral Research Seminar in Strategic Human Resource Management
Spring. 3 credits. Ph.D. candidates only. Staff. Seminar is aimed at reading, understanding, and conducting research in SHRM. The course should enable students to obtain a thorough understanding of the current research in Strategic HRM, and to develop the skills necessary to evaluate, criticize, and contribute to the literature on SHRM.

ILRHR 963 Research Methods in HRM/Strategic Human Resource Management
Spring. 3 credits. Ph.D. candidates only. Staff. Designed to build social science research skills, particularly in the area of human resource studies (HRS). Topics include measurement reliability, construct validity, design of studies, external validity, meta-analysis, critiquing/reviewing HRS research, publishing HRS research, and applications of statistical models of HRS issues.

INTERNATIONAL AND COMPARATIVE LABOR

ILRHR 333 Europe, United States, and Japan in a Global Economy
Fall. 3 credits (1 additional credit may be arranged). L. Turner.
Introduction to the contrasting political economies of Germany, the European Union, Japan, and the United States in today's changing global economy. Emphasis is on national differences, global debates, and on the different strategies pursued by labor, business, and government in the face of growing trade competition, political conflicts, production reorganization, and labor movement revitalization efforts.

ILRHR 337 Special Topics:
Fall. 3 credits. Staff.
Devoted to new topics in the field. The specific content and emphasis vary depending upon the interests of the faculty member teaching the course.

ILRHR 339 The Political Economy of Mexico
Spring. 3 credits. M. Cook.
Examines the range of challenges affecting contemporary Mexican politics, society, and economic development—from democratization to immigration to NAFTA. The course provides both an introduction to Mexican political economy for those with no prior background and an opportunity for students with more knowledge of Mexico to explore a research topic in greater depth.

ILRHR 499 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILRHR 533 Europe, the United States, and Japan in a Global Economy
Fall. 4 credits. Graduate students. L. Turner.
See description for ILRHR 333. Graduate students also submit an analytical term paper at the end of the semester.

ILRHR 537 Special Topics
Fall or spring. 3 or 4 credits. Staff.
Devoted to new topics in the field. The specific content and emphasis vary depending upon the interests of the faculty member teaching the course.

ILRHR 631 Comparative Labor Movements in Latin America
Fall. 3 credits. M. Cook.
Examines the historical development of labor movements in Latin America, their role in national political and economic development, and the impact of economic liberalization, authoritarianism, and decolonization on contemporary labor organizations in the region. Countries examined will include, but are not limited to, Mexico, Brazil, Argentina, Chile, Peru, and Guatemala.

ILRHR 632 Revitalizing the Labor Movement: A Comparative Perspective
Fall. 4 credits. Graduate seminar open to seniors only with permission of instructor. L. Turner.
Examines contemporary efforts in the United States and Europe to revitalize unions and reform industrial relations. The first half of the course examines contemporary labor movements in the United States. The second half covers Britain, Germany, Italy, Spain, and the "Europeization" of labor.

ILRHR 633 Labor, Industry, and Politics in Germany
Fall. 4 credits. Open to seniors with permission and graduate students. L. Turner.
Is the successful postwar "social partnership" model of organized capitalism in the Federal Republic of Germany viable in the twenty-first century? To answer this question, this course looks at the works councils and codetermination, the rise of a strong postwar labor movement, the contemporary German version of social partnership, with an emphasis on current events and the new challenges for German industry and labor posed by German unification and European integration.

ILRHR 635 Labor Markets and Income Distribution in Developing Countries
Spring. 4 credits. Prerequisite: ILRHR 240 or Economics 513 or permission of instructor.

INTERNATIONAL AND COMPARATIVE LABOR 325

A course analyzing who benefits and how much from economic growth in developing countries and how income distribution would be affected by various public policies. Topics to be covered include: poverty, inequality, social welfare, and economic growth-theory and evidence; poverty profiles, earnings functions, and decompositions; employment, unemployment, wages, and labor markets; and an introduction to benefit-cost analysis, with application to the economics of unemployment, wages, and labor markets.

Comparative examples are taken from the experiences in varying work circumstances and work, most of the course consists of in-depth examinations of specific work situations or occupations across time and geography. Comparative examples are taken from the United States, Europe, and the Third World.

ILR636 Comparative History of Women and Work (also WOMNS 636)
Explores the similarities and differences between different cultures' assumptions about the work of women as well as women's experiences in varying work circumstances throughout history. Beginning with theoretical pieces and overviews of the history of women and work, most of the course consists of in-depth examinations of specific work situations or occupations across time and geography. Comparative examples are taken from the United States, Europe, and the Third World.

ILR637 Labor Relations in Asia
Spring. 3 credits. Permission of instructor required. S. Kuruvilla.
A comparative survey of the industrial relations systems of selected Asian nations such as Japan, Korea, Thailand, Malaysia, Singapore, Hong Kong, China, and several others. The emphasis is on economic development strategies and industrial relations policies in these countries. Industrial relations practices, the extent of union organization, and labor force demographics of these countries is examined. The primary objective is to provide students with an introduction to industrial relations systems in Asia. The countries chosen are representative, but not exhaustive.

ILR638 Labor, Free Trade, and Economic Integration in the Americas
Analyses the contemporary movements toward free trade and regional economic integration in the Western Hemisphere. Special attention is paid to labor's role in this process. Examines the origins and implications of the North American Free Trade Agreement (NAFTA) and looks at integration schemes in South America (Mercosur), Central America, and the Caribbean, and at hemisphere-wide initiatives. A research paper is required.

ILR639 Building a "Social Europe": Integration in the Global Economy (also GOVT 736)
Spring. 4 credits. Seminar designed for graduate students and seniors with permission. Limited. L. Turner.
Central questions addressed include: what have the European Union and its member nations done to develop and reform the social dimension in the 1990s and beyond? How are the major actors-labor, government, and business-organized to influence social policy and industrial relations reform, and what strategies are they pursuing? How do EMU and enlargement affect the effort of European societies to defend and develop the social dimension of their market economies?

What are the prospects for the "Social Europe" in an increasingly deregulated global economy?

ILR730 Research Seminar on Labor Markets and Economic Development
Fall or spring. 3 credits. Prerequisite: open to M.S. and Ph.D. students only. G. Fields.
Research seminar for students writing theses or dissertations on aspects of labor markets and economic development. Addresses research questions: methodologies, and contributions in the areas of employment and unemployment, income and earnings, educational and human resource development, welfare economics, and economic growth. Presentations and written papers are required.

ILR731 Industrial Relations in Latin America
Fall. 4 credits. M. Cook.
Examines and compares changes in contemporary industrial relations throughout Latin America. Faced with the competitive pressures brought on by globalization, employers and governments throughout the region are transforming practices, laws, policies, and institutions that shape the industrial relations arena. The course analyzes and compares the extent and character of these changes, the responses and strategies of trade unions and other political and social actors, and the implications of industrial relations changes in the region for economic development, political stability, and democracy. The aim is to introduce students to the key issues in contemporary Latin American industrial relations, and through individual research papers, to enable students to become familiar with a specific country or sector/theme in two or more countries of the region. Reading knowledge of Spanish or Portuguese recommended but not required.

ILR739 The Political Economy of Mexico
Spring. 3 credits. M. Cook.
Course description, see ILR 339. Graduate students attend ILR 339 lectures, meet with the professor, and write a research paper.

ILR790 ILR M.P.S. Program
Fall and spring. 1-9 credits. Supervised research only for those enrolled in the ILR M.P.S. Program.

ILR799 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

Other courses approved to fulfill ILRIC distribution

ILRBC 304 Latin American Labor History
Fall. J. Cowie.
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILRBC 681 International Labor Law
Spring. L. Compa.
For description, see the section, Collective Bargaining, Labor Law and Labor History.

ILRMR 456 International Human Resource Management
Spring. Staff.
For description, see the section, Human Resource Studies.

ILRMR 461 The Organization of Work: Comparative International Perspectives
Fall or spring. R. Batt.
For description, see the section, Human Resource Studies.

ILRMR 465 The Globalization of Services
Fall. R. Batt.
For description, see the section, Human Resource Studies.

ILRMR 466 Comparative Human Resource Management
Fall. Staff.
For description, see the section, Human Resource Studies.

ILRMR 469 Immigration and the American Labor Force
Spring. V. Briggs.
For description, see the section, Human Resource Studies.

ILRMR 638 Labor, Free Trade, and Economic Integration in the Americas (also ECON 459)
Spring. 4 credits. R. Hutchens.
For description, see the section, Labor Economics.

ILRMR 444 The Evolution of Social Policy in Britain and America
Spring. G. Boyer.
For description, see the section, Labor Economics.

ILRMR 446 Economic History of British Labor (also ECON 459)
Spring. G. Boyer.
For description, see the section, Labor Economics.

ILRMR 448 Topics in Twentieth-Century Economic History: The Economics of Depression and the Rise of the Managed Economy
Fall. G. Boyer.
For description, see the section, Labor Economics.

ILRMR 642 Economic Analysis of the Welfare State
Fall. 4 credits. M. Cook.
For description, see the section, Labor Economics.

INTERDEPARTMENTAL COURSES

ILRMR 150 Freshman Colloquium
Fall. 1 credit. Open only to ILR freshmen. S-U only. Staff.
This course is offered to acquaint new freshmen with some of the issues and disciplines in the field of industrial and labor relations, and, establish acquaintanceship among members of the ILR faculty and small, randomly assigned, groups of students. The course includes a plant visit and several meetings early in the semester designed to introduce issues encountered in studying the employment relationship.
ILR 250 Diversity in the Workplace
Spring. 1 credit. S-U only. Limited to 30 ILR sophomores. Enrollment is by consent of instructor. Attendance at all sessions is mandatory, as participation in group discussions, and completion of written work. Exposes students to issues of diversity and discrimination in corporate, union, and legal environments. The purpose is to understand, analyze, and discuss the experience of being part of a culturally and ethnically diverse workplace. Examples of topics include: subtle forms of prejudice and discrimination, how employing organizations are responding to the changing composition (demographics) of the workplace, mentoring programs, the role of networking opportunities for minorities and women, how unions are changing in response to increasingly diverse workforces, and unique issues or problems faced by other disadvantaged groups (e.g., disabled, gay and lesbians). Most sessions involve presentations by practitioners (many of whom are ILR Alumni) and discussions. The purpose of course is to sensitize students to the subtle ways that prejudice and discrimination can arise in the workplace; to bring students into direct contact with practitioners in corporations, labor unions, and law firms in order to familiarize students with current practices for addressing the opportunities and challenges of racial, ethnic, gender, and other forms of diversity in the workplace; and to analyze and discuss with practitioners ways to reduce prejudice and discrimination in workplaces.

ILR 450 Workplace Diversity: Stepping into the 21st Century
Spring. 1 credit. S-U only. Prerequisite: ILRHR 260. Limited to 30 ILR students. Priority is given to seniors. Henderson, Woods. Provides an orientation to diversity in the workplace and to the expectations and challenges presented for future workplace leadership. With an emphasis on hands-on experiential learning, the course begins by familiarizing class participants with current practitioner approaches to diversity awareness training and competency building. Course focus then shifts to examine diversity as an issue of organizational change. Class participants consider the range of policies, practices, and procedures being used to create workplaces that are both diverse and inclusive. Dialogues and case study presentations with invited workplace diversity leaders offer participants an opportunity to learn from an insider's perspective about the experiences, successes and challenges of making diversity work. Students are required to complete a "case study" of an organization.

ILR 451 Science, Technology, and the American Economy
Spring. 4 credits. Waters, Briggs.
The industrial revolution did not begin in the United States, but the nation became the world's first technological society. Attention is given to the evolutionary confluence of science, technology, culture, politics, religion, and capitalism in the formation of the U.S. economy, its institutions, and its labor force. Primary attention is given to the post-World War II economic developments. The vantage point is the linkage with employment, unemployment, income, and productivity considerations. Public policy issues (such as the employment impact of the computer) are considered.

ILR 452 Writing in Industrial and Labor Relations
Fall or spring. 3 credits. Not offered 2002-2003. J. Farley. Requires close reading of four or five books related to the term's theme in the field of industrial and labor relations and careful writing about them. Students also have an opportunity to practice writing about the world of work for different audiences.

ILR 556 Public Policy
Spring. 4 credits. Offered only for the New York City M.P.S. Program. Staff. The government's influence on the workplace and the role of public policy in the utilization and preparation of the nation's human resources for employment is assessed. Areas of study include: the historical role in the labor market, and the effect of efficiency, price stability and economic growth, equity, and immigration policy and its market implications.

ILR 790 ILR M.P.S. Program
Fall and spring. 1-9 credits. Supervised research only for those enrolled in the ILR M.P.S. program.

LABOR ECONOMICS

ILRLE 140 Development of Economic Institutes
Fall. 3 credits. Prerequisite for non-ILR students: permission of instructor. G. Boyer. Examines the historical roots of the economic system currently dominant in Western Europe and the United States. The course focuses on the process of European economic growth prior to 1914, the effect of industrialization on labor in Great Britain, and the historical evolution of economic thought from Adam Smith to J. M. Keynes.

ILRLE 240 Economics of Wages and Employment
Fall and spring. 3 credits. Prerequisites: ECON 101-102, ECON 313, or permission of instructor. Applies the theory and elementary tools of economic theory to the characteristics and problems of the labor market. Considers both the demand (employer) and supply (employee) sides of the market to gain a deeper understanding of the effects of various government programs and private decisions targeted at the labor market. Topics covered include employment demand, basic compensation determination, education and training, benefits and the structure of compensation, labor-force participation, its relationship to production, occupational choice, migration, labor-market discrimination, and the effects of unions.

ILRLE 340 Economic Security (also ECON 451)
Spring. 3 credits. Prerequisites: ILRLE 240 or equivalent. Considers the economic and social effects of income security measures. Analyzes programs offering protection against economic loss due to industrial accident, temporary or permanent disability, illness, old age, premature death, and unemployment, as well as private efforts to provide security, and the problems of integrating public and private programs. Proposals for amending or modifying economic security measures are also considered.

ILRLE 440 Economics of Wages and Employment II (also ECON 341)
Spring. 3 credits. J. DeVaro. See ILRLE 240 for description. Designed for ECON majors with calculus.

ILRLE 441 Income Distribution (also ECON 455)
Fall. 4 credits. Prerequisite: ILRLE 240 or ECON 341. R. Hutchens. Explores income distribution in the United States and the world. Topics to be covered include functional and size distributions of income, wage structure, temporary and permanent functions and theories, discrimination, poverty, public policy and income distribution, and changing income distribution and growth. Students who have taken PAM 370 may not receive credit for 441.

ILRLE 442 The Economics of Employee Benefits (also ECON 456)
Fall. 4 credits. Prerequisites: ILR 240 or equivalent. F. Blau. An in-depth treatment of the economics and financial management and administration of all employee benefits: health care, insurance; retirement income, family-care benefits, executive incentive plans, and other compensation provided as a service or contingent financial package to employees. Detailed international comparisons of health care and retirement systems are included.

ILRLE 443 Personnel Economics for Managers (also ECON 443)
Fall. 4 credits. Prerequisites: ILRLE 240 or equivalent. J. DeVaro. Examines topics in labor economics of particular relevance to individual managers and firms. Representative topics include recruitment, screening, and hiring strategies, compensation (including retirement pensions and other benefits); training, turnover, and the theory of human capital; incentive schemes and promotions; layoffs, downsizing, and buyouts; team work; and internal labor markets. The course focuses on labor-related business problems using the analytic tools of economic theory, and should appeal to students contemplating careers in general business, consulting, and human resource management as well as in economics. Some assignments are case studies requiring teamwork.

ILRLE 444 The Evolution of Social Policy in Britain and America
Spring. 4 credits. Prerequisite: ILRLE 240 or equivalent. G. Boyer. Surveys the history of social policy in Great Britain and the United States from 1800 to the adoption of the British welfare state after World War II. Topics include: the role of poor relief in the early nineteenth century; the changing relationship between public relief and private charity; the adoption of social insurance programs and protective labor legislation for children, old age, and women; government intervention in the Great Depression; the beginnings of the welfare state.
ILRLE 445 Women in the Economy (also ECON 457 also WOMNS 446)
Fall or spring. 4 credits. Prerequisite: ILRLE 240 or equivalent.
Examines the changing economic roles of women and men in the labor market and in the family. Topics include: a historical overview of gender roles; the determinants of the gender division of labor in the family; trends in female and male labor force participation; gender differences in occupations and earnings; and the consequences of women's employment for the family.

ILRLE 448 Economic History of British Labor 1750-1940 (also ECON 459)
Fall or spring. 4 credits. Prerequisite: ILRLE 240 or equivalent. G. Boyer.
Examines various aspects of British labor history from the beginning of the Industrial Revolution until World War II. Specific topics include: monetary and nonmonetary changes in workers' living standards; internal migration and emigration; the London labor market; the extent of poverty and the evolution of the welfare state; trade unionism; the development of trade unions.

ILRLE 448 Topics in Twentieth-Century Economic History: The Economics of Depression and the Rise of the Managed Economy (also ECON 458)
Spring. 4 credits. Prerequisites: ILRLE 240 or ECON 314. G. Boyer.
Topics covered include: the causes of the Great Depression in the United States; the economics of the New Deal; the causes of high unemployment in interwar Great Britain; the role of Keynesian economics and the development of demand management policies in Great Britain and the United States after 1945.

ILRLE 459 Honors Program
Fall and spring (year-long course). 3 credits each term.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 497-498 Internship
Fall and spring. 3 and 6 credits.
For description see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 499 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 540 Labor Economics
Fall 3 credits. Prerequisites: ECON 101-102 or ECON 103 or equivalent. Required of M.I.L.R. candidates. G. Fields.
A course in labor market economics for prospective managers in the corporate, union, and governmental sectors. Begins with demand and supply in labor markets, presenting the tools of decision analysis for workers and firms. It then goes on to consider various topics for managers including deciding on the optimal mix of capital and labor to employ, attract and retain talent, pay and productivity, hiring and training investments, and pensions and retirement. The final section of the course covers other important labor market issues including unemployment, discrimination, poverty and inequality, and analysis of public policies.

ILRLE 544 Labor Market and Personnel Economics
4 credits. Offered only in New York City for the M.P.S. Program. Not offered 2002-2003. Staff.
A four-module course, in which the first module covers the basic elements of supply and demand in the labor market, the second and third modules cover the "new personnel economics" (emphasizing economic issues in a firm that relate to selecting, training, assigning, motivating, and compensating workers), and the final module covers key institutions and economic security issues (including unemployment, pensions, disability, discrimination, and unions). The goals of this course are to have students learn to analyze both business and public policy problems, taking into account both basic principles of economic theory and the relevant institutional environments.

ILRLE 642 Economic Analysis of the Welfare State (also ECON 460)
Spring. 4 credits. R. Hutchens.
Uses the tools of public economics to analyze modern welfare states. Although examples are drawn from several countries, the course focuses on the U.S., Canada, and Sweden. What are the rationales for the level of government intervention in these states, and how do these rationales square with notions of market failure? What are the economic costs and benefits of taxes, transfers, and regulations in these states? Can voting models explain the growth and operation of welfare states? The possible answers to these questions are discussed.

ILRLE 648 Economic Analysis of the University (also ECON 342)
Fall. 4 credits.
Seeks to illustrate the complexity of decision making in a nonprofit organization and to show how microeconomic analysis in general, and labor market analysis in particular, can be usefully applied to analyze resource allocation decisions at universities. Among the topics covered are financial aid, tuition, admissions policies, endowment policies, faculty salary determination, the tenure system, mandatory retirement policies, merit pay, affirmative action, comparable worth, collective bargaining, resource allocation across and within departments, undergraduate versus graduate education, research costs, libraries, athletics, and "socially responsible" policies. Lectures and discussions of the extensive readings are supplemented by presentations by Cornell administrators and outside speakers who have engaged in university resource allocation decisions or have done research on the subject.

ILRLE 741 Applied Econometrics I
Fall. 4 credits. S-U or letter. G. Jakubson.
Considers methods for the analysis of longitudinal data, that is, data in which a set of individual units are followed over time. Focus is on both estimation and specification testing of these models. Students consider how these statistical models are linked to underlying theories in the social sciences. Course coverage includes panel data methods (fixed, random, mixed effects models, etc.) factor analysis, measurement error models, and general moment structure methods.

ILRLE 742 Applied Econometrics II
Spring. 4 credits. Letter or S-U grades. J. Butler.
Covers statistical methods for models in which the dependent variable is not continuous. Covers: models for dichotomous response (including probit and logit), polychotomous response (including ordered response and multinomial logit); various types of censoring and truncation (e.g., the response variable is only observed when it is greater than a threshold); and sample selection issues. Includes an introduction to duration analysis. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model.

ILRLE 743 Applied Econometrics III
Spring. 4 credits. Letter only. Prerequisites: ILRLE 741-742 or permission of instructor. ILRLE 741, 742, and 743 constitute a Ph.D.-level sequence in applied microeconomics. G. Jakubson.
Covers topics not covered in ILRLE 741-742, including further development of duration analysis, panel data methods for nonlinear models, quantile regression, and related techniques, and an introduction to nonparametric and semiparametric methods. Additional topics as suggested by their use in applied areas of social science. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model. Also develops a general framework for the techniques covered in the ILRLE 741-742-743 sequence.

ILRLE 744 Seminar in Labor Economics I (also ECON 641)
Spring. 3 credits. ILRLE 744, 745, and 746 constitute the Ph.D.-level sequence in labor economics.
Course includes reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas are stressed.

ILRLE 745 Seminar in Labor Economics II (also ECON 642)
Fall. 3 credits. ILRLE 744, 745, and 746 constitute the Ph.D.-level sequence in labor economics.
Course includes reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas are stressed.

ILRLE 746 Seminar in Labor Economics III (also ECON 643)
Spring. 4 credits. ILRLE 744, 745, and 746 constitute the Ph.D.-level sequence in labor economics.
Course includes reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas are stressed.

ILRLE 747 Economics of Higher Education
Spring. 4 credits. R. Ehrenberg.
A survey of the economic research on a wide variety of higher education issues. Examples of the areas addressed include public and private funding, financial aid and tuition policies, faculty labor markets and Ph.D. production. While the emphasis is on the American educational system, research
from other countries may also be discussed. Interested students other than economics and labor economics Ph.D. students should speak to the instructor before enrolling for the course.

ILRLE 748 Economics of Employee Benefits
Fall. 4 credits. Students in this course attend the lectures in ILRLE 442 (see description for 442) but have additional course requirements. If enrollment warrants, they will also meet separately at a time TBA for discussion of topics in 442 and additional topics.

ILRLE 749 Economics of Development (also ECON 712)
Fall. 4 credits. Prerequisites: first-year graduate economic theory and econometrics. Analytical approaches to the economic problems of developing nations. Topics to be covered include: some old and new directions in development economics thinking: the welfare economics of poverty and inequality, empirical evidence on who benefits from economic development; labor market models; project analysis with application to the economics of education; and development policy.

ILRLE 790 ILR M.P.S. Program
Fall and spring. 1–9 credits. Supervised research only for those enrolled in the ILR M.P.S. program.

ILRLE 798 Internship
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 799 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 940 Workshop in Labor Economics
Fall and spring. 3 credits. Intended for Ph.D. students who have started to write their dissertations. Presentations of completed papers and work in progress by faculty members, advanced graduate students, and speakers from other universities. Focus is on the formulation, design, and execution of dissertations.

ORGANIZATIONAL BEHAVIOR

ILROB 170 Introduction to Micro Organizational Behavior and Analysis: The Social Psychology of the Workplace
Fall. 3 credits. Staff.
This introductory (survey) course considers the basic individual and group processes in the workplace. At the individual level, students study personality, motivation, perception, attitude formation, and decision making. On the group level, group dynamics, leadership, power and influence, and culture are emphasized.

ILROB 171 Introduction to Macro Organizational Behavior and Analysis
Spring. 3 credits. Staff.
The relationship between industry and the economy as a whole and its implications for other social institutions in American society (including stratification, politics, and American values) is discussed. The course moves from classical sociological theory to the analysis of complex organizations. The central focus of the course is the study of industrial organizations and of complex organizations in general, emphasizing authority relations, goals, the division of labor, bureaucracy, and organizational design.

ILROB 320 The Psychology of Industrial Engineering
Fall. 4 credits. T. Hammer. A study of the human factors in the industrial engineering of work, workplaces, tools, and machinery. The course examines the aspects of individual and social psychology that operate in the work setting and that should be taken into account in the design of jobs. These include limitations of the human sensory system; individual differences in skills, abilities, motives, and needs; group dynamics; intrinsic motivation; job satisfaction; conflict.

ILROB 321 Group Solidarity (also SOC 311)
Fall. 4 credits. M. Macy. What is the most important group that you belong to? What makes it important? What holds the group together, and how might it fall apart? How does the group recruit new members? Make and enforce rules? Do some members end up doing most of the work while others get a free ride? This course explores these questions from an interdisciplinary perspective, drawing on sociology, economics, and social psychology. Alternative theories of group solidarity are applied to a series of cases: urban gangs, spiritual communes, the civil rights movement, pro-life activists, athletic teams, work groups, and college fraternities.

ILROB 322 Service Learning (also SOC 323)
Fall. 4 credits. M. Lounsberry. Service-learning is a course-based, credit-bearing educational experience in which students participate in organized service that contributes to community well-being. Students reflect on the service to gain further understanding of course content, a broader appreciation of the discipline, and an enhanced sense of civic responsibility. The course includes a service-learning requirement that is designed to involve students in projects at local governmental and community organizations. Students draw on sociological readings to examine the relationship between organizations, society and social change. Theoretical perspectives learned in class complement field-based activity; students develop a richer understanding of how organizations and their members are connected to society.

ILROB 324 Gender and Work (also SOC 314/514 and WOMNS 314/514)
Spring. 4 credits. M. Brinton. The purpose of this course is to familiarize students with the field of gender stratification. The first part of the course examines long-term changes in women’s labor force participation and the division of labor between the sexes as societies industrialize. Students conduct theoretical work as well as empirical case studies of a number of countries ranging from Taiwan to Ireland. The second part of the course focuses on gender and work in highly industrialized societies, and includes empirical studies of the gendered division of labor in households and the labor market of the United States in particular. The structure of the course is lecture one day per week and detailed discussion and critique of selected readings on the second day. Students take a mid-term exam and prepare a research proposal on some aspect of gender and work. During the last two weeks of the course, students present synopses of their research proposals which are discussed and constructively critiqued by their classmates.

ILROB 329 Organizational Cultures
Fall or spring. 3 credits. Prerequisite: one or more courses in sociology.
Reviews the concept of culture as it has evolved in sociology and anthropology, applying it to formal organizations in workplaces such as corporations and unions. The course first examines the nature of ideology, and its implications for job design and organizational effectiveness. Focus is on theories of worker motivation and on research approaches and results as they apply to the performance of individuals and groups in formal organizations. In the course, students are predominantly from the field of organizational psychology, supplemented by relevant contributions from experimental and social psychology. Each student designs, executes, and analyzes a research study of his or her own.

ILROB 420 Contemporary Organizational Behavior Applications
Fall or spring. 3 credits. Prerequisites: ILROB 170 and 171. L. Gasser. An exploration of current practical applications of OB theory in organizations. Using a range of contemporary resources, students sift through practitioner articles and research, manage discussions; meet with managers, consultants, and employees; and explore organizational issues and problems from micro and macro perspectives in a political and legal context. Students also develop a toolbox of knowledge and skills to effectively carry out several organizational interventions or development initiatives. Choice of topics may differ to focus on contemporary issues such as: emotional intelligence, influencing organizational climate and morale, engaging strategic planning processes, managing large-scale participative teams, using job/ workplace design concepts, applying SWOT analysis, developing effective teamwork, managing diversity, applying quality management tools, etc.
ILROB 422 Organizations and Deviance
Fall. 3 credits. Enrollment limited to 60.
W. Sonnestuhl.
Focuses upon the deviant actions of organizations, including such behaviors as price fixing, environmental pollution, illegal campaign contributions, and discrimination in hiring and promotion. Examines the origins of such behaviors in organizations, the processes by which they become institutionalized, and the processes by which they become defined as deviant organizational actions. Within this context, the course examines such contemporary cases as Exxon’s Valdez oil spill, Iran-Contra, drug testing, and the federal savings and loan scandal. These events raise troubling questions about what it means to live and work in an organizational society, and they cannot be dismissed as instances of a few individuals gone bad.

ILROB 425 Sociology of Industrial Conflict
Spring. 4 credits. R. Stern.
The course focuses on the social, economic, and political causes of industrial conflict. The nature of work and the employment relationship provide the foundation for understanding both individual and collective expressions of conflict in work settings. Worker background, psychological assumptions, and authority relations set the stage for studying conflict expressions including strikes, labor turnover, absenteeism, sabotage, accidents, grievance filing, violence, and other forms of conflict at work.

ILROB 427 The Professions: Organization and Control
Fall. 3 credits. Prerequisite: permission of the instructor. P. Bacharach.
Focuses on the sources of power and control exercised by professional groups in contemporary society. A number of issues are examined in this context including the role of professions in society, processes through which an occupational group becomes defined as a profession, sources of control that professional associations have over their members, relations between professionals and non-professionals in organizations, and the relationship between unionization and professionalization of occupations.

ILROB 429 Organizational Politics and Institutional Change
Spring. 2 credits. 7 weeks. Limited to juniors and seniors with permission of the instructor. Please see instructor before the first class. S. Bacharach.
Examines the market, cultural, political, and structural forces that change the organizational “rules of the game,” how those changes affect individuals and organizations, and the distortions that occur as individuals and organizations attempt to adjust to a new unstable order. Issues to be examined include power, corruption, dealmaking, rationality, uncertainty, and competition. Course requirements include completing a major research paper and leading a class discussion.

ILROB 470 Group Processes
Fall. 3 credits. Prerequisites: ILROB 170 and 171 or equivalent. Permission of instructor. E. Lawler.
A review of theoretical approaches and selected research literatures, including the formation of groups, the structure of group relationships, and group performance. Specific topics include conformity and obedience, status and power relations, tactics of influence, solidarity and commitment, the management of emotion, the emergence and change of microcultures, and the role of groups in networks and organizations.

ILROB 472 Applied Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 170 and 171. S. Bacharach.
Introduces students to intermediate theory of organizational behavior. The course specifically concentrates on teaching students to use organizational theories for analytical and applied purposes. Among the issues to be addressed are organizational structure, work processes, organizational politics, organizational design, job design, incentive systems, and quality-of-work-life programs.

ILROB 495 Honors Program
Fall and spring (yearlong course). 3 credits each term.
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 497-498 Internship
Fall and spring. 3 and 6 credits.
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 499 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 520 Organizational Behavior and Analysis
Fall or spring. 3 credits. Staff.
Survey of concepts, theories, and research from the fields of organizational and social psychology as these relate to the behavior of individuals and groups in organizations. Job attitudes, motivation, performance, leadership and power, group formation, perception, and organizational climate. A preliminary course for advanced work in organizational behavior.

ILROB 525 Organizational Behavior
Fall, spring. 4 credits. Offered only for the New York City M.P.S. Program. Staff.
Applies theories and methods from the behavioral sciences to the analysis of behavior in organizations. Areas of study include classical and modern theories of organization and their implications for human nature, the relationship between organizations and their environment, the role of power, politics and decision-making in organizations, industrial history, and leadership culture.

ILROB 622 Sociology of Markets (also SOC 622)
3 credits. M. Lounsbury.
Since World War II, the diffusion of markets in Asia, Eastern Europe, and Latin America as well as changes in the structure of Western economies has reinvigorated questions about how markets are socially structured. Drawing on the literature in economic sociology, this course explores the social, cultural, economic, and political factors that shape the emergence and dynamics of markets. Among the issues addressed are: the social organization of markets, market discourses, the cooperative aspects of market formation and functioning, the role of government and other institutional arrangements, the relationship of economic change to broader social changes such as social movements, and the shift towards globally market-oriented economies.

ILROB 625 Conflict, Power, and Negotiation
Fall. 3 credits. Open to seniors and graduate students. Permission of instructor is required. Limited enrollment. E. Lawler.
Theoretical seminar applying a power perspective on bargaining and conflict resolution. Examines how power relations and power processes affect tactics in bargaining and also when power relations inhibit or promote conflict resolution. "Power" is viewed in the course as a capability, embedded in a social structure, and tactics are the action based on or using such power. The seminar gives overview of several theoretical approaches to conflict and bargaining (e.g., rational choice, cognitive, social exchange) and places the power perspective in this context.

ILROB 626 Organizations and Social Inequality
Spring. 3 credits. P. Tolbert.
Examines the central role that organizations in industrial societies play in allocating income, status, and other resources to individuals. A variety of theoretical explanations of social inequality are examined, and the social policy implications of each are considered.

ILROB 627 Leadership in Organizations
Spring. 3 credits. Open to graduate students and seniors with permission. T. Hammer.
An examination of theories and research findings from the behavioral sciences that are relevant to leadership and the influence process in groups and organizations. Personality, situational factors, intergroup processes, interpersonal perception as well as the motivation to both lead and follow are discussed. The implications for leadership training, organization development, and action research are explored.

ILROB 628 Cross-Cultural Studies in Organizational Behavior
Spring. 3 credits. Limited. Permission of instructor before registering in course. Staff.
Designed for students interested in social psychological theory and research in international culture comparisons of behavior and experience in organizations. Variables such as power distance, individualism-collectivism, universalism-particularism, and attitudes toward authority as well as work motivation are examined. Upon completion of the readings and discussion of conceptual materials and consideration of several major international comparison studies, each student prepares and presents a paper on a topic of his/her own choice usually related to his/her country of origin (China, Japan, Germany, United States, etc.).

ILROB 670 Semester in Manufacturing
Spring. 15 credits. Open to master’s and Ph.D. students in Industrial and Labor Relations with permission of instructor. Intended for students who want to work as professionals or who have a strong interest in the manufacturing industries. The course is taught by an interdisciplinary faculty team from the College of Engineering, the Johnson School of Management, and the School of Industrial and Labor Relations. Course material is based on plant visits and project work with local industry. Student participation is in interdisciplinary teams with members representing the three colleges. Course content concentrates on the major issues thought to make a competitive difference in
today’s economic environment: the changing environment for product design, rapid-response production systems; organization, management, and compensation of the manufacturing team; and performance measurement.

ILROB 674 The Social Psychology of Behavior and Experience in Organizations
Fall. 3 credits. Prerequisite: ILROB 170 and 171 or ILROB 520. Staff.
Considers theories that seek to explain behavior at the individual, group, and organizational level. Work motivation, leadership, and the member composition and dynamics of groups are discussed. Harmony, conflict, and other aspects of the relationships among groups in the organization are evaluated.

ILROB 679 Methods of Observation and Analysis of Behavior
Fall or spring. 4 credits. Permission of instructor required.
Focuses on qualitative methods and emphasizes learning by doing. The course examines different approaches to the collection and analysis of data. Students learn a variety of data collection techniques for understanding individual and collective behavior including: participant observation, in-depth interviews, and working with archival materials. The course also emphasizes the constant comparative method as a basic technique for data analysis. This technique is the basis of such qualitative computer programs as Ethnograph and Nudist. Students conduct their own research projects. Students, who wish to use qualitative methods either for a senior honors thesis, master's thesis, or doctoral dissertation, are encouraged to take this course. Because of the intensive nature of the course, class size is limited to 25 students.

ILROB 721 Advanced Micro Organizational Behavior
Spring. 3 credits. Staff.
Examines the historical development of psychological theories of organizational behavior and contemporary issues in micro organizational research. The course emphasizes reading and analysis of primary source material.

ILROB 722 Advanced Macro Organizational Behavior
Fall. 3 credits. Prerequisite: ILROB 520. Staff.
Examines the historical development of sociological theories of organizations and contemporary issues in macro organizational research. The course emphasizes reading and analysis of primary source material.

ILROB 723 Behavioral Research Theory, Strategy, and Methods I
Fall. 4 credits. Designed to meet the needs of M.S. and Ph.D. candidates majoring in organizational behavior, but other graduate students may enroll. Staff.
Materials studied in ILROB 723 and 724 include: theoretical, conceptual, and ethical questions; survey research and attitude-scaling procedures; laboratory methods; participant observation and interview methods; use of documents and qualitative data analysis. Provides students with important philosophical background for doing research and assesses them to a well-balanced, interdisciplinary set of qualitative and quantitative research tools.

ILROB 725 Analysis of Published Research in Organizational Behavior (also SOC 725)
Fall. 3 credits. Prerequisite: ILROB 520 and 1 year of statistics. Staff.
An advanced research methods course that critically examines published research papers in the field of organizational behavior in terms of research design and method as well as theory.

ILROB 726 Selected Topics in Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 520 and permission of instructor.
An advanced seminar that seeks to develop an interdisciplinary perspective on selected topics in organizational behavior. The topics themselves change from year to year depending on participants’ interests. Course is designed to allow students and the instructor to jointly pursue significant scholarly inquiry into one or more areas of organizational theory. Emphasis is placed on exploring the relevance of tradition in related disciplines (anthropology, sociology, psychology, etc.) that may enrich our understanding of organizational life.

ILROB 728 Theories of Motivation and Leadership
Spring. 4 credits. Prerequisite: ILROB 520. T. Hammer.
Course provides an introduction to basic concepts of human motivation in general, with particular emphasis on the theories that explain and predict work motivation. Students examine the empirical research that tests the validity of the theories and show how and under what conditions motivation models can be used for practice in work organizations. Several current microtheories of leadership and power and related research are examined. The disciplinary perspective is social organizational psychology and the level of analysis emphasized is action and experience of individuals in groups.

ILROB 729 Organizational Change and Intervention
Fall. 3 credits. Graduate students only. Staff.
This seminar is concerned with planned and unplanned change in organizations. It is designed to analyze theory in practice. Particular attention is paid to the role of internal and external change agents. Class members are encouraged to analyze contemporary changes such as mergers and acquisitions and work force reductions. Participants submit weekly work force journals.

ILROB 772 The Social Construction of Economic Life
Spring. 3 credits. M. Lounsbury.
Drawing on the literature in economic sociology, this course emphasizes how economic activities are constituted and shaped by the social, cultural, and historical contexts in which they are situated. This course surveys various empirical and theoretical approaches used to study the genesis and influence of broader scale organizational and institutional arrangements. The course provides students with an opportunity to formulate and refine their own research questions and perspectives.

ILROB 773 Advanced Seminar in Cross-Cultural Studies of Organizational Behavior
Fall. 3 credits. Permission of the instructor. Staff.
Considers theory and method for the study of cross-cultural and cognitive style variables. Students participate in the conceptualization and conduct of a comparative research project.

ILROB 776 Organizational Implications of World Class Manufacturing
Fall. 4 credits. Staff.
Aimed at helping students develop an understanding of organizations as complex social systems, and at helping students understand the behavioral implications of new manufacturing initiatives. Case studies are used to study the introduction of a variety of innovations in contemporary manufacturing firms, including manufacturing cells and teams, concurrent engineering, total quality management, and just-in-time material flow. Analyses emphasize the impact of such innovations on individuals’ role definitions and relationships, organizations’ communication requirements and patterns, group dynamics, leadership behaviors, labor relations, and human resource management systems. ILROB 776 is a core course in the Master of Engineering Manufacturing Option degree program.

ILROB 777 Solidarity in Groups (also SOC)
Fall. 3 credits. E. Lawler.
Examines sociological and social psychological theories about how social solidarity or an understanding of one’s common interest and is maintained in groups and organizations. Distinguishes emotional, normative, and instrumental bases for social solidarity and shows how these promote or inhibit subgroup formation in organizations, and the processes of individuals to organizations, and organizational citizenship behavior.

ILROB 790 ILR M.P.S. Program
Fall and spring. 1-9 credits.
Supervised research only for those enrolled in the ILR M.P.S. program.

ILROB 798 Internship
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 799 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 920 Organizational Behavior Workshop
Fall. 2 credits. Limited to M.S. and Ph.D. candidates in the department. S-U grades only. Staff.
This workshop is designed to provide a forum for the presentation of current research undertaken by faculty members and graduate students in the Department of Organizational Behavior and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student in the course is expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of that students’ thesis research.
SOCIAL STATISTICS

ILRST 210 Statistical Reasoning I
Fall, spring, and summer 2002-2003.
3 credits. Attendance at weekly discussion section is required. J. Angellotti, T. DiCiccio.

An introduction to the basic concepts of statistics and data analysis. Descriptive methods, normal theory models, and inference procedures for univariate and bivariate data. Basic statistical designs, an introduction to probability and applications of the Binomial and Normal distributions are covered. Estimation, confidence intervals, and tests of significance for a single population mean and proportion, the difference in two population means and proportions, simple linear regression, correlation, and two-way contingency tables are also considered. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

ILRST 211 Statistical Reasoning II
Fall, spring, and summer 2002-2003.
3 credits. Prerequisite: ILRST 210 or suitable introductory statistics course. J. Angellotti, M. Wells.

A second course in statistics. Applications of statistical data analysis techniques, particularly to the social sciences. Topics include statistical inference: simple linear regression; multiple linear regression; logistic regression; and analysis of variance. Computer packages are used throughout the course.

ILRST 310 Statistical Sampling
Spring. 3 credits. Prerequisite: ILRST 310 or equivalent or permission of instructor.
J. Bunge.

Matrix algebra is a necessary tool for statistics courses such as regression and multivariate analysis, and for other research methods courses in various other disciplines. One goal of this course is to provide students in various fields of knowledge with a basic understanding of matrix algebra in a language they can easily understand. Topics include special types of matrices; matrix calculations; linear dependence and independence; vector geometry; matrix reduction (trace, determinant, norms); matrix inversion; linear transformation; eigenvalues; matrix decompositions; ellipsoids and distances; and some applications of matrices.

ILRST 310 Applied Regression Methods
Fall. 3 credits. Prerequisite: ILRST 211 or equivalent courses. A. Hadi.

Matrix algebra necessary to analyze regression models is reviewed. Multiple linear regression, analysis of variance, nonlinear regression, and linear logistic regression models are covered. For these models, least squares and maximum likelihood estimation, hypothesis testing, model selection, and diagnostic procedures are considered. Illustrative examples are taken from the social sciences. Computer packages are used.

ILRST 410 Techniques of Multivariate Analysis
Spring. 3 credits. Prerequisite: ILRST 310 or equivalent. Not offered 2002-2003.
P. Velleman.

Techniques of multivariate statistical analysis discussed and illustrated by examples from various fields. The course emphasizes application, but theory is not be ignored. Deviation from assumptions and the rationale for choices among techniques are discussed. Students are expected to learn how to thoroughly analyze life data sets using computer-packaged programs. Participants should have some knowledge of matrix notation. Topics include: multivariate normal distribution; sample geometry and multivariate distances; inference about a mean vector; comparison of several multivariate means, variances, and covariances; detection of multivariate outliers; principal component analysis; factor analysis; canonical correlation analysis, discriminant analysis, and multivariate multiple regression.

ILRST 411 Statistical Analysis of Qualitative Data
Fall. 3 credits. Prerequisite: 2 statistics courses or permission of instructor. A. Hadi.

An advanced undergraduate and beginning graduate course. Includes treatment of the association between qualitative variates; contingency tables; log-linear models; binary ordinal, and multinomial regression models; and limit dependent variables.

ILRST 499 Directed Studies
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILRST 510 Statistical Methods for the Social Sciences I
Fall, spring, and summer. 3 credits. T. DiCiccio, M. Wells.

A first course in statistics for graduate students in the social sciences. Descriptive statistics, probability and sampling distributions, estimation, hypothesis testing, simple linear regression and correlation are all covered. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

ILRST 511 Statistical Methods for the Social Sciences II
Fall, spring, and summer. 3 credits. Prerequisite: ILRST 510 or equivalent introductory statistics course. J. Bunge, M. Wells.

A second course in statistics that emphasizes applications to the social sciences. Topics include: simple linear regression; multiple linear regression (theory, model building, and model diagnostics); and the analysis of variance. Computer packages are used extensively.

ILRST 515 Statistical Research Methods
Spring. 4 credits. Offered only for the New York City M.P.S. Program. Staff. Students learn basic skills for conducting qualitative and survey research. Students work through an introductory review course at home on their own time. After passing an exam, they attend a two-week immersion course in Ithaca taught by the on-campus faculty in July. Topics include: an introduction to surveys and discrete analysis, basic regression, and integration of qualitative and quantitative research methods.

ILRST 610 Seminar in Modern Data Analysis
Fall. 3 credits. Prerequisite: 2 statistics courses or permission of instructor. Not offered 2002-2003.
P. Velleman.

ILRST 611 Statistical Computing
3 credits. Prerequisites: linear algebra, knowledge of a programming language, and statistics at least through multiple regression. Not offered 2002-2003.

An introduction to a variety of statistical techniques that assign objects to categories on the basis of observed characteristics of the objects. Course topics include: discriminant analysis and its extensions and variations; nearest neighbor methods, classification and regression trees (CART); neural networks for classification; and estimation of error of classification rules.

ILRST 612 Data Mining
Fall. 3 credits. Prerequisite: ILRST 310 or equivalent, or permission of instructor. Not offered 2002-2003.
J. Bunge.

A survey of new aspects of statistical computing. Topics include: basic numerical methods, numerical linear algebra, nonlinear statistical methods, numerical integration and approximation, smoothing and density estimation. Additional special topics may include Monte Carlo methods, statistical graphics, computing-intensive methods, parallel computation, or computing environments. Designed for graduate students in the social sciences and related fields interested in new advances. Students may be asked to write programs in a programming language of their choice.

ILRST 613 Bayesian and Conditional Inference
3 credits. Prerequisites: graduate level courses equivalent to OR&IE 670 and OR&IE 651 or permission of instructor. Not offered 2002-2003.
M. Wells.

Covers the following topics: loss functions and utility theory, prior information and subjective probability, coherence, Bayesian inference, empirical Bayesian inference, robust Bayesian inference, Bayesian computations, ancillarity, conditional properties of statistical procedures, and Barnard-Nielsen's exact likelihood theory.

ILRST 614 Structure Equations with Latent Variables
Fall. 3 credits. Prerequisites: ILRST 210, 211 or ILRST 510, 511, or equivalent. A. Hadi.

Provides a comprehensive introduction to the general structural equation system, commonly known as the "LISREL model." One purpose of the course is to demonstrate the generality of this model. Rather than treating path analysis, recursive and nonrecursive models, classical econometrics, and confirmatory factor analysis as distinct and unique, this course treats them as special cases of a common model. Another goal of the course is to emphasize the application of these techniques.

ILRST 615 Expert Systems and Probabilistic Network Models
3 credits. S-4 only. Prerequisite: OR&IE 560 or an equivalent course in probability and statistics. Not offered 2002-2003.

ILRST 619 Special Topics in Social Statistics
Spring. 3 credits. Prerequisite: OR&IE 670 or equivalent. Not offered 2002-2003.

Staff.
Recent research has revealed vast territories of sample properties of the proposed procedures and extensions of univariate distributions to and stability; characterization of distributions; martingales. Students are discussed in detail using recent extensions and nonparametric inference for multiplicative stochastic processes. Students examine the history data using the modern theory of problems in the statistical analysis of life and physical sciences. In this course recent progress in the field.

**ILRST 713 Counting Processes with Statistical Applications**
Spring. 3 credits. Prerequisite: a course at the technical level of Math 572 and 574 or permission of instructor. Not offered 2002–2003. M. Wells
The statistical analysis of life history data is playing an increasing role in the social, natural, and physical sciences. In this course students formulate and solve various practical problems in the statistical analysis of life history data using the modern theory of stochastic processes. Students examine the martingale dynamics for point processes relevant to life history data. Both parametric and nonparametric inference for multiplicative intensity models are considered. The large sample properties of the proposed procedures are discussed in detail using recent extensions of functional central limit theorems for martingales.

**ILRST 714 Topics in Modern Statistical Distribution Theory**
3 credits. Prerequisites: courses equivalent to OR&E 651 or Math 571, and STATS 409 or OR&E 670. Not offered 2002–2003. Staff.
Recent research has revealed vast territories of distribution theory that are unfamiliar to most statisticians. This course provides an introduction to a variety of topics in the underlying this "modern" theory: infinite divisibility, decomposability, and stability; characterization of distributions; and extensions of univariate distributions to multivariate distributions.

**ILRST 715 Likelihood Inference**
3 credits. Prerequisites: graduate courses equivalent to OR&E 670 and OR&E 670. Not offered 2002–2003. Staff.
In most statistical models, exact distribution theory for testing hypotheses or constructing confidence intervals is either unavailable or computationally cumbersome. Inferences are routinely performed by using large-sample approximations to the distributions of test statistics. This course provides a survey of some recent higher-order asymptotic approximations for likelihood-based methods of inference.

**ILRST 716 Statistical Consulting**
2 credits. Prerequisite: limited to graduate students. S-U only. Not offered 2002–2003. Staff.
A course in practical consulting on real-world statistical problems. Under the supervision of the instructor, students hear problems presented by clients (usually faculty and graduate students from other fields) and collaborate in proposing a statistical model, analyzing data, and interpreting results. Statistical computing is used as needed.

**ILRST 717 The Analysis of Discrete Data**
Spring. 3 credits. Prerequisites: graduate courses equivalent to OR&E 670 or permission of instructor. Not offered 2002–2003. T. DiCiccio.
This course concerns statistical models and methods for analyzing categorical data. The key models to be covered are log-linear models for contingency tables and logistic regression models for binary-response and multinomial data. Asymptotic distribution theory necessary for inference in these models is emphasized. Other topics include conditional inference and connections with generalized linear models. Computer packages are used for analyses in practical examples.

**ILRST 799 Directed Studies**
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

**ILR EXTENSION**

**Statewide**
The following courses are open to participants in the Extension Division's statewide credit programs in labor studies and management studies. Extension offices are based in Buffalo, Albany, Rochester, Ithaca, New York City, and Long Island. These courses are not open to undergraduate or graduate students matriculated in the Ithaca ILR programs. Courses and course credit earned in Extension Division certificate programs are not automatically accepted as transfer credits or as a basis of admission to the resident ILR undergraduate and graduate programs in Ithaca. Students applying for course transfer are evaluated by the ILR school on an individual basis.

**204 Managing Conflict**
Fall or spring. 3 credits. Staff.
Provides students with opportunities to apply conflict resolution theory to specific situations, based on real-life problems that require resolution. Students will examine situations, analyze the facts and perceptions driving the actors, and engage in applying communication, negotiation, and mediation techniques to reduce or eliminate the conflict.

**205 Oral Skills for Conflict Management**
Fall or spring. 3 credits. Staff.
Emphasizes development of oral communication skills required to successfully manage conflict both as a party to a dispute, as a third party who is charged with helping to resolve a dispute. The course presents simulations to help the participants practice their skills.

**206 The Nature of Conflict**
Fall or spring. 3 credits. Staff.
Provides students with a conceptual foundation to engage in further study of conflict management and conflict resolution. Having taken the course, the students will be able to: identify and describe types of conflict; be able to identify the various sources of conflict; be able to apply a conceptual model of conflict to interpersonal, organizational, and international conflict situations; be able to describe conflict situations in terms of social psychological aspects using a "person perception" or "attribute" theoretical orientation; and be able to identify their personal response styles to conflict.

**208 Workplace Negotiations**
Fall or spring. 3 credits. Staff.
Covers the theory and practice of negotiation as it applies to workplace and business situations. Students learn theoretical models of negotiation and participate in negotiation exercises. Students participate in two negotiation exercises and are asked to write a paper on their negotiating position in each exercise. More weight is given in grading to the student's ability to present a well-thought-out rationale for positions and tactics than to the outcome of the negotiation itself.

**209 Leadership in Unions**
Fall or spring. 3 credits. Staff.
What role does leadership play in the vitality of the labor movement? Is there a crisis of leadership in contemporary unions? Does the political context of a democratic membership organization affect the quality of leadership? Will changing workforce demographics create a demand of increased leadership opportunities by women and minorities in their unions? This course examines theories of leadership including a comparison of leadership styles and skills in the context of changing needs of the labor movement. The dynamic relationship of leaders and followers is examined in regard to emerging internal union organizing strategies which aim to increase membership and to activate current members.

**212 Labor, Technology and the Changing Workplace**
Fall or spring. 3 credits. Staff.
Technological changes are having a profound impact on both workers and society. But what do these changes mean for workers and their unions? Is resisting technological change equivalent to obstructing progress? What can we do to influence how a dispute is shaped and performed? These and other questions are the central concerns of this course. The course is divided into three sections: Skills, Technology, and the Labor Process; Industrial Change; and Worker Responses: Four Historical Case Studies, Unions, Technology, and the Future of Work.

**220 Health Benefits and Policy for Unions**
Fall or spring. 3 credits.
Will introduce union members to the basics of health care and the role of organized labor in...
shaping it and providing it, and to develop critical thinking that can provide direction for future development. The course is directed at stewards, business agents, up through senior union officers and plan staff. Interested rank and file welcome.

240 Union Organizing
Fall or spring. 3 credits. Staff.
Students learn which unions are organizing successfully today, and which workers are joining unions. Through case studies, discussion, and in-class exercises, they learn about organizing strategies, building rank and file organizing committees, how to talk union, inoculating against anti-union campaigns, legal aspects of organizing, and innovative ways to organize outside of government-run certification elections.

241 Arbitration
Fall or spring. 3 credits. Staff.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of an arbitration hearing, and the preparation of an arbitration opinion.

242 Public Sector Collective Bargaining
Fall or spring. 3 credits. Staff.
An introduction to collective bargaining in the public sector. Examines the historical development of bargaining in public employment, collective bargaining agreements, and state and federal bargaining law and practice, as well as impasse resolution techniques frequently found in this sector. Special emphasis is given to developing an understanding of the similarities and differences between public and private sector bargaining and how they have affected tactics and strategies employed by the parties.

245 Public Sector Labor Law
Fall or spring. 3 credits. Staff.
A survey and analysis of the New York State Public Employees Fair Employment Act is made as well as a comparison with other state laws covering public employees. The course examines the extent to which the law protects and regulates concerted actions by employees in the public sector. The intent is to study and understand the law as written, but more importantly to understand how it has been interpreted by the courts of New York State in its application. Major emphasis is in employee and employer rights, including recognition and certification, improper practices, strikes, grievances, and disciplinary procedures of the New York State Public Employment Relations Board.

247 Labor and the American Economy
Fall or spring. 3 credits. Staff.
Helps the student understand how economic theories relate to the economic problems confronting the citizen in general and the American union member in particular. Emphasis is placed on contemporary economic theories and how their proponents attempt to solve American economic problems.

248 Employment Practices Law
Fall or spring. 3 credits. Staff.
Considers laws and regulations that directly affect managers and employers. Students examine issues and laws such as Equal Employment Opportunity, Employee Retirement Income Security Act, Federal Wage and Hour Laws, Occupational Safety and Health Act, unemployment laws, and other topics. Students focus on the practical application of laws and their impact on the workplace.

250 New York Workers' Compensation Law for Trade Unionists and Injured Workers
Fall or spring. 3 credits. Staff.
There is a collective perception that the Worker's Compensation system in New York compounds an injured personal predicament with Byzantine responses that lead to despair. Unions and injured workers' organizations believe that, if properly empowered, they can be just as effective as lawyers in looking after their injured colleagues' claims. This course is structured to meet both of these realities. Students delve into every nook and cranny of New York Worker's Compensation Law. The course is entirely practical. Skills teaching, how to present a case, decomp, ethics, and persuasiveness, are built into the course. Experts on how the system really works are used.

251 Principles and Practices of Management
Fall or spring. 3 credits. Staff.
Principles and practices of management with an emphasis on supervision and management functions of planning, organizing, staffing, and evaluating are included. Concepts and theories are presented, and students are assessed. Motivating people, exercising leadership, and effectively developing employees are emphasized.

252 Contract Bargaining
Fall or spring. 3 credits. Staff.
Examines the principles of contract bargaining, including bargaining environments and structures as well as standards used in bargaining. Students learn to prepare bargaining demands, cost economic items, draft noneconomic contract language, negotiate economic and noneconomic issues, and resolve a contract bargaining impasse. The course considers the impact of contract bargaining outcomes on workers, unions, employers, and the public.

253 Contract Administration
Fall or spring. 3 credits. Staff.
Focuses on the role of the steward in administering the union contract in the workplace. Students evaluate grievance and arbitration contract clauses, the grievance procedure in practice, the role of the union steward, the role of local and international unions, negotiation of grievances, and preparation for arbitration. Students analyze the impact of grievance and arbitration procedures on workers, unions, and employers.

254 Labor Law
Fall or spring. 3 credits. Staff.
Examines the principles of labor law by looking at social philosophy and the historical context of federal labor legislation from the 1910s. Students concentrate on major provisions of the National Labor Relations Act, examining how the National Labor Relations Board and the federal courts have interpreted the national labor laws. Discussion includes new directions in labor legislation and interpretation with consideration given to the impact of labor law on workers, unions, and employers.

255 Labor History
Fall or spring. 3 credits. Staff.
Reviews American labor history from the perspective of workers' social dimensions of the development of the working class, reform and revolutionary movements, and the emergence of craft, industrial, and public employee unions. Included is a discussion of the development of trade union institutions and leaders, and the function of union political activities and collective bargaining. Special attention is paid to the involvement of women and minority workers with unions.

256 Dispute Resolution
Fall or spring. 3 credits. Staff.
Examines third-party participation in dispute resolution in private and public sector collective bargaining. Development of dispute resolution methods in American labor relations; issues and practices in neutral, binding arbitration of grievances and mediation, conciliation; and fact finding procedures are discussed. Use of exclusive labor-management mechanisms to settle industry disputes is also looked at.

257 Organizational Behavior
Fall or spring. 3 credits. Staff.
Designed to illustrate how behavioral science theory leads to research and how theory and research provide a basis for practical application in business, industry, education, and government.

258 Labor Law
Fall or spring. 3 credits. Staff.
The legal obligations of unions and union officials is discussed and analyzed. The course focuses on the principles and practices of effective union administration. Students study the dynamics of democratic organizations and the development of organizational leadership. The course explores alternative methods of decision making and lines of responsibility. The legal obligations of unions and union officials is discussed and analyzed. The course examines the structure and evolution of relationships inside the labor movement.

259 Union Administration
Fall or spring. 3 credits. Staff.
The course explores alternative methods of organizing, the evolution of contemporary workers' social dimensions of the development of the working class, reform and revolutionary movements, and the emergence of craft, industrial, and public employee unions. Included is a discussion of the development of trade union institutions and leaders, and the function of union political activities and collective bargaining. Special attention is paid to the involvement of women and minority workers with unions.

260 Project Management
Fall or spring. 3 credits. Staff.
Through the process of restructuring, many companies are ‘flattening out’ the hierarchy of management levels. This means that more responsibilities are shifting downward to employees who may not have the status (authority) of supervisor or manager, but who have the enormous responsibility of completing complex, critical projects within well-defined business constraints. In response to the shift in responsibility downward and with much more to be accomplished with limited resources, the demands for employees with effective project management skills are increasing. Employees who can successfully manage projects are the most marketable individuals in the workforce because their skills are transferable to all disciplines, organizations, and situations.

261 Contemporary Labor Problems
Fall or spring. 3 credits. Staff.
A survey of the major challenges that confront the American labor movement. Students are briefed on the background of each problem and discuss and analyze a broad range of solutions proposed by the experts.

262 The Evolution of Work in America
Fall or spring. 3 credits. Staff.
Explores the evolution of contemporary business operations. Discussion focuses on historical and present-day theories of work organization, changes in the workplace and
workforce, and future trends. The relationship between the businesses and working conditions in which they exist, in both local and global economies, are also examined.

343 Health in the Workplace
Fall or spring. 3 credits. Staff.
Examines the state and federal laws that affect job safety, and health, and the way workers and their unions can use legislation to prevent workplace hazards. Students study work conditions. Topics include safety and health standards; the enforcement of laws and standards; the responsibilities of management; the rights of employees and their unions, including rights to information regarding safety and health; racial- and gender-based discrimination regarding hazardous work; and drug testing.

344 Union Strategies for Safety and Health
Fall or spring. 3 credits. Staff.
Even with OSHA, the most effective tool for change in the unionized work environment remains the collective bargaining process and collective action. This course explores specific strategies for making the workplace safer through collective bargaining, workers education, safety and health committees, joint labor-management committees, working with COSH groups, union-sponsored medical exams at occupational health clinics, and the OSHA complaint process. Case studies consider integration of occupational health initiatives into broader union strategies such as organizing drives and industrial development planning.

345 Health Hazards Identification and Evaluation in the Workplace
Fall or spring. 3 credits. Staff.
Students learn about the many work site health hazards including toxic chemicals, biological agents, radiation, and electromagnetic fields. Routes of exposure, acute and chronic health effects, and the bases of regulatory exposure limits such as TLV's and OSHA PEL's are discussed. Basic hazard evaluation and information gathering techniques familiarize students with available resources for evaluating work site conditions.

346 Introduction to Industrial Hygiene: Hazard Evaluation and Control
Fall or spring. 3 credits. Staff.
Builds on the knowledge acquired in both the safety hazard and health hazard courses to provide students with greater mastery of hazard evaluation and control methods. Students are encouraged to complete the health hazard and safety hazard courses before taking industrial hygiene.) The course provides practical, hands-on training in evaluating potential workplace hazards. Students learn about environmental monitoring methods such as air sampling and become familiar with the commonly used equipment. They also learn to interpret and evaluate monitoring data provided by professional testers.

347 Safety Hazards Identification and Evaluation in the Workplace
Fall or spring. 3 credits.
Safety hazards (as opposed to health hazards) generally involve harm of an immediate and sometimes violent nature; health effects include burns, electrical shock, broken bones, and the loss of limbs, eyesight, or hearing. With chemicals, the primary concern is their explosive, reactive, or flammable nature rather than with the toxic effects that are the focus of health hazards. Students become familiar with site inspection and hazard identification methods and learn about control techniques appropriate for a variety of work settings.
ADMINISTRATION
Robert J. Swieringa, dean
John A. Elliott, associate dean for academic affairs
Michael J. Hostetler, associate dean for executive education
Thomas B. Hambury, director of EMBA Program
Cathy S. Dove, associate dean for MBA Program and operations
Richard A. Shafer, associate dean for corporate relations
Rosalyn A. Hines, executive director of development and alumni development
Natalie M. Grinblatt, director of admissions
Richard A. Shafer, director of career services
Rhonda H. Velazquez, director of student activities and special events
Sherry L. Canger, assistant to the dean
Ann W. Richards, financial aid director and associate director of admissions
Janet S. Gray, registrar and associate director for MBA Program

The Johnson Graduate School of Management prepares men and women for managerial careers in business. The school offers coursework in many disciplines to provide potential managers with an understanding of the complexities of the professional world in which they will operate and of the organizations of which they will become a part.

A bachelor's degree or its equivalent is required for admission to the two-year program leading to the Master of Business Administration (M.B.A.) degree. Nearly half of the students have a background of undergraduate studies in arts and sciences, and about one-quarter in engineering. Five percent of the students begin their graduate training immediately after receiving their bachelor's degrees and the remaining 95 percent following work experience.

Combined degree programs allow highly qualified Cornell students to co-register in the schools during their senior year, thereby earning a master's degree in less than the usual time.

The doctoral program, administered through the Graduate School, provides an advanced level of education in business for those who seek careers in teaching and research at leading universities.

More detailed information about these programs is available from the Office of Admissions and Student Affairs, Johnson Graduate School of Management, Room 111 Sage Hall.

Students in other graduate programs and undergraduate students registered with the university are welcome in many classes. Since matriculated MBA students require certain courses for graduation, non-Johnson School students are not allowed to pre-enroll. During the first week of classes, registration of non-Johnson School students occurs on a space available basis.

UNDERGRADUATE ONLY

NBA 300 Entrepreneurship and Enterprise
Fall, spring. 3 credits. D. BenDaniel
The course uses Cornell-developed case studies and lectures to address entrepreneurial management in start-up ventures and new-business development in existing companies. Among the topics covered are valuation of business, planning, obtaining resources, management of growth, and cashing out. Guest lecturers speak on specialized topics such as corporate and patent law, bankruptcy and workouts, leveraged buy-outs, and valuations of businesses. Students team up to write and present business plans. The course attempts to integrate marketing, finance, operations, and human-resource topics in the context of high-growth business ventures. For non-Johnson School students only. Johnson School students see NBA 504.

NBA 401 Entrepreneurship for Scientists and Engineers
Fall, spring. 3 credits. J. Nesheim, G. Schneider.
This course is intended to introduce students to the new business startup process. Small teams will be formed to come up with an idea for a startup and create a business plan that can attract venture capital or other funding for the new enterprise. Guest lecturers are from successful high-technology companies. The course is led by instructors from Silicon Valley and Ithaca who created high-technology businesses.

COURSES FOR NON-JOHNSON SCHOOL STUDENTS

NCC 550 Financial Accounting
Fall, spring. 3 credits. Course intended for non-Johnson School students only. Staff.
An introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis; the accounting cycle; financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure. This course is similar in content to the MBA core course NCC 500.

NCC 553 Marketing Management
Fall, spring. 3 credits. Course intended for non-Johnson School students only. Staff.
The course addresses controllable and uncontrollable marketing variables that managers in multi-product firms face in today's business environment. Topics include customer behavior, product planning, distribution, advertising and promotion, pricing, and competitive strategy. This course is similar in content to the MBA core course NCC 503.

NCC 554 Management and Organizations
Fall. 3 credits. Course intended for non-Johnson School students only. Staff.
This course takes a resource-based approach to management by arguing that organizations should link their strategy to their internal resources and capabilities. This theme is developed by addressing: (1) the strategic value of internal resources and capabilities; (2) the role of human resources and organizational behavior in formulating and implementing strategy; and (3) the importance of restructure and the design of organizations in formulating and implementing strategy. Included among the topics are: how firms create sustainable competitive advantage through internal resources and capabilities; what the best practices are for managing people; what effects best practices have on attitudes and behaviors; why putting the customer first is not necessarily best practice from a resource-based perspective; why organizational culture is central to organizational effectiveness; why the formal organizational chart and structure of an organization are important; how organizations innovate; how organizations change through rearchitecture and re-engineering; what firms gain and lose through pursuing core competencies; and what firms gain through strategic alliances and networks. The course makes extensive use of case materials. This course is similar in content to the MBA core course NCC 504.

NCC 556 Managerial Finance
Fall, spring. 3 credits. Course intended for non-Johnson School students only. Staff.
An introduction to business finance through theory and case studies. Topics include stock and bond valuation, the capital-budgeting decision, portfolio theory, the asset-pricing models, raising capital, capital structure, mergers and acquisitions, costs of capital, option pricing, and risk management. International applications are considered within each topic area. Letter grade only, based on exam, group case reports, homework and class participation. This course is similar in content to the MBA core course NCC 506.

NBA 593 Accounting and Finance for Engineers
Spring. 3 credits. Course intended for non-Johnson School students only. J. D'Souza.
This course focuses on basic financial and managerial accounting and the economic and financial concepts that have a bearing on managerial decisions. The goals of the course are: (1) to give students a working knowledge of the accounting process and the value and limitations of the data that comes out of the accounting information system; (2) to familiarize students with key concepts in managerial accounting and the application of cost information to pricing and operating decisions; (3) to promote an understanding of the use of economic theory in the
evaluation of capital investment projects. The teaching methods consist of lectures and cases. Students are evaluated on the basis of exams.

**IMMERSIONS**

Only at the Johnson School will you find learning immersion courses in manufacturing, managerial finance, investment banking, brand management, entrepreneurship, and e-business. Immersions offer a semester of continuous focus, real-world problem solving, and site visits to dozens of companies.

**MFI — Managerial Finance Immersion**

This is a unique immersion course specifically designed for students planning to pursue finance careers. Some students interested in non-finance careers (including consulting) may wish to consider this course, but they should recognize that it is not specifically designed for this purpose. A major objective of this course is to help students make more informed choices about how to launch their finance careers.

**NBA 502 Managerial Cost Accounting**

1.5 credits.

**NBA 549 Managerial Finance — Practicum**

1.0 credits.

**NBA 506 Financial Statement Analysis**

1.5 credits.

**NBA 558 Corporate Financial Policy**

1.5 credits.

**NBA 585 Corporate Governance**

1.5 credits.

**NBA 656 Valuation Principles**

1.5 credits.

**NCC 508 Managing Operations**

2.5 credits.

**NCC 509 Strategy**

2.5 credits.

**IBI — Investment Banking Immersion**

This course is specifically designed for those students planning to pursue careers in investment banking. The course is inappropriate for students interested in following a finance career in non-financial industry or non-finance careers (including consulting).

This course is designed to meld the practical and the theoretical aspects of the field. We will be expecting a great deal of interaction and discussion between students, the participating faculty, and visiting practitioners. While the course is designed to make its students more attractive as candidates for employment in the investment banking profession, and we expect that some of the participating firms will be using their visits to identify candidates for summer internships, obtaining relevant summer internships remains the responsibility of the students. Prerequisite: NCC 506.

**NBA 500 Intermediate Accounting**

3.0 credits.

**NBA 556 Investment Banking — Practicum**

1.0 credits.

**NBA 506 Financial Statement Analysis**

1.5 credits.

**NBA 511 Financial Modeling**

1.5 credits.

**NBA 558 Corporate Financial Policy**

1.5 credits.

**NCC 508 Managing Operations**

2.5 credits.

**NCC 509 Strategy**

2.5 credits.

**NBA 656 Valuation Principles**

1.5 credits.

**SMB — Immersion in Brand Management**

This is a full-time program for the semester; students will not be able to take other courses concurrently. The course objective is to begin developing students to think and act like brand managers, some of the best trained and most upwardly mobile professionals in industry. It will provide students with a unique opportunity to begin internalizing the concepts, principles, and tools necessary to achieve success in brand management. While the course focuses on managing traditional consumer brands, high tech products, services, and global branding will also be addressed. In-class methods consist of: (1) academic and industry lecturers; (2) on-site visits with marketing and manufacturing professionals; (3) case and project discussions and presentations; and (4) a brand management simulation. Course requirements consist of: (1) discussion of readings; (2) individual case write-ups and presentations; (3) group projects and presentations (including a capstone simulation); and (4) in-class exams. There will be considerable off-campus travel for field study. Prerequisites: NCC 500, 501, 502, 503, and 506. Restricted enrollment — permission of the instructor required.

**NBA 624 Brand Management — Practicum**

4.0 credits.

**NBA 502 Managerial Cost Accounting**

3.0 credits.

**NBA 620 Marketing Research**

3.0 credits.

**NCC 508 Managing Operations**

2.5 credits.

**NCC 509 Strategy**

2.5 credits.

**SIM — Semester in Manufacturing**

This is a full-time program for the semester; students cannot take other courses concurrently. The course is concerned with the integration of technological, human-resource, logistical, and financial considerations to produce a manufacturing enterprise that can respond quickly and effectively to market requirements. The class is taught by a team of faculty and industrial practitioners, and much of the student work is team-oriented. There is off-campus travel for field study of various manufacturing plants. Johnson School students should complete NCC 501 and NCC 506 before taking this course. Enrollment limited; permission of instructor required.

**NBA 650 Semester in Manufacturing — Practicum**

10 credits.

**NCC 508 Managing Operations**

2.5 credits.

**NCC 509 Strategy**

2.5 credits.

**EBI — Electronic Business Immersion**

The E-Business Immersion is unusual in that it is a joint undertaking of the Johnson School and Cornell's Faculty of Computing and Information Science (CIS). Three faculty members from CIS will participate in teaching the course, providing state-of-the-art background in Internet infrastructure and technology. EBI project work will be done by mixed teams of MBA and computer science graduate students. The computer science students will learn about business models and strategy; the MBA students will get a direct understanding of the limited and potential of technology, and both will learn from the approach and perspectives of the other.

The E-Business Immersion is also unusual in that it has a corporate sponsor and partner: Corning Inc., a world leader in fiber, cable, and photonics, will supply speakers and open its facilities to site visits. In addition, the EBI project teams will join existing projects in various Corning divisions. Corning staff will be invited to attend and participate in EBI classes.

E-business, of course, is a field that has experienced unprecedented growth and, recently, attrition. The immersion will examine the rapid rise and fall of the early phases of the Internet economy and look for patterns and lessons. If the first round of pure-play B2C is somewhat tarnished, there is no doubt that multi-channel B2C activity will become vitally important in many industries. Customized manufacturing will be a significant part of this—a topic that EBI will explore jointly with the Semester in Manufacturing. Also joint with SIM will be examination of procurement and supply-chain coordination. EBI will also assess the next generation of applications that can be supported by wireless, networked Internet appliances.

EBI seeks to prepare students to deal with a world of infinite bandwidth, unlimited storage, and universal wireless connectivity. It will examine the fundamental underlying issues of intellectual property protection, privacy and security, and the challenging economics of zero-marginal-cost goods. It will identify and distinguish the four different levels of e-business problems: strategy, tactical design, implementation, and execution.

The Internet is inexorably transforming the way the world does business. Cornell's E-Business Immersion is an appropriately innovative way to address preparation for participation in this revolution.

**NBA 508 Managing Operations**

2.5 credits.

**NBA 509 Strategy**

2.5 credits.
This is a comprehensive course that integrates the technical, strategic, and economic aspects of entrepreneurship and is the student's full course load for the semester. David J. BenDaniel, the Don and Margi Berens Professor of Entrepreneurship at the Johnson School, will lead the faculty team for this immersion.

NBA 685 Rebooting IT Strategy
3 credits.

[NBA 686 E-Business Projects
3 credits.
Not offered 2002–2003.]

NBA 664 Internet Technology and Applications
3 credits.

NBA 665 Rebooting IT Strategy
3 credits.

NBA 685 Rebooting IT Strategy
3 credits.

NBA 664 Entrepreneurship & Private Equity
3 credits.

NBA 653 Strategic Alliances
1 credit.

NBA 502 Managerial Cost Accounting
3 credits.

NBA 656 Valuation Principles
1.5 credits.

NBA 531 Startup Forum
1 credit.

NBA 559 Venture Capital & Private Equity Markets
5 credits.

NCC 508 Managing Operations
2.5 credits.

NCC 509 Strategy
2.5 credits.

NCC COMMON CORE COURSES

NCC 500 Financial Accounting
Fall. 2.5 credits. Johnson School core course. Enrollment limited. R. Libby.
An introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transaction analysis, the accounting cycle, financial-statement preparation, use, and analysis, revenue recognition and cost measurement, present value, and problems in financial-accounting disclosure.

NCC 501 Statistics for Management
Fall. 2.5 credits. Johnson School core course. Enrollment limited. J. McClain.
An introduction to decision making under conditions of uncertainty. Topics include descriptive statistics, probability theory, classical statistics, statistical decision theory, and simple and multiple regression analysis. Applications in finance, marketing, and operations management are discussed.

NCC 502 Microeconomics for Management
Fall. 2.5 credits. Johnson School core course. Enrollment limited. R. Hilton.
Microeconomic theory is introduced and applied to problems faced by managers. Specific topics covered include supply and demand, consumer behavior, pricing when a firm has market power, and the role of contracts. The class employs a lecture format and emphasizes problem solving. Grading is based on a midterm and a final exam.

NCC 503 Marketing Management
Fall. 2.5 credits. Johnson School core course. Enrollment limited. D. Stayman, S. Jain.
The course is designed to convey the key concepts of marketing and how they fit into the larger context of management strategy and decisions. Both the practical "how" and the fundamental "why" of marketing activities are presented in the light of contributions from behavioral science, economics, and statistics. The goals are to understand the types of marketing projects that will need to interact with the marketing function, as well as communication concepts and developing processes that can provide the foundation for further courses in marketing. The course makes extensive use of case materials.

NCC 504 Managing and Leading in Organizations
Fall. 2.5 credits. Johnson School core course. Enrollment limited. D. Sally, K. O'Connor.
If you think about it, stories are central to how we know and remember events, people, and facts, and to how we communicate knowledge and history. Most of the jobs you aspire to involve a particular form of story-telling—the CEO's vision, the analyst's report, the planner's strategy, the salesperson's pitch, the consultant's analysis, and the manager's brand. What distinguishes these as business stories is that they are often analytical (based on a set of objective facts and statistics) and reflect a deep understanding of the complex interactions of individuals and organizations. This course has two goals: (1) to make you appreciate the complexity of the issues that often arise in organizations, and (2) to develop and refine your analytical story-telling abilities. To achieve these goals, the course will be taught by the case-study method. Cases are an efficient way to expand your experience base with respect to such issues as motivation, power, leadership, ethics, structure, design, and change. We hope to teach you how to make good inferences about what will and won't work in particular situations, and how to learn from your own experiences and those of others.

NCC 506 Managerial Finance
Fall. 2.5 credits. Johnson School core course. Enrollment limited. R. Michaely.
The course objective is to introduce students to the basic concepts of finance. In particular, we address the issue of what type of investment should firms and individuals take on, and how these investments should be financed. Understanding these concepts are essential to financial managers and professional investors, and has important applications to many aspects of financial decisions all of us have to make on a daily basis (e.g., is getting a MBA a good investment?). These issues involve capital budgeting decisions, stock and bond valuation, how to assess and account for risk through the capital asset pricing model (CAPM), option pricing, capital structure and cost of capital, and market efficiency. Letter grade only, based on examinations, quizzes, group case reports, homework, and class participation.

NCC 508 Managing Operations
Spring. 2.5 credits. Johnson School core course. Enrollment limited. R. Zhang.
This course focuses on managing processes: actions that convert inputs to outputs. Almost any business function can be modeled as a network of processes. The first part of the course examines processes, both individually and as part of a larger system; we see that good process design reflects both the volume and the variety of the product. A common course theme is the deleterious effect of variability (in demand, supply, quality, or capacity) in complex systems. Queuing theory and simulation are particularly helpful to analyzing process capabilities. The second part of the course analyzes how goods and services are produced. After describing the strategic role of operations, we examine forecasting systems, inventory management, and just-in-time and agile management. Constrained optimization models provide information about managing with finite resources. The final part of the course examines process improvement through quality and productivity management and corporate learning.

NCC 509 Strategy
Spring. 2.5 credits. Johnson School core course. Enrollment limited. V. Kadykala, J. Johnson.
Among the critical tasks facing any senior manager are the creation, implementation, and evaluation of a business unit's strategy. This course seeks to provide the management student with the tools and frameworks essential to carrying out these tasks. Many of these tools and frameworks are based on recent advances in game theory, industrial organization, and organization theory, although the course also draws from the older business policy tradition as well. Students who successfully complete this course will be able to analyze industries, identify areas of strategy advantage and disadvantage, and to devise strategies that exploit advantages and remedy disadvantages.

NBA MANAGEMENT ELECTIVE COURSES

Accounting

NBA 500 Intermediate Accounting
Fall, spring. 3 credits. Prerequisite: NCC 500 or the equivalent. T. Dyckman.
The course is based on the essential concepts and terminologies of financial accounting introduced in the accounting core course. Students learn to evaluate financial statements through the use of case studies drawn from actual corporate financial reports.

NBA 502 Managerial Cost Accounting
Fall, spring. 3 credits. Prerequisites: NCC 500, NCC 501, and NBA 502, or the equivalent. R. Hilton.
The course is designed both for those responsible for internal accounting information and those who use such information for decision making. Topics include budgeting, accumulating costs for product costing, activity-based costing, standard costs, the analysis of cost variances, cost estimation and
prediction, cost-price-volume decisions, performance measurement, nonmanufacturing cost analysis, cost allocation, and transfer pricing. Instruction will be a mixture of lecture and case discussion. Student evaluation will be based on a midterm exam, a final exam, a project, and class participation.

**NBA 503 Strategic Cost Management**
1.5 credits. R. Hilton.
This course focuses on the role of cost management and related issues in helping a firm compete successfully in the global market. Topics include activity-based costing, activity-based management, value chain analysis, the lean enterprise, confronting competition in an industry dominated by lean enterprises, re-engineering, process value analysis, identification of nonvalue-added activities and costs, target costing, Kaizen costing, continuous improvement, time-based competition, cost versus quality, and benchmarking. The course is almost entirely hands-on, with most of the cases, many of them leaning enterprise in Japan.

**NBA 504 Taxation Affecting Business and Personal Decision Making**
Spring. 1.5 credits. Prerequisite: NCC 500 or permission of the instructor. R. Bloomfield.
This course introduces students to the fundamental concepts and techniques of tax planning for individuals and businesses. Planning opportunities considered include changing the timing and nature of income, investments, and expenses; choosing an organizational form; and constructing transactions that allow two or more parties to engage in tax arbitrage. The course also introduces tax research techniques and issues regarding tax compliance. Course continues with NBA 507.

**NBA 506 Financial Statement Analysis**
Spring. 1.5 credits. Prerequisite: NCC 506, NBA 500 (or concurrent enrollment) or permission of the instructor. S. Bhoriaji, P. Hribar.
This course develops a set of core skills essential to the analysis of financial statements. We will cover strategic ratio analysis, cash flow analysis, pro forma financial statements, financial modeling, credit analysis, bond rating and bankruptcy predictions, and firm valuation using discounted cash flow techniques. Emphasis is on practical applications. The course format is a combination of case studies and lectures. The lectures communicate subtler aspects of the material while the cases provide hands-on experience. There will be an exam.
Note: Students who have completed the three-credit version of NBA 506 cannot enroll in this course.

**NBA 509 Advanced Financial Analysis**
Fall. 1.5 credits. Prerequisites: NBA 506, a finance immersion course, or permission of the instructor. S. Bhoriaji.
This course builds on the core financial analysis skills developed in NBA 506. Topics covered include equity valuation, residual income models, quality of earnings assessments, earnings manipulation detection, market efficiency issues, fairness opinions in M&As, and stock screening strategies. The overall focus is on using accounting-based information to make investment decisions. Emphasis is on practical applications and special attention is given to cultivating analytical and communication skills. The course features both lectures and cases. There will be a term paper project, but no final exam.
Note: Students who have completed the three-credit version of NBA 506 cannot enroll in this course.

**NBA 511 Financial Modeling**
Fall, spring. 1.5 credits. Prerequisites: NBA 506 or permission of the instructor, and mastery of basic Excel skills. J. D’Souza, P. Hribar.
Financial modeling is the art and science of constructing spreadsheet models of firms’ future financial statements. This class builds on the brief introduction to financial modeling in NBA 506 by modeling the effect on the income statement, balance sheet, and statement of cash flows of more complicated financial transactions such as leveraged buyouts, mergers & acquisitions, and corporate reorganizations. The class meets in the state-of-the-art Parker Center computer lab, and active student participation is emphasized.

**NBA 512 Applied Portfolio Management**
Fall, spring. 3 credits. Restricted: B. Swarnsathan, S. Lee.
An accounting/finance elective course that focuses on the management of an investment fund (see Charles Lee for a full course description). Students enrolled in this course must commit to taking the course for fall and spring semesters. They receive three credit hours for each semester's work. Strong preference is given to second year MBA students who have successfully completed either NBA 506 or one of the finance immersions. Students need to apply formally. If the number of applicants exceeds 12, admission is competitive and merit-based.

**Economics**

**NBA 524 Macroeconomics and International Trade**
Fall. 3 credits. Prerequisite: NCC 502 or equivalent or permission of the instructor. I. Azis.
The course applies basic macroeconomic theory to such problems as inflation, unemployment, economic growth, and productivity and examines how those problems interact with international trade and finance. Students learn to be informed observers of national and international economic policies and discerning users of economic analyses and forecasts. A lecture/discussion format is used as the method of instruction.

**Entrepreneurship**

**NBA 530 Entrepreneurship Lab**
Fall, spring. 3 credits. Prerequisites: NBA 564 Entrepreneurship, or concurrent enrollment, or permission of the instructor. MBA students only. P. Sears.
Students team up with entrepreneurs in the greater Ithaca area on defined projects, which may be a basis for new business ventures. The course focuses on research at Cornell, which may be a basis for new business ventures. It addresses the fundamental ways in which university-based research differs from industrial research. Students explore and critique the business potential of each concept.

**NBA 532 New Business Development**
Spring. 1.5 credits. P. Sears.
The course examines the role of the business development executive in managing partnerships between big companies and new ventures. Topics include setting growth targets, negotiating partnership agreements, managing expectations, licensing, and divestiture.

**NBA 559 The Venture Capital Industry and Private Equity Market**
Spring. 0.5 credit. D. BenDaniel.
This course focuses on the industry from the practitioners' perspective. Topics include an introduction to the private equity market focusing on the transactions that define the industry, its structure, participants, history and trends; (2) institutional private equity investing—now an increasingly important and dynamic part of the asset allocation mix; and (3) issues in private equity investing such as concentration in fewer, larger funds and the critical role of a new class of gatekeeper consultants for limited partners. The course involves four lectures and a final paper.

**NBA 563 Initial Public Offerings and Acquisitions**
Spring. 3 credits. J. Shulman.
An in-depth look at initial public offerings (IPOs) and acquisitions from a practitioner's point of view. With respect to IPOs the course covers: the applicable statutory framework, pre-offering corporate preparation (such as implementation of poison pills and stock option plans), the due diligence process, the implementation of corporate governance policies appropriate for a public company, the offering registration process, liability under federal securities laws, the Securities and Exchange Commission review process, underwriting arrangements, pricing, selection of a trading forum (i.e., NYSE, AMEX, NASDAQ, or AMEX) and the consequences of going public. Regarding acquisitions, the course explores: financing alternatives, accounting treatment, due diligence, choosing an appropriate transaction structure (i.e., stock versus asset sale) and crucial aspects of acquisitions, such as letters of intent, continuity of employees, anti-takeover strategies, and non-competition agreements. Mr. Shulman is an attorney with experience in IPOs and acquisitions, and an adjunct professor at the Cornell Law School where he teaches a seminar course on this topic.

**NBA 564 Entrepreneurship and Enterprise**
Fall, spring. 3 credits. D. BenDaniel.
The course uses Cornell-developed case studies and lectures to address entrepreneurial management in start-up ventures and new-business development in existing companies. Among the topics covered are valuation of business, planning, obtaining resources, management of growth, and cashing out. Guest lecturers speak on specialized topics such as corporate and patent law, bankruptcy.
and work-outs, leveraged buy-outs, and valuations of businesses. Students team up to write and present business plans. The course attempts to integrate marketing, finance, operations, and human-resource topics in the context of high-growth business ventures.

**NBA 553 Strategic Alliances**
Spring. 1 credit. J. Suwinski.
A wide variety of strategic alliances are being used today as companies try to leverage their resources for competitive advantage. This course gives an overview of the spectrum of alliances, including: strategic rationale and pros and cons of each major type of alliance. The primary focus of the course is on joint ventures as a specific form of strategic alliance, where the success rate is less than 50 percent. The course develops a set of principles that have contributed to success for Corning Incorporated. The course is taught from the perspective of the general manager of a major business unit.

**NBA 678 Special Lectures on the Venture Capital Industry**
Spring. 1.5 credits. Prerequisites: NBA 543, NBA 500, NBA 401 or permission of instructor. J. Bartlett, D. Bendaniel. The course focuses on venture capital financing, including the issues facing emerging growth companies as they progress from early-stage to late-stage status to mature public companies. The emphasis is on practical skills: hands-on examination, for example, of how deals are negotiated and valuations arrived at, our principal focus being the so-called Series A, or first professional, round of financing. We view the early-stage space from three points of view: the entrepreneur, or founder; the professional investors, or VCs; and, the key executives, i.e., the major players in early stage venture financing. We review economics; finance; tax; securities; corporate and employment law considerations; and, finally, custom and usage in the industry. This is an Internet course with one classroom lecture with Prof. Bartlett.

**NBA 551 Current Topics at the Crossroads of Law and Finance**
Spring. 3 credits. M. O'Hara. This course explores and presents selected topics that involve important issues in law and finance. The premise of the course is that financial institutions of all kinds, whether they are known as insurance companies, banks, investment banks, or pension funds, receive money and advise clients in a wide variety of settings. This agency relationship introduces a number of important dimensions to the intermediary-client relationship. This course looks at these issues from both an economic and legal perspective. Emphasis is placed on the intersections between modern finance theory and legal analysis.

**NBA 547 Applied Financial Engineering (also OR&E 565)**
Spring. 4 credits. Prerequisites: NCC 506, NBA 546, NBA 555, NBA 542, OR&E 523, OR&E 522, COMS 211, permission of instructor. W. Bailey. This course is designed to integrate students' course work in engineering (computing, stochastic modeling) and finance (options/futures and investment theory) through the completion of a research project. The course project is undertaken via student groups. It involves the implementation of a financial model to a real world problem. The implementation includes model formulation, computer programming, data collection, and data analysis. The course format is a mixture of lectures by faculty, industry professionals, and students (project presentations).
software and non-traditional option pricing
and flexibility in capital investments using
valuation of strategic options, growth options,
managerial decision-making. We focus on the

introduce valuation by keystones using comparables and discuss its applications to
valuing divisions of multi-business firms.
Part 2
The course introduces students to the pricing and hedging of derivative securities. The
course briefly covers forward contracts, futures contracts and swaps. The primary
emphasis is on option contracts. Underlying assets include stocks, currencies, and
commodities.
NBA 674 Introduction to Derivatives,
Part 2
Fall, spring. 1.5 credits. Prerequisite: NCC 506 (finance core) or permission of the
instructor. F. Diz. H. Li
See above, NBA 673.

General Management
NBA 538 Inclusive Leadership
Spring. 1.5 credits. P. Stepp.
This course prepares students for leadership in diverse organizations of today and the
future. Discussions and readings about accountability, sustainability, strategic
mentoring, networking, and the impact of challenging assignments are used to help
students become aware of ways they may discriminate against, judge, or exclude people,
and to help students initiate and develop relationships with people who are different
from themselves. Case studies, group activities, a diversity awareness profile, and
written assignments that require students to critically reflect on situational components they feel
excluded are the primary teaching methods used in the course.
NBA 560 Business Law I (also ARME 320)
Fall. 3 credits. Limited to juniors, seniors, and graduate students. D. Grossman.
The course introduces the basic tenets of law as they apply to businesses and their
operations. Topics include personal property, contracts, agency, real property, and landlord-
tenant concerns. Text readings and case studies are used. All students intending to be
professional accountants are required to take the course, and it is strongly recommended for
finance students.

NBA 547 Business Law II (also ARME 321)
Prerequisite: NBA 560 or permission of the instructor. D. Grossman.
Spring. 3 credits. Prerequisite: NBA 560 or permission of the instructor. D. Grossman.
The first portion of this course examines legal issues in the formation and operation of
business enterprises, particularly partnerships, corporations, and limited liability companies.
The second portion of the course covers selected topics in business law, such as
employment discrimination, secured transactions, product liability, unfair competition, and
international business law.

NBA 562 Estate Planning (also ARME 422)
Fall. 1.5 credits. Limited to juniors, seniors, and graduate students. D. Grossman.
Fourteen sessions on the various aspects of estate planning. The law and use of trusts, the
law of wills, federal and New York State estate and gift taxes, and probate procedures are
covered.

NBA 567 Management Writing
Fall. 1.5 credits. B. Mink, A. Pike, M. Hiltelman, C. Rosen.
Students learn to write clearly and effectively by focusing on the writing process as well as the
finished product. Topics include audience perspective, style, organization, strategy, and persuasion. There is a writing assignment every week. Students receive
instructor and peer feedback. Priority given to MBA students. Open to other graduate
students and employee degree candidates if there is room.

NBA 568 Oral Communication
Fall. 1.5 credits. B. Mink, A. Pike, C. Rosen.
This course focuses on improving the presentation skills of management students. The
course covers the areas of speaking formats (impromptu, extemporaneous, manuscript), delivery, organization, visual aids, and question/answer. Student speeches
constitute the bulk of class time, with each student presenting seven or eight speeches in
the seven-week session. The small class size allows for significant individual attention.
Students receive feedback from classmates and the instructor, and have the opportunity to
review in tutorials the videotapes of most of their presentations. Priority given to MBA
students. Open to other graduate students and employee degree candidates if there is room.

NBA 569 Management Consulting
Fall. Spring. 1.5 credits. A. McAdams.
The course is case-study oriented and focuses on strategic consulting. It has multiple
objectives. First, it provides students with the opportunity to understand the role of the
consultant and to gain indirect experience in that role through dealing with a broad range
of practical real-world issues. Second, it helps students improve their analytic skills
through practice with case studies. Third, it provides students with information that they
are unlikely to gain in other courses, as well as experience in making group presentations.
and evaluating them. Students are required to write a comprehensive analytic term paper.

**NBA 570 Leadership in Management**  
Spring. 1.5 credits. MBA students only. R. Peterson, RPW Executive Development, and other faculty.  
This course is a partnership with RPW Executive Development to provide MBA students with the self-awareness and interpersonal skills required to be effective leaders (the general principles of leadership course is NBA 668). The course has partnered extensively with the Johnson School Executive Education Department in the past. The course consists of five full-day training sessions. Staff from RPW and Johnson School faculty provide training and feedback from team members and faculty. Mid-week activities include various leadership and team challenges, including a business simulation. Attendance is required each day of the course to receive credit. NOTE: most of the self-assessment instruments listed above will need to be completed prior to the first day of class to allow for scoring and analysis.

**NBA 571 Cornell Management Simulation**  
Fall, spring. 1.5 credits. Restricted to second-year MBA students. J. Hass, S. Smith.  
This computer-based simulation is played by self-selected teams of four students who make marketing, production, and finance decisions for one of five companies operating competitively in the same industry. After the first week, during which the rules of the simulation are explained and the software used by each team is demonstrated, the teams make periodic decisions (meeting at their own convenience). At the beginning of the semester, each team is assigned a new company and is given two days to familiarize themselves with the company's shareholder (relative to other companies in the same industry), the team's Strategic Intent paper and the instructor's evaluation of team's performance at the BOD (board of directors) meeting. Students have completed NBA 549 cannot take this course. Open to MBA IIs only. Meetings will be periodic throughout the semester.

**NBA 572 Environmental Management Policy**  
Fall. 1.5 credits. D. Chapman.  
The seminar assists participants in remaining current with the rapidly evolving state of the art in the analysis and management of environmental policy and practice in businesses. Although focused on the private sector, attention is given to understanding the economic basis for government's role in environmental protection. Another focus is the analysis of the operational significance of the concepts of sustainability, and efficiency, and market-based environmental policies. Seminar speakers from finance, marketing, electricity, forest products, and other businesses with environmental responsibilities meet with the class. Readings and Harvard Business School (HBS) case studies are distributed throughout the semester. Each student makes a case study of an individual enterprise or organization.

**NBA 573 Seminar in Sustainable Development (also ABEN 672)**  
Spring, first half of semester. S-U grading only. 1–3 variable credits. A. McAdams. Class members are also trained in giving and receiving feedback from team members and faculty. The first two days focus on self-awareness and employ several experiential exercises and self-assessment instruments including, the Campbell Leadership Index (CLI), Meyers-Briggs Type Indicator (MBTI), and the Ambiguity Preference Scale (APS). Class members are also trained in giving and receiving feedback from team members and faculty. Mid-week activities include various leadership and team challenges, including a business simulation. Attendance is required each day of the course to receive credit. NOTE: most of the self-assessment instruments listed above will need to be completed prior to the first day of class to allow for scoring and analysis.

**NBA 574 Consulting Projects**  
Fall. 1.5 credits. J. Russo.  
The course will focus on unstructured business problems through a hands-on team project. Teams must identify what the central issues are, and then determine the most appropriate tools and concepts to provide insight into these issues. Students also learn to approach business problems from a cross-functional perspective. Specific conceptual content includes: project management; power, politics, and personalities in work groups; managing in fast- versus not-for-profit organizations; and organizational change. This course is not classroom-based. Although there are a few class sessions early in the semester, the course structure will revolve around periodic reviews and coaching sessions as needed. The instructor team will contain one regular member of the Johnson School's faculty, an experienced executive, and an administrator.

**NBA 577 The Political, Legal, and Regulatory Environment of Business**  
Spring. 3 credits. R. Schue.  
The political, climate, laws, regulations, and government arrangements for infrastructure have a profound effect on the nature, operation, and profitability of business. Many of the most important decisions that top management makes are driven by political, legal, and regulatory considerations (e.g., the responses of Exxon to the Exxon Valdez oil spill, Union Carbide to the Bhopal, India, gas leak, and the decision of AT&T to accept the division of its profit in response to an antitrust suit filed by the U.S. government). Environmental and waste-management concerns are leading to new laws and regulations that affect many aspects of business, creating as well as posing problems. The course begins with a discussion of the political and economic foundations of business regulation. Students examine different areas of application, including economic regulation, environmental regulation, antitrust, and product liability. Guest speakers include leading scholars from throughout the university and business and government leaders.

**NBA 579 Cases in Business Strategy**  
Fall. 1.5 credits. Enrollment limited to second-year MBA students only. J. Swinski.  
A well-defined strategy is essential for business success—describing where the business is going, how it's going to get there, and then providing a framework for making decisions along the way. Strategy is the responsibility of top management of a company or business, and the ability to formulate effective strategy is one of the key skills that distinguishes General Managers from functional managers. This course will focus on the process of effective environmental situation from the perspective of the general manager of a business unit. This perspective also applies to consultants working for clients on business unit strategy. Corporate strategy and its interaction with business unit strategies will be discussed, as well tools for industry and company analysis. Situational analysis will also be covered. This course complements the core strategy course, with emphasis on understanding and practicing frameworks that are useful in case-based interviews. The course draws heavily on the instructor's experience developing strategy for numerous businesses at Corning Incorporated. Guest speakers from industry and strategy consulting firms and also from industry present strategy approaches to strategy, and discuss the analytical tools they find most effective in working on business strategy. Students gain experience, via assigned cases, in analyzing business problems/opportunities, using the strategic process to formulate effective business strategies, and in presenting their recommendations in written and oral form. A major case write-up and presentation in a mock board meeting at the end of the course gives each student an opportunity to play the role of a strategy consultant working on a real case.
International Management

**NBA 576 The World Geopolitical Environment of Business**
Fall. 3 credits. G. Staller.
The geopolitical face of the world is changing at a pace that few could have envisioned even five years ago. The unification of Germany, the fall of communism, the institution of sweeping economic restructuring in China, the former Soviet Union, the move toward democracy with market economies in eastern Europe, the movement of Europe toward a unified economy, and the flirtations with reform and its implications in China are just a few of the many examples of the changing world environment of business. This course provides students with a view of those fast-paced worldwide changes. Topics covered include developments in western and eastern Europe, the former Soviet Union, the Pacific Rim, Central and South America and the Middle East and the role and fate of developing countries in the world economy. Guest speakers include leading scholars from Cornell and other universities and leaders in business and government.

**NBA 580 Strategies for Global Competitiveness**
Spring. 3 credits. A. McAdams.
Initially, students explore the role of government in several private-market industrialized nations—Japan, France, Germany, the United Kingdom, and Italy—for lessons the United States might learn and use. Students investigate the impact in each of those countries of government policies on the global competitiveness of their firms. Special emphasis is given to differences in policy appropriate to each of a range of industries, from the mature to the high tech (including computers, telecommunications, and electronics), and to stages of development in each economy. Possible lessons are then tested for less developed countries that might include Venezuela and Malaysia and newly emergent countries such as Singapore. Classes are interactive and student driven. This course can be used to fulfill the strategy requirement.

**NBA 581 Special Topics—Contemporary Development of Southeast Asian Economies**
Spring. 3 credits. I. Azis.
This course analyzes the patterns and economic development during the last three decades. The five plus two countries in the region that will be the focus of the course include Thailand, Indonesia, Malaysia, Singapore, the Philippines, Brunei, and Vietnam. The topics will be divided into the following categories: Southeast Asian economic development, regional economic cooperation in Southeast Asia, and the financial crisis of the 1990's. The course assesses important factors and consequences of the region's development patterns and uses international comparative analysis to explicate the relative position and uniqueness of the region's performance. Evaluation will be based equally on the student's participation in class discussions and debates and on a term paper. This course can be used to fulfill the strategy requirement. J. Katz.

**NBA 582 Experience In International Management**
Spring. 1.5 credits. J. Katz.
The objective of this course is to combine classroom sessions and international experience with an increased awareness of business environments outside the United States. NOTE: participation in a faculty approved study tour is required to complete this course (fee charged). On trips, students visit local businesses, subsidiaries of foreign multinationals, government officials, local business school students, and others. Students must also attend two pre-trip meetings (1 1/4 hours each) and two Saturday meetings during spring semester (2 1/2 hours each). Those meetings are used to present information on international business concerns, legal and cultural structures, management styles, and also, to develop cross-cultural skills. A final paper, integrating the material learned in the classroom with their experiences, will be required.

**NBA 595 Economics of Financial Crises**
Spring. 1.5 credits. I. Azis.
The main purpose of this course is to familiarize students with the analysis of the causes, nature, and consequences of financial crises, and equip them with tools of analyses to better understand the economics of financial instability and alternative strategies for dealing with them. The first part of the course concentrates on financial instability/crisis by way of explaining the empirical episodes of the crisis in various emerging market countries, and elucidating the relevant theoretical concepts in each of the cases. The second part is devoted to post-crisis episodes, emphasizing the different paths of recovery and major policy responses to the crisis. The latter includes financial and monetary policies and the unsettled relationship between interest rates and exchange rates.

**NBA 612 Disruptive Technologies**
Fall. 3 credits. D. Greenberg.
The advances of computer graphics, computer processing power, network bandwidths, and video compression technologies are forcing the merger of the telephone, television, and computer industries. The influence of these technologies has created paradigm shifts that will drastically change the way we communicate, how we are educated, the way we work.
design, and in essence, how we will live in the next century. We are just beginning to fathom how these changes will influence our modus operandi and greatly modify our traditional patterns of behavior, both personal and organizational. Clearly, business and industry managers will have to understand the implications of the advanced technology. This course starts by presenting historical technological advances that created major paradigm shifts for communications. Advances in computer technology emphasizing the fundamentals behind the increases in processing power, video and computer graphics capabilities, and network transmission will be presented. The latter half of the course covers the effect of these scientific advances on many discipline-specific areas including photography, the film industry, the entertainment and animation industry, television broadcasting, publishing, as well as the computer industry itself. Sessions are devoted to the social and legal issues rising from the rapid advances in electronic communication. In attempting to predict the disruptive changes of the future, it is best to understand the technologies themselves. Thus, students with technology or science backgrounds are preferred. Although no computer programming is required, a working knowledge of computers is necessary. The course is especially tailored to the business school and industrial concerns and will have interactive live demonstrations at the state-of-the-art laboratory of the Program of Computer Graphics. No prior knowledge in computer science is required.

NBA 684 Internet Technology and Applications
Spring. 3 credits. R. Conway.
Basic topics in computer science and communications that underlie the current information revolution, combined with analysis of dominant business applications. No prior computer science background is assumed. Key topics are supported in depth by guest faculty from the Department of Computer Science. Professor Dan Huttenlocker, currently on leave with a Silicon Valley startup, will join his CS colleagues this year to contribute to the course.

NBA 685 Rebooting IT Strategy
Spring. 3 credits. A. McAdams.
This course builds on topics raised in the Special Edition (09–10) of Forbes Magazine, "Rebooting the Revolution." With input and support from the school's Technology Advisory Board, the course investigates the strategies of the major players in IT; prepares the student to understand and exploit the many real business opportunities of 2002 and beyond; and determines how, when, and why to introduce e-business approaches into established brick and mortar firms.

NBA 686 e-Business Projects
Spring. 3 credits. A. McAdams, R. Conway.
The course focuses on real-world, industry-sponsored projects exploring strategic aspects of information-rich opportunities in the business environment, especially with brick and mortar businesses.

Management and Organizations

NBA 661 Strategic Career Management
Fall. 1.5 credits. B. Nelsen.
This course presents practical concepts from the behavioral sciences that can serve as guides to managerial action. Lectures, cases, and exercises are used to present students with new perspectives on decision making, critical thinking, problem solving, and group processes. Taken together, these perspectives offer a trouble-shooter's guide to the uncertainty, complexity, and conflict in the business world.

NBA 662 Negotiation Essentials
Spring. 1.5 credits. M. Thomas-Hunt.
This course is designed to complement the strategies used to develop and leverage a firm's intellectual capital (human, social, and organizational capital). We explore processes that drive knowledge creation, transfer, and integration. We study methods for managing knowledge workers to create high performance work systems and learning laboratories. We study how to achieve vertical alignment between their people-related systems and their market and financial objectives. Finally, we study how firms continually renew themselves in the context of rapid change and competitive adaptation.

NBA 663 Managerial Decision Making
Fall. 3 credits. J. Russo.
This course presents practical concepts from the behavioral sciences that can serve as guides to managerial action. Lectures, cases, and exercises are used to present students with new perspectives on decision making, critical thinking, problem solving, and group processes. Taken together, these perspectives offer a trouble-shooter's guide to the uncertainty, complexity, and conflict in the business world.

NBA 664 Internet Technology and Applications
Spring. 3 credits. R. Conway.
Basic topics in computer science and communications that underlie the current information revolution, combined with analysis of dominant business applications. No prior computer science background is assumed. Key topics are supported in depth by guest faculty from the Department of Computer Science. Professor Dan Huttenlocker, currently on leave with a Silicon Valley startup, will join his CS colleagues this year to contribute to the course.

NBA 665 Rebooting IT Strategy
Spring. 3 credits. A. McAdams.
This course builds on topics raised in the Special Edition (09–10) of Forbes Magazine, "Rebooting the Revolution." With input and support from the school's Technology Advisory Board, the course investigates the strategies of the major players in IT; prepares the student to understand and exploit the many real business opportunities of 2002 and beyond; and determines how, when, and why to introduce e-business approaches into established brick and mortar firms.

NBA 666 Leading Teams and Organizations
Fall. 3 credits. R. Peterson.
This course focuses on general principles for successfully leading teams and organizations (the personal development course is NBA 570). The course draws on the latest research in team decision making and organizational leadership to address questions such as: what is the difference between leadership and management? how do leaders establish trust and commitment to an organization? and how do leaders transform organizations? The course consists primarily of case studies of leaders, but also includes some experimental and group activities. Course grading is based on class participation, group case analyses, and a final individual case analysis. Priority is given to MBAs.

NBA 672 Goal Setting and Coaching for Leadership Success
Fall, spring. 1.5 credits. P. Stepp.
This course is designed as a follow-up to NBA 570. Leadership Assessment: A Personal Development System. It provides structured support for personal change through personal learning plans, learning and development strategies, and feedback and coaching support from peers. The course includes the development of a career plan and the culminating goal-setting, goal-monitoring, and goal-attaining process for each student throughout the year to allow students time to develop personal goals and provide numerous opportunities to practice coaching.

NBA 680 Knowledge Management; Driving Strategic Capability and Change
Fall. 1.5 credits. Prerequisites: MBAs only. S. Snell.
Today's business equation requires a combination of firms' developing core competencies and partnering externally to appropriate and integrate knowledge. Given the rapid pace of change in many industries, management of knowledge-based assets is essential. This course focuses on the strategies used to develop and leverage a firm's intellectual capital (human, social, and organizational capital). We explore processes that drive knowledge creation, transfer, and integration. We study methods for managing knowledge workers to create high performance work systems and learning laboratories. We study how to achieve vertical alignment between their people-related systems and their market and financial objectives. Finally, we study how firms continually renew themselves in the context of rapid change and competitive adaptation.
negotiations and integrating their experiences with the principles presented in the assigned readings and course discussions. Students who have taken NBA 606 cannot take this class.

Marketing

NBA 620 Marketing Research
Fall. 3 credits. Prerequisites: NCC 501 and NCC 503, or the equivalent. V. Rao.
This course deals with marketing research as a critical support function in corporations. The broad objective is to provide a fundamental understanding of marketing research methods employed by better managed firms or proposed by leading academicians. The course is aimed at the manager, the ultimate user of marketing information, who is responsible for the scope and direction of research activities involved in obtaining, analyzing, and interpreting results of research. The course covers the use of secondary sources of marketing information for designing studies and collecting primary data. Students are exposed to up-to-date methods in research design, qualitative research, measurement, data collection, and analysis. The emphasis is on evaluating research methods and on interpretation and use of results rather than on mathematical derivations. Students are also exposed to the practical side of marketing research through case studies, problem sets, and projects.

NBA 621 Marketing Communications
Fall. 3 credits. Prerequisite: NCC 503 (Marketing core). D. Stayman.
The course is designed to give students an understanding of the advertising and promotion management process. It covers the components of a successful advertising campaign and helps students develop an appreciation of the issues involved in advertising planning and decision making. They also learn how recent social-scientific findings and theory can facilitate advertising management decisions.

NBA 622 Marketing Strategy
Fall. 3 credits. Prerequisite: NCC 503 (Marketing core). V. Rao.
The course balances theoretical and practical approaches to the development and evaluation of marketing strategies for multiproduct firms. It covers the effects of environmental opportunities and constraints in developing and evaluating integrated marketing strategies for new and established products and services. Recent research results are applied to decisions on product-market boundary definition, resource allocation, product positioning, and competitive reactions. It includes selected current topics such as brand equity, acquisitions, and lead-user analyses. Students use case studies extensively to develop skills in strategy analysis and to enhance skills in assessing external threats and opportunities. They employ computer-assisted market strategy simulations to evaluate the effects of competing strategies. Guest speakers from industry provide a view of the operational aspects of marketing strategy.

NBA 623 Customer-Based New Product Development
Fall. 3 credits. Prerequisites: NCC 501 and NCC 503, or the equivalent. P. Kumbar.
The successful introduction of new products requires careful planning and systematic screening and testing. This course covers models and methods that are useful to managers in the development and marketing of new products. Heavy emphasis is placed on the measurement of consumer preferences. Students are required to complete a group project, consisting of a measurement instrument, data collection (from at least 30 respondents) and data analysis, for a self-chosen product category. The method of instruction consists of a combination of lectures and discussion of cases and articles. Performance is evaluated primarily based on exams and the group project.

NBA 625 International Marketing
Spring. 1.5 credits. Recommended: NCC 503, J. Katz.
Designed to train students to take a domestic product and expand it into international markets successfully. Market selection, international market research issues, and international marketing strategies are all discussed. The term project (actually submitted in three parts throughout the term) requires that students choose some product and develop a plan for taking it abroad. Each class includes a class participation report on the term project, the final, and class participation. Core marketing provides a useful background, but is not a prerequisite.

NBA 626 Consumer Behavior
Spring. 3 credits. S. Chatterjee.
Topics include factors that influence response to advertising of various kinds, purchase decisions, product perceptions, response to promotion, consumer satisfaction, and the basic methodologies for understanding consumer behavior.

NBA 633 Marketing and E-Commerce
Spring. 1.5 credits. Y. Park.
This class explores the effect of the Internet on marketing. Topics include an overview of the on-line industry, business models for the Internet, advertising and promotions on the Internet, marketing research on the Internet, loyalty programs for Internet marketing, and disintermediation and conflict resulting from Internet distribution. The course is comprised of industry speakers from Cendant, CSC, Netcentives, H-P, 1st USA, Catalina marketing, Bausch and Lomb, and others. Course requirements include write-ups on a subset of speakers, and a final report and presentation on an Internet marketing issue of the student's choice. NBA 638 is restricted to MBA II's because the same information is available for MBA I's in the strategy core.

NBA 639 Data-Driven Marketing
Fall. 3 credits. S. Gupta.
Data-Driven Marketing introduces the future brand manager or marketing consultant to the use of market data to evaluate and construct pricing and promotional strategies. The course introduces new sources of data available on product purchases and consumer reactions to the marketing environment. The course focuses on the practical use of popular data sources. Approximately 70 percent of the course covers panel data on high-volume consumer packaged goods, and 50 percent is devoted to direct or "database" marketing. The goal of this course is to introduce these new data sources and provide a solid foundation for the development of analytic tools. Examples are drawn from the consumer packaged goods industry. This course makes intensive use of EXCEL and the WINDOWS computing environment. The data has been extracted and organized for use in EXCEL, this allows the student to concentrate on learning modeling tools without a large investment in computing or data manipulation methods.

Operations Management

NBA 641 Logistics and Manufacturing Strategy
Spring. 3 credits. Prerequisite: NCC 508, ORRIE 410, or permission of the instructor. L. J. Thomas.
The course is about supply-chain integration, which involves strategic management of the values chain, from materials to customer. Students discuss operations strategies that are important to both manufacturing and service. The course emphasizes written and oral communication skills. About a fourth of the classes are spent on case studies, with small groups presenting their analyses of them. There is one mid-term examination, but the majority of the grade is evaluated based on projects and class participation. There is an option of replacing some assignments with a "live case," a project with a local company.

NBA 643 Managerial Spreadsheet Modeling
Fall. 1.5 credits. I. Robinson.
The goal of this course is to develop proficiency in quantitative modeling within the environment of Microsoft Excel. This hands-on lab-style course, taught in the Parker Center, will develop and use spreadsheets to analyze a variety of business problems. There are two principle components of this course: spreadsheets and models. Spreadsheet topics to be covered include principles of good spreadsheet design, the effective presentation of information through spreadsheets (including graphical controls like sliding bars), and advanced Excel features (e.g., data validation, conditional formatting, scenarios, etc.). Modeling topics include the art of finding the appropriate level of modeling detail, practice in dealing with vague and unstructured problems, sensitivity analysis, and working with incomplete and unreliable data.

NBA 647 Advanced Spreadsheet Modeling
Fall. 1.5 credits. I. Robinson.
The goal of this hands-on lab course, taught in the Parker Center, is to develop proficiency with Excel's quantitative tools of Solver (for optimization) and @Risk (for simulation). Building on their brief introduction in the Managing Operations course core, students use these advanced tools to analyze problems and cases in finance, marketing, and operations. Although the bulk of this course is devoted to case analyses, occasional lectures introduce some advanced features of these two powerful modeling tools, including integer and nonlinear programming and sensitivity analysis within optimization, and correlated random variables, scenario analysis, and valid statistical analysis within simulation.
NMI AND NRE RESEARCH AND ADVANCED STUDIES

NMI 500-502 Directed Reading and Research
Fall, spring, 1, 2, or 3 credits. Staff.
Students undertake special-interest research under the supervision of faculty members. Registration is limited to students who have the approval of their advisers and of the faculty members involved in the research.

NMI 510 Multi-Cultural Work Environments
Spring. 1 credit. C. Rosen, B. Mink.
NMI 510 is an independent study course that is open to students whose summer internships will be in a country other than that of their citizenship or prior work experience. The goal of the course is to promote an understanding of the cultural assumptions we bring to the work environment and the effects of cultural differences on organizational interactions and productivity. Registration for the course occurs in the spring semester prior to the internship, and grades are posted in the following fall semester after completion of the course project (1 or 2 hours). Students may register for the course after obtaining an internship offer and completing the paperwork for the course instructors. International students obtain and process work authorization forms with the International Students Office. See Charlotte Rosen (Sage 304) for further details about the academic and immigration requirements for NMI 510.

DOCTORAL SEMINARS

NRE 502 Doctoral Seminar In Marketing
3 credits. Staff.
This class introduces students to empirical research in marketing. There is a strong focus on the historical development of econometric specifications of consumer choice models (with an emphasis on heterogeneity and issues of dynamic consumption patterns), and Bayesian methods in marketing. However, by the very nature of the class, the content is to some extent driven by the participants in the course. Teaching is interactive, and each participant is expected to present one of the papers studied to the rest of the class. Furthermore, each participant is expected to replicate the results of one of the papers, requiring the participant to write the necessary code and briefly discuss their findings.

Enrollment is by consent of the instructor. Students are required to have taken a graduate level course in either mathematical statistics or econometrics, although this restriction may be waived in special cases. Students are welcome to sit in on parts of the class, for example, the session on Bayesian methods will be broad enough that students from other areas may find the presentation useful.

NRE 504 Doctoral Seminar in Accounting
3 credits. This course is for Ph.D. students only. Staff.
The seminar provides a rigorous and integrated exposure to those aspects of the literature in accounting, behavioral economics, and psychology that are related to questions of accounting and auditing theory and research.

NRE 507 Doctoral Seminar: Affect and Cognition
Fall. 3 credits. Prerequisites: courses in statistics and experimental design. A. Isen.
The course examines research on some of the ways affect influences such thought processes as memory, decision making (including risk taking), and problem solving (including creative problem solving). Applied topics relevant to management concerns (for example, organizational behavior and consumer behavior) as well as other theoretical and applied topics (among them medical decision making, social interaction, self-concept, and cognitive and affective development) are considered, depending on student interests.

NRE 523 Doctoral Seminar in International Management
Spring. 3 credits. A. Un.
Provides an overview of the evolution of the field of international management: its domain and professional organization, the key issues and how they have changed over time, and the evolving links between the approaches of this field and related disciplines. Readings focus on the classics of the field and some more-recent work that both extends and challenges the established approaches. The seminar is organized around topics that reflect the interdisciplinary character of international management research. The first and second parts review the existence of MNEs from the perspective of economics/political economy and sociology/organization studies. The third part reviews selected topics on the management of firms across different institutional environments and the impact of the transformation of those environments on firms.

FACULTY ROSTER

Adair, Wendyll, Ph.D., Northwestern. Asst. Prof., Organizational Behavior
Babes, George, Ph.D., U. of California at Berkeley. Asst. Prof., Marketing
Bailey, Warren B., Ph.D., U. of California at Los Angeles. Assoc. Prof., Finance
BenDaniel, David J., Ph.D., Massachusetts Inst. of Technology. Don and Margi Berens Professor of Entrepreneurship
Bierman, Harold, Jr., Ph.D., U. of Michigan. Nicholas H. Noyes Professor of Business Administration
Bloomfield, Robert J., Ph.D., U. of Michigan. Assoc. Prof., Accounting
Bradley, James R., Ph.D., Stanford U. Asst. Prof., Production and Operations Management
Conway, Richard W., Ph.D., Cornell U. Emerson Electric Co. Professor of Manufacturing Management, Prof., Management Information Systems, Director, Semester in Manufacturing
D'Souza, Julia, Ph.D., Northwestern U. Asst. Prof., Accounting
Dyckman, Thomas R., Ph.D., U. of Michigan. Ann Whitney Olin Professor of Accounting
Elliot, John A., Ph.D., Cornell U. Prof., Accounting, Associate Dean for Academic Affairs
Frank, Robert, Ph.D., U. of California at Berkeley. Professor of Economics
Greenberg, Donald P., Ph.D., Cornell U. Prof., Management Information Systems
Hass, Jerome E., Ph.D., Carnegie-Mellon U. Prof., Finance and Business Strategy
Hilton, Ronald W., Ph.D., Ohio State U. Prof., Accounting
Hilibrand, S. Paul, Ph.D., U. of Iowa. Asst. Prof., Accounting
Isen, Alice M., Ph.D., Stanford U. S. C. Johnson Prof., Marketing
Jarrow, Robert A., Ph.D., Massachusetts Inst. of Technology. David M. Harrison Professor of Business Policy and Management
Kadiyali, Vrinda, Ph.D., Northwestern U. Asst. Prof., Marketing and Economics
Lee, Angela, Ph.D., U. of Toronto. Asst. Prof., Marketing
Lee, Charles M. C., Ph.D., Cornell U. Prof., Accounting and Finance, Henrietta Johnson Louis Professor of Management, Director, The Park Center for Investment Research
Li, Hailao, Ph.D., U. of Alberta. Asst. Prof., Finance
Libby, Robert, Ph.D., U. of Illinois. David A. Thomas Professor of Management, Prof., Accounting and Behavioral Science
Lind, Robert C., Ph.D., Stanford U. Prof., Economics, Management, and Public Policy
Mannix, Elizabeth A., Ph.D., U. of Chicago. Prof., Organizational Behavior
McAdams, Alan K., Ph.D., Stanford U. Assoc. Prof., Managerial Economics
McCain, John O., Ph.D., Yale U. Prof., Quantitative Analysis
Michael, Roni, Ph.D., New York U. Assoc. Prof., Finance
Nelson, Bally, Ph.D., Cornell U. Asst. Prof., Organizational Behavior
Nelson, Mark W., Ph.D., Ohio State U. Assoc. Prof., Accounting
O'Connor, Kathleen, Ph.D., U. of Illinois. Asst. Prof., Organizational Behavior
O'Hara, Maureen, Ph.D., Northwestern U. Prof., Finance
Orman, Levent V., Ph.D., Northwestern U. Assoc. Prof., Management Information Systems
Peterson, Randall S., Ph.D., U. of California at Berkeley. Asst. Prof., Organizational Behavior
Rao, Vithala R., Ph.D., U. of Pennsylvania. Deane W. Malott Professor of Management, Prof., Marketing and Quantitative Methods
Robinson, Lawrence W., Ph.D., U. of Chicago. Assoc. Prof., Operations Management
S. C. Johnson Family Prof., Management, Prof., Marketing and Behavioral Science
Sally, David F., Ph.D., U. of Chicago. Asst. Prof., Organizational Behavior
Smidt, Seymour, Ph.D., U. of Chicago.
Nicholas H. Noyes Professor of Economics and Finance, Director, Leadership Skills Program
Suwinski, Jan H., MBA, Cornell U. Prof., Business Operations
Swaminathan, Bhaskaran, Ph.D., U. of California at Los Angeles. Asst. Prof., Finance
Thomas, L. Joseph, Ph.D., Yale U. Nicholas H. Noyes Professor of Manufacturing, Director, Executive Development Program
Thomas-Hunf, Melissa, Ph.D., Northwestern U. Asst. Prof., Organizational Behavior
Un, Annique, Ph.D., M.I.T. Asst. Prof., Management and Organizations
Waldman, Michael, Ph.D., U. of Pennsylvania.
Prof., Economics, Charles H. Dyson Prof., Management
Zhang, Rachel, Ph.D., Northwestern. Asst. Prof., Operations Management

**Lecturers**

Katz, Jan, Ph.D., Massachusetts Inst. of Technology. Sr. Lec., International Business and Marketing

Mink, Barbara E., M.A., Cornell U. Sr. Lec., Management Communications

Pike, Alan S., M.A., Cornell U. Sr. Lec., Management Communications

Rosen, Charlotte, Ph.D., Cornell U. Sr. Lec., Coordinator, Management Communications

**Adjunct and Visiting Faculty**

Grossman, Dale A., J.D., American U. Sr. Lec., Tax and Business Law

Nesheim, John L., MBA, Cornell U. Visiting Lecturer, President, Aladdin Systems, Inc.

Perez, Pedro D., Ph.D., Rochester Polytechnic Inst. Visiting Asst. Prof.

Schuler, Richard E., Ph.D., Brown U. Prof. Economics, Prof. Civil & Environmental Engineering

Sears, Peter A., J.D., Harvard U. Visiting Lecturer, Vice President, Business Investments, Smith Kline Beecham Corporation

Thomas, William, MBA, Harvard. Lec., Management, President, Capital Southwest
students, generally all from abroad. The J.LM. degree (Master of Laws, Legum Magister) and the J.S.D. degree (Doctor of the Science of Law, Jurisprudentiae Scientiae Doctor) are conferred. A small number of law graduates may also be admitted as special students, to pursue advanced legal studies without seeking a degree.

For further information, refer to the Law School catalog, which may be obtained from the Office of the Registrar, Myron Taylor Hall.

FIRST-YEAR COURSES

LAW 500 Civil Procedure
Fall and spring. 6 credits. Pass/Fail option unavailable. K. M. Clermont, B. J. Holden-Smith.
An introduction to civil litigation, from commencement through disposition on appeal, studied in the context of the federal procedural system. Also, a detailed consideration of federalism and ascertainment of applicable law, jurisdiction, process, and venue; and former adjudication.

LAW 502 Constitutional Law
Fall. 4 credits. Pass/Fail option unavailable. T. Eisenberg, S. L. Johnson, S. H. Shiffrin, G. J. Simon.
A study of basic American constitutional law, including judicial review, some structural aspects of the Constitution as developed particularly in light of the passage of the Civil War amendments, and certain of its rights provisions.

LAW 504 Contracts
Fall and spring. 6 credits. Pass/Fail option unavailable. R. A. Hillman, R. S. Summers, W. F. Taylor.
An introduction to the nature, functions, and processes of exchange, contract, and contract law. The course focuses on the predominant rules and principles governing contract and related obligation, including the substantive reasons underlying the rules and principles.

LAW 506 Criminal Law
Spring. 4 credits. Pass/Fail option unavailable. S. D. Clymer, S. P. Garvey.
An introductory study of the criminal law, including theories of punishment, analysis of the elements of criminal liability and available defenses, and consideration of specific crimes as defined by statute and the common law.

LAW 508 Legal Methods
Legal Methods is a full-year course designed to introduce first-year students to lawyering skills, with primary emphasis on legal writing, analysis, and research. In the context of a law office, students create some of the essential legal writings that lawyers produce. For example, students prepare predictive memoranda for their "boss," pointing out the strengths and weaknesses of their client's case, and attempting to develop winning arguments. Students may also write a client letter, using plain English to explain to their client the law and the merits of the case, and, advise the client on the course of conduct. Students determine and investigate the essential facts to support their client's case by interviewing or deposing various witnesses. Finally, students develop their oral and written advocacy skills and start thinking about litigation strategy by researching and writing persuasive memoranda or legal briefs for a trial or appellate court. At the end of the year, the students orally argue their case. Instruction occurs not only in meetings of the class as a whole but also in individual conferences. Each student receives extensive editorial and evaluative feedback on each written assignment.

LAW 512 Property
Spring. 4 credits. Pass/Fail option unavailable. G. S. Alexander, A. Riles.
An investigation of the law's protection of ownership, including the beginnings of property, estates in land, concurrent ownership, landlord/tenant relations, and public and private regulation of land use.

LAW 515 Torts
An introduction to the principles of civil liability in the tort field: intentional wrongs, negligence, and strict liability. Attention is also given to the processes by which tort disputes are handled in our legal system.

GRADUATE COURSES

LAW 622 Contracts in a Global Society
Fall. 3 credits. Graduate program grading—Honors, Satisfactory, Unsatisfactory.
S. J. Schwab. Limited to graduate students. This course is designed for foreign-trained lawyers who are familiar with basic contract law in their own country. It surveys the Anglo-American common law of contracts and related civil obligations. The pedagogic approach focuses on the case method and is Socratically based, similar to the traditional first-year course in Contracts.
Graduate students who wish to study contract law would generally be expected to take this one-semester course. They are free to enroll instead in the first-year Contracts course, but if they do so, they must take that course for the full year.

LAW 676 Principles of American Legal Writing
Fall. 2 credits. Limited to graduate students. Graduate program grading—Honors, Satisfactory, Unsatisfactory. Limited enrollment. K. Silverstein.
This course provides foreign-trained lawyers with an introduction to the essential principles of legal writing in the United States and an opportunity to practice some of the forms of
writing common to American legal practice.

Students will prepare such documents as

A. Arrangements for a master's thesis are made

B. The work is completed during the academic year under the supervision of a law faculty member.

LAW 601 Accounting for Lawyers

Fall. 2 credits. Availability of Pass/Fail option to be announced first day of class.

B. B. Aldave.

This course is designed to introduce students to the basic concepts and fundamentals of financial accounting. It will focus on (1) accrual accounting concepts, principles and conventions, (2) the presentation of financial statements (balance sheets, income statements, statements of cash flow), (3) the interpretation and analysis of financial statements, and (4) the use and misuse of accounting information. The goal of the course is to enable students to critically review a company's financial statements. The course is intended primarily for students with little or no prior background in bookkeeping or accounting.

LAW 602 Administrative Law: The Law of the Regulatory State

Fall. 3 credits. Limited enrollment. Pass/Fail option unavailable.

C. R. Farina, J. J. Rachlinski.

An introduction to the constitutional and other legal issues posed by the modern administrative state. Topics include: procedural due process, separation of powers, procedural modes of administrative policymaking; judicial review of agency action; and the oversight and control relationships between agencies and Congress or the President. The course provides a working familiarity with the fundamentals of administrative procedure, as well as a larger inquiry into the role of agencies in our constitutional system—and the effect of legal doctrine on shaping that role.

LAW 603 Advanced Torts: Privacy, Rational, and Economic Interests

Fall. 3 credits. Pass/Fail option available. M. Heise.

This course explores selected topics in the tort field not typically covered in the first-year Torts course. Three broad areas of civil liability receive particular attention: privacy (including defamation), relational, and economic interests (or business torts). The course also surveys leading theoretical backgrounds to tort law as a complement to the doctrinal coverage (e.g., economic analysis of tort law and relations between tort and contract regimes).

LAW 608 American Indian Law

Fall. 2 credits. Pass/Fail option available. D. T. White

This course is intended to provide a basic understanding and overview of the fundamental principles of Indian law. It will examine the origins of Indian law, historical development of the law, tribal sovereign powers, tribal-state conflicts, Indian water rights, economic development, and hunting and fishing rights. Ascension of readings and cases will be discussed in detail. Students will be graded on the basis of short papers, rather than a final exam.

LAW 609 Anatomy of a Deal: Entrepreneurial and Corporate Finance

Spring. 2 credits. Availability of Pass/Fail option to be announced first day of class.

K. K. Azzarello.

Topics will include an introduction to capital structure and corporate finance during the various stages of a company's growth. While reviewing basic corporate law concepts such as the interests and rights of debt and equity holders and basic financial concepts such as valuation and optimal capital structure, the course will focus on the rights and preferences of various classes of equity holders. The remainder of the course will examine the anatomy of a private equity/venture capital deal. This will involve a review of the business and legal issues that arise in the context of a venture deal, discussion of the principal players involved, and a close look at the agreements employed. Finally, the course will touch on the role of private placements and the relevant securities laws exemptions under which venture deals are done.

LAW 610 Antitrust Law

Spring. 2 or 3 credits. (Students who have taken the antitrust course in the Spring program will receive two credit hours for this course. All others will receive three credit hours.) Pass/Fail option unavailable. G. A. Hay.

The antitrust laws of the U.S. protect competitive markets and limit the exercise of monopoly power. Topics include: price fixing, boycotts, and market allocation agreements among competitors; agreements between suppliers and customers, joint ventures; monopolization; and mergers.

LAW 611 Arbitration

Fall. 3 credits. Pass/Fail option unavailable. R. K. Hull.

Arbitration is the principal method of resolving disputes between unions and employers, between securities brokers and their clients, and under international business agreements, and is gaining favor in many other areas. This course familiarizes students with arbitration practice in a variety of fields through the use of simulation exercises, role-playing, and actual case presentations and videotapes. Class exercises focus on practical skills, including case preparation, preliminary hearings, all phases of case presentation, and post-hearing briefs. The practical distinctions between arbitration and traditional litigation are noted throughout.

LAW 612 Banking Law and Regulation

Fall. 3 credits. Pass/Fail option available. J. A. Macey.

The course begins by defining the roles that banks and other financial intermediaries play in the economy. It considers the claim that a specialized set of regulations governing the activities of financial intermediaries is justified by the special role that banks occupy in society. In that context a variety of theoretical arguments about banking regulation are considered. The course then examines each of the major laws that govern banking activities against the backdrop of the various regulatory theories discussed. Topics addressed include entry restrictions, growth and expansion of bank activities, regulation of the business of banking, expansion through the bank holding-company structure, the financial holding-company structure, branch banking, interstate banking, and regulation of failing or failed banks. Attention is paid to the regulation of close substitutes for banks, particularly mutual funds, and to international banking.

LAW 613 Bankruptcy

Spring. 3 credits. Pass/Fail option unavailable. T. Eisenberg.

Selected topics in the law of bankruptcy. An overview of the various bankruptcy chapters and a detailed study of the bankruptcy provisions of most general applicability. The relationship between bankruptcy and the various bankruptcy exemptions. The course also examines the operations of creditors in connection with juvenile court jurisdiction over neglect and abuse, delinquency, and status offenses.

LAW 617 Comparative Public Law

Spring. 2 credits. Availability of Pass/Fail option to be announced first day of class.

S. P. Baumgartner.

The course tackles first the sources, structures, and assumptions common to the legal systems of continental Europe, Latin America, and some countries of the Far East, and then examines the enduring divisions of their private law. Particularly relevant examples are studied: they may be grouped under a topic or by country. This course aims to demonstrate the utility of the comparative method by encouraging students to rethink their own law in the light of other approaches. This enables students to see how problems may sometimes be solved by seeing past the categories of a given system, and thus to gain a better understanding of the reasons for the rules.

LAW Comparative Public Law

This course will focus on a comparison between the constitutional and administrative law of the United States and the United Kingdom and the structure and influences of the legislative, executive and judicial branches in those systems. Comparisons will also be drawn from the European Union, the Commonwealth, and, where helpful, other foreign jurisdictions to illustrate the ways in which legal systems influence one another and evolve. Continental public law concepts such as legitimacy expectations and proportionality are among those that will be examined in relation to the ways in which they have influenced the development of British and EU public law, and questions will be raised as to
LAW 619 Conflict of Laws
Spring. 3 credits. Pass/Fail option available. G. J. Simson.
A study of the methods used by courts to decide the applicable law in cases that, in their parties or events, involve more than one state or country. Attention to the due-process limitations on jurisdiction, a state’s obligation under the full-faith-and-credit clause to respect sister-state judgments, and conflicts between federal and state law.

LAW 620 Constitutional Law II: The First Amendment
Spring. 3 credits. Pass/Fail option available. S. H. Shiffrin.
A comprehensive discussion of freedom of speech, press, and association. The free-exercise-of-religion clause and the establishment clause of the First Amendment are treated less extensively.

LAW 621 Consumer Law in the Global Marketplace
Spring. 3 credits. Availability of Pass/Fail option to be announced first day of class. W. Taylor.
This course will examine the basic rights, liabilities, and responsibilities of parties engaged in consumer transactions. Viewing these transactions through the lens of a global marketplace, the course will focus on domestic and international problems pertaining to internet commerce, telemarketing, electronic funds transfers, credit reports, debt collection practices, credit costs, credit card fraud, false advertising, and other deceptive trade practices.

In addition, the course will explore credit discrimination issues, particularly those involving racial, gender, and other bias that impede fair access to consumer credit.

LAW 623 Copyright
Spring. 3 credits. Pass/Fail option unavailable. R. Ku.
Copyright law has become increasingly important as the American economy has shifted from a predominantly manufacturing economy to an information economy. This course provides students with a comprehensive overview of U.S. copyright law. It begins with coverage of the substantive and procedural requirements for qualifying for copyright protection and remedies available to copyright owners. It provides an in-depth study of the rights granted to authors under this law, the standards for judging copyright infringement, public policy limitations on the scope of copyright interest (such as the “use defense”), and remedies available to copyright owners. Issues raised by new information technologies and recent amendments affecting them are special attention. Partly as an aid to understanding U.S. law better and partly because copyright law is of increasing international importance, the course also provides some comparative and international copyright law components.

In addition, it touches on issues of trademark and right-of-publicity law as they overlap or complement copyright.

LAW 624 Corporate and White Collar Crime
Fall. 3 credits. Pass/Fail option available. S. P. Garvey.
White collar crime is one of the fastest growing areas of specialization in the legal profession today. The collapse of the savings and loan industry, rampant fraud in the nation’s financial markets, and systemic corruption in the health care industry contributed to a dramatic increase in federal white collar crime prosecutions over the past twenty years. This course examines some of the principal statutes that are used to prosecute corporate and white collar crime. Theories of liability we will consider include traditional white collar offenses like mail and wire fraud, insider trading, perjury, and obstruction of justice. They also include more recent entries into the field such as RICO, money laundering, and enacted to combat government contract fraud. The course will also provide an introductory look at the Federal Sentencing Guidelines.

LAW 630 Directed Reading
Fall or spring. 1 or 2 credits. Arrange directly with instructor. See page 18 of the Law School Catalog and Law School registrar. Must be taken Pass/Fail. S. H. Shiffrin.
An examination of a topic through readings selected by arrangement between the instructor and an individual student or group of students (not exceeding eight).

LAW 626 Criminal Procedure
Fall. 3 credits. Pass/Fail option unavailable. S. D. Clymer.
This course surveys the law of criminal procedure, with emphasis on the constitutional constraints that limit the governmental stage of the criminal process. More specifically, the course focuses on the law of interrogations and confessions, the admissibility of evidence, and on the right to counsel throughout all stages of the criminal process.

LAW 627 Current Topics at the Crossroads of Law and Finance
Spring. 3 credits. Pass/Fail option available. J. R. Macey, M. O’Hara.
Financial institutions of all kinds, whether they are formally known as insurance companies, banks, investment banks, mutual funds, or corporate attorneys (with respect to their clients and the role of business corporations in corporate transactions. Viewing these transactions through the lens of a global marketplace, the course will focus on domestic and international problems pertaining to internet commerce, telemarketing, electronic funds transfers, credit reports, debt collection practices, credit costs, credit card fraud, false advertising, and other deceptive trade practices.

In addition, the course will explore credit discrimination issues, particularly those involving racial, gender, and other bias that impede fair access to consumer credit.

LAW 629 Cyberspace Law
Fall. 3 credits. Availability of Pass/Fail option to be announced first day of class. R. Ku.
This course will expose students to the study of the rules and norms governing the control and dissemination of information in a computer mediated world. We live in a world in which information is increasingly distributed through computers rather than traditional mediums such as paper, broadcast, or film, and the interlinking of computers that make up the Internet has increased our ability to communicate and distribute information. Correspondingly, because information is distributed through computers capable of copying, filtering, or altering information, it is now possible to control and manipulate information at various levels throughout the network in ways and to an extent that were otherwise impossible or impractical. While existing doctrines such as freedom of speech, intellectual property, and privacy are familiar doctrinal and theoretical foundations, cyberspace law, and right-of-publicity law as they overlap or complement copyright.

LAW 625 Corporations
Fall or spring. 4 credits. Limited enrollment. Pass/Fail option available.
B. B. Alsdave, J. A. Macey.
An introduction to the business corporation laws affecting the rights and roles of corporate boards of directors, senior executive officers, and shareholders, with an emphasis on large, publicly traded firms. Shareholders’ economic interests are examined from the perspective of limited liability and dividend standards, expectations of liquidity or transferability of shares, and the use of debt capital as a mode of financing corporate activity. Shareholders’ limited participation rights in corporate decision making are examined from the perspective of state and federal regulations governing shareholder voting and the disclosure of corporate information and the notion of managerial expertise (e.g., as evidenced by judicial application of the “business judgment rule”). The latter part of the course focuses on directors’ fiduciary obligations to shareholders, examining the operation of these duties in a variety of settings and transactions. Issues relating to the roles and functions assumed by corporate attorneys (with respect to their clients) and the role of business corporations within society are also addressed. No previous business knowledge is assumed.

LAW 630 Directed Reading
Fall or spring. 1 or 2 credits. Arrange directly with instructor. See page 18 of the Law School Catalog and Law School registrar. Must be taken Pass/Fail. S. H. Shiffrin.
An examination of a topic through readings selected by arrangement between the instructor and an individual student or group of students (not exceeding eight).

LAW 628 Current Topics at the Crossroads of Law and Finance
Spring. 3 credits. Pass/Fail option unavailable. J. R. Macey, M. O’Hara.
Financial institutions of all kinds, whether they are formally known as insurance companies, banks, investment banks, mutual funds, or corporate attorneys (with respect to their clients and the role of business corporations in corporate transactions. Viewing these transactions through the lens of a global marketplace, the course will focus on domestic and international problems pertaining to internet commerce, telemarketing, electronic funds transfers, credit reports, debt collection practices, credit costs, credit card fraud, false advertising, and other deceptive trade practices.

In addition, the course will explore credit discrimination issues, particularly those involving racial, gender, and other bias that impede fair access to consumer credit.

LAW 629 Cyberspace Law
Fall. 3 credits. Availability of Pass/Fail option to be announced first day of class. R. Ku.
This course will expose students to the study of the rules and norms governing the control and dissemination of information in a computer mediated world. We live in a world in which information is increasingly distributed through computers rather than traditional mediums such as paper, broadcast, or film, and the interlinking of computers that make up the Internet has increased our ability to communicate and distribute information. Correspondingly, because information is distributed through computers capable of copying, filtering, or altering information, it is now possible to control and manipulate information at various levels throughout the network in ways and to an extent that were otherwise impossible or impractical. While existing doctrines such as freedom of speech, intellectual property, and privacy are familiar doctrinal and theoretical foundations, cyberspace law, and right-of-publicity law as they overlap or complement copyright.

LAW 625 Corporations
Fall or spring. 4 credits. Limited enrollment. Pass/Fail option available.
B. B. Alsdave, J. A. Macey.
An introduction to the business corporation laws affecting the rights and roles of corporate boards of directors, senior executive officers, and shareholders, with an emphasis on large, publicly traded firms. Shareholders’ economic interests are examined from the perspective of limited liability and dividend standards, expectations of liquidity or transferability of shares, and the use of debt capital as a mode of financing corporate activity. Shareholders’ limited participation rights in corporate decision making are examined from the perspective of state and federal regulations governing shareholder voting and the disclosure of corporate information and the notion of managerial expertise (e.g., as evidenced by judicial application of the “business judgment rule”). The latter part of the course focuses on directors’ fiduciary obligations to shareholders, examining the operation of these duties in a variety of settings and transactions. Issues relating to the roles and functions assumed by corporate attorneys (with respect to their clients) and the role of business corporations within society are also addressed. No previous business knowledge is assumed.
LAW 632 Education Law
Fall. 3 credits. Pass/Fail option available. M. Heise.
This course focuses on selected legal issues that arise in the public and private education context, with emphasis on the elementary and secondary school setting. Topics considered include the legal and policy dimensions of the relationship between students, parents, educators, and the state with respect to such issues as access to, control over, and regulation of the education setting and institutions. Issues germane to equal education opportunity, school finance, and school governance and regulation receive particular attention.

LAW 633 Employment Law
Fall. 3 credits. Pass/Fail option available. S. J. Schwab.
Survey of major statutory schemes and common law doctrines that affect the employer-employee relationship in the private sector, other than laws regulating union formation and collective bargaining, which are covered in Labor Law. Topics covered include unjust dismissal, drug testing, free speech, privacy, and antidiscrimination laws, as well as wage and hours laws, employee benefit regulation, and safety and health regulation.

LAW 636 Environmental Law
Fall. 2 credits. Recommended prerequisite: Corporations. Pass/Fail option unavailable.
The course surveys the major environmental laws, with a primary focus on federal statutes. Emphasis will be placed on the various sources of liability to both individuals and corporations from common law, statutory provisions, administrative regulation and enforcement policy. Corporate successor liability through mergers and acquisitions will be included, including the increasing importance of performing a full range due diligence review for environmental conditions in such transactions. Special attention is paid to the economic, social, and political obstacles to efficient regulation of the environment.

[UPPERCLASS COURSES 351]

[LAW Estate Planning]
Fall or spring. 3 credits. Limited enrollment. Not offered 2002-2003.
Problems involving planning and drafting for the transfer of property, both during lifetime and at death, taking into account relevant property law and federal and state income, gift, and estate taxes.

LAW 640 Evidence
Fall or spring. 3 credits. J. H. Blume (Pass/Fail option available); S. D. Clymer (Pass/Fail option available). J. H. Blume; S. D. Clymer.
The rules of evidence in civil and criminal cases with emphasis on relevance, hearsay, authentication, witnesses, and experts. The course focuses on the Federal Rules of Evidence, with some attention to how they diverge from the common law.

LAW 641 The Evolving Law of Patents: Patents and Biotechnology
Fall. 2 credits. Limited enrollment. No prior knowledge of either patent law or biotechnology is needed for this course.
Pass/Fail option available. Y. M. Cripps.
This course will focus on the ways in which biotechnological developments are affecting traditional notions of property, intellectual property and information. In addition to patent law, other forms of property protection, such as copyright, will be examined through a biotechnological prism and compared with the way in which they operate, for example, in relation to the internet and digital technology. There will also be an examination of whether generic biotechnological concepts and other biotechnological products should, if at all, be granted intellectual property protection either within the existing frameworks of intellectual property law or under some new regime designed for that purpose. As is inevitable in any discussion of intellectual property law, international perspectives will be important. The course will involve presentation and discussion of papers in class, and a 10-15 page paper that will be presented in class as well as very brief written critiques of the other students' papers.

LAW 642 Family Law
Fall. 3 credits. Pass/Fail option available. L. E. Teitelbaum.
Broadly understood, family law is the study of state regulation of intimate and private family relationships. Laws governing family formation, dissolution, and governance of family members receive particular attention.

[LAW 643 Federal Courts]
Spring. 4 credits. Prerequisite: Constitutional Law and second semester of Civil Procedure. Students without such background should consult with the instructor. Availability of Pass/Fail option to be announced first day of class.
C. R. Farina.
This course examines the various constitutional and judge-made doctrines that control access to the federal courts to vindicate federal rights. It includes: case or controversy limitations, standing; constitutional and statutory rights, including 42 U.S.C. §1983 and Bivens actions; bars to such actions, including the various abstention doctrine and the emerging law on 11th Amendment and sovereign immunities.

LAW 644 Federal Income Taxation
Fall or spring. 4 credits. Pass/Fail option available. G. Gifford; R. A. Green. Limited enrollment.
A basic course designed to develop understanding of tax concepts and ability to work effectively with the Internal Revenue Code, regulations, cases, and other tax materials.

LAW 646 Feminist Jurisprudence
Spring. 3 credits. Availability of Pass/Fail option to be announced first day of class.
M. A. Fineman.
This course examines the role of law, and, more generally, the role of the state, in perpetuating and remedying inequities against women. We will study several paradigmatic feminist legal theories, including equality, difference, dominance, and various antitotalitarian theories (e.g. intersectional, poststructuralist). Among the questions considered will be the following: How does the law help to construct gender? In what ways does it interact with cultural images and assumptions regarding women to perpetuate women's disadvantaged status in society? To what extent can a set of institutions implicated in gendered systems of privilege and marginalization be used to remedy it? Can a legal system predicated on the liberal assumption of a unitary, prepolitical, autonomous self accommodate feminist accounts of social construction, constrained "choice," or decentered subjects? What methods have feminists used to argue in and about the law, and do these methods themselves have the potential to transform legal thinking?

[LAW 647 Health Law]
This course examines the role of law and policy in the health care industry. Students are invited to take a "systems approach" to the study of the role of law in arriving at coherent policy solutions for a host of dilemmas facing a rapidly evolving industry. Students are asked to consider whether a particular regulation, or judicially crafted legal doctrine is consistent with new developments or any public policy towards health care. Topics covered include: access to health care, purchasing health care, commercialization vs. nonprofit institution, the antitrust challenge to professional dominance, changing institutional providers, and public and industry-sponsored quality control.

LAW 649 The IPO Process and Deal Structure Alternatives
Fall or spring. 3 credits. Prerequisite: Corporations. Limited enrollment. Pass/Fail option available. Z. J. Shulman.
An in-depth look at initial public offerings and acquisitions from a practitioner's point of view. With respect to initial public offerings, the course covers the tradable security framework, pre-offering corporate preparations (such as the implementation of poison pills and stock option plans), the due diligence process, the implementation of corporate governance policies appropriate for a public company, the offering registration process, liability under federal securities laws, the Securities and Exchange Commission review process, underwriting arrangements, selection of a trading forum (i.e., NYSE, NASDAQ, or AMEX), and the transaction closing. Regarding mergers and acquisitions, the course explores: financing alternatives, accounting treatment, due diligence, choosing an appropriate transaction structure (i.e., stock vs. asset sale), post-merger integration issues (i.e., antitakeover measures and fiduciary duty concerns), and crucial legal aspects of the acquisition, such as caps/collars, letters of intent, successor liability, continuity of employment agreements, and tax issues.

LAW 650 International Business: Transactional Law and Dispute Settlement
Spring. 2 credits. Availability of Pass/Fail option to be announced first day of class.
D. R. Gray.
The applicable legal regime and the role of law and lawyers in transactions that cross national boundaries. The law of international
International Criminal Court. It also examines the International Court of Justice and the structure, jurisdiction and functions of the United Nations Charter. The course further considers texts establishing these organizations. It also takes into account the United Nations Charter and the structure of the United Nations organs and analysis of problems concerning membership, humanitarian intervention, the status of people within its jurisdiction. Topics include the substantive norms of human rights and human rights.

LAW 653 International Commercial Arbitration
Fall. 3 credits. Pass/Fail option available. J. J. Barceló III.
A study of arbitration as a dispute resolution process for international trade and business disputes. The institutional and ad hoc arbitration, the authority of arbitral panels, enforcement of agreements to arbitrate, challenging arbitrators, procedure and choice of law in arbitral proceedings, and enforcement of international arbitral awards. The course gives special attention to the international convention on the recognition and enforcement of international arbitral agreements and awards (New York Convention) and the UNCITRAL Arbitration (United Nations Commission of International Trade Law) arbitral rules and model law. It focuses on commercial arbitration as an international phenomenon and not on arbitration under any particular national system.

LAW 655 International Human Rights
Spring. 3 credits. Recommended prerequisite: Public International Law. Pass/Fail option available. D. Wolfman.
This course explores the development and effectiveness of international legal rules governing the conduct of a state toward people within its jurisdiction. Topics include the substantive norms of human rights and their philosophic basis; the mechanisms for the protection of human rights, such as the United Nations, international human rights treaty bodies, and domestic courts; and current issues such as the doctrine of humanitarian intervention, the status of indigenous peoples, and human rights during armed conflicts.

LAW 657 International Organizations and International Human Rights Institutions
Fall. 3 credits. Pass/Fail option unavailable. B. B. Nidholo.
The course provides a comprehensive legal analysis of problems concerning membership, the structure of the United Nations organs and a variety of other international organizations. It considers the functions and acts taking into account the United Nations Charter and texts establishing these organizations. It also considers the use of force under international law with specific reference to the United Nations Charter. The course further considers the structure, jurisdiction and functions of the International Court of Justice and the International Criminal Court. It also examines the international machinery for the protection of human rights in the world community including the United Nations Human Rights Committee, the independent human rights of the United Nations and the Inter-American Court of Human Rights. Relevant decisions of these courts and of municipal courts are studied as well as basic documents.

LAW 659 International Tax Planning
Fall. 3 credits. Prerequisite: Federal Income Taxation. Pass/Fail option available. W. C. Gifford.
The international aspects of United States income taxation in the context of business planning and counseling situations. The course is based on a series of problems involving common business transactions by United States multinational corporations, such as exporting, manufacturing and marketing abroad, and repatriation of foreign earnings to the United States.

LAW 660 Labor Law
Spring. 3 credits. Pass/Fail option available. K. V. W. Stone.
A study of collective bargaining, including the process of union formation, legal regulation of strikes and other economic weapons, negotiation and enforcement of collective agreements, the duty of fair representation, the application of antitrust law to union activity, and the relationship between federal labor law and local laws regulating the employment contract.

LAW 661 Land-Use Planning
Fall. 3 credits. Pass/Fail option unavailable. E. F. Roberts.
A study of the legal matrix as a method of controlling the way in which people live and work, including public nuisance as a device to control the town environment; zoning as a control mechanism; conflict between zoning as a plan for growth and as a brake on development; subdivision controls; planning as a respectable government activity; the dynamics of planning, zoning, subdivision controls, and private land-use controls, the rehabilitation-of-center-city syndrome; and future prospects of maintaining a reasonable environment in a class-riven multilingual and culturally tribal society that lacks a genuine moral consensus.

LAW 662 Law and Social Change: International Experience
Fall. 2 credits. Availability of Pass/Fail option to be announced first day of class. M. Greenberg.
This course is intended for students interested in law reform and international development. As compared with courses about international law, this course draws from an international base of experience while focusing on national laws in the context of socio-economic change. How do the concepts of "social change" and "development" differ? When does it suffice to draft and promote passage of new laws? When must the introduction of new laws be preceded or accompanied by other approaches, such as legal literacy training or public education? Who may be necessary partners: ministries of Justice, nongovernmental organizations, bar associations, or others? Issues will be treated by case studies drawn from Eastern Europe, Asia, Latin America and Africa. Social change topics will range from women's rights, gender and the family, to democracy-building and environmental protection. Course requirements are two short "think pieces" (2-3 pages), a midterm, and a final analytical paper of 10-15 pages on a student-selected topic.

LAW 663 Law for High Growth Companies
Spring. 3 credits. Pass/Fail option available. Z. Shulman.
An in-depth analysis of key issues that an emerging high growth business must consider and address, including: (i) choosing type of business entity; (ii) confidentiality, information and inventions; (iii) sources of capital (in both bull and bear market environments); (iv) understanding business structures (common stock, preferred stock, warrants, etc.); (v) use of stock options as employee incentives; (vi) fundamental fair employment practices; (vii) proper establishment and utilization of Boards of Directors and Advisory Boards, (viii) technology licensing and commercialization, (ix) negotiating relationships with distributors, resellers and customers, (x) international business practices, (xi) dealing with creditors, and (xii) key accounting issues that affect early business decisions. Course materials compiled.

LAW 665 Law of Branding and Advertising: Trademarks, Trade Dress, and False Misappropriation
Spring. 2 credits. Pass/Fail option available. N. D. St. Landau.
Fundamental trademark, trade dress, and false advertising laws are examined in the context of assisting clients and businesses in developing and marketing strategies. Special focus is given to branding as it relates to: "consumer products companies;" the impact of e-business and the internet on branding strategies and acquisitions; and complex brand issues in trademark and domain name litigation. Marketing strategies embody fundamental and long-established principles of the trademark laws. The Lanham Act is used to address issues ranging from confusingly similar words and designs, to false and unsubstantiated advertising claims, and public appropriation—and misappropriation—of long-established corporate icons in today's e-commerce world. This course examines the basics of this rapidly changing body of law.

LAW 666 The Law Governing Lawyers
Spring. 3 credits. Satisfies the professional requirement. Pass/Fail option unavailable. W. B. Wendel.
This course is intended to provide a comprehensive overview of the law governing lawyers in a variety of practice settings and areas: transactional, counseling, and civil and criminal litigation. The course is not focused merely on the ABA's Model Rules, but draws extensively from judicial decisions in malpractice and disqualification cases, the new Restatement of the Law Governing Lawyers, and other sources of law. A major theme is the relationship between state bar disciplinary rules and the generally applicable law of tort, contracts, agency, procedure, and remedies. Another significant theme is the prevention of attorney discipline and malpractice liability through advance planning.

LAW 667 Lawyers and Clients
Fall. 3 credits. Satisfies the professional responsibility requirement. Pass/Fail option unavailable. D. A. Kyriazis.
A survey and critique of (1) the law governing the practice of law and the legal profession's norms concerning the lawyer-client relationship; (2) the social functions of lawyers; (3) the methods and patterns in which legal services are or are not made available to the public; and (4) ethical theory relating to lawyer role and conduct.
This course studies legal aspects of foreign investments in developing countries. It seeks to identify legal factors that likely affect a commercial investment in a developing country. Inter alia, it deals with the international law principles and rules governing the establishment by foreign businesses of various aspects of production (persons and capital) on the territory of other states and the protection of such investments. Thus, the course includes a discussion of the following topics: economic development and foreign capital; obstacles to the flow of investments to developing countries; guarantees to investors and investment codes; bilateral treaties; nationalization; joint ventures; transfer of technology; arbitration; investment insurance; unification of trade law; and the settlement of investment disputes.

This course explores various theories of legislation by studying how statutes become a source of public policy, how judges interpret them, and how lawyers draft them. Drafting exercises are used to determine to what degree legislation can be used to reform law or remedy particular social problems.

**LAW 671 Media Law**

Fall. 2 credits. Pass/Fail option available. R. Ku

This course examines various aspects of media law. It begins by considering the scope of First Amendment protection of the media. It then focuses on legal issues arising from newspapering and moves on to issues arising from publication, such as defamation, publication-related privacy torts, and right of publicity. The course briefly examines basic copyright concepts in order to lay the groundwork for close study of disputes over electronic publishing rights to collective works. Various recent landmark developments in the case law will be highlighted.

**LAW 672 Mergers and Acquisitions**

Fall. 2 credits. Prerequisite: Corporations or permission of the instructor. Pass/Fail option available. R. F. Balotti

This course examines the principal business and legal issues in the purchase and sale of publicly held businesses. Emphasis is placed on the duties of directors in the acquisitions of publicly held companies (including hostile takeovers).

**LAW 673 Negotiation and Mediation: Alternative Dispute Resolution and Non-Traditional Approaches to Conflict**

Spring. 2 credits. Limited enrollment. Pass/Fail option available. J. Meyer

This course will introduce the theories and practical realities of mediation and negotiation and will focus on non-traditional, cutting-edge alternatives to the traditional litigation process. The course will introduce students to the spectrum of ADR processes and will teach interviewing and counseling. Negotiation and mediation as skill sets. A variety of approaches will be used to analyze issues and develop skill sets, including lecture/discussion, video tapes, negotiation exercises and simulated mediations.

**LAW 675 Partnership Taxation**

Spring. 2 credits. Pass/Fail option available. R. A. Green

This course provides an introduction to the taxation of partnerships and limited liability companies. The course focuses on the tax issues arising in the organization, operation, and liquidation of a partnership or LLC.

This course will explore contemporary issues in Commercial Law with particular emphasis on sales, leases and electronic transactions. Because of the recent changes in the commercial world around the UCC such as electronic contracts, this course will selectively integrate materials on the Uniform Electronic Transactions Act (UETA), the Uniform Computer Information Transactions Act (UCITA) and the United Nations Convention on Contracts for the International Sale of Goods (CISG).

**LAW 678 Products Liability**

Spring. 3 credits. Pass/Fail option available. D. Wippman

An introduction to the legal rules governing the conduct of states vis-a-vis other states, individuals, and international organizations, with reference to major current events and issues. Topics include the nature, sources, and effectiveness of international law; the establishment and recognition of states; principles concerning consent, sovereignty, territory, and jurisdiction; the law of treaties; state responsibility; international criminal law; and human rights. Special attention is given to the law governing the use of force.

**LAW 680 Public International Law**

Spring. 3 credits. Pass/Fail option available. D. Wippman

An introduction to the legal rules governing the conduct of states vis-a-vis other states, individuals, and international organizations, with reference to major current events and issues. Topics include the nature, sources, and effectiveness of international law; the establishment and recognition of states; principles concerning consent, sovereignty, territory, and jurisdiction; the law of treaties; state responsibility; international criminal law; and human rights. Special attention is given to the law governing the use of force.

**LAW 681 Securities Regulation**

Spring. 3 credits. Availability of Pass/Fail option to be announced first day of class. J. F. Olson

Capital formation is critical to the economic health of the U.S. and other nations. American capital markets have historically been the strongest in the world, but they have been under significant stress recently as a result of market declines and corporate failures. This course examines the U. S. federal regulatory scheme for capital formation through the sale of equity and debt securities, focusing on the Securities Act of 1933. The course also focuses on financial and other disclosure requirements, and regulation of “insider trading”, under the Securities Exchange Act of 1934. Federal regulation of securities markets and broker-dealers, and regulation of accountants and lawyers who practice before the SEC, are also discussed. Federal regulatory requirements are explored in the context of the practical problems of structuring capital formation transactions, and advising public companies and other market participants in the post-Enron environment. Case law and regulatory developments will be considered through the use of hypothetical real-world fact situations.

**LAW 682 Sex Discrimination and the Law**

Spring. 3 credits. Pass/Fail option available. R. L. Liebertz

This course examines various legal issues relevant to discrimination on the basis of sex. Among the problems analyzed are: sexual harassment; pornography; reproductive rights; prostitution; work-family conflict; inequality in employment opportunities; gay and lesbian rights; welfare rights; and affirmative action.

**LAW 683 Social Security Law**

Spring. 3 credits. Pass/Fail option available. P. W. Lawlor

The course focuses especially on how Social Security’s benefit rules relate to employment, families, and household composition and how its procedures address the challenge of adjudicating the massive numbers of benefit claims that arise each year. It introduces the general features of the Social Security Act’s entitlement, benefit formulae, and procedural rules; highlights those that pose the greatest difficulty to administrators and advocates; and surveys current proposals for change.

**LAW 684 Sports Law**

Spring. 2 credits. Prerequisite: recommended prerequisites: Antitrust Law and Labor Law. Pass/Fail option available. W. B. Briggs

The course traces the development of sports law in the United States. Particular attention is given to the relationship of sports with antitrust and labor law. Contemporary issues involving arbitration, collective bargaining, amateur athletics, agents, torts, criminal law, and constitutional law are addressed.

**LAW 686 Supervised Teaching**

Fall or spring. 1 or 2 credits. Arrange directly with instructor. Must be taken Pass/Fail.

See page 18 of the Law School Catalog and the Law School registrar.

**LAW 687 Supervised Writing**

Fall or spring. 1, 2, or 3 credits. Arrange directly with instructor. Must be taken Pass/Fail.

See page 18 of the Law School Catalog and the Law School registrar.

**LAW 688 Supervised Teaching and Supervised Writing—Legal Methods Honors Fellows Program**

Fall and spring. 4 credits for full year. Prerequisite: Application Process. Must be taken Pass/Fail.

Legal Methods Honors Fellows serve for the full year as teaching assistants in the Legal Methods course and as mentors to first-year law students. With training and guidance from the Legal Methods faculty, the Honors Fellows work closely and one-on-one with the students on the various writing projects. In addition to meeting regularly with students, and reviewing and critiquing their work, Honors Fellows may help design writing and research assignments, participate in role-playing exercises during mock interviewing or negotiating sessions, judge oral arguments, and assist the librarians with research training. Honors Fellows are also responsible for teaching and holding classes on the Bluebook. Additionally, Honors Fellows serve as mentors to the entering students to help them make the most of the foundational first year of law school. The Fellows hold workshops on basic law school skills and, during the spring semester, under the direction of the Dean of
Students, a small group of Fellows may tutor first-year law students.

**LAW 689 Taxation of Corporations and Shareholders**  
Fall. 3 credits. Prerequisite: Federal Income Taxation. Pass/Fail option available. R. A. Green.  
This course examines the federal income taxation of corporate transactions, including incorporations, divestitures, redemptions, liquidations, and reorganizations.

**LAW 692 Trial Advocacy**  
This course is devoted to the study of the trial. Fundamental skills are taught in the context of challenging procedural and substantive law problems. Each stage of the trial is examined: jury selection, opening, objections, direct examination, cross-examination, exhibits, impeachment, expert witnesses, child witnesses, summation, and pretrial. In addition to exercises every week on a particular segment of a trial, the student also does a full-day jury trial at the completion of the course. Video equipment is used to teach and critique student performance. There are occasional written assignments and class attendance is mandatory.

**LAW 694 Trusts and Estates**  
Fall. 4 credits. Pass/Fail option available. G. S. Alexander.  
The course surveys the basic law of succession to property, including wills and intestate succession, and the law of trusts. Among the recurring themes of the course are strict and lenient enforcement of formal requirements and methods of interpretation. This is not a course on estate taxation.

**PROBLEM COURSES AND SEMINARS**

All problem courses and seminars satisfy the writing requirement. Limited enrollment.

**LAW 703 Advanced Legal Research**  
Spring. 3 credits. Prerequisite: Legal Methods. Pass/Fail option unavailable. C. M. Germain and staff.  
Teaches cutting-edge research techniques to prepare students for practice in the law office of the future. Focuses on desktop electronic legal research, and covers U.S., international, and foreign law, as well as multidisciplinary research. The course is designed to teach students whose careers will begin in a period of information transition, how to handle traditional and electronic sources and formats and make efficient choices.

**LAW African Americans and the Supreme Court**  
3 credits. Not offered 2002–2003. Beginning with the first decisions related to the slavery question, the Supreme Court has at times aided and at other times hindered efforts to afford African Americans full citizenship. This seminar explores the relationship between the Supreme Court and the principal legal obstacles to the advancement of African Americans along with the legal technologies that were used to resist their advancement.

**LAW 707 American Legal Theory**  
Fall. 3 credits. Pass/Fail option unavailable. R. S. Summers.  
The fall 2002 topic for this seminar is the appropriate form of basic types of legal phenomena such as criteria of valid law (for both public and private law), institutions such as legislatures and courts, statutory rules, accepted methods of statutory interpretation, the principle of stare decisis and common law rules, adjudicative processes, limitations on and proper modifier to rules, and the formal characteristics of the legal system viewed as a whole. American law lacks appropriate form in many important ways and a heavy price is paid for this. However, appropriate legal form and its distinctive underlying rationales (general legal values) profoundly affect the overall content of law and its practice by lawyers in the American as well as other legal systems. Such formality and its rationales have much or more of a claim to primacy as the essence of law can do problem-specific policies that also inform the law's content. In this seminar, there is about equal emphasis on practical skills and theory.

**LAW 708 Appellate Advocacy**  
Fall. 3 credits. Pass/Fail option unavailable. J. B. Atlas.  
This seminar will examine the law and skills that are integral to representing a client on appeal. The seminar will be loosely divided into three central parts: (1) the principles of appellate law, including standards of review, the preservation doctrine, harmless-error analysis, and remedies; (2) the unique role of appellate counsel, including ethical duties to the court and client; and (3) appellate skills, including client counseling, issue selection, brief-writing, and oral argument. Miscellaneous additional topics might include for exploration include the preservation doctrine, harmless-error analysis, and remedies, the unique role of appellate counsel, ethical duties to the court and client, and appellate skills, including client counseling, issue selection, brief-writing, and oral argument. The purpose of the seminar is to explore theories of freedom of speech and theories of equality. How are the ideas of freedom, equality, association, and community linked in doctrine, and how should they be linked? Neoconservative, liberal, radical, feminist, and Marxist writings are considered.

**LAW Constitutional Law and Political Theory**  
3 credits. Not offered 2002–2003. The purpose of the seminar is to explore theories of freedom of speech and theories of equality. How are the ideas of freedom, equality, association, and community linked in doctrine, and how should they be linked? Neoconservative, liberal, radical, feminist, and Marxist writings are considered.

**LAW Consumerism**  
3 credits. Not offered 2002–2003. Consumerism describes the belief that "the possession and use of an increasing number and variety of goods and services is the principal cultural aspiration and the surest perceived route to personal happiness, social status and national success." Individuals subscribing to this belief are said to maximize opportunities for consumption by ensuring a vast supply of natural resources, by deploying public funds in a manner that enables and supports the production and distribution of consumer goods, and by allowing speech between producers and consumers (and about producers and consumers) to assume high significance in social affairs.

This seminar is designed to (a) examine evidence for the existence of consumerism as a pervasive social phenomenon, (b) weigh arguments for and against consumerism as a welfare-enhancing or welfare-decreasing social phenomenon, (c) unravel the role of current law in supporting or suppressing consumerism, and (d) speculate on possible alternative legal approaches to regulating the sources and impacts of consumerism. We will accomplish these aims through careful, contextual examination of consumerism in various legal settings, discussions of products liability law, deceptive advertising regulation, food and drug law, anti-discrimination law, environmental law, and constitutional law. Background readings now common law juridictions. The description is supported by the history of the countries as well as by current statutory guidelines. African countries, however, also retained African customary law as part of the legal system. The two systems of law operated alongside one another and interacted at various points. During the colonial period, the common law was considered superior to African customary law and became the dominant system of law. In today's Africa, the two systems continue to operate side by side in very much the same way as they did during colonial times. Conflicts between them have generated considerable interest among legal scholars. The seminar considers the following issues: the introduction of the common law in Africa; the nature of the customary judicial process; the nature of the plural system; and areas of conflict between customary law and the common law in such areas as succession, land tenure, marriage laws, and gender. It also examines issues relating to constitutional law and governance. Contemporary Africa is engaged in efforts aimed at building democratic political systems that are responsive to the needs of African communities. In this regard, we examine as well the institutional arrangements in postindependence Africa, and conditionality, good governance, and development aid.
This seminar analyzes the types of corruption that exist in both the public and private sectors, the means by which a variety of criminal and non-traditional remedies may be used to reduce the frequency and impact of corrupt activities, and the constitutional and statutory problems implicated by such approaches.

[LAW Empirical Studies of Leading Civil Rights Issues]
3 credits. Not offered 2002–2003. This seminar will focus on empirical studies of sex discrimination in employment cases and death penalty cases.

[LAW 721 Ethical Issues in Civil Litigation]
Spring. 3 credits. Satisfies the professional responsibility requirement. Pass/Fail option available. W. B. Wendel.
This seminar deals with the myriad disciplinary, procedural, and malpractice pitfalls that lawyers encounter in civil litigation. By the conclusion of the seminar, students will be acquainted with common law-of-litigating issues including: conflicts of interest, investigation and discovery (including the attorney-client privilege, perjury, ex parte contacts, and document destruction), motions practice, settlement negotiations, and forensic tactics. The seminar is designed to expose students to problems typically faced by litigators in medium-sized to large law firms handling complex disputes, but is also applicable to lawyers working in small firms or government agencies who do a significant amount of civil litigation.

[LAW 722 Ethical Issues in Criminal Practice]
Spring. 3 credits. Satisfies the professional responsibility requirement. Pass/Fail option unavailable. C. G. Green.
Using simulated problems, we will explore the ethical duties of and practical quandaries faced by prosecutors and criminal defense attorneys. As some examples, we will examine the ethical duty of the prosecutor to the examination of witnesses and argument to the jury; the duty of the prosecutor to "seek justice," not merely to convict; the relationship of the prosecutor to witnesses and police; and the obligation to disclose exculpatory evidence; the duties and dilemmas of the defense attorney confronted with a guilty client who intends to commit perjury or an innocent client who wishes to accept a plea offer; and the right to effective assistance of counsel. We will examine these topics in the context of hypothetical and famous trials that involve coaching, "playing the race card," and blaming the victim, or arrests based upon racial posture, ethnic group relations, labor market conditions, welfare programs, public services, and domestic politics. It also raises in acute form some of the most basic problems that our legal system must address, including the rights of insular minorities, the concepts of national law, and sovereignty, fair treatment of criminal defendants, minority rights, the treatment of reciprocal defense agreements, voluntary disclosures, parallel civil and criminal proceedings, and pre-indictment plea negotiations.

[LAW 725 European Union Law]
Fall. 3 credits. Availability of Pass/Fail option to be announced first day of class. J. J. Barchell.
This seminar examines the substantive legal rules and ethical duties of and practical quandaries related to grand jury investigations, using a combination of readings, discussions, and practical exercises. It will cover such issues as the scope of the grand jury's power, effective advocacy in a grand jury investigation, plea defense agreements, voluntary disclosures, parallel civil and criminal proceedings, and pre-indictment plea negotiations.

[LAW 727 First Amendment Theory]
Spring. 3 credits. Availability of Pass/Fail option to be announced first day of class. S. Shiffman.
An examination of competing theories regarding the justification and scope of freedom of speech, freedom of press, and freedom of religion.

[LAW 730 Grand Jury Investigations]
Fall. 3 credits. Availability of Pass/Fail option to be announced first day of class. N. Kuckes.
This seminar will explore the special legal and practical issues related to grand jury investigations, using a combination of readings, discussions, and practical exercises. It will cover such issues as the scope of the grand jury's power, effective advocacy in a grand jury investigation, plea defense agreements, voluntary disclosures, parallel civil and criminal proceedings, and pre-indictment plea negotiations.

[LAW 731 Immigration and Refugee Law]
Fall. 3 credits. Prerequisite: Constitutional Law. Pass/Fail option unavailable. S. W. Yale.
This course explores the evolving relationship between U.S. immigration policy and our national purposes. Immigration plays a central role in contemporary American life, significantly affecting our foreign relations, human rights posture, ethnic group relations, labor market conditions, welfare programs, public services, and domestic politics. It also raises in acute form some of the most basic problems that our legal system must address, including the rights of insular minorities, the concepts of national law, and sovereignty, fair treatment of criminal defendants, minority rights, the treatment of reciprocal defense agreements, voluntary disclosures, parallel civil and criminal proceedings, and pre-indictment plea negotiations.

[LAW 732 Insurance Law]
Fall. 3 credits. Pass/Fail option available. J. A. Henderson, Jr.
This seminar provides an overview of basic insurance law, including both general theory and practical considerations. Seminar meetings will discuss readings from Kenneth S. Abraham, INSURANCE LAW AND REGULATION (3rd ed. 2000). Performance on a series of focused written assignments, together with class participation, will determine the final grade.

[LAW International Criminal Law]
3 credits. Recommended prerequisite: Public International Law or International Human Rights. Not offered 2002–2003. This seminar examines the evolution of modern international criminal law, from Nuremberg to the new International Criminal Court. Topics include theories governing sources of international criminal law, jurisdiction, individual and state responsibility, penalties and deterrence, and alternatives to criminal trials, such as truth commissions and amnesty. The seminar emphasizes recent developments, such as the Pinochet extradition proceedings and efforts to try senior Khmer Rouge leaders.

[LAW 733 International Law, Human Rights, and Terrorism]
Fall. 3 credits. Availability of Pass/Fail option to be announced first day of class. G. Gutierrez.
This seminar examines the historical and contemporary emergence of international legal principles governing issues related to terrorism. Topics include efforts by the United Nations and regional associations to develop a universal legal definition of terrorism, the relationship between terrorism and national liberation, the role of international human rights norms in addressing terrorism, and the effectiveness of international treaties prohibiting acts of terrorism. Throughout the seminar, we will examine the substantive legal rules and theoretical roots of two predominant perspectives concerning the use of international law as an instrument to combat terrorism: a criminal law model in which terrorists are subject to domestic and international criminal prosecution versus a national security model in which terrorist attacks may justify state use of armed force. It would be helpful if students have previously taken either Public International Law, International Human Rights, or International Organizations and International Human Rights Institutions, but they are not required to have done so.

[LAW 734 Introduction to French Law]
Spring. 3 credits. Not available to students with significant knowledge of civil law system. Pass/Fail option unavailable. C. M. German.
Introduction to the French legal system from a comparative law perspective, with a focus on civil law methodology and French legal institutions. Topics studied include French law sources and authorities, such as legislation, court decisions, and scholarly writings; the relationship between French law and the European Union; the French court structure in civil, criminal, and administrative law matters and its major procedural features; and the organization of the legal profession.

[LAW 735 Introduction to Islamic Law]
Fall. 3 credits. Pass/Fail option available. C. M. German.
This seminar is designed to introduce law students to the terminology, principles, and concepts of Islamic law. In Part One, we will examine the historical formation of Islamic law and the development of its principles of jurisprudence. In Part Two, we will analyze court cases that took place in Morocco and Spain in the period between 1300 and 1500, with special attention to judicial procedure, personal status law, property law, and penal law. In Part Three, we will examine the modern transformation of Islamic law by focusing on the example of Egypt, addressing issues such as codification, legal reform, and constitutional law. Seminar discussions will focus on the sources of Islamic law based largely on primary sources in English translation.

[LAW Juvenile Advocacy]
3 credits. Pass/Fail option available. Not offered 2002–2003. In the context of the simulated law office of MYRON TAYLOR JUVENILE RIGHTS AND DEFENDERS INC. (a non-profit legal service agency that represents juveniles charged as juvenile delinquents or persons in need of supervision. Class meetings are run as weekly law office training sessions.
with the students functioning as junior attorneys. Students give oral presentations to their JRAE colleagues on issues of interest to them that arise from the clients’ cases. Such issues may include the preventive detention of juveniles, the application of criminal rights and defenses to delinquency proceedings, police questioning of suspected runaways, the role of the law guardian in representing juveniles, and the rights of children charged with incorrigibility to assert constitutional rights such as freedom of association and the free exercise of religion, over their parents’ objection. Using simulated case files for the JRAE clientele clients to represent and file various trial motions and legal memoranda before a designated judge. In this manner, students hone their persuasive writing skills and practice writing for a specific audience, learn to evaluate pleadings, and learn how to develop litigation theories and strategies and formulate a litigation plan.

[LAW Law and Economics
The seminar examines the ways in which the law has incorporated, wittingly or unwittingly, an economic perspective. A major theme is the art of economic modeling and the merits and demerits of simplifying assumptions to understand law. A second theme is the Coase Theorem and its relation to legal rules. The seminar focuses on the major common law rules in contracts, torts, property, and procedure. The issues surrounding fairness versus efficiency are also stressed.

LAW 740 Labor and Social Policy
Spring. 3 credits. Prerequisite: prior or concurrent course in labor law or permission of the instructor. Pass/Fail option unavailable. K. V. Stone.
This seminar will focus of three areas of current controversy in labor and employment law. The first topic is the use of alternative dispute resolution in the workplace. The seminar will study the process of arbitration, for the enforcement of substantive employment rights has been rapidly expanding in the nonunion sector, giving rise to many issues such as how to ensure due process in system design, how to protect consent to the agreement to arbitrate, should there be judicial review of arbitral decisions for implementation of statutory rights, and what should be the scope of arbitral remedies. The second topic is the changing nature of the employment relationship and its implications for labor and employment law. In the past decade, there has been a marked increase in the use of flexible work practices and a corresponding emphasis may include: the preventive detention of juveniles, the application of criminal rights and defenses to delinquency proceedings, police questioning of suspected runaways. The role of the law guardian in representing juveniles, and the rights of children charged with incorrigibility to assert constitutional rights such as freedom of association and the free exercise of religion, over their parents’ objection. Using simulated case files for the JRAE clientele clients to represent and file various trial motions and legal memoranda before a designated judge. In this manner, students hone their persuasive writing skills and practice writing for a specific audience, learn to evaluate pleadings, and learn how to develop litigation theories and strategies and formulate a litigation plan.

LAW 741 Law and Higher Education
Spring. 3 credits. Prerequisite: Constitutional Law or Administrative Law. Pass/Fail option unavailable. J. J. Mingle.
Higher education is a complex, idiosyncratic institution. Urgencies have a unique mission—teaching, research, and public-service—and a uniquely challenging task of accommodating the various constituencies and organizations, both internal (governing boards, faculty, students, alumni) and external (legislatures, courts, regulatory agencies) that influence how they are managed and how policies are shaped. This seminar explores the dynamic tensions, high expectations, and complex legal-policy issues universities and colleges face in fulfilling their mission.

LAW 742 Law and Human Behavior
Spring. 3 credits. Availability of Pass/Fail option to be announced first day of class. J. A. Siliciano.
This seminar explores the implicit psychological assumptions embodied in legal doctrine and policy. The seminar focuses on various topics in tort and substantive criminal justice, such as the law’s assumed ability to control human conduct through deterrent signals and its conception of reasonable behavior implicit in various doctrines of justification and excuse. The seminar seeks to compare these legal assumptions about how people think, behave, and react with actual findings from the fields of psychology and psychiatry.

LAW 743 Law and Mental Health
Fall. 3 credits. Pass/Fail option available. H. R. Beresford.
The seminar explores issues at the interface of law and psychiatry. After a general introduction to clinical and scientific aspects of mental illness, the seminar addresses issues of criminal responsibility, competency and behavioral control. The role of behavior in how the legal system integrates or takes into account advances in clinical and scientific understanding of mental illness. Students write and present seminar papers on self-selected topics.

LAW 745 Law Through Literature
Spring. 3 credits. Pass/Fail option unavailable. M. L. Cook.
This seminar introduces students to the use of legal cases, supplemented by law texts, as a basis for understanding operations of law and the impact of legal process on people’s lives. An introduction to the significance of legal doctrine in law practice. Students thus not only analyze legal principles in the context of stories, but also learn how to apply such literary concepts as metaphor, imagery, plot and character development, perspective, and point of view in their legal work.

LAW 756 Legal Aspects of Commercial Real Estate Development
Spring. 3 credits. Pass/Fail option unavailable. J. E. Blyth.
The seminar addresses considerations basic to commercial real estate development. It focuses on purchase agreements, options, rights of refusal, and memoranda thereof; representa-

tions and warranties; disclosure required of brokers and sellers; attorneys as brokers; notarial misconduct; conveying and selling; commercial leases; conventional financing; conflicts between commercial tenants and institutional lenders; alternatives to conventional financing; title insurance; attorney opinion letters; and choice of real estate entity. About half of the semester is devoted to commercial leases, conventional financing, and alternatives to conventional financing (such as tax-exempt financing and synthetic leases).

[LAW Litigation Skills and the Protection of Civil Rights in Housing
Students perform practical exercises in litigation skills while exploring federal fair housing laws, history and policies. The seminar includes litigation exercises, legal writing, reading materials and class discussion. The litigation exercises involve the responsible investigation, evaluation, manage and resolve a case up to the point of trial.

LAW 758 Medical Research, Law and Policy
Spring. 3 credits. Availability of Pass/Fail option to be announced first day of class. P. Palmer.
Lawyers are increasingly being asked by clients to defend or initiate lawsuits involving medical research or to advise clients how proposed regulation or legislation would affect the way they conduct medical research. Representatives of patients who died during clinical trials have recently sued leading academic medical centers over the manner in which the medical research was conducted. In some of these lawsuits plaintiffs have alleged that the consent was defective because the investigator, and sometimes the university, had financial interests in the small start-up companies producing the experimental treatments. In other cases, members of Institutional Review Boards, charged with supervising the obtaining of consent from subjects under federal regulations, have been sued for putting children at risk to harm, even though their parents had consented to the experiments. Policymakers daily make pronouncements and propose legislation on issues ranging from the use of medical records in research to the circumstances under which stem cell research can be conducted in the United States. The Federal Drug Administration recently announced new regulations on the reporting of adverse events during clinical trials of new drugs and gene therapy. In other countries, scientists who cloned the first mammal are seeking licenses to conduct human stem cell research using human embryos as the source of the stem cells and legislators have enacted laws to prohibit "human cloning." This seminar will examine these emerging issues. Students will be asked to prepare a research paper on some aspects of medical research, law and policy.

[LAW Modern Legal Thought
This seminar is intended as a general introduction to modern legal theory. It begins with an examination of several different schools of legal thought (positivism, natural law, legal realism, and critical legal studies), focusing on the differing and often competing answers those schools give to a series of...
questions that have defined the traditional domain of jurisprudence. It next examines several different schools of political thought (libertarianism, liberalism, communitarianism, feminism, and critical race theory), together with their principal claims and commitments. It will also examine how, if at all, the idea of each of these schools is reflected in the law, or alternatively, how those ideas might be used and relied upon to reshape the law. The seminar is intended for those students interested in a broad and even-handed overview and analysis of the most prominent contemporary schools of legal and political thought. Abstract ideas and arguments will, whenever possible, be examined in the context of particular cases and controversies, real or imagined.

**LAW 760 Organized Crime Control**  
Fall. 3 credits. Pass/Fail option available.  
R. C. Goldstock.

This seminar will explore the challenges organized crime poses to society and to traditional law enforcement techniques. Students will undertake a simulated investigation using physical and electronic surveillance, the analysis of documentary evidence, and the examination of witnesses before the grand jury. The RICO statute will be explored in detail as well as a variety of non-criminal remedies including forfeiture and court-imposed trusteeships.

**LAW 765 Pretrial Practice, Litigation Strategies, and Remedies in Commercial and Securities Litigation**  
Spring. 3 credits. Prerequisite: Contracts or a Global Society. Pass/Fail option available.  
Y. G. Harmon.

This seminar studies the strategies of complex commercial litigation, focusing on case development in the pretrial period. It will address pretrial discovery (strategies and approaches) and remedies (e.g., preliminary injunctions, receiverships) in the context of difficult and unclear legal issues. Damages theories and development will also be explored, as well as the use of litigation to achieve business goals. Hardball litigation techniques as well as ethical considerations will be considered. Actual litigation cases will be dissected. Since 90% of commercial cases settle before trial, this seminar will be a real life presentation of the commercial litigation process.

**[LAW Problems in Advanced Torts]**  
Students will have an opportunity to write a paper on a topic of their choosing from the law of torts. Topics not typically covered in the first-year Torts course are preferable, including (but not limited to) products liability, business torts, environmental torts and defamation. Papers will be similar in length and scope to a student note in a law review. Required written submissions include topic proposals, outlines, bibliographies, first drafts and final drafts. Early meetings will be devoted to discussions of background topics such as an analysis of extraterritorial reach, foreseeability, and the legal theories to which it—s and selection of topics. Later meetings will give each student an opportunity to present his/her work product to the group.

**LAW 770 Risk Regulation**  
Spring. 3 credits. Pass/Fail option available.  
D. A. Kreyber.

This seminar concerns the science, law, and policy of society's efforts to assess and manage risks of harm to human life. In addition to the common law of tort, numerous state and federal agencies address, directly or indirectly, risks of death or bodily injury from such sources as food, drugs, automobiles, and environmental contaminants. This seminar will examine the philosophical and practical implications of such efforts to regulate risk. Topics will include: the nature of risk and how it is assessed by both experts and the public; approaches to risk management; the valuation of risks of harm to human life; and the normative treatment of risks of temporally distant harm.

**LAW 772 Separation of Powers**  
Spring. 3 credits. Prerequisite: Constitutional Law and Administrative Law. Students without such background should consult with the instructor. Pass/Fail option unavailable.  
C. R. Farina.

The last twenty years has witnessed more debate about the nature and consequences of "separation of powers" than we have seen since the founding era. This seminar examines the ways this concept is understood and used by modern judges, legislators, executive officials, and scholars to justify, or to attempt to modify, the distribution of power within contemporary American government.

**LAW 773 Sexuality, Gender, and Law**  
Fall. 3 credits. Prerequisite: Contracts or Constitutional Law. Pass/Fail option unavailable.  
B. J. Holden-Smith, M. A. Fineeman.

In the last decade the field of sexuality, gender, and the law has experienced a tremendous increase in scholarly attention. This attention is richly deserved, as the area has become increasingly important. Every year courts and legislatures address these issues in numerous cases and legislative initiatives in the areas of family law, criminal law, and civil rights law. This seminar seeks to explore this developing field of law by focusing primarily upon the social meaning of "sexuality" and how the law helps to construct that meaning.

**LAW 774 Social and Cognitive Psychology for Lawyers**  
Spring. 3 credits. Pass/Fail option unavailable.  
J. J. Rachlinsk.

In their shrinking roles, social science and social psychology have produced a rich understanding of how human beings think and how they interact with each other. It should therefore come as no surprise that these two fields have a number of applications to law. This seminar explores those applications. Examples include: what effect common errors in judgment have on tort and contract law; how the perception of risk affects societal demand for regulation in environmental law; how organizational and group decision-making processes affect corporate governance; how news media about fairness impede or facilitate negotiation and dispute resolution; how biases in judgment influence litigation strategy, and what studies of conformity mean for the development of international human rights law. The goal of this seminar is to introduce students with interests in different areas of law to some of the general principles of human thought and social interaction that will be valuable to them in their future practice.

**LAW 775 Street Law**  
Fall. 3 credits. Pass/Fail option unavailable.  
W. F. Taylor.

This seminar allows law students to lead weekly discussions at the Auburn Correctional Facility on legal topics. Although all students enrolled in the seminar are expected to attend the weekly meeting, two students will be responsible for presenting a legal or policy issue at each meeting and then opening up the floor to questions and comments from the prisoners in attendance. It is anticipated that 10–20 prisoners will participate weekly.

The objective of this seminar is to facilitate the exchange of ideas and the discussion of current legal issues among law students and members of the Auburn prison population. It gives our students an additional opportunity to take law and legal education beyond the traditional classroom setting. The following list is a sampling of topics that hopefully will spark the kind of spirited intellectual debate this seminar envisions: Reparations for African Americans; Legal and Policy Issues; Race Profiling; Family Law and the Rights of Fathers; Term Limits on Elected Officials; Pornography as Discrimination Against Women; The Relevance of Race, Ethnicity, and Sex to Judicial Appointments; Therapeutic Jurisprudence and Shaming Penalties; and Fourth Amendment and Other Limits on Policing Schools for Drugs and Guns.

**LAW 776 Topics in Criminal Law**  
Fall. 3 credits. Prerequisite: Criminal Law. Pass/Fail option available.  
S. P. Garvey.

This seminar will examine the principal issues and controversies dealing with the substantive rules of structure in the substantive criminal law; for example, the justification for punishment, the significance of resulting harm in the determination of liability and punishment, the nature of moral injury, and the theory of excuse (including insanity) and justification. We will proceed through an in-depth examination of Michael Moore's Placing Blame: A Theory of Criminal Law (1997).

**LAW 777 Theories of Law, Theories of Film**  
Fall. 3 credits. Pass/Fail option unavailable.  
C. D. Bond.

This seminar examines cultural representations of the American legal system and lawyers. As part of the course materials, students will view several canonical, mostly American, films that deal with the law. Students will learn the language of film form and theory, which they will use to discuss how particular films construct narratives about the legal system. Topics of inquiry will include parallels between law and film, and how the role of interpretation in constituting legal and cultural meaning, and the manner in which cultural representations of law reflect cultural values, fantasies and myths, with particular attention given to narratives of race and gender. Students will read film theory and criticism and legal theory in an attempt to correlate theories of narrative across both disciplines.

**LAW 779 Theories of Property**  
Fall. 3 credits. Prerequisite: Property. Pass/Fail option unavailable.  
G. S. Alexander.

This seminar explores the idea that people have conceived of, or understood, property. The materials studied are eclectic and interdisciplinary. They include readings on commons, commodification, and women and property, as well as the classical justifications for private property (libertarian, utilitarian, etc.).

**LAW Topics in Feminist Legal Theory**  
Over the course of the semester this seminar will examine the work of 5 or 6 feminist legal
CLINICAL COURSES AND EXTERNSHIPS

All clinical courses and externships have limited enrollment.

**LAW 780 Asylum and Convention Against Torture Appellate Clinic**

Spring. 4 credits. Pass/Fail option available. E. M. McKee, S. W. Yale-Loehr. Students will write appellate briefs to the Board of Immigration Appeals on behalf of clients who have petitioned to remain in the United States because they fear persecution or torture in their home countries. These clients will have represented themselves pro se in Immigration Court. During the first part of the semester, students will learn substantive and procedural aspects of Asylum and Convention Against Torture (CAT) law, such as the nature of persecution, grounds for asylum and CAT claims, and the practical and social effects that these laws have on new immigrants who seek asylum or CAT relief. Classes may also cover practical knowledge needed for effective representation, such as advanced research and writing skills. During the second part of the semester, students will work in teams of two or more to prepare oral arguments on behalf of clients. Students will work closely with the clients, either individually or in a small group, to prepare a live client representation, such as an oral argument for the Board of Immigration Appeals.

**LAW 781 Capital Punishment Clinic: Post-Conviction Litigation**

Spring. 4 credits. Prerequisite: permission of instructor; Criminal Procedure or criminal law experience preferred. Pass/Fail option available. J. H. Blume, S. L. Johnson. Focus is to introduce students to the post-conviction process and critical thinking in this area of law and policy. Students will work on actual cases, either in a two-phase or a one-phase process, under the supervision of a faculty member or an experienced attorney. The cases will be selected from among current cases under active representation by the clinic. The primary goal of the clinic is to prepare students for clinical practice in the area of capital punishment, with an emphasis on death penalty litigation.

**LAW 782 Capital Trial Clinic**

Spring. 4 credits. Prerequisite: permission of instructor; Criminal Procedure or criminal law experience preferred. Pass/Fail option available. J. H. Blume, S. L. Johnson. The focus is to introduce students to the post-conviction process and critical thinking in this area of law and policy. Students will work on actual cases, either in a two-phase or a one-phase process, under the supervision of a faculty member or an experienced attorney. The cases will be selected from among current cases under active representation by the clinic. The primary goal of the clinic is to prepare students for clinical practice in the area of capital punishment, with an emphasis on death penalty litigation.

**LAW 783 Full-Term Externship**

Fall. 12 credits. Must be taken Pass/Fail. G. G. Galbreath, J. M. Miner. Occasionally students find that their educational and career goals would be best served by spending one semester working at a placement outside the law school. The Full-Term Externship course allows students to earn 12 credit hours as externs working full time at an approved placement site off campus during the fall semester of their third year. Written application for the Full-Term Externship course must be submitted to the instructors by March 27 of the preceding spring semester. The application should include, among other things, a description of the placement, a statement of the student's educational and career goals, and a critical reflection on how the student expects to perform a statement of the extern's educational and career goals, and an explanation of how those goals are better met at the placement than at the law school. The instructors, in collaboration with the Associate Dean for Academic Affairs, will review the applications and, by April 15, decide whether each applicant should be granted conditional approval. For students to receive final approval, the placement site must meet the criteria for the placement and meet specific criteria including identification of an attorney at the placement who will closely supervise and mentor the extern. In addition to his or her work responsibilities for the placement, the extern will prepare weekly journal entries for the instructor serving as his or her faculty supervisor.

**LAW 790 Law Guardian Externship**

Fall or spring. 4 credits. Pass/Fail option available. G. G. Galbreath. Students work with a trial court judge. Work involves courtroom observation, conferences with the judge, research and writing memora­ndas, and drafting decisions. The emphasis is on learning about judges, judicial decision-making process, and trial trials. There are weekly class meetings with readings and discussions of topics related to the externship experience. While the primary focus is the student's work at the placement, each student will also do class presentations, weekly journal entries, provide written work samples, and meet individually with the faculty member.

**LAW 791 Law Guardian Externship**

Fall or spring. 4 credits. Pass/Fail option available. J. M. Miner. Students learn about the representation of children in abuse and neglect cases, juvenile delinquency proceedings, and PINS (Person in Need of Supervision) cases through their placement at the Tompkins County Law Guardian office. Duties may include investigating, interviewing, drafting memoranda and motions, and assisting in trial preparation.
instructor during the semester for discussion of issues arising from and related to the representation of children. Bi-weekly journals are also required.

**[LAW Legislative Externship]**

3 credits. Not offered 2002-2003. Students work with the local New York State Member of Assembly. Work involves drafting legislation, tracking legislation for constituents, legal research and writing, and responding to constituent requests that particularly require legal research or an explanation of law. The emphasis is on learning about legislative process, drafting legislation, understanding the reasons for statutory ambiguity, and developing various skills. There are several informal meetings with the faculty supervisor during the semester with readings and group discussions related to the externship experience.

**LAW 792 Neighborhood Legal Services Externship**

Fall or spring. 4 credits. Pass/Fail option available. B. Strom.

Classroom component is provided by Clinical Skills 1, 2 (fall) or 3 (spring), depending on whether the student has previously been enrolled in a course in which Clinical Skills 1 was a component. Cases involve the representation of clients of a legal services office, the Ithaca office of Neighborhood Legal Services (NLS). Along with case handling, this externship includes a classroom component, provided by Clinical Skills 1, 2 or 1, 3. The cases are devoted to the development of lawyering skills and issues related to professional responsibility and the role of an attorney. In addition, each student will meet periodically with the faculty supervisor for review of the placement experience.

**LAW 792 Prisoners Legal Services Externship**

Fall or spring. 4 credits. B. Strom.

The student's work involves the representation of clients of Prisoners Legal Services (PLS), which is a not-for-profit public interest law office providing civil legal services to incarcerated felons in New York state. Student work involves the full range of lawyering activities including reviewing and responding to initial correspondence, interviewing clients in prisons and investigating their claims, reviewing tapes of disciplinary hearings, composing legal research, drafting pleadings and discovery requests, participating in case planning and discovery, working with experts, writing briefs, and making court appearances. Students keep journals of their activities. There are externship related readings and several class meetings with the faculty supervisor to discuss the extern's experiences and topics related to the externship.

**LAW 793 Public Interest Clinic 1**

Fall or spring. 4 credits. (Pass/Fail option available). C. Cimini, G. G. Galbreath, J. M. Miner, B. Strom.

Students handle civil cases for low-income clients of the Public Interest Clinic under the supervision of the clinic faculty. Students interview and counsel; investigate and analyze facts; deliberate substantive and procedural law with facts in the context of actual representation; develop a strategy to handle clients' problems; identify and resolve professional responsibility issues; do legal writing; negotiate and settle cases; and represent clients at administrative hearings. Classroom component is provided by the Clinical Skills 1 class, in which students will develop interviewing, counseling, negotiation, and advocacy skills through the use of readings, videotapes, discussions, demonstrations, and simulation exercises. NOTE: During the second or third week there may be an additional class session. Classes are mandatory.

**LAW 794 Public Interest Clinic 2**

Fall. 4 credits. Prerequisite: Public Interest Clinic 1 or a clinic course that included the Clinical Skills 1 classroom component. Pass/Fail option available. C. Cimini, J. M. Miner, B. Strom.

Students handle Public Interest Clinic cases, participate in a classroom component, Clinical Skills 2, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest Clinic 1. The classroom component, Clinical Skills 2, builds on the skills taught in Clinical Skills 1 and may address such skills as fact investigation and analysis, pre-trial activities and motions that represent the clinic's clients in both federal and state courts.

**LAW 795 Public Interest Clinic 3**

Spring. 4 credits. Prerequisite: Public Interest Clinic 1 or a clinic course that included the Clinical Skills 1 classroom component. Pass/Fail option available. C. Cimini, G. G. Galbreath, J. M. Miner, B. Strom.

Students handle Public Interest Clinic cases, participate in a classroom component, Clinical Skills 3, and help supervise participants in Public Interest Clinic 1. Cases are handled as described in the course description for Public Interest Clinic 1. The classroom component, Clinical Skills 3, builds on the skills taught in Clinical Skills 1 and 2 and may address such issues as alternative dispute resolution, formal discovery and motion practice. Students represent the clinic's clients in both federal and state courts.

**[LAW Wrongful Convictions and Sentences Clinic]**

4 credits. Permission of the instructors required. Preference will be given to students who have taken the Capital Trial Clinic, the Capital Punishment: Post-Conviction Litigation Clinic, Criminal Procedure, the Wrongful Convictions Seminar, the Death Penalty in America, or had some experience (either prosecution or defense) with criminal practice. Pass/Fail option available. Not offered 2002-2003.

Clinic students will work on one or more cases involving factual innocence or an unjust sentence. This class will work on two cases. The first case is the capital murder trial of Sterling Spann, which is set for January, 2002. This is a factual innocence case. Spann spent 17 years on death row, after which he received a new trial because of evidence that the murder was one of three serial killings, all committed by the man who was convicted of the last homicide. The second case will be a post-conviction case with an urgent filing deadline.

**LAW 797 Women and the Law Clinic**

Spring. 6 credits. Pass/Fail option available. J. M. Miner.

Course has two classroom components: Women and the Law Clinic class and Clinical Skills 1 or Clinical Skills 3 class. Students will represent women clients who have legal matters primarily in the family law area (divorce, custody, support, domestic violence). The Women and the Law Clinic class will focus on such issues as the impact of substantive law on women, the impact of legal institutions on women, professional role development, feminist lawyering methods, and other topics related to women and the law. Students will also participate in the lawyering skills classroom component, Clinical Skills 1 or Clinical Skills 3. Clinical Skills 1 will address interviewing, counseling, negotiation, and advocacy skills through the use of readings, videotapes, discussions, demonstrations, and simulation exercises. Clinical Skills 3 builds on the skills taught in Clinical Skills 1.

**LAW 798 Youth Law Clinic**

Fall. 6 credits. Pass/Fail option unavailable. N. L. Cook.

Students work with groups of youth and service providers in a multifaceted approach to identifying and resolving problems of a legal nature. Under the supervision of faculty and community experts, clinic students both handle individual cases and problems and participate in non-litigation project work such as community education, legislative advocacy, and mediation training. Strong emphasis is placed on planning, communication, policy development and non-adversarial problem solving. In addition, students are taught interviewing, counseling, fact development, and advocacy skills through the use of readings, videotapes, discussions, demonstrations, and simulation exercises.

**NONPROFESSIONAL COURSES—NOT OPEN TO LAW STUDENTS**

**GOVT 313 The Nature, Functions, and Limits of Law**

Spring. 4 credits. Undergraduates only. R. A. Hillman.

A general-education course for students at the sophomore and higher levels. Law is presented not as a body of rules but as a set of techniques for resolving conflicts and dealing with social problems. The course analyzes the roles of courts, legislatures, and administrative agencies; compares various approaches to considering Constitutional limits on their power and practical limits on their effectiveness. Assigned readings consist mainly of judicial and administrative decisions, statutes and rules, and commentaries on the legal process.

**B&SOC 406/STS 406 Biotechnology and Law**

Spring. 4 credits. Undergraduates only. L. I. Palmer.

Biotechnology, with myriad applications in areas such as medicine and agriculture, is creating many challenges for basic social institutions. This course explores the use and potential abuse of biotechnology in areas such as medical screening and counseling, reproductive technologies, intentional release of genetically engineered organisms, patents and ownership of human tissue. Particular attention will be given to evolving legal and management strategies for regulating the applications of biotechnology. Readings are from science, medicine, law, and public policy. Several short written assignments as well as a research paper are required.
Copyright law has become increasingly important as the U.S. has shifted from a predominantly manufacturing economy to an information economy, with such products as software, recorded music, movies, and TV shows becoming major exports, and the discussion will be on-line.

This course, offered during fall term 2001, begins with the substantive and procedural requirements that surround copyright protection. It proceeds to survey the rights granted copyright holders and important limits on those rights such as "fair use." How infringement is established, what remedies are available, and other important features of copyright litigation are covered. Issues raised by new information technologies and recent amendments addressing them receive special attention. Finally, because of the growing importance of the global market for copyright-protected products, the international copyright system is also addressed.

**Faculty Roster**

- Abrams, Kathryn A., J.D., Yale U. Prof. of Law and Assoc. Prof. of Ethics and Public Life in the College of Arts and Sciences
- Aldave, Barbara, Bader, J.D., U. of California, Berkeley. Visiting Prof
- Alexander, Gregory S., J.D., Northwestern U. A. Rubert Noll Prof.
- Barcelo, John J. III, S.J.D., Harvard U. William Nelson Cromwell Professor of International and Comparative Law
- Baumgartner, Samuel P., LL.M., U. of Wisconsin. Visiting Prof.
- Blume, John H., J.D., Yale U. Visiting Prof.
- Clermont, Kevin M., J.D., Harvard U. James and Mark Flanagan Professor of Law
- Clymer, Steven D., J.D., Cornell U. Assoc. Prof. of Law
- Cripps, Yvonne M., Ph.D., U. of Cambridge. Visiting Prof.
- Eisenberg, Theodore, J.D. U. of Pennsylvania. Henry Allen Mark Professor of Law
- Garvey, Stephen P., J.D., Yale U. Visiting Assoc. Prof.
- Green, Robert A., J.D., Georgetown U. Senior Lecturer and Director
- Gifford, William C., LL.B., Harvard U. Visiting Prof.
- Greenberg, Marcia E., J.D., Cornell U. Adjunct Prof.
- Grumbach, Carol, J.D., Cornell U. Director of Legal Methods Program
- Galbreath, Glenn G., J.D., Case Western Reserve U. Senior Lecturer
- Gemma, Emily N., J.D., U. of Pennsylvania. Visiting Prof.
- Germain, Claire M., M.L.L., U. of Denver. Edward Cornell Law Librarian and Professor of Law

ADMINISTRATION
Jere Haas, director
Robert Parker, associate director for academic affairs
Elise West, assistant director for academic affairs
Michael Kazaztoff, director of graduate studies, Field of Nutrition
J. Thomas Brennan, director of graduate studies

THE DIVISION
Nutritional Science draws upon the chemical, biological, and social sciences to understand the complex relationships between human health, nutritional status, food and lifestyle patterns, and social and institutional environments. Understanding these relationships includes the study of the metabolic regulation and function of nutrients, nutrient requirements throughout the life span, the role of diet in reducing risk of chronic disease, the nutritional quality of foods, and interventions and policies designed to promote the nutritional health of individuals, communities, and populations.

The focus of this broad field of study at Cornell is the Division of Nutritional Sciences, which brings together specialists from many disciplines. The faculty are involved in undergraduate and graduate teaching, research, and extension of research-based knowledge throughout New York State, the nation, and the world.

The division is affiliated with both the College of Human Ecology and the College of Agriculture and Life Sciences. The undergraduate program in Nutritional Sciences is offered through the College of Human Ecology. An undergraduate program, Nutrition, Food, and Agriculture, is offered in the College of Agriculture and Life Sciences. The undergraduate program in Human Biology, Health, and Society is offered through the College of Human Ecology. A program of study in nutrition for biological science majors is offered in collaboration with the undergraduate program in biology.

Graduate study in the field of nutrition, is administered by faculty members throughout the university.

FACILITIES
Most of the faculty members of the division work in Savage Hall, Kineszberg Hall, and Martha Van Rensselaer Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. The division's Learning Resource Center contains computers and printed and audiovisual resources which give students access to specialized software. Savage Hall also has a graduate reading room.

UNDERGRADUATE PROGRAMS
The Division of Nutritional Sciences offers three programs leading to a B.S. degree:

**Nutritional Sciences (NS), College of Human Ecology:** this program provides students with a strong foundation in the broad field of nutritional sciences as well as thorough training in chemistry and biology. Students may prepare for a variety of career interests including medicine and other health careers, fitness and sports nutrition, nutrition counseling, clinical nutrition, dietetics, nutritional biochemistry, community nutrition, and nutrition education.

**Nutrition, Food, and Agriculture (NFA), College of Agriculture and Life Sciences:** this program is for students who want strong training in human nutrition combined with supportive course work in the agriculture and the life sciences. Strong preparation in biology, chemistry, and math is required. Students in the Nutrition, Food, and Agriculture program supplement the nutrition curriculum with courses in areas such as food science, animal science, plant science, advanced biology, business and economics, education, and communication.

**Human Biology, Health, and Society (HBHS), College of Human Ecology:** established in 1997, this program gives students a strong foundation in biology. It then goes on to explore human health issues from the perspectives of both biology and the social sciences. Students complete a rigorous curriculum in the natural sciences and then, choosing from a wide array of courses offered in the College of Human Ecology, focus their studies on health issues of their choice. Students can explore such topics as gene expression and metabolism related to disease states, biological and social aspects of growth and development, and policies and programs influencing health.

The Division also offers the Program of Study in Human Nutrition for biological sciences majors who may be enrolled in the College of Agriculture and Life Sciences or College of Arts and Sciences. The program of study in Human Nutrition offers biology majors courses on the nature and biochemical function of essential and non-essential nutrients, nutrient requirements, the role of nutrients in gene expression, and the role of diet in both risk of chronic disease and treatment of existing disease states.

Students in this program of study are encouraged to complete a diverse set of advanced courses. They afford a perspective on current knowledge of nutrient requirements and function, and how this knowledge can be put to use. With the exception of a core course in the structure and function of nutrients, the course requirements are unspecified.

Faculty advisers work with individual students to develop a curriculum that fits the students' interests. As part of their program, students are encouraged to obtain laboratory experience either through coursework or research. Students completing the program in nutrition must often choose to continue their education in medical or graduate school, and pursue careers in the applied aspects of nutrition or in laboratory-based or epidemiological research.

THE CURRICULUM
Undergraduate students in these programs complete the requirements of their colleges as well as the courses required by the program of their specific interest. The NS, NFA, and HBHS programs all require a rigorous sequence of courses in chemistry and biology, including introductory chemistry and biology, organic chemistry, biochemistry, and physiology. A minimum competency in college algebra is required with an additional math and/or statistics requirement for some programs and career paths. Students in the HBHS major also complete a course in physics and two additional courses in advanced biology.

All students complete the introductory course, Nutrition, Health, and Society (NS 115). The NS and NFA programs require the completion of four other core courses: Social Science Perspectives on Food and Nutrition (NS 245); Nutritional and Physicochemical Aspects of Foods (NS 345); Physiological and Biochemical Basis of Nutrition (NS 351), and Methods in Nutritional Sciences (NS 352). Students in these programs also must select a minimum of nine credits in advanced courses in the nutritional sciences.

The HBHS major requires a minimum of six credits from courses that integrate biology and the social sciences as they examine health issues. In addition, students also must complete nine credits of advanced electives in courses focused on human biology, health, and society.

Undergraduate students in these programs have a faculty adviser with whom they meet at least twice a year. Advisers help students plan their course schedules and can suggest opportunities for individual study or experience outside the classroom.

In all undergraduate programs the correct sequencing of biology, chemistry, and/or nutrition courses is very important. Students considering these programs should get detailed information about course requirements from the division's Academic Affairs Office, 309/335 MVR. This office offers a wide range of advising materials to help students develop a program of study that matches students' interests and needs.
CAREER OPTIONS AND COURSE PLANNING

Requirements for the programs are the minimum set of courses necessary for a bachelor's degree in these fields. Students should supplement their requirements with elective courses and other learning experiences that will prepare them for entry-level jobs or advanced study in their field(s) of interest. A summary of suggested electives for different career interests follows:

**Medicine and Other Health Careers:** Recommended courses for pre-med students include calculus and two terms of physics. Specific information about medical school admissions requirements can be obtained from the university's Health Careers Office, 203 Barnes Hall. Students interested in other health careers should acquire specific information about those requirements.

Courses of interest may include those related to the biological and social determinants of health, human growth, development, and behavior through the life course; interpersonal communications; advanced biology; sociology; psychology; and ethics.

**Dietetics:** Students who wish to work in the areas of clinical nutrition, nutrition counseling, sports nutrition, community nutrition, or food and nutrition management should complete the academic requirements for The American Dietetic Association (ADA). Courses in foods, nutrition and disease, microbiology, management, statistics, and nutritional care are added to the courses required for the nutrition programs. For more information about meeting ADA requirements. Contact Gail Canterbury, dietetics program administrative assistant, 335 MVR.

**Exercise, Nutrition, and Health Promotion:** Students should complete a course in physiology and a course in anatomy after introductory biology. Students can complete the Applied Exercise Science Concentration at Ithaca College, which includes courses in kinesiology, exercise physiology, and biomechanics. Students who wish to apply to graduate schools to study physical therapy should complete a year of introductory physics, a course in statistics, a course in ethics, and three courses in psychology. Students should check the specific requirements of their schools of interest.

For information about the Applied Exercise Science Concentration, contact the DNS Academic Affairs Office, 309 MVR.

**Biomedical Research/Nutritional Biochemistry:** Recommended electives include calculus, physics, genetics, advanced biology and chemistry, toxicology, and nutritional sciences courses related to the physiology, biochemistry, and metabolism of different nutrients and disease states.

**Public Health and Community Nutrition:** Suggested electives include courses in communications, education, human development, policy analysis and management, maternal and child nutrition, geriatric nutrition, nutrition and disease, and food economics.

**Nutrition, Food, and Business:** Recommended electives include courses in management, marketing, economics, communications, hotel administration, and food science.

**Nutrition and Agriculture:** Recommended electives include courses in food science, animal science, plant sciences, international agriculture, economics, biological sciences, and rural sociology.

**International Nutrition:** Recommended electives include courses in language, anthropology, agricultural economics, policy, economics, rural sociology, international agriculture, and nutritional sciences related to maternal and child health and problems of developing nations.

**Biology and Behavior:** Recommended electives include courses in psychology, human development, and neurobiology.

**Food, Nutrition, and Health Policy:** Recommended electives include courses in economics, sociology, government, policy analysis, and management.

SPECIAL EXPERIENCES

Undergraduates can enhance their experiences by participating in structured field experiences or study abroad. Academic credit can be earned for field experiences in a community agency, health-care facility, or business. The Urban Semester in the College of Human Ecology provides students with an opportunity to study and gain field experience in New York City. All students intending to spend a term off campus in field experience or study abroad must plan their courses well in advance to be sure that all program requirements can be met.

INDEPENDENT STUDY ELECTIVES

Independent study courses (NS 400, 401, 402) can be used to obtain credit for more diverse or intensive experience than the classroom can offer, whether this involves laboratory work, library research, or field study. Any student interested in independent study should obtain the sponsorship of a faculty adviser and the approval of the associate director for Independent Study.

HONORS PROGRAM

The honors program, leading to a B.S. degree with honors in the College of Human Ecology, or B.S. degree with Distinction in Research in the College of Agriculture and Life Sciences, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent study.

In addition to fulfilling the requirements for a major, students in the honors program take seminars in designing and evaluating research, complete an original piece of research (at least six credits of NS 499), and prepare an honors thesis. The honors project may be laboratory or field research or deal with policy and program development. For more information, students should contact J. T. Brenna, B38 Savage Hall or C. Bisogni, 329 MVR.

**COURSES RECOMMENDED FOR NONMAJORS**

Courses in nutritional sciences can strengthen programs of study in biological sciences, biology and society, communications, food science, human development, human services, and other fields.

NS 115, Nutrition, Health and Society is open to all students. After NS 115, nonmajors with limited backgrounds in chemistry and biology may elect NS 245, Social Science Perspectives on Food and Nutrition; NS 327, Food for Contemporary Living; NS 262, Nutrients and Cells; NS 275, Human Biology and Evolution; NS 306, Nutritional Problems of Developing Nations; NS 315, Obesity and the Regulation of Body Weight; NS 347, Human Growth and Development: Biological and Behavioral Interactions; NS 380, Integrating Food Systems and Human Nutrition Needs; NS 450, Public Health Nutrition; NS 451 Epidemiology and Health of Human Communities. Students with strong backgrounds in chemistry and the biological sciences may consider NS 331, Physiological and Biochemical Bases of Human Nutrition, as well as many advanced nutritional sciences courses, such as NS 435, Physicochemical and Nutritional Aspects of Foods; NS 431 Mineral Nutrition and Chronic Disease; NS 441, Nutrition and Disease; and NS 475 Mechanisms Underlying Mammalian Development Defects.

GRADUATE PROGRAMS

Graduate study is administered by the Field of Nutrition, a group of about 40 faculty members from throughout the university who have a common interest in nutritional problems. In the M.S. and Ph.D. degree programs, students may specialize in molecular and biochemical nutrition, human or animal nutrition, community nutrition, or international nutrition. Research is emphasized in all graduate programs. Field experience may be an important component of concentrations in community, international and public health nutrition, and nutrition education. Teaching experience and participation in the graduate student seminar (NS 703) are important aspects of graduate training.

The specialties and interests represented by faculty in the Field of Nutrition provide almost unlimited opportunity for graduate study. Cornell's extensive laboratory and agricultural facilities ensure that students interested in experimental nutrition have exceptional choices and thorough training. As the largest faculty in the country devoted to the study of human nutrition, the field includes specialists in biochemical, metabolic, epidemiological, and sociocultural research. Opportunities to work with community and federal agencies are available to students interested in applied nutrition and public policy. Students interested in international nutrition are expected to conduct their thesis research abroad.

For more information about the graduate program, please write for the brochure. Graduate Study in Nutrition, available from the Director of Graduate Studies, Field of Nutrition, Cornell University, 309 MVR Hall, Ithaca, NY 14853-4401; telephone (607) 255-4410; web site: www.nutrition.cornell.edu/grad.html, e-mail: nutrition_gfr@cornell.edu
COURSES

NS 115 Nutrition, Health and Society
Fall. 3 credits. S-U grades optional. M W F 1:25. D. Levitsky.
The course focuses on the facts and fallacies concerning the role that nutrition, exercise, and other health behaviors play in preventing disease, maintaining good health, and maximizing athletic performance. Emphasis is on understanding the biological mechanisms through which good nutrition and regular exercise affect psychological and physical health.

NS 116 Personalized Concepts and Controversies
Fall. 1 credit. Corequisite: NS 115. S-U only. Limited to freshmen and transfer students. 10 per section. TBA.
This course provides students enrolled in NS 115 individualized assistance in many skills including using computers to analyze data, finding and using scientific references, understanding and criticizing scientific articles, and reviewing material presented in lectures.

NS 120 Nutrition and Health: Issues, Outlooks, and Opportunities
Spring. 1 credit. S-U grades only. Limited to 120 freshmen, sophomores, and juniors, others by permission of instructor. W 12:20. E. West.
A course for students interested in exploring careers in the broad fields of food, nutrition, and health. Experts representing different areas discuss their work, focusing on current issues and trends as well as the requisite knowledge and skills. This course describes many of the disciplines that are drawn upon in addressing human problems related to food, diet, and health. Students explore career opportunities through a variety of assignments. This is NOT an introductory nutrition course for nonmajors.

NS 200 Vegetarian Nutrition: An Introduction
Fall. 3 credits. S-U grades optional. Prerequisites: NS 115 advised but not essential. T R 2:55-4:10. T. C. Campbell.
The course surveys vegetarianism from a variety of nutrition and health considerations. The material to be presented and discussed primarily includes the empirical scientific evidence presented for easy comprehension for students without nutrition training. The course also considers the historical and sociocultural roots, both ancient and of more recent times, that have led to the growing interest in, and acceptance of, this type of dietary practice. Particular attention is given to the role of vegetarianism in the prevention and reversal of chronic degenerative diseases. Special topics on competitive sport, childhood nutrition, food preparation, and dietary transition are offered. Internationally known guest speakers, provide six to eight of the lectures.

NS 222 Maternal and Child Nutrition
Fall. 3 credits. Prerequisites: NS 115 and a college biology course or instructor's permission. S-U grades optional. Limited to sophomores and juniors. Preregistration is required in person 309 MVR Hall. T R 1:25-2:40. P. Brannon, C. Garza.
The course focuses on the biological bases of nutritional requirements in pregnancy, lactation, infancy, and childhood through adolescence. The course stresses critical analyses of beneficial and adverse outcomes of diverse nutrient intakes and dietary patterns, assessment of nutritional status, and the integration of nutrition, other life sciences, and social conditions in understanding nutritional needs during these life stages. Topics include oral and health relationships between maternal diet and pregnancy outcomes; breast- and formula feeding; childhood and adolescent obesity; and, the nutritional needs of young children and adolescents.

NS 245 Social Science Perspectives on Food and Nutrition
Fall. 3 credits. Prerequisites: NS 115. Letter grade only. T R 10:10-11:25. J. Sobal.
Theories, concepts, and methods from the social sciences are used to examine food, eating, and nutrition. The course uses the food and nutrition system and the food choice process as conceptual models for examining the scope of social aspects of nutrition.

NS 247 Food for Contemporary Living
Fall and spring. 2 credits. Laboratory sections limited to 32 students. Preregistration during course preregistration required in 309 MVR Hall. Laboratory coat or apron required. Fall W 12:20; spring T 1:25-4:25 or R 9:05-12:05. TBA.
Emphasizes meal planning for healthy individuals using national nutrition standards, the development of food preparation and presentation skills, the application of sensory evaluation techniques; food science principles as they apply to cooking and ethnic and cultural influences on cuisine.

NS 262 Nutrients and Cells
Spring. 3 credits. Prerequisites: one semester of biology and chemistry. M W 9:05. N. W. Sun.
The course focuses on the relationship of the cells with the environment. Examples from three general areas are considered: (1) mechanisms of uptake of nutrients by bacterial and by mammalian cells; (2) intracellular nutritional stimuli; effects on metabolism and gene expression, toxicity; (3) and pathways of neutralization: detoxification, secretion, and DNA repair.

NS 275 Human Biology and Evolution
(also BIOEE 275 and ANTHR 275)
An introduction to the biology of Homo sapiens through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current human fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Pidtdown fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are all reviewed. Examples of current issues in human biology.

NS 300 Special Studies for Undergraduates
Fall or spring. Prerequisites: permission of instructor. S-U grades optional. DNS faculty.
Special arrangements can be made to establish equivalency for courses not transferred from a previous major or institution. Students prepare a description of the study they want to undertake using a form available from the College Registrar’s Office. The form, signed by both the instructor directing the study and the associate director for academic affairs, is filed at course registration or during the change-of-registration period.

NS 306 Nutritional Problems of Developing Nations
The course is designed for undergraduates interested in the nutritional problems of developing countries. Attention is given to the array of nutritional problems encountered, the causes of hunger and malnutrition, the epidemiology of the major nutritional problems affecting poor nations, the functional consequences of the problems for individuals and societies, and the types of programs that can be implemented to improve health and nutrition.

NS 315 Obesity and the Regulation of Body Weight (also PSYCH 613)
This course is a multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychosocial aspects of eating behavior, the genetics of obesity, the role of activity and energy metabolism, the psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.

NS 320 Introduction to Human Biochemistry
Fall. 4 credits. Prerequisites: one year college biology, one year college general chemistry; and CHEM 257 or 357–358; or permission of the instructor. S-U grades optional. M W F 10:10, sec T 1:25.
W. Aron, P. Stover.
The principles of biochemistry are presented within the context of human health and disease. Metabolism of carbohydrates, lipids, proteins, and selected micro-nutrients is taught from a perspective that emphasizes their role in supporting the structure and physiological functions of the major organs of the body, including the blood. The concepts of enzyme catalysis, enzyme regulation, hormone action, and bioenergetics are incorporated within this framework. The fundamental concepts of eucaryotic DNA structure, function, and gene expression are covered with reference to their importance in regulating metabolism and the impact of a changing nutrient environment.

NS 331 Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits. Prerequisites: BIO S 330, or 331, or NS 320, or equivalent. S-U grades optional. Lecs. M W F 10:10; disc. W or R. M. Stipanuk, C. McCormick.
This course examines the biochemical and physiological bases of human nutritional requirements. The instructors use an integrated approach to cover the digestion and metabolism of the major nutrients (carbohydrates, proteins, lipids, vitamins, and minerals). Metabolic and chronic diseases that are related
to nutrition are discussed throughout the semester. The discussion sections and problem sets provide an opportunity to examine in greater depth selected topics from lecture.

**NS 332 Methods in Nutritional Sciences**
Fall. 3 credits. Each section limited to 18 students. Prerequisites: NS 345, NS 331 preferred or concurrent registration. Laboratory preregistration during course preregistration required in 309 MVR. One evening preлим to be scheduled. Lec: M 12:20, lab M W 1:25-4:25 or T R 10:10-1:10. M. N. Kazarinoff.

Laboratory introduction to principles and analytical techniques of nutritional research. Emphasis is on analytical concepts and skills required to determine nutrient function and nutritional status of individuals. Topics include methods of nutrient, metabolite, and enzyme analysis in body fluids, and methods for assessing individual food intake and nutritional status, and methods for assessing the composition of foods.

**NS 341 Human Anatomy and Physiology**
Spring. 4 credits. Letter grade only; prerequisites: college biology, NS 115 recommended. Completion of laboratory permission forms required in 309 MVR during course enrollment period. Limit 18 per lab. Attendance is required at first lab, or you will forfeit your placement. For further information go to room 309 MVR. Lec: M W F 11:15, lab W or R or F 9:05-11:00 or 2:30-4:25. V. Utermohlen.

Introduction to human anatomy and physiology with particular emphasis on aspects of relevance to the nutrition sciences and medicine. All major organ systems will be covered. Laboratories emphasize location, recognition, and description of anatomical structures. Testing individual physiological functions focuses on the tests with nutritional and medical relevance.

**NS 345 Nutritional and Physicochemical Aspects of Food**
Spring. 3 credits. Prerequisite: college course in organic chemistry or biochemistry. S-U grades optional. T R 1:25-2:40. B. Lewis.

A study of the nutritional, physical, and chemical properties of foods including composition, food structure, enzymic and nonenzymic phenomena, and processing/preparation aspects. Issues related to food safety, regulation, and food composition data bases are also discussed.

**NS 346 Introduction to Physicochemical Aspects of Foods—Laboratory**
Spring. 1 credit. Each section limited to 18 students. Limited to dietetics students in DNS. Prerequisites: NS 345 or concurrent registration; a college course in organic chemistry and permission of instructor during course registration (permission-of-instructor forms must be obtained from and returned to 309 MVR). Letter grade only. M 12:20-3:20 or T 9:05-12:05. B. Lewis, B. Parker.

Laboratory exercises are designed to illustrate principles related to food quality and ingredient functionality, and to introduce students to the analytical methodology associated with food evaluation.

**NS 347 Human Growth and Development: Biological and Behavioral Interactions (also HD 347 and B&B 347)**
Spring. 3 credits. Prerequisites: BIO G 101 or 109 or equivalent, HD 115 or PSYCH 101 or equivalent. M W F 1:25. Offered alternate years. Not offered 2003-2004. J. Haas, S. Robertson.

This course is concerned with the interrelationships of physical and psychological growth and development in humans, particularly during infancy. Intrinsıc and extrinsic causes of variations in growth, including variations of stimulation, are considered. In addition, the consequences of early growth and its variation for current and subsequent behavioral, psychological, and physical development are examined. The intersection between physical and behavioral or psychological factors is emphasized throughout the course.

**NS 361 Biology of Normal and Abnormal Behavior (also PSYCH 361)**
Fall. 3 credits. Prerequisites: BIO G 101-102 and PSYCH 101, or permission of the instructor. A fundamental knowledge of biology and psychology is essential. S-U grades optional. Limited to 50 juniors and seniors. M W F 9:05, B. Strupp.

Serves as a critical evaluation of biological factors thought to influence behavior and/or cognitive functioning. Biological, psychological, and societal influences are integrated.

Topics include nutrition and behavior, psychiatric disorders, developmental exposure to environmental toxins and abused drugs, biopsychology of learning, memory, intelligence, and related cognitive disorders.

**NS 378 Food, Nutrition, and Service Management**
Fall. 3 credits. Prerequisites: NS 115, NS 247 or permission of instructor. T R 1:25-2:40. Faculty.

The course focuses on how management principles and theories apply to foodservice operations and nutrition services. The systems concept of organization is utilized. Emphasis is placed on leadership development, decision making/problem solving as it relates to procurement, financial aspects, distribution, and quality assurance in food and nutrition services. Menu development projects demonstrate the interrelationships of nutrition, labor, equipment, food costs, and customer satisfaction. Marketing strategies and implementation are discussed. Teamwork and negotiating skills are emphasized.

**NS 380 Integrating Food Systems and Human Nutrition Needs**
Spring. 2 credits. Prerequisites: NS 115 or FOOD 200 or AN SC 100. Letter grade only. T R 10:10-1:10.

This is a student-centered course that uses case studies to examine the link between human nutrition and health issues to those involved in systems of food production and distribution.Student teams investigate new and existing technological options within food systems that can be used to address domestic or international human nutrition needs.

**NS 398 Research in Human Nutrition and Health**
Fall. 1 credit. Required for students admitted to the Student Branch of Nutritional Sciences Honors program and open to all students. May be offered in spring if enrollment warrants. S-U grades only. Days TBA. J. T. Brennan, C. Bisogni.

This lecture course focuses on the structures and practice of professional research conducted in human nutrition and health, a field that encompasses a wide range of questions ranging from subcellular components to population level issues. The course introduces the various approaches and methods used by researchers and addresses the topics of ethics and research controls. The course describes the structure of the scientific literature, preparation of research proposals, roles of scientific organizations, and funding sources. Students are required to attend and report on research seminars on campus.

**NS 400-401-402-403 Special Studies for Undergraduates**
Fall or spring. Credits to be arranged. S-U grades optional. Division faculty.

For advanced independent study by an individual or group of students who want to study a field of nutritional sciences not otherwise provided through course work in the division or elsewhere in the university. Students prepare a description of the study they want to undertake on a form to be signed by the instructor directing the study and the associate director for academic affairs. The form, available from the division office, is filed at course registration. Students will change-of-registration period along with an add/drop slip in the Human Ecology Registrar Office. To ensure review before the close of the course registration or change-of-registration period, students should submit the special-studies form to the associate director for academic affairs as early as possible.

**NS 400 Directed Readings**
Study that predominantly involves library research and independent reading.

**NS 401 Empirical Research**
Study that predominantly involves data collection and analysis or laboratory or studio projects.

**NS 402 Supervised Fieldwork**
Study that involves both responsible participation in a community setting and reflection on that experience through observation, reading, and writing. Academic credit is awarded for this integration of theory and practice.

**NS 403 Teaching Apprenticeship**
Study that includes assisting faculty with instruction.

**NS 421 Nutrition and Exercise**
Spring. 3 credits. Prerequisites: BIOAP 311 or NS 341 and NS 115 or NS 331 preferred. Limited to nutrition majors, others by permission of the instructor. S-U grades optional. Lec T R 11:15, sec T R F 8:00-9:55. S. Travis.

Designed for nutrition majors, students in this course examine the interaction between nutrition, exercise, and performance. Topics include the biological, psychological, and sociological aspects of nutrition as it relates to exercise performance. Lectures cover current research on nutritional needs in response to exercise including fluids, energy, nutrient requirements and caloric distribution, supplementation, ergogenic aids, pre/post event recommendations. Applications are made to various sports. Critical thinking skills are enhanced by critiques of studies on sports nutrition related topics and the evaluation of popular sports nutrition claims. Students learn educational strategies for communicating with the recreational and professional athlete, coach, and trainer.
NS 425 Nutrition Communications and Counseling
Fall. 3 credits. Prerequisites: NS 115, NS 245. Limited to dietetics majors. S-U grades optional. M 125, Sec W or F. S. Travis.

Students learn the theoretical basis of effective health communications in public health nutrition and develop effective nutrition communication skills through application in a variety of settings. The course provides hands-on experiences in counseling, educational program development, and oral and written communications.

NS 431 Mineral Nutrition and Chronic Disease
Fall. 3 credits. Prerequisites: NS 331, AN SC 410, or permission of instructor. S-U grades optional. T R 11:15. C. McCormick. We evaluate the evidence that diet plays a role in osteoporosis and hypertension and consider whether iron status affects the development of heart disease and inflammation. An additional goal of the course is to review the data upon which recommendations for daily nutrient intakes are currently based, and the biological basis of current recommendations. Class discussion of key research articles are conducted and evaluated.

NS 441 Nutrition and Disease
Fall. 4 credits. Prerequisites: NS 331 and a human physiology course. S-U grades optional. M W F 10:10, F 8:00. V. Utterholt. Study of the anatomical, physiological, and metabolic abnormalities in acute and chronic illness, and the role of nutritional therapy in their prevention and care. Topics covered include: nutritional assessment, nutritional pharmacology, starvation, infection, trauma, cancer, diabetes mellitus, and renal, cardiovascular, pulmonary, skeletal, neurological, liver, and gastrointestinal disorders.

NS 442 Implementation of Nutrition Care
Fall. 3 credits. Prerequisites: NS 247, concurrent registration in NS 441 (or equivalent background in either course). S-U grades optional. Lec M W F 9:05. TBA. Development of skills necessary to implement nutrition care in clinical settings: nutrition screening, dietary assessment, principles of medical nutrition therapy, menu planning for disease states, the role of other allied health practitioners in assuring nutritional health, and reimbursement and legislation in dietetics practice.

NS 450 Public Health Nutrition
Spring. 3 credits. Prerequisites: NS 115, and one course dealing with population-level studies, e.g., NS 245, HDFS 150, PAM 201, PAM 303, RSOC 100, RSOC 200. M W F 11:15, disc TBA. K. Rasmussen, D. Pelletier. Public health nutrition is the major professional career track for nutritionists outside of dietetics. It deals with efforts to improve the health status of populations by working at the community, state, and national level. This course helps prepare students to work in public health nutrition by describing methods used in the assessment of nutrition problems, development of nutrition-related policies, and delivery of health, nutrition, and food assistance programs.

NS 451 Epidemiology and Health of Human Communities
Fall. 3 credits. Prerequisite: one semester of statistics (can be taken concurrently). M W F 1:25. E. Fronaglio. Examines through a series of case studies, the role of epidemiological investigation in understanding, assessing, and improving the health and nutrition of human communities and populations. Students read and discuss scientific research and public policy literature on specific epidemics of current interest. Emphasis is on the conceptualization of epidemiology as an ecological science that studies the interdependence and interaction of humans with their social, cultural, and physical environment. Intended for advanced undergraduates and graduate students interested in careers in public health, nutrition, or epidemiology.

NS 452 Molecular Epidemiology and Dietary Markers of Chronic Disease
Spring. 3 credits. Prerequisites: upper level biology course, introductory statistics course (can be taken concurrently), or permission of the instructor. S-U grades optional. T R 10:10-11:25. P. Cassano. This course provides an introduction to chronic disease epidemiology, and covers the natural history and epidemiology of chronic diseases affecting the U.S. population. The course focuses on the use of biological markers in understanding the etiology of cardiovascular disease, cancer, and lung disease. The course integrates biological and epidemiological information, as well as public health considerations and concepts related to the prevention of disease. Topics include gene-nutrient interaction in relation to cardiovascular risk, micronutrients and cancer risk, and nutritional influences on the immune system in relation to asthma risk. The course provides a health context that enriches the learning experience in other advanced courses, particularly in biology and nutrition.

NS 455 Nobel Prizes in Biomedical Research
Spring. 2 credits. Prerequisites: a college course in biochemistry and/or cell biology, e.g., BIOBM 330, BIOBM 331/332, NS 320, BIOBM 432. M W 9:05. D. Manor. Key topics in biomedical research are covered in detail through discussions of selected Nobel prizes. For each specific biomedical problem addressed, the discussion encompasses detailed analysis of the relevant experiments and ensuing data, evaluation of the impact of the findings on public health, and retrospective assessment in view of present day knowledge. The course focuses mainly on breakthroughs associated with two major public health issues: infectious diseases and cancer. Other topics discussed include vitamins, prions and technical breakthroughs such as DNA synthesis, mutagenesis and PCR.

NS 457 Economics of Hunger and Malnutrition (also ECON 474)
Spring. 3 credits. Prerequisites: ECON 101 and introductory statistics, or permission of the instructor. S-U grades optional. M W F 9:05. D. Sahn.

This course focuses on the analysis of global hunger and malnutrition. We analyze the dimensions, causes, and solutions to hunger and malnutrition in developing countries. Grades are based on a mid-term and a final exam, a term paper, and class participation.

NS 457 Mechanisms Underlying Mammalian Developmental Defects (also BIOAP 475)
Spring. 3 credits. Prerequisites: BIOBM 330, 331-332 or 333 (may be taken concurrently). Lec M W 9:05, lab R 2:00. D. Noden, P. Stower.

Developmental defects are present in nearly 5% of humanity. Drawing upon current research, this course explores the causes of birth defects, emphasizing the interplay between genetic and environmental factors in the regulation of developmental processes. Emphasis is on nutritional disruptors, teratogens, and regulatory gene networks that are well characterized through animal studies and are associated with morphological, physiological, reproductive, or behavioral abnormalities in humans.

NS 488 Applied Dietetics in Foodservice Systems
Spring. 3 credits. Limited to 27 students. Prerequisites: NS 378, Micro 290. Laboratory preregistration due course prerequisite in approved lab (330, 331, 332 or 333) required. White lab coat required. Approximately $25.00 will be needed for special supplies/activities. Lec M W 9:05, labs, W or R 2:30-5:30. Staff.

Students gain experience in facility design; equipment selection, use, and care; job analysis and evaluation; human resources planning; management of financial resources; recipe development and volume food production; computer-assisted management; employee training; applied safety and sanitation standards; and develop other skills required to operate/manage a foodservice program. The application of quality management in food service operations and facility management is stressed. Laboratories are arranged through Cornell Dining.

NS 499 Honors Problem
Fall and spring. Credits to be arranged. Open only to students in the division honors program. J. T. Brenna, C. A. Bisogni and division faculty. An independent literature or research project or field investigation. Students should plan to spread the work over two or more semesters.

NS 600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. Limited to graduate students recommended by their chair and approved by the instructor in charge. S-U grades optional. Division faculty. Emphasis is on independent advanced work. Experience in research laboratories in the division may be arranged.

NS 601 Proteins and Amino Acids (also AN SC 601)

The course emphasizes the dynamic aspects of protein digestion, absorption, amino acid transport, and amino acid and nitrogen metabolism and their relationships to the nutritional requirements for amino acids.

NS 602 Lipids (also BIO AP 619)
Fall. 2 credits. T R 11:15. A. Bensadoun. Advanced course on biochemical, metabolic, and physiological aspects of lipids, with a specific emphasis on lipid transport. Topics covered include lipid methodology, structure of plasma...
lipoproteins, molecular biology and cell biology of apolipoproteins, lipoprotein receptors, lipid transfer factors, lipolytic enzymes, and atherosclerosis.

[NS 603 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also AN SC 603)]
Fall. 2 credits. Letter grade only. Prerequisites: biochemistry, physiology, and nutrition. T 2:20–4:25. Offered alternate years. Not offered 2003–2004. X. G. Lei. The course emphasizes the metabolic roles and environmental impacts of mineral nutrition in animal, human, and food systems. Text-taught lectures include general biochemical and physiological aspects of mineral metabolism and specific mechanisms of gene expression regulation and mammal health disorders associated with individual elements. Methodology and facility of mineral research is also discussed.

[NS 604 The Vitamins (also AN SC 604)]
Fall. 2 credits. T R 10:10. Staff. Text-based discussion sessions on nutritional interrelationships with other nutrients and metabolites.

[NS 605 Nutritional Biochemistry Colloquium]
Fall and spring. 1 credit. S-U grades only. R 12:20. Nutritional biochemistry faculty. Nutritional biochemistry colloquium is a graduate seminar series that focuses on recent advancements in biochemical nutrition. Weekly presentations are made by faculty, postdocs, and graduate students, and are based on the primary literature. The presentations are followed by a discussion involving all participants.

[NS 607 Nutrition as an Integrating Discipline: Concepts and Paradigms]
Fall. 3 credits. Prerequisite: some prior coursework or experience in nutrition, or permission of the instructor. M W F 10:10. M. N. Kazarinoff, J. P. Habicht and division faculty. An overview course for beginning graduate students which introduces them to the full breadth of nutritional science disciplines, including quantitative and qualitative sciences. Also suitable for seniors as an integrating course. The course presents concepts and paradigms of molecular biology, biochemistry, clinical nutrition, epidemiology, anthropology, economics, program planning and administration, policy development, and ethics. The course uses Vitamin A as the example. Emphasis is placed on the integration of factual and conceptual knowledge to solve nutrition problems in human societies.

[NS 611 Molecular Toxicology (also TOX 611)]
Spring. 3 credits. Prerequisite: TOX 610 and a full-year 400-level course in biochemistry or equivalent. S-U grades optional. TBA. S. Bloom, R. Dieter. A study of the fundamental biochemical mechanisms of absorption, transport, metabolism, and excretion of drugs, carcinogens, and toxicants. Emphasis is placed on oxidative and conjugative pathways of metabolism and of environmental and nutritional factors that influence toxicant metabolism and disposition. Methods of evaluating in vivo and in vitro metabolism are also addressed.

[NS 612 Methods of Assessing Physical Growth in Children]
Spring. 3 credits. Limited to graduate students and undergraduate students who have permission of the instructor. A previous course in statistics required. S-U grades only. Lect. T 1:25; Lab. R 1:25–4:25; Disc. T 2:15–3:05. Not offered 2002–2003. J. Haas. A laboratory course to train students in methods and techniques used to assess the physical growth and development of children. The methods explored are those applicable for field, community, and clinical studies and cover anthropometry, body composition, skeletal age, maturity indicators, physical fitness, and energy expenditure.

[NS 614 Topics in Maternal and Child Nutrition]
Fall. 3 credits. Prerequisites: for undergraduates only, NS 331, 222 or 347, BIO S 311, and permission of instructor. T R 8:30–9:55. K. Rasmussen. An advanced course on the role of nutrition during pregnancy and lactation. The feeding and growth of infants and children in health and disease is considered. Critical evaluation of current literature is emphasized via lecture, discussions, and a term paper.

[NS 617 Teaching Seminar]
Fall or spring. 0 credit. Limited to division graduate students and students who have permission of the instructor. S-U only. E. West, D. Way. Provides individualized instruction focusing on development of teaching skills for guiding learning in lecture, discussion, and laboratory setting, and reflection on the impact of these skills on teaching and learning. Students identify the aspects of the specific teaching assignments they wish to develop, and work with instructors on independent learning projects that may include preparation for lecturing, preparation of exams, efficient grading, and so on. Optional videotaping provides opportunities for practice and analysis.

[NS 618 Teaching Experience]
Fall or spring. 0 credit. Limited to division graduate students and students who have permission of the instructor. S-U only. E. West. Designed to provide experience in teaching nutritional sciences by direct involvement in college courses under supervision of a faculty member. The aspects of teaching and the degree of involvement vary, depending on the needs of the course and the experience of the student.

[NS 619 Field of Nutrition Seminar (also AN SC 619)]
Fall or spring. 0 credit. S-U only. M 4:00. Faculty and guest lecturers. Lectures on current research in nutrition.

[NS 620 Food Carbohydrates (also Food Science 620)]
Spring. 2 credits. Prerequisites. BIO S 330 or equivalent. Letter grades only. T R 10:10. Offered alternate years. Next offered 2003–2004. J. Brady, B. Lewis. A consideration of the chemistry of carbohydrates, including sugars and complex carbohydrates (starches, pectins, hemicelluloses, gums, cellulose, and glycoconjugates). Emphasis is placed on intrinsic chemistry, functionality in food systems, and changes occurring during food processing and storage.

[NS 625 Community Nutrition in Action]
Fall. 5 credits. Limited to dietetic interns. M 1:25–3:25. S. Travis. This course provides students enrolled as dietetic interns with supervised, in-depth experiences in community nutrition program and fosters the integration of research, theory and practice. Through placements in community programs, students gain experience in program administration and in assessing, designing, implementing, and evaluating food and nutrition programs for targeted populations through public organizations. In weekly seminars (and other seminars and observations as arranged) students integrate theory and practice, reflect upon their placement experience, learn about community nutrition research, and explore the many issues facing community food and nutrition practitioners.

[NS 626 Special Topics in Food]
Fall. 2 credits. TBA. B. Lewis. This course provides a discussion of current research on specific topics related to functional foods and nutraceuticals/phytochemicals.

[NS 630 Anthropometric Assessment]
Spring. 1 credit. Prerequisites: TOX 610 or equivalent permission and permission of the instructor. S-U grades only. M. W. F 10:10. Offered alternate years. Next offered 2003–2004. W 1:25–4:25. J. Haas. Topics covered in this lecture/lab course are: biological basis of anthropometry for nutritional status assessment, quality control of anthropometric data, applications to special groups (infants, children, adolescents, pregnant women, and the elderly), statistical analysis and presentation of anthropometric data, references standards and interpretation, measurement techniques of anthropometry, and body composition assessment.

[NS 637 Epidemiology of Nutrition]
Spring. 3 credits. Limited to graduate students. Prerequisites: BTRY 601 and concurrent registration in BTRY 612 or equivalent knowledge. Basic knowledge about the nutritional aspects of growth and development and about nutritional biochemistry. T 3:00–5:00 J-P. Habicht. This course covers the sociomedical and nutritional epidemiology, assessment of nutrition intervention programs, and nutritional surveillance. Principles of using nutritional information in decision making are presented. The course shows how the biochemistry and physiology of nutrition can be related to epidemiological assessment and research strategies.

[NS 638 Epidemiology of Nutrition Seminar]
Spring. 3 credits. Reserved for graduate students planning field intervention studies; by permission of instructor. Prerequisite: NS 637. TBA. J-P. Habicht. Covers the meta-analysis, design, measurement, and analytic issues involved in developing, implementing, and analyzing studies of field interventions with nutritional impact.

[NS 640 Social Science Theories in Nutrition]
Fall. 3 credits. Limited to 20 graduate students. T R 10:10–12:05. J. Sobal. Social science theories and paradigms from sociology, psychology, anthropology, economics, political science, geography, and history that contribute to understanding food,
eating and nutrition will be discussed to understand how theories apply to nutrition topics, issues, and problems.

**NS 644 Community Nutrition Seminar**
Fall and spring. 1 credit. S-U only. M 11:15, spring M 12:20. A. Gillespie and Cornell Community Nutrition faculty. Sponsored by the Cornell Community Nutrition Program. Graduate students and faculty learn about current research in the program and related fields within and outside Cornell; and learn about applications to Community Nutrition theories and research methodologies. The seminar also provides a forum to discuss participants’ own research and current issues in Community Nutrition.

**NS 646 Seminar in Physicochemical Aspects of Food**
Spring. 1–3 credits. Prerequisite: a college course in organic chemistry or biochemistry. S-U grades optional. T R 1:25–2:40. B. Lewis, B. Parker.
An introduction to physicochemical aspects of food, for graduate students who have had limited or no work in this area. The seminar uses the lectures of NS 345 as a basis for supplementary readings and critical review of research on selected topics.

**NS 650 Assessing Food and Nutrition in a Social Context**
Food and nutrition problems in developed and developing countries may manifest themselves in biological or functional terms, but the causes and solutions ultimately are rooted in the socio-political world. This course provides multidisciplinary perspectives and some community experiences needed to assess and analyze the social context of nutrition problems. The course is relevant to developed and developing countries and to research and practice related to community nutrition as well as nutrition policy.

**NS 651 Food and Nutrition Action in a Social Context**
This course builds upon the perspectives developed in NS 650. It provides a framework for combining socio-political considerations and analytical criteria in the planning, implementation, and evaluation of nutrition actions at community and policy levels. Case studies from the United States and developing countries are used extensively for examining a wide range of nutrition actions from the perspective of this integrated framework.

**NS 660 Special Topics in Nutrition**
Fall or spring. 3 credits maximum each term. Registration by permission of the instructor. Division faculty. Designed for students who want to become informed in areas of specific topic related directly or indirectly to nutrition. The course may include individual tutorial study, experience in research laboratories, a lecture series on a special topic selected by a professor or a group of selected lectures of another course already offered. Topics may be changed so that the course may be repeated for credit.

**[NS 680 International Nutrition Problems, Policy, and Programs**
Spring. 3 credits. Prerequisite: permission of instructor. T R TBA. Offered alternate years. B. Lewis and M. Lahbib. Designed for graduate students who want to learn about the important nutritional problems of developing countries. The major forms of malnutrition related to poverty and their underlying causes are discussed. Emphasis is placed on programs and policies that can assist poor countries and communities to improve their nutritional and health status.

**NS 685 Empirical Methods for the Analysis of Household Survey Data: Applications to Nutrition, Health, and Poverty (also ECON 771)**
Spring. 3 credits. Prerequisites: intermediate microeconomics, intermediate statistics or econometrics (through multiple regression and limited dependent variable models) or permission of the instructor. M W TBA. D. Sahn.
The course focuses on empirical methods for the analysis of household survey data. Students examine a series of measurement and modeling issues on health and nutrition, education, and poverty. In addition, we explore methods to evaluate social program. Course readings, and data that are used for hand-on empirical exercises, are largely from Africa and Asia.

**NS 690 Trace Element and Isotopic Analysis (also CHEM 628)**
Spring. 3 credits. Primarily for graduate students and advanced undergraduates. Prerequisite: CHEM 288 or 390, 302 or CHEM 208 and MATH 112, or permission of instructor. S-U grades optional. T R 11:15. Offered alternate years. Next offered 2003–04. J. T. Brenna.
Survey course in modem high precision isotope ratio mass spectrometry (IRMS) techniques and trace/surface methods of analysis. Topics include dual inlet and continuous flow IRMS, thermal ionization MS, inductively coupled plasma MS, atomic spectroscopy, ion and electron microscopies, X-ray and electron spectroscopies, and biological and solid state applications. The first five weeks of CHEM 628/NS 690 focus on IRMS instrumentation and are offered as a separate 1 cr. special topics course (NS 660).1

**NS 696 International Nutrition Seminar**
This seminar series consists of presentations by Cornell faculty and graduate students, and by invited outside speakers. Speakers cover a range of topics relating to nutritional problems, policy, and programs in the nonindustrialized countries.

**NS 699 Special Topics in International Nutrition**
Fall and spring. 3 credits maximum each term. Registration by permission of instructor. Faculty in International Nutrition Program.
This option is designed for graduate students, mainly those with a concentration in international nutrition, who wish to become familiar with some specific topic related to international nutrition that is not adequately covered in the schedule. It consists of a tutorial study on an agreed topic. Because the topics change, the course may be repeated for credit.

**NS 700 Current Topics in Toxicology (also TOX 698)**
Fall or spring. 1–3 credits. S-U grades optional. TBA. Staff.
A discussion of the most current developments in various areas of toxicological research and testing. Faculty and students participate jointly in evaluating research findings and provide seminars and discussion of such material. For information regarding the topic, instructor, location, and credit, contact the office of the Graduate Field of Environmental Toxicology or go to http://www.cf.ee.cornell.edu/icet/seminars.htm.

**NS 702 Seminar in Toxicology (also TOX 702)**
Fall or spring. 1 credit. S-U grades only. F 12:20. Staff.
The seminar program covers varied topics in biochemical, genetic, nutritional, veterinary, and regulatory toxicology, ecotoxicology, and environmental chemistry. Included are presentations of basic research studies, fundamental concepts, and research activities involving environmental problems of a toxicological nature. Presentations are given by speakers from Cornell and visitors.

**NS 703 Seminar in Nutritional Sciences**
Fall and spring. 3 credits. S-U grades only. T 12:20 or W 12:20. Division faculty. Presentations of original articles pertinent to the Nutritional Sciences. Students read and learn how to critically analyze and interpret original articles published in a wide variety of journals. Students learn how to make professional presentations and how to critique the presentations given by others.

**NS 899 Master’s Thesis and Research**
Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Division graduate faculty.

**NS 999 Doctoral Thesis and Research**
Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Division graduate faculty.

---

**FACULTY ROSTER**

Arion, William J., Ph.D., U. of N. Dakota. Emeritus Prof.

Bensadoun, Andre, Ph.D., Cornell U. Prof., Nutritional Sciences/Physiology

Bisogni, Carole, Ph.D., Cornell U. Prof.

Brannon, Patsy, Ph.D., Cornell U. Professor and Dean, College of Human Ecology

Brenna, Thomas, Ph.D., Cornell U. Prof. and Director of Undergraduate Studies

Nutritional Sciences
Miller, Dennis, Prof., Food Science/Nutritional
Sciences
Military instruction began at Cornell University in 1868 under the provisions of the Morrill Act of 1862. Since that time, officer education has been highlighted by the construction of Barton Hall in 1914 and the establishment of a formal Reserve Officers Training Corps (ROTC) unit in 1917. The program evolves to keep pace with the latest military changes and emphasizes the development of leadership and managerial skills.

The Officer Education Programs prepare students for a commission as an officer in either the United States Army, Navy, Air Force, or Marine Corps. Each service program is headed by a senior military officer who also serves as a full professor on the Cornell faculty.

**MILITARY SCIENCE**

Lieutenant Colonel Robert Sova, Aviation (AV), United States Army, Professor of Military Science and Commanding Officer, U.S. Army ROTC Instructor Group

Major James O'Connor, Military Intelligence, United States Army

Captain Richard Brown, Engineer, United States Army

Captain Michelle McKeown, Air Defense Artillery, United States Army

**United States Army ROTC Program**

The primary objective of the Army Officer Education Program at Cornell is to commission the future officer leadership of the United States Army. Intermediate objectives are to provide students with an understanding of the fundamentals of responsibility, integrity, and self-discipline, as well as an appreciation of the citizen's role in national defense. The application of the decision-making process to a variety of situations is given major emphasis as a valuable aid in developing leadership potential. These objectives are achieved through a program normally covering four years. A two-year program is available for those who qualify. The program includes specific courses in military science, more general academic subjects that assure a well-rounded education, practical training in leadership through participation in the Cadet Corps (including attendance at one five-week summer camp at Ft. Lewis, Washington), and the opportunity to participate in a number of extracurricular activities. This combination prepares the student for commissioning and effective performance in the many branches of the Army. The student's academic major, academic performance, leadership ability, personal desires, and the needs of the Army determine the branch of the Army into which the student is commissioned upon graduation.

**Requirements for Enrolling**

Applicants must be citizens of the United States and be able to obtain a Secret level security clearance prior to being commissioned as lieutenants. (Noncitizens may enroll in selected portions of the program.) Students must meet Army medical requirements. Overall sound mental and physical condition is essential; students are required to undergo periodic physical fitness tests. Enrollment and continuation in the program is subject to the approval of the Professor of Military Science. Enrollment in specific courses by students not formally enrolled in the program must be approved by course instructors. Contracted students must register for letter-grade military science classes and leadership laboratories for the purpose of commissioning into the United States Army.

**Four-Year Program**

The Four-Year Program is open to students in their freshman year or, with the approval of military and university authorities, to sophomores in a five-year degree program. Veterans of the Armed Forces of the United States and students enrolled with AROTC credit from secondary or military schools (Junior Division AROTC) may receive advanced standing, if qualified. Under the Four-Year Program students enroll in the Basic Course (MIL S I and II) during the first two years, and the Advanced Course (MIL S III and IV) during the next two years. A total of 12 credits of military subjects are taken. In addition, academic enrichment courses are required in such fields as written communication, computer science, and military history. All cadets attend a five-week camp, with pay, between their junior and senior years. All cadets participate in physical fitness training three days per week. Each year selected cadets are sent to the Army Airborne School, Winter Survival School, and Air Assault Course, depending upon availability and student standings within the ROTC program.

**Basic Course (MIL S I and MIL S II)**

Students in the first year of the Basic Course take one classroom course in military science in the fall and spring semesters, for which they receive academic credit depending upon their college. These courses include study of the U.S. organization for defense and principles and techniques of leadership and management.

Students also participate in leadership modules that include rappelling, orienteering, drill and ceremony, physical training, winter survival, rifle marksmanship, historical site visits, land navigation, interpersonal communication, and individual tactical training. These modules are designed to promote personal development and enrichment. While they do not receive academic credit for these activities, students may receive physical education credit. Typical freshman participation in Army officer education is 6 program-related hours per week.

In the fall of the second year, students take a two-credit course in American military history. In the spring of the second year, students take a one-credit course in leadership theory and spend approximately two hours per week in practical leadership training, land navigation, and military skills.

**Advanced Course (MIL S III and MIL S IV)**

The Advanced Course of the Four-Year Program is open to students who have successfully completed the Basic Course and are accepted by the Professor of Military Science for further enrollment. It is also open to students who have gained appropriate advanced standing through either successful completion of Basic Camp, a six-week summer training camp, or prior military training. Students entering the Advanced Course must have the equivalent of four academic semesters remaining at Cornell or another degree-granting institution. Students must pass required physical and aptitude tests. In addition, the past performance and desire of each student is evaluated to determine potential for eventual commissioning.

When students are accepted for the Advanced Course or accept a scholarship, they sign a written contract with the U.S. government. Under the terms of the contract, they agree to complete the Advanced Course and to accept a commission if offered. Concurrently with the signing of the contract, students enlist in the United States Army Reserve.

Classroom study in the Advanced Course includes one military science course each semester on such subjects as leadership and management, small-unit tactics, and command and staff organization and functions. The two hours a week of practical leadership training continues, and between the junior and senior years all cadets attend a five-week advanced summer camp conducted at Ft. Lewis, Washington.

**Scholarships**

Scholarships are awarded on the basis of merit and may be available for two, three, or four years. AROTC scholarships are awarded each year to outstanding Basic Camp participants and students in the freshman and sophomore classes. Scholarships pay up to full tuition and mandatory fees. Scholarship cadets and Advanced Course cadets also receive between $250 and $400 a month for up to ten months a year. Scholarship cadets also receive $600 per year toward the cost of text books.

**Commissioning**

All students who successfully complete the Advanced Course, including the advanced summer camp, are commissioned as second lieutenants in the United States Army upon graduation.

**Service Obligations**

ROTC graduates may serve on Active Duty, in the Army Reserve, or in the National Guard, depending upon the needs of the Army and the leadership abilities of the cadet. Officers beginning active duty attend the Officer Basic Course (normally 10 to 16 weeks) of their assigned branch. Upon completion, officers
are assigned to a unit and location determined by the desires of the individual and the requirements of the Army. Officers selected for reserve duty attend the Officer Basic Course, after which they are released to reserve status.

ROTC graduates generally serve four years on active duty and four years in reserve status; however, some may serve eight years on reserve duty.

Choice of Branch
Cadets in the second year of the Advanced Course (normally the senior year) may specify the branch of service such as Infantry, Armor, Field Artillery, Air Defense Artillery, Aviation, Corps of Engineers, Signal Corps, Military Police, Military Intelligence—in which they prefer to serve. They are notified in December of the branch to which they are assigned. Appointment in a chosen branch depends upon the student's academic and officer education performance, degree area, and the needs of the Army at that time.

Graduate Study
Active duty deferments, or educational delays, may be granted to individuals who want to attend graduate school at their own expense. Requests will be considered on the basis of the needs of the service. Admission to graduate school is the student's responsibility.

Benefits
Each cadet in the Advanced Course (Mil S III and Mil S IV) receives $350–$400 a month for up to 10 months a year. While attending the advanced summer camp (between the junior and senior years), each cadet receives approximately $700. A cadet in the Two-Year Program receives the same payments as cadets in the Advanced Course and, in addition, receives approximately $700 for summer Basic Camp attendance before entering the Advanced Course.

Military Science Courses
All cadets take one course and a leadership laboratory each semester in military science. The number of hours a week spent in the classroom varies from semester to semester, as does the credit received for each course.

Freshman Year (Mil S I)

**MIL S 101 United States Organization for Defense**
Fall. 1 credit. Required. Instructor TBA
Students examine the U.S. defense structure in terms of organization, mission, personnel, and relationships among and between military forces and branches of the government. The U.S. Army force structure is examined at all levels. The complexities and magnitude of operating the defense organization are studied to provide a framework for subsequent instruction. Students develop skills in conducting oral and written presentations.

**MIL S 102 Leadership Theory**
Spring. 1 credit. Required. Instructor TBA
This course allows students to develop a basic understanding and appreciation of theories of social and organizational psychology and behavior as they apply to the military setting. Attention is given to leader types, the source and content of power and the impact of varying styles of leadership, resource management, motivation, and organizational effectiveness. The student is instructed in the concepts of integrity, ethics, and professionalism. Classes on historical events and strategy are also presented.

**Sophomore Year (MIL S II)**

**MIL S 222 Small Organizational Operations/Land Navigation**
Spring. 1 credit. Required. Prerequisite: MIL S 102 or instructor approval. J. Lopez. Students learn the basic principles of group dynamics at the smallest military unit, the squad. Troop-leading procedures are introduced through case studies and role-playing exercises. Leadership theories introduced in MIL S 102 are examined in a variety of realistic settings. The practical application of behavioral theories is explored in the context of small military organizations.

The course also provides practical knowledge of the various forms of topographic representation. Students use maps in terrain association and land navigation. Knowledge of topography is complemented by an orientation on significant environmental influences of physical, social, and climatic factors. Portions of the course offer experience in land navigation and orienteering.

**MIL S 321 Armed Conflict in Society**
Fall. 2 credits. Required. R. J. Sova. This course provides practical knowledge in American Military History. It is primarily an overview course designed to provide an understanding of the art and nature of warfare and particularly how warfare has affected the United States. The course consists of three primary areas of instruction with an emphasis on American military history. The first area of instruction addresses the art and theory of modern warfare. It analyzes America's first attempt at war, the American Revolution, and ends with the development of modern warfare under Napoleon Bonaparte. The second phase focuses on America at war in the nineteenth century. It places particular emphasis on the American Civil War and the strategy of annihilation versus the strategy of attrition. The final phase looks at warfare in the twentieth century and finishes with an analysis of the future of warfare for the military of the United States.

**Junior Year (MIL S III)**

**MIL S 331 Theory and Dynamics of the Military Team**
Fall. 2 credits. Required. R. Brown. After an initial introduction to techniques of presenting briefings, students are provided with a broad understanding of the principles and application of teamwork in military organizations. Particular emphasis is given to the leadership responsibilities of the commander as the team coordinator. This course helps students develop an understanding of the roles and contributions of the various branches of the Army in support of the military team.

**MIL S 332 Leadership in Small-Unit Operations**
Spring. 2 credits. Required. Prerequisite: MIL S 331. R. Brown. The course takes on the nature of decision making and the tactical application of the military team. Through the use of conferences and exercises, students develop familiarity with the factors influencing a leader's decisions and the process of planning, coordinating, and directing the operations of military units through operation plans and orders.

**Senior Year (MIL S IV)**

**MIL S 441 Leadership, Management, and Ethics for the Junior Military Officer**
Fall. 2 credits. Required. J. D. O'Connor. The course provides an overview of the functions, responsibilities, and interrelationships among small-unit leaders, the commander, and the staff. Discussions focus on actions of small-unit leaders, communication skills, army operations, the logistical support of the army in the field, and the army training system. The course focuses on the dynamics of leadership in battle through the detailed analysis of a series of case studies. Just war theory, ethics, and professionalism are also addressed in a seminar fashion.

**MIL S 442 Contemporary Military Environment**
Spring. 2 credits. Required. J. D. O'Connor. A continuation of MIL S 441. Conferences and seminars examine the techniques of effective military leadership, with special attention given to professionalism and ethical considerations in the armed forces during both peacetime and combat. Army operations and basic doctrine are also discussed. This is a capstone course designed to prepare the student for commissioning.

**Practical Leadership Training**

**All Army Officer-Education Students**
No credit is given for leadership training, but participation is required for successful completion of the AROTC program. Students receive physical education credit for the laboratory. Each semester, cadets register for the appropriate leadership laboratory, consisting of physical fitness training three times per week, two hours of military training each week, and one or two weekend training exercises per semester.

**MIL S I Leadership Laboratory I**
Fall. 0 credits. S-U. MIL S I 151
Spring. 0 credits. S-U. MIL S I 152
MIL S I cadets meet for two hours each week to learn a variety of military skills including rappelling, first aid, drill and ceremonies, weapons familiarization, and physical fitness training.

**MIL S II Leadership Laboratory II**
Fall. 0 credits. S-U. MIL S II 251
Spring. 0 credits. S-U. MIL S II 252
Cadets meet for two hours each week as members of the cadet organization to participate in practical leadership exercises. Types of practical activities include marksmanship, unit identification, marksmanship, signal communications, physical fitness training, first aid, tactics, and field exercises.

**MIL S III Leadership Laboratory III**
Fall. 0 credits. Required. S-U. MIL S III 351
Spring. 0 credits. Required. S-U. MIL S III 352
MIL S III cadets meet for two hours a week and occasional weekends to prepare for a five-week summer camp that follows their junior year. Emphasis is placed on the development of individual practical leadership skills. Cadets rotate through leadership positions to
practice applying decision-making skills in a myriad of situations.

MIL S IV Leadership Laboratory IV
Fall. 0 credits. Spring. 0 credits. S-U. Required. S-U. Required. S-U.
MIL S 451 MIL S 452
Senior cadets plan and operate the leadership laboratory programs for MIL S I–III cadets. The development of planning and supervisory skills is emphasized. Cadets have an opportunity to practice leadership skills developed during previous ROTC training and summer camp experiences. Includes two to three hours a week devoted to physical fitness.

Professional Military Education (PME) Requirements
In addition to the ROTC classes and leadership laboratories listed above, a number of courses are required as part of the contracted student's academic program. These courses are designed to develop and round out the student's professional education. The PME component of the ROTC program requires at least one college course in each of the following areas: communication skills, military history, and an introduction to computers. These courses must be completed prior to graduation and commissioning. Courses that meet these requirements are approved by the Professor of Military Science.

NAVAL SCIENCE
Captain J. Alley, United States Navy, Professor of Naval Science and Commanding Officer, Naval ROTC Unit
TBA, United States Marine Corps
Lieutenant S. Jordan, United States Navy
Lieutenant L. Seymour, United States Navy
Lieutenant J. Kashuba, United States Navy

The objective of the Naval Officer Education Program is to prepare students for service as commissioned officers in the United States Navy or United States Marine Corps; this is done by supplementing undergraduate education with instruction in essential concepts of naval science and by fostering qualities of leadership, integrity, and dedication to country. The program is compatible with most undergraduate major fields of study, including five-year baccalaureate degree programs.

The program covers four years and combines academic courses, uniforms, and a subsistence program. Starting in the junior year, each of these programs provides textbooks for naval science courses, uniforms, and a subsistence allowance of $300–$350 a month stipend for a maximum of 40 months.

Successful completion of the Scholarship Program leads to a commission in the Navy or Marine Corps Reserve. At Cornell University, over 90 percent of NROTC students have a scholarship. Students entering NROTC without a prior scholarship award are entitled to compete for two- or three-year scholarships controlled by the Chief of Naval Education and Training.

Benefits
The program offers scholarships that provide full tuition and are not need-based. While on scholarship, students also receive money for instructional fees, textbooks, nonconsumable supplies, and $290–$350 a-month stipend for a maximum of 40 months.

Choice of Assignment
Graduates have the opportunity to request the duty they prefer upon graduation. These requests are given careful consideration, and every effort is made to assign newly commissioned officers to their duty of choice.

Marine Corps Options
The United States Marine Corps is an integral part of the Naval Service and is commanded by the Commandant of the Marine Corps. One-sixth of the NROTC scholarship students may be Marine selectees who will be designated Marine-option midshipmen. Upon successful completion of the program they will be appointed second lieutenants in the United States Marine Corps Reserve.

Marine-option midshipmen follow the same program as other NROTC midshipmen for the first two years. Beginning with the junior year, Marine-option midshipmen are taught Marine oriented courses by a Marine Officer Instructor. For First Class summer training (after the junior year), Marine-option students travel to Quantico, Virginia, where they undergo six weeks of intensive training known as the USMC Officer Candidate School. Upon commissioning the following year as second lieutenants, they are assigned to the Basic School at Quantico, Virginia. After the Basic School, the Marine officer is assigned duty in a variety of occupational fields.

Choice of Assignment
Graduates have the opportunity to request the duty they prefer upon graduation. These requests are given careful consideration, and every effort is made to assign newly commissioned officers to their duty of choice.

Marine Corps Options
The United States Marine Corps is an integral part of the Naval Service and is commanded by the Commandant of the Marine Corps.

One-sixth of the NROTC scholarship students may be Marine selectees who will be designated Marine-option midshipmen. Upon successful completion of the program they will be appointed second lieutenants in the United States Marine Corps Reserve.

Marine-option midshipmen follow the same program as other NROTC midshipmen for the first two years. Beginning with the junior year, Marine-option midshipmen are taught Marine oriented courses by a Marine Officer Instructor. For First Class summer training (after the junior year), Marine-option students travel to Quantico, Virginia, where they undergo six weeks of intensive training known as the USMC Officer Candidate School. Upon commissioning the following year as second lieutenants, they are assigned to the Basic School at Quantico, Virginia. After the Basic School, the Marine officer is assigned duty in a variety of occupational fields.

Among the duties available are infantry, aviation, artillery, tracked vehicles, engineering, communications, electronics, supply, administration, and computer science. The officer may serve on board naval vessels or on shore installations of the Marine Corps or Navy, either in this country or overseas.

The Marine Corps has a postgraduate training system similar in objectives and organization to that of the Navy. Marine officers selected for aviation receive flight training at the Naval Air Station, Pensacola, Florida, along with their Navy counterparts.

Curriculum
A student has three categories of requirements to fulfill as a midshipman. The first of these requirements is a weekly naval professional...
All students in the program participate in one 90-minute professional development session each week. The session is held from 2:30 until 4:00 on Wednesday afternoons, and consists of both didactic and professional information briefings. Students gain experience in actual leadership situations and learn the fundamentals of seamanship, military formations, movements, commands, discipline, courtesies, and honors. During information briefings, special emphasis is given to applied leadership as it relates to the administrative and managerial aspects of a Navy or Marine Corps officer's duties.

**Naval Science Courses**

All Navy and Marine midshipmen take one naval science course each semester during their freshman and sophomore years. Navy-option students continue to take a naval science course each semester during their junior and senior years. Marine-option students have slightly different curriculum requirements for their junior and senior years.

### Freshman Year (Navy and Marines)

**NAV S 101 Fundamentals of Naval Science**  
Fall. No credit. S. Jordan, J. Kashuba  
This course involves a study of fundamental aspects of naval science, this includes contributions to sea power, different warfare communities involved in the physical development of naval forces, and study of resource management and naval science prospects for the future. Naval uniforms, customs, and traditions are also covered.

**NAV S 102 Sea Power and Maritime Affairs**  
Spring. 3 credits. S. Jordan  
Discussions examine the history of the Navy as a force in the conduct of the U.S. foreign policy. Relationships between Congress and the military for determining the national defense policy are also explored. An integrated examination of current events and issues lends historical perspective throughout the course.

**NAV S 157 Principles of Sailing**  
Fall and spring. Physical education credit. TBA  
This is a course of instruction in basic sailing skills and safety principles. Students sail small boats on Cayuga Lake. Focus is on U.S. Navy Class B inshore skipper certifications.

### Sophomore Year (Navy and Marines)

**NAV S 201 Organizational Behavior and Small Group Processes**  
Fall. 3 credits. J. Alley  
The theme of the course is the "evolving role of the manager, organizational decision maker, and leader." The course begins by briefly covering the theoretical principles of management and progresses through practical skills used by managers and leaders. Lectures, reading assignments, films, and discussions provide students with an excellent opportunity to consider personal and leadership issues. The goal of this course is for students to begin to develop a sound personal leadership philosophy that will enable them to more effectively accomplish the assigned responsibilities of leading men and women in today's demanding and high tech naval environment.

**NAV S 202 Naval Ship Systems I (also M&AE 101)**  
Spring. 3 credits. J. Kashuba  
An introduction to primary ship-systems and their interrelationships. Basic principles of thermodynamics, propulsion, mechanical operation, internal communications, electronics, ship structure, and other marine systems are covered.

### Junior Year (Navy)

**NAV S 301 Principles of Navigation (also ABEN 305)**  
Fall. 4 credits. L. Seymour  
An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. This course covers coordinate projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, and study of tides and currents. Electronic navigation systems are discussed.

**NAV S 302 Naval Operations**  
Spring. 3 credits. L. Seymour  
The course covers the application of the nautical rules and maneuvering board in order to avoid collisions at sea. Other aspects of naval surface ship operations that are introduced include visual and electronic communications methods, tactical disposition of forces, ship handling theory, and deck seamanship topics.

### Senior Year (Navy)

**NAV S 401 Naval Ships Systems II (Weapons)**  
Fall. 3 credits. S. Jordan  
The principles and theories used in the development of naval weapons systems are examined. Initially, extensive study is made of detection systems, especially radar and sonar, followed by a study of ancillary systems for computing, stabilizing, tracking, and weapons control and delivery.

**NAV S 402 Leadership and Ethics**  
Spring. 3 credits. J. Alley  
A variety of topics important to the naval officer for both professional and managerial development are reviewed. The material is designed to provide the midshipman with an understanding and appreciation of leadership and ethics in preparation for assignments in the naval service. Through the use of lectures, case studies, and role playing, the student learns various aspects of naval leadership and ethical decision making. Marine-option students may also take this course.

**NAV S 410 History of Amphibious Warfare**  
Spring. 3 credits. TBA  
The history of the development, theory, techniques, and conduct of amphibious operations from 450 B.C. to the present. Special emphasis is placed on amphibious operations conducted in the central Pacific during World War II and on the future of amphibious operations.

**Other Required Courses**

**Navy-Option Scholarship Program**

To be eligible for a commission in the United States Navy, midshipmen must successfully complete all the requirements for a baccalaureate degree in any field of study offered by Cornell University, and complete courses in the following subjects (specified courses to be approved by the Professor of Naval Science):

- American military affairs or national security policy (one semester)
- English (one year)
- calculus (one year)
- calculus-based physics (one year)
- computer science (one semester)

The calculus requirement must be satisfied by the end of the sophomore year and the physics requirement by the end of the junior year.

Although free choice of academic majors is permitted, students are encouraged to pursue majors in engineering and the physical sciences so that they may be best prepared to meet the technological requirements of the modern Navy.

**Navy-Option College Program**

Navy-option College Program students must complete one year of college-level study in mathematics, physical science, and English as a prerequisite for commissioning. Alternatively, a mathematics course must be completed by the end of the junior year; the physical science course by the end of the senior year. In addition, one term of computer science is required. College Program students who desire entry into the Navy-option Scholarship Program should fulfill all of the requirements applicable to Navy-option scholarship students if they wish to be eligible for a scholarship controlled by the Chief of Naval Education and Training.

**Marine Option**

Any midshipman, in either the Scholarship Program or the College Program, who completes all of Cornell University's degree requirements in any academic major, is eligible for a commission in the U.S. Marine Corps or U.S. Marine Corps Reserve. Marine-option students take the same naval science courses and naval professional laboratories as Navy-option students for the freshman and sophomore years. During the junior and senior years, Marine-option students have slightly different naval science course requirements than their Navy-option counterparts. Two semesters of courses (a minimum of 3 hours each) in the area of American Military Affairs or National Security Policy are
General Military Course

Students in General Military Courses (GMC) take a 1 credit Aerospace Studies course each semester. During the freshman year, the student examines the organization and mission of the United States Air Force and the environment of the Air Force. In the sophomore year, the student studies the history and development of American air power. In both years, officership and professionalism within the United States Air Force are emphasized.

Students also spend two hours a week in a leader laboratory. Leadership laboratories provide cadets with an opportunity to put into practice the skills they have learned in their aerospace studies classes. These laboratories focus on the development of officer qualities through such activities as drill and ceremonies, group leadership problems, confidence-building exercises, and guest lecturers. In addition, all students participate in summer field training for four weeks between their sophomore and junior years.

Professional Officer Course

The Professional Officer Courses (POC) provide a two-year advanced program of instruction. Students who are accepted for the POC must have successfully completed or validated the basic course and must meet academic and physical standards. Each cadet accepted into the POC must sign an agreement to complete the program and accept, if offered, a commission in the United States Air Force upon graduation.

Classroom study in the POC is a 3 credit course each semester. In the junior year, cadets study Air Force leadership and management at the junior officer level. During the senior year, cadets study the elements of national security and the military's role in American society. Leadership laboratory requires two hours a week in the junior and senior years. In leadership laboratory, cadets are exposed to advanced leadership experiences and apply principles of leadership learned in the classroom.

Two-Year Program

The Two-Year Program consists of the last two years (Professional Officer Courses) of the regular Four-Year Program plus a five-week summer training course.

The Two-Year Program is open to all qualified students with two years of academic study remaining at Cornell (graduate or undergraduate) or at schools supported under a crosstown agreement.

One-Year Program

There are limited opportunities for students to enter a one-year program. Call 607-255-4004 for more details and current availability.

Scholarships

The Air Force offers three- and four-year scholarships to high school seniors and one-, two- and three-year scholarships to college students. Four-year scholarships are offered on a competitive basis to high school seniors. Scholarship information can be obtained from the student's major, scores achieved on the Air Force Officer Qualifying Test, the student's academic grade point average, and the recommendation of the Department of Aerospace Studies. Scholarships include amounts ranging from $3,000 per year to full tuition and fees. There is a monthly $250-400 non-taxable allowance during the school year. A $550 per year textbook allowance is included in every scholarship. Scholarships do not include the cost of room and board.

Benefits

All cadets in the advanced program (POC)—whether they are on scholarship or not—receive a $250-400-a-month, non-taxable subsistence allowance during the academic year. During the four- or five-week summer field training (see below), each cadet receives a pay allowance plus an allowance for travel to and from the field site. Textbooks and supplies required for Department of Aerospace Studies courses are provided.

All cadets are eligible to participate in AFROTC-sponsored field trips made to Air Force bases throughout the country as well as voluntary summer programs for professional development. Scholarship and advanced cadets (POC) are entitled to space-available travel on Air Force aircraft flying within the continental United States.

Field Training

There are two types of field training: a four-week course for cadets in the Four-Year Program and a five-week course for Two-Year Program applicants.

Field training is designed to stimulate the development of military leadership skills through meaningful experiences. The curriculum consists of aircraft, aircrew, and survival orientation; junior officer training; physical training; small arms training; social actions program; and supplemental training. The five-week training program includes sixty hours of Air Force ROTC academic course work that substitutes for the freshman and sophomore Aerospace Studies courses.

Cadets may also volunteer for one of many Advanced Training Programs. These programs include but are not limited to the Professional Development Program, Air Force Academy Free-Fall Parachute Training, the British Royal Air Force (RAF) Exchange Program, Research and Development Experiences, the Academy Scaring Program, and Army Airborne Training.
Commissioning Obligations
All students who successfully complete the AFROTC advanced program (POC) are awarded a baccalaureate degree, tendered a commission, and enter the Air Force as second lieutenants.

Second lieutenants commissioned in nonflying categories are required to serve on active duty for four years. Pilots are required to serve on active duty for ten years after completing flying training. Navigators and Air Battle Managers serve six years after completing training.

Air Force Careers
The Air Force assigns new officers to a career field based on mission requirements, educational background, and officers' preferences. Students in the engineering/scientific category may be assigned to practice in their specialty in research and development, communications, electronics, aeronautics, astronautics, the biological sciences, computer design and maintenance, meteorology, space, or other engineering and scientific fields. Graduates in the nontechnical category can anticipate assignments in manpower management, information management, logistics, law enforcement and investigation, intelligence, personnel, transportation, accounting and finance, and other career fields.

Any undergraduate major is suitable for those who are qualified and interested in entering the space and missile career fields or in becoming pilots, navigators, or air battle managers. After completion of flying training, personnel are assigned to a specific type of aircraft.

Curriculum
Students in the Four-Year Program are required to take all courses listed below. Students in the Two-Year Program are required to take all of the courses listed for the junior and senior years. There are no prerequisites for any Aerospace Studies courses.

Freshman Year
AIR S 161 The Foundations of the United States Air Force I
Fall. 1 credit.
This is a survey course designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include: mission and organization of the Air Force, officer ethics, and professionalism, military customs and courtesies, Air Force officer opportunities, group leadership problems, and an introduction to communication skills. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followship experiences.

AIR S 162 The Foundations of the United States Air Force II
Spring. 1 credit.
Continuation of AIR S 161.

Sophomore Year
AIR S 211 The Evolution of USAF Air and Space Power I
Fall. 1 credit.
This course is designed to examine general aspects of air and space power through a historical perspective. The course covers a time period from the first balloons and dirigibles to the role of air power in Afghanistan. Historical examples are provided to illustrate the development of Air Force capabilities and functions to demonstrate the evolution of what has become today's USAF air and space power. The course examines several fundamental truths associated with war in the third dimension, and provides students with an understanding of the general element and employment of air and space power from an institutional, doctrinal, and historical perspective. In addition, students continue to discuss the importance of the Air Force core values.

AIR S 212 The Evolution of USAF Air and Space Power II
Spring. 1 credit.
Continuation of AIR S 211.

Junior Year
AIR S 331 Air Force Leadership Studies I
Fall. 3 credits.
This course is a study of the leadership, quality management fundamentals, professional knowledge, Air Force personnel and evaluation systems, ethics, and communication skills required of an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations; they demonstrate practical applications of the concepts being studied. A mandatory leadership laboratory complements this course, providing advanced leadership experiences in officer-type activities, and giving students the opportunity to apply leadership and management principles of this course.

AIR S 332 Air Force Leadership Studies II
Spring. 3 credits.
Continuation of AIR S 331.

Senior Year
AIR S 401 National Security Affairs/Preparation for Active Duty I
Fall. 3 credits.
This course is concerned with the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Other topics include the military as a profession, officer ethics, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Continued emphasis is given to refining communication skills. A mandatory leadership laboratory complements this course by providing advanced leadership experiences, giving students the opportunity to apply the leadership and management principles described in this course.

AIR S 402 National Security Affairs/Preparation for Active Duty II
Spring. 3 credits.
Continuation of AIR S 401.

Leadership Laboratory Courses
All Air Force cadets spend two hours a week throughout the academic year in a leadership laboratory, for which no academic credit is given. Occasionally laboratories are held at times other than the normally scheduled period. All cadets are expected to participate in a formal dinner and to meet minimum physical fitness and weight standards each semester. Leadership lab is open to students qualified to compete for an Air Force commission.

AIR S 141-142 Initial Military Experiences
Introduction to the responsibilities, life, and work of an Air Force officer. Basic knowledge of drill and ceremonies, military courtesies, and the wearing of the uniform. This course includes a field trip to a local military installation.

AIR S 241-242 Intermediate Military Experiences
This course is designed to help students develop skill in giving commands for drill and ceremonies. They are also introduced to the Air Force base environment in which the officer functions. Career areas available based on academic majors are described. Students participate in military drills and ceremonies, and go on a field trip to a local military installation.

AIR S 341-342 Junior Officer Leadership Experiences
Cadets assume leadership responsibilities similar to those of a junior officer. Emphasis is on the importance of applying effective human relations skills in dealing with superiors, peers, and subordinates. Cadets also gain insight into the general structure and progression patterns of selected Air Force officer career fields.

AIR S 441 Advanced Leadership Experiences
Cadets assume command leadership responsibilities to operate a military organization. Cadets apply effective leadership and managerial techniques with individuals and groups, and participate in self-analysis of leadership and managerial abilities.

AIR S 442 Precommissioning Laboratory
Factors that facilitate transition from civilian to military life are reviewed. The need for military security, base services and activities, personal finances, travel regulations, and social obligations are introduced.
DEPARTMENT OF PHYSICAL EDUCATION AND ATHLETICS

ADMINISTRATION
Alan E. Gantert, director

COURSES
The courses and fees described in this catalog are subject to change or cancellation at any time by official action of Cornell University. For current fee information on physical education courses call 255-4286; for outdoor education courses, call 255-6183, or visit www.coe.cornell.edu.

Enrollment in any course is limited by the space available. Other restrictions are included in the course description. Most courses are coeducational. The specific time and place of class meetings, as well as information about fees, are available at the physical education course registration or may be found on “Bear Access,” a package of software for accessing a variety of network services at Cornell. Course fees are billed through the Office of the Bursar.

Additional course offerings may be listed at registration, as the curriculum is frequently reviewed and changed. Drop deadlines for outdoor education courses are earlier than university deadlines, and often earlier than physical education deadlines. COE courses may be added any time by calling 255-6183, or registering online at www.coe.cornell.edu.

Aquatic Courses
Lifeguard Training
Fall and spring. Fee charged. Prerequisite: swimming test consisting of 500 yards, demonstrating 3 strokes, treading water without the use of hands, and retrieving a brick from 7 feet of water. 3 classes, 1 week.
American Red Cross certification course. Practice and execution of lifeguarding first aid and CPR skills and techniques. Certification is awarded in lifeguarding, first aid, O2, AED and CPR upon satisfactory completion of the course.

Lifeguard Training Instructor
Spring. Fee charged. Prerequisites: current Red Cross ICT or instructor card, written and skill tests in lifeguarding, first aid, and CPR techniques. Students must not miss first class, 2 classes a week.
American Red Cross lifeguarding instructor and CPR-FPR certifications are awarded upon successful completion.

Scuba, Open-Water
Fall, spring, and summer (6 weeks). Fee charged.
Program includes classroom work, skill training in a pool, and open-water training in Cayuga Lake. P.A.D.I. open water certification awarded upon successful completion.

Scuba, Advanced Open-Water
Fall and spring. Fee charged. Advanced-level open-water training in Cayuga Lake. For those who have completed the open-water course.

Rescue Diver
Fall and spring. Fee charged. Advanced course for scuba divers. For those who have completed Advanced Open-Water Scuba certification and are interested in learning rescue and safety techniques.

Dive Master
Fall and spring. Fee charged. Advanced-level scuba course open only to those who have completed the Rescue Diver course. NOTE: This is a long, time-consuming course, which requires the student to be in good physical and swimming shape.

Specialty Scuba Diving
Fall and spring, Fee charged. Courses offered in the following specialty diving areas: navigation, search and recovery, night diving, deep diving, underwater photography, wreck, multi-level, boat, tropical fish identification and buoyancy control, and underwater naturalist.

Scuba Diving Trips
Spring. Fee charged. This course is offered during the spring intersession period. Scuba trips to various destinations such as the Bahamas, Locations change from year to year. See the information sheet at the registration table.

Swimming, Introduction to (ARC)
Fall, spring, and summer, (6 weeks). Instruction and practice in skills leading to passing the basic swimming proficiency test.

Swimming, Advanced Beginning (ARC)
Spring. Ideal for all who have taken one term of Beginning Swimming, regardless of whether the test was successfully completed. Areas of special emphasis are the crawl stroke and rotary breathing, back crawl, elementary backstroke, diving, treading water, and underwater swimming. The primary objective is to strengthen the student’s confidence and competence.

Swimming, Intermediate (ARC)
Fall and spring. Practice of basic skills and five basic strokes: front crawl, back crawl, elementary backstroke, breaststroke, sidestroke.

Swimming, Advanced (ARC)
Fall and spring. Practice of nine strokes: front crawl, back crawl, elementary backstroke, breaststroke, inverted breaststroke, sidestroke, overarm sidestroke, treading, and butterfly.

Swimming Conditioning
Fall and spring. Prerequisite: reasonable swimming ability. Introduction to, and practice of, different training methods. Final objective: to swim 2,500 yards during class period. Primarily a conditioning and not an instructional course.

Water Safety Instructor
Spring. Fee charged. Prerequisite: passing of written and skill water tests which are given on the first day.
American Red Cross water safety instructor certification is awarded upon satisfactory completion of the course. This is not a course for a casual participant. Approximately 45 hours of work is required.

Bowling Courses
Bowling
Fall and spring. Fee charged.
For the beginning and intermediate bowler. Shoe rental is included in the fee.

Dance Courses
Develop flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with rhythmic accuracy, clarity of body design, and fullness of feeling. Auditions are required for admission to all advanced courses, since they require the mental and physical ability to perform more-complex phrases in various styles.

Ballet I
Fall and spring.

Ballet II
Fall and spring.

Ballet III
Fall and spring.

Ballet IV
Fall and spring.

Ballroom Dancing
Fall, spring and summer. Fee charged. Students and their partners must sign up at course registration. Includes instruction in the waltz, swing, cha cha, calypso, tango, and others.

Belly Dancing I
Fall and spring. Fee charged.
Belly dancing is an exciting Middle Eastern folk art that can help in the development of flexibility, body awareness, and overall body tone. The class will begin with warm-ups and continue with basic movements and rhythms, then put them together in a dance to music of the Middle East.

Belly Dancing II
Spring. Fee charged. Advanced Belly Dance movements and combinations which include putting basic and advanced movements to the Beledi, Masmouodi, and Karislama dance rhythms of the Middle East. A drum solo, taqsim (fluid, graceful movements of the arms and hands), floor work (level changes with the dance), and how to play finger cymbals are also a part of this class.

Introduction to Swing Dance
Fall and spring. Fee charged.
No partners are needed. Beginners can expect to develop significant capacity for enjoyment of two forms of swing dance: jitterbug and street boogie. Partners will be rotated throughout the course. Effort will be made at registration to equalize male and female ratios.

Swing Dance I
Fall and spring. Fee charged. A class for those who have taken the introductory course.

Swing Dance II
Fall and spring. Fee charged. A class for those who have taken the introductory course.

Latin Dance
Fall and spring. Fee charged. Partner sign-in required. This is an introductory course that will teach salsa, mambo, Latin and merengue. Emphasis on listening, feeling, and expressing Latin rhythms with precise detail and technique.

LATIN DANCE

LATIN DANCE
Modern Dance I (also THETR 124)
Fall and spring.

Modern Dance II (also THETR 232)
Fall, spring, and summer (6 weeks).

Modern Dance III (also THETR 306)
Fall and spring.

Modern Dance IV (also THETR 308)
Spring.

Equitation Courses
Basic, Intermediate, Advanced
Fall, spring, and summer (6 weeks). Fee charged.
All riding classes are held at the Cornell Equestrian Center located on Pine Tree Road near East Hill Plaza. Detailed information will be offered by the equitation staff at the registration sign-up table. Basic—never ridden; Intermediate I—completed basic with knowledge of walk/trot/canter; Intermediate II—walk/trot/canter with control over 2 course; Advanced—strong jumping/dressage skills with experience hunting/showing/evening. Students must fill out a release form to participate in any riding class.

First Aid/CPR Courses
Emergency Response
Fall and spring. Fee charged.
This advanced-level first aid course is the most comprehensive available without NYS certification. Sixty hours of training includes CPR for the Professional Rescuer and oxygen administration, as well as many of the first aid skills taught in a basic EMT class. This course is taught in cooperation with the educational component of the United States and is accepted by many states as a Certified First Responder equivalent. Certification is valid for three years. This certification would be appropriate for camp medical directors and those who work closely with pre-hospital medical staff.

NYS Emergency Medical Technician—Basic
Two-semester course. Fee charged.
This intensive 150-hour course is taught throughout both the fall and spring semesters. Course includes training in CPR for the Professional Rescuer, oxygen administration, airway management, fracture management, bleeding control, expanded patient assessment, spinal immobilization, medical anti-shock trousers, and defibrillation. Students will qualify for the NYS EMT Certification Exam upon successful completion of this course. Rigid attendance and participation requirements are strictly enforced.

NYS Emergency Medical Technician—Critical Care
Two-semester course. Fee charged.
A course for those who are currently certified NYS EMT’s, AEMT-CRITICAL CARE is an intensive 160 hour course which is taught throughout both fall and spring semesters. Course includes training in CPR for the Professional Rescuer, oxygen administration, airway management, fracture management, bleeding control, expanded patient assessment, spinal immobilization, medical anti-shock trousers, manual defibrillation, EKG, interpretation, pharmacology and IV administration. Clinical rotations, in the field and hospital, last up to 2 weeks. Students will qualify for the New York State AEMT-CRITICAL CARE certification exam upon successful completion of the course. Attendance and participation requirements are strictly enforced.

Fishing Courses
Fly Fishing and Basic Flytting Techniques, Level I
Fall and spring. Fee charged.
Learn the art of fly casting and give more-advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals. Equipment is furnished.

Introduction to Freshwater Angling
Fall. Fee charged.
This course acquaints the student with freshwater spinning, casting and fly fishing equipment, tackle, and techniques through on-the-water experiences. It also seeks to promote an awareness of the angling opportunities that exist close to Cornell and in the Finger Lakes region of New York. The class consists of an orientation and outings to various locations around the area such as Cayuga Lake and the Susquehanna River.

Fitness Courses
Aerobic Dance
Fall, spring, and summer (6 weeks). Fee charged.
A dance program designed to keep the cardiovascular system in top shape by making the body demand increased amounts of oxygen.

Cardio Crazy
Fall and spring. Fee charged.
The course is designed to train the student with the various types of indoor aerobic training equipment, rowing machines, tread mills, stair machines, exercises, and Nordic Tracks, and to teach them to design a personal fitness program incorporating the equipment.

8 O’Clock Rock
Fall and spring. Fee charged.
This class combines the best of the principles of weight training and the cardio training in the 8 O’Clock Rock Class.

Aerobic Instructor Training
Fall and spring. Fee charged.
The course is designed to train the student to teach aerobics and prepare for the A.F.A.A. Primary Aerobic Instructors Certification Test.

Fitness and Conditioning
Fall and spring.
Physical fitness program that embodies features of stretching exercises, weight lifting, and jogging. Students work on their individual training needs.

Jogging
Fall and spring.
This course will cover running and stretching techniques. A conditioning program with the objective to develop the capacity to run three miles after 12 weeks of training.

Jogging Tours—Distance Running
Fall and spring.
A course designed for the intermediate runner who can run an average of 3 miles in 30 minutes. Most tours will be 3-4 miles long and will go through campus and nearby countryside.

Triathlon
Fall and spring.
Designed to acquaint students with the components of, and conditioning for, triathlon (running, swimming, and bicycling).

Wellness and Fitness
Fall and spring. Fee charged.
“Here’s to a Healthier You”—a wellness experience for the busy student. This course will assess the student’s physical fitness status, blood cholesterol levels, and overall lifestyle health habits. Each student will receive an individual exercise prescription and have access to the Wellness Program fitness room in Helen Newman Hall. Lectures on nutrition and stress management are also presented.

Golf Courses
Golf, Introduction to
Fall and spring. Fee charged.
A PGA program of instruction is geared to all levels of experience and ability. The objective is to give beginners enough skill to play, and to give more-advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals. Equipment is furnished.

Golf, Recreational
Fall and spring. Fee charged.
Introduction to golf courses deals with a majority of the Olympic events. The course will focus upon beginner-level skills and is open to both male and female participants.

Ice Skating Courses
Skating, Introduction to
Fall and spring. Fee charged.
Beginning to intermediate skaters. Fee charged. Students provide their own skates or rent them at Lynah Rink. Course will cover forward and backward skating, turns, and stops.

Figure Skating, Beginning, Intermediate, and Advanced Levels
Fall and spring. Fee charged.
Instruction and practice in basic figure skating techniques: forward, backward, crossovers, turns, and spirals. Students provide their own skates or rent them at Lynah Rink.

Martial Arts—Self-Defense Courses
Boxing, Introduction to
Fall and spring. Fee charged.
The course covers the basic skills of footwork, defensive, and offensive techniques. Skipping rope, shadow boxing, and heavy bag work will be taught as methods for individual aerobic conditioning.

Boxing, Thai
Fall and spring. Fee charged.
A martial art system developed from the unique culture of Thailand is a blend of art, science, and sport.

Chi Gong
Fall and spring.
Chi Gong, or "the art of breathing", is an ancient Taoist exercise system from China. Like Tai Chi, Chi Gong is an internal martial art that links movement, breathing and visualization to enhance physical strength and mental clarity. In ancient times, this gentle system was used by warriors preparing for battle. They believed it would make their bodies impervious to weapons of the day. The movements used in Chi Gong are generally less complex than those of Tai Chi and can be
learned more quickly. Meditation is an important element of the practice.

**Fencing, Introduction to**
Fall and spring. Fee charged. Includes warm-up exercises and offensive and defensive moves. Equipment furnished.

**Fencing, Intermediate**
Spring. Fee charged. Prerequisite: Introduction to Fencing or the equivalent. Interclass competition is stressed. Equipment is furnished.

**Fencing, Classical**
Fall and spring. Fee charged. Classical fencing is a martial art that uses the practice of the sword to cultivate self-mastery.

**Renaissance Fencing**
Fall and spring. Prerequisite: Fencing I or with the permission of the instructor. Fee charged. Focuses on the fundamental techniques of 16th-17th century fencing with an emphasis on safety, balance, line, focus, and distance.

**Judo, Introduction to**
Fall and spring. Fee charged. Conditions and increases suppleness. Continue to develop skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

**Judo, Intermediate**
Fall and spring. Fee charged. Conditions and increases suppleness. Continue to develop skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

**Jun Fan / Jeet Kune Do**
Fall and spring. Fee charged. This is a blend of system of martial arts. Developed by the late Bruce Lee and taught to his personal apprentice at the time, Dan Inosanto, Jun Fan Gung Fu Is the foundation from which Jeet Kune Do eventually evolved. The system emphasizes footwork and agility, economy of motion, counter ability and strong practical self-defense. This realistic, modern training approach cultivates strength physical, mental, and emotional development in the student.

**Karate, Introduction to**
Fall and spring. Fee charged. A beginning course taught by professional black belt instructors. Involves mastery of basic blocks, kicks, and punches.

**Karate, Advanced**
Fall and spring. Fee charged. Open to those who have taken basic Karate or the equivalent.

**Kung Fu**
Fall and spring. Fee charged. Exploration of conditioning and fitness procedures used in the major martial arts, such as karate or judo. Covers circular movement for generating strong blocks, kicks, and punches.

**Self-Defense and Empowerment for Women**
Fall and spring. Fee charged. Basic methods of physical protection for women.

**Tae Kwon Do, Introduction to**
Fall and spring. Fee charged. A Korean martial art distinguished by emphasis on high and powerful kicks. Basic kicking, punching, and blocking emphasized.

**Tae Kwon Do, Intermediate**
Fall and spring. Fee charged. A Korean martial art distinguished by its emphasis on high and powerful kicks. Intermediate-level kicking, punching, and blocking are emphasized.

**Tae Kwon Do, Advanced**
Fall and spring. Fee charged. A Korean martial art distinguished by its emphasis on high and powerful kicks. Advanced-level kicking, punching, and blocking are emphasized.

**'T'ai Chi Chuan, Introduction to, and Intermediate**
Fall and spring. Fee charged. Introduction to 'T'ai Chi, a system of graceful exercises that aim at nurturing relaxation, deep breathing, and improved circulation.

**Outdoor Education Program**
For further information, class schedules, or to register anytime, call 255-6183, or visit us online at www.coe.cornell.edu.

**Climbing Courses**

- **Basic Rock Climbing**
  - Fall and summer. Fee charged. Six indoor climbing sessions at the Lindseth climbing wall.
- **Basic Rock-Climbing, for Women**
  - Fall, spring. Fee charged. Six indoor climbing sessions at the Lindseth climbing wall taught by and for women.
- **Basic Rock Climbing, for 24 and Over**
  - Fall. Fee charged. Non-credit course. Four indoor climbing sessions at the Lindseth climbing wall for people age 24 and older.
- **High Adventure**
  - Fall, spring, and summer. Fee charged. Six sessions combining classes at the Lindseth climbing wall and the Hoffman challenge course.
- **Wellness Rock Climbing**
  - Fall. Fee charged. Non-credit course. Seven one-hour climbing sessions at the Lindseth climbing wall for Wellness members only.
- **Intermediate Rock Climbing**
  - Fall, spring. Fee charged. Six indoor sessions at the Lindseth climbing wall that introduce and practice more advanced climbing techniques.
- **Introduction to Outdoor Climbing Seminar**
  - Fall, spring. Fee charged. Non-credit course. Introduction to outdoor climbing techniques and equipment. Meets for one evening class and one full weekend day.
- **Basic Outdoor Rock Climbing**
  - Fall. Fee charged. Includes fall break trip. Classes and a four-day climbing trip to the Shawangunks will introduce basic safety, techniques, equipment, and methods for outdoor rock climbing.
- **Intermediate Outdoor Rock Climbing**
  - Fall, spring. Fee charged. Classes and two weekend trips to the Shawangunks to learn intermediate level climbing skills and top-rope systems.
- **Shawangunks Rock Climbing**
  - Fall, spring. Fee charged. Four-day advanced climbing camp at the Shawangunks. Introduces advanced climbing techniques and systems for outdoor multi-pitch rock climbing. Includes fall break or senior week trip.

**Southwest Advanced Rock Climbing**
- Spring. Fee charged. Includes spring break trip.
- Classes and a one-week advanced rock climbing camp that takes place in the Southwest over spring break.

**Cascades Mountaineering & Leadership**
- Spring. Fee charged. Includes summer break trip.
- Classes and a three-week mountaineering and leadership expedition in the North Cascades of Washington state.

**Adirondack Ice Climbing**
- Spring. Fee charged. Basic top-rope ice climbing instruction including a weekend trip to the Adirondacks.

**High Peaks Expedition**
- Fall. Fee charged. Includes winter break trip.
- Classes and one week winter camping and ice climbing expedition in the Adirondacks.

**Backpacking Courses**

- **Adirondack Winter Camping**
  - Spring. Fee charged. Classes covering basic winter camping techniques, and two weekend trips in the Adirondacks.
- **Arizona Backpacking**
  - Spring. Fee charged. Includes spring break trip.
  - Classes and a one-week backpacking trip that takes place in the Arizona desert over spring break.
- **Adirondack Backpacking**
  - Fall. Fee charged. Includes winter break trip.
  - Classes covering basic camping techniques and equipment lead up to a backpacking trip over fall break.
- **Backpacking in the Finger Lakes**
  - Fall, spring. Fee charged. Classes lead to two full weekends on local trails. Focus is on basic skills and equipment.
- **Arizona Backpacking**
  - Spring. Fee charged. Includes spring break trip.
  - Classes cover basic skills and prepare participants for a spring break trip to the Southwest deserts and canyons.

**Mountain Biking**

- **Southwest Biking Courses**
  - Fall. Fee charged. Includes fall break trip.
  - Six afternoons or four full days exploring local trails.
- **Adirondack Canoe Camping**
  - Spring. Fee charged. Primitive living skills taught in two classes and a weekend backpack trip.

**Canoeing Courses**

- **Adirondack Canoe Camping**
  - Fall. Fee charged. Includes fall break trip.
  - Classes on basic canoeing technique. Break trip explores the beauty of the Adirondacks.
- **River Canoeing**
  - Spring. Fee charged. A sampler of beginning skills and equipment for canoeing.
Whitewater Canoeing
Fall. Fee charged.
Basic whitewater skills and equipment ending in a full weekend of river paddling.

Caving Courses
Caving
Fall, spring. Fee charged.
Learn about the basic safety, techniques, and equipment for caving, finishing with a weekend caving trip.

Caving Seminar
Fall, spring. Fee charged.
Learn about the basic safety, techniques, and equipment for caving, finishing with a day-long caving trip.

Hiking Courses
Day Hiking
Fall, spring. Free with 100% attendance, otherwise fee charged.
Six day outings in the Finger Lakes Region.

Gorgeous Gorges Day Hiking
Fall. Fee charged.
Five weekend outings focusing on the gorgeous gorges in the local area.

Trail Running
Fall. Fee with 100% attendance, otherwise fee charged.
Seven sessions covering warm-ups, basic trail running technique, and scenic local trails.

Snowshoeing
Spring. Free with 100% attendance, otherwise fee charged.
Six day outings in the Finger Lakes Region.

Kayaking Courses
Whitewater Kayaking
Fall. Fee charged.
Basic kayaking technique and equipment culminating in a full weekend of whitewater paddling.

Pool Paddling
Fall. Fee charged.
Seven sessions covering warm-ups, basic trail running technique, and scenic local trails.

Sea Kayaking Touring
Fall. Fee charged.
Learn basic sea kayaking skills and enjoy two weekend outings.

1,000 Islands Sea Kayaking
Fall. Fee charged. Includes fall break trip. Classes covering basic paddling techniques and equipment lead up to a kayaking trip over fall break.

Sea Kayaking the Coast of Maine
Summer. Fee charged.
Classes covering basic paddling techniques and equipment lead up to a multi-day kayaking trip.

Kayak Rolling Seminar
Fall, spring. Fee charged. Non-credit course.
Learn kayak rolling technique in two evening sessions. Classes take place at the Helen Newman pool.

Introduction to Sea Kayaking Seminar
Fall, spring. Fee charged. Non-credit course.
Classes covering basic paddling techniques and equipment lead up to a weekend kayaking trip.

Sea Kayaking Bahamas
Spring. Fee charged. Includes spring break trip.
Learn paddling skills, natural history expedition planning, and have fun in the Bahamas!

Introduction to Slalom Racing Seminar
Spring. Fee charged. Non-credit course.
Classes covering basic whitewater techniques and equipment lead up to a weekend river trip.

Outdoor Leadership and Teambuilding Courses
Outdoor Leadership
Fall, spring. Fee charged. Includes fall or spring break trip.
Training course for outdoor education instructors culminating in a spring or fall break trip.

Facilitating the Adventure Experience
Spring. Fee with 100% attendance, otherwise fee charged.
This experiential class challenges participants to explore the concept of facilitation. Each class member has the opportunity to develop their personal leadership style while gaining valuable interpersonal skills. Course time is balanced between indoor group initiatives and outdoor low and high elements at Cornell's Hoffman Challenge Course.

First Aid Courses
Basic Wilderness Emergency Care
Fall, spring, summer. Fee charged.
Full weekend of wilderness first aid. Includes CPR certification.

Wilderness First Responder
Fall, spring. Offered in January, over winter break; offered late May/early June. Fee charged.
Ten days of instruction and practical application of backcountry first aid. Participants earn CPR and Wilderness First Responder certifications. Taught by Wilderness Medical Associates.

Skiing Courses
Cross-Country Skiing
Spring. Fee charged.
Three weekend days learning basic cross-country skiing skills and exploring trails.

Cross-Country Skiing, for 24 and Over
Fall, spring. Fee charged.
Ten days of instruction and practical application of backcountry first aid. Participants earn CPR and Wilderness First Responder certifications. Taught by Wilderness Medical Associates.

Telemark Skiing
Spring. Fee charged.
Four evenings at Song Mountain Ski Area.

Personal Growth Courses
Body-Mind
Fall and spring.
Activities are drawn from ancient Eastern practices as well as modern Western psychology, and are designed to give the student first-hand experience of the interaction between their own bodies and minds.

Introduction to Meditation
Fall and spring. Fee charged.
This course provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation. The methods serve to evoke the deep relaxation from which heightened awareness and creativity arise.

Meditation and Guided Imagery
Fall and spring. Fee charged.
The class meets twice a week for a session of guided meditation with imagery. Topics include quiet mind, progressive relaxation, safe space, health and wellness, and enhancing learning. Students should have previous experience with meditation.

Living Routines
Fall and spring.
Provides the opportunity to explore a variety of ancient and modem methods designed to bring one to the state of meditation.

Relaxation and Stress Management
Fall and spring.
Introduction to basic relaxation techniques for the reduction of everyday stress. Techniques will be taught that can be used in normal everyday living situations.

Swedish Massage
Fall, spring, and summer. Fee charged.
Learn to give a relaxing, stress-reducing Swedish massage. You will master the basic strokes of Swedish massage and learn about their application to the different parts of the body. Students will use oils and lotions as a part of their training.

Introduction to Massage
Fall, spring, and summer. Fee charged.
Provides an experiential introduction to several types of massage. Included are Swedish, shiatsu, polarity, and sports massage. Class members will participate in group exercises and practice on each other during class time. All exercises and techniques can be done while wearing street clothing.

Weekend Massage Workshop
Fall and spring. Fee charged.
This introductory course in massage is taught in an intensive, weekend workshop format. It includes sessions on Friday evening and Saturday and Sunday during the day. Students are introduced to massage skills and techniques and practice on each other in a structured and supervised format. Basics of touch awareness, palpation skills, and techniques from Swedish and oriental (shiatsu) massage are taught. Students learn to massage the back, shoulders, neck, legs, feet, arms and hands to reduce stress. Professional massage tables are used.

Shiatsu Massage
Fall and spring. Fee charged.
Gain an experimental understanding of your body and learn certain shiatsu massage techniques.

Yoga, Introduction to
Fall, spring, and summer (6 weeks). Fee charged.
Fundamentals of hatha-yoga. Covers basic postures, breathing techniques, and deep relaxation. Introduces chanting.

Racquet Sports Courses
Badminton, Introduction to
Fall and spring. Helen Newman Hall. Fundamental shots, scoring, and general play.

Badminton, Intermediate
Fall and spring. Helen Newman Hall. Review of fundamental shots, scoring, and general play.

Racquetball, Introduction to
Fall, spring, and summer. Fee charged.
Instruction for beginners. Equipment is furnished. Protective eyewear required.
Squash, Introduction to  
Fall, spring, and summer. Fee charged. Classes for appropriate level of play. Equipment is furnished. Protective eye wear required.

Tennis, Introduction to  
Fall, spring, and summer. Fee charged. Basic skills taught include forehand, backhand, serve, and volley. Scoring methods taught.

Tennis, Intermediate  
Fall, spring, and summer. Fee charged. Review basic strokes plus topspin and underspin. Doubles strategy emphasized.

Tennis, Advanced  
Fall, spring. Fee charged. Advanced strokes and doubles play emphasized. Recommended for tournament players or those with previous team experience.

Tennis, Indoor-Recreational  
Fall and spring. Fee charged. Play is conducted at the new Reis Tennis Center. Players must have high school or college tournament experience or a rating of 3.5 or higher from the USTA. Matches are played in both doubles and singles. Equipment furnished. NO BLACK-SOLE SHOES ALLOWED ON COURTS!

Sailing Courses  
Small-Boat Sailing, Introduction to  
Fall, spring, and summer (6 weeks). Fee charged. Learn basic skills necessary to sail small sailboats and basic keelboats safely.

Small-Boat Sailing, Competitive  
Fall and spring. Fee charged. Vanguard 420 sailboat used for the course. USY11A Rules Book used as a text for the course. Fee includes one-year membership in university sailing team program.

Water Skiing  
Fall only. Fee charged. Introductory course for beginning water skiers. Classes will be conducted from East Shore Marina.

Skiing and Snow Boarding  
Downhill Skiing and Snowboarding  
Spring. Fee charged. Transportation, instruction, ski-lift fees, and skiing time are offered in a package deal. Greek Peak and Song Mountain personnel are present at registration to explain the program and accept fees. Bus transportation to Greek Peak is provided six afternoons a week for six weeks.

Cross-Country Skiing—See Outdoor Program.

Target Shooting Courses  
Archery, Introduction to  
Fall and spring. Fee charged. Two classes a week. Instruction in the care of equipment; seven basic steps for shooting; scoring; practice shooting at 20, 30, and 40 yards.

Handgun Safety, Introduction to  
Fall, spring, and summer (6 weeks). Fee charged. Instruction in use of pistol in the three modes of 50-foot competitive target shooting—slow fire, timed fire, and rapid fire. Emphasis on safety and responsibility while firing.

Riflery  
Fall and spring. Fee charged. Instruction and practice in the techniques of target riflery from various shooting positions.

Trap and Skeet  
Fall, spring, and summer (6 weeks). Fee charged. Includes lectures and shooting at the Tompkins County Rod and Gun Club range. Guns and shells are furnished.

Team Sports Courses  
Basketball  
Fall and spring. Fundamental drills in passing, shooting, and dribbling. Scrimmages each class session.

Ice Hockey, Introduction to  
Fall and spring. Prerequisite: basic skating ability. Fee charged. Stick handling, passing, and shooting are stressed. Some scrimmaging. Students provide their own skates and sticks; all other equipment is furnished.

Ice Hockey, Intermediate  
Fall and spring. Fee charged. Prerequisite: beginning hockey or previous participation in organized hockey. This course is designed for the intermediate hockey player. Advanced techniques taught include positioning, power play, penalty killing, and offensive and defensive attack. Each session emphasizes game situations and scrimmaging. Skates and hockey sticks must be supplied by the participants.

Soccer  
Spring. Introduction to the game. Includes basic individual skills (passing, trapping, shooting) and team play and strategy.

Volleyball, Introduction to  
Fall and spring. Fundamentals of ball handling, serves, defensive blocks, and position play are stressed. Classes will scrimmage.

Volleyball, Intermediate  
Fall and spring. Passing and blocking strategy; scrimmages in class.

Volleyball, Advanced  
Fall and spring. Offensive and defensive team strategy is emphasized in class scrimmages.

Weight Training Courses  
Principles of Weight Training  
Fall and spring. Fee charged. Introduces the proper use of olympic weights for improving physical condition and muscular strength. Instruction with focus on the relation between high-rep light weight lifting, low-rep heavy lifting, and the development of bulk, strength, and endurance.

Independent Study  
Independent Study  
Fall and spring. Independent study is designed for those who have difficulty fitting any of the regularly scheduled courses into their academic program. Class activities will be based on personal fitness programs. A term paper is required. Permission to enter this program must be granted by the program director.
Summer Sessions provides a wide variety of educational opportunities beyond the degree-granting programs of the university. These programs serve virtually all age groups in a great variety of formats and time frames. For information about the following programs, write B20 Day Hall, Ithaca, New York 14853-2801; call 255-4987; e-mail cusce@cornell.edu; or fax 255-9697; unless indicated otherwise below. You may also visit us on the web at www.sce.cornell.edu.

SCHOOL ADMINISTRATION
Glenn C. Altschuler, dean
Charles W. Jermy, Jr., associate dean, and director, Cornell University Summer Session
Diane E. Sheridan, director, finance and administration

School Program Directors and Managers
Stuart M. Blumlin, director, Cornell in Washington Program
Abby H. Eller, director, Cornell University Summer College
Christine Holmes, special programs manager
Ralph Janis, director, Cornell's Adult University

School Support Services
Graham Dobson, manager, information technologies
Carol L. Hall, assistant director, finance and administration
Ann L. Morse, media manager
Cathy M. Pace, registrar

SPECIAL AND PROFESSIONAL PROGRAMS
Intensive learning experiences are presented year-round both for students and for professionals in many fields. Formats include for-credit courses of one to eight weeks and noncredit weekend and weeklong short courses. Programs can also be designed to respond to the needs and interests of corporations, professional societies, and other groups. These programs take place on the Cornell campus, on site, at other locations worldwide, and via distance learning. For information, call 255-7259; e-mail cusce@cornell.edu; fax 255-9697; or visit www.sce.cornell.edu/sp/.

SUMMER COLLEGE PROGRAMS FOR HIGH SCHOOL STUDENTS
Talented high school sophomores, juniors, and seniors attend regular university courses through Cornell University Summer College and may earn college credit. They also explore academic and career options in noncredit seminars. Students live in residence halls, become familiar with campus life, and attend seminars describing the college admissions process. The program is designed to help ease the transition from high school to college. For information, call 255-6203; e-mail summer_college@cornell.edu; fax 255-6665; or visit www.summercollege.cornell.edu.

CORNELL'S ADULT UNIVERSITY
Cornell's Adult University (CAU) offers weeklong noncredit courses on campus for adults and families during the summer. During the fall, winter, and spring, there are weekend seminars, weeklong domestic programs, and international study tours. Developed and led by distinguished members of the Cornell faculty, all programs are inspired by the belief that learning never ends and that one of the roles of a great university is to provide a bridge between traditional formal education and informal, noncredit study. For information, write Cornell's Adult University, 626B Thurston Avenue, Ithaca, New York 14850-2490; call 255-6260; e-mail caunofo@cornell.edu; fax 254-4482; or visit www.cau.cornell.edu.

DISTANCE LEARNING
The School of Continuing Education and Summer Sessions offers a range of courses through distance learning. Instructional materials for these courses may be presented on the web, and/or through video tapes, assigned readings, e-mail sessions with course instructors, and CD-ROMs. Students interact with the instructor and other students by phone or e-mail. Courses may be taken from home or elsewhere. Assignments and examinations are completed within a scheduled session, just as in on-campus courses, but students have the option of beginning study prior to the start of the session. For information, visit www.sce.cornell.edu/dl/.

Cybertower is an exciting, new online program that gives users access to many of Cornell's best teachers at any time and from virtually anywhere. Cybertower features Study Rooms on a wide range of topics. Each room offers video-streamed lectures, links to specially selected web sites, informative reading lists, and a place to chat with faculty and other Cornellians and CB Tower subscribers. Cybertower also features monthly faculty Forums on a variety of timely topics. For more information, visit the web site at cybertower.cornell.edu.

EXTRAMURAL STUDY
Cornell undergraduate or graduate students whose studies have been interrupted may find it appropriate to resume their studies by taking classes on a part-time basis. Area residents may take courses on a part-time basis by registering as extramural students. Those interested may enroll in almost any course offered in the fall and spring terms if they receive the instructor's written approval. Another offering, the Visitor's Program, allows adults to attend classes in many divisions of the university on a space-available basis at a reduced charge. In this program, no credit is given, and no record is kept of attendance or performance. Visitors are required to obtain written permission from the instructor. For information, write to Extramural Study, B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; e-mail cusce@cornell.edu; fax 255-9697; or visit www.sce.cornell.edu/exmu/.

WINTER SESSION
Cornell undergraduate and graduate students, as well as employees and area residents, can earn up to four credits between the fall and spring semesters by enrolling in the winter session. This quiet time on campus allows students to enjoy generally smaller classes and to concentrate on intensive study. Winter-session students may enroll in scheduled courses or design individualized study with a faculty member. For information, write to Winter Session, B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; e-mail cusce@cornell.edu; fax 255-9697; or visit www.sce.cornell.edu/ws/.

AM ST 202 Popular Culture in the United States, 1945 to the Present DL
AN SC 497 Seminars on Inherited Diseases of Companion Animals DL
ASI 220 Buddhism in America
ASARC 131 Swahili (off campus)
C&RP 495.18 Introduction to Peace Science
COMM 272 Principles of Public Relations and Advertising DL
COMM 494 Special Topics: Communication and Prejudice
EAS 106 Vertebrate Fossil Collection and Preparation Techniques (off campus)
ECON 101 Introductory Microeconomics DL
ECON 102 Introductory Macroeconomics
ECON 307 Introduction to Peace Science
ENGL 280 Creative Writing
GOVT 161 Introduction to Political Philosophy DL
RELS 220 Buddhism in America
Practicing Medicine/Providing Health Care (off campus)

CONTINUING EDUCATION INFORMATION SERVICE

This service provides free information, counseling, and referral to adults who have been out of school for several years and want to resume their education. It also provides information about short courses, workshops, professional updates, and executive programs offered by the university to people inside and outside Cornell. For information, write to Continuing Education, B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; e-mail cusce@cornell.edu; or fax 255-9697.

CORNELL IN WASHINGTON PROGRAM

Cornell in Washington offers undergraduates the opportunity to combine the strengths of Cornell with all of the best parts of living and learning in Washington, D.C. Students take courses for credit, work as externs, and complete substantial research projects, all the while enjoying the rich opportunities available in the nation's capital. For information, write to Cornell in Washington, 311 Caldwell Hall, Ithaca, NY 14853-2602; call 255-4090; e-mail cwash@cornell.edu; or visit www.ciw.cornell.edu.

CORNELL UNIVERSITY SUMMER SESSION

The Cornell University Summer Session provides unique and unusually attractive opportunities for study and recreation at a time when the Cornell campus and the Finger Lakes region of central New York are at their loveliest and the Ithaca weather is at its best.

Participants may choose from a wide spectrum of courses scheduled during three-, six-, and eight-week sessions. Although admission is open to persons of all ages, the majority of summer session participants are matriculated Cornell students. Classes meet daily, are generally small, and feature personalized interaction with Cornell faculty members. These courses also provide students with the opportunity to accelerate their degree program, take courses not available during the fall and spring semesters, and delve into areas of special interest. For information call 255-4987, e-mail cusce@cornell.edu; or visit our web site at www.summer.cornell.edu.

Summer Session Course Roster

The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session office. Courses are posted to the web (www.summer.cornell.edu) in the fall as the roster is developed. A preliminary course roster is available beginning in late November. If a course is also offered through distance learning, the course title will be followed by DL.

Africana Studies
ASARC 205 African Cultures and Civilizations
ASARC 210 Major Works of Black World Writing
SWAHL 131-132 Swahili

Molecular Medicine: G. Weiland, acting chair
Population Medicine and Diagnostic Services: Y. Grohn

**THE COLLEGE**
The College of Veterinary Medicine offers a professional program that requires four years of full-time academic and clinical study of the normal and abnormal structure and function of the animal body and the diagnosis, treatment, and prevention of animal disease. Graduates of the college receive the Doctor of Veterinary Medicine (D.V.M.) degree, which is recognized by licensing boards throughout the world. Graduates generally enter private practice, academia, or become engaged in one of the increasing number of other biomedical activities.

Admission requires a minimum of three years of college work, including specific prerequisite courses and experience. Applications must be filed approximately one year before the proposed matriculation date. The competition for admission is keen, since there are many more qualified applicants than can be admitted.

Graduate programs in veterinary research and postdoctoral training in clinical specialties are open to Doctors of Veterinary Medicine and some highly qualified holders of baccalaureate degrees and lead to the degree of Master of Science or Doctor of Philosophy.

More detailed information is available electronically at the website of the College of Veterinary Medicine, http://zoo.vet.cornell.edu/

Note: 500- and 600-level courses are open only to veterinary students except by written permission from the instructor.

The College of Veterinary Medicine revised its professional curriculum; course requirements apply to the class that matriculated in the fall of 1993 and to subsequent classes. Courses in the revised professional curriculum are designated with the prefix "VTMED" and consist of two categories of courses: foundation courses and distribution courses.

**The Professional Curriculum**

**FOUNDATION COURSES**

In foundation courses I, II, III, and IV (VTMED 510, 520, 530, 540), students work in small groups under the guidance of a faculty tutor. Case-based exercises are used to facilitate the understanding of basic science concepts within the context of clinical medicine. On average, three to four 2-hour tutorial sessions are scheduled each week. These are complemented by lectures, laboratories, and discussion sessions or other organized learning opportunities specific to the individual course. Faculty are available to respond to questions that arise as a result of the case-based exercises.

Tutorial sessions and all other organized learning programs are usually scheduled during the mornings, thereby reserving the afternoons for independent study. By situating learning in a clinical context, students are better able to integrate material from the basic and clinical sciences and are encouraged to develop an understanding of the clinical reasoning process from the beginning of the curriculum. The tutorial-based educational format creates an atmosphere that requires students to be involved actively in their learning and allows them to develop skills in communication, information retrieval, and analysis.

Note: Courses listed in brackets [] are approved courses that are not offered during the 2002-2003 academic year.

**VTMED 510 The Animal Body (Foundation Course I)**

Fall. 12 credits. Limited to first-year veterinary students. Letter grades only. J. W. Hermanson and staff.

This course is designed to enable students to understand the principles of veterinary anatomy at the gross, microscopic, and ultrastructural levels. Developmental anatomy is emphasized to the extent that it reflects determination of adult form and species differences. Radiologic and related imaging techniques are used throughout the course to assist in the understanding of normal structural anatomy. Understanding of the anatomic basis of common surgical procedures is achieved during the various dissection procedures. The course is based on tutorials with significant emphasis on practical laboratories. Lectures and modules complement student learning.

**VTMED 517 Animals, Veterinarians, and Society: Part A (Foundation Course VIla)**

Fall. 1 credit. Limited to first-year veterinary medical students. Letter grades only. A fee is charged for the course guide.

J. W. Laidler.

This course complements and augments material learned in VTMED 510 (Block I—The Animal Body). The class is divided into small groups and each group meets for 3–4 hours each week during the first 11 weeks of the fall semester. Using the dog, cat, horse and cow as models for learning how to perform a physical examination, this laboratory course teaches the skills of observation, auscultation, palpation, and percussion, and related basic diagnostic procedures. The body systems are examined sequentially and follow the order of study in Block I.

**VTMED 520 Genetics and Development (Foundation Course II)**

Fall and spring. 8 credits. Limited to first-year veterinary students. Prerequisite: VTMED 510 The Animal Body. Letter grades only. R. A. Levine and staff.

An appreciation of how genetic expression and cell behavior contribute to normal animal development and health is crucial for our understanding of the pathogenesis of disease. Students gain an understanding of the cellular and molecular mechanisms that regulate development and maintain normal structure and function throughout the life of an animal. Emphasis is placed on defining and characterizing normal cellular behaviors and on understanding how mutations in specific genes promote disease. Students become familiar with the common molecular procedures being used to develop new diagnostic and therapeutic tools to maintain health and combat disease. Tutorial sessions are complemented by lectures, laboratories, and class discussions.

**VTMED 521 Neuroanatomy and Clinical Neurology**

Spring. 3 credits. Limited to first-year veterinary students. Letter grades only.

A. deLahunta.

Fundamentals of functional neuroanatomy and diseases of the nervous system are taught so that each student is competent in the diagnosis of clinical neurologic disorders of domestic animals. This is a vertically inte-
This course includes dissection of the central nervous system of the dog, the anatomic basis for the diagnosis of diseases of the nervous system, and the differential diagnosis of those diseases. Clinical cases with pertinent lesions are demonstrated with each system. Videotapes of clinical patients are used to demonstrate the clinical signs produced by various diseases. Slides of gross and microscopic lesions are used to emphasize the clinical and neuroanatomic relationships and to stress characteristic features of representative conditions.

**VTMED 527** Animals, Veterinarians, and Society: Part B (Foundation Course VIlb)
This course begins in the last part of fall semester and finishes at the end of winter session. 1 credit. Limited to first-year veterinary medical students. Prerequisite: VTMED 517 Animals, Veterinarians, and Society: Part A. Letter grades only. A fee is charged for the course guide. The lectures consist of one 2-hour session each week and the laboratories require 10 hours spread throughout the course.

This course consists of both lectures and laboratory sessions. Lectures partially complement materials learned in VTMED 520 (Block II—Genetics and Development), but focus more sharply on veterinary medical ethical issues related to animal use, animal welfare, genetics counseling, and clinical day-to-day ethics. The laboratory portion of the course reviews basic equine and food animal husbandry and reviews the small animal physical examination. The lecture consists of one 2-hour session each week, and the laboratories require 10 hours spread throughout the course.

**VTMED 530 Function and Dysfunction: Part I (Foundation Course Illa)**
Spring. 9 credits. Limited to first-year veterinary medical students. Prerequisite: VTMED 520 Genetics and Development. Letter grades only. R. Rawson and staff. This course is designed to develop students' understanding of how an animal maintains itself as a whole organism, how this is achieved through the integration of different functional organ systems; how tissue structure relates to tissue function; how injury alters structure and leads to dysfunction, manifested as clinical signs; how organ function can be assessed; and how it can be modulated pharmacologically. The course incorporates aspects of physiology, biochemistry, cell biology, histology, pathology and pathopharmacology, clinical pathophysiology, and pharmacology.

**VTMED 531 Function and Dysfunction: Part II (Foundation Course VIlb)**
Fall. 7 credits. Limited to second-year veterinary students. Prerequisite: VTMED 530 Function and Dysfunction: Part I. Letter grades only. R. Rawson and staff. A continuation of VTMED 530 Function and Dysfunction: Part I.

**VTMED 537** Animals, Veterinarians, and Society: Part C1 (Foundation Course VIlci)
Spring. 1.5 credits. Limited to first-year veterinary medical students. Prerequisite: VTMED 527 Animals, Veterinarians, and Society: Part B. Letter grades only. A fee is charged for the course guide.

This course complements and augments material learned in VTMED 540 (Block IV—Host, Agent and Defense). The course emphasizes the maintenance of health in individuals and populations, both animal and human, as well as managing and critically reviewing the veterinary medical literature. Topics include animal bites, nosocomial infections, rabies control programs, vaccines and vaccine reactions, zoonotic diseases, and preventative health care programs in large and small animals. The course emphasizes veterinary public health.

**VTMED 550 Animal Health and Disease: Part I (Foundation Course V)**
Spring. 10 credits. Limited to second-year veterinary students. Prerequisite: VTMED 540 Host, Agent, and Defense. Letter grades only. R. Hackett.

This course integrates the clinical sciences of medicine, surgery, anesthesiology, radiology, and theriogenology, which are themselves integrated subjects, with systems pathology and relevant aspects of applied pharmacology. The course is presented on a systems basis moving from clinical signs of alteration in function, to pathophysiology of clinical signs, to strategies for diagnosis and treatment. Specific examples are used to establish a cognitive framework and knowledge of the most important diseases. This course provides a sound foundation for clinical rotations in Foundation Course VI. It builds on the strengths developed in earlier courses by an increased exposure to case examples in a more directed way, taking advantage of the diversity of skills and special knowledge of both faculty and students. A variety of educational techniques are used, including lectures in which interaction is encouraged, laboratories, demonstrations, case discussions, and autotutorials.

**VTMED 551 Animal Health and Disease: Part II (Foundation Course V, continued)**

**VTMED 557** Animals, Veterinarians, and Society: Part E (Foundation Course VIlc1)
Spring. 1 credit. Limited to second-year veterinary medical students. This course continues in the spring semester as VTMED 558. Prerequisite: VTMED 547 Animals, Veterinarians, and Society: Part D. Letter grade only. A fee is charged for the course guide.

This course complements material learned in VTMED 550 (Block V—Animal Health and Disease). In general, during the spring semester this course explores the topic of professional development while during the fall semester it covers topics concerning governmental regulation of veterinary medicine. More specifically, topics during the spring semester include informed consent, utilizing the veterinary team, reducing work place stress, and personal management. There is a laboratory component in which students spend a shift in the Intermediate Nursing Care (INC) unit in the Cornell University Hospital for Animals.

**VTMED 558** Animals, Veterinarians and Society: Part E (Foundation Course VIlc2)
Fall. 1 credit—Class of 2005 ONLY. Limited to third-year veterinary students who have successfully completed Foundation Course VIlc1. Prerequisite: VTMED 557 Animals, Veterinarians, and Society: Part E1. Letter grade only. A fee is charged for the course guide.

This course complements material learned in VTMED 551 (Foundation Course V—Animal Health and Disease: Part I)
Health and Disease). The course examines governmental regulation of the veterinary profession, including proper drug usage, extra label drug use (ELU), controlled substances (DEA), professional liability and malpractice insurance, professional and unprofessional conduct, hazardous materials in the workplace (OSHA), and environmental issues (EPA). Also included are sessions relating to the control and prevention of the spread of animal diseases and the role of USDA and specificallyAPHIS in these regulatory functions. The laboratory component consists of two nights in the Large Animal Clinic and a shift with the Small Animal INC team.

VTMED 560 Ambulatory and Production Medicine I
Fall, winter, spring and summer. Credit variable (either one or two credits). Required component of Clinical Rotations (Foundation Courses VI). Letter grades only. M. E. White and staff.

A total of 4 weeks of Ambulatory and Production Medicine are required. VTMED 560 is taken during the clinical rotations in the 3rd or 4th year. It is also generally taken during the third or fourth year, however first and second year students are encouraged to take one or two weeks of this course over winter recess or during the summer if slots are available. A lottery is done to assign first or second year students to the available slots. See VTMED 565 for course description.

VTMED 561 Community Practice Service—Medicine
Fall, winter, spring and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. E. Hornbuckle and staff.
The Community Practice—Medicine Service is structured to provide supervised clinical experience in the practice of small companion animal medicine. The course is conducted in the Small Animal Clinic of the Cornell University Hospital for Animals. Students interact directly with clients presenting their pet for primary medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients. After review, students explain their plans to the clients and provide follow-up care and management of these patients.

VTMED 562 Surgery II
Fall, winter, spring and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. H. J. Harvey and staff.

Basic principles of anaesthesiology and surgery are emphasized in the clinical rotation. Under direct staff supervision, students anesthetize and perform surgical procedures on patients presented to the Small Animal Clinic for neutering and minor elective procedures. Students are responsible for all aspects of patient care during their hospital stay and are expected to fully participate in client communications. Ordinarily, this course will precede Anesthesiology Service and Small Animal Surgery Service (soft tissue component).

VTMED 563 Small Animal Medicine
Fall, spring, winter, and summer. 4 credits. Required component of Clinical Rotations (Foundation Courses VI). Letter grades only. S. C. Barr, S. A. Center, J. F. Randolph, K. W. Simpson, and R. Goldstein.
The Small Animal Medicine Service is structured to provide supervised clinical experience in the practice of companion small animal medicine. The course is conducted in the Small Animal Clinic of the Cornell University Hospital for Animals. Residents interact directly with clients presenting their pets for primary or referral medical care.

A clinical service rotation, this course exposes the student to the practice of surgery under hospital conditions. Students participate in the diagnostic, surgical, and medical care of small animal pets presented to the hospital for surgical procedures, and daily care of dogs, cats, and exotic species under the direction of a faculty veterinarian. Students assist experienced surgeons in operating rooms and with house-officer supervision, are responsible for patients undergoing elective ovariohysterectomy or castration. Client communications and the basics of efficient practice are emphasized.

VTMED 564 Small Animal Surgery Service
Fall, winter, spring, and summer. 4 credits. Required component of Clinical Rotations (Foundation Courses VI). Letter grades only. H. J. Harvey and small animal surgery faculty.

A clinical service rotation, this course exposes the student to the practice of surgery under hospital conditions. Students participate in the diagnostic, surgical, and medical care of small animal pets presented to the hospital for surgical procedures, and daily care of dogs, cats, and exotic species under the direction of a faculty veterinarian. Students assist experienced surgeons in operating rooms and with house-officer supervision, are responsible for patients undergoing elective ovariohysterectomy or castration. Client communications and the basics of efficient practice are emphasized.

VTMED 565 Ambulatory and Production Medicine II
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. M. E. White and staff.

A clinical service rotation in which students accompany ambulatory clinicians on farm and stable calls and learn the skills and procedures necessary for operation of a modern veterinary practice offering primary care to large animal clients. Routine herd health visits are conducted for cattle, horses, sheep, goats, and swine. Reproductive evaluations (including pregnancy and fertility examinations), nutritional evaluation, and disease prevention are stressed. Herd health programs also include vaccinations, parasite control, mastitis prevention, and routine procedures such as castration and dehorning. With appropriate herds, analysis of computerized performance data is conducted and discussed with the owner. In addition to assisting with routine scheduled work, students participate in diagnosis and medical treatment of ill or injured animals. This includes rotating assignments for night and weekend duty.

VTMED 566 Large Animal Medicine Service
Fall, winter, spring, and summer. 3 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. D. Ainsworth, T. Divers, and staff.

Students assigned to this service assist the faculty and house staff of the Large Animal Medicine service in the diagnosis and care of patients. The goal of this course is for students working on this service to acquire knowledge and skills in history taking, physical examination, diagnosis, surgical treatment, and care of patients presented to the Large Animal Clinic. Training through patient care is supplemented by formal rounds and didactic instruction.

VTMED 567 Large Animal Surgery Service
Fall, winter, spring, and summer. 4 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. A. J. Nixon and staff.

This clinical rotation is structured to provide supervised clinical experience in the practice of large animal surgery. Under the direction of faculty and house staff, students participate in the diagnosis, surgical treatment, and care of patients presented to the Large Animal Clinic. Training through patient care is supplemented by formal rounds and didactic instruction.

VTMED 568 Anesthesiology Service
Fall, winter, spring, and summer. 3 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. R. D. Gleed, J. W. Ludders, P. F. Moon, and staff.

This course is designed to provide clinical experience in the use of anesthetics in small companion animals, horses, and some food animals. The students participate in selecting suitable anesthetic techniques for patients in the Cornell University Hospital for Animals and then implement those techniques under the supervision of faculty and residents. The goal is for students to learn the skills and thought processes necessary to perform safe anesthesia in a modern veterinary practice.

VTMED 569 Dermatology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. H. Miller and D. W. Scott.

During this clinical rotation, students participate in the diagnosis and management of skin disorders in small and large animals. Patients are examined by appointment and through consultation with other hospital services.

VTMED 570 Ophthalmology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. R. C. Riis, T. Kern, and N. Irby.

This course combines clinical experience with beginning skills in diagnostic ophthalmology. Students learn how to apply the ophthalmic diagnostic tests. A competent ocular examination is the goal of this rotation. Confidence in using direct and indirect ophthalmoscopes, slit lamps, tonometers, gonioscopes, conjunctival cytology, and surgery comes with the practice provided by this rotation. Students are required to review the introductory orientation videotapes in the Autotutorial Center titled Ocular Examination I and II before the start of the rotation. This rotation provides surgical experience and consultations. A high percentage of the consultations are referral cases that usually challenge the service. Adequate routine case material is presented to prepare most students for practice.

VTMED 571 Pathology Service
Fall, winter, spring, and summer. 2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. S. P. McDonough and staff.

This course involves the hands-on diagnostic necropsy of most mammalian species that are presented to the pathology necropsy room.
The aim of this course is to give the student an overview of the epidemiology and prevention of infections in veterinary medicine. The course covers a variety of topics, including infectious diseases in domestic animals, zoonotic diseases, and emerging infectious diseases. Students will learn about the principles of infectious disease control, including disease surveillance, laboratory diagnosis, and control measures. The course will also cover the role of public health in infectious disease control and the ethical considerations in infectious disease control. Throughout the course, students will be encouraged to foster an atmosphere in which questions are encouraged, information is shared, and ideas are exchanged. The course is designed to prepare students for careers in the field of infectious disease control and prevention.
anatomy, physiology, and ecology. Emphasis is on the development of a strong foundation in avian biology that will be applied in VTMED 616 Diseases of Birds and VTMED 652 Avian Medicine and Surgery.

VTMED 611 Fish Health Management
Spring. 1 credit. Minimum enrollment 8; maximum enrollment 16. First-, second-, third-, and fourth-year veterinary students; others by written permission of instructor. S-U grades only. Offered odd-numbered years. P. R. Bowser.
This course presents a summary of important diseases of fin fishes. Diseases covered are those of importance in commercial aquaculture as well as those encountered by the tropical fish hobbyist. The course is designed to provide the students with a knowledge base and hands-on diagnostic experience in diseases of fish. Each student prepares a term project and makes one oral presentation.

[VTMED 612 Management of Aquarium Systems]
Spring. 1 credit. Minimum enrollment 8; maximum enrollment 16. First-, second-, third-, and fourth-year veterinary students; others by written permission of instructor. S-U grades only. Offered even-numbered years. P. R. Bowser.
This is a lecture and laboratory course dealing with procedures and practices involved in management of aquarium systems. Topics include water quality, aquatic filtration systems, fish health, fish nutrition, and general fish biology. A portion of the course requires independent work in aquarium system management. Each student prepares a term project and makes one oral presentation.

VTMED 613 Aquavit I: Introduction to Aquatic Veterinary Medicine
Four weeks of full-time instruction at Woods Hole, Massachusetts, immediately after the spring term. 4 credits. Maximum enrollment 24 students from Cornell University of Pennsylvania, and other U.S. colleges and schools of veterinary medicine. Available, by a competitive application process, to veterinary and graduate students. S-U grades only. Course fee required. P. R. Bowser.
The course is sponsored by Cornell University, the University of Pennsylvania, and three marine science institutes at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service. It is designed to introduce veterinary students to aquatic animal medicine. The marine environment is described and visited on field trips in the Woods Hole area. Specific aspects of the comparative anatomy, physiology, nutrition, microbiology, pathology, and medicine of a variety of marine and freshwater species are discussed. Some emphasis is placed on systems of aquaculture. The specific diseases of a few selected species are presented as examples, including the diseases of a crustacean, a shellfish, a finfish, and marine mammals. The course is taught by an invited faculty of 35 individuals who are leaders in their respective fields of aquatic animal medicine. Students present seminars on appropriate topics.

VTMED 614 Aquavit II: Comparative Pathology of Aquatic Animals
Two weeks of full-time instruction at Woods Hole, Massachusetts, immediately after the spring term. 2 credits. Prerequisites: formal course work in diseases of aquatic animals or appropriate experience and permission of instructor. Maximum enrollment 18. S-U grades optional. Course fee required. Available, by a competitive application process, to veterinary and graduate students. P. R. Bowser.
This course is sponsored by Cornell University, the University of Pennsylvania, and three marine science institutes at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service. It is an advanced course in the comparative pathology of aquatic invertebrates and vertebrates commonly used as laboratory animals. The material presented consists of discussions of the diseases of aquatic animals as well as extensive use of the microscope to examine the histopathology associated with these diseases. The course is taught by an invited faculty of 12 individuals who are leaders in their respective fields of aquatic animal medicine.

[VTMED 615 Veterinary Medicine in Developing Nations]
Spring. 2 credits. Maximum enrollment 20. First-, second-, third-, and fourth-year veterinary students; others by permission of instructor. S-U grades only. Normally offered even-numbered years, but not offered in 2003. To be offered spring 2004. K. A. Schat.
Veterinary medicine has an important role to play in developing nations in developing and providing economical sources of animal proteins for feeding and protecting ecological resources. This seminar course provides interested veterinary students with information on and insight into the multitude of complex issues facing U.S. veterinarians working in developing nations.

VTMED 616 Diseases of Birds
Spring. 2 credits. Minimum enrollment 10; maximum enrollment 80. Second-, third-, and fourth-year veterinary students. Letter grades only. G. V. Kollias and N. Abou-Madi.
This course is designed to introduce second-, third-, and fourth-year veterinary students to a basic and practical knowledge of the most common infectious and noninfectious diseases affecting a variety of avian species. The course emphasizes the latest diagnostic and control approaches. The course format is a combination of didactic lectures and discussions.

[VTMED 620 Molecular Biology and Immunology of Host-Parasite Interactions (also VETMI 702)]
Spring. 2 credits. First-, second-, third-, and fourth-year veterinary students; others by permission of the instructor. Letter grades only. Offered even-numbered years. Staff.
The primary objective of this lecture course is to make the student aware of the most important aspects of the field of molecular parasitology. Lectures focus on a broad range of parasites, with an emphasis on those of medical importance. Recently published research articles and reviews are used as the basis from which to explore the issues of host-parasite interactions. Etiology, epidemiology (prevalence and transmission), pathogenesis, clinical findings, diagnosis, pathologic findings, therapy, prevention, and public health considerations are emphasized. Most lectures are presented from a clinician's point of view and therefore the material is oriented towards practical skills in managing clinical cases.

VTMED 623 Interactions of salmonids with parasitic and vector biology, and vector control.

VTMED 622 Foreign Infectious Diseases of Animals
This course describes the etiology, pathogenesis, clinical signs, gross pathology, differential diagnosis, methods of spread, reservoir hosts, and control of foreign animal diseases that present serious economic threats to the United States. The format is student seminar presentations with each student responsible for presenting one disease. The recent spread of FMD, West Nile and BSE emphasize the importance these diseases have to producers, consumers, and practicing veterinarians. Ordinarily the course also includes presentations by college faculty and research scientists working on foreign infectious diseases.

VTMED 624 Feline Infectious Diseases
Spring. 1 credit. Minimum enrollment 10; maximum enrollment 80. Second-, third-, and fourth-year veterinary students. Letter grades only. S. C. Barness.
The course consists of 50-minute lecture periods a week for eight weeks. The letter grade is obtained entirely from the result of a written examination (usually multiple choice format) given in the final period. The course emphasizes the clinical aspects of feline infectious diseases currently of concern to veterinarians working in North America and complements knowledge acquired in blocks IV and V. The overall objective is to provide details about specific infectious diseases a future small animal practitioner may need to know to effectively diagnose and treat diseases. Etiology, epidemiology (prevalence and transmission), pathogenesis, clinical findings, diagnosis, pathologic findings, therapy, prevention, and public health considerations are emphasized. Most lectures are presented from a clinician's point of view and therefore the material is oriented towards practical skills in managing clinical cases.

VTMED 625 Osteoarthritis
This course provides a basis at the molecular, cellular, and tissue levels for understanding the function of mammalian diarthrodial joints. It includes a description of a diarthrodial joint and the composition and metabolism of articular cartilage, subchondral bone, ligaments, meniscus, capsule, and synovium. The interrelationships of synovium, synovial fluid, articular cartilage, joint lubrication, biomechanical considerations, and excretion are considered. Canine hip dysplasia is a focus during the early class sessions. The osteoarthritis that is associated with canine hip dysplasia serves as a basis for discussion of the etiopathogenesis of the disease. Canine osteoarthritis is emphasized, but the disease in animal models such as mice, guinea pigs, rabbits, and sheep is mentioned. Therapies, such as nonsteroidal anti-inflammatory drugs, glatiramer acid, and others may be discussed.

VTMED 626 Epidemiology of Infectious Diseases
This course introduces basic epidemiologic methods used in infectious disease investigations. The importance of surveillance systems in detecting modern epidemics and in the
development of effective disease prevention and control strategies are also discussed. An emphasis is placed on understanding the relationships between the host, the agent, and the environment as they relate to disease causation. The course explores contemporary epidemiologic methods applicable to old diseases that remain real or potential hazards or that might lead to a publication in a peer-reviewed scientific journal.

**VTMED 627 Diseases of Antiquity**

This is a study of the human diseases that have had profound effects on the course of human history from the beginning of recorded time to the present. This course combines aspects of literature, medicine, history and explores the interactions between demographics, commerce, imperialism, medical care, the environment, and disease. Prevailing superstitions and religious views are considered as they relate to human diseases of antiquity. This course is recommended for all second-year veterinary students who do not have a strong background in human diseases or the epidemiology of infectious processes in individuals and groups of animals. Students have the opportunity to apply the methods learned to actual disease problems and write an epidemiologic report that might lead to a publication in a peer-reviewed scientific journal.

**VTMED 628 Clinical Pathology**
Spring. 2 credits. Minimum enrollment 20; maximum enrollment 60. Second-, third-, and fourth-year veterinary students. Letter grades only. Staff.

This six-week course addresses a range of issues related to laboratory medicine and interpretation of laboratory results. General topic areas include hematology, clinical chemistry and immunology, and urinalysis. The primary mode of instruction is student-driven and includes the stimulation and exploration of case materials followed by faculty-moderated large-group discussions. Selected lectures and laboratory sessions supplement and expand on issues generated by the case discussions. This course is designed to provide additional background in ruminant, equine, canine, and feline nutrition. This course, or its equivalent, is necessary for completion of the professional and biomedical literature, and are taught to interpret the statistical techniques, as well as exploring the use of library and bibliographic search methods. R. O. Gilbert.

**VTMED 630 Clinical Biostatistics for Journal Readers**
Spring. 1 credit. Minimum enrollment 4; maximum enrollment 12. First-, second-, third-, and fourth-year veterinary students, others by permission of instructor. Letter grade: H. N. Erb.

Students will become familiar with the statistical methods commonly used in veterinary and biomedical articles, and able to recognize obvious misuse of those methods, and are taught to interpret the statistical results.

**VTMED 631 Clinical Diagnostic Parasitology**
Fall and spring. 0.5 credit. Prerequisite: VTMED 628. Second-, third-, and fourth-year veterinary students. S-U grades only. TBA with Dr. Frongillo, D. D. Bowman and M. K. Frongillo.

This course provides the students with the opportunity to perform diagnostic parasitology methods using samples obtained from ongoing clinic cases. Students attend eight 1-hour sessions as they rotate through the ambulatory, community, practice, and pathology rotations. In the ambulatory service (four sessions with students), diagnostics concentrates on the laboratory confirmation. Gillenwaters samples from farm animal cases that have been observed during the previous week. In the Community Practice Service, one hour concentrates on the examination of samples from ongoing cases, while a second hour consists of a discussion of the treatment of common enteric and ectoparasites. The two hours spent as part of the pathology rotation examine methods of recovering parasites from pathology specimens. The course is limited to 15 students. Attendance at 14 of the senior seminar sessions presented during the academic year constitutes acceptable completion of this course. This course does not fulfill the 1-credit requirement for the pathology rotation.

**VTMED 632 Senior Seminar**
Fall and spring. 1 credit. First-, second-, and third-year veterinary students. S-U grades only. Must be completed in two consecutive terms (either fall to spring or spring to fall). Students are expected to build on the didactic material presented in Large and Small Animal Parasitology.

**VTMED 633 Introduction to Nontraditional Companion and Laboratory Animals**
Spring. 1 credit. First-, second-, third-, and fourth-year veterinary students. Letter grades only. Staff.

This course is both laboratory and lecture based and deals with a wide variety of nontraditional species, other than dogs or cats, that might be brought into a small-animal practice. These can be either companion or laboratory animals and include rodents, lagomorphs, nontraditional species, other than dogs or cats, reptiles, amphibians, birds, fish, goats, sheep, potbellied pigs, primates, and llamas. Instruction in restraint and handling, breeding, husbandry, and general management information is provided. It is followed, where possible, by laboratory sessions for observation, restraint, and physical examination.

**VTMED 635 Introduction to the Professional Literature**

This course introduces veterinary students to the professional literature, including development of critical reading skills. Students become familiar with the broad range of professional and biomedical literature and are encouraged to develop a rigorous approach to journal and scientific article review. Secondary emphasis is on developing skills in library and bibliographic search techniques, as well as the use of veterinary-related on-line information.

**VTMED 637 Introduction to Community Practice Service**
Fall, winter, and summer. 1 credit. First- and second-year veterinary students by permission of instructor. S-U grades optional. W. E. Hombuckle.

This course introduces veterinary students to primary care small-animal clinical practice through direct exposure to the Community Practice Service at the Cornell University Hospital for Animals. Students observe and assist with restraint, examination and routine treatment of pets, and communication with clients. Successful completion requires satisfactory participation during 10 half-days of clinical service.

**VTMED 638 Physiological Nutrition**
Spring. 1 credit. Minimum enrollment 10; maximum enrollment 90. Second-, third-, and fourth-year veterinary students; others by permission of instructor. Letter grades only. F. A. Kallfelz.

This course provides information on the evaluation and formulation of rations for large and small animals. These concepts are applied in discussion on the nutrition requirements of these animals during maintenance, gestation, lactation, growth, stress, and aging. The course is recommended for all second-year veterinary students who do not have a strong background in ruminant, equine, canine, and feline nutrition. This course, or its equivalent, is necessary for completion of the veterinary nutrition concepts in Foundation Course V.

**VTMED 640 Veterinary Aspects of Captive Wildlife Management**
Spring. 2 credits. First-, second-, third- and fourth-year veterinary students. Letter grades only. G. V. Kollas.

This course concentrates on principles of captive wildlife management, both clinical and nonclinical. Students are challenged to learn and integrate a variety of disciplines that are essential to managing wildlife successfully in a captive or semi-free-ranging environment. These disciplines include but are not limited to: species-specific (1) behavior and behavioral requirements, (2) nutritional requirements and problems, (3) natural history, (4) zoonotic and toxicological problems, (5) medical restraint and anesthesia, (6) preventive medicine, and (7) medical and legal ethics. In even-numbered years the course emphasizes non-North American wildlife species (examples include African, Asian, Australian, and South American species), and, in odd-numbered years the course focuses more on the North American (native) wildlife species.
VTMED 642 Management of Fluid and Electrolyte Disorders
Spring. Second-semester enrollment 20; maximum enrollment 40 per section. Second-, third-, and fourth-year veterinary students. Letter grades only. V. Cook. Students focus on clinical manifestations and the pathophysiologic mechanisms associated with fluid, electrolyte, and metabolic acid base disturbances in domestic animals. The course is divided into segments dealing with salt and water imbalances, potassium abnormalities, metabolic acidosis, metabolic alkalosis, and mixed acid-base disturbances.

VTMED 643 Fundamental Aspects of Embryo Transfer
Spring. 1 credit. Maximum enrollment 16. Enrollment is done by lottery. Third- and fourth-year veterinary students or graduate students by permission of instructor. S-U grades only. Staff. This course introduces the theory and practice of embryo transfer in domestic animals. Topics include: background, advantages and disadvantages, superovulation, embryo recovery, embryo culture and manipulation, embryo transfer techniques, registration of offspring, import and export, and related topics in assisted reproductive technologies. Students are expected to participate in the technical embryo transfer in cattle, small ruminants, horses, and swine. The course consists of lectures, demonstrations, and laboratory classes during which students practice techniques of embryo recovery, evaluation, handling, and transfer.

VTMED 644 Equine Surgical and Anesthetic Techniques
Winter. 1 credit. Prerequisite: VTMED 602 Anatomy of the Horse. Minimum enrollment 3; maximum enrollment 21. Enrollment is done by lottery. Third- and fourth-year veterinary students. S-U grades only. S. I. Furbin (coordinator) and other large-animal surgeons. This course consists of five laboratories performing surgical procedures on ponies and caclaver specimens. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with some specialized surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating equine practice after graduation. This course is offered during a one-week period over winter intersession.

VTMED 645 Food Animal Surgical and Anesthetic Techniques
Winter. 1 credit. Prerequisite: VTMED 603 Anatomy of the Ruminant. Minimum enrollment 6; maximum enrollment 21. Third- and fourth-year veterinary students. S-U grades only. Enrollment is done by lottery. S. L. Furbin and other large-animal surgeons. This course consists of five laboratories performing surgical procedures on sheep, calves, caclaver specimens, and adult cattle. It is the intent of this course not to make the students proficient in surgical techniques but to familiarize them with surgical techniques and to make them more enlightened referring practitioners. The course, therefore, is intended for students anticipating food animal practice after graduation. This course is offered during a one-week period over winter intersession.

VTMED 646 Llama Tutorial
Fall, spring, summer. 1 credit. Prerequisite: VTMED 540 Second-semester enrollment 20; maximum enrollment 40 per section. Second-, third-, or fourth-year veterinary students. S-U grades only. Independent study. M. C. Smith. This autotutorial or group tutorial course covers common problems of llamas and alpacas. Participants are provided with study guides consisting of brief case descriptions and sample study questions. Reference is made to textbooks, journal articles, video­ tapes, and films. The course is taught in a self-directed and laboratory-instructor directed format with laboratories that reinforce concepts presented in the lectures.

VTMED 647 Poisonous Plants
Fall. 1 credit. First-, second-, third-, and fourth-year veterinary students; others by permission of instructor. S-U grades only. B. H. Wukasch. This course introduces veterinary students to potential poisons of plants native to the United States. A detailed analysis of toxic principles, toxicology, and treatment and prevention of poisoning in animals. Students are expected to participate in the technical embryo transfer in cattle, small ruminants, horses, and swine. The course consists of lectures, demonstrations, and laboratory classes during which students practice techniques of embryo recovery, evaluation, handling, and transfer.

VTMED 648 Clinical Management of Native Wildlife
Fall, spring, summer (credit given in fall). 1 credit. Enrollment not to exceed 20 students per semester. 2 students per rotation. First-, second-, third-, and fourth-year veterinary students by permission of instructor. Letter grades only. G. V. Kollias and staff. This course introduces veterinary students to primary native wildlife care and to wildlife issues that practicing veterinarians face on a daily basis. Students are responsible for the assessment, physical examination, and medical care of native wildlife presented to the Cornell Wildlife Health Service. Experiences with native animals by the public and local wildlife rehabilitators. Student activities are directly supervised and assessed by faculty wildlife clinicians on a daily basis. Successful completion of the course requires satisfactory supervised participation per semester in the clinic. Clinical times are appropriately scheduled throughout the semester. Students are required to submit two case summaries before the end of the semester and a log of their clinical hours.

VTMED 649 Introduction to Equine Practice
Spring. 0.5 credit. Maximum enrollment 30. First- and second-year veterinary students. Letter grades only. R. Hackett and C. Colyer. This is an introductory course in equine husbandry intended for students with little or no experience working with horses. Lecture topics include horse breeds and colors, housing and feeding, and overview discussions of the racing, showing, and breeding industries. Laboratories emphasize basic equine handling and restraint as well as feeds and bedding.

VTMED 650 Avian Medicine and Surgery
Spring. 2 credits. Minimum enrollment 20; maximum enrollment 21. Third- and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff. This course is designed to introduce third- and fourth-year veterinary students to the principles and practice of clinical avian medicine and surgery. The course is taught in a basic didactic lecture and discussion format with laboratories that reinforce concepts presented in the lectures.

VTMED 653 Advanced Equine Lameness
Spring. 1.5 credits. Minimum enrollment 7; maximum enrollment 21. Third- and fourth-year veterinary students. Enrollment is done by lottery. S-U grades only. N. Ducharme, B. Woodie, and staff. This course is designed to help students understand the methodology and to develop practical skills required for lameness examination in horses. Emphasis is on developing diagnostic skills. Specifically, students are expected to develop proficiency in the identification of clinical characteristics associated with recognized lameness. Students are expected to participate in the technical embryo transfer in cattle, small ruminants, horses, and swine. The course consists of lectures, demonstrations, and laboratory classes during which students practice techniques of embryo recovery, evaluation, handling, and transfer.

VTMED 654 Current Therapy in Equine Reproduction
Spring. Lec, 1 credit; lab, 0.5 credit. Lab minimum enrollment 12, maximum enrollment 24. Laboratory enrollment is done by lottery, if oversubscribed; corequisite enrollment required. Third- and fourth-year veterinary students. Letter grades only. D. H. Volkman. This course covers advanced aspects of equine reproductive physiology. Reproductive management of mares and stallions using natural and artificial breeding strategies is discussed. Diagnosis, treatment, and prevention of common reproductive disorders is stressed. The laboratory portion builds on skills acquired during Foundation Courses and provides experience in techniques important in equine theriogenology.

VTMED 655 Production Animal Theriogenology
Spring. Lec, 1 credit; lab, 1 credit. Lab minimum enrollment 12, maximum enrollment 24. Laboratory enrollment is done by lottery. Concurrent enrollment in Production Animal Theriogenology Lecture is required. Third- and fourth-year veterinary students. Letter grades only. Staff. This course deals with specific reproductive disorders of production animals. Content includes reproductive biology of production animals, pregnancy diagnosis, treatment of infertility, medical, and surgical approaches to management of reproductive disorders. The course also covers related topics in assisted reproductive technologies such as semen freezing, artificial insemination and embryo transfer. Laboratory sessions are tailored to acquisition of specific skills fundamental to the practice of theriogenology of production animals. Emphasis is on dairy cows.

<tr>
<td>VTMED 656</td>
<td>Special Problems in Equine Medicine</td>
<td>1.5 credits</td>
<td>Minimum enrollment 10; maximum enrollment 30.</td>
<td>Spring</td>
<td>T. Divers and staff. This course is intended for students who plan to or are employed in the practice. In-depth study of important diseases, review of recent literature, health management, and hands-on procedures or demonstrations are the core of this course.</td>
</tr>
<tr>
<td>VTMED 657</td>
<td>Disorders of Large Animal Neonates</td>
<td>1.0 credit</td>
<td>Minimum enrollment 10; maximum enrollment 100.</td>
<td>Spring</td>
<td>Letter grades only. D. Ainsworth. This course discusses neonatal problems specific to foals and calves, with emphasis on the neonatal period. Specific topics examined in detail include disorders affecting the respiratory, gastrointestinal, and musculoskeletal systems. Students also spend several hours in the neonatal intensive care unit providing medical care of hospitalized patients under staff supervision.</td>
</tr>
<tr>
<td>VTMED 659</td>
<td>Equine Soft Tissue Surgery</td>
<td>1.0 credit</td>
<td>Minimum enrollment 6; maximum enrollment 24.</td>
<td>Spring</td>
<td>Letter grades only. R. Hacker and staff. This course, intended for students anticipating equine practice after graduation, builds on material presented in the foundation courses to provide supplemental instruction in surgical disorders of the horse. Lectures are case-based and emphasis is likely to be encountered in equine practice (colic, traumatic injuries, upper respiratory tract disorders, prepurchase examination). Laboratories emphasize diagnostic and therapeutic procedures in which an entry-level equine practitioner should be competent.</td>
</tr>
<tr>
<td>VTMED 661</td>
<td>Surgical Pathology</td>
<td>2.0 credits</td>
<td>Variable 1–2 credits.</td>
<td>Spring</td>
<td>Letter grades only. S. McDonough. This one- or two-week course (approximately eight days in the first course, one credit per week) provides hands-on experience in the Surgical Pathology Service of the Department of Biomedical Sciences. Working with the attending pathologist, students examine tissue specimens histologically, propose diagnoses, and discuss their interpretations. Students may enroll in this course only through the Office of Student Records within the official add/drop period. All requests to enroll must be accompanied by the Supplemental Enrollment Form indicating Dr. McDonough's approval of the enrollment and the amount of credit to be awarded. Second-year students should not enroll for any term other than summer unless they have a medical reason, such as a January or spring break slot through Dr. McDonough.</td>
</tr>
<tr>
<td>VTMED 665</td>
<td>Medical and Surgical Problems of Dairy Cattle—Emphasis on the Individual Animal</td>
<td>1.5 credits</td>
<td>Minimum enrollment 6; maximum enrollment 28.</td>
<td>Spring</td>
<td>S. Fubini and staff. This course provides students with a special interest in dairy practice the opportunity for in-depth discussions of special problems in bovine medicine and surgery. Emphasis is on case discussions, physical examination techniques, and ethical and practical matters. The course emphasizes individual cow treatment.</td>
</tr>
<tr>
<td>VTMED 666</td>
<td>Small Animal Clinical Oncology</td>
<td>1.0 credit</td>
<td>Minimum enrollment 10; maximum enrollment 40.</td>
<td>Spring</td>
<td>Letter grades only. R. L. Page. This course presents the common cancers affecting small animals. Emphasis is placed on behavioral and patient management. Surgery, chemotherapy, and radiation therapy as important methods to treat cancers in small animals are discussed. Course format includes lectures.</td>
</tr>
<tr>
<td>VTMED 667</td>
<td>Special Problems in Small Animal Medicine</td>
<td>1.0 credit</td>
<td>Minimum enrollment 6; maximum enrollment 24.</td>
<td>Spring</td>
<td>Letter grades only. S. McDonough. This course discusses diagnosis, treatment, and prevention of medical and surgical problems of individual small ruminants and of sheep and goat herds. Basic information on breed, behavior, nutrition, and diseases of sheep and goats is presented. The course is intended for students with interest in this area.</td>

</tbody>
</table>
The goal of this course is to give veterinary students the ability to treat the behavioral problems of horses. History-taking, counseling, and follow-up methods are presented. Each student has the opportunity to participate in three cases. Behavioral and pharmacological treatments for behavior problems are presented.

VTMED 682 Topics in Veterinary Emergency and Critical Care Medicine
This course provides an introduction to emergency and critical care medicine. It is designed to have one to three topics per week. Although lectures are based on small animal cases, the same principles apply to both large animal and small animal situations. Topics that might be covered include: triage, shock, emergency fluid therapy, cardiac emergencies, transfusion medicine, acute renal failure, endocrine emergencies, sepsis, acute abdomen, nutritional support, common toxicology problems, emergency surgical procedures (chest tubes, tracheotomies), and basic and advanced cardiopulmonary resuscitation. When two courses (i.e. section "A" and "C") are offered in the same year, the same topics are covered in each course.

VTMED 685 Physiology of Pregnancy
This course is presented in lecture fashion. One major reference per lecture is assigned each week. Subjects covered include placental function, fetal development, neural system development, fetal breathing, biohythms in maternal and fetal physiology, parturition, and adaptations to newborn life.

VTMED 689 Fundamentals of Ruminant Digestion and Metabolism
Spring. 0.5 credit. Minimum enrollment 5. First-, second-, third-, and fourth-year veterinary students, selected graduate students by permission of instructor. Letter grades only. T. R. Houp.
This course is designed for the student who has little or no previous course work in ruminant digestive physiology. It consists primarily of lectures surveying: the functional aspects of control of feed intake; salivation; reticulorumen motility, including rumination and eructation; microbial flora and fauna; fermentation in ruminoculums (digestion of carbohydrates, proteins and fats); ruminal gas formation; absorption of short-chained fatty acids; special features of ruminal nitrogen metabolism; passage of nutrients to lower tract; and a brief consideration of the functions of omasum, abomasum, and small and large intestines. Emphasis is on the differences of the ruminant digestive processes from those of the simple-stomached animals.

VTMED 690 Molecular and Genetic Basis of Inherited Disorders in Animals and Application to Clinical Medicine
Spring. 2 credits. Minimum enrollment 5. Maximum enrollment 15. First-, second-, third-, and fourth-year veterinary students; graduate and undergraduate students also welcome. Letter grades only. Offered even-numbered years. J. Ray.
This course introduces the molecular basis of inherited diseases in animals. Topics include: several inherited metabolic defects causing systemic malfunctions; muscle and bone abnormalities; retinal degeneration; and failure of the immune systems. Techniques to characterize genes and mutations. Use of molecular techniques for diagnosis and prevention. Use of molecular tools for the treatment of inherited disorders.

VTMED 696 Fundamental Principles and Techniques of Small Animal Anesthesia: Dogs, Cats, and Birds.
This course is designed for the veterinary medical student interested in small animal practice. The course consists of lectures, case discussions, and development of anesthetic protocols for routine and complicated cases. Subjects to be covered include: anesthetic management for electro- surgery, management of the high-risk patient, fluid therapy, drug interactions, pain management, and the management of anesthesia-related complications, cardiopulmonary resuscitation, and post-anesthetic
The purpose of the cardiology rotation is to provide students with the opportunity to put into practice what they have learned in the foundation years. The management of the most common cardiac diseases is emphasized including congestive heart failure, arrhythmias, and secondary cardiac diseases. All species are examined, large and small, although the majority are domestic. Diagnostics, including cardiovascular physical examination, electrocardiography, radiography, and echocardiography, are taught. The rotation includes clinical work, didactic teaching, and self-initiated digging for information.

VTMED 702 Laboratory Animal Medicine
Fall and spring. 2 credits. Prerequisite: VTMED 551. Maximum enrollment 4 per rotation. Third- and fourth-year veterinary students. Letter grades only. M. Bailey and staff.

The practice of laboratory animal medicine requires a combination of preventive programs, clinical skills, knowledge of various species' biology, familiarity with research methodology, and acquaintance with state and federal regulations. This course is offered as a two-week introduction to that specialty. Students accompany laboratory animal veterinarians on clinical rounds of Cornell's research animal housing and participate in laboratory diagnostic procedures. Review sessions are conducted in the biology, medicine, anatomy, and pathology of small and large rodents, rabbits, and primates and on current legislation regulating the use and research animals. The course may include a field trip to the research animal facilities of Rockefeller University, the Cornell University Medical College, Marshall Farms, and the Laboratory of Experimental Medicine and Surgery in Primates.

VTMED 703 Clinical Wildlife, Exotic, and Zoo Animal Medicine
Fall, winter, spring, summer. 2 credits. Prerequisite: VTMED 551. Maximum enrollment 4 per rotation (plus one intern). Third- and fourth-year veterinary students. Letter grades only. G. V. Kollias and staff.

This course introduces primary medical care of nontraditional pet species, zoo animals, and native wildlife. Students, directly supervised by the attending clinician, are responsible for the assessment, physical examination, and medical management of exotic animal species presented to the Cornell University Hospital for Animals. Other opportunities available to assist in the development of clinical skills in wildlife, zoo and exotic animal medicine include the wildlife clinic cases, ongoing wildlife research and service projects, and trips to the Rosamond Gifford Zoo. Successful completion of the course requires satisfactory performance during this 14-day clinical rotation.

VTMED 704 Quality Milk
Fall or spring. 2 credits. Prerequisite: VTMED 551. Third- and fourth-year veterinary students. Letter grades only. R. Gonzalez, Y. Schukken, D. Wilson and staff.

This course covers the causes, diagnosis, treatment, and prevention of bovine mastitis. The role of management practices is stressed. The course includes lectures, readings, discussions, laboratory exercises, and farm visits as part of the Quality Milk Production Services. Participants are expected to complete a case study on a dairy farm withudder health problems and present their findings to the producer and farm personnel. Grading is on performance during the course and final exam.

VTMED 705 Special Opportunities in Clinical Veterinary Medicine
Fall, spring, and summer. Prerequisites: VTMED 551. Third- and fourth-year veterinary students. S-U grades only. This course provides opportunities for students finished with Foundation Course V to explore professional areas not available through the regular curriculum. Blocks of two to four weeks are usually spent at other teaching hospitals, research laboratories, or zoological facilities. Student proposals are submitted to the associate dean for academic programs for review and approval. On-site supervisors of the block act as ex-officio faculty members and are required to evaluate each student formally.

VTMED 707 Poultry Medicine and Production Rotation
Fall. 2 credits. Prerequisite: VTMED 551 and VTMED 516. A course in poultry is recommended. Third- and fourth-year veterinary students. Letter grades only. R. Page.

Management and prevention of cancer in companion animals represents a significant component of the practice of veterinary medicine. The focus of this clinical rotation is the development of a comprehensive set of skills necessary for a veterinarian to become an advocate for the client facing the disease. These skills include appropriate initial evaluation of animals with cancer, sensitive and effective client and referring veterinarian communication, ability to access relevant information from numerous sources related to cancer management, understanding and applying principles of surgical, medical, and radiation oncology as well as techniques specifically related to minimize pain and treatment-related effects in cancer patients.

VTMED 720 Issues and Preventive Medicine in Animal Shelters
Spring. 1 credit. Prerequisite: VTMED 540. Minimum enrollment 5; maximum enrollment 30. Second-, third-, and fourth-year veterinary students. Letter grades only. J. M. Scarlett and staff from the American Society for Prevention of Cruelty to Animals.

Veterinarians often work for or with animal shelters, serve on shelter boards of directors, and in community resources related to companion animal welfare, participate in spay and neuter programs, and influence the quality of the human-animal bond. This course addresses the history of the humane movement, role of the veterinarian in relation to shelters, preventive and palliative health management (including highlighting diseases of major concern), issues surrounding euthanasia, reasons for relinquishment,
programs for behavior modification, and the legal concerns of shelters. These issues are addressed using lectures and large group discussions.

VTMED 721 Timely Topics in Veterinary Parasitology: Large Animal
This course presents an in-depth look at one or a few parasites of special interest relative to small-animal medicine. The course presents details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts are made to discuss those aspects of the disease as it relates to the practical control of these and in-depth coverage of primary literature related to the parasite being discussed. Topics vary annually. The course is presented in a lecture/discussion format.

VTMED 722 Timely Topics in Veterinary Parasitology: Small Animal
This course presents an in-depth look at one or a few parasites of special interest relative to small-animal medicine. The course presents details of taxonomy, biology, epidemiology, clinical presentation, and preventive and curative treatment. Efforts are made to discuss those aspects of the disease as it relates to the practical control of these and in-depth coverage of primary literature related to the parasite being discussed. Topics vary annually. The course is presented in a lecture/discussion format.

VTMED 723 Bacteria and Fungi in Veterinary Medicine
This course provides an overview and listing of important bacterial and fungal diseases of domestic animals (cow, horse, sheep, pig, goat, dog, cat) in preparation for medicine courses. The etiology, pathogenesis, host response, and prevention are emphasized. Avian, zoonotic, and exotic (foreign animal) bacterial and fungal diseases are covered in less detail because they are covered in other courses. The course also provides insight into diagnostic procedures for bacterial and fungal diseases such as available tests, what samples to take, how to handle samples, and how diagnostic procedures are performed.

VTMED 726 Reptile Medicine and Surgery
This course is designed to introduce third- and potentially fourth-year veterinary students to the principles and practices of reptile medicine and surgery. The course is taught in a basic lecture and discussion format with laboratories (limited) reinforcing concepts presented in the lectures.

VTMED 730 Vaccines: Theory and Practice
Spring. 1 credit. Prerequisite: introductory course in immunology or VTMED 540 or VTEMI 315. Minimum enrollment 10. Maximum enrollment 40. Second-, third-, and fourth-year veterinary students and graduate students. Letter grades only. T. Clark.
Grade based on a final examination and one term report. Offered odd-numbered years.

VTMED 732 Veterinary Clinical Toxicology
This course provides the veterinary student with a solid introduction to concepts and principles of toxicology and how they are applied in the clinical setting. Students learn about specific common toxicants, clinical signs in affected animals, and treatment protocols for the toxicants in question. Students also gain an understanding of the clinical approach to suspected or unknown toxicoses, sample collection and handling, and resources available for clinical toxicologic problems. The course is conducted with two 1-hour lectures per week and one hour-long large-group discussion per week. The class meets two days per week, the first day for one hour and the second day for two hours. Grades are based on weekly quizzes, a final exam, a short paper and/or oral participation.

VTMED 733 Selected Infectious Diseases of Swine
This course provides veterinary students with a solid introduction to concepts and principles of swine infectious diseases and how they are treated in the clinical setting. Students learn about specific infectious diseases, clinical signs in affected animals, and treatment protocols for the diseases in question. Students also gain an understanding of the clinical approach to suspected or unknown infectious agents, sample collection and handling, and resources available for infectious disease diagnosis. The course is conducted with two 1-hour lectures per week and one hour-long large-group discussion per week. The class meets three days per week for one hour lecture and are based on weekly quizzes, a final exam, a short paper and/or oral presentation.

VTMED 735 Special Topics in Ambulatory and Production Animal Medicine
Fall, winter, spring, and summer. Variable 1–2 credits. Prerequisite: VTMED 560. Enrollment is done by lottery. Second-, third-, and fourth-year veterinary students. Letter grades only. M. E. White and staff.
This course provides specialized experiences in the Ambulatory and Production Medicine Service. The course consists of participation in scheduled and emergency farm calls and completion of projects designed to provide experience in herd problem solving, records analysis and implementing herd-health programs. Clinical service assignments are planned to meet individual student goals. Examples of focus areas available include livestock production medicine, dairy reproductive examinations, small-ruminant medicine, and equine ambulatory practice.

VTMED 736 Veterinary Diagnostic Imaging: Anatomy and Interpretation
The course is designed to emphasize the relevance of a solid foundation in veterinary anatomy as it clinically applies to diagnostic imaging. Additionally, the course is designed to provide students with an understanding of the strengths and limitation of diagnostic imaging by discussing interventional principles, pitfalls and interpretations, and measurements obtained through lectures, laboratory exercises, weekly quizzes, and reading assignments. Integration of these objectives occurs in weekly laboratory exercises where students must make or evaluate decisions regarding patient management based on evaluation of clinical signs and imaging examinations. The "Roentgen-Sign" approach to diagnostic imaging interpretation is used as a model.

VTMED 737 Principles of Pathology
Principles of Pathology is intended for students who wish to strengthen and broaden their knowledge of the pathologic basis of disease. Fundamental biologic processes as revealed by gross and microscopic pathologic changes are emphasized. Molecular mechanisms are integrated into the discussion where appropriate. General pathologic processes are organized into a logical and uniform system in order to facilitate comprehension and learning with particular attention paid to definition and proper usage of terminology. The course includes two lectures per week and a one-hour large-group discussion. The large-group discussion allows students to apply general knowledge gained in lecture to a specific problem. Approximately half of the large-group discussions are held in the Necropsy Teaching Laboratory using actual diseased organs for illustration of general pathologic processes.

VTMED 738 Veterinary Parasitology
Spring. 2.5 credits. First-, second-, third-, and fourth-year veterinary students. Letter grades only. D. D. Bowman.
This course provides a basic introduction to veterinary medicine, concentrating mainly on the biology, control, and diagnosis of protozoan and metazoan parasites. Emphasis is given to parasites representative of significant disease processes or of significant clinical importance to veterinarians. The course elaborates on the biology and pathogenesis of these major pathogens with the ultimate goal being to maximize the recognition of the major disease manifestations induced by the different groups of organisms. Laboratories stress certain aspects of some important parasite groups.

**VTMED 739 Viruses in Veterinary Medicine**

This course is designed to supplement the information provided in the Foundation Courses, particularly courses IV and V. The objective is to provide, in a survey form, an overview of the major groups of viruses which infect animals and to give a summary of the diseases that they cause. The diseases which are most commonly encountered in veterinary practice are given the greatest amount of the available time, and diseases which are less frequently seen are given less detailed coverage. The properties of the viruses, their general pathogenic mechanisms, diagnostic methods, and some specific examples are covered.

**VTMED 740 Veterinary Perspectives on Pathogen Control in Animal Manure**

This course presents an in-depth look at the management of pathogens in animal manures. It reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. The course discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. The course concludes with class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

**VTMED 745 Dynamics of Dairy Herd Health and Management**

Competitive pressure, increasing input costs, and comparatively stagnant milk and salvage values require dairy producers to become more efficient. The current trend of increasing herd size drives changes in management. Dairy cattle are handled in groups, although individual cow health and productivity fundamentally underpin the financial success of the dairy enterprise. Veterinarians are called upon to advise dairy producers not only in matters of production but increasingly in matters of productivity and management decision making. Identifying opportunity areas to improve productivity and ultimately profitability requires modern veterinarians to recognize and solve complex and interdependent problems, including value-elm milk production, reproduction, and health issues. Until the advent of the new veterinary curriculum, biological systems were often taught in isolation. Yet there are research models that integrate the dynamic nature of dairy production, health, management, and economics through epidemiological and economic modeling. Despite the existence of such advanced research models, they have not been integrated fully into the curriculum. The goal of this course is to teach students the dynamics of herd performance parameters with dairy herd health and management. This is done with a combination of lectures and exercises using two computer simulation models. The following topics are addressed: (1) how often production diseases occur and when, (2) how they are interrelated, (3) the impact of disease on milk production, reproductive performance, and risk of culling, and (4) how to use this information in production medicine. The format of this eight-week course (two days per week) is a lecture one day and hands-on work with computer simulation models on the other day.

**Biomedical Sciences**

**VTBMS 346 Introductory Animal Physiology (also BIOAP 311) (Undergraduate)**

Fall. 3 credits. Prerequisites: BIOG 105, BIOG 106, BIOG 102, BIOG 103, BIOG 104, BIOG 107, BIOG 108, CHEM 207, CHEM 208, or CHEM 206, or CHEM 215, CHEM 216, MATH 106, MATH 111 or MATH 191 or AP credit for any of the above; or one year of college-level biology, chemistry, and mathematics. S-U grades optional. E. R. Loew.

A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems, from the cellular to the organismal level. Structure-function relationships are stressed along with underlying physical-chemical mechanisms.

**VTBMS 600 Special Projects in Anatomy**

Fall, spring. 1 credit per 2.5-hour period. By permission of instructor. S-U grades only. Biomedical science staff.

**VTBMS 628 Graduate Research in Animal Physiology (Graduate) (also BIO AP 719)**

Fall, spring. 1–3 credits. By written permission of department chairperson and faculty mentor who will supervise the work and assign the grade. S-U grades optional. Similar to Biological Sciences 499 but intended for graduate students who are working with faculty members on an individual basis.

**VTBMS 700 Predictions of Form or Phlogeny**

Spring. 1 credit. By permission of instructor. S-U grades optional. J. W. Hermanson.

Form and function are often discussed as a correlated entity in biology. This seminar group starts with the question, Does form really predict function? This is addressed initially with respect to the analysis of paleobiology but then encompasses examples of experimental functional morphology. In particular, there is a growing body of experimental data demonstrating that diverse functions can be achieved with nearly identical morphologies, and that the functional diversity may better be explained by behavior or environmental factors. Might these observations refute current theories about the origin of flight in extinct organisms (i.e., the cursorial or ground-up theory of flight versus the arborescent gliding theory of flight evolution)? Specific topics pursued are selected by participants in this course. Participation is open to interested graduate students, advanced undergraduate students, and veterinary students.

**VTBMS 713 Cell Cycle Analysis**

Fall, spring. 1 credit. S-U grades only. A. Yen.

Current topics in the control of mammalian cell division are discussed, including growth factors and oncogenes.

**VTBMS 720 Special Problems in Physiology (Graduate)**

Fall, spring. 1–3 credits. By permission of instructor. Laboratory work, conferences, collateral readings, and reports. Adapted to the needs of students. S-U grades optional.

**VTBMS 788 Seminar in Surgical Pathology**

Fall, spring. 1 credit. Intended for residents; third- and fourth-year veterinary students may attend. Letter grades only. A. A. Summers and T. B. Guerry.

The major objective of this discussion and seminar course is to introduce the residents to the discipline of surgical pathology. Selected material from the Surgical Pathology Service is shared in a slide-seminar format by the residents. The material is presented in a slide-seminar format by the residents under the review of the faculty. Emphasis is placed on pathogenesis, etiology, and pathologic descriptions of the lesions. In addition, appropriate guest lecturers cover specific areas of interest and special topics not encountered in the departmental service programs.

**VTBMS 811 Advanced Physiology Methods I (also BIO S 811) (Graduate)**

Fall. 2 credits. Enrollment limited. Prerequisite: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. J. Ray.

This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint students with the latest techniques and methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

**VTBMS 812 Advanced Physiology Methods II (also BIO S 812) (Graduate)**

Spring. 2 credits. Enrollment limited. Prerequisite: graduate student status or permission of course coordinator. S-U grades only. Lab TBA. J. Ray.

This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint students with the latest techniques and methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.
Clinical Sciences

VETCS 299 Research Opportunities in Clinical Sciences
Summer. 6 credits. Prerequisites: one year of basic biology (scores of 5 on Biology Advanced Placement Examination of the College Entrance Examination Board or BIO G 100 level). Letter grade only. A minimum of 120 hours of laboratory time is expected per three course credits.

This is a mentored research apprenticeship program, designed to give laboratory experience to qualified unmatriculated high school students (participating in Cornell Summer College). Students will be placed in research laboratory with designated project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students will be graded on preparation, participation in laboratory academic life, and appropriate acquisition of techniques. At the end of the six-week session, he/she will be expected to give a brief (15–20 minute) oral presentation on their work, and submit a manuscript in a form suitable for publication. The faculty director of the laboratory will have ultimate responsibility for evaluating the student’s work and assigning the grade.

VETCS 700 Pathophysiology of Gastrointestinal Surgery
Fall. 1.5 credits. S-U grades only. Offered every third year. Next offered fall 2004. N. G. Ducharme.

Normal anatomy and physiology of the gastrointestinal system in carnivores, herbivores and ruminants is presented initially. This is followed by a depth discussion of the pathophysiological mechanisms and sequelae of gastrointestinal obstructions including perforation injury, peritonitis, adhesions and short bowel syndrome. The emphasis of this course is development of advanced understanding of surgically relevant gastrointestinal problems that lead to appropriate decision making.

VETCS 701 Pathophysiology of Orthopedic Surgery (Graduate)
Spring. 1.5 credits. Prerequisites include DVM, MD, or equivalents or approval of instructor. S-U grades only. Offered every third year. Next offered spring 2005. E. J. Trotter.

VETCS 702 Pathophysiology of Cardiopulmonary Surgery (Graduate)
Fall. 1.5 credits. Prerequisite: DVM degree or equivalent. S-U grades only. Offered every third year. R. P. Hackett, S. L. Pufini, N. G. Ducharme, H. J. Harvey.

Using lectures and group discussions, the objective of this course is to explain the pathophysiology of various cardiovascular diseases (cardiac arrest, cardiac arrhythmia under anesthesia) and airway disease (thoracic and upper airway disease). As a basis for these abnormalities, cardiopulmonary hemodynamics and biomechanical aspects of ventilation are reviewed. The emphasis is placed on understanding these mechanisms and outlining the surgeon’s response to them.

VETCS 703 Surgical Principles and Surgery of the Integumentary System (Graduate)
Spring. 1.5 credits. For graduate DVMs (or equivalent) in residency or graduate training programs. S-U grades only. Offered every third year.

VETCS 704 Pathophysiology of Urogenital Surgery (Graduate)
Fall. Prerequisite: DVM degree or equivalent in residency or graduate training programs. 1.5 credits. S-U grades only. Offered every third year. Next offered fall 2003. S. Pufini and V. Cook.

This course is designed to review and discuss urogenital surgical procedures in animals and the rational basis for them. Pathophysiology will be stressed. Some classes will consist of reprints with discussion.

VETCS 705 Animal Pain and Its Control
Spring. 2 credits. By permission of instructor. S-U grades optional. Offered odd-numbered years. R. D. Gleed, J. W. Ludders, P. F. Moon, and L. P. Posner. This course is open to third- and fourth-year veterinary medical students, interns, residents, graduate students, and postdoctoral associates who are interested in the fundamental and applied concepts of pain in animals. The course emphasizes the physiologic and pathophysiologic mechanisms involved in pain perception by animals, their responses (physiologic and behavioral) to pain, and the pharmacologic mechanisms underlying anesthetic therapy. The subject material is presented through lectures, group discussions, group readings, and group evaluation of anesthetic protocols.

VETCS 706 Pathophysiology of Neurologic Surgery (Graduate)
Spring. 1.5 credits. Prerequisite: DVM, MD, or equivalent or approval of instructor. S-U grades only. Offered every third year. Next offered spring 2004. A. J. Nixon, E. J. Trotter. This course provides specialized training in neurosurgical techniques and application and discusses pathophysiologic implications of neurosurgical and neurologic diseases.

VETCS 710 Advanced Veterinary Anesthesiology I
Fall. 1 credit. Prerequisite: VTMED 568 Veterinary Anesthesiology or permission of instructor. Third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. Offered every third year. L. P. Posner, R. D. Gleed, J. W. Ludders, and P. F. Moon.

The content of this course is designed for preparation for the American College of Veterinary Anesthesiology examinations. However, the course is also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers are from both inside and outside the college. Topics cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology, and pathology. Clinically oriented lectures are also given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

VETCS 711 Advanced Veterinary Anesthesiology II
Spring. 1 credit. Prerequisite: VTMED 568, Veterinary Anesthesiology or permission of instructor. Third- and fourth-year veterinary students, graduate students, interns, and residents. S-U grades only. L. P. Posner, R. D. Gleed, J. W. Ludders, and P. F. Moon.
The content of the course is designed for preparation for the American College of Veterinary Anesthesiology examinations. However, the course is also suitable for interns and for residency training in other areas such as surgery and internal medicine. Speakers are from both inside and outside the college. Topics cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology, and pathology. Clinically oriented lectures are also given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

Microbiology and Immunology

VETMI 299 Research Opportunities in Microbiology and Immunology
Summer. 6 credits. Prerequisites: one year of basic biology (scores of 5 on Biology Advanced Placement Examination of the College Entrance Examination Board or BIO G 100 level). Letter grade only. A minimum of 120 hours of laboratory time is expected per three course credits.

This is a mentored research apprenticeship program, designed to give laboratory experience to qualified unmatriculated high school students (participating in Cornell Summer College). Students will be placed in research laboratory with designated project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). Students will be graded on preparation, participation in laboratory academic life, and appropriate acquisition of techniques. At the end of the six-week session, he/she will be expected to give a brief (15–20 minute) oral presentation on their work, and submit a manuscript in a form suitable for publication. The faculty director of the laboratory will have ultimate responsibility for evaluating the student’s work and assigning the grade.

VETMI 315 Basic Immunology (Undergraduate) (also Biological Sciences 305)
Fall. 3 credits. Strongly recommended: basic courses in biology, genetics, biochemistry, and biochemistry. S-U grades optional. Offered every third year. J. A. Marsh. This course is a survey of immunology, with emphasis on the cellular and molecular bases of the immune response. More information is available at the biog305 courseinfo web site.

VETMI 320 Principles of Toxicology (Undergraduate) (also Biological Sciences 320 and Toxicology 320)
Spring. 3 credits. Prerequisites: one year each of introductory biology and chemistry, with lab; one semester of organic chemistry lectures and lab instructor. S-U grades optional. Not offered 2002–2003. S. Penningroth, R. Dietert, and S. Bloom. This course is an introduction to the interdisciplinary science of toxicology, drawing on material from biology, chemistry, pharmacology, ecology, earth science, risk analysis, and policy studies. Basic principles of toxicological science are presented by case examples, such as pesticide toxicity to wildlife reproduction and human health risk assessment at a Superfund hazardous chemical waste site. Chemical risk management is described as a sociopolitical process involving the integration of scientific, economic, and cultural factors.
Independent student projects include a toxic chemical profile and a team analysis of hypothetical "environmental risk scenarios." Periodic talks by toxicology faculty acquaint students with the current state of this interdisciplinary branch of biological science. This is an introductory-level course in toxicology. Format: lecture supplemented by case examples. One field trip to a hazardous chemical waste site. Appropriate for nonmajors seeking basic literacy in environmental and human toxicology. “Gateway course” for students interested in 400- and 600-level toxicology courses.

**VETMI 331 General Parasitology** (also BIOIM 331; Undergraduate)
Spring. 2 credits. Prerequisites: zoology or biology. Introductory-level course in toxicology. This course provides an opportunity for the student to work in a research laboratory or carry out a special project under supervision.

**VETMI 404 Pathogenic Bacteriology and Mycology** (also BIOIM 404)
Spring. 2 or 3 credits (3 credits with lecture and seminar). Prerequisites: BIOIM 290 and 291. Seminar is required of graduate students and open to undergraduates with permission of instructor. Maximum enrollment for seminar portion, 15 students. Letter grades only. D. P. Debbie.

This is a course in medical microbiology, stressing systematics, taxonomy, general biology, ecological interactions, and behavior of non-medically important groups. Introduces the major animal parasites, protozoan, nematode, plathyhelminth, acanthocephalan, annelid, and arthropod.

**VETMI 408 Viruses and Diseases I (also Biological Sciences 408)**
Spring. 2 credits. Intended primarily for graduate and undergraduate microbiology majors. Prerequisites: Microbiology 290 and 291 (College of Agriculture and Life Sciences). Recommended. VETMI 315, Genetics 281. Letter grades only. Offered even-numbered years. J. W. Casey.

The course covers basic concepts in virology with emphasis primarily on DNA virus-host interactions, strategies for gene regulation, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasia are highlighted in the context of approaches to prevent or reduce the severity of diseases.

**VETMI 409 Viruses and Disease II (also BIOIM 409)**
Fall. 2 credits. Prerequisites: BIOIM 290 and 291 or permission of instructor. Recommended. BIOIM 408, BIOIM 330–332, BIOIM 432. Offered every other year. G. Whittaker.

This course is complementary to BIOIM 408, Viruses and Disease I, and emphasizes RNA viruses. The course is complete in its own right. As such, completion of BIOIM 408 is not a requirement. The course covers the structure and classification of viruses, entry, genome replication, and virus assembly. Particular emphasis is placed on virus-host cell interactions. Vaccinations, chemotherapy, and evolution of viruses are also discussed.

**VETMI 431 Medical Parasitology** (also BIOIM 417; Undergraduate)
Fall. 2 credits. Prerequisites: zoology or biology. Introductory-level course in toxicology. This course is a systematic study of arthropod, protozoan, and helmint parasites of public health importance, with emphasis on epidemiologic, clinical, and zoontic aspects of these parasitisms.

**VETMI 605 Special Projects in Microbiology (Undergraduate)**
Fall, spring. 1–3 credits. By permission of instructor. Prerequisite: a good background in microbiology or immunology. Preferably, students should have background in pathogenic microbiology and immunology. S-U grades only. Microbiology staff.

The course normally provides an opportunity for the student to work in a research laboratory or carry out a special project under supervision.

**VETMI 700 The Biology of Animal Viruses** (Graduate and Undergraduate)
Fall. 2 credits. Letter grades only. Offered odd-numbered years. C. R. Parrish and staff.

This course examines current topics in studies of animal viruses, including some comparisons with plant viruses where similar mechanisms apply. Selected topics are examined in depth, including the structures of viruses and their components, viral nucleic acids and replication strategies, details of the interactions between viruses and their host cell components and pathways. Other topics include the evolution and selection of viruses, novel approaches to the prevention of virus infection, and methods for antiviral chemotherapy.

**VETMI 702 Molecular Biology and Immunology of Host-Parasite Interactions** (Graduate) (also VTMED 620)
Spring. 2 credits. S-U grades only. Offered even-numbered years. Next term offered to be determined. Faculty. See description for VTMED 620.

**VETMI 705 Advanced Immunology** (Graduate) (also Biological Sciences 705)
Spring. 3 credits. Prerequisite: VETMI 315 Basic Immunology or permission of instructor. Letter grades only. Offered even-numbered years. J. Marsh and staff.

Coverage at an advanced level of molecular and cellular immunology.

**VETMI 707 Advanced Work in Bacteriology, Virology, and Immunology** (Graduate)
Fall, spring. 1–3 credits. By arrangement with instructor. S-U grades only. P. R. Bowser.

**VETMI 708 Selected Topics in Animal Virology**
Spring, odd-numbered years. 2 credits. Letter grades only. Microbiology faculty.

This graduate level course focuses on molecular and cellular mechanisms underlying the immunity to infectious diseases caused by viral, bacterial, protozoan, and helminth pathogens. Topics include immune response initiation; antigen presentation pathways, Th1 and Th2 cytokines in protection and pathology; mechanisms of cytolyis, immune evasion strategies, vaccines. Lectures are based upon recent advances in the field and are accompanied by relevant readings from the current literature.

**VETMI 737 Advanced Work in Animal Parasitology** (Graduate)
Fall, spring. 1–3 credits. For advanced undergraduate, graduate and veterinary students. Letter grades only. D. D. Bowman and other faculty.

This course is intended for advanced undergraduate, graduate and veterinary students with interests in parasitology research.

**VETMI 770 Advanced Work in Avian Diseases** (Graduate)
Fall. 1–3 credits. By arrangement with instructor. Letter grades only. K. A. Schat.

**VETMI 772 Advanced Work in Aquatic Animal Diseases** (Graduate)
Fall. 1–3 credits. By arrangement with instructor. S-U grades only. P. R. Bowser.

**VETMI 773 Advanced Work in Avian Immunology**
Fall. Variable credit. Letter grades only. K. A. Schat.

**VETMI 783 Seminars in Parasitology** (Graduate)
Fall. 1 credits. Open to veterinary students or graduate students; others by permission of instructor. S-U grades only. D. D. Bowman.

This is a seminar series designed to acquaint students with current research in the field of parasitology. The range of topics is determined, in part, by the interests of those participating and may include such topics as the ecology of parasites, parasitic systematics, wildlife parasitology and parasitic diseases of plants and animals, including humans.
Molecular Medicine

VETMM 299 Undergraduate Research in Pharmacology
Summer. 3 to 6 credits (3 credits per 120 contact minutes). Prerequisites: one year of basic biology (Score of 5 on Biology Advanced Placement Examination of the College Entrance Examination Board or BIOG 100 level.) Letter grades only.

R. A. Cerione.

This is a mentored research apprenticeship program, designed to give laboratory experience to qualified unmatriculated high school students (participating in Cornell Summer College) or Cornell undergraduates.

Students are placed in research laboratories with direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). A minimum of 120 hours of laboratory time is expected per three course credits. Students will present their work and submit a manuscript in a form suitable for publication.

The faculty director of the laboratory has ultimate responsibility for evaluating the student's work and assigning the grade.

VETMM 470 Biophysical Methods (also A&EP 470 and BIONB 470)
Spring. 3 credits. Prerequisite: permission of instructor. Letter grades only. M. Lindau.

This course is an overview of the diversity of modern biophysical experimental techniques used in the study of biological systems at the cellular and molecular level found in articles published in the Biophysical Journal. Topics covered include methods that examine both structure and function of biological systems: light microscopy, fluorescence microscopy, Fourier optics and image processing, confocal and multiphoton microscopy, phase contrast, electron microscopy, X-ray diffraction and protein structure determination, multidimensional NMR, spectroscopy, chromatophores, calcium measurements, resonance energy transfer, membrane electrophysiology, ion channels, action potentials, ligand-gated channels, fluctuation analysis, patch-clamp, molecular biology of ion channels, rapid kinetics, caged compounds, transmitter release, capacitance measurements, direct force measurements and other measurements. The course format includes assigned literature reviews by the students on specific topics and individual student presentations of these topics. The course is intended for students of the engineering, physics, chemistry and biological disciplines who seek an introduction to modern biophysical experimental methods. Due to the interdisciplinary nature of the course, students have diverse backgrounds. A basic knowledge of and interest in physics and mathematics is expected but strong attempts are made to give an intuitive understanding of the mathematics and physics involved. Some knowledge of physical chemistry, molecular and cell biology, or neurobiology is helpful. Depending on individual backgrounds, all students find certain aspects of the course easy and other aspects demanding.

VETMM 610 Cellular and Molecular Pharmacology
Fall. 2 credits. By permission of the instructors. S-U grades optional. Offered even-numbered years. G. A. Weinstein and field of pharmacology faculty.

This graduate-level course surveys the molecular and cellular aspects of receptor mechanisms, signaling pathways and effector systems. Topics include drug-receptor interactions; ligand- and voltage-gated ion channels; G protein pathways; growth factor signaling; lipid signaling; calcium; nutrient and nitric oxide signaling; and mechanisms of receptor-mediated effects on neural excitable, electrical pacemakers, muscle contraction and gene expression.

VETMM 611 Systems Pharmacology
Spring. 2 credits. By permission of the instructors. S-U grades optional. Offered even-numbered years. G. A. Weinstein and field of pharmacology faculty.

This graduate-level course surveys systems and organ-related aspects of pharmacology. Topics include drug disposition; pharmacokinetics; autonomic pharmacology; central nervous system pharmacology, pharmacology of inflammation, allergy and platelet function; cardiovascular, gastrointestinal and endocrine pharmacology; and chemotherapy, including antimicrobial agents and cancer chemotherapies.

VETMM 672 Protein Kinetics (also CHEM 672)
Spring. 4 credits. Prerequisite: CHEM 288 or 390, BIONB 331, or permission of instructor. Letter grades only. B. A. Baird.

This course focuses on protein interactions with ligands and consequent changes in structure and activity. Topics include protein structure and dynamics; thermodynamics and kinetics of ligand binding; steady state and transient enzyme kinetics; enzyme catalysis and regulation; and roles of cell membrane receptors in regulating cellular activities.

VETMM 700 Calcium as a Second Messenger in Cell Activation
Spring. 2 credits. By permission of instructor. Lecture-discussion. S-U grades only. Offered odd-numbered years.

C. M. S. Fewtrell.

This course focuses on the regulation of intracellular calcium and techniques for studying calcium movements and distribution in cells. Topics include calcium channels and exchangers, calcium-binding proteins and calcium stores, phosphatidylinositol turnover, release of calcium from intracellular stores and activation of calcium influx; calcium gradients and oscillations; mechanisms of exocytosis and the proteins involved. Each topic is introduced with a lecture followed by discussion of recent papers from the literature.

VETMM 701 Organ System Toxicology (also TOX 611)
Fall. 1 credit. For graduate students in environmental toxicology. S-U grades only. Offered even-numbered years.

W. S. Schwalk.

This is a minicourse on molecular mechanisms involved in chemical toxicity. Specific examples of toxicity in organ systems such as the nervous system, kidney, liver, respiratory tract and cardiovascular system are considered.

VETMM 703 Receptor-Ligand Interactions (also BIONB 790-02)
Fall. 2 credits. By permission of the instructors. S-U grades optional. Offered odd-numbered years. G. A. Weinstein and R. E. Oswald.

The course covers both the practical and theoretical tools for the study of ligand-receptor interactions, emphasizing the quantitative and physical chemical aspects of receptor theory. Topics discussed are basic methods of radioligand binding assays, including separation and measurement of bound and free ligands; characterization of receptor function; analysis of receptor structure; thermodynamic basis of the binding; methods of analyzing equilibrium binding; equilibrium binding for complex binding mechanisms; and kinetics of simple and complex binding mechanisms.

VETMM 704 CNS Synaptic Transmission
Fall. 2 credits. Maximum enrollment 20 graduate students and undergraduate seniors by permission of instructor. S-U grades optional. Offered odd-numbered years.

R. A. Cerione.

This is a survey course in vertebrate central nervous system physiology and pharmacology, and it focuses on mechanisms of neurotransmitter action at the membrane and cellular levels. Roles of selected neurotransmitters in normal and dysfunctional brains are covered. Topics are introduced in lectures and followed up in discussions of recent journal articles.

VETMM 705 Chemistry of Signal Transduction
Fall. 2 credits. S-U grades optional. Offered odd-numbered years.

L. M. Nowak.

This course focuses on the mechanisms of action of GTP binding proteins. Several receptor-coupled signaling systems are examined, including adenylyl cyclase, vertebrate vision, phosphatidylinositol lipid turnover, receptor systems regulating various ion channels and receptors involved in cell growth regulation.

VETMM 706 Growth Factor-Coupled Signaling (also BIONB 734)
Fall. 0.5 credits. By permission of the instructor. S-U grades optional. Offered odd-numbered years.

H. A. Brown.

The general theme of this course is mitogenic signaling pathways. Receptor tyrosine kinases, src, ras and ras-regulatory proteins are covered.

VETMM 707 Protein NMR Spectroscopy (also BIONB 730)
Spring. 2 credits. S-U grades optional. Offered even-numbered years.

The fundamentals of NMR are presented and students acquire the tools necessary to establish an in-depth knowledge of multidimensional, single-pulse NMR experiments. Application of the technique to the analysis of resonance assignment, determination of structure and characterization of dynamics in proteins is presented. Approaches for applying solution NMR techniques to large molecules are discussed.

VETMM 708 Lipid Second Messengers
Spring. 2 credits. Students with a general biology background may enroll by permission of instructor. Lecture-discussion. S-U grades optional. Offered odd-numbered years.

H. A. Brown.
This course covers the biochemical pathways involved in the production of lipid second messengers. These pathways function as essential elements of cellular signal transduction. Topics include pathways of phospholipid synthesis, regulation of major mammalian phospholipases by receptors linked through G-proteins and tyrosine kinase receptors to intracellular cascades and subsequent metabolism of lipid products. The roles of lipids in regulating cell processes, such as membrane structure, exocytosis, cell cycle and apoptosis, are topics for discussion following reviews of recent publications. A background in general biochemistry is recommended.

**VETMM 709 Topics in Cancer Cell Biology**

Fall and spring. 0.5-1 credit per section. Letter grades only. Course offered in odd-numbered years. Students may select modules (sections) of interest to them. B. Pauli.

Section 1—Cell Adhesion Molecules, Signaling, and Cancer

Fall. J. Guan.

This one-credit module introduces the role of cell adhesion receptors in cancer. Emphasis is on the integrin families, plasmamembrane families of cell adhesion molecules and their roles in signal transduction and cancer. Topics include the structure and function of integrins, integrin interactions with cytoketes, intracellular signaling pathways in cell-matrix interactions, integrin-mediated signaling in cell migration, proliferation and survival, changes of integrins in tumors and metastasis, structure and function of cadherins, signaling mechanisms in cell-cell interactions in normal development and cancer.

Section 2 Cell Cycle Analysis (also TOX 713 and TOX 698)

Spring. A. Yen.

This one-credit module presents a brief historical review of the cell cycle; a summary of cell cycle regulatory processes; and practical methods for cell cycle analysis, including mathematical representations. Topics include: growth control of bacterial cell cycle including chemostats, mammalian cell tissue culture, cell synchronization, flow cytometry, age-density representation, G1 regulation, labile regulatory protein models, cell transformation, regulation by growth factors and the cytoketes, cyclin/EF2/RB regulatory model, practical examples for analysis of cell cycle phase durations, cell cycle phase specific growth factor sensitivity, timing of RB protein phosphorylation within the cell cycle. The objective of the course is to present graduate students with methods for cell cycle analyses that will be useful in their research.

Section 3—Principles of Metastasis

B. U. Pauli.

This one-credit module discusses the following principles: the molecular basis of cancer progression leading to metastasis (clonal evolution of metastatically competent cancer cells; contribution of specific oncogenes and tumor suppressor genes); the routes of metastatic spread; the process of invasation emphasizing the roles of matrix-degrading proteases (e.g., tissue metalloproteinases, uPA, etc.) and angiogenesis; host effect on circulating cancer cells: immunological and hemodynamic considerations; organo-

Field of Pharmacology. Topics include, but are not limited to: Mechanisms of Growth-Factor Action—R. A. Cerione; The Role of Calcium in growth factor action—G. A. Weiland; The Role of Calcium in signal transduction in normal and cancer cells—C. M. S. Fewtrell; Mechanisms of Neurotransmitter Release—M. Lindau; Central Nervous System Neurotransmitters—L. M. Nowak; Structure-Function of the Nicotinic Acetylcholine Receptor—R. E. Oswald.

**VETMM 760 Directed Readings in Pharmacology**

Fall, spring, and summer. 1-3 credits each topic. By arrangement with the instructor. Letter grade or S-U option. Reading and discussion. Field of pharmacology faculty. Individual members of the Graduate Field of Pharmacology offer directed readings and discussions on pharmacological topics to small groups or to individual students. Topics include, but are not limited to: Receptor Mechanisms—G. A. Weiland; Biochemical Neuropharmacology—G. A. Weiland; Alkaloid Neurotransmitters—L. M. Nowak; Stimulus-Secreation Coupling—C. M. S. Fewtrell; Cell Calcium—C. M. S. Fewtrell.

Population Medicine and Diagnostic Sciences

**VTPMD 299 Undergraduate Research in Epidemiology**

Summer. 3 credits. Limited to undergraduate students. Letter grades only. Prerequisites are one year of basic biology (Score of 5 on Biology Advanced Placement Examination of the College Entrance Examination Board or BIOG 100 level). Permission of the instructor can be submitted for the prerequisite. J. Scarlett.

This is a mentored research apprenticeship program designed to give laboratory experience in applied epidemiology to qualified unmatriculated high school students (participating in Cornell Summer College) or Cornell underclassmen. Students are placed in a research laboratory with a designed project under the direct supervision of a research associate (upper-level graduate student, post-doc, or faculty member). A minimum of 120 hours of laboratory time is expected per three course credits. Students are graded on preparation participation in laboratory academic life and appropriate acquisition of techniques. At the end of the six-week session, students are expected to give a brief (15-20 minute) oral presentation on their work and submit a manuscript in a form suitable for publication. The faculty director of the laboratory has ultimate responsibility for evaluating each student's work and assigning the grade.

**VTPMD 664 Introduction to Epidemiology (Graduate)**

Fall. 3 credits. Prerequisites: Statistics and Biometry 601 (College of Agriculture and Life Sciences) may be taken concurrently or by permission of instructor. S-U grades optional. H. N. Erb.

Lectures and discussions deal with the fundamentals of epidemiology. Topics include outbreak investigation, causal association, data quality, the design and ethical constraints of clinical trials, and infectious-disease epidemiology.

**VTPMD 665 Study Designs (Graduate)**

Spring. 2 credits. Prerequisites: VTPMD/ VETCS 664 and Statistics and Biometry 601 (College of Agriculture and Life Sciences). S-U grades optional. H. O. Mohammed.
Design and interpretation of cross-sectional, case-control and cohort studies (including controlled clinical trial) are covered. Design issues include sample size, bias and relative advantages and disadvantages.

The course objectives are (1) to know the difference between epidemiologic study designs and related advantages and disadvantages of each; (2) given a problem (usually a field situation), be able to design an appropriate epidemiologic study; (3) be able to effectively analyze and criticize published epidemiologic studies.

The course consists of lectures on the principles of epidemiologic study design and related topics, case-control and cohort studies, case-control studies and cross-sectional studies (ambidirectional and other hybrid designs).

VTPMD 666 Advanced Methods in Epidemiology (Graduate)
Fall, 3 credits. Prerequisites: VTPMD/ VETCS 665 and Statistics and Biometry 602 (College of Agriculture and Life Sciences). S-U grades optional. Y. T. Grohn. Concepts introduced in VTPMD 664 and VTPMD 665 are further developed, with emphasis on statistical methods. Topics include interaction, effect modification, stratified analysis, matching and multivariate (logistic regression) methods, survival analysis and strategies for the analysis of epidemiologic data.

VTPMD 707 Clinical Biostatistics (Graduate)
Spring, 2 credits. For veterinary residents or graduate students. Letter grades only. Offered odd-numbered years. H. N. Erb, Y. T. Grohn, H. O. Mohammed and J. M. Scarlett.
This course enhances the theory behind and interpretation of parametric and nonparametric statistical techniques commonly used in research/clinical medicine. Students analyze small data sets using a commercial statistical software package.

VTPMD 708 Epidemiology Seminar Series (Graduate)
Fall, spring, summer. Credit hours TBA. Must be registered in masters or Ph.D. program and permission of the graduate faculty member concerned. S-U grades only. Epidemiology faculty.
This course enables students outside the section of Epidemiology to receive graduate research credits for projects with epidemiologic components.

VTPMD 769 Doctoral-Level Thesis Research
Fall, spring, and summer. Credits and hours TBA. Must be registered in masters or Ph.D. program and permission of the graduate faculty. This course enables students in the section of epidemiology to receive graduate research credits for their doctoral research.

VTPMD 799 Independent Studies in Epidemiology
Fall, spring, 1-3 credits. H. N. Erb, Y. T. Grohn, H. O. Mohammed, and J. M. Scarlett.
The purpose of this course is to investigate an epidemiologic topic with one of the instructors. It provides experience in problem definition, research design, and the analysis of epidemiologic data.

FACULTY ROSTER
Abou-Madi, Noha, D.V.M., U. of Montreal (Canada). Lecturer, Clinical Sciences
Aguirre, Gustavo D., Ph.D., U. of Pennsylvania.
Alfred H. Casparry Professor, Clinical Sciences
Ainsworth, Dorothy M., Ph.D., U. of Wisconsin–Madison. Assoc. Prof., Clinical Sciences
Alcaraz, Ana, D.V.M., U. of Autonoma Natl De Mexico. Lecturer, Biomedical Sciences
Anicak, Denis, Ph.D., U. of Cambridge (England). Dorothy Havemeyer McConville Professor of Microbiology and Immunology
Appel, Leslie, D.V.M., Cornell U. Instructor, Clinical Sciences
Appel, Max J., Ph.D., Cornell U. Prof. Emeritus, Microbiology and Immunology
Appleton, Judith, Ph.D., U. of Georgia. Prof., Microbiology and Immunology
Baines, Joel, Ph.D., Cornell U. Assoc. Prof., Microbiology and Immunology
Balkman, Cheryl, D.V.M., Cornell U. Instructor, Clinical Sciences
Barr, Stephen C., Ph.D., Louisiana State U. Assoc. Prof., Clinical Sciences
Baustian, Mark D., M.S., Portland State U. Lecturer, Biomedical Sciences
Bell, Robin G., Ph.D., John Curtin School (Australia). Prof., Microbiology and Immunology
Beyenbach, Klaus, Ph.D., Washington State U. Prof., Biomedical Sciences
Senior Lecturer, Biomedical Sciences
Bliss, Stuart, D.V.M., Cornell U. Instructor, Clinical Sciences
Bloom, Stephen E., Ph.D., Penn State U. Prof., Microbiology and Immunology
Bowman, Dwight D., Ph.D., Tulane U. Assoc. Prof., Microbiology and Immunology
Bowser, Paul R., Ph.D., Auburn U. Prof., Microbiology and Immunology
Brown, H. Alex, Ph.D., U. of North Carolina–Chapel Hill. Assoc. Prof., Molecular Medicine
Butler, Emily C., D.V.M., Cornell U. Instructor, Clinical Sciences
Gassett, Alison P., Ph.D., U. of Rochester. Prof., Emeritus, Biomedical Sciences
Casey, James W., Ph.D., U. of Chicago. Assoc. Prof., Microbiology and Immunology
Cerone, Richard A., Ph.D., Rutgers U. Prof., Molecular Medicine
Chang, Yung Fu, Ph.D., Texas A& M. Assoc. Prof., Population Medicine and Diagnostic Sciences
Chastin, Dan, U. of Rochester. Assoc. Prof., Biomedical Sciences
Clark, Theodore G., Ph.D., SUNY–Stony Brook. Asst. Prof., Microbiology and Immunology
Colditz, Ruth N., Ph.D., John Curtin Research Center. Asst. Prof., Molecular Medicine
Cook, Vanessa L., Veterinary MB, Cambridge U. (U.K.). Lecturer, Clinical Sciences
Cooper, Barry J., Ph.D., U. of Sydney (Australia). Prof., Biomedical Sciences/ Administration
Cummins, Kevin, D.V.M., Cornell U. Instructor, Clinical Sciences
Debbie, Dorothy P., U. of Michigan. Lecturer, Microbiology and Immunology
Denkers, Eric Y., Ph.D., Wisconsin–Madison. Assoc. Prof., Microbiology and Immunology
deLahunta, Alexander, Ph.D., Cornell U. James Law Professor of Veterinary Anatomy, Biomedical Sciences
Dhupa, Neel, Bachelors of Veterinary Medicine, India.
Dietert, Rodney R., Ph.D., U. of Texas–Austin. Prof., Microbiology and Immunology
Divers, Thomas J., D.V.M., U. of Georgia. Prof., Clinical Sciences
Dobson, Alan, Ph.D., U. of Cambridge (U.K.). Prof. Emeritus, Biomedical Sciences
Dobrow, Edward J., Ph.D., U. of Pittsburgh. Assoc. Prof., Population Medicine and Diagnostic Sciences
Ducharme, Normand G., D.V.M., U. of Montreal (Canada). Prof., Clinical Sciences
Dykes, Nathan L., D.V.M., Cornell U. Lecturer, Clinical Sciences
Earnest-Koons, Kathy, M.S., Penn State U. Instructor, Microbiology and Immunology
Erb, Hollis N., Ph.D., U. of Guelph (Canada). Prof., Population Medicine and Diagnostic Sciences

Fortune, Joanne E., Ph.D., Cornell U. Prof., Microbiology and Immunology
Fox, Francis H., D.V.M., Cornell U. Prof., Emeritus, Clinical Sciences
French, Tracy W., D.V.M., Purdue U. Assoc. Prof., Population Medicine and Diagnostic Sciences
Furin, Susan L., D.V.M., U. of Georgia. Prof., Clinical Sciences
PROGRAM OF STUDY

Introduction

The College of Arts and Sciences is a community of about 4,000 undergraduates and 600 faculty members. It is also a graduate school and research center. Altogether it attracts faculty whose research and scholarly and creative work require first-rate academic facilities and who bring to all their students the profound questioning and exciting ideas of current scholarship. Finally, the college exists within a university of other colleges at Cornell—about 19,000 undergraduate and graduate students and 1,500 faculty members. This wider community provides depth and diversity of applied and professional studies beyond what one college of the liberal arts and sciences alone can offer. Students studying the liberal arts and sciences may draw upon the knowledge and facilities of the other colleges at Cornell to complement their studies. Abundant variety and outstanding quality in many fields, including interdisciplinary fields, and emphasis on individual academic freedom and responsibility give the college the university its distinctive character.

The richness of the college's undergraduate curriculum is extraordinary; there is no course that all students must take, and there are nearly 2,000 from which they may choose. By choosing courses each semester, students design their own education. They develop known interests and explore new subjects. An education in the liberal arts and sciences means honing one's critical and imaginative capacities, learning about oneself in nature and culture, and gaining experience with views of the world radically unlike one's own. All this is highly individual, and the college relies on each student and faculty advisor to design a sensible, challenging, and appropriate course of study.

Yet the faculty believes that each student's education should have certain common qualities. These include familiarity with several different ways of knowing that are reflected in the various disciplines and fields of study. In addition to these general areas of knowledge, students acquire effective writing and quantitative skills, study foreign languages, achieve cultural breadth, and concentrate on one particular field through which they deepen their imaginative and critical thinking as fully as possible. To accomplish these objectives, the college has certain requirements for graduation.

The College of Arts and Sciences awards one undergraduate degree, the Bachelor of Arts degree

Summary of Requirements

1) First-Year Writing Seminars: two courses. (See John S. Knight Institute for Writing in the Disciplines p. 550.)

2) Foreign language: proficiency in one language or qualification in two; zero to four courses, depending on background.

3) Distribution: nine courses, three of which are satisfied with a major in humanities or social sciences and four of which are satisfied with a major in sciences.

4) Breadth: two courses (may be among courses for distribution, major, or electives).

5) Major.

6) Electives: four or five courses (at least 15 credits) not used to fulfill other requirements and not in the major field.

7) Residence: eight full-time semesters, unless a student can successfully complete all other requirements in fewer than eight semesters and meet the additional criteria to accelerate graduation. (See below under "Acceleration.""

8) 34 courses: a three- or four-credit course counts as one course. A two-credit course counts as half a course; a one-credit course does not normally count toward the requirement; a six-credit language course counts as one and one-half courses. (See below under "Courses and Credits" for some one-credit courses in music, dance, and theatre performance that can be cumulated to count as one-half course and for counting five and six credit courses.

9) Credits: a total of 120 academic credits, of which 100 must be taken in the College of Arts and Sciences. (Note "Non-credit courses below.")

10) Physical education: completion of the university requirement (passing a swim test and two one-credit non-academic courses). Please note that physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester.

11) Application to graduate. (See below under "Graduation."

Explanation of Requirements

Foreign Language Requirement

The faculty considers competence in a foreign language essential for an educated person. Studying language other than one's own helps students understand the problems of language, our fundamental intellectual tool, and enables understanding of another culture for exploration. The sooner a student acquires competence, the sooner it will be useful. Hence, work toward the foreign language requirement should be undertaken in the first two years. Courses in foreign languages and/or literature are taught in the College of Arts and Sciences by the following departments: Africana Studies and Research Center, Asian Studies, Classics, German Studies, Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

The language requirement may be satisfied in one of two ways:

1) by attaining proficiency (competence at the intermediate level) in one language or

2) by attaining qualification (mastery of an introductory sequence) in two languages.

Proficiency

Proficiency may be attained in languages by passing an intermediate (usually 200-level) Cornell course (or Chinese or Japanese 161). Introductory courses in some less commonly taught languages are taught at the 200-level or above; (for example, Ancient Egyptian and Welsh); these do not confer proficiency. Proficiency can also be earned by examination. A score of 4 or 5 on an AP literature exam in French, Italian, or Spanish earns proficiency and three credits. A score of 4 or 5 on the AP exam in German earns proficiency and three credits. Students with those scores should also take the Cornell Advanced Standing Examination (CASE), given during orientation week, to see if they can earn three additional credits and to obtain appropriate placement for further language study. A score of 4 or 5 on an AP language exam earns three credits but does not carry with it proficiency. However, a student who received a score of 4 or 5 on an AP language exam can earn proficiency and an additional three credits by scoring high enough on the CASE. Students with appropriate scores on Cornell Language Placement tests or SAT II examinations are also eligible to take the CASE (see chart below). Native speakers and writers of a language other than English may earn proficiency and six credits by taking the CASE or an individual exam (if no CASE is available and a qualified examiner is here).

Qualification

Qualification may be attained in any of the following ways:

1) Three years of high school study in any one language gives qualification in that language. No demonstration of competence is necessary. Note, however, that this route to qualification does not guarantee entrance into an intermediate level course. Students who want to continue studying the language must be placed in the appropriate course through an examination. Being placed below the intermediate level does not cancel the qualification.

2) Passing the requisite Cornell course, the last course of the introductory sequence.

Note: Except in the case of Sanskrit, completion of language sequences 131-132 does not constitute qualification.

3) Achieving the requisite score (see chart) on the SAT II taken in high school or a score of 56 or higher on the appropriate Cornell LP (Language Placement) test. Students may earn a score of 56 on the placement test at the end of a course
Placement in Language Courses and Advanced Placement Credit

Placement

Entering students who have had two or more years of high school study in a language, who have been awarded credit for language work at another college or university, or who are native speakers, bilingual, or have spoken the language at home, may enroll in a course in the same language only after being placed by examination. The placement exam may have been taken in high school (SAT II, taken after the last course, or AP, if the score was 4 or 5) or at Cornell (LP test). Students may, but need not, retake a language test if a year or more has passed since last taking it. Being placed into the first course at an intermediate level, course does not earn credit toward the degree. Degree credit is earned only for demonstrated mastery of work equivalent to the first course at an intermediate level at Cornell, and placement into the second intermediate course.

Placement Tests and Advanced Placement Credit

1) The following language placement and advanced standing tests are scheduled at the beginning of each semester: Chinese, Japanese, and Korean (schedule available from the Department of Asian Studies, 388 Rockefeller Hall); German (schedule available from the Department of German Studies, 226 Goldwin Smith Hall); French, Italian, and Spanish (schedule available from the Department of Romance Studies, 303 Morrill Hall); and Russian (schedule available from the Department of Russian Literature, 226 Morrill Hall). The Advanced standing examination in French, German, Italian, Russian, and Spanish, is called the CASE (Cornell Advanced Standing Examination). Eligibility for the CASE may be determined from the placement tables. In Russian only: all students seeking placement take the CASE.

Native speakers of Spanish who have completed their secondary education in a Spanish-speaking country do not take the CASE. For these students, the Spanish program offers a walk-in service, the Native Language Accreditation for Spanish, in the third week of September and the first week of February. Students interested in this service should contact Eleanor Dozier in Morrill Hall. Spanish-English bilinguals who do not fit the definition of "native speakers," and whose test scores make them eligible, should take the CASE.

2) Arabic: departmental examination, Department of Near Eastern Studies, 360 Rockefeller Hall.

3) Greek and ancient modern: departmental examination, Department of Classics, 120 Goldwin Smith Hall.

Substitutions to the Language Requirement

Outright waivers of the requirement are never granted. However, rarely and as appropriate, legitimate requests for substitutions require evidence of inability to learn foreign languages in a classroom setting. Most students provide documentation of learning disabilities relating to foreign language acquisition (e.g., an auditory processing problem) to Student Disability Services, 420 Computing and Communications Center, 255–4545. Other students who may never have been tested for a disability reveal it through repeated and dedicated but vain attempts in formal language courses. A poor grade in a Cornell introductory language course or taking the LP exam repeatedly and unsuccessfully is not adequate evidence.

Students who wish to request a substitution for the normal requirement should meet with Dean Walbridge, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall. If Dean Walbridge determines that the request has merit, the student meets with the Language Substitution Review Committee. This committee makes the final decision for or against a substitution. If a substitution is allowed, the committee works with the student to select substitute courses.

Distribution Requirements

In satisfying the distribution requirements, students become acquainted with a broad range of subject matter and points of view among disciplines in the college and explore areas that may be entirely new to them. Or, to look at it the other way, as first-year students explore subjects that interest them, they begin to satisfy distribution requirements. Consequently, first-year students should take courses to prepare for possible majors and to explore subjects new to them and take no course only in order to satisfy a distribution requirement. Although students may complete distribution requirements over eight semesters, they can take advanced courses in subjects they (perhaps unexpectedly) find intriguing only if they have completed the introductory prerequisites. Consequently, students should not postpone satisfying distribution requirements until the last semesters. Once sure of a major, students should consider which distribution requirements are yet unfilled and how to fulfill them with courses that complement their overall program.

Students must take a total of nine courses of three or more credits each for the distribution requirements: four courses from Groups I (science) and II (quantitative reasoning) below, at least two of which are from Group I and at least one of which is from Group II (for example, one chemistry, one physics, one geology, and one mathematics); five courses from Groups III (social science) and IV (humanities and the arts) below, with at least two in each group and two in the same department (for example, one course in sociology, one in history, one in history of art, and two in theater arts). Courses that satisfy distribution requirements are listed and described in their departmental sections. The Roman numeral—I, II, III, or IV indicates which group they satisfy. If there is no numeral at all, the course satisfies no distribution requirement. Courses in the major may be applied to the distribution requirements (unless prohibited by one of the restrictions noted under restrictions on applying AP credit, transfer credit, and Cornell courses to distribution requirements).

I. Physical and Biological Sciences

In fulfilling the four courses in science and quantitative reasoning, students must take at least two science courses. At least one of these must be from the primary list of courses in science departments in the College of Arts and Sciences.

Primary list: (The courses listed individually are all cross-listed in an A&S science department.)

Animal Science:
427 Fundamentals Endocrinology

Anthropology:
275 Human Biology and Evolution
371 Human Paleontology

474 Lab and Field Methods in Human Biology

Applied & Engineering Physics:
470 Biophysical Methods

Astronomy: all courses

Biological Sciences: all 3 or 4 credit courses except BIO G 200 and BIO G 499 (unless permission is obtained from the Director of Undergraduate Studies in biology), BIO G 209, BIO G 498, and BIOSM 204, any combination of two from BIO 101–104.

Biological & Environmental Engineering: 456 Biomechanics of Plants

Biology & Society:
214 Biological Basis of Sex
461 Environmental Policy

Chemistry and Chemical Biology: all courses

Cognitive Studies:
111 Brain, Mind, & Behavior

Computer Science:
321 Numerical Methods in Computational Molecular Biology

Earth and Atmospheric Sciences: all courses except 150, 250

Entomology:
400 Insect Development
452 Herbivores and Plants
533 Princ/Pract Historical Biogeography
454 Insect Ecology
455 Stream Ecology

Feminist, Gender and Sexuality Studies (previously Women’s Studies):
214 Biological Basis of Sex

Food:
394 Applied and Food Microbiology

History:
287 Evolution

Horticulture:
243 Taxonomy of Cultivated Plants

Math:
362 Dynamic Models in Biology

Natural Resources:
275 Human Biology and Evolution
456 Stream Ecology

Nutritional Science:
475 Mechanisms of Birth Defects

Physics: all courses except 205, 209, 210

Plant Pathology:
407 Nature of Sensing and Response

Psychology:
111 Brain, Mind, & Behavior
322 Hormones and Behavior
323 Biopsychology Laboratory
352 Biopsychology of Learning and Memory
390 Introduction to Sensory Systems
424 Neuroethology
429 Olfaction and Taste: Structure and Function
451 Effects of Aging on Sensory and Perception Systems
460 Human Neuroanatomy
492 Sensory Function

SCAS:
398 Environmental Microbiology

Students may select additional science courses from the following supplementary list:

Animal Science:
100 Domestic Animal Biology I
150 Domestic Animal Biology II
212 Animal Nutrition

Anthropology:
101 Introduction to Anthropology
208 The Evolution of Human Mating
390 Primate Behavior and Ecology

Applied and Engineering Physics:
110 The Laser and its Applications in Science, Technology, and Medicine

Electrical and Computer Engineering:
200 Intro to Info Science & Tech

Electrical Engineering:
430 Lasers and Optical Electronics

Engineering:
110 The Laser and its Applications in Science, Technology, and Medicine

Entomology:
212 Insect Biology

Food:
200 Introductory Food Science

Materials Science and Engineering:
281 The Substance of Civilization

Natural Resources:
201 Environmental Conservation
210 Introductory Field Biology
301 Forest Ecology

Nutritional Science:
115 Nutrition and Health

Psychology:
223 Introduction to Biopsychology
326 Evolution of Human Behavior

Theatre:
312 The Moving Body: Form and Function
II. Quantitative and formal reasoning

In completing four courses in science and quantitative reasoning, students must take at least one of the following courses:

- Biometry: 301 (formerly 261) Statistical Methods
- City and Regional Planning: 223 Introduction to Statistical Reasoning
- 321 Introduction to Quantitative Methods

Computer Science:
- 100 Introduction to Computer Programming
- 211 Computers and Programming
- 312 Structure and Interpretation of Computer Programs
- 486 Applied Logic

Economics:
- 319 Introduction to Statistics and Probability
- 320 Introduction to Econometrics
- 321 Applied Econometrics

Industrial & Labor Relations:
- 210 Statistical Reasoning I
- 211 Statistical Reasoning II

Mathematics: all courses except 101 and 109
- Operations Research & Industrial Engineering
- 115 Engineering Applications of OR&IE

Philosophy:
- 231 Introduction to Deductive Logic
- 331 Deductive Logic
- 583 Choice, Chance and Reason
- 311 Mathematical Logic
- 452 Topics in Logic
- 436 Intensional Logic

Physics:
- 205 Reasoning about Luck
- 209 Relativity and Chaos
- 210 Random Classical & Quantum Physics

Psychology:
- 350 Statistics and Research Design

Sociology:
- 301 Evaluating Statistical Evidence

If students choose two courses from this list to satisfy part of the distribution requirement, those two courses may not have significant overlap. For example, students may not choose two beginning courses in statistics. Nor may they earn credit toward the degree for overlapping courses: Biometry 301, formerly 261 (Statistical Methods I), CRP 223, (Intro to Statistical Reasoning), IIR 210 (Statistical Reasoning I), MATH 171 (Statistical Theory and Application in the Real World), PSYCH 350 (Statistics Research and Design), SOC 301 (Evaluating Statistical Evidence).

III. Social sciences and history

The following departments are included in Group III, social sciences and history. Most (although not all) courses in these departments satisfy distribution in this group. Students should consult the departmental listings for options that are noted as satisfying Group III.

- African Studies
- American Studies
- Anthropology
- Archaeology
- Asian American Studies
- Asian Studies
- Biology and Society
- Cognitive Studies
- Feminist, Gender & Sexuality Studies

Near Eastern Studies
- Religious Studies
- Science and Technology Studies

Finally, CRP 100 (The American City) and CRP 101 (Global City) and ENGRG 250 (Technology in Society) and ENGRG 298 (Inventing an Information Society) satisfy distribution in Group III.

IV. Humanities and the arts

The following departments are included in Group IV, humanities (literature and philosophy) and the arts. While language and logic courses do not count for distribution in this group, most (although not all) other courses in these departments do. Students should consult the departmental listings for options that are noted as satisfying Group IV.

- Asian Studies
- Classics
- Comparative Literature
- English
- German Studies
- History of Art

Music: one course must be in music history, culture, or theory. If a student chooses to satisfy part of the distribution requirement with more than one music course, an acceptable sequence may include four credits (two half courses) in musical performance, organizations, or ensembles combined with theory, history, and culture courses. Students may count performance credits as only one course toward distribution.

Philosophy
- Romance Studies (French, Italian, and Spanish Literature)
- Russian Literature
- Theatre, Film, and Dance

In addition, interdisciplinary departments and programs offer courses in Group IV. Again, students should consult the departmental and program listings to find which courses satisfy Group IV.

- Africana Studies
- American Studies
- Anthropology
- Archaeology
- Asian American Studies
- Asian Studies
- Biology and Society
- Feminist, Gender & Sexuality Studies

Near Eastern Studies
- Religious Studies
- Science and Technology Studies
- Visual Studies

Restrictions on Applying AP Courses and Credit from Other Institutions to the Distribution Requirements

Students may apply up to two courses of approved advanced placement or transfer credit toward distribution requirements in Groups I and II (physical/biological sciences and quantitative/formal reasoning), as long as they take at least one course from the primary list in an Arts and Sciences science department at Cornell. Transfer credit applied to distribution in Group II (quantitative/formal reasoning) must be in mathematics, statistics, or computer science, it may not be in other quantitative subjects. Courses taken at other institutions in mathematics or computer science must be approved for transfer and distribution credit by the Departments of Mathematics or Computer Science respectively. Statistics courses taken at other institutions in social science departments must be approved by the relevant department in Arts and Sciences (e.g. psychology or sociology), statistics courses taken in mathematics or statistics departments must be approved by the Department of Mathematics.

Students may apply no advanced placement or transfer credit from other institutions toward satisfaction of the distribution requirements in Groups III and IV (social sciences/history and humanities/arts).

Students who transfer to the college from another institution or who enter through the Mid-Year Freshman Program are under the above rules for advanced placement credit, but are eligible to have credit for post high school coursework taken during regular semesters (not summer school) at their previous institution count towards all distribution requirements. Transfer students receive a detailed credit evaluation when they are accepted for admission.

Restrictions on Applying Cornell Courses to the Distribution Requirement

1) First-Year Writing Seminars may not count toward any other college requirement.
2) No single course may satisfy more than one distribution requirement.
3) Students may count courses in their major towards distribution. However, courses offered or cross-listed by their major department may be counted only toward the distribution category of the major department itself. For example, a history major may not count a course cross-listed between history and a literature department toward distribution in the humanities.

Breadth Requirements

Students must include in their undergraduate program at least one Arts and Sciences course that focuses on an area or a people other than those of the United States, Canada, or Europe and one course that focuses on an historical period before the twentieth century. Courses that satisfy the geographic breadth requirement are marked with an @ when described in this catalog. Courses that satisfy the historical breadth requirement are marked with a #. Many courses satisfy both requirements, and students may in fact use the same course to satisfy both. Students may use courses satisfying distribution, major, or elective—but not writing—requirements in satisfaction of either of the breadth requirements. They may also apply Cornell courses confering proficiency in a non-Western language toward the geographical breadth requirement. They may not apply to either of the breadth requirements (a) advanced placement credit, (b) credit awarded by examination, or (c) if matriculating as freshmen (unless through the Mid-Year Freshman Program), transfer credit.
The Major
In their last two years, students devote roughly one-half their time to acquiring depth and intellectual capacities through a subject they find especially interesting. The major does not necessarily define a student’s intellect or character or lead directly to a lifetime occupation, although it sometimes does some of each. Through the major, students focus and develop their imaginative and intellectual capacities through a subject they find especially interesting.

Most departments and programs specify certain prerequisites for admission to the major; they are found on the following pages in the descriptions of each department and program.

Students may apply for acceptance into the major as soon as they have completed the prerequisites and are confident of their choice. This may be as early as the second semester of freshman year, and may be no later than second semester of sophomore year. To apply, they take a copy of their transcript to an appointment with the director of undergraduate studies in their prospective major. A department or program may refuse admission into the major if the applicant’s performance does not meet established standards. A student without a major at the beginning of the junior year is not making satisfactory progress toward the degree. That student must meet with an advising dean, and may not be allowed to continue in the college.

Available majors
Majors are offered by each of the departments. There are also majors in American studies, archaeology, biology and society, religious studies, science of earth systems, and women’s studies.

Some students want to pursue a subject that cannot be met within an established major. They may plan, with the help of their faculty adviser, an independent major that includes courses from several departments and even colleges. See “Independent Major Program,” under “Special Academic Options.” Whatever the major—chemistry, math, philosophy, or music—graduates from the College of Arts and Sciences earn the one degree the college awards, a Bachelor of Arts.

Double Majors
Only one major is required for graduation. Some students choose to complete two majors. No special permission or procedure is required; students simply become accepted into both majors and find an adviser in each department. Both majors are posted on the official transcript.

Electives
Of the 34 courses and 120 credits required for graduation, at least 15 credits are free electives. How students use these electives frequently makes the difference between an ordinary and a truly interesting course of study. Students must complete at least four courses and at least 15 credits offered outside the major field and not used to fill another requirement except breadth. AP credits not otherwise used may be used to fulfill elective requirements. Students may group electives to complete one of the established interdisciplinary concentrations or may form their own unofficial concentration or “minor” separate from their major. Students may also group electives into a second major. Since only one major is required, students may count courses in a second major as electives. Some students choose to explore a variety of subjects, some develop a concentration in a department or subject outside Arts and Sciences to gain applied training or specialized knowledge.

Residence
The College of Arts and Sciences is a residential college for students who devote their energy and spirit to full-time study. The faculty believes that integrated, full-time study for a defined period best promotes intellectual and creative development and best prepares people for citizenship and careers.

Consequently, eight semesters of full-time study in the College of Arts and Sciences are integral to earning the A.B. degree. Even if the minimum requirements can be met in fewer semesters, the faculty of the college expects students to take advantage of the resources of the university for eight full terms and obtain as rich and advanced an education in the liberal arts and sciences as possible. Students may complete their undergraduate degrees with credits earned at other institutions or as part-time or summer students at Cornell only if they have completed their eight full-time semesters of residence or satisfied the criteria listed below under “Part-time study in final semester.”

For transfer students from other institutions, each full semester of study at their previous institution counts as one of the eight semesters of residence. However, even if transfer students have completed more than four full semesters at their previous institution, they must spend a minimum of four semesters on campus at Cornell, satisfy all Cornell degree requirements, and be enrolled in the College of Arts and Sciences. Transfers from other colleges at Cornell must spend four semesters on campus in Ithaca as students in the Internal Transfer Division or in the college.

Approved study abroad, SEA Semester, Urban Semester, and Cornell-in-Washington are considered semesters of residence, but not as semesters on the Cornell campus. Students may spend no more than two semesters on such programs and must be on campus during their last semester.

Semesters of extramural study in Cornell’s Division of Continuing Education, semesters of study at other institutions while on leave from Cornell, and summer sessions anywhere do not count as semesters of residence.

Acceleration
Some students decide that they do not need eight semesters of residence to obtain a solid undergraduate education. These students must complete the first four semesters and spend four full semesters in the major. Benefiting from opportunities for advanced, seminar, and independent (sometimes honors) work is what best characterizes undergraduate education in the college. Students considering acceleration should discuss their plans with their major adviser.

Accelerants apply to graduate one semester before their intended new graduation date. They obtain an “Application to Graduate” for this purpose in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

1. Accelerants must meet either condition a or b.

a. Complete 60 credits before beginning their last four semesters in the college and complete the prerequisites for admission to the major in time to spend four semesters in the major.

b. Pass 48 credits in College of Arts and Sciences courses numbered “300” and above. Upper-level courses taken in other colleges at Cornell University may count as College of Arts and Sciences credit only if approved for the major.

2. All accelerants are required to complete 100 credits at Cornell at “C” (not C-) or above. Courses completed with a grade of “S” will count toward the 100 credits. Advanced placement credits do not count toward this requirement.

3. Students may not use credits earned while on leave of absence to reduce their terms of residence.

4. Accelerants may not finish the degree with credits earned in summer or winter session, through part-time study (unless they meet the guidelines for part-time study), or at an off-campus program, including Cornell-in-Washington, SEA Semester, Urban Semester, or study abroad. That is, they may not exit through any program other than a regular, full-time Cornell semester in Ithaca.

Students matriculating as freshmen may not compress their undergraduate education into fewer than six semesters of residence. Transfer students, both from other institutions and from other colleges at Cornell, must satisfy the eight semesters of residence requirement and must spend at least four semesters in the college on campus in Ithaca.

Ninth term
Students who can graduate in eight semesters should do so. If a worthy academic plan for a full ninth or tenth semester is approved, the student enrolls in the college as a special student for the additional work. Such a status allows enrollment in a full schedule of courses for full tuition and full use of campus resources, but allows financial aid only from loans or outside agencies, not from Cornell funds. Students who need only a part-time schedule of courses may options to take four full semesters of extramural study, and may exit through any program other than a regular, full-time Cornell semester in Ithaca. Such permission is normally granted only to:

1) Students who have been ill or experienced other untoward circumstances beyond their control.

2) Students who were academically under-prepared for the curriculum at Cornell and needed to begin with a lighter schedule of courses than normal. (See Dean Turner, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall, about this option.)

Part-time study
Students in good academic standing may take a personal leave of absence and enroll in the Division of Continuing Education, but such semesters of extramural study do not count as terms of residence and credits from such
Art and Sciences - 2002-2003

Part-time study in special circumstances

The college and university support students (with financial aid and services) as best they can to make full-time study possible. Occasionally, however, extraordinary but nonfinancial personal, academic, or medical circumstances may make becoming a part-time student necessary and appropriate. Students in good academic standing who face extraordinary situations may petition the Committee on Academic Records for part-time status and proration of tuition in the college.

Students requesting part-time status because of documented disabilities that, under the Americans with Disabilities Act, require appropriate accommodations, should discuss their situation with Dean Walbridge. Otherwise, students should meet with a dean of their class.

Part-time study in final semester

Students may complete their degrees as part-time students paying prorated tuition at Cornell after fewer than eight semesters of full-time residence only if:

1) They have completed all requirements by the end of the sixth or seventh term, met the criteria for accelerated graduation, and are remaining to complete study beyond what is required for the degree.

2) They are writing an honors thesis in the eighth semester and can complete all degree requirements by taking two courses, one of which is the thesis itself.

Students must obtain approval of an advising dean and complete the pre-rated tuition form in the semester prior to the part-time semester and confirm their status and registration with college registrar Sally O'Hanlon in 55 Goldwin Smith Hall.

Courses and Credits

Counting courses and credits

Students must complete at least 34 courses to graduate—that is, an average of four courses during each of six semesters and five courses during each of two semesters. A three- or four-credit course counts as one course; a two-credit course counts as one-half course. Single-credit courses do not count as part of the 34 except in certain cases when they form a part of a series and two in the same series can be aggregated to count as one-half course (certain offerings in the Departments of Music and of Theatre, Film and Dance fall into this category). Three one-credit courses do not aggregate to count as one course. A six-credit language course counts as 1 1/2 courses, while the summer Falcon Programs in Asian languages count as eight credits and two courses each. Archaeology and geology fieldwork for more than six credits counts as 1 1/2 courses each. BIOGD 281 counts as 1 1/2 courses; those in language that result in six credits count as 1 1/2 courses; those in biology that result in six or eight credits count as two courses.

Students must also complete 120 credits, 100 of which must be from courses taken in the College of Arts and Sciences. Liberal arts courses approved for study abroad during a semester or academic year of full-time study (not summer study) and courses taken in certain off-campus Cornell residential programs may be counted toward the 100 credits required. Advanced placement credits, credits earned in other colleges at Cornell, or credits earned in any subject at institutions other than Cornell do not count as part of the 100. The only exceptions to the above restrictions are for courses (usually no more than three) that certain departments accept from other colleges at Cornell as fulfilling major requirements and for up to two courses that an adviser accepts as part of a completed and formally established cross-college, interdisciplinary concentration.

Using courses towards more than one requirement

A course may fulfill more than one college requirement in the following situations:

1. A course may be used to fulfill a distribution requirement and also a major requirement (except as noted under previous section of restrictions on applying AP credits, transfer credits, and Cornell courses to distribution requirements).

2. A one-semester course in foreign literature (not language) that is acceptable for achieving proficiency in that language may also be used as a partial fulfillment of the distribution requirement in the humanities and the arts.

3. Courses may count toward breadth requirements and toward any other requirement except First-Year Writing Seminars.

4. Courses in a second major may count as electives.

Auditing

The college encourages its students to take advantage of its rich curriculum by sitting in on courses that interest them but that they prefer not to take for credit. As long as the instructor agrees, students are welcome to visit classes. Small seminars and language courses are sometimes not open to visitors. Audited courses do not appear on the student's schedule or transcript.

Repeating courses

Students occasionally need to repeat courses. If the instructor certifies that the course content has been changed, credit will be granted a second time. If the content has not changed, both grades nonetheless will appear on the transcript and be included in any average that is calculated, but credit will be counted toward the degree only once; students considering repeating a course under this circumstance should discuss the matter with their adviser and an advising dean.

Students who plan to repeat a course submit a petition to the college registrar, Sally O'Hanlon, 55 Goldwin Smith Hall. If the original course grade was F, no petition is necessary.

Courses that do not count toward the degree

The college does not grant credit toward the degree for every course offered by the university. Courses in military training, training as an emergency medical technician, service as a teaching assistant, physical education, remedial or developmental reading, precalculus mathematics (including Education 115), supplemental science and mathematics offered by the Learning Strategies Center, English as a second language, keyboarding, and shorthand are among those for which degree credit and credit toward the 120 required for good academic standing are not given.

Students enrolled in courses for undergraduate teaching assistants may petition once to have the nondegree credits count towards good academic standing. This would allow continued eligibility for graduating with distinction in all subjects, but would not change the student from being on the dean's list that semester.

Advanced placement credit

See p. 6-11. Advanced placement credit counts as part of the 120 credits and 34 courses required for the degree. It does not count as part of the 100 credits required in Arts and Sciences; its application to distribution requirements is restricted, as explained under "Distribution."

Summer session credit

A student may earn credit toward the degree by completing courses in Cornell's summer session or by successfully petitioning for credit for summer courses at other colleges. Students should consult their advisers regarding summer study plans.

Credit for summer courses not taken at Cornell must be approved by the appropriate Cornell department. Approval forms and information are available on-line, www.arts.cornell.edu, and in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall. Transcripts for completed work at other institutions must be sent to Robin Perry, 172 Goldwin Smith Hall. Credit approved for summer courses away from Cornell (including summer or orientation programs abroad) counts toward the 120 credits and 34 courses required for the degree, but does not count toward the 100 credits required in the college. It may be applied to part of the Group I and II distribution requirements, elective requirements (but not to breadth requirements) and to major requirements (with the approval of the department).

Entering students who want to receive credit toward the degree for courses completed before matriculation in a summer session away from Cornell should obtain approval forms as soon as possible and have transcripts sent to Robin Perry, 172 Goldwin Smith Hall. Credits completed in Cornell summer sessions will be awarded automatically.

Summer session at Cornell or elsewhere does not count toward the eight-semester residence requirement.

Transferring credit earned away from Cornell while on leave of absence

Students may petition to transfer credits from other accredited institutions for work completed while on leave of absence. Petitions are available in 55 and 172 Goldwin Smith Hall and at www.arts.cornell.edu. The relevant department will decide whether the course is comparable to Cornell courses. Credit approved for courses counts as part of the 120 required for graduation and as part of the 34 courses. It does not count among the 100 credits required in Arts and Sciences and cannot be used to graduate in fewer than eight semesters. Its application to distribution
and breadth requirements is restricted as described under "Distribution."

Transferring credit (for transfer students from another institution or from another Cornell college)

Transfer students must satisfy all normal requirements for the degree, including eight semesters of full-time study. They may never complete fewer than 60 credits and 16 courses at Cornell nor be in residence in the college for fewer than four regular semesters (summer session does not count toward the residence requirement). The college evaluates credit and residence earned either at another school or college at Cornell University or at another accredited institution of collegiate rank and determines the number of credits and courses the student may apply toward the various requirements for the Bachelor of Arts degree at Cornell. In addition, it reevaluates advanced placement credit allowed by another institution, including another college at Cornell. Evaluations of transfer credits are normally provided when students are notified of their admission.

SPECIAL ACADEMIC OPTIONS

Degree Programs

The following five programs allow students to alter the regular college or major requirements or to work toward more than one degree.

College Scholar Program

The College Scholar Program frees up to 40 students in each class from the usual college requirements for a degree and allows them to design their own course of study. It is meant to serve students whose interests and talents would benefit from a little more academic freedom than other students have, who demonstrate exceptional promise, and who show the maturity to plan and carry out, with the help of their adviser, a well-designed program of studies. College Scholars design idiosyncratic programs: some pursue diverse interests; others integrate a variety of courses into a coherent subject.

College Scholars must complete 120 credits of course work (100 in the college), 34 courses, and, unless they receive permission from the program to accelerate, eight full terms of undergraduate study. They must also complete the university's physical education requirement. All College Scholars must complete a senior project. They are not required to complete or fulfill the general education requirements, although members of the College Scholar Advisory Board believe that the spirit of those requirements is a good one.

Each applicant to the College Scholar Program is asked to write an essay, which is due the last Wednesday in April of the freshman year. Mid-year freshmen apply by that date in their first spring semester in the college. Students should contact Dean Ken Gabard, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall, for further information.

Dual-Degree Program with Other Colleges

The Dual-Degree Program enables especially ambitious undergraduate students to pursue programs of study in two colleges. Dual-degree candidates may earn both a Bachelor of Arts degree from the College of Arts and Sciences and: (1) a Master of Science degree from the College of Engineering; or (2) a Bachelor of Fine Arts degree from the Department of Art in the College of Architecture, Art, and Planning; or (3) a Bachelor of Science degree in urban and regional studies from the Department of City and Regional Planning in the College of Architecture, Art, and Planning; or (4) a Bachelor of Science degree in architectural history from the Department of Architecture in the College of Architecture, Art, and Planning. Students enter one of these colleges as freshmen or sophomores and begin the Dual-Degree Program with the second college in the second or, in some cases, the third year. The Dual-Degree Program ordinarily takes five years to complete, and students are eligible for ten semesters with financial aid. For further information contact the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Independent Major Program

The Independent Major Program allows students to design their own interdisciplinary majors and pursue a subject that cannot be found in an established major. Proposals for an independent major must be equivalent in coherence, breadth, and depth to a departmental major, well suited to the student's academic preparation, and consistent with a liberal education. Proposals must also be supported by a faculty adviser and are assessed by a board of faculty members. Independent majors substitute for established majors, but students must still satisfy all the other requirements for the bachelor's degree. Students should contact Dean Lynne Abel, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall, for further information. Deadlines for submitting independent major proposals are listed on the calendar supplement for the College of Arts and Sciences.

Double Registration with and Early Admission to Professional Schools

Registration in the senior year of the College of Arts and Sciences for the first year of either the College Law Program or the Johnson Graduate School of Management, is occasionally possible. A very few exceptionally well-prepared students who have earned 105 credits before the start of the senior year and have been accepted by one of the above-named professional schools may be permitted to register simultaneously in the college and in one or another of these professional schools during the seventh and eighth terms. They earn the A.B. degree after the first year of professional school.

Students with eight or fewer credits and two or fewer courses to complete may apply to enter the Master's of Engineering program during (but no earlier than) their eighth semester; dual-degree students may enter this program no earlier than the ninth semester. They earn the bachelor degree(s) after one semester of graduate school.

Students interested in the joint program with the Law School or the Graduate School of Management, or in early admission to the Master's of Engineering program should apply to the relevant program. All candidates should confirm their eligibility with an advising dean, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Double-registered students must, of course, complete all requirements for the A.B. degree, including 100 credits in Arts and Sciences courses.

Teacher Education

Students at Cornell may pursue teaching credentials in agriculture, biology, chemistry, earth science, general science, mathematics, and physics. Cornell students from any college are encouraged to apply for admission to the Cornell Teacher Education Program during their sophomore or junior year. Those who are admitted complete their undergraduate major in an agricultural science, mathematics or one of the sciences, while taking education courses. They are then able to complete a Master of Arts in Teaching (MAT) in one year and earn certification in New York State.

For more information, contact the Program Coordinator at 255-9573.

Special-Interest Options

The following options enable students to pursue special interests within the usual degree programs.

Concentrations

Established interdisciplinary concentrations, described in alphabetical order along with departments in the pages following, provide structures for organizing electives. Completed concentrations are noted on the transcript.

Informal Minors

Some students organize electives within a discipline or department in Arts and Science or another college. Such informal minors can be developed with the help of the departmental directors of undergraduate studies. They are not noted on the transcript.

Independent Study

Independent study affords students the opportunity to pursue special interests or research not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the independent course, must approve the proposed study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study (proposals forms are available on-line at www.arts.cornell.edu and in the Office of Undergraduate Admissions and Advising, 55 and 172 Goldwin Smith Hall). In one semester students may earn up to six credits with one instructor or up to eight credits with more than one instructor.

Undergraduate Research Program

An excellent way to benefit from being an undergraduate at a research university, at Cornell in particular, is to become an apprentice in ongoing faculty research. About 400 students participate each year in creating new knowledge and earn independent study credit for what they learn and contribute. They sharpen their critical and creative abilities and test their interest in pursuing a research career. Sometimes they publish their work.

The Undergraduate Research Program gathers information about research opportunities in most disciplines of the liberal arts and sciences, guides students in finding further opportunities—on campus and elsewhere—and during the academic year and the summer—
and helps students prepare for research and presenting themselves as candidates for apprenticeships. Other students locate research opportunities independently through faculty whose courses they have taken, through their major departments, or through published materials.

The Cornell Undergraduate Research Board, an undergraduate organization, conducts an annual open house to help students get started in research and an annual forum at which undergraduates present their work. Students interested in this program should consult the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Language Study
FALCON (Full-Year Asian Language Concentration). FALCON allows students who are interested in the Far East to study Chinese or Japanese exclusively for one year. They gain proficiency in the language and familiarity with the culture. Students who are interested in the Far East should be aware of the opportunities to pursue rapid and thorough beginning studies on campus with the objective of entering one of the following intensive programs: the Chinese Language Program or the Japanese Language Program. Students interested in this program should contact the Office of Undergraduate Admissions, 172 Goldwin Smith Hall.

Language House Program
A complement to classroom cultural and linguistic instruction, the Language House Program combines residential and academic opportunities for developing and practicing conversational skills in French, German, Italian, Japanese, Mandarin Chinese, and Spanish. It helps prepare students who plan to study abroad and helps returning students share their cultural experiences while further increasing their language skills. Students interested in this program should contact the Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Prelaw Study
Law schools seek students with sound training in the liberal arts and sciences; they neither require nor prefer any particular program of study. Students should therefore study what they love and do well. While doing that, they should also develop their powers of precise, analytical thinking and proficiency in writing and speaking. Students in the College of Arts and Sciences who are planning careers in law may not study abroad as long as the curriculum abroad is consistent with that of the college. A maximum of 10 credits is awarded for each trimester of study. Courses that fall outside the scope of the liberal arts and sciences may earn non-Arts credits. Students must carry a full course-load as defined by the host institution. Students may spend up to two semesters abroad only. Those with compelling academic reasons may study in more than one location over two semesters. The college does not approve study abroad that tours more than one country or that is more touristic than scholarly in content and structure. Students must continue study of the host language while abroad. Only in exceptional circumstances will the college approve programs which, in non-English speaking countries, provide no language training.

Applications to study abroad must have the support of a faculty adviser in the major and the approval of Dean Pat Wasyliw in the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall. Although students investigate options for study abroad and submit final applications through the Cornell Abroad office, Arts and Sciences applicants submit to the college an essay describing the academic rationale for study abroad, an outline of prospective courses to be taken and any other relevant materials.

All courses taken abroad will appear on the Cornell transcript and grades earned are reported in the system of the host institution. Grades earned through course work abroad do not, however, become part of the Cornell grade point average.

Summer Residential Programs in Archaeology
During the summer months students may participate in a Cornell-sponsored archaeological project. In recent years the program has organized archaeological projects in Central America, Greece, Israel, Italy, and New York State. Students should contact the Archaeology Program for information about the sites currently available.

Schools do not prescribe or even prefer a particular major; they do, however, require particular undergraduate courses, and most students are well advised to begin chemistry in their freshman year. Students who are interested in medical careers are urged to visit the Health Careers Office, 205 Barnes Hall. The adviser for students in the College of Arts and Sciences career counseling for medicine is Dean Janice Turner, Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall.

Off-Campus Programs
Many students find it important to their majors or to their overall academic programs to study off campus or abroad for one or two semesters. When it makes academic sense, the college encourages its students to pursue such studies and grants credit toward the degree for work satisfactorily completed. It discourages students from participating in more than one off-campus program.

Study Abroad
Each year about 200 undergraduates in Arts and Sciences include semester- or year-long study abroad as part of their formal undergraduate education. Ideally, study abroad builds on a broad liberal arts background in the early semesters: area studies, language training, and preparation in the proposed field of study and all essential.

Many students go abroad to pursue work in their majors. Focused academic work in an appropriate institution abroad can prepare students for advanced study or honors work in the final semesters back in Ithaca.

The college insists wherever possible on study at foreign institutions alongside their degree candidates rather than study in self-contained programs that offer courses specially designed for foreigners. The primary goals of this cultural immersion are to learn firsthand the modes of inquiry, methods of analysis, and educational values of higher education offered to students of another country and to involve students in social relationships with peers who may hold a new and unexpected range of social attitudes.

The college advocates study abroad that enables students to become competent enough in another language to experience daily life, develop social relationships, and accomplish formal course work in that language. Students who intend to study abroad in a country where the host language is not English must demonstrate a serious commitment to learning the language through course work before studying abroad; specific language requirements may vary, but most programs require two semesters of 200-level language instruction. At least one area studies course or one course in the history, culture, economics, politics, or social relations of the country of destination must be part of every student's program for study abroad.

Students planning to study abroad need solid academic credentials to do so productively and successfully. The college requires a minimum overall grade point average of 3.0 for all Cornell course work and good academic standing in the semester immediately before going abroad.

Study abroad is possible during the sophomore and junior years or during the first semester of the senior year. Study abroad in the final semester is rarely approved. Important steps to prepare for study abroad include:

- substantial progress with college distribution requirements;
- admission to a major and a faculty adviser in the major;
- clear academic agenda for study abroad;
- appropriate preparatory study of the country or region of destination, especially language study.

Study abroad can earn up to 15 liberal arts and sciences credits per semester of full-time coursework as long as the curriculum abroad is consistent with that of the college. A maximum of 10 credits is awarded for each trimester of study. Courses that fall outside the scope of the liberal arts and sciences may earn non-Arts credits. Students must carry a full course-load as defined by the host institution. Students may spend up to two semesters abroad only. Those with compelling academic reasons may study in more than one location over two semesters. The college does not approve study abroad that tours more than one country or that is more touristic than scholarly in content and structure. Students must continue study of the host language while abroad. Only in exceptional circumstances will the college approve programs which, in non-English speaking countries, provide no language training.

All applicants for study abroad during the academic year must go through the Cornell Abroad Office. Applications to study abroad must have the support of a faculty adviser in the major and the approval of Dean Pat Wasyliw in the Office of Undergraduate Admissions and Advising, 55 Goldwin Smith Hall. Although students investigate options for study abroad and submit final applications through the Cornell Abroad office, Arts and Sciences applicants submit to the college an essay describing the academic rationale for study abroad, an outline of prospective courses to be taken and any other relevant materials.

All courses taken abroad will appear on the Cornell transcript and grades earned are reported in the system of the host institution. Grades earned through course work abroad do not, however, become part of the Cornell grade point average.

Students who transfer to Cornell and must complete at least four semesters of residence on campus in Ithaca may not study abroad as one of those four semesters.

Marine Science
Shoals Marine Laboratory is a seasonal field station that offers a variety of courses and experiences designed to introduce undergraduates to the marine sciences. The laboratory is located on Appledore Island, six miles off the Maine/New Hampshire coasts. Students should contact the Shoals Marine Laboratory Office, G14 Simons Hall, for further information.

Cornell in Washington
The Cornell in Washington program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Cornell in Washington program offers two study options: (1) studies in public policy, and (2) studies in the American experience. The program also offers unique externship opportunities: students serve as externs in a federal agency, congressional office, or non-governmental organization and take part in a public policy or humanities seminar. They define and carry out individual research projects under the supervision of Cornell faculty. Potential externships are arranged through, and approved by, the Cornell in Washington program. For further information, see p. 20 or inquire at 311 Caldwell Hall, 255-4090. Study in Washington during a final semester of residence is allowed only and unusually by petition. Students should consult with the dean of seniors, Office of Undergraduate Admissions and Advising, 172 Goldwin Smith Hall.

Fieldwork
Sometimes it is appropriate for students to include fieldwork as part of their major. A three-member faculty committee helps the student plan the project, arranges for ongoing supervision, and evaluates the project at the end of the term. Fieldwork almost always involves writing a long paper or several short ones, as well as practical experience. All proposals for fieldwork must be presented in advance to the college faculty's Committee on Academic Records for approval. A maximum of 15 credits in fieldwork may be earned. For further information students should contact an advising dean in Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

ADVISORY
The following advisers and offices provide academic advising, help with problems, and information on college procedures and regulations.

Faculty Advisers
Each new student is assigned a faculty adviser. Advisers help students plan programs of study and advise them about ways to achieve their academic goals. Advisers may also help students with study or personal problems or may direct them to other offices on campus where help is available. Academic difficulties may frequently be solved or avoided if students and advisers recognize and address problems early.

Advisers and new advisers meet first during orientation week to discuss course selection. New students are encouraged to see their advisers again early in the term, before it is too late to drop courses, to discuss their academic progress and to become better acquainted. Advisers and advisees meet at least once each semester to discuss courses for the following term, and more often if advisers wish to discuss academic or personal issues or to petition for an exception to college rules.

Facility Advisers
Student advisers pass on lore about the college and life at Cornell and help new students understand requirements and negotiate the university.

Major Advisers
After acceptance into a major, students are assigned a major adviser, a faculty member in the major department, with whom they shape and direct their course of study. The adviser eventually certifies the completion of the major. The major adviser should be consulted by the student about all academic plans, including honors, study abroad, acceleration, and graduate study. The adviser's support is especially important if a student petitions for an exception to the requirements for the degree.

Office of Undergraduate Admissions and Advising
This office, 55 Goldwin Smith Hall, 255-5004 and 172 Goldwin Smith Hall, 255-4833, is a resource for faculty and student advisers and especially for students themselves and their parents. Advising fellows are available to help students define their academic and career goals, to help with special academic options and exceptions to college rules, and to help when problems arise.

The standards of integrity are those that prevail in professional life. This means that students must acknowledge and cite ideas they adopt from others (not just direct quotations) and help they receive from colleagues. With productive emphasis on collaborative learning and writing, students must understand the general standards and policies about academic integrity and be sure they understand the expectations in individual courses as well. When in doubt, ask the instructor.

ACADEMIC INTEGRITY
Academic integrity is the heart of intellectual life—both in learning and in research. All members of the university community simply must support each other's efforts to master new material and discover new knowledge by sharing ideas and resources, by respecting each other's contributions, and by being honest about their own work. Otherwise the university will fail to accomplish its most central and important goals.

Cornell's Code of Academic Integrity and policy about acknowledging the work of others are among the documents new students receive. Students should read them carefully and not assume they understand what integrity and cheating are and are not. Academic integrity implies more here at the university than it usually did in high school.

LYNNE S. ABEL, ASSOCIATE DEAN FOR UNDERGRADUATE ADMISSIONS AND ADVISING AND INDEPENDENT MAJOR PROGRAM—255-3386
YOLANDA CLARKE, INTERNS AND MINORITY STUDENTS—255-5004
MARIA DAVIDIS, FIRST- AND SECOND-YEAR STUDENTS AND DEAN'S SCHOLARS, CORNELL PRESIDENTIAL RESEARCH SCHOLARS AND MELLON MINORITY FELLOWS—255-5004

PATRICIA WASYLIEW, FIRST- AND SECOND-YEAR STUDENTS, STUDY ABROAD AND STUDENT ADVISERS—255-5004

REGISTRATION AND COURSE SCHEDULING
Enrollment in Courses in the College of Arts and Sciences
New Students
During orientation week, new students attend briefings and other information sessions, meet with faculty advisers, and sign into courses. The college reserves spaces in courses for its in-coming students.

Continuing Students
Continuing students select and schedule up to five courses of 3 or more credits and as many 1 and 2 credit courses as they would like during the semester prior to the one in which the courses will be taken. Students who do not “pre-enroll” during the designated period must wait until the beginning of the term and may have difficulty securing places in the courses they most want. Before signing into courses, students plan their programs and discuss long-range goals with their faculty advisers. In addition, all students are welcome to discuss programs and plans with an advising dean in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall.

At the beginning of each term, students find their schedules and should confirm the accuracy of their records on “Just the Facts.”
Limits on Numbers of Courses and Credits

To meet the 34-course requirement, students must normally take four courses during each of six semesters and five courses during each of two semesters. To meet the 120-credit requirement, students must average 15 credits per semester. (AP, credit and/or summer credits may reduce the average numbers of courses and credits required each semester.)

Minimum number of credits per semester

To maintain good academic standing as a full-time student, students must complete at least twelve degree credits per semester; if for compelling personal or academic reasons students need to carry fewer than 12 credits, they should consult their faculty advisor and an advising dean. Permission is by petition only; it is freely given for first-semester students.

Maximum number of credits per semester

First-term freshmen must petition to register for more than 18 credits; other students may register for more than 18 credits if their previous term's average was 3.0 or higher and they are in good academic standing. No more than 22 credits may be taken in a regular semester without permission of the college faculty's Committee on Academic Records. Students who fail to receive approval for extra credits from the committee may count only 18 credits for the semester toward the degree.

Attendance

Attendance in classes is expected. Absences are a matter between students and their instructors. If a student cannot attend classes because of illness or family crisis, the Office of Undergraduate Admissions and Advising will notify instructors at the request of the student or the family. Nonetheless, the student must arrange to make up examinations or other work with each instructor. A student who will be absent because of religious holidays or athletic competitions must discuss arrangements for making up work with his or her instructor well in advance of the absence. A student who must miss an examination must also consult with the professor in advance. Alternative arrangements are at the discretion of the instructor.

Student athletes should discuss scheduled absences with their instructors at the beginning of the term. Courses vary in their tolerance of absences. Instructors are not obligated to approve absences for purposes of participating in extra-curricular activities, although most will be as flexible as is sensible.

Adding and Dropping Courses

After course enrollment (also known as pre-enrollment), students may not adjust their schedules until the new term begins. During the first three weeks of the semester, students may change courses without petitioning. Add/drop forms are available in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall. (Note: the add drop period for First-Year Writing Seminars is only two weeks.)

After the third week of classes, students must petition to add courses and may normally add them only for a letter grade. They may drop courses through the seventh week of the term, if the department approves and no issue of academic integrity is at stake. Between the seventh and twelfth weeks students may petition to withdraw from courses, if (1) the instructor approves; (2) the adviser approves; (3) an advising dean approves; and (4) no issue of academic integrity is at stake. Students must meet with an advising dean to obtain petition forms.

Courses officially dropped after the seventh week will be noted on the transcript by a "W" where the grade would normally appear. This is a matter of record and cannot be petitioned. Petitions to withdraw from courses must be submitted after the end of the twelfth week in the term. Deadlines for short courses will be adjusted according to the length of the courses.

The effective date of all course changes will be the day the student submits all completed paperwork to the Academic Advising Office.

Leaves of Absence

Taking time off from college to gain experiences or funds or to find direction is sometimes useful. Usually, of course, students take leaves at the end of a semester for the following semester. Students in good academic standing, however, may take a leave as late as the seventh week of a semester, although there are serious financial consequences to taking leaves after a term has begun. Five years is the maximum length of time a student may be on leave and return without special permission. Leaves of absence are of four types:

1) Personal leaves impose no conditions concerning reentering the college except for the five-year limit. Readmission is automatic upon written request made at least one month before the beginning of the term in which the student wishes to return.

2) Medical leaves, usually for at least six months, are granted by the college only on recommendation by University Health Services. In some cases, students must satisfy the college that the condition requiring the leave has been corrected before they may return. The student's academic standing will also be subject to review at the time of the leave and on return.

3) Conditional leaves are granted when the student is not in good academic standing or, in unusual circumstances and with the approval of the college's faculty's Committee on Academic Records, between the seventh and twelfth weeks of the term. In consultation with the student, an advising dean and the Committee on Academic Records set the conditions for the student's return. Normally students may not return from conditional leaves for at least two terms or until specific and individual conditions, such as completing unfinished work, have been met. Students may be granted conditional leaves after the twelfth week of a term only under extraordinary circumstances and with the approval of the faculty's Committee on Academic Records.

4) Required leaves. The Committee on Academic Records may require a leave of absence if a student is not making satisfactory progress toward the degree. See the section "Academic Actions."

Any student who wishes to take a leave of absence should consult an advising dean in the Office of Undergraduate Admissions and Advising, 55 or 172 Goldwin Smith Hall. On readmission, the student's graduation date will be recalculated.

Transferring Credits Earned While on Leave

Students who take courses elsewhere in the United States while on leave may petition to have credits transferred. Approval depends on acceptable grades and the judgment of the relevant departments about the quality of the courses. If approved, credits earned elsewhere should be applied toward the 120 credits and 34 courses needed for graduation, but not toward the 100 credits required in the college. They may be applied to part of Group I and II distribution requirements (not to Group III or IV), to elective requirements (but not to breadth requirements) or to the major as allowed by the department. Credits earned during a leave do not count toward the eight semesters of residence and may not be used to reduce the terms of residence below the required eight. See the section "Residence."

Study Abroad and International Students on Leave of Absence

Study abroad undertaken during a leave of absence will not receive academic credit. International students on leave of absence from the College of Arts and Sciences may enroll in courses at a college or university in their home country only, as such enrollment is not defined as study abroad. They may petition for transfer credit upon return to Cornell. If approved, the credit will count as described in the previous paragraph.

Withdrawals

A withdrawal is a permanent severance from the university and from status as a degree candidate. Students planning to withdraw should consult an advising dean. Students not requesting a leave and failing to register for a term will be withdrawn from the college. The college faculty's Committee on Academic Records may require a student to withdraw for a highly unsatisfactory academic record.

Transferring within Cornell (Internal Transfer)

Internal transfer from one college or school at Cornell into another is attractive for many students whose intellectual interests change (or become more focused). Students who want to transfer should discuss their eligibility with a counselor in the new school or college.

In some cases, students who want to transfer into the College of Arts and Sciences may transfer directly. In other cases, they may be referred to the Internal Transfer Division. During the term immediately preceding transfer into the College of Arts and Sciences, students should complete at least 12 credits of courses in the College of Arts and Sciences with a 3.0 average and without any grades of Incomplete, any S-U grades (unless only S-U grades are offered for that particular course), or any grades below C. Satisfying this minimum requirement does not, however, guarantee admission. Admission to the college is based on consideration of the student's entire record at Cornell and the high school record, not just the work of one semester. It is also based on ability to complete the A.B. degree within a reasonable time. Internal transfers are required to spend four semesters
in Arts and Sciences and thus should initiate the transfer process no later than the second semester of sophomore year. Interested students should see Dean Lamphere, 172 Goldwin Smith Hall or Dean Clarke, 55 Goldwin Smith Hall.

ACADEMIC STANDING

Students are in good academic standing for the term if they successfully complete at least 12 degree credits by the end of the term and earn no more than one D and no F or U grades. If a student completes only three courses, all grades must be above D. In addition, students are expected to make satisfactory progress toward satisfying requirements for the degree and to earn grades of C (not C-) or better in at least 100 of the 120 credits for the degree. Courses listed under “courses that do not count toward the degree” do not count toward good academic standing in a semester.

Academic Actions

Students who are not in good academic standing will be considered for academic action by the college faculty’s Committee on Academic Records or by one of the advising deans of the college. Students are urged to explain their poor academic performance and submit corroborating documentation. Students may appeal a decision or action of the committee, if they have new relevant information. They must consult an advising dean about appealing.

Warning

Any student who fails to maintain good academic standing will, at a minimum, be warned. A warning is posted on a student’s college record but is not reported to the university registrar and does not appear on official transcripts.

Required leave of absence

A student in serious academic difficulty may be required by the faculty Committee on Academic Records to take a leave of absence, normally for a full year. Usually, but not always or necessarily, the Committee on Academic Records warns students before suspending them. Before being allowed to return and reregister in the college, students must document what they did on leave and how they resolved their problems and submit a plan for completing the degree. In some cases students will be required to furnish evidence that they are ready to return or satisfy other conditions before being allowed to reregister in the college. Students who request to return in less than a year must present to the committee extraordinarily convincing evidence of their readiness to return. “Required leave” and the date are posted on the student’s official transcript.

Required withdrawal

The faculty Committee on Academic Records may dismiss a student from the college because of a highly unsatisfactory record for one term or for failure to make satisfactory overall progress in grades, credits, or degree requirements. This action expels the student permanently from the college. “Required withdrawal” and the date are posted on the student’s official transcript.

Forgery on Forms

Forging signatures or credentials on college forms is an academic offense; sometimes it constitutes academic fraud. In all cases of forgery on academic forms, the effect of the forged documents shall be negated. Students may then petition properly to do whatever they attempted to do improperly. Such incidents will be recorded in the Academic Integrity Hearing Board’s confidential file for forgeries. If a student forges more than once or if the forgery would advance the student’s academic standing unfairly or fraudulently, or if for any other reason the situation requires some response in addition to the uniform penalty, the Academic Integrity Hearing Board might recommend further action, such as a notation on the student’s transcript, suspension, or dismissal.

GRADES

Letter Grades

S-U Grades

The S-U (satisfactory-unsatisfactory) option allows students to explore unfamiliar subjects or take advanced courses in subjects relatively new to them without being under pressure to compete with better prepared students for high grades. Students are expected to devote full effort and commitment to a course and complete all work assigned in a course they take for an S-U grade. The S-U option is contingent upon the instructor’s willingness to assign such grades. Students must select their grading option and obtain the instructor’s approval for the S-U option during the first three weeks of the term. Virtually no exceptions to this deadline are permitted, and consequently students adding courses after the third week of the term must normally add them for a letter grade. A grade of S is equivalent to a grade of C- or higher; a grade of U, which means that the course below C- is a failing grade equal to an F. S means the student receives the credit specified for the course. U means no credit is given. A few courses in the college are graded exclusively S-U; in that case, the final grade appears on the transcript as SX or UX.

Courses that will count toward satisfaction of major requirements should not be taken for an S-U grade unless the department grants permission. Students may elect the S-U option in courses used to satisfy the distribution, and elective requirements, provided that such courses do not also count toward major requirements or serve as prerequisites for admission to the major. First-year writing seminars and many language courses disallow the S-U option. In any case, students are advised to use the S-U option sparingly, if they intend to apply to graduate school or for transfer to another college. There is no limit on the number of courses each term for which students may select the S-U grade, but within the 120 credits required for the degree, a minimum of 80 credits must be in courses for which a letter grade was received.

Grades of Incomplete

A grade of incomplete signifies that a course was not completed before the end of the term for reasons beyond the student’s control and acceptable to the instructor. Students must have substantial (normally at least 50 percent) equity in the course, be able to complete the remaining work without further registration, and have a passing grade for the completed portion. When a grade of incomplete is reported, the instructor submits a form stating what work must be completed, when it must be completed, and the grade (or “frozen” incomplete) earned if the work is not completed by that date. When a final grade is determined, it is recorded on the official transcript with an asterisk and a footnote explaining that this grade was formerly an incomplete.

Students must resolve (make up or “freeze”) any incompletes with their instructors before graduation.

Note of R

R designates two-semester or year-long courses and students enrolled in the course both semesters, each time for the full number of credits for the whole course. The R is recorded on the student’s transcript at the end of the term. The grade recorded at the end of the second term evaluates the student’s performance in the course for the entire year.

Grade Reports

Students should periodically check their courses and grades on “Just the Facts” to be sure that they are recorded correctly.

Class Rank

The college does not compute class rank.

Dean’s List

Inclusion on the Dean’s List is an academic honor bestowed by the dean of the college semester by semester. Based on grades, the criteria include about the top 30 percent of students and vary with the number of credits the student completes. The criteria are subject to slight changes from semester to semester and are available at www.arts.cornell.edu/advising/undergraduate/admissions-and-advising, 55 Goldwin Smith Hall.

GRADUATION

The Degree

The College of Arts and Sciences grants only one degree (no matter what the student’s major): the A.B. (or B.A.). A.B. is the abbreviation of the Latin name for the degree, “Artium Baccalarius,” or translated into English, B.A., “Bachelor of Arts.”

Application to Graduate

In the first semester of their senior year, students attend senior briefings and then complete an application to graduate. The application allows the college to check each student’s plan for fulfilling college requirements. This process is intended to help seniors identify problems early enough in the final year to make any necessary changes in course selection to satisfy those requirements. Nonetheless, meeting graduation requirements is the student’s responsibility; problems that are discovered, even late in the final term, must be resolved by the student before the degree can be granted.
Degree Dates
There are three degree dates in the year: May, August, and January. Students who plan to graduate in August may attend graduation ceremonies in the preceding May. Students graduating in January are invited to a special recognition ceremony in December; they may also attend graduation ceremonies the following May.

Honors

Bachelor of Arts with Honors
Almost all departments offer honors programs for students who have demonstrated exceptional accomplishment in the major and succeeded in research. The honors programs are described by individual departments. The degree of Bachelor of Arts cum laude, magna cum laude, and summa cum laude will be conferred upon students who, in addition to having completed the requirements for the degree of Bachelor of Arts, have been recommended for a level of honors by their major department, the Independent Major Program, or the College Scholar Program. Concentrations do not offer honors programs.

Bachelor of Arts with Distinction
The degree of Bachelor of Arts with distinction in all subjects will be conferred on students who have completed the requirements for the degree of Bachelor of Arts, if they have met the following requirements by the end of their final semester:
1) completed at least 60 credits while registered in regular sessions at Cornell;
2) ranked in the upper 30 percent of their class at the end of the seventh semester, or next-to-last semester for transfers and accelerants;
3) received a grade below C- in no more than one course;
4) received no failing grade;
5) have no frozen Incompletes on their records, and
6) maintained good academic standing, including completing a full schedule of at least 12 credits, in each of their last four terms.

CALENDAR SUPPLEMENT
All of the dates in the university calendar at the front of this volume apply to all Cornell students. Listed below are some additional dates that are of importance for students in the College of Arts and Sciences.

ADMINISTRATION
Philip E. Lewis, dean—255-4146
Jon C. Clark, senior associate dean—255-4147
Paul Houston, senior associate dean—255-4147
Lynne S. Abel, associate dean of admissions and undergraduate education—255-3786
Jonathan B. Monroe, associate dean and director of writing programs—255-4601
Jane V. Pedersen, associate dean of administration—255-7507

Departments, Programs and Courses

AFRIKAANS
See Department of German Studies (Dutch).

AFRICANA STUDIES AND RESEARCH CENTER

The Africana Studies and Research Center is concerned with the examination of the history, culture, intellectual development, and social organization of Black people and cultures in the Americas, Africa, and the Caribbean. Its program is structured from an interdisciplinary and comparative perspective and presents a variety of subjects in focal areas of history, literature, social sciences, and African languages. African languages such as Swahili is consistently offered, fall and spring

semesters and taught during summer/winter session.

The center offers a unique and specialized program of study that leads to an undergraduate degree through the College of Arts and Sciences and a graduate degree, the Master of Professional Studies (African and African-American), through the university's Graduate School.

A student may major in Africana Studies; however, another attractive alternative is the center's joint major program. This program enables the student to complete a major in any of the other disciplines represented in the college while at the same time fulfilling requirements for a major in Africana Studies. This requires only a few more credits than is usually the case when one completes a single major course of study. Courses offered by the center are open to both majors and nonmajors and may be used to meet a number of college distribution requirements, including historical/temporal breadth (α) and geographical breadth (β) requirements, such as freshman writing seminars, language (Swahili), expressive arts, humanities, social sciences, and history.

The center also brings distinguished visitors to the campus, sponsors a colloquium series, and houses its own library.

The Africana Major
The undergraduate major offers interdisciplinary study of the fundamental dimensions of the African-American and African experiences. Because of the comprehensive nature of the program, it is to students' advantage to declare themselves Africana majors as early as possible. The following are prerequisites for admission to the major.

Students should submit:
1) a statement of why they want to be an Africana Studies major;
2) a tentative outline of the area of study they are considering (African or African-American) for the undergraduate concentration, and
3) a full transcript of courses taken and grades received.

The center's undergraduate faculty representative will review the applications and notify students within two weeks of the status of their request.

After acceptance as a major in the Africana Center, a student must maintain a C+ cumulative average in the center's courses while completing the major program. The Africana major must complete 36 credits in courses offered by the center, to include the following four core courses: AS&DRC 205, 231, 200, and 422. Beyond the core courses, the student must take eight credits of center courses numbered 200 or above and 15 credits numbered 300 or above. The program of an undergraduate major may have a specifically Afro-American focus or a specifically African focus.

Joint Majors
The center encourages joint majors in the College of Arts and Sciences and in other colleges. Joint majors are individualized programs that must be worked out between the departments concerned. The center's undergraduate faculty representative,
Professor Bekerie, will assist students in the design and coordination of joint major programs. In any joint major program, the center will require at least 16 credits to be taken in Africana studies courses, including AS&RC 290.

Double Majors
In the case of double majors (as distinct from joint majors), students undertake to carry the full load of stipulated requirements for a major in each of the two departments they have selected.

Certificate in African Studies
Collaboration with the Institute for African Development, the Africana Studies and Research Center administers an undergraduate Certificate in African Studies program. The certificate is offered as a minor concentration to students in all of the undergraduate colleges at Cornell. Many of the courses in the program might be used to fulfill other course distribution requirements. By pursuing this certificate, students acquire an interdisciplinary understanding of Africa. After developing a foundation of knowledge on the culture, society, and development of Africa in the core course "Africa: The Continent and Its People," students pursue 15 credit hours in a humanities or development studies track or a combination of the two, including an additional core course, either "African Civilizations and Cultures" or "Contemporary African Development Issues." The requirements for the certificate are a minimum of 18 credit hours, including the core courses. Students interested in the certificate program must contact Professor Bekerie (the center's undergraduate faculty representative) who will register them in the program and assign them a faculty adviser from their own college. The faculty adviser will be responsible for determining completion of the certificate requirements.

Honors. The honors program offers students the opportunity to complete a library research thesis, a field project in conjunction with a research experience, or a project or experiment designed by the student. The requirements for admission to the honors program for all students—regular majors, joint majors, and double majors—are a B-cumulative average in all courses and a B+ cumulative average in the center's courses. Each student accepted into the honors program will have an honors faculty committee consisting of the student's adviser and one additional faculty member, which is responsible for final evaluation of the student's work. The honors committee must approve the thesis or project before May 1 of the student's junior year. The completed thesis or project should be filed with the student's faculty committee by May 10 of the senior year.

Language Requirement
Courses in Swahili may be used to satisfy the College of Arts and Sciences language requirement. Successful completion of AS&RC 131, 132, 133, and 134 provides qualification, and the addition of 202 provides proficiency. AS&RC majors are not required to take an African language, but the center recommends the study of Swahili to complete the language requirement.

AS&RC 131 Swahili
Fall. 4 credits. Laboratory time TBA. A. Nanji.

AS&RC 132 Swahili
Spring. 4 credits. Prerequisite: Swahili 131. A. Nanji.

AS&RC 133 Swahili
Fall. 4 credits. Prerequisites: Swahili 131 and 132. Language laboratory time TBA. A. Nanji.

AS&RC 134 Swahili
Spring. 4 credits. Provides language qualification. Prerequisite: Swahili 133. A. Nanji.

AS&RC 171 Black Families and the Socialization of Black Children
Fall. 3 credits. Staff.

AS&RC 172 The Education of Black Americans: Historical and Contemporary Issues (III)
Spring. 3 credits. A. Adams.

AS&RC 191 Africa: The Continent and Its People (III)
Fall. 3 credits. L. Edmondson.

AS&RC 202 Swahili Literature @
Fall. 4 credits. Prerequisite: Swahili 134. A. Nanji.

AS&RC 204 History and Politics of Racialisation: A Comparative Study (III)
Spring. 4 credits. A. Bekerie.

AS&RC 205 African Cultures and Civilizations
Fall. 3 credits. D. Ohadikè.

AS&RC 210 Major Works of Black World Writing (IV)
Fall. 3 credits. A. Adams.

AS&RC 231 African-American Social and Political Thought (III)
Spring. 3 credits. J. Turner.

This course surveys classic texts by African American, Caribbean, and African writers. The focus is on literary texts by authors such as Langston Hughes, Toni Morrison, James Baldwin, Marvsey Conde, and Chinua Achebe, with a view toward analyzing common experiences, references, themes, and literary strategies across the Black world. The works of fiction, poetry, and drama that constitute the central material of the course are supplemented by essays and biographies from other authors who have influenced the creative vision and the movement of the peoples of Africa and the Diaspora, e.g., W. E. B. DuBois and Marcus Garvey, Nelson and Winnie Mandela.
people in this century. Such themes as slave resistance, nationalism, Pan-Africanism, emigration, anti-imperialism, socialism and internal colonialism, and the political and social views of Black women are discussed. Black political thought is viewed in its development as responses to concrete conditions of oppression and expression.

AS&RC 271 Introduction to African Development (also CRP and GOVT 271) @ (III)

For description, see CRP 271.

AS&RC 280 Race, Power, and Privilege in the United States (formerly Racism in American Society) (III)

Spring. 3 credits. D. Barr and J. Turner.

This course is a survey of basic concepts and theories of racism. From there we examine the history of racial groups in America—African Americans, Native Americans, Hispanics, and Asians. Particular attention is paid to the political economy of racism and the sociological and psychological aspects of race relations in America, with specific reference to the differences and intersections of race, class, gender, and ethnicity.

AS&RC 282 History of Resistance Movements in Africa and the Diaspora @ (III)

Fall. 3 credits. Not offered fall 2002. D. Ohadiké.

This course deals with the history of resistance and liberation movements in Africa, Brazil, the Caribbean, and the United States. It is concerned with the dialectical relationships between European domination and Black resistance. The course examines the methods, strength and complexity of Black resistance and liberation, together with the rise of revolutionary classes in Africa and the Diaspora. It draws attention to the importance of unity and organization in resistance and then shows similarities, connections, and continuities in Black resistance. Finally, it demonstrates that African background helped shape the nature of struggles for independence and civil liberties in the Caribbean, Brazil, and the United States.

AS&RC 290 The Sociology of the African-American Experience (III)

Fall. 3 credits. J. Turner.

This is an introductory course to the field of Africana Studies. It assumes a historical/sociological approach to the examination of the African-American experience. The course surveys the African beginnings of human kind and the classical role of Black people in world civilization and the making of early culture. The course treats issues in the humanities, social sciences, and history. The course is required for all undergraduate students majoring at the Africana Center.

AS&RC 304 African American Art (also ART H 377) (IV)

Spring. 3 credits. S. Hassan.

This course investigates the different forms of African American artistic traditions in relation to their historical origins and sociocultural context from the early days of slavery to the present time. The course starts with an overview of African art and the experiences of the Middle Passage in relation to African-American traditions in the decorative arts including: pottery, architecture, ironwork, quilling, and basketry. This is followed by a fine art survey starting with the eighteenth and nineteenth centuries, continuing through the early twentieth-century Harlem Renaissance up to the present. Certain issues related to African-American arts and creativity such as "improvisation," "Black Aesthetic," and "Pan Africanism" are also explored. Tiles, films, and film strips are used extensively to illustrate topics discussed. Visits to museums and relevant current exhibitions may be arranged.

AS&RC 310 Art in African Culture and Society (also ART H 378) @ (IV)

Fall. 3 credits. Not offered fall 2002. S. Hassan.

This course is a survey of the visual art and material cultural traditions of sub-Saharan Africa. It aims at investigating the different forms of visual artistic traditions in relation to their historical and sociocultural context. The symbolism and complexity of traditional African art are explored through the analysis of myth, ritual, and cosmology. In-depth analysis of particular African societies is used to examine the arts to indigenous concepts of time, space, color, form, and sociopolitical order. New and contemporary arts forms associated with major socioeconomic changes and processes of assimilation are also explored. These include tourist art, popular art, and elite art.

AS&RC 311 Government and Politics in Africa @ (III)

Fall. 3 credits. A. Mazrui.

This course deals with power and political participation in Africa. Topics include: colonial background and its political consequences; the pre-colonial continuities in the post-colonial politics; ethnicity and allegiance in the African polity; and the monopolarchic tendency in African political culture. Discussion covers a spectrum of topics from the warrior tradition to the military coup in the postcolonial era; from the elder tradition to presidential gerontocracy; from the age tradition to intellectual meritocracy. Other major topics include class versus ethnicity in African politics; the one-party versus the multiparty state; socio-cultural versus socio-economic ideologies; the gender question in African politics; the soldier and the state; and the African political experience in a global context.

AS&RC 332 Twentieth-Century Black Cultural Movements @ (IV)

Fall. 4 credits. A. Adams.

This course will examine the major cultural currents of the twentieth century in the Black World. Major movements-currents that will be considered include the Harlem Renaissance, Negritude, Indigenismo, Black Arts Movement, Creolité. Basing the study primarily in the reading of literary texts, the artistic/cultural movements will be studied within the historical, social, and political forces that produced or influenced them, e.g., religion, colonialism, social protest, African and Caribbean independence, womanism. Particular attention will be given to the contrasts across geographic regions, principally the African continent, North America, and the Caribbean. The reading of the literary texts will be supported by theoretical readings as well as references to artistic forms, such as visual arts and music.

AS&RC 352 Pan-Africanism and International Politics (III)

Spring. 3 credits. J. Edmondson.

Pan-Africanism addresses the shared experiences and aspirations of African people around the world, focused on a search for greater linkages and unifying measures. Informed by an examination of the racial factor in international relations, the course examines Pan-African theories, ideologies, and movements, past and present, in their political, socio-economic, and cultural manifestations, focusing mainly on the African continent, the Caribbean, and Black America.

AS&RC 360 Global Perspectives on Gender

The course examines how forms of gender inequality have been shaped by international forces and structured by differences in national histories. The class is taught by a rotating set of two faculty members from different departments. Contingent on the particular faculty member directing the course, the class considers issues of cultural perspectives on gender, the history of work and family life in different societies; the gendered division of labor in local, national, and international economies; the impact of colonialism; the efforts of women to define gender relations; and the role of the state in constructing an engendered economy and polity.

AS&RC 380 African History: Earliest Times to 1800 @ (III)

Fall. 3 credits. A. Bekerie.

As the second largest continent with vast and varying geographical and cultural diversity, Africa is the only continent in which the geographical and cultural diversity is not reflected in its national boundaries. This course surveys the entire continent, the Caribbean, and Black America. It focuses on the major racial groups in Africa, their histories and cultures of peoples of Africa and their historical and sociocultural context. The symbolism and complexity of traditional African art are explored through the analysis of myth, ritual, and cosmology. In-depth analysis of particular African societies is used to examine the arts to indigenous concepts of time, space, color, form, and sociopolitical order. New and contemporary arts forms associated with major socioeconomic changes and processes of assimilation are also explored. These include tourist art, popular art, and elite art.

AS&RC 381 African History, 1800–Present @ (III)

Spring. 3 credits. D. Ohadiké.

This is a survey of African history in the nineteenth and twentieth centuries. It deals with African revolutions in the nineteenth century; the ending of the slave trade and the politics of the abolition; European scramble and partition of Africa; resistance to European colonial conquest; African societies in the colonial period; the politics of decolonization; Neo-colonialism; the rise and decline of military regimes; African debt crisis; and conflict and reconciliation in Africa.

AS&RC 404 Afrocentricity: Paradigm and Critical Readings (III)

Fall. 4 credits. A. Bekerie.

What is Afrocentricity? It is a theoretical framework designed to study and interpret the histories and cultures of peoples of Africa and African descent by locating them at the center of their experiences. In other words, it is a method of knowing the life experiences of African peoples from the inside out. The course examines—through the writings of Asante, Kete, Clarke, Jean, Myers, Amin,
Mazrui, Gates, Appiah, Richards, Schlesinger, and Thiongo—the conception and depth of the paradigm, its relevance in the production and utilization of knowledge, particularly emancipatory knowledge, the history of the paradigm, and the debate it generates among a wide range of thinkers and scholars.

AS&RC 410 African American Politics (III)
Spring. 4 credits. J. Turner.

The central thesis of African American politics has been its movements for political change and democratic access and human rights. This development of the eighteenth century is a complex political legacy. This course conducts a close study of African American political practice and theoretical analysis of the American political system. Implications of the political systems for prospects and limitations to participation by Black people are analyzed. Critical historical stages in the process of Black politics are examined. The development of electoral offices in federal and state-wide politics, and the significant urban political power bases giving rise to African American mayoralty politics in critical American politics.

AS&RC 451 Politics and Social Change in the Caribbean (V)
Fall. 4 credits. L. Edmondson.

A study of historical, intra-regional, political, economic, and social (including racial and cultural) forces affecting the domestic and international experiences of Caribbean societies. Special attention is given to conflicting dependencies and perceptions of the Caribbean, contending theories of Caribbean social structure and models of development; the continuing salience of struggles for change and transformation; prospects of regional integration, and Caribbean challenges to the global system, especially with regard to the region’s relations with the United States and the region’s position in the Third World in the context of the North-South cleavage.

AS&RC 455 Caribbean Literature (IV)
Fall. 4 credits. A. Adams.

This course examines the literature of the Caribbean islands. Through the reading of several novels and short stories from the various languages and cultural strains that comprise the Caribbean societies, students study the points of commonality and the diversity within this body of literature. The recurrence of certain historical, social, and cultural issues that have formed the multi-ethnic Caribbean peoples are analyzed in their varying manifestations across the linguistic and other boundaries to uncover the underlying shared experience.

AS&RC 459 Education in Africa and the Diaspora (III)
Fall. 4 credits. Not offered 2002-2003.

Africana Center.

The course deals with educational innovations geared to promoting equal opportunity based on gender, race, and class in Africa and the African diaspora. After an introduction on the concepts of education and innovations and the states of innovation as planned change, the course focuses on concrete historical and contemporary cases of educational innovations. The case studies in the United States include the creation and expansion of historically black institutions such as Lincoln University, Spelman College, Tuskegee Institute (now Tuskegee University), and other schools in the South, and the Westside Preparatory School in Chicago. The African cases studied include African languages for instruction with a focus on a Nigerian case, Ujamaa and education for self-reliance in Tanzania, and the case of Cote d’Ivoire which adopted television as a medium of instruction.

AS&RC 468-469 Honors Thesis
Fall. 468; spring. 469. Africana Center faculty.

For senior Africana Studies majors working on honors theses, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty. Permission of the AS&RC director of undergraduate studies is required.

AS&RC 475 Black Leaders and Movements in African-American History (III)
Fall. 4 credits. R. Harris.

The course analyzes the personalities, ideas, and activities central to the struggle for African-American liberation from the eighteenth century to the present. It examines theories of leadership and the structure of protest movements with the goal of understanding current leadership needs and trends among African Americans.

AS&RC 476 Family and Society in Africa (III)
Fall. 4 credits. Not offered fall 2002.

N. Assié-Lumumba.

There are two contrasting views of the status and role of women in Africa. One view portrays African women as dominated and exploited by men. According to another view women have a favorable social position in Africa: indigenous ideologies consider women to be the foundation of society, they are economically active and independent and they have an identity independent of men. In this seminar we discuss the status and role of women in Africa historically as well as in the contemporary period. Among the topics covered are: women in non-westernized/pre-colonial societies; the impact of colonial policies on the status of women; gender and access to schooling, participation in the economy and politics; women and the law; women and health issues; gender issues in southern Africa; womanism and feminism; the United Nations Decade of Women; and the four World Conferences on Women (Mexico 1975, Copenhagen 1986, Nairobi 1985, and Beijing 1995).

AS&RC 483 History of African Political Thought @ (III)
Fall. 4 credits. Not offered fall 2002.

D. Ohadike.

AS&RC 484 Politics and Social Change in Southern Africa (III)
Spring. 4 credits. L. Edmondson.

This course focuses on the legacies of apartheid and the challenges of transformation toward a post-apartheid society in South Africa. Topical emphases include: the rise and decline of apartheid; the historical continuity of Black resistance against racism; women under, against, and after apartheid; South Africa’s relations with its neighbors; geopolitical, economic, and racial dimensions of the American connection; politics of negotiation and transition to majority rule; prospects for stability, democracy, and equality; and South Africa’s new role in the African continental and global arenas. Instructor’s lectures are supplemented by films and class discussions.

AS&RC 489-499 Independent Study
Fall. 498; spring. 499. Africana Center faculty.

For students working on special topics, with selected reading, research projects, etc., under the supervision of a member of the Africana Studies and Research Center faculty.
AS&RC 501 Global Africa: Comparative Black Experience
Spring. 4 credits. A. Mazrui.
This seminar addresses two diasporas in the Black experience. The diaspora of enslavement concerns slaves and their descendants in both the Western and Eastern Diaspora. The diaspora of colonization concerns demographic dispersal as a result of colonialism. The majority of African-Americans are part of the Diaspora of Enslavement. Recent Algerian immigrants into France are part of the Diaspora of Colonization. Jamaicans and Trinidadians in Britain are part of a double diaspora—products of both enslavement and colonization. The course addresses these areas of Black comparison: Comparative Slavery—A Triple Heritage; Race and Race Mixture in Four Traditions; Comparative Emancipation from Slavery; Comparative Struggle for Civil Rights, The Gender Question in Global Africa; and Comparative Quest for Global Equality.

AS&RC 502 Education and Development in Africa

AS&RC 503 African Aesthetics (also ART H 571)
Fall. 4 credits. Not offered fall 2002. S. Hassan.

AS&RC 504 Political Change in Africa
Fall. 4 credits. A. Mazrui.
The study of Africa can be approached dialectically (focusing on the tension between opposing forces) or thematically (focusing on themes as chapters of experience). This course borrows from both those approaches. In their class assignments and examinations students are free to use either approach. The first approach explores the dialectic between continuity and change; tradition and modernity; dependency and liberation; foreign and indigenous influences; anarchy and order; political decay and political development; democracy and authoritarianism; and socialism and capitalism. The thematic approach examines African Nationalism; race consciousness and Pan-Africanism; political parties and interest groups; executive power; ethnicity in politics; class-formation; civil-military relations; economic and cultural development; sub-regional and continental Pan-Africanism; crisis of the African state; and Africa in World Politics.

AS&RC 532 Twentieth-Century Black Cultural Movements
Fall. 4 credits. A. Adams.
This course will examine the major cultural currents of the 20th Century in the Black World. Major movements/currents that will be considered include the Harlem Renaissance, Negritude, Indigenismo, Black Arts Movement, Creolité. Basing the study primarily in the reading of literary texts, the artistic/cultural movements will be studied within the historical, social, and political forces that produced or influenced them, e.g., religion, colonialism, social protest, African and Caribbean independence, womanism. Particular attention will be given to comparisions across geographic regions, principally the African continent, North America, and the Caribbean. The reading of the literary texts will be supported by theoretical readings as well as references to other artistic forms, such as visual arts and music.

AS&RC 598-599 Independent Study
Fall, 598; spring, 599. Variable credit. For graduate students.

AS&RC 601-602 Africana Studies Graduate Seminar
Fall, 601; spring, 602. 4 credits. Africana Studies faculty.
This course, which is conducted as a seminar, is designed for first-year AS&RC graduate students. It is coordinated and supervised by one or two faculty members per semester. Each participating faculty member is responsible for a topical segment of the course related to her/his areas of specialization or an area of interest pertaining to theory and methodology of Africana Studies.

AS&RC 698-699 Thesis
698, fall; 699, spring. Limited to Africana Studies and Research Center graduate students.

AKKADIAN
See Department of Near Eastern Studies.

AMERICAN STUDIES

AMERICAN STUDIES major are encouraged to take a variety of courses in African-American History, race consciousness and Pan-Africanism, political parties and interest groups, executive power, ethnicity in politics, class-formation, civil-military relations, economic and cultural development, sub-regional and continental Pan-Africanism, crisis of the African state, and Africa in World Politics.
in the twentieth century? What does it mean to assimilate: can one assimilate structurally and yet maintain a distinct cultural identity? In what ways do racial and ethnic perceptions structure political, economic, and cultural life? This is an interdisciplinary course in which students analyze historical, literary, and cultural evidence in exploring these and other issues.

American Studies 430 Seminars

AM ST 430.1 The Politics of the American Civil War (also GOVT 408)
Spring. 4 credits. Prerequisite: permission of instructor. R. Bensel.
The Civil War, along with the founding of the nation in the late eighteenth century, is one of the two most important influences on the course of American Political development. Arising out of intense ideological, cultural, and economic competition between the slave South and the free labor North, the conflict created two new national states: a northern Union that replaced the loose federation of the antebellum period and a southern Confederacy that perished at Appomattox. In this course, particular attention is paid to: the political economy and culture of plantation slavery in the antebellum South; the apparent inevitability of collision between the slave and free states and their respective societies; the military, political, and economic strategies that determined, on both sides, the course and duration of the war; the limits and possibilities of reform of southern society during Reconstruction; and the impact of the Civil War on the subsequent development of the United States.

AM ST 430.2 The Four Seasons Motif in American Culture (also HIST 455)
Fall. 4 credits. Prerequisite: permission of instructor. B. Maxwell.
The focus of this seminar is one of the most ubiquitous and pervasive motifs in all of the arts (painting, literature, and music) in the northern hemisphere, both West and East. The Four Seasons, The Four Elements, spring, summer, Fall. 4 credits. Prerequisite: permission of instructor. B. Maxwell.

AM ST 430.3 Literature as History: The Americas (also ENGL 430)
Spring. 4 credits. Prerequisite: permission of instructor. B. Maxwell.
Beginning with William Carlos Williams's In the American Grain (1925), this course considers modernist innovations in the telling of history by literary means. Responding to what they felt was the "glibness" of conventional historiography, writers such as Williams, Charles Reznikoff, John Sanford, Muriel Rukeyser, Melvin Tolson, and Paul Metcalf produced imaginative American histories that made a new world of historical narration, and in the process found new objects of historical attention. One of these was the plural, transnational America of the hemisphere Americas. This recategorization anticipated and influenced in some cases dominant critiques of the European presence on American soil (Eduardo Galeano, Leslie Marmon Silko, David Stannard, Ward Churchill, Noam Chomsky, Ana Castillo), accordingly students read examples, some polemical, of that later work.

American Studies 377 The United States (also ANTH 377 and LSP 377) (III)
For description, see ANTHRO 321.

American Studies 323 American Economic History (also ECON 323) (III)
Spring. 4 credits. P. McClelld.
For description, see ECON 323.

Anthropology, Sociology, and Economics

AM ST 221 Anthropological Representation: Ethnographies of Latino Culture (also ANTHR 221 and LSP 221) (III)
Fall. 3 credits. V. Santiago-Irizarry.
For description, see ANTHRO 221.

AM ST 323 American Economic History (also ECON 323) (III)
Spring. 4 credits. P. McClelld.
For description, see ECON 323.

AM ST 215 Comparative American Literature (also COM L 215) (IV)
Fall. 4 credits. B. Maxwell.
For description, see COM L 215.

AM ST 262  Asian American Literature (also ENGL 262, AAS 262) (IV) Spring 4 credits. S. Wong. For description, see ENGL 262.

AM ST 268  The Culture of the 1960s (also ENGL 268) (IV) 4 credits. Not offered 2002–2003. P. Sawyer. This course argues that the 1960s helps define the 1990s, but that as we look back, the 1990s helps define the 1960s. Were the sixties a time of dangerous experimentation with drugs, sex, and other lifestyles? Were the experiences of young “boomers” contribute to a later generation, the last of the twentieth century? The course explores these and other questions by focusing on the topics of racial justice, war, the counterculture, and the movement. Texts include The Autobiography of Malcolm X, The Electric Kool-Aid Acid Test, Dasipages, the poems of Allen Ginsburg and Adrienne Rich, films, music, speeches, manifestoes, and memoirs. The term paper explores students’ special interests.

AM ST 275  The American Literary Tradition (also ENGL 275) (IV) Fall 4 credits. N. Waligora-Davis. The American national literature is explored through the reading, discussion, and close analysis of texts across the range of American literary history. Not a survey, this course focuses on the relations of the texts to each other, the shaping of national identities in those relationships, and the assumptions about history, language, and the self that underlie them.

AM ST 276  Literature in the Cold War Culture (also ENGL 276) (IV) Not offered 2002–2003. B. Maxwell. For description, see ENGL 276.

AM ST 318  Queer Theatre (also THETR 320) (IV) 4 credits. Not offered 2002–2003. E. Gainor. For description, see THETR 320.

AM ST 335  Contemporary American Theatre (also THETR 337 and ENGL 337) (IV) 4 credits. Not offered 2002–2003. E. Gainor. For description, see THETR 337.

AM ST 338  American Indians and Film (also THETR 338) (IV) 4 credits. Not offered 2002–2003. L. Black. For description, see THETR 338.

AM ST 361  Early American Literature (also ENGL 361) (IV) Fall 4 credits. S. Samuels. For description, see ENGL 361.

AM ST 362  The American Renaissance (also ENGL 362) (IV) Spring 4 credits. D. Fried. For description, see ENGL 362.

AM ST 363  American Fiction at the Turn of the Century (also ENGL 363) Spring 4 credits. K. McCullough. For description, see ENGL 363.

AM ST 365  American Literature Since 1945 (also ENGL 365) (IV) Fall 4 credits. B. Maxwell. For description, see ENGL 365.

AM ST 366  The Nineteenth-Century American Novel (also ENGL 366) (IV) Spring 4 credits. S. Samuels. For description, see ENGL 366.

AM ST 372  American Poetry Since 1950 (also ENGL 378) Spring 4 credits. R. Gilbert. For description, see ENGL 378.

AM ST 374  Nineteenth-Century American Women Writers (also ENGL 374 and WOMNS 378) # (IV) 4 credits. Not offered 2002–2003. Staff. For description, see ENGL 374.

AM ST 406  Prestige in American Literary Realism (also S HUM 419) Spring 4 credits. Limited to 15 students. P. Barrish. For description, see S HUM 419.

AM ST 469  William Faulkner (also ENGL 469) (IV) 4 credits. Not offered 2002–2003. H. Spillers. For description, see ENGL 469.

AM ST 475  Seminar in Cinema I (also FILM 475) (IV) Fall 4 credits. D. Frederiksens. For description, see FILM 475.

AM ST 476  American Melodrama and Film (also FILM 476) Spring 4 credits. S. Haenni. For description, see FILM 476.

AM ST 479  Jewish-American Writing (also ENGL 479 and JWST 478) (IV) Fall 4 credits. J. Porte. For description, see ENGL 479.

Government and Public Policy

GOVT 111  Introduction to American Government and Politics (III) Fall 3 credits. T. J. Lowi. An introduction to government through the American experience. Concentration on analysis of the institutions of government and politics as mechanisms of social control.

AM ST 310  Civil Liberties in the United States (also GOVT 327) (III) Fall 4 credits. Taught in Washington, D.C. J. Rabkin. For description, see GOVT 327.

This course will examine the presidencies of AM ST 316 The American Presidency For description, see GOVT 314. AM ST 315 Prisons (also GOVT 314) (III) Fall. 4 credits. M. E. Sanders. For description, see GOVT 316.

[AM ST 319 The American Congress (also GOVT 318) (III) 4 credits. Not offered 2002–2003. M. Shetter. For description, see GOVT 318.]

[AM ST 328 Constitutional Politics: The United States Supreme Court (also GOVT 328) (III) 4 credits. Not offered 2002–2003. J. Rabkin. For description, see GOVT 328.]

[AM ST 342 The Postmodern Presidency (also GOVT 344) Fall. 4 credits. D. Rubenstein. This course will examine the presidencies of Reagan, Bush (1 and 2), and Clinton in relation to what scholars have called "the postmodern presidency." While this term has been used by institutionalist students of the presidency as a periodizing hypothesis, our emphasis will be on the work of cultural critics and historians. We will address the slippage between fact and fiction in cinematic and popular representations of the presidency (biography, novels, television). The construction of gender normativity (especially masculinity) will be an attendant subtheme. The postmodern presidency will be read as a site of political as well as cultural contestation. The Kennedy assassination will serve as a case study for the formation of a national icon. The larger question of this approach to the presidency concerns the relationship between everyday life practices and citizenship as well as the role of national fantasy in American political culture today. We will read novels (Libra; George Bush, Dark Prince of Love); works of popular biography (Dutch), and criticism (Michael Rogin's Ronald Reagan: The Movie). Film and film clips to be shown include: Tail Gunner Joe, Day, Daise, The Contender, JFK, Forrest Gump, Nixon, Dick. There will be a take-home midterm exam and a final paper.

[AM ST 353 Feminism Movements and the State (also GOVT 353, WOMNS 353) (III) 4 credits. Not offered 2002–2003. M. Katzenstein. For description, see GOVT 353.]

[AM ST 376 American Political Thought from Madison to Malcolm X (also GOVT 366 and HIST 316) # (III) Fall. 4 credits. I. Krannick. For description, see GOVT 366.

[AM ST 388 Science in the American Polity, 1800–1960 (also S&T S 390, GOVT 388) (III) Fall. 4 credits. M. Dennis. For description, see S&T S 390.]

[AM ST 389 Science in the American Polity, 1960–Now (also S&T S 391, GOVT 309) (III) Fall. 4 credits. M. Dennis. For description, see S&T S 391.

[AM ST 428 Government and Public Policy: An Introduction to Analysis and Criticism (also GOVT 428) (III) Fall. 4 credits. T. Lowi. For description, see GOVT 428.

[AM ST 429 Government and Public Policy: An Introduction to Analysis and Criticism (also GOVT 429) (III) Spring. 4 credits. 428 and consent of instructor are required for 429. T. Lowi. For description, see GOVT 429.

History

AM ST 103 Introduction to American History (also HIST 153) # (III) Fall. 4 credits. F. Dunaway. A survey of American history from the beginning through the Civil War. Topics include cultural encounters in the age of Columbus, European colonization, the American Revolution, the early republic, antebellum reform movements, and the coming of the Civil War.

AM ST 104 Introduction to American History (also HIST 154) (III) Spring. 4 credits. T. Bostelmann. An introductory survey of the development of the United States since the Civil War.

AM ST 124 Democracy and its Discontents: Political Traditions in the United States (also HIST 124) (III) Summer. 3 credits. N. Salvatore. An examination of democracy and its critics. The course explores the evolution of democracy in America, focusing on some of the dramatic and important episodes in American history. It considers the struggles over the emancipation of slaves in the nineteenth century and expanded rights for women and working people in the twentieth century, free-speech issues, the civil-rights movement, religious-based critiques of American culture, and conservative critiques of American liberalism. The course serves as an investigation of the ways in which political expression takes forms in modern American culture. In addition to lectures, the course features several afternoon programs. These programs include guest lecturers and hands-on instruction in how to use the modern electronic research library.

AM ST 201 Popular Culture in the United States, 1900–1945 (III or IV) Fall. 4 credits. G. Altschuler. American Studies 201 deals with American popular culture in the period between 1900 and the end of World War II. As we examine best-sellers, films, sports and television, radio, ads, newspapers, magazines, and music, we try to better understand the ways in which popular culture as "contested terrain," the place where social classes, racial and ethnic groups, women and men, the powerful and the less powerful, seek to "control" images and themes. Topics for 201 include: the Western; Cultural Heroes and the Cult of Individualism in the 1920s; The Hays Code and the Black Sox scandal; Mae West and the "New Women"; Advertising in an Age of Consumption; Gangsters and G-Men; and Jackie Robinson and the American Dilemma.

AM ST 202 Popular Culture in the United States, 1945–Present (III or IV) Spring. 4 credits. G. Altschuler. American Studies 202 treats the period from 1945 to the present. As we examine best-sellers, films, sports and television, radio, ads, newspapers, magazines, and music, we try to better understand the ways in which popular culture shapes and/or reflects American values. The course also depicts popular culture as "contested terrain," the place where social classes, racial and ethnic groups, women and men, the powerful and less powerful, seek to "control" images and themes. Topics for 202 include: The "Honey-moons" and 1950s Television; soap operas; "Gross-out" movies; The Beatles and Guns 'n Roses; Gothic Romances; and People Magazine and USA Today.

[AM ST 204 Comparative Migration in the Americas (also HIST 202) (III) Spring. 4 credits. Not offered 2002–2003. M. C. Garcia. For description, see HIST 202.]

AM ST 210 Civil Rights and Civil Wrongs: The Search for Racial Justice in America, 1945–1970 (III) Fall. 4 credits. Not offered 2002–2003. N. Salvatore. In this seminar we read a variety of texts that underscore the fierce struggle to define the meaning of civil rights in American society during this era. We explore this from multiple perspectives through readings of historical, legal, political, theological, and literary readings.

AM ST 213 Introduction to Asian American History (also HIST 264 and AS 213) Fall. 4 credits. D. Chang. For description, see HIST 264.

AM ST 214 Seminar on American Foreign Policy (also HIST 214) (III) Fall. 3 credits. Prerequisite: permission of instructor. W. LaFeber. For description, see HIST 214.

AM ST 219 Mexican Immigration to the United States (also HIST 219, LSP 219, LASP 215) (III) Spring. 4 credits. J. Cardenas. For description, see LSP 219.

AM ST 225 The U.S.-Mexico Border: History, Culture, Representation (also HIST 225 and LSP 225) Spring. 4 credits. M. C. Garcia and R. Graib. For description, see HIST 225.
The emergence of the cinema in the late-nineteenth century coincided with the emergence of a new kind of metropolis, characterized, among other things, by new traffic systems (elevated train, subway, automobile), new racial, ethnic, and sexual regimes, and new urban planning. In this course, we examine how the cinema has participated and intervened in urban transformations by imagining and representing the American city variously as a panorama, a musical symphony, a mystery to be deciphered, a stage for civic theater, a modernist artwork, or a post-apocalyptic wasteland. How does the cinema produce a particularly modern, urban experience? How has it been shaped by urban politics and how, in turn, does it shape the way in which we understand the city? Screenings may include films such as *Manhattan*, *The Crowd*, *Skyscraper Souls*, *42nd Street*, *Naked City*, *Asphalt Jungle*, *Just Another Girl on the I.R.T.*, *Blade Runner*, and will be supplemented by readings in film history, as well as urban history and urban theory.

**AM ST 242 Religion and Politics in American History from J. Winthrop to R. Reed** (also HIST 242 and RELST 242)  (III)  Spring. 4 credits. Prerequisite: permission of instructor. R. L. Moore.

For description, see HIST 242.

For description, see HIST 251.

**AM ST 257 United States Culture and Mexican Americans, 1848 to Present** (also HIST 258, LSP 258)  (III)  Fall. 4 credits. J. Cardenas.

For description, see HIST 258.

**AM ST 258 Historical Development of Women as Professionals, 1800 to Present** (also HD 258, HIST 278, WOMNS 238)  (III)  Spring. 4 credits. J. Brumberg.

For description, see HD 258.

For description, see HIST 260.

For description, see HIST 261.

For description, see HIST 273.

For description, see HIST 303.

For description, see HIST 304.

**AM ST 306 History of American Workers: 1960-90s** (also IRRCB 306)  (III)  Fall. 3 credits. J. Cowie.

For description, see IRRCB 306.

**AM ST 308 Working-Class America in Mass Media and Popular Culture** (also IRRCB 303)  (III)  Spring. 3 credits. J. Cowie.

For description, see IRRCB 303.

**AM ST 309 The Cinema and the American City** (also FILM 342)  (III)  Spring. 4 credits. S. Haenni.

The emergence of the cinema in the late-nineteenth century coincided with the emergence of a new kind of metropolis, characterizing, among other things, by new traffic systems (elevated train, subway, automobile), new racial, ethnic, and sexual regimes, and new urban planning. In this course, we examine how the cinema has participated and intervened in urban transformations by imagining and representing the American city variously as a panarama, a musical symphony, a mystery to be deciphered, a stage for civic theater, a modernist artwork, or a post-apocalyptic wasteland. How does the cinema produce a particularly modern, urban experience? How has it been shaped by urban politics and how, in turn, does it shape the way in which we understand the city? Screenings may include films such as *Manhattan*, *The Crowd*, *Skyscraper Souls*, *42nd Street*, *Naked City*, *Asphalt Jungle*, *Just Another Girl on the I.R.T.*, *Blade Runner*, and will be supplemented by readings in film history, as well as urban history and urban theory.

**AM ST 314 History of American Foreign Policy, 1912 to the Present** (also HIST 314)  (III)  Spring. 4 credits. T. Borstelmann.

For description, see HIST 314.

For description, see HIST 318.

This course examines both the experience and the perception of work in American life in the century framed by two fundamental formations: the emergence of a system of industrial capitalism largely nationalistic in its orientation and the development of a more international economic system in more recent times. Among the topics considered are the effects of technological change, its impact on the experience of work across numerous occupational categories, and the changing perceptions of work as reflected in contemporary cultural expression, literature, and commentary across the century.

For description, see HIST 321.

For description, see HIST 325.

**AM ST 324 Varieties of American Dissent, 1880-1990** (also HIST 324)  (III)  Fall. 4 credits. N. Salvatore.

The idea of dissent in American society raises among the topics considered is the effects of technological change, its impact on the experience of work across numerous occupational categories, and the changing perceptions of work as reflected in contemporary cultural expression, literature, and commentary across the century.

For description, see HIST 332.

For description, see HIST 333.

Fall. 4 credits. J. E. Bernstock.
For description, see ART H 365.

ANTHROPOLOGY

ANTHROPOLOGY 360 Painting and Everyday Life in Nineteenth-Century America (also ART H 360) # (IV)
For description, see ART H 360.

ANTHROPOLOGY 390 American Architecture and Building I (also ARCH 390)
Fall. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. M. Woods.
For description, see ARCH 390.

ANTHROPOLOGY 391 American Architecture and Building II (also ARCH 391)
For description, see ARCH 391.

ANTHROPOLOGY 397 Special Topics in the History of Architecture and Urbanism (also ARCH 398)
For description, see ARCH 398.

ANTHROPOLOGY 462 Topics in Early Modernism (also ART H 462) # (IV)
For description, see ART H 462.

ANTHROPOLOGY 463 Art and Social Histories (also ART H 461)
Spring. 4 credits. L. L. Meixner.
For description, see ART H 461.

Honors
Please see description of major for information about registration in these courses.

ANTHROPOLOGY 493–494 Honors Essay Tutorial 493, fall; 494, spring. Up to 4 credits each semester. See R. L. Moore for appropriate advisers.

ANTHROPOLOGY 493, fall; 494, spring. Up to 4 credits each semester. See R. L. Moore for appropriate advisers.

Unless prerequisites are explicitly stated, 200- and 300-level courses do not have formal prerequisites and can be taken by students without prior experience in anthropology. Such students are welcome in these upper-level courses. For additional information to assist nonmajors and students from other colleges in selecting anthropology courses, see the anthropology department web page (falcon.arts.cornell.edu/~anthro/).

The Major

The range and complexity of the field of Anthropology requires active collaboration between the student and a faculty adviser in developing an individualized program of study. To enter the major, a student must pass one course in each of the two broad introductory areas of anthropology: "Nature and Culture" and "Culture and History" listed below under the heading "Introductory Courses." Provisional acceptance into the major is possible before completing these courses, with permission from the Director of Undergraduate Studies in anthropology. Students are encouraged to contact the Director of Undergraduate Studies or other faculty members as soon as possible in their studies to discuss their interests and a possible major in anthropology.

Students see the Director of Undergraduate Studies to apply to the major and get an adviser. They prepare a short statement about their interests and goals for the major, then meet with their adviser to develop a course plan reflecting these special interests. This concentration should include at least 32 credits in addition to the two introductory courses used to enter the major. Examples of possible concentrations are myth and ritual; ethnicity and identity; action research; nature and culture in human history; anthropology and literature, or law, or the arts, or medicine; human origins, ethnomusicology; primate and human behavior; prehistory of the Americas, or Europe, or Africa; cultural construction of the person; etc. When warranted, the adviser is free to approve up to two cognate courses from other departments totaling up to eight credit hours to fulfill the 32-credit requirement. Students may revise their program of study in consultation with their adviser as they move through their studies. Our goal is to provide a close and supportive advising relationship that is the central and coherent structure for the student's major.

In the senior year, all Anthropology majors are required to take one of the Anthropology Senior Seminars offered by the department (archaeologically oriented majors may substitute Approaches to Archaeology or Archaeological Research). These seminars are designed to provide broad integrating perspectives on the contemporary field of anthropology through the study of principal trends, contemporary issues, history, etc.

Study abroad and off-campus study programs: The Department of Anthropology encourages students to consider a semester of study abroad or off-campus study developed as an integral part of the student's major concentration. The Director of Undergraduate Studies serves as the Anthropology Study Abroad adviser.

The Cornell-Nepal Study Program: The Cornell-Nepal Study Program is a joint program of Cornell University and Tribhuvan University in Nepal.

ANTHROPOLOGY 345 U.S. Art from FDR to Reagan (also ART H 365) # (IV)
Fall. 4 credits. J. E. Bernstock.
For description, see ART H 365.

ANTHROPOLOGY 397 Special Topics in the History of Architecture and Urbanism (also ARCH 398)
For description, see ARCH 398.

ANTHROPOLOGY 462 Topics in Early Modernism (also ART H 462) # (IV)
For description, see ART H 462.

ANTHROPOLOGY 463 Art and Social Histories (also ART H 461)
Spring. 4 credits. L. L. Meixner.
For description, see ART H 461.

For description, see ART H 360.

ANTHROPOLOGY 390 American Architecture and Building I (also ARCH 390)
Fall. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. M. Woods.
For description, see ARCH 390.

ANTHROPOLOGY 391 American Architecture and Building II (also ARCH 391)
For description, see ARCH 391.

ANTHROPOLOGY 397 Special Topics in the History of Architecture and Urbanism (also ARCH 398)
For description, see ARCH 398.
University, the national university of Nepal. Qualified seniors, and first- or second-year graduate students work with faculty from both universities to prepare for and undertake field research projects in Nepal. Students receiving 15 credits per semester; students may enroll for either fall or spring semester, or for the entire year; application is through Cornell Abroad. For further information, consult David Holmberg or Kathryn March in the Department of Anthropology.

Other anthropologically-relevant study abroad options, using existing Cornell Abroad and off-campus options, can be worked out in consultation with the major adviser, the Anthropology Study Abroad adviser, and Cornell Abroad.

Honors

Honors in anthropology are awarded for excellence in the major, which includes overall grade point average and completion of an honors thesis. Anthropology majors interested in the Honors Program should consult the chair of the Honors Committee in their junior year. To qualify for entrance into the Honors Program, a student must have at least a 3.0 GPA overall and 3.3 GPA in the major, and the consent of a faculty member in anthropology who will guide the honors thesis. After applying to the program and being admitted as a candidate by the Honors Committee, the student conducts research and writes a thesis. This thesis is evaluated by the faculty research adviser and two other faculty members. Honors (i.e., cum laude, magna cum laude, or summa cum laude) are awarded based on the quality of the thesis and the student's overall record. Honors candidates must start this process by consulting their major adviser about the honors program early in their junior year.

In addition, students may enroll in ANTHR 483 (fall or spring) "Honors Thesis Research." To complete the thesis, students must enroll in 491 (fall or spring) "Honors Thesis Write-up." Only ANTHR 493 may count toward hours for completion of the anthropology major requirements. The credit hours for these courses are variable, grades for these courses are given by the faculty research adviser, and they are based on performance during thesis research and writing.

Any honors candidate whose research directly involves working with human subjects must receive approval for the project from the Cornell University Committee on Human Subjects.

Special Programs and Facilities

Collections: the department has an extensive collection of archaeological and ethnological materials housed in the anthropology collections. A limited number of students can make arrangements to serve as interns in the anthropology collections. Olin Library houses some of the most extensive collections of materials on the ethnology of Southeast Asia, South Asia, East Asia, and Latin America to be found anywhere in the United States. The biological anthropology laboratory (McGraw B65) houses an extensive collection of materials for teaching purposes, including (1) human skeletal remains, (2) articulated skeletons and cranial casts of primates, and (3) casts of important fossils in the human lineage.

Independent Study: specialized individual study programs are offered in Anthropology 497, Topics in Anthropology, a course open to a limited number of juniors and seniors who have obtained consent and supervision of a faculty member. Students should note that many 600-level courses are open to them by consent of the instructor.

Colloquia: the Department of Anthropology holds colloquia almost every week of the semester on Friday at 3:30 in McGraw 215. Faculty members from Cornell and other universities present their views on current research and problems in anthropology. Students are encouraged to attend.

For more complete information about the anthropology major, see the Director of Undergraduate Studies, pick up a copy of the major brochure (which includes descriptions of each major), or consult the Anthropology Department web page (falcon.arts.cornell.edu/~anthro/).

I. Introductory Courses

A. Nature and Culture:

ANTHR 101 Introduction to Anthropology: Biological Perspectives on the Evolution of Humankind (I Supplementary List) Fall. 3 credits. Fee for lab usage and maintenance, $5. A. Arcadi. The evolution of humankind is explored through the fossil record, studies of the biological differences among current human populations, and a comparison with our closest relatives, the primates. This course investigates the roots of human biology and behavior with an evolutionary framework.

ANTHR 103 The Scope of Anthropology Spring. 1 credit. Prerequisite: concurrent enrollment in or prior completion of ANTHR 101 or ANTHR 102. S-U grades only. Staff. This course is intended for majors or prospective majors in anthropology. Each week a different member of the faculty in anthropology makes a presentation on the nature of their work within the field and discusses their interests with students. The course is meant to introduce the range of approaches found within anthropology and help students in planning future course work.

ANTHR 203 Early People: The Archaeological and Fossil Record (also ARKEO 203) (III) Spring. 3 credits. T. Volman. A survey of the archaeological and fossil record of human evolution. Contributions by researchers from a variety of disciplines are highlighted, as are the discoveries that have enlarged the study of human evolution for more than a century. Critical evaluation of evidence and interpretation are stressed. Demonstrations and films supplement the lectures.

ANTHR 211 Nature and Culture (III) Spring. 4 credits. Limited to 15. Sophomore Writing Seminar. S. Sangren. "Nature and Culture" is a sophomore seminar that examines and evaluates contrasting views of how best to understand the interactions of nature and culture in human life. This examination exposes the familiar tension of "nature" versus "nurture" debates. Beyond these debates, cultural anthropological study of other societies reveals that assumptions about human nature are intrinsically intertwined with the legitimacy of social arrangements (family organization, beliefs about gender and procreation, forms of political authority). This cross-cultural perspective on linkages between ideologies of nature and culture, on the one hand, and social-institutional arrangements, on the other, provides a useful critical vantage in a consideration of similar linkages in our own society. In addition, the course takes up current political debates in which ideas about nature and culture divide opinion. The course is premised on a strong claim for the contribution of cultural anthropology to the development of better science and a reflective understanding of human potential.

ANTHR 275 Human Biology and Evolution (also BIOEE 275 and NS 275) (I) Fall. 3 credits. S-U grades optional, with permission of either instructor: Lecsc W F 10-12; disc M 2-4. Offered alternate years. J. D. Haas, K. A. Kennedy.

An introduction to the biology of Homo Sapiens through an examination of human evolution, biological diversity, and the biological implications of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Piltdown hoax, sociobiology, the debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology. These topics and others are the focus of the optional one-hour weekly discussions.

B. Culture and History:

ANTHR 100 Introduction to Archaeology (also ARKEO 100) (II) or (III) Fall. 3 credits. J. F. Nance. A broad introduction to archaeology—the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societies and illustrate the varied methods that archaeologists use to investigate the material remains. This course can serve as a platform for both archaeology and anthropology undergraduate majors.

ANTHR 102 Introduction to Anthropology: The Comparison of Cultures (II) Spring. 3 credits. K. March.

An introduction to cultural anthropology through ethnographies, or the descriptive accounts of anthropologists. Through readings and lectures, students acquaint themselves with a number of cultures from several parts of the world. The cultures range in form from those of small-scale tribal societies to those of state societies. Throughout the course, we attempt to make sense of exotic cultures in their own terms. Attention is focused on variation in cultural patterns as they are expressed in social, economic, and ritual practices. In this encounter, the principles of anthropology as a comparative enterprise that explores distinct cultural systems in relief are developed. Fiction, films, and exercises supplement the formal anthropological materials.
anthr 103 the scope of anthropology
spring. 1 credit. prerequisite: concurrent enrollment in or prior completion of anthr 101 or anthr 102. s-u grades only. staff. for course description, see section i.a. introductory courses.

anthr 200 cultural diversity and contemporary issues @ (iii)
fall. 3 credits. a. willford. this course introduces students to the meaning and significance of forms of cultural diversity for contemporary issues. drawing from films, videos, and selected readings, students are confronted with different representational forms that portray cultures in various parts of the world and they are asked to critically examine their own prejudices as they influence the perception and evaluation of cultural differences. we approach cultures holistically, assuming the inseparability of economies, kinship, religion, and politics, as well as interconnections and dependencies between world areas (e.g., africa, latin america, the west). among the issues considered: "political correctness" and truth; nativism and ecological diversity, race, ethnicity, and sexuality; sin, religion, and war; and global processes and cultural integrity.

[anthr 202 interpretive archaeology (also arkeo 202) @ (iii)]
fall. 3 credits. not offered 2002-2003.

anthr 215 stone age art (also arkeo 215) # (iii)
fall. 3 credits. t. volman. when did "art" begin? are we sure? do we know how it began? these are some of the questions we will investigate. drawing from a variety of sources, this course will explore important aspects of paleoindian and paleoamerican cultures in the americas. students are required to complete a research project in one of the following areas: "social organization and culture"; "technology and culture"; "archaeology and art." students will be expected to present their findings to the class.

[anthr 240 old world prehistory (also arkeo 240) # (iii)]
fall. 3 credits. not offered 2002-2003.

ii. honors and independent study

anthr 483 honors thesis research
fall or spring. credit tba. prerequisite: consent of the honors committee. staff. independent work under the close guidance of a faculty member selected by the student.

anthr 491 honors thesis write-up
fall or spring. credit tba. staff.

anthr 497 independent study: undergraduate i
fall or spring. credit tba. intended for undergraduate students only. staff. independent reading course in topics not covered in regularly scheduled courses. students select a topic in consultation with the faculty member who has agreed to supervise the course work.

anthr 498 independent study: undergraduate ii
fall or spring. credit and hours tba. intended for undergraduate students only. staff.

for course description, see anthr 497, section ii, honors and independent study.

iii. anthropology major senior seminars

in the senior year, all anthropology majors are required to take one of the anthropology senior seminars offered by the department (archaeologically oriented majors may substitute approaches to archaeology or archaeological research design). these seminars are designed to provide broad integrating perspectives on the contemporary field of anthropology through the study of principal trends, contemporary issues, history, and so on.

anthr 429 anthropology and psychoanalysis @ (iii)
fall. 4 credits. limited to 15. s. sangren. this seminar is designed to introduce students to the major concepts of psychoanalytic theory and to consider the implications of psychoanalytic ideas for anthropology.

anthr 444 god(s) and the market (iii)
fall. 4 credits. h. miyazaki. one of the oldest and most powerful insights of anthropology is that different domains of society such as religion and economy shape and condition each other. we will discuss a variety of old and new anthropological explorations into the intersections of religion and economy, from max weber's classical study of the relationship between protestantism and the rise of capitalism to recent studies of the work of faith in financial markets. this seminar is intended to bring together students interested in religion and students interested in business and economy.

anthr 456 mesoamerican religion, science, and history @ (iii)
fall. 4 credits. limited to 15. j. henderson. an introduction to belief systems in ancient mexico and central america, emphasizing the blending of religion, astrology, myth, history, and prophecy. interpreting text and image in pre-columbian texts and inscriptions is a major focus.

anthr 490 topics in biological anthropology
fall. 4 credits. limited to 12 students. m. small. current topics in biological anthropology are explored. topics change each semester. for further information, contact the professor or department office.

iv. understanding cultures and societies

anthropologists examine the diversity of human behaviors, social relationships and structures, economies, political and legal orders, worldviews, logics, languages, symbols, myths, and religions among the many other means by which they create and reproduce social life around the world. anthropologists work from a holistic perspective to account for differences and similarities across cultures. anthropologists also take central-scale and macro-level sociocultural systems as the object of analysis. they collect data primarily through ethnographic fieldwork, that is, months or years of participating in and observing the societies they study. anthropologists see inherent linkages between the practical and the meaningful dimensions of human existence.

a. anthropological approaches to economy, society, law, and politics:

the courses below take as their starting point what are usually defined as the social, political, legal, and economic practices and structures of human life and how they are shaped culturally and how they shape culture.

anthr 307 comparative analyses of contemporary muslim societies (also nes 352) @ (iii)
fall. 4 credits. c. robinson. moving beyond approaches that locate islam geographically, highlighting its particularities and links to local cultural contexts, this course offers a comparative approach to the examination of central cultural, social, and political practices of contemporary muslim societies. the course aims to examine the ways in which regional cultural and historical processes intersect with islam as a religious, legal, cultural, economic, and political system and provide frameworks for understanding islam as the globalizing phenomena it is today. drawing on anthropological theory and on ethnographic studies from south asia, the middle east, southeast asia, europe, north america, and the caribbean, this course explores the following five themes: 1) islam and economics; 2) islam and politics; 3) islam and law; 4) islam and culture; 5) islam and the state; and 6) islam and the global economy.

anthr 310 nationalism and revitalism (iii)
fall. 4 credits. a. willford. this course explores the growing phenomena of religious and ethnic nationalism within modern nation-states. we also examine ways in which religious and ethnic revitalism present alternative models of modernity and group identity, often defined in opposition to state-sponsored nationalist ideologies.

anthr 313 topics in the anthropology of japan @ (iii)
fall. 4 credits. h. miyazaki. in this survey course, we seek to understand contemporary japanese society by focusing on a particular social and cultural issue hotly debated in japan. the ultimate goal of the course is to appreciate anthropology as a particular form of engagement with contem-

anthropology 425
porary issues, distinct from other forms of engagement such as journalism, policy-oriented social research and philosophical and ethical contemplation. No prior knowledge of Japan or anthropology is necessary in order to take this course. In 2003, the focus of the course is on concepts of work and workplace in contemporary Japan.

ANTHR 321 Sex and Gender in Cross-Cultural Perspective (also ANTHR 621 and WOMNS 321/631) (III) Fall. 4 credits. K. March.

An introduction to the study of sex roles cross-culturally and to anthropological theories of sex and gender. The course examines various aspects of the place of the sexes in social, political, economic, ideological, and biological systems to emphasize the diversity in gender and sex-role definitions around the world.

Much of this course is a survey of forms of the family, descent groups, and marriage systems. The role of age and sex in the social structure is also considered. The last part of the course is devoted to a history of the British and American family and to its fate in utopian communities.

Rule-making and dispute resolution are integral aspects of social reality in any culture. The ways in which conflict is treated and interpreted—to be then deflected or resolved—articulate with other cultural domains such as religion, politics, and economics as part of the material and symbolic processes that enable sociocultural interaction. At issue then are the formal and processual means that the treatment of conflict takes in different societies. These means constitute frames for the definition of social experience that are used by social factors in the interpretation of events within the terms of an overriding sociocultural logic that is in turn refigured by these interpretive frames.

This course offers a review of anthropological research on intellectuals (or "knowledge-specialists") and on social practices of knowledge-making. The question of how social knowledge is generated, standardized, and reproduced has become an area of renewed interest across the social sciences since the 1970s. Reflective social science has been especially interested in understanding how social and cultural knowledges are created, by whom, and for what purposes. These questions actually have a substantial heritage and the course begins with a review of classic sociological and anthropological theories of intellectuals and their role(s) in society. Then the course explores both classic and contemporary ethnographies of knowledge-specialists and knowledge-making with a special focus on the relationship between intellectuals and the creation of cultural order. Finally, the course discusses the possibly changing role of intellectuals in contemporary Western "knowledge societies."

ANTHR 388 Masks of Power and Strategies of Resistance and Subversion (III) Fall. 4 credits. J. Rigi.

The aim of the course is to provide a broad theoretical and ethnographic orientation on various forms of power relations, strategies of resistance/subversion and the role of human agency in them. The course explores various concepts of power on both macro and micro levels, tracing their genealogies and looking comparatively at relevant ethnographies. Although a pillar of the course is the comparative anthropology of state, it also examines power relations in stateless societies. Various forms of state are contrasted to each other on the one hand and to forms of political power in the stateless societies on the other. The course also covers micro processes of power relation related to gender relations and body politics.

ANTHR 422 Anthropology and Environment (III) Fall. 4 credits. Prerequisite: anthropology major or permission of instructor. Not offered 2002–2003. D. Holmberg.

ANTHR 423 Anthropology of the University (also SHUM 423) (III) Spring. 4 credits. Limited to 15 students. D. Greenwood.

Turning an anthropological gaze on the contemporary university as a social and cultural system, this seminar involves an examination of the convergences and divergences between the trajectories of the sciences and engineering, the humanities, and the social sciences in contemporary universities and some international comparisons with the trajectories of universities around the world. The overall aim is to link an ethnographic analysis of the microstructures of departmental differentiation, professional hegemonies, and local financing with the larger-scale transformations of universities' place in society under the pressures of corporatization, globalization, and competition from a host of alternative higher education institutions.

ANTHR 424 Ethnoracial Identity in Anthropology, Language, and Law (also SP 424) (III) Spring. 4 credits. V. Santiago-Irizarry.

This course examines the role that both law and language, as mutually constitutive mediating systems, occupy in constructing ethnoracial identities in the United States. We approach the law from a critical anthropological perspective, as a signifying and significant sociocultural system rather than as an abstract collection of rules, norms, and procedures, to examine how legal processes and discourses contribute to processes of cultural production and reproduction that contribute to the creation and maintenance of differential power relations. Course material draws on anthropological, linguistic, and critical race theory as well as ethnographic and legal material to guide and document our analyses.

ANTHR 429 Anthropology and Psychoanalysis (III) Fall. 4 credits. S. Sangren.

For course description, see section III, Anthropology Major Senior Seminars.

ANTHR 442 Violence, Symbolic Violence, Terror and Trauma in South Asia and the Himalayas (also ANTHR 642) (III) Spring. 4 credits. D. Holmberg.

This working seminar will focus on violent conflict in South Asia. Key texts on social, ethnic, religious, and political violence in Sri Lanka, India, Nepal, and Pakistan as well as theoretical literature on violence, trauma, and human rights will provide the basis for a general reassessment of the anthropological study of violence.

ANTHR 444 God(s) and the Market (III) Spring. 4 credits. H. Miyazaki.

For course description, see section III, Anthropology Major Senior Seminars.

ANTHR 479 Ethnicity and Identity Politics: An Anthropological Perspective (also LSP 424) (III) Spring. 4 credits. V. Munasinghe.

The most baffling aspect of ethnicity is that while ethnic sentiments and movements gain ground rapidly within the international arena, there is no claim to ethnic status or identity. No objective sense is also receiving increasing credence within the academic community. How can something thought "not to exist" have such profound consequences in the real world? In lay understandings, ethnicity is believed to be a "natural" disposition of humanity. If so, why does ethnicity mean different "things" in different places? Anthropology has much to contribute to a greater understanding of this perplexing phenomenon. After all, the defining criterion for ethnic groups is that of critical distinctiveness. Through ethnographic case studies, this course examines some of the key anthropological approaches to the identity politics of today. We explore the relationship of ethnicity to culture, ethnicity to nation, and ethnicity to state to better understand the role ethnicity plays in the identity politics of today.

B. Interpretive Approaches in Cultural Anthropology:

These courses stress symbolic or textual approaches to human society. They take as their object of analysis the meaning of meaning in such diverse areas as performance and text, myth and religion, views of the self, gender, and the sociology of knowledge. These same topics arise in many of the area-focused courses as well (Section D), but take center stage in the following courses.

This course provides an introduction to understanding the relationship between media and culture from an anthropological perspective. The primary goal of the course is to help students develop an ethnoanalytic awareness of the complex factors influencing mass media production, representation, and reception. We work toward this goal by studying how media
technologies effect the representation and reproduction of cultural identities, how mass media representations mediate the negotiation of national identities. Topics to be covered include the ways in which social and historical cases are used to analyze how these cultural patterns are produced, exchanged, presented, and given meaning in contemporary society.

ANTHR 250 The Anthropology of Food and Culture
Fall. 4 credits. J. Fajans.
You are what you eat! This course examines the way food is produced, prepared, exchanged, presented, and given meaning in cultures around the world. It examines the symbolism of specific foodstuffs: Who prepares food and how is it done? Who feeds whom and how these relations are expressed and valued? In addition to looking at these questions with reference to commensalism, how food is used in public contexts for presentation or exchange, and how food is a marker of gender, class, status, ethnicity, and identity. In addition to looking specifically at food, we analyze cultural ideas about food, the body, and identity in terms of how these cultural patterns are produced and expressed through concrete activities like eating, fasting, and special diets. In this class we stress critical and comparative thinking about subcultures we tend to take for granted.

ANTHR 257 American Indians in Film (III)
Spring. 3 credits. F. Gleach.
American Indians have been featured in films in a variety of ways over the years, from actors in red-face and portrayals of savagery to over-romanticized nobility. There have also been more accurate views produced, however, and there are Native actors and filmmakers. This course will explore the range of these portrayals, in documentary as well as Hollywood films. We conclude by examining the apparent persistence, revival and transformation of these patterns in popular culture and media today. Students without prior experience in anthropological studies of cosmology, ritual, roles of specialists (spirit mediums, curers, priests, ascetics, etc.) and non-specialists in producing these cultural forms.

ANTHR 379 Culture, Language, and Thought (III)
Spring. 4 credits. V. Santiago-Irizarry.
The relationship among culture, language, and thought has been a core concern in anthropology. Language and culture are commonly defined as processes that are public and shared yet also operate within and upon subliminal levels. In this course we examine how anthropologists have explored this relationship, which is engendered in the interaction between culture and language as parallel mediating devices for the constitution, interpretation, and expression of human experience.

ANTHR 381 Anthropology and Religion (also RELST 381) (III)
This course approaches the study of religion from an anthropological perspective. The centrality and universality of religion in social life has been fundamental in the development of social and cultural theory. We begin by examining the classic theories of religion in the works of Durkheim, Weber, and Freud, followed by an exploration of how these theories have been influential in anthropological studies of cosmology, ritual, selfhood, myth, sorcery, witchcraft, and pilgrimage by examining the apparent persistence, revival and transformation of religious beliefs and practices within modern and modernizing states. This leads us to ask whether an increasing politicization and globalization of religious ideology poses significant challenges to the anthropological analysis of religion.

ANTHR 406 The Culture of Lives (also WOMNS 406) (III)

ANTHR 408 Gender Symbolism (also WOMNS 408) (IV)

ANTHR 430 Indians and the Environment (III)
Fall. 4 credits. F. Gleach.
From "savages of the woods to "keepers of the game" to "keepers of the game" to natural conservationists, American Indians have long been constructed as having a special relationship to the environment. This course examines the history of this construction, and its effects on Native people today. Indigenous peoples around the world have been and are being cast in similar dimensions, and global effects, parallels, and relationships will also be considered.

ANTHR 433 Censorship and the Production of Knowledge (also S HUM 403) (III)
Spring. 4 credits. Limited to 15 students. D. Boyer.
This course seeks to productively expand the definition of censorship as ideological interdiction by exploring psychoanalytic and social-theoretical approaches to censorship and practices of self-censorship. We are especially interested in the relationship of censorship to the social formation of knowledge and we explore this relationship through case studies of media control, academic peer review processes, and the commodification of knowledge in corporate "knowledge industries."

ANTHR 434 The University as Locus of National Culture (also S HUM 404) (III)
Fall. 4 credits. Limited to 15 students. D. Boyer.
This course focuses on the places of the university as a site for the articulation, negotiation, and dissemination of knowledges of nation. We investigate the university as a public cultural institution and how it both becomes a symbol of the cultural achievement of the nation-state and serves to elaborate and publicize knowledges of national belonging alongside its cultivation of a plurality of specialized fields of knowledge (including critical knowledges of nationhood). These discussions are grounded in a study of the evolution of the modern German research university and its dual role as producer of scientific knowledge and site for the production of national culture.

ANTHR 435 Visual Anthropology (III)

ANTHR 456 Mesoamerican Religion, Science, and History (III)
Fall. 4 credits. J. Henderson.
For course description, see section, III Anthropology Major Senior Seminars.

ANTHR 469 Gender and Age in Archaeology (IV)

C. Cultures in Anthropological Perspectives:
Anthropology constructs its theories in the comparison of different social and cultural systems and thus depends integrally on knowledge about particular places. The courses below are all focused on the cultures and societies of particular areas of the world and organize knowledge about these areas in reference to key anthropological questions. Students without prior experience in anthropology are welcome in these courses.

ANTHR 221 Anthropological Representation: Ethnographies on Latino Culture (also LSP 221 and AM ST 221) (III)
Fall. 3 credits. V. Santiago-Irizarry.
Representation is basic to anthropology. In translating cultures, anthropologists produce authoritative representations of and about other people's lives. In this course, we examine, with a crisis of the production of representations about U.S. Latino cultures as these are embodied in anthropological texts. Issues explored include the relationship between the ethnographer and the people s/he is
studying, the contexts in which ethnographic texts are produced, and the way they position different cultural groups within the larger national context.

[ANTHR 224] The French Experience (also FRLIT 224) (II or IV)

An examination of French society, culture, and institutions. What has made French culture so distinctive? Its literature and its revolutions, its gastronomy and fashionable painting, its cathedrals and cinema. Looking attentively at texts, images, and contexts from selected moments in the eighteenth, nineteenth, and twentieth centuries, we attempt to unravel some of the defining enigmas of the French experience.

ANTHR 230 Cultures of Native North America @ # (III)
Fall. 4 credits. B. Lambert.

A survey of the principal Eskimo and American Indian culture areas north of Mexico. Selected cultures are examined to bring out distinctive features of the economy, social organization, religion, and worldview. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.

ANTHR 257 American Indians in Film (III)
Spring. 3 credits. F. Gleach.
For course description, see section IVB, Understanding Cultures and Societies.

ANTHR 303 Asians in the Americas: A Comparative Perspective (also AAS 303) (III)
Spring. 4 credits. V. Munasinghe.

The common perception of ethnicity is that it is a "natural" and an inevitable consequence of cultural difference. "Asians" overseas, in particular, have won repute as a people who cling tenaciously to their culture and refuse to assimilate into their host societies and cultures. But, who are the "Asians"? On what basis can we label "Asians" an ethnic group? Although there is a significant Asian presence in the Caribbean and the category "Asian" itself does not exist in the Caribbean. What does this say about the nature of categories that label and demarcate groups of people on the basis of alleged cultural and phenotypical characteristics? This course examines the dynamics behind group identity, namely ethnicity, by comparing and contrasting the multicultural experience of Asian populations in the Caribbean and the United States. Ethnographic case studies focus on the East Indian and Chinese experiences in the Caribbean and the Chinese, Korean, Japanese, Filipino, and Indian experiences in the United States.

ANTHR 307 Comparative Analyses of Contemporary Muslim Societies (also NES 352) (III)
Spring. 4 credits. C. Robinson.
For course description, see section IVA, Understanding Cultures and Societies.

ANTHR 313 Topics in the Anthropology of Japan (III)
Spring. 4 credits. H. Miyazaki.
For course description, see section IVA, Understanding Cultures and Societies.

[ANTHR 316] Power, Society, and Culture in Southeast Asia (also ARKEO 356) @ # (III)

Southeast Asia is a region where anthropologists have paid great attention to the symbolic within cultural and social processes. While this intellectual orientation has produced contextually rich accounts of cultural uniqueness, there has been a tendency within "interpretive" ethnographies to downplay the role of power and domination within culture and society. This course aims to utilize the traditional strength of symbolic anthropology by examining the roles of ritual, art, religion, and "traditional" values within contemporary Southeast Asian societies. In so doing, however, we examine how these practices and ideas can also structure ethnic, class, and gender inequalities. Understanding how "traditional" cultural practices and ideologies fit within contemporary nation-states requires that we also examine the effects of colonialism, war, and nationalism throughout the region. In this broad and comparative ethnographic survey of Southeast Asia, this course also investigates how culturally-specific forms of power and domination are reflected in national politics and in local and regional responses to the economic and cultural forces of globalization.

ANTHR 336 Change and Continuity in the Pacific Islands (III)

This course provides an introduction to the diverse peoples and cultures of Oceania, which extends from Hawaii to New Zealand and from Easter Island to New Guinea. It surveys the continuities and differences within this vast domain. The primary focus is on cultural diversity, linguistic patterns, history and migration, and ecological constraints and adaptations. The course examines issues confronting the contemporary Pacific nations: colonialism, development, nationalism, the politics of tradition, and how the world system influences their politics in the region. This course is open to anyone interested in the Pacific region and/or in anthropology.

[ANTHR 337] Gender, Identity, and Exchange in Melanesia (III)

The anthropological inquiry into one's own culture is never a neutral exercise. This course explores issues in the cultural construction of the United States as a "pluralistic" society. We look at the ideological context for the production of a cultural profile predicted upon ideas that are intrinsic to American images of identity such as individualism, freedom, and equality and the way these are applied in practice. The course readings include historic documents and accounts, popular writing, and recent ethnographies on the United States.

ANTHR 339 Peoples and Cultures of the Himalayas (also ANTHR 739) @ (III)

A comprehensive exploration of the peoples and cultures of the Himalayas. Ethnographic materials draw on the lifeways of populations living in the Himalayan regions of Bhutan, India, Nepal, and Tibet. The cultural issues to be examined through these sources include images of the Himalayas in the West, forms of social life, ethnic diversity, political and economic history, and religious complexity.

ANTHR 344 Male and Female in Chinese Culture and Society (also WOMNS 346) @ (III)
Fall. 4 credits. S. Sangren.

This course explores the culture of gender, sex roles, and domestic relations in late traditional and modern Chinese society. Readings and lectures range from ethnographic descriptions of the dynamics of Chinese family life, kin relations, and socialization to representations of male and female in mythologies and ritual activities. The course also considers developments subsequent to political changes in China. Although the course's analytical focus is anthropological, readings will draw from the writings of historians and political scientists as well. A premise of the course is that understanding sex and gender in China is essential to understanding Chinese culture and its most fundamental values. The course also aims to introduce students interested in Chinese to techniques of anthropological analysis.

[ANTHR 356] The Kayapo of Brazil (also ANTHR 648) @ (III)
Spring. 4 credits. T. Turner.

An intensive study of an Amazonian indigenous society, its culture, history and contemporary struggle for coexistence with modern regional, national and global society. The broader theoretical implications of aspects of Kayapo ethnography, such as kinship and family structure, moiety organization, ritual and the ceremonial system, social values, the political system, gender relations, inequality and hierarchy, the social production of bodiliness and the person, the patterning of affects and emotion, cosmology and alienated aspects of social constructions of history as narrative genres and modes of consciousness, social modes of speech and specialized uses of language, the appropriation and use of video, historical change, contemporary political and efforts at communal economic development.

[ANTHR 355] Ancient Mexico and Central America (also ARKEO 355) @ # (III)

ANTHR 356 Archaeology of the Andes (also ARKEO 356) @ (III)
Spring. 4 credits. J. Henderson.

A survey of the rise and decline of civilizations in the Andean region of western South America before the European invasion. Key topics include the use of invasion-period and ethnographic information to interpret precolombian societies, the emergence of settled farming life, and the development of the state.

[ANTHR 377] The United States (also LSP 377 and AM ST 377) (III)

The anthropological inquiry into one's own culture is never a neutral exercise. This course explores issues in the cultural construction of the United States as a "pluralistic" society. We look at the ideological context for the production of a cultural profile predicted upon ideas that are intrinsic to American images of identity such as individualism, freedom, and equality and the way these are applied in practice. The course readings include historic documents and accounts, popular writing, and recent ethnographies on the United States.

ANTHR 383 Topics in African Ethnography and the Social and Civil Society in Colonial and Contemporary Africa (III)
Fall. 4 credits. J. Schoof.

This course will provide an intensive introduction to Africanist anthropology through an examination of classic works of British social anthropology and current ethnographic materials from 1965 to the present. Taking the African civil society as its central foci, the course will address their relationship through three lenses: state power...
and African popular responses; social change, globalization, and the expansion of Western economic systems into African societies; and the role of education and educational institutions in the transformation of Africa. The course readings will move between colonial and contemporary ethnographic materials to examine how the processes have changed with the passing of the colonial regime and the rise of independent African states. Further, by comparing these two bodies of literature, we will analyze how anthropological approaches to Africa have changed (or not) in their analytical and representational orientation.

**ANTHR 413 Religion and Politics in Southeast Asia (also ASIAN 413)** @ (III)
Spring. 4 credits. A. Willford. This course explores how religious beliefs and practices in Southeast Asia have been transformed by the combined forces of colonialism, nationalism, and globalization. By examining both diversity and resurgence in one of the world's most rapidly modernizing regions, we aim to understand the common economic, social, and political conditions that are contributing to the popularity of contemporary religious movements. At the same time, we also consider the unique ideological, theological, and cultural understandings behind different religions and movements. Throughout this process, we will also reexamine ideas about modernity.

**ANTHR 442 Violence, Symbolic Violence, Terror and Trauma in South Asia and the Himalayas (also ANTHR 642) @ (III)
Spring. 4 credits. D. Holmberg. For course description, see section JVA, Understanding Cultures and Societies.

**ANTHR 456 Mesoamerican Religion, Science, and History @ # (III)
Fall. 4 credits. J. Henderson. For course description, see section III, Anthropology Major Senior Seminars.

**ANTHR 477 Ethnology of Island Southeast Asia @ (III)
Fall. 4 credits. Not offered 2002-2003.

**ANTHR 493 Seminar in Archaeology (also ARKEO) @ (III)
Fall. 4 credits. Not offered 2002-2003.

**V. Anthropological Thought and Method**

As a form of inquiry, anthropology has a long and complex history and utilizes a wide variety of theories and methods. In this section, topics in the history of anthropological thought and numerous anthropological approaches are presented, along with courses focused on the design of anthropological research projects.

**ANTHR 215 Stone Age Art (also ARKEO 215) @ (III)
Fall. 3 credits. T. Volman. For course description, see section IB, Introductory Courses.

**ANTHR 291 Filming Other Cultures (also ANTHR 291 and THETR 291/691) @ (III or IV)
Spring. 4 credits. Limited to 20 students. Preference given to students who have taken either ANTHR 102 or THETR 474. Fee for film screening and maintenance: $55. Not offered 2002-2003.

**ANTHR 306 Ethnographic Description (III)
Fall. 4 credits. Not offered 2002-2003.

**ANTHR 324 Anthropology Amongst the Disciplines (III)
Fall. 4 credits. J. Siegel. Ethnography has as one of its aims the comprehension of "the other" in whose eyes the "I" or the first person is constructed. The history of this idea in Western philosophy and literature has influenced anthropologists' understanding. We look at this in Western philosophy and its influence in ethnography, particularly in the study of ritual.

**ANTHR 362 Democratizing Research: Participation, Action, and Research (also ANTHR 662) @ (III)
Fall. 4 credits. Not offered 2002-2003. D. J. Greenwood. This course provides an alternative to distanced, "objectivist" social science by reviewing some of the numerous approaches to socially engaged research. Among the approaches discussed are those centered on the pedagogy of liberation, feminism, the industrial desert, and the "Southern" participatory action research, action science, and participatory evaluation. There are no prerequisites and undergraduates are welcome.

**ANTHR 368 Marx: An Overview of His Thought (also ANTHR 668) @ (III)
Spring. 4 credits. Not offered 2002-2003. T. Turner. A reading and interpretation of Marx's principal writings, emphasizing both the continuities and the changes from his earlier to his later works, with attention given to contemporary developments and controversies in Marxian scholarship.

**ANTHR 372 Hunters and Gatherers (also ANTHR 672) @ (III)

**ANTHR 403 The Craft of Anthropology: Ethnographic Field Methods (also ANTHR 603) @ (III)
Fall. 4 credits. V. Santiago-Inirary. This course provides practical understanding about what anthropologists actually do in the field. We examine problems that emerge in conducting fieldwork which raise ethical, methodological, theoretical, and practical issues in the observation, participation in, recording, and representation of culture(s). Students are expected to develop a semester-long, local research project that allows them to experience fieldwork situations.

**ANTHR 405 Archaeology Research Design (also ANTHR 605 and ARKEO 405/605) @ (III)

**ANTHR 412 Contemporary Anthropological Theory (III)

**ANTHR 420 Development of Anthropological Thought (also ANTHR 720) @ (III)
Fall. 4 credits. Prerequisite: undergraduates must have two prior anthropology courses or permission of instructor. J. Fajans. An examination of the history and development of anthropological theory and practice. The course focuses on the differences and continuities among the various national and historical approaches that have come to be regarded as the schools of anthropology.

**ANTHR 453 Visual Anthropology (IV)

**ANTHR 458 Archaeological Analysis (also ANTHR 656 and ARKEO 458/658) (III)

**ANTHR 459 Archaeology of the Household (also ANTHR 659 and ARKEO 459/659) @ (III)
Fall. 4 credits. Not offered 2002-2003.

**ANTHR 463 Zooarchaeological Interpretation (also ARKEO 463) @ (III)
Fall. 5 credits. N. Russell. This is a hands-on laboratory course in zooarchaeological method: the study of animal bones from archaeological sites. It is designed to provide students with a basic grounding in identification of bone part and taxon, aging and sexing, pathologies, taphonomy, and human modification. We deal only with mammals larger than squirrels. While we work on a variety of prehistoric Europe, most of these skills are easily transferable to the fauna of other areas, especially North America. This is an intensive course that emphasizes laboratory skills in a realistic setting. Students analyze an ensemble of actual archaeological bones. It is highly recommended that students also take the course in Zooarchaeological Interpretation (ANTHR/ARKEO 464) offered in the spring.

**ANTHR 464 Zooarchaeological Interpretation (also ARKEO 464) @ (III)
Spring. 4 credits. Permission of instructor only. N. Russell. This course follows from last semester's Zooarchaeological Method. We shift our emphasis here from basic skills to interpretation, although students continue to work with archaeological bones. We begin by examining topics surrounding the basic interpretation of raw faunal data: sampling, quantification, taphonomy, seasonality. We then explore how to use faunal data to reconstruct subsistence patterns, social structure, and human/animal relations.

**ANTHR 466 Humans and Animals (also ANTHR 666 and ARKEO 466/668) @ (III)
Fall. 4 credits. Not offered 2002-2003.

**ANTHR 467 Origins of Agriculture (also ARKEO 467) @ (III)

**ANTHR 474 Laboratory and Field Methods in Human Biology (also BIOEE 474) @ (III)
Spring. 5 credits. Limited to 16 students. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Recommended: permission of instructor by preregistering in E231 Corson. Independent research project required. Labs and labs, T R 10:10-12:05; additional hours TBA. Offered alternate years. K. A. R. Keenan. Forensic anthropology within the forensic sciences is covered in a broad survey of laboratory and field methods for students with interest in this applied area of biological anthropology. Emphasis upon human skeletal biology, pathology, age and sex determination, and relevant techniques for the archaeologist and forensic anthropologist.
ANTHR 480 Anthropology and Globalization (also ANTHRO 680) (III)
Fall. 4 credits. Not offered 2002-2003.

This course examines anthropological perspectives on globalization and assesses the cultural, political, and social implications of contemporary global processes. In exploring the factors that are contributing to the production of diasporic consciousness, the intensity and variety of transnational flows of culture, commodities, corporations, and people are considered in order to assess challenges these processes pose to the modern nation-state. Has culture been liberated from the control of the nation-state through the emergence of new cultural networks created by immigration, electronic media, tourism, and multinational corporations and organization? Or, has the acceleration of global processes within the modern world system created new tools of domination within an increasingly stratified global economy? This course addresses these and related questions utilizing both anthropological theories and ethnographic studies on globalization, ethnicity, diaspora, and nationalism.

ANTHR 487 Field Research Abroad @ (III)
Fall or spring. Credit TBA. Intended for undergraduates only. Staff. Field research abroad as part of the Cornell-Nepal Studies Program, the Cornell-Honduras Program, or other departmentally-approved programs. Topics are selected and project proposals prepared by students in consultation with faculty. Fieldwork typically involves extended research (usually four-six weeks) in a foreign setting with faculty supervision, culminating in a major paper or report.

ANTHR 494 Seminar in Anthropology: The Archaeology of Human Origins (also ARKEO 494) (III)
Spring. 4 credits. T. Volman.

An exploration of the archaeological record associated with early modern and near-modern humans as well as their non-modern contemporaries, such as the Neanderthals. Major issues include: what behaviors and capabilities are indicated for various populations, and how and why did these change over the course of the later Pleistocene? To what extent does the archaeological record support the “Out-of-Africa” hypothesis of a recent, African origin for all modern humans?

ANTHR 495 Action Research Practicum
Fall and spring. 2 credits. Prerequisite: student must be holder of Bartels Action Research Undergraduate Fellowship. Not offered 2002-2003.

The Henry E. Bartels Undergraduate Action Research Fellowship Program offers opportunities for Cornell University undergraduate students from all colleges, departments, and majors to engage in action research projects in the local community, including the Ithaca area and the Cornell campus community. This is a two-part course.

VI. Human History and Archaeology

Archaeology tells the story of human origins, the invention of farming and settled life, the rise of complex social institutions and technologies, and the worldviews of the past, while also teaching field and laboratory methods for uncovering the human past.

ANTHR 203 Early People: The Archaeological and Fossil Record (also ARKEO 203) # (III)
Spring. 3 credits. T. Volman. For course description, see section IA, Introductory Courses.

ANTHR 215 Stone Age Art (also ARKEO 215) # (III)
Fall. 3 credits. T. Volman. For course description, see section IB, Introductory Courses.

ANTHR 240 Old World Prehistory (also ARKEO 240) # (III)
Fall. 3 credits. Not offered 2002-2003.

ANTHR 242 Early Agriculture @ # (III)
Spring. 3 credits. N. Russell.

Throughout most of the human career, people survived by hunting and gathering wild foods. The advent of food production is one of the most profound changes in (pre)history. This course examines the current evidence for the appearance and spread of agriculture (plant and animal domestication) around the world. We consider definitions of agriculture and domestication, the conditions under which it arises, the consequences for those who adopt it, and why it has spread over most of the world.

ANTHR 317 Stone Age Archaeology (also ARKEO 317) (III)
Fall. 4 credits. T. Volman.

A survey of current approaches to the archaeological record of Stone Age peoples, from the earliest sites to those of recent times. Case studies are used to illustrate the nature of archaeological occurrences, excavation procedures, and analytical methods. Multidisciplinary efforts to expand our knowledge of prehistoric lifeways and behaviors are a major concern of the course.

ANTHR 355 Ancient Mexico and Central America (also ARKEO 355) @ # (III)

ANTHR 356 Archaeology of the Andes (also ARKEO 356) @ # (III)
Spring. 4 credits. J. Henderson. For course description, see section IV, Understanding Cultures and Societies.

ANTHR 370 Environmental Archaeology (also ANTHR 670 and ARKEO 370/670) (III)

ANTHR 371 Human Paleontology (also BIOEE 371) # (I)
Fall. 4 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lecs, M W F 2:30; lab, 1 hour each week, TBA; occasional field trips. Offered alternate years. Not offered 2002-2003. K. A. R. Kennedy. A broad survey of the fossil evidence for human evolution with special attention to the human past, with emphasis on the fossil evidence for human evolution with special attention to the human past, with emphasis on the human past.

ANTHR 456 Mesoamerican Religion, Science, and History @ (III)
Fall. 4 credits. J. Henderson. For course description, see section III, Anthropology Major Senior Seminars.

ANTHR 458 Archaeological Analysis (also ANTHR 658 and ARKEO 458/658) (III)

ANTHR 459 Archaeology of the Household (also ANTHR 659 and ARKEO 459/659) # (III)
Fall. 4 credits. Not offered 2002-2003.

ANTHR 463 Zooarchaeological Method (also ARKEO 463) (III)
Fall. 5 credits. N. Russell. For course description, see section V, Anthropological Thought and Method.

ANTHR 464 Zooarchaeological Interpretation (also ARKEO 464) (III)
Spring. 4 credits. N. Russell. For course description, see section V, Anthropological Thought and Method.

ANTHR 466 Humans and Animals (also ANTHR 666 and ARKEO 466/666) # (III)
Fall. 4 credits. Not offered 2002-2003.

ANTHR 467 Origins of Agriculture (also ARKEO 467) # (III)

ANTHR 468 Gender and Age in Archaeology (also ANTHR 669, ARKEO 469/669) # (III)

In recent years, feminism has begun to have an impact on archaeological thought. It is now recognized that gender is likely to have been a relevant dimension of social organization in past societies. Some archaeologists are also trying to take into account the differing interests and experiences of children, adults of reproductive age, and the elderly. This course is not limited to any period or geographical area, but ranges widely in examining how feminist theory has been applied to archaeological data and models. We consider whether it is necessary to identify women and men, adults and children in the archaeological record in order to take gender and age into account. We also examine the uses of archaeological data by contemporary social scientists.

ANTHR 493 Seminar in Archaeology (also ARKEO 493)
Fall. 4 credits. Not offered 2002-2003.

ANTHR 494 Seminar in Archaeology: The Archaeology of Human Origins (also ARKEO 494) (III)
Spring. 4 credits. T. Volman. For course description, see section V, Anthropological Thought and Method.
VII. Nature and Culture

Thinking about nature and culture and their interaction is central to contemporary anthropology. The courses in this section present a biological and evolutionary perspective on behavior, focus on the interplay between nature and culture, and discuss the controversies surrounding these relationships between these dimensions of human life.

[ANTHR 208 The Evolution of Human Matting (III)]

[ANTHR 211 Nature and Culture (III)]
Spring. 4 credits. S. Sangren.
For course description, see section I A, Introductory Courses.

[ANTHR 242 Early Agriculture (II)]
Spring. 3 credits. N. Russell.
For course description, see section VI, Human History and Archaeology.

[ANTHR 344 Male and Female in Chinese Culture and Society (also Womi 344)] (II)
Fall. 4 credits. S. Sangren.
For course description, see section IVC, Understanding Cultures and Societies.

[ANTHR 370 Environmental Archaeology (also ANTHR 670 and ARKEO 370/670)] (III)

[ANTHR 371 Human Paleontology (also BioSc 377)] (I)
Fall. 4 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lees, M W F 2:30; lab, 1 hour each week TBA; occasional field trips. Offered alternate years. Not offered 2002–2003. K. A. R. Kennedy.
For course description, see section VI, Human History and Archaeology.

[ANTHR 372 Hunters and Gatherers (also ANTHR 672)] (II)

[ANTHR 375 Evolutionary Theory and Human Behavior (also ANTHR 675)] (III)

[ANTHR 390 Primate Behavior and Ecology (I Supplementary List)]
Spring. 4 credits. Prerequisite: ANTHR 101 or permission of instructor. M. Small.
The course investigates all aspects of nonhuman primate life. Based on the fundamentals of evolutionary theory, group and interindividual behaviors are presented. In addition, an understanding of group structure and breeding systems is reached through an evaluation of ecological constraints imposed on primates in different habitats. Subjects include: primates, dominance, diet and foraging, predation, cooperation and competition, social ontology, kinship, and mating strategies.

[ANTHR 409 Approaches to Archaeology (also ANTHR 609 and ARKEO 409/609)] (III)
Fall. 4 credits. Limited to 15 students. Prerequisite: anthropology major or permission of instructor. Not offered 2002-2003. D. Holmberg.

[ANTHR 422 Anthropology and Environment (II)]

While emphasizing aspects of the discipline generally associated with cultural anthropology, the course endeavors to set the stage for a dialectical understanding of social, political, economic, and symbolic activities as interrelated phenomena. The works of de Saussure, Levi-Strauss, Dumont, Geertz, Victor Turner, Sahlin, among others, as well as contemporary theories are given careful attention.

[ANTHR 601 Proseminar: Social Organization]
Spring. 6 credits. S. Sangren.
This course focuses on linkages between culture and social institutions, representations and practices. The nature of these linkages is debated from strongly contesting points of view in social theory (structuralist, poststructuralist, utilitarian, hermeneutic, Marxist). Unlike debates in critical theory where the form of contestation has been mainly philosophical, in anthropology, these issues have developed in ethnographic analyses. The course briefly surveys kinship theory and economic anthropology with a focus on implications for general issues in social theory. Discussion of attempts to develop dialectical synthesis around the motion of “practice” follows. The issues addressed in this section carry over into the next, colonialism and post-colonialism, in which poststructuralist readings of anthropological research are confronted with counterposed Marxist visions. Finally, Lacanian and Marxist visions of ideology as they relate to anthropological theory and ethnographic analysis are examined with particular emphasis on the cultural and social production of persons.

[ANTHR 602 The Practices of Anthropology]
Fall. 4 credits. Not offered 2002-2003.

[ANTHR 603 The Craft of Anthropology (also ANTHRO 403)]
Fall. 4 credits. V. Santiago-Trizarry.
For course description, see section V, Anthropological Thought and Method.

[ANTHR 604 Praxis and Culture]

[ANTHR 605 Archaeological Research Design (also ANTHR 405 and ARKEO 405/605)]

[ANTHR 606 Professional Ethics for Anthropologists]
Spring. 4 credits. Non-anthropology grad with consent of instructor. T. Turner.
Anthropological involvement in human rights, cultural, ethnic and indigenous activism, multiculturalism, cultural and political nationalism. Individual and collective ethical responsibilities, the latter involving the Professional Association and its standing committees on ethics and human rights. Rights and protection of informants. Case studies of ethical controversies and human rights cases. Problems of working with governments, development banks, and non-governmental organizations.

[ANTHR 609 Approaches to Archaeology (also ANTHR 409 and ARKEO 409/609)]
Fall. 4 credits. Not offered 2002-2003.

[ANTHR 610 Language and Myth]
Fall. 4 credits. Not offered 2002-2003.
432 ARTS AND SCIENCES - 2002-2003

[ANTHR 614 Reading in the Ethnographic Tradition (1880-1960)
This seminar examines the development of the monographic tradition within American cultural anthropology and British social anthropology. We read "classic" ethnographic texts beginning with Gushing's writings in the late nineteenth century, following with works by anthropologists such as Rivers, Boas, Radcliffe-Brown, Malinowski, Firth, Mead, Bateson, Radin, Redfield, Stirling, Evans-Pritchard, and Leach. We also read some of the more recent literature assessing ethnographic practice and writing. This seminar alternates from year to year with ANTHR 615.]

[ANTHR 615 Reading Contemporary Ethnographies (1960-1990)
Fall. 4 credits. Not offered 2002-2003.]

ANTHR 616 Cultural Production of the Person
Spring. 4 credits. J. Fajans.
The course addresses the interdisciplinary nature of the relations between the person and both culture and society. Focusing on the integration of theories of the body, models of cultural forms and social interaction, the aim is to develop an understanding of the processes and activities that simultaneously produce the cultural subject, the culture, and the society.

ANTHR 621 Sex and Gender in Cross-Cultural Perspective (also ANTHR 321 and WOMNS 321/331)
Fall. 4 credits. Prerequisite: concurrent attendance in the lectures and films of ANTHR/WMNS 521 and permission of instructor. K. March.
For course description, see ANTHR 321, section IVA, Understanding Cultures and Societies.

ANTHR 624 Ethnoracial Identity in Anthropology, Language, and Law (also LSP 624)
Spring. 4 credits. V. Santiago-Iturraz.
For course description and section IVA, Understanding Cultures and Societies.

ANTHR 628 Social Forms of Violence in Anthropological Perspective
Fall. 4 credits. J. Siegel.
The seminar treats war, the feud, and witchcraft with the aim of framing questions in ways amenable to anthropological analysis. We ask why death so frequently prompts a sense of vengeance; why and with what effects practices of violence are thought of as taboo and the like. We also consider colonial war and theindsay.

[ANTHR 629 Chinese Ethnology
Spring. 4 credits. Not offered 2002-2003.]

[ANTHR 632 Andean Symbolism
Spring. 4 credits. Not offered 2002-2003.]

ANTHR 635 Southeast Asia: Readings in Special Problems
Fall or spring. Credit TBA. Staff.
Independent reading course on topics not covered in regularly scheduled courses.

[ANTHR 640 Problems in Himalayan Studies
This working seminar is for students who have research interests in the Nepali Himalayas and related regions. Topics vary but include nationalism, caste, and ethnicity, including indigenous people's movements and the Dalit movement; land tenure; gender; modern politics, including the people's movement and Maoism; Nepal and the world, including tourism, development, ritual practice, and globalization.]

ANTHR 641 South Asia: Readings in Special Problems
Fall or spring. Credit TBA. Staff.
Independent reading course in topics not covered in regularly scheduled courses.

[ANTHR 642 Violence, Symbolic Violence, Terror and Trauma in South Asia and the Himalayas (also ANTHR 323)
Spring. 4 credits. D. Holmberg.
For course description, see section IVA, Understanding Cultures and Societies.

ANTHR 644 Research Design
Spring. 4 credits. Staff.
This seminar focuses on preparing a full-scale proposal for anthropological fieldwork for a dissertation. Topics include: identifying appropriate funding sources; defining a researchable problem; selecting and justifying a particular fieldwork site; situating the ethnographic case within appropriate theoretical contexts; selecting and justifying appropriate research methodologies; developing a feasible timetable for field research, ethical considerations and human subjects protection procedures; and preparing appropriate budgets. This is a writing seminar, students complete a proposal suitable for submission to a major funding agency in the social sciences.

ANTHR 646 The Kayapo of Brazil (also ANTHR 346)
Spring. 4 credits. T. Turner.
For course description, see section IVC, Understanding Cultures and Societies.

ANTHR 652 Evidence: Ethnography and Historical Method
Fall. 4 credits. H. Miyazaki.
Are anthropologists' recent turn to history destiny, as Evans-Pritchard once said? Or is it simply a temporary oscillation from an emphasis on systematization to an emphasis on process? If the latter, there any potentially productive incommensurabilities between ethnography and history as two distinct forms of knowledge production? In this seminar, we will explore these questions by examining the uses of archival records as evidence in the two disciplines. We will read some of the most well-known texts in historical anthropology and historical anthropology side by side with some influential reflection on the uses of evidence in history and a wide range of recent studies of evidential practices in various sites of knowledge production such as archives, court rooms, and laboratories. The ultimate purpose of the seminar is to carve out a space for a new kind of ethnographic engagement with historical method. Graduate students from programs of study other than anthropology are welcome.

ANTHR 655 East Asia: Readings in Special Problems
Fall or spring. Credit TBA. Staff.
Independent reading course in topics not covered in regularly scheduled courses.

ANTHR 656 Maya History (also ARKEO 656)
Spring. 4 credits. J. Henderson.
An exploration of Maya understandings of their own history, drawing on ethnographic, historical, and archaeological sources. Analysis of hieroglyphic inscriptions from ancient Maya cities is a major focus.

ANTHR 658 Archaeological Analysis (also ANTHR 458 and ARKEO 458/658)
Spring. 4 credits. Not offered 2002-2003.]

ANTHR 659 Archaeology of the Household (also ANTHR 459 and ARKEO 459/659)
Fall. 4 credits. Not offered 2002-2003.]

ANTHR 660 Language, Ideologies and Practices (also LSP 660)

ANTHR 662 Democratizing Research: Participation, Action, and Research (also ANTHR 362)
For description see ANTHR 362, Section V, Anthropological Thought and Method.

ANTHR 663 Action Research
This seminar is a practicum in action research (AR) in which the semester becomes a self-managing learning environment for the exploration of the techniques and group processes involved in AR, including co-generative learning, searching, and AR facilitation. Participation in a seminar-centered LIST/SERV on the Internet is expected.

ANTHR 665 Topics in Native American Societies and Cultures (also AIS 665)
This seminar is intended for undergraduate and graduate students in any field who are prepared to undertake independent research in American Indian studies. I am particularly interested in how materials from Native American cultures can be used to help solve problems of general anthropological significance and in the contributions Native Americans have made to anthropological and sociological knowledge as teachers and researchers. However, students are encouraged to pursue their own interests and are expected to discuss work in progress with other members of the seminar. A reading list is developed to provide a shared background for discussions.

ANTHR 666 Humans and Animals (also ANTHR 466 and ARKEO 466/666)
Fall. 4 credits. Not offered 2002-2003.

ANTHR 667 Contemporary Archaeological Theory (also ARKEO 667)
Spring. 4 credits. Prerequisite: undergraduates with permission of instructor only. Not offered 2002-2003. N. Russell.
This course surveys recent developments and current debates in archaeological theory. This includes the processual/postprocessual debate and contrasts between scientific and humanistic approaches more generally, as well as other approaches (Marxist, feminist, etc.). We also discuss ethical concerns and engagements with groups outside archaeology with interests in the past.

[ANTHR 668 Marx: An Overview of His Thought (also ANTHR 368)]
T. Turner.
For course description, see section V, Anthropological Thought and Method.

[ANTHR 669 Gender and Age in Archaeology (also ANTHR 469 and ARKEO 469/669)]
N. Russell.
For course description, see section VI, Human History and Archaeology.

[ANTHR 670 Environmental Archaeology (prereq ANTHR 370 and ARKEO 370/670)]

[ANTHR 671 Palaeoanthropology of South Asia (also BIOEE 671 and ASIAN 620)]

[ANTHR 672 Hunters and Gatherers (also ANTHR 372)]

ANTHR 673 Human Evolution: Concepts, History, and Theory (also BIOEE 673)
Fall. 3 credits. Prerequisite: one year of introductory biology, ANTHR 101, or permission of instructor. Lec. M 2:30, sem and disc. W 7:30–9:30 p.m. Offered alternate years. K. A. R. Kennedy.
A survey of the historical background of present-day concepts of human evolutionary variations and adaptations in space and time. The formation of biological anthropology as an area of scientific inquiry within the social and biological sciences is reviewed. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature.

ANTHR 677 The Anthropology of Global Turbulence
Fall. 4 credits. J. Rigi.
The aim of the course is to provide comparative analytical and ethnographic insights on global turbulence, conflicts, violence, and the survival of the dispossessed. The effects of global economic turbulence, the emergence of new social and state forms, practices of corruption, wars and violence, discourses of human rights, and media representations of global turbulence will be some of the key issues explored. The first half of the course addresses the acute economic and political conditions which have contributed to the present global resurgence of conflicts and violence. Particular attention is paid to various global economic processes, the corruption of state institutions, and the global rise of poverty. The second on specific wars and conflicts, their consequences in terms of forced displacement, the discourses of human rights and humanitarian intervention, and media representations of war and conflicts. The course concludes (week 12) with a critical reflection on the current global processes which contribute to war and conflict.

ANTHR 679 Technocracy: Anthropological Approaches
Spring. 4 credits. A. Riles.
In recent years, anthropologists have begun to turn their attention to the character of bureaucratic and technical knowledge at play in diverse contexts of transnational activist organizations to scientific laboratories and even the academy. This new turn has brought anthropologists into renewed debate with scholars in science and technology studies, sociology, law, cultural studies, and architecture. Topics of concern to anthropologists include the relationship between aesthetics and politics in the practices of technocracy, the forms of agency that produce and are produced by the technocratic, the temporality of bureaucratic practices, and the nature of innovation. There are methodological questions as well. How should such practices be studied ethnographically? What kinds of interpretive frames should anthropologists deploy where categories such as "the social" or "culture, or oppositions of global to local, or symbolic to material seem already displaced by the subjects of study? What is the relationship of anthropological understanding to critique? This seminar aims to explore these themes as they present themselves in contemporary ethnographic work.

[ANTHR 680 Anthropology and Globalization (also ANTHR 480)]
A. Willford.
For course description, see section V, Anthropological Thought and Method.

[ANTHR 682 Perspectives on the Nation (also AAS 682)]

[ANTHR 690 Ritual and Myth: Structure, Process, Practice]

[ANTHR 691 Filming Other Cultures (also ANTHR 291 and THEATR 291/691)]
Spring. 4 credits. Fee for film screening and maintenance, $35. Graduate students who register in this course attend the meetings of 291. In addition, they write in-depth studies on one or more films in consultation with the instructor. Not offered 2002–2003. Staff.
For course description, see section IVB, Anthropological Thought and Method.

[ANTHR 689 Current Fields in Biological Anthropology]

ANTHR 701 Independent Study: Grad I
Fall or spring. Credit TBA. Intended for graduate students only. Staff.
Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 702 Independent Study: Grad II
Fall or spring. Credit TBA. Intended for graduate students only. Staff.
For course description, see ANTHR 701, section VIII, Graduate Seminars.

ANTHR 703 Independent Study: Grad III
Fall or spring. Credit TBA. Intended for graduate students only. Staff.
For course description, see ANTHR 701, section VIII, Graduate Seminars.
Either ARKEO 481 or ARKEO 482 (Honors Thesis, Fall and Spring) can count toward the major, but not both. In addition to ARKEO 481 or 482, only four credits of ARKEO 300 (Individual Study) or other supervised study can count toward the major.

Courses basic to the discipline of archaeology are marked with the word Basic after the course number. It is recommended that majors who are planning to pursue graduate studies in archaeology take at least two of the basic courses in each category. Further courses in languages and geology are also recommended.

Honors. Honors in archaeology are awarded on the basis of the quality of an honors essay and the student's overall academic record. Prospective honors students should have at least a 3.5 grade point average in the major and a 3.0 grade point overall. They should consult with the director of undergraduate studies before the beginning of the senior year. The honors essay is normally prepared over two semesters in consultation with a faculty adviser during the senior year; students may enroll in Archaeology 481 (Fall) or Archaeology 482 (Spring) for this purpose.

Fieldwork. Every student should gain some practical experience in archaeological fieldwork on a project authorized by his or her adviser. This requirement may be waived in exceptional circumstances. The Jacob and Hedwig Hirsch bequest provides support for a limited number of students to work at excavations sponsored by Cornell and other approved institutions.

The Concentration

Students in Cornell schools and colleges other than Arts and Sciences may elect a concentration in archaeology. To concentrate in archaeology, the student must complete five courses, all with a grade of C or better. The five courses must consist of either (1) Archaeology 100 and four other courses from categories B-D (described below), at least three of which must be basic courses, or (2) five courses from categories B-D, at least four of which must be basic courses. Concentrators are encouraged to gain some fieldwork experience to render them eligible for Hirsch Scholarships in support of fieldwork on the same basis as majors.

First-Year Writing Seminars

For course descriptions, see the first-year writing seminar brochure.

A. Introductory Courses and Independent Study Courses

ARKEO 100 Introduction to Archaeology
(also ANTHR 100) # @ (III or IV)
Fall. 3 credits. Basic. J. Henderson.

A broad introduction to archaeology: the study of material remains to answer questions about the human past. Case studies highlight the variability of ancient societies and illustrate the varied methods and interpretive frameworks archaeologists use to reconstruct them. This course can serve as a platform for both Archaeology and Anthropology undergraduate majors.

ARKEO 201 Lost Tribes and Sunken Continents
(also ANTHR 201) @ # (III)

An examination of popular theories about past highlights, differences among them, and the kinds of explanations offered by archaeologists. Emphasis is on the ways archaeologists interpret the past. Case studies include Atlantis, Stonehenge, Egyptian and Mexican pyramids, and the history of war between the Old World and the Americas.

ARKEO 266 Jerusalem Through the Ages
(also NES 266, JWST 266, RELST 266) # @ (III)

ARKEO 300 Individual Study in Archaeology and Related Fields
Fall and spring. Credit TBA. Prerequisite: ARKEO 100 or permission of instructor. Students pursue topics of particular interest with the guidance of a faculty member.

ARKEO 481-482 Honors Thesis
481, fall; 482, spring. 4 (V) credits. S-U only. Prerequisite: admission to Honors Program.

The student, under faculty direction, prepares a senior thesis.

ARKEO 600 Special Topics in Archaeology
Fall and spring. 4 (V) credits. Students pursue advanced topics of particular interest under the guidance of a faculty member(s).

ARKEO 681-682 Master's Thesis
681, fall; 682, spring. 4 (V) credits. S-U only. Limited to students admitted to Master's Program in Archaeology. Students, working individually with faculty member(s), prepare a Master's Thesis in Archaeology.

B. Anthropological Archaeology

ARKEO 203 Early Peoples: The Archaeological and Fossil Record
(also ANTHR 203) # @ (III)
Spring. 3 credits. T. P. Volman.

A survey of the archaeological and fossil record of human evolution. Contributions by researchers from a variety of disciplines are highlighted, as are the discoveries that have enlivened the study of human evolution for more than a century. Critical evaluation of evidence and interpretation will be stressed. Demonstrations and films supplement the lecture.

ARKEO 204 Ancient Civilizations
(also ANTHR 204) # @ (III)

ARKEO 215 Stone Age Art
(also ANTHR 215) # @ (III)
Fall. 3 credits. T. P. Volman.

For description, see ANTHR 215.

ARKEO 242 Early Agriculture
(also ANTHR 242) # @ (III)
Spring. 3 credits. N. Russell.

Throughout most of the human career, people survived by hunting and gathering wild foods. The advent of food production is one of the most profound changes in (prehistoric) history. This course examines the current evidence for the appearance and spread of agriculture (plant and animal domestication) around the world. We consider definitions of agriculture and domestication, the conditions under which it arises, the consequences for those who adopt it, and why it has spread over most of the world.

ARKEO 255 Great Empires of the Andes
(also ANTHR 255) # @ (III)
Summer only. 3 credits. M. Malpass.

The Andes region of South America, stretching from northern Colombia to Tierra del Fuego, saw the rise and fall of some of the world's most spectacular societies, from the Moche of the north Peruvian coast to the Incas. Not only were the cultures of this area highly developed, but many of the technologies—metallurgy, textiles, ceramics, and stonework—to name just four—were unusually sophisticated. The Andean region saw the indigenous domestication of plants and animals as well as the rise of state-level societies. This course introduces students to the cultural developments of this fascinating area, from the earliest times to the fall of the Incas in AD 1543.

ARKEO 317 Stone Age Archaeology
(also ANTHR 317) # @ (III)
Fall. 4 credits. T. P. Volman.

ARKEO 355 Ancient Mexico and Central America
(also ANTHR 355) # @ (III)

For description, see ANTHR 355.

ARKEO 356 Archaeology of the Andes
(also ANTHR 356) # @ (III)
Spring. 4 credits. J. Henderson.

A survey of the rise and decline of civilizations in the Andean region of western South America before the European invasion. Key topics include the use of invasion-period and ethnographic information to interpret prehispanic societies, the emergence of settled farming life, and the development of the state.

ARKEO 409 Approaches to Archaeology
(also ARKEO 409 and ANTHR 409/609) # @ (III)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2002-2003. Staff.

For description, see ANTHR 409.

ARKEO 459 Archaeology of the Household
(also ARKEO 659 and ANTHR 459/659) # @ (III)

For description, see ANTHR 459.

ARKEO 466 Humans and Animals
(also ARKEO 466 and ANTHR 466/666) # @ (III)

For description, see ANTHR 466.

ARKEO 469 Gender and Age in Archaeology
(also ARKEO 669 and ANTHR 469/669) # @ (III)

For description, see ANTHR 469.

ARKEO 493 Seminar in Archaeology
(also ANTHR 493)
Fall. 4 credits. Not offered 2002-2003.
The archaeology of the human origins is a major focus. An exploration of the historical record associated with early modern and near-modern humans as well as their non-modern contemporaries, such as the Neanderthals. Major issues include: what behaviors and capabilities are indicated for various populations, and how and why did these change over the course of the late Pleistocene? To what extent does the archaeological record support the “Out-of-Africa” hypothesis of a recent, African origin for all modern humans?

[AARKEO 409 Approaches to Archaeology (also AARKEO 409 and ANTHR 409/409)]
For description, see ANTHR 409.

[AARKEO 459 Archaeology of the Household (also AARKEO 459 and ANTHR 458/458)]
For description, see ANTHR 459.

[AARKEO 466 Humans and Animals (also AARKEO 466 and ANTHR 466/466)]
For description, see ANTHR 466.

[AARKEO 467 Contemporary Archaeological Theory (also ANTHR 467)]
For description, see ANTHR 467.

[AARKEO 469 Gender and Age in Archaeology (also AARKEO 469 and ANTHR 468/469)]
For description, see ANTHR 469.

[AARKEO 456 Messenian Religion, Science, and History @ # (III)]
Fall. 4 credits. J. Henderson.
An introduction to belief systems in ancient Mexico and Central America, emphasizing the blending of religion, astrology, myth, history, and prophecy. Interpreting text and image in pre-Columbian books and inscriptions is a major focus.

[AARKEO 456 Maya History (also ANTHR 456)]
Spring. 4 credits. J. Henderson.
An exploration of Maya understandings of their own history, drawing on ethnographic, historical, and archaeological sources. Analysis of hieroglyphic inscriptions from ancient Maya cities is a major focus.

[LA 260 Preindustrial Cities and Towns of North America (also CRP 260)]
For description, see LA 260.

C. Classical, Near Eastern, and Medieval Archaeology

[AARKEO 221 Minoan-Mycenaean Art and Archaeology (also CLASS 221 and ART H 221) @ (IV)]
Fall. 3 credits. J. Coleman.
For description, see CLASS 221.

[AARKEO 232 Archaeology in Action I (also ART H 224 and CLASS 232) @ (IV)]
For description see AARKEO 233.

[AARKEO 233 Archaeology in Action II (also ART H 225 and CLASS 233) @ (IV)]
Objects from the Classical, Hellenistic, and Roman periods are “dug” out of Cornell basements, identified, cleaned, restored, catalogued, and photographed and are considered in their appropriate historic, artistic, and cultural contexts.

[AARKEO 240 Old World Prehistory (also ANTHR 240) @ (III)]
For description, see ANTHR 240.

[AARKEO 263 Introduction to Biblical History and Archaeology (also NES 263, JWST 263, and RELST 264) @ (# III or IV)]
Spring. 3 credits. J. Zorn.
For description, see NES 263.

[AARKEO 268 Ancient Egyptian Civilization (also NES 268 and JWST 268) @ (# III or IV)]
Spring. 3 credits. G. Kadish.
For description, see NES 268.

[AARKEO 275 Ancient Seafaring (also JWST 261 and NES 261) @ (III)]
For description, see NES 261.

[AARKEO 321 Mycenaean and Homer (also CLASS 321 and ART H 321) @ (IV)]
Fall. 4 credits. Prerequisite: at least 1 previous course in Archaeology, Classics, or History of Art. Not offered 2002–2003. J. Coleman.
Study of the relationship between the Mycenaean period of Greece (known primarily from archaeology) and the Homeric Iliad and Odyssey. Topics include Mycenaean architecture; burial customs, kinship, and military activities; the reasons for the collapse of the Bronze Age palatial economies; the archaeological evidence for society in the “Dark Ages” that followed; the writing systems of Mycenaean Greece (Linear B) and the Iron Age (the Semitic/Greek alphabet); and the nature of the Homeric poems and their value as historical sources.

[AARKEO 360–361 Origins of Mesopotamian Civilization (also NES 360–361) @ (# III or IV)]
For description, see NES 360–361.

[AARKEO 386 The History and Archaeology of the Ancient Near East (also JWST 386 and NES 386) @ (# III or IV)]
For description, see NES 386.

[AARKEO 380 Introduction to the Arts of China (also ART H 380) @ (IV)]
Fall. 4 credits. Prerequisite: permission of instructor. Enrollment limited to 15 students. This course may be used as one of the three pre-1800 courses required of English majors. R. T. Farrell.
For description, see ENGL 417.

[AARKEO 425 Seminar on the Bronze Age Architecture of Asia Minor (also ART H 425 and CLASS 430) @ (IV)]
This course covers major architectural building programs from Neolithic Catal Huyuk, Beycesultan, to the final phases of Troy and Hittite Bogazkoy. The art and archaeology of these civilizations is taken into account when relevant. Reading knowledge of German useful.

[AARKEO 432 Sardis and the Cities of Asia Minor (ART H 424 and CLASS 432) @ (IV)]

[AARKEO 434 The Rise of Classical Greece (also ART H 434 and CLASS 434) @ (IV)]
Spring. 4 credits. Recommended: CLASS 220 or 221 or ART H 220 or 221, or permission of instructor. Not offered 2002–2003. P. I. Kuniholm.
The art and archaeology of the Greek dark ages. Topics include: site reports, pottery, metalworking, the introduction of the alphabet, the beginnings of coinage, and links with Anatolia and the Near East.

[AARKEO 435 Seminar on Roman Art and Archaeology (also CLASS 435 and ART H 427) @ (IV)]
For description, see ART H 427.

[AARKEO 520 Seminar in Classical Archaeology (also ART H 520 and CLASS 630)]
Spring. 4 credits. P. Kuniholm.
Seminar on Greek Archaeology.

[AARKEO 617 Early Medieval Archaeology and Literature (also AARKEO 417, ENGL 417 and 617)]
For description, see ENGL 417.
Arts and Sciences - 2002-2003

[ARKEO 629] The Prehistoric Aegean (also CLASS 629) 4 credits. For graduate students and advanced undergraduates with permission of instructor. Not offered 2002-2003. J. E. Coleman. For description, see CLASS 629.

CLASS 220 Introduction to Art History: The Classical World (also ART H 220) Fall. 4 credits. J. Coleman. For description, see CLASS 220.

CLASS 240 Greek Art and Archaeology (also ART H 240) Spring. 3 credits. J. Coleman. Introduction to the material culture of Greece from the Early Iron Age to the coming of the Romans (ca. 1000 BC to 31 BC). The course focuses not only on famous monuments such as the Parthenon, but also on the evidence for daily life and for contact with other civilizations of the Mediterranean. A critical attitude is encouraged toward the interpretation of archaeological remains and toward contemporary uses (and misuses) of the past.

CLASS 319 Art in the Daily Life of Greece and Rome (also ART H 319) Spring. 4 credits. A. Ramage. For description, see ART H 319.

CLASS 322 Greeks and Barbarians (also ART H 322) Fall. 4 credits. Prerequisite: CLASS 220 or 221, or permission of instructor. Not offered 2002-2003. J. Coleman. For description, see CLASS 322.

CLASS 333 Greek and Roman Mystery Cults and Early Christianity (also RELST 333) Fall. 4 credits. A previous course in Classics (civilization or language) or RELST 101 is recommended. Not offered 2002-2003. K. Clinton. For description, see CLASS 333.

ART H 322 Arts of the Roman Empire (also CLASS 350) Fall. 4 credits. A. Ramage. For description, see ART H 322.

ART H 325 Greek Vase Painting (also CLASS 395) Fall 4 credits. Not offered 2002-2003. A. Ramage. For description, see ART H 325.

ART H 327 Greek and Roman Coins (also CLASS 327) Fall. 4 credits. A. Ramage. For description, see ART H 327.

LA 292 Creating a Second Nature Spring. 3 credits. Prerequisites: none. ANTHR 100, ARKEO 100, or CLASS ART H 220 recommended. Offered alternate years. K. Gleason. For description, see LA 292.

LA 545 The Parks and Fora of Imperial Rome Spring. 3 credits. Prerequisites: advanced standing in design field, classics or history of art, or permission of the instructor. Not offered 2002-2003. K. Gleason. For description, see LA 545.

D. Methodology and Technology

[ARKEO 256 Practical Archaeology (also CLASS 256) (IV)] Spring. 3 credits. Not offered 2002-2003. J. Coleman. For description, see CLASS 256.

[ARKEO 262 Laboratory in Landscape Archaeology (also LA 262)] Fall. 3 credits. Not offered 2002-2003. S. Baugher. For description, see LA 262.

ART H 285 Art, Archaeology, and Analysis (also ENGR 185, EAS 200, MS&E 285, ART H 200, and PHYS 200) (I or IV) Spring. 3 credits. Does not meet liberal studies distribution requirements. Staff. For description, see EAS 200.

ARKEO 309 Dendrochronology of the Aegean (also ART H 309 and CLASS 309) (IV) Fall and spring. 4 credits. Limited to 10 students. Letter only. Prerequisite: permission of instructor. P. I. Kuniholm. Participation in a research project of dating modern and ancient tree-ring samples from the Aegean and Mediterranean. Supervised reading and laboratory work. A possibility exists for summer fieldwork in the Aegean.

ARKEO 317 Stone Age Archaeology (also ANTHR 317) Fall. 4 credits. T. Volman. A survey of current approaches to the archaeological record of Stone Age peoples, from the earliest sites to those of recent times. Case studies are used to illustrate the nature of archaeological occurrences, excavation procedures, and analytical methods. Multidisciplinary efforts to expand our knowledge of prehistoric lifeways and behaviors are a major concern of the course.

ARKEO 370 Environmental Archaeology (also ART H 370 and ANTHR 370 and 670) (III) Spring. 4 credits. Prerequisite: 2 previous courses in archaeology or permission of instructor. Not offered 2002-2003. T. P. Volman. For description, see ANTHR 370.

ARKEO 402 Designing Archaeological Exhibits (also ARKEO 602) Spring. Variable (letter grade only). Not offered 2002-2003. S. Baugher. Presenting archaeology to the public has become an educational goal for many professional archaeological societies and museums. Class discussions will focus on the theories and techniques of exhibit design. To evaluate different academic approaches to exhibiting objects, the class will visit art and historical museums. Students then design and install an archaeological exhibit using artifacts that have been catalogued in an archaeology laboratory course, ARKEO 262. These artifacts are from archeological excavations completed in an archaeology field methods class, ARKEO 261.

ARKEO 405 Archaeological Research Design (also ARKEO 605 and ANTHR 405/605) (III) Spring. 4 credits. Basic. Prerequisite: permission of instructor. Not offered 2002-2003. J. S. Henderson. For description, see ANTHR 405.

ARKEO 423 Ceramics (also ART H 423 and CLASS 423) (IV) Spring. 4 credits. Prerequisite: permission of instructor. A. Ramage. For description, see ART H 423.

ARKEO 458 Archaeological Analysis (also ARKEO 658 and ANTHR 458/658) (III) Spring. 4 credits. Prerequisite: 1 course in archaeology or permission of instructor. Enrollment limited to 15 students. Not offered 2002-2003. J. S. Henderson. For description, see ANTHR 458.

ARKEO 463 Zooloarchaeological Method (also ANTHR 463) (III) Fall. 5 credits. N. Russell. This is a hands-on laboratory course in zooloarchaeological method: the study of animal bones from archaeological sites. It is designed to provide students with a basic grounding in identification of body part and taxon, aging and sexing, pathologies, taphonomy, and human modification. We deal only with mammals larger than squirrels. While we work on animal bones from prehistoric Europe, most of these skills are easily transferable to the fauna of other areas, especially North America. This is an intensive course that emphasizes laboratory skills in a realistic setting. Students analyze an assemblage of actual archaeological bones. It is highly recommended that students also take the course in Zooarchaeological Interpretation (ARKEO/ANTHR 464) offered in the spring.

ARKEO 464 Zooloarchaeological Interpretation (also ANTHR 464) (III) Spring. 4 credits. Prerequisite: ARKEO/ANTHR 463. Permission of instructor only. N. Russell. This course follows from last semester’s Zooloarchaeological Method. We shift our emphasis here from basic skills to interpretation, although students continue to work with archaeological bones. We begin by examining topics surrounding the basic interpretation of raw faunal data: sauropod, quantification, taphonomy, seasonality. We then explore how to use faunal data to reconstruct subsistence patterns, social structure, and human/animal relations.

ARKEO 600 Special Topics in Archaeology Fall. 4 credits. Staff.

ARKEO 601 Graduate Colloquium in Archaeology Spring. 4 credits. Open to graduate students and advanced undergraduates by permission of instructor. K. Gleason. Faculty members of the Program in Archaeology and invited speakers present summaries of the different aspects of archaeological analysis. Topics may include: lithics, ceramic typology, petrographic and neutron activation analysis, dendrochronology and other chronological techniques, settlement patterns, inscriptions, human and animal bones.

436
The Major

A student majoring in Asian studies normally specializes in the language and culture of one country and often chooses an additional major in a traditional discipline.

majors complete two courses at the 200 level (a minimum of six credits of introductory biology, ANTHR 101, or permission of instructor. Not offered 2002-2003. T. P. Volman.

For description, see ANTHR 370.)

[ARKEO 655 Archaeological Research Design (also ARKEO 405 and ANTHR 405/605)]

For description, see ANTHR 405.)

[ARKEO 670 Environmental Archaeology (also ARKEO 370 and ANTHR 370 and 670)]
Spring. 4 credits. Prerequisite: 2 previous courses in archaeology or permission of instructor. Not offered 2002-2003. T. P. Volman.

For description, see ANTHR 370.)

ANTHR 474 Laboratory and Field Methods in Human Biology (also ANTHR 374)
Spring. 5 credits. Prerequisite: 1 year of introductory biology, ANTHR 101, or permission of instructor. K. A. R. Kennedy.

BIO 275 Human Biology and Evolution (also ANTHR 275)
Fall. 5 credits. K. A. R. Kennedy.

[BIOES 371 Human Paleontology (also ANTHR 371)]
Fall. 4 credits. Prerequisite: one year of introductory biology, ANTHR 101, or permission of instructor. Not offered 2002-2003. K. A. R. Kennedy.

For description, see BIOES 371.)

[BIO ES 671 Paleoanthropology of South Asia (also ANTHR 671 and ASIAN 629)]

For description, see BIO ES 671.)

[BIO ES 673 Human Evolution: Concepts, History, and Theory (also ANTHR 673)]
Fall. 3 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Not offered 2002-2003-2003. K. A. R. Kennedy.

For description, see BIOES 673.)

[LA 261 Urban Archaeology (also CRP 261)]
Fall. 3 credits. Not offered 2002-2003. S. Baugher.

For description, see LA 261.)

LA 569 Archaeology in Preservation Planning and Design (also CRP 569)
Spring. 3 credits. S. Baugher.

For description, see LA 569.)

The Department of Asian Studies encompasses the geographical areas of East Asia, South Asia, and Southeast Asia and offers courses in most of the disciplines of the social sciences and the humanities. Asian studies courses through the 400 level (ASIAN is the prefix) are taught in English and are open to all students in the university. Some of these courses may be counted toward majors in other departments; others fulfill the humanities distribution requirement. Courses listed under Asian Studies offered through other departments may fulfill distribution requirements in history, social sciences, and arts.

Concentration in East Asia Studies

A candidate for the Bachelor of Arts degree at Cornell may take a concentration in East Asian studies by completing at least 18 credits of course work.

Students normally take five courses in East Asian studies at the 200 level or above from those East Asian courses listed (China, Japan, Korea) either under Asian Studies or Asian-related courses. Of these, two courses might be Asian language courses at the 200-level or beyond. East Asian graduate courses may also be offered for the concentration, as well as East Asia-related courses with a research paper on an East Asian topic. Appropriate courses taken through Cornell Abroad in East Asia may also be counted toward the concentration. Students concentrating in East Asia studies should select an advisor from the East Asia Program faculty for consultation on their course of study. For more information, contact the Asian Studies Department at 388 Rockefeller Hall, (607) 255-5095.

Concentration in South Asia Studies

A candidate for the Bachelor of Arts or Science degree at Cornell may take a concentration in South Asian studies by completing at least 18 credits of course work in South Asian studies, including ASIAN 215 (Introduction to South Asia) (also ARKEO 215 and ANTHR 215) and four courses in the intermediate or advanced level, two of which may be South Asian language courses. Students taking a concentration in South Asian studies are considered members of the South Asia Program and will have an adviser from the program faculty. This adviser will be for the student's concentration and is not a substitute for a student's academic adviser in his or her major.)

One South Asian graduate course may be taken for the concentration with consent of both the instructor and the adviser. The same applies for one South Asia-related course with a research paper on a South Asian subject. Additional courses may be added if offered with comparable South Asia content.

Concentration in Southeast Asia Studies

A candidate for the Bachelor of Arts degree at Cornell may take a concentration in Southeast Asian studies by completing 18 credits of course work. A recommended plan would include ASIAN 208 and four courses at the intermediate or advanced stage, two of which should be in the Southeast Asian language. Students taking a concentration in Southeast Asian studies are members of the Southeast Asia Program and are assigned an adviser from the program faculty. Such students are encouraged to commence work on a Southeast Asian language either at the 10-week intensive courses offered by the Southeast Asia Studies Summer Institute (SEASSI) or by studying for one semester at IKIP Malang, Indonesia; Atma Jaya University, Indonesia; King Mongkut, Thailand; or Hanoi University, Vietnam; fellowships are available for undergraduates through the Cornell Abroad Program.

Intensive Language Program (FALCON)

The FALCON Program offers intensive instruction in Japanese, Chinese, and other Asian languages in the program is still the only one in the world offering a full year of intensive instruction from the elementary level, except for the exclusive language schools of some government agencies. Students must formally apply to the program, but the application process is simple and admission is open to all students. (Applications available for FALCON from the
administrative assistant, room 125 Rockefeller Hall, or visit our web site www.arts.cornell.edu/academic/faculty and apply online.) Students may take the entire sequence of 160, 161, 162, or any other portion of the program if they have the necessary background (to be determined by a placement test). The courses are full-time intensive language study; the degree of intensity required does not allow students to enroll simultaneously in other courses or to work, except perhaps on weekends. The spring semester of the Chinese program is offered in Beijing at Tsinghua University.

Study Abroad
Cornell is a member of the Inter-University Center for Japanese Language Studies in Yokohama, the Inter-University Board for Chinese Language Studies in Beijing (at Tsinghua University), and a member of the Council on International Educational Exchange offering study in China at Beijing University and Nanjing University. These centers offer training in both spoken and written forms of the target language. The Kyoto Center for Japanese Studies (KCSJ) is an undergraduate program for students who wish to spend either one or two semesters in Kyoto, Japan studying the Japanese language as well as contemporary and traditional Japanese culture.

Cornell is a class-A member of the American Institute of Indian Studies, which offers fellowships in India for intensive language study in Hindi, Bengali, and Tamil. Cornell and the central campus of the Nepalese national university—Tribhuvan—at Kirtipur, Kathmandu, cosponsor an academic semester or year in Nepal.

Other opportunities include a junior year abroad at IKIP-Malog, in Indonesia, or at the School of Oriental and African Studies, University of London. Many other options for study in Asia exist, including in Indonesia, Thailand, and Vietnam through the Council for International Educational Exchange. Undergraduates should consult Cornell Abroad.

First-Year Writing Seminars
See John S. Knight Institute brochure for times, instructor, and descriptions.

General Education Courses

**ASIAN 125 Introduction to the Urdu Script (also URDU 125)**
Spring. 1 credit. Prerequisite: HINDI 101 or permission of instructor. Satisfactory completion of ASIAN 125 fulfills the qualification portion of the language requirement. Staff.

This course provides instruction in the basics of the Urdu script. It is intended primarily for students who have had some exposure to Hindi or Urdu but who have had little or no formal training in the script. The course focuses on mastering the script and pronunciation. It does not provide instruction in grammar.

**ASIAN 191 Introduction to Modern Asian History (also HIST 191) @ (III)**
Fall. 4 credits. J. Koschnick, E. Tagliacozzo.
See HIST 191 for description.

**ASIAN 192 Introduction to World Music: Asia (also MUSIC 104) @ (IV)**
Fall. 3 credits. M. Hatch.
See MUSIC 104 for description.

**ASIAN 206 The Occidental Tourist: Travel Writing and Orientalism in Southeast Asia (also HIST 207) @ (III or IV)**

**ASIAN 208 Introduction to Southeast Asia @ (III or IV)**
Spring. 3 credits. T. Chaloemtiarana.
This course is for anyone curious about the most diverse part of Asia; it defines Southeast Asia both as the nation-states that have emerged since 1945 (Brunei, Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, and Vietnam) and as a larger cultural world extending from southern China to Madagascar and Polynesia. Students find a serious, organized introduction to a variety of disciplinary and topical approaches to this region, including geography, linguistics, history, religion and ideology, anthropology, marriage and family systems, music, literary and literature, art and architecture, agriculture, industrialization and urbanization, politics and government, warfare and diplomacy, ecological and human degradation, and business and marketing. The course teaches both basic information and different ways of interpreting that information.

**ASIAN 211 Introduction to Japan: Japanese Texts in History @ # (IV)**
Fall. 3 credits. B. deBary.

An interdisciplinary introduction to Japanese Studies especially designed for nonmajors. The course takes up a diverse series of cultural artifacts and demonstrates how, against the background of simultaneous and successive periods of political and cultural change in the Japanese archipelago, the meanings and readings generated by these artifacts have changed dramatically over time. We consider verbal and visual, fictional and historical, canonical and noncanonical texts, including the eighth century Kojiki, the courtly narrative Tale of Genji, eighteenth century puppet theater, modern Anou autobiography, and films and comic books dealing with themes of nuclear warfare and apocalypse.

**ASIAN 212 Introduction to China @ # (IV)**
Spring. 3 credits. R. McNeal.

An interdisciplinary introduction to Chinese culture especially designed for students not majoring in Asian Studies. The class explores literature, history, religion, art and archaeology, and other aspects of China's rich and diverse heritage, from earliest times to the present.

**ASIAN 215 Introduction to South Asian Civilization @ (IV)**
Fall. 3 credits. A. Blackburn.
An interdisciplinary introduction to the culture and history shared by India and other states of South Asia. Designed for students not majoring in Asian Studies. Guest lecturers provide the perspective of their disciplines to the general themes of the course: cultural diversity and the role of tradition in contemporary life.

**ASIAN 218 Introduction to Korea (also HIST 218) @ (III or IV)**
Spring. 3 credits. M. Shin.
A multidisciplinary introduction to Korean history, society, and culture. The first part of the course examines sources of Korean "tradition" such as native religions, Buddhism, and Neo-Confucianism by situating them within their historical contexts and comparing them to their modern forms. The second part, on the transition to a modern society, covers the opening to the West, the colonial period, the Liberation period, and the Korean War. The last part is devoted to contemporary society: industrialization, democracy movements, urban life and culture, North Korea and prospects for reunification. There will be both lectures and sections as well as film showings in the evenings.

**Asia—Literature and Religion Courses**

The following courses are taught entirely in English and are open to any Cornell student.

**ASIAN 220 Buddhism in America (also RELST 220)**

This course focuses on a three fold division of Buddhist communities in America: 1) communities established by Asian teachers with predominantly western community members; 2) communities established to serve the needs of immigrant communities arriving from traditionally Buddhist cultures; and 3) communities established by refugee communities. The class explores how these three different methods of arrival and establishment of Buddhist traditions in North America influenced the decisions these communities make as they adapt Buddhism to a new cultural setting. We also look at the writings of several thinkers who deal with the multicultural nature of American religious life, including Buddhism in the community of American religions in the twenty-first century.

**ASIAN 241 China's Literary Heritage: An Introduction in Translation @ # (IV)**
Fall. 3 credits. D. X. Warner.

This is a survey course designed for, though not limited to, non-majors with or without any knowledge of Chinese language, history, or culture. Students will read a broad selection in translation of poems, prose, and narrative writings from the pre-modern period on a variety of themes including the individual and society, man and nature, love and sorrow, fate and faith, life and death. Lectures and guided discussions will explore the interrelation between the Chinese literary tradition and its culture, history, philosophy, religions, and visual art. The goal is to help students toward informed and enjoyable reading of Chinese literature while gaining a deeper understanding of the Chinese cultural heritage.

**ASIAN 245 Gamelan in Indonesian History and Cultures (also MUSIC 245) @ (IV)**
Fall or spring. 3 credits. M. Hatch.
See MUSIC 245 for description.
This course explores a range of religious traditions in South Asia, including Hinduism, Buddhism (South and East Asian), Confucianism, Daoism, and Shinto. We concentrate on these religions in traditional times in order to understand better the historical foundations that have influenced much of what these cultures are today. The course format includes lectures and discussion sections.

ASIAN 277 Meditation In Indian Culture (also RELST 277) @ (IV)
Spring. 3 credits. D. Boucher.
This course probes the truths behind traditional claims of the priority of internal practice in Indian traditions. We examine both practices themselves—techniques of meditation and contemplation, religious ways of using intellect, forms of chant and ritual—and the dynamics through which these have left a wider mark on South Asian civilization. These dynamics include not only the evident reverberations of practice in philosophical reflection and socioreligious institutions, but also wide-ranging processes of stylization, elaboration, and popularization found throughout South Asian culture. In order to get a sense of the experiences treated in classical religious texts, students will be expected to experiment with some basic meditation practices. At least as important for the work of the course (and much more important for the grade) are the ways in which students situate these practices within larger South Asian world views as suggested by doctrines, rituals, iconic forms, and literary texts. To keep the interaction between internal practice and broader world views central, we will examined texts in Pali and Buddhist sources, consistently examining the ways in which similar practices are given distinct shapes by the two religious traditions.

ASIAN 284 Southeast Asia in the World System: Capitalism and Incorporation, 1500–Present (also HIST 284) @ (III)
See HIST 284 for description.

ASIAN 293 History of China up to Modern Times (also HIST 293) @ (III)
Fall. 4 credits. C. Peterson.
See HIST 293 for description.

ASIAN 294 History of China in Modern Times (also HIST 294) @ (III)
See HIST 294 for description.

ASIAN 297 Japan Before 1600 (also HIST 297) @ (III)
See HIST 297 for description.

ASIAN 298 The U.S.-Vietnam War (also HIST 289) @ (III)
Spring. 3 credits. K. Taylor.
This is a survey of events in Vietnam, the US, and elsewhere related to US intervention in Vietnam from the 1940s to 1975. Readings include historical narratives, memoirs, and literature. Alternative ways of understanding this war in the context of Vietnamese and American history will be explored.

ASIAN 299 Buddhism (also RELST 290)
This course explores the Buddhist tradition from its origins in ancient India to its migrations throughout Asia and eventually to the West. The first half of the course deals with Indian Buddhism: the Buddha, the principal teachings and practices of his early followers, and new developments in spiritual orientation. We then turn to the transmission of Buddhist Eastward, including China, Japan, and Tibet, concentrating on those traditions in traditional times. From there we look at the southern migration to Sri Lanka and Southeast Asia and conclude with an examination of Buddhism in America.

ASIAN 301 Schools of Thought-Ancient China @ # (IV)
Winter. 4 credits. R. McNeal.
This course introduces students to China's most important early moral and political philosophers, such as Confucius, Laozi, and Sunzi, through readings in translation. We address the traditional conception of six schools of thought in ancient China as reflected in classical and modern historiography and examine newly discovered texts with an eye toward clarifying the relationships among early schools and their representatives.

ASIAN 302 Art of War In Ancient China @ # (IV)
Fall. 4 credits. Also fulfills Humanities requirement. R. McNeal.
Sun-tzu's Art of War is one of the most widely translated and circulated books of all time. Businessmen in Asia swear by it, professional coaches invoke it when planning strategy, and students of political science plumb its depths for timeless wisdom on how to defeat an enemy without taking to the battlefield. This course examines Sun-tzu's text in its historical context, along with several other early military and strategic works. We treat these works as a genre, and look for characteristic features of the genre that can be better understood by reading these texts not as manuals for modern-day success, but as a record of a complex and sophisticated conceptualization of the role of warfare and all its components in the broader mission of the state.

ASIAN 306 Zen Buddhism (also RELST 306) @ (IV)
Spring. 4 credits. Prerequisites: any course with a university level in Buddhism or Asian Studies (Religious Studies) 250, or consent of the instructor. Course limited to 15 students. Graduate students can take this course for credit and sign up for an additional credit hour for an extra session. Not offered 2002–2003. J. M. Law.
This course is an explanation of the Zen tradition, with a core focus on central religious, historical, and aesthetic developments in Japan. We rely on both primary sources in translation and secondary sources by scholars in the academic study of religion and Buddhist Studies. The course covers the rise of the Ch'an tradition in China and the development of the Northern and Southern Schools, and the establishment of Zen in the K'ingkaku period, focusing on the developments of both Rinzai and Soto Zen, and the early transmissions of Chinese texts and practices to Japan through Japanese emissaries. We study the lives and writings of both Eisai (1146–1215) and Dogen (1200–1253), and also explore how their life works and writings influenced later developments in Zen. We also explore the work of the Tokugawa Zen figure Hakuin (1686–1769). Finally, we study how Zen has become implicated in Japanese postwar identity discourses, by focusing on a critical reading of the writings of D. T. Suzuki and others.

ASIAN 312 Intellectuals in Early Modern Korea @ # (IV)
An introduction to early modern Korean history (early 19th century to 1945) through a survey of its major intellectuals. The course gives an overview of the political and socio-economic background that gave rise to these intellectuals and then examines how they commented on and tried to shape the conditions of their times. Topics to be covered include critiques of feudal society, the origins of modern literature and historiography, socialism/communism, liberation movements, Christianity, and feminism. Readings include secondary sources, Korean texts in translation, and works by Korean intellectuals written in English.

ASIAN 314 Europe and Its Others (also COM L 304) (IV)
See COM L 304 for description.

ASIAN 316 Melodrama, Totalitarianism, and Everyday Life: Japan and China (also COM L 312) @ (IV)
Spring. 4 credits. H. Lee.
See COM L 312 for description.

ASIAN 322 History of the Samurai (also HIST 322/522) @ (III)
Fall. 4 credits. Asian/HIST 297 recommended. J. Pigott.
See HIST 322 for description.

ASIAN 347 Tantric Traditions (also RELST 347) @ (IV)
This course treats the development of tantric traditions in the Indian subcontinent and beyond. Philosophical, socio-religious, cultic, and visionary dimensions of tantra are discussed. We study different Hindu and Indo-Tibetan traditions, with some attention also paid to tantric developments in East Asian Buddhism.

ASIAN 348 Indian Devotional Poetry (also RELST 348) @ (IV)
A survey of Indian devotional genres, with particular attention to the genre of the devotional literature. Consideration is given to social and ritual contexts of the texts, the ways in which their literary conventions work, and their contemplative uses. The predominant focus is on Hindu traditions, but some Buddhist and Islamic works are also read. Readings in translation.
ASIAN 351 Indian Religious Worlds (also RELST 351) @ (IV)
Fall. 4 credits. D. Gold.
A survey of religious traditions as lived today in the Indian subcontinent. Alongside some underlying similarities, attention is paid to differences in piety and practice within alternative environments: urban and rural, male and female, more and less orthodox. In addition to several Hindu traditions, Sikh, Jain, Buddhist, and Muslim traditions may also be treated. Readings include ethnographies and perhaps a novel.

ASIAN 354 Indian Buddhism (also RELST 354) @ # (IV)
Fall. 4 credits. D. Boucher.
This course surveys Buddhism in South Asia from its origins in northeast India to its migrations throughout the Indian subcontinent. We spend considerable time dealing with the earliest literature about the Buddha, his teachings, and the principal doctrines and practices of the earliest Buddhist communities. We then look at later developments, including the new spiritual orientations offered by the emergence of the Mahayana and Vajrayana traditions. Attention is paid to the ways in which very different forms of the Indian Buddhist practice became entrenched in the adjacent regions of Sri Lanka and Nepal.

ASIAN 355 Japanese Religions (also RELST 356) @ (IV)
Spring. 4 credits. J. M. Law.
This course addresses the complexity of religion in Japan through a focus on the dominant ideological system commonly referred to as Shinto. We focus on methodological issues surrounding tradition formation, invention, continuity, change, and revision, and explore the Shinto tradition as follows: 1) how a central corpus of values, tastes, practices, beliefs, and concerns were formulated and how this system interacts with other religious systems; 2) the academic sources of Shinto ideology; 3) views of this religious system from those actively shaping its discourse; 4) views of this religious system from those peripheralized by its ideologies; 5) personal cultivation and aesthetic practices; and 6) the relationship between Shinto religion and imperial, war, and historical revisionism.

ASIAN 356 Theravada Buddhism @ (IV)
Fall. 4 credits. A. Blackhurst.
Theravada Buddhism dominates the Buddhist world of Sri Lanka and Southeast Asia. Its history in these regions is complex. In this course we will briefly examine the origins and growth of Theravada Buddhism in India and Sri Lanka as well as the ways in which this form of Buddhism was exported from Sri Lanka to Southeast Asia. The primary aim of the course, however, is to explore several specific instances of Theravada Buddhist community organization and practice in historical and contemporary contexts. We will note diverse ways in which Theravada Buddhism has responded to modern times' threefold imperative to cultivate learning, insight, and proper conduct. In doing so, we will be attentive to the ways in which visions of ideal Buddhist practice vary with period, region, and social location, as well as to the ways in which a shared body of authoritative texts informs quite different interpretations of the dhamma and its practice. The case studies are selected to raise questions related to gender, class, and the constitution of political identities.

ASIAN 357 Chinese Religions (also RELST 357) @ (IV)
This course presents a broad survey of Chinese religions from the earliest historic records through the late imperial and modern periods, from highbrow philosophical movements to local deity cults. Our survey focuses intensively on the great traditions of Confucianism, Taoism, and Buddhism as well as the lesser known practices that often fall through the cracks. Our goal in part is to trace patterns of continuity among competing and sometimes acrimonious voices.

ASIAN 359 Japanese Buddhism: Texts in Context (also RELST 359) @ (IV)
Spring. 4 credits. Not offered 2002-2003. Next offered 2003-2004. J. M. Law. This course explores central dynamics of Buddhism as it established itself in Japan, focusing on five figures considered central to the history of Japanese Buddhism: Saicho (767-822), Kukai (774-835), Honen (1133-1212), Nchiren (1222-1282) and Dogen (1200-1253). We study key writings, core practices and doctrines of schools, and a central religious dynamic that their work and contributions embody: 1) establishment of Mahayana ordination, 2) grounding of esoteric practice in Japan and the accommodation to Japanese understandings of the natural world, 3) the popularization of Buddhist religious practice for commoners through nembutsu recitation and narrative traditions, 4) the uses of Buddhism as a political, pragmatic ideology, and 5) establishment of Zen meditation as an iconic Japanese form of Buddhism. Readings are primary sources in translation with secondary sources.

ASIAN 370 Twentieth-Century Chinese Literature @ (IV)
A survey of the principal works in English translation, the course introduces fiction, drama, essays, and poetry of China beginning with the Republican era and continuing up to the present in the People’s Republic and Taiwan, with attention to social and political issues and literary theory.

ASIAN 374 Chinese Narrative Literature (also COM L 376) @ # (IV)
Spring. 4 credits. D. X. Warner.
Selected works in classical Chinese fiction are read in translation. Major novels, such as The Dream of the Red Chamber and Water Margin, are emphasized.

ASIAN 380 Vietnamese Literature in Translation @ (IV)
Fall. 4 credits. K. Taylor.
A survey of Vietnamese literature available in translation from all eras beginning with earliest times to the contemporary period, both poetry and prose, with particular attention to literary forms and considerations of how these forms relate to their ostensible contents. A major case study of a national literature arose and how the substance of this idea was constructed.

ASIAN 381 Introduction to the Arts of Japan (also ART H 384) @ (IV)
Fall. 4 credits. A. Pan. See ART H 384 for description.

ASIAN 383 Introduction to the Arts of China (also ART H 380 and ARKEO 380) @ # (IV)
Spring. 4 credits. A. Pan. See ART H 380 for description.

ASIAN 386 Representation and Meaning in Chinese Painting (also ART H 385) @ (IV)

ASIAN 387 History of Vietnam (also HIST 386/688) @ # (IV)
This course is a survey of Vietnamese history and culture from earliest times to the present. Graduate students may enroll and attend a seminar section.

ASIAN 390 The Sanskrit Epics (also CLASS 390) @ # (IV)
An historical survey of the cosmological and divinatory systems in Greek, Sanskrit, and Arabic, with special focus on the geocentric world-system and astrology. Some attention to early knowledge systems—Egyptian, Babylonian, Indian, and Chinese—and to the later career of divination and cosmology in medieval Europe and Asia. Topics include: the relevance of various theories of space, time, causation and being to the practice of divination, philosophical and theological arguments for and against divination, the theory and practice of universal, genetico-cataclysmic, and catarcyclic astrology; the social worlds of astrologers and their clients; and the problems of studying such systems from the nature of the material and the history of its transmission.

ASIAN 394 The House and the World: Architecture of Asia (also ART H 395) @ # (IV)
Spring. 4 credits. K. McGowan. See ART H 395 for description.

ASIAN 395 Classical Indian Philosophical Systems (also CLASS 385 and RELST 385) @ # (IV)
Spring. 4 credits. Prerequisite: some background in philosophy or in classical culture. C. Minkowski.
A survey of the traditions of philosophical inquiry in ancient India, especially Nyaya, Sankhya, Mimamsa, and Vedanta. Topics include the origins in and relationships to the Vedas, the formation of distinct positions on such subjects as perception, language, identity, karma, and liberation in dialogue with Buddhist, Jain, skeptics, materialist, and cynics; and new theistic models, particularly among the Saiva philosophers in Kashmir.

ASIAN 396 Southeast Asian History from the Eighteenth Century (also HIST 396) @ (III)
Spring. 4 credits. E. Tagliacozzo. See HIST 396 for description.
[ASIAN 410 Chinese Performing Arts @ (IV)
Fall. 4 credits. Not offered 2002-2003.
The course surveys drama, music theater, and film in twentieth-century China. Some material requires knowledge of Chinese.]

[ASIAN 411 History of the Japanese Language (also LING 411) @ (III)
Fall. 4 credits. Not offered 2002-2003.
J. Whitman.
See LING 411 for description.]

[ASIAN 412 Linguistic Structure of Japanese (also LING 404) (III)
Spring. 4 credits. J. Whitman.
See LING 404 for description.]

[ASIAN 413 Religion and Politics in Southeast Asia (also ANTHR 413) @ (III)
Spring. 4 credits. A. Willford.
See ANTHR 413 for description.]

[ASIAN 414 Second Language Acquisition I (also LING 414) (III)
Fall. 4 credits. Y. Shirai.
See LING 414 for description.]

[ASIAN 415 Virtual Orientalisms (also S HUM 415 and COM L 418) @ (IV)
J. de Bary.
A comparative study of representations of Japan in postwar French, American, and Japanese cultures. The course is particularly concerned with the role of virtual technologies in representations of Japan, as well as with a proliferation of late-twentieth-century representations of Japan as a site of utopic or dystopic virtuality. Postizing Orientalism as a broadly-based, but definitely not monolithic, ensemble of representational and regulatory practices, we attend to differences in the historical context. Examples include: Roland Barthes' figuring of Japan as a "possibility of difference," or of "the very fissure of the symbolic" in post-1968 France, and Michael Crichton's more recent superimposition of a "Rising Sun" over processes of American racial hybridization, high-tech reproduction and alteration of images, and trade imbalances. Ambiguously represented as a culture of both the "chrysanthemum" (the hyper-aesthetic) and the "sword" (the hyper-phallic), with the advent of what some have called "techno-orientalism," Japan has increasingly become a preoccupation of technological and futurological imagination. We consider literary, filmic, and theoretical texts, as well as science fiction, video games, and fanzines.]

[ASIAN 416 Undergraduate Seminar on Gender and Sexuality in Southeast Asian History (also HIST 416) (III)
Fall. 4 credits. Not offered 2002-2003.
T. Loos.
See HIST 416 for description.]

[ASIAN 417 Second Language Acquisition II (also LING 415) (III)
Spring. 4 credits. Y. Shirai.
See LING 415 for description.]

[ASIAN 420 The Map of Tenderness: The Sentimental Subject in Cross-Cultural Perspective (also COM L 421) (IV)
Fall. 4 credits. H. Lee.
See COM L 421 for description.]

[ASIAN 425 Theories of Civilization (also HIST 484) @ (III or IV)
Spring. 4 credits. K. Taylor.
A survey of theories about how to define civilization and how civilizations arise and decline, based on the writings of Confucius and Mencius, Ibn Khaldun, Giambattista Vico, and Arnold Toynbee.]

[ASIAN 430 Structure of Korean (also LING 430) (III)
J. Whitman.
See LING 430 for description.]

[ASIAN 433 Tale of the Genji in Historical Perspective (also HIST 420) @ (III)
Fall. 4 credits. J. Piggott.
See HIST 420 for description.]

[ASIAN 441 Mahayana Buddhism (also RELST 441) @ (IV)
Next offered spring 2004.
D. Boucher.
This course explores the origins and early developments of a movement in Indian Buddhism known as the Mahayana. We intensively examine a small slice of this movement's voluminous literature so as to better understand its call for a new spiritual orientation within Buddhism. Topics of discussion include the career of the bodhisattva, the lay/monk distinction, attitudes of Mahayanists towards women and other Buddhists, and the development of Buddhist utopias and transcendent Buddhhas.]

[ASIAN 445 Japanese Imperialism in East Asia @ (IV)
Fall. 4 credits. Prerequisite: at least one previous course on modern East Asia. Limited to 15 students. M. Shin.
The first part of the course reviews the major theories of imperialism and fascism as well as post-colonial theory. The second part considers their applicability to East Asia through readings of the major monographs on Japanese imperialism and its colonies.]

[ASIAN 449 History and Methods of the Academic Study of Religion (also RELST 449) (III)
Spring. 4 credits. Prerequisite: 1 course satisfying the religious studies major.
J. M. Law.
This course provides advanced students in Religious Studies or the humanities familiarity with important methodological issues in the academic study of religion. Following a brief historical outline, we survey major approaches to the academic study of religion currently used and discussed in Religious Studies. We read works from the following approaches to the study of religion: anthropology, philosophical hermeneutics, phenomenology, history of religions, the sociology of religion and critical ideological studies. In the final segment of the class, we focus on recent developments in the field of Religious Studies. We explore how these studies either build upon or react against the nineteenth century assumptions of Religionswissenschaft and how new methodological approaches address twentieth and twenty-first century academic, religious, and theoretical issues.]

[ASIAN 450 Crime and Diaspora in Southeast Asian History (also HIST 451) @ (IV)
Fall. 4 credits. Not offered 2002-2003.
E. Tagliacozzo.
See HIST 451 for description.]

[ASIAN 451 Theories of Civilization (also HIST 484) @ (III or IV)
Spring. 4 credits. K. Taylor.
A survey of theories about how to define civilization and how civilizations arise and decline, based on the writings of Confucius and Mencius, Ibn Khaldun, Giambattista Vico, and Arnold Toynbee.]

[ASIAN 460 Indian Meditation Texts (also RELST 460) @ (IV)
Fall. 4 credits. D. Gold.
Because texts that record visionary experience prescribe the practice of contemplation, and present enigmatic utterances are highly valued in Indian tradition, they need to be taken seriously by students of Indian and world civilizations. Yet the special problems of interpretation that they present have often caused meditation texts to be passed over in embarrassed, sometimes reverent silence. In this course we draw on approaches from literary criticism, anthropology, and religious studies to explore a number of the problems to which these texts give rise: in what ways are the apparent differences in experience presented in meditation texts shaped by different cosmologies and ritual practice? Do different literary genres have particular religious implications? What are the relations between convention and experience in the creation of the texts? Readings are drawn from the Upanishads and Tantras, devotional verse in the vernaculars, and the classical meditation manuals of Hinduism and Buddhism. Some attention may be given to Indian Sufi materials. No knowledge of Indian languages is required.]

[ASIAN 466 Senior Seminar: Comparative Colonial Law and Society (also HIST 476 and WOMNS 476) @ (III)
Fall. 4 credits. Letter grade only. Limited to 15 students. Not offered 2002-2003.
T. Loos.
See HIST 476 for description.]

[ASIAN 479 Art of the T'ang Dynasty (also ART H 481) @ (IV)
A. Pan.
See ART H 481 for description.]

[ASIAN 481 Translation and Identities @ (IV)
Spring. 4 credits. N. Sakai.
Translation establishes a division of two spheres and thereby marks the limit of what can be expressed in one medium. Broadly understood, translation can take place not only between two national languages but also at a variety of boundaries within a putatively single society. The seminar investigates different economies of translation by which different social and cultural identities are constructed, emphasizing the disappearance of multi-lingualism in modern nation-state and the mutation of translation economies which gave rise to new ways of imagining the organicist unity of the society in eighteenth-century and twentieth-century Japan. Seminar readings are translations of pre-modern European and Japanese philosophical articles (in English).]

[ASIAN 482 Seminar: Gender Adjudicated (also HIST 480) @ (III)
Fall. 4 credits. Not offered 2002-2003.
T. Loos.
See HIST 480 for description.]

[ASIAN 483 Internationalism, Nationalism, and Modern Japanese Discursive Space @ (III)
N. Sakai.
The late nineteenth century marks an important transitional period: nation-states formed in Britain, France, Japan, Germany, the United States, and elsewhere sought to
become imperial powers, and "internationalism" virtually collapsed. Focusing on Japanese examples, but not excluding other cases, we study the discursive spaces of modern national subjectivity with a view to the problems of ethnicity, colonialism, imperial sexism, violence, historical memory, post-coloniality and academic knowledge. A major critical paper is required.)

[ASIAN 486 Ritual and Performance in Japanese Religions (also RELST 486) (IV)]
Spring. 4 credits. Class size limited to 12. Prerequisites: instructor consent for undergraduates. Ability to read Japanese is not required, but there are optional readings in Japanese. Graduate students may sign up for this as a graduate level course. Not offered 2002-2003. J. M. Law.
In the last fifty years in Japan, there has been a proliferation of revived, restored, invented and newly created folk performing arts throughout the country. This course is an exploration of this phenomenon, and its relationship to Japanese religion. The course begins with an overview of the major theoretical works relating to tradition creation, revitalization and invention, with a focus on ritual performance theory. With this theoretical base, we explore several paradigmatic cases classified as "folk performing arts" (minzoku geinō) which are directly related to overtly religious concerns. Through these cases, we see how both national and local identity discourses are being worked out through public ritual performances. Each student also has an opportunity to conduct in-depth research on one ritual performance tradition, or a given aspect of critical theory relating to ritual studies. This course is recommended for upper level undergraduates with the consent of the instructor or graduate students.)

ASIAN 490 Tales of the Heike (also HIST 490) @ (III)
Fall. 4 credits. J. R. Piggott.

[ASIAN 496 Tokugawa Literature and Thought @ (IV)]
N. Sakai.
An introduction (in English translation) to literary, theatrical, and intellectual works of the Tokugawa period (1600-1868). We examine the characteristics of early Tokugawa literary and theatrical works and see how different they are from the literary works of the later Tokugawa period. We also read the philosophical and philological works on the classics by writers such as Ogyu Sorai and Motoori Norinaga to understand the ways contemporary Japanese intellectuals understood cultural activities and literature during the Tokugawa period."

Asia—Graduate Seminars
For complete descriptions of courses numbered 600 or above, consult the director of graduate studies.

ASIAN 601 Southeast Asia Area Seminar: Philippines
Fall. 4 credits. C. Harvy.
This course offers a critical review of the key texts and themes in the study of the Philippines. The texts are drawn from a range of disciplines: history, anthropology, politics, and literature. Students who wish to join this seminar are expected to read across this range of materials. The emergence of the Philippine nation-state remains the pre-eminent political development of the past century and this fact necessarily influences the shape of intellectual developments well. Students are encouraged to critically evaluate the processes by which a modern nation-state took shape because and in spite of the experiences of colonization: Spanish, American, and Japanese. Students also engage with the social, political and intellectual consequences of colonialism, especially as reflected in social scientific literatures produced by the colonizers and by Filipinos.

ASIAN 602 Southeast Asia Seminar
Spring. 4 credits. Staff.

[ASIAN 603 Southeast Asia Topical Seminar: Sociology of Natural Resources and Development (also SOC 607)]
Fall. 4 credits. Not offered 2002-2003.
Staff.

ASIAN 604 Southeast Asia Topical Seminar
Spring. 3-4 credits. T. Chaloeiartana.
This course allows students to look at Southeast Asia as a field of study. Beginning graduate students may find this seminar useful. Students attend lectures in ASIAN 208 and meet in a graduate seminar. Discussion topics include Southeast Asia as a field of inquiry, academic disciplines and area studies, art and culture, Colonialism and post-colonialism, nationalism and cold war, economic development, and gender studies.

ASIAN 605-606 Master of Arts Seminar in Asian Studies
605, fall; 606, spring. 2-4 credits. Staff.

[ASIAN 609 Modern Japanese Studies: The Formation of the Field in History and Literature (also HIST 609)]
N. Sakai, J. V. Koschmann, B. de Bary.
See HIST 609 for description.

[ASIAN 610 SLA and the Asian Languages (also LING 609)]
Fall. 4 credits. Not offered 2002-2003.
Y. Shirai.
See LING 609 for description.

ASIAN 612 Japanese Bibliography and Methodology
Fall. 1 credit. Prerequisite: permission of instructor. Required of honors students and M.A. candidates. F. Kotas.

ASIAN 613 Southeast Asian Bibliography and Methodology
Fall. 1 credit. Prerequisite: permission of instructor. A. Riedy.

This course is designed to instruct students in methods of identifying and locating resources for the study of Southeast Asia. Emphasis is on the practical aspects of using various types of bibliographical tools to identify both primary and secondary sources in Southeast Asian and Western languages. Electronic databases and online services as well as traditional printed resources are covered. Relevant archana of library science is explained as necessary. Required of honors students and Master of Arts candidates. No foreign language competence is required but a reading knowledge of at least one Southeast Asian language or other Asian language (especially Chinese or Japanese) and a major European language (especially French, Spanish, or Dutch) is highly desirable.

ASIAN 626 The 18th Century and the Emergence of Literary Modernity
Spring. 4 credits. N. Sakai, T. Yoda.
This course attempts to read texts from pre-Meiji Japan together with European equivalents of the eighteenth century, and seeks to understand the conditions of modernity in what may broadly be referred to as "literature" outside the scope of Eurocentric historicism. It has been argued that it is possible to identify a historically specific form of temporality, which is later called "subject," among some texts produced from the early eighteenth century in areas as diverse as France, Germany, England and Japan. Whether actualized in vernacular dialogues in printed medium, in stories of heterosocial love in essentially homosocial settings, or in the image of an ethno-linguistic community, new types of narration and social imaginary came into existence in the eighteenth century in many parts of the world. We examine how these transformations took place by reading exemplary texts from the old formations as well as from the new ones with particular focus on the following issues: the narrative articulation of inter-personal relations, the intensities of authorial voice, the management of textual production, the economy of textual visibility and invisibility, the claims of reproducibility, and aesthetic senses associated with poetry and calligraphy.

[ASIAN 648 Peasants, Pirates, and Prostitutes: Subaltern Histories of Southeast Asia, 1800-1900 (also HIST 249/648)]
E. Tagliacozzo.
See HIST 648 for description.]
ASIAN 650 Seminar in Asian Religions
Fall. 4 credits. Graduate students only. Limited to 12 Students. J. M. Law.

Topic Fall 2002: Ritual and Performance in Japanese Religions. This course, an exploration of ritual performance and its relationship to Japanese religion, begins with an overview of the major theoretical works relating to tradition creation, revitalization and invention, with a focus on ritual performance theory. With this theoretical basis, we explore several paradigmatic cases classified as "folk performing arts" (minzoku geino) which are directly related to overtly religious concerns. Through these cases, we see how both national and local identity discourses are being written out through public ritual performances.

[ASIAN 651 Crime and Diaspora in Southeast Asian History (also HIST 451/650)]

ASIAN 652 Straddling the Himalayas: the Transmission of Buddhism from India to China
Spring. 4 credits. Prerequisites: students do NOT have to have reading knowledge of classical Chinese, although it is helpful. Students with strong reading knowledge of Chinese will be encouraged to pursue projects in primary sources. All graduate students should have reading knowledge of French OR Japanese. D. Boucher. This is a graduate seminar designed for students interested in a broad range of related topics: Indian Buddhism, early Chinese Buddhism, Buddhism in Central Asia, problems of cultural transmission and translation, and models of appropriation of religious traditions into new cultural environments. We start with a rapid survey of the state of our knowledge about Buddhism in northwest India and west Central Asia on the eve of its transmission eastward. We explore various theories and models of transmission and look for parallels in other cultural contexts. We also examine in some detail what the Chinese received as "Buddhism", and explore the earliest attempts to make sense of this fundamentally alien tradition.

ASIAN 654 Indian Buddhism
Fall. 4 credits. Graduate students attend ASIAN 354 and arrange additional meetings with instructor. D. Boucher. This course surveys Buddhism in South Asia from its origins in northeast India to its migrations throughout the Indian subcontinent. We spend considerable time dealing with the earliest literature about the Buddha, his teachings, and the principal doctrines and practices of the earliest Buddhist communities. We then look at later developments, including the new spiritual orientations offered by the emergence of the Mahayana and Vajrayana traditions. Finally, we explore the way two very different forms of the Indian Buddhism became entrenched in the adjacent regions of Sri Lanka and Nepal.

ASIAN 676 Southeast Asia Reading Seminar: Thai Political Novel
Fall. 4 credits. T. Chaloeiintara
This seminar examines the relationship between the craft of the novelist and the representations of social, historical and political "reality." We discuss how early Thai novels illuminate the past, affect the course of history and politics, and/or distort our understanding of Thai self-identity. Students read five novels and one short story in Thai written by Kulap Sairapit (1905–1974) and discuss them in the context of Thai sociality, history and politics.

[ASIAN 684 Southeast Asia in the World System: Capitalism and Incorporation, 1500–Present (also HIST 284/684)]

[ASIAN 685 History of Vietnam (also HIST 388/688)]
Spring. 4 credits. Not offered 2002–2003. K. Taylor. This course is a survey of Vietnamese history and culture from earliest times to the present. Graduate students may enroll and attend a seminar section.

ASIAN 690 Tales of the Heike (also HIST 490/690)
Fall. 4 credits. J. R. Piggott.

[ASIAN 693 Problems in Modern Chinese History (also HIST 693)]

[ASIAN 694 Problems in Modern Chinese History (also HIST 694)]

[ASIAN 696 Modern Southeast Asia: Graduate Proseminar (also HIST 390)]

ASIAN 701-702 Seminar in East Asian Literature
701, fall; 702, spring. 1–4 credits. Staff. Topic fall 2002: Reconfiguring Asia, Reconstructing the Past. B. de Bary, N. Sakai, T. Yoda. A comparative graduate seminar which critically examines the ongoing construction of modern "Asia" while linking it to the historiographical problem of the retrieval of knowledge of the past. As was the case with the modern knowledge practices that preceded them, variants of post-modern theory today are often seen as powerfully "othering," marginalizing, or silencing the premodern and those who would reconstitute knowledge of it. Also familiar from early twentieth century discourses of nostalgia and loss is the association of this loss of knowledge from the past with the loss of cultural particularity, especially in societies subject to colonialism or other forms of modern western expansion. In recent work in subaltern studies or those proposing "provincializing the west," for example, the conceptual distinction between premodern and modern itself has been questioned and politicized. Our course makes these questions its point of departure. Rather than focusing solely on contemporary theoretical articulations of the problem, however, the majority of our weekly meetings consist of a reading of selected premodern texts, translations of premodern texts, or texts attempting to recover premodern historical, archival, or archaeological knowledge. This year’s seminar will include classes dealing with Japan, India, Korea, and Vietnam.

ASIAN 703-704 Directed Research
703, fall or spring; 704, fall or spring. 1–4 credits. Staff.

ASIAN 899 Master’s Thesis Research
Fall, spring. 2–4 credits. Staff.

ASIAN 999 Doctoral Dissertation Research
Fall, spring. 2–4 credits. Staff.

Honor Courses

ASIAN 401 Asian Studies Honors Course
Fall or spring. 4 credits. Intended for seniors who have been admitted to the honors program. Staff. Supervised reading and research on the problem selected for honors work.

ASIAN 402 Asian Studies Honors: Senior Essay
Fall or spring. 4 credits. Prerequisite: admission to the honors program. Staff. The student, under faculty direction, prepares an honors essay.

ASIAN 403-404 Asian Studies Supervised Reading
Fall, spring, or both. 1–4 credits. Prerequisite: permission of instructor. Open to majors and other qualified students. Intensive reading under the direction of a member of the staff.

Bengali

BENG 121-122 Elementary Bengali
121, fall; 122, spring. 4 credits each term. BENG 122 provides language qualification. Prerequisite: for BENG 122, BENG 121 or examination. Staff. The emphasis is on basic grammar, speaking, and comprehension skills; Bengali script is also introduced.

BENG 201-202 Intermediate Bengali Reading
201, fall; 202, spring. 3 credits each term. BENG 202 provides language proficiency. Prerequisites: for BENG 201, BENG 122 or examination; for BENG 202, BENG 201 or examination. Staff. Continuing instruction in grammar with attention to speaking and reading skills.

BENG 203-204 Intermediate Bengali Composition and Conversation
203, fall; 204, spring. 3 credits each term. BENG 204 provides language proficiency. Prerequisites: for BENG 203, BENG 122 or examination; for BENG 204, BENG 203 or examination. Staff. Continuing instruction in grammar with attention to writing skills.

BENG 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Staff. Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

BENG 303-304 Bengali Literature I, II
303, fall; 304, spring. 4 credits each term. Prerequisites: BENG 203–204 or equivalent. Staff. An introduction to noted Bengali writers. Selections of works by Rabindranath Tagore and Abanindranath Tagore and short stories by Boronpil are covered. The course is devoted to reading these works and developing
ing literary criticism and creative writing in Bengali.

Burmese

**NOTE:** Contact S. Tun in Morrill Hall 405 before classes begin for placement or other testing and organizational information.

**BURM 103-104 Burmese Conversation Practice**

103, fall; 104, spring. 2 credits each term. Prerequisites: for BURM 104, BURM 103 and BURM 121. May not be taken alone. Must be taken simultaneously with BURM 121-122. Satisfactory completion of BURM 104/122 fulfills the qualification portion of the language requirement. S. Tun.

A thorough grounding is given in all language skills: listening, speaking, reading, and writing.

**BURM 121-122 Elementary Burmese**

121, fall; 122, spring. 4 credits each term. BURM 122 provides language qualification. Prerequisite: for BURM 122, BURM 121. May be taken alone or simultaneously with BURM 121. Satisfactory completion of BURM 104/122 fulfills the qualification portion of the language requirement. S. Tun.

A thorough grounding is given in all language skills: listening, speaking, reading, and writing.

**BURM 300 Directed Studies**

Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. S. Tun.

Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

**BURM 301-302 Advanced Burmese**

301, fall or spring; 302, fall or spring. 3 credits each term. Prerequisites: for BURM 301, BURM 202 or permission of instructor; for BURM 302, BURM 301. S. Tun.

Continuing instruction in conversational and literary skills, but with special emphasis on reading. Students encounter various genres and styles of written Burmese. Readings will include articles on current events, and either several short stories or a novel. Focus is on developing reading skills, particularly on vocabulary development, consolidating and expanding grammar, and appreciating stylistic and cultural differences.

**BURM 303-304 Advanced Burmese II**

303, fall or spring; 304, fall or spring. 3 credits each term. Prerequisite: for BURM 303, BURM 202 or permission of instructor; for BURM 304, BURM 303. S. Tun.

This is a course for students who have good conversational ability in Burmese and some familiarity with Burmese culture, but who need to strengthen reading skills and further enrich their vocabulary. Students in consultation with the instructor, are able to select reading materials. There is also an opportunity for those who need it, to strengthen listening skills, through the study of current films, TV, and radio programs in Burmese.

**BURM 401-402 Directed Individual Study**

401, fall; 402, spring. 2-4 credits variable each term. Prerequisite: permission of instructor. S. Tun.

This course is designed to accommodate the needs of advanced or specialized students, and faculty interests. Topics of reading and discussion are selected on the basis of student need.

**Cambodian**

See Khmer.

**Chinese**

**NOTE:** Testing for placement, except for those with near-native abilities (particularly those schooled in a Chinese setting up until the age of about 12), takes place in registration week, before classes begin. Time and place will be posted on the web at www.arts.cornell.edu/asian/index.html under “Language Programs” and the bulletin board outside Rockefeller 388. Students with some Chinese schooling who want to obtain 3 or 6 credits for their proficiency will be tested at the beginning of the second week of classes. Again, the time and place will be announced.

**CHIN 101-102 Elementary Standard Chinese ('Mandarin')**

101, fall; 102, spring. 6 credits each term. Prerequisite: for CHIN 102, CHIN 101, or equivalent. Letter grades assigned unless student receives exceptional permission from the course coordinator for S-U. You must enroll in lecture and 1 section. Since each section is limited to 10-12 students, students missing the first 2 class meetings without a university excuse are dropped so others may register. No student will be added after the second week of classes. Satisfactory completion of CHIN 102 fulfills the qualification portion of the language requirement. S. Hoare and staff.

A course for beginners only, providing a thorough grounding in conversational and reading skills. Students with some facility in the spoken language (because Chinese is spoken at home) but who do not read characters should take 109-110. Students who read Chinese, but who speak ‘dialects,’ such as Cantonese or Anoy, should enroll in CHIN 215.

**CHIN 109-110 Beginning Reading and Writing (Standard Chinese)**

109, fall; 110, spring. 4 credits each term. CHIN 110 provides language qualification. Prerequisites: must have permission of instructor to enroll. Students who complete CHIN 110 normally continue with CHIN 209 and 210. Because of high demand for this course, students missing the first 2 meetings without a university excuse are dropped so others may register. Satisfactory completion of CHIN 110 fulfills the qualification portion of the language requirement. F. Lee Mehta.

This course is intended primarily for students who speak some Chinese at home, but who have had little or no formal training. The focus is on characters, reading comprehension, basic composition, standard grammar, and reading aloud with standard Chinese ('Mandarin') pronunciation.

**CHIN 111-112 Elementary Cantonese**

111, fall; 112, spring. 4 credits each term. Prerequisite: must have permission of instructor with instructor's signature to complete formal enrollment after preregistration. For CHIN 111, 112, or equivalent. Satisfactory completion of CHIN 112 provides language qualification. Since the course is limited to 10-12 students, students missing the first two classes without a University excuse are dropped so others may register.

No student will be added after the second week of classes. H. Huang.

A course in standard Cantonese (as spoken in Hong Kong and Canton) for beginners who have no Chinese language skills from heritage or previous training. Students who have a Mandarin background should take CHIN 211. Students with very limited skills in Cantonese oral expressions should consult with instructor before formal enrollment in the class with instructor’s signature. The course gives a thorough grounding in conversational and character reading skills in Cantonese.

**CHIN 201-202 Intermediate Standard Chinese ('Mandarin')**

201, fall or summer; 202, spring or summer. 4 credits each term. CHIN 201 provides language proficiency. Prerequisites: for CHIN 201, CHIN 102 with a grade of C+ or above or equivalent; for CHIN 202, CHIN 201 or equivalent. Section 1, Q. Teng; Section 2, Staff.

Continuing instruction in written and spoken Chinese with particular emphasis on consolidating basic conversational skills and improving reading confidence and ability.

**CHIN 209-210 Intermediate Reading and Writing**

209, fall; 210, spring. 4 credits each term. CHIN 209 provides language proficiency. Prerequisites: for CHIN 209, CHIN 210 or equivalent; CHIN 210, CHIN 209. After completing 210, students may only take 400-level courses in Chinese. Staff.

Continuing focus on reading and writing for students with spoken background in standard Chinese; introduction of canonical letter writing and other types of composition.

**CHIN 211-212 Intermediate Cantonese**

211, fall; 212, spring. 4 credits each term. Prerequisite for 211: 112 or equivalent. Prerequisite for 212: 211 or equivalent. CHIN 211 provides language proficiency. Prerequisite: completion of CHIN 111/112, or students who have Mandarin speaking, reading and writing background from family heritage or formal training, or students who have some elementary conversational skills in Cantonese from...
A course that gives comprehensive training in oral and written Cantonese at a higher level than CHIN 111/112 or elementary level in Cantonese.

CHIN 213-214 Intermediate Reading and Writing for Cantonese Speakers
213, fall; 214, spring. 4 credits each term. Prerequisite for 214: 213 or equivalent.

CHIN 214 provides language proficiency.
Prerequisite: Cantonese speakers who have no major problems in oral expressions in Cantonese and who have acquired basic skills in characters reading and writing in Cantonese, or students who have equivalent abilities. H. Huang.

A course intended primarily for students who are Cantonese speakers (e.g., at home) or CHIN 215 Mandarin for Cantonese in character reading and writing. The focus is on reading and writing Chinese characters. Taught on a specialized basis to address CHIN 301-302 High Intermediate instructor.

CHIN 215 Mandarin for Cantonese Speakers
Fall. 4 credits. Prerequisite: Advanced Cantonese. Limited to 15 students. Provides language proficiency. Staff.

CHIN 300 Directed Studies
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Staff. Taught on a specialized basis to address particular student needs. Taught in consultation with instructor.

CHIN 301-302 High Intermediate Chinese
301, fall; 302, spring. 4 credits each term. Prerequisites: for CHIN 301, CHIN 202 or equivalent; for CHIN 302, CHIN 301. P. Lee-Mehta.

Continuing instruction in spoken Chinese and in various genres and styles of written Chinese.

CHIN 304 Advanced Mandarin Conversation
Spring. 1 credit. Prerequisite: CHIN 202, CHIN 215, or permission of instructor. Limited to 10 students. Staff.

Conversational reading and oral practice for students who wish to maintain language skills. Guided conversation and oral composition and translation. Corrective pronunciation drills.

CHIN 411-412 Advanced Chinese: Fiction, Reportage, Current Events
411, fall; 412, spring. 4 credits each term. Prerequisites: for CHIN 411, CHIN 302 or equivalent; for CHIN 412, CHIN 411 and permission of instructor required. Q. Teng.

Reading, discussion, and composition at advanced levels.

CHIN 425 Special Topics
Fall. 4 credits. Prerequisite: permission of instructor. X. Jiang.

A number of different topics in advanced Chinese language, advertised the previous semester, are offered under this title to accommodate the needs of advanced or specialized students, and take advantage of faculty interests. Topic varies; correspondence and composition, excerpts from classical novels, Ch’ing documents, xiesheng comedy routines, etc. May be repeated for credit.

Topic Fall 2002: The Language of Chinese Periodicals. This course studies the standard usage of language in Chinese newspapers and magazines and the differences with spoken Chinese and other forms of written Chinese. The course is designed to introduce the rules and changing trends of journalism Chinese to assist students in understanding and writing, as well as reading, journalism.

Chinese FALCON (Full-year Asian Language CONcentration)
For full information, brochures, etc., see the FALCON secretary in 125 Rockefeller Hall e-mail: falcon@cornell.edu or www.arts.comell.edu/asian/falcon.htm.

CHIN 160 Introductory Intensive Mandarin
Summer only. 8 credits. Provides language qualification. Completion of 160 fulfills the qualification portion of the language requirement. S. Hoare and staff.

Introduction to spoken and written Mandarin. Lectures on linguistic and cultural matters, intensive practice with native speakers, and laboratory work. Students who complete this course with a grade of at least B are normally eligible to enroll in CHIN 201.

CHIN 161-162 Intensive Mandarin
161, fall, 162, spring. 16 credits each term. Provides language proficiency. Prerequisites: for CHIN 161, CHIN 160 or equivalent or permission of instructor; for CHIN 162, CHIN 161 or placement by FALCON staff prior to beginning of spring term. Students must apply formally to the program; application open to all Cornell students and students from other institutions. S. Hoare and staff.

Work on spoken and written Chinese from an intermediate level to an advanced level. This is a full-time program and full academic load; the demands of the program do not normally permit students to take other courses simultaneously.

CHIN 161, 162, CHIN 161 or placement by FALCON staff prior to beginning of spring term.

Fall. 4 credits. Prerequisites: for CHIN 201, CHIN 202 or equivalent; for CHIN 301, CHIN 302, CHIN 301. P. Lee-Mehta.

CHIN 162, CHIN 161 or placement by FALCON staff prior to beginning of spring term.

Fall. 4 credits. Prerequisite: CHIN 161 or placement by FALCON staff prior to beginning of spring term.

CHIN 161, 162, CHIN 161 or placement by FALCON staff prior to beginning of spring term.

Fall. 4 credits. Prerequisite: CHIN 161 or placement by FALCON staff prior to beginning of spring term.

CHIN 304 Advanced Mandarin Conversation
Spring. 1 credit. Prerequisite: CHIN 202, CHIN 215, or permission of instructor. Limited to 10 students. Staff.

Conversational reading and oral practice for students who wish to maintain language skills. Guided conversation and oral composition and translation. Corrective pronunciation drills.

CHIN 411-412 Advanced Chinese: Fiction, Reportage, Current Events
411, fall; 412, spring. 4 credits each term. Prerequisites: for CHIN 411, CHIN 302 or equivalent; for CHIN 412, CHIN 411 and permission of instructor required. Q. Teng.

Reading, discussion, and composition at advanced levels.

Fall. 4 credits. Prerequisite: CHIN 161 or placement by FALCON staff prior to beginning of spring term.

CHIN 162, CHIN 161 or placement by FALCON staff prior to beginning of spring term.

Fall. 4 credits. Prerequisite: CHIN 161 or placement by FALCON staff prior to beginning of spring term.

CHIN 161, 162, CHIN 161 or placement by FALCON staff prior to beginning of spring term.

Fall. 4 credits. Prerequisite: CHIN 161 or placement by FALCON staff prior to beginning of spring term.

Fall. 4 credits. Prerequisite: CHIN 161 or permission of instructor. X. Jiang.

This is an introduction to classical Chinese literary texts. Students survey a selection of texts from the ancient and medieval periods. Readings are primarily in prose; some poetry is included. Through close reading, students expand their knowledge of the diction, syntax, and nuances of classical Chinese; at the same time, students gain familiarity with the various genres, themes, and literary styles that were foundational for the later Chinese literary tradition.

CHIL 421-422 Directed Study
Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. Staff.

Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop course content.

CHIL 423 Readings in Chinese History
Fall. 4 credits. X. Jiang.

Topc fall 2002: Contemporary Chinese Journalism. Through the selected study and analysis of examples from the most recent journalistic reporting, this course is designed to help students understand the background, events, and characteristic composition of Chinese journalism and recognize particular features of change in its development.

CHIL 435 Chinese Buddhist Texts
Fall. 4 credits. Prerequisite: 1 year of classical Chinese or permission of the instructor. D. Boucher.

This seminar is designed to introduce students to the idiom of Buddhist Chinese. We start by reading selections from the early translations to gain a grounding in the vocabulary and syntax that came to characterize literary Buddhism in China. From there we survey some of the so-called apocryphal texts (Buddhist "sutras" produced in China) and look at samples from important writers and schools, depending on student interests. This course is open to students in any area of East Asia with an interest in developing skills in Buddhist texts.

CHIL 497 Disjuncture: Text and Exegesis
Spring. 4 credits. Prerequisite: permission of instructor. Students should have completed the equivalent of CHIL 214 and any CHIL 214 course at the 300 level. R. McNeal.

This class focuses on developing critical reading strategies to address issues in classical Chinese texts and the commentarial traditions that have grown up around them. Of particular interest will be: identifying disjunctures and discontinuities between early texts and their commentaries; identifying such
This course develops questions about cultural criticism of China through reading and discussion of modern critiques of Chinese culture, primarily from the late Qing to the post-Mao era, selected from the work of both Chinese and Western critics. Particular emphasis is placed on the role of cultural criticism in producing literature.

This is a graduate-level seminar that offers introduction to the most important sources, both textual and archaeological, for the study of Chinese intellectual history. Students read from a range of primary works—including poetry, prose, literary treatises, philosophical essays, and historical writings—from the Later Han to the Sui and early Tang, in addition to a selection of modern scholarly essays in the field. Our primary aim is to re-examine the interrelationship between the history of ideas and the formation of a medieval poetics during this period of Chinese literary history.

This class focuses on developing critical reading strategies to address issues in classical Chinese texts and the commentarial traditions that have grown up around them. Of particular interest will be: identifying disjunctures and discontinuities between early texts and their commentaries; identifying such disjunctures among parts of a text itself; glimping, through the gaps created by such disjunctures, aspects of early Chinese thought, belief, and practice not otherwise easily accessible.

Hindi

HINDI 101-102 Elementary Hindi-Urdu
101, fall; 102, spring. 6 credits each term.
HINDI 102 provides language qualification.
Prerequisite: for HINDI 102, HINDI 101 or equivalent. Staff.
This course sequence is meant for those students who have had very little or no exposure to Hindi-Urdu. It is designed to enable such students to read, write and converse in the language with confidence and enjoyment. Hindi and Urdu are sister languages and share an identical grammar and elementary vocabulary. The language presented in the course is colloquial. The Hindi script is taught plus knowledge of the Urdu script is taught as an additional course in the spring semester. Students who have some experience of Hindi-Urdu or a closely related language are suited for HINDI 109-110, and should check with the instructor.

HINDI 109-110 Accelerated Elementary Hindi-Urdu
109, fall, 110, spring. 3 credits each term.
HINDI 110 provides language qualification.
Prerequisite for HINDI 110: HINDI 109 or equivalent. Staff.
An entry-level sequence for students with some prior exposure to Hindi-Urdu or a closely related language. This course sequence provides a thorough grounding in all the language skills: listening, speaking, reading, and writing. Completion of this sequence, including satisfactory performance on an examination given at the end of HINDI 110, constitutes a level of performance equal to that of the 101-102 sequence, and is thus considered to fulfill qualification for the language requirement. Students are eligible for 200-level Hindi-Urdu courses. Check with instructor regarding placement.

HINDI 201-202 Intermediate Hindi
Reading @
201, fall; 202, spring. 3 credits each term.
HINDI 201 provides language proficiency.
Prerequisite: for HINDI 201, HINDI 202, HINDI 201 or permission of instructor. Staff.

[HINDI 203-204 Intermediate Composition and Conversation @
203, fall; 204, spring. 3 credits each term.
HINDI 203 provides language proficiency.
Prerequisites: for HINDI 203, HINDI 202, for HINDI 204, HINDI 203 or permission of instructor. Not offered 2002-2003. Staff.
Throughout this course sequence all aspects of language learning are practiced: listening, speaking, reading, and writing. In 203, video materials are used and the emphasis is on the conversational aspect of the language. In 204, the focus shifts to reading skills and the main text used is a popular novel.]
Taught on a specialized basis to address particular student needs.

**JAPANESE**

**JAPAN 101-102 Elementary Japanese**

101, fall, 102, spring. 6 credits each term.

**JAPAN 102 provides language qualification.** Prerequisite for JAPAN 102. JAPAN 101 or placement by the instructor during registration period. Intended for beginners or for those who have been placed in the course by examination. You must enroll in lecture and 1 section. R. Sukle, Y. Kawasaki, and staff.

A thorough grounding in all four language skills—speaking, hearing, reading, writing—at the beginning level, but with a special emphasis on oral communication and actual use of the language in social context. Homework for the course is largely work on the skill aspects of language through practice in the language lab with tapes or CD-ROM. The lecture provides explanation, analysis, and cultural background necessary for successful interaction with Japanese people. The sections are conducted entirely in Japanese. Materials covered are not the same as for JAPAN 141-142.

**JAPAN 141-142 Beginning Japanese at a Moderate Pace**

141, fall; 142, spring. 4 credits each term. Prerequisite: Placement by instructor. Two one-hour sessions in the lecture is conducted by an expert in Japanese language structure. Two one-hour sessions in the language lab with tapes or CD-ROM. Placement by the instructor during registration period. Y. Shirai, Y. Kawasaki, and staff.

Beginning level training in listening, speaking, reading, and writing, with more emphasis on written skills than JAPAN 101-102. Classroom activities focus on oral communication skills. Homework for the course is largely written exercises. Fewer credits and fewer class contact hours than JAPAN 101-102, the course meets five hours per week (MTWRF). Materials covered are not the same materials as JAPAN 101-102.

**JAPAN 201-202 Intermediate Japanese**

Conversation @ 201, fall and summer; 202, spring and summer. 4 credits each term. **JAPAN 201 provides language proficiency.** Prerequisites: for JAPAN 201, JAPAN 102 or placement by the instructor during registration; for JAPAN 202, JAPAN 201 and 203 or placement by the instructor during registration; for JAPAN 201, JAPAN 102 or placement by the instructor during registration; for JAPAN 202, JAPAN 201 and 203 or placement by the instructor during registration. Students enrolled in JAPAN 201 are strongly urged to enroll concurrently in JAPAN 203. Y. Katagiri.

This is a course for students who have learned an elementary level of Japanese and would like to continue to study the structure of the language and to acquire basic oral proficiency.

**JAPAN 203-204 Intermediate Japanese**

Reading I @ 203, fall; 204, spring. 2 or 3 credits each term. **JAPAN 203 provides language proficiency.** Prerequisites: for JAPAN 203, JAPAN 102, or placement by the instructor during registration; for JAPAN 204, JAPAN 203 or placement by the instructor during registration. You must enroll in lecture and 1 section. N. Nakade.

Reading of elementary texts emphasizing practical materials, with development of writing skills.

**JAPAN 241-242 Intermediate Japanese at a Moderate Pace**

241, fall; 242, spring. 4 credits each term. **JAPAN 241 provides language proficiency.** Prerequisites: for JAPAN 241, JAPAN 142 or placement by instructor during registration period; for JAPAN 242, JAPAN 241 or placement by instructor. Y. Kawasaki and K. Selden.

Training in listening, speaking, reading, and writing for those students who have acquired a basic beginning-level command.

**JAPAN 300 Directed Studies**

Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. Staff.

Taught on a specialized basis to address particular student needs. Times arranged with instructor.

**JAPAN 301-302 Communicative Competence @**

301, fall; 302, spring. 3 credits each term. Prerequisites: for JAPAN 301, JAPAN 202 and placement by the instructor during registration; for JAPAN 302, JAPAN 301 or placement by the instructor during registration. Y. Kawasaki and staff.

This is a course for students who have learned basic Japanese grammar and oral skill and would like to use the language for natural conversation and effective oral communication. The course is intended to: (1) expand vocabulary for daily life use; (2) brush up on knowledge of basic grammar for fluency; and (3) develop communicative skills for varied situations.

**JAPAN 303-304 Intermediate Japanese**

Reading II @ 303, fall; 304, spring. 4 credits each term. Prerequisites: for JAPAN 303, JAPAN 202 or placement by the instructor during registration; for JAPAN 304, JAPAN 303 or placement by the instructor during registration. Staff.

Reading of selected modern texts with emphasis on expository style.

**JAPAN 401-402 Oral Narration and Public Speaking**

401, fall; 402, spring. 2 credits each term. Prerequisites: for JAPAN 401, JAPAN 302 or placement by the instructor during registration; for JAPAN 402, JAPAN 401 or placement by the instructor during registration. Y. Katagiri.

Instruction in making and delivering socially appropriate and effective speeches, with emphasis on both the construction of discourse and Japanese patterns of oral delivery. Students learn spoken Japanese in formal occasions through discussions, speeches, and debates as well as increase vocabulary and reinforce listening comprehension ability.

**JAPAN 403-404 Advanced Japanese**

Reading @ 403, fall; 404, spring. 4 credits each term. Prerequisite: JAPAN 304 or permission of instructor.

**Section I: Area of Humanities. Cannot be used for distribution. Reading of selected modern texts. K. Selden.**

**Section II: Area of Economics and Social Science. Cannot be used for distribution. Y. Kawasaki. Reading of selected modern texts with emphasis on expository style.**

**JAPAN 410 History of the Japanese Language (also LING 411) @ #**

Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2002-2003. J. Whitman.

An overview of the history of the Japanese language followed by intensive examination of issues of interest to the participants. Students should have a reading knowledge of Japanese.

**JAPAN 421-422 Directed Readings**

421, fall; 422, spring. 1-4 credits. Limited to advanced students. Prerequisite: placement by the instructor during registration. K. Selden.

Topics are selected on the basis of student needs.

**Japanese FALCON (Full-year Asian Language Concentration)**

Director: R. Sukle, 123 Rockefeller Hall; FALCON Secretary 125 Rockefeller Hall, 255-6457, e-mail: falcon@cornell.edu

There are three small interactive classes per day conducted entirely in Japanese and one lecture conducted in English and Japanese. The interactive classes are conducted by experienced and highly trained teachers; the lecture is conducted by an expert in Japanese language structure. Two one-hour sessions in the language lab are required daily. Additional preparation time in the language lab is necessary in the evenings. Exposure to the language exceeds that of even students living and studying in Japan, providing over 1,800 hours of exposure throughout the full-year program. The extensive exposure and intensive work on the language allows students to develop a level of fluency, accuracy, and control of the language not achieved in any other type of academic setting. The course is designed to develop "comparability" in the students by bringing them up to the level where they will be able to successfully make further progress in the language on their own even if they do not have further formal instruction. The intensive nature of the program allows graduate students to complete their language work in minimal time and undergraduates, including freshmen, to achieve levels of Japanese that are far beyond what is normally achieved in a four-year program, provided they continue their study of Japanese after FALCON.

**JAPAN 160 Introductory Intensive Japanese (FALCON)**

Summer only. 6 credits. Satisfies language qualification. R. Sukle and staff.

This is the first term of the FALCON Program. It is a full-time, intensive, nine-week course which begins at the absolute beginning level, in speaking as well as rudimentary reading.
Literature in Japanese

JPLIT 406 Introduction to Classical Japanese @
Fall. 4 credits. Prerequisite: permission of instructor. R. Selden.
This course is an introduction to the fundamental grammar and vocabulary of classical Japanese.

JPLIT 408 Readings in Classical Japanese @
Spring. 4 credits. Prerequisite: JPLIT 406 or permission of instructor. K. Selden.
This course is intended for students who have completed the JAPAN 403/404 sequence or the equivalent. Readings of excerpts and completed the JAPAN 403/404 sequence or the equivalent. Staff.

JPLIT 421-422 Directed Readings
421, fall; 422, spring. 2-4 credits. Prerequisite: for JPLIT 421, JAPAN 402 or equivalent; for JPLIT 422, JAPAN 421 or equivalent. Staff.
Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings.

JPLIT 613 Seminar in Tokugawa Culture and Thought
Spring. 2-4 credits. Prerequisite: permission of instructor. N. Sakai.
This seminar examines a variety of topics discussed in these are many: from the conceptualization of the virtue in the Confucian tradition, to the composition of Waka poetry. The texts are not selected from one school or from one teaching but encompass a wide range of intellectual trends including Neo-Confucianism, the Kogaku and the Kokugaku. In addition to the original texts of the Tokugawa period, we are going to read a few works of modern historiography on Tokugawa thought and culture. These works do not necessarily represent the standard of the present-day Tokugawa studies, but they clearly show different approaches. In this seminar, we evaluate critically these works through a careful reading of the original texts of the Tokugawa period.

JPLIT 614 Seminar in Modern Japanese Literature: Postmodern Thought for Area Studies (also COM L 695)
Spring. 4 credits. Prerequisite: permission of instructor. Not offered 2002-2003. B. de Bary.
How might postmodern debates on language and difference transform our understanding of the project of cross-cultural learning institutionalized in postwar American area studies? Intended as an introductory course for graduate students, this class emphasizes weekly close readings of important primary texts which have grappled with, or attempted to challenge, epistemological assumptions, categories, and critical frameworks which have informed modern disciplinary knowledge of cultural others. Readings will include texts by Rey Chow, James Clifford, Jacques Derrida, Gayatri Spivak, and others.

JPLIT 617 Modern Japanese Philosophy
Fall. 4 credits. N. Sakai.
Seminar on modern Japanese philosophy. Students are expected to read texts in Japanese and discuss epistemic, historical, and practical issues involved in them. Supplementary reading of European and U.S. philosophical texts is also required.

JPLIT 624 Advanced Readings in Modern Japanese Literature
Spring. 4 credits. Prerequisite: permission of instructor. Offered alternate years. B. de Bary.
Students will read modern Japanese literary texts in the original. This year's thematic focus will be on modernizing urban life and the relationship between literature and new media.

JPLIT 625 Directed Readings
Fall or spring. 4 credits. Staff.
Students choose a faculty member to oversee this independent study. The student and the faculty member work together to develop class readings.

JPLIT 700-701 Seminar: Reading of Historical Materials—Japanese Imperial Nationalism and Its Literature
700, fall; 701, spring. 4 credits. Not offered 2002-2003. N. Sakai.
Research readings for graduate level students.

Javanese

JAVA 131-132 Elementary Javanese
131, fall; 132, spring. 3 credits each term. Prerequisite: for JAVA 132, JAVA 131 or equivalent. This language series (131-132) cannot be used to satisfy the language requirement. Not offered 2002-2003. J. Wolf and staff.
An elementary language course for those who have had no previous experience in the language.

JAVA 133-134 Continuing Javanese
133, fall; 134, spring. 3 credits each term. JAVA 134 provides language qualification. Prerequisite: for JAVA 133, JAVA 132 or equivalent; for JAVA 134, JAVA 133 or equivalent. Satisfactory completion of JAVA 134 fulfills the qualification portion of the language requirement. Not offered 2002-2003. J. Wolf and staff.
This is a practical language course on an intermediate level in which the students work through readings and conversations under the guidance of a native speaker for three contact hours a week.

JAVA 300 Directed Studies
Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. Not offered 2002-2003. J. Wolf.
Taught on a specialized basis to address particular student needs. Times arranged with instructor.

Khmer (Cambodian)

KHMER 121-122-123 Elementary Khmer
121, fall; 122, spring; 123 fall. 4 credits each term. Completion of KHMER 123 provides language qualification. Prerequisite: for KHMER 122, KHMER 121; for KHMER 123, KHMER 122. Staff.
A course for beginners or those who have been placed in the course by examination. The course gives a thorough grounding in speaking and reading.

KHMER 201-202 Intermediate Khmer Reading @
201, fall; 202, spring. 3 credits each term. KHMER 201 provides language proficiency. Prerequisites: for KHMER 201, KHMER 102; for KHMER 202, KHMER 201. Staff.
Continuing instruction in spoken and written Khmer.

KHMER 203-204 Intermediate Composition and Conversation @
203, fall; 204, spring. 3 credits each term. KHMER 203 provides language proficiency. Prerequisites: for KHMER 203, KHMER 102; for KHMER 204, KHMER 203. Not offered 2002-2003. Staff.
Letter writing and other forms of composition.
KOREA 101-102 Elementary Korean
101, fall, 102, spring. 6 credits each term. KOREA 102 provides language qualification. Prerequisite: ASIAN 218 or its equivalent. S. Oja.
A survey of 20th-century Korean literature. The first part of the course focuses on the emergence of modern Korean literature in the early 20th century and colonial period of literature. The second part covers the major South Korean writers such as Hwang Sunwon, Yi Munyol, Pak Wanso, and Yi Ch’ongun.

KOREA 201-202 Intermediate Korean @
201, fall 202, spring. 4 credits each term. KOREA 201 provides language proficiency. Prerequisite: for KOREA 201, KOREA 102 or permission of instructor; for KOREA 202, KOREA 201. S. Oja.
Intermediate instruction in spoken grammar and writing practice use both colloquial and scholarly materials in the Nepali (Devanagari) script.

NEPAL 203-204 Intermediate Nepali Composition @
203, fall; 204, spring. 3 credits each term. NEPAL 203 provides language proficiency. Prerequisites: for NEPAL 203, NEPAL 102 or examination; for NEPAL 204, NEPAL 203 or examination. S. Oja.
A systematic review of written grammar and reading comprehension skills, with special attention to the technical vocabularies and other verbal skills appropriate to students’ professional fields.

KOREA 300 Directed Studies Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. H. Diffloth.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

KOREA 301-302 Advanced Korean 301, fall; 302, spring. 4 credits each term. Prerequisites: for KOREA 301, KOREA 202 or equivalent; for KOREA 302, KOREA 301. S. Oja.
Continuing instruction in spoken and written Korean; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

KOREA 401-402 Directed Individual Study 401, fall; 402, spring. For advanced students. 2-4 credits each term. Prerequisite: permission of instructor. Not offered 2002–2003. Staff.
Various topics according to need.

KOREA 110 provides language qualification. Prerequisite: permission of instructor. S. Oja.
Newspapers and Chinese character material, together with advanced use of the spoken language.

KOREA 430 Structure of Korean (also LING 430) Spring. 4 credits. Offered alternate years. J. Whitman.
See description under LING 430.

Literature in Korean
KRLIT 305 Modern Korean Literature in Translation @ [IV] Spring. 4 credits. Prerequisite: ASIAN 218 or its equivalent. M. Shin.
A survey of 20th century Korean literature. The first part of the course focuses on the emergence of modern Korean literature in the early 20th century and colonial period of literature. The second part covers the major South Korean writers such as Hwang Sunwon, Yi Munyol, Pak Wanso, and Yi Ch’ongun.

KRLIT 405 Readings in Korean Literature Fall. 4 credits. Prerequisite: three years of Korean language study or permission of instructor. M. Shin.
Reading of a variety of prose works in modern Korean. Assignments are chosen from newspapers, magazines, short stories, novels, and academic texts.

NEPAL 160 Intensive Nepali Summer only. 6 credits. Intended for beginners. Offered alternate years. S. Oja.
Emphasis is on the spoken language, in dialogues, exercises, and conversation practice. In addition, however, special attention is given to assisting students to develop vocabularies and abilities appropriate to their unique professional needs. Reading and writing practice use both colloquial and scholarly materials in the Nepali (Devanagari) script.

NEPAL 201-202 Intermediate Nepali Conversation @
201, fall; 202, spring. 3 credits each term. NEPAL 201 provides language proficiency. Prerequisites: for NEPAL 201, NEPAL 102 or examination; for NEPAL 202, NEPAL 201 or examination. S. Oja.
Intermediate instruction in spoken and written comprehension skills, with special attention to developing technical vocabularies and other verbal skills appropriate to students’ professional fields.

NEPAL 203-204 Intermediate Nepali Composition @
203, fall; 204, spring. 3 credits each term. NEPAL 203 provides language proficiency. Prerequisites: for NEPAL 203, NEPAL 102 or examination; for NEPAL 204, NEPAL 203 or examination. S. Oja.
A systematic review of written grammar and reading comprehension skills, with special attention to the technical vocabularies, necessary writing skills, and published materials typical of advanced students’ professional fields.

NEPAL 300 Directed Studies Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. S. Oja.
Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

NEPAL 401-402 Advanced Nepali 401, fall; 402, spring. 3 credits each term. Prerequisite: NEPAL 204 or permission of instructor. S. Oja.
Reading of advanced texts, together with advanced drill on the spoken language.
ARTS AND SCIENCES - 2002-2003

Sanskrit

[SANSK 131-132 Elementary Sanskrit (also CLASS 131-132 and LING 131-132)
131, fall; 132, spring. 4 credits each term. SANSK 132 provides language qualification. Offered alternate years. Not offered 2002-2003. C. Minkowski.]

SANSK 251-252 Intermediate Sanskrit (also CLASS 251-252 and LING 251-252)
251, fall; 252, spring. 3 credits each term. SANSK 251 provides language proficiency. Prerequisite: SANSK 132 or equivalent. Offered alternate years. C. Minkowski. Readings from the literature of classical Sanskrit. Fall: selections from the two Sanskrit epics, the Mahabharata and the Ramayana. Spring: more selections from the epics and selections from either Sanskrit story literature or from Sanskrit dramas.

Southeast Asian Languages

[LING 655-656 Seminar in Southeast Asian Linguistics
655, fall; 656, spring. 4 credits each term. Prerequisite: permission of instructor. Language 655 is a prerequisite for Language 656. Not offered 2002-2003. J. Wolff. Languages of mainland Southeast Asia. Topics, chosen according to student interests, may include description, dialectology, typology, comparative reconstruction, and historical studies.]

[LING 655-656 Seminar in Austronesian Linguistics (also LING 655-656)
655, fall; 656, spring. 4 credits each term. Prerequisites: for 655, permission of instructor, for 656, Language 655. Not offered 2002-2003. J. Wolff. Descriptive and comparative studies of Malayo-Polynesian languages.]

Tagalog

TAG 121-122 Elementary Tagalog
121, fall; 122, spring. 4 credits each term. Prerequisite: for TAG 122, TAG 121. T. Savella.

A thorough grounding is given in basic language skills: listening, speaking, reading, and writing.

TAG 123 Continuing Tagalog
Fall. 4 credits. Provides language qualification. Prerequisite: TAG 122 or equivalent. Satisfactory completion of TAG 123 fulfills the qualification portion of the language requirement. T. Savella.

Improves speaking skills, such as fluency and pronunciation, focusing on verbal communication skills; offers a wide range of readings, and sharpens listening skills.

TAG 205-206 Intermediate Tagalog @ 205, fall; 206, spring. 3 credits each term. TAG 205 provides language proficiency. Prerequisites: for TAG 205, TAG 123 or equivalent; for TAG 206, TAG 205 or equivalent. T. Savella.

This course develops all four skills: reading, writing, speaking, and comprehension.

Thai

THAI 101-102 Elementary Thai
101, fall; 102, spring. 6 credits each term. THAI 102 provides language qualification. Prerequisite: for THAI 102, THAI 101 or equivalent. Offered 2002-2003. N. Jagacinski.

Continuing instruction in spoken and written Thai.

THAI 201-202 Intermediate Thai @
201, fall; 202, spring. 3 credits each term. THAI 201 provides language proficiency. Prerequisites: for THAI 201, THAI 102; for THAI 202, THAI 201 or equivalent. N. Jagacinski.

THAI 203-204 Intermediate Composition and Conversation @
203, fall; 204, spring. 3 credits each term. THAI 203 provides language proficiency. Prerequisites: for THAI 203, THAI 102 or permission of instructor; for THAI 204, THAI 203 or equivalent. Not offered 2002-2003. Staff.

THAI 301-302 Advanced Thai
301, fall; 302, spring. 4 credits each term. Prerequisite: THAI 201 or equivalent. N. Jagacinski.

Selected readings in Thai writings in various fields.

THAI 300 Directed Studies
Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. N. Jagacinski.

Tagalog

TAG 121-122 Elementary Tagalog
121, fall; 122, spring. 4 credits each term. Prerequisite: for TAG 122, TAG 121. T. Savella.

A thorough grounding is given in basic language skills: listening, speaking, reading, and writing.

TAG 123 Continuing Tagalog
Fall. 4 credits. Provides language qualification. Prerequisite: TAG 122 or equivalent. Satisfactory completion of TAG 123 fulfills the qualification portion of the language requirement. T. Savella.

Improves speaking skills, such as fluency and pronunciation, focusing on verbal communication skills; offers a wide range of readings, and sharpens listening skills.

TAG 205-206 Intermediate Tagalog @ 205, fall; 206, spring. 3 credits each term. TAG 205 provides language proficiency. Prerequisites: for TAG 205, TAG 123 or equivalent; for TAG 206, TAG 205 or equivalent. T. Savella.

This course develops all four skills: reading, writing, speaking, and comprehension.

THAI 300 Directed Studies
Fall or spring. 1-4 credits variable. Prerequisite: permission of instructor. T. Savella.

Taught on a specialized basis to address particular student needs. Times arranged with instructor.

Urdu

See listings under HINDI/ASLAN 125.

Vietnamese

VIET 101-102 Elementary Vietnamese
101, fall; 102, spring. 6 credits each term. VIET 102 provides language qualification. Prerequisite: for VIET 102, VIET 101 or equivalent. Offered for beginners or

Reading of authentic texts of Theravada Buddhism. Emphasis on both content and grammatical structure. Familiarity with Sanskrit is not required. 132 is a continuation of 131 with further readings.

PALI 300 Directed Studies
Fall or spring. 1-4 credits variable. Prerequisite: PALI 132 or two years of Sanskrit. D. Boucher.

Taught on a specialized basis to address particular student needs. Times arranged with instructor.

VIET 101-102 Elementary Vietnamese
101, fall; 102, spring. 6 credits each term. VIET 102 provides language qualification. Prerequisite: for VIET 102, VIET 101 or equivalent. Intended for beginners or students placed by examination. N. Jagacinski.

A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

VIET 201-202 Intermediate Vietnamese
201, fall; 202, spring. 3 credits each term. VIET 201 provides language proficiency. Prerequisites: for VIET 201, VIET 102, VIET 202, VIET 201 or equivalent. T. Savella.

Taught on a specialized basis to address particular student needs. Times arranged with instructor.

Urd
students placed by examination. Satisfactory completion of VIET 102 fulfills the qualification portion of the language requirement. T. Tranviet.

A thorough grounding is given in all language skills: listening, speaking, reading, and writing.

**VIET 201–202 Intermediate Vietnamese**
- Fall: 201, 202. Spring: 3 credits each term. *VIET 201 provides language proficiency.*
- Prerequisites: for VIET 201, VIET 102 or equivalent; for VIET 202, VIET 201. T. Tranviet.

Continuing instruction in spoken and written Vietnamese:

**VIET 203–204 Intermediate Vietnamese Composition and Reading**
- Fall: 203, 204, spring. 3 credits each term. *VIET 203 provides language proficiency.*
- Prerequisite: permission of instructor only. T. Tranviet.

Designed for students and "native" speakers of Vietnamese whose speaking and listening are at the advanced level, but who still need to improve writing and reading skills.

**VIET 300 Directed Studies**
- Fall or spring. 1–4 credits variable. Prequisite: permission of instructor. T. Tranviet.

Taught on a specialized basis to address particular student needs. Times arranged with instructor.

**VIET 301–302 Advanced Vietnamese**
- 301, fall or spring; 302, fall or spring. 3 credits each term. Prerequisites: for VIET 301, VIET 202 or permission of instructor; for VIET 302, VIET 301. T. Tranviet.

Continuing instruction in spoken and written Vietnamese; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

**VIET 401–402 Directed Individual Study**
- 401, fall; 402, spring. 2–4 credits variable each term. Prerequisite: permission of instructor. Intended for advanced students. T. Tranviet.

Various topics according to need.

---

**Vietnamese Literature**

[Introduction to Classical Vietnamese](https://example.com/VTLLIT222) 222, fall; 223, spring. 3 credits. *VTLLIT 222 provides language proficiency.* Prequisite: qualification in Vietnamese or permission of instructor. Not offered 2002-2003. K. Taylor.

This is a two-semester sequence of courses introducing students to Han (Classical Chinese as used in the Vietnamese language) and Nom (vernacular Vietnamese character writing). Students learn to read Han and Nom texts, mostly from the seventeenth through nineteenth centuries, including historical records, prose writings, and poetry.

This course continues study for students who have completed VTLLIT 222–223 "Introduction to Classical Vietnamese."

---

**Related Courses in Other Departments and Colleges**

Check the primary department section for the offering status of the following courses. Courses in other colleges will count as College of Arts and Sciences credit only for Asian Studies majors.

**Asia/General Courses**

- ANTHRO 374 Human Paleontology
- AEM 464 Economics of Agricultural Development (also ECON 464)
- AEM 667 Topics in Economic Development (also ECON 770)
- COMM 424/624 Communication in the Developing Nations
- ECON 473 Economics of Export-Led Development
- GOVT 349 Political Role of the Military
- GOVT 648 Graduate Seminar in Political Economy of Change: Rural Development in the Third World
- GOVT 674 Theory and Practice of Nationalism
- HIST 190 Introduction to Asian Civilization
- HIST 495 Kings and States: Asian Models
- ART H 280 Introduction to Art History: Approaches to Asian Art
- ILRIC 637 Labor Relations in Asia
- R SOC 205 Rural Sociology and International Development

**China—Area Courses**

- ANTHR 655 East Asia: Readings in Specific Problems
- ECON 469 Economy of China
- ECON 772 Economics of Development

MUSIC 604 Ethnomusicology

ASIAN AMERICAN STUDIES PROGRAM

The Asian American Studies Program is a university-wide academic program housed administratively within the College of Arts and Sciences. Its aim is to promote teaching, research, and educational activities related to Asian Americans and to serve as a resource to the campus and regional communities. The program's undergraduate courses, offered within the program and cross-listed with departments in various colleges, meet distribution requirements and count toward a concentration in Asian American Studies. The program does not offer a graduate course of study, but students can undertake graduate work in Asian American Studies within selected disciplines of the university.

Undergraduate Concentration

The program's undergraduate concentration affords students an opportunity to develop a multidisciplinary approach to the study of Asians in the hemispheric Americas. The course of study stresses developments within the United States, but also underscores the transnational and comparative contexts of Asian America and the field's connections with African American, American Indian, Latino, and Women's Studies. Students must work with a faculty adviser from among the program's affiliated faculty and must complete at least 15 units of credits as follows: (a) AAS 110 and two additional courses in Asian American Studies; (b) one course in Africana, American Indian, Latino Studies, or Women's Studies*, and (c) one course in East Asian, South Asian, or Southeast Asian Studies.

*These courses must be approved by the student's faculty adviser, and they should address issues of race, gender, or the histories and cultures of Asian peoples.) Students must file an application for the concentration with the Asian American Studies Program.

Resource Center

The program's Asian American Studies Resource Center provides meeting space for the more than 40 undergraduate student organizations of the Cornell Asian Pacific Student Union and the graduate student Asian Pacific American Graduate Association. It also holds a modest print collection of books, periodicals, and newspapers; a current news clip file; a comprehensive data base of publications on Asian Americans since 1977; and a sizable collection of videotapes as well as music CDs on the Asian American experience.

Research

The program encourages faculty and student research on Asian Americans by sponsoring guest lectures, conferences, film festivals, readings, and exhibits. It also funds research projects and student travel to conferences and research sites. The Asian American Studies Workshop is the program's principal research initiative, engaging Cornell's faculty and students with invited faculty from other universities in a year-long intensive study of selected themes.

Core Faculty

D. Chang, V. Munasinghe, S. Wong

Advisory Board

T. Chaloemtiarana (Southeast Asia Program), B. de Bary (Asian studies), S. Han (sociology), V. P. Kayastha (Kroch Library), J. V. Koschmann (history), V. Munasinghe (anthropology), V. Nee (sociology), N. Sakai (Asian studies), S. Samuels (English), A. M. Smith (government), K. W. Taylor (Asian studies), Wai-Kwong Wong (Gannett Health Center), S. Wong, director (English), D. Yeh (vice president student/academic services)

Courses

AAS 110 Introduction to Asian American Studies (III or IV)
Spring. 3 credits. This course can be used to satisfy either a social science or humanities distribution requirement. D. Chang.

An interdisciplinary, cross-cultural introduction to Asian American Studies focusing on contemporary issues. Major themes include: identity and stereotypes, gender, family, community, education, migration and labor, and anti-Asianism. Coverage is given to both Hawaii and the U.S. mainland, and to Chinese, Filipinos, Hawaiians, Japanese, Koreans, South Asians and Southeast Asians.

AAS 213 Asian American History (III)
Fall. 4 credits.
For description, see HIST 263.

AAS 262 Asian American Literature (IV)
Spring. 4 credits. S. Wong.
For description, see ENGL 262.

AAS 303 Asians in the Americas: A Comparative Perspective (also ANTHR 303) (III)
Spring. 4 credits. V. Munasinghe.

The common perception of ethnicity is that this is a "natural" and an inevitable consequence of cultural difference. "Asians" overseas, in particular, have won respect as people who cling tenaciously to their culture and refuse to assimilate into their host societies and cultures. But, who are the "Asians"? On what basis can we label Asians an ethnic group? Although there is a significant Asian presence in the Caribbean, the category "Asian" itself does not exist in the Caribbean. What does the label "Asian" mean in the context of the Caribbean?

AAS 412 Undergraduate Seminar in Asian American History (also HIST 412) (III)
Spring. 4 credits. Not offered 2002-2003. For description, see HIST 412. A reading and research seminar that covers various topics in Asian American history.

AAS 438 Immigration and Ethnic Identity (III)
Spring. 4 credits. Not offered 2002-2003. For description, see SOC 438.

AAS 478 Self and Nation in Asian-American Literature (also ENGL 478) (IV)
4 credits. Not offered 2002-2003. A study of the ways in which Asian American writers have constructed discourses of self and nation. Topics include nationalism, feminism, identity politics, and theories of minority discourse. In our reading of selected works of prose, poetry, and drama by Chinese American, Filipino American, Japanese American, and Korean American writers, we ask questions about the relation of these works to the moment of their production and reception, and the manner in which these textual representations engage with shifting cultural and political struggles. Writers under discussion may include: Carlos Bulosan, Theresa Hak Kyung Cha, Frank Chin, Jessica Hagedorn, and David Henry Hwang, Maxine Hong Kingston, Joy Kogawa, and David Mura.

AAS 453 Twentieth-Century Women Writers of Color
Fall. 4 credits.
This course explores a range of writing—novels, stories, poems, essays—by American women writers of color in the twentieth century. We look at how these writings articulate concerns with language, home, mobility, and memory, and at how the work is informed by the specificities of gender, race, region, and class. Readings may include works by Joy Harjo, Leslie Marmon Silko, Sandra Cisneros, Theresa Hak Kyung Cha, Sigrid Nunez, Jamaica Kincaid, Maxine Hong Kingston, and Gwendolyn Brooks, Ann Petry, Carolivia Herron, Shani Mooteo, Helena Maria Viamonte.

AAS 495 Independent Study
Fall or spring. 1-4 credits.
Topic and credit hours to be mutually arranged between faculty and student. Independent Study Forms must be approved by Asian American Studies Program Office.

ASTRONOMY

542 ARTS AND SCIENCES - 2002-2003
current research in astronomy and astrophysics for prospective majors, but is not required of students who elect to major in astronomy after the sophomore year. Students are also urged to acquire computer literacy. ASTRO 234 is designed to give students hands-on experience with the methods of analysis, visualization, and simulation needed in astrophysical research. Acceptance to the major is first considered after completion of three semesters of introductory physics and mathematics and in general requires a GPA of 3.2 in physics and mathematics courses.

The major requirements stress the importance of building a strong preparation in physical science. The following upper level courses are normally required:

- PHYS 314 or 318, 316, 323 or 327, 341 and 443
- A&EP 321–322 (or equivalent, e.g. MATH 420 and 422)
- ASTRO 410, 431, and 432.

Upon consent of the major advisor, students interested in planetary studies may substitute appropriate advanced courses or may pursue an independent major under the program in the Science of Earth Systems. Majors are encouraged to choose courses that will provide an understanding of the Sun and its family of planets, moons, asteroids, and comets. The course emphasizes images and other data obtained from current and past NASA space missions and how these data provide insights about the important processes that shaped the evolution of solar system objects. General astronomical concepts relevant to the study of the solar system are also discussed. Critical focus is on developing an understanding of the Earth as a planetary body and discovering how studies of other planets and satellites influence models of the climatic, geologic, and biologic history of our home world. Other topics covered include impact hazards, the search for life in the solar system, and future missions.

ASTRO 103 The Nature of the Universe (I)
Fall. 4 credits. Labs limited to 18 students each; discussions limited to 30 students each. J. Bell/S. Squyres; labs: G. Stacey.

This course introduces students to the cosmos. The birth, evolution, and death of stars, the formation of the chemical elements, and the nature of white dwarfs, neutron stars, and black holes are discussed. An introduction to the theories of space, the origin, structure, and fate of the universe is given. The course covers the search for other worlds outside the solar system and the possible existence of life and intelligence elsewhere in the universe. Modern theories of cosmology are presented, and the topics of special relativity and general relativity are included as prerequisites. In the spring, these concepts are expanded to include the theories of special relativity and general relativity. Correlations of observations and mathematical predictions of the Sun and its family of planets, moons, asteroids, and comets are emphasized. The course emphasizes images and other data obtained from current and past NASA space missions and how these data provide insights about the important processes that shaped the evolution of solar system objects. General astronomical concepts relevant to the study of the solar system are also discussed. Critical focus is on developing an understanding of the Earth as a planetary body and discovering how studies of other planets and satellites influence models of the climatic, geologic, and biologic history of our home world. Other topics covered include impact hazards, the search for life in the solar system, and future missions.

ASTRO 105 An Introduction to the Universe (I)
Summer. 3 credits. J. Harrington.

How do we measure the size of our galaxy and the size of the universe? Is the universe round or flat? How are the stars born, why do they shine, and how do they die? What are the chemical elements, and how were they formed in stars? What are quasars, pulsars, and black holes? How was the solar system formed? Is it unique? Where are the other planets like Earth? Will we be able to explore the solar system? Do we exist? Is there life elsewhere in the universe? How can we find it out? Each student has an opportunity to make observations with small telescopes.

ASTRO 106 Essential Ideas in Relativity and Cosmology (I)
Summer. 3 credits. Prerequisites: high school algebra and trigonometry. R. A. Saenz.

An explanation of Einstein's theories of special and general relativity, which brought about a fundamental change in our conceptual understanding of space and time. Correspondence to, and conflicts with, common sense. Applications to various areas in special
relativity space travel, the equivalence of mass and energy, nuclear fission and fusion, and thermonuclear processes in the sun and in general relativity (motion of light and particles in curved space-time, cosmological models, and the question of whether the universe is open or closed).

ASTRO 107 An Introduction to the Universe (I)
Summer. 4 credits. J. Harrington. Identical to ASTRO 105 except for the addition of the afternoon laboratory that emphasizes mathematical problem-solving. This option is recommended for potential majors in science and engineering.

ASTRO 195 Observational Astronomy (I)
Fall. 3 credits. Limited to 24 students. G. Stacey. This course provides a "hands-on" introduction to observational astronomy intended for liberal arts students at the freshman and sophomore level. High school mathematics is assumed, but otherwise there are no formal prerequisites. The course objective is to teach how we know what we know about the universe. The course is set up with two lectures and one evening laboratory per week. Not all of the evening sessions will be used. Planned exercises include five or six observational labs. Observing with binoculars and small telescopes, telescopic observations and CCD imaging of star clusters, nebulae, and the planets, solar observations, radio observations of the Milky Way Galaxy, plus a selection of exercises from the following: experiments on navigating by the stars, construction and use of simple instruments such as optical spectroscopes and sun dials; laboratory spectroscopy; experiments in planetary cratering, collection and study of micrometeorites; computer simulations of the orbits of planets and their satellites; and cosmological explorations using data from the Hubble Space Telescope available on the web.

ASTRO 201 Our Home in the Universe (I)
Fall. 3 credits. Assumes no scientific background. Course intended for freshmen and sophomores. R. Giovanelli, M. Haynes. A general discussion of our relation to the physical universe and how our view of the universe has changed from ancient to modern times. Several main themes are covered over the course of the semester: the evolution of our view of the sky from that of ancient cultures to that of space telescopes; the death of stars and the formation of black holes; dark matter and the structure of galaxies; and the origin, evolution, and fate of the universe. We present a nonmathematical introduction to these subjects and discuss uncertainties and unresolved issues in our understanding.

ASTRO 202 Our Home in the Solar System (I)
Spring. 3 credits. Prerequisite: some background in science is required. Course intended for freshmen and sophomores. J. Veverka. This writing course is designed to develop an understanding of our home planet as a member of a diverse family of objects in our solar system. Discussion centers on how studies of other planets and satellites have broadened our understanding of Earth, and vice versa. We study, debate, and learn to write critically about important issues in science and public policy that benefit from this perspective. Topics discussed include global warming, the impact threat, the searches for extrasolar planets and extraterrestrial intelligence and the exploration of Mars.

ASTRO 211 Astronomy: Stars, Galaxies, and Cosmology (I)
Fall. 4 credits. Intended for engineering and physical science students. Prerequisite: introductory calculus or coregistration in MATH 111 or 191 or consent of instructor. J. Houck. The topics to be discussed include the following: the evolution of normal and extreme stars, the structure and evolution of galaxies, and cosmology.

ASTRO 212 The Solar System: Planets, Satellites, and Rings (I)
Spring. 4 credits. Intended for first and second year engineering and physical sciences students. Prerequisite: introductory calculus or coregistration in MATH 111 or 191; some knowledge of classical physics (mechanics and thermodynamics). D. Campbell. An introduction to the solar system, with emphasis on the application of simple physical principles. Topics include: the Sun, nucleosynthesis of the elements, radioactive dating, seismology and planetary interiors, planetary surfaces and atmospheres including greenhouse models, orbital mechanics and resonances, interplanetary migration of comets and asteroids and comets, the jovian planets, icy moons and ring systems, and the search for extra-solar planets.

ASTRO 233 Topics in Astronomy and Astrophysics
Fall. 2 credits. Prerequisites: co-registration in PHYS 213 and MATH 112, 122 or 192 OR permission of instructor. Enrollment is limited to 15 students. Intended for sophomores planning to major in astronomy or related fields. M. Haynes, D. Campbell. Topics may change yearly. The fall 2002 course will be offered as a Knight sophomore seminar and will explore the theme: "From Planets to Galaxies: The Origin of Cosmic Structures". Emphasis is placed on understanding both the context and the methodology of such issues as the search for extrasolar planets, interstellar chemistry and the influence of environment on galaxy evolution. While not restricted to sophomores, this course is intended to offer students, especially sophomores, an opportunity to work closely with faculty in a seminar environment within a strong interdisciplinary context.

ASTRO 234 Modern Astrophysical Techniques
Spring. 2 credits. Prerequisites: 2 semesters of introductory physics and 2 semesters of calculus plus ASTRO 233 or permission of instructor. Some experience with computer programming expected. Intended for sophomores majoring or concentrating in astronomy or related fields. S. Eikenberry. The course covers the basic techniques employed in astrophysical research, both observational and theoretical, to probe the universe. Basic methods and strategies of data acquisition and image and signal processing are discussed. Students gain hands-on experience with visualization techniques and methods of data fitting and numerical simulation. Exercises address the processes by which astrophysicists piece together observations made with today's foremost astronomical instruments to solve questions concerning the origin of planets, stars, galaxies, and the universe itself.

ASTRO 280 Space Exploration (I)
Fall. 3 credits. S. Squyres. This course provides an overview of space science, with particular emphasis on the solar system, and a description of a few selected objects, including the planet Mars, the satellites in the outer solar system, and comets. The focus is on methods of collecting information and especially on spacecraft and space missions. Topics include the design and limitations of instruments. Ethical and political questions associated with space exploration are discussed. Intended for students with an interest in science, technology, and associated policy issues. No special background in physics, mathematics, or engineering is assumed.

[ASTRO 290 Relativity and Astrophysics (I)]
Spring. 4 credits. Prerequisites: knowledge of freshman physics, calculus, and geometry. Not offered 2002-2003.

ASTRO 299 Search for Life in the Universe (I)
Spring. 4 credits. Prerequisites: 2 courses in any physical science subject or permission of instructors. J. Cordes, Y. Terzian. The contents of the universe is surveyed. Theories of cosmic and stellar evolution, and of the formation and evolution of planetary systems, planetary atmospheres, and surfaces are reviewed. Questions regarding the evolution of life and the development of technology are discussed. Methods to detect extraterrestrial life on Earth are discussed. Methods to detect extraterrestrial life with emphasis on radio telescopes and associated instrumentation are presented. Hypotheses of extraterrestrial life are debatable. The evolution of life on Earth is debated.

ASTRO 310 Planetary Imaging Processing (I)
Fall. 3 credits. Prerequisites: two semesters of introductory physics and some experience with computer programming expected. Intended for sophomores or juniors majoring or concentrating in astronomy or related fields. J. Bell. This course reviews the basic techniques employed in the collection and processing of spacecraft images of our solar system, rings, asteroids, and comets, from both the observational and theoretical perspectives. Students gain hands-on experience with digital image manipulation, including visualization, calibration, statistics, and error analysis. Specific examples involve the processing and analysis of imaging data from missions like Voyager, Clementine, Galileo, NEAR, Mars Pathfinder, Mars Global Surveyor, and the Hubble Space Telescope. Emphasis is placed on the range of techniques used by planetary scientists to acquire and process spacecraft data that are then used to address questions on the geology, composition, and evolution of solar system bodies.
ASTRO 331 Climate Dynamics (also EAS 331) (I)
Fall. 4 credits. Prerequisite: MATH 112 or 119 or equivalent; instructor's approval. K. Cook, P. Gierasch.
Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

ASTRO 332 Elements of Astrophysics (I)
Spring. 4 credits. Prerequisites: MATH 112, 122, or equivalent; PHYS 213 or 217. K. Cook, P. Gierasch.
An introduction to astronomy, with emphasis on the application of physics to the study of the universe. Covers: physical laws of radiation, distance, mass, and age of stars, galaxies, and the universe; stellar evolution and nucleosynthesis; supernovae, pulsars, and black holes; galaxies and quasars. Introduction to cosmology. Mainly intended for students of science, engineering, and science education interested in astronomy and astrophysics.

ASTRO 342 Atmospheric Dynamics (also EAS 342) (I)
Spring. 3 credits. Prerequisites: one year each of calculus and physics. K. H. Cook, P. J. Gierasch.
An introduction to the basic equations and techniques used to understand motion in the atmosphere, with an emphasis on the space and time scales typical of storm systems (the synoptic scale). The governing equations of atmospheric flow are derived from first principles and applied to middle latitude and tropical meteorology. Topics include balanced flow, atmospheric waves, circulation, and vorticity.

ASTRO 410 Experimental Astronomy (I)
Fall. 4 credits. Prerequisites: PHYS 214/8 (or 310 or 360), PHYS 323/7 (or coregistration) or permission of instructor. J. W. Walker, E. Cackett, J. Cordes.
Observational astrophysics. Major experiments involve techniques in CCD (charge-coupled-device) imaging, optical photometry, optical spectroscopy, radiometry, radio spectroscopy and radiometry, and astrometric experiments. Experiments involve the use of the Hartung-Boothroyd Observatory's 24-inch telescope, a laboratory two-element radio interferometer, and a radio telescope mounted on top of the Space Sciences Building. The laboratory covers the fundamentals of using astronomical instrumentation and data analysis as applied to celestial phenomena: asteroids, normal stars, supernovae remnants, globular clusters, planetary nebulae, the interstellar medium, OH masers, and galaxies.

ASTRO 431 Introduction to Astrophysics and Space Sciences (I)
Fall. 4 credits. Prerequisites: mathematics above the 200 level and physics above the 300 level, PHYS 443 is recommended. J. W. Walker.
A systematic development of modern astrophysical concepts for physical science majors. Stellar structure and evolution, stellar spheres, compact objects (white dwarf, neutron star, and black hole), planets, and brown dwarfs. Current research problems in these areas are introduced along the way. The emphasis is on using fundamental physics principles to explain astronomical phenomena. A variety of physics, including elements of general relativity, nuclear physics, solid state physics and fluid mechanics, are introduced in a quick, practical fashion and put into use in solving astrophysics puzzles.

ASTRO 432 Introduction to Astrophysics and Space Sciences II (I)
Spring. 4 credits. Prerequisite: ASTRO 431 or permission of instructor. D. Chernoff.
This course is divided into two broad topics, the astrophysics of the interstellar medium and cosmology. The interstellar medium section covers thermal equilibrium and radiative transport in HI regions, atomic gas regions, and molecular clouds. The cosmology section includes expansion of the universe, Friedmann equations, dark matter, cosmological tests, the early universe, and the cosmological production of the elements.

[ASTRO 434 The Evolution of Planets (I)]

ASTRO 440 Independent Study in Astronomy
Fall or spring. 2–4 credits. Prerequisite: permission of instructor. Recommended: familiarity with the topics covered in ASTRO 332, 431, or 434. Individuals work on selected topics. A program of study is devised by the student and instructor. Students need to fill out an independent study form, have it signed by the instructor, and register in the department office, 610 Space Sciences Building.

ASTRO 490 Senior Seminar Critical Thinking (I)
Fall. 3 credits. No prerequisites. Y. Terzian.
Critical thinking in scientific and non-scientific contexts. Topics include elements of classical logic, including standards of evidence and paradoxes. Case studies include examples of competing hypotheses in the history of science, as well as examples from borderline sciences. Stress will be put on creative generation of alternative hypotheses and their winnowing by critical scrutiny. Topics include the nature and history of the universe, the nature of time, the possibility of reality, the possibilities of life on other planets, and artificial intelligence. The course includes debates by the students.

ASTRO 509 General Relativity (also PHYS 553)
Fall. 4 credits. Prerequisite: knowledge of special relativity and methods of dynamics at the level of Classical Mechanics by Goldstein. J. York.
A systematic introduction to Einstein's theory using both modern and classical methods of computation. Topics include review of special relativity, differential geometry, foundations of general relativity (GR), laws of physics in the presence of gravitational fields, GR as a dynamical theory, experimental tests of GR. At the level of Gravitation by Misner, Hörner, and Wheeler.

ASTRO 510 Applications to General Relativity (also PHYS 554)
Spring. 4 credits. Prerequisite: ASTRO 509. J. York.
A continuation of ASTRO 509 that emphasizes applications to astrophysics and cosmology. Topics include: general relativity of stars, gravitational collapse and black holes, gravitational waves and cosmology, use of dynamics to formulate astrophysical and cosmological computations.

ASTRO 511 Physics of Black Holes, White Dwarfs, and Neutron Stars (also PHYS 525)
Spring. 4 credits. The minimum prerequisites for this course are all of the physics at the upper division undergraduate level. Compact objects (neutron stars, black holes and white dwarfs) are the endpoints of stellar evolution. They are responsible for some of the most exotic phenomena in the universe including: supernova explosion, radio pulsars, bright X-ray binaries, magnetars, gamma-ray bursts, and so on. Supermassive black holes also lie at the heart of the violent processes in active galactic nuclei and quasars. The study of compact objects allows one to probe physics under extreme conditions (high densities, strong magnetic fields, and gravity). This course surveys the astrophysics of compact stars and related subjects. Emphasis is on the application of diverse theoretical physics tools to various observations of compact stars. There are no astronomy or general relativity prerequisites. At the level of Physics of Black Holes, White Dwarfs, and Neutron Stars by Shapiro and Teukolsky.

[ASTRO 518 Galactic Structure and Stellar Dynamics]
This course is an introduction to the study of the structure of galaxies with the laws of modern physics. Topics include the observed kinematics and spatial distribution of stars in the vicinity of the Sun, shapes and properties of stellar orbits, the gravitational N-body problem, collisional relaxation, stellar structure, stellar evolution, and cosmological evolution, and cosmological results in galaxy formation.

[ASTRO 520 Radio Astronomy]
Covers radio astronomy telescopes and electronics, antenna theory, observation procedures and data analysis; maximum entropy techniques; interferometry and aperture synthesis.

ASTRO 523 Signal Modeling, Statistical Inference, and Data Mining in Astronomy
Spring. 4 credits. J. Cordes.
The course aims to provide tools for modeling and detection of various kinds of signals encountered in the physical sciences and engineering. Data mining and statistical inference from large and diverse databases are also covered. Experimental design is to be discussed. Basic topics covered include: probability theory; Fourier analysis of continuous and discrete signals; digital filtering; matched filtering and pattern recognition; spectral analysis; Karhunen-Loeve analysis; wavelets; parameter estimation; optimization techniques; Bayesian statistical inference; deterministic, chaotic, and stochastic processes; image formation and analysis; maximum entropy techniques; specific applications chosen from different areas of interest in astronomy, where large scale surveys throughout the electromagnetic spectrum and using non-electromagnetic signals (e.g., neutrinos and gravitational waves) are ongoing and anticipated. Applications are also chosen from topics in geophysics, plasma physics, electronics, artificial intelligence, expert systems, and genetic
ARTS AND SCIENCES - 2002-2003

programming. The course is self-contained and is intended for students with thorough backgrounds in the physical sciences or engineering.

T. Hertter, G. Stacey.
Optical/infrared and submillimeter telescopes and instrumentation are discussed and related to current research in these fields. The course includes telescope design and general optical design (ray tracing). CCD, photoconductor, photovoltaic, bolometer, impurity band conduction, and heterodyne detection systems are presented. The instrumentation discussion includes general instrument design and specific applications to cameras, spectrographs, and interferometers. Detection limits of various systems, cryogenic techniques, and astronomical data analysis techniques are also discussed. Special topics include speckle interferometry and adaptive optics.

D. Lai.
Thermal and nonthermal radiation processes encountered in studies of stars, the interstellar and intergalactic medium, galaxies, and quasars. Fundamentals of radiative transfer, bremsstrahlung, synchrotron radiation, and Compton scattering are covered, as well as spectral line transfer, gas heating and cooling, and topics in atomic and molecular spectroscopy. These topics are discussed within the framework of astrophysical situations, such as star formation, interstellar gas and dust clouds, jets, active galactic nuclei, clusters of galaxies and cosmology.

ASTRO 555 Theory of the Interstellar Medium
Fall. 4 credits. D. Chernoff, P. Goldsmith, J. Cordes, Y. Terzian.
Covers global theories of the interstellar medium-mass and energy exchange between the ISM and stars, the role of shock waves and energetic outflows in the thermal equilibrium and ionization state of gas in the galaxy; basic astrophysical fluids and plasmas; galactic dynamics; and observation techniques, current problems and results.

ASTRO 560 Theory of Stellar Structure and Evolution (also PHYS 667)
Fall. 4 credits. D. Lai.
This course is intended to provide a systematic development of stellar astrophysics, both theory and observations. Topics include: hydrostatic equilibrium; equation of state; radiative transfer, convection and stellar turbulence; nuclear burning and nucleosynthesis; solar neutrinos; star formation; pre-main sequence stars; brown dwarfs; end states of stellar evolution (white dwarfs, neutron stars, and black holes); supernovae; interacting binary stars; stellar rotation and magnetic fields; stellar pulsations; winds and outflows. The prerequisites for the course are all undergraduate level physics. Though helpful, no astronomy background is required.

P. Nicholson.
An introductory survey of planetary science with an emphasis on the application of physical principles. Planetary dynamics, including satellite orbits, tidal interactions, resonances, and ring dynamics. An introduction to the theory of planetary interiors, gravitational fields, heat sources, and rotational mechanics. Physics of planetary atmospheres, including radiative transfer, convection, and thermal structure. Important observational results, including those of ground-based optical, infrared, radio, and radar astronomy, as well as those made by spacecraft, are discussed. Intended for graduate students and seniors in astronomy, physics, and engineering.

ASTRO 590 Galaxies and the Universe
Spring. 4 credits. R. Giovanelli, T. Hertter.
The universe, its constituents, its large-scale structure, and its history in the light of the major thrusts of extragalactic research. The morphology, photometry, dynamics, and kinematics of galaxies and their subsystems. Determination of the mass-to-light ratios, and the "missing mass." Activity in Seyferts, radio galaxies, and quasars. Binaries, groups, clusters, and superclusters. The extragalactic distance scale: Galaxy formation and evolution. Confrontation of cosmological theories with observational results.

This course is intended to provide a detailed theoretical development of current ideas in cosmology. Topics include observational overview; growth of irregularities, galaxy formation, and clustering; big bang cosmology, recombination, nucleosynthesis; very early universe, symmetry breaking, inflationary scenarios. At the level of Peebles, Principles of Physical Cosmology.

D. Campbell.
The application of radar to the study of the surfaces of planets, planetary satellites, asteroids, and comets. Topics covered target detectability and the specification of the needed antennas, transmitters, and receiving systems; data processing techniques; imaging techniques including delay-Doppler imaging; synthetic aperture radar (SAR) and interferometric SAR; target characterization from cross section, scattering laws and polarization measurements, results from earth-based and spacecraft observations of Mercury, Earth, the Moon, Mars, the satellites of Jupiter, the rings of Saturn, asteroids, and comets.

ASTRO 640 Advanced Study and Research
Fall or spring. Credit TBA. Guided research on topics not currently covered in regular courses. Students need to register in the department office, 610 Space Sciences Building.

ASTRO 651 Atmospheric Physics (also EAS 651)
Fall. 3 credits. K. Cook, S. Colucci, P. Gierasch.
For description, see SCAS 651.

ASTRO 652 Advanced Atmospheric Dynamics (also SCAS 652)
Spring. 3 credits. S. Colucci, K. Cook, P. Gierasch.
For description, see SCAS 652.

ASTRO 660 Cosmic Electrodynamics (also A&EP 608)

ASTRO 671 Seminar: Comets
Fall. 3 credits. J. Veverka.
Current knowledge of the chemistry and physical state of cometary ice, as well as the role of comets in the evolution of earthly planets. Emphasis is placed on the science return expected from upcoming missions to comets, including Stardust, CONTOUR, Deep Impact, and Rosetta.

This course deals with motions in planetary atmospheres. Among the topics discussed are the Venus general circulation, dust and water transport on Mars, alternating jets on the outer planets, and compositional layering in the outer planets.

[ASTRO 690 Seminar: Computational Astrophysics (also PHYS 680)] Spring. 3 credits. Prerequisites: working knowledge of FORTRAN. Not offered 2002-2003. Staff.

BIological SCIENCES

Biology is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences at Cornell is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Student services
J. V. Reppy, director of undergraduate studies,

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a biology. Programs of study include animal physiology; biochemistry; computational biology; ecology and evolutionary biology; general biology; genetics and development; insect biology; microbiology; moleucule biology; neurobiology and behavior; nutrition; plant biology; and systematics and biotic diversity. Students interested in the marine sciences may consult the Cornell Marine Programs Office (G14 Stimson Hall, 255-3717) for academic advice and career counseling. For more details about the biology curriculum, see the section in this catalog on Biological Sciences.

BIOLOGY AND SOCIETY MAJOR

J. V. Reppy, director of undergraduate studies, colleges of Arts and Sciences and Agriculture and Life Sciences and Human Ecology.

Admission to the Major

All students should have completed a year of college-level biology before submitting an application during their sophomore year. Juniors are considered on a case-by-case basis. Upper-division applicants should realize the difficulties of completing the major requirements in fewer than two years. Freshmen admitted to the Colleges of Agriculture and Life Sciences and Human Ecology as Biology & Society majors are considered to have been admitted to the major on a provisional basis, contingent on successful completion of the course sequence in introductory biology and submission of the application to the university major. The application includes (1) a one-page statement explaining the student’s intellectual interests in the Biology & Society major and why the major is consistent with the student’s academic goals and interests; (2) the theme the student wishes to pursue in the major; (3) a tentative plan of fulfilling Biology & Society requirements, including courses already taken and those the student plans to take; and (4) a transcript of work completed at Cornell University (and elsewhere, if applicable) current as of the date of application.

Acceptance into the major requires completion of the course sequence in introductory biology. Sophomores in the process of completing this prerequisite may be admitted to the major on a provisional basis. It is the student’s responsibility to assure that final acceptance is granted upon satisfactory completion of the introductory biology sequence. Although only introductory biological science is a prerequisite for acceptance, students will find it useful to have completed some of the other requirements (listed below) by the end of their sophomore year, preferably by the end of the first semester. Students who are considering the major may also find it beneficial to take S&TS 201. *What is Science?* is beneficial in their freshman or sophomore year. Human Ecology students should also consult the current Human Ecology Guide and meet with the college advising coordinator, Nancy Breen, 205 Martha Van Rensselaer Hall, 255-1928.

**Biochemistry and molecular-cell biology; ecology; evolutionary biology**, as well as integrative courses offered through Biology & Society. Majors are required to take a core course and must develop a theme, an intellectually coherent grouping of courses representative of their special interest in biology and society. Recommended themes in the Biology & Society major include biology, behavior, and society; biology and human population; biology and public policy; environment and society; and health and society. Students may also develop their own individually tailored themes (which in recent years have included topics such as biotechnology and society and agriculture, environment, and society). In consultation with their faculty advisor, students select courses that meet the foundation and core course requirements so as to build a coherent theme. Sample curricula for the recommended themes and for several student-developed themes are available in the Biology & Society office.

<table>
<thead>
<tr>
<th>Major Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>No single course may satisfy more than one major requirement. All courses must be taken for a letter grade.</td>
</tr>
</tbody>
</table>

1) **Basic courses** |

| A. | BIO G 101–104 or 105–106 or 107–108 (prerequisite for admission to Biology and Society). |
| B. | College calculus (one course) |

2) **Foundation Courses** (should be completed by end of junior year). Foundation courses are intended to provide a broad introduction to methodology and theory in their area. These courses must be above the 100-level, at least three credit hours, and taken for a letter grade.

| A. | Ethics: one course |
| B. | Social sciences/humanities foundation: two courses; one from any two of the following subject areas: History of Science; Philosophy of Science; Sociology of Science; Politics of Science; and Science Communication. |
| C. | Biology foundation (breadth requirement): three courses; one each from three of the following subject areas: Ecology (BIO EE 271); Evolutionary Biology (BIO EE 279); Biochemistry, Molecular and Cell Biology (BIO BM, 330 or 331 or 333 or NS 320); Microbiology (BIO MI 290); Genetics and Development (BIO GD 281 or 282); Neurobiology and Behavior (BIO NB 221 or 222); Botany (BIO PL 241); and Anatomy and Physiology (BIO AP 311 or NS 341 but NOT BIO AP 212). |
| D. | Biology foundation (Depth requirement): one biology course for which one of the above (2C) is a prerequisite. |
| E. | Statistics: one course selected from MATH 171, ILRST 210, BTRY 301, AEM 210, SOC 301, PSYCH 350, ECON 319, CRP 225, PAM 210. |

3) **Core Course***(one course). Should be completed by end of junior year. B&SOC 301 Biology and Society. The Social Construction of Life (also S&TS 301), or S&TS 286 Science and Human Nature (also PHIL 286). |

4) **Theme** (five courses that correspond to the theme selected by the student). These courses must be above the 100-level, at least three credit hours, and taken for a letter grade. Choose these courses as follows:

| A. | Natural Science Issues/Biology Elective (two courses). Select from the list of B&SOC approved Natural Science Courses or choose course(s) with introductory biology as a prerequisite from: ALS, AN, TOM, FOOD, HD, NS, NTR3, PL, BR, PL, PA, PSYCH, VTMED. |
The honors program is designed to provide intellectually stimulating and available in the Biology & Society office, 275 Clark Hall during the fall semester. More information on the honors program is available in the Biology & Society Office, 275 Clark Hall (255-6047).

People to contact for Biology & Society Honors Information:

I. First-Year Writing Seminars

Consult the John S. Knight Institute brochure for times, instructors, and descriptions.

II. Foundation Courses

A. Ethics (one course)

B&SOC 205 Ethical Issues in Health and Medicine (also S&T 205) (IV)

Fall. 4 credits. Limited to 150 students. Not open to freshmen. S. Hilgartner.

In today's rapidly changing world of health and medicine, complex ethical issues arise in many contexts—from the private, interpersonal interactions between doctor and patient to the broad, mass-mediated controversies that make medicine into headline news. This course examines ethical problems and policy issues that arise in contemporary medicine, health care, and biomedical research. Tools for ethical analysis are applied to a variety of cases and fundamental questions in bioethics. Perspectives from social science, history, and law also inform the course. We explore ethical questions that arise in a number of substantive contexts, including the doctor-patient relationship, medical decision making near the end of life, human experimentation, genetics and reproductive technology, public health, and the allocation of scarce resources.

B&SOC 206 Ethics and the Environment (also S&T 206, PHIL 246) (IV)

Spring. 4 credits. Limited to 60 students. Open to all undergraduates. Permission of instructor required for freshmen. N. Sethi.

The aim of this course is to acquaint students with moral issues that arise in the context of the environment and environmental policy. Our concerns about the environment bring to our attention the importance of economic, epistemological, legal, political and social issues in assessing our moral obligations to other humans and the natural world. Our attempt is then to explore how different factors come into play in defining our responsibilities to the environment and to examine the grounds for our environmental policy decisions. A background in basic ecology or environmental issues or ethics is helpful.

R. Social Sciences/Humanities Foundation (two courses, one from any two areas)

1. History of Science

S&T 233 Agriculture, History, and Society: From Squanto to Biotechnology

Fall. 3 credits. M. Rossiter.
For description, see S&T 233.

S&T 282 Science in Western Civilization (also HIST 282)

Spring. 4 credits. P. Dear.
For description, see HIST 282.

S&T 283 The Sciences in the Twentieth Century (also HIST 280)

Fall. 4 credits. M. Dennis.
For description, see S&T 283.

S&T 287 Evolution (also BIOEE 207, HIST 287)

Fall or summer. 3 credits. May not be taken for credit after BIOEE 278.
W. Provine.
For description, see BIOEE 207.

[S&T 390 Science in the American Polity: 1800-1960 (also GOVT 308, AM ST 398)

Fall. 4 credits. Not offered 2002-2003.
M. Dennis.
For description, see S&T 390.

[S&T 433 Comparative Historical Study of Science

M. Rossiter.
For description, see S&T 433.

S&T 444 Historical Issues of Gender and Science (also WOMNS 444)

Spring. 4 credits. M. Rossiter.
For description, see S&T 444.

2. Philosophy of Science

S&T 201 What is Science? An Introduction to the Social Studies of Science and Technology (also SOC 210)

Spring. 3 credits. S. Hilgartner.
For description, see S&T 201.

S&T 226 Science and Human Nature (also PHIL 280)

Spring. 4 credits. May be used to meet the philosophy of science requirement if not used to meet the core course requirement.
R. Boyd.
For description, see PHIL 280.

S&T 381 Philosophy of Science: Knowledge and Objectivity (also PHIL 381)

Fall. 4 credits. R. Boyd.
For description, see PHIL 381.
3. Sociology of Science

B&SOC 301 Biology and Society: The Social Construction of Life (also S&TS 301) (III)
Fall. 4 credits. May be used to meet the sociology of science requirement if not used to meet the core course requirement. E. Toon.
For description, see Core Courses for description.

B&SOC 442 Sociology of Science (also S&TS 442, SOC 442, CRP 442) (III)
Spring. 4 credits. H. Mietal.
For description, see S&TS 442.

HD 452 Culture and Human Development
Fall. 3 credits. Q. Wang.
For description, see HD 452.

NS 245 Social Science Perspectives on Food and Nutrition
Fall. 3 credits. J. Schal.
For description, see NS 245.

R SOC 208 Technology and Society
Fall. 3 credits. Not offered 2002-2003.
C. Geisler.
For description, see R SOC 208.

S&TS 201 What Is Science? An Introduction to the Social Studies of Science and Technology (also SOC 210)
Spring. 3 credits. S. Hilgarter.
For description, see S&TS 201.

S&TS 311 The Sociology of Medicine
Spring. 4 credits. E. Toon.
For description, see S&TS 311.

S&TS 411 Knowledge, Technology, and Property
Spring. 4 credits. S. Hilgarter.
For description, see S&TS 411.

4. Politics of Science

B&SOC 406 Biotechnology and Law (also S&TS 406) (III)
Spring. 4 credits. L. Palmer.
For description, see S&TS 406.

B&SOC 407 Law, Science, and Public Values (also GOVT 407 and S&TS 407) (III)
Spring. 4 credits. M. Lynch.
For description, see S&TS 407.

CRP 380 Environmental Politics
Fall. 4 credits. R. Booth.
For description, see CRP 380.

PAM 230 Introduction to Policy Analysis
Fall. 3 credits. R. Avery.
For description, see PAM 230.

S&TS 324 Environment & Society (also R SOC 324, SOC 324)
Spring. 3 credits. C. Caron.
For description, see R SOC 324.

S&TS 391 Science in the American Polity: 1960-Now (also GOVT 309, AM ST 389)
Fall. 4 credits. M. Dennis.
For description, see S&TS 391.

S&TS 427 Politics of Environmental Protection in America (also GOVT 427)
Summer. 4 credits. S. Yearley.
For description, see S&TS 427.

5. Science Communication

COMM 260 Scientific Writing for Public Information
Fall or spring. 3 credits. Limited to 25 non-freshman or graduate students per section.
S. Conroe.
For description and prerequisites, see COMM 260.

COMM 421 Communication and the Environment
Spring. 3 credits. May be used in Foundation only if not taken as senior seminar.
J. Shanahan.
For description, see COMM 421.

S&TS 285 Communication in the Life Sciences (also COMM 285)
Spring. 3 credits. B. Lewenstein.
For description, see COMM 285.

S&TS 352 Science Writing for the Mass Media (also COMM 352)
Spring. 3 credits. B. Lewenstein.
For description and prerequisites, see COMM 352.

[S&TS 466 Communication of Science and Technology (also COMM 466)
Fall. 3 credits. Limited to 15 students. May be used in Foundation only if not taken as senior seminar. Not offered 2002-2003.
B. Lewenstein.
For description and prerequisites, see COMM 466.

C. Biology foundation (breadth requirement): Three courses: one from three of the following subject areas:

1. Biochemistry, Molecular and Cell Biology

BIOB 330 Principles of Biochemistry, Individual Instruction
Fall or spring. 4 credits. J. Blankenship, P. Hinkle, staff.
For description and prerequisites, see BIOMB 330.

BIOB 331 Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. May not be taken for credit after BIOMB 330 or 333. G. Feigenson.
For description and prerequisites, see BIOMB 331.

BIOMB 333 Principles of Biochemistry, Lectures
Summer. 4 credits. H. Nivison.
For description and prerequisites, see BIOMB 333.

2. Ecology

BIOEE 261 Ecology and the Environment
Fall or summer. 4 credits. Not open to freshmen.
A. Flicker, J. Sparks, A. Vawter.
For description and prerequisites, see BIOEES 261.

3. Genetics and Development

BIOGD 281 Genetics
Fall, spring, or summer. 5 credits. Not open to freshmen fall semester. Limited to 200 students. M. Goldberg, P. Bruns, T. Fox, R. Macdougal.
For description and prerequisites, see BIOGD 281.

BIOGD 282 Human Genetics
Spring. 2 or 3 credits (2 cr. if taken after BIOGD 281). Must be taken for 3 credits to fulfill Biology & Society requirements. Limited to 25 per discussion group.
M. Hamblin.
For description and prerequisites, see BIOGD 282.

4. Evolutionary Biology

BIOEE 278 Evolutionary Biology
Fall or spring. 3 or 4 credits. M. Shulman, staff.
For description, see BIOE 278.

5. Microbiology

BIOMI 290 General Microbiology Lectures
Fall, spring, or summer. 2 or 3 credits.
Must be taken for 3 credits. W. Ghiorese, S. Wains, S. Merkel, J. Helmanna, B. Batzing.
For description and prerequisites, see BIOMI 290.

6. Neurobiology and Behavior

BION 221 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3, 4, or 5 credits. A. Reeve.
For description and prerequisites, see BIONB 221.

BION 222 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits. Staff.
For description and prerequisites, see BIONB 222.

7. Botany

BIOPL 241 Introductory Botany
Fall. 3 credits. K. Nilsars.
For description, see BIOPL 241.

8. Physiology and Anatomy

BIOAP 311 Introductory Animal Physiology, Lectures (also VET MED 346)
Fall. 3 credits. E. Low, staff.
For description and prerequisites, see BIOAP 311.

NS 341 Human Anatomy and Physiology
Spring. 4 credits. Permission only. Must preregister for lab in 309 MVR during CourseEnroll.
V. Utremohlen.
For description and prerequisites, see NS 341.

D. Biology foundation (depth requirement): one course for which one of the above breadth requirement courses (2C) is a prerequisite.

E. Statistics (one course)

AEM 210 Introductory Statistics
Fall. 4 credits. C. Van de Ee.
For description and prerequisites, see AEM 210.

BTRY 301 Statistical Methods I
Fall. 4 credits. Formerly BTRY 261.
R. Lloyd.
For description and prerequisites, see BTRY 301.
B&SOC 347 Human Growth and Development: Biological and Behavioral Interactions (also HD 147, HS 347)
Spring. 3 credits. Offered alternate years. J. Haas and S. Robertson.
For description and prerequisites, see HD 347.

BIOE 275 Human Biology and Evolution (also ANTHR 275 and NS 275)
Fall. 3 credits. K. Kennedy and J. Haas.
For description, see BIOE 275.

BIOE 474 Laboratory and Field Methods in Human Biology (also ANTHR 474)
Spring. 5 credits. K. Kennedy.
For description, see BIOE 474.

BIOE 673 Human Evolution: Concepts, History, and Theory (also ANTHR 673)
Fall. 3 credits. Offered alternate years. K. Kennedy.
For description, see BIOE 673.

BIOPL 247 Ethnobiology
Fall. 3 credits. D. Bates.
For description, see BIOPL 247.

HD 220 Biological Issues in Human Development: The Human Brain and Mind
Fall. 3 credits. E. Temple.
For description, see HD 220.

HD 266 Emotional Functions of the Brain
For description, see HD 266.

HD 344 Infant Behavior and Development
Fall. 3 credits. Not open to freshmen. S. Robertson.
For description and prerequisites, see HD 344.

HD 433 Developmental Cognitive Neuroscience
Spring. May be used as depth course if BIOL 221 or 222 is taken as breadth. 3 credits. E. Temple.
For description, see HD 433.

HD 436 Language Development (also LING 436, PSYCH 436, COGST 436)
Spring. 4 credits. B. Lust.
For description, see HD 436.

NS 222 Maternal and Child Nutrition
Fall. 3 credits. Limited to 20. C. Garza, P. Brannon.
For description and prerequisites, see NS 222.

NS 331 Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits. M. Stipek, C. McCormick.
For description and prerequisites, see NS 331.

NS 361 Biology of Normal and Abnormal Behavior (also PSYCH 361)
Fall. 3 credits. Limited to juniors and seniors only. B. Strupp.
For description and prerequisites, see NS 361.

NS 452 Molecular Epidemiology and Dietary Markers of Chronic Disease
Spring. 3 credits. P. Cassano.
For description and prerequisites, see NS 452.

NS 475 Molecular Nutrition and Development
For description and prerequisites, see NS 475.

NTRES 201 Environmental Conservation
Spring. 3 credits. T. Fahey.
For description, see NTRES 201.

PSYCH 326 Evolution of Human Behavior
Spring. 4 credits. B. Johnston.
For description and prerequisites, see PSYCH 326.

Examples of biology electives
AN SCI 300 Animal Reproduction and Development
Spring. 3 credits.
For description, see AN SCI 300.

NS 331 Physiological and Biochemical Bases of Human Nutrition
Spring. 4 credits.
For description, see NS 331.

R. Humanities/Social Science elective
(two courses)
Courses listed earlier as social science/humanities foundation courses (2B) are particularly appropriate as social science/humanities electives. However, a single course cannot be used to meet both requirements. Examples of recommended social science or humanities electives are listed below. A more complete list is available in 275 Clark Hall.

Examples of social science electives
AEM 464 Economics of Agricultural Development
Spring. 3 credits. R. Christy.
For description, see AEM 464.

[ANTHRO 211 Nature and Culture
Spring. 3 credits. Not offered 2002-2003. For description, see ANTHR 211.]

B&SOC 403 Environmental Governance (also S&T 403 and NTRES 403)
Fall. 3 credits. S. Wolf.
For description, see NTRES 403.

[HD 457 Health and Social Behavior (also SOC 457)
Fall. 3 credits. Not offered 2002-2003. E. Wethington.
For description, see HD 457.]

NS 450 Public Health Nutrition
Spring. 3 credits. D. Pelletier.
For description, see NS 450.

NTRES 400 International Environmental Issues
Fall. 4 credits. R. McNeil.
For description, see NTRES 400.

PAM 303 Ecology and Epidemiology of Health
Spring. 3 credits. E. Rodriguez.
For description, see PAM 303.

PAM 380 Human Sexuality
Spring. 3 credits. A. Parrot.
For description, see PAM 380.

[PAM 435 U.S. Health Care System
Fall. 3 credits. Not offered 2002-2003. R. Battistella.
For description, see PAM 435.]

PAM 437 Economics of Health Policy
Spring. 3 credits. K. Simon.
For description, see PAM 437.

R SOC 205 Rural Sociology and International Development (also SOC 206)
Spring. 3 credits. P. McMichael.
For description, see R SOC 205.
S&TS 645 Genetics: Politics and Society in Comparative Perspective (also GOVT 634)

Fall. 4 credits. S. Hilgartner.
For description, see S&TS 645.

V. Other Courses

B&SOC 375 Independent Study

Fall or spring. 1–4 credits. Prerequisite: must have written permission of faculty supervisor and Biology & Society major. Projects under the direction of a Biology & Society faculty member are encouraged as part of the program of study within the student's concentration area. Applications for research projects are accepted by individual faculty members. Students may enroll for 1–4 credits in B&SOC 375 (Independent Study) with written permission of the faculty supervisor and may elect either the letter grade or the S-U option. Students may elect to do an independent study project as an alternative to, or in advance of, an honors project. Applications and information on faculty research, scholarly activities, and undergraduate opportunities are available in the Biology & Society Office, 275 Clark Hall. Independent study credits may not be used in completion of the major requirements.

B&SOC 400 Undergraduate Seminar

Fall or spring. Variable credit. May be repeated for credit. From time to time different seminars on topics of interest to undergraduates are offered. Topics and instructors are listed in the Biology & Society supplement issued at the beginning of each semester.

B&SOC 498/499 Honors Project I & II

Fall and spring. 3–5 credits each term. Open only to Biology & Society students in their senior year by permission of the department. Please apply in 275 Clark Hall. Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research and the completed work should be of wider scope and greater originality than is normal for an upper-level course. Students may take three to five credits per semester up to a maximum of eight credits in B&SOC 498 & 499, Honors Projects I & II. Students should note that these courses are to be taken in addition to those courses that meet the regular major requirements. B&SOC 498 includes the fall Honors Seminar. The student and the project supervisor must reach clear agreement at the outset as to work to be completed during the first semester. Minimally, an honors thesis outline, bibliography, and draft introductory chapter should be accomplished. At the end of B&SOC 498, Honors Project I, a letter grade will be assigned and the advisers, in consultation with the Director of Undergraduate Studies, will evaluate whether or not the student should continue working on an honors project. Biology & Society students who do continue in the honors program for the second semester will receive a letter grade at the end of their final term whether or not they complete a thesis and whether or not they are recommended for honors. Applications and information are available in the Biology & Society Office, 275 Clark Hall.

S&TS 645 Genetics: Politics and Society in Comparative Perspective (also GOVT 634)

Fall. 4 credits. S. Hilgartner.
For description, see S&TS 645.
BURMESE
See Department of Asian Studies.

CAMBODIAN
See Department of Asian Studies.

CENTER FOR APPLIED MATHEMATICS
The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. This program is based on a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the Director of Graduate Studies of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

A listing of selected graduate courses in applied mathematics can be found in the description of the center in "Interdisciplinary Centers, Programs, and Studies."

CENTER FOR INTERNATIONAL STUDIES
See Interdisciplinary Centers, Programs, and Studies.

CHEMISTRY AND CHEMICAL BIOLOGY

The Department of Chemistry and Chemical Biology offers a full range of courses in physical, organic, inorganic, analytical, theoretical, biorganic, and biophysical chemistry. In addition to their teaching interests, Chemistry and Chemical Biology faculty members have active research programs. The link between teaching and research is a vital one in a continuously evolving scientific subject; it ensures that students will be provided with the most advanced information and perspectives, and affords opportunities for students to participate in research.

The Standard Major
The chemistry major at Cornell provides a great deal of flexibility and prepares students for a large variety of career options. In recent years, chemistry majors have gone on to graduate study in chemistry, medicine, law, and business as well as directly into positions with chemical, pharmaceutical, and other industrial companies. A major in chemistry can also provide the basis for work in related areas such as molecular biology, polymer science, chemical physics, geochemistry, chemical engineering, materials science, solid state physics, and secondary education. Nearly all of the required courses for the major can be completed in three years, leaving the senior year open for independent research under the supervision of a professor. Advanced courses in chemistry or courses that will enable the individual to pursue interests in related fields.

The courses are arranged as a progression, with some (including mathematics and physics) prerequisite to those that are more advanced. During the first year, a student should normally register for general chemistry (preferably CHEM 215–216 although CHEM 207–208 or 205–206 is acceptable), mathematics, a freshman writing seminar, a foreign language if necessary, or physics. CHEM 215–216 is aimed at those students with good preparation and a strong interest in chemistry. Students who do not know if their preparation is adequate should consult the instructor. In the second year a student should complete calculus and take physics and organic chemistry (CHEM 359–360 is preferred to CHEM 357–358). The second-year laboratory courses include 300, Analytical Chemistry and 301, Experimental Chemistry I. CHEM 389–390, Physical Chemistry I and II, and CHEM 302–303, Experimental Chemistry II and III, should be completed in the third year. CHEM 410, inorganic chemistry should be completed in the third or fourth year. Advanced work in chemistry and related subjects can be pursued in the fourth year and in the earlier years as well. The opportunity for independent research is also available. All students with questions about the major are encouraged to consult either the director of Undergraduate Studies or the chair of the Department of Chemistry and Chemical Biology. Entering students who are exceptionally well prepared in chemistry may have advanced placement credit for CHEM 207.

Prerequisites for admission to a major in chemistry are (1) CHEM 215–216, 300, or 207–208, 300; or 211, 208, 300; or 206, 208, 300; (2) PHYS 207 or 112; and (3) MATH 111 or 191. Students are not encouraged to undertake a major in chemistry unless they have passed those prerequisite courses at a good level of proficiency. The minimum additional courses that must be completed for the standard major in chemistry are listed below.

1) CHEM 301–302–303, 359–360 (357–358 may be substituted), 389–390, and 410
2) MATH 112, 213, or 122, 221–222, or 192–293–294

3) PHYS 208

Potential majors electing to take MATH 213 are strongly urged to do so in their sophomore year to avoid scheduling conflicts with CHEM 389 in their junior year.

The sequence described above is a basic program in chemistry that students can extend substantially in whatever direction that suits their own needs and interests. Those going on to do graduate work in chemistry should recognize that these requirements are minimal and should supplement their programs, where possible, with further courses such as CHEM 405, 605, 606, 665, 666, 688, 670, 671, and 681. Even students not planning graduate work in chemistry should consider advanced work in physics and mathematics, courses in the biological sciences, and advanced work in chemistry as possible extensions of the basic program.

HONORS. The honors program in chemistry offers superior students in the standard major an opportunity to study independently in advanced seminars and to gain additional experience by engaging in research during the senior year. It is particularly recommended to those who plan graduate work in chemistry. Prospective candidates should consult with the chair about organic chemistry and physical chemistry sequences by the end of the junior year, although failure to have completed those courses in the junior year does not in itself disqualify a student from the honors program. Completion of the program at a high level of performance leads to the degree of Bachelor of Arts with honors in chemistry. Students will be admitted to the program by invitation of the department, with selection based on a superior cumulative average, including chemistry grades, and good performance in at least four credits of research at Cornell.

Prospective candidates should discuss their plans with advisers by March 1 of their junior year; participants are notified by early January of their senior year. To be awarded honors, candidates must show outstanding performance in at least eight credits of undergraduate research such as is offered in CHEM 421, 433, 461, or 477. In addition, the writing of a thesis in the honors seminar (CHEM 490) is expected.

The Alternative Major
The alternative major is a flexible program that provides core coverage of chemistry around which students can design a program to meet their own career goals. Requirements consist of a core program along with four additional courses chosen by the student. One of the four must be in chemistry at the 300 level or above; the other three may be in another field but should represent a cohesive plan around which students can design a program in collaboration with advisers by March 1 of their junior year; participants are notified by early January of their senior year. To be awarded honors, candidates must show outstanding performance in at least eight credits of undergraduate research such as is offered in CHEM 421, 433, 461, or 477. In addition, the writing of a thesis in the honors seminar (CHEM 490) is expected.

The Core Program for the Alternative Major
1) CHEM 215–216, 300 (or 207–208, 300, or 211, 208, 300; or 206, 208, 300); 251, 257, 287, 289, and 410 (CHEM 357–358 or 359–360 can be substituted for CHEM 257; or CHEM 389–390 can be substituted for CHEM 287, thereby fulfilling the requirement for an additional 300-level chemistry course)
2) MATH 111-112; or 111, 122; or 191-192
3) PHYS 207-208; or 112, 213

Additional Courses for the Alternative Major
Possible plans for the remaining three courses might include programs in Biochemistry; Biology; Physics; Computer Science; Polymers; Materials Science; Science, Technology, and Society; History and Philosophy of Science and Technology; Business and Management; Economics; Education; and others.

Premedical students and those interested in pursuing double majors might find the alternative major particularly attractive. Students who select the alternative major are eligible for the honors program only in exceptional cases.

Program for Science Teachers
Chemistry majors who wish to become teachers will be interested to know that Cornell University offers a certification program for teachers of secondary (grades 7-12) science. Interested students apply to the program during their sophomore or junior years. If accepted, students integrate some course work in Education with the rest of their undergraduate studies. All chemistry majors who enter this program will remain in the College of Arts and Sciences to complete the major.

After earning the bachelor's degree, certification students enter the Graduate Field of Education to complete a fifth year of study at Cornell. Following this fifth year, students are eligible for a master's degree from Cornell and a teaching certificate from New York State. Additional information is available from Susie Slack, 424 Kennedy Hall, 255-9255 or Prof. Deborah Trumbull, 426 Kennedy Hall, 255-3108.

Laboratory Course Regulations
Students registered for laboratory courses who do not appear at the first meeting of the laboratory will forfeit their registration in that course.

Students and members of the teaching staff are required to wear safety goggles and lab aprons in all chemistry laboratories. Close-toed footwear is required (no sandals). Students are reminded to take their goggles and lab aprons to the first laboratory session. Students are reminded to take their goggles and aprons to the first laboratory session. Those who fail to cooperate with the safety program will be asked to leave the laboratories.

Students are required to pay for glassware and any other items broken or missing from their laboratory desks at the close of each semester. Students who fail to inventory their desks at the appointed time in the presence of their instructor are charged a $10 fee in addition to charges for any breakage.

Courses
Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

Preliminary examinations for all courses may be given in the evening.

[CHM 105] The Language of Chemistry (I)
Fall. 3 credits. This course contributes to satisfying the CASL physical science requirement of one course in chemistry. S-U or letter grades. Lecs, M W F. Prelims: permission of 208 instructor. recommended and can be done only with the permission of the 208 instructor.

[CHM 211] Chemistry for the Applied Sciences (I)
Fall or spring. 4 credits. Recommended for those students who intend to take only one term of chemistry. Enrollment limited. Prerequisite: high school chemistry or permission of instructor. Corequisite: a calculus course at the level of MATH 111 or 191. Lecs, M W F. Labs, M T W R F. Prelims: Sept. 24, Oct. 24, Nov. 26, Feb. 13, Mar. 11, Apr. 10. Fall: P. T. Wolczanski; spring: P. J. Chirik.

Important chemical principles and facts are covered with the objective of understanding the role of chemistry in other fields. Emphasis is on topics such as solid-state materials, periodic trends, and specific classes of compounds, such as polymers.

Note: Entering students exceptionally well prepared in chemistry may receive advanced placement credit for General Chemistry by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall.

[CHM 215-216] General and Inorganic Chemistry (I)
Fall, 215, spring, 216. 4 credits each term. Recommended for students who intend to specialize in chemistry or in related fields. Enrollment limited. Prerequisites: good performance in high school chemistry, physics, and mathematics. Corequisite: a calculus course at the level of MATH 111 or 191 for students who have not taken high school calculus. Prerequisite for CHEM 216: CHEM 215. Lecs, M W F. Lab, M T W R F. Prelims: Oct. 8, Nov. 14, Feb. 25, Apr. 8. Fall: B. Wisdom; spring: B. R. Crane.

An intensive systematic study of the laws and concepts of chemistry, with considerable emphasis on quantitative aspects. Second term includes systems of inorganic chemistry. Laboratory work covers qualitative and quantitative analysis, transition metal chemistry, and spectroscopic techniques.

Note: Taking CHEM 208 after 215 is not recommended and can be done only with the permission of 208 instructor.

[CHM 232] Introduction to Biomolecular Structure
Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207-208 or equivalents. Lecs, T R. Not offered 2002-2003. S. E. Ealick.

This course is intended for students with a basic understanding of chemistry who are considering a program of study in biochemistry. The interrelationship of the structure and function of biologically important molecules are explored. Emphasis is placed on under-
standing the way in which the three-dimensional arrangements of atoms determine the properties of both small molecules and macromolecules such as proteins and enzymes. The study of molecular structure is aided by interactive computer graphics for visualizing three-dimensional structures of molecules.)

**CHEM 251 Introduction to Experimental Organic Chemistry**

Fall, spring, or summer. 2 credits. Recommended for non-chemistry majors. Enrollment limited. Prerequisite: coregistration in CHEM 257 or 258. Lecs: fall, R or F; spring, R, lab, M T W R or F or T or R; Prelims: fall, Nov. 14; spring, Apr. 15, S. Russo.

Introduction to the synthesis, separation, and handling of materials, including applications of many types of chromatography, simple and fractional distillation, crystallization, extraction, and others.

**CHEM 252 Elementary Experimental Organic Chemistry**

**CHEM 257 Introduction to Organic and Biological Chemistry (I)**

Spring. 3 credits. Prerequisite: CHEM 206 or 207. Because CHEM 257 is only a 3-credit course, it does not provide a practical route to satisfying medical school requirements. Lecs, M W F. Prelims: Feb. 13, Mar. 11, Apr. 10. D. A. Usher. An introduction to organic chemistry with an emphasis on those structures and reactions of organic compounds having particular relevance to biological chemistry.

**CHEM 287-288 Introductory Physical Chemistry (I)**

Fall, 207; spring, 288. 3 credits each term. Prerequisities: CHEM 208 or 216 and MATH 111-112 and PHYS 208, or permission of instructor. Prerequisite for CHEM 288: CHEM 287 or 589. Lecs, M W F; 287: rec, M or W, T; 288: rec, M or W. Prelims: 287: Oct. 10, Nov. 15. Fall: H. D. Abruta; spring: B. A. Baird. A systematic treatment of the fundamental principles of physical chemistry, focusing in the fall on thermodynamics and an introduction to quantum mechanics. In the spring the course is oriented to the application of physical chemistry to biological systems, including transport, kinetics, electrochemistry, spectroscopy. CHEM 287 satisfies the minimum requirement for physical chemistry in the alternative chemistry major.

**CHEM 289-290 Introductory Physical Chemistry Laboratory**

Fall, 289; spring, 290. 2 credits each term. Lecs: fall, R, spring, R. Lab: fall, M T, spring, M T W R T. McCarrick. A survey of the methods basic to the experimental study of physical chemistry, with a focus on the areas of kinetics, equilibrium, calorimetry, and molecular spectroscopy.

**CHEM 300 Quantitative Chemistry**

Fall. 2 credits. Prerequisite: CHEM 208, or CHEM 216 or advanced placement in chemistry. Lecs, M W F; 2 labs, M T W R or T. Prelims: Oct. 24, Nov. 26. J. M. Burlitch. Volumetric, spectrophotometric, and potentiometric methods are emphasized. Techniques are learned by analysis of knowns, and then are used on unknowns. Lectures and problem set stress the relationship between theory and applications.

**CHEM 301 Experimental Chemistry I (I)**

Spring. 4 credits. Prerequisites: CHEM 300, and 357 or 359. Lec, M W F; 2 labs, M W or T R. G. W. Coates. An introduction to the techniques of synthetic organic chemistry. A representative selection of the most important classes of organic reactions is explored in the first half of the semester, augmented by lectures on the reaction chemistry and the theory of separation and characterization techniques. The second half of the term is devoted to a special project, part of which is designed by the student. An opportunity to use inert atmosphere techniques is included.

**CHEM 302 Experimental Chemistry II (II)**

Fall. 4 credits. Enrollment limited; preference given to chemistry majors. Prerequisite: CHEM 301. Lecs, M W F; 2 labs, M W, T R F. J. DiSalvo. Instrumental methods of analysis, including chemical microscopy, visible and infra-red spectroscopies, and gas chromatography. Basic concepts of interfacing will be covered.

**CHEM 303 Experimental Chemistry III (III)**

Spring. 4 credits. Each lab to limit 10 students. Prerequisites: CHEM 302, 389; coregistration in the latter is permissible. Lecs, M W F 9:05; 2 labs, M W, or T R H. F. Davis. An introduction to experimental physical chemistry, including topics in calorimetry, spectroscopy, and kinetics. The analysis and numerical simulation of experimental data is stressed.

**CHEM 357-358 Organic Chemistry for Chemistry Majors**

Fall or summer, 357; spring or summer, 358. 3 credits each term. Prerequisite for CHEM 357: a grade of C or better in CHEM 357 or 216 and advanced placement; recommended: concurrent registration in CHEM 251 or 300. Lecs, M W F; 357: rec, M, W, T; 358: rec, M or W. Prelims: Oct. 10, Nov. 15. Fall: H. D. Abruta; spring: B. A. Baird. A study of the more important classes of organic compounds—especially those encountered in the biological sciences. Emphasis is placed on their three-dimensional structures, mechanisms of their characteristic reactions, their synthesis in nature and the laboratory, methods of identifying them, and their role in modern science and technology. Note: Because of duplication of material, students who take both CHEM 357 and 358 will receive graduation credit only for CHEM 357.

**CHEM 358-360 Organic Chemistry I and II (I)**

Fall, 359, spring, 360. 4 credits each term. Recommended for students who intend to specialize in chemistry or closely related fields. Enrollment limited. Prerequisites: CHEM 216 with a grade of B or better, CHEM 208 with a grade of A or better, or permission of instructor. Prerequisite for CHEM 358: CHEM 359. Recommended: coregistration with CHEM 300-301-302. Lecs, M W F; dis sec, W, prelims, Sept. 18, Oct. 16, Nov. 15, Spring: Feb. 12, Mar. 12, Apr. 16. Fall: D. A. Usher; spring, D. T. McQuade.

**CHEM 389-390 Physical Chemistry I and II (II)**

Fall, 389; spring, 390. 4 credits each term. Prerequisites: MATH 213 or, ideally, 221-222; PHYS 208; CHEM 208 or 216 or permission of instructor. Prerequisite for CHEM 389: CHEM 380. Lecs, M W F; rec, M or W or T. Lecs, 389, M W F; prelims: 389: Oct. 1, Oct. 29, Nov. 26, 390. Feb. 15, Mar. 11, Apr. 10. Fall: H. F. Davis; spring: R. F. Loring. The principal techniques of physical chemistry are studied from the standpoint of the laws of thermodynamics, kinetic theory, statistical mechanics, and quantum chemistry.

**CHEM 391 Physical Chemistry II (also CHEM 391)**

Spring. 4 credits. Enrollment limited to engineering students. Prerequisites: MATH 213, PHYS 208, or CHEM 216. An introduction to quantum chemistry—the electronic structure of atoms, molecules, and condensed matter; the interaction of electromagnetic radiation with matter for spectroscopy and chemical reaction; and (2) Chemistry kinetics—reaction rate laws from experimental data and reaction mechanisms; approximation methods and applications to polymerization and heterogeneous catalysis.

**CHEM 404 Entrepreneurship in Chemical Enterprise**

Spring. 1 credit. Lecs, T. B. Ganem. Designed to acquaint students with the problems of planning, starting, and managing a new scientifically oriented business venture, the course consists of six weekly 90-minute meetings focusing on assigned reading, as well as outside lectures by entrepreneurs in the chemical, pharmaceutical, and biotechnology industries. Topics include new technology evaluation and assessment, business formation, resource allocation, management development, as well as manufacturing and sales issues.

**CHEM 405 Techniques of Modern Synthetic Chemistry (I)**

Spring. 3 or 6 credits. Enrollment limited. Prerequisites: CHEM 302 and permission of instructor. To receive 3 credits, students must perform a minimum of three 2-week experiments. 6 credits will be given for 3 additional experiments. Completion of 5 exercises in elementary glass-blowing will count as 1 experiment. Lab time required: 16 hours each week, including at least two 4-hour sessions in 1 section (M W 1:25). Lec, first week only. Not offered 2002-2003. J. M. Burlitch.

**CHEM 410 Inorganic Chemistry (I)**

Fall. 4 credits. Prerequisites: CHEM 358 or 360, and 287 or 390. Lecs, M W F. Prelims: Sept. 24, Oct. 24, Nov. 19. R. F. Cay. A systematic study of the synthesis, structure, bonding, reactivity, and uses of inorganic, organometallic, and solid-state compounds.
CHEM 421 Introduction to Inorganic Chemistry Colloquium
Fall or spring. 2-4 credits. Prerequisites: CHEM 303 and 389-390, or CHEM 287-288, and CHEM 289-290 with an average of B- or better, or permission of instructor. Selected faculty.
Research in inorganic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 433 Introduction to Analytical Chemistry Research
Fall or spring. 2-4 credits. Prerequisites: CHEM 303 and 390 with an average of B- or better, or permission of instructor. Selected faculty.
Research in analytical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 450 Principles of Chemical Biology (I)
Fall. 3 credits. Prerequisites: CHEM 357-358, CHEM 390-391, or equivalent. Lecs, M W F. T. P. Begley.
This course covers topics at the interface of chemistry and biology with a focus on problems where organic chemistry has made a particularly strong contribution to understanding the mechanism of the biological system at the atomic level. Topics covered include the organic chemistry of carbohydrates, proteins and nucleic acids, strategies for identifying the cellular target of physiologically active natural products, combinatorial chemistry, and chemical aspects of signal transduction, cell division and development.

CHEM 461 Introduction to Organic Chemistry Research
Fall or spring. 2-4 credits. Prerequisites: CHEM 302 and 358 or 360 with a grade of B- or better or permission of instructor. Selected faculty.
Research in organic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

CHEM 477 Introduction to Physical Chemistry Research
Fall or spring. 2-4 credits. Prerequisites: CHEM 390 with an average of B- or better or permission of instructor. Lecs, T R. L. Solla.
For description, see BIONB 6231 [CHEM 622 Chemical Communication].

CHEM 485 Honors Seminar
Spring. No credit. Admission to standard chemistry majors only by departmental invitation. Additional prerequisites or corequisites: outstanding performance in either (1) two coherent 4-credit units of research in a course such as CHEM 421, 433, 461, or 477, or (2) one 4-credit unit in a course such as CHEM 421, 433, 461, or 477 and summer research equivalent to at least 4 credits in the same subject.
W. R. F. Loring.
Informal presentations and discussions of selected topics in which all students participate. Professional issues are discussed, including graduate education, publication, techniques of oral and audiovisual presentation, employment, ethics, chemistry in society, and support of scientific research. Individual research on advanced problems in chemistry or related subjects under the guidance of a faculty member, culminating in a written report.

CHEM 600-601 General Chemistry Research
Fall. 600; spring, 601. No credit. R. Staff.
A series of talks representative of all fields of current research interest in chemistry given by distinguished visitors and faculty members.

CHEM 602 Information Literacy for the Physical Scientist
Spring. 1 credit. Primarily for graduate students and undergraduate chemistry majors doing research. Lec, T. L. Solla.
An introduction to physical science information research methods, with hands-on use of traditional and electronic resources. With the continuous information explosion, much time can be wasted and important information missed unless efficient information research strategies is developed. Topic range from property searching to new online and web resources, to managing citations.

CHEM 605 Advanced Inorganic Chemistry I: Symmetry, Structure, and Reactivity of Coordination Compounds, and Bioinorganic Chemistry
Fall. 4 credits. Prerequisite: CHEM 389-390 or equivalent or permission of instructor. Lecs, M W F. P. J. Chirik.
Introduction to chemical bonding and applications of quantum mechanics; hybrid orbitals, molecular orbitals, molecular vibrations and spectroscopy. Application of these models to modern topics in inorganic chemistry, Bishosp's Theory and Chemistry.

CHEM 606 Advanced Inorganic Chemistry II: Synthesis, Structure, and Reactivity of Coordination Compounds, and Bioinorganic Chemistry
Spring. 4 credits. Lecs, M W F. P. T. Wolczanski.
Synthesis, structure, and reactivity of modern coordination compounds; oxidation and bioinorganic chemistry. Emphasis on bonding models, structure, and reactivity, including the elucidation of mechanisms. Readings at the level of Purcell and Koz's Inorganic Chemistry, and Jordan's Reaction Mechanisms of Inorganic and Organometallic Systems.

CHEM 607 Advanced Inorganic Chemistry III: Solid-State Chemistry
Fall. 4 credits. Prerequisite: CHEM 605 or permission of instructor. Lecs, M W F. S. Lee.

CHEM 608 Organometallic Chemistry
Synthesis, structure, and reactivity of organotransition metal complexes. Current literature is emphasized, and background readings are at the level of Collman, Hefedus, Finke, and Norton's Principles and Applications of Organotransition Metal Chemistry.

CHEM 622 Chemical Communication
Fall. 3 credits. Prerequisite: M W F. Not offered 2002-2003; next offered fall 2004. J. Meinwald, T. Eisner.
For description, see BIONB 623J.

CHEM 625 Advanced Analytical Chemistry I
Spring. 4 credits. Prerequisite: CHEM 288 or 390 or equivalent. Lecs, M W F. occasional prelms W. D. B. Zax.
The application of molecular spectroscopy to chemical problems. Topics in infrared, NMR, and mass spectroscopy are discussed.

CHEM 627 Advanced Analytical Chemistry II
Spring. 3 credits. Primarily for graduate students. Prerequisite: CHEM 793 or equivalent is preferable. Lecs, M W F. Not offered 2002-2003; next offered spring 2004. D. B. Zax.
Modern techniques in nuclear magnetic resonance. Little overlap is expected with CHEM 625, as this course focuses on more general questions of experimental design, understanding of multipulse experiments, and aspects of coherent averaging theory. Examples taken from both liquid and solid-state NMR. May also be of interest to other coherent spectroscopists.

CHEM 628 Isotopic and Trace Element Analysis (also MS 690)
Spring. 3 credits. Primarily for graduate students and advanced undergraduates. Prerequisite: CHEM 288 or 390 or CHEM 208 and PHYS 208, or permission of instructor. Lecs T R. Offered alternate years. Not offered 2002-2003; next offered spring 2004. J. T. Brenna.
Survey course in modern high precision isotope ratio mass spectrometry (IRMS) techniques and trace/surface methods of analysis. Topics include dual inlet and continuous flow IRMS, thermal ionization MS, inductively coupled plasma MS, atomic absorption spectroscopy, ion and electron microscopies, X-ray and electron spectroscopies, and biological and solid state applications.

CHEM 629 Electrochemistry
Fall. 4 credits. Primarily for graduate students and junior and senior undergraduates. Prerequisites: CHEM 390 or equivalent (MATH 213 helpful). Lecs, T R. Not offered 2002-2003. H. D. Abrau.
Fundamentals and applications of electrochemistry. Topics include the fundamentals of electrode kinetics, electroanalytical theory, the electrical double layer, diffusion, and other modes of transport. A wide range of techniques and their application as well as instrumental aspects are covered.

CHEM 650-651 Organic and Organometallic Chemistry Seminar
Fall, 650; spring 651. No credit. Required of all graduate students majoring in organic or bioorganic chemistry. Juniors and seniors are encouraged to attend. M. Staff.
A series of talks representative of all fields of current research interest in organic organometallic chemistry, given by research associates, faculty members, and distinguished visitors.

CHEM 665 Advanced Organic Chemistry
Fall. 4 credits. Primarily for graduate students and junior and senior undergraduates. Prerequisites. CHEM 358 or 360, and 390 or equivalents or permission of instructor. Lecs, M W F. D. T. McQuade.
CHEM 665 focuses on bonding (covalent and non-covalent), reaction mechanisms, and reactive intermediates, with an emphasis on experimental design and methods. The lecture portion of the course is augmented by both written and oral presentations from the students.

CHEMISTRY AND CHEMICAL BIOLOGY 465

CHEMISTRY AND CHEMICAL BIOLOGY 465

CHEMISTRY AND CHEMICAL BIOLOGY 465

CHEMISTRY AND CHEMICAL BIOLOGY 465
CHEM 666 Synthetic Organic Chemistry
Spring. 4 credits. Primarily for graduate students and upper-class undergraduates. Prerequisite: CHEM 665 or permission of instructor. Lecs, T. R. D. B. Collum. Modern techniques of organic synthesis, applications of organic reaction mechanisms and retrosynthetic analysis to the problems encountered in rational multistep synthesis, with particular emphasis on modern developments in synthesis design.

CHEM 668 Chemical Aspects of Biological Processes
Fall. 4 credits. Prerequisite: CHEM 360 or equivalent. Lecs, T. R. T. P. Begley. A representative selection of the most important classes of enzyme-catalyzed reactions is examined from a mechanistic perspective. Topics discussed include the chemical basis of enzymatic catalysis, techniques for the elucidation of enzyme mechanism, cofactor chemistry, and the biosynthesis of selected natural products. The application of chemical principles to understanding biological processes is emphasized.

CHEM 669 Organic and Polymer Synthesis Using Transition Metal Catalysis
Fall. 4 credits. Prerequisite: primarily for graduate students. CHEM 359/360 or equivalent or by permission of the instructor. G. W. Coates. Transition metal based catalysis are invaluable in both organic and polymer synthesis. This course begins with a brief overview of organometallic chemistry and catalysis. Subsequent modules on organic and polymer synthesis are then presented. Topics of current interest are emphasized.

CHEM 670 Fundamental Principles of Polymer Chemistry
Fall. 4 credits. Prerequisite: Physical Chemistry 389/390 and Organic Chemistry 359/360 or equivalent or by permission of instructor. Primarily for graduate students and advocates. No previous knowledge of polymers is required. Lecs, T. R. D. Y. Sogah. This course emphasizes general concepts and fundamental principles of polymer chemistry. The first part of the course deals with general introduction to classes of polymers, molecular masses and their distributions, and a brief survey of major methods of polymer synthesis—radical, step growth, ionic, group transfer, Ziegler-Natta, and metathesis polymerization methods—with emphasis on kinetics, mechanisms and stereochemistry rather than on structure. The second part deals with characterization and physical properties. These include: solution properties—solubility and solubility parameters, solution viscosity, molecular weight characterizations (gel permeation chromatography, viscosity, light scattering, osmometry), bulk properties—thermal and mechanical properties; and structure-property relationships. The discussions will focus on chemistry rather than physics than engineering of polymers.

CHEM 671 Synthetic Polymer Chemistry (also MS&E 671 and CHEM 675)
Spring. 4 credits. Prerequisites: a minimum of one semester of organic chemistry at the level of CHEM 359/360 is essential. Those without this chemistry background should see the instructor before registering for the course. Primarily for graduate students and advanced undergraduates. No previous knowledge of polymer chemistry is required although knowledge of material covered in CHEM 670 or MS&E 452 will be helpful. Lecs, T. R. D. Y. Sogah. This course emphasizes application of organic synthetic methods to the development of new polymerization methods and control of polymer architecture. Emphasis is on modern concepts in synthetic polymer chemistry and topics of current interest: the study of new methods of synthesis, preparation of polymers with reactive end groups, the control of polymer stereochemistry and topology, and the design of polymers tailored for specific uses and properties. Topics on synthesis are selected from the following: step-growth polymerization with emphasis on high performance materials, free radical polymerization and copolymerization, Ziegler-Natta polymerization, recent developments in living free radical, anionic, cationic, group transfer, and ring-opening metathesis polymerizations.

CHEM 672 Kinetics and Regulation of Enzyme Systems
Spring. 4 credits. Primarily for graduate students with interest in physical chemistry. Prerequisite: CHEM 288 or 390, BIOB 331, or equivalent permission of instructor. Lecs, M W F. Not offered 2002-2003. B. Baird. Focus is on protein interactions with ligands and consequent changes in structure and activity. Topics include protein structure and dynamics, thermodynamics and kinetics of ligand binding; steady state and transient enzyme kinetics; enzyme catalysis and regulation; and the role of cell membrane receptors in regulating cellular activities.

CHEM 677 Chemistry of Nucleic Acids
Fall. 4 credits. Primarily for graduate students. Prerequisites: CHEM 358 or 360, and 390 or equivalents. Lecs, M W F. Not offered 2002-2003. D. A. Usher. Structure, properties, synthesis, and reactions of nucleic acids from a chemical point of view. Special topics include antisense and gene expression, ribosome reactions (including the ribosome), mutagens, PCR, recent advances in DNA as computer, and alternative genetic materials.

CHEM 678 Statistical Thermodynamics
Fall. 4 credits. Primarily for graduate students. Prerequisite: CHEM 390 or equivalent. Lecs, M W F J. Marohn. Course covers the principles of statistical thermodynamics and how they lead to classical thermodynamics. Topics include: ensembles and partition functions, ideal gases and crystals; thermodynamic properties from spectroscopic and structural data; chemical equilibrium, dense gases: virial coefficients, statistical mechanics of small molecules and Bose-Einstein and Fermi-Dirac statistics. At the level of the first twelve chapters of Statistical Mechanics by McQuarrie.

CHEM 681 Introduction to Quantum Chemistry
Fall. 4 credits. Prerequisites: 1 year of undergraduate physics, Chem 2, semesters of calculus, 1 year of college physics. Lecs T R. G. S. Ezra. An introduction to the application of quantum mechanics in chemistry. This course covers many of the topics from Chapters 73-794 in a more descriptive, less mathematical level. The course is designed for advanced undergraduates, chemistry graduate students with a minor in physical chemistry, and graduate students from related fields with an interest in physical chemistry. At the level of Quantum Chemistry, by Levine, or Molecular Quantum Mechanics by Atkins.

CHEM 686 Physical Chemistry of Proteins
Fall. 4 credits. Primarily for graduate students. Prerequisite: CHEM 288 or 390 or equivalents. Letter grade for undergraduate and graduate. Lecs, M W F 0. Crane. Physical properties of proteins are presented from a quantitative perspective and related to biological function. Topics include: chemical, structural, thermodynamic, hydrodynamic, electrical and conduction properties of soluble and membrane proteins; conformational transitions, protein stability and folding; photochemistry and spectroscopic properties of proteins; and protein-protein interactions and single molecular studies.

CHEM 700 Baker Lectures
Fall. On dates TBA. No credit. Lect, T R. Distinguished scientists who have made significant contributions to chemistry present lectures for approximately six weeks. This year's lecturer: J. M. Saveant, P. D. Diderot.

CHEM 701 Introductory Graduate Seminar
Fall. No credit. Highly recommended for all senior graduate students, in any field of chemistry. Lecs, M W F. Not offered 2002-2003. R. Hoffmann. A discussion of professional issues facing young chemists as well as life skills: academic and industrial trends, presentations, employment, immigration, publication, research funding, and ethics.

CHEM 716 Introduction to Solid State Organic Chemistry
Spring. 3 credits. Prerequisite: CHEM 607 is recommended or some exposure to (or a course in) solid state chemistry and quantum mechanics. A good undergraduate physical chemistry course may be sufficient for quantum theory, while PHYS 443 or CHEM 793 or CHEM 794 are at a substantially higher level than what is demanded. Lecs, M W F. Lee, M W F. This course examines some principles of crystallography and also electronic structure theory of solids. We then consider properties such as conduction, superconductivity, ferroelectricity and ferromagnetism. The final portion of this course is concerned with structure-property relations.

CHEM 765 Physical Organic Chemistry I
Fall. 4 credits. Primarily for graduate students. Prerequisite: CHEM 665 or permission of instructor. Lecs, M W F. Not offered 2002-2003. C. F. Wilcox. Application of computational and experimental techniques to studies of organic reaction mechanisms and the properties of reactive intermediates.

CHEM 774 Chemistry of Natural Products: Combinatorial Chemistry
Spring. 3 credits. Prerequisites: CHEM 360 and BIOB 331 or equivalent. Lecs, M W F. Not offered 2002-2003. T. P. Begley. Combinatorial chemistry has revolutionized the way organic chemists think about structure function studies on biological systems and the design of inhibitors. This course explores the design, synthesis, screening, and use of natural (i.e., peptide, protein, nucleic acid, carbohydrate) and unnatural (i.e., totally synthetic libraries).
**CHEM 780 Chemical Kinetics and Molecular Reaction Dynamics**

Fall. 4 credits. Prerequisite: CHEM 681 or permission of instructor. Lecs, T R. Not offered 2002-2003. P. L. Houston. Principles and theories of chemical kinetics and molecular reaction dynamics. Topics include potential energy surfaces, transition state theory, and statistical theories of unimolecular decomposition. Depending on class interest, the course also includes special topics such as surface reactions and photochemistry.

**CHEM 787 Modern Methods of Physical Chemistry**

Fall. 4 credits. Prerequisites: 1 year of undergraduate physical chemistry, 3 semesters of calculus, 1 year of college physics, (same as for CHEM 681). Lecs, T R. J. H. Reed. This course provides the methodological background for graduate courses in chemical thermodynamics, kinetics, statistical mechanics, and quantum chemistry. It includes the methods of solution of relevant differential equations; the eigenvalue problem and linear algebra; special functions partial differential equations for diffusion and wave mechanics; integral transforms; functions of a complex variable. At the level of Taylor's group; and spectroscopy, dynamics, and IVR.

**CHEM 788 Macromolecular Crystallography (also BIQB 738)**

Fall. 3 credits. S-U grades optional. Prerequisite: permission of instructor. Lecs, T R. S. E. Eallek. Lectures cover the fundamentals of x-ray crystallography and focus on methods for determining the three-dimensional structures of macromolecules. Topics include crystalization, data collection, phasing methods, model building, refinement, structure validation and structure interpretation.

**CHEM 791 Spectroscopy**

Spring. 4 credits. Prerequisite: CHEM 793 or PHYS 443 or equivalent. Lecs, M W F. Not offered 2002-2003. G. S. Ezra. Principles of molecular rotational, vibrational, and electronic spectroscopy. Topics include interaction of molecules with radiation; Born-Oppenheimer approximation; diatomic molecules; polyatomic molecules; feasible operations and the molecular symmetry group; and spectroscopy, dynamics, and IVR. At the level of Kroto's Molecular Rotation Spectra.

**CHEM 792 Molecular Collision Theory**

Spring. 4 credits. Lecs, T R. Not offered 2002-2003. G. S. Ezra. The concepts and methods of scattering theory are described with particular emphasis on applications to problems of chemical interest. At the level of Child's Molecular Collision Theory and Taylor's Scattering Theory.

**CHEM 793 Quantum Mechanics I**

Fall. 4 credits. Prerequisites: CHEM 390, coregistration in A&EP 221, or CHEM 797 or equivalents or permission of instructor. Lecs, M W F, D. B. Zax. Course topics include: Schrodinger's equation, wave packets, uncertainty principle, matrix mechanics, orbital and spin angular momentum, exclusion principle, perturbation theory, and the variational principle. At the level of Cohen-Tannoudji's Quantum Mechanics.

**CHEM 794 Quantum Mechanics II**

Spring. 4 credits. Prerequisites: CHEM 793 or equivalent and the equivalent of or ccoregistration in A&EP 322, or permission of instructor. Lecs, M W F. G. S. Ezra. Topics include: WKB theory; density matrix; time-dependent perturbation theory; molecule-field interaction and spectroscopy; group theory; angular momentum theory; scattering theory; Born-Oppenheimer approximation and molecular vibrations; molecular electronic structure.

**CHEM 796 Statistical Mechanics**

Spring. 4 credits. Prerequisite: CHEM 678 and 793 or equivalent. Lecs, T R. Staff. Statistical mechanics of systems of interacting molecules. Structure and thermodynamics of molecular liquids. Phase transitions and critical phenomena. Computer simulation methods Nonequilibrium statistical mechanics, with application to reactive and nonreactive dynamics in the liquid state.

**CHEM 798 Bonding in Molecules**

Fall. 4 credits. Prerequisite: some exposure to quantum mechanics; a good undergraduate physical chemistry course may be sufficient, or CHEM 681. Physics 433 or CHEM 793 at substantially higher level than what is needed. Consult instructor if in doubt. Lecs, T R. R. Hoffmann.

The aim is to build a qualitative picture of bonding in all molecules, including organic, inorganic, organometallic systems and extended structures (polymer, surfaces, and three-dimensional materials). The approach uses molecular orbital theory to shape a language one. Some basic quantum mechanics is needed, more will be taught along the way. The course is directed at organic, inorganic, and polymer chemists who are not theoreticians, it is useful for physical chemists, engineers and physicists as well.

**FALCON Program (Chinese)**

See Department of Asian Studies.

**CLASSICS**

Cornell University has long recognized the importance of studying the civilizations of ancient Greece and Rome. Particularly in an age of increasing specialization, study of the Classics is widely viewed as an excellent means of acquiring a liberal education; at Cornell, we are deeply interested in the continuing humanistic values contained in the literature of the ancient world and in gaining a fuller understanding of these important cultures and their impact on subsequent ages. The Classics department at Cornell is one of the oldest and largest in the country. With twenty-seven faculty members—including professors with related interests in the departments of History, Philosophy, Comparative Literature, History of Art, Modern Languages, Linguistics, and Near Eastern Studies, and in the Archaeology, Medieval Studies, and Religious Studies programs—the range of instruction is broad. The department embraces both the traditional core studies of ancient language, literature, philosophy, art, and history, and the different approaches to its material yielded by comparative study of Mediterranean civilizations, peace studies, and feminist and literary theory.

The department offers a wide variety of Classical Civilization courses and seminars in English on such subjects as Greek mythology, ancient mystery religions, early Christianity, and Greek and Roman society; ancient epic, lyric, tragedy, comedy, satire, novels, and love-poetry, Periclean Athens, Republican Rome, the Roman Empire, Goths, Vandals and Huns, and Byzantine history, and Plato, Aristotle, and Hellenistic philosophy. These courses are designed to introduce aspects of Classical antiquity to students with very divergent primary interests. Other Classical civilization courses with a wide appeal are those on art and archaeology, and dendrochronology (the study of tree-rings to determine the date of ancient artifacts). These courses make use of the university's large collections of ancient coins, and of reproductions of sculptures, inscriptions, and other ancient objects. Students who wish to gain first-hand archeological experience may also join one of several summer Cornell-sponsored field Projects in Greece and Turkey.

The study of language is a vital part of Classics. The department offers courses ranging from 100-level classes designed to further the understanding of English and modern scientific terminology through the study of the Latin and Greek sources of much of its vocabulary, to courses in linguistics on the morphology and syntax of the ancient languages, comparative grammar, and Indo-European (the reconstructed family of languages that includes Greek, Latin, Sanskrit and most modern European languages). The core function of the department is the study of ancient Greek and Latin Elementary Greek and Latin are taught in both two-semester courses and intensive one-semester courses. (For students whose Latin is a bit rusty, the department also offers a rapid, one-semester review class.) Students with a more advanced knowledge of Greek or Latin can take advantage of a wide selection of courses, from intermediate language classes at the 200-level, which brush up and broaden knowledge of syntax and vocabulary, to graduate and faculty reading groups. All of these courses use exciting literary texts, whether the poems of Catullus and Virgil, or the dialogues of Plato and Xenophon, at the 200-level, or, in the reading groups, the latest papyrological discoveries, such as the 'new' fragments of 'Epelemodos' cosmic poem or the 'new' epigrams of Posidippus.

The primary purpose of language-instruction is to enable the study at first-hand of the extraordinary range of powerful and challenging texts in Greek and Latin. The department offers undergraduate and graduate courses on literary, linguistic, historical, and philosophical topics, studied through the Greek and Latin works of authors from Homer (probably from the 8th Century BCE) to
Boethius (6th Century CE), and occasionally from later writers such as Dante, Petrarch, or Milton. The department strives to adapt its program to the needs of individual students from all disciplines. If you are interested in studying a Classical text or period that is not offered in the Courses of Study, please contact the directors of graduate or undergraduate studies.

**Majors in Classics**

The Department of Classics offers majors in Classics, Greek, Latin, and Classical Civilization.

**Classics**

The Classics major has two requirements: (i) seven courses in Greek and Latin numbered 201 or above; and (ii) 3 courses in related subjects selected in consultation with the student’s departmental advisor (see below).

Classics majors are required to take a minimum of one 300-level course in one language and two 300-level courses in the other.

Students who are considering the option of undertaking graduate study in Classics are strongly advised to complete the Classics major.

**Greek**

The Greek major has three requirements: (i) Classics 201; (ii) 5 courses in Greek numbered 203 and above; and (iii) 3 courses in related subjects selected in consultation with the student’s departmental advisor (see below). The courses in Greek must include at least 3 at the 300-level.

**Latin**

The Latin major has three requirements: (i) Classics 205; (ii) 5 courses in Latin numbered 207 and above; and (iii) 3 courses in related subjects selected in consultation with the student’s departmental advisor (see below). The courses in Latin must include at least 3 at the 300-level.

**Classical Civilization**

The Classical Civilization major has four requirements: (i) qualification in Latin and Greek or proficiency in either; (ii) Classics 211 or History 205, Classics 212 or History 206, and Classics 220; (iii) 5 courses selected from those listed under Classical civilization, Classical archaeology, Ancient Philosophy, Latin (numbered 206 and above), and Greek (numbered 201 and above); and (iv) 3 courses in related subjects selected in consultation with the student’s departmental advisor (see below). The courses in Latin must include at least 3 at the 300-level.

**Related Subjects**

Classics is an interdisciplinary field concerned with the study of Mediterranean civilizations from the 15th century BCE to the 6th century CE. Subjects in the field include Greek and Latin language, literature and linguistics; ancient philosophy, history, archaeology and art history; papyrology, epigraphy, and numismatics. In addition to the required courses in language and literature, the majors include a requirement for related courses intended to give breadth and exposure to the other disciplines within the field and to enrich the student’s study of Classical languages and literature. Since the influence of the Greek and Roman world extended far beyond antiquity, a related course may focus on some aspect of the classical tradition in a later period. Students select related courses in consultation with their departmental advisors or the DUS.

**Honors**

Candidates for the degree of Bachelor of Arts with honors in Classics, Greek, or Classical civilization must fulfill the requirements of the appropriate major and complete the two-semester honors course, Classics 472. Credit for the honors course may be included in the credits required for the major.

**Independent Study**

Independent study at the 300 level may be undertaken by undergraduates upon completion of one semester of work at the 300 level. 200-level independent study may be undertaken only in the case of documented schedule conflict and with the permission of the DUS.

**Study Abroad**

Cornell is associated with four programs that provide opportunities for summer, semester, or year-long study abroad in Greece and Italy. The American School of Classical Studies at Athens offers a Summer Program for graduate students and qualified undergraduates; College Year in Athens offers semester-long courses (consult Cornell Abroad for details). The Intercollegiate Center for Classical Studies in Rome provides semester-long courses in Latin, Greek, ancient history, art, archaeology, and Italian; the American Academy in Rome offers both full-year and summer programs for qualified graduate students. The Classics Department awards several travel grants each year for graduate students from the Townsend Memorial Fund; undergraduates are eligible for the Caplan Fellowships (see ‘awards’ below). Detailed information on these programs is available in the Classics Office, 120 Goldwin Smith Hall.

**Summer Support for Language Study**

The Department of Classics has at its disposal a number of endowments established to assist with the tuition of students who wish to enroll in Intensive Latin or Greek in the Cornell summer session. These courses are designed to enable students to enter second-year Latin or Greek the following fall. Preference is given to Classics’ undergraduate majors, and other students needing Latin or Greek for completion of their majors; dyslexic students are accorded additional preference. Applications are due to the chair of the Department of Classics by March 31st. See also under “Awards” below.

**Placement, Qualification, and Proficiency in Latin, Ancient Greek, and Modern Greek**

Placement of first-year students in Latin and ancient Greek courses is determined by examination given by the Department of Classics during orientation week. Qualification and proficiency in Latin and Ancient Greek may be achieved by passing the relevant language courses or by special examination. Special examinations are offered only in the first week of each semester. For details concerning these examinations and qualification or proficiency in Modern Greek, contact the director of undergraduate studies.

**Freshman Writing Seminars**

The department offers freshman writing seminars on a wide range of Classical and Medieval topics. Consult John S. Knight Writing Seminar Program brochures for times, instructors, and descriptions.

**Awards**

Departmental majors are eligible for several awards administered by the Classics department. The Kanders-Townsend Prize Fellowships are awarded annually to three or four freshmen or sophomores for summer study of Intensive Greek or Latin at Cornell and provide tuition and a stipend to cover living expenses. The Harry Caplan Fellowships are awarded annually to one or two outstanding juniors by the College of Arts and Sciences for travel in Europe or the Near East.

**Classical Civilization**

CLASS 100 Word Power: Greek and Latin Elements in the English Language Spring. 3 credits. Not offered 2002-2003. This course gives the student with no knowledge of the classical languages an understanding of how the Greek and Latin elements that make up over half our English vocabulary operate in both literary and scientific English usage. Attention is paid to how words acquire their meaning and to enlarging each student’s working knowledge of vocabulary and grammar.

CLASS 109 English Words: Histories and Mysteries (also LING 109) # (III) Fall. 3 credits. M. Weiss. For description, see LING 109.

CLASS 211 The Greek Experience # (IV) Fall. 3 credits. Limited to 50 students. F. Ahl. An introduction to the literature and thought of ancient Greece. Topics include epic and lyric poetry, tragedy and comedy, and historical, political, philosophical, and scientific writings. Some attention is also given to the daily life of ordinary citizens, supplemented by slides of ancient art and architecture.
Apuleius, Chariton, Heliodorus, Longus, and from related genres such as satire, biography, Petronius and a selection of shorter pieces including the novels by Achilles Tatius, our own thinking.

Ancient fiction blended ideal romance, tragedy responded to and made an accommodation with philosophical discourse while ancient soldier-historians who participated in the campaigns about which they later wrote. Topics include historiography, autobiography, propagandistic, style. Readings include selections from Thucydides, Xenophon, Julius Caesar, Josephus, Ammianus Marcellinus, for comparative purposes, modern soldier-historians.

Greek religion constitutes one of the essential factors and influences involved in the creation of myths; and the use of myths for our understanding of Greek literature, religion, and moral and political concepts.

Greek religion constitutes one of the essential features of ancient Greek civilization and distinguishes it from later Western civilization. Since religion permeates Greek culture, including the major art forms (epic poetry, tragedy, comedy, architecture, painting, and sculpture), the course investigates the interaction between these forms—an investigation that is fruitful both for the understanding of Greek religion and the forms themselves, some of which, like tragedy, originated in cult. A representative variety of cults and their history are studied with special emphasis on mystery cults, such as the Eleusinian mysteries of Demeter and Persephone, the Kabiri, the Great Gods of Samothrace, and Bacchic rites.

The origins of comic drama in ancient Greece and Rome, and its subsequent developments especially in the Italian renaissance (Commedia prospera and Commedia dell’arte), Elizabethan England, seventeenth-century France, the English Restoration, and Hollywood in the thirties and forties. Chief topics include: the growth of the comic theatrical tradition and conventions; techniques and themes of comic plots (trickster, parody, farce, caricature); and the role of comedy in society. All readings in English.

Fall 2002 and summer 2003. 3 credits. Limited to 200 students. D. Mankin.

A survey of the Greek myths, with emphasis on the content and significance of the myths in Mediterranean society, including the place of myth in Greek life and consciousness; the factors and influences involved in the creation of myths; and the use of myths for our understanding of Greek literature, religion, and moral and political concepts.

Fall 2002 and summer 2003. 3 credits. Limited to 200 students. D. Mankin.

A survey of the Greek myths, with emphasis on the content and significance of the myths in Mediterranean society, including the place of myth in Greek life and consciousness; the factors and influences involved in the creation of myths; and the use of myths for our understanding of Greek literature, religion, and moral and political concepts.

Fall 2002 and summer 2003. 3 credits.

A survey of the Greek myths, with emphasis on the content and significance of the myths in Mediterranean society, including the place of myth in Greek life and consciousness; the factors and influences involved in the creation of myths; and the use of myths for our understanding of Greek literature, religion, and moral and political concepts.

Fall 2002 and summer 2003. 3 credits. Limited to 200 students. D. Mankin.

A survey of the Greek myths, with emphasis on the content and significance of the myths in Mediterranean society, including the place of myth in Greek life and consciousness; the factors and influences involved in the creation of myths; and the use of myths for our understanding of Greek literature, religion, and moral and political concepts.
examines a variety of very different conceptions of the self from the period 700 BCE to 400 CE, using a range of texts from Greek and Roman literature (including epic and tragedy), medical theory, and philosophy (both pagan and Christian).

**[CLASS 265 Ancient Greece from Homer to Alexander the Great (also HIST 265)] # (III)**

For description, see HIST 265.

**CLASS 268 A History of Rome from Republic to Principate (also HIST 268) # (III)**
Spring. 4 credits. Open to freshmen. J. Ginsburg.

For description, see HIST 268.

**[CLASS 291 Classical Indian Narrative (also ASIAN 291) @ # (IV)]**

**CLASS 303-304 Independent Study in Classical Civilization, Undergraduate Level**
303, fall; 304, spring. Up to 4 credits.

**CLASS 310 Aristotle (also PHIL 310)**
Spring. 4 credits. J. Whiting.

Aristotle's practical and productive works (his Ethics, Politics, Rhetoric, and Poetics), with attention to their grounding in his theoretical works.

**[CLASS 342 Translation for the Theatre (also THETR 423/623 and COM L 446/646) # (IV)]**
Spring. 4 credits. Prerequisites: proficiency in language other than English; coursework in dramatic literature, directing, or playwriting. Not offered 2002-2003. J. E. Gainor.

For description, see THETR 423/623.

**[CLASS 331 Goths, Vandals, Franks, and Romans # (IV)]**

Contemporary views of the Visigothic Sack of Rome by Alaric in 410 are followed by three different case-studies for coexistence of Roman and barbarian in Late Antiquity: the Vandal kingdom (North Africa), the Ostrogothic kingdom (Italy), and finally the one that lasted, the Frankish kingdom (Gaul). Readings include contemporary primary works as well as modern historiography.

**[CLASS 333 Greek and Roman Mystery Cults and Early Christianity (also RELST 333) # (IV)]**
Fall. 4 credits. A previous course in Classics (civilization or language) or Religious Studies 101 is recommended. Not offered 2002-2003. K. Clinton.

A study of the controversial question of religious continuity between paganism and early Christianity. After a brief survey of classical mystery cults and Hellenistic religion, the course focuses on such Hellenistic and Roman cults as the mystery cults of Isis, Bacchus, Mithras, and Attis and the Great Mother and on the distinctive features that contributed to their success. Discussion of Christian liturgy and beliefs to determine what Christianity owed to its pagan predecessors and to isolate the factors that contributed to its triumph over the "rival" pagan cults of late antiquity.

**[CLASS 339 Plato (also PHIL 309) # (IV)]**
Fall. 4 credits. Prerequisite: at least 1 previous course in philosophy. Not offered 2002-2003. G. Fine.

For description, see PHIL 309.

**CLASS 345 The Tragic Theater (also COM L 344 and THETR 345) # (IV)**
Spring. 4 credits. Limited to 40 students. F. Ahl.

Tragedy and its audiences from ancient Greece to modern theater and film. Topics: origins of theatrical conventions; Shakespeare and Seneca; tragedy in modern theater and film. Works studied will include: Aeschylus' Agamemnon; Sophocles' Oedipus Tyrannus, Philoctetes; Euripides' Alcestis, Helen, Iphigenia in Aulis, Orestes, Seneca's Thyestes, Trojan Women, Shakespeare's Julius Caesar, Titus Andronicus, Othello; Strindberg's The Father, Durrenmann's The Visit, Bergman's Seventh Seal, Cacoyannis' Iphigenia.

**CLASS 362 Greeks, Romans, and Victorians (also COM L 382) # (IV)**

This course explores how nineteenth-century (and especially Victorian English and Irish) poets, dramatists, and to a lesser extent, novelists, present Greco-Roman antiquity. The varied influences of Vergil and Homer, Seneca and Sophocles, Plautus and Aristophanes, Horace, and Greek lyric poetry are discussed in selected works of Thomas More, Shelley, Byron, Swinburne, W. S. Gilbert, Oscar Wilde, and the pre-Raphaelites and Victorian poets.

**[CLASS 390 The Sanskrit Epics (also ASIAN 390) @ # (IV)]**

For description, see ASIAN 390.

**[CLASS 395 Classical Indian Philosophical Systems (also ASIAN 395 and RELST 395) @ # (IV)]**
Spring. 4 credits. Prerequisite: some background in philosophy or in classical Indian culture. Not offered 2002-2003. C. Minkowski.

For description, see ASIAN 395.

**CLASS 413 Topics in Ancient Philosophy (also PHIL 413)**
Fall. 4 credits. J. Whiting.

Mind, self, and psychopathology in ancient philosophy.

**CLASS 445 Classic Modern Historiography of Ancient Greece (also HIST 435) # (III)**
Fall. 4 credits. Prerequisite: an introductory course in ancient Greek history or civilization or permission of the instructor. Not offered 2002-2003. C. Minkowski.

This upper-level seminar is an introduction to some of the main themes, directions, and controversies in modern research on ancient Greece. We will read selections from the leading works of scholarship on ancient Greece from the nineteenth and twentieth century, including such authors as Grote, Burchardt, Comford, Glotz, Momigliano, M. I. Finley, Ste. Croix, Vernant, Vidal-Naquet, and the current crop of scholars.

**[CLASS 450 The Peloponnesian War (also CLASS 632 and HIST 450/630) # (III)]**
Fall. 4 credits. Prerequisites: CLASS 211 or 217, HIST 265, or permission of instructor. Not offered 2002-2003. B. Strauss.

For description, see HIST 450.

**[CLASS 463 Gender and Politics in the Roman World (also HIST 463 and WOMNS 464) # (III or IV)]**

An undergraduate seminar examining the relationship between gender and politics in the late Roman Republic and early Empire. Among the questions this course addresses are: was politics the exclusive domain of men in Roman society (as is generally assumed) or does a broader definition of politics and an understanding of the various forms political activity in ancient Rome might have taken allow a place for women in Roman political life? What role did gender have in Roman political discourse and ideology? Why did issues such as family, marriage, and sexuality become subjects of political debate and legislation?

**[CLASS 469 Equality and Inequality in Ancient Greece (also HIST 469) # (III or IV)]**
Fall. 4 credits. Prerequisite: HIST 265, CLASS 211 or 217, or written permission of the instructor. Not offered 2002-2003. B. Strauss.

For description, see HIST 469.

**[CLASS 470 Roman Society and Politics under the Julio-Claudians (also HIST 473) # (III or IV)]**
Spring. 4 credits. Prerequisite: CLASS 212, HIST 268, or permission of instructor. Not offered 2002-2003. J. Ginsburg.

This course examines several of the important social and political changes in Roman society under Augustus and his successors, the Julio-Claudians. Topics to be investigated include Augustus' consolidation of power through political and social revolution, the Augustan attempt to regulate family life and social relations by legislation, the relation of the emperor Tiberius with the members of the old ruling class, the growth of the imperial bureaucracy and the opportunities for social mobility, the political opposition to Claudius and Nero, Nero's cultural and provincial policy, and the manipulation of the imperial cult. All readings will be in English.

**CLASS 700 Doctoral Dissertation Research**
Fall, spring. Letter grade only (0 credit).

**CLASS 711-712 Independent Study for Graduate Students in Classical Civilization**
711, fall; 712, spring. Up to 4 credits.

**Greek**

**CLASS 101 Elementary Ancient Greek I**
Fall. 4 credits. K. Clinton.

Introduction to Attic Greek. Designed to enable the student to read the ancient authors as soon as possible.

**CLASS 103 Elementary Ancient Greek II**
Spring. 4 credits. Provides language qualification. Prerequisite: 101 or equivalent. Staff.
A continuation of CLASS 101, prepares students for CLASS 201.

CLASS 104 Intensive Greek Summer. 6 credits. Provides language qualification. Not offered 2002-2003. Staff. An intensive introduction combining the fundamentals of ancient Greek grammar with readings from a variety of classical authors in the original Greek. Prepares students in a single semester for CLASS 201.

CLASS 209 Intermediate Ancient Greek # (IV) Fall. 3 credits. Prerequisite: CLASS 103 or 104 or equivalent. C. Brittain. Selected readings from Greek prose.

CLASS 203 Homer # (IV) Spring. 3 credits. Prerequisite: CLASS 201. J. Coleman. Readings in the Homeric epic.

CLASS 210 Attic Prose # (IV) 5 credits. Prerequisite: CLASS 201. Not offered 2002-2003.

CLASS 225-226 Independent Study in Greek, Undergraduate # 225, fall, 226, spring. Up to 4 credits. Only by permission of the DUS in the case of documented schedule conflict. Staff.

CLASS 305 The Greek New Testament and Early Christian Literature # (IV) Fall. 4 credits. Prerequisite: CLASS 201 or equivalent, or permission of instructor. Not offered 2002-2003. D. Shanzer. More advanced readings from the Acts of the Apostles and some exercises on the Gospels are followed by readings from Early Christian Greek literature. The latter may include theological tracts and hagiographical texts, e.g. martyr-acts, such as the Passion of Pionius or the Passion of Perpetua.

CLASS 307-308 Independent Study in Greek, Undergraduate Level 307, fall; 308, spring. Up to 4 credits. Staff.

CLASS 310 Greek Undergraduate Seminar # (IV) Fall and spring. 4 credits. Prerequisite: two 200-level courses in Greek or permission of instructor. Fall topic: Euripides and Aristophanes. P. Pucci. Spring topic: Homer. K. Clinton.

CLASS 342 Greek Prose Composition (IV) Fall. 4 credits. Prerequisite: CLASS 201 or permission of instructor. A. Nussbaum.

CLASS 417 Advanced Readings in Greek: Thucydides (also ENGL 417, ENGL 617) # (IV) Fall. 4 credits. J. Rusten.

CLASS 419 Advanced Greek Composition (IV) Spring. 4 credits. Prerequisite: CLASS 342 or equivalent. J. Rusten.

CLASS 421 Greek Comparative Grammar (also LING 451) (III) Fall. 4 credits. A. Nussbaum. The prehistory and evolution of the sounds and forms of ancient Greek as reconstructed by comparison with the other Indo-European languages.

CLASS 427 Homeric Philology (also LING 487) (III) Spring. 4 credits. A. Nussbaum. The language of the Homeric epics: dialect background, archaisms, modernizations. The notion of a Kunstsprache: its constitution, use, and internal consistency. The phonological and morphological aspects of epic compositional technique.

CLASS 511 Greek Philosophical Texts (also PHIL 411) Fall and spring: up to 4 credits. Prerequisites: knowledge of Greek and permission of instructor. Staff. Readings of Greek philosophical texts in the original.

CLASS 545 Graduate TA Training Fall and spring. 1 credit. H. Pelliccia and F. Ahl. Pedagogical instruction and course coordination. Required for all graduate student teachers of CLASS (Latin) 105-106 and Classics First-Year Writing Seminars.

CLASS 555 Graduate Proseminar Fall. 1 credit. Not offered 2002-2003. Staff. Graduate students are introduced to the tools, techniques, and methods of classical scholarship.

CLASS 605-606 Graduate Survey of Greek Literature 605, fall; 606, spring. 4 credits each term. Prerequisite: linguistic proficiency to be determined by instructor. Not offered 2002-2003. A survey of Greek literature in two semesters. CLASS 505: Greek literature from Homer to the mid-fifth century. CLASS 606: Greek literature from the late fifth century to the Empire.

CLASS 632 Topics in Ancient History (also CLASS 450 and HIST 450/630) Fall. 4 credits. Not offered 2002-2003. B. Strauss. For description, see HIST 630.

CLASS 671 Graduate Seminar in Greek: Homer Fall. 4 credits. H. Pelliccia.

CLASS 672 Graduate Seminar in Greek: Odyssey Spring. 4 credits. P. Pucci.

CLASS 701-702 Independent Study for Graduate Students in Greek 701, fall; 702, spring. Up to 4 credits.

CLASS 105 Elementary Latin I Fall. 4 credits. Staff. An introductory course designed to prepare students to start reading Latin prose at the end of a year. The class moves swiftly and meets daily. Work includes extensive memorization of vocabulary and paradigms, study of Latin syntax, and written homework, quizzes, tests, and oral drills.

CLASS 106 Elementary Latin II Spring 4 credits. Provides language qualification. Staff. A continuation of CLASS 105, using readings from various authors; prepares students for CLASS 205.

CLASS 205 Intermediate Latin # (IV) Fall and spring. 3 credits. Provides language proficiency. Prerequisite: CLASS 105, 106, 107, 108, or placement by departmental examination. Fall: J. Ginsburg; spring: Staff. Readings in Latin prose.

CLASS 207 Catullus # (IV) Spring. 3 credits. Prerequisite: CLASS 205. P. Pucci.

CLASS 208 Roman Drama # (IV) 3 credits. Prerequisite: CLASS 205. Not offered 2002-2003. Staff.

CLASS 216 Vergil # (IV) Fall. 3 credits. Prerequisite: CLASS 205. K. Clinton.

CLASS 227-228 Independent Study in Latin, Undergraduate Level 227, fall; 228, spring. Up to 4 credits. Only by permission of the DUS in the case of documented schedule conflict. Staff.

CLASS 231 Latin Undergraduate Seminar # (IV) Fall and spring. 4 credits. Prerequisite: 2 terms of 200-level Latin or permission of instructor. Fall topic: Roman Drama. D. Mankin. Spring topic: Suetonius and Tacitus. J. Ginsburg.

CLASS 314 The Augustan Age # (IV) 4 credits. Prerequisite: 2 terms of 200-level Latin or permission of instructor. Not offered 2002-2003. Staff.

CLASS 315-316 Independent Study in Latin, Undergraduate Level 315, fall; 316, spring. Up to 4 credits. Staff.

CLASS 317 Roman Historiography # (III or IV) 4 credits. Prerequisite: 1 term of 300-level Latin or permission of instructor. Not offered 2002-2003. J. Ginsburg.

CLASS 341 Latin Prose Composition # 4 credits. Prerequisite: 1 term of 200-level Latin or permission of instructor. Not offered 2002-2003. K. Clinton.

Web site: www.arts.cornell.edu/classics/Classes/Classics 369/Med_Latin.html
ARTS AND SCIENCES - 2002-2003

CLASS 411 Advanced Readings in Latin Literature: Tacitus, Dialogus and Germania # (IV)
Fall. 4 credits. J. Ginsburg.

CLASS 412 Advanced Readings in Latin Literature # (IV)
Spring. 4 credits. D. Shanzer.

CLASS 420 Plautus # (IV)
4 credits. Prerequisite: at least one 300-level Latin course or permission of instructor. Not offered 2002-2003. A. Nussbaum.

CLASS 422 Latin Comparative Grammar (also LING 452) # (III)
Not offered 2002-2003. The prehistory and evolution of the sounds and forms of Classical Latin as reconstructed by comparison with the other Indo-European languages.

CLASS 441 Advanced Latin Prose Composition Spring. 4 credits. For graduate students. Only those undergraduates who have completed CLASS 341 and have permission of the instructor may enroll. Not offered 2002-2003. Staff.

CLASS 555 Graduate Proseminar
Fall. 3 credits. Not offered 2002-2003. Staff. Graduate students are introduced to the tools, techniques, and methods of Classical scholarship.

CLASS 625-626 Graduate Survey of Latin Literature 625 fall; 626 spring. 4 credits each term. Prerequisite: linguistic proficiency to be determined by instructor. Fall. C. Sogno; spring. F. Ahl. A survey of Latin literature in two semesters.

CLASS 751-752 Independent Study for Graduate Students in Latin 751; fall; 752; spring. Up to 4 credits. Staff.

Classical Art and Archaeology

CLASS 220 Introduction to Art History: The Classical World (also ART H 220) # (IV)
Spring. 4 credits. Each student must enroll in a section. Not offered 2002-2003. A. Ramage. An overview of the art and archaeology of the Greek and Roman world. The sculpture, vase painting, and architecture of the ancient Greeks from the Geometric period through the Hellenistic, and the art of the Romans from the early Republic to the time of Constantine the Great.

CLASS 221 Minoan-Mycenaean Art and Archaeology (also ARKEO 221 and ART H 221) # (IV)
Fall. 3 credits. J. Coleman. The birth of civilization in Greece and the Aegean islands during the Bronze Age. The main focus is on the rise and fall of Minoan Crete and Mycenaean Greece, with consideration given to the nature and significance of Aegean interactions with Egypt, the Near East, and Anatolia.

CLASS 232 Archaeology in Action I (also ARKEO 232 and ART H 224) # (IV)

CLASS 233 Archaeology in Action II (also ARKEO 233 and ART H 225) # (IV)
3 credits. Prerequisite: permission of instructor. Not offered 2002-2003. P. I. Kuniholm. For description, see ART H 225.

CLASS 240 Greek Art and Archaeology (also ARKEO 240) # (III or IV)
Spring. 3 credits. J. Coleman. Introduction to the material culture of Greece from the Early Iron Age to the coming of the Romans (ca. 1000 BC to 31 BC). The course focuses not only on famous monuments such as the Parthenon, but also on the evidence for daily life and for contact with other civilizations of the Mediterranean. A critical attitude is encouraged toward the interpretation of archaeological remains and toward contemporary uses (and misuses) of the past.

CLASS 256 Practical Archaeology (also ARKEO 256) # (III or IV)
Spring. 3 credits. Not offered 2002-2003. J. Coleman. An introduction to the aims and methods of field archaeology. Topics covered include: remote sensing (satellite images and aerial photos); surface survey; sub-surface investigations by magnetometer; ground penetrating radar, etc.; the layout and development of a land excavation; underwater excavations; the remote sensing (satellite images and aerial photos); collection, description, illustration, and analysis of artifacts and data, such as pottery, lichens, botanical samples, and radiocarbon samples. Hands-on experience with potsherds and other artifacts from prehistoric and Classical Greece and Cyprus in the university's collections is intended to prepare students for work in the field.

CLASS 309 Dendrochronology of the Aegean (also ARKEO 309 and ART H 309) # (IV)
Fall and spring. 4 credits. Prerequisite: permission of instructor. Letter grade only. Limited to 10 students. P. I. Kuniholm. For description, see ART H 309.

CLASS 319 Art in the Daily Life of Greece and Rome (also ART H 319) # (IV)
Spring. 4 credits. A. Ramage. For description, see ART H 319.

CLASS 320 The Archaeology of Classical Greece (also ART H 320) # (IV)

CLASS 321 Mycenaes and Homer (also ARKEO 321 and ART H 321) # (IV)
Fall. 4 credits. Prerequisite: at least 1 previous course in archaeology, classics, or history of art. Not offered 2002-2003. J. Coleman. Study of the relationship between the Mycenaean period of Greece (known primarily from archaeology) and the Homeric Iliad and Odyssey. Topics include Mycenaean architecture, burial customs, kingship, and military activities; the reasons for the collapse of the Bronze Age palatial economies; the archaeological evidence for society in the "Dark Ages" that followed; the writing systems of Mycenaean Age (Linear B) and the Iron Age (the Semitic/Greek alphabet); the nature of the Homeric poems and their value as historical sources.

CLASS 322 Greeks and Barbarians (also ART H 322) # (IV)
Fall. 4 credits. Prerequisite: CLASS 220 or 221, or permission of instructor. Not offered 2002-2003. J. Coleman. A study of the archaeological and other evidence for the interaction between Greek civilization and the peoples of the eastern and western Mediterranean from the thirteenth to the fourth centuries B.C.E. The course focuses on Greek relationships with Egypt, Phoenicia, Cyprus, Anatolia, and Italy in the post-Bronze Age period.

CLASS 323 Painting in the Greek and Roman World (also ART H 323) # (IV)

CLASS 324 Greek Vase Painting (also ART H 324) # (IV)

CLASS 325 Greek Sculpture (also ART H 325) # (IV)
4 credits. Not offered 2002-2003. J. Coleman. An examination of ancient Greek sculpture, both three-dimensional and two-dimensional, from the Archaic to the Hellenistic period. Aspects of the works studied include: technological advances, changing ideology of the sculptors, regionalism of styles, and taste of individual patrons.

CLASS 350 Arts of the Roman Empire (also ART H 350) # (IV)
Fall. 4 credits. A. Ramage. For description, see ART H 350.

CLASS 357-358 Independent Study in Classical Archaeology, Undergraduate Level 357; fall; 358; spring. Up to 4 credits.

CLASS 423 Ceramics (also ARKEO 423 and ART H 423) # (IV)
Spring. 4 credits. Prerequisite: permission of instructor. A. Ramage. For description, see ART H 423.

CLASS 430 Seminar on the Bronze Age Architecture of Asia Minor (also ARKEO 430 and ART H 425) # (IV)

CLASS 432 Sardis and the Cities of Asia Minor (also ARKEO 432 and ART H 424) # (IV)
4 credits. Prerequisite: permission of instructor. Not offered 2002-2003. A. Ramage. For description, see ART H 424.
CLASS 434 The Rise of Classical Greece (also ARKEO 434 and ART H 434) # (IV)
Spring. 4 credits. Recommended: CLASS 220 or 221, ART H 220 or 221, or permission of instructor. Not offered 2002–2003. P. I. Kuniholm.
For description, see ARKEO 434.

CLASS 435 Seminar on Roman Art and Archaeology (also ARKEO 435 and ART H 435) # (IV)
For description, see ART H 427.

CLASS 629 The Prehistoric Aegean (also ARKEO 629)
Seminar with focus on the Aegean and neighboring regions in the Neolithic and Early Bronze Ages.

CLASS 630 Seminar in Classical Archaeology (also ARKEO 520 and ART H 520)
Spring. 4 credits. P. Kuniholm.
For description, see ARKEO 520.

CLASS 721–722 Independent Study for Graduate Students in Classical Archaeology
721, fall; 722, spring. Up to 4 credits. Staff.

Greek and Latin Linguistics

CLASS 421 Greek Comparative Grammar (also LING 451) (III)
Spring. 4 credits. Prerequisite: thorough familiarity with the morphology of classical Greek. A. Nussbaum.
The prehistory and evolution of the sounds and forms of ancient Greek as reconstructed by comparison with the other Indo-European languages.

CLASS 422 Latin Comparative Grammar (also LING 452) (III)
The prehistory and evolution of the sounds and forms of Classical Latin as reconstructed by comparison with the other Indo-European languages.

CLASS 424 Italic Dialects (also LING 454) (III)

CLASS 425 Greek Dialects (also LING 455) (III)

CLASS 426 Archaic Latin (also LING 456) (III)
Reading of epigraphic and literary pre-Classical texts with special attention to archaic and dialectal features. The position of Latin among the Indo-European languages of ancient Italy, the rudiments of Latin historical grammar, and aspects of the development of the literary language.

CLASS 427 Homeric Philology (also LING 457) (III)
Spring. 4 credits. Prerequisite: ability to read Homeric Greek. A. Nussbaum.
The language of the Homeric epics: dialect background, archaisms, modernizations. The notion of a Kunstsprache: its constitution, use, and internal consistency. The phonological and morphological aspects of epic compositional technique.

CLASS 429 Mycenaean Greek (also LING 459) (III)

CLASS 131-132 Elementary Sanskrit
131, fall; 132, spring. 4 credits each term.
An introduction to the essentials of Sanskrit grammar. Designed to enable the student to read classical and epic Sanskrit as quickly as possible.

CLASS 251-252 Intermediate Sanskrit (also LING 251-252 and SANSK 251-252) # (IV)
251, fall; 252, spring. 3 credits each term.
CLASS 251 provides language proficiency. Prerequisite: CLASS 152 or equivalent. C. Minkowski.
Readings from the literature of Classical Sanskrit: Fall: selections from the two Sanskrit epics, the Mahabharata and the Ramayana. Spring: more selections from the epics, and from either Sanskrit story literature or from Sanskrit dramas.

CLASS 403-404 Independent Study in Sanskrit, Undergraduate Level
403, fall; 404, spring. Up to 4 credits. Staff.

CLASS 703-704 Independent Study for Graduate Students in Sanskrit
703, fall; 704, spring. Up to 4 credits. Staff.
Also see CLASS 291, 390, and 395 (Classical Civilization listings).

Honors Courses

CLASS 472 Honors Course: Senior Essay
Fall and spring. 8 credits. An adviser must be chosen by the end of the student’s sixth semester. Topics must be approved by the Standing Committee on Honors by the beginning of the seventh semester. See “Honors.” Classics front matter.

Cognitive Studies Program

S. Edelman (psychology), director. G. Gay (communication); C. Carle; R. Constable, J. Halpern, D. Hutterer, L. Lee, B. Selman, R. Zahn (computer science); A. Hedge (design and environmental analysis); K. Basu, L. Blume, D. Easley (economics); J. Dunn, R. Rippie, D. Schrader (education); S. Wicker (electrical and computer engineering); R. Canfield, M. Casasola, S. Ceci, B. Koslowski, B. Lust, S. Robertson, E. Temple, Q. Wang, E. Wetherington, W. Williams (human development).

Cognitive studies is comprised of a number of disciplines that are linked by a major concern with fundamental capacities of the mind, such as perception, memory, reasoning, language, the organization of motor action, and their neural correlates. In the College of Arts and Sciences these disciplines are represented in the departments of Computer Science, Economics, Linguistics, Mathematics, Neurobiology and Behavior, Philosophy, Psychology, Science & Technology Studies, and Sociology. Elsewhere in the university they are represented in the Departments of Computer Science, Mechanical and Computer Engineering, and Mechanical and Aerospace Engineering (College of Engineering), the Departments of Design and Environmental Analysis and Human Development (College of Human Ecology), the Departments of Communication and Education (College of Agriculture and Life Sciences), and the Johnson Graduate School of Management.

The issues addressed in cognitive studies arise at several levels. At the broadest level are problems of characterizing such basic notions as “mind,” “knowledge,” “information,” and “meaning.” At a more specific level are questions regarding the abstract operating principles of individual components of the mind, such as those underlying visual perception, language ability, and understanding of concepts. These principles concern the organization and behavior of the components and how they are biologically represented in the brain. At the most specific level are questions about the properties of the elementary computational structures and processes that constitute these components.
Important insights into issues of these kinds have been achieved in recent years as a result of the various cognitive studies disciplines converging in their theoretical and methodological approaches. It is this convergence, in fact, that warrants grouping the disciplines together under the single-term “cognitive studies.” Even greater progress can be expected in the future as a consequence of increasing cooperation among the disciplines.

Undergraduate Concentration

An interdisciplinary undergraduate concentration in Cognitive Studies is available to Cornell University undergraduates in the College of Arts and Sciences. Students from other colleges who seek such a concentration should discuss such possibilities with the Cognitive Studies office, which will provide information and contacts concerning such concentrations.

The undergraduate concentration in Cognitive Studies is designed to enable students to engage in a structured program directly related to the scientific study of cognition and the mind. The concentration provides a framework for the design of structured, supervised programs of study in this growing interdisciplinary field. Such programs of study serve as complements to coursework in a single discipline as represented by an individual department. It is considered crucial that students gain a strong background in their major, independent of their work in the concentration. Independent majors and college scholars may also apply. Colleges vary in their procedures for formal recognition of this concentration (contact the Cognitive Studies office for details). The Cognitive Studies Program faculty have designed five structured “tracks” that offer students different ways of satisfying the concentration. In addition, students are always able to construct their own programs of study subject to approval by their concentration advisor. The courses listed under each track are program suggestions. The student should consult with his or her Cognitive Studies advisor to develop a more customized curriculum. In some cases, students may want to combine or cross tracks.

In general, it is expected that students in the concentration will take COGST 101, a lab course such as COGST 201, and three courses at the 300 or 400 level in at least two departments. Even though only five courses are required to complete the concentration, we expect that students interested in cognitive studies will often end up taking more, and we encourage them to do an independent research project (COGST 470) and a research workshop such as COGST 471.

The five typical tracks are as follows. The first track involves a particular approach to the study of cognition. The other four tracks are structured around specific content domains and consist of sets of suggested course clusters. Please note that many of these courses have substantial prerequisites.

Foundational issues in cognitive science are intimately relevant to real world settings. The Cognitive Studies in Context track offers students the opportunity to learn and independently explore how theory and research on the mind can help us better understand how we use information in much of our daily activities, whether it be the workplace, the classroom, or any other aspect of everyday life. Students will come to better understand the cognitive ergonomics of such diverse settings as an aircraft cockpit, a quality control station on an assembly line, or an anesthesiology station in a surgical suite. They will come to better understand the perceptual constraints that help tailor the nature of visual communication systems, or the linguistic constraints that help tailor text-based communication. They will come to see how the functional architecture of human memory guides the presentation and use of information in a wide array of settings. They will also learn how design constraints on computer hardware and software interact with human capacities and biases.

COGST 101/COM S 101/LING 170/PHIL 191/PSYCH 102, Introduction to Cognitive Science

COGST 201/COM S 201/PSYCH 201, Cognitive Science in Context Laboratory

COGST 416/PSYCH 416, Modeling Perception and Cognition

In addition, three more upper-level approved courses in Cognitive Studies areas will normally be expected.

2. Perception and Cognition

This track focuses on psychological, computational, and neurobiological approaches to the interface between perception and cognition. Students will develop a grasp of the continuum between sensory impressions and complex thought.

PSYCH 425, Cognitive Neuroscience

PSYCH 440, The Brain and Sleep

A Cognitive Studies undergraduate laboratory and computer facility is available for all students in a Cognitive Studies concentration.

Students who complete the concentration requirements will have their concentration in Cognitive Studies officially represented on their transcript. In addition, students who have made very substantial progress towards completing the requirements for the concentration will be eligible for enrollment in the graduate courses in Cognitive Studies during their senior year.

Concentration Application Procedures.

Initial inquiries concerning the undergraduate concentration should be made to the Cognitive Studies Program coordinator, Linda LeVan, cogst@cornell.edu, 255-6431, who will provide application materials and set up a meeting with a relevant member of the Undergraduate Concentration Committee. This committee will assist the student with selection of a concentration advisor with expertise in the student’s main area of interest.

To formally initiate the concentration in Cognitive Studies, a student must gain approval for a selection of courses from a concentration advisor (one of the program faculty). The courses selected must form a coherent cluster that makes sense to both the advisor and be acceptable to the concentration, the student must submit this plan of study to the Cognitive Studies undergraduate faculty committee for final approval.

In addition to assisting in and approving the student’s selection of courses, the concentration advisor serves as a general source of information about the field of cognitive studies, relevant resources around the university, and job and graduate school opportunities. Often, the advisor can help the student develop independent research experience.

Independent Research. The concentration encourages each student to be involved in independent research that bears on research issues in cognitive studies, if possible. COGST 470 is available for this purpose. It is recommended that students report on their research activities in an annual undergraduate forum. The Undergraduate Concentration Committee is committed to helping students find an appropriate research placement when needed.

The Committee for Undergraduate Concentration in Cognitive Studies consists of: Bart Selman, computer science, 5-5643, 4144 Upson Hall, selman@cs.cornell.edu; Draga Zec, linguistics, 5-0728, 217 Morrill Hall, DZ17@cornell.edu; Zoltan Szabo, philosophy, 5-6824, 218 Goldwin Smith, ZS15@cornell.edu; Michael Owren, psychology, 5-3835, 224 Uris Hall, MJQ0@cornell.edu. The current Director of Undergraduate Studies is Draga Zec.

Graduate Minor

Entering graduate students, as well as advanced undergraduates, who are interested in cognition and in the cognitive sciences are advised to take course COGST 501, Cognition, in Fall semester. To obtain the full four credits, a student will have to enroll concurrently in PSYCH 214/COGST 214 or in COGST 101; alternatively, COGST101 may be taken earlier as a prerequisite.

Graduate students minorin in Cognitive Studies should take COGST 531, Topics in Cognitive Studies, at some point after taking COGST 501. This is a "topics" course, which focuses on different issues each spring semester, and also is open to advanced undergraduate students.

For more information, consult the program office (282 Uris Hall, cogst@cornell.edu) or the director of graduate studies, Shimon Edelman, 255-6365; se378@cornell.edu.

Courses

Cognitive Studies

[COGST 101 Introduction to Cognitive Science (also COM S 101, LING 170, PHIL 191, and PSYCH 102) (III)] Fall. 3 or 4 credits (the 4-credit option involves a writing section instead of taking exams). Not offered 2002-2003. M. Spivey. This course surveys the study of how the mind/brain works. We examine how information processing can arise from biological and artificial systems. The course draws primarily from five disciplines that make major contributions to cognitive science: philosophy, psychology, neuroscience, linguistics, and computer science. The first part of the course introduces the roles played by these disciplines, and by the full human cognitive science. The second part of the course focuses on how each of these disciplines contributes to the study of five topics in cognitive science: language, vision, learning and memory, action, and artificial intelligence.]

[COGST 111 Brain, Mind, and Behavior (also BIONB 111 and PSYCH 111) (II)] Spring. 3 credits. Letter grade only. Intended for freshmen and sophomores in the humanities and social sciences; seniors not allowed. Not recommended for psychology majors; biology majors may not use the course for credit toward the major. Not offered 2002-2003. R. Hoy and E. Adkins Regan.

Understanding how the brain creates complex human behavior and mental life is a great scientific frontier of the next century. This course enables students with little scientific background from any college or major to appreciate the excitement. What are the interesting and important questions? How are researchers trying to answer them? What are they discovering? Why did the brain evolve this remarkable capacity?

[COGST 172 Computation, Information, and Intelligence (also COM S 172 and ENGR 172)] Fall. 3 credits. Prerequisite: some knowledge of calculus. L. Lee. An introduction to computer science using methods and examples from the field of artificial intelligence. Topics include game playing, search techniques, learning theory, computer-intensive methods, data mining, information retrieval, the web, natural language processing, machine translation, and the Turing test. This is not a programming course; rather, "paper and pencil" problem sets will be assigned. Not open to students who have completed the equivalent of COM S 100.

A laboratory course that explores the theories of cognitive science and provides direct experience with the techniques of cognitive science, in relation to the full range of both present and anticipated future activities in the workplace, the classroom, and in everyday life. Discussions of laboratory exercise results, with emphasis on the techniques of cognitive science, are done in meetings of the entire class. Laboratory exercises, which are done on an individual or small group basis, include both pre-planned investigations and student-developed experiments. Use of digital computers as well as the Internet, e-mail, and web sites are integral components of the course.

The focus is on human-computer interactions that are intended to permit effective and efficient exchange of information and control of functions or operations. This approach is applied to real life settings. Students are expected to come to each discussion meeting having read and thought about assigned readings for the associated laboratory meetings fully prepared to perform the laboratory exercises. Laboratory facilities are available to students at all times so that statistical analysis of data, preparation of laboratory reports, and collection of experimental data will be facilitated.

[COGST 214 Cognitive Psychology (also PSYCH 214 and 614) (III)] Fall. 3 or 4 credits. The 4-credit option involves some participation in COGST 501 or PSYCH 614. Sophomore standing required. Limited to 150 students. S. Edelman.

The course serves as a broad overview of problems arising in the study of cognition and of the information-processing, or computa-
tional, approaches to solving these problems, in natural and artificial cognitive systems. Theoretical and experimental challenges posed by the understanding of perception, attention, action, reasoning, memory, thinking, and language are discussed and analyzed. Participants acquire conceptual tools essential for following the current debates on the nature of mind and its relationship to the brain.

**COGST 215 Psychological Language**

Language and Thought, and Academic Skills.

This course provides an introduction to the psychology of language. The purpose of the course is to introduce students to the scientific study of psycholinguistic phenomena. It covers a broad range of topics from the psycholinguistics, including the origin of language, the different components of language (phonology, morphology, syntax, and semantics), processes involved in reading, computational modeling of language processes, the acquisition of language (both under normal and special circumstances), and the brain bases of language.

**COGST 220 The Human Brain and Mind: Biological Issues in Human Development (also HD 220)**

**Fall. 3 credits. Prerequisite: HD 115, or permission of instructor. E. Temple.**

What do we know about the biology of the mind? As long as ago as the 1600s, when the philosopher, Descartes, speculated on how the mind and body interact, humans have been fascinated by how the chunk of tissue we call the brain can give rise to all the complexity that is human behavior. This course is designed as an introduction to the biology underlying human behavior. After studying basic concepts in neurobiology and neuroanatomy, the course will explore a variety of topics, such as how the brain reacts to drugs and hormones, and what brain mechanisms underlie seeing, hearing, thinking, emotions and desires, and dreaming. We will try to understand what is understood (and what is not yet understood) about the biological mechanisms underlying the human experience. In addition, we will discuss the biology of clinical disorders throughout. This course will give background necessary for other courses in HD that focus on biological mechanisms of human development and serves as a prerequisite for many of them.

**COGST 230 Cognitive Development (also HD 230)**

Spring. 3 credits. Prerequisite: HD 115 or PSYCH 101. Q. Wang.

This course is designed to help students develop a broad understanding of the mechanisms, processes, and current issues in cognitive development and learn to do critical, in-depth analyses of developmental research. We will discuss how children's thinking changes over the course of development and evaluate psychological theories and research on various aspects of cognitive development. Topics include perception, representation and concepts, reasoning and problem solving, social cognition, memory, metacognition, language and thought, and academic skills. Students will also have hands-on research experiences with "real" kids.

**COGST 264 Language, Mind, and Brain**

(also LING 264) (III)

J. Bowers.

An introductory course that emphasizes the formal structure of natural language in the Minimalist framework. The following topics are covered: the formal representation of linguistic knowledge, principles, and parameters of Universal Grammar, the basic biology of language, mechanisms of linguistic performance, the modularity hypothesis, and language and cognition. The course is specially suited for majors in fields such as psychology, philosophy, computer science, and linguistics (and also for those enrolled in the concentration in cognitive studies) who want to take a one-semester introduction to linguistics that concentrates on the formal principles that govern linguistic knowledge, along with some discussion of their biological realization and their use in perception and production.

**COGST 270 Truth and Interpretation**

(also LING 270 and PHIL 270) (III or IV)

**COGST 330 Introduction to Computational Neuroscience**

(also BIONB 330) (III)

Fall. 3 credits. Limited to 25 students. Prerequisites: BIONB 222 or permission of instructor. Offered alternate years.

C. Linster.

This course covers the basic ideas and techniques involved in computational neuroscience. The course surveys diverse topics including: neural dynamics of small networks of cells, neural coding, learning in neural networks and in brain structures, memory models of the hippocampus, sensory coding and others.

**COGST 333 Problems in Semantics—Quantification in Natural Language**

(also LING 333 and PHIL 333) (III or IV)

Spring. 4 credits. Prerequisites: a previous course in formal semantics (e.g., LING 421) or logic (e.g., PHIL 231) or permission of instructor. Not offered 2002-2003.

S. McConnell-Ginet and Z. G. Szabó.

This course looks at problems in the semantic analysis of natural languages, critically examining work in linguistics and philosophy on particular topics of current interest. The focus is on quantification. Languages offer a variety of resources for expressing generalizations: some, every, no, many, and other quantifying expressions that appear inside noun phrases, always, never, occasionally, and other adverbial quantifying expressions not associated with finite nominalizations, constructions of kinds of various kinds (e.g., English free relatives like whatever the cook). How different are these resources and what might they imply about basic cognitive and linguistic capacities?

**COGST 342 Human Perception: Applications to Computer Graphics, Art, and Visual Display (also PSYCH 342 and 642) (III)

Fall. 3 or 4 credits. The 4-credit option involves an annotated bibliography or creating a relevant web site. Prerequisites: PSYCH 205, 209, 214, 223, 292, or permission of instructor. M. Owren.

This course examines some of the conceptual and empirical work resulting from and fueling the recent surge of interest in animals' thinking. Specific topics may include whether nonhumans behave intentionally; whether they show concept and category learning, memory, and abstract thinking similar to that of humans; the role of social cognition in the evolution of intelligence; and whether animals are conscious or self-aware. Evidence from communication studies and field studies on animal signals provide a "window on the mind." Emphasis is placed on how complex sensory information gets represented in these models, as well as how it gets processed. This course covers computational accounts of language processing, language acquisition, visual perception, and visual development, among other topics. Students complete a final project that applies a computational model to some perceptual/cognitive phenomena.

**COGST 414 Comparative Cognition (also PSYCH 414 and 516)**

(III)

Spring. 4 credits. Prerequisites: PSYCH 205, 209, 214, or 215, or permission of instructor. Not offered 2002-2003. M. Spivey.

This course offers a survey of several computational approaches to understanding perception and cognition in animals. Topics include methods of systems analysis, connectionist models, dynamical systems, and production systems, to name a few. Emphasis is placed on how complex sensory information gets represented in these models, as well as how it gets processed. This course covers computational accounts of language processing, language acquisition, visual perception, and visual development, among other topics. Students complete a final project that applies a computational model to some perceptual/cognitive phenomena.

**COGST 424 Computational Linguistics**

(also COM S 324 and LING 424) (III)

Spring. 4 credits. Prerequisite: LING 203.

This course involves work in the Unix environment, COM S 114 is recommended. Not offered 2002-2003. M. Rooth.

Steady progress in formalisms, algorithms, linguistic knowledge, and computer technology is bringing computational mastery of the syntax, morphology, and phonology of natural languages within reach. The course introduces methods for "doing a language" computationally, with an emphasis on approaches which combine linguistic knowledge with powerful computational formalisms. Topics include: computational grammars, parsing, representation of syntactic analyses; finite state morphology, weighted grammars, feature constraint formalisms for syntax; treebank and other markup methodologies; robust low-level syntax and semantics.
Connectionist psycholinguistics involves using (artificial) 'neural' networks, which are inspired by brain architecture, to model empirical data on the acquisition and processing of language. As such, connectionist psycholinguistics has had a far-reaching impact on language research. In this course, we will survey the state of the art of connectionist psycholinguistics, ranging from speech processing and word recognition, to inflectional morphology, sentence processing, and the broader methodological and theoretical issues related to language acquisition. A major theoretical focus of discussion will be the brain mechanisms underlying human behavior and cognition: How do those underlying brain mechanisms develop? These are the questions that we will explore in this course through both lecture and reading and discussion of primary literature. The first weeks of class will cover basics of developmental neurobiology and neuropsychology, and methods used in the field of cognitive neuroscience (especially neuroimaging techniques). After the introductory and methods information is covered we will change topics every week. In the remaining weeks we will be lecture and discussion of current research papers. Each week we will focus on a particular cognitive ability like language, memory, attention, inhibitory control, etc. For each topic, we will explore what is known about the brain mechanisms underlying that particular function, how those brain mechanisms develop over the lifespan, and where possible, the brain mechanisms underlying disorders of that particular cognitive function.

This laboratory course is an optional supplement to the survey course, Language Development (COGST/HD/LING/PSYCH 450). The lab course provides students with a hands-on introduction to research in language acquisition, including design and methods, in the area of first language acquisition.

This course examines current data and theory concerning memory, self, and emotion from a variety of perspectives and at multiple levels of analysis, particularly focusing on the interconnections among these fields of inquiry. A special emphasis is given to cross-cultural studies on memory development, self-construal, and conception of emotion.
experiments, i.e., how to turn vague theories into concrete and testable notions, evaluate studies, avoid common pitfalls, and, finally, remain ethical. Beyond learning methods of "correct" and rigorous experimentation, we also discuss what makes a research study actually interesting. The course, in addition, covers test construction, survey methods, and "quasi experiments." Students concentrate on completing a small research project in which they conduct an experiment, interpret its data, and write up the results.

Computer Science

[COM S 211] Computers and Programming Fall, spring, or summer. 3 credits.

[COM S 312] Structure and Interpretation of Computer Programs Fall or spring. 4 credits.

[COM S 381] Introduction to Theory of Computing Fall or summer. 4 credits.

PSYCH 492 Sensory Function (also BIONB 492 and PSYCH 692) Spring. 4 credits. B. Halpern and H. Howland.

Graduate Courses and Seminars The following courses and seminars are generally for graduate students only. However, some may be appropriate for advanced undergraduates. The director of the concentration must approve an undergraduate's use of any of these for satisfying the concentration requirements.

COGST 501 Cognition Fall. 4 credits. Concurrent or prior registration in COGST 101 (also COM S 101, LING 170, PHIL 191, and PSYCH 102) Introduction to Cognitive Science, or COGST/PSYCH 214, Cognitive Psychology, is required. Co-meets with PSYCH 614, Cognitive Psychology. S. Edelman. This course introduces graduate students interested in cognition (especially those who plan to pursue the Cognitive Studies minor) to the central issues in computational cognitive psychology. It consists of a series of advanced-level discussions of selected examples from the material covered in COGST 101 (also COM S 101, LING 170, PHIL 191, and PSYCH 102) and COGST 214 (also PSYCH 214/614). The material from those courses includes perception, attention and consciousness, memory, thinking, and language. The course focuses on the development of skills required for critical evaluation of research in cognitive sciences, backed by an in-depth understanding of the relevant concepts and theories.

COGST 530 Representation of Structure in Vision and Language (also LING 530 and PSYCH 530) Spring. 4 credits. Graduate seminar. Enrollment limited to advanced undergraduates (or undergraduates with permission of instructor). Prerequisites: a course each in cognitive psychology, linguistics, and computer science, or permission of instructor. Offered alternate years. S. Edelman. The seminar concentrates on the nature of the representation of visual objects and scenes in the brain and compares it with the structural framework that serve as the main explanatory tool in current theories of language processing. Data and ideas are drawn from visual psychophysics, neurophysiology, psycholinguistics, computational vision and linguistics, and philosophy. Readings present published research papers and preprints, which are then discussed and critiqued.

COGST 531 Topics in Cognitive Studies: Mind and Reality in Science Fiction (also LING 531 and PSYCH 531) Spring. 4 credits. Prerequisites: COGST 501, PSYCH 614 or permission of instructor. Open to advanced undergraduates. S. Edelman and H. Segal. What does it mean to be a mind? How is a mind affected by its embodiment? By the body's immersion in the world? By not having a body in the first place, or not any longer? Is the world out there? How do I find out? For more information, see http://kybele.psych.cornell.edu/~edelman/Cog-531-Spring-2003.

COGST 550 Special Topics in Cognitive Science (also PSYCH 550) Fall or spring. 4 credits. Topics and schedule available in the Psychology Department main office just prior to the start of classes each semester. Not offered 2002-2003. M. Spivey.

COGST 633 Language Acquisition Seminar (also HD 633 and LING 633) Fall. 1-4 credits. Prerequisite: COGST/HD/LING/PSYCH 450 or equivalent, or permission of instructor. B. Lust. This seminar reviews and critiques current theoretical and experimental studies of first-language acquisition, with a concentration on insights gained by cross-linguistic study of this area. Attention is also given to the development of research proposals.
Topics in modern logic needed to understand variety of disciplines including computer science, economics, game theory, philosophy, and use automated reasoning systems such as science, economics, game theory, philosophy, Research on decision theory resides in a behavior, and shaping the individual decisions they conduct an experiment, interpret its data, and write up the results.

COM S 671 Introduction to Automated Reasoning (also COGST 671)
Spring. 4 credits. Prerequisite: (COM S 611 and graduate standing) or permission of instructor. Not offered 2002–2003. R. Constable.

COM S 672 Advanced Artificial Intelligence
Spring. 4 credits. Prerequisite: COM S 472.

COM S 674 Natural Language Processing
Spring. 4 credits. Prerequisite: COM S 472.

COM S 675 Decision Theory (also COGST 676/677, ECON 478/477, and ECON 678/677)
Fall and spring. 4 credits each semester. This is a two-semester course. In the fall semester the course is lecture based. Students will be required to complete several problem sets and there will a final exam. In the spring semester there will be additional lectures as well as visiting speakers. Students will be required to read the speakers papers and participate in discussions. In the spring semester students will be required to complete a research project. L. Blume, D. Easley, and J. Halpem.

Research on decision theory resides in a variety of disciplines including computer science, economics, game theory, philosophy, and psychology. This new course attempts to integrate these various approaches. The course has several objectives. First, we will cover basic decision theory. This theory, sometimes known as "rational choice theory," is part of the foundation for the disciplines listed above. It applies to decisions made by individuals or by machines. Second, we will cover the limitations of and problems with this theory. Issues to be discussed here include decision theory paradoxes revealed by experiments, cognitive and knowledge limitations, and computational issues. Third, we will cover new research designed in response to these difficulties. Issues to be covered here include alternative approaches to the foundations of decision theory, adaptive behavior, and shaping the individual decisions by aggregate/evolutionary forces.

COM S 681 Research Methods in Psychology (also COGST 491 and PSYCH 491/691)
Spring. 4 credits. Enrollment limited to 15 students. D. Dunning.

An intensive examination of the basic research methods used in social, personality, cognitive, and developmental psychology. The course focuses on designing and conducting experiments, i.e., how to turn vague theories into concrete and testable notions, evaluate studies, avoid common pitfalls, and, finally, remain ethical. The course, in addition, covers test construction, survey methods, and "quasi experiments." Students concentrate on completing a small research project in which they conduct an experiment, interpret its data, and write up the results.

COM S 664 Machine Vision
Spring. 4 credits.

[COM S 671 Introduction to Automated Reasoning (also COGST 671)]

COM S 672 Advanced Artificial Intelligence
Spring. 4 credits. Prerequisite: COM S 472.

COM S 674 Natural Language Processing
Spring. 4 credits. Prerequisite: COM S 472.

COM S 676 Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Not offered 2002-2003. J. Y. Halpem.

COM S 677 Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Not offered 2002-2003. J. Y. Halpem.

[COM S 772 Seminar in Artificial Intelligence]
Fall and spring. 2 credits. B. Selman.

COM S 775 Seminar in Natural Language Understanding
Fall and spring. 2 credits.

EDUC 611 Educational Psychology
Fall. 3 credits. Undergraduates admitted with permission from instructor. R. Ripple.

EDUC 614 Gender, Context, and Epistemological Development (also WOMNS 624)
Fall. 3 credits. D. Schrader.

EDUC 714 Moral Development and Education
Spring. 3 credits. Offered alternate years. D. Schrader.

HD 600/700 Graduate Seminars

LING 530 Representation of Structure in Vision and Language (also COGST 530 and PSYCH 530)
Spring. 4 credits. Offered alternate years. S. Edelman.

LING 531 Topics in Cognitive Studies: Mind and Reality in Science Fiction (also COST 531 and PSYCH 531)
Spring. 4 credits. S. Edelman and H. Segal.

[LING 609 Second Language Acquisition and the Asian Languages (also ASIAN 610)]

LING 633 Language Acquisition Seminar (also COGST 633 and HD 633)
Fall. 1–4 credits. Prerequisite: COGST/HD-LING/PSYCH 436 or equivalent. B. Lust.

LING 700 Graduate Seminars

EDCH 681 Logic
Spring. 4 credits.

MAT 781–782 Seminar in Logic
Fall and spring. 4 credits each.

MATH 788 Topics in Applied Logic
Fall. 4 credits.

NBA 663 Managerial Decision Making
Fall. 3 credits. J. Russo.

PHIL 633 Philosophy of Language—Linguistic Convention
Spring. 4 credits. Z. Szabo.

[PHIL 662 Philosophy of Mind]

PHIL 700 Graduate Seminars

PSYCH 521 Psychobiology (Developmental Seminar)
Fall and spring. 4 credits each. S. Johnson.

PSYCH 530 Representation of Structure In Vision and Language (also COGST 530 and LING 530)
Spring. 4 credits. Offered alternate years. S. Edelman.

PSYCH 531 Topics in Cognitive Studies: Mind and Reality In Science Fiction (also COGST 531 and LING 531)
Spring. 4 credits. S. Edelman and H. Segal.

[PSYCH 550 Special Topics in Cognitive Science (also COGST 550)]

PSYCH 601 Computational Models of Language

PSYCH 614 Cognitive Psychology (also COGST 214 and PSYCH 214)
Fall. 4 credits. Co-meets with COGST 501, Cognition. S. Edelman.

[PSYCH 616 Modeling Perception and Cognition (also COGST 416 and PSYCH 416)]

PSYCH 618 Psychology of Music (also PSYCH 418)
Spring. 4 credits. C. Krumhansl.

PSYCH 628 Connectionist Psycholinguistics (also COGST 428, LING 428, and PSYCH 428)
Fall. 3 credits. M. Christiansen.

PSYCH 631 Effects of Aging on Sensory and Perceptual Systems (also BION 421 and PSYCH 431)
Fall. 3 or 4 credits. B. Halpem.

PSYCH 665 Topics in High-Level Vision (also COMS 392, COGST 465, and PSYCH 465)
Spring. 4 credits. Offered alternate years. S. Edelman.

PSYCH 691 Research Methods in Psychology (also COGST 491/691 and PSYCH 491)
Spring. 4 credits. D. Dunning.

PSYCH 714 Comparative Cognition (also COGST 414 and PSYCH 414)
Spring. 3 or 4 credits. M. Owren.

[PSYCH 716 Auditory Perception (also PSYCH 316)]

K. Gabard, director, 55 Goldwin Hall, 255–5792
The College Scholar Program is described in the introductory section of Arts and Sciences.

COLLS 397 Independent Study
Fall or spring. 1–4 credits. Prerequisite: permission of program office.

COLLS 499 Honors Research
Fall or spring. 1–8 credits; a maximum of 8 credits may be earned for honors research. Prerequisite: permission of program director. Each participant must submit a brief proposal approved by the honors committee.
COMPARATIVE LITERATURE

The Department of Comparative Literature provides a broad range of courses in European as well as non-European literature. Courses stress significant authors, themes, problems, styles, genres, historical periods, and theoretical perspectives. In cooperation with related departments in the humanities, the departmental offerings reflect current interdisciplinary study: hermeneutics, semiotics, deconstruction, cultural criticism, Marxism, reception aesthetics, feminism, and psychoanalysis.

The Major

The major enables students to develop an integrated knowledge of Western literature, to strengthen their reading and writing abilities, and to prepare for careers demanding analytical, interpretive, and evaluative skills. Prospective majors should consult with the director of undergraduate studies. After declaring a major, a student chooses an adviser from the department's faculty. The requirements for the major are designed to allow each student to follow a course of study that complements the student's background and personal interests. The specific contours of such a program are worked out in consultation with the student's adviser.

Requirements for the Major

1) Five courses in Comparative Literature at the 200 level and above, including the core course listed below. A student may include up to two literature courses from other departments.

2) One core course in Comparative Literature (for 2001–2002 COM L 365 [fall]), COM L 370 (spring), to be taken by all majors in their junior year. At the discretion of the department, students may enroll in core courses in both their junior and senior years.

3) Five courses in literature and other areas of the humanities at the 200 level or higher, to be taken in one or more foreign language and literature departments. Texts must be read in the original language. A student may offer one language course (conversation, composition, etc.) towards fulfilling this requirement.

4) An honor's essay (COM L 493) of roughly 50 pages is optional. It is to be written during the senior year under the direction of a faculty member, preferably from within the department, who has agreed to work in close cooperation with the student. Students are urged to begin research on their thesis topic during the summer preceding their senior year. In lieu of a Senior Honors Essay, students may take one course at the 400-600 level. The department also encourages:

1) a program that includes broad historical coverage (e.g., COM L 202–202, Great Books); intensive study of a single genre (e.g., COM L 363–364, The European Novel, COM L 365, Contemporary Fiction); analysis of problems in literary theory (e.g., COM L 302 Literature and Theory). The department also offers a number of strongly recommended 200-level courses designed to acquaint undergraduates with the discipline: COM L 203, "Introduction to Comparative Literature," as well as broadening introductory courses in Global Fictions (COM L 204).

HONORS

A student who completes the requirements for the major is eligible for the degree of Bachelor of Arts with honors in comparative literature. The department bases its decision on the first-year seminar program. Students are urged to begin having members of the department present their expertise and their methods of teaching. Of the three methods of teaching, the department generally takes the form of a lecture; the second and third are a discussion of the assigned text. Topics considered include uses and methods of comparison, the role of theory in literary criticism, and connections between literary study and other disciplines, including history, visual and film studies, and political and economic theory. Authors studied range from Aeschylus to Ammons, Baudelaire to Borges, Cervantes to Césaire. All readings in English translations. Open to majors and prospective majors as well as students intending majors other than Comparative Literature.

COM L 204 Global Fictions (IV)

Spring. 4 credits. N. Melas. This course is an introduction and an inquiry into global perspectives and the reading of fiction point us towards becoming citizens of the world? How might we know this world? How might we imagine it? We consider the condition of the stranger in this global world and see it as a geography of reading. Readings are drawn mainly but not only from the contemporary period and outside Europe. Readings change depending on instructor, but may include works of Rushdie, Marquez, Conde, Munif, Castillo, Oe, Ngugi, Wolf, Kincaid, and Homer.

FIRST-YEAR WRITING SEMINARS

First-Year Writing Seminars

Most 100-level courses may be used toward satisfying the freshman writing seminar requirements. See "John S. Knight Institute for Writing in the Disciplines" for a full description of the first-year seminar program.

COURSES

COM L 201 Great Books # (IV)

Fall. 4 credits. COM L 201 and 202 may be taken independently of each other. S. Donatelli. A reading of seminal texts that represent and have shaped Western culture and hence form an essential part of the student's intellectual equipment. By evaluating and interpreting selections from the Bible, Homer, Virgil, Dante, Shakespeare, and others, students will develop critical reading and writing abilities.

COM L 202 Great Books (IV)

Spring. 4 credits. B. Maxwell. World literature of the last 300 years, emphasizing the response to European worldwide expansion first in the colonizing countries, then in the colonized. The persistence of certain themes (such as slavery, monstrosity, overreaching, coercion, and vengeance) are a central concern in many of the texts studied. A certain amount of attention is given to an examination of differing ideological stances on the notion of "Great Books." Readings chosen from texts by Shakespeare, Montaigne, Defoe, Goethe, Mary Shelley, Poe, Melville, Marx, Conrad, Kipling, Brecht, Woolf, Césaire, Tocqueville, Brathwaite, and Sebald.

COM L 203 Introduction to Comparative Literature (also ASIAN 203) (IV)

Fall. 4 credits. J. Stark. The course is intended to answer the question persistently asked by undergraduates: "What is Comparative Literature, anyway?" The format of the course is designed to acquaint students with the range and variety of the field by having members of the department present those aspects which reflect their areas of expertise and their methods of teaching. Of the three methods of teaching, the department generally takes the form of a lecture; the second and third are a discussion of the assigned text. Topics considered include uses and methods of comparison, the role of theory in literary criticism, and connections between literary study and other disciplines, including history, visual and film studies, and political and economic theory. Authors studied range from Aeschylus to Ammons, Baudelaire to Borges, Cervantes to Césaire. All readings in English translations. Open to majors and prospective majors as well as students intending majors other than Comparative Literature.

COM L 208 Shakespeare and the Twentieth Century (also ENGL 208) (IV)

What is the relationship between the plays of Shakespeare in their own time and the various ways they have functioned in modern culture? We compare selected works of Shakespeare with their adaptations in fiction, theater, film, the educational system, government, and popular culture. The course ends with a whole class reading of a play organized around one or more critical approaches. The course as a whole attempts to provide a systematic introduction to the contemporary study of literature and culture.

COM L 211 The Comic Road to Wisdom (also THEM 214) (IV)

Spring. 4 credits. S. Donatelli. An appreciation of comedy as a literary mode, as a symbolic attitude, and as an essential aspect of human experience. A reading of premodern and modern texts, mostly narrative, provides valuable orientation for humanists in an increasingly rationalistic and technological age. Seminal works by Plato, Erasmus, Cervantes, Samuel Beckett, George Schuyler, and Witold Gombrowicz. Prominent theoretical approaches to the comic by Freud, Bakhtin, Langer, and others, with background on related sub-topics such as the carnival, the fool, and laughter. The course considers the philosophical inclinations of comedy and will invite a speculative critical response.

COM L 215 Comparative American Literatures (also AM ST 215) (IV)

Fall. 4 credits. B. Maxwell. Twentieth-century writing from Canada, the United States, the Caribbean, and Latin America. A hemispheric American Studies perspective encourages thinking about and across cultural, linguistic, and national
This course proposes that a question put by the poet William Carlos Williams—"History, history! What do we fools know or care?"—finds its counter-statement in words from the novelist Paul Marshall: "Once a great wrong has been done, it never dies. People speak the words of peace, but their hearts do not forgive.

Generations perform ceremonies of reconciliation but there is need for the understanding of the literature of annnesia and baseless optimism, the works that we read cannot forget, and decline to forgive, the historical traumas that so bittery flavor them. Our concern largely is with understanding the poetic means and strategies that certain writers use to perform ceremonies not benc on reconciliation.

Readings (in English) chosen from Joy Kogawa, Obasan; Sheila Watson, The Double Hook; Hubert Aquin, The Antipartisan; William Faulkner, Absalom, Absalom!; Kamau Brathwaite, Trench Town Rock; Rosario Castellanos, The Nine Guardians; Juan Rulfo, Pedro Paramo; Gabriel Garcia Marquez, One Hundred Years of Solitude; Jione Donoso, Caraf; Eduardo Galeano, The Book of Embraces and Francisco Goldman, The Ordinary Seaman.

COM L 220 Thinking Surrealisms (IV)

Borrowing its title from a formulation of the Marxist philosopher Ernst Bloch and beginning from the "forays of demoralization" instigated by the Dadas, who bequeathed to surrealism the precious gift of unreconciliation to the given, this course ranges over the protean expressiveness of several surrealist movements of the twentieth century. The inception of surrealist precept and practice in Paris in the mid-1920s is a consideration, perhaps only slightly more central to the course than the explicitly anti-fascist political phase of the 1930s and '40s, the suppression of Parisian surrealism by Caribbean, Mexican, African American, Quebeccois, and Mauritian writers and artists; the renegade practice of Hans Bellmer and the unschooled surreality of Euripides; the reflections of and on surrealism by Walter Benjamin, Ernst Bloch, and Theodor W. Adorno; the relations of surrealism to the Situationist International; and the recent critiques of surrealism in fiction (Micha Kunda) and scholarship (Hal Foster). Throughout, the course asks what the proliferation of "thinking surrealisms" meant to twentieth-century culture and politics. All readings in English.

COM L 223 The Comic Theatre (also CLASS 223, THETR 223)
Fall 3 credits. J. Rusen.

See CLASS 223 for full course description.

COM L 225 Poetry and Poetics of Difference (also ENGL 225) (IV)
Spring. 4 credits. Limited to 15 students.

While not restricted to sophomores, this course is intended to offer sophomores especially an opportunity to work closely with faculty in a seminar environment in a strong interdisciplinary context. Not offered 2002-2003. J. Monroe.

What is the relationship between the diverse pleasures we experience in poetry and contemporary ethical concerns? In what ways does poetry encourage us to understand and engage, in particular, questions of difference and otherness? In exploring these and related questions, this course begins with a constellation of influential examples from poetry of the past two centuries, then moves to recent discussions from a cross-section of fields including anthropology, philosophy, linguistics, and cultural studies. The latter half of the course explores the role such questions have played across a range of contemporary poetic practices within the United States and abroad over the past two decades, with particular emphasis on the period since 1980. Readings include works by Edgar Allen Poe, Gertrude Stein, André Breton, Adrienne Rich, June Jordan, Kamau Brathwaite, Aime Césaire, Hans Magnus Enzensberger, Joy Harjo, Rosmarie Waldrop, Charles Bernstein, Michael Palmer, Leslie Scalapino, and Susan Howe.

COM L 236 Greek Mythology (also CLASS 236) (IV)
Fall. 3 credits. Limited to 200. D. Mankin.
See CLASS 236 for a full description.

COM L 245 Jews and Arabs in Contact and Conflict (also NES 235, JWST 235) (III or IV)
Spring. 3 credits. D. Stark. See NES 235 for full course description.

COM L 276 Desire (also ENGL 276) (IV)
Spring. 4 credits. E. Hanson.
See ENGL 276 for full course description.

COM L 279 Russian Connection 1830-1867 (also RUSSL 279) (IV)
Fall. 4 credits. P. Carden.
See RUSSL 279 for full course description.

COM L 280 Russian Connection 1870-1960 (also RUSSL 280) (IV)
Spring. 4 credits. P. Carden.
See RUSSL 280 for full course description.

COM L 302 Literature and Theory (also COM L 622 and ENGL 302/602) (IV)
Fall. 4 credits. J. Culler.
Study of issues in contemporary theoretical debates, with particular attention to structuralism, deconstruction, psychoanalysis, and feminism. Readings from Barthes, Derrida, Foucault, J. Butler, B. Johnson, and others. No previous knowledge of literary theory is assumed.

COM L 304 Europe and the Others: An Introduction to the Literature of Colonialism (IV)
Fall. 4 credits. Limited to 15. Core course for majors. N. Melas.
Through an examination of selected works from the early twentieth century to the present from France, England, Africa, and the Caribbean, this course provides an introduction to the literature written alongside and against the historical phenomenon that has arguably had the most far reaching impact in modern history: European colonialism. How was culture instrumental in the political project of domination? How have writers of the postcolonial period attempted to write back? What problems and possibilities does colonialism present for cultural identity and cultural resistance? In addition to close reading of texts and a consideration of historical background we also examine visual representations of colonialism, particularly film. Authors include Conrad, Ngugi, Nandy, Condé, Duras, Salih, Fanon, Memmi, Djebar, Resmais, and Pontecorvo. All readings available in English.

COM L 311 Modern European Literature and Culture (also FRLIT 315) (IV)

While not restricted to sophomores, this course is intended to offer sophomores especially an opportunity to work closely with faculty in a seminar environment in a strong interdisciplinary context. Not offered 2002-2003. J. Monroe.

What is the relationship between the diverse pleasures we experience in poetry and contemporary ethical concerns? In what ways does poetry encourage us to understand and engage, in particular, questions of difference and otherness? In exploring these and related questions, this course begins with a constellation of influential examples from poetry of the past two centuries, then moves to recent discussions from a cross-section of fields including anthropology, philosophy, linguistics, and cultural studies. The latter half of the course explores the role such questions have played across a range of contemporary poetic practices within the United States and abroad over the past two decades, with particular emphasis on the period since 1980. Readings include works by Edgar Allen Poe, Gertrude Stein, André Breton, Adrienne Rich, June Jordan, Kamau Brathwaite, Aime Césaire, Hans Magnus Enzensberger, Joy Harjo, Rosmarie Waldrop, Charles Bernstein, Michael Palmer, Leslie Scalapino, and Susan Howe.

COM L 312 Melodrama, Totalitarianism, and Everyday Life: Japan and China (also ASIAN 316) (IV)
Spring. 4 credits. H. Lee.

Peter Brooks characterizes melodrama as the quintessential revolutionary genre and the enduring artistic form created by the French Revolution. Uncannily, twentieth-century totalitarian states have found an ally in the melodramatic form—in its penchant for the grandiose and spectacular and its symbolic economy of good and evil, love and hate, justice and revenge. This course explores the relationship between melodrama as an aesthetic form and totalitarianism as a political ideology. We first read the theoretical writings of Peter Brooks, Hannah Arendt and others, and then move to case studies of the imbrication of politics, culture, and everyday life in the Japanese and Chinese contexts. These studies are supplemented by primary sources ranging from personal narratives to a variety of visual materials.

COM L 315 Love and Its Vicissitudes (IV)
Spring. 4 credits. E. Rottenberg.

This course is designed for those interested in the postcolonial period attempted to write back? What problems and possibilities does colonialism present for cultural identity and cultural resistance? In addition to close reading of texts and a consideration of historical background we also examine visual representations of colonialism, particularly film. Authors include Conrad, Ngugi, Nandy, Condé, Duras, Salih, Fanon, Memmi, Djebar, Resmais, and Pontecorvo. All readings available in English.

COM L 320 In Search of the Origin of Language (also FRLIT 327) (IV)
Spring. 4 credits. T. McNulty.
See FRLIT 327 for full course description.

COM L 326 Christianity and Judaism (also RELST 326) (IV)
Spring. 4 credits. C. Carmichael.

COM L 328 Literature of the Old Testament (also RELST 328) @ (IV)
Fall. 4 credits. C. M. Carmichael. Analysis of small sections of well-known material for in-depth discussion.

COM L 335 Modern Western Drama. Modern Western Theater Theory and Practice (also THETR 335) (IV)
Fall. 4 credits. Staff. See THETR 335 for full course description.

COM L 342 Literature and Culture after Auschwitz (IV)
Spring. 4 credits. Core course for majors. Open to non-majors. Limited to 15 students. J. Stark.
Examines how post-WWII artists and writers have sought to understand the impact of the Holocaust and the challenges of living in its aftermath. Theodor Adorno's claim that "to write poetry after Auschwitz is barbaric" to recent efforts to memorialize the Holocaust through museums and monuments, we focus on debates about how the Holocaust can, cannot, should, or should not be represented, and examine various ways of understanding its cultural significance. Along with philosophical and historiographical discussions, we study the testimony of survivors (Amery, Levi, Friedländer) and texts, several films and the debates surrounding them (Rensselaer's Night and Fog, Lanzmann's Shoah, Spielberg's Schindler's List), and art and writing by members of the post-war generations (Kiefer, Spiegelman, Rappaport). All texts in English translation, but may of course be read in the original by students with command of the pertinent language.

COM L 343 Contemporary Mass Culture in Japan and in the U.S. (also ASIAN 363) (IV)

COM L 344 Tragic Theatre (also CLASS 345) (IV)
See CLASS 345 for full course description.

COM L 350 Education and Philosophical Fantasies (also RUSSL 350) @ (IV)
Fall. 4 credits. P. Carden. See RUSSL 350 for full course description.

COM L 352 European Cultural History 1815-1870 (also HIST 362) @ (III or IV)
Fall. 4 credits. M. Steinberg. See HIST 362 for full course description.

COM L 355 Decadence (also ENGL 355) (IV)
Fall. 4 credits. E. Hanson. See ENGL 355 for full course description.

COM L 356 Renaissance Literature (IV)
An introduction to Renaissance literary texts with some attention to cultural backgrounds and intellectual history. Readings from Machiavelli, Erasmus, Rabelais, Shakespeare, Cervantes, and others.

COM L 362 The Culture of the Renaissance II (also ENGL 325, HIST 364, MUSIC 390, ART H 351, FRLIT 362 and RELST 362) @ (III or IV)
Fall 4 credits. (Friday required sections.) C. Kaske, K. P. Long.
Members of various departments lecture on Luther, Michelangelo, Edmund Spenser, Cervantes, Copernicus, Galileo, and Monteverdi. Guest lectures include Peter Dear, History, Esther Dotson, History of Art, and Rebecca Harris-Warrick, Music. Lectures and discussions introduce different methods of interpretation and of historical analysis.

COM L 363 The European Novel II (IV)
Fall. 4 credits. J. Stark.
The European novel from its origins to the early nineteenth century. The course is discussion-based and focuses on detailed consideration of character and narrative technique in conjunction with analysis of the historical, philosophical, and aesthetic significance of the novel. Texts include Lazarillo de Tormes, Cervantes' Don Quixote, Defoe's Robinson Crusoe, Goethe's Sorrows of Young Werther, Austen's Emma, and Sterndahl's The Red and the Black. All texts in English translation, but may of course be read in the original by students with command of the pertinent language. May be taken independently of COM L 364.

COM L 364 The European Novel IV (IV)
Spring. 4 credits. J. Stark.
The nineteenth- and twentieth-century European novel from realism to post-modern experimentation. Discussions focus on the role of fiction in understanding, troubling, or shaping modern culture and identity, with particular attention to the ways that major novelistic themes and forms reflect and participate in modern European social and intellectual history. Authors studied could include Balzac, Dickens, Flaubert, Dostoevsky, Woolf, Kafka, Calvino, and Nabokov. All texts in English translation, but may of course be read in the original by students with command of the pertinent language. May be taken independently of COM L 364.

COM L 365 Contemporary Fiction (IV)
Fall. 4 credits. Limited to 15 students.
A study of European fiction and drama largely drawing on texts from the first half of the twentieth century. We pay particular attention to the making of literary types and characters; to traces of utopian and messianic elements; to the relations between memory and political revolution; and to the motive of reression. Readings in translation chosen from the following: Robert Walser, Snowshoe and the Wall; Franz Kafka, The Trial; Thomas Mann, Death in Venice; Bertolt Brecht, The Rise and Fall of the City of Mahagonny; Joseph Roth, Hotel Savoy; Albert Camus, The Plague; Fritz Karsen, The Quest for Christa T.; Louis Aragon, Paris Peasant; Louis-Ferdinand Celine, Death on the Installment Plan; Elio Vittorini, In Sicily; Natalia Ginzburg, stories; and Isaac Babel, stories. Collateral theoretical readings by Georg Lukacs, Ernst Bloch, Bertolt Brecht, Walter Benjamin, Siegfried Kricauer, Gershon Scholem, Elias Canetti, and Christa Wolf.

COM L 370 Literature and Ethics (IV)
Spring. 4 credits. Limited to 15 students.
Recent literary criticism has renewed the fraught question of how literature relates to ethics. This question has been most dramatically when incompatible modes of interpreting or representing experience confront each other and consequently destabilize acceptable definitions of the law, of moral value, and of historical truth.

COM L 382 Greeks, Romans, and Victorians (also ASIAN 363) (IV)
F. Ahl.
See CLASS 382 for full course description.

COM L 387 Twentieth-Century Black Cultural Movements (also COM L 690, ASRC 332/532) @ (IV)
Fall. 4 credits. A. Adams.
See ASRC 332/532 for full course description.

COM L 404 Narratives of the University (also S HUM 408) (IV)
Fall. 4 credits. J. Williams.
See SHUM 408 for full course description.

COM L 406 Cosmopolitan Alexandria (also S HUM 411) @ (IV)
Fall. 4 credits. D. Starr.
See SHUM 411 for full course description.

COM L 407 Reading Practices of the University (also S HUM 412) (IV)
Fall. 4 credits. P. Kamuf.
See SHUM 412 for full course description.

COM L 408 Moving Beyond the Readymade (also S HUM 418) (IV)
Spring. 4 credits. C. Dharvemdas.
See S HUM 418 for full course description.

COM L 413 Death, Culture, and the Literary Monument (IV)
N. Metas.
Beginning with Homer's Iliad, this course inquires into the monumental transformation of death into immortality in the literary composition. How do death's negations become fiction's triumphs? We pay particular attention to the fate of this procedure when its subjects are no longer heroes or warriors but slaves and women. How do colonial domination and gender difference alter the aesthetic procedures and assumptions underlying commemoration and literary immortality? In addition to death and language, we consider such themes as the relation of antiquity to the present, of identity to its dissolution and of politics to culture. Readings of literary texts drawn from a variety of languages and traditions are attended by selected readings in critical theory and a glance at visual culture, particularly surrounding monuments commemorating the emancipation of slaves and the holocaust. Authors include Homer, Derek Walcott, Simone Schwartz-Bart, Virginia Woolf, Krista Wolf, Tayeb Salih, Maurice Blanchot, Hegel, Orlando Patterson, and Walter Benjamin.

COM L 417 Faust (also GERST 417) @ (IV)
Spring. 4 credits. H. Deinert.
See GERST 417 for full course description.

COM L 418 Virtual Orientalisms (also ASIAN 415) @ (IV)
Fall. 4 credits. Limited to 15 students.
B. deBarry.
See ASIAN 415 for full course description.
A reading and discussion of key texts in lyric poetry from Italian, French, English, and other European literatures of the Renaissance.

[COM L 451 Renaissance Narrative (IV)]
A reading and discussion of key texts in narrative epic and narrative romance from Italian, French, English, and other European literatures of the Renaissance.

[COM L 452 Renaissance Humanism (also COM L 652) (IV)]
A reading and discussion of key texts by Renaissance humanists in Italian, French, English, and other European literatures from the fourteenth to seventeenth centuries.

[COM L 467 Poetry and Rhetoric (also COM L 667, ENGL 483/683, FRLIT 437/637) (IV)]

In present-day common usage, “poetry” means emotion or beauty, and “rhetoric” means deceptive, decorative language. These incompatible means cover over a history of close connections between poetry and rhetoric. Historically, if poetry and rhetoric at times have been seen as opposite, incompatible kinds of language, they also have been identified with each other and strongly distinguished from philosophy and science. Where rhetoric belongs turns out to raise issues of politics and philosophy, not only of literary history and language. Such questions and issues have been intensely pursued in modern poetry beginning with the Romantics.

[COM L 476 Libertine Literature (also FRLIT 476) (IV)]
Spring. 4 credits. T. McNulty.
See FRLIT 476 for full course description.

[COM L 479 Femininity, Ethics and Aesthetics (also FRLIT 491/691, COM L 679) (IV)]
Fall. 4 credits. T. McNulty.
See FRLIT 491/691 for full course description.

[COM L 480 Baudelaire in Context (also COM L 680, FRLIT 488/688) (IV)]
A reading of Les Fleurs du Mal and Les Petits poèmes en prose, in conjunction with major twenty-century critical treatments of them, so as to grasp what has been at stake in discussions of Baudelaire. Critics to be read include Benjamin, Bersani, de Man, Friedrich, Jakobson, Jauss, Johnson, and Sartre.

[COM L 482 Latin American Women Writers (also SPANL 482, WOMNS 481) (IV)]
Fall. 4 credits. D. Castillo.
See SPANL 492 for full course description.

[COM L 483 Imagining the Holocaust (also ENGL 458/658, JSWT 458/658, COM L 683, GERST 483) (IV)]
Spring. 4 credits. D. Schwarz.
See ENGL 458 for a full course description.

[COM L 487 Contemporary Poetry and Culture (also COM L 674, ENGL 488/688, GERST 674, SPANL 674) (IV)]
Spring. 4 credits. J. Monroe.
The redrawing of cultural and political boundaries underway since the late 1980s has made it possible to conceive of the poetry of the Cold War era with a degree of closure unimaginable only a few years ago. In light of this changed situation, we focus on the second-half of the post-1945 period—the 30 years extending from 1968 to the present—with particular attention to the past two decades. Exploring issues of emerging and evolving importance for a poetry of the present moment in light of the recent past, we consider dominant modes as well as alternative practices; canon formation, gender, and multiculturalism; the roles of the publishing industry, popular culture, creative writing programs, and new computer technologies in shaping reading habits and writing communities.
ARTS AND SCIENCES - 2002-2003

[COM L 610 Modern Japanese Studies: The Formation of the Field in History and Literature (also ASIAN 609)]
See ASIAN 609 for full course description.

[COM L 619-620 Independent Study 619, fall; 620, spring. Variable credit.]
COM L 619 and 620 may be taken independently of each other. Applications available in 247 G.S.

[COM L 622 Literature and Theory (also COM L 302 and ENGL 302/602)]
Fall. 4 credits. J. Culler.
See COM L 302 for full course description.

[COM L 630 Aesthetics in the Eighteenth Century (also ENGL 630)]
See ENGL 630 for a full course description.

[COM L 631 Politics and the Passions: Hobbes to Rousseau (also ENGL 631)]
See ENGL 631 for full course description.

[COM L 636 Comparative Modernisms/ Alternatives]
Fall. 4 credits. Limited to 15 students. N. Melas.
The cultural movements or "style" that go under the name of modernism are international in scope. Modernism's broad comparative dimensions, however, when they are considered at all, are usually read from the centers of Western culture, especially Paris and London, out towards peripheral or marginal regions. This course reverses this critical trajectory and in the process inquire into the geographical coordinates that alternatively relay and obscure the relation between modernism as an aesthetic movement and modernity as a world-historical and political-economic project. Central emphasis falls on colonialism and its particular infliction of the temporality of modernist aesthetics and on the process of modernity in the two regions that are our focal point: South Caribbean and Mediterranean Egypt. While including canonical theoretical texts on Western modernity, modernism and postcolonial theory, readings are focussed on the multiple and intersecting influences around two central figures, Martinican poet Aimé Césaire (Baudelaire, surrealism, African literature and anthropology, decolonization, Fanon, Glissant) and the modern Greek Alexandrian poet, Constantine Cavafy, (Baudelaire, surrealism, African literature and anthropology, decolonization, Fanon, Glissant)

[COM L 644 Judaism and Modernism (also ENGL 683)]
Spring. 4 credits. W. Cohen.
Emphasis on the centrality of Jewish writers and characters to modernist fiction, especially of the 1920s, in relation to European literary history, the nature of modernism, the rise of anti-Semitism, and, more generally, racial and imperial discourse. Readings from Babel, Joyce, Kafka, Proust, Stein, and Svevo, with possible attention to such writers as Borges, Celine, Doblin, Eliot, Hemingway, Mann, Nabokov, and Pound. Texts available in English.

[COM L 650 Renaissance Poetry (also COM L 450, ENGL 622, ITALL 450/ 650)]
See COM L 450 for full course description.

[COM L 652 Renaissance Humanism (also COM L 452)]
See COM L 452 for full course description.

[COM L 657 Seminar in Dramatic Theory (THETR 637)]
Fall. 4 credits. Permission of instructor. E. Winet.
See THETR 637 for full course description.

[COM L 665 The Literature of Empire in the Renaissance (also ENGL 628)]
Literary responses to the first age of European global expansion, viewed in the context of the category of the Renaissance and the ongoing process of the self-definition of European literature and Western civilization. Emphasis on the interplay between Mediterranean and oceanic imperialism, and on the relationship between ideology and literary form. Readings from lyric poetry, Ariosto, Bacon, Camões, Campanella, Marlowe, Montaigne, More, Rabelais, Shakespeare, Spenser, Tasso, and especially Cervantes. Readings available in English.

[COM L 667 Poetry and Rhetoric (also COM L 477, ENGL 4483/683, FRLIT 437/637)]
See COM L 467 for full course description.

[COM L 671 Transnational Imaginaries: Globalization and Culture]
The term 'globalization' has become ubiquitous in recent years as the primary conceptual category of the Renaissance and the ongoing transnational tradition. It evokes a brave new borderless world in which politics, culture and social formations are no longer necessarily congruent with nor primarily beholden to national boundaries. It triumphantly or despairingly announces the end of history when space precedes time as the measure of human experience, and that experience exceeds the grasp of modernity's autonomous subject. Globalization thus challenges many aspects of our experience of culture—both in its ethnographic and humanist guises—and of the categories through which we apprehend and analyze it.

[COM L 674 Contemporary Poetry and Culture (also COM L 487, ENGL 488/ 697, GERST 674, SPANL 674)]
Spring. 4 credits. J. Monrose.
See COM L 487 for full course description.

[COM L 675 After the Divide: German Critical Theory of the Seventies and Eighties (also GERST 675 and HIST 675)]
See GERST 675 for a full course description.

[COM L 679 Femininity, Ethics and Aesthetics (also FRLIT 491/691, COM L 479)]
Fall. 4 credits. T. McNulty.
See FRLIT 491/691 for full course description.

[COM L 680 Baudelaire in Context (also COM L 480, FRLIT 488/688)]
For course description, please see COM L 480.

[COM L 683 Imagining the Holocaust (also COM L 483, ENGL 458/658, JWST 458/658, GERST 483)]
Spring. 4 credits. D. Schwartz.
See ENGL 458 for full course description.

[COM L 684 Hopkins and Baudelaire (also ENGL 682)]
Spring. 4 credits. J. Culler.
See ENGL 682 for full course description.

[COM L 689 Adorno's Aesthetic Theory (also GERST 689)]
See GERST 689 for full course description.

[COM L 690 Twentieth-Century Black Cultural Movements (also COM L 387, ASRC 332/532)]
Fall. 4 credits. A. Adams.
See ASRC 332/532 for full course description.

[COM L 695 Post-Modem Thought and Area Studies (also JPLIT 614)]
Fall. 4 credits. Not offered 2002-2003. B. deBary.
See JPLIT 614 for full course description.

COMPUTER SCIENCE

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science. For details, visit our web site at www.cs.cornell.edu/ugrad.

The Major

CS majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:

- four semesters of calculus (MATH 111-112 or 122-221-222 or 191-192-293-294)
- two semesters of introductory computer programming (COM S 100 and 211)
- a one-credit project (COM S 212)
- a seven-course computer science core (COM S 280, 312, 314, 321 or 322 or 421, 381, 414, and 482)
Honors. who are not suitably prepared for the student must have:

- academic requirements of the program and can be exceptionally rigorous for students affiliation with the major. The COM S major requirements are discouraged from attempting Note: Students who do not meet these Qualifying courses must be taken at Cornell. will be used for all repeated courses.

4) An overall GPA of not less than 2.0 (2.5 or better recommended).

Courses
For complete course descriptions, see the computer science listing in the College of Engineering section.

COM S 099 Fundamental Programming Concepts
Fall, summer. 2 credits. S-U grades only. No prerequisites. Freshman only.

COM S 100 Introduction to Computer Programming (II)
Fall, spring. 4 credits. During the fall semester, two versions of COM S 100 (COM S 100M and COM S 100G) are available as described in the computer science listing in the College of Engineering. [COM S 101 Introduction to Cognitive Science (also COGST 101, LING 170, and PSYCH 102) (III)
Fall, summer. 3 credits. Not offered 2002–2003.]

COM S 113 Introduction to C
Fall, spring. 1 credit. Usually weeks 1–4. Prerequisite: COM S 100 or equivalent programming experience. Credit is granted for both COM S 113 and 213 only if 113 is taken first. S-U grades only.

COM S 114 Unix Tools
Fall. 1 credit. Usually weeks 5–8. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.

COM S 130 Introductory Web Programming (also CIS 130)
Fall, summer. 3 credits. No prerequisites.

COM S 172 Computation, Information, and Intelligence (also ENGRG 172)
Fall. 3 credits. Prerequisites: some knowledge of calculus.

COM S 191 Media Arts Studio I (also ART 381, CIS 191, THETR 391) (II)
Fall. 3 credits. Prerequisites: one of the following courses: ART 171, THETR 277, 377, MUSIC 120, or equivalent. Also must be a junior and have permission of instructor. Lab fee $50.

For description, see ART 391.

[COM S 201 Cognitive Science in Context Laboratory (also COGST 201 and PSYCH 201) (III)
Fall or spring. 4 credits. Concurrent or prior registration in "Introduction to Cognitive Science" PSYCH 102/COGST 101/COM S 101/LING 170/PHIL 191 is suggested but not required. Credit is not granted for both COM S 201 and 301] (also COGST 101, LING 170, PSYCH 102) (III)
Fall, summer. 3 credits. Prerequisites: one of the following courses: ART 171, THETR 277, 377, MUSIC 120, or equivalent. Also must be a junior and have permission of instructor. Lab fee $50.

For description, see ART 391.

COM S 211 Computers and Programming (also ENGRG 211) (II)
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or an equivalent course in Java or C++.

COM S 212 Java Practicum Fall, spring, summer. 1 credit. Letter grade only. Pre- or corequisite: COM S/ENGRG 211.

COM S 213 C++ Programming
Fall, spring. 2 credits. Prerequisite: COM S 100 or equivalent programming experience. Students who plan to take COM S 213 and 214 must take 113 first. S-U grades only.

COM S 214 Advanced UNIX Programming and Tools
Spring. 1 credit. S-U grade only. Prerequisite: COM S 114 or equivalent.

COM S 230 Intermediate Web Design (also CIS 230)
Spring. 3 credits. Prerequisite: COM S 130. Not offered every year; may be offered spring 2002.

COM S 280 Discrete Structures
Fall, spring. 4 credits. Pre- or corequisite: COM S 211 or permission of instructor.

COM S 312 Data Structures and Functional Programming (II)
Fall, spring. 4 credits. Prerequisite: COM S 211/212 or equivalent programming experience. Should not be taken concurrently with COM S 314.

COM S 314 Computer Organization (also ECE 314)
Fall, spring. 4 credits. Prerequisite: COM S 211, COM S 312 or ENGRG 231/ECE 232 recommended, but not required. Should not be taken concurrently with COM S 312.

COM S 321 Numerical Methods in Computational Molecular Biology (also BIOBM 321 and ENGRG 321) (I)
Fall. 3 credits. Prerequisites: at least one course in calculus such as MATH 106, 111, or 191 and a course in linear algebra such as MATH 221 or 294 or BTRY 417. COM S 100 or equivalent and some familiarity with iteration, arrays, and procedures. COM S majors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 322 Introduction to Scientific Computation (also ENGRG 322)
Spring. 3 credits. Prerequisites: COM S 100 and (MATH 222 or 294). COM S majors may use only one of the following toward their degree: COM S 321, 322, or 421.

[COM S 324 Computational Linguistics (also COGST 424, LING 424) (III)
Spring. 4 credits. Prerequisites: LING 203; Labs involve work in the UNIX environment; COM S 114 recommended. Not offered 2002–2003.

For description, see LING 424.]

COM S 330 Applied Database Systems (also CIS 330)
Spring. 3 credits. Prerequisites: COM S 130, COM S 211/ENGRG 211, and COM S 250.

COM S 341 Introduction to Theory of Computing Fall, spring. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 341 and 481.

COM S 392 Topics in High-level Vision (also COGST 465, PSYCH 465) (II)
Spring. 4 credits. Prerequisite: COM S 300. For description, see PSYCH 465.
COM S 401 Introduction to Applied Scientific Computing with MATLAB (also CIS 401)
Fall. 1 credit. Usually weeks 2–5. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.

COM S 402 Scientific Visualization with MATLAB (also CIS 402)
Spring. 1 credit. Usually weeks 2–5. Prerequisites: COM S 100 or equivalent programming experience; COM S 401/CIS 401 recommended, but not required. S-U grades only.

COM S 403 Development of Scientific Computing Programs (also CIS 403)
Fall. 1 credit. Usually weeks 2–5. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.

COM S 404 Survey and Use of Software Libraries for Scientific Computing (also CIS 404)
Spring. 1 credit. Usually weeks 2–5. Prerequisites: COM S 100 or equivalent programming experience; COM S 403/CIS 403 recommended, but not required. S-U grades only.

COM S 408 Data Structures and Algorithms for Computational Science (also CIS 408)
Spring. 4 credits. This course is not open to COM S majors. Prerequisite: COM S 211 or equivalent programming experience. Not offered every year.

COM S 411 Programming Languages and Logics
Fall or spring. 4 credits. Prerequisites: COM S 312 or permission of instructor. Not offered every year, semester TBA.

COM S 412 Introduction to Compilers
Spring. 3 credits. Prerequisites: COM S 312 (or permission of instructor) and 314. Corequisite: COM S 413.

COM S 413 Practicum in Compilers
Spring. 2 credits. Corequisite: COM S 412. A compiler implementation project related to COM S 412.

COM S 414 Systems Programming and Operating Systems
Fall or spring, summer. 3 credits. Prerequisite: COM S 211, 212, 312 (or permission of instructor), and 314. Corequisite: COM S 415 in spring only.

COM S 415 Practicum in Operating Systems
Fall, spring. 2 credits. Corequisite: COM S 414.

COM S 417 Introduction to Computer Graphics (also ARCH 374)
Fall. 3 credits. Prerequisite: COM S 211. Corequisite: COM S 418 or permission of instructor.

COM S 418 Practicum in Computer Graphics (also ARCH 375)
Fall. 2 credits. Enrollment limited. Prerequisite: COM S 212 and permission of instructor. Recommended: COM S 314. Corequisite: COM S 417.

COM S 421 Numerical Analysis
Fall. 4 credits. Prerequisites: MATH 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming. COM S majors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 430 Information Discovery (also CIS 430)
Fall. 3 credits. Prerequisite: COM S 211 or equivalent.

COM S 432 Introduction to Database Systems
Fall. 3 credits. Prerequisites: COM S 312 or 211, 212, and permission of instructor. Recommended: COM S 213 and strong programming skills in C or C++.

COM S 433 Practicum in Database Systems
Fall. 2 credits. Corequisite: COM S 432.

COM S 472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: COM S 211 and 280 (or equivalent).

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Corequisite: COM S 472.

COM S 474 Introduction to Natural Language Processing (also COGST 474, LING 474)
Fall. 4 credits. Prerequisites: COM S 211.

COM S 478 Machine Learning
Spring. 4 credits. Prerequisites: COM S 280, 312, and basic knowledge of linear algebra and probability theory.

COM S 481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481. A faster-moving and deeper version of COM S 381. Corrective transfers between COM S 481 and 381 (in either direction) are encouraged during the first few weeks of instruction.

COM S 482 Introduction to Analysis of Algorithms
Spring, summer. 4 credits. Prerequisites: COM S 280, 312, and either 381 or 481, or permission of instructor.

COM S 483 Quantum Computation (also PHYS 481, 681)
Spring. 2 credits. Prerequisite: familiarity with the theory of vector spaces over the complex numbers.

COM S 486 Applied Logic (also MATH 486 (II))
Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (such as MATH 332, 432, 454, 481), and some course in mathematics or theoretical computer science.

COM S 490 Independent Reading and Research
Fall, spring. 1–4 credits.

COM S 501 Software Engineering
Spring. 4 credits. Prerequisite: COM S 211 or equivalent experience programming in Java or C++.

COM S 502 Web Information Systems (also CIS 502)
Spring. 3 credits. Prerequisite: COM S 211 and some familiarity with the technology of web sites.

COM S 504 Applied Systems Engineering I (also CEE 504, ECE 512, M&AEE 591, OR&EIE 512)
Fall. 3 credits. Prerequisites: senior or graduate standing in an engineering field, concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by a course instructor.

COM S 505 Applied Systems Engineering II (also CEE 505, ECE 513, M&AEE 592, OR&EIE 513)
Spring. 3 credits. Prerequisite: Applied Systems Engineering I.

COM S 513 System Security
Fall. 4 credits. Prerequisites: COM S 414 or 519 and familiarity with JAVA programming language.

COM S 514 Intermediate Computer Systems
Fall or spring. 4 credits. Prerequisites: COM S 414 or permission of instructor.

COM S 515 Practicum in Systems
Fall or spring. 1–2 credits. Corequisite: COM S 514.

COM S 517 Advanced Rendering
Spring. 3 credits. Prerequisite: COM S 417 or permission of instructor.

COM S 519 Computer Networks
Spring. 4 credits. Prerequisites: COM S 314 or permission of instructor. Not offered every year.

COM S 522 Computational Tools and Methods for Finance
Spring. 4 credits. Prerequisites: programming experience (e.g., C FORTRAN, or MATLAB) and some knowledge of numerical methods, especially numerical linear algebra. Not offered every year.

COM S 572 Heuristic Methods for Optimization (also CEE 509)
Spring. 3 or 4 credits. Prerequisite: COM S/ENGRD 211 or 322 or CEE/ENGRD 241, or graduate standing, or permission of instructor. Not offered every year.

COM S 574 Language Technologies
Fall. 3 credits. Prerequisites: COM S 472 or 478 or 578 or the equivalent.

COM S 576 Decision Theory I (also CIS 576, ECOM 476, 676)
Fall. 4 credit. Prerequisites: mathematical sophistication.

COM S 577 Decision Theory II (also CIS 577, ECOM 477, 677)
Spring. 4 credits. Prerequisites: mathematical sophistication.

COM S 578 Empirical Methods in Machine Learning and Data Mining
Fall. 3 credits. Prerequisites: COM S 280 and 312 or equivalent.

COM S 601 System Concepts
Fall. 3 credits. Prerequisite: open to students enrolled in the COM S Ph.D. program.

COM S 611 Advanced Programming Languages
Fall. 4 credits. Prerequisites: graduate standing or permission of instructor.

COM S 612 Compiler Design for High-Performance Architectures
Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor.

COM S 613 Concurrent Programming
Spring. 4 credits. Prerequisites: COM S 414 or permission of instructor. Not offered every year, semester TBA.

**Computing and Information Science**

**Faculty of Computing and Information Science**

Robert L. Constable, dean for Computing and Information Science

John Abowd, Industrial and Labor Relations

Kenneth Birman, Computer Science

Claire Cardie, Computer Science

Terrence Fine, Electrical and Computer Engineering

Geri Gay, Communication

Donald Greenberg, Architecture, Johnson School of Management

John Kleinberg, Computer Science

Stephen Pope, Mechanical and Aerospace Engineering

Fred Schneider, Computer Science

David Shalloway, Molecular Biology and Genetics

Stan Tafm, Art

Ken Torrance, Mechanical and Aerospace Engineering

Charles Van Loan, Computer Science

Stephen Wicker, Electrical and Computer Engineering
Mission
The Faculty of Computing and Information (FCI) presents courses and programs in computing and information science across campus. The professors associated with its programs have appointments in the Department of Computer Science or as FCI professors in other academic units. The FCI has three areas of interest: information science, computational science and engineering, and digital arts and graphics. Each area is at a different stage of development.

Information Science
Information Science at Cornell is a new interdisciplinary program that considers information systems in their human context and integrates the study of three aspects of information. First, Information Science studies computing systems that provide people with information content; this study overlaps with parts of computer science stressing the design, construction, and use of large information systems such as the World Wide Web, the National Digital Library for science education, and other global information resources. The second aspect of Information Science examines how people engage these information resources and how information systems can be designed to be integrated into everyday life—human-computer interaction (HCI). This area is also called “human-centered systems,” because it is concerned with systems that hundreds of millions of people will use in daily life. The third aspect is the study of social systems and how they interact with computer systems. This area of Information Science deals with understanding how information systems are situated in social, economic, and historical contexts. It explores the economic value of information, the legal constraints on systems, their social impact, and the cultural aspects of their construction. These are synergistic topics, and the next generation of scientists, scholars, business leaders, and government workers will need to understand them and how they relate.

Specific topics emphasized in the Information Science program include information networks; information discovery; knowledge organization; interaction design; interface design and evaluation; collaboration within and across groups, communities, organizations, and society; computational linguistics; computational techniques in the collection, archiving, and analysis of social-science data; information privacy; methods of collecting, preserving, and distributing information; information system design; cognition and learning, social informatics; and cultural studies of computation.

Computational Science and Engineering
Another FCI area of activity is computational science and engineering. Numerous courses are taught throughout the university. Topics include numerical methods, modeling and simulation, and real-time computing and control. The FCI itself sponsors several "tool-based" short courses for graduate students who anticipate that their studies will have a strong computational component (CIS 401, 402, 403, 404). A course on data structures for computational science (CIS 469) also is offered.

Digital Arts and Graphics
The FCI is working to develop research programs and curriculum in the digital arts. Several courses already exist in this area (ART 375, ART 391, MUSIC 120, COM S 417-18) and more can be expected in the near future.

Relationship with Computer Science
FCI programs have connections to computer science, the study of computation in all of its forms. Computation is both abstract and physical, both artificial and natural, and its study is a unique combination of fundamental science, applied science, and enabling technology. The curriculum covers the theory of algorithms and computing and its many applications in science, engineering, and business. Students learn the algorithmic method of thinking and how to bring it to bear on a wide range of problems. They also study the elements of computing and information technology such as system design, problem specification, programming, system analysis and evaluation, and complex modeling. Research areas include programming languages, compilers, computing systems, artificial intelligence, natural language processing, computer graphics, computer vision, databases, networks, bioinformatics, the theory of algorithms, scientific computing, and computational logic.

Undergraduate majors in Computer Science are offered in the College of Engineering and the College of Arts and Sciences. A minor in Computer Science is available to undergraduates in the College of Engineering. These programs are administered by the Department of Computer Science, whose professors are members of both the College of Engineering and the College of Arts and Sciences.

There is also a one-year Master of Engineering Program in Computer Science and a Ph.D. program in Computer Science. These degree programs are administered by the Graduate Field of Computer Science.

The Information Science Concentration/Minor
A minor in Information Science is available to students in the College of Engineering, the College of Arts and Sciences, and the College of Agriculture and Life Sciences. (Minors are referred to as "concentrations" in the College of Arts and Sciences.) The program has three main areas: information systems, human-centered systems, and social systems. The area of information systems studies the computer science problems of representing, storing, manipulating, and using digital information. Human-centered systems investigates the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines the economic, legal, political, cultural and social context. The concentration/minor has been designed to ensure that students have substantial grounding in all three of these areas and in statistics.

Courses to fulfill the requirements for the Information Science concentration/minor are selected from the following categories:

Statistics
ENGRD 270 Basic Engineering Probability and Statistics
CEE 304 Uncertainty Analysis in Engineering

Digital Arts
ART 370 Introduction To Probability and Random Signals
MATH 171 Statistical Theory and Application in the Real World
BTRY 261 Statistical Methods I (also STBTRY 261)
LRST 312 Applied Regression Methods
CEE 304 Uncertainty Analysis in Engineering
ECE 310 Introduction To Probability and Random Signals

Information Systems
COM S 130 Creating Web Documents
COM S 230 Intermediate Web Design
COM S 330 Applied Databases
COM S 430 Information Discovery
COM S 432 Introduction to Database Systems
COM S 473 Introduction to Natural Language Processing
COM S 474 Machine Learning
COM S 502 Architecture of Web Information Systems
COM S 515 Public Policy and Security
ECE 562 Fundamental Information Theory
COM S 752 Seminar on Scholarly Information Architecture

Human-Centered Systems
PSYCH 214 Cognitive Psychology (also COGST 214)
PSYCH 342 Human Perception: Applications to Computer Graphics, Art, and Visual Display (also COGST 342)
PSYCH 347 Psychology of Visual Communications
PSYCH 413 Information Processing: Conscious and Unconscious
COMM 439 Designing for Human-Computer Interaction
COMM 440 Computer Mediated Communication

Social Systems
S&TS 250 Technology in Society (also ENGR 298, HIST 250 and ECE 298)
S&TS 252 Inventing an Information Society (also ENGR 298 and ECE 298)
S&TS 257 The Automatic Lifestyle: Consumer Culture and Technology
S&TS 411 Knowledge, Technology, and Property
ORIE 480 Information Technology
COMM 428 Communication Law
LAW 410 Limits on and Protection of Creative Expression—Copyright Law and Its Close Neighbors

The concentration/minor requires:
• One statistics course. (For Engineering students it must be ENGRD 270, ECE 310, or CEE 304, because these courses assume some knowledge of calculus.)
• Two courses in information systems. (For Engineering students, COM S 130 cannot be used.)
• One course in human-centered systems.
• One course in social systems.
• One or two elective courses. (For Engineering students, one elective chosen from the human-centered system category or the social system category. For all other students, two elective courses, at least one of which must be from the human-centered system category.)

These programs are administered by the Department of Computer Science. Visit http://www.fci.cornell.edu/infoscience/undergraduate.html or Upson 330 for more information.

CIS Courses

Courses offered under the CIS rubric are of particular interest to students in the computing and information sciences.

CIS 130 Introductory Web Programming (also COM S 130)
Fall, summer. 3 credits. No prerequisites. See COM S 130 for description.

CIS 191 Media Arts Studio I (also ART 391, THETR 391)
Fall. 3 credits. Prerequisite: one of the following courses: ART 171, THETR 277, 377, MUSIC 120, or equivalent; must be a junior and have permission of the instructor. Lab fee $50. Not offered 2002–2003. Staff. See ART 391 for description.

CIS 230 Intermediate Web Design (also COM S 230)
Spring. 3 credits. Prerequisite: COM S 130 or equivalent. See COM S 230 for description.

CIS 330 Applied Database Systems (also COM S 330)
Spring. 3 credits. Prerequisites: COM S 130, COM S 211/ENGRD 211, and COM S 230. See COM S 330 for description.

CIS 401 Introduction to Applied Scientific Computing with MATLAB (also COM S 401)
Fall. 1 credit. Usually weeks 1–4. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.

This course introduces to the use of MATLAB as an aid to scientific research. The course introduces the basic syntax and features of MATLAB and develops the background necessary for the more specialized courses. The course covers basic MATLAB programming and vectorized operations, data input/output, and simple visualization. The course emphasizes applied issues such as managing large data sets, simulation, and visualization, but also introduces fundamental ideas in scientific computing such as floating point arithmetic and algorithm efficiency. Although the course uses MATLAB, the ideas and concepts covered are common to many computational environments.

CIS 402 Scientific Visualization with MATLAB (also COM S 402)
Fall. 1 credit. Usually weeks 1–4. Prerequisites: COM S 100 or equivalent programming experience; COM S 401/CIS 401 recommended, but not required. S-U grades only.

A survey of the advanced visualization features in MATLAB. The course covers MATLAB’s “handle graphics” paradigm, specialized graphics routines for vectors and fields, and introduces color mapping, lighting, and new features for controlling object transparency. Although the course is meant to introduce students to the capabilities of the MATLAB system, it also emphasizes the basic goal of visualization: producing an image that effectively communicates a scientific result.

CIS 403 Development of Scientific Computing Programs (also COM S 403)
Spring. 1 credit. Usually weeks 1–4. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.

This course is designed for graduate students who, in their research, will develop computer programs to solve scientific or engineering problems (e.g., in Fortran, C, or Java). Approaches and tools are presented which facilitate the development of good software. The course emphasizes the tools available in UNIX and Windows environments. Topics covered include compilers, debuggers, software design, and project management.

CIS 404 Survey and Use of Software Libraries for Scientific Computing (also COM S 404)
Spring. 1 credit. Usually weeks 1–4. Prerequisites: COM S 100 or equivalent programming experience; COM S 403/CIS 403 recommended, but not required. S-U grades only.

Many software packages and code libraries have been developed for the solution of standard problems in scientific computing. Examples of such libraries are LAPACK, IMSL, Numerical Recipes routines, MATLAB functions, and routines available in online repositories such as Netlib. This course discusses how to link to or compile standard library formats and considers the legal and ethical aspects of using other people’s code (or having them use yours). The course also surveys some of the standard problems and the available libraries and discusses topics that arise in their use (e.g., accuracy, robustness, and generality).

CIS 409 Data Structures and Algorithms for Computational Science (also COM S 409)
Spring. 4 credits. Prerequisite: COM S 211 or equivalent programming experience. This course is not open to COM S majors. Not offered every year. See COM S 409 for description.

CIS 430 Information Discovery (also COM S 430)
Fall. 3 credits. Prerequisite: COM S 211 or equivalent. See COM S 430 for description.

CIS 480 Independent Reading and Research
Fall, spring. 1–4 credits. Independent reading and research for undergraduates.

CIS 502 Web Information Systems (also COM S 502)
Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with the technology of web sites. See COM S 502 for description.

CIS 576 Decision Theory I (also COM S 576, ECON 476, 676)
Fall. 4 credits. Prerequisites: mathematical sophistication. See ECON 476 for description.

CIS 577 Decision Theory II (also COM S 577, ECON 477, 677)
Spring. 4 credits. Prerequisites: Mathematical sophistication. See ECON 476 for description.

CIS 655 The Structure of Information Networks (also COM S 655)
Fall. 4 credits. Prerequisite: COM S 482. See COM S 655 for description.

CIS 750 Evolutionary Computation and Design Automation (also COM S 750, M&AE 650)
Fall. 4 credits. Prerequisite: programming experience or permission of instructor. Covers advanced topics in evolutionary algorithms and their application to computational design. The course provides insight into a variety of evolutionary computation paradigms, as well as governing dynamics of co-evolution, arms races, and symbiosis. Topics include artificial life, evolutionary robotics, and applications in a variety of domains in engineering, science, and art. The course is suitable for students interested in computational techniques for addressing open-ended design problems using computational models of evolutionary discovery. The course will be comprised of lectures, paper readings, and discussions. Grading based on critical paper reviews and individual projects.

CIS 751 Media Research and Critical Design (also COM S 751)
Fall. 4 credits. Prerequisite: standing in COM S or equivalent ability to read technical research papers. Contact instructor if unsure of qualifications.

This course studies media research practices that incorporate cultural criticism into technology design. Topics include tangible media, ubiquitous computing, speculative design, and interactive narrative. Computer science content draws on interactive art, cultural studies, and interaction design.

CIS 752 Seminar on Scholarly Information Architecture (also COM S 752)
Fall. 3 credits. Prerequisite: concurrent enrollment in COM S 502 or equivalent experience. S-U grades only.

This seminar examines on-line information systems designed for scholarly usage, covering ongoing trends and highlighting current problems and new research directions. Topics include techniques for rendering, indexing, and linking scholarly information, and formats and protocols for querying, accessing, mining, and transmitting the information. An objective is to identify the components necessary for an idealized system and to lay the basis for future research projects resulting in their design and implementation. Examples include automated classification systems, real-time closedness measures, authoring tools, and next-generation document formats to facilitate efficient data mining and long-term archival stability. Some of the non-technical obstacles to realization of ideal systems—sociological, legal, financial, and political—will also be examined.
The Geological Sciences Major

The geological sciences major reveals Earth's turbulent history from the formation of our solar system to the plate tectonic cycles that dominate Earth's present behavior. That history is highlighted by the co-evolution of life and the Earth system, a dramatic story that starts with the origin of life in our sun's planetary system and leads to the modern interglacial phase of our planet's latest ice age during which our species has emerged to play a major role in the planetary system. Topics of study also include the fundamental processes responsible for the concentration of mineral and energy resources that have enabled our technological evolution, and include natural hazards such as earthquakes, volcanic eruptions, floods, and landslides which pose dangers to our increasingly vulnerable cities and infrastructure.

The geological sciences major prepares students in geology, geophysics, geochemistry, and geobiology for careers in mineral and petroleum exploration, environmental geology, and academic and government research enterprises. Many of these career tracks involve graduate study, for which the major is excellent. Alternatively it is a valuable major for a pre-law or pre-med program or in preparation for a career in K-12 education.

In addition to course work, students learn by outdoor fieldwork and involvement in the vigorous research programs of the department. Facilities include equipment for processing seismic signals and satellite images of the Earth's surface using extensive libraries of earthquake records, satellite images, and exploration seismic records, and instruments for highly precise chemical and physical analyses of earth materials, including the large-scale, high-resolution instruments of the Cornell Center for Material Research, Ward Laboratory and the Cornell High Energy Synchotron Source (CHESS).

Undergraduates have served as field assistants for faculty members and graduate students in Argentina, Mexico, British Columbia, the Aleutian Islands and southeastern Alaska, Scotland, Switzerland, Tibet, and the Barbados. Undergraduates are encouraged to participate in research activities, frequently as paid assistants.

For admission to the geological sciences major, a student should have made substantial progress toward completing the following basic science requirements for the major: MATH 111-112 or MATH 191-192, PHYS 207-208 or PHYS 112-113, CHEM 207 or 211. Freshmen and sophomores should take an introductory EAS course (or courses), normally EAS 101 or EAS 201, or EAS 102 or EAS 104. Juniors with a strong foundation in mathematics and science may be accepted into the major without an introductory course. Majors take EAS 210, the five 300-level core courses listed below, six credits of additional course work; or (d) an approved outdoor field study that interest them at the department office in 2122 Snee Hall.

Honors. An honors program is offered by the Department of Earth and Atmospheric Sciences for superior students. Candidates for honors must maintain an overall 3.5 grade point average, a cumulative average of 3.5 in the major, and complete an honors thesis (EAS 491 or 492). Students interested in applying should contact the director of undergraduate studies during the second semester of the junior year.

Courses

EAS 101 Introductory Geological Sciences (I)
Fall, spring. 3 credits. A. Moore. Designed to enhance an appreciation of the physical world. Emphasizes natural environments, surface temperatures, and dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems. Interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (earth system science). Water, mineral, and fuel resources, environmental concerns. Field trips in the Ithaca region.

EAS 102 Evolution of the Earth and Life (also BIO Q 170) (I)
Spring. 3 credits. J. L. Case. Course topics include: Earth systems and their evolution; Earth history's astronomical context; plate tectonics, continental drift, and their implications for climate and life; co-evolution of life and the atmosphere; precursors for ongoing global change; and dinosaurs, mass extinctions, and humans. Options include laboratories on reconstructing geological history and mapping ancient geography. Field collecting on field trips.

EAS 105 Writing on Rocks (Freshman Seminar)

EAS 106 Vertebrate Fossil Preparation
Fall, spring. 1 credit. Prerequisite: 1 introductory geology course or concurrent enrollment, class size is limited. J. Chimento. A laboratory-oriented course that exposes students to techniques of vertebrate fossil
preparation. Roughing-out and fine preparation of large specimens in solid matrix are covered, as well as screen washing and microscope techniques for the recovery of micro-vertebrate remains. Specialized scanning techniques are discussed.

The class meets for one hour each week for the first three weeks of the semester. Students are assigned to an individual or group project requiring three hours of participation each week for the remainder of the semester.

EAS 107 How the Earth Works
Fall. 1 credit. J. L. Gisne.
A user-friendly introduction to the workings and interactions of solid earth, ocean, atmosphere, and life as they relate to understanding ongoing global change.

EAS 109 Dinosaurs
Fall. 1 credit. J. L. Gisne.
An introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

EAS 111 To Know the Earth and Build a Habitable Planet (I)
Fall. 3 credits. J. M. Bird.
Acquaints the nonscientist with Earth. Course topics include: major features and how Earth has evolved; Earth system science and building a habitable planet; effects of human activity on geologic environments, mitigating environment damage, living with natural hazards; and mineral resource use in the twenty-first century and an environmentally sound fuel-minerals cycle.

EAS 122 Earthquake! (also ENGRD 122) (II)
Spring. 3 credits. L. D. Brown.
The science of natural hazards and strategic resources is explored. Techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the earth's interior to search for strategic minerals; the historical importance of such resources. Seismic experiments on campus to probe for groundwater, the new critical environmental resource.

EAS 131 Basic Principles of Meteorology (I)
Fall. 3 credits. M. W. Wysocki.
A simplified treatment of the structure of the atmosphere: heat balance of the Earth, general and secondary circulations; air masses, fronts, and cyclones, and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

EAS 150 Introduction to Fortran Programming
Fall. 3 credits. M. W. Wysocki.
An introduction to the elements of computer programming using Fortran. Exercises involve mainly meteorological problems.

EAS 154 The Sea: An Introduction to Oceanography, Lecture (also offered as BIOEE 154) (I)
Spring, summer. 3 credits. C. H. Greene, W. M. White.
A survey of the physics, chemistry, geology, and biology of the oceans for both science and nonscience majors. Topics include: seafloor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate change, ocean ecology, and coastal processes. The optional one-credit laboratory for this course is offered as EAS 155/BIOEE 155.

EAS 155 The Sea: An Introduction to Oceanography, Laboratory (also offered as BIOEE 155)
Spring. 1 credit. C. H. Greene, W. M. White. Prerequisite: concurrent enrollment in EAS 154. Laboratory course covering topics presented in EAS 154.

EAS 200 Art, Archaeology, and Analysis (also ARKEO 285, ART H 200, ENGR 185, ANTH 200) (I)
Spring. 3 credits. R. W. Kay.
An interdepartmental course on the use of techniques of science and engineering in cultural research. Applications of physical and physiological principles to the study of archaeological artifacts and works of art. Historical and technical aspects of artistic creation. Analyses by modern methods to deduce geographic origins and for exploration, dating, and provenance of cultural objects. Does not meet liberal studies distribution requirement for engineering.

EAS 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 201) (I)
Fall. 3 credits. Prerequisites: PHYS 112 or 207, L. M. Cathles.
Course topics include: formation of the solar system; accretion and evolution of the earth; the rock cycle: radioactive isotopes and the geological time scale, plate tectonics, rock and minerals, earth dynamics, mantle plumes, the hydrologic cycle: runoff, floods and sedimentation, groundwater flow, and contaminant transport; and the weathering cycle: chemical cycles, CO₂ (weathering), rock cycle, controls on global temperature (CO₂ or ocean currents), oil, and mineral resources.

EAS 202 Environmental Geology (I)
Summer. 3 credits. D. E. Price.
In-depth introduction to geologic processes that affect or are affected by human society, including stream behavior and floods, earthquakes, land stability and mass wasting, and volcanic hazards. This material provides an application of geology to engineering, natural resources, and land-use planning. Local examples are discussed and visited on short field trips. This course can be taken as an introduction to geology or as a continuation of EAS 101.

EAS 203 Natural Hazards and the Science of Complexity (II)
Fall. 3 credits. Prerequisites: 1 calculus course. Not offered 2002-2003. D. L. Turcotte.
Studies of natural hazards; earthquakes, volcanic eruptions, floods, hurricanes, tornadoes, severe storms, wildfires, meteor impacts. Applications of the science of complexity to natural hazards: fractals, chaos, and self-organized criticality.

EAS 210 Introduction to Field Methods in Geological Sciences (I)
Fall. 3 credits. J. L. Cisne. Prerequisites: EAS 101 (or 201) or permission of instructor. R. W. Allmendinger.
Course covers the methods by which rocks are used as a geological database. Topics include field methods used in the construction of geological maps and cross sections.

EAS 213 Marine and Coastal Geology
Summer. 2 credits. Prerequisite: an introductory course in geology or permission of instructor. Staff or A special one-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island near Portsmouth, New Hampshire. For more details and an application, consult the SML office, G14 Simon Hall. Estimated cost for 2002 (including tuition, room, board, and ferry transportation) is $1,100.

EAS 250 Meteorological Observations and Instruments
Spring. 3 credits. Prerequisite: EAS 131. M. W. Wysocki.
Methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Topics include: instrument siting, mounting, and protection; instrument response characteristics, calibration, and standardization, and recorders and data logging systems. Includes laboratory exercises in observation and data analysis. Intended to serve as preparation for Observers Examination.

EAS 260 Soil Science (also CSS 260) (II)
Fall. 4 credits. S-U grades optional. J. S. Riba.
Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective, this course is divided into three units. A unit on soil information introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. A soil management unit addresses fertility, pest management, water, and microclimate, as well as conservation, conservation tillage, and soil health. The unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs are designed to be conducted with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

EAS 268 Climate and Global Warming (I)
Spring. 3 credits. Prerequisite: basic college math. A. T. DeGaetano.
Students from a range of disciplines become familiarized with such contemporary issues in climatology as global warming and El Niño. Introductions to the natural greenhouse effect, past climates, observed and projected climate changes and impacts. Also natural climate variations and their consequences and predictability. Weekly student-led discussions of issues appearing in journals such as Nature.

EAS 296 Forecast Competition
Fall and spring. 1 credit. S-U grades only. Prerequisites: some standing in atmospheric science or permission of instructor. D. S. Wilks.
This two-semester course provides daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully. Enroll for two consecutive semesters, with credit awarded.
after the second semester. May be repeated for credit.

EAS 302 Evolution of the Earth System (I)
Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. W. M. White, W. D. Allmon, and B. L. Isacks. Course covers the co-evolution of life and the earth system. Earth's early history, plate tectonics, continental drift, and climate changes during the past billion years; mountain building, ice ages, and our own emergence during the past ten million years. Semester an introduction to methods of interpreting information preserved in the rock record.

EAS 315 Geomorphology (I)
Fall. 4 credits. Prerequisite: a 3-credit EAS course. B. L. Isacks. A study of the processes that sculpt the Earth's landscapes (above and below sea level) and the nature of those landforms. Landforms constructed by Earth's internal processes are the point of departure as we examine their modification by physical interaction with the atmosphere and oceans. Also treated are depositional landforms that are generated by accumulations of grains or sediment. Laboratory exercises include both field examination of landforms of the Finger Lakes area and computer analysis of satellite images and Digital Elevation Models of examples from around the globe. Includes two Saturday field trips.

EAS 321 Introduction to Biogeochecmistry (also NTRES 321) (I)
Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus a course in biology and/or geology. L. A. Derry, J. Yavitt. Control and function of the Earth's global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

EAS 326 Structural Geology (I)
Spring. 4 credits. Prerequisite: MATH 112, EAS 101 or 201, or permission of instructor. One weekend field trip. R. W. Allmendinger. Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics. Topics include stress, strain, rheology, deformation mechanisms, minor structures, faulting, folding, and structural families.

EAS 331 Climate Dynamics (also ASTRO 331) (I)
Fall. 4 credits. Prerequisites: MATH 112 or 192 or equivalent. K. H. Cook, P. J. Gierasch. Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

EAS 332 Micrometeorology (I)
Spring. 3 credits. Prerequisite: a course in physics. Offered alternate years. Not offered 2002-2003. D. S. Wilks. Considers the relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.

EAS 341 Atmospheric Thermodynamics and Hydrostatics (I)
Fall. 3 credits. Prerequisites: 1 year of calculus and 1 semester of physics. A. T. DeGaetano. Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics covered include the basic equations of flow and processes of dry air, water vapor, and moist air and concepts of hydrostatics and stability.

EAS 342 Atmospheric Dynamics (also ASTRO 342) (I)
Spring. 3 credits. Prerequisites: 1 year each of calculus and physics. K. H. Cook and P. J. Gierasch. An introduction to the basic equations and techniques used to understand motion in the atmosphere, with an emphasis on the space and time scales typical of storm systems (the synoptic scale). The governing equations of atmospheric flow are derived from first principles and applied to middle latitude and tropical meteorology. Topics include balanced flow, atmospheric waves, circulation, and vorticity. Text used is Holton's *An Introduction to Dynamic Meteorology*.

EAS 350 Dynamics of Marine Ecosystems (I)
Fall. 3 credits. Prerequisites: 1 year of calculus and a semester of oceanography (i.e., EAS 154), or instructor's permission. C. H. Greene. This lecture course covers the interactions of physical and biological processes in marine ecosystems. It begins by looking at these processes on a global scale and works down to the scales relevant to individual organisms. Topics include: global patterns of ocean circulation, global patterns of ocean production, climate variability and the role of the ocean in global climate change; the El Nino/Southern Oscillation, ecosystem dynamics of the open ocean and coastal environments.

EAS 352 Synoptic Meteorology (I)
Spring. 3 credits. Prerequisites: EAS 341 and concurrent enrollment in EAS 242. M. W. Wysocki. Weather map analysis and forecasting techniques are studied by applying the principles of fluid and heat flow. This course strengthens previously introduced meteorological concepts which are applied to forecasting midlatitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

EAS 355 Mineralogy (I)
Fall. 4 credits. Prerequisites: EAS 101 or 201 and CHEM 207 or permission of instructor. S. Mahlburg Kay. The course covers chemical and physical properties and identification of minerals with emphasis on the rock forming minerals that are the principal constituents of the Earth and other planets. Topics include internal and external crystallography, crystal chemistry, introductions to x-ray crystallography and optical mineralogy, and a systematic examination of the structures, chemistry, and occurrence of the rock forming minerals. Independent project includes use of electron microprobe and x-ray facilities.

EAS 356 Petrology and Geochemistry (I)
Spring. 4 credits. Prerequisite: EAS 355. R. W. Kay. Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. The petrogenetic evolution of the planets.

EAS 375 Sedimentology and Stratigraphy (I)
Fall. 4 credits. Prerequisite: EAS 101 or 201. J. L. Cisne. Course covers: the formation of sedimentary rocks, depositional processes and environments; correlation of strata in relation to time and environment; petrology of sandstone and limestone; geological age determination; reconstruction of paleogeography and interpretation of earth history from stratigraphic evidence; and organization of strata in stratigraphic sequences.

EAS 388 Geophysics and Geotectonics (I)
Spring. 4 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. B. L. Isacks. Covers global tectonics and the deep structure of the solid earth as revealed by investigations of earthquakes, earthquake waves, the earth's gravitational and magnetic fields, and heat flow.

EAS 417 Field Mapping in Argentina (I)
Summer. 3 credits. Prerequisites: EAS 210 and 326; Spanish desirable, but not required. S. Mahlburg Kay. Covers modern techniques of geological mapping applied in the region of San Juan, Argentina, including folded and faulted sedimentary rock units of the Andean Precordillera (San Juan River section), intensely deformed Precambrian metamorphic rocks of the Pampean Ranges (Pie de Palo), and shallow-level silicic intrusives (Cerro Blanco-Ullan).

EAS 434 Reflection Seismology (I)
Fall. 3 credits. Prerequisites: MATH 192 and PHYS 208, 215, or equivalent. L. D. Brown. Fundamentals of subsurface imaging by multichannel seismic reflection techniques as used in oil exploration and geohydrological investigations. Covers survey design, acquisition, analysis, processing, and interpretation in both 2-D and 3-D. Includes discussion of related techniques such as seismic refraction analysis, tomographic inversion, vertical seismic profiling, shear wave exploration, and ground penetrating radar. Lab is keyed to state-of-the-art seismic processing, modeling and interpretation software from LandMark.
EAS 435 Statistical Methods in Meteorology and Climatology (I)
Fall. 3 credits. Prerequisites: an introductory course in statistics (e.g., AEM 210) and calculus. D. S. Wilks.
Course covers statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications; some statistical characteristics of meteorological data, including probability distributions and correlation structures; operational forecasts derived from multiple regression models, including the MOS system; forecast verification techniques and scoring rules; and time series analysis, EOFs, and other research topics as time permits.

EAS 437 Geophysical Field Methods (I)
Fall. 3 credits. Prerequisite: PHYS 213 or 208, or permission of instructor. L. D. Brown.
Introduction to field methods of geophysical exploration, especially as applied to environmental issues. Emphasis is on seismic, ground penetrating radar, gravity, and magnetic techniques. Field surveys carried out at the beginning of the semester are analyzed and interpreted.

EAS 447 Physical Meteorology (I)
Fall. 3 credits. Prerequisites: 1 year each of calculus and physics. Offered alternate years. Not offered 2002-2003. A. T. DeGaetano.
Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics, and electricity, microphysical cloud processes, and principles of radar probing of the atmosphere.

EAS 451 Synoptic Meteorology II (I)
Fall. 3 credits. Prerequisites: EAS 341 and 342. S. J. Colucci.
Structure and dynamics of large-scale, mid-latitude weather systems, such as cyclones, anticyclones, and jet streams, with consideration of processes that contribute to temperature changes and precipitation are covered. Laboratory sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale, mid-latitude weather events.

EAS 453 Advanced Petrology (I)
Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years. Not offered 2002-2003. R. W. Kay.
Course topics include: magmas and metamorphism in the context of plate tectonics; major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks; and temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems.

EAS 454 Advanced Mineralogy (I)
Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. S. Mahlburg Kay.
Course covers crystalllography and crystal chemistry of minerals and the methods of their study. Includes X-ray diffraction, optical methods, computer simulation of crystal structures. Emphasis is on effects of high pressures and temperatures with implications for understanding the Earth's interior.

EAS 455 Geochemistry (I)
Looks at the Earth from a chemical perspective. Covers the formation of the element, crystal chemistry; chemical evidence regarding the formation of the Earth and solar system; trace-element geochemistry; isotopic geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemistry of rivers and the oceans; hydrothermal systems and ore deposition.

EAS 456 Mesoscale Meteorology (I)
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. Not offered 2002-2003. S. J. Colucci.
Covers the structure and dynamics of mid-latitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms. Also considers tropical weather systems and mesoscale modeling.

EAS 457 Atmospheric Air Pollution (I)
Fall. 3 credits. Prerequisites: EAS 341 or 342 or permission of instructor. Offered alternate years. M. W. Wysocki.
Course examines sources, effects, transport, measurement, and controls of air pollution. Basic physical processes in each area are discussed with an emphasis on their local, regional, and global impacts.

EAS 458 Volcanology (I)
Fall. 3 credits. Prerequisite: EAS 356 or equivalent. Offered alternate years. R. W. Kay and W. M. White.
Considers the causes of volcanism, melting in the Earth, and the origin of magmas. Topics include: physical volcanology, nature and types of volcanic eruptions and associated deposits, eruption mechanisms; volcanic plumbing systems, magma chamber processes, evolution of magma; and impact phenomena in the solar system; volcanic hazard assessment and volcano monitoring; and ore deposits associated with volcanism.

EAS 462 Marine Ecology (also BIOEE 462) (I)
Spring. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Offered alternate years. C. D. Harvell, C. H. Greene.
Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats including polar seas, temperate coastal waters, and tropical coral reefs.

EAS 475 Special Topics in Oceanography
Fall, spring, summer. 2-6 var. credits. Prerequisites: one semester of oceanography and permission of instructor. C. H. Greene.
Undergraduate instruction and participation in advanced areas of oceanographic research. Topics change from term to term. Contact instructor for further information.

EAS 476 Sedimentary Basins: Tectonics and Mechanics (I)
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. T. E. Jordan.
Covers subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Topics include: interactions of subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences; stratigraphic characteristics of active-margin, passive-margin, and cratonic basins, and geophysical and stratigraphic modeling; sequence stratigraphy. Modern and ancient examples are used.

EAS 478 Advanced Stratigraphy (I)
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. Not offered 2002-2003. T. E. Jordan.
Modern improvements in traditional methods of the study of ages and genetic relations among sedimentary rocks, emphasizing 3-D relationships. Techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Physical correlation, dating techniques, and time resolution in sedimentary rocks. Physical controls on the stratigraphic record. Numerical modeling.

EAS 479 Paleobiology (also BIOEE 479) (I)
Fall. 4 credits. Prerequisites: 1 year of introductory biology and either BIOEE 274, 273, EAS 375, or permission of instructor. Offered alternate years; not offered 2002-2003. W. Allmon.
A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of earth and atmospheric sciences students concerning the nature and significance of the fossil record for their respective studies.

EAS 481 Senior Survey of Earth Systems (I)
Spring. 3 credits. Limited to seniors majoring in geological science. J. M. Bird.
Survey course that integrates undergraduate course work, intended to enhance overall understanding of geological sciences. Emphasis on current models of earth's dynamic systems (e.g., global climate change; mantle evolution). Includes guest lecturers; synthesis and review literature; scientific literature readings; discussions; student presentations.

EAS 483 Environmental Biophysics (also CSS 483) (I)
Spring. 3 credits. Prerequisites: EAS/CSS 260 or equivalent, or permission of instructor. Offered alternate years. S. J. Riha.
Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Topics include: energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problem sets.
EAS 487 Introduction to Radar and Remote Sensing (also ECE 487)
Fall or spring. Prerequisites: PHYS 208 or 213 or equivalent. D. L. Hysell. Course on the fundamentals of radar, antennas, and remote sensing. Students are exposed to the principles underlying the analysis and design used for communication and for radar-related applications. They also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds will be able to take the course. Emphasis is placed on radar applications in geophysics, meteorology and atmospheric sciences, astronomy and space sciences. Radar remote sensing of the Earth from spacecraft receives special attention.

EAS 491-492 Undergraduate Research Fall, spring. 1-4 credits. Staff. (R. W. Kay, coordinator.) Introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with, and guided by, a staff member. A short written report is required, and outstanding projects are prepared for publication.

EAS 496 Internship experience Fall or spring. 1-2 credits. S-U grades only.

EAS 497 Individual Study in Atmospheric Science Fall or spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form. Topics are arranged at the beginning of the term for individual study or for group discussions.

EAS 498 Teaching Experience Fall or spring. 1-5 credits. S-U grades only. Students must register with an Independent Study form. Teaching experience is obtained by assisting in the instruction of an atmospheric science course.

EAS 499 Undergraduate Research in Atmospheric Science Fall or spring. Credit by arrangement. S-U grades only. Students must register with an Independent Study form. Independent research on current problems in atmospheric science.

EAS 500 Design Project in Geohydrology Fall. Spring, 3-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over 2 or more semesters. L. M. Cathles. The project may address one of the many aspects of groundwater flow and contamination and must involve a significant geological component and lead to concrete recommendations or conclusions of an engineering nature. Results are presented orally and in a professional report.

EAS 502 Case Histories in Groundwater Analysis Spring. 4 credits. L. M. Cathles.

Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, is analyzed in a detailed and comprehensive manner. The recharge and discharge data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report. Results are presented in a half-day seminar at the end of term.

[EAS 622 Advanced Structural Geology I Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. Not offered 2002-2003. R. W. Allmendinger. Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement, microstructure, preferred orientation, and TEM analysis, pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Analysis of shear zones and folds in these regimes.]

EAS 624 Advanced Structural Geology II Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger. Geometry, kinematics, and mechanics of structural provinces. Concentration on thrust belts, rift provinces, or strike-slip provinces. Techniques of balanced cross sections.

EAS 628 Geology of Organic Belts Spring. 3 credits. Prerequisite: permission of instructor. J. M. Bird. A seminar course in which students study specific geologic topics of an orogenic belt selected for study during the term. The course is intended to complement EAS 681.

EAS 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics Fall. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. D. L. Turcotte. Topics include: definitions of fractal sets and statistical fractals, scale invariance, self-affine fractals, multifractals, applications to fragmentation, seismicity and tectonics, petroleum distribution and reserves, ore grade and tonnage, drainage networks and landforms, and floods and droughts. Definitions of chaos and self-organized criticality, renormalization groups, diffusion limited aggregation and percolation clusters, wavelet transforms, applications to mantle convection, the Earth's dynamo, and distributed seismicity.

[EAS 636 Advanced Geophysics II: Quantitative Geodynamics Spring. 3 credits. Prerequisite: EAS 388 or permission of instructor. Offered alternate years. D. L. Turcotte. Stress and strain in the earth, elasticity and flexure, heat transfer, gravity, fluid mechanics, rock rheology, faulting, chemical geodynamics, flow in porous media.]

EAS 641 Analysis of Biogeochemical Systems Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. L. A. Derry. Dynamics of biogeochemical systems. Kinetic treatment of biogeochemical cycles. Box models, residence time, response time. Analytical and numerical solutions of model systems. Eigenanalysis of linear systems. Feedback and nonlinear cases, problems of uncertainties in natural systems. Modeling software such as Stella II and MatLab, applications to current research of participants or from recent literature.

EAS 651 Atmospheric Physics (also ASTRO 651)
Fall. 3 credits. Prerequisite: a good background in undergraduate calculus and physics is required. Offered alternate years. R. H. Cook, P. J. Gierasch, S. J. Colucci. A survey of the fundamental physical processes in atmospheres. Topics include thermodynamics of atmospheric gases, most effects, hydrostatics, convective instability, atmospheric radiation and radiative heating, radiative-convective equilibrium, clouds, cloud microphysics, and precipitation processes. Thermal structure and greenhouse effects on the Earth and other planets are discussed. The course is taught at the level of Fundamentals of Atmospheric Physics by Salby.

EAS 652 Advanced Atmospheric Dynamics (also ASTRO 652)
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Offered alternate years. S. J. Colucci, P. J. Gierasch. Course topics include: quasigeostrophic theory, atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

EAS 656 Isotope Geochemistry Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years. W. M. White. Course topics include: nucleosynthetic processes and the isotopic abundances of the elements: geochronology and cosmochronology using radioactive decay schemes, including U-Pb, Rb-Sr, Sm-Nd, K-Ar, U-series isotopes, and cosmogenic isotopes such as 10Be and 14C. Diffusion and stable isotopes in petrology and their application to study of the evolution of the crust and mantle; isotopic evidence regarding the formation of the Earth and the solar system; and stable isotopes and their use in geothermometry, paleotemperature, paleontology, and the global climate system.

EAS 666 Applied Multivariate Statistics Spring. 3 credits. Prerequisites: multivariate calculus, matrix algebra, and two previous courses in statistics. Offered alternate years. D. S. Wilks. Statistical techniques for multivariable data. Topics include multivariate EDA, the multivariate normal distribution, parametric and nonparametric inference about multivariate means, principal component analysis, canonical correlation analysis, discriminant analysis and cluster analysis. Geophysical applications are emphasized, using primarily atmospheric and oceanographic data as examples, but the development is general enough to be of broader interest.
EAS 755 Advanced Topics in Petrology and Tectonics
J. M. Bird.

EAS 757 Current Research in Petrology and Geochemistry
S. Mahlburg Kay.

EAS 762 Advanced Topics in Paleobiology
W. D. Allmon.

EAS 771 Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

EAS 773 Palaeobiology
J. L. Caine.

EAS 775 Advanced Topics in Oceanography
Spring. C. H. Greene.

EAS 780 Earthquake Record Reading
Fall. M. Barazangi.

EAS 781 Advanced Topics in Exploration Geophysics
L. D. Brown.

EAS 783 Advanced Topics in Geophysics
B. L. Isacks.

EAS 789 Advanced Topics in Seismology
L. D. Brown.

EAS 793 Andes-Himalayas Seminar

EAS 795 Low Temperature Geochemistry
L. A. Derry.

EAS 796 Geochemistry of the Solid Earth
W. M. White.

EAS 797 Fluid-Rock Interactions
L. M. Cathles.

EAS 799 Soil, Water, and Geology Seminar
L. M. Cathles, T. S. Steenhuis.

EAS 850 Master's-Level Thesis Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in the master's program in atmospheric science.

EAS 950 Graduate-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty. Limited to students in the atmospheric science Ph.D. program only before the "A" exam has been passed.

EAS 951 Doctoral-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy in the atmospheric science Ph.D. program after the "A" exam has been passed.

EAST ASIA PROGRAM
140 Uris Hall

The study of economics provides an understanding of the way economies operate and an insight into public issues. The department offers a broad range of undergraduate courses in such fields as money and banking; international and comparative economics; econometrics; theory; history; growth and development; and the organization, performance, and control of industry.

Social Science Distribution Requirement
The macroeconomics distribution requirement can be fulfilled with any of the following: ENCON 101, ENCON 301, or ENCON 313. The microeconomics distribution requirement can be satisfied with any of the following: ENCON 102, ENCON 302, or ENCON 314.
The Major
Prerequisites
ECON 101 and 102 and MATH 111 (or equivalents, with approval of the director of undergraduate studies), all with grades of C or better.
ECON 301 with a grade of C or better substitutes for 101; ECON 302 with a grade of C or better substitutes for 102.

Requirements
Eight courses listed by the Department of Economics at the 300 level or above, or approved by the student’s major adviser, all with grades of C- or better. (S-U grade option is not allowed.)

These eight courses must include:
1. ECON 313 and 314
2. ECON 321, or ECON 319 and 320
3. At least three courses from the following:
   - 318, 320, 322-99, 467

ECON 301 with a grade of B or better substitutes for both 101 and 313; ECON 302 with a grade of B or better substitutes for both 102 and 314.

If ECON 321 is applied toward the major, neither 319 nor 320 can be applied.

ECON 498 and 499 cannot be counted toward the eight-course requirement.

If ECON 313 is applied to the major, ECON 301 cannot be.

If ECON 314 is applied to the major, ECON 302 cannot be.

An honors program is currently being offered. Students should consult the director of undergraduate studies before May of their junior year for more information.

Students planning graduate work in Economics should select ECON 319-320 rather than 321 and should consider including some of the following courses in their majors:
- ECON 416, Intertemporal Economics
- ECON 419, Economic Decisions under Uncertainty
- ECON 445-446, Topics in Microeconomic and Macroeconomic Analysis
- ECON 467, Game Theory.

Students planning careers in business management should consider including some of the following courses in their majors:
- ECON 333, Financial Economics
- ECON 351 or 352, Industrial Organization
- ECON 361-362, International Trade and Finance
- ECON 440-41, Analysis of Agricultural Markets and Commodity Futures Markets
- ECON 443, Personnel Economics for Managers

In addition to completing the Economics major, such students should also consider courses in accounting and subjects such as finance, marketing, entrepreneurship, business administration, and business law. Courses in these subjects are offered by the Department of Applied Economics and Management, the School of Hotel Administration, and the Johnson Graduate School of Management.

Students planning to attend Law School should consider including some of the following courses in their majors:
- ECON 351 or 352, Industrial Organization
- ECON 361-362, International Trade and Finance
- ECON 404, Economics and the Law.

In addition to completing the Economics major, such students should inquire at Career Services, College of Arts and Sciences, concerning recommended courses offered by other departments.

Courses
ECON 101 Introductory Microeconomics (III)
Fall, spring, winter, and summer. 3 credits. ECON 101 is not a prerequisite for 102. Explanation and evaluation of how the price system operates in determining what goods are produced, how goods are produced, who receives income, and how the price system is modified and influenced by private organizations and government policy.

ECON 102 Introductory Macroeconomics (III)
Fall, spring, winter, and summer. 3 credits. ECON 101 is not a prerequisite for 102. Analysis of aggregate economic activity in relation to the level, stability, and growth of national income. Topics discussed may include the determination and effects of unemployment, inflation, balance of payments, deficits, and economic development, and how these may be influenced by monetary, fiscal, and other policies.

ECON 230 International Trade and Finance (III)
For description, see AEM 230.

ECON 301 Microeconomics (III)
Fall. 4 credits. Prerequisites: calculus. Intended for students with strong analytical skills who have not taken ECON 101, 102. Can be used to replace both ECON 101 and 313. (Can replace 313 only with grade of B or better.) This course covers the topics taught in ECON 101 and 313. An introduction to the theory of consumer and producer behavior and to the functioning of the price system.

ECON 302 Macroeconomics (III)
Spring. 4 credits. Prerequisite: ECON 301. Intended for students with strong analytical skills who have not taken ECON 101, 102. Can be used to replace both ECON 102 and 314. This course covers the topics taught in ECON 102 and 314. (Can replace 314 only with grade of B or better.) An introduction to the theory of national income determination, unemployment, growth, and inflation.

ECON 307 Introduction to Peace Science (also CRP 495.18) (III)
Winter session. 4 credits. Prerequisites: ECON 101-102 or permission of instructor. Introduction to the theories and research on conflict resolution. Topics include conflict, its role and impact on society; theories of aggression and altruism; causes of war; game theory; conflict management procedures and other analytical tools and methods of peace science; and alternatives to war.

ECON 313 Intermediate Microeconomic Theory (III)
Fall, spring, and summer. 4 credits. Prerequisites: ECON 101-102 and calculus. The pricing processes in a private enterprise economy are analyzed under varying competitive conditions, and their role in the allocation of resources and the functional distribution of national income is considered.

ECON 314 Intermediate Macroeconomic Theory (III)
Fall, spring, and summer. 4 credits. Prerequisites: ECON 101-102 and calculus. The theory of national income and determination and economic growth in alternative models of the national economy is introduced. The interaction and relation of these models to empirical aggregate economic data is examined.

ECON 319 Introduction to Statistics and Probability (II)
Fall. 4 credits. Prerequisites: ECON 101-102 and MATH 111-112.

This course provides an introduction to statistical inference and to principles of probability. It includes descriptive statistics, principles of probability, discrete and continuous distributions, and hypothesis testing (of sample means, proportions, variance). Regression analysis and correlation are introduced.

ECON 320 Introduction to Econometrics (II)
Spring. 4 credits. Prerequisites: ECON 101-102, 319, or equivalent.

Introduction to the theory and application of econometric techniques. How econometric models are formulated, estimated, used to test hypotheses, and used to forecast. Understanding economists’ results in studies using regression model, multiple regression model, and introduction to simultaneous equation models.

ECON 321 Applied Econometrics (II)
Fall and spring. 4 credits. Prerequisites: ECON 101-102 and calculus.

This course provides an introduction to statistical methods and principles of probability. Topics covered include analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, correlation and time series analysis. Applications from economics are used to illustrate the methods covered in the course.

ECON 322 World Economic History # (III)
Spring. 4 credits. Prerequisites: ECON 101 and 102 or the equivalent.

An economist's perspective on the comparative evolution of selected economic and social institutions, with emphasis on trade, finance, population growth and technological change.

ECON 323 American Economic History # (III)
Fall. 4 credits. Prerequisites: ECON 101-102 or equivalent.

Problems in American economic history from the first settlements to early industrialization are surveyed.

ECON 324 American Economic History # (III)
Spring. 4 credits. Prerequisites: ECON 101-102 or equivalent.

A survey of problems in American economic history from the Civil War to World War I.

ECON 331 Money and Credit (III)
Fall. 4 credits. Prerequisites: ECON 101-102 and 314.

A systematic treatment of the determinants of the money supply and the volume of credit. Economic analysis of credit markets and financial institutions in the United States.
This course primarily focuses on the pricing of goods and services. The course does not cover the effects of antitrust laws).

The role of government in a free market economy is analyzed. Topics covered include public goods, market failures, allocation mechanisms, optimal taxation, effects of taxation, and benefit-cost analysis. Current topics of an applied nature vary from term to term.

ECON 335 Public Finance: The Microeconomics of Government (III)
Fall. 4 credits. Prerequisites: ECON 101–102 and 313, or their equivalent, and one semester of calculus.

This course examines the role of subnational governments and jurisdictions in the economy. Among the broad questions addressed are: what tasks are optimally assigned to local governments? What impact can such assignment have on efficiency and equity? How do inter-government financial relations affect these outcomes? The theory and evidence on these issues are analyzed, with frequent application to current issues, like debates surrounding local, school district-based taxation, and special topics. Subjects covered include the federal debt, the budget, and government regulation and transfers, as well as problems like local public goods, health care, education, the hierarchy of governmental structure, plus a variety of applied problems.

ECON 336 Public Finance: Resource Allocation and Fiscal Policy (III)
Spring. 4 credits. Prerequisites: ECON 101–102, 313 or its equivalent and 1 semester of calculus.

This course covers the revenue side of public finance and special topics. Subjects covered include the federal debt, the budget, and government regulation and transfers, as well as problems like local public goods, health care, education, the hierarchy of governmental structure, plus a variety of applied problems.

ECON 339 State and Local Public Finance (III)
Spring. 4 credits. Prerequisites: ECON 313.

This course examines the role of subnational governments and jurisdictions in the economy. Among the broad questions addressed are: what tasks are optimally assigned to local governments? What impact can such assignment have on efficiency and equity? How do inter-government financial relations affect these outcomes? The theory and evidence on these issues are analyzed, with frequent application to current issues, like debates surrounding local, school district-based provision of education.

ECON 341 Economics of Wages and Employment II (III)
For description, see ILRLE 440.

ECON 351 Industrial Organization I (III)
Fall. 4 credits. Prerequisite: ECON 313 or its equivalent.

This course examines markets with only a few firms (i.e., oligopolies), and the primary focus is the strategic interactions between firms. Topics include static competition in oligopolies, cartels and other forms of collusive behavior, competition between firms producing complements and products, entry and exit behavior, R&D behavior, and government interventions in oligopoly industries (e.g., antitrust laws).

ECON 352 Industrial Organization II (III)
Spring. 4 credits. Prerequisite: ECON 313 or its equivalent.

This course primarily focuses on the pricing decisions of firms. The course does not consider the strategic response of other firms to these pricing decisions. The pricing decisions include price discrimination, commodity bundling, pricing a product line and pricing a durable good. In addition to pricing decisions, the course considers topics associated with private information such as adverse selection, signaling, and moral hazard.

Numerous theoretical models are presented and empirical results are discussed.

ECON 354 The Economics of Regulation (III)
Fall. 4 credits. Prerequisite: ECON 313 or equivalent.

Regulation constrains individual and institutional behavior. These interfaces between the private and public sectors are explored in terms of their rationale, efficacy, and economic consequences. Regulation is examined as a system of incentives that guides the development and efficient functioning of markets, that moulds the behavior of regulated industries like utilities and that elicits socially desirable levels of pollution, congestion, risk and benefits from externality-generating activities. How the various professions (law, accounting and engineering) view and address these challenges are examined in light of their economic effects.

ECON 361 International Trade Theory and Policy (III)
Fall. 4 credits. Prerequisites: ECON 101–102 and 313.

This course surveys the sources of comparative advantage. It studies commercial policy and analyzes the welfare economics of trade between countries. Some attention is paid to the institutional aspects of the world trading system.

ECON 362 International Monetary Theory and Policy (III)
Spring and summer. 4 credits. Prerequisites: ECON 101–102 and 313.

This course surveys the determination of exchange rates and theories of balance of payments adjustments. It also explores open economy macroeconomics, and it analyzes some of the institutional details of foreign exchange markets, balance of payments accounting, and the international monetary system.

ECON 367 Game Theoretic Methods (III)
Spring. 4 credits. Prerequisites: ECON 101 or equivalent.

This course introduces students to the use of game-theoretic methods for the social sciences. This leads to an analysis of the social and political foundations of economics which prepares students to think strategically on social and economic matters and thus serve as a background for more advanced courses in economics, game theory, and related social sciences.

ECON 371 Economic Development (III)
Fall. 4 credits. Prerequisites: ECON 313 or equivalent.

Study of the problem of sustaining accelerated economic growth in less-developed countries. Trade-offs between growth, welfare, and equity; the legacy of colonialism; relevance of history and economic theory; problems of capital formation, economic planning and international specialization; and the interaction of industrialization, agricultural development, and population change are emphasized.

ECON 372 Applied Economic Development (III)
Spring. 4 credits. Prerequisite: ECON 101–102.

This course examines several special topics in the economics of developing countries. Among the topics covered recently are the concepts of development and underdevelop-
A survey of changing economic institutions
For description, see PAM 321.

For description, see ILRLE 433.

but require only a modicum of analytic tooling
to introduce concepts that are novel to
efficiency? What can be done if the indivisible
economic activities be efficiently organized
contents may vary from year to year. Issues
for upperclass undergraduates. Course
ECON 443 Personnel Economics for
ECON 441 Commodity Futures Markets
ECON 440 Analysis of Agricultural
Markets
ECON 440 and 441 together, count as one
course for the Economics major.
For description, see AEM 640.

ECON 441 Commodity Futures Markets
ECON 440 and 441 together, count as one
course for the Economics major.
For description, see AEM 641.

ECON 443 Personnel Economics for
Managers
For description, see ILRLE 433.

ECON 444 Modern European Economic
History
For description, see ILRLE 444.

ECON 445 Topics in Microeconomic
Analysis—Markets and
Planning (III)
Fall. 4 credits. Prerequisites: ECON 313.
This is a course of economic theory designed for upperclass undergraduates. Course
contents may vary from year to year. Issues
that may be examined include: How can economic activities be efficiently organized through the market mechanisms? Why is the
presence of many traders essential to
efficiency? What can be done if the indivisibility
in production processes becomes an important hindrance to competitive pricing?
How can economies be decentralized efficiently? This course serves two purposes:
to introduce concepts that are novel to undergraduates and relevant to public policy
but require only a modicum of analytic tooling
up, and to illustrate the deductive approach of modern economic analysis—how to define
concepts unambiguously, how to form
propositions in clear-cut fashion, and how to follow up logical implications sequentially
to the conclusion.

ECON 446 Topics in Macroeconomic
Analysis—is Keynesianism
Dead? (III)
Fall or spring. 4 credits. Prerequisites: ECON 314. Not offered 2002–2003.
The coverage of this course may vary from term to term. Presently, the content of the
course deals with the range of criticisms against Keynesian theory by the New Classical Economics, alias the Equilibrium School, alias the Rational Expectations School. Despite the fact that almost all intermediate macroeconomic textbooks are Keynesian in perspective, clearly Keynesian economics is currently at bay. We review critically critiques to Keynesian theory.)

ECON 447 Economics of Social
Security (III)
For description, see CEH 346.

ECON 450 Resource Economics (III)
For description, see ARME 450.
ECON 451 Economic Security (III)
For description, see ILRLE 540.
ECON 453 The Economics of
Unemployment (III)
For description, see ILRLE 348.
ECON 454 Special Topics in Labor
Economics
For description, see ILRLE 440.
ECON 455 Income Distribution (III)
For description, see ILRLE 441.
ECON 456 The Economics of Employee
Benefits (III)
For description, see ILRLE 442.
ECON 457 Women in the Economy (III)
For description, see ILRLE 445.
ECON 458 Topics in Twentieth-Century
Economic History (III)
For description, see ILRLE 448.
ECON 459 Economic History of British Labor (III)
For description, see ILRLE 446.
ECON 460 Economic Analysis of the
Welfare State (III)
For description, see ILRLE 642.
ECON 461 The Economics of
Occupational Safety and Health (III)
For description, see ILRLE 644.
ECON 464 Economics of Agricultural
Development (III)
For description, see AEM 464.
ECON 465 Food and Nutrition
Policy (III)
For description, see AEM 665.
ECON 467 Game Theory (III)
Fall. 4 credits. Prerequisites: ECON 313 and
319.
This course studies mathematical models of
conflict and cooperation in situations of
uncertainty (about nature and about decision
makers).
ECON 468 Economic Problems of Latin
America (III)
Spring. 4 credits. Prerequisites: ECON 101–
102.
Current topics include, international debt,
capital flight, economic integration, stabilization
programs, etc.
ECON 469 China's Economy under Mao
and Deng (III)
Fall. 4 credits. Prerequisites: ECON 101–
102.
This course introduces first the basic features of a centrally planned economy and proceeds to consider the most important example: the rise and fall of the Soviet Union. Secondly, the analysis extends to what used to be known as "Eastern Europe" (e.g., Czechoslovakia, Hungary, Poland). From this necessary
historical background, the course proceeds to current attempts to move away from Socialist
central planning and its legacies to market
economy, privatization, and independence.

ECON 472 Comparative Economic
Systems: East and West (III)
Fall. 4 credits. Prerequisites: ECON 101–
102.
The course develops first a framework for studying economic systems and national
economies and presents three simple stylized
systemic models: capitalist market, socialist
market, and central planning. Secondly, the
course considers economic goals to be
achieved (such as growth, stability, and
productivity) and introduces quantitative
measures used in the evaluation of the
performance. Thirdly, comparative studies of
selected national economies representing the
models are carried out.

ECON 473 Economics of Export-Led
Development (III)
Spring. 4 credits. Prerequisites: ECON 313,
314, or their equivalent.
This course examines the phenomenon of
export-led development from both the
theoretical and empirical points of view.
Concentration is on experiences within the
West Pacific Rim.

ECON 474 National and International
Food Economics (III)
For description, see NS 457.

ECON 475 The Economy of India (III)
Fall. 4 credits. Prerequisite: ECON 101–102
or equivalent background.
This course presents the major economics and
development problems of contemporary India
and examines the country's future economic
prospects. It is, however, our aim to discuss
these problems in their proper historical
perspectives. Hence, the course starts with a
brief outline of the social and political history of
India. It then turns to a more detailed
account of the economic history of India in
two stages.

ECON 476 Decision Theory I (also ECON
676 and CIS 576) (III)
Fall. 4 credits.
Research on decision theory resides in a
variety of disciplines including computer
science, economics, game theory, philosophy,
and psychology. This course attempts to
integrate these various approaches. The
course is taught jointly by two economists/
game theorists and a computer scientist.
The course has several objectives. First, we cover
basic decision theory. This theory, sometimes
known as "rational choice theory", is part of
the foundation for the disciplines listed above.
It applies to decisions made by individuals or
by machines. Second, we cover the limitations of
and problems with this theory. Issues
discussed here include decision theory
paradoxes revealed by experiments, cognitive
and knowledge limitations, and computational
issues. Third, we cover new research designed in
response to these difficulties. Issues
covered include alternative approaches to the
foundations of decision theory, adaptive
behavior and shaping the individual decisions
by aggregate/evolutionary forces. This is a
two-semester course. In the fall semester the
course is lecture based. Students will be
required to complete several problem sets and
there will be a final exam. In the spring semester
there will be additional lectures as well as
visiting speakers. Students will be required to
read the speakers papers and participate in discussions. In the spring semester students will be required to complete a research project.

**ECON 477 Decision Theory II (also ECON 677, C1S 577) (III)**
Spring. 4 credits. Prerequisite: ECON 476 or ECON 677. For description, see ECON 476.

**ECON 498 Independent Study in Economics**
Fall or spring. Variable credit. Independent study.

**ECON 499 Honors Program**
Fall and spring. 8 credits. Prerequisites: ECON 313, 314, 321 (or 319–320). Consult the Director of Undergraduate Studies for details. Interested students should apply to the program in the spring semester of their junior year.

**Graduate Courses and Seminars**

**ECON 609 Microeconomic Theory I**
Fall. 4 credits.
Topics in consumer and producer theory.

**ECON 610 Microeconomic Theory II**
Spring. 4 credits.
Topics in consumer and producer theory, equilibrium models and their application, externalities and public goods, intertemporal choice, simple dynamic models and resource depletion, choice under uncertainty.

**ECON 611 Microeconomic Theory III**
Spring. 4 credits. Prerequisites: ECON 609 and 610.
This class is a part of a three semester sequence in microeconomic theory. It provides a rigorous underpinning of partial equilibrium competitive analysis and reviews theories of non-competitive markets, including Bertrand, Cournot, and monopolistic competition. It covers the classical sources of market failure (public goods, externalities, and natural monopoly) and discusses market failures stemming from informational asymmetries. It also provides an introduction to contract theory, bargaining theory, social choice theory, and the theory of mechanism design.

**ECON 613 Macroeconomic Theory I**
Fall. 4 credits.
Course covers the following topics: static general equilibrium; intertemporal general equilibrium: infinitely lived agents models and overlapping generations models; welfare theorems; equivalence between sequential markets and Arrow-Debreu Markets; Ricardian proposition; Modigliani-Miller theorem; asset pricing; recursive competitive equilibrium; the Neoclassical Growth Model; calibration; and introduction to dynamic programming.

**ECON 614 Macroeconomic Theory II**
Spring. 4 credits.
Course covers the following topics: dynamic programming; stochastic growth; search models; cash-in-advance models; real business-cycle models; labor indivisibilities and lotteries; heterogeneous agents models; optimal fiscal and monetary policy; sustainable plans; and endogenous growth.

**ECON 617 Intermediate Mathematical Economics I**
Fall. 4 credits. Prerequisites: Calculus II and intermediate linear algebra.
The course covers selected topics in Matrix algebra (vector spaces, matrices, simultaneous linear equations, characteristic value problem), calculus of several variables (elementary real analysis, partial differentiation, convex analysis), classical optimal theory (unconstrained maximization, constrained maximization).

**ECON 618 Intermediate Mathematical Economics II**
Spring. 4 credits. Not offered 2002–2003. A continuation of ECON 617, the course develops additional mathematical techniques for applications in economics. Topics covered may include study of dynamic systems (linear and nonlinear difference equations, differential equation, chaotic behavior), dynamic optimization methods (optimal control theory, nonstochastic and stochastic dynamic programming), and game theory (repeated dynamic and evolutionary games).

**ECON 619 Econometrics I**
Fall. 4 credits. Prerequisites: ECON 319–320 or permission of instructor.
This course gives the probabilistic and statistical background for meaningful application of econometric techniques. Topics covered include: probability theory: probability spaces, random variables, distributions, moments, transformations, conditional distribution, distribution theory and the multivariate normal distribution, convergence concepts, laws of large numbers, central limit theorems, Monte Carlo simulation; statistics: sample statistics, sufficiency, exponential families of distributions. Further topics in statistics are considered in ECON 620.

**ECON 620 Econometrics II**
Spring. 4 credits. Prerequisite: ECON 619.
This course is a continuation of ECON 619 (Econometrics I) covering statistics: estimation theory, least squares methods, method of maximum likelihood, generalized method of moments, theory of hypothesis testing, asymptotic test theory, and nonnested hypothesis testing; and econometrics: the linear general model, generalized least squares, specification tests, instrumental variables, dynamic linear models, linear simultaneous equation models, nonlinear models, and applications.

**ECON 639 Public Political Economy (also CEE 528)**
Spring. 4 credits. Prerequisites: ECON 313 or equivalent.
Topics covered include the intrinsic nature of goods and services, decreasing cost of production, externalities and congestion, attributes and government regulation essential for an effective market, the efficient role of government in non-market resource allocation methods, methods for inferring the demand for public goods, efficient public decision-making, the supply of public services and raising revenue through taxes and user-fees. Particular emphasis is placed on the intersection between efficiency and efficiency in resolving conflicts over public good provision, including defining jurisdictions for the provision of particular services. Examples emphasize the proper provision of infrastructure services: physical transportation, utilities, tele-information; human-capital (education and R&D); and biological (renewable resources, species diversity and the environment).

**ECON 676 Decision Theory I (also C1S 576)**
For description, see ECON 476.

**ECON 677 Decision Theory II (also C1S 577)**
For description, see ECON 477.

**ECON 699 Readings in Economics**
Fall or spring. Variable credit. Independent study.

**ECON 703 Seminar in Peace Science**
Fall. 4 credits.
Among the topics covered at an advanced level are game theory are: coalition theory, bargaining and negotiation, cooperative procedures, microbehavior models, macrosocial processes, and general systems analysis.

**ECON 710 Stochastic Economics: Concepts and Techniques**
Spring. 4 credits. Prerequisites: ECON 609, 610, 613, 614, 619, and 620.
This course reviews a number of techniques that have been useful in developing stochastic models of economic behavior. These include: discrete-time Markov processes, dynamic programming under uncertainty, and continuous-time differential equations. Examples of economic models are drawn from recent literature on optimal capital accumulation and optimal savings and portfolio selection problems; permanent income hypothesis; dynamic models of the business cycle. Advanced graduate students contemplating work in economic theory and econometric theory gain exposure to current research.

**ECON 712 Advanced Macroeconomics**
4 credits. Prerequisites: ECON 613, 614.
The purpose of this course is to introduce students to some of the topics and analytic techniques of modern macroeconomic research. The course falls into three parts: dynamic programming, new Keynesian economics, and recent theories of economic growth. The dynamic programming section includes models of consumption, investment, and real business cycles. The new Keynesian section covers models of wage and price rigidity, coordination failure, and credit markets. The section on endogenous growth looks at recent efforts to add nonconvexities to models of optimal growth. These topics are intended to complement the material on overlapping generations covered elsewhere.

**ECON 713 Advanced Macroeconomics II**
Spring. 4 credits. Prerequisites: ECON 613, 614.
This course reviews the most recent research in endogenous growth theory. This theory is little more than a decade old, but it has produced a large number of both empirical and theoretical results that have substantially reshaped the general field of macroeconomics. It is perhaps no exaggeration to say that most of the work at the front of today's macroeconomics belongs to this field. An increasing number of papers have been touching important issues such as: learning by doing, R&D investment, market structure, private and public organization of R&D, education financing, human capital accumulation, technological unemployment, growth and business cycles, inequality and growth, political equilibrium, democracy and growth, instability, social conflict, capital accumulation, intergenerational and vested interests and barriers to technology adoption, international transfers of technologies, sustainable development, etc.
This course aims to orient the student in this large and variegated literature consisting of recently published articles and working papers. Understanding this literature is a sound training in the analytical methods used at the forefront of theoretical research, but it also provides a number of empirical results at the center of the economic debate.

**ECON 717 Mathematical Economics**
4 credits. Prerequisites: ECON 609–610 (or equivalent training in micro theory) and MATH 413–414 (or equivalent training in analysis).

The primary theme of this course is to explore the role of prices in achieving an efficient allocation of resources in dynamic economies. Some of the classical results on static equilibrium theory and welfare economics are examined through an axiomatic approach. Some basic issues on capital theory are also analyzed.

**ECON 718 Topics in Mathematical Economics**

**ECON 719 Advanced Topics in Econometrics I**
Fall. 4 credits. Prerequisites: ECON 619–620 or permission of instructor.

This course covers advanced topics in econometrics, such as asymptotic estimation and test theory, robust estimation, Bayesian inference, advanced topics in time-series analysis, errors in variable and latent-variable models, qualitative and limited dependent variables, aggregation, panel data, and duration models.

**ECON 720 Advanced Topics in Econometrics II**
Spring. 4 credits. Prerequisites: ECON 619–620 or permission of instructor.

For description see ECON 719.

**ECON 721 Time Series Econometrics**
Spring. 4 credits. Prerequisites: ECON 619–620 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include: the theory of stationary stochastic processes including univariate ARMA(p,q) models, spectral density analysis, and vector autoregressive models; parametric and semi-parametric estimation; current developments in distributional theory; and estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

**ECON 731 Monetary Economics**
Spring. 4 credits. Prerequisites: ECON 614 or permission of the instructor.

This course covers advanced topics in monetary economics, macroeconomics, and economic growth—such as overlapping-generations, taxes and transfers, labor market determinants in money, transactions demand for money, multi-asset accumulation, exchange rates, and financial intermediation.

**ECON 732 Monetary Economics**
Fall. 4 credits. Prerequisites: ECON 731 or permission of the instructor.

This course covers advanced topics in monetary economics, macroeconomics, and economic growth—such as economic volatility, the "burden" of government debt, restrictions on government borrowing, dynamic optimization, endogenous growth theory, technological evolution, financial market frictions, and cyclical fluctuations.

**ECON 735 Public Finance: Resource Allocation and Fiscal Policy (also AEM 735)**

This course combines a mathematical and highly analytical understanding of the role of government in market economies and the fundamentals of public economics and related issues. Topics covered include: generalizations and extensions of fundamental theories of welfare economics, in-depth analysis of social choice theory and the theory on implementation in economic environments, public goods and externalities and other forms of market failure associated with asymmetric information. The theoretical foundation for optimal direct and indirect taxation is also introduced along with the development of various consumer surplus measures and an application to benefit cost analysis. Topics of an applied nature vary from semester to semester depending on faculty research interests.

**ECON 736 Public Finance: Resource Allocation and Fiscal Policy**
Fall. 4 credits.

This course spends a large part of the semester covering the revenue side of public finance. Topics include the impact of various types of taxes as well as the determination of optimal taxation. The impact of taxation on labor supply, savings, company finance and investment behavior, risk bearing, and portfolio choice are explored. Other topics include the interaction of taxation and inflation, tax evasion, tax incidence, social security, unemployment insurance, deficits, and interactions between different levels of government.

**ECON 737 Location Theory and Regional Analysis**

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include: the theory of stationary stochastic processes including univariate ARMA(p,q) models, spectral density analysis, and vector autoregressive models; parametric and semi-parametric estimation; current developments in distributional theory; and estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

**ECON 738 Public Choice**
Spring. 4 credits. Prerequisites: ECON 609, 610.

This class has two parts. It begins with an introduction to economic theories of political decision making. We review the theory of voting, theories of political parties and party competition, theories of legislative decision making and interest group influence. We also discuss empirical evidence concerning the validity of these theories. The second part uses these theories to address a number of issues in Public Economics. We develop the theory of political failure, analyze the performance of alternative political systems and discuss the problem of doing policy analysis which takes into account political constraints.

**ECON 739 Advanced Topics in State and Local Public Finance**
Spring. 4 credits. Prerequisites: ECON 609, 620.

This course addresses: What tasks are optimally assigned to local governments? What impact can such assignment have on efficiency and equity? In addition to the theoretical foundations on these issues, the course explores recent empirical evidence in this area, with particular attention to the research designs and data used in relevant papers.

**ECON 741 Seminar in Labor Economics**
For description see ILRLE 744.

**ECON 742 Seminar in Labor Economics**
For description see ILRLE 745.

**ECON 751 Industrial Organization and Regulation**
Fall. 4 credits. Prerequisites: ECON 609, 610.

This course focuses primarily on recent theoretical advances in the study of industrial organization. Topics covered include: market structure, nonlinear pricing, quality, durability, location selection, repeated games, collusion, entry deterrence, managerial incentives, switching costs, government intervention, and R&D/Patents. These topics are discussed in a game-theoretic context.

**ECON 752 Industrial Organization and Regulation**
Spring. 4 credits. Prerequisites: ECON 609, 610, 751.

This course rounds out some topics in the Theory of Industrial Organization with the specific intent of addressing the empirical implications of the theory. The course reviews empirical literature in the SCP paradigm and in the NEIO paradigm.

**ECON 753 Public Policy Issues for Industrial Organizations**

This course surveys equilibrium concepts for noncooperative games. We cover Nash equilibrium and a variety of equilibrium refinements, including perfect equilibrium, proper equilibrium, sequential equilibrium and more! We pay attention to important special classes of games, including bargaining games, signalling games, and games of incomplete information. Most of our analysis is from the strict decision-theoretic point of view, but we also survey some models of bounded rationality in games, including games played by automata.

**ECON 754 Economics of Imperfect Information**
Spring. 4 credits. Prerequisites: ECON 609–610 and 619.

This course surveys equilibrium concepts for noncooperative games. We cover Nash equilibrium and a variety of equilibrium refinements, including perfect equilibrium, proper equilibrium, sequential equilibrium and more! We pay attention to important special classes of games, including bargaining games, signalling games, and games of incomplete information. Most of our analysis is from the strict decision-theoretic point of view, but we also survey some models of bounded rationality in games, including games played by automata.
This course develops critiques and extensions of economic theory, departing from the standard assumptions of economic modeling techniques. Evidence is presented into how human behavior systematically departs from the standard assumptions of economic theory and how this can be incorporated into modeling techniques.

**ECON 760 Topics in Political Economy**
Fall. 4 credits. Prerequisite: Economics 609, 610.
This course develops critiques and extensions of economic theory, taking into account the political and social moorings of economic activity and equilibrium. The formation and persistence of social norms; the meaning and emergence of property rights; the role of policy advice in influencing economic outcomes; and the effect of political power and ideology on economic variables are studied. While these topics were popular in the classic works of political economy, recent advances in game theory and, more generally, game-theoretic thinking allows us to approach these topics from a new perspective. Hence, the course begins by devoting some lectures to elementary ideas in game-theory and strategic analysis.

**ECON 761 International Economics: Trade Theory and Policy**
Fall. 4 credits. Prerequisites: ECON 609, 610.
This course surveys the sources of comparative advantage. It analyzes simple general equilibrium models to illustrate the direction, volume, and welfare effects of trade. Topics in game theory and econometrics as applied to international economics may be covered.

**ECON 762 International Economics: International Finance and Open Economy Macroeconomics**
Spring. 4 credits. Prerequisite: ECON 761.
This course surveys the determination of exchange rates and theories of balance of payment adjustments. It explores open economy models by analyzing models of monetary economies. Topics in monetary economics and econometrics as applied to international economics are covered.

**ENGLISH 503 Psychology and Economic Theory**
Fall, spring. 4 credits. Prerequisites: grad core or instructor's permission.
This course explores the ways in which insights from psychology can be integrated into economic theory. Evidence is presented into modeling techniques.

**ENGLISH 772 Economics of Development**
Spring. 4 credits. Prerequisites: first-year graduate economic theory and econometrics.
Analytical approaches to the economic problems of developing nations. Topics to be covered include: some old and new directions in development economics thinking, the welfare economics of poverty and inequality, empirical evidence on who benefits from economic development, labor market models, project analysis with application to the economics of education, and development policy.

**ENGLISH 773 Economic Development**
Fall. 4 credits. Prerequisites: ECON 609 and 620.
The course is concerned with theoretical and applied work that seek to explain economic development, or lack thereof, in countries at low-income levels. Specific topics vary each semester.

**ENGLISH 774 Economic Systems**
Spring. 4 credits. The course deals with economic systems, formerly centrally planned economies, and economies in transition.

**ENGLISH 775 Economic Systems**
Spring. 4 credits. The course deals with economic systems, formerly centrally planned economies, and economies in transition.

**ENGLISH 776 Seminars in Advanced Economics**
Fall and spring. 4 credits.
Courses of Study. Many English majors choose courses in English at the 300 level and above. English. Although advanced courses in foreign literature read in the original languages may not be used to fulfill the pre-1800 requirement, they may be used for English major credit provided they are included within the 12 credits required for the major. The department's "Guide to the English Major" contains suggested areas of concentration and lists of courses that fall within the areas proposed, but majors are expected to define their own concentrations in consultation with their advisers.

As many as 12 credits in courses offered by departments and programs other than English may under certain conditions be used to satisfy English major requirements. Courses in literature and creative writing offered by academic departments in neighboring fields and by departments and programs other than English may be used to meet the college's "historical breadth" requirement. The "Humanities and the Arts" distribution requirement for the English major may also be used to meet requirements for the major. Credit from other non-ENGL courses may be included within the 12 credits of non-departmental courses approved for the major only when the student is able to demonstrate to the adviser's satisfaction their relevance to his or her individual program of study.

To meet the college's "historical breadth" requirement, a student must complete with passing letter grades 10 courses (40 academic units) approved by the Department of English, all of which are strongly recommended for majors and prospective majors. ENGL 201 and 202, which together constitute a two-semester survey of major British writers, though not required, are generally strongly recommended for majors.

The Major in English with Honors
Second-term sophomores who have done superior work in English and related subjects are encouraged to seek admission to the department's program leading to the degree of Bachelor of Arts with Honors in English. Following an interview with the chair of the Honors Committee, qualified students will be admitted provisionally to the program. During their junior year these students must complete at least one honors seminar (ENGL 491 or 492); they are encouraged to take an additional 400-level English course in the field in which they plan to concentrate. On the basis of work in these and other English courses, a prospective candidate is expected to select a thesis topic and secure a thesis adviser by the end of the junior year. A student who has been accepted by a thesis adviser becomes a candidate for Honors rather than a provisional candidate. During the senior year, each candidate for Honors in English enrolls in a year-long tutorial (ENGL 493–494) with the faculty member who has agreed to serve as the student's thesis adviser. The year's work culminates in the submission of a substantial scholarly or critical essay to be judged by at least two members of the faculty. More information about the Honors Program may be found in a leaflet available in the English offices.

Referee Writing Seminars Recommended for Prospective Majors

ENGL 270 The Reading of Fiction
Fall, spring, 3 credits. Each section limited to 17 students. Recommended for prospective majors in English. This course does not satisfy requirements for the English major.

ENGL 271 The Reading of Poetry
Fall, spring, 3 credits. Each section limited to 17 students. Recommended for prospective majors in English. How can we become more appreciative, alert readers of poetry, and at the same time better writers of prose? This course attends to the rich variety of poems written in English, drawing on the works of poets from Wycliffe to Sylvia Plath, John Keats to Li-Young Lee, Emily Dickinson to A. R. Ammons. We may read songs, sonnets, odes, villanelles, even limericks. By engaging in thorough discussions and varied writing assignments, we explore some of the major periods, modes, and genres of English poetry, and in the process expand the possibilities of our own writing. This course does not satisfy requirements for the English major.

ENGL 272 Introduction to Drama
Fall, spring, 3 credits. Each section limited to 17 students. Recommended for prospective majors in English. This course does not satisfy requirements for the English major.

Students in this seminar study plays, older and newer, in a variety of dramatic idioms and cultural traditions. Plays being performed by the theatre department will be included, if possible. A typical reading list might include works by Sophocles, Shakespeare, Chekhov, Brecht, Miller, Beckett, and Shange. Course work consists of writing and discussion and the occasional viewing of live or filmed performances.

Expository Writing

ENGL 288-289 Expository Writing (IV)
Fall, spring, summer, winter. 3 credits. Each section limited to 17 students. Students must have completed their colleges' first-year writing requirements or have the permission of the instructor. A. Davis and staff.

ENGL 288-289 offers guidance and an audience for students who wish to gain skill in expository writing. Each section provides a context for writing defined by a form of exposition, a disciplinary area, a practice, or a topic intimately related to the written medium. Course members read in relevant published material and write and revise their own work regularly, while reviewing and responding to each other's. Since these seminar-sized courses depend on members' full participation, regular attendance and submission of written work are required. Students and instructors confer individually throughout the term. For more information please see the following web site: http://www.cornell.edu/instruct/ct/courses/engl288-89/

Topics for fall sections include:
Section 1—S. Serrell—The "I" in Nature
Section 2—R. Roenisch—The Essay: Personal to Public
Section 3—C. Harwood—Free Speech under the First Amendment
Section 4—L. LeGendre—Issues and Audiences
Section 5—S. Davis—Making the News
See English department Course Offerings for full fall and spring section descriptions.

This course does not satisfy requirements for the English major.

[ENGL 381] Reading as Writing (IV)  

[ENGL 386] Philologic Fictions (IV)  

[ENGL 387] Autobiography: Theory and Practice (IV)  

[ENGL 388] The Art of the Essay (IV)  
Fall. 4 credits. Limited to 15 students. Interested students should submit one or more pieces of recent writing (prose) to the instructor before the beginning of the term, preferably to L. Fakundiny.

For both English majors and nonmajors who have done distinguished work in first-year writing seminars and in such courses as ENGL 280–281 and 288–289, and who desire intensive practice in writing essays as a kind of creative nonfiction. The course assumes a high degree of self-motivation, a capacity for independent work, and critical interest in the work of other writers. It aims for a portfolio of conceptually rich and stylistically polished writing.

Creative Writing

Students usually begin their work in Creative Writing with ENGL 280 or 281, and only after completion of the First-Year Writing Seminar requirement. Please note that either ENGL 280 or ENGL 281 is the recommended prerequisite for 300-level creative writing courses. ENGL 280 and 281 may satisfy a distribution requirement in your college (please check with your college adviser). ENGL 382–383, 384–385, and 480–481 are approved for the English major.

ENGL 280–281 Creative Writing (IV)  
Fall, spring, summer, winter. 3 credits. Prerequisites: completion of the freshman seminar requirement. Limited to 18 students.

Majors and prospective majors, please note. Although recommended for prospective English majors, ENGL 280–281 cannot be counted towards the 40 credits required for completion of the English major. It is a prerequisite for 300-level courses in creative writing, which count towards the major. ENGL 280 is not a prerequisite for ENGL 281.

An introductory course in the theory, practice, and reading of prose, poetry, and allied forms. Students are given the opportunity to try both prose and verse writing and may specialize on one or the other. Many of the class meetings are conducted as workshops.

ENGL 382–383 Narrative Writing (IV)  
Fall, spring, 383. 4 credits each term. Each section limited to 15 students. Previous enrollment in ENGL 280 or 281 recommended. Prerequisite: permission of instructor, normally on the basis of a manuscript. Fall: Sec. 1, R. Morgan; Sec. 2, M. McCoy; Sec. 3, H. Viramontes. Spring: H. Viramontes, M. Koch, M. McCoy.

The writing of fiction; study of models; analysis of students' work.

ENGL 384–385 Verse Writing (IV)  
Fall or summer, 384; spring, 385. 4 credits each term. Each section limited to 15 students. Prerequisites: ENGL 280 or 281, or permission of instructor. Fall: A. Fulton, K. McClaine. Spring: K. McClaine, staff.

The writing of poetry; study of models; analysis of students' poems; personal conferences.

ENGL 480–481 Seminar in Writing (IV)  
Fall, 480; spring, 481. 4 credits each term. Each section limited to 15 students. Prerequisite: permission of instructor, normally on the basis of a manuscript. The manuscript should be submitted to the instructor no later than the first day of class. Prerequisites: ENGL 280 or 281 and at least one 300-level writing course recommended. Successful completion of one half of the 480–481 sequence does not guarantee enrollment in the other half, students must receive permission of the instructor to enroll in the second course. Fall: Sec. 1, P. Janowitz, sec. 2, R. Morgan. Spring: L. Herrin, M. McCoy.

Intended for those writers who have already gained a basic mastery of technique. Although ENGL 480 is not a prerequisite for ENGL 481, students normally enroll for both terms and should be capable of a major project—a collection of stories or poems, a group of personal essays, or perhaps a novel—to be completed by the end of the second semester. Seminars are used for discussion of the students' manuscripts and published works that individual members have found of exceptional value.

Courses for Freshmen and Sophomores

These courses have no prerequisites and are open to freshmen and nonmajors as well as majors and prospective majors.

Introductions to Literary Studies

ENGL 201–202 The English Literary Tradition # (IV)  
Fall, 201. 4 credits. ENGL 201 is not a prerequisite for 202. This course may be used as one of the three pre-1800 courses required of English majors. D. Fried.

An introductory survey of English literature, examining its historical development and some of its achievements from its beginnings in the 8th century through the 17th century. Some of the works we read, discuss, and write about across this thousand-year era (Blake's illuminated books Songs of Innocence and Songs of Experience), prose selections and poems by Wordsworth, Coleridge, Shelley, and Keats, and a novel by Jane Austen (Persuasion), and end with dramatic monologues and other lyrics from the Victorian era (Tennyson, Browning, Arnold, Hopkins), plus one play (Wilde, The Importance of Being Earnest). Lectures are supplemented by small discussion groups once a week. Short creative exercises will introduce techniques of close reading and approaches to literary language and style.

ENGL 207 Introduction to Modern Poetry (IV)  
Fall. 4 credits. No prior study of poetry necessary. D. Mendelson.

An introduction to the exhilaratingly diverse forms, purposes, and themes of poetry of the last hundred years. The course focuses on about a dozen U. S. and British poets, chosen not only for the ways in which they enlarged the formal possibilities of verse but also for the subtlety or bravura with which they evoke the anxiety, perversity, joy, and complexity of modern life. Key developments in non-English-language poetry also receive some attention, as do prose poems and polemics of modernism, questions of avant-gardism and tradition in other genres and arts, and the changing role of poetry in the age of radio, film, television, and internet. Assignments include exercises in the writing of poetry and analyses of poets' specific dictical, metrical, and syntactic choices, as well as broader interpretive essays. Focal poets may include William Carlos Williams, T. S. Eliot, Gertrude Stein, Marianne Moore, Langston Hughes, W. H. Auden, Dylan Thomas, Elizabeth Bishop, Frank O'Hara, Susan Howe, Don Paterson, and Louise Glück.

ENGL 227 Shakespeare # (IV)  
Spring, summer, and winter. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. W. Wetherbee.

Careful study of 10 of Shakespeare's major plays.

Major Genres and Areas

[ENGL 203] Major Poets (IV)  

[ENGL 209] Introduction to Cultural Studies (IV)  

[ENGL 251] Twentieth-Century Women Novelists (also WOMNS 251) (IV)  
Fall. 4 credits. E. DeLoughrey.

This course will be particularly concerned with questions about women's experience and perspective and will explore intersections of gender, ethnicity, race, sexuality, and other vectors of identity. Readings might include novels by Jamaica Kincaid, Dorothy Allison, Louise Erdrich, Toni Morrison, Helena Maria Viramontes, Fae Ng, Cristina Garcia, and others. Assignments include two papers, a research project, and a number of short in-class writings.

ENGL 265 African Literature # (IV)  
Fall. 4 credits. B. Jeyifo.

An introduction to major African writers and literary traditions. Authors to be studied may include Wole Soyinka, Chinua Achebe, Bessie Head, Ayi Kwei Armah, Ama Ata Aidoo, Tayeb Salih, and Ousmane Sembene.

[ENGLISH 505]
ENGL 282 Asian American Literature (also AAS 262 and AM ST 282) (IV) Spring. 4 credits. S. Wong.

This course introduces students to a variety of writings by Asian North American authors and the variety and importance of children's literature. It is designed to give students an understanding of the range of American literary history. Not a required of English majors. T. Hill and H. Shaw.

Scotland was an independent kingdom during most of its history. Although it is now politically part of the UK, it preserves a cultural distinctiveness. This course provides an introduction to Scottish literature and its cultural context. We will focus on important Scottish literary texts, with special emphasis on the period from the sixteenth century through the eighteenth. The course should appeal to those who wish to learn more about their Scottish heritage, to those who wish to view in a new perspective works normally considered monuments of "English" literature, and to those who simply wish to know more about a remarkable culture and the literature it produced. Some of the texts are read in Scots, but no familiarity with Scots or earlier English is assumed. Authors studied include Henryson, Dunbar, Anonymous (the Scottish Ballads), Hume, Burns, Scott, Stevenson, Grassic Gibbon, Spark, and some twentieth-century writers of short stories. Students will view the film, The Prime of Miss Jean Brodie.

ENGL 275 The American Literary Tradition (also AM ST 275) (IV) Fall. 3 or 4 credits. N. Walligora-Davis.

The problem of an American national literature is explored through the reading, discussion, and close analysis of texts across the range of American literary history. Not a survey, this course focuses on the relations of the texts to each other, the shaping of national identities in those relationships, and the assumptions about history, language, and the self that underlie them.

ENGL 276 Desire (also COM L 276, WOMNS 276) (III or IV) Spring. 4 credits. E. Hanson.

Sexuality is a series of scripted performances, a set of stories we tell ourselves about ourselves. Through a critical discussion of "these pleasures which we lightly call physical," to borrow a phrase from the French novelist Colette, we might discover a deeper appreciation for the strange narrative of someone else's sexual desire, and perhaps even the strength of our own. We begin with the theory that sexual desire has a history, even a literary history, and we examine classic texts in some of its most influential modes: Platonic, Christian, romantic, dehumanizing, psychoanalytic, feminist, and queer. This course is an introductory survey of dramatic literature from Ancient Greece to the present, from Plato and William Shakespeare to Carlh Churchill and Tony Kushner, and it is also a survey of the most influential trends in modern sexual theory and sexual politics, including the work of Freud, Foucault, and various feminists and queer theorists. Topics for discussion include Greek pederasty, sublimation, hypstera, sadomasochism, homosexuality, pornography, cybersex, feminism, and other literary and performative pleasures, and the focus is always on expanding our critical vocabulary for considering sex and sexual desire as a field of intellectual inquiry.

[ENGL 278 Queer Fiction (also WOMNS 280)] Fall. 4 credits. Next offered 2003–2004.

ENGL 279 Introduction to Lesbian Fiction (also WOMNS 280) (IV) Fall. 4 credits. K. McCullough.

This course tracks the modern lesbian in American and British literature, from her early appearances in the nineteenth century as monster or invert to her emergence in the twentieth-century reappearance in fiction by self-identified lesbian authors. We begin by examining the category of "lesbian fiction," asking what exactly constitutes lesbian fiction and examining a variety of answers posited by literary critics. We then explore, among other things, the relationship between historical context and representational possibilities, the constraining or enabling impact of "community," the conceptual and cultural construction of "lesbian" identity, and, last but not least, the benefits and dangers (for a marginalized group) of being put into/reclaiming a representational space. Authors under consideration may include Dorothy Allison, June Arnold, Marusa Bocuariuiw, Beth Brant, Michelle Clif, Terri de la Peña, Leslie Feinberg, Jewelle Gomez, Radclyffe Haile, Audre Lorde, Achy Obejas, and Jeanette Winterson, among others.

[ENGL 295 The Essay in English # (IV)] Fall. 4 credits. Prerequisite: completion of the three pre-1800 courses required of English majors. Next offered 2003–2004. L. Fakundiny.

Special Topics

ENGL 210 Medieval Romance: Voyage to the Otherworld # (IV) Spring. 4 credits. This course may not be used as one of the three pre-1800 courses required of English majors. Next offered 2003–2004. J. Hill.

ENGL 217 History of the English Language (also LING 217) (III or IV) Fall. 4 credits. W. Harbert.

ENGL 221 The Ethics of Imagining the Holocaust (IV) Fall. 4 credits. Enrollment is limited to 15 students. While not restricted to sophomores this course is intended to offer sophomores especially an opportunity to work closely with faculty in a seminar environment within a strong interdisciplinary context. Next offered 2003–2004. L. Brown.

ENGL 225 Rewriting the Classics: Stories of Travels and Encounters (also WOMNS 235) (IV) Fall. 4 credits. E. Deloughrey.

This course examines the ways particular narratives travel across time and space. We read canonical works of literature produced during the era of the British empire, such as The Tempest, Robinson Crusoe, Jane Eyre, and Heart of Darkness and position them in relation to novels that rewrite, contest, and mitigate the depiction of contact between Europeans and others. We not only interrogate the relationship between writers from the colonies (in Africa, India, and the Caribbean) and those from Great Britain, but also examine the ways in which these British texts were revisions of earlier travel narratives and legends. Requirements: active class participation, student presentations, a few short essays and a final paper.

ENGL 237 Children's Literature (IV) Fall. 4 credits. J. Adams.

An historical study of children's literature from the seventeenth century to the present, principally in Europe and America, which explores changing literary forms in relation to the social history of childhood. Ranging from oral folktales to contemporary novelistic realism (with some glances at film narrative), major figures may include Perrault, Newbery, the Grieing, Andersen, Galt, A.L. Stevenson, Burnett, Kipling, the Disney studio, E. B. White, C. S. Lewis, Sendak, Silverstein, Mildred Taylor, and Bette Greene. We also encounter a variety of critical modes—psychoanalytic, materialist, feminist, structuralist—that scholars have employed to explain the variety and importance of children's literature.

ENGL 292 Introduction to Visual Studies (IV) Spring. 4 credits. T. Murray. See VSST 200 for full course description.

ENGL 296 Linguistic Theory and Poetic Mores, Juniors, and Seniors and to others with previous knowledge of literary theory is assumed. No previous knowledge of literary theory is assumed.

ENGL 302 Literature and Theory (also ENGL 602 and COM L 302 and 622) (IV) Fall. 4 credits. J. Culler. Study of issues in contemporary theoretical debates, with particular attention to structuralism, deconstruction, psychoanalysis, and feminism. Readings by Roland Barthes, Judith Butler, Jacques Derrida, Michel Foucault, Barbara Johnson, Jacques Lacan, and others.

ENGL 310 Old English in Translation (IV) Fall. 4 credits. T. Hill. This course may be used as one of the three pre-1800 courses required of all English majors. Next offered 2003-2004. T. Hill.

ENGL 311 Old English (also ENGL 611) (IV) Fall. 4 credits. T. Hill. This course may be used as one of the three pre-1800 courses required of English majors. T. Hill.

ENGL 312 Beowulf (also ENGL 612) (IV) Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. R. Farrell. A reading of Beowulf. Attention is given to relevant literary, cultural, and linguistic issues. One semester’s study of Old English, or the equivalent, is recommended.

ENGL 313 The Structure of English (also LING 311) (III or IV) Fall. 4 credits. M. Suner. See LING 313 for full course description.

ENGL 319 Chaucer (IV) Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. R. Farrell. This course will begin with the study of the major Canterbury Tales and some of Chaucer’s minor works, such as The Book of the Duchess. If time permits, we will read at least part of his great epic poems Troilus and Criseyde. All works will be read in Middle English, but ample time will be devoted to learning the language, for it is impossible to read Chaucer as a poet without Middle English. There will be lectures on Chaucer’s life and society and his literary and religious content. There will be take-home, mid-, and end-of-term exams and student presentations.

ENGL 321 Spenser and Malory (also RELST 319) (IV) Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Informal lecture and discussion. Two papers, no exams. Next offered 2003-2004. C. Kaske.

ENGL 325 Culture of the Renaissance (also COM L 362, HIST 364, RELST 362, MUSC 390, ARTH 351) (III or IV) Fall. 4 credits. C. Kaske, K. Perry Long. For course description, see COML 362.

ENGL 327 Shakespearean Gender and Power (also WOMNS 327) (IV) 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2003-2004.

ENGL 328 The Bible as Literature (IV) Spring. 4 credits. L. Donaldson. Introduction to the Bible, one of English literature’s most important influences, and approaches it as an anthology of literary and religious genres, themes and issues in both the Hebrew and Christian traditions. In addition to narrative, legal, historical, apocalyptic and prophetic texts, we also examine biblical poetry (for example, the Song of Songs) and its relation to other ancient poetic forms. Students are also introduced to various critical approaches to reading the Bible such as narrative, feminist, rhetorical, and ideological criticism. Other topics covered include the historical contexts of various biblical texts and the trajectory of powerful prophetic, narrative, and apocalyptic images within the literary imagination of various cultures.

ENGL 329 Milton (IV) Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. N. Saccamano.

ENGL 330 Restoration and Eighteenth-Century Literature (IV) Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. F. Bogel. Close reading of texts in a variety of genres (poetry, fiction, drama, autobiography) will be guided by such topics as the nature of satire, irony, and mock-forms; the languages of the ridiculous and the sublime; the politics of gender and sexuality; the authority and fallibility of human knowledge; connections among melancholy, madness, and imagination. Works by such writers as Rochester, Behn, Finch, Dryden, Swift, Gay, Defoe, Johnson, Boswell, Sterne, and Cowper.

ENGL 333 The Eighteenth-Century Novel (IV) Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. N. Saccamano. A study of form and theme in the British novel tradition. The course focuses on representative novels mostly from the eighteenth century, paying close attention to language and structure but also to cultural contexts and to the development of the novel form itself. We explore such topics as truth and fiction, romance, realism, satire, and the gotCHA; heroic and mock-heroic modes; sentiment, sensibility, and sexuality; race and gender; and the forms and uses of narrative. Readings may include Behn’s Oroonoko, Defoe’s Moll Flanders, Richardson’s Clarissa, Fielding’s Tom Jones, Johnson’s Rasselas, Sterne’s A Sentimental Journey, and Austen’s Emma.

ENGL 345 Victorian Controversies (IV) Fall. 4 credits. S. Siegel. Economic, political, and technological changes transformed the nineteenth century. We consider some of the unprecedented social, political, and cultural transformations provoked in England and Ireland. Our readings are selected chiefly from leading nineteenth-century periodicals and from essays that contributed greatly to shaping public opinion. We explore the social, political, and cultural problems Victorian critics and artists identified, the various solutions they proposed, and their contrasting visions of their nation and its colonies. The men and women who contributed to the periodicals press and who anticipated new cultural forms were preoccupied with urgent questions about themselves: Were their century marked by progress or by decline? Would machines degrade or ennoble workers? Did aesthetic experience complement or compete with religious doctrine? Were art and science dependent upon or opposed to each other? Would all forms of expression be permitted or should certain forms be censored? Should the colonies be permitted to rule themselves or remain dependent on England? Would prestige be gained if institutions of higher learning awarded degrees to women? Was “manliness” revealed through “character” or through “behavior”? In addition to these intellectual conflicts we are attentive to the emergence of new visual forms that participated in and provoked controversy. Accordingly, we view photographs and descriptions of England’s Crystal Palace Exhibition of 1851, the objections such displays aroused, as well as the emergence of new and controversial fashions in painting, in clothing, in interior design, and in home furnishings. Authors include Arnold, Browning, Eliot, Morris, Pater, the Rossettis, Ruskin, Shaw, Swinburne, Wilde, and Yeats. Classes are by lecture and discussion. Examinations include in-class and take-home exercises.

ENGL 348 Studies in Women’s Fiction: Louise Erdrich and Leslie Marmon Silko (also WMS 348) (IV) Spring. 4 credits. L. Donaldson. Louise Erdrich (Ojibwa) and Leslie Marmon Silko (Laguna Pueblo) are two of the most important and popular writers of the past 25 years. Each has privileged the novel as their artistic form of choice—although both are also

RAW_TEXT_END
talented poets—and each has developed a powerful tradition of resistance literature. In their own distinct styles, each addresses such issues as the conquest of the Americas, the role of women and women's cultural production in indigenous and Euro-American societies, the relation between history and art, and the survival of American Indian traditions. This course spends half the semester on Erdrich and half on Silko. We read their fiction and some of their poetry as well as their autobiographical and critical writings. Texts include Tracks, The Last Report of Miracle at Little No Horse, Jacklight, and The Birchbark House by Louise Erdrich, and Sacred Water, Storyteller, Almanac of the Dead, and Yellow Woman: A Beauty of Spirit by Leslie Marmon Silko. Students write a paper on each author and the class is conducted seminar-style.

[ENGL 350] The Modern Tradition I: 1890-1930 (IV)

ENGL 353 The Modern Indian Novel (also AM ST 355) (IV)
Survey of the modern Indian novel, from its origins in the latter part of the 19th century to the present. An attempt is made to read the novels as representative of modernisation and to the challenges of a postcolonial society. Texts (mainly novels, but also a few short stories) are drawn from a variety of Indian languages as well as English, including works by such authors as R. R. Nagar, Rahibuddin Tigrone, Salwan Rushdie, Gopinath Mohanty, Anita Desai, Fikir Mohan Senapatu, Ambai, Prem Chand, Anundhi Roy, and R. K. Narayan. Two papers (5-6 pp. and 12-14 pp.) and a journal.

ENGL 355 Decadence (also COML 355 and WOMNS 355) (IV)
My existence is a scandal," Oscar Wilde once wrote, summing up in an epigram the effect of his carefully cultivated style of perversity and paradox. Through their valorization of perversity, the "decadent" writers of the late-nineteenth century sought to free the pleasures of beauty, spirituality, and sexual desire from their more conventional moral ferment. We discuss the most important texts through which "decadence" was defined as a literary style, including works by Charles Baudelaire, J.-K. Huysmans, Leopold von Sacher-Masoch, A. C. Swinburne, and Oscar Wilde. The latter, with particular focus on Oscar Wilde, is covered in full. Topics for discussion include aestheticism and the cult of "art for art's sake," theories of cultural and linguistic degeneration, homophobia and sexual encoding, androgyny and sexual inversion, hysteria and paranoia, masochism and mysticism, chastity and sublimation, Catholicism and Hellenism, and dandyism. Students may read French and German texts in the original or in translation.

ENGL 361 Early American Literature (also AM ST 361) (IV)
Fall. 4 credits. B. Maxwell.
An American Studies approach to the literature of 1745-1960, the early Cold War period of "perpetual crisis and some postwar state" (Harold Lasswell). Themes include fear, glamour, domestic life, integration, the "white negro," addiction, loyalty, bureaucracy, and the dispossession in the United States of the legacies of the Depression and of World War II. Fiction by Saul Bellow, Nelson Algren, Ann Peery, Ralph Ellison, Tillie Olsen, and Jack Kerouac (among others), collateral readings in memoir (Hillman), sociology (Mills), social psychology (Ernckick, Adorno and Horkheimer), history (Hofstadter), aesthetics (Greens), politics (Keman, Arendt), feminism (Fredman), and self-advertisement (Mailer). Some attention to bop, poetry, painting, film noir, political speeches, stand-up comedy, and magazine culture.

ENGL 365 American Fiction Since 1845 (also AM ST 365) (IV)
Fall. 4 credits. Enrollment limited to 15. Regular critical readings, frequent viewing questions, two longer essays, no exam. Students must be free to attend Monday and/or Tuesday evenings, and screen discussions. $20 lab fee. Next offered 2003-2004. L. Bogel.

ENGL 370 The Nineteenth Century Novel (also AM ST 367) (IV)
Spring. 4 credits. J. Adams.
A survey of representative works by major British novelists from Austen to Hardy. As great writers in a realistic mode, these novelists explore the interplay of self and society, particularly the clash between traditional social orders—class, gender, marriage—and new forms of mobility and self-determination in the world's first industrial nation. We are especially interested in the novel's preoccupation with domestic life, and reshapings of the familiar "marriage plot" in a world of great social and sexual anxiety. In short: love and money. Readings include works by Austen, Thackeray, Dickens, C. Bronett, Braddon, George Eliot, and Hardy.

ENGL 372 Medieval and Renaissance Drama (also ENGL 677) (IV)

ENGL 388 American Novel Since 1950 (also AM ST 368) (IV)
Fall. 4 credits. Enrollment limited to 15. Regular critical readings, frequent viewing questions, two longer essays, no exam. Students must be free to attend Monday and/or Tuesday evenings, and screen discussions. $20 lab fee. Next offered 2003-2004. P. Sawyer.

ENGL 399 Fast Talking Dames and Sad Ladies (also WOMNS 369 and THETR 367) (IV)
Fall. 4 credits. Enrollment limited to 15. Regular critical readings, frequent viewing questions, two longer essays, no exam. Students must be free to attend Monday and/or Tuesday evenings, and screen discussions. $20 lab fee. Next offered 2003-2004. L. Bogel.

ENGL 399 The Nineteenth Century Novel (also AM ST 367) (IV)
Spring. 4 credits. J. Adams.
A survey of representative works by major British novelists from Austen to Hardy. As great writers in a realistic mode, these novelists explore the interplay of self and society, particularly the clash between traditional social orders—class, gender, marriage—and new forms of mobility and self-determination in the world's first industrial nation. We are especially interested in the novel's preoccupation with domestic life, and reshapings of the familiar "marriage plot" in a world of great social and sexual anxiety. In short: love and money. Readings include works by Austen, Thackeray, Dickens, C. Bronett, Braddon, George Eliot, and Hardy.

ENGL 372 Medieval and Renaissance Drama (also ENGL 677) (IV)

ENGL 388 American Novel Since 1950 (also AM ST 368) (IV)
Fall. 4 credits. Enrollment limited to 15. Regular critical readings, frequent viewing questions, two longer essays, no exam. Students must be free to attend Monday and/or Tuesday evenings, and screen discussions. $20 lab fee. Next offered 2003-2004. P. Sawyer.

ENGL 399 Fast Talking Dames and Sad Ladies (also WOMNS 369 and THETR 367) (IV)
Fall. 4 credits. Enrollment limited to 15. Regular critical readings, frequent viewing questions, two longer essays, no exam. Students must be free to attend Monday and/or Tuesday evenings, and screen discussions. $20 lab fee. Next offered 2003-2004. L. Bogel.

ENGL 399 The Nineteenth Century Novel (also AM ST 367) (IV)
Spring. 4 credits. J. Adams.
A survey of representative works by major British novelists from Austen to Hardy. As great writers in a realistic mode, these novelists explore the interplay of self and society, particularly the clash between traditional social orders—class, gender, marriage—and new forms of mobility and self-determination in the world's first industrial nation. We are especially interested in the novel's preoccupation with domestic life, and reshapings of the familiar "marriage plot" in a world of great social and sexual anxiety. In short: love and money. Readings include works by Austen, Thackeray, Dickens, C. Bronett, Braddon, George Eliot, and Hardy.
literary art (but also at times one of the sleaziest). This long span of drama history allows us to consider drama's origins and changing cultural meanings. Using selected highlights, this course traces the residue of Roman drama and the beginnings of European and English drama from the 10th to the 13th centuries; then examine more fully some of the richness of late medieval drama in English, then finally read some of the writers in the age of authorship and London dominance—usually known as the Age of Shakespeare, although Shakespeare appears there only as one part of a major series of representative figures bom between 1580 and 1660. We consider therefore the production of stereotypes (particularly in the nineteenth century) and the ongoing efforts of contemporary artists to dispel such stereotypes, to work along side them and to rework them. We also consider the relationship between cultural production, representation, and public policy.

Courses for Advanced Undergraduates

Courses at the 400 level are open to juniors and seniors and to others by permission of instructor unless other prerequisites are noted.

[ENGL 402 Literature as Moral Inquiry (IV)
Fall. 4 credits. S. Mohanty.
What can literary works, especially novels and short stories, tell us about moral issues? Should they be seen as suggesting a form of moral inquiry similar to the kind of philosophical discussion we get in, say, Aristotle's Nicomachean Ethics? Do they deal with the same range of issues? Can reading philosophical works in ethics together with novels that deal with similar themes help us understand these themes better? This course is an attempt to answer these questions. We read selections from key texts in moral philosophy, including works by Aristotle, Kant, Marx, Nietzsche. Our attempt is to use these works to help us understand the nature of moral debate and inquiry in novels like Eliot's Middlemarch, James's Portrait of a Lady, Morrison's Beloved, Woolf's Mrs. Dalloway, Conrad's Heart of Darkness, and Achebe's Things Fall Apart. Other works we have in mind, and others may be included: Nadine Gordimer, Doris Lessing, and Kazuo Ishiguro. The emphasis is on close reading, with particular attention to the relationship between formal elements (such as the use of narrative techniques) and the moral questions the texts explore. Assignments include two papers and a journal.

[ENGL 403 Studies in American Poetry: Great Books, 1855–1926 (also AM ST 403) (IV)
R. Gilbert.

[ENGL 404 History Into Fiction: Nazis and the Literary Imagination (also COM L 404 and GERST 414) (IV)
Fall. 4 credits. Two papers; no exam. Next offered 2003–2004.
E. Rosenberg.

[ENGL 408 Narratives of the University (also ENGL 608, S HUM 408) (IV)
Fall. 4 credits. J. Williams.
For course description, see S HUM 408.

[ENGL 413 Middle English (also ENGL 613) (IV)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Next offered 2003–2004.

[ENGL 414 Bodies of the Middle Ages: Embodiment, Incarnation Performance # (IV)
Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. M. Raskolnikov.
To study the Middle Ages is to study the writings of people centuries dead. We reach back in time and find only disembodied words. And yet, these words speak to us about the very stuff of embodied life: love, sex, hunger, dirt, death, decay. In this course, we read a number of significant Middle English works that represent the body in a variety of ways, as well as contemporary critical theory about the meaning of embodiment, and about how the suffering body can represent "the real" both in its own time and to contemporary readers. Reading both the theoretical and the Middle English materials critically and closely, we will begin, morbidly enough, by examining the literature of death. We read several plays about the incarnation and suffering of Christ, and about the deaths of real people, especially those that have come to taunt them in their extremity. We go on to read some of the masterpieces of fourteenth-century literature, including some tales of Chaucer that are particularly concerned with the body, and some significant works of Chaucer's time (including Sir Gawain and the Green Knight), thinking about how these works respond to the gender and class politics of their time. Particular attention is paid to the many and contradictory representations of women's bodies (bodies which often stand in for sinful embodiment in general) through reading several kinds of writings and stories. Women. The goal of this course is to gain a new and critical understanding of medieval literature, the history of the body, and a new and critical understanding of contemporary critical thought about the meaning, politics, and aesthetics of embodiment.

Though not a survey in the strict sense of the term, this course is designed to expose students to a wide range of medieval genres and authors. Knowledge of Middle English is not a prerequisite, and the books ordered have facing-page translations. Nevertheless, some thinking about the specificity and richness of Middle English words is incorporated into class discussions and written assignments.

[ENGL 416 Chaucer and the Politics of Love # (IV)
Fall. 4 credits. Prerequisite: permission of instructor. This course is designed to provide an overview of the early middle ages in which is now called Great Britain. A massive amount of evidence on the material culture has come to light in the past 50 years, evidence which permits us a far better comprehension of written sources. We start with a reading of the great Old English epic and a close study of the material culture of a society in transition from pagan Germanic to cosmopolitan Christian culture. Our next focus is Bede's
ENGL 410 Art History in England, Ireland, Scandinavia (also ENGL 656, S HUM 419) (IV)
Spring. 4 credits. P. Barrish.
For course description, see S HUM 419.

ENGL 423 Renaissance Lyric (also ENGL 625) # (IV)
Spring. 4 credits. B. Correll.
This course may be used as one of the three pre-1800 courses required of English majors.
The study of sixteenth- and seventeenth-century English poets, major and minor, male and female, secular and religious, and the questions raised in study raise: What is the connection between lyric poetry and the conditions and conflicts of the early modern period? How did the writing and publication of poetry change? What do women writers contribute to lyric poetry? What is at stake for poetics, for a cultural poetics—in reading love lyric? As our readings and seminar discussions show, Renaissance poets are both products and producers of their culture. We also read and discuss recent critical work on lyric.

ENGL 428 Close Reading and Critical Debate (IV)
Spring. 4 credits. F. Bogel.
This course may be used as one of the three pre-1800 courses required of English majors.
The course of literary history, a number of extremely interesting English and American poems have generated long—sometimes dramatic—controversy, much of it still unresolved. We study closely a variety of these poems and their "problems," paying attention to the texts themselves, to the sources of the disagreements, and to what criticism can tell us about how those disagreements have been produced and addressed (some short, supplementary readings in criticism and theory are made available). We also ask what these controversies can tell us about poetic meaning, about the procedures of criticism, and about the ways history and culture shape our understanding of literary texts. Poems—mostly short lyrics—are drawn from a wide range of authors and periods. Authors may include Shakespeare, Jonson, Marvell, Rochester, Swift, Egerton, Pope, Gray, Wordsworth, Coleridge, Keats, Robert Browning, Dickinson, Christina Rossetti, Lawrence, Williams, Millay, Campbell, Roethke, Bishop, Larkin, Plath, and others. This is an appropriate course for anyone interested in poetry and different ways of reading it.

ENGL 430 Literature As History: The Americas (also AM ST 430.03) (IV)
Spring. 4 credits. M. Nesper.
See AM ST 430.03 for full course description.

ENGL 433 Electric Innovations (also VISST 433) (IV)
Fall. 4 credits. Requirements: two medium length papers (7–8 pages), collaborative online project (with students in Australia), seminar presentation. Some advanced knowledge of digital or installation art is helpful. Permission of instructor.
T. Murray.
A pilot course in the Innovation for the Teaching with Technology Initiative, the course will combine recent experimentation in electronic and digital art, with an emphasis on web art, CD-Rom art and interactive installation, as well as the theorization of digital art and culture. The seminar will be offered in tandem with a course on "Digital Culture" at the University of Technology, Sydney, Australia. The professor at UTS, Norrie Neumark, is a leading international figure in digital installation art who will co-teach the course and combine with the Professor Murray who curates and writes on digital art. Technological innovation will permit both seminars to communicate in real time (we will meet on Thursday evening at the same moment the UTS group will meet on Friday morning). With the likelihood of patching into digital installations at leading international art centers, the course will emphasize questions of cultural identity and national specificity in the context of global cyberspace. Cornell students will work in collaboration with UTS students on critical projects to be developed and shared online with the aim of fostering international dialogue among the first generation of "cyberthinkers." Some of the artists to be studied can be previewed at: http://contactzones.cit.comell.edu/ and http://etheorymultimedia.comell.edu.

ENGL 434 Electronic Art and Culture (IV)
T. Murray.

ENGL 437 Fiction(s) of Race, Fact(s) of Racism: Perspectives from South African and Afro-American Literatures @ (IV)
B. Jeyifo.

ENGL 442 Adam's Rib and Other Divine Signs: Reading Biblical Narrative (also RELST 429) # (IV)
L. Donaldson.

ENGL 450 Literature As History: The Americas (also AM ST 430.03) (IV)
Spring. 4 credits. M. Nesper.
See AM ST 430.03 for full course description.

ENGL 452 Wilde and Woolf (also ENGL 652) (IV)
Spring. 4 credits. S. Siegel.
This seminar considers the question of style: what does the word mean; why has it claimed attention; how has it behaved in the work of two authors whose writings among their contemporaries marked distinctive departures? We explore Oscar Wilde and Virginia Woolf as readers of literary and social texts. Along the way, we direct our attention to the implicit expectations we bring to our understanding of "Victorians" and "Modernists." Selections are drawn from the full range of Wilde's and Woolf's work. Our principal texts, however, are limited to a few essays by each author.

ENGL 453 Twentieth Century Women Writers of Color (also AAS 253, WOMMNS 453) (IV)
Fall. 4 credits.
Course requirements include class presentations, short responses to the readings, and a longer research essay.
S. Wong.
In this course, we read literature—primarily novels—produced by hemispheric American women writers of the mid- to late-twentieth-century. We look at how these writings articulate concerns with language, home, mobility, and memory, and at how the work is informed by the specificities of gender, race, region and class. Readings may include work by Leslie Marmon Silko, Sandra Cisneros, Theresa Hak Kyung Cha, Jamaica Kincaid, Gwendolyn Brooks, Ann Petry, Fae Myenne Ng, Carolina Herrera, Helena Maria Viramontes, and Shani Mootoo.

ENGL 454 American Musical Theatre (also MUSIC 490 and THETR 454) (IV)

ENGL 456 Postmodern Novel (also ENGL 656) (IV)

ENGL 458 Imagining the Holocaust (also ENGL 658, JWST 458 and 658, COM L 483 and 683) (IV)
Spring. 4 credits. D. Schwarz.
What is the role of creative imagination in keeping the memory of the Holocaust alive for our culture? We examine major and widely read Holocaust narratives which have shaped the way we understand and respond to the Holocaust. As we move further away from the original events, why do the kinds of narratives with which authors render the Holocaust horror evoke to include fantasy and parable? Employing both a chronological overview and a synchronic approach—which conceives of the authors having a conversation with one another—we discover recurring themes and structural patterns in the works we read.

We begin with first-person reminiscences— Wiesel's Night, Levi's Survival at Auschwitz,
and The Diary of Anne Frank—before turning to searingly realistic fictions such as Hersey’s The Wall, Kosinski’s The Painted Bird, and Ozick’s “The Shawl.” In later weeks, we explore the kinds of fictions and discuss the mythopoetic vision of Schwarz-Bart’s The Last of the Just, the illuminating distortions of Epstein’s King of the Jews, the Kafkaesqueparable of Appelfeld’s Badenheim 1939, and the fantastic cartoons of Spiegelman’s Maus books. We shall also include Kinsella’s Schindler’s List, which was the source of Spielberg’s academy award-winning film, and compare the book with the film.

ENGL 459 Contemporary British Drama (IV)

Spring. 4 credits. S. McMillan.

English theatre in the second half of the twentieth century, with special attention to Tom Stoppard (Arcadia, Rosencrantz and Guilderstern are Dead), Harold Pinter (The Homecoming, Mountain Language, Moonlight) and Calzaghe (Cloud Nine, Top Girls), along with plays by Sarah Kane, David Edgar, Michael Frayn, Edward Bond, and Peter Shaffer. The importance of the Royal Court Theatre, the effect of The National Theatre and The Royal Shakespeare Company, the role played by the Fringe, and the political impact of Thatcherism and its aftermath are important considerations.

ENGL 460 Riddles of Rhythm (IV)

D. Fried.

ENGL 462 Between Aztlán and Queens: Latinx Culture and the Making of Space (also LSP 462) (IV)

M. P. Brady.

ENGL 464 Emerson and Poe (IV)

R. Morgan.

ENGL 466 James on Film (IV)

D. Fried.

ENGL 467 Black Manhattan

Spring. 4 credits. N. Waligora-Davis.

This course examines the key figures, political movements and the literary, cinematic, and musical traditions that emerge during the period of intense black artistic innovation known as the Harlem Renaissance. We will study black artistic productions of the 1920s and 1930s against the twinned impulses of Negrophobia and Negrophilia. Reading the work of DuBois, Hughes, Larsen, Colleen, McKay, Locke, Hurston, Toomer, Johnson, and Garvey alongside black cinematic and musical (jazz and blues) productions, we will take up the political and social implications of the "new Negro" and a distinctly African American non-Western aesthetic. The course will examine the relationships among these artistic productions and emerging black nationalisms, black revolutionary tendencies, and radical black cultural philosophies. We will also be critical of the concept of "Harlem," a place around which myths and utopic desires of black possibility were configured, and a cityspace simultaneously transforming into a "ghetto." There will be two exams and a final research project.

ENGL 468 Faulkner (also AM ST 469) (IV)

H. Spillers.

ENGL 470 Studies in the Novel: Experimental Novels by Twentieth-Century Women (also WOMNS 470) (IV)

Fall. 4 credits. M. Hite.

Innovative (strange, difficult) prose narratives by Dorothy Richardson, Virginia Woolf, H. D. (Hilda Doolittle), Doris Lessing, Toni Morrison, Margaret Atwood, Angela Carter and Joanna Russ, along with some critical and theoretical readings. Seminar participants do a weekly e-mail assignment, and two class presentations forming the basis for a 5–7 page midterm paper, and a final paper of 15+ pages.

ENGL 471 Humor in Literature (IV)

Fall. 4 credits. A. Lurie.

Why do we laugh, and at what? Why do some works seem funny at certain periods and in certain social contexts? This course looks at different ways of answering these questions, and at different kinds of literary humor: romantic comedy, black comedy, farce, satire, parody, and nonsense. Among works that may be read are humorist tales, comic verse, A Midsummer Night’s Dream, The Way of the World, Gulliver’s Travels, Alice in Wonderland, The Importance of Being Earnest, Patience, Waiting for Godot, and stories by James Thurber, Flannery O’Connor, Grace Paley, Philip Roth, Donald Barthelme, and Garrison Keillor.

ENGL 473 Sondheim and Musical Theatre (also MUSIC 495, THETR 472) (IV)

Fall. 4 credits. Limited to 15 students.

S. McMillan.

A seminar on the plays, lyrics, and music of Stephen Sondheim. The course takes up all of Sondheim’s major works, with particular attention to Company, Follies, A Little Night Music, The Frogs, Pacific Overtures, Sweeney Todd, Sondheim George, and Into the Woods. Collateral assignments in Aristophanes, Rodgers and Hammerstein, Bergman’s film Smiles of a Summer Night, Chekhov, Shaw, Shakespeare, Kabuki Theatre, Victorian Moral Dramas and topics which are at the basis of Sondheim’s musicals. There is a focus on the formal differences between musical theatre and what is often called “legitimate” theatre. Prerequisite: ENGL 454, American Musical Theatre (also listed as THETR 454 and MUSIC 490), or similar background. Students must be able to read music and must be familiar with dramatic literature as a genre. Also open to graduate students who have a special reason to study Sondheim.

ENGL 475 Studies in the Twentieth-Century Writers / Writers in Twentieth-Century Literature (IV)

ENGL 476 Global Women’s Literature (also WOMNS 476) (IV)

Spring. 4 credits. Requirements: active class participation, student presentations, a few short essays, and a final paper.

E. DeLoughrey.

This course focuses on contemporary women’s writing in English from "postcolonial" regions such as the Pacific, Caribbean, India and Africa. During the semester we look at how women from these regions depict the process of migration from within the nation (from rural to urban spaces) or from the “postcolony” to metropoles such as England. As women are generally associated with private, domestic space, this course explores the motifs of exile and border crossing and sketch out the ways in which gender, nation, and class inform “traveling theory.” We read novels/poetry by Joan Riley, Merle Hodge, Patricia Grace, Miriam Ba, Anita Desai, and Grace Nichols, and align these texts with the theoretical works of James Clifford, Caren Kaplan, Paul Gilroy, and M. NourbeSe Philip.
literary/cultural issues pertaining to American Indian women's writing but also the major figures of this field. Students have the opportunity to read one work of their own choosing. Course texts include Betty Louise Bell (Cherokee), *Faces in the Moon*; Louise Erdrich (Chippewa), *Tracks*; Luci Tahapsonho (Navajo), *Saanitii Daabaii*; The Women Are Singing: Poems and Stories, Linda Hogan (Chickasaw), *Sorok Storms*, Mounting Dove (Salish), *Coganewa: The HalfBlood*; Wendy Rose (Hopi/Miwok), *Bone Dance: Selected Poems*; Leslie Marmon Silko ( Laguna Pueblo), *Yellow Woman* (Alito); Elizabeth Woody (Yakama/Warm Springs), *Seven Hands, Seven Hearts: Prose and Poetry*; and Joy Harjo (Muscogee), *The Woman Who Fell From The Sky*.

**ENGL 47** Writing About Literature (IV)
Fall. 4 credits. F. Bogel.
Why do we write about literature and "interpret" it instead of just "reading" it? Are some interpretations better than others? True? If there are many different modes of criticism, does the field of "English" have a coherent identity? This course does not conduct a broad survey of the genre but investigates a few critical approaches and attempts to apply them practically to a small selection of literary texts. The aim is less an acquaintance with theory than an enlargement of critical possibilities and a reflection on the undertaking of literary interpretation itself. The critical schools explored include a few of the following: New Criticism (American Formalism), structuralism, deconstruction, feminism, and New Historicism. Literatures will likely include a Shakespeare play, a variety of poems by authors including Donne, Shakespeare, Herrick, Pope, Coleridge, Dickinson, Plath, Lowell, Roethke, and Ammons and several short works of fiction, including Conrad's *Heart of Darkness*.

**ENGL 488 Contemporary Poetry and Poetics (also ENGL 697, COM L 674, GERST 674, SPANL 674) (IV)
Spring. 4 credits. J. Monroe.
For course description, see COM L 674.

**[ENGL 490 Literature of the Archipelagoes: Caribbean and Pacific "Tidaletics" (also ENGL 490, COM L 674, GERST 674, SPANL 674) (IV)
Spring. 4 credits. J. Monroe.
For course description, see COM L 674.**

**ENGL 491 Honors Seminar I**
Fall. 4 credits. Open to students in the Honors Program in English or related fields, or by permission of instructor. S. McMillin.
*Shakespeare: Problem Plays, Hamlet, Troilus, Measure for Measure, and others*. Close reading of a group of Shakespeare’s plays which have always puzzled people for their abnormality. *Measure for Measure*, Shakespeare’s novel, and *Troilus and Cressida* are central. *Cortisulus and Cymbeline* are possibilities, and *The Rape of Lucrece* will certainly be worked in. The main critical and theoretical approaches are reviewed, and students work up to a long term paper.

**ENGL 492 Honors Seminar II**
Spring. 4 credits. Open to students in the Honors Program in English or related fields, or by permission of instructor. Course requirements include, in addition to rigorous reading, two shorter papers and one lengthy term paper.

**Section I: Progenitors of Frankenstein**

C. Chase.
A study of the original *Frankenstein*, Mary Wollstonecraft Shelley’s novel written in 1818. We read some of the works that loomed large in Mary Shelley’s reading or belong to the novel's intellectual and psychological background, such as her mother Mary Wollstonecraft’s *A Vindication of the Rights of Woman*. Godwin’s *Memoirs of the Author of A Vindication of the Rights of Woman*, parts of Jean-Jacques Rousseau’s *Confessions* and a novel about education, and work by Percy Bysshe Shelley. The seminar centers, however, on *Frankenstein* itself.

**Section II: Experimental Long Novel**

M. P. Brady.
This course examines a selection of capacious, experimental novels. Beginning with one of the more famous examples of this genre, Herman Melville’s *Moby-Dick*, or *The Whale*, and moving to contemporary texts (perhaps including novels by Ralph Ellison, Leslie Marmon Silko, Don DeLillo, Gayl Jones) we explore the narrative experimentation, stylistic shifts, and challenges that the long novel uniquely offers. We also use this course as the occasion to study the history of the novel and narrative theory more generally (including work by Hutcheon, Balibar, Barthes, Chambers).

**ENGL 493 Honors Essay Tutorial I**
Fall or spring. 4 credits. Prerequisite: senior standing and permission of director of the Honors Program.

**ENGL 494 Honors Essay Tutorial II**
Fall or spring. 4 credits. Prerequisite: ENGL 493 and permission of director of the Honors Program.

**ENGL 495 Independent Study**
Fall or spring. 2–4 credits. Prerequisites: permission of departmental adviser and director of undergraduate studies.

**Courses Primarily for Graduate Students**

Permission of the instructor is a prerequisite for admission to courses numbered in the 600s. These are intended primarily for graduate students, although qualified undergraduates are sometimes admitted. Undergraduates seeking admission to a 600-level course should consult the instructor. The list of courses given below is illustrative only; a definitive list, together with course descriptions and class meeting times, is published in a separate department brochure before course enrollment each term.

**Graduate English Courses for 2002-2003**

**Fall**

**ENGL 585 Linguistic Theory and Poetic Structure**
( also ENGL 295, LING 285/585)

B. Correll.

**ENGL 643 Secrecy and Scandal**
J. Adams.
ENGLISH AS A SECOND LANGUAGE
See English for Academic Purposes.
See Intensive English Program.

ENGLISH FOR ACADEMIC PURPOSES
D. Campbell, director, S. Schaffzin, I. Arnesen, fall; F-H Yap, spring.
Note: Courses and credits do not count toward the B.A. degree.

ENGL 205 English as a Second Language
Fall. 4 credits. Prerequisite: placement by examination. S. Schaffzin.
An all-skills course emphasizing listening and speaking, with some writing practice. Students also meet individually with the instructor.

ENGL 206 English as a Second Language
Spring. 3 credits. Prerequisite: ENGL 205 placement by examination. S. Schaffzin.
A writing class for those who have completed ENGL 205 and need further practice, or for those who place into the course. Individual conferences are also included.

ENGL 209 English as a Second Language
Fall or spring. 1 credit. Prerequisite: permission of instructor. S. Schaffzin.
Practice in classroom speaking and in informal conversational English techniques for gaining information. Students also practice giving informal presentations. Individual conferences with the instructor supplement class work.

ENGL 210 English as a Second Language
Spring. 1 credit. Prerequisite: permission of instructor. S. Schaffzin.
Practice in academic speaking. Formal classroom discussion techniques and presentation of information to a group. Presentations are videotaped and reviewed with the instructor. Individual conferences supplement class work.

ENGL 211 English as a Second Language
Fall, spring, or summer. 3 credits. Prerequisite: placement by examination. D. Campbell.
Academic writing with emphasis on improving organization, grammar, vocabulary, and style through the writing and revision of short papers relevant to students' fields. Frequent individual conferences supplement class work.

ENGL 212 English as a Second Language
Spring. 3 credits. Prerequisite: permission of instructor. Enrollment is restricted to 12 on a first-come, first-served basis. D. Campbell.
Research paper writing. For the major writing assignment of this course, the students must have a project that is required for their graduate work. This can be a thesis proposal; a pre-thesis, part of a thesis, such as the literature review or discussion section; a paper for another course or a series of shorter papers (with permission of the other instructor); or a paper for publication. Time limitations make it difficult to deal with work over 20 pages in length. Course work involves practice in paraphrase, summary, the production of cohesive, coherent prose, vocabulary use, and grammatical structure. Frequent individual conferences are a necessary part of the course. Separate sections for Social Sciences/Humanities and for Science/Technology.

ENGL 213 Written English for Non-Native Speakers
Spring. 3 credits. Prerequisite: permission of instructor. S. Schaffzin.
Designed for those whose writing fluency is sufficient for them to carry on regular academic work but who want to refine and develop their ability to express themselves clearly and effectively. Individual conferences supplement class work.

First-Year Writing Seminar

ENGLB 115–116 English for Later Bilinguals
For description, see first-year writing seminar brochure.

FALCON PROGRAM (INDONESIAN)
See Department of Asian Studies.
even further toward the intertwining of gender and sexuality with structures of power and inequality, in 2002 the program changed its name from Women’s Studies to Feminist, Gender & Sexuality Studies.

Program Offerings

The Feminist, Gender & Sexuality Studies Program (FGSS) will begin to offer a much-revised undergraduate major and concentration as soon as these are approved by the state of New York. These new offerings have already been approved by the College of Arts and Sciences. Very briefly, the new FGSS major requires 36 credits including 201 (Intro to FGSS), 202 (Intro to FGSS: Theory and Seminar in FGSS), plus additional FGSS courses with a significant focus on each of the following:

(a) LBG Studies; (b) Intersecting Structures of Oppression—Race, Ethnicity, and/or Class; and (c) Global Perspectives Africa, Asia, Latin America, or Middle East, by itself or in a comparative or transnational framework. Contact the FGSS office (255-6480) for more detailed descriptions of these new offerings and for updated information about their approval status.

Until these new offerings are approved, FGSS will continue to offer both a Women’s Studies major and a Women’s Studies concentration, as described below. Students already majoring or concentrating in Women’s Studies when the new FGSS major and concentration go into effect will be able to complete their Women’s Studies program as planned or switch to an FGSS program if they prefer.

The Undergraduate Major: Women’s Studies

The questions posed by feminist inquiry cannot be answered from within any single discipline or even from a simple combination of two or more disciplines. For that reason, the women’s studies major provides students with a basic groundwork in the interdisciplinary field of women’s studies and then requires each student to construct an advanced and individually tailored program of study on a topic, in a discipline, or in a combination of disciplines of special interest to the student alone.

Rather than specifying a particular sequence of required courses for each and every student, the women’s studies major gives students a starting point in women’s studies, an active advisory structure to help them shape a curriculum, and an ongoing impetus to reflection about their entire program of undergraduate study.

In designing their major, students should keep in mind that there are comparatively few graduate programs offering a degree in women’s studies itself. Accordingly, undergraduate majors in women’s studies should talk at length with their faculty adviser about how to design a program of study that will best qualify them for entry into either a job or a postgraduate degree program when they leave Cornell. Students who might want to do graduate study within a discipline will need to develop a certain level of disciplinary specialization at the undergraduate level. This can be done either by supplementing the women’s studies major with a carefully selected cluster of courses in that discipline or by pursuing a double major. Students wishing to apply their interest in Women’s Studies to other professional areas may similarly select focused coursework in their fields or consider supplementing their studies through internships or other work experiences.

Requirements for a Women’s Studies Major

1. Prerequisite courses: before applying to the major, the student must complete any two Women’s Studies courses with a grade of B- or better. Suggested entry-level courses for 2002–2003 include: any class at the 200 level, especially 210 and 211. These courses would count both as prerequisites and as part of the women’s studies major. First-Year writing seminars, in contrast, would count as prerequisite courses but not as part of the major.

2. Required course work:
   a. A minimum of 36 credits in women’s studies is required for the major. No course in which the student has earned less than a C- can count toward these 36 credits. Although there is no single women’s studies course that is required of all students, every major must complete a program of study that is both graduated in difficulty and interdisciplinary in scope—a program, in other words, that reflects both the breadth and the depth of women’s studies scholarship. This program of study should be developed in consultation with the director of undergraduate studies and must include advanced work at the 300 level or above.
   b. Students may count up to three courses outside women’s studies toward the major if those courses are approved by the director of undergraduate studies as constituting a meaningful component of the student’s women’s studies curriculum. To facilitate the coordination of a women’s studies major with other majors in the college, students may also count toward the major up to three women’s studies courses that are simultaneously being counted toward a second major.

3. The Honors Program: to graduate with honors, the major in women’s studies must complete a senior thesis under the supervision of a women’s studies faculty member and defend that thesis orally before an honors committee. To be eligible for honors, students must have at least a cumulative grade point average of 3.0 in all coursework and a 3.3 average in all courses applying to their women’s studies major. Students interested in the Honors Program should consult the Director of Undergraduate Studies (DUS) late in the spring semester of their junior year or very early in the fall semester of their senior year. For more information about the Honors Program, see WOMNS 400 and the "Guidelines For a Senior Honors Thesis" available in the Women’s Studies Program office.

The Women’s Studies Concentration

Undergraduate students in any college at Cornell can concentrate in Women’s Studies in conjunction with a major defined elsewhere in the university. The concentration consists of four courses in Women’s Studies completed with a grade of C- or above, no more than two of which can come from a single discipline and none of which should overlap with the major. In 2002-2003 cases, the DUS may allow one class from within a student’s major to count toward the requirements for the concentration. Students should not assume the waiver will be granted, and they must petition the DUS with this request before the beginning of their final semester of study.

Freshman writing seminars cannot be included within the four required courses. Students wishing to concentrate in Women’s Studies should see the DUS.

The LBG Concentration

Women’s Studies serves as home to the Lesbian, Bisexual, and Gay Studies Program, which offers an undergraduate concentration as well as a graduate minor. The LBG undergraduate concentration consists of four courses. For a complete listing of all courses that will fulfill this concentration please see the LBG Studies portion of this catalog.

I. First-Year Writing Seminars

WOMNS 106 FWS: Women and Writing (also ENGL 105)
   Fall and spring. 3 credits. Staff. For description, see ENGL 105.

WOMNS 120 FWS: Butches, Bitches, and Bugglers: A Survey of Queer Drama (also THETR 120)
   Fall, spring. 3 credits. M. Gualtieri. For description, see THETR 120

WOMNS 178 FWS: Queer Theory (also ENGL 178 and FILM 178)
   Spring. 3 credits. E. Hanson. For description, see ENGL 178.

II. Courses

WOMNS 108 Social Inequality (also SOC 108)
   Fall. 3 credits. M. Brinton. For description, see SOC 108.

WOMNS 206 Gender and Society (also SOC 206)
   Spring. 3 credits. B. Wejnert. For description, see SOC 206.

WOMNS 210 Introduction to Feminist Theory (IV)
   Fall. 4 credits. A. Villarejo. This course introduces students to critical approaches in feminist scholarship to the cultural, socioeconomic, and political situation(s) of women. Particular attention is paid to the conceptual challenges and dangers posed by attempts to study women without taking account of relations between race, class, and gender in ideological and social formations. Readings draw on work in various disciplines and include literary texts and visual images.

WOMNS 211 Introduction to Women’s Studies (III or IV)
   Fall. 3 credits. K. McCormagh. For description, see WOMNS 211.

WOMNS 212 African American Women: Twentieth Century (also HIST 212 and AM ST 212)
WOMNS 214 Biological Basis of Sex Differences (also BIOAP 214 and B&SOC 214)
Spring. 3 credits. J. Fortune.
For description, see BIOAP 214.

WOMNS 234 Gender in Early Modern Europe (also HIST 234)
Fall. 4 credits. R. Weil.
For description, see HIST 234.

WOMNS 241 New York Women (also HIST 241)
Spring. 3 credits. M. Rossiter.
For description, see HIST 241.

WOMNS 244 Language and Gender Relations (also LING 244)
Fall. 4 credits. S. McConnell-Ginet.
For description, see LING 244.

WOMNS 246 Contemporary Narratives by Latina Writers (also SPANL 246 and LSP 246)
Fall. 3 credits. L. Carrillo.
For description, see SPANL 246.

WOMNS 249 Feminism and Philosophy (also PHIL 249)
Fall. 4 credits. N. Sethi.
For description, see PHIL 249.

WOMNS 251 Twentieth-Century Women Novelists (also ENGL 251)
Fall. 4 credits. E. Deloughery.
For description, see ENGL 251.

WOMNS 253 Gender and the Life Course (also HD 253)
P. Palmieri.

WOMNS 262 Introduction to Asian American Literature (also ENGL 262, ASIAN 262, AM ST 262)
S. Wong.

WOMNS 273 Women in American Sociology, Past and Present (also HIST 273)
M. B. Norton.

WOMNS 277 Social Construction of Gender (also PSYCH 277)
S. Bern.

WOMNS 279 Queer Fiction (also ENGL 279)
E. Hanson.

WOMNS 280 Introduction to Lesbian Fiction (also ENGL 279)
Fall. 4 credits. K. McCullough.
For description, see ENGL 279.

WOMNS 285 Gender and Sexual Minorities (also HD 285)
Fall. 3 credits. R. Savin-Williams.
For description, see HD 285.

WOMNS 290 African-American Women in Slavery and Freedom (also HIST 303 and AS&RC 307)
Fall. 4 credits. M. Washington.
For description, see HIST 303.

WOMNS 309/509 The Sociology of Marriage (also SOC 309/509)
Spring. 3 credits. M. Clarkberg.
For description, see SOC 309/509.

WOMNS 314/514 Gender and Work (also SOC 314/514)
M. Brinton.

WOMNS 316 Gender Inequality (also SOC 316)
Fall. 3 credits. S. Szelenyi.
For description, see SOC 316.

WOMNS 320 Queer Theater (also FILM 320)
J. E. Gainor.

WOMNS 324/524 Sex and Gender in Cross-Cultural Perspective (also ANTHR 324/521)
Fall. 4 credits. K. March.
For description, see ANTHR 324/521.

WOMNS 322 Women in the Hebrew Bible (also NES 320 and JWST 320)
Spring. 3 credits. G. Rendsburg.
For description, see NES 320.

WOMNS 326 Women in the Hebrew Bible-Seminar (also NES 326 and JWST 326)
G. Rendsburg.

WOMNS 327 Shakespeare: Gender and Power (also ENGL 327)
B. Corell.

WOMNS 344 Male and Female in Chinese Culture and Society (also ANTHRO 344)
Fall. 4 credits. S. Sangren.
For description, see ANTHRO 344.

WOMNS 348 Studies in Women’s Fiction (also ENGL 348)
Spring. 4 credits. L. Brown.
For description, see ENGL 348.

WOMNS 353 Feminism: State and Public Policy (also GOVT 353)
M. Katzenstein.

WOMNS 355 Decadence (also ENGL 355 and COM L 355)
Fall. 4 credits. E. Hanson.
For description, see ENGL 355.

WOMNS 359 Introduction to Political Feminist Thought (also GOVT 369)
N. Hirschmann.

WOMNS 360 Gender and Globalization (III)
Fall. 3 credits. L. Benetria.
This course will invite students to think globally about gender issues and to trace the connections between global, national, and local perspectives. Emphasis is given to: a) understanding processes of globalization (economic, political, cultural); b) discussing the ways in which these processes interact with the dynamics of gender differentiation; c) understanding how globalization has affected women's and men's paid and unpaid work; d) discussing the significance of women's location in global markets; e) looking at the importance of culture and the social construction of gender in shaping the ways in which globalization affects people's lives and gender relations; f) introducing regional differences and similarities; g) discussing the gender dimensions in the debates on "the clash of civilizations:" h) introducing questions of global governance and examining specific cases that illustrate women's role in the shaping of international debates. The course combines theoretical and empirical readings/discussions.

WOMNS 361 Impressionism in Society (also ART H 362)
Spring. 4 credits. L. Meixner.
For description, see ART H 362.

WOMNS 366 Women at Work (also IILHR 366)
J. Farley.

WOMNS 368 Marriage and Sexuality in Medieval Europe (also HIST 368 and RELST)
P. Hyams.

WOMNS 369 Studies in Film Analysis: Fast-Talking Dames and Sad Ladies (also ENGL 369 and FILM 367)
L. Bogel.

WOMNS 370 Nineteenth-Century Novel (also ENGL 370)
E. Hanson.

WOMNS 377 Concepts of Race and Racism (also GOVT 377)
Spring. 4 credits. A. M. Smith.
For description, see GOVT 377.

WOMNS 378 Topics in U.S. Women's History (also HIST 378 and AM ST 378)
Fall. 4 credits. M. B. Norton.
For description, see HIST 378.

WOMNS 384 History of Women and Unions (also LRCB 384)
Spring. 4 credits. I. Devault.
For description, see LRCB 384.

WOMNS 391 Fictions of Self (also FRLIT 391)
Fall. 4 credits. T. McNulty.
For description, see FRLIT 391.

WOMNS 394 Gender and Sexuality in Early Christianity (also NES 394 and RELST 394)
K. Haines-Eitzen.

WOMNS 396 Introduction to Global Women's Literature (also ENGL 396)
E. DeLoughrey.

WOMNS 400 Senior Honors Thesis
Fall and spring. 2–8 credits. For Women’s Studies seniors only. Permission of Women’s Studies faculty member required. Student must carry a GPA of 3.0 in all subjects and a 3.3 in Women’s Studies. Staff.
Both the form of theses, and the nature and extent of contact between student and adviser, will depend on mutual agreement between the two. In one common scenario, the student will write an essay of approximately 50 pages in length, drafted and revised in a series of carefully planned stages over the course of two semesters, with an outline expected on approximately November 15. An "R" grade will be assigned at the end of the project at the end of the spring semester and a letter grade on completion of the project at the end of the spring semester.

WOMNS 401 New Women in the ‘New’ New York (also S HUM 405 and ARCH 690)
M. Woods.
WOMNS 403 Love, Sex, and Song in the Middle Ages (also MUSIC 494)
Fall. 4 credits. J. Peraino.
For description, see MUSIC 494.

WOMNS 404 Women Artists (also ART H 466)
J. Bemstock.

WOMNS 405/605 Domestic Television
A. Villarejo.
This course is a seminar on television as technology and cultural form, focusing on the "domestic" as a synonym for gendered valuing, an axis of the international division of labor (and questions of television's dissemination and circulation), and a site for historical exploration. The course balances readings in television and cultural theory (Spigel, Dienst, Merck, Williams, Feuer, Modleski, Mellencamp, Shattuc, Spivak, and others) with close analysis of television as information, entertainment, furniture, technology, text, genre, flow, channel, and circuit of production of the commodity audience. Students may enroll in either undergraduate or graduate level with graduate students submitting a longer paper and doing supplementary readings.

WOMNS 406 The Culture of Lives (also ANTH 406)

WOMNS 408 Gender Symbolism (also ANTH 408)

WOMNS 416 Gender and Sex in South East Asia (also HIST 416)
T. Loos.

WOMNS 427 Shakespeare: Gender, Sexuality, Cultural Politics (also ENGL 427 and FILM 427)
B. Correll.

WOMNS 433 The Female Dramatic Tradition (also FILM 436)
J. E. Gainor.

WOMNS 438 Female Adolescence in Historical Perspective, 1815–1960 (also HD 417, HIST 458 and AM ST 417)
J. Brumbaugh.

WOMNS 441 Theatre of Commodities: Feminism, Advertising, T. V., and Performance (also THETR 439)
R. Schneider.

WOMNS 443 The Novels of George Elliot (also ENGL 444)

WOMNS 444 Historical Issues of Gender and Science (also S&T S 444)
M. Russiter.

WOMNS 446 Women in the Economy (also ILRLE 445 and ECON 457)
Fall. 4 credits F. Blau.
For description, see ILRLE 445.

WOMNS 450/650 Gender and Clinical Psychology (also PSYCH 450/650)
Fall. 4 credits. S. Bem.
For description, see PSYCH 450/650.

WOMNS 451 Women in Italian Renaissance Art (also ART H 450)
C. Lazzaro.

WOMNS 454 Opera, History, Politics, Gender (also HIST 456, S HUM 459, COM L 456, ITAL 456)
M. Steinberg, S. Stewart.

WOMNS 463 The Politics of Contemporary Feminist Theory (also GOVT 463)
N. Hirschmann.

WOMNS 464 Gender and Politics in the Roman World (also CLASS 463 and HIST 463)

WOMNS 465 Feminist Theory/Lesbian Theory (also COM L 465 and GERST 465)
Spring. 4 credits. A. Villarejo.
This seminar explores developments in feminist theory, primarily in the United States from the 1950s through the mid-1990s. We also trace the changing status of "lesbianism" in feminist theories over that same time period and examine its status in current constructions of "queer theory." What happens to the relationship between feminist theory and lesbian thought when "queer theory" emerges? The purpose of the course is to encourage critical, historically informed readings of what could be considered canonical texts and crucial junctures in Second Wave feminist thought, many of which remain unfamiliar even to Women's Studies students.

WOMNS 467 Sexual Minorities and Human Development (also HD 464)
Spring. 3 credits. R. Savin-Williams.
For description, see HD 464.

WOMNS 468 Radical Democratic Feminisms (also GOVT 467)
Spring. 4 credits. A. M. Smith.
For description, see GOVT 467.

WOMNS 469/669 Gender and Age in Archeology (also ANTH 469/669)
N. Russell.

WOMNS 470 Studies in the Novel: Experimental novels by 20th Century Women (also ENGL 470)
Fall. 4 credits. M. Hite.
For description, see ENGL 470.

WOMNS 476 Global Women's Literature: (En)Gendering Space (also ENGL 476)
Spring. 4 credits. E. DeLoughrey.
For description, see ENGL 476.

WOMNS 478 19th Century French Women Writers (also FRLIT 480)
A. Berger.

WOMNS 480 Gender Adjudicated (also HIST 480)

WOMNS 481 Latin American Women Writers (also SPANL 492 and COM L 482)
Fall. 4 credits. D. Castillo.
For description, see SPANL 492.

WOMNS 487 Gender, Nationalism, and Conflict (also GOVT 486)
M. Katzenstein and M. Evangelista.

WOMNS 488/688 Beliefs, Attitudes, and Ideologies (also PSYCH 488/688)
Fall. 4 credits. D. Benn.
For description, see PSYCH 488.

WOMNS 491/691 Feminity, Ethics, and Aesthetics (also FRLIT 491/691)
Fall. 4 credits. T. McNulty.
For description, see FRLIT 491.

WOMNS 493 French Feminisms (also FRLIT 493)
N. Furman.

WOMNS 494 Music and Queer Identity (also MUSC 492)
J. Peraino.

WOMNS 496 Women and Music (also MUSIC 493)
Spring. 4 credits. J. Peraino.
For description, see MUSIC 493.

WOMNS 499 Directed Study
Fall and spring. Variable credit. Prerequisites: 1 course in women's studies and permission of a faculty member of the Women's Studies Program Board. Staff.

WOMNS 600 Special Topics in Feminist Theory: An Interdisciplinary Graduate Course in Women's Studies
4 credits. This course is open to graduate students and undergraduate seniors who have obtained permission of instructor. Not offered 2002–2003. Staff.
The purpose of this course is to expose graduate students to interdisciplinary approaches in Women's Studies and feminist theory to a variety of topics or questions. While many of our graduate courses train students in highly specialized areas of feminist theory, this course aims to teach students how to find common intellectual ground around a single topic from interdisciplinary perspectives without sacrificing the complexity of any disciplinary approach. The course is designed for graduate minors in Women's Studies and students with a specialized interest in feminist theory. Although it is not required, the course is strongly recommended for students obtaining a graduate minor in Women's Studies.

WOMNS 608 African-American Women (also HIST 608)
M. Washington.

WOMNS 610 Sexuality and the Politics of Representation
A. Villarejo.
The seminar explores contexts for critical work on sexuality and film/video. Beginning with the texts of Foucault, Freud, Lacan, Jacqueline Rose, and Jeffrey Weeks, the course examines the uses and abuses of psychoanalytic theory, as well as the regulation of sexuality in the past century. "Sexuality" is not, however, a simple
abstraction, and its coherence is put to the test through the dual lenses of Marxism and poststructuralism throughout the second half of the course, with readings from Gramsci, Deleuze and Guattari, Lyotard, and others. Films include Blonde Venus, Trabi, The Night Porter, All That Falls, the Soul, Written on the Wind, and others.

WOMNS 612 Population and Development in Asia (also R SOC 612)
Spring. 3 credits. L. Williams.
For description, see R SOC 612.

[WOMNS 613 The Political Economy of Gender and Work (also CRP 613)]
L. Beneria.

WOMNS 614 Gender and International Development (also CRP 614)
Spring. 3 credits. L. Beneria.
For description, see CRP 614.

WOMNS 624 Epistemological Development and Reflective Thought (also EDUC 614)
Fall. 3 credits. D. Schrader.
For description, see EDUC 614.

[WOMNS 625 Self and Interpersonal Development (also EDUC 615)]

[WOMNS 626 Graduate Seminar in the History of American Women (also HIST 626)]
M. B. Norton.

[WOMNS 636 Comparative History of Women and Work (also LRRCB 636)]

[WOMNS 644 Topics in the History of Women in Science (also S&T 644)]
M. Rossiter.

WOMNS 651 The Sexual Child (also ENGL 651)
Fall. 4 credits. E. Hanson.
For description, see ENGL 651.

[WOMNS 654 Queer Theory (also ENGL 654 and COM L 654)]
E. Hanson.

[WOMNS 655 Decadence (also ENGL 655 and COM L 655)]
E. Hanson.

[WOMNS 661 Cinematic Desire (also ENGL 660 and AM ST 662)]
E. Hanson.

[WOMNS 670 Feminist Political Theory (Graduate Seminar) (also GOVT 671)]
N. Hirschmann.

[WOMNS 671 Feminist Methods (also SOC 671)]
S. Feldman.

WOMNS 682 Hispanic Feminisms (also SPANL 680)
D. Castillo.

WOMNS 699 Topics in Women's Studies
Fall and spring. Variable credits. Staff.
Independent reading course for graduate students on topics not covered in regularly scheduled courses. Students develop a course of readings in consultation with a faculty member in the field of Women's Studies who has agreed to supervise the course work.

[WOMNS 733 Literary Anti-Feminism (also ENGL 733)]
L. Brown.

WOMNS 762 Sexuality and the Law (also GOVT 762)

FILM
See Department of Theatre, Film and Dance.

FIRST-YEAR WRITING SEMINARS
For information about the requirements for writing seminars and descriptions of seminar offerings, consult the John S. Knight Institute brochure, available from college registrars in August for the fall term and on the web in October at www.arts.cornell.edu/knight_institute for the spring term.

FRENCH
See Romance Studies.

GERMAN STUDIES
L. Adelson, P. Gilgen, A. Schwarz, acting chair; D. Bathrick, M. Briggs (Dutch), B. Martin, U. Maschke, A. Groos, acting director of graduate studies; P. U. Hohendidahl, G. Lischke, acting director of undergraduate studies; B. Martin, U. Maschke, D. Reese, L. Trancik (Swedish), G. Waite

The Department of German Studies offers students a wide variety of opportunities to explore the literature and culture of German-speaking countries, whether as part of their general education, a major in German Studies, or a double major involving another discipline, or as preparation for graduate school or an international professional career. Courses are offered in German as well as in English translation; subjects range from medieval to contemporary literature and from film and visual culture to intellectual history, music, history of psychology, and women's studies.

The department's offerings in English begin with a series of First-Year Writing Seminars introducing various aspects of German literature (for example, the fairytale and romantic consciousness or twentieth-century writers such as Kafka, Hesse, Mann, Brecht), theorists such as Marx, Nietzsche and Freud, issues in mass culture and modernity, problems of German national identity/ies, and cinema and society. Courses in English translation at the 300 and 400 levels explore such topics as the Faust legend, aesthetics from Kant to Heidegger, Freud and his legacy, opera from Mozart to Strauss, the German novel, political theory and cinema, the Frankfurt School, and feminist theory. It may be possible to arrange a German section for courses taught in English, either informally or formally (for credit). Students are encouraged to discuss this possibility with instructors.

For information about the requirements for writing seminars and descriptions of seminar offerings, consult the John S. Knight Institute brochure, available from college registrars in August for the fall term and on the web in October at www.arts.cornell.edu/knight_institute for the spring term.

The Department of German Studies offers students a wide variety of opportunities to explore the literature and culture of German-speaking countries, whether as part of their general education, a major in German Studies, or a double major involving another discipline, or as preparation for graduate school or an international professional career. Courses are offered in German as well as in English translation; subjects range from medieval to contemporary literature and from film and visual culture to intellectual history, music, history of psychology, and women's studies.

The department's offerings in English begin with a series of First-Year Writing Seminars introducing various aspects of German literature (for example, the fairytale and romantic consciousness or twentieth-century writers such as Kafka, Hesse, Mann, Brecht), theorists such as Marx, Nietzsche and Freud, issues in mass culture and modernity, problems of German national identity/ies, and cinema and society. Courses in English translation at the 300 and 400 levels explore such topics as the Faust legend, aesthetics from Kant to Heidegger, Freud and his legacy, opera from Mozart to Strauss, the German novel, political theory and cinema, the Frankfurt School, and feminist theory. It may be possible to arrange a German section for courses taught in English, either informally or formally (for credit). Students are encouraged to discuss this possibility with instructors.

Students wishing to begin German language at Cornell enroll in GERST 121–122, 123 (elementary language level). Students then continue with intermediate level courses, which provide further grounding in the language as well as introduce German literature and cultural studies. The sequence GERST 205–206 provides language instruction for business German leading to certification. On the advanced level (300 level or above), we offer thematically oriented courses that include intensive grammar review (301, 302); literature and culture study courses in German, including the Senior Seminar, and seminars of interdisciplinary interest taught in English. Addressing a broad spectrum of topics in German culture, our courses at the advanced level appeal to German majors and other qualified students alike.

Sequence of courses
Courses in German:
Elementary level: GERST 121–122, after completion, placement into GERST 123 or 200, 205
Intermediate level: GERST 200, 202, 204, and 205–206
Advanced level: GERST 301, 302, 307, 410.
Courses in German or English. Further 300- and 400-level literature and culture courses (see course descriptions)

Advanced Standing
Students with an AP score of 4 or better are automatically granted three credits in German. Students with an AP score of 4 or better, an LPG score of 65 or higher, or an SAT II score of 680 or higher must take the CASE examination for placement in courses above GERST 200. Students coming to Cornell with advanced standing in German and/or another subject are encouraged to consider a double major and to discuss the options with the director of undergraduate studies as early as possible.

The Majors
The department offers two options for the major: German literature and culture, and German area studies. The latter is a more broadly defined sequence that includes work in related disciplines. The course of study in either major is designed to give students proficiency in reading, speaking, and writing in German, to acquaint them with German culture, and to help them develop skills in reading, analyzing, and discussing German texts in relevant disciplines. For both majors, there is a wide variety of courses co-sponsored with other departments (Comparative Literature; Government; History; Music; Theatre, Film, and Dance; Women's Studies).

The department encourages double majors and makes every effort to accommodate
prospective majors with a late start in German. Students interested in a major should consult the acting director of undergraduate studies, Gunhild Lischke, G75 Goldwin Smith Hall.

German (Literature and Culture)
Although the emphasis of this track is on literature, majors may also pursue individual interests in courses on film and visual culture, theater and performing arts, music, intellectual and political history, and women's studies that have a substantial German component. Please consult with the director of undergraduate studies.

Admission: By the end of their sophomore year, prospective majors should have successfully completed GERST 202, 220, 204, or 206.

To complete the major, a student must:
1. Demonstrate competence in the German language by successful completion of two 300-level courses with intensive language work (GERST 301, 302) or the equivalent.
2. Complete six courses in German Studies at the 300 level or above. One of these must be the Senior Seminar (GERST 410).

German Area Studies
Students select courses from the Department of German Studies as well as courses with a substantial German component from other departments, such as Comparative Literature; Government; History; Music; Theatre, Film, and Dance; and Women’s Studies.

Admission: By the end of their sophomore year, prospective majors should have successfully completed GERST 202, 220, 204, or 206.

To complete the major, a student must:
1. Demonstrate competence in the German language by successful completion of two 300-level courses with intensive language work (GERST 301, 302) or the equivalent.
2. Complete six courses with a substantial German component at the 300 level or above. Three of these must be in German Studies, including the Senior Seminar (GERST 410).
3. Select a committee of one or more faculty advisers to help formulate a coherent program of study. One of the advisers must be from the Department of German Studies.

Study Abroad in Germany
German Studies strongly supports Study Abroad as an opportunity for students to put their German to use by living and studying in the German cultural context. The experience of living abroad promotes enduring personal growth, provides new intellectual perspectives through cultural immersion, and opens up academic and professional opportunities.

Students interested in studying abroad are encouraged to consider the Berlin Consortium, of which Cornell is an associate member. The program is run in conjunction with the Free University of Berlin and is of very high caliber. Six weeks of an intensive language practicum held at the center of the consortium are followed by one or two semesters of study at the university. Academic-year students have been assisted in finding internships between semesters. Prerequisite for participating in the program is five semesters of German language study, of which the last course must be on the 300 level.

Students interested in this or other study abroad options in Germany, Austria, or Switzerland should consult Gunhild Lischke, G75 Goldwin Smith, 255-0725; gl15@cornell.edu as soon as possible.

Honors
Eligibility: A student wishing to receive honors in German Studies must have a GPA of 3.5 in all courses relevant to the major.

Committee: Candidates for honors form an advisory committee consisting of an adviser from German Studies and at least one additional faculty member.

Honors essay: During the first term of their senior year, students determine the focus of their honors essay through an appropriate course, GERST 453, under the direction of their advisers. During the second term they complete an honors essay, GERST 454, which will be evaluated by the committee.

Determination of honors: An oral examination concludes the process. Honors is determined by the essay, the exam, and grades in the major.

First-Year Writing Seminars
Consult the John S. Knight Institute brochure for course times, instructors, and descriptions.

Courses Offered in German
GERST 121 Introductory German I
Fall or spring. 4 credits. Intended for students with no prior experience in German or with a language placement test (LPG) score below 57, or an SAT II score below 370. G. Lischke, U. Maschke and staff.

Students develop basic abilities in listening, reading, writing, and speaking German in meaningful contexts through interaction in small group activities. Course materials include videos, short articles, poems, and songs provide students with varied perspectives on German language, culture, and society.

GERST 122 Introductory German II
Fall or spring. 4 credits. Prerequisite: GERST 121, LPG score 37-44, or SAT II score 370-450. Students who obtain an LPG score of 56 or above after GERST 122 attain qualification and may enter a 200-level course; otherwise successful completion of GERST 123 is required for qualification. G. Lischke, U. Maschke and staff.

Students build on their basic knowledge of German by engaging in intense and more sustained interaction in the language. Students learn more advanced language structures allowing them to express more complex ideas in German. Discussions, videos, and group activities address topics of relevance to the contemporary German-speaking world.

GERST 123 Continuing German
Fall or spring. 4 credits. Provides language qualification. Limited to students who have previously studied German and have an LPG score 45-55 or SAT II 460-570. U. Maschke and staff.

Students continue to develop their language skills by discussing a variety of cultural topics and themes in the German-speaking world. The focus of the course is on expanding vocabulary, reviewing major grammar topics, developing effective note-taking, improving listening comprehension, and working on writing skills. Work in small groups increases each student’s opportunity to speak in German and provides for greater feedback and individual help.

GERST 200 Contemporary Germany (IV)
Fall or spring. 3 credits. Provides language proficiency. Prerequisite: qualification in German (GERST 123 or LPG score of 56-64 or SAT II score of 580-670) or placement by examination. B. Buettner and staff.

A content-based language course on the intermediate level. Students examine important aspects of present-day German culture while expanding and strengthening their reading, writing, and speaking skills in German. Materials for each topic are selected from a variety of sources (fiction, newspapers, magazines, and the Internet). Units address a variety of topics including studying at a German university, modern literature, Germany online, and Germany at the turn of the century. Oral and written work and individual and group presentations emphasize accurate and idiomatic expression in German. Successful completion of the course enables students to continue with more advanced courses in language, literature, and culture.

GERST 202 Exploring German Literature (IV)
Fall or spring. 3 credits. Prerequisite: GERST 200 or equivalent or permission of instructor. Taught in German. B. Buettner and staff.

In this intermediate course, we read and discuss a number of works belonging to different literary genres by major German-speaking authors such as Kafka, Walser, Brecht, Mann, Frisch, Dürrenmatt, Bachmann, and others. We explore questions of subjectivity and identity in modern society, of human existence as existence in language, and of the representation of history in literary texts. Activities and assignments in this course focuses on the development of reading competency in different literary genres, the use of accurate and idiomatic expressions, the expansion of students’ German vocabulary and, the systematic review of select topics in German grammar.

GERST 204 Intermediate Conversation and Composition
Fall or spring. 3 credits. Prerequisite: GERST 200 or GERST 201 or GERST 205 or placement by examination (placement score and CASE). U. Maschke.

Emphasis is on improving oral and written expression of idiomatic German. Enrichment of vocabulary and appropriate use of language in different conversational contexts and written genres. Material consists of readings in contemporary prose, articles on current events, videos, and group projects. Topics include awareness of culture, dependence of meaning on perspective, interviews with native German speakers,
GERST 205 Business German I
Fall. 3 credits. GERST 205 provides language proficiency. Prerequisite: qualification in German (GERST 125, or an LPG score of 56–64, or an SAT II score between 580–670). Staff. Learn German and understand German business culture at the same time. This is a German language course that examines the German economic structure and its major components: industry, trade, the banking system, and the government. Participants learn about the business culture in Germany and how to be effective in a work environment, Germany’s role within the European Union, the dual education system, the importance of trade and globalization, and current economic issues in Germany. The materials consist of authentic documents from the German business world, TV footage, and a Business German textbook.

GERST 206 Business German II
Spring. 3 credits. Prerequisite: proficiency in German (GERST 205, 200, or placement by examination (placement score and CASEL)). G. Lischke.
This course is a continuation of GERST 205; however students without previous knowledge of Business German are welcome. This is a German language course that examines the German economic structure and its major components: industry, trade unions, the banking system, and the government. Participants learn about the business culture in Germany and how to be effective in a work environment, Germany’s role within the European Union, the role of the European Central Bank, the importance of trade and globalization, and current economic issues in Germany. The materials consist of authentic documents from the German business world, TV footage, and a Business German textbook. At the end of the course, the external Goethe Institut exam “Deutsch für den Beruf” will be offered.

GERST 301 Scenes of the Crime: German Mystery and Detective Fiction (IV)
Fall. 4 credits. Prerequisite: GERST 202, 220, 204, 206 or equivalent, or permission of instructor. Taught in German. This course may be counted towards the requirement for 300-level language work in the major. P. Gilgen.
An exploration of German crime, detective, and mystery writing in texts ranging from the early nineteenth century to contemporary fiction. Authors to be studied may include: Kleist, E. T. A. Hoffmann, Dürenmatt, Schatten, Süskind, Handke, Oren and Georg Klein. In addition to exercising hermeneutic skills (and, by extension, that gray matter of cultural studies), students are encouraged to discuss this possibility with instructors.

GERST 302 Youth Culture: Adolescence in German Fiction (IV)
Spring. 4 credits. Prerequisite: GERST 301 or equivalent or permission of instructor. Taught in German. B. Buettner.
Examination of literary and cultural approaches to children, youth, and adolescence in texts ranging from the late eighteenth century to the present. These include longer works by Bernhard, Musil, Zweig, von Horvath, Mann and Schlink and a variety of shorter texts. Aimed at further improving students’ proficiency in aural and reading comprehension, as well as in speaking and composition skills. Focus on high-level grammar review, stylistic and expository refinement, and vocabulary expansion. Recommended for students wishing to combine intensive language training with reading and discussion of short fiction.

GERST 306 German Media

GERST 307 After the Fires: Divided Germany 1945–1989 (IV)

GERST 310 Berlin: Where the Wild Things Are (IV)
Spring. 4 credits. Prerequisite: GERST 202, 204, 206, or 220, or equivalent or permission of instructor. Taught in German. U. Maschke.
Berlin has recently been declared the city of the world: Berlin as the place to be for politicians and profit-seekers, architects and artists, the rich and famous, but also for those seeking new thrills. Is this new Berlin pulsing once again with the vibrant energy of the 1920s or overwhelmed by the historical legacy of fascism and the divisions of the Cold War? With a focus on a wide variety of media, such as literature, film, architecture, music, political documents, the Internet, and MIT’s hypermedia program Berliner Sehen, this course investigates the emergence and life of contemporary Berlin in the context of its history as the capital of Germany. Differing and sometimes contradictory representations of this unique city form the thematic core of this course, which stresses the refinement of critical reading and writing skills in German. Especially suitable for students interested in study abroad, this course is open to all qualified students interested in high-level development of their German-language skills in the context of cultural studies.

GERST 353 Kleist # (IV)

GERST 354 Schiller # (IV)

GERST 357 Major Works of Goethe (1749–1832) # (IV)

Courses offered in English
It may be possible to arrange a German course for courses taught in English, either informally or for credit (for credit). Students are encouraged to discuss this possibility with instructors.

GERST 221 The Ethics of Imagining the Holocaust (also ENGL 221 and JWST 257) (IV)

GERST 237 The Germanic Languages (also LING 237) (III)

GERST 310 "1800" # (IV)

GERST 320 Postwar German Novel (IV)

GERST 330 Political Theory and Cinema (also COM L 330, FIlM 370 and MUSIC 374) (IV)

GERST 340 Metropolis: Urban Sites in Literature (IV)

GERST 374 Opera and Culture (also MUSIC 374) # (IV)

GERST 378 German Aesthetic Theory: From Kant to Hegel # (IV)

GERST 392 Minority Literature in the Federal Republic (IV)

GERST 395 Rilke: The Duino Elegies and Sonnets to Orpheus (IV)
Fall. 4 credits. In English translation. We use a bilingual edition for the benefit of those who know German and will arrange an optional weekly discussion section in German for interested students. H. Deinert.
In 1922, the same year that saw publication of Joyce’s Ulysses, Eliot’s Waste Land, and Valery’s Charmes, Rilke’s Duino Elegies, more than ten years in the making, and Sonnets to Orpheus, were finally completed in a burst of creative energy that astonished even the poet. One of Germany’s greatest lyrical poets along with Klopstock, Goethe and Hölderlin, Rilke attempts nothing less than the creation of a modern myth, a secular religiosity in which the relationship between God and humans is replaced by one between man and Angel, the latter, like Nietzsche’s Superman, but a projection of human possibilities and aspirations. A member of a generation still numbed by the destruction and social and political upheaval wrought by World War I, Rilke defines the role of humans in terms of preservation and conservation, of exuberant service to what is transitory, be they natural or cultural phenomena: transient, they look to us for deliverance, us, the most transient of all (IX. Elegy). We discuss the ten elegies and fifty-five sonnets both as documents of their time and in the context of intellectual history.

GERST 396 German Film (also COM L 396 and FILM 396) (IV)

Advanced Undergraduate and Graduate Courses

GERST 402 The Language of German Poetry (IV)

GERST 403 The Afro-Europeans (IV)

GERST 405 Introduction to Medieval German Literature I # (IV)
Fall. 4 credits. Prerequisites: reading knowledge of German. A. Groos.
After a brief introduction to basic aspects of the medieval universe, ranging from cosmology to psychology, reading focuses on introductory texts of late twelfth-century
courtly culture. Using the predominant genres of aristocratic self-representation, the heroic epic (Nibelungenlied), Arthurian romance (Hartmann von Aue), and Minnesang, discussions investigate the court as the locus of conflicting forces in the rise of the secular culture in Germany, examining such issues as the first prominent construction of social and sexual identity, generational conflicts within the communal-dynastic order, the rise of individualism (the knightly quest), and subjectivity (the love lyric).

GERST 406 Introduction to Medieval German Literature II # (IV)
Spring. 4 credits. Prerequisite: GERST 405 or permission of instructor. This is the anchor course for the medieval period. A. Groos. Political lyrics by Walther von der Vogelweide introduce agendas of conflict in thirteenth-century courtly culture. Using the predominant genres (Hartmann's the first vernacular construction of social and culture in Germany, examining such issues as subjectivity (the love lyric). the communal-dynastic order, the rise of sexual identity, generational conflicts within GERST 406 Introduction to Medieval German Literature II # (IV) the increasing complexity of self, and instabilities of the performance text. Concluding topics may include the destabilization of order in Gottfried von Strassburg's Tristan und Isolde, women mystics and late medieval narratives of socio-sexual violence, anti-Semitism, and urban Angst.

GERST 407 Teaching German as a Foreign Language
Fall. 4 credits. G. Lischke. This course has been designed to familiarize students with current ways of thinking in the field of applied linguistics and language pedagogy. It introduces different concepts of foreign language methodology as well as presents and discusses various techniques as they can be implemented in the foreign language classroom. Special consideration is given to topics such as planning syllabi, writing classroom tests, and evaluating student's performance. Participants conduct an action research project.

GERST 408 Uncanny Communities (IV)

GERST 409 Spinoza and New Spinozism (also COM L 442) (IV)

GERST 410 Senior Seminar
Fall. 4 credits. Open to all students with an adequate command of German. Prerequisite: any German course at the 300-level or equivalent or permission of instructor. Readings and discussions in German.

A. Schwarz. Topic: The Poetics of Realism Survey of 19th-century prose, drama and poetry with special focus on the literary program of "Poetic Realism." In addition to discussing concepts such as "mimesis," the "real" and "imitation," the seminar will examine narrative strategies that aim at reconciling the "poetic" realm of literature and the "prosaic" realm of the everyday. We will investigate how literary texts attempt to glorify work, the city and industrialization by relocating the plot to the realms of love, the domestic, adventure, suburbia, gardens or America. Further attention will be paid to artistic developments that anticipate literary periods such as Naturalism, Expressionism and the Avantgarde. Authors include: Hegel, Vischer, Tieck, Keller, Freytag, Stifter, Fontane, Raabeand Storm.

GERST 412 German Literature from 1770 to 1848 # (IV)

GERST 413 Women around Freud (also COM L 412 and WOMNS 413) (IV)

GERST 415 Marx, Nietzsche, Freud (also COM L 425 and GOVT 473) (III or IV)

GERST 417 Faust: Transformations of a Myth (also COM L 417) # (IV)
Spring. 4 credits. Taught in English. H. Deinert. Few legends have so engaged the imagination as that of the man who signed a pact with the devil to obtain pleasure, power, and knowledge. While the myth itself is timeless, the modern version takes its cue from one real Georg Faust, a figure of dubious character, half scholar, half quack, during the time of the German Reformation. The German Volkstext depicting his adventures was almost immediately translated into English and became the inspiration for Marlowe's Tragic History of Doctor Faust. Goethe devoted some 60 years to his Faust, completing it only months before his death in 1832. While Marlowe's Faust deserves eternal damnation for his hubris, Goethe's protagonist finds favor with God for the same reason. We look at various representations of the myth from the late sixteenth century through the early nineteenth. The Faust Book, Marlowe, and Goethe are our main texts. We listen to some of the music they have inspired: Schubert, Schumann, Berioz, Gounoud, Mahler, and look at related mythical figures like Lucifer, Prometheus, Don Juan, Ahasverus, Schlemiehl, and others. Time permitting, we will discuss selections from several recent versions: Bulgakov's The Master and Margarita (1938), Voltaire's Don Faust (1940), and Thomas Mann's Doktor Faustus (1947).

GERST 418 Thomas Mann (IV)

[GERST 614] Gender at the Fin-de-siècle

[GERST 615] Jews in German Culture
Since 1945 (also JWST 615)

[GERST 617] Literature and Affect (also COM L 625)

[GERST 618] "The Science of the Experience of Consciousness":
Hegel's Phenomenology of Spirit
(1796–1797)

[GERST 621] Issues in Gay and Lesbian Studies
(also WOMNS 621)

[GERST 623] Aesthetic Turns: The Fin-de-siècle
Spring. 4 credits. Anchor course. Prerequi-
site: graduate standing or permission of
instructor. Readings in German, discussion
either in German or English. A. Schwarz.

Interdisciplinary examination of the fin-de-
siècle as a crucial turning point in literature,
art, architecture, psychoanalysis and cultural
criticism. Emphasizing the variety of differing
projects of Modernity within the European
context, examining the conditions for the
emergence of avant-garde movements;
analyzing ambivalent attitudes towards
traditionalism and heritage (Realism and Natu-
ralism) and changing attitudes toward literary
concepts such as "mimesis," "montage,"
"description," "narrative," and "temporality."
Focus on the interrelationship between
psychoanalysis, literature and cultural critique;
between literature and architecture (the city as
the site of artistic production), between
aesthetics and politics and youth culture and
artistic innovation. Authors include: Fontane,
Nietzsche; Bahr, Mach, Freud, Schlaf, Holz,
Brock, Benn, Benjamin, Schnitzler, Musil,
Hofmannsthal, Simmel, George, Kraus, Mann,
Lasker-Schueeler et al.

[GERST 624] Seminar in Medieval German Literature
Fall. 4 credits. Prerequisite: GERST 405 or
equivalent. A. Gross.

Topic: Minnesang. Originally a variety of
songs practiced by the feudal aristocracy of
the late twelfth and thirteenth centuries,
is transmitted only in manuscripts written a
century later. The transformation from song to
book, and the variability— even incompatibil-
ity— of texts in different manuscripts, poses
vexing questions for understanding the Middle
High German love lyric: Were they conceived
as both songs and poems, performed and/or
read in print? Or are they stagings of subject-
reification, even author-formation, vis-à-vis a
community? What is the significance of their
foregrounding of gender relationships for the
emergence of secular culture? Readings focus
on poems of the three major Minnesinger
around 1200: Heinrich von Morungen,
Reimar der Alte, and Walter von der
Vogelweide.

[GERST 626] Nuremberg

[GERST 627] Baroque (also COM L 626)

[GERST 629] The Enlightenment

[GERST 630] Classicism and Idealism
Fall. 4 credits. Texts in German. Anchor
course. P. U. Hohendahl.

An introduction to some of the major poetic
and philosophical texts generally considered
to be of the period of German Classicism
(1785–1805), while at the same time giving
reasons to call into question notions of
periodization and the canon, particularly as
they have excluded women and lower social
classes. In addition to the basic problem of
the appropriation of classic antique at a time
marked by the transition to bourgeois
modernity, special consideration is given to
the emergence of modern aesthetic theory as
well as its impact on literary production and
reception. Specifically the seminar focuses on
the problem of subject formation in the
context of modernity as it is expressed in the
current of Bildung. Special emphasis is
placed on the gendering of this concept.
Readings are taken from the works of Goethe,
Herder, Humboldt, Kant, Moritz, and Schiller
among others. While the main focus of the
seminar is on primary texts, we also consider
contemporary criticism of the concept of
Classicism and its problems.

[GERST 631–632] Academic German I
and II
631, fall; 632, spring. 3 credits each term.
Limited to graduate students. Prerequi-
site for GERST 632, GERST 631 or equivalent.
Staff.

Intended primarily for beginners with little
or no previous German knowledge. Emphasis
in 631 on acquiring basic German reading
skills. Emphasis in 632 on development of the
specialized vocabulary of student's field of
study.

[GERST 634] German Romanticism

[GERST 635] The Gates to Modernity:
From Karlstein to the 1848
Revolution

[GERST 636] Kleist and Kafka: Prose
Works
Fall. 4 credits. Prerequisite: graduate
standing or permission of instructor.
D. Reese.

Reading Kleist and Kafka together, we
endeavor to strike upon our own vocabulary
for describing the peculiar temporal qualities
of their narratives and short prose works.
Rather than beginning with a particular
understanding of narratology, we attempt to
elaborate one by attending to what might be
called narrative speed—an attention to the
significance of lapses and accelerations in the
art of storytelling. How is the description of
space conditioned by the becoming of the
description in time? How, in turn, is this
reconstruction of space within the temporal
development of the narrative related to the
arrival of judgment? We pay close attention to
the variation between the random detail, what
might be called narrative caprice, and
re recuperative, retrospective assertions of
necessity—between the absurd and the
impossible. Of particular concern is the
persistent dislocation of epistemological
certainty in the unfolding of the texts and how
it bears on issues of law. In keeping with this,
we consider the density of the bodies which
cross the thresholds of judgment, swallow
prophesies, move through border patrols and
succumb to or exceed the narrative logic
which brings them forth. Selected prose works
by Kleist and Kafka are read alongside
writings by Barthes, Benjamin, Bloch, Freud,
and Nietzsche.

programs which can be anything from advanced mastery in any or all skills to the mastery of Dutch for research, literature, and history in support of all disciplines. Taught in Dutch. Topic for fall or spring: Afrikaans.

**Swedish**

**SWED 121-122 Elementary Swedish**

121, fall; 122, spring. 4 credits each term. Prerequisite: for SWED 122, SWED 121 or equivalent. L. Tranck.

Students in the course develop abilities in listening, speaking, reading, and writing within Sweden's cultural context. Work on the Internet and interactive computer programs are used in these courses.

**SWED 123 Continuing Swedish**

Fall. 4 credits. Provides language qualification. Prerequisite: SWED 122 or equivalent. L. Tranck.

Development of skills in spoken and written Swedish within Sweden's cultural context.

**SWED 203 Intermediate Swedish**

Fall. 3 credits. Provides language proficiency. Prerequisite: SWED 123 or permission of instructor. L. Tranck.

Intermediate to advanced-level instruction using audio-visual material and text to enhance language comprehension.

**SWED 204 Advanced Swedish**

Spring. 3 credits. Prerequisite: SWED 203 or permission of instructor. Taught in Swedish. L. Tranck.

Emphasis on improving oral and written expression of Swedish, including vocabulary, readings in contemporary prose, treatment of specific problems in grammar, and presentation of videos and films.

**SWED 300 Directed Studies**

Fall or spring. 1–4 credits variable. Prerequisite: permission of instructor. L. Tranck.

Taught on a specialized basis to address particular student needs. Times will be arranged with instructor.

**Government**

V. Bunce, chair; R. Bensel, S. Buck-Morss, A. Carlson, M. Evangelista, R. Herring, N. Hirschmann, M. Koroma, M. Katzenstein, P. Katzenstein, J. Kirshner, I. Kramnick, T. J. Lowi, W. Mebane, N. T. Uphoff, C. Way

Government is divided into four subfields: (1) pass two of the introductory government courses (GOVT 111, 131, 161, 181); (2) pass an additional course in one of the remaining subfields (American government, comparative government, political theory, or international relations). This course may be any course offered in the government department, including introductory courses, upper-level courses or seminars. Students are strongly advised to take at least one course in each of the four subfields;

(3) accumulate an additional 28 credits of government course work at the 200-level or above;

(4) complete at least one seminar-style course in government which may be applied toward the 28 credits. These courses include those numbered 400.XX to which students are admitted by application only;

(5) accumulate 12 credits in upper-level courses in related fields (such as anthropology, economics, history, science and technology studies, psychology, and sociology). Upper-level courses are usually courses numbered at the 300 level or above (200-level courses are not considered upper-level). Students should consult with their major adviser to choose appropriate courses. All choices of related courses must be approved by the major adviser or the director of undergraduate studies;

(6) all courses used to fulfill a government major must be passed with a letter grade.

To summarize, a total of 10 government courses and three additional courses (12 credits) of upper-level related courses are required to complete the major. For more information about the Government major, please visit our website: (http://falcon.arts.cornell.edu)

**Cornell-in-Washington Program.** Government majors may apply to the Cornell-in-Washington program to take courses and undertake a closely supervised externship during a fall or spring semester.

**European Studies Concentration.** Government majors may elect to group some of their required and optional courses in the area of European studies, drawing from a wide variety of courses in relevant departments. Students are invited to consult Professors P. Katzenstein, J. Pontusson, and S. G. Tarrow for advice on course selection and foreign study programs.

**Model European Community Simulation.** Undergraduates with an interest in the European Union, public affairs, or debating may participate in an annual European Union simulation held, on an alternating basis, in April at SUNY Brockport or in January in Brussels. The simulation provides an opportunity for participants, representing politicians from the member states, to discuss issues and resolutions of current concern to the European Union.
To prepare for the simulation, a two-credit course is offered by the Government department each year (GOVT 431 or GOVT 432). Participation in the simulation is open only to those who register for this course. Anyone interested in participating or finding out more information should contact the Institute for European Studies at 120 Uris Hall, 255-7992.

**International Relations Concentration.** See the description under "Special Programs and Interdisciplinary Studies."

**Honors.** Application to the honors program is made in the early spring of the junior year. For more information about the Honors Program and an application form, please visit our website: (http://falcon.arts.cornell.edu/ Govt)

### Introductory Courses

Students registering for introductory courses should register for the lecture only. Sections are assigned during the first week of class. Introductory courses are also offered during summer session.

**GOVT 111 Introduction to American Government and Politics (III)**
Fall and summer. 3 credits. T. J. Lowi.
An introduction to government through the American experience. Concentration on analysis of the institutions of government and politics as mechanisms of social control.

**GOVT 131 Introduction to Comparative Government and Politics (III)**
Spring and summer. 3 credits. J. Pontusson.
This course provides a survey of the institutions, political processes, and policies of contemporary states. It focuses on the conditions for and workings of democracy. Looking at Western Europe, we analyze institutional variations among liberal democracies, and their political implications. We then probe the origins of democracy in Western societies and the reasons why communism and other forms of authoritarian rule have prevailed elsewhere. Finally, we explore the impetus behind and the obstacles to democratization in the Third World and the erstwhile Communist bloc. Throughout this survey, problems of democracy are related to problems of economic development, efficiency, and equality.

**GOVT 161 Introduction to Political Philosophy # (III)**
Spring. 3 credits. N. Hirschmann.
A survey of the development of Western political theory from Plato to the present. Readings from the works of the major theorists. An examination of the relevance of their ideas to contemporary politics.

**GOVT 181 Introduction to International Relations (III)**
Fall and summer. 3 credits. J. Kirshner.
An introduction to the basic concepts and practice of international politics.

### First-Year Writing Seminars

Consult the John S. Knight Institute brochure for times, instructors, and descriptions.

### Major Seminars

**GOVT 400 Major Seminars**
Fall or spring. 4 credits.
These seminars, emphasizing important controversies in the discipline, cap the majors' experience. Thus preference in admission is given to majors over nonmajors and seniors over juniors. Topics and instructors change each semester. To apply, students should pick up an application in 125 McGraw Hall during the course selection period the semester before the seminar is given.

The following courses are open to sophomores, juniors, and seniors without prerequisites unless otherwise indicated.

### American Government and Institutions

GOVT 111 is recommended.

- **GOVT 302 Social Movements in American Politics (also AM ST 302) (III)**

- **GOVT 303 Introduction to American Political Parties (III)**

- **GOVT 305 Atomic Consequences: The Incorporation of Nuclear Weapons in Post-War America (III)**

- **GOVT 308 Science in the American Polity 1800-1960 (also S&TS 390) (III)**

- **GOVT 309 Science in the American Polity (also S&TS 391) (III)**
  Fall. 4 credits. M. Dennis.

This course reviews the changing political relations between science, technology and the state in America from 1860 to the present. It focuses on the politics of choices involving science and technology in a variety of institutional settings, from Congress to courts and regulatory agencies. The tensions and contradictions between the concepts of science as an autonomous republic and as just another special interest provide the central theme for the course. Topics addressed include research funding, technological controversies, scientific advice, citizen participation in science policy, and the use of experts in courts.

- **GOVT 311 Urban Politics (III)**
  Fall. 4 credits. M. Shifter.

Covers the major political actors, institutions, and political styles in large American cities: mayors, city councils, bureaucracies, ethnic and racial minorities, urban machine politics, and the municipal reform movement.

- **GOVT 316 The American Presidency (III)**
  Fall. 4 credits. E. Sanders.

Analysis of the politics of the presidency and the executive branch with emphasis on executive-legislative relations, executive branch policymaking, and the problems of the modern presidency.

- **GOVT 317 Campaigns and Elections (III)**
  Fall. 4 credits. W. Melhane.

This course examines campaigns and elections, focusing primarily on national elections in the United States. Topics include the relationship between elections and the economy, the weakness of the American party system, voter turnout, individual voting decisions, negative campaigning, and the noncompetitiveness of congressional elections. We examine several theories that explain these phenomena, including the theory of rational choice. Course requirements include one or two papers based on original analysis of election survey data.

- **GOVT 318 The American Congress (III)**

- **GOVT 319 Minority Politics in the US (also LSP 319) (III)**

- **GOVT 320 Public Opinion and Public Choice (III)**

- **GOVT 324 Legal Reasoning and Legal Adaptation: A Comparison of American and Talmudic Law (III)**

- **GOVT 327 Civil Liberties in the United States (also AM ST 310) (III)**
  Fall. 4 credits. Course will be taught in Washington, D.C. J. Rabkin.

An analysis of contemporary issues in civil liberties and civil rights with emphasis on Supreme Court decisions. Cases are analyzed in terms of democratic theory and the social and political context in which they arose.
[GOVT 353] Feminism Movements and the State (also WOMNS 353) (III) 

GOVT 402 New York Politics
Fall. 4 credits. M. Luster.
New York is arguably the most politically, economically, socially, ethnically and demographically diverse state in the nation. How its government manages to operate at all—sometimes is a wonder. This course examines the structure, traditions, tensions, and processes of its political institutions, with a particular focus on the legislature, in an effort to understand how a contentious, partisan and historically brutal political climate has produced great leaders and positive results. With the “devolution revolution” still underway, the course will help students better understand the role of state government and how it functions in the turbulent world of New York politics.

[GOVT 404] American Political Development in the 20th Century (co-taught with GOVT 612) (III) 

GOVT 408 Politics of the American Civil War (also AM ST 430) # (III) 
Spring. 4 credits. R. Bensel.
The Civil War, along with the Founding of the nation in the late eighteenth century, is one of the two most important influences on the course of American political development. Arising out of intense ideological, cultural, and economic competition between the slave South and the free labor North, the conflict created two new national states: a northern Union that replaced the loose federation of the ante-bellum period and a southern Confederacy that perished at Appomattox. In this course, particular attention is paid to the political economy and culture of plantation slavery in the ante-bellum South; the apparent inevitability of collision between the slave and free states and their respective societies, the military, political, and economic strategies that determined, on both sides, the course and duration of the war, the limits and possibilities of reform of southern society during Reconstruction and the impact of the Civil War on the subsequent development of the United States.

[GOVT 412] American Political Parties and Elections (III)  

[GOVT 413/613] Finance, Federalism, and Politics (III)  

GOVT 427 Immigrants, Membership, and Citizenship (also LSP 430 and AM ST 430.4) (III) 
Fall. 4 credits. M. Jones-Correa.
Immigrants are increasingly important players in the politics and economics of industrialized societies. However, in many cases despite their residence in these societies, their membership in and citizenship status is often in question. At times migrants are undocumented, living and working at the fringes of the protections and regulations afforded by the legal system. Or they may petition to enter as refugees, having to prove their right to stay. Even if residing permanently, immigrants may still not be citizens of their receiving country, or if they are, they may have dual nationality. This course explores the complications of membership and citizenship among migrants, refugees and immigrants, focusing largely on immigration to the United States.

[GOVT 428/728] Government and Public Policy: An Introduction to Analysis and Criticism (III) 
Fall. 4 credits. T. J. Lowi.
GOVT 428 concentrates on history and criticism of U.S. policies and the politics associated with them. Particular attention is given to the origins and character of the regulatory state and the welfare system.

GOVT 429 Government and Public Policy: An Introduction to Analysis and Criticism (III) 
Spring. Open to undergraduates. 428 and consent of instructor are required for 429. T. J. Lowi.
GOVT 429 is an opportunity to pursue further the research begun in 428.

Comparative Government
GOVT 131 is recommended.

[GOVT 326] Building a Better Democracy (III)  

GOVT 330 Europe, the US, and Japan in the Global Economy (also ILRIC 333) (III) 
Fall. 4 credits. L. Turner.
For a description, see ILRIC 333.

GOVT 332 Modern European Politics (III) 
Fall. 4 credits. D. Schirmer.
The course gives an introduction to politics and political systems in Western Europe. It starts with a brief history of the formation of the nation state and the establishment of democratic rule. It continues with the modes and structures of political conflict and explores political cultures, party and electoral systems, the roles of interest groups and social movements, and the mass media. It then turns to a discussion of parliament and government. The main countries studied include Britain, France, Germany, Italy and Spain. The main dimensions guiding the comparison are conflict vs. consent, federalism vs. centralism, parliamentary vs. presidential systems, and majority vs. proportional representation. The course concludes with a discussion of minority-majority relations and the problem of democratic inclusion.

[GOVT 333] Government and Politics of the Former Soviet Union (III) 

[GOVT 334] Political Economy of East Asia @ (III)  

[GOVT 335] America in the World # (III)  

GOVT 336 Postcommunist Transitions (III) 
Spring. 4 credits. V. Bunce.
This course compares economic and political development of states of collapse of communism in Eastern Europe and the former Soviet Union. Primary emphasis is placed on the relationship between democratization and the transition to capitalism, with some attention paid as well to nationalism, the role of terorr, and modernity and its critics. Even the 50-year division of the continent by the Cold War could not destroy its common, but contradictory history. This interdisciplinary core course in Modern European Studies serves as an introduction to European society and politics. Topics include European state-building and capitalism, nationalism and socialism, cycles of revolution and reaction, stratification and mobility, law and violence, and war and democracy. The course ends with an introduction to the European Union and its conflicts. May be taken separately, or in combination with GOVT 342, The New Europe, which focuses on contemporary Europe. If qualified student interest permits, a section may be offered in French or German.

[GOVT 342] United Germany in the New Europe (III)  

[GOVT 343] The Politics of European Integration (III)  

GOVT 344 Government and Politics of Southeast Asia (III)  
Fall. 4 credits. L. Ryter.
The course focuses on the comparative analysis of the nature and origins of political conflict in selected Southeast Asian nations. Particular attention is given to nationalism/ethnicity, religion, and class, as well as to the differential impact of colonial rule.

GOVT 347 Government and Politics of China (III) Fall. 4 credits. Staff.
An introduction to the main currents in China's domestic politics over the last 60 years. Topics include the revolutionary rise of communism; Maoism, in theory and in practice; the politics of bitterness during the "Cultural Revolution"; the evolving roles of the party and the military, and of peasants, workers, and intellectuals in the polity; the prospects for democracy, perceived social inequality, violence, corruption, and other pressing problems that have emerged with the reforms under Deng Xiaoping.

GOVT 354 Capitalism, Competition, and Conflict in the Global Economy (III) Fall. 4 credits. P. Katzenstein.
Unemployed autoworkers in Detroit and the wood stoves in New England signal an important change in America's relation to the world economy. This course characterizes these changes in a number of fields (trade, money, energy, technology), explains them as the result of the political choices of a declining imperial power that differs substantively for the choices of other states (Japan, Germany, Britain, France, the small European states, and Korea), and examines their consequences for America and international politics.

GOVT 357 American Indian Politics and Policy (also AIS 367 and R SOC 367) (III) Fall. 3 credits. Enrollment limited to 20.
B. Baker.
This course addresses the Constitutional basis of the Federal-Indian Relationship through an examination of treaties, Supreme Court decisions, and Congressional law/policy. The effects of European and American forms of governance on traditional American Indian political structures are detailed and contrasted with contemporary tribal governments and political organizations. Issues relating to sovereignty and self-governance with respect to American Indian tribal governments are addressed relative to state and federal governments.

GOVT 358 Imagining the Modern Middle East (also NES 294, JWST 294) (III) Not offered 2002-2003.

GOVT 415 Race, Gender, and Organization (III) Not offered 2002-2003.

GOVT 432 The Politics of Economic Liberalization in the Developing World (III) Fall. 4 credits. H. Schamis.
What drives the current processes of economic liberalization taking place in most of the developing world? What kinds of constraints and opportunities do governments embarked upon such policy reforms face? What types of factors account for their success or failure? What is the relationship between the international dimension of this phenomenon and the domestic political conditions? This seminar addresses these questions by examining the interplay of domestic and international ideas, local and foreign actors, and national and transnational institutions which take part in these processes. The course focuses extensively on, but is not limited to, Latin America.

GOVT 437 Contemporary China: Society and Politics (III) Spring. 4 credits. Staff.
Selected reading and in-class discussion of some of the central dilemmas that have been posed by the rapidly escalating processes of social change taking place under conditions of continuing political authoritarianism in China today. Topics include broad changes in demographic and social structure, rising tensions in family and gender relations, the enduring salience of community and workplace; the resurgence of Chinese nationalism, of Han Chinese nationalism, of regionalism, and of popular religious movements; the significance of rising rates of crime and of political corruption; the growing crisis of social welfare delivery, and the limits on political dissent and on the development of civil society.

GOVT 439 Japan in International Politics (III) 4 credits. Not offered 2002-2003.

GOVT 448 The Quality of Democracy in Latin America (III) Fall. 4 credits. K. O'Neill.
This course explores major issues affecting the quality of democracy in Latin America. We begin by trying to capture the many meanings of the term "democracy" and by thinking through how it is possible to measure changes in the quality of democracy over time. The course examines both institutional bases for Latin America's level of democracy—whether the quality of democracy is affected by government structures in the region—and also specific topics that impact the region's democracies. These subjects include ethnic mobilization, guerrilla insurgencies, civil wars and peace processes, human rights violations, rising poverty rates, income inequality, and economic globalization.

GOVT 457 Political Theory (also WOMNS 359) (III) Not offered 2002-2003.

GOVT 460 Political Theory (also WOMNS 359) (III) Not offered 2002-2003.

GOVT 461 Race, Gender, and Organization (III) Not offered 2002-2003.

GOVT 463 The Selfish Individual in the Modern World (III) Spring. 4 credits. Enrollment limited. N. Hirschmann.
Michael Milken and Ivan Boesky broke the law: but did they really do anything wrong? Is acting selfishly simply human nature, or its perversion? Do we have natural obligations to others, or is everyone out for themselves? This course considers these questions through the lens of modern political theory from Hobbes to contemporary times. We consider the relation of the individual to society to examine different understandings of "the individual," and how they change over time. In the process, we examine how these understandings affect the meaning of concepts such as freedom, equality, and justice, as well as the form and role of government. This course follows a seminar format and rely heavily on class discussion.

GOVT 466 American Political Thought from Madison to Malcolm X (also HIST 316 and AM ST 366) (III) Fall. 4 credits. I. Kramnick.
A survey of American political thought from the eighteenth century to the present. Particular attention is devoted to the persistence of liberal individualism in the American tradition. Politicians, pamphleteers, and poets provide the reading. Insightful historical and social context is offered.

GOVT 468 The Quality of Democracy in Latin America (III) Fall. 4 credits. K. O'Neill.
This course explores major issues affecting the quality of democracy in Latin America. We begin by trying to capture the many meanings of the term "democracy" and by thinking through how it is possible to measure changes in the quality of democracy over time. The course examines both institutional bases for Latin America's level of democracy—whether the quality of democracy is affected by government structures in the region—and also specific topics that impact the region's democracies. These subjects include ethnic mobilization, guerrilla insurgencies, civil wars and peace processes, human rights violations, rising poverty rates, income inequality, and economic globalization.

GOVT 470 Political Theory (also WOMNS 359) (III) Not offered 2002-2003.

GOVT 470 Political Theory and Cinema (also GERST 330, COM L 330, THETR 330) (III or IV) Fall. 4 credits. G. Waite. For description, see GERST 330.
GOVT 375 Visual Culture and Social Theory (also ART H 370 and COM L 368) (III or IV)
Spring. 4 credits. S. Buck-Morss. Introduction to critical concepts for the analysis of visual culture in specific socio-historical contexts.

GOVT 377 Concepts of Race and Racism (III)
Spring. 4 credits. A. M. Smith. This course examines race and racism from a political theory perspective. We discuss the different types of racism: traditional racism, "new racism" or cultural racism, scientific racism, and contemporary or "hybrid" racism. We then examine the politically ambiguous "ethnicity theory." In the second half of the course, we consider the works by Marable on African American political economy; women of color feminist theorists; native American theorists; Takaki on Asian American labor history; and Hero on Latinos/Latinas and "ethnicity theory." In the second half of the course, we discuss American multicultural history in some detail, our primary focus is on an investigation of these works' theoretical foundations.

GOVT 452 Modern Political Philosophy (also PHIL 346) (III or IV) Fall. 4 credits. R. Miller. See PHIL 346 for description.

GOVT 454 Theorizing the Public Sphere (also GERST 496, COM L 496) (III or IV)
Fall. 4 credits. P. U. Holender. For description, see GERST 496.

GOVT 465 Reconceiving Liberalism (also PHIL 447) (III or IV)
Spring. 4 credits. R. Miller. For description, see PHIL 447.

GOVT 466 Topics Pol Phil: Islamism (III)
Fall. 4 credits. Open to graduate students and juniors and seniors who have taken GOVT 161 or 300-level course in political theory. B. Grundf. Topics vary, but all analyze texts written by non-European and non-U.S. theorists who have inspired modern political and social movements. Attention is given to the political and theoretical presuppositions embedded in the very conception of the "West," the hegemony of its political discourses, and how these figure into the meanings of "modernity," "progress," "universal rights," and "liberation." In fall 2002 the topic will be Islamism. We will read philosophical texts by Ayatollah Ruhollah Khomeini, Hassan al-Banna, Muhammad Iqbal, Ustadh Mahmoud, Sayyid Quib, and Ali Shariati, and commentaries by academic scholars: Mohammad Arkoun, Talal Asad, Saba Mahmood, Bobby Sayyid, Azzam Tamimi, Bassam Tibi, as well as historical and social-scientific analyses of political events influenced by Islamism. (In alternate years, Latin American and Cultural writers and social movements are the focus.)

GOVT 467 Radical Democratic Feminisms (III)
Spring. 4 credits. A. M. Smith. Radical Democratic Feminism is an advanced feminist theory seminar. We focus on contemporary political discourses that are influenced by socialist feminism, radical democratic pluralism, critical race theory, and radical anti-racist and anti-heterosexist multiculturalism. The reading list includes works by Sheila Rowbotham, Joan Scott, Michele Barrett, Lynne Segal, Zillah Eisenstein, Frances Fox Piven, Barbara Ehrenreich, Jacquari Alexander, Chandra Talpade Mohanty, Judith Butler, Anne McClintock, Angela Davis, Alice Echols, Lisa Duggan, Nan Hunter, Renata Salecl, Patricia J. Williams, Gayatri Spivak, and bell hooks. Students should have completed at least one course in feminist theory and at least one course in social theory or political theory before taking this course.

GOVT 469 Limiting War (also PHIL 369) (III or IV)

GOVT 471 The Cultural Theory of the Frankfurt School (also GERST 495, COM L 495) (III or IV)

GOVT 473 Marx, Nietzsche, Freud (also GERST 415) (III or IV)

GOVT 474 Community, Nation, and Morality (also PHIL 446) (III or IV)

International Relations
GOVT 181 is recommended.

GOVT 380 The Politics of Modern Germany (III)

GOVT 382 International Relations of East Asia (III)

GOVT 384 Contemporary International Conflicts (III)
Fall. 4 credits. J. J. Suh. This is a survey of contemporary international conflicts. After a brief review of theoretical literature on the causes of conflict/war, we address some of the more salient international security issues such as proliferation of weapons of mass destruction, missile defense, civil wars, and terrorism. We also critically evaluate whether the use of force or outside intervention is helpful in mitigating the contemporary conflicts.

GOVT 385 American Foreign Policy (III)
Fall. 4 credits. R. McDermott. This course provides an overview of the history of American foreign policy, concentrating on the period between 1914 and the present. Various theoretical approaches to the study of American foreign policy are covered, including international, domestic, and individual levels of analysis. These interpretations are used to examine events including: the First World War and the League of Nations; the rise of American hegemony; various crises of the Cold War, including the U-2 crisis, the Suez and Berlin crises, and the Cuban missile crisis; the Korean, Vietnamese, and Gulf Wars. Emphasis is placed on security as opposed to economic foreign policy issues.

GOVT 386 The Causes of War (III)

GOVT 387 Political Psychology in International Relations (III)
Spring. 4 credits. R. McDermott. This course provides a survey of how social and cognitive psychology are used in the study of international relations. This course covers various methodologies, including psychobiography and experimental and survey research. It also covers several theoretical approaches, including recent work in neuroscience and evolutionary psychology. These theories and methods are applied to topics including risk taking, leadership, group dynamics, and the influence strategies of the media. Particular attention is placed on the interaction of emotion, cognition, and behavior in processes of judgment and decision making.

GOVT 388 International Political Economy (III)

GOVT 389 International Law (III)
Spring. 4 credits. J. Rabkin. Is international law a pious delusion, helpless in the face of real power? Or is public policy becoming so entangled in international standards that international law is now eroding national sovereignty? This course surveys the theoretical foundations and general history of international law since the 17th Century in order to highlight what is new in the doctrines and institutions by which it operates in the contemporary world. The course gives special attention to the relation between international and U.S. law and to the workings of international law in particular fields—including environmental and human rights protection, trade regulation, and control of terrorism.

GOVT 390 International Relations and Film Theory (III)

GOVT 391 Chinese Foreign Policy (III)

GOVT 392 International Relations of the Middle East (also NES 395) (III)

GOVT 393 Introduction to Peace Studies (also SOC 310) (III)

GOVT 395 New Wars (Actors and Issues) in International Politics (III)
Spring. 4 credits. A. Carlson. How important are regional groupings, non-governmental organizations, narco-terrorism, ethnic groups, and transnational environmental issues, within international politics? These forces seem to be occupying an increasingly central position in the international arena, yet the factors that have caused their rise, and the degree to which they have transformed the face of international politics, are still poorly understood. In this course we address such issues through exploring how students of international politics have described and explained the emergence of these new forces in the international system during the post-Cold War period. In short, the course focuses on determining the extent to which we are witnessing a transformation of the international political system, and why such a change is (or is not) taking place.

GOVT 475 The Politics of International Monetary and Financial Relations (III)

GOVT 476 The Politics of Disease (III)
Spring. 4 credits. Enrollment limited to 15 students. R. McDermott. This course covers several specific aspects of public health policy. First, the effect of diseases like AIDS on the economic, political,
and cultural institutions in the United States and Africa are examined. Second, the way in which the United States government has responded to various epidemics and disease outbreaks is explored. Why is it that some diseases receive more funding than others? How has the public health system responded to the outbreak of epidemics, both historically and currently? What are the politics behind the development and marketing of new drugs? In the final section of the class we discuss bioterrorism. How does it work? What responses can we put in place to defend against it?

GOVT 481 Democracies in the International System (III) Fall. 4 credits. Now offered as GOVT 400.02.

GOVT 482 Uniting China, Integrating with the World (III) Fall. 4 credits. Enrollment by permission of the instructor. A. Carlson.

This seminar is intended to examine the increasingly complex relationship that has evolved between China and the rest of the international system during the 1980s and 1990s. In it, emphasis is placed upon the inter-related, yet often contradictory, challenges facing Beijing in regards to the task of furthering the cause of economic growth, democracy, and independence in the context of globalization. Specifically, we delve into the ongoing controversies within China over Tibet and Taiwan's international status, membership in the WTO, and the rise of Chinese nationalism. Exploration of these issues is framed within a consideration of the broader literature in international relations theory and comparative politics.

GOVT 487 Asian Security (also GOVT 587) (III) Spring. 4 credits. A. Carlson, J. J. Suh.

Throughout the 1990s it has been part of the conventional wisdom of international relations scholarship that Asia was, in the words of Aaron Friedberg, "ripe for rivalry." In this seminar we explore the accuracy of such an assessment through studying Asia's historical and contemporary security situation. Such an examination is oriented toward introducing students to the security issues confronting Asia, alongside an exploration of the extent to which competing explanations drawn from different strands of IR theory and the security field can explain such issues. In addition, we ask students to challenge the limitations of traditional security studies through considering the importance of new actors and issue areas within the region. In short, while the seminar has a regional focus on east Asia, it is framed within the broader literature of the field.

GOVT 490 International Institutions (also GOVT 690) (III) Fall. 4 credits. J. J. Suh.

This is a study of the ways in which units in the international system are constituted and how their interactions are institutionalized. We examine not only formal international organizations that have formal decision-making rules and palpable entities, but also "sentient practices" the legitimize certain actions and de-legitimize others. We develop our theoretical understanding of international institutions by analyzing such issue areas as decolonization, human rights, the environment, and communications.

GOVT 491 Conflict, Cooperation, and Norms: Ethical Issues in International Affairs (also GOVT 691) (III) Spring. 4 credits. M. Evangelista.

This course examines current and historical issues in international relations from the perspective of international law, norms, and ethics. We develop general principles and concepts, such as "just war," "national interest," and "human rights," and apply them to real-world situations. Most of the focus of the course is on particular cases that involve legal and ethical issues: violations of human rights and genocide; war crimes; military intervention; economic sanctions; environmental degradation; economic injustice. The second part of the course examines these issues using examples from 20th century international affairs, including recent events. The first part of the course examines these issues using examples from 20th century international affairs, including recent events.

GOVT 492 Unitary China, Integrating with the World (III) Fall. 4 credits. A. Carlson.

This seminar meets twice weekly under the supervision of a senior faculty member with extensive research experience. The seminar focuses on current issues that pose ethical problems for the foreign policy of the United States: internal violence and human rights abuses in the former Yugoslavia and former Soviet Union; indigenous uprisings in Mexico and their relation to U.S. foreign economic policy; the appropriate U.S. response to situations in countries such as Haiti, Nigeria, and China.

Honors Courses

GOVT 493 Studying Politics: The Junior Honors Seminar Fall and spring. 4 credits. Fall, H. Schamis; spring, M. Evangelista.

The seminar meets twice weekly under the supervision of a senior faculty member with numerous classes being led by other members of the department faculty. The seminar surveys the broad range of what we mean by "the study of politics" and the various methods we enlist to carry out the study. The seminar is writing intensive, requiring at least five papers.

GOVT 494 Honors Seminar: Thesis Clarification and Research Fall. 4 credits. A. M. Smith.

A seminar designed to support thesis writers in the Honors Program during the early stages of their research projects. Limited to students who have been accepted into the Honors program.

GOVT 495 Honors Thesis: Research and Writing Spring. 4 credits. Limited to students who have successfully completed GOVT 494.

Independent Study

Qualified undergraduates are encouraged to apply for seminars listed with 600 course numbers but may only register with the permission of the instructor. Students may consult the supplement that lists graduate courses, available in the department office.

Field Seminars

GOVT 603 Field Seminar in American Politics Fall. 4 credits. E. Sanders and W. Mebane.

The basic issues and institutions of American government and the various subfields of American politics are introduced. The focus is on substantive information and theoretical analysis and problems of teaching and research.

GOVT 606 Field Seminar in International Relations Fall. 4 credits. A. Carlson, P. Katzenstein.

A general survey of the literature and propositions of the international relations field. Criteria are developed for judging theoretical propositions and are applied to the major findings. Participants are expected to do extensive reading in the literature as well as research.

GOVT 607 The Western Political Tradition: A Survey Spring. 4 credits. N. Hirschmann.

An introduction to political theory through a reading of selected classics in political thought from Plato to Marx.

Methodology

GOVT 605 Comparative Methods
Fall. 4 credits. J. Pontusson and K. O’Neill.
This seminar provides a survey of different methodological approaches to the study of comparative politics: single case studies, comparative case studies, statistical and survey methods, qualitative comparative analysis, and a variety of quantitative methods. Substantive works are used to illustrate each approach.
Throughout, the discussion emphasizes methodological issues that are common to all forms of comparative inquiry.

American Government and Institutions
GOVT 610 Political Identity: Race, Ethnicity, and Nationalism (also LSP 610)
Fall. 4 credits. M. Jones-Corrales.
The social sciences generally treat ethnicity, nationalism, and race as descriptive categories or variables, while avoiding actually defining these categories, or thinking about how they should be used. The course seeks answers to the following questions: How should we go about describing ethnicity, nationalism, and race? Should we treat them as primordial or as social constructions? Much of the recent literature suggests the latter. If constructed, by whom are they constructed (or by what)? What constrains these constructions? What purposes do these constructions serve? Whom do they serve? Are some constructions better representations of identity than others, and what does this mean? How should we go about applying these categories in political analysis?

GOVT 611 The Political Economy of American Development, 1860–1900
Fall. 4 credits. R. Bensel.
This course traces and describes the political economy of national state formation from the last decades of the antebellum period, through the Civil War and Reconstruction era, and end with the transition to a more industrial society during the late nineteenth and early-twentieth centuries. Using a broad survey of the historical literature on these periods, the course investigates: (1) the connection between slavery and the emergence of southern separatism; (2) the impact of conflict between the plantation South and industrializing North on American state formation; (3) the failure of post-Civil War attempts to remodel the southern political economy; (4) the role of finance capital markets in industrial and western agrarian expansion and the consequent emergence of monetary issues in national politics; and (5) the political economic basis of possible developmental trajectories other than the high-tariff, gold-standard one actually followed.

GOVT 620 The United States Congress
Spring. 4 credits. R. Bensel.
The United States Congress is examined: first, as a "closed system" in which institutional arrangements decisively apportion political power; and, second, as the product of electoral and social forces outside the institution. Emphasis is placed on the historical relationship between institutional growth and state formation, parliamentary rules as both arrangements within which the "rational choices" of legislators are played out and as deliberate, constructions and allocations of political influence, and the use of legislative behavior as evidence in the analysis of fundamental principles of politics. Because the literature on the lower chamber is generally more rich, the House of Representatives receives greater attention than the Senate.

GOVT 703 Political Economy
Fall, spring. 4 credits. J. Kirshner.
This course undertakes a general survey of the classical and modern theories of political economy. The works of Smith, List, Marx, Weber, Keynes, Shumpeter, Hayek, and Friedman, among others, are studied and placed within the context of the history and evolution of the thought, practice, and method of the field.

GOVT 728 Government and Public Policy
Fall. 4 credits. T. J. Lipson.
For description, see GOVT 428.

Comparative Government

GOVT 641 Revitalizing Labor: A Comparative Perspective (also ILRRC 632)
Fall. 4 credits. L. Turner.
For description, see ILRRC 632.

GOVT 647 Criminality and the State
Spring. 4 credits. L. Ryter.
Criminality has been approached in the social sciences from a variety of angles. Sociologists following Durkheim have viewed crime as a social anomaly. Critical theorists following Foucault have understood criminality as an integral and functional part of the social system. Comparative politics has tended to approach criminality from above, viewing it, for instance, as an inverse measure of the relative degree of institutionalization of legal systems. Meanwhile, empirical studies of post-colonial states (in particular but not exclusively) suggest a problematic indeterminacy between state authorities and criminals. State officials and institutions may act criminally with impunity (corruption) while criminals may act on behalf of state officials (contracted extra-judicial political violence). This seminar explores the relationship between criminality and the state, mostly in post-colonial contexts, drawing from interdisciplinary theoretical literatures as well as area-specific empirical studies, literature, and film. Although we focus largely on cases in Southeast Asia, where there is an emerging literature on―criminality and the state as well as empirical studies, graduate students with other area knowledge are encouraged to bring their materials to the seminar discussions.

GOVT 656 Comparative Political Economy
Fall. 4 credits. C. Way.
While exploring selected topics in the comparative political economy of advanced industrial societies, this seminar seeks to delineate “political economy” as a subfield of political science. At the level of theory, our goal is to bridge two research traditions, one concerned with micro-economic issues (industrial organization, industrial policy, competitiveness) and the other concerned with macro-economic issues (wage bargaining, fiscal and monetary policy), and to explore what a synthesis of these research traditions might look like. At the level of methodology, we seek to bridge and integrate qualitative and quantitative approaches to comparative political economy. Students are expected to have some prior exposure to quantitative analysis (e.g. GOVT 601).

GOVT 657 Comparative Democratization
Spring. 4 credits. V. Bunce.
This course focuses on the transition from authoritarian to liberal politics in Eastern Europe and in Latin America. Particular attention is paid to Poland, Hungary, Russia as well as Argentina, Brazil, and the not-necessarily-transitional Mexico. During the course, we also bring in a variety of other cases of recent democracy—such as Spain, Portugal, Italy, and Greece. Our focus is equally divided between the empires of these transitions and theoretical understandings of transitions to democracy.

GOVT 660 States and Social Movements (also SOC 660)
Fall. 4 credits. S. Tarrow.
Two traditions run parallel in political sociology and comparative politics: the study of statebuilding and state transformation and the study of social movements and contentious politics. In the 1960s and 1970s, they converged in the work of scholars like Charles Tilly, who advanced both fields of study, which then ran along parallel but largely independent tracks. This course seeks to synthesize the two traditions, drawing on both historical and contemporary materials from Europe and the Third World, and searching for the key mechanisms and processes that link forms of contentiousness to processes of statebuilding and state transformation.

GOVT 692 The Administration of Agricultural and Rural Development
Spring. 4 credits. N. Uphoff.
For description, see INTAG 603.
GOVT 661 Politics of Transnationalism (also SOC 661)
Fall. 4 credits. S. Tarrow.
Between the realism of traditional international relations and the constructivism of its critics, a new school of transnational politics has developed. Ranging from sociological institutionalists who examine transnational normative diffusion to students of international institutions who focus on non-state authority, to students of globalization and its discontents, scholars in this tradition examine the responses of actors in civil society to a globalizing world through their interactions with one another, with states, and with international institutions. The course traces the development of this area of research from its origins in the "old" transnational politics of the 1970s; examines critically the contributions of constructivism, sociological institutionalism, and global civil society; and proposes a model of the international system in which transnational actors—claiming to act as proxies for civil society groups—interact with states and international institutions. Particular attention is paid to the formation of transnational alliances among social movements, transnational advocacy networks, state actors, and agents of international institutions.

[GOVT 684 Strategies of Inquiry for International and Comparative Politics

GOVT 685 International Political Economy
Spring. 4 credits. C. Way.
An exploration into a range of contemporary theories and research topics in the field of international political economy. The seminar covers different theoretical perspectives and a number of substantive problems.

GOVT 687 Asian Security (also GOVT 487)
Spring. 4 credits. A. Carlson, J. J. Suh.
For description, see GOVT 487.

[GOVT 688 Political Economy and National Security
Not offered 2002–2003.]

GOVT 689 International Security Politics
Fall. 4 credits. R. McDermott.
This course provides an overview of theoretical and research topics in the area of international security policy. The course covers several theoretical perspectives, including rational choice and psychological approaches to the study of security issues. These perspectives are used to examine various substantive topics including war and deterrence, balance of power, alliance politics, domestic constraints on foreign policy and military strategy. Less attention is paid to issues involving economic cooperation and sanctions.

GOVT 691 Conflict, Cooperation, and Norm: Ethical Issues in International Affairs (also GOVT 491)
Spring. 4 credits. M. Evangelista.
For description, see GOVT 491.

**Independent Study**

This course is **NOT** open to undergraduates. Undergraduates wishing to conduct supervised study should register for GOVT 499.

GOVT 799 Independent Study
Fall or spring. 4 credits.
GOVT 799 is a course of individualized readings and research for graduate students. Topics, readings, and writing requirements are designed through consultation between the student and the instructor. Graduate students in government who are looking to use this as an option to fulfill their course requirements should check with their chairs to be certain that the program of study is acceptable for this purpose. Applications must be completed and signed by the instructor and by the chairs of their special committees. They are available from, and must be returned to, the graduate assistant in 125 McGraw Hall.

**GREEK**

See Department of Classics.

**HEBREW**

See Department of Near Eastern Studies.

**HINDI-URDU**

See Department of Asian Studies.

**HISTORY**

The popularity of history among Cornell students is due to its usefulness as preparation for graduate, professional, or law school and for any career that requires critical thinking and good writing; the reputation of the faculty; the opportunities for scholarship, teaching, and advising; and most of all, the intrinsic interest of the discipline. A wide variety of introductory and advanced courses is offered. The department is particularly strong in ancient, medieval, and modern European history; in American, Latin American, and Asian history; and in the history of science.

**Advanced Placement and International Baccalaureate**

Advanced placement and International Baccalaureate credit are awarded by the College of Arts and Sciences counts towards the 120 credits needed for graduation, but does not count toward completion of the history major. Students earning a 4 or 5 in the Advanced Placement Examination or a 6 or 7 in the International Baccalaureate history examinations are urged to enroll in intermediate or
advanced history classes. Students who are unsure about their qualification should consult the instructor.

The Major
To complete the history major, a student must fulfill the requirements listed below:

Entry requirement: completion of any two History courses excluding First-Year Writing Seminars.

1) Take nine history department courses (for either 3 or 4 credits each), completing all of them with a grade of C or better. (Courses taken for entry may count towards fulfilling the major.)

2) Of the total nine courses:
   a) four must be outside of American history and
   b) three must be in history before 1800.

Courses used to fulfill requirement (1) above may also be used to fulfill Requirement (2), in respect both to (a) and (b) if applicable. A course in American history before 1800 may be used to fulfill Requirement (2b). A course before 1800 in a field other than American history can be used toward fulfillment of both Requirements (2a) and (2b).

3) Of the total nine courses, one must be a 400-level seminar. HIST 400 may be used to fulfill this requirement. Appropriate 400-level seminars may be used to fulfill Requirements (2a) and (2b).

Honors
The history department offers an honors program for students who wish to research and write a thesis during their senior year. In addition to writing the thesis, honors students must maintain a 3.5 average in their history courses, take the Honors Proseminar (History 400) plus an additional 400-level seminar, preferably during their junior year, and complete 10 courses in history (for 3 or 4 credits each). During the second term of the sophomore year or early in the junior year, interested students should speak to a faculty member or faculty adviser about the honors program.

Before the beginning of the senior year, the candidate presents, in conversation or in writing, a thesis proposal to an appropriate member of the faculty. The faculty member who approves the proposal ordinarily becomes the thesis supervisor. If for any reason it is necessary to change supervisors, this arrangement should be confirmed no later than the fourth week after the beginning of the candidate's senior year.

Honors candidates should register in HIST 401, Honors Research, with their supervisors. Any exceptions to this must be approved by the Honors Committee. HIST 401 is a four-credit course that permits honors candidates to conduct research and to begin writing the honors essay. At the end of the first semester of the senior year, as part of the requirements for HIST 401, the student submits to the supervisor a 10- to 15-page overview, or, alternatively, a preliminary draft of some part of the thesis along with an outline of the whole and meets with a committee consisting of the student's supervisor and one other department member who will eventually serve as a reader of the thesis. That committee then recommends whether the student may proceed to enroll in HIST 402, Honors Thesis, during the final semester of the senior year. HIST 402 is a four-credit course that permits honors candidates to complete the honors essay and to demonstrate their understanding of the ways in which the themes explored in the thesis fit into a larger historical context.

The completed thesis is evaluated by three readers, including the two faculty members who administered the preliminary oral interview in December.

The text of the honors essay may not exceed 60 pages except by permission of the chair of the honors committee and the student's supervisor. Two copies are due during the third or fourth week of April. In May each honors candidate is given an oral examination administered by the supervisor; examination focuses on the essay as well as the specific subject matter in which the student has conducted research. To qualify for a bachelor of arts degree with honors, a student must (1) sustain at least a 3.5 cumulative average in all history courses and (2) earn at least a cum laude grade on the honors essay and on the oral examination.

Cornell-in-Washington Program. History majors may apply to the Cornell-in-Washington program to take courses and undertake a closely supervised externship during a fall or spring semester.

Course Offerings
Comparative history

History of science: Survey of the modern scientific enterprise. 

Comparative History

An interdisciplinary examination of the validity of the adage "man is what he eats." Among the topics: food and nutrition, food and social structure, the politics of food control, food and modernization, taste making, and food in religion and literature. Cases are drawn widely across space and time, from Pharaoh's Egypt to the 1990s.

[HIST 360 Early Warfare, East and West # (III)] Fall. 4 credits. Not offered 2002-2003. C. Peterson.

A study of the principal modes of warfare found both in the East and the West from ancient times up to the eighteenth century. Tactical evolution and the impact of innovations are stressed, but attention is also paid to the general social and cultural background and the role of nonmilitary factors.

[HIST 380 Social History of Western Technology # (III)] 4 credits. Not offered 2002-2003. J. Weiss. For description, see History of Science.

[HIST 393 Images of Humanity in Medieval China (also ASIAN 393) @ (III)] Fall. 4 credits. Prerequisite: any course on premodem China or Chinese religions, or permission. Not offered 2002-2003.

C. Peterson.

[HIST 409 Seminar on Work in Europe and America # (III)] Fall. 4 credits. S. L. Kaplan.

A comparative study of the meaning of work in different societies from premodern times to the present. Emphasis is on the "representations" of work of the actors themselves who worked, as well as of those, who for various critical reasons, did not work. The seminar examines not only ideology but also the organization, practice, and physical place of work. It explores theory as well as "cases," and draw on anthropological and sociological as well as historical materials.

[HIST 428 Narratives of the University (also S NUM 409) # (III)] Fall. 4 credits. Limited to 15 students. J. Williams.

What is the university—this institution in which we find ourselves, and to which we've committed considerable time, money, and effort—for? The typical way to answer this is to look at the tradition of "the idea of the university." In this seminar, we examine some of those key "ideas," from Kant through Newman to readings. But we also focus on other ideas of the university, as represented in histories of the university, "academic" novels and popular films of "college life," and statements such as media reports and university memoranda, from the eighteenth century to the present.
This course aims to make comprehensible science in non-Western cultures. This includes the growth of sciences; the role of new technologies in humanities; the historical structure and development of modern science and to show science as a cultural phenomenon. Changing perceptions of nature and human knowledge from Greek Antiquity to the twentieth century form the framework for current Western views of the world, while the roots of the present-day dominance of “science” as a symbol of progress and modernity lie in an alliance between knowledge of nature and power over nature that took shape in the nineteenth century after a long period of emergence. 281 runs chronologically up to the death of Isaac Newton and focuses on the cultural traditions of Christian Europe and its selective appropriation of a Greek heritage.

HIST 282 Science in Western Civilization (also S&TS 282) # (III)
Spring. 4 credits. HIST 281 is not a prerequisite to 282. P. Dear
This course aims to make comprehensible both to science majors and to students of the humanities the historical structure and development of modern science and to show sciences as a cultural phenomenon. Changing perceptions of nature and human knowledge from Greek Antiquity to the twentieth century form the framework for current Western views of the world, while the roots of the present-day dominance of “science” as a symbol of progress and modernity lie in an alliance between knowledge of nature and power over nature that took shape in the nineteenth century after a long period of emergence. This course covers the eighteenth, nineteenth, and early twentieth centuries.

HIST 287 Evolution (also BIO EE 207, S&T S 287) (I or III)
Fall or summer. 3 credits. W. Provine. For description, see BIO G 207

HIST 292 Inventing an Information Society (also ENGRG 298, ECE 298, and S&T S 292) (I or III)
Spring. 3 credits. R. Kline. For description, see ENGRG 298.

HIST 380 Social History of Western Technology # (III)
Includes the interaction between technological changes and social changes in Western Europe and America since the eighteenth century. Readings and lectures deal both with invention of new forms of technology that accompanied technological changes and with the role of technology in social thought and cultural expression. Special attention is paid to three periods: Britain during the Industrial Revolution, America in the nineteenth century, and America during the Vietnam War.

HIST 415 Seminar in the History of Biology (also BIO G 447, B&SOC 447, and S&T S 447) (I or III)
Summer (6-week session). 4 credits. W. Provine. Specific topics change each year.

HIST 471 Knowledge and Politics in Seventeenth-Century England (also S&T S 473) # (III)
Spring. 4 credits. Limited to 15 students. Not offered 2002-2003. P. Dear and R. Weil. England in the 17th century was a revolutionary ferment of political, religious, and philosophical conflict. This course examines the conflicts and arguments, and the means explored for their apparent resolution. These affected ideas of God and worship, the meanings of gender, conceptions of the natural world and its scientific appropriation, and the legitimacy and proper form of political power. The course focuses on the close study of primary source readings by many of the principal players in all these areas, including Francis Bacon, Thomas Hobbes, the Duchess of Newcastle, and John Locke.

HIST 525 Seminar in the History of Technology (also S&T S 525)
Fall. 4 credits. Not offered 2002-2003. R. Kline. For description, see S&T S 525.

HIST 616 Enlightened Science (also S&T S 416)
“Science” is a term that is often associated with “rationality.” The idea that “reason,” rather than “faith” or “tradition” should be the pre-eminent guide to practical action has deep roots in the thought of eighteenth-century Europe, the period known as the Enlightenment. The practice and image of science in the Enlightenment shows how this ideal was developed and understood, and what its meanings and implications were. Those meanings, and their associated values, remain strong with us today. This course investigates our current scholarly understanding of many themes and issues relating to “enlightened science,” and studies writings of the period itself in a variety of topical areas, from political economy to astronomy and natural history, in several national contexts including Scotland, France, and Germany. We attempt to view these materials from the perspective both of developments from earlier periods and in relation to the later consequences of this ideology.

HIST 680 Seminar in Historiographical Approaches to Science (also S&T S 680)

HIST 682 Topics in the Scientific Revolution (also S&T S 682)
Spring. 4 credits. P. R. Dear. This is a graduate seminar devoted to investigation of recent scholarship and issues in sixteenth- and seventeenth-century European knowledge of nature. Students are expected to produce a substantial paper focused on the study of primary source documents. Topics include: credibility and social status; the academic environment; the natural world; and the legitimacy and proper form of political power. The course focuses on the close study of primary source readings by many of the principal players in all these areas, including Francis Bacon, Thomas Hobbes, the Duchess of Newcastle, and John Locke.

HIST 711 Introduction to Science and Technology Studies (also S&T S 711)
Fall. 4 credits. T. Finch. For description, see S&T S 711.

HIST 713 Issues in History of Technology
Spring. 3 credits. R. Kline. For description, see S&T S 700.3.

American History

HIST 153 Introduction to American History (also AM ST 103) # (III)
Summer and fall. 4 credits. 101 is not a prerequisite for 102. P. Dunaway.
A survey of American history from the beginnings through the Civil War. Topics include cultural encounters in the age of Columbus, European colonization, the American Revolution, the early republic, antebellum reform movements, and the coming of the Civil War.

**HIST 154 Introduction to American History (also AM ST 104) (III)**
Summer and spring. 4 credits. 101 is not a prerequisite for 102. T. Borstelmann.
An introductory survey of the development of the United States since the Civil War.

**HIST 200 Seminar: Immigration and Ethnicity in Twentieth-Century U.S. (III)**
Spring. 4 credits. Seminar designed for underclassmen but open to all students. Enrollment limited to 15 students. Prerequisite: permission of instructor. Not offered 2002–2003. M. C. Garcia.

**HIST 202 Comparative Migration in the Americas (also AM ST 204 and LSP 203) @ (III)**
A seminar examining migration both within and among the Americas in the nineteenth and twentieth centuries. Topics to be discussed are the reasons for population movements; immigration policies; social, economic, and political accommodation; nativist and restrictionist responses; women and migration; remittances and nationalism. Among the immigrant-receiving nations studied are Argentina, Brazil, Canada, Cuba, Mexico, and the United States.

**HIST 208 Seminar: The Era of Franklin D. Roosevelt (also AM ST 208) (III)**
Fall. 4 credits. Seminar designed for underclassmen but open to all students. Enrollment limited to 15 students. Prerequisite: permission of instructor. Not offered 2002–2003. R. Polenberg.
The impact of the Great Depression and World War II on American politics, law, and culture.

**HIST 212 African-American Women in the Twentieth Century (also AM ST 212 and WOMNS 212) (III)**
An examination of twentieth-century themes significant in the historical experience of Black women. Major emphasis is on race, gender, community, art, and politics in post World War II America. Specific topics include African-American women’s involvement in such areas as political activism at the electoral and grass-root levels; socio-economic issues affecting women and the community; religion, representation and participation of Black women in art and entertainment; and issues specific to gender cross-racially as well as intra-racially.

**HIST 214 Seminar on American Foreign Policy (also AM ST 214) (III)**
Fall. 3 credits. Prerequisite: permission of instructor. W. LaFeber.
Topic: for fall 2002. U.S. Presidential power and foreign relations since the 1890s.

**HIST 225 The U.S.-Mexico Border: History, Culture, Representation (also LSP 225) (III)**
Spring. 4 credits. Sophomore seminar. Limited to 15 students. R. Crab, M. C. Garcia.
A writing-intensive, interdisciplinary sophomore seminar on the U.S.-Mexico border. The study of borders, and specifically of the U.S.-Mexico border, requires us to cross the disciplinary and methodological borders of academic disciplines. The proliferation of provocative writings on the border in recent years bears this assumption out: in no other field of study has the literature been so remarkably interdisciplinary, so methodologically eclectic, nor so theoretically provocative. This seminar intends to tap that literature to help students analyze and understand the histories, cultures, and representations of the border that are so important to contemporary self-fashioning and policy-making in the United States and Mexico. Readings include works of fiction, literary and cultural theory, history, science studies, and postcolonial criticism. Students can expect to write several papers of varying lengths that will develop their skills in historical research and textual criticism.

**HIST 238 History of Women in the Professions, 1800 to the Present (also AM ST 258, WOMNS 238, and HD 258) (III)**
For description, see HD 258.

**HIST 242 Religion and Politics in American History: From J. Winthrop to R. Reed (also AM ST 242 and RELST 242) (III)**
Spring. 4 credits. Sophomore seminar. R. L. Moore.
A reading and research seminar concerned with popular culture in nineteenth-century America (publications, performances, and audiences).

**HIST 246 New York Women (also WOMNS 241) (III)**
Spring. 4 credits. Limited to 15 students. M. Rossiter.
Over the centuries New York State has been the site of activity for a great many women of consequence. This course is a one-semester survey of the past and present activities and contributions of Asian and urban women in a variety of fields of interest to Cornell students—politics, medicine, science, the law, education, business (including hotels), entertainment, communications, government, religion, psychology, and other areas. Weekly readings and discussion and a paper, possibly using local or university archives.

**HIST 251 Black Religious Traditions from Slavery to Freedom (also AM ST 251, RELST 251) (III)**
A survey on the black religious and spiritual traditions during bondage and the early years of freedom. The course examines slave religion, the rise of black churches in the North, the formation of black churches after the Civil War, the independent church movement and the churches’ role in social protest.

**HIST 260 Introduction to U. S. Latino History, Part I (also LSP 260 and AM ST 260) (III)**
This course introduces students to the history of Latinos in the United States. We focus specifically on the history of Chicanos (Mexican Americans) and Central Americans. Part II of this course, History 261, focuses on the history of Puerto Ricans, Cubans, and Dominicans in the U.S. (students are not required to take both courses). Among the topics addressed are: historical immigration patterns and the “push/pull” factors that compelled migration to the United States; the social and political events that shaped the evolution of these Latino communities; and the role of cultural identity, race, class, and gender in shaping experience; and the role of foreign policy in formulating immigration policy.

**HIST 261 Introduction to U. S. Latino History, Part II (also LSP 261 and AM ST 261) (III)**
This seminar discusses the history of Latinos from the Caribbean: the Puerto Ricans, Cubans, and Dominicans. Students are introduced to some of the most important historical and theoretical works in this field. Topics discussed include the push/pull/historical-structural factors that influenced migration to the United States; the historical evolution of these communities; the role of cultural identity, as well as race, class, and gender in shaping experience, and the intersection of foreign policy and immigration policy.

**HIST 264 Introduction to Asian American History (also AAS 213 and AM ST 213) (III)**
Fall. 4 credits. D. Chang.

**HIST 266 Introduction to Asian American Studies (also AAS 110) (III or IV)**
Spring. 4 credits. D. Chang.
An interdisciplinary, cross-cultural introduction to Asian American Studies that examines ethnic, cultural, and contemporary issues. Major themes include identity and stereotypes, gender, family, community, education, migration and labor, and anti-Asianism. Coverage is given to both Hawaii and the U.S. mainland, and to Asian Indians, Chinese Filipinos, Hawaiians, Japanese, Koreans, and South Asians.

**HIST 272 The Atlantic World from Conquest to Revolution # (III)**
After Europeans first crossed the Atlantic in the late fifteenth century, the ocean became a vast highway linking the European powers—Spain, France, Britain, and the Netherlands—with their colonial outposts in America. This seminar explores the Atlantic world through reading such primary sources as the log of Christopher Columbus and the autobiography of Olaudah Equiano, an Anglo-African sailor, and recent scholarly examinations of the slave trade and other aspects of the Atlantic economy. Intended primarily for sophomore prospective history majors; open to others by permission of instructors.

**HIST 273 Women in American Society, Past and Present (also WOMNS 273) # (III)**
A survey of women's experiences in America from the seventeenth century to the present. Among the topics discussed are women's familial roles, the changing nature of household work, women's rights movement, employment of women outside the home, racial and ethnic differences in women's experiences, and contemporary feminism.]

HIST 303 African-American Women in Slavery and Freedom (also WOMNS 307 and AM ST 303) # (III)
Fall. 4 credits. Letter only. M. Washington. Historical exploration of African-American women from a sociopolitical perspective. Topics include women in Africa, slavery and freedom, sexuality, labor, the family, and gender crosscasionally beginning with the African background and ending at 1900.

HIST 304 American Culture in Historical Perspective, 1880-1980 (also AM ST 304) # (III)
Spring. 4 credits. Not offered 2002-2003. Next offered 2003-2004. M. Kammen. An introduction to the study of modern American culture. Emphasis is on the role of culture in the quest for national identity; the function of cultural myths and myth making; the advent of modernism; relationships between mass culture, popular culture, and high culture; and the question of American exceptionalism (distinctiveness). Special attention is also paid to the situation of subcultures and regions, to the changing role of entertainment in relation to leisure, the media, ethnicity (pluralism), and the decorative and popular arts.

HIST 311 The Structure of American Political History (also AM ST 311) # (III)
Fall. 4 credits. Not offered 2002-2003. Next offered 2003-2004. Staff. Examines the course of American politics from the eighteenth century to the Gilded Age, focusing on the development of American political culture, the nature of decision making, and the role of social conflict, mass behavior, political parties, and political elites in shaping our political history.

HIST 312 The Structure of American Political History (also AM ST 312) # (III)
Spring. 4 credits. Not offered 2002-2003. Next offered 2003-2004. Staff. A continuation of HIST 311 but can be taken independently. Examines the course of American politics from the 1890s to the present, focusing on the massive transformation of American political life in the late nineteenth and twentieth centuries in response to industrialism and urbanization, the depression, and the international crises from the 1930s to the 1990s.

HIST 313 U.S. Foreign Relations, 1750-1912 # (III)
Fall. 4 credits. W. LaFeber. Examines the development of the U.S. continental and global empires by analyzing policy and policymakers from Benjamin Franklin to Willard Straight. Emphasis is placed on domestic events that shaped foreign policy. In conjunction with HIST 313, a special course, 201, for discussion and guided research is offered.

HIST 314 History of American Foreign Policy, 1912 to the Present (also AM ST 314) # (III)
Spring and summer. 4 credits. T. Bostick. Students examine the emergence of the United States as a world power in the twentieth century. The course focuses on the domestic sources of foreign policy and the assumptions of the major policymakers (Wilson through Clinton). Important themes include the American response to a revolutionary world since 1912, the Cold War, the Third World, and the increasingly dominant role of the president in the making of U.S. foreign policy.

HIST 316 American Political Thought: From Madison to Malcolm X (also AM ST 376 and GOVT 366) # (III)
Fall. 4 credits. I. Kramnick. For description, see GOVT 366.

HIST 318 American Constitutional Development (also AM ST 317) # (III)
Fall. 4 credits. Not open to freshmen. Not offered 2002-2003. Next offered 2003-2004. R. Polenberg. Major issues in constitutional history. Topics include: the drafting of the Constitution; the Bill of Rights, the Marshall era; the crises caused by slavery and emancipation; the rise of substantive due process; Holmes, Brandeis, and freedom of speech; the Roosevelt "revolution"; civil liberties and civil rights in modern America; the right of privacy; the contemporary Supreme Court.

HIST 321 Colonial North America to 1736 # (III)
Fall. 4 credits. Not offered 2002-2003. M. B. Norton. A survey of European settlement in North America and the Caribbean, emphasizing the interactions of Europeans, Indians, and Africans; economic development; gender relations; religious and political change; and the impact on the colonies of internal and external conflicts.

HIST 324 Varieties of American Dissent, 1800-1900 (also AM ST 324) # (III)
Fall. 4 credits. N. Salvatore. The idea of dissent in American society raises a variety of images. Civil rights activists, striking workers, and student radicals of the 1960s are familiar symbols of dissent. But might we understand a Pecorastical believer, filled with the spirit of his or her God in critiquing contemporary society, as an example of American dissent? This course explores the varieties of economic, political, and cultural dissent in America between 1880 and 1900, and examines how understanding dissent in its specific historical context illuminates major aspects of American life and culture.

HIST 325 Age of the American Revolution, 1754-1815 (also AM ST 325) # (III)
Spring. 4 credits. Not offered 2002-2003. M. B. Norton. An examination of the process by which the 13 English colonies became an independent and united nation, with emphasis on political thought and practice, social and economic change, and cultural development. Attention is paid to the impact of the American Revolution on women, Blacks, Indians, and white males.

HIST 330 The Age of Jackson, 1815-1850 (also AM ST 330) # (III)

HIST 331 The American Civil War and Reconstruction 1850-1877 (also AM ST 331) # (III)
4 credits. Not offered 2002-2003. Staff. An analysis of the factors leading up to the breakup of the Union, the impact of the war in North and South, and the problems of restoration and reconstruction of the seceded states.

HIST 332 The Urbanization of American Society: 1600-1860 (also AM ST 332) # (III)
Fall. 4 credits. Not offered 2002-2003. S. Blumin. America was born in the country and moved to the city. This course examines the transformation of America from a rural to a rapidly urbanizing society and culture, from the first European settlements to the era of the Civil War. It is also a history of the city itself, as a human community, as a crucible of cultural contact and change.

HIST 333 The Urbanization of American Society: 1860-2000 (also AM ST 333) # (III)
Spring. 4 credits. 332 is not a prerequisite to 333. Not offered 2002-2003. S. Blumin. America was born in the country and moved to the city. This course examines the transformation of America from the urbanizing society and culture of the mid-nineteenth century to the thoroughly metropolitan nation of the present. It is also a history of the city itself, as a human community, a crucible of cultural contact and change, and a focus of public policy.

HIST 335 African-American History from Slavery to Freedom (also AM ST 335) # (III)
Fall. 4 credits. Letter only. Not offered 2002-2003. M. Washington. Introductory course on African-Americans from 1619 to 1865. Emphasis is on life in bondage, the free black communities, and racism. Other topics include African cultural heritage, the slave trade, religion, the family, and the black freedom struggle.

HIST 336 Capitalism and Society in Developing America, 1607-1877 (also AM ST 336) # (III)
Fall. 4 credits. Not offered 2002-2003. S. Blumin. An examination of American society in the context of capitalist development, and of capitalism as a social phenomenon. The transformation of pre-industrial colonies into an industrializing nation; the development of social classes; the emerging ethos of free enterprise.

HIST 337 Entrepreneurialism and Organization in the Age of the Corporation: Capitalism and Society in Modern America, 1840-2000 (also AM ST 337) # (III)
American environmental history, an exciting world. Americans have interacted with the natural world. An examination of the development of religious pluralism.

HIST 347 American Environmental History (also AM ST 347) (III)
Spring. 4 credits. F. Duraway.
This course provides an introduction to American environmental history, an exciting and relatively new field of scholarship. Ranging from the colonial period to the present, we explore how different groups of Americans have interacted with the natural world.

HIST 348 American Families in Historical Perspective (also AM ST 359, HD 359, and WOMNS 357) (III)
Spring. 3 credits. Prerequisite: HD 150 or one 200-level social science or history course. S-U grades optional. Human ecology students must register for HD 359. Not offered 2002-2003. J. Brumberg.
For description, see HD 359.

HIST 376 The African-American Workers, 1910-the present: Race, Work, and the City (III)
Fall. 4 credits. 2002-2003. N. Salvatore.
For description, see ILR CB 385.

HIST 377 The African-American Workers, 1865-1910: The Rural and Urban Experience (also ILR CB 385) # (III)
Fall. 3 credits. Prerequisite: juniors and seniors, or permission of instructor. Not offered 2002-2003. N. Salvatore.
For description, see ILR CB 385.

HIST 426 Race and Ethnicity in Nineteenth-Century America (III)
Spring. 4 credits. D. Chang.
This course explores the significance of race and ethnicity in America from colonial legacies to legal segregation and immigration restriction in the late-nineteenth century. Major themes include processes of categorization, construction, and oppression; identity; community formation and resistance; and struggles for equality.

HIST 430 America in the Camera's Eye (III or IV)
Photographs and films have become archives for historical research. From the era of Matthew Brady's Civil War images, the United States has been recorded by documentary photographers who have called attention to the country's progress and its poverty. Hollywood filmmakers have also recorded endless images of the American landscape and placed against that landscape fictionalized accounts of the country's history and its social problems. What can we learn from these images? What is their relation to written texts and to other documents that tell us about the past? How truthful is documentary? How misleading is Hollywood? One key text is James Agee's and Walker Evans' Let Us Now Praise Famous Men. The seminar meets once each week for discussion and periodically during the semester to view films.

HIST 432 The City in History: Europe and America (also AM ST 378 and WOMNS 378) (III)
Fall. 4 credits. Preference given to students who have taken HIST/WOMNS 275, HIST/WOMNS 305, or HIST/WOMNS 238. Others: by permission of instructor only. M. B. Norton.
Topic for 2003: Gender and Sexuality in America. A colloquium course, limited to 20 students. Students read and discuss some of the new scholarly work on gender and sexuality in American history. They also prepare several written and oral presentations based on primary sources in the Cornell Human Sexuality collection and elsewhere.

HIST 440 Undergraduate Seminar in American Political History (also AM ST 440) (III)
Topic: freedom of speech, censorship, and the Supreme Court.

HIST 448 Seminar on the 1960s (also AM ST 486) (III)
Fall. 4 credits. Limited to 15 students. Permission of instructor required. M. Kamen.
The focus of this seminar is one of the most ubiquitous and pervasive motifs in all of the arts (painting, literature, and music) in the northern hemisphere, both West and East. The Four Seasons. We view works of art and films, read fiction, non-fiction, and poetry, and listen to music. All students must devote serious attentions to the Old World origins, dispersion, and local permutations of this motif, more than half of the seminar given over to American manifestations and writings and include special attention to the seasons, with particular attention to changes over time as well as geographical variations.

HIST 476 Seminar on the 1960s (also AM ST 486) (III)
Fall. 4 credits. T. Borstein.
This course explores the issues and developments of the most turbulent and significant decade in recent U.S. history. Major topics include the civil rights movement, the Kennedy and Johnson administrations, the Vietnam War, the anti-war movement, the counterculture, the women's liberation movement, and the Nixon administration. A substantial research paper is required.

HIST 500 Undergraduate Research Seminar (also AM ST 500)
Fall and spring. 8 credits each term. S. Jackson.
Offered in Cornell-in-Washington Program. An intensive reading and writing experience utilizing the extensive resources of Washington, D.C.

HIST 521 Seminar in American Cultural Studies (also AM ST 521)
The focus is the relationship between government and culture in historical perspective. After three contextual sessions devoted to nineteenth-century background, we are mainly concerned with the period from the 1930s to the present. Several comparative sessions are devoted to government as a patron of culture in various societies. A research paper is required.

HIST 607 Writing Seminar on African-American Women
A reading and discussion seminar focusing on the experiences of African-American women's history. Students must have already done the research and most of the reading for their papers prior to enrollment. Reading and class discussion focus on style, methodology, and the theory. An extensive research paper is due at the end of the semester.

HIST 608 African-American Women
A reading and discussion seminar focusing on the experiences of African-American women in nineteenth- and twentieth-century America, including the Caribbean.

HIST 610 Afro-American Historiography
Fall. 4 credits. Letter only. M. Washington.
A reading and discussion seminar focusing on the experiences of African-American women in nineteenth- and twentieth-century America, emphasizing the Cold War period and interpretive approaches to U.S. foreign policy. A research paper is required.

HIST 613 Seminar on American Diplomatic History
A reading and research seminar in twentieth-century American diplomatic history, emphasizing the Cold War period and interpretive approaches to U.S. foreign policy. A research paper is required.

HIST 617 Seminar in American Cultural History

HIST 618 Seminar in American Cultural History
A reading and research seminar concerning selected topics in nineteenth century America.

HIST 621 Graduate Seminar in American Cultural History
A reading and research seminar intended primarily for graduate students. Major works in American women's history and carefully scrutinized, and each student prepares a lengthy research paper.

HIST 625 Graduate Seminar in Early American History
Fall. 4 credits. Prerequisite: permission of instructor. Graduate students only. M. B. Norton.

HIST 633 Seminar in Nineteenth-Century American History
4 credits. Prerequisite: permission of instructor. Not offered 2002-2003. Staff.

HIST 634 Seminar in Nineteenth-Century American History
A research seminar intended primarily for graduate students exploring society, culture, and politics of the United States between 1815 and 1896.

HIST 640 Graduate Seminar in Recent American History
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2002-2003. T. Borstelmann.
A graduate research seminar that will examine American political and social history since 1945.

HIST 683 Seminar in American Labor History (also ILRBC 783)
Fall. 3 credits. Prerequisites: graduate students only. Not offered 2002-2003. N. Salvatore.
For description, see ILRBC 783.

HIST 710 Colloquium in American History
Spring. 4 credits. Required of all first-year graduate students in United States history. M. B. Norton.
Examination of major approaches, periods, issues, and modes of interpreting American history. Readings include recent "classics" of American scholarship from diverse subfields and genres.

Latin American History

HIST 195 Colonial Latin America (III)
Fall. 4 credits. K. Graubart.
This course examines the "encounter" between Spain and the New World which began in 1492. Topics include the cultural hybridity that preceded as well as developed from colonialism, the production of ethnicity and race, slavery and economic stratification, intellectual currents and daily life, rebellion, and independence.

HIST 196 Modern Latin America (III)
Spring. 4 credits. R. Craib.
An introductory survey of Latin American history from the beginning of the nineteenth century to the present with particular emphasis on processes of nation-state formation and the development of capitalist economies. Prominent themes include U.S.-Latin American Relations; neocolonialism; and radicalism and revolutionary movements, explored through a variety of primary and secondary sources.

HIST 206 Modern Mexico (III)
A survey of Mexico's history from the early nineteenth century to the present. The course covers social, cultural and economic trends and their relationship to political movements. Topics include rural and urban movements, U.S.-Mexican relations, the Revolution of 1910, indigenismo; popular culture; NAFTA; and the Zapatas.

HIST 216 Gender and Colonization in Latin America (III)
Spring. 4 credits. K. Graubart.
This seminar examines colonization as a gendered process. We look at men's and women's lives in terms of sexuality, marriage, labor roles, ethnicity, and spirituality. Other important topics could include witchcrafts, honor, law, and masculinity.

HIST 219 Mexican Immigration to the United States (also LSP 219, AM ST 219) (III)
Spring. 4 credits. J. Cárdenas.
For description, see LSP 219.

HIST 225 The U.S.-Mexico Border: History, Culture, Representation (also LSP 225) (III)
Spring. 4 credits. Sophomore seminar. Limited to 15 students. R. Craib, M. C. Garcia.
A writing-intensive, interdisciplinary sophomore seminar on the U.S.-Mexico border. The study of borders, and specifically of the U.S.-Mexico border, requires us to cross the disciplinary and methodological borders of academia itself. The proliferation of provocative writings on the border in recent years bears this assumption out: in no other field of study has the literature been so remarkably interdisciplinary; so methodologically eclectic; nor so theoretically provocative. This seminar intends to tap that literature to help students analyze and understand the histories, cultures, and representations of the border that are so important to contemporary self-fashioning and policy-making in the United States and Mexico. Readings include works of fiction, literary and cultural history, history, science studies, and postcolonial criticism. Students can expect to write several papers of varying lengths that will develop their skills in historical research and textual criticism.

HIST 245 Diaspora, People, Policies, Politics (II)
Fall. 4 credits. Sophomore seminar.
Previous course in Latin American history would be helpful. M. Roldan.
This seminar uses the narcotics trade to examine a variety of issues in historical perspective: migration, human rights, smuggling, international trade and foreign policy. The temporal focus is the period between the 1920s and the present.
We explore these questions of national cultural interactions between dominant sources and secondary sources in the course, with their colonial outposts in America. This identities in conjunction to gender, class, and ideologies of nationalism, race, and ethnicity in the United States, and Mexican Americans.

**HIST 272 Atlantic World: From Conquest to Revolution # (III)**
Spring. 4 credits. Intended primarily for sophomore prospective history majors; open to others by permission of instructors.
After Europeans first crossed the Atlantic in the late fifteenth century, the ocean became a vast highway linking the European powers—Spain, France, Britain, and the Netherlands—with their colonial outposts in America. This seminar explores the Atlantic world through reading such primary sources as the log of Christopher Columbus and the autobiography of Olaudah Equiano, an Anglo-African sailor, and recent scholarly examinations of slave economy.

**HIST 306 Modern Mexico: From Independence to the Zapatistas (III)**
Fall. 4 credits. R. Craib.
A survey of Mexico's history from the early 19th century to the present. The course covers social, cultural and economic trends and their relationships. Special emphasis is given to the ways in which "common people" participated in and influenced politics, to the important regional, class, ethnic, and gender differences that have figured prominently in Mexico's history, and to the politics of historic-making.

**HIST 404 Ethnicity, Race and Indigeneity in Latin America # (III)**
Fall. 4 credits. Permission of instructor required. Limited to 15 students.
K. Graubart.
This seminar examines the invention of ethnicity in the colonial period, the development of a theory of race within Latin American as well as European societies, and the politics of "indiginity" in the 20th century. Students should have a basic knowledge of Latin American history prior to this course.

**HIST 418 Agrarian History (III)**
Fall. 4 credits. Not offered 2002-2003.
R. Craib.
A comparative, interdisciplinary examination of agrarian life from a broad temporal and geographical perspective. Strong emphasis on recent historiography, method, and theory. Major themes include rural rebellion, resistance, and crime; capitalist transformation of the countryside; agrarian custom and practice; and the way in which rural life has been romanticized, denigrated, and essentialized. Readings include works of history, fiction, literary theory, anthropology, and geography.

**HIST 423 Chronicles of the Conquest of Latin America @ (III)**
K. Graubart.
In this seminar we examine the writings of participants in the conquest and colonization of Latin America. Readings include writings by European conquistadors, Amerindian elites, and non-alphabetic materials from the early colonial period. In particular we investigate how the history of the conquest itself and of the societies that existed prior to this contact were produced by its participants, with special attention to questions of ethnicity, gender, and class.

**HIST 424 Art and Politics in 20th Century Latin America # (III)**
Fall. 4 credits. Permission of instructor required. M. Roldan.
This seminar examines the intersection of art and politics shaped culture, ideology, and identity in Latin America from the Mexican Revolution to the dictatorships of the late twentieth century. Topics may include muralism and the Mexican Revolution; the artist as muse and activist (Frida Kahlo); working class and immigrant culture in Argentina and the tango; Samba as social and political protest in Brazil; gender and politics in exiled women's literature; the appropriation of public spaces as artistic forum and mean of communication under authoritarian regimes.

**HIST 427 History's Margins: Frontiers and Borders in Comparative Perspective (III)**
R. Craib.
A comparative seminar on borders and frontiers. Primary emphasis is on the Mexican-U.S. border. Central themes include the historical transformation of frontiers into borders; colonialism and imperialism; and immigration and nation-state formation. Attention is also given to situating the revived interest in borders in relationship to contemporary economic, social and political changes. Readings include works of fiction, literary theory, history, science studies, and postcolonial criticism.

**HIST 445 Prostitutes and Patriots: Urban Culture and the Construction of Citizenship in Latin America, 1885-1950 (also HIST 645) # (III)**
Fall. 4 credits. Prerequisites: HIST 295 and/or 296 suggested. Permission of instructor required. Enrollment limited to 15. Not offered 2002-2003. M. Roldan.

**HIST 459 Radicals and Revolutionaries in Modern Latin America (also HIST 659) # (III)**
Fall. 4 credits. HIST 296, or permission. Limited to 15 students. R. Craib.
This course examines radicalism in Modern Latin America, mostly in the 20th century. Primary emphasis is on the various processes—industrialization, capitalist development, urbanization, among others—that gave rise to radical movements, especially among peasants, urban workers, priests, and students. Particular attention is given to the relationship between experience and ideology through close readings of memoirs, testimonial, diaries, poetry, song lyrics, and the like.

**HIST 469 Seminar in Latin American History**
Fall. 4 credits. Not offered 2002-2003.
M. Roldan.
A graduate-level seminar focusing on current issues in Modern Latin American history, politics, labor, economy, violence, social movements, agrarian society, etc.). In addition to weekly meetings to discuss readings, students are expected to conduct original research culminating in a final 25- to 30-page paper.

**HIST 659 Radicals and Revolutionaries in Modern Latin America (also HIST 459)**
Fall. 4 credits. HIST 296, or permission. Limited to 15 students. R. Craib.
This course examines radicalism in Modern Latin America, mostly in the 20th century. Primary emphasis is on the various processes—industrialization, capitalist development, urbanization, among others—that gave rise to radical movements, especially among peasants, urban workers, priests, and students. Particular attention is given to the relationship between experience and ideology through close readings of memoirs, testimonial, diaries, poetry, song lyrics, and the like.

Undergraduates who are interested in this course should enroll in HIST 459.

**African History**

**HIST 155 The Past and Present of Precolonial Africa # (III)**
Fall. 4 credits. S. Greene.
How has Africa's pre-colonial past influenced current events in Africa and elsewhere? To answer this question, this course explore the pre-19th century histories of the many precolonial cultural areas in Africa (e.g. Ancient Egypt, the West African coast.) Using both ancient and more recent oral traditions, travelers' accounts and visual images, we link these histories to current debates about the role of history in contemporary politics, the significance of race, class and gender in times past and present, and the role of Africa in world affairs.

**HIST 241 Sophomore Seminar: Riot and Revolution in Nineteenth-Century Africa: The Birth of the Modern # (III)**
Spring. 4 credits. S. Greene.
The beginning of the nineteenth century witnessed the rapid and often times forceful expansion of Islam in West Africa, the transformation of the Zulu from a small, inconsequential people to the largest and most powerful ethnic group in South Africa, and a major riot by enslaved peoples in east Africa. This course explores these revolutionary changes and upheavals as Africa remade itself to face the modern era. Lectures, readings and discussions focus on the causes and consequences of these events and their significance for understanding contemporary Africa.

**HIST 443 The European as Other # (III)**
Spring. 4 credits. Permission of instructor required. Limited to 15 students. S. Greene.
Much has been written about European images of African men, African women, and African cultural practices during the 18th, 19th, and 20th century, but how did Africans view Europeans during these periods? How did these images influence the ways Africans saw themselves and how did these images change over time? These questions and others are explored by examining a variety of historical, literary, artistic and anthropological texts. Additional readings on how other peoples of color viewed Europeans are read for comparative purposes.

**HIST 604 The Colonial Encounter**
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2002-2003.
S. Greene and T. Lois.
The course examines the way colonizer and colonized influenced the culture, history, and identity of the other. Emphasis is on exploring the colonial encounter as a phenomenon in itself. We consider both sides of the unequal equation that linked specific European countries (for example, France, England, Germany, the Netherlands) with the states they colonized in Africa and Asia. This linkage, at different times and in different places, pre-existing understandings of self, country, and culture, and notions about the other.

Asian History

[HIST 190 Introduction to Asian Civilizations @ # (III)]

An introduction to the distinctive cultures of China, India, Japan, and Southeast Asia that features an intensive examination of selected topics and periods of particular significance in the history of each.

[HIST 191 Introduction to Modern Asian History @ (III)]
Fall. 4 credits. V. Koschmann and E. Tagliacozzo.
The history of Asia-Pacific from the nineteenth century to the present, focusing on relations of China, Japan, and Southeast Asia with each other and with the West.

[HIST 203 War and Diplomacy in Korea @ (III)]
Spring. 4 credits. Not offered 2002-2003; B. Strauss.

[HIST 207 The Occidental Tourist: Travel Writing and Orientalism in Southeast Asia (also ASIAN 206 and HIST 507) @ (III)]

Students read travel literature about Southeast Asia in the nineteenth and early twentieth centuries and travel accounts written by Southeast Asians living abroad. The seminar emphasizes themes of race, orientalism, transculturalism, and authenticity. We critically assess the transformative potential of the Internet on (virtual) tourism. Graduate students should register for HIST 507 and are expected to participate in the HIST 207 seminar. Preference is given to students with Internet experience.

[HIST 218 Introduction to Korea (also ASIAN 218) @ (III or IV)]
Spring. 3 credits. Staff.

For description see ASIAN 218.

[HIST 230 Seminar in History and Memory: The Asia-Pacific War @ (III)]
Fall. 4 credits. Seminar designed for undergraduates but open to all students.
Enrollment limited to 15 students.
J. V. Koschmann.

This seminar examines what is at stake when the fighting between Japan and its former enemies in the Pacific during World War II is remembered, memorialized, and (re)constructed as historical narrative. By exploring the legacies of such events and processes as the Nanking Massacre, systems of sexual slavery, mistreatment of POWs, and bombings of civilians, the seminar will offer an opportunity to reflect on war crimes, public memory, and responsibility.

[HIST 243 Seminar: China and the West before Imperialism @ # (III)]
Spring. 3 credits. Seminar designed for undergraduates but open to all students.
Enrollment limited to 15 students.

This course examines the history of China and the West before the period of European influence in Asia, from the late Seventeenth Century to the end of the Nineteenth Century. It is intended for students with an interest in history, politics, and culture of China and the West during the period. The course will focus on the interaction between China and the West, particularly the role of the United States in shaping China's development during this period. Students will engage with primary and secondary sources to understand the complex historical processes that have shaped the modern world. This course will cover topics such as the Opium War, the Boxer Rebellion, and the Boxer Protocol, as well as the impact of these events on China's modernization and its role in the global economy.

[HIST 249 Peddlers, Pirates, and Prostitute: Subaltern Histories of Southeast Asia, 1800-1900 (also ASIAN 249/648) @ # (III)]

This course examines Southeast Asian history "from below" over the course of a single century, 1800-1900. Laboring histories, the history of piracy and prostitution, and the pasts of people usually considered "marginal" to the state are all discussed. How do we look for clues to these peoples' lives? Were there similarities in experience across disparate geographies? What did it mean to be an outlaw, "deviant," or poor in colonial Southeast Asia? This course attempts to answer these questions.

[HIST 284 Southeast Asia in the World System: Capitalism and Incorporation, 1500-Present (also ASIAN 284/684) @ # (III)]
Fall. 4 credits. Graduate students should enroll in HIST 684. Not offered 2002-2003. J. V. Koschmann.

This course examines the history of Southeast Asia in conjunction with what theorists have called the emerging "World System." The expanding reach of capitalism is traced through the region's Early Modern "Age of Commerce," through the age of great European merchant companies; through the coercive capitalism of the imperial age; and into our own times. Throughout, attention is paid to similar (or dissimilar) trends in the rest of global history, spanning Europe, Africa, Middle East, and Latin America. Open to students with an interest in Southeast Asian history, as well as the shaping forces of capitalism on the modern world.

[HIST 289 The U.S.-Vietnam War (also ASIAN 293/597) @ (III)]
Fall. 4 credits. Graduate students should register for HIST 597 and ASIAN 293/597. Not offered 2002-2003.

This course covers the history of the Vietnam War, including its causes, course, and consequences. It explores the domestic and international factors that led to the war, the fighting on the ground, and the impact of the war on Vietnamese society. The course examines the role of the United States in the war, including the decisions made by policymakers and the experiences of American soldiers. It also considers the perspectives of Vietnamese civilians and the international community. The course concludes with an examination of the lasting effects of the Vietnam War on Vietnam and the world.

[HIST 293 History of China up to Modern Times (also ASIAN 293) @ # (III)]
Fall. 4 credits. C. A. Peterson.

This is an introductory course on the history of China from the earliest times to the eighteenth century. The course is designed as a broad introduction to Chinese culture and civilization, in part by the use of visual materials.

[HIST 294 History of China in Modern Times (also ASIAN 294) @ (III)]

A survey that concentrates on the rise of the imperial dynasty in the seventeenth and eighteenth centuries, the upheavals resulting from domestic rebellions and foreign imperialism in the nineteenth century, and the twentieth-century efforts to achieve social mobilization, political unity, and commercial expansion.

[HIST 297 Japan Before 1600 (also HIST 597 and ASIAN 297/597) @ # (III)]
Fall. 4 credits. Not offered 2002-2003.
J. Piggott.

This course explores Japan before 1600 from a variety of perspectives. Analysis of primary sources, including literary and archaeological artifacts, is emphasized. HIST 297 is a good introductory to the issues of premodern historical study and to the study of East Asia. (Graduate students or more advanced undergraduates who would like to do a research project should register for HIST 597.)

[HIST 319 Introduction to South Asia's Environmental History (also ASIAN 319) @ (III)]
Spring. 4 credits. M. Rangarajan.

The course aims to be an introduction to key themes in the environmental history of South Asia, a region with diverse ecological and cultural complexes, differing environmental traditions, and lively debates about alternative futures. These have given rise to controversies, many of which are relevant beyond the subcontinent. The course sharply focuses on the colonial period and its aftermath, but seeks to place these events in perspective. The subsequent emergence of independent nation-states in the twentieth century and their record forms a major part of the course. Selections from a rich corpus of original sources including travel writings, pictorial books, and memoirs add variety to the study of the region.

[HIST 322 History of Samurai @ (III)]
Fall. 4 credits. J. Piggott.

This course explores the role of the samurai at various epochal moments, and the effects of samurai-centered governance has had on society and culture up to the early modern era. This is very much a hands-on course in which analysis and writing are emphasized. Recommended: HIST 297. Graduate students are welcome but they should register for HIST 522 after consultation with the instructor.

[HIST 326 History of the Samurai II @ (III)]

We continue our study of themes and issues introduced in HIST 322, wherein the origins of the samurai from eight-century roots through the era of the first warrior government during early medieval times are traced. This course covers the samurai through 1600.

[HIST 328 State, Society, and Culture in Modern Japan @ (III)]

A survey of Japan from early-nineteenth century to the present, which attempts to connect the political, socio-economic, and imaginative realms of modern Japanese life so as to achieve a comprehensive view of modern Japanese society. Pays particular attention to the changing situation of women and women's movements, Japan's relations with Asia and the United States, and problems of historical representation and consciousness. Readings include Japanese works in translation as well as secondary sources.

HIST 537
HIST 330 Japan from War to Prosperity © (III)
Spring. 4 credits. V. Koschmann.
An interpretation of Japanese history from the late 1920s to present, emphasizing mobilization for total war and its continuing legacies, technology and organized capitalism, relations with the U.S. and Asian neighbors, social integration and exclusion, historical representation and consciousness, and political dynamics.

[HIST 380 Early Warfare, East and West # (III)]
For description see Comparative History.

[HIST 388 Vietnamese Histories (also HIST 688 and ASIAN 385/685) © (III)]
For description see ASIAN 385.

[HIST 393 Images of Humanity in Medieval China (also ASIAN 293) © (III)]

HIST 396 Southeast Asian History from the Eighteenth Century (also HIST 696 and ASIAN 396/696) © (III)
Spring. 4 credits. S-U option.
E. Tagliacozzo.
Surveys the modern history of Southeast Asia with special attention to colonialism, the Chinese diaspora, and socio-cultural institutions. Considers global transformations that brought "the West" into people's lives in Southeast Asia. Focuses on the development of the modern nation-state, but also questions the narrative by incorporating groups that are typically excluded. Assigns primary texts in translation.

[HIST 416 Undergraduate Seminar on Gender and Sexuality in Southeast Asia (also ASIAN 416 and WOMNS 416) © (III)]
Students consider the relationships among colonialism and gender and sexual identity formation in Southeast Asia. Using material from a range of fields including anthropology and literature, the course complicates a simplistic East/West and male/female binary.

HIST 420 Japan in the Year 1000: The Tale of Genji in Historical Perspective © (III)
Fall. 4-4-4 credits. Prerequisite: permission of instructor. J. Piggott.
The Tale of Genji is a classic of premodern Japanese literature that provides readers a broad view into Japan's courtly society at a time when many of the elements of Japan's classical tradition were taking form. Those interested in premodern Japan, Comparative Literature, and courtly societies will find the seminar of great interest. Previous study of premodern Japan is advised.

[HIST 448 Family and Gender Relations in Premodern Japan © (III)]
An inquiry into structures of family and gender relations in the classical and medieval periods. Themes will include kinship and family organization, state formation, and gender construction. Those interested in comparative perspectives are encouraged to enroll. Breadth reading, primary source materials, and comparative reading placing Japan in a broader context are emphasized. Previous study of premodern Japan and East Asia is recommended.

[HIST 451 Crime and Diaspora in Southeast Asian History, 1750-1950 (also HIST 650 and ASIAN 450/651) © (III)]
During the last two centuries, the mass movement of people in Southeast Asia has increased to an unparalleled scale. This course examines the diasporas of various Asian peoples in this time frame, and asks how these movements have intersected with notions (and actions) of "criminality" in the region. Historical sources, period literature, and anthropological writings are used to analyze the growth of migration, smuggling syndicates, and "illicit" behavior in Southeast Asia. Open to students with an interest in Southeast Asian history and the region's links to the wider Asian orbit.

[HIST 466 Kings and Shoguns: the Taibeki Age © (III)]
The turn of the fourteenth century witnessed epochal changes in Japan as structures of monarchy, court-Bakufu relations, landholding, judicial administration, and popular culture were deeply affected by the failure of Go-Daigo Tenno's royal restoration. Core readings of the seminar include portions of the martial epic, the Taibeki, and other materials from which insights into these transformations can be drawn. Previous study of Japanese history, especially HIST 322, is highly recommended.

[HIST 476 Senior Seminar: Comparative Colonial Law and Society (also ASIAN 476) © (III)]
Students explore topics including: hybrid jurisprudence, notions of public and private, religious codes, family, and national identity that resulted from colonial policies. Most readings focus on law, society in colonial Southeast Asia. Readings may include theoretical material on law and society and historical material about jurisprudence in Europe that informed colonial categories of law in the colonies. Relevant comparative readings outside the scope of Southeast Asia are also included.

[HIST 480 Senior Seminar: Gender Adjudicated (also WOMNS 480 and ASIAN 480/580) © (III)]
Students explore the intersections among jurisprudence, religious codes, gender, family, and national identity in Southeast Asia from the colonial period to the present.

[HIST 489 Seminar in Modern Japanese History © (III)]
Fall. 4 credits. Prerequisites: HIST 298 or equivalent knowledge of modern Japanese history. Not offered 2002-2003. J. V. Koschmann.

[HIST 490 Tales of the Heike (also ASIAN 490/690 and HIST 690) © (III)]
Fall. 4 credits. Prerequisite: previous study of pre-1600 Japan or permission of instructor. Not offered 2002-2003. J. Piggott.
Medieval Japan was crisscrossed by an assortment of minstrel monks who sang the heroic exploits of fighting men—samurai—in the late twelfth century. The resulting Tale of the Heike (Heike Monogatari) was later compiled in its current form by the master chanter Kakuichi during the 14th century. It has been called "Japan's first national epic," because listening to it, enjoying it, and identifying with it brought people of all strata and regions together as nothing had done before. In this seminar we will investigate the Tale of the Heike from various historical and literary perspectives.

HIST 492 Undergraduate Seminar in Medieval East Asian History (also ASIAN 492) © (III)
Fall. 4 credits. Prerequisite: HIST 190, 293, 300, or permission of instructor. C. A. Peterson.
Topic for fall 2002: East meets West—Marco Polo and the Mongol Conquest.

[HIST 493 Problems in Modern Chinese History (also HIST 683) © (III)]
Fall. 4 credits. Prerequisite: HIST 294 or permission of instructor. Not offered 2002-2003. S. Cochran.
Conflicting interpretations of Chinese history during the late imperial period and the first half of the twentieth century.

HIST 494 Theories of Civilization (also ASIAN 425) © (III or IV)
Spring. 4 credits. K. Taylor.
See ASIAN 425 for description.

[HIST 495 Kings and States: Asian Models © (III)]
Spring. 4 credits. Prerequisite: previous coursework in East Asian history and permission of instructor. Not offered 2002-2003. J. Piggott.
The seminar explores kingship and state formation in comparative perspective. In addition to participating in discussions focused on core readings, the members undertake research projects targeting a society of their choice. Students interested in the history of preindustrial societies, political and cultural anthropology, political science, and religion will find the seminar of interest.

HIST 496 Conservation, Politics, and History: Seminar on Comparative Perspectives on Colonialism (III)
Spring. 4 credits. M. Rangarajan.
This course examines the social history and background of nature conservation in the Indian Ocean region in a comparative light. It begins with an introduction to wider themes in ecological history and environmental debates. It will then move on to specific themes, drawing out contrasts and comparisons between imperial powers and colonized countries and more so, between different experiences, mainly of South Asia with southern Africa. To enable clear focus, the contrasts are normally with Anglophone southern Africa and South Asia. Occasionally, the course may bring in wider themes. It also examines the emergence of new forms of knowledge, agendas of environmental control or repair, and alternative currents. Original
works are extensively used with secondary readings serving as a guide to the subject.

<td>HIST 604</td>
<td>The Colonial Encounter</td>
<td>4</td>
<td>S. Greene and T. Loos. This course examines the way colonizer and colonized influenced the culture, history, and identity of the other. Emphasis is on exploring the colonial encounter as a phenomenon in itself. We consider both sides of the unequal equation that linked specific European countries (for example, France, England, Germany, and the Netherlands) with the states they colonized in Africa and Asia. We discuss how this linkage challenged, at different times and in different places, pre-existing understandings of self, country, culture and notions about the other.</td>

<td>HIST 390</td>
<td>The Safavid Dynasty of Iran, 1501-1722 (also NES 391)</td>
<td>4</td>
<td>Fall 4 credits. C. Mitchell. This seminar focuses intensely on the premodern dynasty of the Safavids in “Greater Iran.” We will examine how this gunpowder empire grew from a millenarian mystical movement to become a major Muslim political entity in the early sixteenth century. Particular focus will be placed on discussing the founding of the Safavid empire by Shah Isma'il (r. 1501-24) and the degree with which he was committed to establishing a proper Perso-Islamic state. Considerable attention will be given to the promulgation and enforcement of Twelver Shi'ism as the state religion by Shah Isma'il and his successor, Shah Tahmasp (r. 1524-76).</td>
<td></td>
</tr>
</tbody>
</table>
The empire culminated with the reign of Shah Abbas the Great (r. 1589–1629), and we will debate the various political, administrative, economic, social, and religious reforms instituted during this period; this will be examined in conjunction with Abbas’s dealing with the encroaching European powers of Portugal, England, and Holland. We will also allot time to discuss the decline of the Safavids, and the legacy of this dynasty to later 19th- and 20th-century developments in Iran.

HIST 398 Persia in Early Modern European Scholarship and Imagination (also NES 398) # (III or IV)
Spring. 4 credits. C. Mitchell.
For description see NES 398.

HIST 429 The Cross and the Crescent: Early Modern Christian Contacts with Islam (also SPANL 446 and NES 437) # (III)
Fall. 4 credits. M. A. Garces.
Under the Medieval caliphate, and under the Persian and Turkish dynasties, the empire of Islam was the richest, most powerful, most creative, most enlightened region in the world. Tenth-century Cordoba in al-Andalus was the pinnacle of its glory, giving rise to such poets and philosophers as Ibn Hazm and Ibn Rushd, better known as Averroes. Christendom was on the defensive: In the Iberian Peninsula, the Reconquista advanced, fueling an inbuilt hostility against Islam. In 1492, the Catholic monarchs Ferdinand and Isabella conquered the Moorish kingdom of Granada and unified Spain under Christianity. But in the southeastern Europe, where the Ottoman Sultan assaulted first the Byzantine Emperor and then the Holy Roman Empire of Charles V, Muslim power continued to prevail, particularly in the early modern Mediterranean wars against Spain. This course traces the development of these encounters in medieval and early modern Spain through the study of historical and literary texts from Ibn Hazm of Cordoba to the sixteenth-century Iberian obsession with Moorish motifs, represented by the Alhambra romance, to the depiction of the conflicts between Christianity and Islam in works by Leo Africanus, Lopez de Mendoza, Perez de Hita, Cervantes, and Antoni de Sosa, among others. Particular attention is paid to the construction of a Spanish national identity, created through Christian-Islamic confrontations. The course is conducted in Spanish.

HIST 461 Seminar in Islamic History 600-750 (also HIST 671, NES 451 and 650, and RELST 451) # (III)
For description, see NES 451.

HIST 652 Introduction to Islamic Law (also HIST 372, NES 351/651, RELST 350)
Spring. 4 credits. Enrollment is limited to 25 students. D. Powers.
For description, see NES 351.

HIST 671 Seminar in Islamic History (also HIST 461, NES 451, and 650, and RELST 451)
For description, see NES 451.

Ancient European History

HIST 151 Introduction to Western Civilization # (III)
Summer and fall. 4 credits. S. Pohl.
A survey of European history from Antiquity to the Renaissance and Reformation. Important themes include the construction of a Spanish national identity, the development of and conflict between secular and ecclesiastical governments, European encounters with the non-Europeans, the culture and role of minority groups within European society, and the roles of women.

HIST 228 War and Peace in Greece and Rome # (III or IV)
In ancient Greece and Rome, government did little besides wage war and raise taxes; culture focused on war, warriors gloried in battle, and civilians tried to get out of the way. This course surveys the impact of war and the reality of peace in the ancient world. Topics include: Why war?, the nature and state under the Caesars; the nature and decline of the Roman Republic from 494 B.C. to 27 B.C.; the rise of Christianity in the ancient world; the impact of war on the economy; the role of women; intelligence and information gathering; diplomacy and peace-making; militarism and economic slavery; and the archaeology of warfare. Readings in translation include selections from Homer, Herodotus, Thucydides, Xenophon, Caesar, Livy, Tacitus, Josephus, and Ammianus Marcellinus.

HIST 232 Sophomore Seminar: Eyewitness to War in the Ancient World (also CLASS 234) # (III or IV)
A study of ancient soldier-historians who participated in the campaigns about which they later wrote. Topics include historicity, autobiography, propaganda, and prose style. Readings include selections from Thucydides, Xenophon, Julius Caesar, Josephus, Ammianus Marcellinus, as well as, for comparative purposes, modern soldier-historians.

HIST 265 Ancient Greece from Homer to Alexander the Great (also CLASS 265) # (III)
A survey of Greece from the earliest times to the end of the Classical period in the late fourth century B.C. The course focuses on the Greek genius: its causes, its greatness, its defects, and its legacy. The Heroic Age, the city-state, ancient democracy, and the intellectual ferment of the Greek Enlightenment are the main topics of study. Readings in translation include Homer, Aristophanes, Sophocles, Herodotus, Thucydides, Plato, Aristotle, and from the evidence of ancient inscriptions, coins, art, and architecture.

HIST 266 A History of Rome from Republic to Principate (also CLASS 266) # (III)
Summer and spring. 4 credits. Open to freshmen. J. Ginsburg.
A survey of Rome and its empire. This course explores the formation of Rome’s Mediterranean empire and its political, social, and economic consequences; the constitutional and social struggles of the late Republic; the transition from Republic to Principate; society and state under the Caesars; the nature and limits of governing a world empire; and the interaction of pagans, Christians, and Jews in the Roman world.

HIST 435 Modern Classics in the Historiography of Ancient Greece (also CLASS 435) # (III)
Fall. 4 credits. Prerequisite: an introductory course in ancient Greek history or civilization or permission of the instructor. Not offered 2002-2003. B. Strauss.
This upper-level seminar is an introduction to some of the main themes, directions and controversies in modern research on ancient Greece. We read selections from the leading works of scholarship on ancient Greece from the nineteenth and twentieth century, including such authors as Grote, Burckhardt, Corinz, Glotz, Momigliano, M. I. Finley, Ste. Croix, Vernant, Vidal-Naquet, and the current crop of scholars.

HIST 450 The Peloponnesian War (also HIST 630 and CLASS 450/632) # (III)
Famous as the subject matter of one of the most important books ever written about war—Thucydides’ history—the Peloponnesian War (431-404 B.C.) remains today the focus of study by historians, classicists, and political scientists. This course looks at the results of intensive and ongoing study by ancient historians and considers areas of future research. Topics include strategy, operations, and tactics; battle on land and sea; alliances; politics; war and psychology; if the Peloponnesian War was really a historic turning point; war and ethics; Thucydides as a historian; and sources other than Thucydides. Graduate students should enroll in HIST 630.

HIST 452 The Tragedy of Classical Athens, 462-404 B.C. # (III)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2002-2003. B. Strauss.

HIST 453 Crisis of the Greek City-State, 415-336 B.C. # (III or IV)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2002-2003. B. Strauss.

HIST 463 Gender and Politics in the Roman World (also CLASS 463 and WOMNS 464) # (III or IV)
Spring. 4 credits. Prerequisite: HIST 268, CLASS 212, or permission of the instructor. Not offered 2002-2003. J. Ginsburg.

HIST 469 Equality and Inequality in Ancient Greece (also CLASS 469) # (III or IV)
We examine equality and inequality in Archaic and Classical Greek city-states ca. 650-400 B.C., with an eye toward politics, society and economics, culture, and gender relations. The course focuses on concepts and institutions such as ancient democracy, tyranny, oligarchy, “middling” ideology, and slavery, as well as theories of equality. All readings in English.
Historical Course Descriptions

HIST 151 Introduction to Western Civilization # (III)
Fall and summer. 4 credits. S. Pohl.
For description, see Modern European History.

HIST 152 Introduction to Western Civilization # (III)
Summer and spring. 4 credits. R. L. Moore and M. Steinberg.
For description, see Modern European History.

HIST 204 Seminar Age of Atlantic Revolution (III)
Fall. 4 credits. Seminar designed for underclassmen but open to all students.
Enrollment limited to 15 students.
Prerequisite: permission of instructor.
R. Weil.
"All the Atlantic Mountains shook," wrote the poet William Blake of the revolutions which toppled regimes across Europe and the Americas at the end of the eighteenth century. This course explores the ideas, outcomes, and connections among events in America, France, Haiti, and Britain, through literary and philosophical texts: Wordsworth, Rousseau, Jefferson, Paine, Burke, Godwin, Tocqueville, and even Jane Austen.

HIST 210 The Government of God # (III)
Spring. 4 credits. O. Falk.
The most efficient and powerful system of government in the West during the high Middle Ages was centred at Rome and headed by the papacy. Yet, paradoxically, the Pope commanded no divisions and identified himself as the "servant of the servants of God." This course introduces students to key aspects of medieval institutional and religious history through an examination of this mighty papal apparatus, relying chiefly on reading of primary sources (in translation). We will trace the structure and methods by which the papal hierarchy established its sovereignty, comparing and contrasting them to those used by other medieval rulers, and ponder the ideologies that played a role in animating this enterprise.

HIST 211 Specters, Demons, and the Dead in European Society, 1200–1800 # (III)
S. Pohl.
Premodern Europeans believed that they could interact with supernatural apparitions in a variety of ways. The dead could return to admonish the living, demons might possess men and women, houses could be haunted by spirits and poltergeists. What can we learn from a study of these beliefs about the ways in which Europeans regarded sin, punishment, the afterlife, and the role of the devil in their lives? What was the impact of the Reformation or the scientific revolution on these beliefs?

HIST 224 Seminar: Gender in Early Modern Europe (also WOMNS 234) # (III)
Fall. 4 credits. Seminar designed for underclassmen but open to all students.
Enrollment limited to 15 students.
Prerequisite: permission of instructor.
R. Weil.
Course serves as an inquiry into how masculinity and femininity were defined in early modern Europe. Questions to be explored include: What purpose did gender distinctions serve in this particular society? To what extent were men and women able to shape and redefine the meaning of their gender? How was their ability to do so affected by such events as the Reformation and the French Revolution?

HIST 225 English History from Anglo-Saxon Times to 1485 # (III)
P. Hyams.
A lecture course examining the Crusading Movement and the States it produced from the eleventh century to the fall of the mainland Kingdom of Jerusalem in 1291. The historical themes this generates are almost unlimited. The course treats the Christianity and Chivalry of the Medieval West, the confrontation of this culture with those of the Mediterranean and Islam, and what is perhaps the cradle of Western Colonialism. The very concept of "Crusade" itself is problematic today and will continue to cast its shadow on U.S. dealings with the Middle East. The readings allow students to vary the range of paper topics, and enjoy an excellent introduction to every aspect of the long-gone world of the Middle Ages.

HIST 226 The Middle Ages: Introduction and Sampler (also RELST 265) # (III)
Fall. 4 credits. P. Hyams.
As a single-semester introduction to the period, this survey aims to convey what was significant in that area of the "West" that was to become Europe, between the end of the Roman Empire to the fall of the French Empire in 1792. The historical themes this generates are almost unlimited. The course treats the Christianity and Chivalry of the Medieval West, the confrontation of this culture with those of the Mediterranean and Islam, and what is perhaps the cradle of Western Colonialism. The very concept of "Crusade" itself is problematic today and will continue to cast its shadow on U.S. dealings with the Middle East. The readings allow students to vary the range of paper topics, and enjoy an excellent introduction to every aspect of the long-gone world of the Middle Ages.

HIST 2264 The High Middle Ages # (III)
P. Hyams.
A survey of medieval civilization 1100–1400, dealing with political, economic, religious, and intellectual developments in Western Europe. Special attention is paid to the interaction of different kinds of history and to the historian's understanding of literature and its use as a primary source. Lectures and class discussions.

HIST 2269 The Early Middle Ages # (III)
Spring. 4 credits. O. Falk.
Spanning the period ca. 500 to 1100 AD, this course offers a brief survey of European history between the twilight of Classical antiquity and the dawn of the second millennium. Although we will focus primarily on what would later become Western Europe, we shall also pay close attention to the neighbors of Latin Christendom, Byzantium, and the Muslim world. Emphasis will be placed on social, cultural, and institutional developments during the period, as well as on the variety of historical methodologies used to study the early Middle Ages.

HIST 272 Atlantic World: From Conquest to Revolution # (III)
Spring. 4 credits. Intended primarily for sophomore prospective history majors; open to others by permission of instructors.
After Europeans first crossed the Atlantic in the late fifteenth century, the ocean became a vast highway linking the European powers—Spain, France, Britain, and the Netherlands—with their colonial outposts in America. This seminar explores the Atlantic world through reading such primary sources as the log of Christopher Columbus and the autobiography of Olaudah Equiano, an Anglo-African sailor, and recent scholarly examinations of slave trade and other aspects of the Atlantic economy.

HIST 275 Authority and Resistance in Europe, 1400–1600 # (III)
Spring. 4 credits. S. Pohl.
A lecture course examining the political, cultural, and social transformations during the Reformation era through an exploration of aspects of state formation and ecclesiastical order, social and religious protest, and deviant behavior. Specific topics covered include the Protestant Reformation and the emergence of confessional churches, law and crime, the peasant rebellions and the early moderne witch hunts.

HIST 305 Britain, 1660–1815 # (III)
Fall. 4 credits. R. Weil.
Course covers the British Isles from the Restoration of Charles II through the Napoleonic wars. We consider the domestic effects of war and the war economy, and the public sphere; continuing conflicts over religious toleration, popular politics, and the relation of England to Ireland and Scotland. Readings include works by John Locke, Jonathan Swift, Ann Radcliffe, Thomas Paine, Edmund Burke, and Jane Austen.

HIST 310 Life, Literature, and Power in Medieval England (also ENGL 314) # (III or IV)
Fall. 4 credits. No prerequisites.
P. Hyams and A. Galloway.
This course explores key issues and key texts from the English literature of the period 1100–1500. It aims to survey and introduce the Age of Middle English—its history, its language, and its literatures—to majors in English and History and others who seek something more than a bare acquaintance with the Canterbury Tales and Wars of the Roses. The instructors, coming from two different disciplines, expect to educate themselves and all of us in the contributions that history and literature can each make to the understanding of the other. Lectures are designed to provide context for the class's central feature: close reading of texts, some in the original Middle English, some in translation of Middle English, French, and Latin, ranging from literary masterpieces to chronicle narratives, from dream visions to social satire.
HIST 320 The Viking Age (also ITALL 221) # (III)
Fall. 4 credits. O. Falk.
This course aims to familiarize students with the history of Scandinavia, ca. 800-1100 AD. Although well known as a dramatic chapter in medieval history, this period remains enigmatic and often misunderstood. Our goal will be to see the Norse history within its European context, observing similarities with processes elsewhere in the medieval world, the better to perceive what makes the Norse unique. We will examine the social, economic and political activities of the Norsemen in continental Scandinavia, in Western and Eastern Europe, and in the North Atlantic.

HIST 349 Early Modern England # (III)
This course explores the crises of political, religious, and epistemological authority that plagued England in the sixteenth and seventeenth centuries. We examine the political and cultural impact of the Protestant Reformation, the nature of Tudor despotism and Stuart absolutism, the construction of a rhetoric of political dissent around issues of sexuality and representation, competing understandings of the social order and social control, the Puritan Revolution, and the invention of liberalism. Emphasis is on close reading of contemporary sources, from autobiography and drama to political theory.

HIST 350 The Italian Renaissance (also ITALL 222) # (III or IV)
Spring. 4 credits. J. Najemy.
An exploration of intellectual, cultural, religious, and political developments in Italy from the political thought of Dante and Marsilius in the age of the communes, through the several stages of Humanism from Petrarch to Alberti to Pico, down to the crisis of Italian liberty in the generation of Machiavelli, Guicciardini, and Castiglione. The course seeks to problematize the notion of a "Renaissance" in the p. W's ambivalent attitudes toward history, politics, learning, culture, gender, language, and the role of intellectuals in politics and society. Emphasis is placed on the close reading of primary sources and on issues of interpretation.

HIST 351 Machiavelli (also ITALL 351) # (III or IV)
This course presents Machiavelli in a variety of historical and interpretive contexts: European and Italian politics in the early sixteenth century; the decline of the Florentine republic and the rise of the Medicean principate; Machiavelli's own career in government and his, and the republic's, crisis in 1512-13; formal traditions of Renaissance humanism, political thought, and the revival of antiquity, vernacular literary currents and popular culture; and the political figures, writers, and theorists with whom Machiavelli associated and corresponded. Emphasis is placed on a close reading of the major works (including the letters, The Prince, the Discourses, Mandragola, and selections from The Art of War and the Florentine Histories, all in translation) and a critical examination, in the light of that reading, of some major modern interpretations of Machiavelli.

HIST 364 The Culture of the Renaissance II (also COM L 362, ENGL 325, FRITL 362, RELST 362, MUSIC 390) # (III or IV)
Fall. 4 credits. Open to freshmen with permission. K. P. Long, W. Kennedy. For description, see COM L 362.

HIST 368 Marriage and Sexuality in Medieval Europe (also RELST 368, WOMNS 369) # (III)
Few topics generate heat so readily as gender relations and sexuality. Behind the current controversies lie decisions made in the first Christian centuries, and firm up in the course of the Middle Ages, these still affect all of us, believers and unbelieves alike. This course studies Western attempts to deal with the problem of sexuality up to about 1500. The class first clarifies the church's normative rules of law and theology. Armed with this framework, the the specific topics, including homosexuality, prostitution, rape/abduction, and sexuality in medieval literature. The goal is to be able to compare the ideal model with the reality, and thus to assess the product the medieval church passed on to Western culture and to ourselves.

HIST 369 The History of Florence in the Time of the Republic, 1250-1530 (also ITALL 369) # (III or IV)
Florentine politics and society from the communal period through the age of Dante, the rise and decline of the guild republic, the age of civic humanism, and the rise of the Medici, to the crisis of the republic in the time of Machiavelli. Social classes and conflicts, the elite families, economic structures, the working classes, guilds, family history, women, and political and historical ideas are considered. We also consider the emergence and transformation of republican government.

HIST 408 Feudalism and Chivalry: Secular Culture in Medieval France, 1000-1300 (III)
An upper-level seminar on the main currents of noble lay culture in France, which led to Western culture and to our heritage. The class first clarifies the church's normative rules of law and theology. Armed with this framework, the the specific topics, including homosexuality, prostitution, rape/abduction, and sexuality in medieval literature. The goal is to be able to compare the ideal model with the reality, and thus to assess the product the medieval church passed on to Western culture and to ourselves.

HIST 409 Seminar on Work in Europe and America # (III)
Fall. 4 credits. S. Kaplan.
For description, see Comparative History.

HIST 436 Conflict Resolution in Medieval Europe # (III)
This seminar concentrates on a time (late ninth to thirteenth centuries) when much of Europe lacked formal systems of justice, and so handled questions of social control quite largely by extra-legal means. Its subject is in one sense political history upside-down, as viewed by individuals rather than their rulers.

HIST 444 Seminar: Witchcraft, Magic, and the Occult in Europe, 1400-1700 # (III)
A study of attitudes toward magic, witchcraft, astrology, specters, and demons in late medieval and early modern Europe and what they reveal to us about religious beliefs, concepts of community, and gender relations. Special attention is given to the role the Christian Church claimed in defining the occult: which aspects it legitimated and which it condemned. Other topics include the influence of humanism, the Reformation, and the Scientific Revolution on attitudes toward the occult. We also undertake an analysis of the historiographical model which opposes "elite" to "popular" ideas. The course emphasizes close analyses of primary works, including literary and visual sources.

HIST 446 Law, Crime and Society in Europe, 1400-1700 # (III)
Spring. 4 credits. Prerequisite: permission of instructor. S. Pohl.
This comparative study focuses on Germany, England, France, and Italy and concentrates mainly on the social and legal treatment of crimes of violence. Throughout the course, we consider the differences and similarities between English common law and continental legal systems. Major issues covered include the role of criminal justice, the fate of customary methods of conflict resolution in a time of increasing legal centralization, and the relationship between cultural and legal change. We approach these issues by examining, among other things, the development of criminal procedure, the role of lawyers, contested notions of criminal responsibility, and the self-presentation of defendants. The course emphasizes close readings of primary works, including trial documents and literary sources.

HIST 447 Crusaders and Chroniclers @ (III)
An intensive reading seminar offering a natural progression from HIST 259 The Crusades. It examines contemporary accounts of the crusading movement in English translation. The twin goals are to follow select themes of crusading history to a deeper level than is possible in HIST 259 and to study medieval historiography through whole texts and other primary sources.

HIST 464 Murder, Warfare, and the State: Violence in Europe, 1300-1800 # (III)
An inquiry into forms of and attitudes toward violence in late medieval and early modern Europe. Questions to be explored include: How violent was premodern Europe? How did the...
various cultural legitimations of violence change over time? We examine these questions by analyzing forms of interpersonal violence as well as violence orchestrated by the state, such as warfare and capital punishment.

[HIST 468 Love and Sex in the Italian Renaissance (also ITALL 468) # (III or IV)]
An exploration of the representation of love, sex, and eros in Italian Renaissance literature and the attempts by secular governments and the Church to manage, discipline, and punish sexual transgression. Primary texts include Boccaccio’s Decameron, fifteenth-century novelle, plays by Machiavelli (Mandragola, Castigione) and Bibbiena (Calandria), and Aretino’s Dialogues. Secondary readings include studies of sexual crime, love across social boundaries, prostitution, homosexuality, and lesbianism.

[HIST 471 Knowledge and Politics in Seventeenth-Century England (also SARTS 473) # (III)]
England in the 17th century was a revolutionary ferment of political, religious, and philosophical ideas. This course examines the conflicts and arguments, and the means explored for their apparent resolution. These affected ideas of God and worship, the meanings of gender, conceptions of the natural world and its scientific appropriation, and the legitimacy and proper form of political power. The course focuses on the close study of primary source readings by many of the principal players in all these areas, including Francis Bacon, Thomas Hobbes, the Duchess of Newcastle, and John Locke.

[HIST 472 Politics and Culture in Eighteenth-Century England # (III)]
Between 1660 and 1800 England experienced imperial and economic expansion, the Enlightenment, and the threat of Revolution abroad and at home. How in this context did people interpret and imagine the nature of the social order, political authority, and the family? We consider the changing and fiercely contested notions of property, politeness, crime and punishment, sexuality, Empire, slavery, and the market.

[HIST 479 Patronage and the Medici # (III)]
Spring. 4 credits. J. Najemy.
Between the early fifteenth and sixteenth centuries, the Medici family of Florence rose from the ranks of the city’s merchant bankers to become virtual rulers of the republic, cardinals and popes in Rome, and eventually hereditary grand dukes of Tuscany. Much of the family’s power and fame derived from two kinds of patronage: the social and political patronage that established their political influence; and the artistic and cultural patronage central to the fashioning of their image and the realization of their princely ambitions. This seminar explores the connections between the two kinds of patronage with a focus on works of art and architecture and recent historical and art historical scholarship.

[HIST 481 The English Revolution # (III)]
Between 1640 and 1660, England experienced two decades of civil war and revolution and embarked on a fascinating series of attempts to reorganize Protestant life. Women and the lower classes emerged as actors on the political stage, radical religious sects flourished, and the nature of authority was questioned in both the family and the state. This course explores the political, cultural, religious, and social dimensions of the English Revolution, using mostly primary sources.

[HIST 491 Approaches to Medieval Violence (also HIST 692) # (III)]
Fall. 4 credits. O. Falk.
“Violence” has become an unavoidable—and urgently troubling—buzzword in contemporary Western culture. We worry about its manifestations and representations in our own civilization, we scan foreign societies with which we interact for any sign of it, we fantasize about consuming it or construct our utopias around its absence. This course is intended as an opportunity for students working on a variety of topics, periods, and areas in medieval Europe to investigate its relevance to their own studies. Through an examination of readings on violence in particular historical contexts, from Late Antiquity to the Early Modern period, we will seek to elucidate what is meant by the concept prompting consideration of distinctions among forms of violence, and to sample a variety of analytical tools and methods. Graduate students should sign up for HIST 692.

[HIST 496 Theorizing the Public Sphere (also COM L 496 and GERST 496)]
For description, see GERST 496.

[HIST 651 Old English Literature in Its Historical Context (also ENGL 710)]
This graduate course, cross-listed with ENGL 710, might equally be known as “Anglo-Saxon History in their literary and cultural context. It studies the written sources for major questions of Anglo-Saxon history in their literary and cultural context. It concentrates on important texts extant in both Latin and Old English. Comparison can illuminate the resources and intentions of writers, compilers, and copyists, the literary and linguistic culture of England, and the ways in which historians might most fruitfully study such texts. Betts’s Ecclesiastical History and Battle of Maldon, Aelfric’s Colleagues, selections from the Anglo-Saxon chronicle, Beowulf, laws, homilies, and wisdom literature are all likely to come under scrutiny. One goal is to reclaim for European religious history a corpus of material that historians neglect because it is in Old English.

[HIST 653 England—Britain—Europe in the Middle Ages]
This graduate seminar tentatively explores the coming move from the study of medieval English history to that of the British Isles and its inhabitations within the wider context of Europe and Western Christendom. Readings are mostly representative original sources. The course examines the role of antisemitism in nineteenth and twentieth century European ideological, political, and socioeconomic developments. Attention is paid to the way in which modern European history

[HIST 152 Introduction to Western Civilization (1600 to the End of World War II) # (III)]
Spring. 4 credits. R. L. Moore and M. Steinberg.
This course offers a comparative perspective on the development of modern states, societies, and cultures in Europe and North America. Topics include: religious and scientific revolutions in early modern Europe; European expansion and conquest; Enlightenment and revolution; liberalism, capitalism, and communism; the politics of race, slavery, and the new imperialism; the World Wars and the Holocaust; the Cold War; and the modern and the post-modern in European and American culture.

[HIST 233 Soviet Society and Family Life During WWII: Perspectives from Culture (also Russ Lit 233 and JWST 233) # (III)]
Fall. 4 credits. Sophomore seminar. Limited to 15 students. P. Holguin.
A sophomore seminar constructed around Vasili Grossman’s novel Life and Fate as well as other literary and cultural works (films, music).

[HIST 235 Antisemitism and Crisis Modernity (also JWST 254) # (III)]
This course examines the role of antisemitism in nineteenth and twentieth century European ideological, political, and socioeconomic developments. Attention is paid to the way in which
which antisemitism illuminates the underside of European history, allowing us to see how anti-Jewish intolerance and prejudice became embedded in the worldview of significant sectors of the European populations culminating in the Holocaust. Topics include: the Christian roots of antisemitism and the extent to which modern antisemitism marks a break with the medieval past, the politicization of antisemitism by both Left and Right; the origins and development of anti-Semitism in socioeconomic conflicts linked to the rise of capitalism; Jewish responses to antisemitism; antisemitism in the Nazi and Fascist revolutions; and contemporary interpretations of antisemitism.)

HIST 267 *History of Zionism and the Birth of Israel* (also JWST 290, NES 290) (III or IV)
Spring. 4 credits. V. Caron.
This course examines the history of Zionism as an ideology and political movement from its origins in the nineteenth century to the present. Attention is paid to situating Zionism within the context of modern Jewish, European, and Middle Eastern History. Topics include: the ideological foundations of Zionism; the role of Theodor Herzl and the rise of political Zionism; the Balfour Declaration; the Vichy Jews and the Holocaust; Zionism as a cultural identity for Diaspora Jewry; the British mandate; the Arab-Zionist encounter; Zionist responses to the Holocaust, and Zionism and contemporary Israeli society.

HIST 270 *The French Experience* (also FRLIT 224 and ANTHRO 224) (III or IV)
Fall. 4 credits. N. Furman, J. Weiss. We look ethnographically and through literature at tastes and at class as they function and are discussed in France. We examine speech in its practice and as it is reflected upon, and we look at views from France, from America, and other countries. As we emphasize differences, the French experience emerges.

[HIST 283 *Europe in the Technological Age* (III)
J. Weiss.]

HIST 285 *From Medievalism to Modernity: The History of Jews in Early Modern Europe, 1492-1789* (also NES 245, JWST 253) (III or IV)
Fall. 4 credits. V. Caron.
This course examines the history of European Jewry during the centuries of transition from the Middle Ages to the Modern Era. We examine the extent to which traditional Jewish life began to break down during this period and thus paved the way for the emergence of modern Jewry. We explore the impact of the Spanish Expulsion of 1492, religious, intellectual, and socioeconomic dimensions of the Marrano dispersion, including Lurianic Kabbalah and the messianic movement of Shabbetai Zevi; the establishment of Jewish communities in the West; the end of the "Golden Age" of Polish Jewry and the rise of Hasidism; the changing economic and political role of Jews in the seventeenth and eighteenth centuries; and the impact of the Enlightenment.

HIST 290 *Twentieth-Century Russia and the Soviet Union* (III)
Fall. 4 credits. P. Holquist.
An introductory lecture course spanning the lifetime of the USSR (1917-1991), but covering the last years of the Russian Empire and the first years of the post-communist present as well. Geographically, it focuses on the Russian heartland and the non-Russian areas of the Soviet Union. The course explores the roots and consequences of the Russian Revolution; the nature and evolution of Leninism, Stalinism, and Soviet communism; the entrenchment of the post-Stalinist legacy; and the legacy of communism for the region's new regimes. Students are introduced to a wide variety of historical materials, including documents, essays, memoirs, literature, and film.

[HIST 291 *Modern European Jewish History, 1789-1948* (also JWST 252) (III)
Fall. 4 credits. Not offered 2002-2003.
V. Caron.
Jewish life in Europe experienced a profound transformation as a result of the process of Jewish emancipation which began at the end of the eighteenth century. While emancipation offered Jews unprecedented social, economic, and political opportunities, it also posed serious challenges to traditional Jewish life and values by making available new avenues of integration. This course examines the ways in which Jewish and non-Jewish society responded to these transformations from the eighteenth century Enlightenment to the post-World War II era. Topics include Jewish responses to emancipation, including assimilation and new varieties of religious accommodation; the development of modern antisemitism; the rise of Zionism and the creation of the state of Israel; the modernization of Eastern European Jewry; the impact of mass immigration; and the Nazi era.]

HIST 295 *Intro to the History, Language, and Culture of the Balkans* (III)
Spring. 4 credits. W. Browne. J. Weiss. Cultural and linguistic factors interacted with political events to form present-day Slovenia, Croatia, Bosnia-Hercegovina, Serbia, Montenegro, Romania, Bulgaria, Macedonia, Albania, and Greece. The course traces these relationships from the end of the medieval period to the present.

[HIST 355 *The Old Regime: France in the Seventeenth and Eighteenth Centuries* (III)
Fall. 4 credits. Not offered 2002-2003.
S. Kaplan.
A systematic examination of the social structure, economic life, political organization, and collective mentalities of a society that eclipsed all others in its time and then, brutally and irreversibly, began to age. France, in European perspective, from the wars of religion through the age of Voltaire.]

HIST 356 *The Era of the French Revolution and Napoleon* (III)
Fall. 4 credits. S. Kaplan.
A study of the failure of the traditional system, its dismantling and replacement in France, and the international consequences. Focus is on the meaning of the revolutionary experience, the tension between the desires to destroy and to create, and the implications of the Revolution for the modern world.

[HIST 357 *Survey of German History, 1648-1890* (III)
Fall. 4 credits. Open to freshmen with permission of instructor. Not offered 2002-2003.
I. Hull.
An examination of the social, political, intellectual, and diplomatic history of the German states from the devastation of the Thirty Years' War, through absolutism, the bourgeois revolutions of 1848, the struggle for unification, to the beginning of the modern industrial state.]

HIST 358 *Survey of German History, 1890 to the Present* (III)
Fall. 4 credits. Open to freshmen with permission of instructor. I. Hull.
An examination of the "German problem," that is the political, cultural, economic, and other causes of modern Germany's extreme violence and volatility from 1890 through 1945, and of the consequences thereof on the divided Germany of 1945 to 1989 and on the new German state since 1989.

HIST 362 *European Cultural History, 1750-1870* (also COM L 352) (III or IV)
Fall. 4 credits. M. Steinberg.
The course focuses on the making of middle-class culture, society, and imagination from the Enlightenment to the Second Empire. There are three units with national and thematic foci: Germany in the period of Enlightenment, emancipation, and the burgeoning of national consciousness; questions of law, property, gender, and sexuality in early nineteenth-century England; modernism and urbanism in Second Empire France. Primary readings (including novels, paintings, and poems) are considered along with contemporary historical and theoretical readings.

[HIST 363 *European Cultural History, 1870-1945* (also COM L 353) (III or IV)
M. Steinberg.]
This course focuses on problems of modernity, identity, and ideology in comparative European contexts. We address the politics and culture of German nationalism, French urbanism and religious revival, the cultural origins of psychoanalysis, technological culture (including film), and the cultural origins and dynamics of fascism. As in 362, primary materials (including Wagner, Nietzsche, George Eliot, Freud, Benjamin, and Alfred Hitchcock) are considered along with recent theoretical work.]

HIST 370 *History of the Holocaust* (also JWST 353) (III)
Fall. 4 credits. Each student must enroll in a section. V. Caron.
This course analyzes the meaning of the Holocaust from three vantage points: European history, Jewish history, and that of those states and religious institutions that shared responsibility by having stood by in silence. Topics include: the evolution of modern anti-Semitism; the role of anti-Semitism in the Nazi ideology and program; the bureaucratization of death; Jewish life in ghettos and concentration camps; the fate of Jews in occupied Europe and the question of collaboration; Jewish political behavior under duress; the responsibility of Western allies and the Churches; and contemporary interpretations of the Holocaust and the meaning of evil.

HIST 371 *World War II in Europe* (III)
Fall. 4 credits. J. Weiss.
The Second World War remains the single most important set of events shaping the contemporary world. The course deals with both the events of World War II as they shaped European and world history and the way those events were remembered and
- The seminar addresses the rise and the eventual decline of the classical German research university between 1810 and the present. The concept of the university as a semi-autonomous community based on freedom of teaching and research determined the development of German education during the 19th and 20th century. The modernization of the German university occurred in close proximity with the emergence of ideologies in German philosophy and it's emphasis on Bildung. The seminar focuses on the intersection between the innovative idea of the university and the actual development of the institution. Readings from the works of Kant, Fichte, Schleiermacher, Schelling, Nietzsche, Weber, Jaspers, and Habermas.

- Historically, the Holocaust began with the emancipation of Jews in the 18th century and reached its peak in the 20th century with the rise of Nazi Germany. This course examines the links between revolution, total war, and the emergence of the welfare state in Russia and situate the revolutionary Soviet experience in its European and global context. Students read both historical treatments and analyze documents in translation. Knowledge of foreign languages is not required but some background in European history is desirable.

- The seminar examines the long-term and immediate political, social, and cultural causes of World War I, its catastrophic prosecution, and its revolutionary consequences. Recurring themes are: the building of nation-states, the diplomatic and military systems of the nineteenth and twentieth centuries, mass mobilization, the development of mass violence, and the emergence of millenarian visions of the future.

- This course examines the origins and course of the Cold War, its catastrophic prosecution, and its revolutionary consequences. Recurring themes are: the building of nation-states, the diplomatic and military systems of the nineteenth and twentieth centuries, mass mobilization, the development of mass violence, and the emergence of millenarian visions of the future.

- The course explores the integration of Jews into French society from the French Revolution to the present. Topics include: the debate over Jewish emancipation during the Enlightenment, the French Revolution, and the Napoleonic era; the processes of religious and social assimilation; the rise of anti-Semitism and the Dreyfus Affair; Jewish responses to anti-Semitism; and the immigration challenge and refugee crisis of the 1930s; the Vichy era and Jewish resistance during World War II; and the reconstruction of the French Jewish community since 1945.

- This course examines the links between revolution, total war, and the emergence of the welfare state in Russia and situate the revolutionary Soviet experience in its European and global context. Students read both historical treatments and analyze documents in translation. Knowledge of foreign languages is not required but some background in European history is desirable.

perspectives. This course approaches Stalinism as an entire system, examining the links between high politics, foreign relations, culture, and everyday political strategies.

Readings include historical studies as well as newly available primary materials. Knowledge of Russian not required.

[HIST 482] The Aesthetic and Cultural Theory of the Frankfurt School (also GERST 495) (III or IV)

P. Hohenadl.

[HIST 488] Seminar in Late Nineteenth-Century European Imperialism (III)
Spring. 4 credits. Prerequisite: permission of instructor.

This seminar examines the theories of the "second wave" of European imperialism, and then compares the imperial experiences of Great Britain, France, and Germany. It focuses on the imperialist powers, and on the (often unintended) consequences of their colonial involvement on them. Of special concern are the transformation of nationalism into imperialism, and the effects on the European powers themselves of their experiences of applied racism and the commission of mass violence in their colonies.

[HIST 605] Graduate Seminar in European Cultural and Intellectual History

D. LaCapra.

[HIST 635] The Gates to Modernity: From Karl Marx to the 1848 Revolution (also GERST 635)
Fall. 4 credits. Anchor course.

For description, see GERST 635.

[HIST 661] Graduate Seminar in Twentieth-Century German History
Fall. 4 credits. Prerequisite: permission of instructor.

[HIST 672] Seminar in European Intellectual History

D. LaCapra.

[HIST 672] Seminar in European Intellectual History

D. LaCapra.

[HIST 674] Graduate Seminar in German History, 1770-1918

Semester TBA. I. Hull.

Honors and Research Courses

Note: HIST 201–302 are not regular courses for which students may sign up at will. They are personal arrangements between an instructor and a particular student. Students must first gain the consent of a particular instructor to work with them.

HIST 201 Supervised Reading
Fall or spring. 2 credits. Open only to juniors and seniors. Prerequisite: permission of instructor.

HIST 302 Supervised Research
Fall or spring. 3 or 4 credits. Open only to upperclass students. Prerequisite: permission of instructor.

HIST 400 Honors Proseminar
Fall and spring. 4 credits. Limited to 15 students. For prospective honors candidates in history. Prerequisite: permission of a member of the Honors Committee is required to register. E. Tagliacozzo. An exploration of major approaches to historical inquiry, analysis, and presentation. Ways of thinking about history along with research methods and organization of the results are considered by reading and discussing a variety of historical works.

Substantive readings are drawn from several time periods and diverse geographical areas. There is one short paper during the semester, and a longer final paper which explores the work of a major historian or school of historical writing.

HIST 401 Honors Guidance
Fall. 4 credits. Prerequisites: HIST 400 and permission of instructor. I. Hull.

HIST 402 Honors Research
Spring. 4 credits. Prerequisites: HIST 400 and permission of instructor. I. Hull.

HIST 709 Introduction to the Graduate Study of History
Fall. 4 credits. Required of all first-year graduate students. P. Dear and T. Borsteimann.

The course is designed to introduce entering graduate students to crucial issues and problems in historical methodology that cut across various areas of specialization.

HIST 803-804 Supervised Reading
705, fall; 704, spring. 4 credits each term. Limited to graduate students. Prerequisite: permission of instructor.

Staff.
HISTORY OF ART

The Department of the History of Art provides a broad range of introductory and advanced courses in Western art (European and North American) and non-Western art (East and Southeast Asian, African), from antiquity to the present.

The Major
Department majors acquire a broad understanding of the history of art in several chronological and geographical areas: ancient, medieval, Renaissance, modern (Europe and North America), Southeast Asia, China, Japan, and Africa. Additionally, majors practice a range of art historical methods and interpretive strategies, including connoisseurship, dendrochronology, feminism, iconography, semiotics, and social history. Majors are encouraged to locate the history of art within allied humanities fields and the applied arts by taking courses in history, literature, history of architecture, and fine arts. The study of foreign languages is strongly encouraged.

Requirements for the Major
Prospective majors should consult the director of undergraduate studies. Students wishing to declare a major in the history of art should complete two courses at Cornell in the department by the end of their sophomore year. These courses should reflect the diversity of the departmental offerings. One must be at the 200 level, and one—but not both—must emphasize material either predominantly before 1800 or outside Europe/North America. These two courses are prerequisites for the major and a grade of C or above is required for admission; courses must be taken for a letter grade. These courses do count toward the total 44 credits. The major in the history of art requires 44 credits, 30 at the 300 level or above. The core requirements are: proseminar; one 400-level area seminar; two courses in art outside Europe/North America; and three courses in art predating 1800 (ancient, medieval, or Renaissance/Baroque). Majors must choose at least two courses from different categories. In addition to the 44 credits, majors are required to take two courses, approved by their advisers, in areas related to the history of art.

Honors
To become a candidate for the degree of Bachelor of Arts with honors in the history of art, a student must have a cumulative average of B+ for all courses taken in the department and in all arts and sciences courses. Application to write an honors thesis should be made to the director of undergraduate studies during the second term of the junior year. The application must include a summary of the proposed project, an endorsement by a faculty sponsor, and a copy of the student's transcript. In the senior year the honors candidate will include in his/her course load, History of Art 600 and 601. These courses address the research and writing of the senior thesis under the direction of the student's project adviser.

Course Numbering System
100-level courses are freshman writing seminars.

200-level courses are introductions to the major subdivisions of Western art and art outside the West.

300-level courses are introductory courses addressing more specialized topics or epochs.

400-level courses are seminars primarily for advanced undergraduates and graduate students.

500-level courses are seminars primarily for graduate students.

First-Year Writing Seminars
For First-Year Writing Seminar offerings in the History of Art, consult the John S. Knight Institute brochure for times, instructors, and descriptions. These courses may be used as freshman electives but not to satisfy the distribution requirement.

Courses
ART H 200 Art, Archaeology, and Analysis (also ARKEO 285, MSAE 285, ENGR 185, EAS 200, PHYS 200) (I or IV)
Spring. 3 credits. Staff. For description see EAS 200.

ART H 202 Survey of European Art: Renaissance to Modern # (IV)
Summer only. 3 credits. D. Royce-Roll. The major traditions and movements in western European art from the Renaissance to the modern period. Painting, sculpture, and architecture with an emphasis on painting. Each Friday class meets at the Johnson Museum of Art with gallery talks and viewing of relevant works that supplement the previous four days of classroom lectures.

[ART H 220 Introduction to Art History: The Classical World also CLASS 220] # (IV)
Fall. 4 credits. Each student must enroll in a section. Not offered 2002-2003. A. Ramage. An overview of the art and archaeology of the Greek and Roman world. The sculpture, vase painting, and architecture of the ancient Greeks from the Geometric period through the Hellenistic, and the art of the Romans from the early Republic to the time of Constantine the Great.

ART H 221 Minoan-Mycenaean Art and Archaeology (also CLASS 221 and ARKEO 221) # (IV)
Fall. 3 credits. J. Coleman. For description, see CLASS 221.

ART H 222 Greek Art and Archaeology # (IV)
Spring. 3 credits. J. Coleman. For description, see CLASS 240.

[ART H 224 Archaeology in Action I also CLASS 232 and ARKEO 232] # (IV)

[ART H 225 Archaeology in Action II also CLASS 233 and ARKEO 233] # (IV)

ART H 230 Introduction to Art History: Monuments of Medieval Art also RELST 230 Fall. 4 credits. Each student must enroll in a section. P. Morrin. An introduction to the approaches to art history through a study of selected works of art from the Middle Ages: architecture, sculpture, painting, manuscript illumination, metalwork, and ivory.

ART H 245 Introduction to Art History: Renaissance and Baroque Art # (IV)
Fall. 4 credits. Each student must enroll in a section. S. Benson. A survey of major works of European painting, sculpture, and architecture from 1400 to 1700. The focus is on pre-17th-century artists and their workshops. Methodologies, style, meaning, patronage, the function of art in a range of social contexts. The course also covers the methods of art history currently practiced in Renaissance and Baroque studies. Weekly section meetings are required.

ART H 260 Introduction to Art History: The Modern Era (IV)
Spring. 4 credits. Not open to students who have taken ART H 261. Each student must enroll in a section. J. E. Bernstock. A discussion of the most important developments in art from 1780 to the present in a socio-political, historical context. The emphasis is on major movements and artists: Neo-Classicism (David), Romanticism (Delacroix), Realism (Courbet), Impressionism (Monet), Post-Impressionism (Van Gogh), Cubism (Picasso), Fauvism (Matisse), Surrealism (Miro), Abstract Expressionism (Pollock), and Pop Art (Warhol). Different critical approaches are examined.

ART H 261 Introduction to Art History: The Modern Era (IV)
Fall. 3 credits. Not offered 2002-2003. S. Benson. An introduction to early modern art as it developed between the French Revolution and World War I. Both European and American movements are examined, including Romanticism, Impressionism, and Cubism. Units are organized around central figures such as Mary Cassatt, Edgar Degas, Thomas Eakins, and Vincent van Gogh. Lectures are supplemented with discussions of methods of inquiry, including social history and feminism, fundamental to interpreting works of art.

ART H 270 Mapping America (also AM ST 270) # (IV)
Fall. 4 credits. Each student must enroll in a section. Not offered 2002-2003. L. Meixner. An introduction to American art from colonial mercantilism through the Great Depression. Through a variety of sources including maps, paintings, street festivals, political cartoons, photographs, and advertisements, we explore the social and economic factors that shaped American identities. We focus on how emphasis is placed on the representation of race, class, and ethnicity.

ART H 280 Introduction to Art History: Approaches to Asian Art @ # (IV)
Fall. 3 credits. Not offered 2002-2003. K. McGowan. Arranged according to selective focus and emphasis rather than broad chronological survey, this course introduces students to the varied responses of the Asian artist in diverse social, geographical, and historical contexts. Indian miniature paintings, Japanese prints, high-fired ceramics from Thailand and Vietnam, Indonesian textiles and jewelry,
Javanese shadow-puppet theater, and Balinese ritual and performance traditions are explored. A number of class sessions meet in the Herbert F. Johnson Museum of Art.

ART H 309  
Dendrochronology of the Aegean (also CLASS 309 and ARKEO 309) # (IV)  
Fall and spring. 4 credits. Prerequisite: permission of instructor. Limited to 10 students. P. I. Kuniholm.  
For description, see ARKEO 309.

ART H 319  
Art in the Daily Life of Greece and Rome (also CLASS 319) # (IV)  
Spring. 4 credits. A. Ramage.  
Classical art is well reflected in the small items of daily life that are neglected frequently in the standard histories. This course looks at the making and decorating of household items in Greece and Rome in a variety of materials from clay to metal. The links between the commissions of the state and the tastes of the people are examined through their material culture.

ART H 320  
The Archaeology of Classical Greece (also CLASS 320) # (IV)  

ART H 321  
Mycenae and Homer (also CLASS 321 and ARKEO 321) # (IV)  
For description, see CLASS 321.

ART H 322  
Arts of the Roman Empire (also CLASS 350) # (IV)  
Fall. 4 credits. A. Ramage.  
The visual arts in the service of the first world state. The course starts with the architecture, painting, and sculpture of the Etruscan and Republican period but concentrates on monuments of the Imperial era in Italy and the provinces until the time of Constantine. Art made for private patrons is considered along with the official presentations of the emperors.

ART H 323  
Painting in the Greek and Roman World (also CLASS 323) # (IV)  

ART H 325  
Greek Vase Painting (also CLASS 325) # (IV)  
A stylistic and iconographical approach to an art in which the Greeks excelled. The course is arranged chronologically by periods, beginning with the early (eleventh century B.C.), anonymous beginnings to the “personal” hands of identifiable masters of the fifth and fourth centuries B.C. Styles of cities other than Athens are stressed.

ART H 326  
Greek Cities and Towns (also CLASS 326) # (IV)  

ART H 327  
Greek and Roman Coins (also CLASS 327) # (IV)  
Fall. 4 credits. A. Ramage.  
The varied issues of Greek coins and the Roman state are examined. Coins are considered as well objects as well as economic and historical documents. The changes in design, value, and metals from the origins of coinage to the late Roman period are studied.

Lectures, student presentations, and work with the actual examples.

ART H 328  
Greeks and Barbarians (also CLASS 322) # (IV)  
For description, see CLASS 322.

ART H 329  
Greek Sculpture (also CLASS 329) # (IV)  
For description, see CLASS 329.

ART H 338  
Modern Western Drama, Modern Western Theater: Theory and Practice (also COM L 335 and THETR 335) # (IV)  
Fall. 4 credits. Staff.  
A study of a drama and the culture contexts of its performances from the mid-nineteenth century to the mid-twentieth century in Europe and America. We move from symbolism and naturalism through to constructivism, expressionism, Dadaism, futurism, surrealism and on the Brecht, Artaud and a few of their more contemporary descendants. Students engage in performance projects as well as text analysis.

ART H 343  
Italian Renaissance of the Fifteenth Century # (IV)  
This course examines the artistic production of the fifteenth century in its social and cultural context. The new style, which was developed in Florence in the early century and spread to other city-states in Italy, is examined in the context of the new educated class, the increased wealth of the mercantile, urban class, and the new role of family in society.

ART H 344  
Italian Renaissance of the Sixteenth Century: Leonardo, Michelangelo, and Raphael # (IV)  
This course focuses on the three great artists of the late fifteenth and sixteenth centuries, Leonardo, Michelangelo, and Raphael. It examines each as a thinker as well as an artist, through their own writings together with their works of painting, sculpture, and architecture. It also analyses the contemporary constructions of the artist as genius and as courtier in the biographies and other writings about them.

ART H 345  
Rome, Florence, and Venice in the Sixteenth Century # (IV)  
This course examines the distinctive cultural identities of Rome, Florence, and Venice, and how art, architecture, and urban planning served to create the myths and self-images of these cities, their rulers, and society. Topics include the centers of power, relationship of church and state, and private patronage and collections.

ART H 348  
Destination Rome: From Medieval Pilgrimage to Eighteenth-Century Grand Tour # (IV)  
Spring. 4 credits. S. Benson.  
As seat of the Catholic Church and center of the ancient Roman empire, the city of Rome was both a spiritual and cultural capital in medieval and early modern Europe. This class will investigate the fascination of Rome for early modern Europeans and consider how popes, patrons, and visitors shaped the planning of the city. Objects of study will include the development of the built environment, the display of ancient objects, sacred rituals, sacred and secular images and artifacts created for pilgrims and tourists.

ART H 351  
The Culture of the Renaissance II (also COM L 362, HIST 364, MUSIC 390, RELST 362, ENGL 325) # (III or IV)  
Fall. 4 credits. K. K. C. Kaske.  
For description, see COM L 362.

ART H 360  
Painting Nineteenth-Century America (also AM ST 360) # (IV)  
This course is an interdisciplinary view of art and life in nineteenth-century America from the colonial era through the Gilded Age. We will consider definitions of democratic culture through topical units including the following: New England portraiture and commodity culture; the art museum in the new republic; genre painting in the Jacksonian era; Hudson River landscape and railroad expansion; photography and the rising middle class; images of African Americans and Reconstruction; images of Native Americans, Manifest Destiny, and the frontier myth; cosmopolitan taste and robber barons in the Gilded Age. Alongside key paintings, we look at print culture including daguerreotypes, postcards, political prints, photographs, and advertisements. Major artists include: John S. Copley, George Caleb Bingham, Winslow Homer, Thomas Eakins, Mary Cassat, and John Singer Sargent. We address their relationship to major writers including Walt Whitman, Henry James, Stephen Crane, and Edith Wharton.

ART H 362  
Impressionism in Society (also WOMNS 361) # (IV)  
Spring. 4 credits. L. L. Meixner.  
This course discusses French Impressionist art as products of nineteenth-century public life. By relating Impressionist art to literature, including Universal Expositions, we trace its subversive themes such as criminality, cafe and brothel societies, clandestine prostitution, and class-regulated leisure. We consider images of Parisian spectacle and commodity culture (Manet, Cassat, Degas, Toulouse-Lautrec) as well as French landscapes (Monet, Van Gogh, Pissarro). Special topics include artists’ relationships to novelists (Zola), poets, and the avant garde theatre as well as the construction of the artist and courtesan in Puccini’s “La Boheme” and Verdi’s “La Traviata.” Images include postcards, playbills, medical photographs, and posters. Organizing our historical units is the theme of power and vision, with attention to the female gaze, voyeurism, surveillance, and scopophilia.

ART H 365  
U.S. Art from FDR to Reagan (also AM ST 355) (IV)  
Fall. 4 credits. Prerequisite: each student must enroll in a section. J. E. Bernstock.  
This course covers major artists and movements in the U.S. starting with the Depression era through the late 1980’s. A few of the developments on which the course focuses are: Abstract Expressionism, Pop Art, Earth Art, and Feminist Art. Much attention is devoted to the critical reception that the artists received.
ART H 366 Contemporary Art and Technology (IV)
Fall. 4 credits. M. Fernandez.
In this course students will examine the role of mechanical, electronic, and digital technologies in the arts of the late 20th and 21st centuries with emphasis on Europe and North America. Beginning with kinetic art and the cybernetically inspired work of the late sixties, we will explore early uses of computer technology, including early work in synthetic video in the 1970s. An overview of pre-Internet telematic experiments will lead to an investigation of net art. The ongoing development of behavioral art forms including interactive art and interactive installation will be a central theme. Critical evaluation of various attitudes concerning technology will be encouraged.

ART H 367 Conceptual Art (IV)
Spring. 4 credits. M. Fernandez.
This lecture course examines the histories, theories, and social contexts of the Conceptual Art movement with emphasis on Europe and the American continents (North, South, and Central America). Artists studied include Joseph Kosuth, Ad Reinhardt, Helio Oiticica, Lygia Clark, Art and Language, Dan Graham, Martha Rosler, and Hans Haacke.

ART H 370 Visual Culture and Social Theory (also GOVT 375 and COM L 368) (III or IV)
Spring. 4 credits. S. Buck-Morss.
For description, see GOVT 375.

ART H 371 Architectural History of Washington, D.C. # (IV)
A historical and critical survey of the architecture of Washington. Attention is given to the periods, styles, architects, and clients—public and private—of the notable buildings and to the urban scale of the national capital. The vocabulary of architectural analysis and criticism is taught. Field trips required.

ART H 377 African American Art (also AS&RC 304) (IV)
Spring. 3 credits. S. Hassan.
For description, see AS&RC 304.

ART H 378 Art in African Culture and Society (also AS&RC 310) (IV)
For description, see AS&RC 310.

ART H 380 Introduction to the Arts of China (also ARKEO 380 and ASIAN 383) @ (IV)
Spring. 4 credits. A. Pan.
This course offers a survey of the art and culture of China, from the Neolithic period to the twentieth century. We begin with an inquiry into the meaning of national boundaries and the controversy of the Han Chinese people, which helps us identify the scope of Chinese culture. Pre-dynastic (or prehistoric) Chinese culture is presented through both legends about the origins of the Chinese, and scientifically excavated artifacts. Art of the dynastic and modern periods is presented in light of contemporaneous social, political, geographical, philosophical and religious contexts. Students work directly with objects in the Herbert F. Johnson Museum of Art.

ART H 384 Introduction to the Arts of Japan @ (IV)
Fall. 4 credits. A. Pan.
As an island nation, Japan developed a unique culture that reflects both continental and indigenous characteristics. This course examines pre-and post-contact with continental culture and the process of artistic acculturation and assimilation in successive periods of Japanese art history.

ART H 385 Representation and Meaning in Chinese Painting (also ASIAN 384) @ # (IV)
Using major monuments of art, this course introduces various genres of Chinese painting through socio-political and religious history. The focus is on understanding the aesthetic criteria, artistic movements, stylistic transformations, and agendas of different social classes. Weekly sections will meet at the Herbert F. Johnson Museum so that students can gain first-hand experience examining and handling Chinese paintings.

ART H 395 The House and the World: Architecture of Asia (also ASIAN 395) @ (IV)
Spring. 4 credits. K. McGowan.
In many Asian societies, houses are regarded as having a life force or a vitality of their own. This course examines the role of the house as a living organism in Asia, a symbol of the cosmos encompassed. Houses also function in many societies as storehouses for material and immaterial wealth; artifacts such as textiles, jewelry, sculptures, and masks function within the house as ancestral heirlooms, conveying their own currents of life force, the power from which serving to blend with the vitality of the house. This accumulation of energy can be conferred on the inhabitants, or it may exist as a quiet reservoir of power, distinct from its occupants. The indigenous architectural traditions of India, Vietnam, Thailand, Indonesia, and the Philippines are examined. By studying the inhabited spaces of others, divining their technologies of construction and their applications, students are provided with powerful tools for examining the visual skills and sensibilities of other cultures. "The House and the World" serves as the metaphor for these discoveries.

ART H 396 The Arts of Southeast Asia @ (IV)
The arts of Southeast Asia are studied in their social context, since art plays a role in most of the salient occasions in life in traditional societies. Special emphasis is devoted to developments in Indonesia, Thailand, and Cambodia. Among topics covered are the shadow puppet theater of Java, textiles, architecture, sculpture, and Bali's performance tradition.

Seminars
Courses at the 400 and 500 level are open to juniors and seniors, majors, and graduate students. All seminars involve the writing and presentation of research papers. Enrollment is limited to 15 students, and permission of the Instructor is required. Students may repeat courses that cover a different topic each semester.

ART H 400 Proseminar for Art History Majors: The History and Practice of Art History (IV)
Fall. 4 credits. Prerequisite: History of Art majors only. Enrollment is limited. K. McGowan.
Works of art have always engendered political, social, and cultural meanings. This seminar presents an introduction to the methods which art historians have engaged in studying the objects and ideas which constitute the historiography of their discipline. Challenged and enlarged by cultural debates over issues of class, ethnicity, nationality, sexual orientation, and gender, the field of art history is expanding to incorporate problems of assessing quality of intention and reception along with authorship, of artistic production in place of artistic creation, and of Western-oriented attitudes to race in reference to orientalism and colonialism. Readings focus on historically situating methods used to situate art historically, and on the implications of their cross-cultural application. Papers encourage students to put methods into practice, realizing in the process that subject matter is not an isolated choice to which methods are applied, but something which profoundly affects the approach which the researcher brings to the writing of art history.

ART H 401 Independent Study
Fall or spring. 2–4 credits. May be repeated for credit. Prerequisite: permission of a department faculty member.
Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.

ART H 402 Independent Study
Fall or spring. 2–4 credits. May be repeated for credit. Prerequisite: permission of a department faculty member.
Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.
ART H 403 Ritual, Play, Spectacle, Act: Performing Culture (also THETR 403 and 603) (IV)
Spring. 4 credits. R. Schneider. For description, see THETR 403.

ART H 407 The Museum and the Object
Fall. 4 credits. Prerequisite: permission of instructor. All classes meet in the Johnson Art Museum Study Gallery. A. Pan. This seminar focuses on museum careers and offers advanced students in ART History the opportunity to work directly with objects. Weekly meetings at the Herbert F. Johnson Museum enable students to study aspects of curatorial, administrative, outreach, and public programs, as well as issues related to collecting, the politics of display, and the ever-changing role of art museums in modern society. Through weekly readings and discussion, participants will formulate ideas and conduct a research project of a (or a group of) museum object(s) for final class presentation.

ART H 423 Ceramics (also CLASS 423 and ARKEO 423) # (IV)
Spring. 4 credits. A. Ramage. Bronze Age, Greek, and Roman pottery specimens from Near-Eastern and Mediterranean sites are studied to provide direct experience of the basic prerequisites of archaeological excavation—the identification and dating of pottery types. Reports, delivered in class, concern ancient ceramic materials or particular types and periods of ceramics. Practical experience in making and decorating pottery is encouraged.

ART H 424 Sardis and the Cities of Asia Minor (also ARKEO 432 and CLASS 432) # (IV)

ART H 425 Seminar on the Bronze Age Architecture of Asia Minor (also CLASS 435 and ARKEO 425) # (IV)

ART H 427 Seminar on Roman Art and Archaeology (also CLASS 435 and ARKEO 435) # (IV)

ART H 430 America in the Camera's Eye (also HIST 430 and AM ST 430.2) (III or IV)
Fall. 4 credits. Not offered 2002-2003. R. L. Moore. For description, see HIST 430.

ART H 434 The Rise of Classical Greece (also ARKEO 434 and CLASS 434) # (IV)
Spring. 4 credits. Recommended: CLASS 220 or ART H 220, CLASS 221 or ART H 221, or permission of instructor. Not offered 2002-2003. P. I. Kuniholm. For description, see ARKEO 434.

ART H 446 European Art In the Age of Exploration, 1492-1700 # (IV)
Spring. 4 credits. Prerequisite: permission of instructor. S. Benson. Between the 15th and 18th centuries, Europeans became engaged in exploring the world both physically and intellectually. From voyages to Asia and the Americas to Galileo's first observation of the moon through a telescope, Europeans encountered lands, peoples, and natural phenomena that they had never seen before. Central to these enterprises were the visual arts, through which new ideas and information were spread. Images and objects that this course will examine include optical devices like telescopes and microscopes, scientific images, maps, trade goods, and illustrated travel books. We will consider the connections among the visual arts, global exploration, and scientific revolution, focusing on the cross-cultural nature of the arts in this period. Rather than merely assuming the Europeans to be colonizers of nature and other cultures, we will see what the arts can show us of how European thought was also influenced and transformed by these encounters.

ART H 447 Aesthetic Theory: End of Art (also GERST 656 and EEOL 656)
Fall. 4 credits. Permission of instructor. Not offered 2002-2003. P. Gilgen. For description, see GERST 656.

ART H 448 Studies in Sixteenth-Century European Art # (IV)
4 credits. Not offered 2002-2003. C. Lazzaro. Topic: Constructing the Self in the Sixteenth Century. This seminar examines portraits, self-portraits, autobiographies, and biographies, as well as treatises on etiquette and behavior. In this society, "civility," the mark of class and education, was conveyed through bearing, gesture, manners, and speech, as well as social organization and artistic interests, all of which are evident in both visual and verbal representations of individuals.

ART H 450 Women in Italian Renaissance Art (also WOMNS 451) # (IV)
Spring. 4 credits. Prerequisite: permission of instructor. Not offered 2002-2003. C. Lazzaro. This seminar examines representations of the Madonna and Child from the fourteenth and fifteenth centuries, the narrative scenes painted on chests and other domestic furniture, biblical and historical heroines such as Judith and Lucretia, portraits of patrician women and courtiers, and violence to women in a political context. It investigates the contemporary ideas about motherhood, beauty, sexuality, social presentation, and gender roles in society that inform these representations. We discuss the existing critical frameworks for interpreting them in feminist art history and theory (particularly in Renaissance studies). We are concerned especially with how visual images are encoded with meaning, what kind of relationship can be established with their historical context, and how they convey social constructs as ideology.

ART H 451 Prints of the Fifteenth through the Seventeenth Century # (IV)
4 credits. Prerequisite: permission of instructor. Not offered 2002-2003. C. Lazzaro. This seminar has several aims: to introduce students to prints—their techniques, styles, and issues of connoisseurship—and to the major printmakers of the period, including Marcantonio Raimondi, Dürer, and Rembrandt; to give students firsthand experience with works of art in the Herbert F. Johnson Museum; and to consider the social and cultural issues raised in the medium of prints and through their unique visual language. These issues include the social hierarchies of class and gender (including witches), moral concerns and religious devotion, the construction and transmission of notions of antiquity and classicism, and the representation of the urban and rural environment. Students give brief presentations on prints in the collection and longer ones of their own research projects on these and related topics.

ART H 452 The Printed Image: the World on Paper # (IV)
Fall. 4 credits. Prerequisite: not open to freshmen or sophomores without permission of instructor. A. Ramage. The printing of images was a new artistic medium for Renaissance Europe, and this course traces the stylistic and technical development of prints, their uses, and their effects on other aspects of life in early modern Europe. Topics include printing and the ever-changing role of the artist, the new availability of private decorative images, erotic art, and the virtual collecting of antiquities and natural curiosities. Both in class and in individual projects, students have the opportunity to engage directly with printed images and books in the Herbert F. Johnson Museum and Rare Book collection of the Krich library.

ART H 461 Art and Social Histories (also AM ST 463) (IV)
Spring. 4 credits. Prerequisite: permission of instructor. L. Meixner. Topic for spring 2003: American Art and the Machine. This seminar examines early modernism in America with a particular emphasis on the mechanical reproduction. We define "machine" in the broadest sense to mean the artist, the city, the camera, and its consumer byproducts including pictorial months such as Life, advertisements, and films. We also consider the mechanized laboring body. Key artists include the Urban Realists, cartoonists at The Masses, Stieglitz, Steichen, Riis, Hine, and the Precisionists.

ART H 462 Topics in Early Modernism (IV)
4 credits. Prerequisite: permission of instructor. Auditing is not permitted. Not open to freshmen or sophomores. Not offered 2002-2003. L. L. Meixner. Early Modernism in America. Using the Armory Show (2013) as its center, this interdisciplinary seminar examines the varied expressions of American modernism prior to World War II. Against the backdrop of post-World War I social politics and the Jazz Age, we examine the machine aesthetic and kinetic poetry, icons such as the Brooklyn Bridge. O'Keefe, Stieglitz, and the rise of photography at "291," American Dada, the Harlem Renaissance, and the introduction of homoerotic imagery. Key figures include Gertrude Stein, D. S. Passos, Hart Crane, and Ernest Hemingway.
ART H 463 Studies in Modern Art (IV)
Fall. 4 credits. Prerequisite: not to open to freshman or sophomores without permission of Instructor. Auditing is not permitted. J. E. Bernstock.
Topic for fall 2002. An Analysis of Abstract Art considers the historical context, the philosophical and social developments in art criticism that had a bearing on the evolution of abstract art in the Netherlands, Germany, and Russia.

ART H 464 Studies in Modern Art (IV)
Spring. 4 credits. Prerequisite: permission of instructor. Auditing is not permitted. J. E. Bernstock.
Topic for spring 2003. American Art of the Fifties. This class examines closely art that emerged in the United States as a reaction against the emphasis on consensus culture. Civil rights protests, the birth of rock 'n' roll, and the beat generation are some of the phenomena considered as essential to the development of avant-garde art during this period.

ART H 466 Women Artists (also WOMNS 404) (IV)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2002–2003. J. E. Bernstock.
This seminar studies the work of women artists from antiquity to the present. We consider the works of the most prominent women artists from each period in relation to the changing roles of women in society. The artists covered include Jennifer Bartlett, Artemisia Gentileschi, Elizabeth Vigee-Lebrun, Mary Cassatt, Georgia O’Keeffe, Louise Nevelson, Joan Mitchell, Judy Chicago, and Barbara Kruger. Different critical approaches to feminist art are discussed.

ART H 476 Seminar in American Art (IV)

ART H 478 African Cinema (also AS&R/C 435 and S NUM 435) (IV)
Fall. 4 credits. S. Hasson.
For description, see AS&R/C 435.

ART H 481 Art of the Tang Dynasty (618–907) (also ASIAN 479) (IV)
Spring. 4 credits. Prerequisite: ART H 383 or a course in Chinese history or Chinese literature and permission of instructor required. Not offered 2002–2003. A. Pan.
This seminar explores art and culture of the Tang dynasty, China’s “golden age,” by focusing on new discoveries and museum objects representing court, secular, and Buddhist art. We examine how imperial taste, patronage, and aesthetics influenced painting, calligraphy, gold and silver wares, ceramics, and important architectural and cave-temple sites.

ART H 483 Arts of the Song Dynasty, with Focus on Tea Cultures in East Asia (also ASIAN 580 and THETR 580) (IV)
Spring. 4 credits. Prerequisite: permission of instructor. A. Pan.
Topic for spring 2003 is Tea Ceremony and its diaspora. This seminar focuses on the cultural phenomenon of tea culture in East Asia, namely China, Korea, and Japan. Social, economic, and aesthetic concerns pertaining to tea cultures will be addressed in our weekly discussion. As part of the Freeman Foundation Asian Artist in Residence Program, this seminar will incorporate the expertise of the renowned Taiwanese potter Ah Leon in our regular class meetings. Additional guest lectures will be arranged to provide students the opportunity to work with scholars specializing in various aspects of tea culture in the three Asian countries.

ART H 490 Art and Collecting: East and West (also ASIAN 491) (IV)
This course examines the social life of things, focusing in particular on the collection as an organizing metaphor for cross-cultural exploration. By examining biographies of objects, and the extent of their influence, it is possible to observe the transformation of gifts or heirlooms into commodities and vice versa as constellations of cultures appropriate objects and ideas across vast distances, East and West. India, Europe, China, America, Japan, and Mainland and Island Southeast Asia are examined at different points historically where dynamic convergences occur in the traffic of culture.

ART H 520 Seminar in Classical Archaeology (also CLASS 630 and ARKEO 520)
Spring. 4 credits. Prerequisite: permission of instructor. P. Kuniholm.
For description, see ARKEO 520.

ART H 531 Leon Battista Alberti: 1404–1472
Spring. 4 credits. Prerequisite: not open to freshman or sophomores without permission of instructor. P. Morrin.
This seminar explores selected aspects of the literary and built works of Leon Battista Alberti. Alberti's work reverberates with the voices of other texts and edifices. This class investigates the work of Alberti in relation to these literary and architectural precedents. The seminar combines weekly lectures on selected themes with student individual research. The seminar will interdentify the construction of architectural identity, the Renaissance quest for fame, aesthetic theory and its origins in classical rhetoric, the literary origins of artistic method, society and space. Students will become familiar with all of Alberti's works, both built and written.

ART H 540 Seminar in Renaissance Art
Topic: Nature, Cultural Landscape, and Gardens in Early Modern Italy. This seminar examines conceptions of nature, the paired concepts of nature and culture, and the representations of nature in gardens. We consider the “second nature”—human interventions in the natural world, and the resulting “cultural landscapes”—in both the actuality and painted representations of the countryside. The cultural significance of plants and plant foods and of animals, the revived literary genre of the pastoral, and collections of nature are all examined. Reflecting on and analyzing the flourishing gardens from the sixteenth century we discuss how these cultural concepts of nature are manifested in garden design, planting and ornamentation.

ART H 549 Problems in Interpretation in Italian Renaissance Art
This seminar examines assumptions about meaning and how meaning is produced in Renaissance art. Various interpretative strategies are examined among them iconographic, semiotic, feminist, and psychoanalytic, within a specifically Renaissance literary, intellectual, and social context. Texts by Panofsky and critical discussions of them, Baxandall, Bryson, and others are read and discussed with reference to particular works of art. The seminar is intended primarily for graduate students in all areas of the history of art and those in other disciplines with an interest in the Italian Renaissance. Senior History of Art majors with background in the Italian Renaissance are also welcome.

ART H 570 Theory Seminar II: Representation
Fall. 4 credits. Prerequisite: graduate students only. M. Fernandez.
This seminar examines select bodies of theory influential to scholars and artists understanding of visual representation during the last forty years. The goal of the course is to familiarize students with diverse theoretical approaches and to critically evaluate the assumption that the advent of new media precipitated the end of representation. Aspects of semiotics, deconstruction, feminism, queer theory, cybertheory, and phenomenology will be included.

ART H 571 African Aesthetics (also AS&R/C 503)
For description, see AS&R/C 503.

ART H 572 Theory Seminar III: Mimesis
Spring. 4 credits. Prerequisite: graduate students only. M. Fernandez.
This seminar explores the significance of the concept of mimesis to selected aspects of contemporary art practices including clinical representations, genetic and bio-tech art, feminist art, and various forms of art activism. Relevant theoretical perspectives will be addressed.

ART H 580 Dancing the Stone: Body, Memory, and Architecture (also ASIAN 580 and THETR 580)
Spring. 4 credits. Prerequisite: permission of Instructor. K. McGowan.
This course examines the role of temples and their sculptural programs in South and Southeast Asia as creative stimuli for performative reenactments. Choreographic encounters between imagination and memory are mapped as they occur at various points historically and politically in Java, Bali, Cambodia, and India. Since architectural choreography implies the human body’s inhabitation and experience of place, the nature of ritualized behavior and its relationship to performance and politics is explored spatially, both in organizing experience and defining or redefining political, cultural, national, and diasporic margins. Bringing back the haptic sense (i.e. of feeling and doing at the same time) students have the unique opportunity to balance the demands of learning a Japanese traditional dance and/or its musical accompaniment, taught by visiting artists Linangkung Nurwijayanti and Raharja, while exploring performance traditions in historical perspective.
ART H 591-592 Supervised Reading
591, fall, 592, spring. 4 credits. May be repeated for credit. Limited to graduate students.

ART H 600 Honors Work
Fall or spring. 8 credits. Intended for senior art history majors who have been admitted to the honors program. Basic methods of art historical research are discussed and individual readings assigned, leading to the selection of an appropriate thesis topic.

ART H 601 Honors Work
Fall or spring. 8 credits. Prerequisite: ART H 600.
The student under faculty direction prepares a senior thesis.

HUMAN BIOLOGY PROGRAM

J. Haas (nutritional sciences), director, 127 South Hall, (585-863); P. Finlay (psychology), J. Fortune (physiology/women's studies), E. Frongillo (nutritional sciences), R. Johnston (psychology), K. A. R. Kennedy (ecology and systematics/anthropology), D. Levitsky (anthropology), R. Pelletier (nutritional sciences), W. Provine (ecology and systematics/history), S. Robertson (human development), R. Savin-Williams (human development), M. Small (anthropology)

Human biology integrates the methods and theories of many disciplines, such as biological anthropology, nutrition, neurology, physiology, psychology, demography, ecology, genetics, and paleontology into a comprehensive study of biological diversity in Homo sapiens. A central focus of this interdisciplinary approach to the study of the human organism is an understanding of evolutionary processes that explain our biological variation through space and time. The curriculum of study seeks to provide the student with a broad perspective on the subject matter of human biology by integrating knowledge from a variety of disciplines. The curriculum of study in human biology is not a major but a program of study that provides majors in various departments with a program for selecting elective courses that deal with the biology of the human species. Students in their junior year may develop a program of study in human biology while majoring in a number of different departmental fields.

Basic Requirements

The requirements for a program of study in human biology are designed to ensure sufficient background in physical sciences and mathematics to enable the student to pursue a wide range of interests in the fields of modern biological sciences, anthropology, and fields related to the evolution and physical diversity of the human species. Adjustments may be made in these requirements, depending on the student's academic background and affiliation with colleges and schools within the university.

The basic requirements are one year of introductory biology (BIO S 101-103 plus 102-104 or 105-106 or BIO S 107-108 offered during the eight-week Cornell Summer Session); one year of general chemistry (CHEM 207-208 or 215-216); one year of college mathematics (MATH 111-112 or 105-106 or 111-110); one course in genetics (BIO S 281 or 282); one course in biochemistry (BIO S 330, 331, 332, or 333 or NS 320). It is recommended that students planning graduate study in biological anthropology, psychology, and related fields in the medical and nutritional sciences take a course in statistics. Students should consult their faculty adviser in human biology for details on selecting appropriate courses.

Elective courses should be taken that will enable the student to acquire breadth in the subject matter of human biology outside of their departmental major. Therefore only 6 of the 15 human biology elective credits may also fulfill requirements for the major. Courses should be selected that also provide sufficient exposure to the integration of basic anatomical and physiological sciences with the behavior of individuals and groups within the context of evolutionary theory and ecology. The courses listed below are representative of the offerings in human biology and are included to assist the student in organizing a curriculum of study. They are organized into three groups that reflect the three levels of integration noted above: (1) human anatomy and physiology, (2) human behavior, and (3) human evolution and ecology. Students should choose at least one course from each of these areas of integration. It is anticipated that the student will include in a program of study at least one of the laboratory courses offered. It is expected that a student will take a minimum of 15 credits from among these courses.

There is no foreign language requirement for human biology beyond what is dictated by specific departments and colleges. The requirements for the human biology curriculum are set alongside requirements of the undergraduate majors as these are defined by different departments. Students with independent majors may design their own programs of study under the guidelines provided by their college. Although a student may indicate an interest in human biology in the freshman year and be able to obtain early guidance from a faculty adviser representing the curriculum of study, it is more usual for students to establish their course programs in the first semester of the junior year. The student may request one of the faculty advisers in his or her department who is listed as faculty in human biology to be their principal adviser, or he or she may have an adviser in the department of the major who seek the advice of a human biology faculty adviser in matters pertaining to satisfaction of the requirements. In certain cases a faculty adviser may represent both the major and the curriculum of study in human biology.

Courses

Human Anatomy and Physiology

BIO AP 214 Biological Basis of Sex Differences (also B&SOC 214 and WOMNS 214) Fall. 3 credits.

BIO AP 311 Introductory Animal Physiology, Lectures (also VET BMS 346) Fall. 4 credits.

BIO AP 319 Animal Physiology Experimentation Fall. 4 credits.

BIO AP 458 Mammalian Physiology Spring. 3 credits.

BIO BM 434 Application of Molecular Biology to Medicine, Agriculture, and Industry Fall. 3 credits.

BIO BM 439 Molecular Basis of Human Disease Fall. 3 credits.

BIO EE 274 The Vertebrates: Structure, Function, and Evolution Spring. 4 credits.

BIO EE 474 Laboratory and Field Methods in Human Biology (also ANTHR 474) Spring. 5 credits.

BIO MI 431 Medical Parasitology (also VETMI 431) Fall. 2 credits.

NS 115 Nutrition and Health: Concepts and Controversies Fall. 3 credits.

NS 222 Maternal and Child Nutrition Fall. 3 credits.

NS 262 Nutrients and Cells Spring. 3 credits.

NS 315 Obesity and the Regulation of Body Weight Fall. 3 credits.

NS 331 Physiological and Biochemical Bases of Human Nutrition Spring. 4 credits.

NS 341 Human Anatomy and Physiology Spring. 4 credits.

NS 361 Biology of Normal and Abnormal Behavior (also PSYCH 361) Fall. 3 credits.

NS 421 Nutrition and Exercise Spring. 3 credits.

NS 421 Mineral Nutrition and Chronic Disease Fall. 3 credits.

NS 441 Nutrition and Disease Fall. 4 credits.

NS 475 Molecular Nutrition and Development Spring. 3 credits.

PSYCH 322 Hormones and Behavior (also BIONB 322) Fall. 3 or 4 credits.

PSYCH 425 Cognitive Neuroscience Fall. 3 or 4 credits.
PSYCH 460 Human Neuroanatomy (also BIONB 420)  
Spring. 3 or 4 credits.

Human Behavior

ANTHR 390 Primate Behavior and Ecology  
Spring. 4 credits.

ANTHR 490 Topics on Primates and Evolution: The Evolution of Language  
Spring. 4 credits.

B&SOC 301 Biology and Society I: The Social Construction of Life (also S&TS 401)  
Fall. 4 credits.

BIO NB 392 Drugs and the Brain  
Spring. 4 credits.

BIO NB 421 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 421)  
Fall. 3 or 4 credits.

BIO NB 422 Modeling Behavioral Evolution  
Spring. 4 credits.

BIO NB 427 Animal Social Behavior  
Spring. 4 credits.

DEA 325 Human Factors: Ergonomics—Anthropometrics  
Fall. 3 credits.

HD 266 Emotional Functions of the Brain  
Fall. 3 credits.

HD 344 Infant Behavior and Development  
Fall. 3 credits.

HD 366 Psychobiology of Temperament and Personality  
Spring. 3 credits.

PAM 380 Human Sexuality  
Spring. 3 credits.

NS 245 Social Science Perspectives on Food and Nutrition  
Fall. 3 credits.

NS 347 Human Growth and Development: Biological and Behavioral Interactions (also HD 347 and B&SOC 347)  
Spring. 3 credits.

NS 361 Biology of Normal and Abnormal Behavior  
Fall. 3 credits.

PSYCH 223 Introduction to Biopsychology  
Fall. 3 credits.

PSYCH 326 Evolution of Human Behavior  
Spring. 4 credits.

PSYCH 422 Developmental Biopsychology  
Fall. 4 credits.

PSYCH 425 Cognitive Neuroscience  
Fall. 3 or 4 credits.

Human Evolution and Ecology

ANTHR 101 Introduction to Anthropology: Biological Perspectives on the Evolution of Humankind  
Fall. 3 credits.

ANTHR 203 Early People: The Archaeological and Fossil Record (also ARKEO 203)  
Spring. 3 credits.

ANTHR 375 Evolutionary Theory and Human Behavior  
Spring. 4 credits.

ANTHR 390 Primate Behavior and Ecology  
Spring. 4 credits.

ANTHR 490 Topics on Primates and Evolution: Evolutionary Medicine  
Spring. 4 credits.

BIO EE 261 Ecology and the Environment  
Fall or summer. 4 credits.

BIO EE 275 Human Biology and Evolution (also ANTHR 275 and NS 275)  
Fall. 3 credits.

BIO EE 278 Evolutionary Biology  
Fall or spring. 3 or 4 credits.

BIO EE 371 Human Paleontology (also ANTHR 371)  
Fall. 4 credits.

BIO EE 464 Macroevolution  
Spring. 4 credits.

BIO EE 469 Food, Agriculture, and Society (also B&SOC 469 and S&TS 469)  
Spring. 3 credits.

BIO EE 673 Human Evolution: Concepts, History, and Theory (also ANTHR 673)  
Fall. 3 credits.

BIO Q 207 Evolution (also HIST 287, and S&TS 287)  
Fall or summer. 3 credits.

BIO Q 481 Population Genetics  
Fall. 4 credits.

BIO Q 482 Human Genetics and Society  
Fall. 4 credits.

BIO Q 484 Molecular Evolution  
Spring. 3 credits.

B&SOC 447 Seminar in the History of Biology (also HIST 415)  
Fall. 4 credits.

NS 306 Nutritional Problems of Developing Nations  
Fall. 3 credits.

NS 450 Public Health Nutrition  
Spring. 3 credits.

NS 451 Epidemiology and Health of Human Communities  
Fall. 3 credits.

NS 452 Molecular Epidemiology and Dietary Markers of Chronic Disease  
Spring. 3 credits.

PAM 303 Ecology and Epidemiology of Health  
Spring. 3 credits.

PSYCH 326 Evolution of Human Behavior  
Spring. 4 credits.

R SOC 201 Population Dynamics (also SOC 202)  
Spring. 3 credits.

VET MI 431 Medical Parasitology (also BIO MI 417)  
Fall. 2 credits.

VTPMD 664 Introduction to Epidemiology (enroll in VET CS 664)  
Fall. 3 credits.

HUNGARIAN

See Departments of Linguistics and Russian.

INDEPENDENT MAJOR PROGRAM

L. Abel, director, 172 Goldwin Smith Hall. 255–3386.

The Independent Major Program is described in the introductory section of Arts and Sciences.

IM 351 Independent Study  
Fall or spring. 1–4 credits. Prerequisite: permission of the program office.

IM 499 Honors Research  
Fall or spring. 1–8 credits; a maximum of 8 credits may be earned for honors research. Prerequisite: permission of program director. Each participant must submit a brief proposal approved by the honors committee.

INDONESIAN

See Department of Asian Studies.

INEQUALITY CONCENTRATION

Office: 363 Uris Hall/URL  
http://www.inequality.comell.edu  
Telephone: 254–8674

The study of inequality lies at the heart of current debates about welfare reform, affirmative action, the "glass ceiling," globalization, and any number of other contemporary policy issues. In recent years, public and scholarly interest in issues of inequality has intensified, not merely because of historic increases in income inequality in the United States and other advanced industrial countries, but also because inequalities of race, ethnicity, and gender are evolving in equally dramatic and complicated ways.

The Inequality Concentration allows undergraduate students to supplement their studies for their major with a coherent program of courses oriented toward the study of inequality. Although Cornell University is a leading center of scholarship on poverty and inequality, this strength is necessarily distributed across many departments and colleges, and an interdisciplinary concentration thus allows students to combine these resources into an integrated program of study. The institutional home for the Inequality Concentration is the Center for the Study of Inequality (located at 565 Uris Hall and at www.inequality.comell.edu).

The Inequality Concentration is appropriate for students interested in government service, policy work, and related jobs in nongovernmental organizations (NGOs) as well as students who wish to pursue post-graduate education in such fields as public policy, economics, government, law, history,
psychology, sociology, anthropology, literature, and philosophy. In many of these fields, the study of inequality is becoming increasingly central and fundamental, and the Inequality Concentration can therefore provide students with a valuable and unique foundation for further study.

The Inequality Concentration is not a major, but rather is an interdisciplinary program that should be completed in conjunction with a major. The Concentration is open to students enrolled in any of the seven Cornell undergraduate colleges. If the requirements of the Concentration are met, a special notation to this effect will be recorded on the transcript.

**Concentration Requirements**

The Inequality Concentration exposes students to the breadth of approaches, methods, and topic areas on offer while also allowing them to tailor a program to their particular interests. The requirements are as follows:

A. **Overview Course**

The required overview course may be selected from any of the eight courses listed below. When possible, the overview course should be completed early in the program, as it serves to define the field and to expose students to areas and topics that might be explored in future coursework.

- Income Distribution (ILRLE 441)
- Inequality, Diversity, and Justice (PHIL 193, CRP 293, GOVT 293, and SOC 293)
- Power and Poverty in America (GOVT 310)
- Social Inequality (SOC 208 and R SOC 209)
- Comparative Social Stratification (R SOC 370 and SOC 371)
- Social Inequality: Contemporary Theories, Debates, and Models (SOC 516)
- Introduction to Social Inequality (SOC 108)
- Inequality and Social Science (SOC 221)

B. **Controversies About Inequality**

(SOC 222, PAM 222, ECON 222, ILRLE 222, PHIL 195, R SOC 222, and GOVT 222)

This seminar (taken for 1-3 credits) introduces students to other concentrators and to faculty at Cornell University carrying out relevant research. In weekly meetings, students are exposed to research on inequality underway at Cornell, and they also participate in debates staged between faculty who take opposing positions on pressing inequality-relevant issues (e.g., welfare reform, school vouchers, immigration policy, affirmative action).

Because it introduces concentrators to potential advisers and lines of study, this course is best taken early in the program.

C. **Electives**

In addition to the overview course and seminar, students must select four electives from the list of qualified courses. This list is available from Jessica Henning (363 Uris Hall) or can viewed on the website for the Center for the Study of Inequality (www.inequality.com). Although students may tailor their programs to match their interests, the electives and overview course must be distributed across at least three departments (thereby ensuring breadth in the analytic approaches that are represented).

D. **Lectures and Seminars**

The Center for the Study of Inequality (see listing under the heading “Academic Training”). For students considering the Concentration, it may be useful to schedule a meeting with the Executive Administrator of CSI, Jessica Henning (inequality@cornell.edu). Once a decision is made to enroll, a faculty adviser should be chosen to help design a program of study that combines effectively with the major, that is intellectually coherent, and that serves future career and professional interests well.

**Research and Internship Opportunities**

The Center for the Study of Inequality serves as a clearinghouse for internship opportunities in the areas of poverty and inequality (see CSI website under “Finding an Internship”). Additionally, the CSI can assist students who wish to become involved in research by matching them to faculty projects of interest, and by providing small research grants for student-initiated research (see CSI website under “Student Research Grants”).

**Advisers**

The Inequality Concentration is governed by a Director and Executive Board. Although all members of the Board (including the Director) may serve as student advisers, some members are not currently taking on new advisees. The listing of available advisers can be obtained from Jessica Henning at inequality@cornell.edu.

**Director:** David Grusky, Professor, Sociology; Director, Center for the Study of Inequality

**Executive Board:** N’Dri Assie-Lumumba, Associate Professor, Dept. of Education and Africana Studies; Kaushik Basu, C. Marks Professor of International Studies and Professor, Dept. of Economics; David Dunning, Professor, Dept. of Psychology; Gary Fields, Professor, School of Industrial and Labor Relations; Maria Cristina Garcia, Director, Latino Studies Program and Associate Professor, Dept. of History; Davydd Greenwood, Golden Smith Professor of Anthropology and Director, Institute for European Studies; Douglas Gurak, Director, Population and Development Program and Professor, Rural Sociology; Michael Jones-Correa, Associate Professor, Dept. of Government; Ravi Kanbur, T.H. Lee Professor of World Affairs, Dept. of Applied Economics and Management; Mary Katzenstein, Professor, Dept. of Government, Richard Miller, Professor, Dept. of Philosophy; Satya Mohanty, Professor, Dept. of English; Elizabeth Peters, Professor and Director of Graduate Studies, Dept. of Policy Analysis and Management; Jonas Pontusson, Professor, Dept. of Government, Sazona Szelenyi, Associate Professor, Sociology.

**Sample Programs**

The Inequality Concentration allows students considerable flexibility in devising programs that reflect their interests. As examples of possible programs, we have listed below ten sample tracks, each with a distinctive set of possible electives. The first program listed below is a general track that provides an overview of the field, while the remaining nine programs are more specialized and focus on particular issues within the field. This sampling of programs is obviously illustrative and does not cover the entire wide range of interests that may be addressed within the Concentration. It is important for students and advisers to work together to formulate an individualized program of study that may draw only partially, if at all, from the programs listed below.

**General Track**

The objective of the general track is to provide a broad foundation that addresses both the many forms of inequality (e.g., class, gender, ethnic) as well as the various approaches and perspectives (e.g., economic, sociological, historical) that have been brought to bear on these forms. The sample schedule outlined below is just one of many possible programs that meets this generalist objective.

I. **Overview Course (choose any one)**

II. **Controversies About Inequality (SOC 222, PAM 222, ECON 222, ILRLE 222, PHIL 195, and GOVT 222)**

III. **Possible Electives:**

- Economics of Hunger and Malnutrition (ECON 474 and NS 457)
- Race, Power, and Privilege in the United States (AS&RC 280)
- Gender Inequality (SOC 316)
- Social Welfare as a Social Institution (PAM 383)

**Globalization and Inequality**

As a global economy takes hold, there has been increasing concern that economic inequalities will grow apace, especially North-South inequalities between rich and poor countries. The countervailing “optimistic view” is that between-country disparities will in the long run wither away and render inequality an entirely internal, within-country affair. These and related lines of argumentation can be explored in courses that address such topics as trends in income inequality, theories of economic development, emerging patterns of international migration, and globalization and gender.

I. **Overview Course (choose any one)**

II. **Controversies About Inequality (SOC 222, PAM 222, ECON 222, ILRLE 222, PHIL 195, and GOVT 222)**

III. **Possible Electives (choose any four):**

- International Development (R SOC 205 and SOC 206)
- Economic Development (ECON 371)
- Labor Markets and Income Distribution in Developing Countries (ILRLE 655)
- Globalization and Inequality (SOC 320)
Indigenous Peoples and Globalization (R SOC 325)
Comparative Ethnic Stratification: Demographic Perspectives (R SOC 431 and R SOC 631)
Global Perspectives on Gender (AS&RC 362)
Sex and Gender in Cross-Cultural Perspective (ANTHR 321/621 and WOMNS 521/631)
Human Migration: Internal and International (R SOC 430)
Gender and International Development (WOMNS 614 and CRP 614)
Politics of Transnationalism (GOVT 681)

Social Policy and Inequality
In the modern period, inequalities generated in the market and through other social institutions are typically regarded as excessive, and the state is seen as the main tool for redistribution, discrimination abatement, equalization of life chances, and related forms of amelioration. The social policy and inequality track explores the role of the state in generating and reducing inequalities of various kinds.

I. Overview Course (choose any one)

II. Controversies About Inequality
(SOC 222, PAM 222, ECON 222, ILRLE 222, PHIL 195, and GOVT 222)

III. Possible Electives (choose two)
Organizations and Social Inequality (SOC 322 and ILROB 626)
The Sociology of Markets (SOC 217)
Sociology of Markets (ILROB 622 and SOC 622)
Employment Discrimination and the Law (ILRCB 684)
Human Resource Economics and Public Policy (ILRHR 360)
Employee Relations and Diversity (ILRHR 463)
Social Welfare as a Social Institution (PAM 385)
Applied Public Finance (PAM 204)
Introduction to Policy Analysis (PAM 230)
Critical Perspectives (PAM 240)
Introduction to Policy Management (PAM 320)
Intermediate Policy Analysis (PAM 350)
Demography and Family Policy (PAM 371)
Social Policy (SOC 326 and SOC 526)
Social Policy (PAM 473)
Social Policy and Social Welfare (CRP 448 and CRP 548)
Policy Analysis: Welfare Theory, Agriculture, and Trade (ECON 430 and AEM 630)
Economic Analysis of the Welfare State (ILRLE 642 and ECON 460)
Families and Social Policy (HD 456)
Health and Social Behavior (HD 457 and SOC 457)
Public Policy and the African-American Urban Community (AS&RC 420)
Seminar: Beliefs, Attitudes, and Ideologies (PSYCH 489 and WOMNS 488)

Feminist Jurisprudence (LAW 646)
Political Economy of Education (EDUC 378)
Research on Education Reform and Human Resource Policy (ILRHR 653)

The Ethics of Inequality
Charges of social injustice are often charges of excessive inequality. What are the political, philosophical, and legal debates that are relevant to such judgements? Under what conditions should rich countries assist poor ones? At what point should governments step in and redistribute income? When should parents pass on their wealth to their children? The ethics of inequality track examines the conditions under which inequalities might be deemed legitimate or illegitimate, evaluates prevailing inequalities and social policy as against this yardstick, and explores the larger role of values in popular and scholarly judgements about inequality.

I. Overview Course: Inequality, Diversity, and Justice (PHIL 193, SOC 293, CRP 293, and GOVT 293)

II. Controversies About Inequality (SOC 222, PAM 222, ECON 222, PHIL 195, and GOVT 222)

III. Possible Electives:
A. Ethics Courses (choose two)
Values in Law, Economics, and Industrial Relations (ILRCB 607)
Appropriation and Alienation (PHIL 142)
Global Thinking (PHIL 194 and GOVT 294)
Modern Political Philosophy (PHIL 346 and GOVT 462)
Contemporary Political Philosophy (PHIL 447 and GOVT 465)
International Justice (PHIL 448 and GOVT 492)
Feminism and Philosophy (PHIL 249 and WOMNS 249)
Marx (PHIL 219)
Marx: An Overview of His Thought (ANTHR 368)

B. Social Science Classes (choose two)
Select courses in consultation with adviser (see list of electives below).

Literature, Postmodernism, and Inequality
This program juxtaposes literary and social scientific approaches to the understanding of inequality. Although considerations of power and inequality have long been fundamental to social scientific analysis, they are increasingly central to literary analysis; these two traditions of scholarly inquiry have not always been adequately informed one another.

I. Overview Course (choose one)

II. Controversies About Inequality (SOC 222, PAM 222, ECON 222, ILRLE 222, PHIL 195, and GOVT 222)

III. Possible Electives:
A. Literature Classes (choose two)
Introduction to Cultural Studies (ENGL 209)
Poetry and Poetics of Difference (COM L 225 and ENGL 225)

Rewriting the Classics: Stories of Travels and Encounters (ENGL 235)
Twentieth Century Women Novelists (ENGL 251, WOMNS 251, and AM ST 252)
Politics and Culture in the 1960s (ENGL 268 and AM ST 268)
Shakespeare: Gender and Power (ENGL 327 and WOMNS 327)
Introduction to Global Women's Literature (ENGL 396 and WOMNS 396)
Global Women's Literature (ENGL 476 and WOMNS 476)
Literatures of the Archipelagoes: Caribbean and Pacific "tidelectics" (ENGL 490)
Europe and Its Others: An Introduction to the Literature of Colonialism (COM L 304)
Feminist Theory/Lesbian Theory (WOMNS 465, COM L 465, and GERST 465)
Virtual Orientalisms (ASIAN 415, S HUM 415, and COM L 418)
Language, Religion, and Politics in Modern South Asia (ASIAN 431)
Internationalism, Nationalism, and Modern Japanese Discursive Space (ASIAN 485)
Political Theory and Cinema (GERST 330, COM L 330, GOVT 370, and THETR 329)
Reading Freud: Gender, Race, and Psycho-analysis (GERST 447, COM L 447, WOMNS 447)
Minority Literature in the Federal Republic (GERST 392)
The Euro-Americans (GERST 405)
Women Around Freud (GERST 413, COM L 412, and WOMNS 413)
Marx, Nietzsche, Freud (GERST 415, COM L 425, and GOVT 473)
The Cultural Theory of the Frankfurt School (GERST 495, COM L 495, and GOVT 471)
Gender and Society in the Muslim Middle East (NES 281, RELST 261, and WOMNS 212)
May '68 and its Consequences (FRLIT 576)
Contemporary Narratives by Latina Writers (SPANL 346, LSP 246, and WOMNS 246)
Hispanic Caribbean Culture and Literature (SPANL 346)

B. Social Science Classes (choose two)
Select courses in consultation with adviser (see list of electives below).

Poverty and Economic Development
Over the last century, rich countries have of course become yet richer, while less developed countries remain burdened with massive poverty. The courses listed below examine the sources and causes of world poverty, the rise of global anti-inequality social movements, and the types of policy interventions that might stimulate economic development and reduce poverty.

I. Overview Course (choose any one)

II. Controversies About Inequality (SOC 222, PAM 222, ECON 222, ILRLE 222, PHIL 195, and GOVT 222)

III. Possible Electives (choose any four):
Economic Development (ECON 371)
Population and Development (R SOC 438 and SOC 437)
International Justice (PHIL 448 and GOVT 492)
Economics of Development (ECON 466 and AEM 666)
Land Reform Old and New (R SOC 643)
Issues in African Development (CRP 477 and CRP 677)
Labor Markets and Income Distribution in Developing Countries (ILRRC 635)
Global Perspectives on Gender (AS&RC 362)
Population, Environment, and Development in Sub-Saharan Africa (R SOC 495)
Gender and International Development (WOMNS 614 and CRP 614)
Politics of Transnationalism (GOVT 681)
Economics of Malnutrition and Hunger (NS 457 and ECON 474)

Social Movements and Inequality
The history of modern society may be seen in large part as a history of anti-inequality social movements (e.g., the Enlightenment, socialism, the union movement, the civil rights movement, feminism) interspersed with occasional inequality-inducing reactions (e.g., the post-socialist transition). The social movements track examine the causes, effects, and likely future of such social movements and the reactions they spawn.

I. Overview Course (choose any one)
II. Controversies About Inequality (SOC 222, PAM 222, ECON 222, ILRLE 222, PHIL 195, and GOVT 222)
III. Possible Electives (choose any four):
1. Utopia in Theory and Practice (SOC 311)
2. Social Movements in American Politics (GOVT 302 and AM ST 302)
3. Poor People's Movements (GOVT 456)
4. Group Conflict and the Nation-State (SOC 531)
5. Social Movements (SOC 660 and GOVT 660)
6. Politics of Transnationalism (GOVT 681)
7. Feminism Movements and the State (GOVT 353 and WOMNS 353)
8. Comparative Labor Movements in Latin America (ILRRC 651)
9. Union Organizing (ILRRC 400)
10. Theories of Industrial Relations Systems (ILRRC 606)
11. Revitalizing the Labor Movement: A Comparative Perspective (ILRRC 632)
12. Women and Unions (ILRRC 384 and WOMNS 384)
13. History of Resistance Movements in Africa and the Diaspora (AS&RC 283)
14. Latina Activism Feminist Theory (LSP 300)
15. Strikes (GOVT 314)

Education and the Reproduction of Inequality
In the contemporary period, the study of inequality has increasingly turned on the study of formal education, as schools have become the main institutional locus for training and credentialing workers and for signaling potential employers about (putative) worker quality. The inequality and education track examines educational institutions and how they are organized, how they generate equality and inequality, and how possible institutional changes (e.g., vouchers, required testing) might affect the reproduction of inequalities.

I. Overview Course (choose any one)
II. Controversies About Inequality (SOC 222, PAM 222, ECON 222, ILRLE 222, PHIL 195, and GOVT 222)
III. Possible Electives (choose any four):
1. Education and the Diaspora (AS&RC 484)
2. Political Identity: Race, Ethnicity, and Nationalism (GOVT 610 and LSP 610)
3. Race and Ethnicity in Comparative Perspective (AS&RC 438 and AAS 438)
4. Human Migration: Internal and International (R SOC 430)
5. International Migration and Ethnic Identity (SOC 438 and AAS 438)
6. African-American History from Slavery to Freedom (HIST 355)
8. The African-American Workers, 1910-The Present: Race, Work, and the City (HIST 376 and ILRRC 386)
11. Politics and Social Change in Southern Africa (AS&RC 484)
15. Latinos in the United States (SOC 265, R SOC 265, and LSP 201)
16. Introduction to U.S. Latino History, Part I (LSP 260, HIST 260, and AM ST 259)
17. Introduction to U.S. Latino History, Part II (LSP 261, HIST 261, and AM ST 261)
18. Latina Activism Feminist Theory (LSP 300)
19. Latino Politics in the United States (LSP 306 and GOVT 306)
20. Introduction to Asian American Studies (AAS 110)
21. Asian American History (AAS 213 and HIST 213)
INTENSIVE ENGLISH PROGRAM

105 Morrill Hall

This noncredit, nondegree program provides full-time intensive English as a second language instruction as well as academic, social, and cultural orientation to the United States and its institutions. The aim of the program is for participants to acquire proficiency in the language in order to pursue goals in English for academic, business, professional, or personal purposes.

Programs are offered both fall and spring semesters and in the six-week summer session (from late June to early August). Participants receive a minimum of 20 hours of classroom instruction weekly in speaking, listening, reading, writing, and grammar, which are taught at all levels from low intermediate through very-high advanced. Applicants must be at least 17 years of age, hold the equivalent of a high school diploma, and have had some previous study of English. Participants receive a Certificate of Eligibility (Form I-20) to obtain an F-1 visa.

Students who have gained full admission to or who are already registered in degree-granting programs at Cornell should consult the section “English for Academic Purposes” (series ENGLP).

INTERNATIONAL RELATIONS CONCENTRATION

Office: 156 Uris Hall, 254-5004, www.einaudi.cornell.edu/about/irc.asp
Faculty Advisory Board: M. Cook (ILR), M. Evangelista (Government), S. Feldman (Rural Sociology), D. Lee (AEM), J. Reppy (S&TS), H. Shue (Ethics and Public Policy), B. Strauss (History); B. Szekely (Associate Director, Cornell Abroad)

Objective

The International Relations Concentration is an interdisciplinary program for undergraduates who have majored in fields ranging from anthropology and economics, agriculture, trade, finance, and government service, among others. They have gone on to work in international and non-governmental organizations, in cross-cultural affairs, in journalism, and in education.

The International Relations Concentration is not a major or a department, but rather a program offering a selection of courses tailored to specific interests. Students should take note that these lists are not necessarily complete. Other courses throughout the university can qualify for the International Relations Concentration by arrangement.

Course List for Fall 2002

For course list for spring 2003, contact IRC program in fall of 2002. Courses with the brackets are core courses for each group but not offered in fall 2002.

Group 1: International Economics and Development

Core:
ECON 361 International Trade Theory
ECON 230/AEM 230 International Trade and Finance
ECON 263/AEM 430 International Trade Policy
ECON 362 International Monetary Theory and Policy

Electives:
ECON 371 Economic Development
ECON 425 Economic History of Latin America

requirements of the IR Concentration, including the language requirement.

Course Requirements

These requirements are designed to expose students to a broad range of perspectives in international relations while allowing them to tailor their course selections to specific interests. Courses throughout the university are grouped into four subject areas including:

1) International Economics and Development;
2) World Politics and Foreign Policy;
3) Transnational Processes and Policies;
4) Cultural Studies.

Within these four subject areas, courses are also identified as "core" or "elective." Starting with the Class of 2003 and for current students who have not been enrolled in the program by the end of spring 1999, students must complete altogether eight courses from the four groups according to one of two strategies. Option A emphasizes the politics and economics of international relations. Option B puts greater stress on culture. In choosing either option, students should ensure that they acquire familiarity with more than one geographic region or country. All courses used to fulfill the concentration requirements must be taken for a letter grade.

Courses can count both toward a major and the International Relations Concentration.

Option A—One core course from Groups 1, 2, 3, and 4—One elective from Groups 1, 2, 3, and 4

Option B—One core course from Groups 1, 2, 3, and 4—One elective from either Group 1 or Group 2—One elective from Group 3 and 4, and one additional elective from either Group 3 and Group 4

Prior to pre-registration a course list for the following semester (as well as lists for the current and previous semesters) can be obtained from the administrative coordinator, Hyeok Yong Kwon, hyk1@cornell.edu, 156 Uris Hall, as well as from the website. Students should take note that these lists are not necessarily complete. Other courses throughout the university can qualify for the International Relations Concentration by arrangement.

D. Starr.
For description, see NES 401.
The colleges and the school served by the Institute accept first-year writing seminars in fulfillment of their individual graduation requirements in categories referred to variously as "first-year writing," "oral and written expression," and "writing." The Institute does not decide whether students may graduate; it makes courses available. Individual colleges and schools administer their own graduation requirements.

Currently, most undergraduate students are required to take two first-year writing seminars. A seminar, however, need only one. Hotel students fulfill their requirement through H ADM 165, which should be taken with H ADM 205 during the first two semesters at Cornell. Agriculture and Life Sciences students can take first-year writing seminars or choose from among a variety of other courses to fulfill their requirement.

All students who score "4" or "5" on the Princeton Advanced Placement Examination in English receive three credits. Such credits are awarded automatically; no application to the John S. Knight Institute or the Department of English is necessary. How these credits may be applied to first-year writing or other distribution requirements depends on the student's college and score. All students who score "4," except Architecture majors, may apply their three credits towards the writing requirements of their college. Students who score "4," only Agriculture and Life Sciences students and Industrial and Labor Relations students may apply their three credits toward the writing requirements of their college. Students should always consult their college registrars to be certain that they understand their writing requirements.

Students who have already taken a first-year writing seminar, or who score "4" or "5" on the Princeton AP exam, or "700" or better on the English Composition or CEEB tests, may enroll, space permitting, in the following upper-level first-year writing seminars: ENGL 270, 271, or 272.

Although there are no exemptions from college writing requirements, some students may fulfill all or part of their college's writing requirement through credits or writing-course substitutions.

For work done at other institutions to be accepted as equivalent to first-year writing seminars, students should demonstrate that they have done a reasonably equivalent amount of writing in a formal course. (It is not sufficient to write, for example, one 30-page term paper.) Students in the College of Engineering and the College of Arts and Sciences must file an "application for transfer evaluative letter" and any writing credit for such courses; students in other colleges should consult their college registrars.

In unusual circumstances, upper-level students may petition to use a Cornell writing course other than a first-year writing seminar to satisfy part of their writing requirement. The John S. Knight Institute must approve all such petitions in advance.

For information about the requirements for first-year writing seminars and descriptions of seminar offerings, consult the John S. Knight Institute brochure, available from college registrars in August for the fall term and on the web in late October for the spring term.

English 288-289: Expository Writing

English 288-289, "Expository Writing," helps students write with more confidence and skill in all disciplines. Open to Cornell sophomores, juniors, and seniors, ENGL 288-289 courses explore themes shaped by a genre or use of expository writing, by the common concerns of several disciplines, or an interdisciplinary topic intimately related to the written medium. Although English department instructors make up roughly half the staff, the Knight Institute's involvement enables the course to extend and diversify its offerings in a more broadly defined, 16-member sections that appeal to the varied interests and needs of students in many areas of study. Students may choose among a variety of sections focusing on such themes as "Minding the Body," "The Essay: Personal to Public," "Issues, Audiences, and Ourselves," "Reading the News, Understanding the Media," and "Myths of the City." All staff are selected because their special interests and their teaching and experience in First-Year Writing Seminars promise original course design and superior performance.

Sophomore Seminars

In fall 2001, the Knight Institute launched the first set of courses in its Sophomore Seminars initiative, a distinctive feature of the Institute's program sponsored by the Institute that involves a wide range of disciplines across the Arts College and the University. Building on the introductory exposure to discipline-specific approaches to writing, students in their two required First-Year Writing Seminars, Sophomore Seminars will offer students the opportunity to benefit from early mentoring experiences in small, faculty-taught classes that will help them prepare for the more advanced, increasingly specialized work in which they will be engaged in their chosen fields as juniors and seniors. With a limited enrollment of 15 students per class, each Sophomore Seminar is intended to serve as a gateway course to a particular major within an expressly interdisciplinary context. The first six Sophomore Seminars were offered in academic year 2001–2002. Additional seminars will be offered each fall, with a total of 30 seminars annually by 2006.

Writing in the Majors

Spanning the humanities, social sciences, and sciences, the Knight Institute's upper-level, Writing in the Majors courses do not satisfy formal writing requirements, and faculty participation is entirely voluntary. While all Writing in the Majors courses include extensive writing, usually with guided revision, they also emphasize other forms of active, interactive learning, such as scholarship and careers in the disciplines.

Writing in the Majors initiatives have included individual and collaborative research projects, collaborative writing, oral presentations, group oral exams, field studies, authentic student-designed laboratory experiments, debates, analytical and critical reading exercises, topical symposia, conversation groups, student-led discussions, poster sessions, and many kinds of informal writing, including online exchanges. Varying radically in design and size, from enrollments of fewer than 10 students to more than 300, Writing in the Majors courses over the past thirteen years have involved collaboration with 100 faculty members and more than 150 graduate teaching assistants to enrich learning in 63 upper-level courses offered in 22 departments.
Teaching Writing

Each summer and fall, the Institute offers instruction in the teaching of writing to new staff members in the first-year writing seminars and other interested instructors. Teaching Writing, offered in the summer or fall, is primarily a course for graduate students. The program also sponsors a summer apprenticeship program for a limited number of graduate students, and a summer seminar for faculty members interested in the teaching of writing.

WRIT 700  Teaching Writing

Summer and fall. 1 credit. S-U grade only. Teaching Writing introduces new instructors of Cornell’s First-Year Writing Seminars to the challenges of teaching writing in courses that both introduce students to particular fields of study and develop the sophisticated writing skills students will need throughout their undergraduate careers and beyond. An overview of methodologies involved in the teaching of writing within a disciplinary context is provided by readings representing a range of pedagogical theories and practices, seminar discussions, and presentations of faculty, visiting scholars in the field, and experienced TAs. Participants in the course prepare written assignments designed to prepare them for the actual work of their First-Year Writing Seminars. In addition, written critiques and explanatory rationales of those assignments provide an opportunity for reflection on the methods chosen and on the principles underlying them.

Writing Workshop

The John S. Knight Institute offers “An Introduction to Writing in the University” for first-year students (or transfer students needing writing credit) through the Writing Workshop. This course is designed for students who have had little training in composition or who have serious difficulty with writing assignments.

WRIT 137 and 138 are graded S-U only, and students receiving a grade of S are granted credit toward their college writing requirement. Students who think this course might be appropriate, including non-native speakers of English scoring less than 600 on the Test of English as a Foreign Language (TOEFL), should attend the assessment sessions offered by the Writing Workshop during orientation week each fall. The Workshop also offers a Walk-In Service (see below) to help students work on writing assignments. The director is Joe Martin, senior lecturer in the Writing Workshop. The Workshop offices are in 174 Rockefeller Hall, 255-6349.

The Walk-In Service

Through the Walk-In Service, the Writing Workshop offers tutoring assistance in writing to any student who needs help with a writing project. The Walk-In Service has tutors available during the academic year in 174 Rockefeller and north- and south-campus residential areas. The director is Mary Gilliland. For information contact the Writing Workshop, 174 Rockefeller Hall, 255-6349.

WRIT 137-138, 134  An Introduction to Writing in the University

137, fall; 138, spring; 134, summer. 3 credits each term. Each section limited to 12 students in the fall and spring, 6 students in the summer. S-U grades only. Prerequisite: permission of instructor.

This writing seminar is designed for students who need more focused attention to master the expectations of academic writing. The course emphasizes the analytic and argumentative writing and critical reading essential for university-level work. With small classes and weekly student/teacher conferences, each section is shaped to respond to the needs of students in that particular class.

WRIT 139-239  Special Topics in Writing

Fall, spring. 139, graduate students only; 239, graduate students only. 3 credits. S-U grades only. Cannot fulfill any writing requirement by distribution requirements. Prerequisite: permission of instructor. These courses allow students the opportunity to resolve significant writing challenges that have interfered with their academic progress. Students must have ongoing writing projects on which to work. Instruction is in weekly tutorials. Interested students should come to 174 Rockefeller for more information.

LATIN AMERICAN STUDIES

190 Urbs Hall

The Latin American Studies Program encourages and coordinates faculty and student interests in Latin America. A variety of special lectures, films, and seminars supplement the regular course offerings. Graduate students may pursue a minor in Latin American Studies, while majoring in the field of their choice.

Undergraduate Concentration

Undergraduate students may fulfill a Latin American Studies Concentration by completing a minimum of 15 credits in Latin American Studies courses combined with language proficiency in Quechua, Spanish, or Portuguese. Latin American courses are offered in the College of Agriculture and Life Sciences; the College of Architecture, Art, and Planning; the College of Arts and Sciences; the College of Human Ecology; the School of Hotel Administration; and the School of Industrial and Labor Relations.

For further information and a current course listing, students should contact the program office at 255-3345, or visit 190 Urbs Hall.

Latin American Studies Core Courses

It is strongly recommended that undergraduate concentrators take the interdisciplinary core course, SPANL 320/LASP 301/ANTHR 340 Perspectives on Latin America. Particular attention is drawn to the following courses that students have taken in the past to complete requirements for the undergraduate concentration or the graduate minor. Other courses may be substituted with the approval of the adviser.

ANTHR

204  Ancient Civilizations
333  Ethnology of the Andean Region
340  Perspectives on Latin America
355  Archaeology of Mexico and Central America
382  Latin America: An Anthropological Perspective
433  Andean Ethnology Thought and Culture
456  Mesoamerican Religion, Science, and History
485/685  Mothers, Priests, Rebels and Indian Chiefs: New Social Movements in Latin America
487  Field Research Abroad—Cornell-Honduras Program
499  The Amazonian Imagination: Reflections on the Savage State
637  Social Movements, Human Rights and Democracy in Latin America
638  Contemporary Gender Issues in the Americas
565  Maya History

ARKEO

355  Archaeology of Mexico and Central America

AS&RBC

451  Politics and Social Change in the Caribbean
455  Caribbean Literature
530  Womanist Writing Africa and Caribbean

COM L

482  Latin American Women Writers

CRP

371  Cuba: The Search for Development Alternatives
453/683  Environmental Aspects of International Planning
395/679  Latin American Cities
616  Globalization and Development
670  Regional Planning and Development in Developing Nations
671  Seminar in International Studies and Planning

ECON

425  Economic History of Latin America
468  Economic Problems of Latin America
748  Issues in Latin American Development

**LATINO STUDIES PROGRAM**

434 Rockefeller Hall

The Latino Studies Program is an interdisciplinary academic program that focuses on the contributions, concerns, and welfare of those persons of Latino origin who reside in the United States. It includes support for historical, linguistic, literary, social, economic, and political studies of this diverse group of Americans. To this end the program objectives are (1) to expand the available course curriculum by providing both undergraduate and graduate courses pertaining to Latino subject matters; (2) to enlarge the size of the Latino faculty at Cornell through permanent appointments visiting scholars, and post-doctoral fellowships; and (3) to enhance the academic environment on campus through support of such activities as lectures, conferences, seminars, exhibits, and research activities.

### Undergraduate Concentration

The Latino Studies Program offers an undergraduate concentration in Latino Studies which consists of an interdisciplinary course of study primarily in history, sociology, anthropology, literature and language. To complete the concentration, students must take at least five courses (minimum total of 15 credits) in Latino Studies, including "Latinos in the United States" (LSP 201/ SOC 265) offered each spring semester. Students are required to include at least two courses at the 300 or 400 level. Students who are interested in the concentration must meet with the LSP adviser, senior lecturer Loretta Carrillo, and file an application with the Latino Studies Program office by the beginning of their junior year. A maximum of one independent study, which requires the approval of the LSP adviser, will be accepted to fulfill the requirements of the concentration. The FWS does not count towards fulfilling concentration requirements. Courses must be completed with a letter grade of C or above.

### Graduate Minor

Students wishing to complete a graduate minor in Latino Studies need to formally register with the Latino Studies Program office, take an upper level course (400/600) tentatively entitled "Introduction to Latino Studies: History and Methodologies," and work intensively with a faculty member outside of their major field. Over the course of their study they will be expected to take two other Latino Studies graduate or advanced undergraduate courses outside of their major field. In lieu of available courses, the student and his or her minor field adviser may design a special petition in a paper given at a conference or presented for publication. Each special project requires the approval of the director of graduate studies for the minor field. In addition, graduate students will participate in the annual Latino Studies Colloquium. Upon completion of the minor, students receive a Certificate from the program. Students wishing to pursue the Graduate Minor Field in Latino Studies must file an application with the Latino Studies Program, 434 Rockefeller Hall.

### Library

The Latino Studies Program Resource Center in 432 Rockefeller Hall serves Cornell students, faculty, staff, and the wider local community. The Resource Center maintains print and media material pertinent to U.S. Latino issues and also provides a meeting space for more than 25 Latino student organizations.

### Courses

**LSP 100 Introduction to World Music: Africa and the Americas (also MUSIC 103)**

Exploration of folk, popular, and traditional genres of the Western Hemisphere, particularly the African diaspora. The course examines both the elements of musical styles and the features of society that influence music. Listening assignments are major components of the course.

**LSP 110 Introduction to American Studies: New Approaches to Understanding American Diversity: The Twentieth Century (also AM ST 110)**

This course examines American national life in the twentieth century and asks questions about the changing meaning of national identity. What does it mean to be an American in the twentieth century? What does it mean to assimilate? Can one assimilate structurally and yet maintain a distinct cultural identity? In what ways do racial and ethnic perceptions structure political, economic, and cultural life? This is a team-taught interdisciplinary course in which students analyze historical, literary, and cultural evidence in exploring these and other issues.

**LSP 201 Latinos in the United States (also SOC 265 and RSO 266)**

Exploration and analysis of the Hispanic experience in the United States. An examination of sociohistorical background and economic technology, and political factors that converge to shape a Latino group identity in the United States. Perspectives are suggested and developed for understanding Hispanic migrations, the plight of Latinos in urban and rural areas, and the unique problems Latinos (400/600) face. Groups studied include Mexican Americans, Dominicans, Cubans, and Puerto Ricans.

**LSP 202 Spanish for English/Spanish Bilinguals (also SPANR 200)**

Fall and spring. 3 credits. T R 11:40-12:55. N. Maldonado-Mendez.

A course designed to expand bilingual student's knowledge of Spanish providing them with ample opportunities to develop and improve each of the basic language skills.

**LSP 203 Comparative Migration to the Americas (also HIST 202 and AM ST 204)**

This seminar examines migration both within and to the Americas in the nineteenth and twentieth centuries. Topics discussed include the reasons for population movements; immigration policies; social, economic, and political accommodation; nativist and restrictionist responses; and women and migration, remittances, and transnationalism. Among the different countries studied are Argentina, Brazil, Canada, Cuba, Mexico, and the United States.
LISP 240 Survey in U.S. Latino Literature (also ENGL 240)
M. P. Brady.

LISP 246 Contemporary Narratives by Latina Writers (also SPANL 246, WOMENS 246)
Fall. 3 credits. T-TH 1:25–2:40. J. Carrillo.
This course offers a survey of narratives by representative Latina writers of various Latino ethnic groups in the United States including Chicana, Chicanos, Cuban, Dominican, and Puerto Rican. We investigate the parallel development of a Latina perspective on personal, social, and cultural issues alongside that of the U.S. ethnic liberation/revitalization movements of the 1960s through to contemporary feminist activism and woman of color movements. We investigate these works as artistic attempts to deal with such issues as culture, language and bilingualism, family, gender, sexuality, and domesticity. We account for regional distinctions and contributions. Readings include works by Julia Alvarez, Gloria Anzaldúa, Elena Castedo, Ana Castillo, Denise Chávez, Sandra Cisneros, Judith Ortiz Cofer, Cristina García, Nora Glickman, Nicholasa Mohr, Cherríe Moraga, Archy Obejas, Esmeralda Santiago, Ana Lydia Vega, and Helena María Viramontes.

LISP 250 U.S. Culture and Mexican Americans, 1848–Present (also HIST 256, AM ST 257)
Fall. 4 credits. TR 1:25–2:40. J. Cardenas.
This course explores the different political and cultural interactions between dominant ideologies of nationalism, race, and ethnicity in the United States, and Mexican Americans. We explore these questions of national identities in conjunction to gender, class, and political discourses, and use both primary sources and secondary sources in our course.

LISP 260 Introduction to U.S. Latino History, Part I (also HIST 260, AM ST 259)
M. C. Garcia.

LISP 261 Introduction to U.S. Latino History, Part II (also HIST/AM ST 260)
M. C. Garcia.
This course, part II of a two-semester sequence, introduces students to the history of Latinos in the United States. In LISP/HIST/AM ST 261 we focus on Puerto Ricans, Cubans, and the Dominicans in the United States. (LISP/HIST 260, AM ST 259 focuses on Mexican Americans/Chicanos and Central Americans.) Among the topics addressed are: historical immigration patterns and reasons for migration, the social and political events that shaped the evolution of these communities; the role of cultural identity, race, class, and gender in shaping experience; and the intersection of U.S. foreign policy and immigration policy.

LISP 291 Minority Politics in the United States (also GOVT 319)
M. Jones-Correa.
In 1965 the landscape of American politics changed dramatically with the passage of the Voting Rights Act. That same year, Congress passed the Immigration Reform Act, which though little heralded at the time, arguably has had equally profound effects. This course provides a general survey of minority politics in the United States, focusing on the effects of these two key pieces of legislation. The course highlights the relationships between immigrants and minorities, electoral politics, and protest politics, as well as the interaction between minority politics and American politics as a whole.

LISP 366 Spanish in the United States (also LING 366 and SPANR 366)
This course provides an examination of major Spanish dialects in the United States from a linguistic perspective. Contrast is made to the standard language. Topics include borrowing, interference, and code switching. Special emphasis is on syntactic, morphological, and phonological characteristics.

LISP 377 The United States (also ANTH/RAMST 377)
V. Santiago-Irizary.
The anthropological inquiry into one's culture is never a neutral exercise. This course explores issues in the cultural construction of the United States as a "pluralistic" society. We look at the ideological context for the production of a cultural profile predicated upon ideas that are intrinsic to American images of identity such as individualism, freedom, and equality and the way these are applied in practice. The course readings include historic documents and accounts, popular writings, and recent ethnographies on the United States.

LISP 386 Third Cinema (also FILM 386)
Spring. 4 credits. Prerequisite: previous course in film history or analysis helpful, though not mandatory. Time/day TBA. A. Villarejo.
This course explores postcolonial film and video through the rubric of "third cinema." We investigate the diverse historical, national, political, and generic commitments of films from Africa, South Asia, U.S. Latino, Latin America, and the United Kingdom. Readings in film andioclastic theory guide our critical analyses of the film.

LISP 396 U.S. Latino Prose Fiction (also SPANL 396)

LISP 398 Latina/o Cultural Practices (also ENGL 398)
M. P. Brady.
This course explores Latina/o cultural work ranging from zines to comic books, architecture to film, music to sculpture, musicals to spoken word, theater to Internet sites. We consider how this work emerges in the context of U.S. engagements with Latin America and in the context of struggles for social and ethnic equality among ethnoracial groups in the U.S. We consider therefore the production of stereotypes (particularly in the nineteenth century) and the ongoing efforts of contemporary artists to dispel such stereotypes, to work along side them and to rework them. We also consider the relationship between cultural production, representation, and public policy. U.S. Latina/o history is strongly recommended as a prerequisite, but not required.

LISP 403 After Immigration (also S HUM 403, SPAN L 403)
D. Castillo.
Beginning with a close reading of Michael Jones-Correa’s seminal study of Latinos in New York, Between Two Nations, we focus class discussion on recent Latin American immigration to the United States through two complementary perspectives and meditations on the immigrant experience that of the individuals who have arrived in the U.S., and that of individuals who have chosen to remain in the countries of origin. The class studies films like Neuve Yol y Jardin de Eden, Latin American authors like Carlos Fuentes, Ana Lydia Vega, and Ariel Dorfman, and U.S. Latinos like Julia Alvarez, Francisco Goldman, and Cristina Garcia. Students are encouraged to do individually-tailored research projects that may include an autobiographical or ethnographic perspective as well as literary analysis and theoretical inquires.

LISP 406 The Immigrant City: 1900–2000 (also S HUM 406, AM ST 406, HIST 412)
M. C. Garcia.

LISP 420/421 Undergraduate Independent Study
Fall and spring. 2–4 credits. Permission of instructor. Guided independent study.

LISP 424/624 Ethnic Identity in Anthropology, Language, and Law (also ANTHR 424/624)
Spring. 4 credits. Time/day TBA. V. Santiago-Irizary.
This course will examine the role that both law and language, as mutually constitutive mediating systems, occupy in constructing ethnoracial identity in the United States. We will approach the law from a critical anthropological perspective, as a signifying and significant sociocultural system rather than as an abstract collection of rules, norms, and cultural production and reproduction that contribute to the construction and maintenance of differential power relations. Course material will draw on anthropological, linguistic, and critical race theory as well as ethnographic and legal material to guide and document our analyses.

LISP 430 Immigrants, Membership and Citizenship (also GOVT 427, AM ST 430) 4
Fall. 4 credits. T 10:10–12:05.
M. Jones-Correa.
Immigrants are increasingly important players in the politics and economies of industrialized societies. However, in many cases despite their residence in these societies, their membership and citizenship status is often in question. At times migrants are undocumented, living and working at the fringes of the protections and regulations afforded by the legal system. Or they may petition to enter as refugees, having to prove their right to stay. Even if residing permanently, immigrants may still not be citizens of their receiving country, or if they are, they may have dual nationality. This course explores the complications of membership and citizenship among immigrants, refugees and immigrants, focusing largely on immigration to the United States.
LSP 462 Between Aztlán and Queens: Latina Culture in the Making of Space (also ENGL 462)
M. P. Brady.
How do cultural practices like music and film produce space? What do freeways, zoning laws, advertising codes, and hiking trails have to do with literature? How have changing urban demographics and immigration shaped, even “Latinized,” cities, and how have these changes been reflected or restricted in Latino cultural production? How does paying attention to space change our reading practices? This interdisciplinary course examines these questions and explores how place and space shape Latina cultures and how Latina cultures shape place and space.

We draw from scholarship in fields such as urban planning, law, architecture, geography, anthropology, literature, and history. Students should plan to do extensive reading, write two to three papers, and produce a substantial research paper.

LSP 610 Political Identity: Race, Ethnicity, and Nationalism (also GOVT 610)
M. Jones-Correa.
The social sciences generally treat ethnicity, nationalism and race as descriptive categories or variables, while avoiding actually defining these categories, or thinking about how they should be used. How should we go about describing ethnicity, nationalism, and race? Should we treat them as primordial or as social constructions? Much of the recent literature suggests the latter. If constructed, by whom are they constructed (or by what)? What constrains/structures these constructions? What purposes do these constructions serve? Whom do they serve? Are some constructions better representations of identity than others, and what does this mean? How should we go about applying these categories in political analysis?

LSP 620/621 Graduate Independent Study
Fall, spring. 2 to 4 credits. Permission of instructor. Guided independent study.

LSP 660 Latino Languages, Ideology, and Practice (also ANTHR 660)
V. Santiago-Irizarry.
Cultural identity and citizenship in the United States have often been organized around linguistic difference and the issues this raises in an English-dominant society. Drawing from anthropological theories on language, this course looks at the place of language as a signifying space in the United States by focusing on the experience of Latino communities. Topics explored include linguistic diversity and change, accommodation and resistance, language maintenance and shift, linguistic ideologies, the production of language hierarchies, and institutional applications of language.

LSP 693 Gender, Globalization and Latina/o Literature (also ENGL 693)
Fall. 4 credits. M. L. A. Brydges.
It is customary to date globalization as beginning at the end of World War II with the ensuing rapidity of an international “development” and “modernization,” the proliferation of transnational corporations, the end of the Cold War, and the crafting of the “geopolitical control model” as Venezuelan Sociologist Rosa del Olmo terms it. Alternatively, globalization might be dated to the development of a mercantile system centered upon slavery. Such a contrapuntal account offers a reminder that what Anthony Giddens calls global capitalism’s “emerging world market in labour” or what Rachele Parreñas refers to as the new “international division of reproductive labor” has perhaps a longer history. This definition also has the advantage of drawing into the conversation about globalization a broader spectrum of public intellectuals including Phyllis Wheatley, Herman Melville, José Martí, Maria Amparo Ruiz de Burton, Ignacio Bonilla, and other nineteenth century thinkers. This course begins by studying their insights into the production of (racialized) gender within a world-labor-market system and then narrow its focus to concentrate on the particular analyses provided by Latina/o writers and artists including Denise Chavez, Hector Tobar, Francisco Goldman, Reinaldo Arenas, Alma Lopez, Ana Mendieta, Dianne Gambaño, and Laura Alvarez. Each offers a critique of socio-economic change through the lens of gender by complicating the notions of flexible citizenship and cosmopolitanism championed by many theorists of globalization (whom we also study, including Ong, Sassen, Castells, Giddens, Massey, Cheah, Sub. Marcos, and others). Put differently, this course analyzes how many Latina/o authors, and their precursors, illustrate the fissures and faultlines of a neoliberalism emerging as a new form of civilization.

LAW AND SOCIETY

M. Fineman, co-director, 208 Myron Taylor Hall, 255-2622, fineman@law.mayo.cornell.edu; Arni Marie Smith, co-director, 101 McGraw Hall, 255-2708, amas@cornell.edu; D. A. Dunning (psychology), G. Hay (economics), P. Hyams (history), R. Lieberwitz (ILR), R. Miller (philosophy), M. B. Norton (history), R. Pollenbger (history), D. Powers (Near Eastern studies)], J. Rahbin (government), V. Santiago-Irizarry (anthropology), P. Sawyer (English), H. Shue (ethics and public life).

The Law and Society Program offers an interdisciplinary concentration for undergraduates who are interested in the law from the perspectives of the social sciences and the humanities: anthropology, comparative literature, economics, government, history, philosophy, psychology, science and technology studies, and sociology. Students who wish to graduate with a concentration in law and society are strongly encouraged to apply in the fall of their junior year to allow ample time to fulfill the event attendance requirement. Applications will not be accepted after the fall semester of a student’s senior year.

Upon submission of a completed application, each student will receive email confirmation of their acceptance into the concentration and a Law and Society Advisor will be assigned. Advisors help to plan a coherent program of study made up of four of the approved courses. At least two of the courses should fall outside the student’s major and only two can be within the same subject area. Particular attention is drawn to GOVT 313 and PSYCH 265, which past students have often taken.

Courses not currently on the list may be substituted with approval of the advisor.

All students must attend at least four Law and Society sponsored events. Each student in the program will be added to an email list through which event announcements and other pertinent information will be circulated. The Law and Society Program is an activity of the Program on Ethics and Public Life. Inquiries can be directed to: the EPL Administrative Assistant, 240 Goldwin Smith Hall, 255-8515, epl@cornell.edu.

LESBIAN, BISEXUAL, AND GAY STUDIES

The field of Lesbian, Bisexual, and Gay Studies is devoted to the interdisciplinary study of the social construction of sexuality. LBG Studies is founded on the premise that the social organization of sexuality is best studied from the perspectives offered by those positions that have been excluded from established cultural norms.

In addition to offering a graduate minor, the field of LBG Studies offers an undergraduate concentration, which is administered under the auspices of the Women's Studies Program and is hence crosslisted and which consists of four courses from the LBG Studies subset. To qualify for the concentration, courses must devote a significant portion of their time to sexuality and to questioning the cultural and historical institution of exclusive heterosexuality. Students selecting their four courses from the LBG Studies subset must identify their concentration as either LBG Studies or Women's Studies; they cannot double-count their credits and thereby use the same courses for both concentrations.

Students interested in the LBG Studies concentration should contact the Lesbian, Bisexual, and Gay Studies Office in 379 Uris Hall.

Courses

ANTHR 200 Cultural Diversity and Contemporary Issues
Fall. 3 credits. A. Wilford.
For description, see ANTHR 200.

ANTHR 321/621 Sex and Gender in Cross-Cultural Perspective (also WOMNS 321/631)
Fall. 4 credits. K. March.
For descriptions, see ANTHR 321/621.

ENGL 178 FWS: Queer Theory (also WOMNS 178)
Spring. 3 credits. E. Hanson.
For description, see ENGL 178.

ENGL 276 Desire (also WOMNS 276)
Spring. 4 credits. E. Hanson.
For description, see ENGL 276.

[ENGL 278 Queer Fiction (also WOMNS 279)]

[ENGL 327 Shakespeare: Gender and Society (also WOMNS 327)]

ENGL 355 Decadence (also WOMNS 355)
Fall. 4 credits. E. Hanson.
For description, see ENGL 355.

[ENGL 395 Video: Art, Theory, Politics (also THETR 395)]

[ENGL 424 Studies in Renaissance Lyric

[ENGL 608 Seminar in Cultural Studies: Race, Drugs and Gender

ENGL 651 The Sexual Child (also WOMNS 651)
Fall. 4 credits. E. Hanson.
For description, see ENGL 651.

[ENGL 654 Queer Theory (also WOMNS 654 and COM L 654)]

[ENGL 655 Decadence (also WOMNS 655 and COM L 655)]

[ENGL 660 Cinematic Desire (also AM ST 662 and WOMNS 661)]

[ENGL 703 Theorizing Film: Race, Nation, and Psychoanalysis (also FRLIT 695)]

[FRLIT 493 French Feminisms (also WOMNS 493)]

[GERST 413 The Women around Freud

[GERST 614 Gender at the Fin-de-siècle

[GOGV 353 Feminist Movements and the State (also WOMNS 353)]
For description, see THETR 339-

THETR 637 Seminar in Dramatic Theory
For description, see THETR 637 Seminar in Dramatic Theory

LING 170, Introduction to Cognitive Science; LING 285, Linguistic Theory and Poetic Structure) or focus on the linguistics of a particular geographic region or historical development of particular languages (e.g., LING 217, History of the English Language; LING 239, The Celtic Languages). Some of these courses also fulfill the breadth requirements.

Talks and discussions about linguistics are offered through the Undergraduate Linguistics Forum and the Linguistics Colloquium (sponsored by the department and the Cornell Linguistic Circle). These meetings are open to the university public and anyone wishing to learn more about linguistics is most welcome to attend.

The Major
For questions regarding the linguistics major, contact Professor Wayne Harbert (210 Morrill Hall, 255-8441, wh@cornell.edu).

The prerequisite for a major in linguistics is the completion of LING 101 and either LING 201 or 203. The major has its own language distribution requirement. Most 100-level courses fulfill the social science distribution requirement. Most 200-level courses fulfill the social science distribution requirement. Most 300- and 400-level courses have no prerequisites and cover various topics in linguistics (e.g.,

LINGUISTICS
S. McConnell-Ginet, acting chair—fall (206 Morrill Hall); J. Bowers, acting chair—spring (214 Morrill Hall); D. Zec, director of graduate studies (219 Morrill Hall); W. Harbert, director of undergraduate studies (210 Morrill Hall).

Linguistics, the systematic study of human language, lies at the crossroads of the humanities and the social sciences, and much of its appeal derives from the special combination of intuition and rigor that the analysis of language demands. The interests of the members of the Department of Linguistics and linguistic colleagues in other departments span most of the major subfields of linguistics: phonetics and phonology, the study of speech sounds; syntax, the study of how words are combined; semantics, the study of meaning; historical linguistics, the study of language change over time; and sociolinguistics, the study of language's role in social and cultural interactions.

Studying linguistics is not a matter of studying many languages. Linguistics is a theoretical discipline with ties to such areas as cognitive psychology, philosophy, logic, computer science, and anthropology. Nonetheless, knowing particular languages (e.g., Spanish or Japanese) in some depth can enhance understanding of the general properties of human language. Not surprisingly, then, many students of linguistics owe their initial interest to a period of exposure to a foreign language, and those who come to linguistics by some other route find their knowledge about languages enriched and are often stimulated to embark on further foreign language study.

Students interested in learning more about linguistics and his relationship to other disciplines in the humanities and social sciences are encouraged to take Linguistics 101, a general survey, which is a prerequisite for most other courses in the field, or one of the first-year writing seminars offered in linguistics (on topics such as metaphor and the science of language). Linguistics 101 and other introductory courses fulfill the social science distribution requirement. Most 100- and 200-level courses have no prerequisites and cover various topics in linguistics (e.g.,
will complete an honors thesis and take a final oral examination in defense of it. The thesis is usually written during the senior year but may be started in the second term of the junior year when the student's program so warrants. The oral examination will be conducted by the honors committee, consisting of the thesis adviser and at least one other faculty member in linguistics. Members of other departments may serve as additional members if the topic makes this advisable. LING 493 and 494 may be taken in conjunction with thesis research and writing but are not required.

First-Year Writing Seminars
For descriptions, consult the John S. Knight brochure for times, instructors, and descriptions.

Courses
**LING 101 Introduction to Linguistics (III)**
Fall or spring. 4 credits each term. Fall. C. Collins; spring. W. Harbert.
An introductory course designed to provide an overview of the science of language, especially its theoretical underpinnings, methodology, and major findings. The course focuses on the basic analytic methods of several subfields of linguistics including phonetics, phonology, morphology, syntax, semantics, language variation, language change, and psycholinguistics.

**LING 109 English Words: Histories and Mysteries (also CLASS 109) # (III)**
Fall. 3 credits. M. Weiss.
Where do the words we use come from? This course examines the history and structure of the English vocabulary from its distant Indo-European roots to the latest in technical jargon and slang. Topics to be discussed include formal and semantic change, taboo and euphemism, borrowing, new words from old, “learned” English loans from Greek and Latin, slang, and society.

**LING 131-132 Elementary Sanskrit (also CLASS 131-132 and SANSK 131-132)**
Not offered 2002-2003. For description, see SANSK 131-132.

**LING 170 Introduction to Cognitive Science (also COGST 101, COM S 101, PHIL 102, and PSYCH 102)**
Not offered 2002-2003. For description, see COGST 101.

**LING 201 Introduction to Phonetics and Phonology (III)**
Spring. 4 credits. Prerequisite: LING 101 or equivalent or permission of instructor. A. Miller-Ockhuizen, B. Moren.
An introduction to the study of human speech sounds and how the vocabulary of language is governed. The first part of the course focuses on the phonetics: the production, acoustics, and perception of speech, with attention to both the common and the less common sounds of the world’s languages. The second part of the course focuses on phonology: how human speech sounds pattern within and across languages, with an emphasis on the rules that govern these patterns and their possible representations.

**LING 203 Introduction to Syntax and Semantics (III)**
Fall. 4 credits. Prerequisite: LING 101 or equivalent or permission of instructor. M. Diesing.
This course focuses on language as a system of knowledge that enables native speakers to create and interpret the structures of their language. Part of the course considers issues of syntactic structure, such as the order of constituents, the hierarchical organization of grammars, and syntactic universals. The other part of the course focuses on meaning and interpretation, addressing such issues as the role of context, how information is structured, and how it is encoded in the syntax.

**LING 212 Language and Culture (III)**
We often assume that there is a close relationship between differences in language and cultural variation. This course focuses on that relationship, beginning with an examination of the linguistic relativity hypothesis, which posits a link between basic properties of languages and crosscultural differences in world view. We also examine potential cultural determinants of variation in language: pronouns and honorific systems, systems of ritual and taboo in language, and the impact of narrative organization on grammar. Special attention is paid to extreme forms of language: invented languages from Esperanto to Klingon; glossolalia and trance languages; language games and secret languages.

**LING 215/715 Psychology of Language (also PSYCH 215) (III)**
For description, see PSYCH 215.

**LING 217 History of the English Language (also ENGL 217) # (III or IV)**
Fall. 4 credits. W. Harbert.
This course explores the development of the English language from its Indo-European beginnings to the present. Topics covered include changes in sound, vocabulary and grammatical structure, regional dialects of English spoken in the British Isles and Europe, and World Englishes.

**LING 236 Introduction to Gaelic**
This course is an introduction to the history, structure, and current status of the Scottish Gaelic language; oriented around elementary Gaelic texts.

**LING 237 The Germanic Languages (III)**
This course surveys the history, structure, and use of the modern Germanic languages (English, German, Dutch, Afrikaans, Swedish, Danish, Icelandic, Norwegian, Faroese, and Yiddish).

**LING 238 Introduction to Welsh**
This course surveys the history, structure, cultural, and political situation of the Welsh language. It includes several sessions of elementary language instruction; and a brief introduction to Welsh literature.

**LING 239/539 The Celtic Languages (III)**
This course surveys the history, structure, and political and social situation of the Celtic languages (Welsh, Scottish Gaelic, Irish Gaelic, Breton, Cornish, and Manx). The course includes a few days of introductory language instruction in some of these languages.

**LING 241 Yiddish Linguistics (also JWST 271) (III)**
This course covers a wide variety of topics relating to the Yiddish language and Yiddish culture, including the structure of Yiddish, the history of the Yiddish language, Yiddish in America (the Yiddish revival, the role of the Yiddish press, etc.), Yiddish as a minority or dying language, and the influence of Yiddish on present-day American English. No previous knowledge of Yiddish required.

**LING 242 Diversity in American English (III)**
This course is a basic introduction to the regional dialects of English spoken in the United States. It is linguistically oriented, introducing the relevant aspects of phonetics, phonology, morphology, and syntax where appropriate. There is an emphasis on the students discovering what features characterize their own dialects (if they speak American English). The class is also of use as an introduction to American English dialects for nonnative speakers of English.

**LING 244 Language and Gender (also WOMNS 244) (III)**
Fall. 4 credits. For nonmajors or majors. S. McConnell-Ginet.
This course explores connections between language (use) and gender/sex systems, addressing such questions as the following: How do sex and gender affect the ways we speak, the ways we interpret and evaluate speech? How do sociocultural differences in women's and men's roles affect their language use, their relation to language change? What is meant by sexist language? How does conversation structure the social worlds of women and men? Readings draw from work in linguistics, anthropology, philosophy, psychology, literature, and general women's studies and feminist theory.

**LING 246/546 Minority Languages and Linguistics (III)**
Fall. 4 credits. Graduate students register under LING 546. W. Harbert.
This course examines minority languages from a linguistic, social, and political perspectives. Topics discussed include language death (according to some projections, the majority of the world’s languages are in danger of becoming extinct by the end of this century), language maintenance efforts and the reasons they succeed or fail, language contact, official languages, linguistic rights, and related issues. A range of specific case studies are introduced, and each student is expected to research and report on aspects of the history, current situation, and future prospects of a minority language of his or her choosing.

**LING 251-252 Intermediate Sanskrit (also CLASS 251-252 and SANSK 251-252) @ #**
Satisfies language proficiency.
For description, see SANSK 251-252.
LING 264 Language, Mind, and Brain (also COGST 264) (III)
Spring. 4 credits. For nonmajors or majors. Prerequisite: Basic course in linguistics and/or psychology is desirable. Not offered 2002–2003. J. Bowers.
An introductory course that emphasizes the formal structure of natural language and its biological basis. Following topics are covered: the formal representation of linguistic knowledge, principles and parameters of universal grammar, the basic biology of language, mechanisms of linguistic performance, the acquisition of language, and language and cognition. This is course is especially suited for majors in fields such as psychology, philosophy, computer science, and linguistics (and also for those enrolled in the concentration in cognitive studies) who want to take a one-semester introduction to linguistics that concentrates on the formal principles that govern linguistic knowledge, along with some discussion of their biological realization and their use in perception and production.

LING 270 Truth and Interpretation (also COGST 270 and PHIL 270) (III)
Not offered 2002–2003. For description, see PHIL 270.

LING 285/585 Linguistic Theory and Poetic Structure (also ENGL 296/585) (III or IV)
Fall. 3 credits. Graduate students register under LING 585. J. Bowers.
Poems are among the most highly structured linguistic objects that human beings produce. While some of the devices used in poetry are arbitrary and purely conventional, most are natural extensions of structural properties inherent in natural language itself. The aim of this course is to reveal the ways poetry is structured at every level, from rhyme to metaphor, and to show how certain results of modern linguistics can usefully be applied to the analysis and interpretation of poetry. After introducing some of the basic concepts of modern phonology, syntax, and semantics, it is shown how literary notions such as rhyme, meter, and metaphor can be formally defined. These results are then applied to the analysis of particular poems and shown to yield novel and interesting insights into both their structure and interpretation.

LING 300 Field Methods (III)
Spring. 4 credits. Prerequisites: LING 201 and 203 or permission of instructor. Not offered 2002–2003. Staff.
Elicitation, recording, and analysis of data from a native speaker of a non-Western language not generally known to students.

LING 301–302 Phonology I, II (III)
301, fall; 302, spring. 4 credits each term. Prerequisites: for LING 301, LING 201 or equivalent; for LING 302, LING 301 or permission of instructor. Fall, D. Zec; spring, B. Moren.
301 provides a basic introduction to phonological theory. The first half of the course focuses on two basic principles of phonology—patterns of sounds, and their representations. In the second half, the nature of syllable structure and feature representations are explored. 302 provides further refinement of the issues and concepts of 301, focusing in particular on metrical theory, Lexical Phonology, autosegmental phonology, and Prosodic Morphology.

LING 303–304 Syntax I, II (III)
303, fall; 304, spring. 4 credits each term. Prerequisites: for LING 303, LING 203; for LING 304, LING 303 or permission of instructor. C. Collins.
303 is an advanced introduction to syntactic theory within the Principles and Parameters/Minimalist framework. The topics covered include phrase structure, argument structure (unaccusative verbs, unergative verbs, double object constructions), principles of word order, and the binding theory. 304 is a continuation of 303, focusing on syntactic dependencies, including the theory of control, an examination of locality constraints on movement, covert versus overt movement, and the syntax of quantification. The purpose of the course is to develop the background needed for independent syntactic research.

LING 308 Readings in Celtic Languages
Fall or spring, depending on demand. 2 credits. Prerequisite: permission of instructor. W. Harbert.
Reading/discussion groups in Welsh or Scottish Gaelic.

LING 309 Morphology (III)
Fall. 4 credits. Prerequisite: LING 101 or equivalent or permission of instructor. B. Moren.
This course addresses the basic issues in the study of words and their structures. It provides an introduction to different types of morphological structures with examples from a wide range of languages. Special emphasis is given to current theoretical approaches to morphological theory.

LING 311 The Structure of English: Demystifying English Grammar (also ENGL 313) (III or IV)
Fall. 4 credits. M. Suter.
Do you suffer from grammatical insecurity? In foreign language classrooms, do you find yourself at a loss because you don’t know how grammatical terminology applies to English? This course makes English grammar accessible and comprehensible to native speakers who want to understand how the language they use so easily works. In addition to standard grammatical notions, the course considers dialectal variation, matters of style, how sentence structure conveys viewpoint, and other discourse phenomena.

LING 314 Introduction to Historical Linguistics (III)
Spring. 4 credits. Prerequisite: LING 201 or permission of instructor. M. Weiss.
A survey of the basic mechanisms of linguistic change, with examples from a variety of languages.

LING 315–316 Old Norse
315, fall; 316, spring. 4 credits each term. J. Sigtrygsson.
Old Norse is a collective term for the earliest North Germanic literary languages: Old Icelandic, Old Norwegian, Old Danish, and Old Swedish. The richly documented Old Icelandic is the center of attention, and the purpose is to help students gain knowledge of an ancient North Germanic language, important from a linguistic point of view, and gain access to the medieval Icelandic (and Scandinavian) literature. 315: The structure of Old Norse (Old Icelandic) syntax, morphological, and, with reading of selections from the Prose-Edda, a thirteenth-century narrative based on the Eddaic poetry. 316: Extensive reading of Old Norse texts, among them selections from some of the major Icelandic family sagas: Njal's saga, Grettis saga, and Egil's saga, as well as the whole Hrafnkels saga.

LING 319 Phonetics I (III)
Fall. 4 credits. Prerequisite: LING 201 or permission of instructor. A. Miller-Ochshuizen.
This course provides a basic introduction to the study of phonetics. Topics covered include anatomy and physiology of the speech production apparatus, transcription and production of some of the world's sounds, basic acoustics, computerized methods of speech analysis, acoustic characteristics of sounds, speech perception, speech synthesis, and stress and intonation.

LING 320 Phonetics II (III)
Spring. 4 credits. Prerequisite: LING 319. A. Miller-Ochshuizen.
This course is a continuation of Phonetics I and provides a more detailed survey of some areas in acoustic and articulatory phonetics. Topics include feature theory, vocal tract acoustics, quantal theory, speaker normalization, theories of speech perception, coarticulation, theories of speech production, and prosody. In addition, a number of "hands-on" projects are part of the course.

LING 321–322 History of the Romance Languages (also ROMS 321) (III)
321, fall; 322, spring, 4 credits each term. Prerequisites: LING 101 or equivalent and qualification in any Romance language. Offered alternate years. Not offered 2002–2003. C. Rosen.
321: Course covers: popular Latin, Pan-Romance trends in phonology, morphology, syntax, and the lexicon; Latin and Romance divergences; non-Latin influences; and medieval diglossia and emergence of Romance standards. 322: French, Italian, and Spanish from 850 to 1250 A.D. Analysis of texts. Overview of other languages to the present day. Elements of dialectology.

LING 323 Comparative Romance Syntax (also ROM S 323) (III)
Course survey of Romance syntax, covering the salient constructions in six languages with equal attention to their historical evolution and their current state. Grammatical innovation and divergence in a typological perspective.

LING 332 Philosophy of Language (also PHIL 332) (IV)
For description, see PHIL 332.

LING 333 Problems in Semantics (also PHIL 333 and COGST 333) (III or IV)
This course looks at problems in the semantic analysis of natural languages, critically examining work in linguistics and philosophy on particular topics of current interest. The focus is on quantification. Languages offer a variety of resources for expressing generalizations: some, every, no, and other quantifying expressions that appear inside noun phrases; always, never, not differently and other adverbial quantifying expressions not associated with particular nominals;
The course will treat specific topics in the English period—a period crucial to the linguistic history of the English language, selected on the basis of the particular interests of the students and the instructor. The topic area for 2000-2001 was morphological and syntactic change during the Early Middle English period—a period crucial to the development of the distinctive syntactic properties of Modern English.

LING 347 Topics in the History of English (III)
Spring. 4 credits. Prerequisite: LING 217, 314, a course in Old or Middle English, or permission of instructor. Not offered 2002-2003; next offered 2003-2004. W. Harbert.

The course will treat specific topics in the linguistic history of the English language, selected on the basis of the particular interests of the students and the instructor. The topic area for 2000-2001 was morphological and syntactic change during the Early Middle English period—a period crucial to the development of the distinctive syntactic properties of Modern English.

LING 366 Spanish in the United States (also SPANR 366 and LSP 366) (III)
Fall. 4 credits. Prerequisite: some knowledge of Spanish. Not offered 2002-2003.

Examination of major Spanish dialects in the United States from a linguistic perspective. Contrast with the standard language. Borrowing, interference, and code switching. Syntactic, morphological, and phonological characteristics.

LING 390 Independent Study in Linguistics
Fall or spring. 1-4 credits variable. Prerequisite: LING 101 or permission of instructor. Staff.

Independent study of linguistics topics not covered in regular curriculum for undergrads.

LING 401 Language Typology (III)
Spring. 4 credits. Prerequisite: LING 101 or equivalent introductory course in linguistics. Study of a basic question of contemporary linguistics: in what ways do languages differ, and in what ways are they all alike? Efforts to formalize universals of syntax and to characterize the typology of constructions available to natural languages. Common morphological devices and their syntactic correlates. Emphasis is on systems of case, agreement, and voice.

LING 402 Applied Linguistics and Second Language Learning (III)
Fall. 4 credits. Prerequisite: at least one course in applied linguistics, linguistics, psychology, anthropology, communication, cognitive studies, education, or literary analysis; or permission of instructor. Not offered 2002-2003; next offered 2003-2004.

This course is an introduction to the field of applied linguistics with focus on different domains of language research as they come to bear on the matter of second language learning. The course topics include developmental and experimental psychology of language, textual and discourse analysis, literary, cognitive consequences of bilingualism, corpora and language teaching, and contact between first and second language communities.

LING 404 Linguistic Structure of Japanese (also ASIAN 412) (III)
Spring. 4 credits. Prerequisites: JAPAN 102 or permission of instructor and LING 101 or equivalent introductory course in linguistics. Offered alternate years. J. Whitman.

Introduction to the linguistic study of Japanese, with an emphasis on morphology and syntax.

LING 405 Sociolinguistics (III)
Spring. 4 credits. Prerequisite: LING 101 or permission of instructor. R. Kim.

The principal work of linguistics is to describe, analyze, and understand the regularities of language systems. How, then, are we to deal with irregularities and variability when they are observed in language? This course introduces and discusses the most significant issues in the study of language variation and it examines some of the methodologies that have been developed to study variation in language use. We consider the observable interactions between linguistic variables and social factors (age, sex, ethnicity) and review the main generalizations about these factors that sociolinguistics has arrived at in the last three decades. Some of the problems associated with the quantification and measurement of nonlinguistic variation are discussed and we evaluate the various ways researchers have dealt with these problems.

LING 406 Ethnolinguistics (III)
Spring. 4 credits. Prerequisite: LING 101 or permission of instructor. Not offered 2002-2003; next offered 2003-2004.

This course is an introduction to the study of pidgin and creole languages and the issues surrounding them both in and beyond linguistics. Topics covered include: genesis of pidgins and creoles; classification of pidgins and creoles; creoles and language universals; creoles and sociolinguistic variation; a module on Saramaccan Creole English; educational and language planning issues; sociohistorical issues; Black English.

LING 407 Grammatical Structure of Spanish I (also SPANR 407) (III)
Fall. 4 credits. Prerequisite: proficiency in Spanish or permission of instructor. M. Suárez.

This course seeks to equip the advanced student or the future language professional with practical insights into problem areas for foreign language learners with the aid of linguistic descriptions. The intent is to narrow the gap known to exist between the knowledge that a native speaker has and the incomplete one that a foreign language learner possesses.

LING 408 Grammatical Structure of Spanish II (also SPANR 408) (III)
Spring. 4 credits. Prerequisite: LING 101 or permission of instructor. Offered alternate years. Not offered 2002-2003; next offered 2003-2004.

Survey of Spanish morpho-syntax using contemporary theoretical models to highlight hidden patterns and generalizations. Topics may vary according to students' interests, but may include major clause types, word order possibilities, negation, agreement, and null categories.

LING 409 Structure of Italian (III)
Fall. 4 credits. Prerequisites: LING 101 or equivalent and qualification in any Romance language. Offered alternate years. Not offered 2002-2003; next offered 2003-2004.

Survey of Italian syntax, using simple theoretical tools to bring hidden regularities to light. Topics include auxiliaries, modals, clitics, reflexive constructions, agreement, impersonal constructions, causatives.

LING 410 History of the Italian Language (III)
Spring. 4 credits. Prerequisites: LING 321 and either ITAL 201, 205, or equivalent. Offered alternate years. Not offered 2002-2003; next offered 2003-2004. C. Rosen.

Overview of Italian and its dialects from the earliest texts to the present day. Emergence of the standard language. External history and sociolinguistic circumstances.

LING 411 History of the Japanese Language (also ASIAN 411) (III)
Fall. 4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 2002-2003.

J. Whitman.

An overview of the history of the Japanese language followed by intensive examination of issues of interest to the participants. Students should have a reading knowledge of Japanese.

LING 413 Topics in Historical Linguistics
Fall. 4 credits. Prerequisite: LING 314 or permission of instructor. Not offered 2002-2003.

W. Harbert, C. Rosen.

Examines a selection of recent research illustrating a variety of productive and innovative approaches to problems in historical linguistics. Readings center on phonological and morphological evolution in the Romance and Germanic families. Students carry out guided research projects.

LING 414 Second Language Acquisition I (also ASIAN 414) (III)
Fall. 4 credits. Prerequisite: permission of instructor. Y. Shiri.

A survey of the qualitative and quantitative research literature on the acquisition of second and additional languages among the adult population. Research carried out in both experimental and natural settings is considered. Topics include: learner errors and errors analysis; contrastive analysis hypothesis, developmental and individual differences in the acquisition of syntax, phonology and morphology, including the potential effects of typological and formal universals; pragmatics and discourse; the lexicon, social and cognitive factors in second language acquisition, communicative and learning strategies; theories of second language acquisition.

LING 415 Second Language Acquisition II (also ASIAN 417) (III)
Spring. 4 credits. Prerequisite: permission of instructor. Y. Shiri.

This course examines various issues in second language acquisition research that is particularly relevant to foreign language teaching and learning. Topics covered include: the role of input (listening/reading) vs. output (speaking/writing); implicit vs. explicit learning; negative vs. positive evidence (including the role of error correction); affective factors (motivation, anxiety); individual differences; teachability hypothesis and syllabus construction; the structure of second language proficiency.

LING 417-418 History of the Russian Language (also RUSSA 401-402) (III)
Fall, 417; spring, 418. 4 credits each term. Prerequisites: for LING 417, permission of instructor; for LING 418, LING 417 or equivalent. Offered alternate years. Not offered 2002-2003; next offered 2003-2004.

W. Browne.
Phonological, morphological, and syntactic developments from Old Russian to modern Russian.

**LING 421 Semantics I (III)**
Spring. 4 credits. Prerequisite: LING 205. M. Diesing.

This course introduces methods for theorizing about meaning within generative grammar. These techniques allow us to create grammars that pair syntactic structures with meanings. We look at several empirical areas in detail, among them complementation (combining heads with their arguments), modification, conjunction, definite descriptions, relative clauses, traces, bound pronouns and quantification. An introduction to logical and mathematical concepts used in linguistic semantics (such as set theory, functions and their types, and the lambda notation for naming linguistic meanings) is included in the course.

**LING 422 Semantics II (III)**
Fall. 4 credits. Prerequisite: LING 421 or permission of instructor. D. Abusch.

The course uses the techniques introduced in Semantics I to analyze linguistic phenomena including quantifier scope, ellipsis, and referential pronouns. Temporal and possible worlds semantics are introduced and used in the analysis of modality, tense, and belief sentences. The phenomena of presupposition, indefinite descriptions, and anaphora are analyzed in a dynamic compositional framework that formalizes the idea that sentence meaning effects a change in an information state.

**LING 424 Computational Linguistics (also COGST 424 and COM S 424) (III)**
Spring. 4 credits. Prerequisite: LING 203 or permission of instructor, COM S 114 is also recommended. Not offered 2002–2003. M. Rooth.

Steady progress in formalisms, algorithms, linguistic knowledge, and computer technology is bringing computational mastery of the syntax, morphology, and phonology of natural languages within reach. The course introduces methods for “doing a language” computationally, with an emphasis on approaches which combine linguistic knowledge with powerful computational formalisms. The course covers: computational grammars, parsing, representation of syntactic analyses; finite state morphology; weighted grammars; feature constraint formalisms for syntax; treebank and other markup methodology; robust low-level syntax and semantics; and experimental-modeling methodology using large data samples.

**LING 425 Pragmatics (also PHIL 334) (III or IV)**
Fall. 4 credits. Prerequisite: LING 201 or PHIL 231 or permission of instructor. D. Abusch.

An introduction to aspects of linguistic meaning which have to do with context and with the use of language. Topics include context change semantics and pragmatics, presupposition and accommodation, conversational implicature, speech acts, and the pragmatics of definite descriptions and quantifiers.

**LING 427 Structure of Hungarian (III)**

Survey of phonology, morphology, and syntax of this non-Indo-European language. Topics to be stressed include vowel harmony, consonant assimilation; definite and indefinite quantifiers; adjectives, verb prefixes, causatives; and focus, word order, clause types, movement, intonation.

**LING 430 Structure of Korean (also ASIAN 430) (III)**

Intensive overview of the syntax and phonology of a non-Indo-European language with the objective of testing principles of current linguistic theory. No previous knowledge of Korean required.

**LING 431 Structure of an African Language (III)**

A survey of the grammar of an African language in light of current linguistic theory.

**LING 433 The Lesser-Known Romance Languages (also ROM S 433)**
Fall. 4 credits. Prerequisite: LING 101 or equivalent and qualification in any Romance language. Not offered 2002–2003. C. Rosen.

The course surveys three or four Romance languages or dialects, examining their sound systems, grammars, and historical evolution from Latin. Includes some native speaker demonstrations. Readings represent both the modern languages and their earliest attested stages. Topics for fall 2003 include Catalan, Roman, a Northern Italian dialect, and a Rheo-Romance language.

**LING 436 Language Development (also COGST 436, HD 436, and PSYCH 436) (III)**
Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HD 433/LING 700/PSYCH 600, a supplemental graduate seminar. Prerequisite: at least 1 course in developmental psychology, cognitive psychology, cognitive development, biology, neurobiology, or linguistics. B. Lust.

This course surveys basic issues, methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental issues of relationships between language and thought are discussed, as are the fundamental linguistic issues of Universal Grammar and the biological foundations for language acquisition. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child. An optional lab course supplement is available (see COGST 450/LING 450/PSYCH 437).

**LING 437 Celtic Linguistic Structures (III)**

This course treats selected topics in the syntax and morphosyntax of the modern Celtic languages.

**LING 441 Introduction to Germanic Linguistics (also GERST 441) (III)**
Fall. 4 credits. Prerequisite: LING 101 or permission of instructor. Not offered 2002–2003. W. Harbert.

Survey of major issues in historical Germanic linguistics.

**LING 443–444 Linguistic Structure of Russian (also RUSSA 403–404) (III)**
Fall, spring. 4 credits each term. Prerequisites: for LING 443, LING 101 and permission of instructor; for LING 444 LING 443 or equivalent. Offered alternate years; next offered 2003–2004. W. Browne.

A synchronic analysis of the structure of modern Russian. LING 443 deals primarily with modern Russian and LING 444 with syntax and word order. Topics covered include case theory, the functions of word order, voice, agreement, impersonal constructions, negation, nonuniversal categories, and the relation between morphology and syntax.

**LING 450 Lab Course: Language Development (also COGST 450 and PSYCH 437)**
Spring. 2 credits. Prerequisite: COGST/HD/PSYCH 436. B. Lust.

This laboratory course provides undergraduates with an introduction to hands-on research experience in the Cognitive Studies research labs and meets once a week in group format. It includes several structured modules dealing with topics covered in the survey course, COGST/HD/LING/PSYCH 436, Language Development. They include training in how to study and analyze original child language data, including the use of selected portions of a large database of child language data from many languages in the Cornell Language Acquisition Lab (CLAL), and training necessary to the collection and analysis of new child language data. Emphasis is placed on developing research methods in order to test hypotheses.

**LING 451 Greek Comparative Grammar (also CLASS 421) (III)**
Fall. 4 credits. Prerequisite: thorough familiarity with classical Greek morphology. A. Nussbaum.

The prehistory and evolution of the sounds and forms of ancient Greek as reconstructed by comparison with the other Indo-European languages.

**LING 452 Latin Comparative Grammar (also CLASS 422) (III)**

The prehistory and evolution of the sounds and forms of classical Latin as reconstructed by comparison with the other Indo-European languages.

**LING 454 IItalic Dialects (also CLASS 424) (III)**

The phonology and morphology of Faliscan, Osca, and Umbrian studied through the reading of epigraphic texts. Emphasis on the relations of these languages to Latin and the question of proto-Italic.
LING 455 Greek Dialects (also CLASS 425) (III)
A survey of the dialects of ancient Greek through the reading and analysis of representative epigraphical and literary texts.

LING 456 Archaic Latin (also CLASS 426) (III)
Reading of epigraphic and literary preclassical texts with special attention to archaic and dialectal features. The position of Latin among the Indo-European languages of ancient Italy, the rudiments of Latin historical grammar, and aspects of the development of the literary language.

LING 457 Homeric Philology (also CLASS 427) (III)
Spring. 4 credits. Prerequisite: ability to read Homeric Greek. A. Nussbaum.
The language of the Homeric epics: dialect background, archaisms, modernizations. The notion of a Kunstsprache: its constitution, use, and internal consistency. The phonological and morphological aspects of epic compositional technique.

LING 459 Mycenaean Greek (also CLASS 429) (III)
An introduction to the epigraphy, language, and content of the Linear B tablets with special attention to their implications for Greek historical grammar and dialectology.

LING 460 Sanskrit Comparative Grammar (III or IV)
A survey of the historical phonology and morphology of Sanskrit in relation to the Indo-Iranian and Indo-European comparative evidence.

LING 474 Introduction to Natural Language Processing (also COGST 474 and COM S 474) (III)
For description, see COM S 474.

LING 485 Topics in Computational Linguistics (also COM S 485) (III)
Fall. 4 credits. Prerequisite: LING 424 or LING/COM S 474. M. Rooth.
This laboratory course is concerned with broad-coverage computational grammars, computational methodology for addressing linguistic questions, and programming and experimental environments for computational linguistics. Course work includes an experimental project.

LING 493 Honors Thesis Research
Fall. 4 credits. Staff. May be taken before or after LING 494, or may be taken independently.

LING 494 Honors Thesis Research
Spring. 4 credits. Staff. May be taken as a continuation of, or before, LING 493.

LING 501 Topical Research
Fall. 4 credits. Prerequisite: LING 425 or 426. Permission of instructor. A. Nussbaum.
Research in the field of ancient Greek, Latin, or Sanskrit philology.

LING 504 Research Workshop
Fall. 2 credits. S-U grade only. Required of third-year linguistics graduate students. S. McConnell-Ginet.
This course provides a forum for presentation and discussion of ongoing research, and development of professional skills. Participants must enroll in a concurrent independent study with a special committee member, or a relevant workshop.

LING 506 Historical Syntax
A course on change in language structure, beginning with an overview of widely attested types of syntactic change and proceeding to an introduction of current theoretical treatments. Topics covered include grammaticalization, word order change, and the interplay between morphological and syntactic change. Assumes a basic background in syntax.

LING 509 SLA and the Asian Languages (also ASIAN 610)
This course surveys the literature on the acquisition of Asian languages both in first and second language. We mainly focus on Japanese, Korean, Chinese (Mandarin/Cantonese), but other languages (Thai, Malay, Vietnamese, Burmese, Tagalog, etc.) may be dealt with, depending on faculty/student interest.

LING 516 Topics in Syntactic Theory
Fall. 4 credits variable. Prerequisite: LING 304 or permission of instructor. M. Diesing.
An examination of recent developments in syntactic theory, including "minimalist" approaches to phrase structure, derivations/representations and the nature of economy conditions, and parametric differences.

LING 517-518 Hittite
fall. 617, fall; 618, spring. 4 credits each term. Prerequisites: for LING 617, permission of instructor; for LING 618, LING 617 or permission of instructor. Not offered 2002–2003. Staff.
An introduction to the cuneiform writing system and the grammar of Hittite, followed by the reading of selected texts.

LING 520 Comparative Grammar of Anatolian (also NES 623)
Introduction to the historical phonology and morphology of the Anatolian languages. Knowledge of Hittite and Luvi an recommended but not required.

LING 521 Avestan and Old Persian (also NES 621)
Linguistically-oriented readings of Old Persian and Avestan.

LING 522-524 Old Irish I, II
623, fall; 624, spring. 4 credits each term. Prerequisite for LING 624: LING 623 or permission of instructor. Not offered 2002–2003. Staff.
An introduction to "classical" Old Irish for students with no previous experience with the language.

LING 525 Middle Welsh
Spring. 4 credits. Prerequisite: permission of instructor. W. Hartpert.
Students develop a reading knowledge of Middle Welsh through translating selections from prose and poetry. Emphasis is on the prose tales, including the Mabinogi. No familiarity with Welsh is assumed.

LING 527 Advanced Old Irish

LING 529 Old Avestan (also NES 622)
Linguistically and philologically oriented reading of the Gathas of Zarathustra and the Yasna Haptanhaiti. Some knowledge of Sanskrit required.

LING 531 Comparative Indo-European Linguistics
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2002–2003. Staff.
An introduction to the comparative grammar of the Indo-European languages.

LING 533 Language Acquisition Seminar (also COGST 633 and HD 633)
Fall. 1–4 credits. Prerequisite: LING 436 or equivalent or permission of instructor. B. Lust.
This seminar reviews and critiques current theoretical and experimental studies of first-language acquisition, with a concentration on insights gained by cross-linguistic study of this area. Attention is also given to the development of research proposals.

LING 535-536 Indo-European Workshop
An assortment of subjects intended for students with previous training in Indo-European linguistics: problems in the reconstruction of Proto Indo-European, topics in the historical grammars of the various IE languages, reading and historical linguistic analysis of texts, and grammatical sketches of "minor" IE languages.
LING 637  Introduction to Tocharian
Fall. 4 credits. Prerequisite: knowledge of other ancient IE language and historical linguistic methods. M. Weiss. Introduction to the grammar of Tocharian A and B.

LING 638  Comparative Grammar of Tocharian
Spring. 4 credits. Prerequisite: LING 637. R. Kim.
Introduction to the historical phonology and morphology of Tocharian A and B.

LING 643  Topics in Historical Germanic Phonology
Spring. 4 credits. Prerequisite: LING 441. Not offered 2002–2003. W. Harbert. The development of the sound system from Proto-Germanic to its daughter languages.

LING 644  Topics in Historical Germanic Syntax

LING 645  Gothic
Fall. 4 credits. Prerequisite: LING 101. Offered alternate years. W. Harbert. Linguistic structure of Gothic, with extensive readings of Gothic texts.

LING 646  Old High German, Old Saxon (also GERST 658)
Spring. 4 credits. Prerequisite: LING 101. Offered alternate years. W. Harbert. This course combines a survey of the linguistic history and structure of Old High German and Old Saxon with extensive readings from the major documents in which they are recorded. Reading knowledge of Modern German is highly recommended.

LING 648  Speech Synthesis by Rule
Spring. 4 credits. Prerequisite: LING 301, 319, or permission of instructor. Offered alternate years. Not offered 2002–2003. S. Hertz. Investigates the nature of the acoustic structure of speech synthesis, using speech as a tool for exploring this structure. A particular acoustic model is proposed, developed, and motivated by considering the relationship between phonological and acoustic structure, speech timing, phonetic universals, coarticulation, and speech perception. The primary tool for investigation will be the Delta System, a powerful software system for investigating phonology and phonetics through speech synthesis. The course is meant for graduate students and advanced undergraduate students in linguistics, but may also be of interest to students in psychology, psycholinguistics, computer science, and cognitive studies.

LING 649  Structure of Old English

LING 653–654  Seminar in Southeast Asian Linguistics
653, fall; 654, spring. 4 credits each term. Prerequisite: LING 303 or permission of instructor. LING 653 is not a prerequisite for 654. Not offered 2002–2003. J. Wolff. Languages of mainland Southeast Asia. Topics, chosen according to student interests, may include description, dialectology, typology, comparative reconstruction, and historical studies.

LING 655–656  Seminar in Austronesian Linguistics
655, fall; 656, spring. 4 credits each term. Prerequisites: for LING 655, LING 101 and permission of instructor; for LING 656, LING 655. Not offered 2002–2003. J. Wolff. Descriptive and comparative studies of Malayo-Polynesian languages.

LING 659  Seminar in Vedic Philology (also ASIAN 659 and CLASS 659)

LING 661  Old Church Slavonic (also RUSSA 601)
Fall. 4 credits. Prerequisite: students must know a Slavic or Indo-European language. This course is prerequisite to LING 662 and LING 671. Offered alternate years. Not offered 2002–2003. W. Browne. Grammar and reading of basic texts.

LING 662  Old Russian Texts (also RUSSA 662)

LING 671–672  Comparative Slavic Linguistics (also RUSSA 651–652)
Fall, 671; spring, 672. 4 credits each term. Prerequisites: for LING 672, LING 661 taken previously or simultaneously or permission of instructor. Offered alternate years. Not offered 2002–2003. W. Browne. Sounds and forms of the Slavic languages and of prehistoric common Slavic; main historical developments leading to the modern languages.

LING 700  Seminar
Fall or spring, according to demand. Credit to be arranged. Seminars are offered according to faculty interest and student demand. Topics in recent years have included subject and topic, Montague grammar, speech synthesis, lexicography, classical and autonomous phonology, Japanese sociolinguistics, relational grammar, semantics and semiotics, and others.

LING 701–702  Directed Research
701, fall; 702, spring. 1–4 credits. Hours to be arranged. Staff.

MATHEMATICS
www.math.cornell.edu

Mathematics is the language of modern science; basic training in the discipline is essential for those who want to understand, as well as for those who want to take part in, the important scientific developments of our time. Acquaintance with mathematics is also extremely useful for students in the social sciences and valuable for anyone interested in the full range of human culture and the ways of knowing the universe in which we live. The Department of Mathematics faculty has strong groups specializing in algebra, number theory, combinatorics, real and complex analysis, Lie groups, topology and geometry, logic, probability and statistics, mathematical physics, and applied mathematics. Related departments at Cornell have specialists in computer science, operations research, linear programming, and game theory, and courses in these topics can be integrated readily into the mathematics major.

The department offers a rich variety of undergraduate courses, and many of its beginning graduate courses are suitable for advanced undergraduates as well. Under some conditions, a student may carry out an independent reading and research project for college credit under the supervision of a faculty member.

Members of the department are available to discuss with students the appropriate course for their levels of ability and interest, and students are urged to avail themselves of this help.

Students who want to take any of the courses numbered 300 or above are invited to confer, before registering, with the instructor concerned. The level of a course is indicated by the first digit of the course number: roughly, 1, 2, indicate underclass courses; 3, 4, upperclass courses; 5, professional level and mathematics education courses; 6, 7, graduate courses. The subject matter of courses is often indicated by the second digit: 0, general; 1, 2, analysis; 3, 4, algebra and combinatorics; 5, 6, topology and geometry; 7, probability and statistics; 8, logic; 9, other.

Midterm grades, when required, will be S or U only, except in special circumstances. In courses with numbers below 700, students will receive letter grades, with the exception of nonmathematics majors who have requested an S-U grade.

Advanced Placement
Secondary school students are strongly urged to take one of the two advanced placement examinations of the College Entrance Examination Board in their senior year. Freshmen who have had some calculus but who have not taken an advanced placement examination should take the placement examination in mathematics offered at Cornell before the beginning of classes in the fall. It is most important that anyone with any knowledge of calculus carefully read "Advanced Placement," p. 6–11.
The Major
The mathematics major adapts to a number of purposes. It can emphasize the theoretical or the applied. It can be appropriate for professionals and nonprofessionals alike, and can be broad or narrow. It can also be combined easily with serious study in another subject in the physical, biological, or social sciences by means of a double major and/or concentration. For example, a double major in mathematics and computer science is facilitated by the concentration in computer science (requirement 4, option b) described below. This concentration permits a student to use certain computer science courses to satisfy the requirements of both majors. Questions concerning the major should be brought to a departmental representative.

Prerequisites
The traditional prerequisites are MATH 221–222, 223–224, or 293–294. A unit on infinite series is required. Such a unit is offered in MATH 112, 122 and 192. Normally students will be admitted to the major only when they have grades of B- or better in all 200-level mathematics courses taken. Alternative prerequisites are MATH 213 and 251, normally with grades of B+ or better.

Requirements
There are five requirements for the major:
1. COM S 100. Students are urged to take this course before the end of their sophomore year.
2. Two courses in algebra. Eligible courses are MATH 431 or 433, MATH 432 or 444, MATH 332 or 336 (Credit for both MATH 332 and MATH 336 will be granted only if both were taken during or before spring 2002 or by a mathematics major graduating in or before spring 2003.)
3. Two courses in analysis. Eligible courses are MATH 311, 321, 323, 413, 414, 418, 420, 422, 424, 425, 427, 428. (MATH 411 has been discontinued and replaced by MATH 311. Students may not receive credit for MATH 311 if they have received credit for MATH 411.)
4. Further high-level mathematical courses. Any one of (a), (b), (c), (d), (e) below is sufficient. The five alternatives below do not exhaust the possibilities. A mathematics major interested in a concentration in a subject different from those below may develop a suitable individual program in consultation with his/her major adviser.
   (a) Four additional Mathematics courses numbered 300 or above
   (b) Concentration in Computer Science: Five additional courses from (i) and (ii) below, of which at least one is from (i) and three are from (ii)
      (i) Mathematics courses numbered 300 or above
      (ii) Computer Science courses numbered 300 or above
   (c) Concentration in Operations Research: Five additional courses from (iii) and (iv) below, of which at least one is from (iii) and three are from (iv)
      (i) Mathematics courses numbered 300 or above
      (ii) Computer Science courses numbered 300 or above
      (iii) Mathematics courses numbered 300 or above
      (iv) Courses in Operations Research and Industrial Engineering in which the primary focus involves mathematical techniques. Undergraduate courses include OR&IE 320–326 excluding OR&IE 350, 414, and 416. Many Operations Research graduate courses are also allowed. Students should consult with their advisers.
   (d) Concentration in Economics: Five additional courses from (v), (vi), and (vii) below, as follows: one course from (v), three courses from (vi), and a fifth course from any of (v), (vi), or (vii). However, Mathematics 472 and Economics 319 cannot both be used to satisfy these requirements.
      (v) Mathematics courses numbered 300 or above
      (vi) Economics courses with significant mathematical content. Eligible courses are ECON 318, 319, 320, 416, 419, 450 (also ARME 450), 467, 469, 410, 613, 614, 619, 620, 717, 756.
      (vii) Courses in Operations Research with significant mathematical content and dealing with material of interest in economics; e.g., OR&IE 320, 321, 432, 435, and the sequence 475–476. However, the student may, with the adviser's approval, select an OR&IE course that satisfies the basic intent of the requirement but is not in this list.
   (e) Concentration in Mathematical Physics: Five additional courses from (viii) and (ix) below, of which at least one is from (viii) and three are from (ix).
      (viii) Mathematics courses in analysis, geometry, algebra and combinatorics, probability and statistics, and mathematical logic. Eligible courses are MATH 311, 321, 323, 401, 413, 414, 420, 422, 424, 425, 427, 428, 451 or 455, 452 or 434, 436, 441, 442, 451, 452, 453, 454, 455, 457, 471, 472, 474, 481, 482, 483, 486.
      (ix) Physics courses that make significant use of advanced mathematics. Eligible courses are PHYS 315, 317, 318, 327, 341, 443, 444, 454, 455, 480.

1. One course dealing with mathematical models. Any course from outside mathematics with serious mathematical content and dealing with scientific matters. This course cannot be used to satisfy any of the other requirements for the major. Serious mathematical content includes, but is not limited to, extensive use of calculus or linear algebra. Even if the Physics concentration has been selected, PHYS 110, 208, 213, or 217 may be used to satisfy the modeling requirement, but no other 100-level Physics course, nor PHYS 207 or 209 may be used. COM S 211 satisfies the modeling requirement provided the Computer Science concentration has not been selected. Any course from another department that would satisfy one of the concentrations requirements may be used to fulfill the modeling requirement, provided the course is not also used to fulfill the concentration requirement. Some courses in biology, chemistry and other fields can fulfill the modeling requirement. Students should consult with their advisers.

A course may be counted toward the mathematics major only if a grade of C- or better is received for that course.

Major advisers can alter these requirements upon request from an advisee, provided the intent of the requirements is met.

Honors Program
The Department of Mathematics awards honors (cum laude) and high honors (magna cum laude and summa cum laude) to graduating mathematics majors who have demonstrated outstanding ability in the major program.

The awards are determined by the Mathematics Major Committee in the latter part of the semester prior to graduation. The committee will primarily be looking for excellent performance in mathematics courses, particularly in challenging courses at the 400 level or beyond. Participation in the Honors Seminar (MATH 401) for one semester, or independent study at a high performance level can also contribute to honors. Students interested in honors should consult their major advisers concerning suitable courses.

One route through which a student may earn high honors is to write a senior thesis and present it orally. This project is carried out during the senior year under the supervision of a member of the Mathematics Department faculty. Outstanding performance in graduate courses in any college can also contribute to high honors. Students interested in high honors should consult their major advisers and the chair of the department's Mathematics Major Committee during the second semester of their junior year.

Teacher Education in Mathematics
Students at Cornell may pursue teaching credentials in biology, chemistry, earth science, general science, mathematics, and physics. CTE (Cornell Teacher Education) is a program situated in the Department of Education. Most CTE students enroll in a five-year program, which combines an undergraduate major in mathematics or one of the sciences with a one-year Master of Arts in Teaching (MAT). Students from any college at Cornell are eligible to apply to the program as undergraduates. Students completing the graduate program will earn the master's degree required for permanent certification in New York and most other states.

Mathematics students in CTE must complete all the requirements for a mathematics major (or its equivalent) including MATH 402, 408, 451, 507, and a probability/statistics course. There are a number of education courses required. Some of the required mathematics and education courses will be taken in the graduate fifth year.
For more information, contact the CTE Student Support Specialist at 255-9255 or Avery Solomon (Mathematics, ap5@cornell.edu), or David Henderson (Mathematics, dwh2@cornell.edu).

**Studying Mathematics Outside the Major**

The College of Arts and Sciences and the Department of Mathematics offer no minor in mathematics; however, some other scientific departments in the college offer, within their own majors, concentrations in mathematics and mathematics-related fields. A student interested in such a concentration should consult the Director of Undergraduate Studies of his/her major department.

The Engineering College offers a minor in applied mathematics that is open to any undergraduate in that college. The minor is sponsored jointly by the Department of Mathematics and the Department of Theoretical and Applied Mechanics, and is administered by the latter department. Engineering students interested in this minor should contact Professor Richard Rand of the Department of Theoretical and Applied Mechanics (255–7145; rhr2@cornell.edu).

Information about the minor is also available at www.math.cornell.edu.

The Mathematics Department welcomes into its upper-level courses students from all colleges, schools, and departments at Cornell. In particular, undergraduates who wish to pursue serious study of mathematics, whether within or to complement their own major fields, are encouraged to consult with the department. The department's Director of Undergraduate Studies and other faculty can provide assistance in selecting appropriate areas of study and individual courses.

**Distribution Requirement**

The mathematics courses that can be used to satisfy the Group II (Quantitative and Formal Reasoning) part of the Arts College distribution requirements are indicated by the symbol "(II)" next to the title of the course.

**Basic Sequences**

**PreCalculus**

*Description*

1) Algebra and trigonometry to prepare students for calculus

   MATH 109* or EDUC 005*

2) Algebra, analytic geometry, and elements of calculus

   EDUC 115*

*MATH 109, EDUC 005, and EDUC 115 do not carry credit for graduation in the Arts College. Students who want a second semester of mathematics after EDUC 115 may take MATH 105 or, if they need more calculus, MATH 106 or 111.

**Calculus**

*Description*

1) Standard three-semester sequence for students who do not expect to take advanced courses in mathematics

   MATH Courses

   111–122–213

2) Calculus for engineers

   MATH 109/191–192–

   (also taken by some physical science majors)

3) Prospective mathematics majors and others who expect to take advanced courses in mathematics; many sequences are possible. For example, 111–112–221–222, or 121–122–221–222; or 121–122–223–224; or the engineering sequence 190/191–192–

   293–294; or a mix of the above. There is no specifically "approved" basic sequence for mathematics majors. Students should consult with their advisers for each individual case.

   MATH 190 or 191 may be substituted for 111

   in sequences 1 and 3. Sequences 2 and 3 are two-year sequences that include some linear algebra.

   Students who take the 3-semester sequence may learn some linear algebra by taking Mathematics 231.

**Special-Purpose Sequences**

*Description*

1) Finite mathematics and calculus for life and social science majors

   MATH Courses

   105–106

2) Other possible finite mathematics and calculus sequence

   105–111

3) Calculus and statistics sequences

   106–171

   111–171

   Students who want to take two semesters of calculus are advised to take the first two semesters of one of the three calculus sequences. Students with excellent performance in MATH 106 may follow that course with MATH 112 or 122. The courses in each of the calculus and statistics sequences may be taken in either order, since no calculus background is required for MATH 171. Each of the sequences listed here satisfies the mathematics requirement for most medical schools.

   Switching between calculus sequences is often difficult, especially at the 200 level. Students should not attempt such a switch without consulting the Director of Undergraduate Studies.

**Courses with Overlapping Content**

Because the department offers many courses with overlapping content, students must choose their courses carefully to ensure that they will receive credit for each course they take. Listed below are groups of courses with similar content. Students will receive credit for only one of the courses in each group.

105, 111, 121, 190, 191

112, 122, 192

213, 222, 224, 293

221, 231, 294

332 and 336*

336 and 436

411 and 413

431 and 435

432 and 434

*Credit for both MATH 332 and MATH 336 will be granted only if both were taken during or before spring 2002 or by a mathematics major graduating in or before spring 2003.

**MATH 103 Mathematical Explorations (II)**

Fall, spring, summer. 3 credits. This course may be used to satisfy the distribution requirement in mathematics. This course is for students who wish to experience how mathematical ideas naturally evolve. The homework consists of the students actively investigating mathematical ideas. The course emphasizes ideas and imagination as opposed to techniques and calculations. Topics vary depending on the instructor and are announced (www.math.cornell.edu) several weeks before the semester begins. Some assessment is done through writing assignments.

**MATH 105 Finite Mathematics for the Life and Social Sciences (II)**

Fall. 3 credits. Prerequisite: 3 years of high school mathematics, including trigonometry and logarithms.

This course is an introduction to linear algebra, probability, and Markov chains which develops the parts of the theory most relevant for applications. Specific topics include: equations of lines, the method of least squares, solutions of linear systems, matrices, basic concepts of probability, permutations, combinations, binomial distribution, mean and variance, and the normal approximation to the binomial. Examples from biology and the social sciences are used.

**MATH 106 Calculus for the Life and Social Sciences (II)**

Spring. 3 credits. Prerequisite: readiness for calculus, such as can be obtained from 3 years of high school mathematics.

**Fees**

In some courses there may be a small fee for computer lab use or for photocopying materials to be handed out to students.

**Summer Courses**

A list of mathematics courses usually offered every summer can be found in the School of Continuing Education and Summer Sessions section of this catalog. Students interested in taking summer courses in mathematics should consult the Mathematics Department website (www.math.cornell.edu). A tentative summer listing may be available as early as October.

**Undergraduate Course Offerings**

Please visit www.math.cornell.edu for further information and up-to-the-minute corrections.

Foundation courses: 105, 106, 109, 111, 112, 121, 122, 190, 191, 192, 213, 221, 222, 223, 224, 231, 293, 294

Mathematics Education: 408, 451

History of Mathematics: 403

General and Liberal Arts Courses: 103, 171, 401, 402, 408

Analysis: 311, 413, 414, 418

Algebra and Number Theory: 332, 336, 431, 432, 433, 434, 436

Combinatorics: 441, 442

Geometry and Topology: 356, 451, 452, 453, 454, 455

Probability and Statistics: 171, 471, 472

Mathematical Logic: 281, 384, 481, 482, 483, 486

**MATH 103 Mathematical Explorations (II)**

Fall, spring, summer. 3 credits. This course may be used to satisfy the distribution requirement in mathematics. This course is for students who wish to experience how mathematical ideas naturally evolve. The homework consists of the students actively investigating mathematical ideas. The course emphasizes ideas and imagination as opposed to techniques and calculations. Topics vary depending on the instructor and are announced (www.math.cornell.edu) several weeks before the semester begins. Some assessment is done through writing assignments.

**MATH 105 Finite Mathematics for the Life and Social Sciences (II)**

Fall. 3 credits. Prerequisite: 3 years of high school mathematics, including trigonometry and logarithms.

This course is an introduction to linear algebra, probability, and Markov chains which develops the parts of the theory most relevant for applications. Specific topics include: equations of lines, the method of least squares, solutions of linear systems, matrices, basic concepts of probability, permutations, combinations, binomial distribution, mean and variance, and the normal approximation to the binomial. Examples from biology and the social sciences are used.

**MATH 106 Calculus for the Life and Social Sciences (II)**

Spring. 3 credits. Prerequisite: readiness for calculus, such as can be obtained from 3 years of high school mathematics.
MATHEMATICS 577

(including trigonometry and logarithms) or any of the following Cornell courses:
MATH 105, MATH 109, or EDUC 115.
MATH 111, rather than 106, is recommended for those planning to take 112.*
Course serves as an introduction to differential and integral calculus, partial derivatives, elementary differential equations. Examples from biology and the social sciences are used.

MATH 109 Precalculus Mathematics
Summer. 3 transcript credits only; cannot be used toward graduation.
This course is designed to prepare students for MATH 111. Algebra, trigonometry, logarithms and exponentials are reviewed.

MATH 111-112 Calculus
Calculus is the study of functions and processes from the point of view of how they are changing. What can we know of a function from the rate at which it changes? Many infinitesimal changes? MATH 111 and 112 aim to provide, to students with little or no prior exposure to calculus, the knowledge that calculus is useful, in that its applications to the physical, biological, and social sciences have expanded our world, and beautiful, in that it represents a breathtaking attempt of the human mind to capture the infinitely large and the infinitely small. These courses seek to provide basic understanding, technical skills, and simple applications in various fields for the very broad range of students who take them. Topics are studied (as appropriate) by analytic, numerical, and graphical methods. These courses sometimes offer one or more sections with small-group projects. (See the Supplement to the Course and Room Roster.)

MATH 111 Calculus I (II)
Fall, spring, summer. 4 credits. Prerequisite: MATH 109 or 3 years of high school mathematics, including trigonometry and logarithms.*
Course topics include: functions and graphs, limits and continuity; differentiation and integration of algebraic, trigonometric, inverse trig, logarithmic, and exponential functions; applications of differentiation, including graphing, max-min problems, tangent line approximations, implicit differentiation, and applications to the sciences; the mean value theorem; and antiderivatives, definite and indefinite integrals, the fundamental theorem of calculus, substitution in integration, the area under a curve. Graphing calculators are used, and their pitfalls are discussed, as applicable to the above topics.

MATH 111 can serve as a one-semester introduction to calculus or as part of a two-semester sequence in which it is followed by MATH 112 or 112.

MATH 112 Calculus II (II)
Fall, spring, summer. 4 credits. Prerequisite: MATH 111 with a grade of C or better, or excellent performance in MATH 106. Those who do well in MATH 111 and expect to major in mathematics or a strongly mathematics-related field should take 112 instead of 112.*
Course focus is on integration: applications, including volumes and arc length; techniques of integration, approximate integration with error estimates, improper integrals, differential equations (separation of variables, initial conditions, systems, some applications). Also covered are infinite sequences and series: definition and tests for convergence, power series, Taylor series with remainder, and parametric equations.

MATH 121 Honors Calculus (II)
Fall, 4 credits. Prerequisite: 3 years of high school mathematics with average grade of A- or better, or permission of the department.*
This is a first-semester course in calculus intended for students who have been quite successful in their previous mathematics courses. The syllabus for the course is quite similar to that of MATH 111; however, the approach is more theoretical and the material is covered in greater depth.

MATH 122 Honors Calculus (II)
Fall, spring, 4 credits. Prerequisite: 1 semester of calculus with a high performance or permission of the department. Students planning to continue with MATH 213 are advised to take 112 instead of this course.*
Topics covered include: differentiation and integration of elementary transcendental functions, techniques of integration, applications, polar coordinates, complex numbers, as well as an introduction to proving theorems. The approach is more theoretical than in MATH 112.

MATH 171 Statistical Theory and Application in the Real World (II)
Fall, spring, summer. 4 credits. Prerequisite: high school mathematics. This introductory statistics course discusses techniques for analyzing data occurring in the real world and the mathematical and philosophical justification for these techniques. Topics include: population and sample distributions, central limit theorem, statistical theories of point estimation, confidence intervals, testing hypotheses, the linear model, and the least squares estimator. The course concludes with a discussion and tests and estimates for regression and analysis of variance (if time permits). The computer is used to demonstrate some aspects of the theory, such as sampling distributions and the Central Limit Theorem. In the lab portion of the course, students learn to use computer-based methods for implementing the statistical methodology presented in the lectures. (No previous familiarity with computers is presumed.)

MATH 190 Calculus for Engineers (II)
Fall, 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry and logarithms.*
Course topics include: plane analytic geometry, differential and integral calculus, and applications. This course is restricted to engineering students who have had no previous successful experience with calculus. Students who have had such experience but wish a first-semester calculus course should take MATH 191.

MATH 191 Calculus for Engineers (II)
Fall, spring, summer 4 credits. Prerequisite: 3 years of high school mathematics including trigonometry and logarithms, plus some knowledge of calculus.*
Course topics include: plane analytic geometry, differential and integral calculus, and applications. MATH 191 covers essentially the same topics as 190, but is designed for students with some previous successful experience with calculus.

MATH 192 Calculus for Engineers (II)
Fall, spring, summer. 4 credits. Prerequisite: MATH 190 or 191.*
Course topics include: vectors and vector-valued functions, multivariable and vector calculus including multiple and line integrals; first- and second-order differential equations with applications; systems of differential equations; and elementary partial differential equations. This course is designed for students who wish to master the basic techniques of calculus, but whose major will not require a substantial amount of mathematics. The course may emphasize different topics in the syllabus in different semesters.

MATH 221 Linear Algebra and Differential Equations (II)
Fall, spring, 4 credits. Prerequisite: 2 semesters of calculus with high performance or permission of the department.*
Course covers linear algebra and differential equations. Topics include: vector algebra, linear transformations, matrices, and linear differential equations, as well as an introduction to proving theorems. This course is especially recommended for students who plan to major in mathematics or in a strongly related field.

MATH 222 Multivariable Calculus (II)
Fall, spring. 4 credits. Prerequisite: MATH 221.*
Course topics include: multivariable and vector differential and integral calculus, including multiple, line, and surface integrals. This course is especially recommended for students who plan to major in mathematics or in a strongly related field.

MATH 223 Theoretical Linear Algebra and Calculus (II)
Spring. 4 credits. Prerequisite: 2 semesters of calculus with a grade of A- or better, or permission of instructor.*
Course topics include: vectors, matrices, and linear transformations; differential calculus of functions of several variables; inverse and implicit function theorems; quadratic forms, extremum and manifolds; multiple and iterated integrals. MATH 223-224 provides an integrated treatment of linear algebra and multivariable calculus designed for students who have been highly successful in their previous calculus courses.

MATH 224 Theoretical Linear Algebra and Calculus (II)
Spring. 4 credits. Prerequisite: MATH 223.*
Course topics include: vectors, linear algebra, calculus of functions of several variables; inverse and implicit function theorems; linear transformations; matrix and vector space analysis; integration of forms over parameterized domains; and Green's, Stokes', and divergence theorems.

*See the list of courses with overlapping content at the end of the introduction.
MATH 231 Linear Algebra (II)  
Spring. 3 credits. Prerequisite: MATH 111 or equivalent.*

Course topics include: vectors, matrices, and linear transformations, affine and Euclidean spaces, transformation of matrices, and eigenvalues.

MATH 281 Deductive Logic (also PHIL 331) (II)  
Spring. 4 credits. For description, see PHIL 331.

MATH 293 Engineering Mathematics (II)  
Fall, spring, summer. 4 credits. Prerequisite: MATH 192.*

The conclusion of vector calculus, including line integrals, vector fields, Green's theorem, Stokes' theorem, and the divergence theorem; followed by an introduction to ordinary and partial differential equations, including Fourier series and boundary value problems. May include computer use in solving problems.

MATH 294 Engineering Mathematics (II)  
Fall, spring, summer. 4 credits. Prerequisite: MATH 192.*

Linear algebra and its applications. Topics include matrices, determinants, vector spaces, eigenvalues and eigenvectors, orthogonality and inner product spaces; applications include brief introductions to difference equations, Markov chains, and systems of linear ordinary differential equations. May include computer use in solving problems.

MATH 311 Introduction to Analysis (II)  
Spring. 4 credits. Prerequisites: MATH 221–222 or 293–294.

Provides a transition from calculus to real analysis. Topics include: rigorous treatment of fundamental concepts in calculus: including limits and convergence of sequences and series, compact sets, continuity, uniform continuity and differentiability of functions. Emphasis will be placed upon understanding and constructing mathematical proofs.

MATH 321 Manifolds and Differential Forms (II)  
Fall. 4 credits. Prerequisites: multivariable calculus and linear algebra as taught in MATH 221–222 or 293–294.

Topics for this course include: differential forms, exterior derivative, implicit function theorem, manifolds, orientation, boundaries, integration of forms, and constructing mathematical proofs.

MATH 323 Introduction to Differential Equations (II)  
Fall. 4 credits. Prerequisites: multivariable calculus and linear algebra as taught in MATH 221–222 or 293–294, or permission of instructor.

This course is intended for students who want a brief one-semester introduction to the theory of and techniques in both ordinary and partial differential equations. (Fuller introductions are given in MATH 427 and 428.) Topics for ordinary differential equations may include: initial-value and two-point boundary value problems, the basic existence and uniqueness theorems, continuous dependence on data, stability of fixed-points, numerical methods, special functions. Topics for partial differential equations may include: the Poisson, heat and wave equations, boundary and initial-boundary value problems, maximum principles, continuous dependence on data, separation of variables, Fourier series, Green's functions, numerical methods, transform methods.

MATH 332 Algebra and Number Theory  
Fall, summer. 4 credits. Prerequisite: MATH 221, 223, 231 or 294.*

Course covers various topics from number theory and modern algebra, usually including most of the following: Primes and factorization, Diophantine equations, congruences, quadratic reciprocity, continued fractions, rings and fields, finite groups, and an introduction to the arithmetic of the Gaussian integers and other rings. Examples for the concepts of abstract algebra are derived primarily from number theory and geometry.

MATH 336 Applicable Algebra (II)  
Spring, summer. 4 credits. Prerequisites: MATH 221, 223, 231 or 294.*

An introduction to the concepts and methods of abstract algebra that are of interest in applications. Covers: basic theory of groups, rings and fields and their applications to such areas as public-key cryptography, error-correcting codes, parallel computing, and experimental designs. Also covers: elementary number theory, Euclidean algorithm, prime factorization, congruences, theorems of Fermat and Euler, elementary group theory, Chinese remainder theorem, factorization in the ring of polynomials, and classification of finite fields. Applications include the RSA cryptosystem and use of finite fields to construct error-correcting codes and Latin squares.

MATH 356 Groups and Geometry (II)  
Spring. 4 credits. Prerequisite: MATH 221, 223, 231 or 294.

Topological groups, Lie groups, manifolds, Lie algebra, and Lie groups of matrices. Focuses on the interplay between algebraic properties of the group and the analytic or topological properties of the manifold it is acting on. Several examples will be discussed: symmetries, groups of transformations acting as rotations and translations. Students are required to give oral and written reports.

MATH 362 Dynamic Models in Biology (also BIOEE 362) (II)  

For description, see BIOEE 362.

MATH 401 Honors Seminar: Topics in Modern Mathematics (II)  
Spring. 4 credits. Prerequisite: 2 courses in mathematics numbered 300 or higher or permission of instructor.

This course is a participatory seminar primarily aimed at introducing senior and junior mathematics majors to some of the challenging problems and areas of modern mathematics. The seminar helps students develop research and expository skills in mathematics, which is important for careers in any field that makes use of the mathematical sciences (i.e., pure or applied mathematics, physical or biological sciences, business and industry, medicine). The content varies from year to year.

MATH 402 Smorgasbord Seminar  
Fall. 1 credit. Prerequisite: 2 courses in mathematics numbered 300 or higher. S-U only. Recommended for mathematics majors. A student may only receive credit for this course once. Not offered 2002–2003.

A lecture series by members of the Mathematics Department about current research topics, to give students a little taste of many different areas in mathematics. This course is valuable for students looking for a topic for a senior thesis and for students thinking about graduate work in the mathematical sciences.

MATH 403 History of Mathematics (II)  
Spring. 4 credits. Prerequisite: 2 courses in mathematics above 300, or permission of instructor.

Survey of the development of mathematics from antiquity to the present, with an emphasis on the achievements, problems, and mathematical viewpoints of each historical period and the evolution of such basic concepts as number, geometry, construction, and proof. Readings from original sources in translation. Students are required to give oral and written reports.

MATH 408 Mathematics in Perspective (II)  
Spring. 4 credits. Prerequisite: consent of instructor.

The purpose of this course is for students to step back and form an overview of the mathematics they have learned. The course is intended for junior and senior mathematics majors and other undergraduates with strong backgrounds in mathematics.

MATH 413-414 Honors Introduction to Analysis (II)  
413, fall; 414, spring. 4 credits each. Prerequisite for 413: a high level of performance in MATH 221–222, 223–224 or 293–294. Prerequisite for MATH 414: MATH 413.*

This sequence, designed for honors students, provides an introduction to the theory of functions of real variables, stressing a rigorous

*See the list of courses with overlapping content at the end of the introduction.
logical development of the subject rather than
applications. Topics include: metric spaces, the
real number system, continuous and
differentiable functions, uniform convergence
and approximation of functions, Riemann and
Lebesgue integrals, calculus in several
variables, and differential forms.

**MATH 418 Introduction to the Theory of Functions of One Complex Variable (II)**
Spring. 4 credits. Prerequisite: MATH 223-222, 311, 411 or 413 or permission of instructor. A theoretical and rigorous introduction to complex variable theory. Topics include: complex numbers, differential and integral calculus for functions of a complex variable including Cauchy's theorem and the calculus of residues, elements of conformal mapping. Students interested in the applications of complex analysis should consider MATH 422.

**MATH 420 Differential Equations and Dynamical Systems (II)**
Fall. Spring. 4 credits. Prerequisite: high level of performance in MATH 295-294, 221-222, 223-224, or permission of instructor. Course covers ordinary differential equations in one and higher dimensions: qualitative, analytic, and numerical methods. Emphasis is on differential equations as models and the implications of the theory for the behavior of the system being modeled and includes an introduction to bifurcations.

**MATH 422 Applied Complex Analysis (II)**
Spring. 5 credits. Prerequisite: MATH 221-222, 223-224. Course covers complex variables, Fourier transforms, Laplace transforms and applications to partial differential equations. Additional topics may include an introduction to generalized functions.

**MATH 424 Waves and Fourier Series (II)**
Spring. 4 credits. Prerequisite: MATH 221-222, 223-224, 293-294, or permission of instructor. Both Fourier series and wavelets provide methods to represent or approximate general functions in terms of simple building blocks. Such representations have important consequences, both for pure mathematics and for applications. Fourier series use natural sinusoidal building blocks and may be used to help solve differential equations. Wavelets use artificial building blocks that have the advantage of localization in space. A full understanding of both topics requires a background involving Lebesgue integration theory and functional analysis. This course presents as much as possible on both topics without such formidable prerequisites. The emphasis is on clear statements of results and key ideas of proofs, working out examples, and applications. Related topics that may be included in the course: Fourier transforms, Heisenberg uncertainty principle, Shannon sampling theorem, and Poisson summation formula.

**MATH 425 Numerical Solutions of Differential Equations (II)**
Fall. 4 credits. Prerequisite: MATH 221-222, 223-224, 293-294 and one course numbered 300 or higher in mathematics, or permission of instructor. Generally offered every two years. Not offered 2002-2003. Emphasis may be on numerical approximation of initial-value or two-point boundary value problems for ordinary differential equations, or on partial differential equations. A major component in the structure (or for using) computer code to illustrate the theoretical concepts introduced.

**MATH 427 Introduction to Ordinary Differential Equations (II)**
Fall. 4 credits. Prerequisite: MATH 221-222, 223-224, or 293-294 or permission of instructor. Covers the basic existence, uniqueness, and stability theory together with methods of solution and methods of approximation. Topics include: singular points, series solutions, Sturm-Liouville theory, transform methods, approximation methods, and application to physical problems.

**MATH 428 Introduction to Partial Differential Equations (II)**
Spring. 4 credits. Prerequisite: MATH 221-222, 223-224, or 293-294 or permission of instructor. Topics selected from first-order quasilinear equations, classification of second-order equations, with emphasis on maximum principles, existence, uniqueness, stability, Fourier series methods, approximation methods.

**MATH 431 Linear Algebra (II)**
Fall. 4 credits. Prerequisite: MATH 332, 431 or 433 or permission of instructor. Undergraduates who plan to attend graduate school in mathematics should take MATH 433-434.* An introduction to linear algebra, including: the study of vector spaces, linear transformations, matrices, and systems of linear equations; quadratic forms and inner product spaces; canonical forms for various classes of matrices and linear transformations.

**MATH 432 Introduction to Algebra (II)**
Spring. 4 credits. Prerequisite: MATH 332, 336, 431 or 433, or permission of instructor. Topics selected from: elementary number theory, congruences, and the structure of finitely generated abelian groups. Optional topics: modules over Euclidean domains, Sylow theorems.

**MATH 433-434 Honors Introduction to Algebra (II)**
Fall. Spring. 4 credits each. Prerequisite: a high level of performance in MATH 221, 223, 231, or 294. Prerequisite for MATH 434: MATH 433 or permission of instructor.* Honors version of MATH 431-432. MATH 433-434 is more rigorous than 431-432 and includes additional material such as multilinear and exterior algebra.

**MATH 436 Applications of Abstract Algebra (II)**
Spring. 4 credits. Prerequisite: MATH 221, 223, 231, or 294 or higher. Familiarity with elementary algebra or other theory such as MATH 332 would also be helpful.* Not offered 2002-2003.

*See the list of courses with overlapping content at the end of the introduction.

The course is intended for students who would like to learn modern algebra and its applications outside of mathematics. There is at least as much emphasis on applications as the relevant modern algebra. Frequently the applications involve or were made possible by the advent of computers. Students who already know the modern algebra covered in the course may still find the applications of interest. Specific topics are chosen by the instructor. The algebra typically includes items drawn from: elementary number theory, polynomials and ring theory, monoids and group theory, real closed fields, algebraic combinatorics, Groebner bases, algebraic geometry, and field theory. The applications and related topics typically include items drawn from: complexity theory, coding theory, encryption, discrete and fast Fourier transform, primality testing, factoring integers and polynomials, root counting and isolation, solving systems of polynomial equations, formal language theory, and automata.

MATH 336 and 436 may overlap in choice of material. Where they overlap, the coverage in MATH 436 is of greater depth appropriate to a 400-level course. Students cannot get credit for both MATH 336 and MATH 436.

**MATH 441 Introduction to Combinatorics (II)**
Fall. 4 credits. Prerequisite: MATH 221, 223, 231, or 294. Generally offered every two years. Course covers enumerative combinatorics: permutation enumeration, Stirling and Bell numbers, generating functions, exponential formula, Lagrange inversion, recurrences, basic asymptotic methods, rational generating functions. Also covers basic graph theory: trees and Cayley's theorem, chromatic polynomial, eigenvalues and their application. Also considers matching theory: equivalences, marriage theorem, flow problems, totally unimodular matrices. Also considers Polya theory: action of a group on a set, Burnside lemma, DeBrujin's method, applications to graphical enumeration and algorithms.

**MATH 442 Introduction to Combinatorics (II)**
Spring. 4 credits. Prerequisite: MATH 221, 223, 231, or 294. Generally offered every two years. Not offered 2002-2003.

Course covers topics include: Sieves and Mobius Inversion: inclusion/exclusion and its application to enumeration and number theory; partially ordered sets, abstract Mobius inversion, rudiments of lattice theory, matroids and combinatorial geometry; rank function, circuits, bases, application to graph theory and geometry; combinatorial design; Fisher's inequality, Latin squares, Hadamard matrices, Wilson's theorem on t-designs, application to statistical design: nonconstructive methods: Ramsey's theorem, Lovasz's local lemma, random graphs, application to coding theory; and extremal set theory: Sperner's lemma, Kruskal-Katona and Erdos-Ko-Rado theorems.

**MATH 451 Euclidean and Spherical Geometry (II)**
Fall. 4 credits. Prerequisite: MATH 221, 223, 231, or 294, or permission of instructor. Covers topics from Euclidean and spherical (non-Euclidean) geometry. A nonlecture, seminar-style course organized around student participation.
MATH 452 Classical Geometries (II)  
Spring. 4 credits. Prerequisite: MATH 221, 223, 231, or 294, or permission of instructor.  
This is an introduction to hyperbolic and projective geometry—the classical geometries that developed as Euclidean geometry was better understood. For example, the historical problem of the independence of Euclid’s fifth postulate is understood when the existence of the hyperbolic plane is realized. Straightedge (and compass) constructions and stereographic projection in Euclidean geometry can be understood within the structure of projective geometry. Topics in hyperbolic geometry include the hyperbolic plane and its models, the development of use in statistical applications. Topics in projective geometry include: homogeneous coordinates and the classical theorems about conics and configurations of points and lines. Optional topics include: principles of perspective drawing, finite projective planes, orthogonal Latin squares, and the cross ratio.

MATH 453 Introduction to Topology (II)  
Fall. 4 credits. Prerequisite: MATH 311, 411 or 413, or permission of instructor.
Course covers basic point set topology, connectedness, compactness, metric spaces, fundamental group. Application of these concepts to surfaces such as the torus, the Klein bottle, and the Moebius band.

MATH 454 Introduction to Differential Geometry (II)  
Spring. 4 credits. Prerequisites: MATH 221, 223, 224, or 293-294, plus at least one mathematics course numbered 300 or above. MATH 455 is not a prerequisite.
Course covers differential geometry of curves and surfaces. Also covers curvature, geodesics, and differential forms. Serves as an introduction to n-dimensional Riemannian manifolds. This material provides some background for the study of general relativity; connections with the latter are indicated.

MATH 455 Applicable Geometry (II)  
Fall. 4 credits. Prerequisite: a good introduction to linear algebra (such as in MATH 291, 293, or MATH 223, 224, or 293-294) or permission of the instructor. It is not assumed that students know what any of the words in the following description mean. Generally offered every two years. Not offered 2002–2003.
An introduction to the theory of n-dimensional convex polytopes and polyhedra and some of its applications, with an in-depth treatment of the case of 3-dimensions. We discuss both combination properties (such as face counts) as well as metric properties (such as rigidity). Covers theorems of Euler, Cauchy, and Steinitz, Voronoi diagrams and triangulations, convex hulls, cyclic polytopes, shellability and the upper bound theorem. We relate these ideas to applications in tiling, linear inequalities and linear programming, structural rigidity, computational geometry, hyperplane arrangements and zonotopes.

MATH 471 Basic Probability (II)  
Fall. 4 credits. Prerequisite: MATH 221, 223, 231, or 294. May be used as a terminal course in basic probability. Topics include: combinations, important probability laws, expectations, moments, moment-generating functions, limit theorems. Emphasis is on diverse applications and on development of use in statistical applications. See also the description of MATH 671.

MATH 472 Statistics (II)  
Spring. 4 credits. Prerequisites: MATH 471 and knowledge of linear algebra such as taught in MATH 221. Some knowledge of multivariable calculus helpful but not necessary.
Statistics have proved to be an important research tool in nearly all of the physical, biological, and social sciences. This course serves as an introduction to statistics for students who already have some background in calculus, linear algebra, and probability theory. Topics covered in the course include parameter estimation, hypothesis testing, and linear regression. The course emphasizes both the mathematical properties of statistics as well as techniques for data analysis that are useful in solving scientific problems.

MATH 481 Mathematical Logic (also PHIL 431) (II)  
Spring. 4 credits. Generally offered every two years.
Course covers propositional and predicate logic; classical proof procedures; completeness and compactness; decidability and undecidability; the Godel incompleteness theorem; and elements of set theory.

MATH 482 Topics in Logic (also PHIL 432) (II)  
Fall. 4 credits. Prerequisite: 1 logic course from the Mathematics Department at the 200 level or higher, 1 logic course from the Philosophy Department at the 300 level or higher, or permission of the instructor. For description, see PHIL 432.

MATH 483 Intensional Logic (also PHIL 436) (II)  
Spring. 4 credits. Prerequisite: 1 logic course at the 200 level or higher from the Philosophy Department or the Mathematics Department, or permission of instructor. Not offered 2002–2003.
For description, see PHIL 436.

MATH 486 Applied Logic (also COM S 486) (II)  
Spring. 4 credits. Prerequisites: MATH 221–222, 223–224, or 293–294; COM S 280 or equivalent (such as MATH 332, 336, 432, 434, 436, or 481); and some additional course in mathematics or theoretical computer science.
Course covers: propositional and predicate logic; compactness and completeness by tableaux, natural deduction, and resolution. Other possible topics include: equational logic; Herbrand Universes and unification, rewrite rules and equational logic; Knuth-Bendix method and the congruence-closure algorithm and lambda-calculus reduction strategies; topics in Prolog, Lisp, ML, or Nuprl; and applications to expert systems and program verification.

MATH 490 Supervised Reading and Research  
Fall, spring. 1–6 credits.
Supervised reading and research by arrangement with individual professors. Not for material currently available in regularly scheduled courses.

Graduate Courses
Many of our graduate courses are topics courses for which descriptions are not included here; however, during each pre­registration period a schedule of courses to be offered the following semester is posted at www.math.cornell.edu/Courses/courses.html. This schedule includes course descriptions that are often more detailed than those included here, as well as a means for interested students to participate in the process of selecting meeting times.

MATH 505 Educational Issues in Undergraduate Mathematics  
Spring. 4 credits. Prerequisite: graduate standing or permission of the instructor.
This course examines various educational issues in undergraduate mathematics and the relationship of these issues to the mathematics itself. The precise choice of topics varies, but the intent is that a balance of different views be presented and discussed. There are extensive readings in the course and occasional guest lectures. Possible topics include: nature of proof and how and when to teach it, calculus "reform," teaching mathematics to school teachers, learning history, alternative assessments, alternatives to lecturing, equity issues, effective uses of technology, what is mathematical understanding and how do we recognize it, what should every mathematics major know, and research in undergraduate mathematics.

MATH 507 Teaching Secondary Mathematics: Theory and Practices  
Spring. 4 credits.
This course provides direct experience of new approaches, curricula and standards in mathematics education. Discussion of articles, activities for the secondary classroom and videotape of classroom teaching is tied to in-class exploration of math problems. Experience in the computer lab, examining software environments and their use in the mathematics classroom is included. Participants are expected to write short papers, share ideas in class and present their opinions on issues.

MATH 508 Mathematics for Secondary School Teachers  
Fall, spring. 1–6 credits. Prerequisite: secondary school mathematics teacher, or permission of instructor. May not be taught every semester.
An examination of the principles underlying the content of the secondary school mathematics curriculum, including connections with the history of mathematics and current mathematics research.

Graduate Courses
Many of our graduate courses are topics courses for which descriptions are not included here; however, during each pre­registration period a schedule of courses to be offered the following semester is posted at www.math.cornell.edu/Courses/courses.html. This schedule includes course descriptions that are often more detailed than those included here, as well as a means for interested students to participate in the process of selecting meeting times.
MATH 613-614  Topics in Analysis
613, fall, 614, spring. 4 credits each.

MATH 615  Mathematical Methods in Physics
Fall. 4 credits. Intended for graduate students in physics or related fields who have had a strong advanced calculus course and at least 2 years of general physics. A knowledge of the elements of finite dimensional vector space theory, complex variables, separation of variables in partial differential equations, and Fourier series is assumed. Undergraduates are admitted only with permission of instructor.

Topics are designed to give a working knowledge of the principal mathematical methods used in advanced physics. Course covers: Hilbert space, generalized functions, Fourier transform, Sturm-Liouville problem in ODE, Green's functions, and asymptotic expansions.

[MATH 617  Dynamical Systems]
Fall. 4 credits. Generally offered every two years. Not offered 2002-2003.
Topics include: existence and uniqueness theorems for ODEs; Poincaré-Bendixon theorem and global properties of two dimensional flows; limit sets, nonwandering sets, chain recurrence, pseudo-orbits and structural stability, linearization at equilibrium points; stable manifold theorem and the Hartman-Grobman theorem; and generic properties: transversality theorem and the Kupka-Smale theorem. Examples include: expanding maps and Anosov diffeomorphisms; hyperbolicity: the horseshoe and the Birkhoff-Smale theorem on transversal homoclinic orbits; rotation numbers; Herman's theorem; and characterization of structurally stable systems.

MATH 618  Smooth Ergodic Theory
Spring. 4 credits. Generally offered every two years.
Topics include: invariant measures; entropy; Hausdorff dimension and related concepts; hyperbolic invariant sets: stable manifolds, Markov partitions and symbolic dynamics; equilibrium measures of hyperbolic attractors; ergodic theory: stable manifolds of nonhyperbolic systems; Liapunov exponents; and relations between entropy, exponents, and dimensions.

[MATH 619-620  Partial Differential Equations]
619, fall; 620, spring. 4 credits each.
Course covers basic theory of partial differential equations.

MATH 621  Measure Theory and Lebesgue Integration
Fall. 4 credits.
Course covers measure theory, integration, and Lp spaces.

MATH 622  Applied Functional Analysis
Spring. 4 credits. Not offered every year.
Course covers basic theory of Hilbert and Banach spaces and operations on them. Applications.

[MATH 628  Complex Dynamical Systems]
Fall. 4 credits. Prerequisite: MATH 418.
Various topics in the dynamics of analytic mappings in one complex variable, such as: Julia and Fatou sets, the Mandelbrot set, Mañé-Sad-Sullivan's theorem on structural stability. Also covers: local theory, including repulsive cycles and the Yoccoz inequality, parabolic points and Ealle-Voronin invariants, Siegel discs and Yoccoz's proof of the Siegel-Bruno theorem; quasi-conformal mappings and surgery; Sullivan's theorem on nonwandering domains, polynomial-like mappings and renormalization, Shishikura's construction of Hermand rings, puzzles, tableaux and local connectivity problems; and Thurston's topological characterization of rational functions, the spider algorithm, and mating of polynomials.

[MATH 631-632-634  Algebra]
631, fall; 632, spring; 634, spring. 4 credits each.
632 and 634 offered in alternate years. 634 not offered 2002-2003.
631 covers: finite groups, field extensions, Galois theory, rings and algebras, and tensor and exterior algebra. 632 covers: Wedderburn structure theorem, Brauer group, and group cohomology. 634 covers: Dedekind domains, primary decomposition, Hilbert basis theorem, and local rings.

MATH 640  Lie Algebras
Fall. 4 credits. Generally offered every two years.
Topics include: nilpotent, solvable and reductive Lie algebras; enveloping algebras; root systems; Coxeter groups; and classification of simple algebras.

[MATH 650  Lie Groups]
Course topics include: topological groups, Lie groups; relation between Lie groups and Lie algebras; exponential map, homogeneous manifolds; and invariant differential operators.

[MATH 651  Introductory Algebraic Topology]
Spring. 4 credits.
Course covers fundamental group and covering spaces, and homology theories for complexes and spaces.

MATH 652  Differentiable Manifolds I
Fall. 4 credits. Prerequisites: advanced calculus, linear algebra (MATH 431), point-set topology (MATH 453), and basic linear algebra. This is an introduction to differential geometry and differential topology at the level of a beginning graduate student. Topics include: smooth manifolds, embeddings, tangent bundles, tensors, vector bundles, vector fields, and Frobenius' theorem. Further topics chosen by instructor from other major areas such as fibre bundles, Lie groups, connections, curvature, geodesics, Riemannian manifolds, differential forms, and de Rham cohomology.

MATH 653  Differentiable Manifolds II
Spring. Prerequisites: MATH 652 or equivalent. Generally offered every 3-4 years.
Advanced topics from differential geometry and differential topology selected by instructor. Examples of eligible topics include: transversality, cobordism, Morse theory, classification of vector bundles and principal bundles, characteristic classes, microlocal analysis, conformal geometry, geometric analysis, and partial differential equations, and Aiyah-Singer index theorem.

[MATH 661  Geometric Topology]
Fall. 4 credits.
An introduction to some of the more geometric aspects of topology and its connections with group theory. Possible topics include: surface theory, 3-manifolds, knot theory, geometric and combinatorial group theory, hyperbolic groups, and hyperbolic manifolds.

[MATH 662  Riemannian Geometry]
Course topics include: linear connections, Riemannian metrics and parallel translation, covariant differentiation and curvature tensors, the exponential map, the Gauss Lemma and completeness of the metric, isometries and space forms, Jacobi fields and the Cartan-Hadamard; the first and second variation formulas; the index form of Morse and the theorem of Bonnet-Myers; the Rauch, Hessian, and Laplacian comparison theorems; the Morse index theorem; the conjugate and cut loci; and submanifolds and the Second Fundamental form.

[MATH 671-672  Probability Theory]
Course covers basic theory of Lebesgue integration theory, at least on the real line. Students may only register for one of parts MATH 413-414 or 621. Prerequisite for MATH 672: MATH 671.
Course covers: measure theory, integration, and Lp spaces. Undergraduate students may register for one of MATH 413-414 or 621. Prerequisites: MATH 671 or permission of instructor.
Course covers: measure theory, integration, and Lp spaces.

[MATH 674  Introduction to Mathematical Statistics]
Spring. 4 credits. Prerequisites: MATH 671 and OR&IE 670 or permission of instructor.
Topics include: an introduction to the theory of point estimation, hypothesis testing and confidence intervals, consistency, efficiency, sufficiency, and the method of maximum likelihood. Basic concepts of decision theory are discussed; asymptotic methods are introduced and developed in detail. The course is coordinated with OR&IE 670 to form the second part of a one-year course in mathematical statistics.

[MATH 681  Logic]
Spring. 4 credits.
Course covers basic topics in mathematical logic, including propositional and predicate calculus, formal number theory and recursive functions; completeness and incompleteness theorems. Other topics as time permits.

[MATH 703  Topics in the History of Mathematics]
MATH 711-712 Seminar in Analysis
711, fall; 712, spring. 4 credits each. fall

MATH 713 Functional Analysis
Spring. 4 credits. Course covers: topological vector spaces, Banach and Hilbert spaces, and Banach algebras. Additional topics selected by instructor.

MATH 715 Fourier Analysis
Fall. 4 credits. Generally offered every two years. Not offered 2002-2003.

MATH 717 Applied Dynamical Systems (also T&AM 776)

Course topics include: review of planar (single-degree-of-freedom) systems; local and global analysis; structural stability and bifurcations in planar systems; center manifolds and normal forms; the averaging theorem and perturbation methods; Melnikov's method; discrete dynamical systems; maps and difference equations; homoclinic and heteroclinic motions; the Smale Horseshoe and other complex invariant sets; global bifurcations; strange attractors, and chaos in free and forced oscillator equations; and applications to problems in solid and fluid mechanics.

MATH 722 Topics in Complex Analysis
Fall. 4 credits. Not offered every year. Selections of advanced topics from complex analysis, such as Riemann surfaces, complex dynamics, and quasiconformal mapping. Course content varies.

MATH 724 Seminar in Partial Differential Equations
Fall, spring. 4 credits. Generally offered every two years.

MATH 731-732 Seminar in Algebra
731, fall; 732, spring. 4 credits each.

MATH 735 Topics in Algebra
Fall. 4 credits. Selection of advanced topics from algebra, algebraic number theory, and algebraic geometry. Course content varies.

MATH 737 Algebraic Number Theory
Fall. 4 credits. Not offered 2002-2003.

MATH 738 Topics in Algebra
Spring. 4 credits.

MATH 740 Homological Algebra
Spring. 4 credits.

MATH 751-752 Seminar in Topology
751, fall; 752, spring. 4 credits each.

MATH 753 Algebraic Topology
Fall. 4 credits. The continuation of 651. The standard topics covered in this course most years are cohomology, cup products, Poincare duality, and homotopy groups. Other possible topics include fiber bundles, fibrations, vector bundles, and characteristic classes. The course may sometimes be taught from a different forms viewpoint.

MATH 754 Topics in Algebraic Topology
Spring. 4 credits. Prerequisite: MATH 753. Generally offered every year.

MATH 757-758 Topics in Topology
757, fall; 758, spring. 4 credits each. Selection of advanced topics from modern algebraic, differential, and geometric topology. Course content varies.

MATH 761-762 Seminar in Geometry
761, fall; 762, spring. 4 credits each. Either 761 or 762 generally offered every year.

MATH 767 Algebraic Geometry
Spring. 4 credits.

MATH 771-772 Seminar in Probability and Statistics
771, fall; 772, spring. 4 credits each.

MATH 774 Asymptotic Statistics
Fall. 4 credits. Prerequisites: probability theory (MATH 671 or equivalent), containing stochastic processes) and statistics (MATH 472 or MATH 674). Not offered 2002-2003.

Introduction to asymptotic statistical decision theory and to empirical stochastic processes. Course covers: the notion of experiment, reduction by sufficiency, equivalence classes, the Le Cam delta distance, local asymptotic normality and minimaxity, optimal rates of convergence, white noise models, the Pinsker bound, and Gaussian approximation of nonparametric experiments. Topics in empirical processes include coupling theorems, some probability metrics, entropy conditions, functional limit theorems, and Hungarian constructions.

MATH 777-778 Stochastic Processes
777, fall; 778, spring. 4 credits each.

MATH 781-782 Seminar in Logic
781, fall; 782, spring. 4 credits each.

MATH 783 Model Theory

An introduction to model theory at the level of the books by Hodges or Chang and Keisler.

MATH 784 Recursion Theory
Fall. 4 credits.

Course covers: theory of effectively computable functions; classification of recursively enumerable sets; degrees of recursive unsolvability and an annual升温 to logic; hierarchies; recursive functions of ordinals and higher type objects; generalized recursion theory.

MATH 787 Set Theory
Spring. 4 credits. Generally offered every two years.

A first course in axiomatic set theory at the level of the book by Kunen.

MATH 788 Topics in Applied Logic
Fall. 4 credits. Not offered 2002-2003.

This course covers applications of the results and methods of mathematical logic to other areas of mathematics and science. Topics vary each year; some recent examples are: automatic theorem proving, formal semantics of programming and specification languages, linear logic, constructivism (intuitionism), and nonstandard analysis. Students are expected to be familiar with the standard results in graduate level mathematical logic.

MATH 790 Supervised Reading and Research
Fall, spring. 1-6 credits.

MEDIEVAL STUDIES

Undergraduate Study in Medieval Studies
Coursework in Medieval Studies enhances the student's enjoyment and understanding of the artistic and material relics of the Middle Ages: Gregorian chant, manuscripts and stained glass windows, Gothic cathedrals, Crusader castles, and picturesque towns cramped within ancient walls. Students discover the serious realities involved in, and shaped by, Arthurian tales of brave knights and fair ladies, dungeons, dragons, and other marvels. Students can analyze and appreciate the horrors of the Black Death, triumphs in courtly love and pitched battle, swords and scimitars, caliphs and popes, fear of demons and djinns, and the reassuring presence of angels. You can study all this and more very well in English, but see below for how to acquire the medieval languages that so enhance the experience.

The period saw many of the foundational choices that have, for good and ill, made the world what it is today. Many of our current challenges in the fields of law, human rights, attitudes toward power, authority, gender relations, and sexual mores derive from the ways in which these and other questions were formulated a millennium ago. It actually makes good sense to think out your positions on today's world through study of the less complicated but intriguing medieval West, with whose successes and failures we must still contend. Serious investigation of exotic materials marks this concentration out as a unique addition to Cornell's training. The Medieval Studies Program houses a lively undergraduate association, Quodlibet, that arranges frequent lectures on medieval topics and runs a Medieval conference each spring. Undergraduate study in medieval languages and research in medieval sources.

The "middle" in "Middle Ages" comes from its position between antiquity and the "modern" period, in a schema created for European and Western conditions. Our concentration, however, is more properly inclusive and treats a time span from roughly the fifth century into the sixteenth and ranges from Western Europe and the Mediterranean to China and Japan. To discover the vibrant state of medieval studies today, look at the extraordinary range of scholarly, but accessible, web sites that have sprung up all over the Internet. (You can start from <http://www.medieval-studies.com>.) Cornell possesses a wealth of resources to introduce students to every corner of the field.

Undergraduate Study in Medieval Studies
Coursework in Medieval Studies enhances the student's enjoyment and understanding of the artistic and material relics of the Middle Ages: Gregorian chant, manuscripts and stained glass windows, Gothic cathedrals, Crusader castles, and picturesque towns cramped within ancient walls. Students discover the serious realities involved in, and shaped by, Arthurian tales of brave knights and fair ladies, dungeons, dragons, and other marvels. Students can analyze and appreciate the horrors of the Black Death, triumphs in courtly love and pitched battle, swords and scimitars, caliphs and popes, fear of demons and djinns, and the reassuring presence of angels. You can study all this and more very well in English, but see below for how to acquire the medieval languages that so enhance the experience.

The period saw many of the foundational choices that have, for good and ill, made the world what it is today. Many of our current challenges in the fields of law, human rights, attitudes toward power, authority, gender relations, and sexual mores derive from the ways in which these and other questions were formulated a millennium ago. It actually makes good sense to think out your positions on today's world through study of the less complicated but intriguing medieval West, with whose successes and failures we must still contend. Serious investigation of exotic materials marks this concentration out as a unique addition to Cornell's training. The Medieval Studies Program houses a lively undergraduate association, Quodlibet, that arranges frequent lectures on medieval topics and runs a Medieval conference each spring. Undergraduate study in medieval languages and research in medieval sources.

The "middle" in "Middle Ages" comes from its position between antiquity and the "modern" period, in a schema created for European and Western conditions. Our concentration, however, is more properly inclusive and treats a time span from roughly the fifth century into the sixteenth and ranges from Western Europe and the Mediterranean to China and Japan. To discover the vibrant state of medieval studies today, look at the extraordinary range of scholarly, but accessible, web sites that have sprung up all over the Internet. (You can start from <http://www.medieval-studies.com>.) Cornell possesses a wealth of resources to introduce students to every corner of the field.
While this concentration provides strong interdisciplinary breadth to many majors (e.g., classics, all modern languages, history, music, philosophy), and is excellent preparation for graduate study in a medieval field, science majors do well too. Many students feel bound to choose their majors with an eye to future careers and earning potential. The program provides encouragement, guidance, and an avenue for intelligent appreciation of an important part of all our pasts.

Undergraduates who wish to undertake an independent major or concentration in Medieval Studies should consult the director of the program, 259 Goldwin Smith Hall, 255-8545, mediest@cornell.edu.

The Undergraduate Concentration in Medieval Studies shall consist of five medieval courses (at the 200 level or above) in at least two different disciplines, of which up to two may also count towards the major, and one must come from our list of approved "core courses," which are marked below with an asterisk (*).

### Medieval Languages

Medieval texts (like all others) become most lively and informative when read in the original, and Cornell fortunately offers many courses for students interested in acquiring the relevant skills: Classical Arabic, Medieval Hebrew, Medieval Latin, Classical Chinese, Classical Japanese, Old English, Middle English, Gothic, Old Saxon, Old High German, Middle High German, Old Norse-Icelandic, Old Irish, Middle Welsh, Old Occitan (Provençal), Old French, Medieval Spanish, Medieval Italian, Old Russian, and Old Church Slavonic.

Some medieval languages require study of a modern language (e.g., French for Old Occitan and Old French) or a classical language (Classical Latin for Medieval Latin) as background. Students interested in a concentration in Medieval Studies should begin the study of a medieval language as early as possible, so that they may be able to study texts in the original before they graduate. Students are advised to consult the sponsoring departments for information about the prerequisites for various medieval languages.

### Graduate Study

The Medieval Studies Program offers both an interdisciplinary and a literary comparative Ph.D. in Medieval Studies. Disciplinary fields of concentration offered within the Field of Medieval Studies are: Medieval Archaeology, Medieval History, Medieval History of Art, Medieval Literature, Medieval Music, Medieval Philology and Linguistics, and Medieval Philosophy. Information about the graduate program in Medieval Studies is contained in the catalog of the Graduate School, in a brochure on Medieval Studies available from the field coordinator, and at Cornucopia, the program’s web site, www.arts.cornell.edu/medieval.

### Medieval Studies Courses: Graduate and Undergraduate

Courses in various aspects of Medieval Studies are offered every year in several cooperating departments, including Art History, Asian Studies, Classics, Comparative Literature, English, German Studies, History, Linguistics, Music, Near Eastern Studies, Philosophy, Romance Studies, Russian Literature, and by the Society for the Humanities. The current year’s offerings are:

* **ART H 230** Monuments of Medieval Art (also RELST 230)  Fall. 4 credits. P. Morin.

* **CHLIT 213** Classical Chinese  Fall. 3 credits. R. McNeal.

* **CLASS 244** Psyche, Ego and Self  Spring. 4 credits. C. Britain and H. Pelliccia.

* **CLASS 369** Intensive Medieval Latin Reading  Summer. 4 credits. D. R. Shanzer.

* **CLASS 403/703** Independent Study—Sanskrit  Fall. Variable credit. C. Minkowski.

* **CLASS 412** Advanced Readings in Latin Literature  Spring. 4 credits. D. Shanzer.

* **ENGL 210** Medieval Romance: Voyage to the Otherworld  Spring. 3 credits. T. Hill.

* **ENGL 274** Scottish Literature  Fall. 3 or 4 credits. T. Hill and H. Shaw.

* **ENGL 310** Old English in Translation  Fall. 4 credits. T. Hill.

* **ENGL 311/611** Old English  Fall. 4 credits. T. Hill.

* **ENGL 319** Chaucer  Fall. 4 credits. R. Farrell.

* **ENGL 325** Culture of the Renaissance II (also ART H 351, COM L 362, FRLIT 362)  Fall. 4 credits. C. Kaske and K. Long.

* **ENGL 372/677** Medieval and Renaissance Drama  Spring. 4 credits. A. Galloway.

* **ENGL 417/617** Early Medieval Archaeology and Literature (also ARKEO 417)  Fall. 4 credits. R. Farrell.

* **ENGL 603** The Roman de la Rose and Its Tradition  Fall. 4 credits. W. Wetherbee.

* **ENGL 615** Piers Plowman  Spring. 4 credits. T. Hill.

* **FRLIT 447** Medieval Literature  Spring. 4 credits. A. Colby-Hall.

* **GERST 405** Introduction to Medieval German Literature I  Fall. 4 credits. A. Groos.

* **GERST 406** Introduction to Medieval German Literature II  Spring. 4 credits. A. Groos.

* **GERST 624** Seminar in Medieval German Literature: Minnesang  Fall. 4 credits. A. Groos.

* **HIST 262** The Middle Ages—An Introduction (also RELST 265)  Fall. 4 credits. P. Hyams.

* **HIST 322/522** History of the Samurai  Fall. 4 credits. J. Piggott.

* **HIST 420** Tale of the Genji in Historical Perspective  Fall. 4 credits. J. Piggott.

* **HIST 492** Undergraduate Seminar: Medieval Chinese History (also ASIAN 492)  Fall. 4 credits. C. A. Peterson.

* **JPLIT 406** Introduction to Classical Japanese  Fall. 4 credits. K. Selden.

* **LING 217** History of the English Language (also ENGL 217)  Fall. 4 credits. W. Harbert.

* **LING 315/316** Old Norse 315, fall; 316, spring. 4 credits each term. J. Sigurgygsson.

* **LING 645** Gothic  Fall. 4 credits. W. Harbert.

* **MUSIC 494** Love, Sex and Song in Medieval France  Fall. 4 credits. J. Piggott.

* **MUSIC 580** Medieval Music  Fall. 4 credits. D. Powers.

* **PHIL 611** Early Medieval Romanesque Art  Spring. 4 credits. J. Najemy.

* **PHIL 612** Medieval Philosophy  Spring. 4 credits. J. Najemy.

* **PHIL 613** Medieval Studies  Spring. 4 credits. D. Powers.

* **PHIL 614** Medieval and Early Modern Thought  Fall. 4 credits. D. Powers.

* **PHIL 615** Medieval and Early Modern Thought  Spring. 4 credits. S. Toorawa.

* **PHIL 617** Medieval and Early Modern Thought  Fall. 4 credits. S. Toorawa.

* **TS 625** Introduction to Islamic Civilization (also HIST 253, RELST 253)  Fall. 3 credits. D. Powers.

* **TS 631** Classical Arab Texts (also RELST 313)  Spring. 4 credits. D. Powers.

* **TS 634** Qur'an and Commentary (also RELST 314)  Fall. 4 credits. D. Powers.

* **TS 638** 1001 Nights and Arabic Writing  Fall. 4 credits. S. Toorawa.

* **TS 651** Law, Society and Culture in the Middle East 1200-1400 (also HIST 372/682, RELST 350)  Spring. 4 credits. D. Powers.

* **PHIL 344** History of Ethics: Ancient and Medieval  Fall. 4 credits. T. Irwin.

* **PHIL 410** Latin Philosophical Texts  Spring. 4 credits. S. MacDonald.

* **PHIL 612** Medieval Philosophy  Spring. 4 credits. S. MacDonald.
**SANSK 251 Intermediate Sanskrit (also CLASS 251, LING 251)**
Fall. 3 credits. C. Minkowski.

**SPANL 440 Medieval Spanish Literature**
Fall. 4 credits. C. Arroyo.

**SPANL 446 The Cross and the Crescent: Early Modern Christian Contacts with Islam (also HIST 429, NES 437)**
Fall. 4 credits. M. A. Garcés.

### MODERN EUROPEAN STUDIES

**CONCENTRATION**

Susan Tarrow, coordinator

Students from any college may choose an undergraduate concentration in Modern European Studies to complement any major in any college. The purpose of the concentration is to provide a coherent structure for students with an interest in interdisciplinary study in the field of European studies.

The concentration has three tracks: European politics, economics, and society; modern European history; and European culture. The requirements for the concentration are:

1. **Competence in at least one modern European language, Romance, Germanic, or Slavic (i.e., completion of a 300-level course or equivalent with a grade of at least B-, or demonstration of an advanced level of competence in an oral proficiency interview test where available).**
2. **Completion of two interdisciplinary core courses:**
   - **GOVT 341/SOC 341: Modern European Society and Politics** Spring 2003. 4 credits. S. G. Tarrow.
   - **COM L 352/HIST 362: European Cultural History 1750-1870** Fall 2002. 4 credits. M. Steinberg.

Under certain conditions, students may be permitted to substitute other courses for those listed above.

3. **Completion of one course in modern (post-1789) European history.**
4. **Two additional courses in any of the three areas, which may include a senior seminar (400 level).**
   - a) Courses in European and comparative politics, anthropology, sociology, women's studies, and related courses in the School of Hotel Administration, the College of Agriculture and Life Sciences, and the School of Industrial and Labor Relations.
   - b) Courses in modern European history (post-1789).
   - c) Courses in (post-1789) English and European literatures, comparative literature, semiotics, fine arts, architecture, music, philosophy, film and theatre arts, and women's studies.

Only two courses may be used to satisfy requirements for both the major and the concentration. Courses satisfying the breadth and distribution requirements in the College of Arts and Sciences, however, may be applied to the concentration. Students interested in completing a research project under the European Summer Research Program may apply for The Wood Fellowship in their junior year. All concentrators are encouraged to participate in the Language House Program, and to spend a semester or more in a program of study in Europe. Courses taken abroad may be applied to the concentration if they are approved for Cornell credit.

Undergraduates in the College of Arts and Sciences can major in European Studies through the Independent Major or College Scholar programs.

Departmental advisers include: D. Greenwood (anthropology); C. Otto (architecture); L. Abel (College Scholars, Independent Majors); S. Christopherson (CRP); G. Fields (economics); D. Schwarz (English); A. Schwarz (German studies); J. Pontusson (government); J. Weiss (history); C. Rosen (linguistics); M. Suher (linguistics); N. Zaslav (music); S. Tarrow (romance studies); G. Shapiro (Russian literature); S. G. Tarrow (sociology); D. Bathrick (theatre, film, dance)

For a list of relevant courses and seminars, and any further information, contact Susan Tarrow, coordinator of the Modern European Studies Concentration, at the Institute for European Studies, 120 Uris Hall (telephone 255-7377, e-mail SRT2@@cornell.edu).

**MUSIC**

R. Harris-Warrick, chair; S. Pond, director of undergraduate studies (120 Lincoln Hall, 255-2916). L. Coral, director of graduate studies (2168 Lincoln Hall, 255-7126); M. Bilson, J. X. Bjerken, D. Borden, D. Conn, L. Coral, M. Hatch, H. Hoffman, J. Hsu, J. Kellock, P. Merrill, J. Peraino, S. Pond, A. Richards, R. Riley, R. Sierra, S. Stucky, K. Taavola, D. Schwarz with music majors in all of these ensembles: Cornell University Wind Ensemble, Cornell University Wind Symphony, Cornell University Chamber Winds, Cornell University Symphonic Band, Cornell University Wind Ensemble, Cornell University Wind Symphony

Information about requirements, rehearsal hours, and conditions for academic credit can be found in the following listings for the Department of Music. Announcements of auditions are posted during registration each fall term and, where appropriate, each spring term as well.

The university is also home to many student-run musical organizations, including the Big Red Marching Band and Big Red Pep Band, the Cornell Savoyards, and several a cappella groups. Information about these groups, too, is available through the Department of Music office, 101 Lincoln Hall (255-4997).

The Department of Music and the Faculty Committee on Music sponsor more than 100 formal and informal concerts each year by Cornell's ensembles, faculty, and students and by distinguished visiting artists. The great majority of concerts are free and open to the public. Lectures and concerts are listed on the web (www.arts.cornell.edu/music/). Additional information is available through the events office (255-4760).

**Nonmajors**

In addition to its performing, instructional, and concert activities, the department offers numerous courses for nonmajors, many of which carry no prerequisites and presuppose no previous formal training in music. Consult the following course listings, and for further information contact the department office, 101 Lincoln Hall (255-4097), or the director of undergraduate studies (255-2916).

**The Major**

The major carries the study of music to an advanced level through the integration of performance, music theory, and music history. It is designed to accommodate both students who are oriented toward eventual graduate or professional work in music and those who wish to take a more general approach, often in conjunction with a major in another department.

Students contemplating a major in music should arrange for placement examinations and advising in the department as early as possible, usually during the freshman orientation period. Information is available from the director of undergraduate studies. Prerequisites for admission to the major are completion of MUSIC 152 and 154, at the latest by the end of the sophomore year (the freshman year is preferable), with an overall grade of B- or better in each course. In consultation with the director of undergraduate studies, students are expected to have chosen an adviser from among the department faculty before acceptance into the major; admission to the major is decided by the faculty as a whole. Students majoring in music then design their course of study with their adviser.

Music majors must complete the Core Curriculum plus at least two electives. The Core Curriculum serves as the basis for focus in specific areas, such as composition, performance, jazz studies, vernacular music, Western art music, and Asian music. Students may, however, choose electives that reflect a more broadly-based study. Those intending to pursue graduate study or professional work in music are advised to take further courses in addition to the two required electives.
The Core Curriculum is comprised of:

1) in music theory: MUSIC 251, 252, 253, 254
2) in music history: MUSIC 207, 208, 300, 400
3) in performance: four semesters of participation in a musical organization or ensemble sponsored by the department of music (MUSIC 331 through 346 and 421 through 448)

Electives: at least two from the following:
1) in music theory: MUSIC 451-457
2) in music history: All courses above and including MUSIC 374
3) in performance: MUSIC 321, 322, 323, 324

Honors. The honors program in music is intended to provide special distinction for the department's ablest undergraduate majors. Qualified students are invited to become candidates in the honors program as early as the fall of their junior year. As soon as possible thereafter, the student forms a committee of three or more faculty members to guide and evaluate the honors work. In their senior year, candidates enroll in MUSIC 401-402 with the chair of the honors committee as instructor. Candidates are encouraged to formulate programs that allow them to demonstrate their musical and scholarly abilities, culminating in an honors thesis, composition, or recital, to be presented not later than April 1 of the senior year. A comprehensive examination administered by the candidate's committee is held not later than May 1. The level of honors conferred is based primarily on the candidate's overall record in departmental courses and activities.

Distribution Requirement
College of Arts and Sciences students may apply either for one or two Music Department courses toward the distribution requirement in Group 4 (humanities and the arts). Neither freshman seminars nor advanced placement credit count toward this requirement.

If one music course is counted for distribution, it must carry at least three credits, and it must not be in musical performance (MUSIC 321-322, 323-324) or in organizations and ensembles (MUSIC 331 through 346 and 421 through 448).

If two music courses are counted for distribution, they must total at least six credits, and at least one of the courses must be academic, not performance-oriented. The second "course," however, may comprise either up to four credits earned in performance (MUSIC 321-322, 323-324) or up to four credits earned in organizations and ensembles (MUSIC 331 through 346 and 421 through 448), but not both.

Facilities
Music Library. The Sidney Cox Library of Music and Dance in Lincoln Hall has an excellent collection of standard research tools. Its holdings consist of approximately 130,000 books, periodicals, and scores and 55,000 sound and video recordings. Particularly noteworthy are the collections of opera from all periods; instrumental compositions; a large microfilm collection of musical manuscripts, both theoretical and musical; and a collection of eighteenth-century chamber music. In addition, the Department of Rare Books, in the Kroch Library, houses a collection of early printed books on music and musical manuscripts.

Concert Halls. The Department of Music sponsors more than 100 concerts annually. Cornell's principal concert halls are Bailey Hall Auditorium (about 2,000), Alice Statler Auditorium (about 900), Sage Chapel (about 800) and Barnes Hall Auditorium (about 260).

Rehearsal Spaces. The orchestras and bands rehearse in Lincoln Hall, Bailey Hall, Barnes Hall, and Jaron Ensembles. Gamelan, and Chamber Ensembles rehearse in Lincoln Hall, and the choral ensembles are primarily quartered in Sage Chapel. Practice studios in Lincoln Hall are available for individual practice by pianists, vocalists, and instrumentalists.

Thirty-five grand pianos and 22 upright or studio pianos are housed in Cornell's offices, classrooms, and rehearsal spaces. In addition, our Center for Keyboard Studies includes two concert grand pianos (Steinway and Mason & Hamlin), two four-manual fortepianos, replicas (copies of Johann Andreas Stein and Anton Walter), an original Broadwood grand piano from 1827, an 1824 Conrad Graf fortepiano replica, one Dowd and one Hubbard harpsichord, and a Chaliis clavichord.

Two chapels on campus house three distinctive organs that are available to qualified individuals for lessons and practice. These instruments include: a small Italian organ (1746), a two-manual mechanical action instrument (1759), and a three-manual symphonic organ (1941).

Digital/Equipment. A Macintosh Master Studio is available for graduate student use (hours TBA) and occasional independent study use. The software used is Digital Performer, Finale, Peak, and e-Magic Editor/Editor. The instruments include a Yamaha RX88 MIDI Controller keyboard, a Yamaha TX802 FM synthesizer, an E-Mu Proteus XR, a Casio EZ 10M sampler and various other synthesizers. In addition, there are four MIDI work stations with additional instruments, including a Korg M1 synthesizer and an Akai S900 sampler.

Introductory Courses
Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

MUSIC 105 Elements of Musical Notation
Fall or spring, weeks 2-5. 1 credit.
Prerequisite: concurrent enrollment in any 3-credit course in music and permission of instructor. D. Conn.
This four-week course, given at the beginning of each term, fulfills the requirement of basic pitch and rhythm and reading skills needed for some introductory courses and 200-level courses with prerequisites.

[MUSIC 101 Popular Music in America: A Historical Survey (also AM ST 105)] (IV)
Spring. 3 credits. D. Conn.
A survey of the history and diverse streams of popular music in America. Elementary vocabulary and techniques for describing, analyzing, and evaluating music. Covers the relationships between mainstream musics, tributaries, and side-streams, and between folk, art, and popular music.

MUSIC 103 Intro to World Music I: Africa and the Americas (also LSP 100) (IV)
Spring. 3 credits. 1-hour disc TBA. No previous training in music required. S. Pond.
Exploration of folk, popular, and traditional musical genres of the Western Hemisphere, particularly the African diaspora. The course examines both the elements of musical styles and the features of society that influence music. Listening assignments are major components of the course.

MUSIC 104 Intro to World Music II: Asia (IV)
Fall. 3 credits. 1-hour disc to be arranged. No previous training in music required. M. Hatch.
Exploration of folk, popular, and traditional musical genres from East and Southeast Asia. The course examines both the elements of musical styles and the features of society that influence music. Listening assignments are major components of the course.

MUSIC 105 Introduction to Music Theory (IV)
Fall. Spring. 3 credits. Plus 2 hours TBA. Experience in reading music is recommended. D. Conn.
An elementary, self-contained introduction to music theory emphasizing fundamental musical techniques, theoretical concepts, and their application. Intervals, scales, triads; basic concepts of tonality; extensive listening to music in various styles; analysis of representative works of Bach, Mozart, Haydn, and Beethoven.

MUSIC 107 Hildegard to Handel (IV)
Fall. Spring. 3 credits. Prerequisite: ability to read music or concurrent enrollment in MUSIC 100. Not offered 2002-2003. N. Zaslav.
The music of Western Europe from the Middle Ages through the Baroque period. Starting from Gregorian chant and the monophonic works of Hildegard von Bingen, this course surveys composers and repertoires such as the troubadors, the Notre Dame School. Renaissance sacred polyphony, madrigals, the dance suite, concertos, cantatas, and ends in the early eighteenth century with works by Vivaldi, Bach, and Handel.

MUSIC 108 Mozart to Minimalism (IV)
Spring. 3 credits. Prerequisite: ability to read music or concurrent enrollment in MUSIC 100. N. Zaslav.
A survey of Western art music in many genres from the second half of the eighteenth century to the present. Composers whose music is studied include Haydn, Mozart, Beethoven, Schumann, Mendelssohn, Berlioz, Chopin, Wagner, Verdi, Liszt, Brahms, Mahler, Debussy, Strauss, Satie, Bartok, Ives, Webern, Messiaen, Copland, Bernstein, Carter, Stucky, and Sierra.

MUSIC 112 Popular Song Writing (IV)
Spring. 3 credits. D. Conn.
This course is designed for those with previous song writing experience and ability to sing and perform on guitar or piano. Methods of writing and producing original material are explored and original songs composed and performed weekly. Styles of
Music Theory

Students contemplating the music major are strongly advised to take MUSIC 151, 152, 153, and 154 in the freshman year; in any case MUSIC 152 and 154 must be completed no later than the end of the sophomore year.

MUSIC 151 Tonal Theory I (IV)
Fall. 3 credits. Prerequisites: admission by departmental placement exam and concurrent enrollment in or previous credit for MUSIC 153, or equivalent. Intended for students expecting to major in music and other qualified students. K. Taavola.
Detailed study of the fundamental elements of tonal music: rhythm, scales, intervals, triads; melodic principles and 2-part counterpoint; diatonic harmony and 4-part voice leading in root position and first inversion; and analysis of phrase and period structure.

MUSIC 152 Tonal Theory II (IV)
Spring. 3 credits. Prerequisites: MUSIC 151 and 153 or equivalent, and concurrent enrollment in or previous credit for MUSIC 154. Intended for students expecting to major in music and other qualified students. A grade of B- or better in MUSIC 152 is required for admission to the music major. K. Taavola.
Continued study of voice leading and harmonic progression, including diatonic modulation; analysis of binary and ternary forms.

MUSIC 153 Musicianship I
Fall. 2 credits. Prerequisite: concurrent enrollment in or previous credit for MUSIC 151. Intended for students expecting to major in music and other qualified students. 3 hrs. K. Taavola.

MUSIC 154 Musicianship II
Spring. 2 credits. Prerequisite: concurrent enrollment in or previous credit for MUSIC 152. Intended for students expecting to major in music and other qualified students. A grade of B- or better in MUSIC 154, and failure in none of the individual musicianship components of the course, are required for admission to the music major. 3 hrs. K. Taavola.

MUSIC 251 Tonal Theory III (IV)
Fall. 3 credits. Prerequisites: MUSIC 152 and 154 or equivalent, and concurrent enrollment in MUSIC 253. K. Tan.
Continuation of diatonic and introduction to chromatic harmony; species counterpoint; composition in small forms.

MUSIC 252 Tonal Theory IV (IV)
Spring. 3 credits. Prerequisites: MUSIC 251 and 253 or equivalent, and concurrent enrollment in MUSIC 254. J. Webster.
Study of and composition in larger forms, including sonata form; systematic study of chromatic harmony, voice-leading, and modulation, composition in chromatic style.

MUSIC 253 Musicianship III
Fall. 2 credits. Prerequisite: concurrent enrollment in or previous credit for MUSIC 251. 2 hours TBA. K. Tan.

MUSIC 254 Musicianship IV
Spring. 2 credits. Prerequisite: concurrent enrollment in or previous credit for MUSIC 252. 2 hours TBA. J. Webster.

MUSIC 451 Counterpoint
Spring. 4 credits. Prerequisite: MUSIC 251 or permission of instructor. Not offered 2002–2003. S. Stucky.
Composition in the polyphonic vocal style of the late Renaissance.

MUSIC 452 Topics In Music Analysis (also MUSIC 602)
Spring. 4 credits. Prerequisite: MUSIC 251 or permission of instructor. J. Webster.
A survey of important analytical approaches to tonal music, including thematic-motivic relations, phrase-rhythm, large-scale paragraph construction, structural-tonal voice-leading, and relations among the movements in a multimovement work.

MUSIC 453 Improvisational Theory
Spring. 4 credits. Prerequisite: MUSIC 251 or permission of instructor. P. Merrill.
Study of tonal concepts in jazz improvisation including: major and minor modes, rhythmic motive development, swing feel, even eight-note feel, phrase construction, chordal style, linear style, and ear development through performance, analysis, keyboard skill, transcription and composition.

MUSIC 454 Composition (IV)
Fall. 4 credits. Prerequisite: MUSIC 251 or permission of instructor. Not offered 2002–2003. R. Sierra.
Study of music composition through the use of traditional forms such as variation and sonata. The student is required to write original pieces for solo and chamber ensembles.

MUSIC 455 Conducting (IV)
Covers fundamentals of score reading, score analysis, rehearsal procedures and conducting technique, instrumental and choral contexts.

MUSIC 456 Orchestration (IV)
Spring. 4 credits. Prerequisite: MUSIC 251 or permission of instructor. R. Sierra.
Orchestration based on nineteenth- and twentieth-century models.

MUSIC 457 20th-Century Musical Languages (IV)
Fall. 4 credits. Prerequisite: MUSIC 252 and MUSIC 254. K. Taavola.
This course examines the diverse compositional structures and styles of the Twentieth Century, developing student's skills through listening, analysis, improvisation, and short compositional assignments, as well as supplementary readings. Beginning with the expanded tonal languages of Wagner, Prokofiev, and Lizst, the course covers the modal, atonal, and serial techniques developed in the first half of the century by Debussy, Bartok, Schoenberg, Varese, Stravinsky, and others. Post-1945 use of these compositional styles is examined and contrasted with such musical trends as minimalism, experimentalism, and aleatoric and microtonal approaches.

Music in History and Culture

MUSIC 221 History of Rock Music (also AM ST 223) (IV)
Spring. 3 credits. No previous training in music required. J. Peraino.
This course examines the development and cultural significance of rock music from its origins in blues, gospel, and Tin Pan Alley up to present-day genres of alternative rock and hip hop.

MUSIC 222 A Survey of Jazz (also AM ST 223) (IV)
Fall. 3 credits. Enrollment limited. S. Pond.
This course addresses jazz from two perspectives: the various sounds of jazz, as well as the historical streams—musical and cultural—which have contributed to its development. The historical focus locates jazz as an expression of culture. We investigate how jazz affects and is affected by notions of ethnicity, class, nationalism, gender, art, and genre. We examine what has changed over time and try to understand why. Throughout we focus our inquiry through listening to recordings, studying writings about music by musicians and nonmusicians, learning to listen with new ears, experiencing jazz hands-on, and collaborating to add to the body of literature on jazz.

MUSIC 245 Gamelan in Indonesian History and Cultures @ (IV)
Fall or spring. 3 credits. Permission of instructor. No previous knowledge of musical notation or performance experience necessary. M. Hatch.
An introduction to Indonesia through its art. Elementary techniques of performance on the Javanese gamelan; a general introduction to Indonesian history and cultures, and the socio-cultural contexts for the arts there. Several short papers and one longer research report are required.
MUSIC 261 Bach and Handel # (IV)
Fall. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. Not offered 2002-2003. D. Yearley. Bach's music, product of a provincial life, and Handel's music, product of a cosmopolitan life, are compared. Genres studied include works for keyboard instruments, chamber music, concerto, cantatas, operas, oratorios, anthems, and oratorios.

MUSIC 262 Haydn and Mozart # (IV)
Spring. 3 credits. Prerequisite: any 3-credit course in music or permission of instructor. Not offered 2002-2003. J. Webster. The music of, and the social structures integrated with local concert offerings.

MUSIC 263 Beethoven # (IV)
Spring. 3 credits. Prerequisite: any 3-credit course in music or permission of instructor. J. Webster. A survey of Beethoven's life, works, and influence. While the primary focus is his musical style and its development, the course also covers socio-cultural factors and the psychology and reception of genius.

MUSIC 264 Musical Romantics # (IV)
Spring. 3 credits. Prerequisite: any 3-credit course in music or permission of instructor. Not offered 2002-2003. D. Rosen. This survey of music from 1815 to 1900 is divided into five segments focusing on five composers (Schubert, Berlioz, Verdi, Wagner, and Mahler) and two or three segments on broader topics, such as musical nationalism in Russia, fin de siecle Vienna, the art song, and the history of the piano and its music.

MUSIC 274 Opera # (IV)
Fall. 3 credits. R. Harris-Warrick. An introduction to major works of the operatic repertoire, with discussion of texts and theatrical performances as well as music. Video recordings are an integral part of the course, trips to live performances are scheduled where possible.

MUSIC 275 Choral Sounds # (IV)
Spring. 3 credits. Prerequisite: ability to read music or concurrent enrollment in MUSIC 100. Not offered 2002-2003. R. Harris-Warrick. This course examines representative works composed for group singing, primarily from the Western choral tradition, but also including folk and popular styles, from the Middle Ages to the twentieth century. Class includes discussion of performance practices as well as historical and stylistic issues, and is integrated with local concert offerings.

MUSIC 276 The Orchestra and Its Music # (IV)
Spring. 3 credits. Prerequisite: any 3-credit music course or permission of instructor. Not offered 2002-2003. N. Zaslav. The music of, and the social structures supporting, large instrumental ensembles in the Western world, including: Italian court festivals of the sixteenth century, string bands of the seventeenth century, Lully's ascendency at Paris and Versailles, and music of Purcell, Corelli, Vivaldi, Bach, Handel, Haydn, Mozart, Beethoven, Schubert, Schumann, Mendelssohn, Berlioz, Liszt, Wagner, Brahms, Tchaikovsky, Bruckner, Mahler, Strauss, Stravinsky, Schoenberg, Webern, Bartók, Shostakovich, Messiaen, Copland, Carter, Tower, Stucky, Sierra, and others.

MUSIC 277 The Piano and Its Music # (IV)
Fall or spring. 3 credits. Prerequisite: 1 semester of music theory (MUSIC 105), an equivalent course, or equivalent experience) or permission of the instructors. Not offered 2002-2003. D. Rosen and M. Bilson. Representative masterpieces of the piano repertoire from J. S. Bach to the present, placed in the context of the instruments for which they were written and the social structures mediating their production. Thus three different historical approaches are interwoven: (1) the history of music written for the piano and its predecessors, the harpsichord and clavichord; (2) the development of the piano from these predecessors, through Mozart's Stein piano, the pianos of Beethoven, Chopin, Liszt, and Brahms, up to today's Steinway; and (3) the social history of the piano.

MUSIC 372 Mind and Memory (also ENGL 301, S HUM 301, and THETR 301) (IV)
Spring. 4 credits. J. Morgenroth. See THETR 301 for description.

MUSIC 374 Opera and Culture (also GERST 374 and ITALA 374) (IV)
Spring. 4 credits. Prerequisite: any 3-credit music course or proficiency in German or Italian. Not offered 2002-2003. A. Groos. See GERST 374 for description.

MUSIC 381 Music in Western Europe to 1700 # (IV)
Fall. 4 credits. Prerequisite: MUSIC 152 or permission of instructor. Not offered 2002-2003. J. Peraino. Western European music from the Middle Ages to the early Baroque, including Gregorian chant, secular monophony, the development of polyphony, the birth of opera, and the rise of independent instrumental music.

MUSIC 382 Music of the Eighteenth Century # (IV)
Spring. 4 credits. Prerequisite: MUSIC 152 or permission of instructor. Not offered 2002-2003. J. Webster. Music in Western and Central Europe and North America from Bach, Handel, and Vivaldi to Haydn and Mozart, including comic and serious opera, church music, concert music, and social music.

MUSIC 383 Music of the Nineteenth Century # (IV)
Spring. 4 credits. Prerequisite: MUSIC 152 or permission of instructor. S. Stucky. A chronological survey of nineteenth-century music from Beethoven through Puccini including reference to its cultural and historical context.

MUSIC 384 Music of the Twentieth Century (IV)
Spring. 4 credits. Prerequisite: MUSIC 152 or permission of instructor. Not offered 2002-2003. S. Stucky. Covers movements, schools, and styles in "classical" music from the turn of the century to the present. Includes extensive listening and reading assignments for historical breadth; detailed attention to representative works for analytical depth.

MUSIC 386 Topics in Popular Music and Jazz (IV)
Spring. 4 credits. Prerequisite: MUSIC 152/154. S. Pond. Topic: Post-Bebop Jazz to 1970. This course examines a cluster of jazz developments in the aftermath of the Bebop Revolution, from the late 1940s to the mid-1960s, from historical, cultural, and analytical viewpoints. A special focus is the complex of styles known as Hard Bop. The course also discusses the negotiation in jazz of Western European- and African-based aesthetics, key personalities of the time, compositional and improvisational developments, the music industry, and cultural politics of this rich period of jazz history. Throughout, we are attentive to the myriad musical streams that grew out of this time, and assess the historical importance this period has assumed in retrospect.

MUSIC 388 Historical Performance Practicum # (IV)
Spring. 4 credits. Prerequisite: MUSIC 152 or permission of instructor. Not offered 2002-2003. M. Bilson. The study of eighteenth- and nineteenth-century instrumental performance practices, with special emphasis on the string quartets of Haydn and the piano trios of Schubert. Open to qualified performers.
MUSIC 390 Culture of Renaissance II
(also COM L 362, ENGL 325, HIST 364 ART HIST 396 and ART 396) (II or IV)
Fall. 4 credits. Plus discussion section.
C. Kaske and K. P. Long.
See COM L 362 for description.

MUSIC 398-399 Independent Study in Music History
398, fall; 399, spring. 4 credits. Prerequisite: MUSIC 152 and permission of instructor.
Staff.
Advanced study of various topics in music history. Students enrolling in MUSIC 398-399 participate in, but do not register for, an appropriate 200-level music history course and, in addition, pursue independent research and writing projects.

[MUSIC 400 Senior Seminar]

[MUSIC 410 Music and Monstrous Imaginations # (IV)]
Fall. 4 credits. Not offered 2002-2003.
A. Richards.
This seminar explores the limits of the imaginary in the eighteenth- and nineteenth-century culture, from the theories of fantasy, unreason, and "monstrous imagining" to freak shows, virtuosi, and illusionists. Focusing on visual, literary, and musical phantasmagoria, we investigate the performance of the uncanny (Paganini and devilish technical feats, Mesmer and the glass harmonica), the gendered imagination and artistic creation (pregnancy and invention), technologies of death and its representation (the guillotine and wax museum, magic, lantern shows and automata). Novels by Radcliffe, Lewis, Shelley; instrumental music by C. P. E. Bach, Beethoven, Mendelssohn, Berlioz; opera by Mozart, Weber, Meyerbeer; critical texts from Addison and Steele to Freud and Foucault.

MUSIC 411 The Organ in Western Culture # (IV)
Fall. 4 credits. Prerequisite: permission of instructor. A. Richards and D. Yearsley.
The oldest Western musical instrument, the organ, has the longest and richest repertory and has played a vital role in European culture for more than a millennium. This course traces the changing musical, technological, social, and political significance of the organ from Antiquity to the present day, from the Roman Coliseum to Yankee Stadium, from J. S. Bach to Jimmy Smith.

[MUSIC 474 Opera, History, Politics, Gender (also HIST 460, WOMNS 454, COM L 459, S HUM 459, ITALIA 456) (III or IV)]
M. Steinberg and S. Stewart.
See HIST 460 for description.

[MUSIC 490 American Musical Theatre (also ENGL 454) (IV)]
S. McMillin.
See ENGL 454 for description.

[MUSIC 492 Music and Queer Identity (IV)]
Spring. 4 credits. Prerequisite: MUSIC 152 or permission of instructor. Not offered 2002-2003.
J. Peraino.
Throughout history music has been associated with "otherness" in Western cultures. Appropriately, lesbian and gay individuals and communities have turned to music as a means of expressing and negotiating their "queer" identity within status-quo culture. This course examines how and why music encodes "queerness" by focusing onto various musical genres (such as opera, disco, women's music, country) and composer/musicians (such as Franz Schubert, Judy Garland, David Bowie) that have become significant for various lesbian and gay communities. The course also examines the reasons behind the general popularity of queer-coded but "straight-identified" performers such as Elvis Presley, Prince, and Michael Jackson.

MUSIC 493 Women and Music (also WOMNS 496) (IV)
Spring. 4 credits. Prerequisite: MUSIC 152 or permission of instructor. J. Peraino.
This course introduces the students to a critical examination of women's participation in Western European and American musical traditions. The course focuses on the various subject positions and critical perspectives that women hold in examples of music and writings about music. Of primary importance are the concepts of "objective" vs. "subjective" approaches to the topic of the week. Topics include approaches to gender and criticism, women composers, women performers, women as objects, women's music, drag and androgyny, and women as listeners. Students are asked to keep a journal of their reactions to the readings, listen to assigned works, attend class discussions, and to write "objective" and "subjective" formal papers.

MUSIC 494 Love, Sex, and Song in Medieval France (also WOMNS 403) (IV)
Fall. 4 credits. J. Peraino.
This course explores the cult of courtly love and its inextricable relationship with singing. We focus on secular music and poetry and relevant narratives of Southern and Northern France from the twelfth and thirteenth centuries, and consider issues such as constructions of gender and gender relations, music and sexuality in the Middle Ages, medieval misogyny, women's voices in courtly love lyric, the relationship of words and music, performance context, and reconstruction.

MUSIC 495 Sondheim & Musical Theatre (also ENGL 473, THEAT 472) (IV)
Fall. 4 credits. S. McMillin.
See ENGL 473 for prerequisite and description.

Independent Study

MUSIC 301-302 Independent Study in Music
301, fall; 302, spring. Credit TBA.
Prerequisite: departmental approval. Presupposes experience in the proposed area of study.
Staff.

Honors Program

MUSIC 401-402 Honors in Music
401, fall; 402, spring. 4 credits each term. Limited to honors candidates in their senior year. Staff.

Digital Music and New Media

MUSIC 120 Learning Music through Digital Technology (IV)
Fall or spring. 3 credits. Enrollment limited.
Prerequisite: permission of instructor.
D. Borden.
This course uses selected commercially available technological resources to produce live music. The student is expected to master the Macintosh computer, several music software programs, and several synthesizers using MIDI. The ability to read music is helpful but not necessary. There are no papers to write. Home projects are presented in three classroom concerts. The final is a live presentation of the student's final project in a concert open to the public.

[MUSIC 220 Learning Counterpoint through Digital Technology] (IV)
Spring. 3 credits. Enrollment limited.
Prerequisite: MUSIC 152 and permission of instructor. Not offered 2002-2003.
D. Borden.
This course is a study of traditional contrapuntal techniques from the fourteenth century to the present, with emphasis on invention and fugue. Synthesizers, samplers, MIDI, and music software are covered. There are three classroom concerts, some analysis and a final public concert.

[MUSIC 320 Scoring the Moving Image Using Digital Technology] (IV)
Spring. 4 credits. Prerequisite: MUSIC 120 with a grade of B or higher and MUSIC 251. D. Borden.
Students learn sound design and music composition using MIDI and Digital Audio to enhance images in motion. The course is at least partially collaborative, involving students taking courses in computer animation, film, and dance. In addition, to learn techniques involving synchronizing sound to image, film clips from various sources are used as practice exercises. The final project is a public showing of short computer animation and/or dance performance using the sounds and music provided by the students in this course.

[MUSIC 420 Introduction to MIDI Techniques]
Spring. 4 credits. Permission of instructor.
D. Borden.
This course is an introduction to MIDI for students who are already at an advanced level in music composition. Three composition projects are completed in collaboration with film, dance, and computer animation students.

Musical Performance

Cornell faculty members offer individual instruction in voice, organ, harpsichord, piano and fortepiano, violin, viola, cello, and some brass and woodwind instruments to those students advanced enough to do college-level work in these instruments. Lessons are available by audition only. They may be taken either without credit or, through MUSIC 321-322, with credit. Other instruments may sometimes be studied for credit outside Cornell, but also by audition only (see MUSIC 321h-322h).

Lessons for beginners. The Music Department can recommend outside teachers for those who wish to begin studying voice or an instrument. No credit is available for beginning instruction.

Auditions. Auditions are held at the beginning of each term for lessons for advanced students. Contact the Department of Music office (101 Lincoln Hall) for information.
 Fees. The fee for a one-half hour lesson weekly, without credit, is $150 per term. For a one-hour lesson (or two half-hour lessons) weekly, without credit, the fee is $300. The fee in MUSIC 321–322 for a one-hour lesson (or two half-hour lessons) for credit is $225 per term. All fees are non-refundable once lessons begin, even if the course is subsequently dropped.

Scholarships. Music majors receive a scholarship of up to $225 per term. Members of department-sponsored organizations and ensembles may, with the permission of the director of the organization, receive a scholarship of up to $100 of the Cornell fee for the type of lessons chosen during the term. All scholarships are intended only for lessons in the student’s primary performing medium. Scholarship forms, available in the Music Department office, are to be returned to the office within the first three weeks of classes.

Practice rooms. Practice-room fees for a room with a piano are $75 per term for up to 10 hours weekly, with a charge of $10 for each additional hour. A $25 deposit must be made for a key to the grand piano practice rooms, $20 of which is refunded upon return of the key. Fees for a room with either an upright piano or drum set are $60 per term for up to 10 hours weekly, with a charge of $8 for each additional hour, and fees for a room without a piano are $25 per term for up to 10 hours weekly. The fee for use of the pipe organs is $60 per term for up to 10 hours weekly. All fees are non-refundable and are not prorated.

Earning credit for lessons. For every four credits earned in MUSIC 321–322, the student must have earned, or currently be earning, at least two credits in another music course (excluding freshman seminars, MUSIC 321–322, 323–324, 331–343, or 421 through 448). These three credits must be earned prior to, or simultaneously with, the first two credits in 321–322, they cannot be applied retroactively to previous courses taken outside Cornell. An audition is required, and no credit can be granted for beginning instruction. For further information, read the description of Music 321h–322h and contact the Music Department office.

MUSIC 321–322 Individual Instruction in Voice, Organ, Harpsichord, Piano, Strings, Woodwinds, and Brass
Prerequisite: Advanced students may register only after a successful audition with the instructor, usually scheduled during the first week of classes, and will receive credit only as described under “Earning credit.” Students may register for this course in successive years. Students, at the sole discretion of the instructor, earn two credits each term for a one-hour lesson (or two half-hour lessons) weekly accompanied by an appropriate practice schedule.

MUSIC 321a–322a Individual Instruction in Voice
321a, fall; 322a, spring. 2 credits each term. Prerequisite: successful audition. J. Kellock.

MUSIC 321b–322b Individual Instruction in Organ
321b, fall; 322b, spring. 2 credits each term. Prerequisite: successful audition. A. Richards.

MUSIC 321c–322c Individual Instruction in Piano
321c, fall; 322c, spring. 2 credits each term. Prerequisite: successful audition. X. Bjerken, M. Bilson.

MUSIC 321d–322d Individual Instruction in Harpsichord
321d, fall; 322d, spring. 2 credits each term. Prerequisite: successful audition. A. Richards.

MUSIC 321e–322e Individual Instruction in Violin or Viola
321e, fall; 322e, spring. 2 credits each term. Prerequisite: successful audition. K. Tan.

MUSIC 321f–322f Individual Instruction in Cello
321f, fall; 322f, spring. 2 credits each term. Prerequisite: successful audition. H. Hoffman.

MUSIC 321g–322g Individual Instruction in Brass
321g, fall; 322g, spring. 2 credits each term. Prerequisite: successful audition. Staff.

MUSIC 321h–322h Individual Instruction Outside Cornell
321h, fall; 322h, spring. 2 credits each term. Prerequisite: successful audition. All the standard orchestral and band instruments, keyboard instruments, guitar and voice may, under certain conditions, be studied for credit with outside teachers. This course is available primarily for the study of instruments not taught at Cornell and when there is limited enrollment in MUSIC 321–322. Prior approval and audition by a member of the faculty in the department is required, and credit may be earned only as described under “Earning credit.” Above. Additionally, a departmental petition must be completed by the end of the third week of classes. For information and a list of approved teachers, consult the department office, 101 Lincoln Hall.

MUSIC 321i–322i Individual Instruction in Woodwinds
321i, fall; 322i, spring. 2 credits each term. Prerequisite: successful audition. D. Conn.

MUSIC 323–324 Advanced Individual Instruction
323, fall; 324, spring. 4 credits each term. Open only to juniors and seniors majoring in music and to graduate students. Majors whose lessons must be taken outside Cornell may apply to the department for financial assistance toward the cost of lessons, $225 per semester is normally awarded to such students.

Musical Organizations and Ensembles
Students may participate in musical organizations and ensembles throughout the year. Permission of the instructor is required, and admission is by audition only (usually at the beginning of each semester), except that the Sage Chapel Choir and the Cornell Gamelan Ensemble are open to all students without prior audition. Registration is permitted in two of these courses simultaneously and students may register in successive years, but no student may earn more than eight credits in these courses. Membership in these musical organizations and ensembles is also open to qualified students who wish to participate without earning credit.

MUSIC 331–332 Sage Chapel Choir
331, fall or summer; 332, spring. 1 credit. No audition for admission. R. Riley.

MUSIC 333–334 Cornell Chorus
333, fall; 334, spring. 1 credit. Prerequisite: permission of instructor. Staff.

MUSIC 335–336 Cornell University Glee Club
335, fall; 336, spring. 1 credit. Prerequisite: permission of instructor. T. Sokol.

MUSIC 337 Wind Symphony
Fall. 1 credit. Prerequisite: permission of instructor. D. Conn.

MUSIC 338 Symphonic Band
Spring. 1 credit. Prerequisite: permission of instructor. D. Conn.

MUSIC 339–340 Jazz Lab Ensemble
339, fall; 340, spring. 1 credit. Prerequisite: permission of instructor. P. Merrill.

MUSIC 339–343 Cornell Chamber Orchestra
421, fall; 422 spring. 1 credit. Prerequisite: permission of instructor. D. Conn.

MUSIC 345–346 Introduction to the Gamelan
345, fall; 346, spring. 1 credit. Enrollment limited. Prerequisite: permission of instructor. M. Hatch.

MUSIC 421–422 Cornell Chamber Orchestra
421, fall; 422 spring. 1 credit. Prerequisite: permission of instructor. X. Bjerken.

MUSIC 437–438 Chamber Winds
437, fall; 438, spring. 1 credit each term. Prerequisites: enrollment in Symphonic Band, Wind Symphony or Wind Ensemble in the same semester as this course AND permission of instructor only. D. Conn.

MUSIC 589
MUSIC 439-440 Jazz Ensemble
439, fall; 440, spring. 1 credit. Prerequisite: permission of instructor. P. Merrill. Study and performance of classic and contemporary big band literature.

MUSIC 441-442 Chamber Music Ensemble
441, fall; 442, spring. 1 credit. Prerequisite: permission of instructor. Coordinator: K. Tan. Study and perform chamber music works from duos to octets for pianists, string, and wind players.

MUSIC 443-444 Chorale
443, fall; 444, spring. 1 credit each term. Prerequisite: permission of instructor. Staff. Study and performance of selected choral music for mixed voices.

MUSIC 445-446 Cornell Gamelan Ensemble
445, fall; 446, spring. 1 credit each term. Enrollment limited. Prerequisite: permission of instructor. M. Hatch. Advanced performance on the Javanese gamelan. Tape recordings of gamelan and elementary number notation are provided. Some instruction by Indonesian musicians is offered in most years.

MUSIC 447-448 Chamber Singers
447, fall; 448, spring. 1 credit each term. Prerequisite: permission of instructor. Plus 2 hours TBA. Staff. A mixed-voice chamber choir specializing in Renaissance and twentieth-century music.

Graduate Courses
Open to qualified undergraduates with permission of instructor.

MUSIC 601 Introduction to Bibliography and Research
Fall. 4 credits. L. Coral. This course explores the nature of the discipline and introduces the many types of bibliographic tools, both printed and electronic, needed to pursue research in music.

MUSIC 602 Analytical Technique (also MUSIC 482)
Spring. 4 credits. J. Webster. A critical survey of various analytical methods in current use. Frequent analytical assignments and class presentations.

MUSIC 603 Editorial Practice

MUSIC 604 Ethnomusicology: Areas of Study and Methods of Analysis
Spring. 4 credits. Open to graduate students in anthropology, linguistics, psychology, sociology, and other cognate fields with permission of instructor. S. Pond. Topic: current issues in ethnomusicology.

MUSIC 622 Historical Performance Practice
Spring. 4 credits. M. Bilson. The study of eighteenth- and nineteenth-century instrumental performance practices, with special emphasis on the string quartets of Haydn and the piano trios of Schubert. Open to qualified performers.

MUSIC 653 Topics in Tonal Theory and Analysis

MUSIC 654 Topics in Post-Tonal Theory and Analysis

MUSIC 657-658 Composition
657, fall; 658, spring. 4 credits each term. F 1:25–4:00 p.m. plus 1 hour TBA. R. Sierra, S. Stucky.

MUSIC 674 German Opera (also GERST 672)

MUSIC 680 Topics in Ethnomusicology

MUSIC 681 Seminar in Medieval Music

MUSIC 682 Seminar in Baroque Music
Spring. 4 credits. R. Harris-Warrick. Topic: French opera from Lully to Gluck.

MUSIC 683 Seminar in Music and Postmodern Critical Theory

MUSIC 684 Seminar in Renaissance Music

MUSIC 685 Seminar in Music of the Romantic Era
Fall. 4 credits. J. Webster. Topic: Instrumental music in the later forms.

MUSIC 686 Seminar in Music of the Twentieth Century
Fall. 4 credits. S. Stucky. Topic: Lutoslawski.

MUSIC 687 Mozart: His Life, Works, and Times (also GERST 757)

MUSIC 688 Seminar in Classical Music

MUSIC 689 Seminar in Music of the Twentieth Century
Fall. 4 credits. J. Webster. Topic: Instrumental music in the larger forms.

MUSIC 690 Seminar in Music of the Twentieth Century
Fall. 4 credits. S. Stucky. Topic: Lutoslawski.

MUSIC 691-692 Historical Performance
691, fall; 692, spring. 4 credits each term. Prerequisite: permission of instructor. M. Bilson. Lessons on the major instrument with supplementary study and research on related subjects.

MUSIC 693 Seminar in Performance Practice

MUSIC 694 Seminar in Renaissance Music

MUSIC 695-696 Independent Study and Research
697, fall; 698, spring. Credit TBA. Staff.

MUSIC 705-706 History of Music Theory
785, fall; 786, spring. 4 credits each term. Not offered 2002–2003.

MUSIC 787 History and Criticism

MUSIC 901-902 Thesis Research
901, fall; 902, spring. Up to 6 credits each term. TBA. Offered for S/U only. Limited to doctoral students in music who have passed the Admission-to-Candidacy Exam.

NEAR EASTERN STUDIES

The Department
The Department of Near Eastern Studies (360 Rockefeller Hall, 255–672) offers courses in Near Eastern civilization including archaeology, history, religions, languages, and literatures. These course offerings treat the Near East from the dawn of history to the present and emphasize methods of historical, cultural, and literary analysis. Students are encouraged to take an interdisciplinary approach to the religions and cultures of the region and their articulation during antique, late antique, medieval, and modern times.

Distribution Requirements
Any two Near Eastern Studies history or archaeology courses at the 200, 300, or 400 level that form a reasonable sequence or combination satisfy the distribution requirement in the social sciences/history. Any two Near Eastern Studies civilization or history courses at the 200, 300, or 400 level that form a reasonable sequence or combination satisfy the distribution requirement in the humanities. NES 197 or NES 251 plus any other Near Eastern studies course will constitute a sequence to fulfill the distribution requirement in either social sciences/history or humanities, depending on the second course used in
combination with 197 or 251. All 200- or 300-level language courses may fulfill the humanities requirement.

The Major

The precise sequence and combination of courses that a major in Near Eastern Studies chooses will be selected in consultation with the student's adviser. All majors must satisfy the following requirements (no course may be used to satisfy two requirements; S-U options not permitted):

A. Qualification in two Near Eastern languages or proficiency in one.

B. Nine three- or four-credit NES courses, which must include the following:

1. NES 197 or 251.
2. Two 200-level NES survey courses, one whose chronological parameters fall within the period 3000 B.C.E. to 600 C.E., and one whose chronological parameters fall within the period 600 C.E. to the present. The following are examples (a complete list can be obtained in the department office): 3000 B.C.E. to 600 C.E.

NES 223, Introduction to the Hebrew Bible

NES 261, Ancient Seafering

NES 229, Introduction to the New Testament

NES 295, Introduction to Christian History

600 C.E. to the present

NES 235, Jews and Arabs in Contact and Conflict: The Modern Period

NES 250, Muhammad and Mystics in the Literatures of the Islamic World

NES 258, Islamic History 1258-1914

NES 294, Modern History of the Near East

3. At least two NES courses at the 300 level or above (one of which may be NES 301, 302, 311, or 312).

Prospective majors should discuss their plans with the director of undergraduate studies before formally enrolling in the department. To qualify as a major, a cumulative grade average of C or better is required.

Honors. Candidates for the degree of Bachelor of Arts with honors in Near Eastern Studies must fulfill the requirements of the appropriate major study and enroll in the honors course, NES 499, in the fall and spring semesters of their senior year. For admission to the honors program, candidates must have a cumulative average of B+ or better and have demonstrated superior performance overall in Near Eastern Studies courses. After consulting their major adviser, candidates should submit a proposal to their committee members and the Director of Undergraduate Studies during the second semester of their junior year. The honors course carries 3 credits.

Study abroad. Near Eastern Studies majors may choose to study in the Near East during their junior year. There are various academic programs in the countries of the Near East that are recognized by the Department of Near Eastern Studies and that allow for the transfer of credit. Archaeological field work on Cornell-sponsored projects in the Near East may also qualify for course credit.

First-Year Writing Seminars

For descriptions, consult the John S. Knight Institute brochure for times, instructors, and descriptions.

Language Courses

NES 101-102 Elementary Modern Hebrew I and II (also JWST 105-106)

101, fall; 102, spring. 6 credits each term.

NES 102 satisfies the language qualification. Prerequisite for NES 102: 101 or permission of instructor. Enrollment limited to 17 students in each section. S. Shoer. Intended for beginners. The course provides a thorough grounding in reading, writing, grammar, oral comprehension, and speaking. Students who complete the course are able to function in basic situations in a Hebrew-speaking environment.

NES 105-106 Elementary Hindi-Urdu (also HINDI 101-102)

Fall, spring. 6 credits each term.

M. Farooqi.

For description, see HINDI 101-102.

NES 107 Introduction to Urdu Script (also HINDI 125)

Spring. 6 credits. M. Farooqi.

For description, see ASIAN 125.

NES 111-112 Elementary Arabic I and II

111, fall; 112, spring. Enrollment limited to 17 in each session. 6 credits each term.

NES 112 provides language qualification. Prerequisite for NES 112 is NES 111, or permission of instructor. M. Younes.

The course provides a thorough grounding in all language skills: listening, speaking, reading, and writing. It starts with spoken Arabic and gradually integrates Modern Standard Arabic in the form of listening and reading texts. Emphasis is on learning the language through using it in meaningful contexts. Students who successfully complete the two-semester sequence are able to: (1) understand and actively participate in simple conversations involving basic practical and social situations (introductions, greetings, school, home and family, work, simple instructions, etc.); (2) read Arabic material of limited complexity and variety (simple narrative and descriptive texts, directions, etc.); (3) write notes and short letters describing an event or a personal experience. An important objective of the course is to familiarize students with basic facts about the geography, history, and culture of the Arab world.

NES 123-124 Elementary Biblical Hebrew I and II (also JWST 123-124, RELST 123-124)

123, fall; 124, spring. 3 credits each term.

The course is intended to develop basic proficiency in reading the Hebrew Bible. The first semester emphasizes introductory grammar and vocabulary. The second semester focuses on reading selected passages in the Hebrew Bible, with further development of vocabulary and grammar.

NES 133-134 Introduction to Qur’anic and Classical Arabic (also RELST 133-134)

133, fall; R. Brann; 134, spring. S. Toorawa.

4 credits each term.

NES 134 provides language qualification. This course is designed for students who are interested in reading the language of the Qur’an and Hadiths (Sayings of the Prophet) with accuracy and understanding. Authentic texts in the form of chapters from the Qur’an and Hadiths are presented and analyzed, and basic grammatical structures are discussed, explained, and practiced systematically. Interested students are encouraged to memorize excerpts from the texts. At the end of the two-semester sequence, the successful student has mastered a working vocabulary of over 1,000 words, correct pronunciation, and the most commonly used grammatical structures. In addition, the course provides the student with a firm foundation on which to build an advanced study of Classical Arabic.

NES 201-202 Intermediate Modern Hebrew I and II (also JWST 201-202)

201, fall; 202, spring. Enrollment limited to 15 students in each section. 4 credits each term.

NES 201 provides language proficiency. Prerequisites for NES 201, 102 or permission of instructor; for NES 202, 201 or permission of instructor. N. Scharf.

A sequel to NES 101-102. Continued development of reading, writing, grammar, oral comprehension, and speaking skills. The course introduces Hebrew literature and Israeli culture through the use of texts and audio-visual materials.

NES 211-212 Intermediate Arabic I and II

211, fall; 212, spring. Enrollment limited to 15 students in each section. 4 credits each term.

NES 211 provides language proficiency. Prerequisites: for NES 211, one year of Arabic or permission of instructor; for NES 212, 211 or permission of instructor. M. Younes.

A sequel to NES 111-112. Continued development of the four language skills through extensive use of graded materials on a wide variety of topics. Increasing attention is given to developing native-like pronunciation and grammatical accuracy, but the main focus is on developing communication skills. The student who successfully completes 212 is able to: (1) understand and express himself or herself in Arabic in situations beyond the basic needs; (2) read and comprehend written Arabic of average difficulty; (3) write a letter, a summary of a report, or a reading selection. An appreciation of Arabic literature and culture is sought through the use of authentic materials.

NES 201-302 Advanced Modern Hebrew I and II (also JWST 301-302)

301, fall; 302, spring. Limited to 15 students. 4 credits each term.

Prerequisite for NES 301, 202 or equivalent, with permission of instructor. Prerequisite for NES 302: 301 or equivalent, with permission of instructor. This sequence may be used to fulfill the humanities distribution requirement in a major. N. Scharf.

Advanced study of Hebrew through the analysis of literary texts and expository prose. This course employs a double perspective: language is viewed through literature and literature through language. Students develop composition skills by studying language structures, idioms, and various registers of style.
NES 311 Advanced Intermediate Arabic I @ (IV) Fall. 4 credits. Prerequisite: NES 212 or permission of instructor. Limited to 15 students. S. Toorawa. Students are introduced to authentic, unedited Arabic language materials ranging from poems, short stories, and plays to newspaper articles dealing with social, political, and cultural issues. Emphasis is on consolidation of reading and writing skills.

NES 312 Advanced Intermediate Arabic II @ (IV) Spring. 4 credits. Limited to 15 students. Prerequisite: NES 311, or permission of instructor. D. Starr. Students are introduced to authentic, unedited Arabic language materials ranging from poems, short stories, and plays to newspaper articles dealing with social, political, and cultural issues. Emphasis will be on developing fluency in oral expression through discussions of concepts presented in the reading selections. A primary objective of the course is the development of writing skills through free composition exercises in topics of interest to individual students.

NES 313 Classical Arabic Texts (also RELST 313) @ (IV) Spring. 4 credits. Prerequisite: NES 212 or equivalent. D. Powers. This course will introduce students to different genres of literary Arabic. We read, translate and discuss selected texts written in classical and modern standard Arabic. Review of morphology and grammar.

NES 314 Qur'an and Commentary (also RELST 314) @ (IV) Fall. 4 credits. D. Powers. This course is an advanced study of classical Arabic through a close reading of selected chapters of the Qur'an, together with the Arabic commentary (tafsir) and other relevant literature. Special attention is given to grammar, syntax, and lexicography.

NES 330-331 Hieroglyphic Egyptian I and II (IV) 330 fall; 331 spring. 4 credits. NES 331 provides language qualification. Not offered 2002-2003. Stull.

NES 333-334 Elementary Akkadian I & II (also NES 633-634) (IV) 333, fall; 334, spring. 4 credits each term. Prerequisite for NES 334: 533 or permission of instructor. Prerequisite for NES 634: 633 or permission of instructor. A. Rahmouni. An introduction to the Semitic language of the Akkadians and Babylonians of ancient Mesopotamia. Utilizing the inductive method, students are rapidly introduced to the grammar and the cuneiform writing system of Akkadian through selected readings in the Code of Hammurapi, the Descent of Ishtar, and the Annals of Sennacherib. Secondary readings in comparative Semitic linguistics, the position of Akkadian in the family of Semitic languages and on the history and culture of Mesopotamia provide a background for study of the language. Knowledge of another Semitic language is helpful but not essential.

NES 337-338 Ugaritic I & II (also NES 637-638) @ (IV) 337, fall; 338, spring. 4 credits. Prerequisite: knowledge of another Semitic language (preferably Hebrew). Not offered 2002-2003. G. Rendsburg. Study of the language and literature of ancient Ugarit, an important site in northern Canaan. Special attention is paid to the relationships between Ugaritic and Hebrew and between Canaanite literature and the Bible.

NES 420 Readings in the Biblical Hebrew Prose (also JWST 420, RELST 420) @ (IV) Fall. 4 credits. Provides language proficiency. Prerequisite: 1 year of biblical or modern Hebrew. Course may be repeated for credit. G. Rendsburg. An advanced course in reading selected portions of the Hebrew Bible. Emphasis is placed on the philological method, with attention to literary, historical, and comparative concerns.

NES 433 Introductory Sumerian I (also NES 631) @ (IV) Fall. 4 credits each semester. Prerequisite: permission of instructor. Not offered 2002-2003. D. I. Owen.

NES 434 Introductory Sumerian II (also NES 632) @ (IV) Spring. 4 credits each semester. Provides language qualification. Prerequisite: NES 433 (or NES 434). Not offered 2002-2003. D. I. Owen.

NES 625 West Semitic Inscriptions Fall. 4 credits. G. Rendsburg.

Spring. 3 credits. J. Zorn.

NES 631 Introductory Sumerian I (also NES 433) Fall. 4 credits. Prerequisite: permission of instructor. Not offered 2002-2003. D. I. Owen.

For description, see NES 433 under Near Eastern Languages.

For description, see NES 434 under Near Eastern Languages.

NES 633-634 Elementary Akkadian I and II (also NES 333-334) 633, fall; 634, spring. 4 credits each term. Prerequisite for NES 634: 633 or permission of instructor. A. Rahmouni. An introduction to the Semitic language of the Akkadians and Babylonians of ancient Mesopotamia. Utilizing the inductive method, students are rapidly introduced to the grammar and the cuneiform writing system of Akkadian through selected readings in the...
made monuments, and artifacts that flesh out the textural material providing a fuller image of the world's most prominent spiritual and secular capital.

**NES 360 The Origins of Mesopotamian Civilization (also JWST 360, ARKEO 360) @ (III or IV)**

An introduction to the language, literature, history, culture and archaeology of Syria-Mesopotamia in the fourth and third millennia B.C.E. This course examines the emergence of Mesopotamian civilization from its emergence in the archaeological record. In the fourth millennium until its disappearance around 2000 B.C.E. In addition, it emphasizes the parallel development of the Semitic peoples in Syria (Eblaites) and upper Mesopotamia (Akkadians). A special feature of the course will be a basic introduction to the Sumerian language utilizing one of the many cuneiform tablets in the collection of the Department of Near Eastern Studies.

**NES 361 Sumerian Language and Culture (also JWST 361, ARKEO 361) @ (III or IV)**

A continuation of NES 360, the course focuses on a more intense introduction to Sumerian language and grammar with additional readings in literature in translation. Particular emphasis is placed on the reading and interpretation of original texts from the Cornell collection and their use in the reconstruction of Mesopotamian history and culture in the third millennium.

**NES 366 The History and Archaeology of the Ancient Near East (also ARKEO 366, JWST 366) @ (III or IV)**

Fall: 4 credits. Prerequisite: ARKEO 100 or permission of instructor. Not offered 2002-2003. D. I. Owen.

**Civilization**

**NES 197 Introduction to Near Eastern Civilization (also JWST 197 and RELST 197) @ (IV)**

**NES 244 Introduction to Ancient Judaism (also JWST 244 and RELST 244) @ (III or IV)**

Fall: 3 credits. G. Rendsburg.

This course focuses on the development of Judaism as a religion and a civilization in antiquity, with particular emphasis on its beliefs and practices. Topics discussed include the development of monotheism, the role of the covenant, law and society, prayer and sacrifice, and the rise of worship holidays. Jewish civilization is placed within the context of ancient civilizations (Canaan, Egypt, Babylon, Persia, Greece, Rome). We also focus on the rise of Jewish sects (Pharisees, Sadducees, Essenes, Zealots, etc.) in late antiquity. Texts studied include selections from the Bible, the Apocrypha, the Dead Sea Scrolls, Josephus, and the Mishnah. All readings in English translation. In addition, there is a one-credit option for reading the texts in Hebrew (NES 328).

**NES 251 Judaism, Christianity, and Islam (also JWST 251, RELST 251) @ (IV)**

Fall: 3 credits. K. Haines-Eitzen.

For description, see NES 251 under Near Eastern History.

**NES 255 Introduction to Islamic Civilization (also HIST 253, RELST 255) @ (III or IV)**

Fall: 3 credits. D. Powers.

We consider the major themes of Islamic civilization as they developed from the lifetime of Muhammad until the twentieth century. While the readings provide the student with the chronology of Islamic History, lectures are devoted to an analysis of thematic units such as architecture, science and culture. The class meets three times weekly, and the classroom format is that of a lecture/discussion in which students are encouraged to participate actively. Lectures are accompanied by slide presentations, when appropriate.

**NES 281 Gender and Society in the Muslim Middle East (also RELST 281, WOMNS 281) @ (III)**

**NES 291 Arab Society and Culture (III)**

**NES 298 Issues in Catholic Thought (also RELST 201) (IV)**

Fall: 4 credits. W. T. Dickens.

Issues in Catholic Thought: addressing primarily developments since the Second Vatican Council (1962-1965), this course familiarizes students with some of the principal contemporary forms of Roman Catholic thought and practice. We begin by situating these developments against the backdrop of the transformations in Catholicism's responses to modernity since the late sixteenth century. Our principal interest at this stage lies in examining how Catholic leaders sought to meet the challenges posed by modernity's emphasis on individual rights and freedoms, religious and cultural pluralism, and the rise of modern sciences and feminisms. This prepares the ground for a more focused examination of the following topics: medical ethics, sexuality, marriage, and the family, social justice, evolution, biblical interpretation, sacraments, Catholic spirituality, Mary, Catholic feminism, and inter-religious dialogue. Our sources include, among others, social scientific studies, official Church documents, and the writings of influential Catholic social activists (Dorothy Day and Mother Teresa), mystics (Thomas Merton), feminists (Rosemary Radford Ruether), and theologians (Hans Urs von Balthasar, Gustavo Gutierrez, Karl Rahner, Oscar Romero, and Pierre Teilhard de Chardin). Although our energies are directed primarily to understanding the situation in Europe and the Americas, we also examine recent work done by Catholics in South Asia and Africa.

**NES 328 Readings in Ancient Jewish Texts (also RELST 317, JWST 328)**

Fall: 1 credit. G. Rendsburg.

This course is a one-credit add-on to NES 244 Introduction to Ancient Judaism. Students enrolled in NES 244, who wish to read a selection of the texts to be discussed in that class in the Hebrew original, should enroll in this one-credit seminar NES 328. Texts read include selections from the Bible, the Dead Sea Scrolls, and the Mishnah.

**NES 339 Islamic Spain: Culture and Society (also JWST 339, COM L 334, RELST 334, SPAN L 339/699, NES 639) @ (IV)**

This course examines the culture and society of al-Andalus (Islamic Spain) from 711, when Islam arrived in Iberia, until 1492 and the demise of Nasrid Granada. Through extensive discussion and analysis of Arabic, Latin and Hebrew primary documents and literary texts of various genres (in translation), the course challenges ideological bases of conventional thinking regarding the social, political, and cultural identity of medieval "Spain." Among other things, the class investigates the origins of lyric poetry, the relationships among the various confessional and ethnic communities in al-Andalus and the problems involved in Moorish Christian and Andalusian Jewish subcultural adaptations of Andalusi Arabo-Islamic culture.

**NES 351 Law, Society, and Culture in the Middle East, 1200-1500 (also NES 651, RELST 350, HIST 372/652) @ (III)**

After surveying the historical development of Islamic Law, the seminar focuses on the structure and function of the Islamic legal system in the thirteenth and fourteenth centuries, with the use of legal documents, judicial opinions, and court cases (in English translation) to elicit major themes and issues; e.g., the Marital regime, women and property, social hierarchies, law, and the public sphere.

**NES 357 Islamic Law and Society (also RELST 356) @ (III)**

The concept of Shari'ah, or sacred law of Islam, embodies the totality of God's commands that regulate the life of every Muslim in all aspects. The Shari'ah comprises on an equal basis ordinances regarding worship and ritual as well as political and, in Western terms, strictly legal rules. This course examines the relationship between the Shari'ah and the major social, economic, and political institutions of Islamic society. Topics discussed include the status of women, slaves, and non-Muslims; attitudes toward the economy and the arts, the significance of jihad (holy war); the nature of the Muslim city, and the relationship between the religious establishment and the government. Attention is given to the function of the Shari'ah in the modern world, with special reference to the problems and challenges of legal reform.

**NES 363 Society and Law in the Ancient Near East (also JWST 363) @ (III)**

**NES 371 A Mediterranean Society, and Its Culture: The Jews and Judaism under Byzantium (also JWST 371, RELST 371, COM L 371) @ (IV)**

Nes 392 Cosmology and Divination in Antiquity (also Asian 392, Class 392) @ (iv)
Fall. 4 credits. C. Minkowski.
A seminar examining the encounter between the world-system and astrology. Some attention to Babylonian, Indian, and Chinese and to the later career of divination and cosmology in medieval Europe and Asia. Topics include: the relevance of various theories of space, time, causation, and being to the practice of divination; philosophical and theological arguments for and against divination; the theory and practice of universal, genethlialog, catachatic astrology; the social worlds of astrologers and their clients; and the problems of study that result from the nature of the material and the history of its transmission.

Nes 496 Religion and Science (also Relst 496) Spring. 4 credits. W. T. Dickens.
A seminar examining the encounter between religion and the natural, social, and historical sciences in western civilization. We begin by clarifying what we mean by "religion" and "science," noting the variety of definitions of both and the effect one's definitions will have on one's views of how they relate. We then examine four basic forms of relating them: that are distinct, yet complementary, religious beliefs are reconcilable with scientific discoveries; and religious beliefs inform scientific inquiry. We use this fourfold framework to analyze and assess the debates that occur within eight areas of engagement: scientific knowledge and religious belief, the origin of the cosmos, evolution and creationism, natural laws and miracles, religion and the mind-body problem, psychology and religion, anthropology and religion, and the historical-critical study of religious texts. Finally, the writings of E. O. Wilson and A. R. Peacocke provide us with case studies of two different answers to the question whether it is intellectually defensible to be a religious scientist.

[Nes 239 Cultural History of the Jews of Western Europe 1492-1789 (also Jwst 253, Relst 239, Span 239) @ (iv)]
Staff.
A survey of the cultural history of the Jews in Spain from the late Visigothic period until the converso crisis of the fourteenth and fifteenth centuries and the Expulsion, focusing on the interaction of Jewish with Muslim and Christian cultures and the stable yet evolving nature of a "Jewish" identity. The course establishes historical and literary-critical frames for reading primary sources in translation, including secular and synagogal poetry, philosophy and kabbalah, biblical hermeneutics, historiography, polemics, and other genres.

Nes 245 From Medievalism to Modernity: The History of Jews in E. Modern Europe, 1492-1789 (also Jwst 253, Hist 285) @ (iii)
Fall. 4 credits. V. Caron.
This course examines the history of the European Jewry during the centuries of transition from the Middle Ages to the Modern Era. We examine the extent to which traditional Jewish life began to break down during this period and thus paved the way for the emergence of modern Jewry. Topics include the Spanish Expulsion of 1492, religious, intellectual, and socio-economic dimensions of the Marrano dispersion, including Lurianic Cabalalah and the messianic movement of Shabbetai Zevi, the establishment of Jewish communities in the West; the end of the "Golden Age" of Polish Jewry and the rise of Hasidism; the changing economic and political role of Jews in the seventeenth and eighteenth centuries; and the impact of the Enlightenment.

Nes 251 Judaism, Christianity and Islam (also Jwst 251, Relst 251) @ (iv)
Fall. 3 credits. K. Haines-Eitzen.
You have ever wondered how Jews, Christians, and Muslims can worship the same universal deity, yet find themselves in conflict with one another, often to the point of demonizing adherents of another tradition? How can Jews consider Abraham the first Jew, Christians regard him as the first Christian, and Muslims look upon him as the first Muslim? How can each put forth exclusive claims to truth, to what is required of women and men, and to control of sacred sites such as Jerusalem? This course explores the ways in which communities of Jews, Christians, and Muslims came to define themselves and by extension those outside their religious community through the production and subsequent interpretation of "authoritative texts," including the Hebrew Bible, The (Christian) Bible, and the Arabic Qur'an. After we undertake a historical overview of the emergence of Judaism, Christianity, and Islam, and established a comparative approach to monotheistic religious culture, we examine some of the provocative ways (in text, image, and film) in which Jews, Christians, and Muslims imagined both the other as well as members of their own traditions in late antiquity, the Middle Ages, and in more recent times. For example: polemics among Jews and Christians in late antiquity and the Middle Ages, images of Muslims in American cinema, and the modern political situation in and over Jerusalem, particularly as it relates to the practice of holiness.

The approach is comparative, analyzing literary and historical aspects of shared and parallel narrative traditions and textual hermeneutics. The class also discusses the religious concepts of revelation, prophecy, and community, attitudes toward gender, and notions of history. For description, see NES 263 under Near Eastern Archaeology.

Nes 261 Ancient Seafaring (also Jwst 261, Arteko 275) @ (iii)
Fall. 3 credits. Not offered 2002-2003.
D. I. Owen.

Nes 263 Introduction to Biblical History and Archaeology (also Arteko 253, Jwst 263, Relst 264) @ (iii)
Spring. 3 credits. J. Zorn.
For description, see NES 263 under Near Eastern Archaeology.

Nes 266 Jerusalem through the Ages (also Jwst 266, Arteko 266, Relst 266) @ (iii or iv)
Fall. 3 credits. J. Zorn.
For description, see NES 266 under Archaeology.

Nes 290 History of Zionism and the Birth of Israel (also Jwst 290, Hist 267) @ (iii)
Spring. 4 credits. V. Caron.
For description, see Hist 267.

Nes 295 Introduction to Christian History (also Jwst 295, Relst 295, Hist 299) @ (iii or iv)
Spring. 3 credits. K. Haines-Eitzen.
This course offers an introduction of Christianity from the apostle Paul through the seventeenth century, with an emphasis on the diversity of Christian traditions, beliefs, and practices. We explore the origins of Christianity within Judaism in the eastern Mediterranean world, the spread of Christianity, the development of ecclesiastical institutions, the rise and establishment of monasticism, and the various controversies that occupied the church throughout its history. The course draws on primary literary sources (from biblical literature to council proceedings, monastic rules, sermons, theological treatises, and biographies) as well as Christian art, inscriptions, music, and manuscripts.

Nes 296 Sophomore Seminar: Jesus in History, Tradition and Cultural Imagination (also Jwst 296, Relst 296) @ (iii or iv)
Spring. 4 credits. K. Haines-Eitzen.
Who was Jesus? How do we reconstruct Jesus in history? What did he believe? Why was he executed? Why was his identity so vehemently contested throughout the early
centuries (and beyond) of Christianity? How did non-Christians, especially Jews and Muslims, understand and imagine the figure of Jesus? How has the figure of Jesus come to be imagined in music, art, and literature? These are the questions at the fore of this course, which offer an interdisciplinary approach to the study of the figure of Jesus. Beginning with our earliest materials (canonical and non-canonical early Christian texts) we explore the historical figure of Jesus, his life, context, worldview, the reasons for his death, and so forth. Here we raise issues of historical methodology. The second phase of the course moves us from the reconstruction of this historical Jesus to the Jesus Christ imagined by various Christians, Jews, and Muslims. Here we look closely at the christological controversies that occupied much of Christian history. In the third part of the course, we take art constructions and imaginations about Jesus even further to look at the Jesus of art, music, film, and literature. The materials here are, of course, vast; but we select representatives from each of these fields that demonstrate the presence and use of the figure of Jesus in the cultural imagination.

For description, see Near Eastern Archaeology.

NES 331 The Sword and the Pen: The Safavid Dynasty of Iran, 1501-1722
[also HIST 390]  @ (III or IV)
Fall. 4 credits. C. Mitchell.
This seminar focuses intensively on the premodern history of the Safavid in Greater Iran. We examine how this gunpowder empire grew from a millennium mystical movement to become a major Muslim political entity in the early sixteenth century. Particular focus is placed on discussing the founding of the Safavid empire by Shah Isma`il (r. 1501-24) and the degree with which he was committed to establishing a proper Persian-Islamic state. Considerable attention is also given to the content and enforcement of Twelver Shi`ism as the state religion by Shah Isma`il and his successor, Shah Tahmasp (r. 1524-76). The Empire culminated with the reign of Shah 'Abbас the Great (r. 1589-1629), and we continue to examine its administrative, economic, social, and religious reforms instituted during this period; this is examined in conjunction with 'Abbás's dealing with the encroaching European powers of Portugal, England, and the Ottoman Empire, as well as our attempts to discuss the decline of the Safavids, and the legacy of this dynasty to later 19th and 20th century development in Iran.

NES 393 Religion and Politics in the Middle East (also RELST 393)  @ (III)
Fall. 4 credits. Enrollment limited to 25 students. Not offered 2002-2003.

NES 397 The Arab-Israeli Conflict in Historical and Critical Perspective (also GOVT 397, JWST 397)  (III)
Fall. 4 credits. R. Brann.
This course examines the history of the conflict between two peoples with claims to the same land and national identity (Israel), from the rise of their national movements at the turn of the 20th century and their eventual clash down to the present crisis. We will investigate the variousable and shifting elements in the evolution of the conflict, from conflicting Israeli and Palestinian narratives and mythologies about the nature of the conflict. Among many issues to be addressed are the impact of the Holocaust on European identity, and the emergence of Pan-Arabism and Islamism, the various currents in Zionism and its relationship to Judaism, the implications of great power rivalry in the Middle East, and the different causes and consequences of the four Arab-Israeli wars, efforts at peacemaking including Oslo and Camp David, and the significance of the two Palestinian uprisings.

NES 396 Persia in the Medieval and Early Modern European Imagination (also HIST 398)  @ (III or IV)
Spring. 4 credits. C. Mitchell.
The seminar focuses on the changing European perceptions of Persia (Iran) from the Middle Ages to the Enlightenment. Thanks to treatments by Herodotus, Arrian, and other authors of classical antiquity, Persia and the legacy of the Achaemenid, Sassanian, and Hellenistic empires continued to exist as subjects of historical interest throughout the early modern era. We explore the manner in which Europeans were influenced by the Humanist resuscitation of and fondness for the ancient world, while at the same time having their perceptions of Persia being framed by fear and awe at an ever-expanding heretical Islamic faith. Were Renaissance Europeans able to reconcile the religious and cultural aspects of the great glory of ancient Persia, nemesis of the Athenian Greeks, with prevalent disdain for the Muslim Orient? With the advent of print culture and the subsequent rise in popularity of travel literature, Persia and other Oriental phenomenons became subjects of fascination and levels of inquiry. By the seventeenth century, the perception of Persia initially imbued by Humanist scholars was now intermeshed with fantastic and often fictional accounts provided by European travelers abroad. To what extent were travelers in Persia influenced by ever-changing understandings of the Orient? Is the current historiography of medieval Persia influenced by existing incongruities in these accounts? We also discuss how Persia and its association with Persia became established in European culture—art, drama, literature—during the Enlightenment. Here, we begin to contemplate the work of Said, White, Anderson, Greenblatt, Subramani, and Clifford, as well as the relationship between European self-definition and the depiction of 'Other.' Did Persia, either as an ancient classical empire or as a form of Oriental Muslim despotism, serve explicit interest for the Europeans and their own views of authority?

NES 418 Seminar in Islamic History: 600-750 (also HIST 460, NES 618, RELST 418)  @ (III)

Fall. 4 credits. Not offered 2002-2003.

NES 419 The History of Tabari
Spring. 4 credits. D. Powers.
An examination of Islamic history from 600-750, with special attention to interpretive issues relating to the career of the Prophet Muhammad, the Arab conquests, the emergence of the Caliphate, conversion to Islam, and the Abbasid revolution. Students read primary sources in English translation, especially The History of Tabarî.

NES 651 Law, Society, and Culture in the Middle East, 1200-1500 (also NES 351, RELST 350, HIST 372/652)  @ (III or IV)
Spring. 4 credits. Enrollment limited to 25 students. D. Powers.
For description, see NES 351.

Literature

NES 223 Introduction to the Hebrew Bible I (also JWST 223, RELST 223)  @ (IV)
Fall. 3 credits. Next time offered will be 2003-2004. G. Rendsburg.
This is the first course of a two-semester sequence. The main goal is to introduce students to the literature of the Hebrew Bible, which is accomplished by concentrating on the Torah and the historical material in Joshua through Samuel, that is, the material which covers the period from Israel's origins through King David. Emphasis is placed on literary, historical, and theological aspects. Special use is made of the numerous archaeological discoveries that have advanced our knowledge of ancient Israel. As such, the Bible is studied against the backdrop of ancient Near Eastern literature, history, religion, mythology, and law.
This course provides a literary and historical sequence, but one does not need to take NES Testament Greek reading weekly seminar would like to participate in a one-credit, New Testament (also JWST 229, RELST 229) @ # (IV)

This is a one-credit option for students who wish to meet one day each week to read the texts covered in class in the original Hebrew. Must be concurrently enrolled in NES 223 or NES 224.

NES 229 The Bible and the Literature of the Ancient Near East (also JWST 227 and RELST 227) @ # (IV)

In 7th century Arabia, a merchant by the name of Muhammad shared with his followers the Book of God as revealed to him through the archangel Gabriel. That book is now a source of spiritual guidance and law for over a billion people the world over. In this course, a literary, historical and religious introduction to the Qur'an, we explore: the circumstances of the Qur'an's revelation; its written compilation; its narrative structure; its major themes, its connections to and departures from the Hebrew Bible and the New Testament; Qur'anic commentary; translation and the problems associated with it; the impact of the Qur'an on political and religious thought; and the influence of the Qur'an on literature.)

NES 299 Hebrew Bible and Arabic Qur'an in Comparative Perspective (also RELST 299, COM L 299, JWST 299) @ # (IV)

In this course, we read major examples of classical and medieval Arabic literature in translation. In addition to the Thousand and One (or Arabian) Nights, we explore works such as al-Jahiz's Book of Manners, the Maqamat of al-Hariri and al-Hamadhani, the Arabic biographical and autobiographical traditions, encyclopedic writing by al-Mas'udi, and the travel accounts of Ibn Battuta. We also complement our study with contemporary interventions, e.g. the work(s) of Djebar, Kilito, Wannus, and others. We pay special attention to gender, tradition, satire, and irony.

NES 315 1001 Nights and Other Arabic Writing (also NES 315) @ # (IV)

In this course, we read major examples of classical and medieval Arabic literature in translation. In addition to the Thousand and One (or Arabian) Nights, we explore works such as al-Jahiz's Book of Manners, the Maqamat of al-Hariri and al-Hamadhani, the Arabic biographical and autobiographical traditions, encyclopedic writing by al-Mas'udi, and the travel accounts of Ibn Battuta. We also complement our study with contemporary interventions, e.g. the work(s) of Djebar, Kilito, Wannus, and others. We pay special attention to gender, tradition, satire, and irony.

NES 329 Hebrew Bible and Arabic Qur'an in Comparative Perspective (also RELST 299, COM L 299, JWST 299) @ # (IV)

This is an introductory course to the New Testament, early Christian apocrypha, early Christian movements, and the construction and representation of gender, sexuality, and the human body in Early Christianity (also JWST 326, WOMNS 326) Fall. 1 credit. Prerequisite: concurrent enrollment (or past enrollment) in NES 229 and 1 year of ancient Greek.

NES 330 Women in the Hebrew Bible—Seminar (also JWST 326, RELST 329) Fall. 1 credit. Not offered 2002-2003.

This is a one-credit option for students who wish to meet one hour each week to read the texts in the Hebrew original. Must be concurrently enrolled in NES 223 or NES 224.

For description, see NES Civilization.
NES 399 Catholic Rituals, the Formation of Community, and Biblical Interpretation (also RELST 399) (IV)

Spring. 4 credits. W. T. Dickens.

A seminar exploring the roles that the Catholic Church's rituals play in forming and transforming communal identities and, therewith, shaping the ways Catholics interpret biblical texts. In the first part of the course, we rely on cultural anthropologists, sociologists of religion, cultural critics, and specialists in ritual studies to develop working definitions of "culture," "sign," "symbol," "text," and "ritual." We then examine various interpretive methods (historical-critical, literary-critical, reader response, and authorial discourse) so as to appreciate, among other things, the influence one's interpretive purposes have on the meanings one derives from a given text.

Finally, we examine several rituals in order to discern their consequences for interpreting the Bible. We give particular attention in this part to magisterial authority, dissent within the Catholic Church, and the cultural diversity of liturgical practices and understandings. Our sources in this final section include Church documents and works by liturgical and feminist theologians.

NES 400 Seminar in Advanced Hebrew (also JWST 400) (IV)

Fall. 4 credits. Prerequisite: NES 302/JWST 302 or permission of instructor. Enrollment limited to 15 students. The course may be repeated for credit with permission of instructor. N. Scharf.

Continuation of work done in NES/JWST 302, with less emphasis on the study of grammar. We will read and discuss texts of cultural relevance, using articles published in Israeli newspapers and works by authors in each of the three principal genres: poetry, theater, and novels.

[NES 401 Topics in Modern Hebrew Literature

For description, see department.]

NES 409 Seasons of Migration (also JWST 409, RELST 409) @ # (IV)

For description, see S HUM 409.

NES 420 Readings in Biblical Hebrew Prose (also JWST 420 and RELST 420) @ # (IV)

Fall. 4 credits. Prerequisite: 1 year of biblical or modern Hebrew. Course may be repeated for credit. G. Rendsburg.

An advanced course in reading selected portions of the Hebrew Bible. Emphasis is placed on the philological method, with attention to literary, historical, and comparative concerns.

[NES 421 Readings in Biblical Hebrew Poetry (also JWST 421, RELST 421) @ # (IV)

Fall. 4 credits. Prerequisite for NES 421: 1 year of Biblical or Modern Hebrew. Course may be repeated for credit. Not offered 2002-2003. G. Rendsburg.

Advanced course in reading selected poems of the Hebrew Bible. Chapters studied include various Psalms, parts of the Book of Job, various prophetic speeches, and early compositions such as Genesis 40 and Judges 5. Emphasis is placed on the philological method, with attention to literary, historical, and comparative concerns as well.]
The study of philosophy provides students with an opportunity to become familiar with some of the ideas and texts in the history of thought while developing analytical skills that are valuable in practical as well as academic affairs. It affords the excitement and satisfaction that come from understanding and working toward solutions of intellectual problems. The curriculum includes offerings in the history of philosophy, logic, philosophy of science, ethics, social and political philosophy, metaphysics, and the theory of knowledge. Any philosophy course numbered in the 100s or 200s is suitable for beginning study in the field. Sections of Philosophy 100 are part of the freshman writing seminar program; they are taught by members of the staff on a variety of philosophical topics, and because of their small size (seventeen students at most) they provide ample opportunity for discussion. Students who want a broad introduction to philosophy may take Philosophy 101, but many students with special interests may find that the best introduction to philosophy is a 200-level course in some particular area of philosophy; such courses have no prerequisites and are usually open to first year students.

The Major

Students expecting to major in philosophy should begin their study of it in their freshman or sophomore year. Admission to the major is granted by the director of undergraduate studies of the department on the basis of a student’s work during the first two years. Normally the student must have completed two philosophy courses with grades of B or better. Eight philosophy courses are required for the major. They must include at least one course in ancient philosophy (Philosophy 210 or 211), at least one course in metaphysics and epistemology (e.g., Philosophy 212 or a course on the empiricists, the rationalists, or Kant), and a minimum of three courses numbered above 200. Students admitted to the major (after fall 1996) are required to take all six courses from a list of six philosophy courses numbered above 200, and may not count more than one section of Philosophy 100 toward the major. A course in formal logic (e.g., PHIL 231), while not required, is especially recommended for majors or prospective majors. Courses numbered 191–199 do not count toward the major.

Philosophy majors must also complete at least eight credits of course work in related subjects approved by their major advisers. Occasionally majors may serve as teaching or research aides, working with faculty members familiar with their work.

Hons. A candidate for honors in philosophy must be a philosophy major with an average of B+ or better for all work in the College of Arts and Sciences and an average of B+ or better for all work in philosophy. In either or both terms of the senior year, a candidate for honors must enroll in PHIL 490 and undertake research leading to the writing of an honors essay by the end of the final term. Honors students normally need to take PHIL 490 both terms of their senior year in order to write a satisfactory honors essay. PHIL 490 does not count toward the eight philosophy courses required for the major. Prospective candidates should apply at the philosophy department office, 218 Goldwin Smith Hall.

Fees

In some courses there may be a small fee for photocopying materials to be handed out to students.

Introductory Courses

These courses have no prerequisites; all are open to freshmen.

Freshman Writing Seminars in Philosophy

Fall and spring. 3 credits. Consult the John S. Knight Institute brochure for times, instructors, and descriptions.

PHIL 101 Introduction to Philosophy (IV)

3 credits. The course has no prerequisites. Fall. Z. Szabó, spring: B. Hellie.

Fall: We discuss four central questions from four different areas of philosophy. Each is relevant to what many have thought is the central question of philosophy: What is human nature? Our first topic is illusions and dreams. What, if anything, distinguishes these from experiences we regard as reliable guides to how things are around us? When can we trust what we see, or what we seem to see? And when we can, what exactly makes this trust rational? The second issue is that of minds and machines. Is it really true that computers can think? Can our apparent intelligence be always a deceptive illusion? And assuming there is something about human intelligence that can be replicated in silicon, isn’t there something else about us that cannot be captured in this way? Next, we turn to the relationship between self-interest and morality. Is morality telling us to act against what is in our best interest? If so, what compels us to follow its orders? Or is it that morality requires rational egoism of some sort, because acting from enlightened self-interest is the very best thing we can do? Our final topic is determinism and free will. It seems that every physical event has its physical cause, and that event is determined by its cause. But then how is it possible that some of our actions are free? Should we give up our intuitions about causation or about freedom? Is there a way out of this conundrum?

Spring: We talk about some big questions that make the mind boggle: why is there something rather than nothing? What makes some acts right and others wrong? Is there a meaning to life, and if so what is it? Do we have free will? And we talk about some zippy questions: can I travel back in time and kill my grandfather as a baby? Can an omnipotent being make a stone so heavy he can’t lift it? If removing one hair from a hairy man doesn’t make him less hairy, why can’t I remove the hairs one at a time until he’s hairless, and leave him hairy? Do n’t expect for me to tell you conclusive answers to these questions (although I have opinions that I might share). Do expect for me to deal with abstractions on a more basic level and to get used to chopping things up and organizing them in a precise way: otherwise things get out of control pretty quickly.

PHIL 145 Contemporary Moral Issues (IV)

Spring. 3 credits. T. J. Berry.

In this course, we will examine some central moral issues in American politics, including abortion, cloning, physician-assisted suicide, gun control, reparations for slavery, and world hunger. Students will learn to distinguish consequentialist and deontological approaches to moral questions. At least one class meeting per week will be devoted to student discussion. Written work will consist in four or five very short (2 pp.) opinion pieces, one of which will be developed into a fuller (6 pp.) essay. There will also be several quizzes and a final exam.

PHIL 151 Philosophy of Sport (IV)

Spring. 3 credits. T. J. Berry.

This course examines philosophical issues that arise in sport. The course is divided into three parts. In the first part, we consider the nature of sport and how we can demarcate sport from other human pursuits. Do high altitude mountaineering, Olympic figure skating, and track and field share some feature(s) that an activity like chess lacks? The second part concerns ethical issues arising in sport. Is winning everything in sport? Ought one to seek competitive advantage by violating the rules? Ought one to accept competitive advantage resulting from errors by judging officials? In the third part, we consider issues concerning the integration of sport into society. Ought there to be gender equity in sport, and if so, how ought we to judge that such equity has been achieved? What does the academic mission of institutions of higher education imply about the role of athletics within those institutions?

PHIL 191 Introduction to Cognitive Science (also COGS 101 and PSYCH 102) (III)

PHIL 193 Inequality, Diversity, and Justice (also CPR 293, GOVT 293, SOC 293) (IV)

Fall. 4 credits. No prerequisites. Intended primarily for freshmen and sophomores. M W F. The class will meet as a whole, for a lecture, F, 8/30; thereafter, lectures will be given M W. disc. sections will be F. R. Miller. An interdisciplinary discussion of the nature and moral significance of social inequality, diversity and poverty and of the search for just responses to them. How unequal are economic opportunities in the United States?
today? How many people are in genuine poverty? What are the typical causes of poverty? To what extent, if any, does justice require government action to reduce current economic inequalities? Does race have special significance as a source of inequality? Does gender? Is affirmative action justified, as a response to such inequalities? How does membership in an ethnic group shape people’s lives, and how should it? How should governments deal with religious diversity and other differences in ultimate values (which give rise, for example, to radically different attitudes toward abortion, school prayer, and sexuality)? Do people in pre-capitalist rich countries have a duty to help the foreign poor? Moral argument, investigations of social causes, and legal reasoning interact in the search for answers to these questions. To provide these resources, the course is taught by leading faculty researchers in philosophy, political theory, the social sciences, and law.

PHIL 194 Global Thinking (also GOVT 294) @ (III or IV) Not offered 2002–2003.

PHIL 195 Controversies About Inequality (also SOC 222, PAM 222, ECON 222, IRLLE 222, and GOVT 222b) Spring. 1–3 credits. D. Grusky.

This course introduces students to contemporary debates and controversies about the underlying structure of inequality, the processes by which it is generated and maintained, the mechanisms through which it comes to be viewed as legitimate, natural, or inevitable, and the forces making for change and stability in inequality regimes. These topics are addressed through readings, class discussion, lectures from visiting distinguished scholars of inequality, and debates staged between faculty members who take opposing positions on pressing inequality-relevant issues (e.g., welfare reform, school vouchers, immigration policy, affirmative action). Although this course is required for students in the Inequality Concentration, it is also open to other students who have completed prior coursework relevant to issues of inequality. It does not count toward the Philosophy major or toward the Humanities Distribution Requirement in Philosophy.

PHIL 211 Ancient Philosophy (also CLASS 231) @ (IV) Fall. 4 credits. This course has no prerequisites. It is open to freshmen.

This course examines the origin and development of Western philosophy in Ancient Greece and Rome. We study some of the central ideas of the Pre-Socratics, Socrates, Plato, Aristotle, and the Hellenistic philosophers (Epicureans, Stoics, and Skeptics). Questions considered include: What are the nature and limits of knowledge? Is knowledge even possible? How reliable is perception? What are the basic entities in the universe: atoms, Platonic Forms or Aristotelian substances? Is moral knowledge possible? What is the nature of happiness and what sort of life will make people happy? Do human beings have free will? Ought we to fear death? Among the fundamental works we read is Plato’s Republic.

PHIL 212 Modern Philosophy # (IV) Spring. 4 credits. The course has no prerequisites. Z. Szabo.

This course is about the rise of modern philosophical thought in the 17th and 18th centuries in Europe. We focus on four philosophers: Descartes, Berkeley, Leibniz, and Hume. Our main interest is the theory of ideas and the way this theory underlies metaphysics. What are ideas and how do we come to have them? Why are ideas necessary for knowledge about the external world? What is the connection between the structure of ideas and the structure of reality? The course emphasizes close reading of original texts (or translations of original texts) and critical assessment of philosophical arguments.

PHIL 216 Self, Ego, Psyche # (IV) Fall. 4 credit. Note: this is a sophomore writing seminar sponsored by the John S. Knight Institute. While not restricted to sophomores, they will be given priority since the course is intended to offer them (especially those considering the philosophy major) an opportunity to develop their writing by working closely with faculty in an interdisciplinary context. We shall occasionally even meet together with those in CLASS 244 ("Psyche, Ego, Self"), whose reading list will overlap significantly with our own. J. Whiton.

It is often claimed that the ancient Greeks, either for better or for worse, lacked the so-called "modern Western conception of the self," and that this conception arose only later, perhaps even partly as a result of the emergence of more introspective literary genres, such as we find in Augustine's Confessions. We examine these claims drawing on a variety of philosophical, literary, and psychological sources, starting with the conceptions of soul or psyche among ancient Greeks, and proceeding through early modern European (especially Cartesian) conceptions of the ego, on to contemporary conceptions of the self, some of which question the unity traditionally ascribed to the self. Special attention is paid to the relationship between self and literary genres. And some attention will be paid to non-Western ideas, such as the Buddhist idea that the self is an illusion, and to so-called "pathologies" of self, such as "multiple personality disorder". Selected readings from Homer, Herodotus, Euripides, Plato, Aristotle, Augustine, Descartes, Locke, Hume, and a variety of contemporary sources (philosophical, anthropological, and psychological).

PHIL 218 Introduction to Deductive Logic (II) Fall, spring. 3 credits. Fall, H. Hodes; spring, D. Graff.

Fall: The logic of truth-functional connectives and the universal and existential quantifiers: analysis of English-statements in terms of a formal language; evaluation of deductive reasoning in terms of such an analysis.

Spring: The course covers the basics of propositional and first-order logic with a special emphasis on the problem of translating English sentences into the formal language of these logics. We use a textbook accompanied by a software package (Barwise and Etchemendy, Language, Proof, and Logic), which makes it easier to learn the skills necessary for doing formal proofs.

PHIL 241 Ethics (IV) Spring. 4 credits. (By petition for breadth requirement). N. Sturgeon.

An introduction to the philosophical study of moral theories and moral arguments. Ethical relativism, ethical egoism, ethical skepticism, utilitarianism and deontological theories; some application to controversial contemporary issues.

PHIL 242 Social and Political Philosophy (also GOVT 260) (III or IV) Spring. 4 credits. F. Neuhouser.

An introduction to the foundational texts of modern political theory, including Hobbes, Locke, Rousseau, and Rawls. Topics include the source of political legitimacy, why individuals are obligated to obey just laws, the limits of legitimate political authority, and the nature of human freedom. Special attention is paid to the justificatory role the social contract plays in political philosophy.

PHIL 245 Ethics and Health Care (IV) Fall. 4 credits. T. J. Berry.

This course is an introduction to the ethical issues associated with contemporary medicine. No previous study of philosophy is presupposed. The course has two lectures and one discussion section per week. Topics to be covered include: the professional-patient relationship (including informed consent, medical confidentiality, medical paternalism, and trust); contemporary problems such as abortion and euthanasia—beginning from these practical moral problems we investigate concepts such as illness, death, autonomy, quality of life and personhood, and health care in a just society. We consider competing conceptions of justice and arguments for entitlement to health care. Does justice require that all have access to basic health care? Does it require that all have access to approximately the same level of health care? What are the implications for access to health care resources by the requirement that we not discriminate on the basis of gender or race? In the course of investigating these topics, there are questions emerge about what ethics is, and whether or not ethical judgments can be objective. Thus, in addition to learning how to arrive at and defend ethical positions, we reflect on the techniques and methods we use.

PHIL 246 Ethics and the Environment (also SATS 206) (IV) Spring. 4 credits. Open to all undergraduates; permission of instructor required for freshmen.

The aim of this course is to acquaint students with moral issues that arise in the context of the environment and environmental policy. Our concerns about the environment bring to our attention the importance of economic, epistemological, legal, political, and social issues in assessing our moral obligations to other humans and the natural world. Our attempt then is to explore how different factors come into play in defining our responsibilities to the environment and to examine the grounds for our environmental policy decisions.
PHIL 247 Ethics and Public Life (IV)
Fall. 4 credits. T. R. M. Moody-Adams.
What kind of public life is worth having? This course examines the efforts of philosophers, social theorists, theologians, and others to understand the ethical dimensions of our lives as citizens of complex social and political communities. We consider several questions of pressing concern. To what moral standards should we hold those, such as politicians and journalists, whose professions involve service to the public? What moral obligations do citizens themselves have to those with whom they share a public life? What does morality tell us about how to draw the line between “public” and “private,” for the purposes of public policy? Is it ever morally permissible (or even required) to opt out of demands that underwrite a stable public life—in civil disobedience, for instance, or in conscientious objection to some public policy?

PHIL 249 Feminism and Philosophy (also WOMNS 249) (IV)
Fall. 4 credits. N. Sethi.
An introduction using a variety of texts (philosophical, literary, legal, and political) to feminist thought. Special attention is paid to sexual difference and the social construction of gender, and to how we frame various issues (e.g., whether pornography is primarily an issue about freedom of expression or about equal protection).

PHIL 261 Knowledge and Reality (IV)
Fall. 4 credits. J. Hellie.
This course provides an introduction to some central philosophical questions about the nature of the universe and our knowledge of it. Questions addressed include: What is the relation between mind and matter? What reason do we have to believe in the predictions of science? How do you know you’re not dreaming right now? What is the nature of human freedom? Don’t expect the course to answer these questions once and for all. Instead, expect to learn how to go about thinking about them, and how to distinguish a good philosophical argument from a bad one.

PHIL 262 Philosophy of Mind (IV)
Fall. 4 credits. B. Hellie.
We discuss such issues as: what is a person? How do the first-person and third-person perspectives differ? What is a belief? An intention? What is consciousness? In what ways is the mind like, or unlike, a computer? What does the mind do, and how does it do what it does? How did it come to do that?

PHIL 263 Religion and Reason (also RELST 262) (IV)
Spring. 4 credits. M. W. F. S. MacDonald.
What must (or could) God be like, and what reasons do we have for thinking that a being of that sort actually exists? What difference would (or could) the existence of God make to our lives? This course examines the idea, common to several major world religions, that God must be an absolutely perfect being. What attributes must a perfect being have? Must it have a mind, be a person, care for human beings? Is the concept of a perfect being coherent? Is the existence of a perfect being compatible with the presence of evil in the world and the existence of human freedom? Does human morality depend in any important way on the nature or will of a perfect being? Is a perfect being among the things that actually inhabit our universe? The course approaches these questions with the tools and methods of philosophical reason and through readings drawn from both classic texts and contemporary philosophical discussion.

PHIL 286 Science and Human Nature (also S&T&S 286) (IV)
Spring. 4 credits.
Topic for 2002–2003: Darwin, Social Darwinism, and Human Sociobiology. An examination of attempts in the biological and social sciences to offer scientific theories of human nature and human potential and to apply such theories to explain important social and psychological phenomena.

Intermediate or Advanced Courses
Some of these courses have prerequisites.

PHIL 309 Plato (also CLASS 339) (IV)
PHIL 310 Aristotle (also Class 310)
Spring. 4 credits. J. Whitinger.
Special topic: rational animals and their characteristic activities, primarily as discussed in Aristotle’s practical and productive works (i.e., his Ethics, Politics, Rhetoric, and Poetics).

PHIL 312 Modern Empiricism (IV)
Fall. 4 credits. S. Shapin.
This course focuses on the epistemological and metaphysical views of David Hume and Thomas Reid. We read Book 1 of Hume’s Treatise, Reid’s Inquiries, and parts of Reid’s Essay on the Intellectual Powers of Man. Topics include skepticism, our knowledge of external things, perception, causation, the nature of mind, and personal identity.

PHIL 314 Ancient Philosophy (IV)
4 credits. Spring. V. Harte.
Topic: Ancient Epistemology. This course focuses on epistemological questions as they arise in the works of Plato, Aristotle, the Epicureans, Stoics & Sceptics. Topics discussed include: the acquisition of knowledge; knowledge & belief; the nature of perception; the concept of truth; empiricism vs rationalism; scepticism.

PHIL 315 Medieval Philosophy (IV)
PHIL 316 Kant (IV)
PHIL 317 Hegel (IV)
Fall. 4 credits. Prerequisite: PHIL 212, 311, or 316 (316 highly recommended).
F. Neuhouser.
An introduction to the major themes of Hegel’s philosophy, with an emphasis on his social and political thought. Topics include Hegel’s critique of Kant, the possibility of metaphysics, the master-slave dialectic, and the role of freedom in Hegel’s account of rational social institutions. Readings from Fichte help to explain how Hegel’s project develops out of Kant’s transcendental idealism. Some knowledge of Kant’s Critique of Pure Reason is presupposed.

PHIL 318 Origins of Twentieth-Century Philosophy (IV)
Fall. 4 credits. B. Hellie.
Frege, Russell, and contemporaries on knowledge and meaning.

PHIL 319 Post-War Analytic Philosophy (IV)

PHIL 320 17th Century Women Philosophers (also WOMNS 319) (IV)

PHIL 331 Deductive Logic (also MATH 281) (II)
Spring. 4 credits. Prerequisite: PHIL 231 or equivalent, or permission of instructor.
M. Fara.
This course provides an introduction to some metatheoretical results in mathematical logic. Topics covered include: some very basic set theory; computability and recursive functions; decidability and undecidability; soundness and completeness; compactness and the Lowenheim-Skolem theorem; representability in arithmetic; definability and Godel’s First Incompleteness Theorem; provability and Godel’s Second Incompleteness Theorem.

PHIL 332 Philosophy of Language (IV)
Spring. 4 credits. D. Graff.
This course is an introduction to 20th century philosophy of language. The three main topics of the course are: (i) Reference and Descriptions, (ii) Naming, Nominalism and Externalism, and (iii) Propositional Attitudes. We begin the semester with Frege’s 1892 paper “On Sense and Reference.” We then continue with the debate about the semantics of descriptions, reading papers from Russell, Strawson, Donnellan and Kripke. The next unit of the course begins with Quine’s “Three Grades of Modal Involvement,” then focuses on Kripke’s Naming and Necessity and its aftermath (papers by Evans, Dummett, Putnam and Bugle). For the final unit of the course, we study classic papers on propositional attitudes (and their ascriptions) by Frege, Quine, Kaplan, Kripke and Perry.

PHIL 334 Pragmatics (also LING 325) (III or IV)

PHIL 341 Ethical Theory (IV)
Fall. 4 credits. N. Surgeon.
Topic for 2002: Consequentialism and its Critics. A historical and systematic investigation of one of the deepest divides in philosophical debate about ethics, between those who think the moral evaluation of acts, character traits and social institutions depends solely on their good or bad consequences, and critics who find this approach fundamentally misguided.

PHIL 343 Resistance and Responsibility (also LAW 676) (IV)

PHIL 344 History of Ethics: Ancient and Medieval (IV)
Fall. 4 credits. T. H. Irwin.
The development of moral theory in Greek, Roman, and medieval philosophers. Topics include: Socrates and his questions about morality; the different answers of Plato, Aristotle, and the Stoics; and the influence of Christian thought. Main questions: happiness, welfare, and the human good; the virtues; self-interest and the interests of others; love; friendship and morality; theories of human nature and their relevance to ethics; comparisons and contrasts with modern moral theory. Readings mainly from Plato, Aristotle, the Stoics, St. Augustine, St. Thomas Aquinas.

PHIL 345 History of Ethics: Modern (IV)
Spring. 4 credits. 344 not prerequisite to 345. T. H. Irwin.
A continuation of PHIL 344. Hobbes's challenge to Greek and Christian ethics, responses to Hobbes, self-interest and the interests of others, the place of reason and sentiment in ethics, the objectivity of ethics, different conceptions of the right and the good, utilitarianism and its critics, and radical critiques of morality. Readings mainly from Hobbes, Butler, Hume, Kant, Sidgwick, Nietzsche, Bradley, and Rawls.

PHIL 346 Modern Political Philosophy (also GOVT 462) (III or IV)
FALL 4 CREDITS
A study of the leading contemporary theories of justice, including the work of Rawls, Nozick, Gauthier, and Scanlon. We discuss rival views of the moral significance of economic inequality, the kinds of freedom that governments ought to protect, the kinds of values and convictions that are a proper basis for laws (as opposed to being private matters), the tension between unequal political influence and democratic rights, and the points of view of community, and the role of culture in political justification. We are largely concerned with the conceptions of freedom, equality, obligation, and community underlying competing theories. We also consider implications for specific political controversies, e.g., over abortion, welfare programs, and gun control.

PHIL 348 Philosophy and Literature (IV)
Spring. 4 CREDITS. J. WHITING
What is philosophy? What is literature? And how are they related? Are there certain forms of thought and/or experience that can be expressed either only or best in certain modes (e.g., in a novel or a poem as opposed to a treatise or a proof)? Special attention is paid to (1) questions of literary and philosophical genre (to why, e.g., so many philosophers have written dialogues, whether explicit, like Plato's, or implicit, like Descartes' and Wittgenstein's), (2) the relations between genre such as autobiography) and forms of subjectivity (such as "modern" individualism), (3) points of view (of characters, readers and authors); and (4) the relations between thought, feeling, and imagination. Readings from philosophical and literary sources, both ancient and modern. Possible sources include Plato, Aristotle, Locke, J. S. Mill, H. Bergson, Sartre, M. Nussbaum, S. Cavell, and A. Nehamas; Sophocles, Euripides, Shakespeare, George Eliot, Tolstoy, Dostoevsky, Proust, and Woolf.

PHIL 349 Feminism and Philosophy (IV)
Spring. 4 CREDITS. PREREQUISITE: ONE COURSE IN PHILOSOPHY. M. MOODY-ADAMS
This course explores some of the major contributions of feminist reflection to the central concerns of philosophy. Topics include feminist accounts of human nature, gender and the self, feminist approaches to the critical examination of science, and to understanding the nature and limits of human knowledge more generally, influential feminist theories in moral and political philosophy, and controversial approaches to proper methods and assumptions of feminist philosophy itself.

PHIL 361 Epistemology (IV)

PHIL 364 Metaphysics (IV)
FALL 4 CREDITS.
The topic of this course is truth. In analytic philosophy during the last century questions about realism and objectivity have been intertwined with questions about the nature of truth. Towards the end of the century, with the rise in popularity of the so-called deflationary theories about truth, this association has been widely called into question. We are going to try to ascertain whether truth is a deep and philosophically central concept or a shallow and utterly unproblematic one. In the first part of the course, we read classic papers by Frege, Moore, Russell, Ramsey, Tarski and Davidson along with some secondary literature. In the second part, we glance at contemporary debates, involving Blackburn, Field, Horwich, Putnam, Soames, and Wright. The course assumes familiarity with the basic concepts of logic (PHIL 231, or equivalent).

PHIL 381 Philosophy of Science: Knowledge and Objectivity (also S&T S 381) (IV)
FALL 4 CREDITS. R. BOYD
An examination of central epistemological and metaphysical issues raised by scientific theorizing: the nature of evidence; scientific objectivity; the nature of theories, models, and paradigms; and the characters of scientific revolutions.

PHIL 382 Philosophy and Psychology (IV)

PHIL 383 Choice, Chance and Reason (IV)
Spring. 4 CREDITS. PREREQUISITE: ONE COURSE IN LOGIC OR A COURSE IN MATHEMATICS THAT INVOLVES PROOFS, OR INSTRUCTOR'S PERMISSION. H. HODES.
The mathematical theory of instrumental rationality and philosophical issues that it raises: preference orderings, choice functions and constraints on rational choice; strict uncertainty (ignorance) and probabilistic uncertainty (risk); basic of probability theory; value functions and the concept of utility; the expected utility theorem; multi-attribute decision theory. Time permitting we'll consider one of the following further topics: social choice; Jeffrey and Bolker's approach to decision theory, Newcomb's paradox and causal decision theory, basic game theory.

PHIL 390 Informal Study
FALL OR SPRING 5 CREDITS.
To be taken only in exceptional circumstances, Must be arranged by the student with his or her adviser and the faculty member who has agreed to direct the study.

Advanced Courses and Seminars
These courses are offered primarily for majors and graduate students.

PHIL 409 German Philosophical Texts (IV)

PHIL 410 Latin Philosophical Texts (IV)
Spring. Variable credit. PREREQUISITES: KNOWLEDGE OF LATIN AND PERMISSION OF INSTRUCTOR. S. MCDONALD.
Reading of philosophical texts in the original Latin.

PHIL 411 Greek Philosophical Texts (also CLASS 311) (IV)
FALL AND SPRING. Variable credit. PREREQUISITE: KNOWLEDGE OF GREEK AND PERMISSION OF INSTRUCTOR. T. IRWIN AND C. BRITTA.
Reading of philosophical texts in the original Greek.

PHIL 413 Topics in Ancient Philosophy (also CLASS 413)
FALL. 4 CREDITS. J. WHITING.
Mind, self, and psychopathology in ancient philosophy.

PHIL 414 German Philosophy after Kant (IV)

PHIL 415 Special Topics in the History of Philosophy (IV)
Spring. 4 CREDITS. PREREQUISITES: PHIL 316, 317, OR PERMISSION OF INSTRUCTOR. F. NEUHAUSER.
This course examines the idea of recognition (the acknowledgment of one subject's value or worth by another) and its importance for the social philosophy of several thinkers in the Continental tradition. Figures studied include Rousseau, Kant, Fichte, and Hegel.

PHIL 416 Modern Philosophy (IV)
Spring. 4 CREDITS. PREREQUISITES: AT LEAST TWO PREVIOUS COURSES IN PHILOSOPHY, AT OR ABOVE THE 200 LEVEL, OR PERMISSION OF THE INSTRUCTOR. F. NEUHAUSER.
We study the epistemology and metaphysics of the Rationalists, especially Descartes.

PHIL 422 Topics in Logic (also MATH 482) (II)
Fall. 4 CREDITS. H. HODES.
PART I: FORMULATIONS OF FIRST-ORDER LOGIC (AXIOMATIC, NATURAL DEDUCTION, SEQUENT CALCULI); MODELS (CLASSICAL AND KRUPIE); SOUNDNESS AND COMPLETENESS FOR CLASSICAL AND INTUITIONISTIC LOGICS; RELATIONS BETWEEN CLASSICAL AND INTUITIONISTIC LOGICS. PART II: TOPICS TO BE ANNOUNCED.

PHIL 423 Philosophy of Logic (IV)
Spring. 4 CREDITS. PREREQUISITE: ONE COURSE IN LOGIC. H. HODES.
Philosophical issues concerning truth and inference.

PHIL 425 Pragmatics (also LING 425) (III)
Fall. 4 CREDITS. PREREQUISITE: LING 201 OR PHIL 251 OR PERMISSION OF THE INSTRUCTOR. D. ABUSCH.
An introduction to aspects of linguistic meaning which have to do with context and with the use of language. Topics include context change semantics and pragmatics, presupposition and accommodation, conversational implicature, speech acts, and the pragmatics of definite descriptions and quantifiers.

PHIL 436 Intensional Logic (II)

PHIL 441 Contemporary Ethical Theory (IV)

PHIL 447 Contemporary Political Philosophy (also GOVT 465) (III or IV)

PHIL 448 International Justice (also GOVT 492) (III or IV)
Spring. 4 CREDITS. R. MILLER.
An investigation of leading current controversies over the demands of international justice. What duties, if any, do people in per-capita rich countries have to aid the foreign poor? When are international economic processes exploitive or unfair? When and in what respects does a government have a sovereign right to freedom from external interference? Are there duties of humanitarian intervention?
to end foreign injustice? What standards of justice should guide U.S. conduct in the "war against terrorism"? In what ways should the realities of international power, including the political and economic dominance of the United States, affect the moral assessment of governments' conduct? What is the just response to demands for national self-determination, including secession? To what extent are patriotism, nationalism and cosmopolitanism defensible as political perspectives or personal attitudes? Readings include work by political philosophers and political theorists and relevant case studies.

**PHIL 460 Epistemology (IV)**  

**PHIL 462 Philosophy of Mind (IV)**  
Spring. 4 credits. S. Shoemaker.  
This course is about the nature of personal identity, with special attention to the relation of persons to their bodies. Readings are from classical and contemporary sources.

**PHIL 481 Problems in the Philosophy of Science (IV)**  
Spring. 4 credits. R. Boyd.  
Topic for 2003: Objectivity in science: alternative approaches from philosophy, science studies, feminist theory and radical critiques of science.

**PHIL 490 Special Studies in Philosophy (IV)**  
Fall and spring. 4 credits. Open only to honors students in their senior year. See Honors description at the beginning of Philosophy section.

**PHIL 611 Ancient Philosophy (also CLASS 671)**  
Spring. 4 credits. V. Harte.  
This course focuses on Plato's *Philebus*, which considers the question of what is the best life. Issues explored en route to answering this question include: the nature of pleasure and of knowledge and their competing claims to be the good true and false pleasures; the psychology of desire; philosophical methodology.

**PHIL 612 Medieval Philosophy**  
Spring. 4 credits. S. MacDonald.  
Topic for spring 2003: Aquinas's Ethics and Moral Psychology.

**PHIL 633 Philosophy of Language**  
Spring. 4 credits. Z. Szabó.  
The topic of this course is an old but recently somewhat neglected question: "Wherein is language conventional?" Before reflection, we seem to have inconsistent views on the matter fluctuating between the view that language is entirely the product of human contrivance and the view that abstracting from its most superficial features, language is part of our genetic endowment. To adequately address the issue, we need on the one hand to clarify certain conceptual issues about the nature of norms and rules, and on the other hand, to pay some attention to what linguists and psychologists have recently learned about the variation of human languages. We also discuss how debates about linguistic conventions relate to wider questions of relativism.

**PHIL 641 Ethics and Value Theory**  
Fall. 4 credits. M. Sturgeon.  
Topic for Fall 2002: Relativism, Realism, Skepticism, and Noncognitivism in Ethics.
Physics Core
Common to all major programs is a requirement to complete a core of physics courses. In addition to the three-term introductory sequence (PHYS 112–213–214 or PHYS 116–217–218), the core includes five upper-level courses—(a) the two-course sequence in modern physics (617–317), (b) at least three semester hours of laboratory work selected from PHYS 310, 330, 360, 410, Astronomy 410, (c) an intermediate course in classical mechanics, and (d) an intermediate course in electromagnetism.

Accompanying these physics courses should be work in mathematics through at least MATH 222 or 294. Students following the professional/graduate school channel are expected to complete at least one additional year of applicable mathematics (A&EP 321–322 or MATH 321/420–422).

In addition to the core, each physics major must complete 15 semester hours of credit in an area of concentration which has been agreed on by the student and major faculty adviser.

Concentration Within Physics
A student who wishes to pursue professional or graduate work in physics or a closely related field should follow a concentration within the field of physics. For those students with a strong secondary school preparation, the sequence PHYS 116–217–218 is encouraged. Students are strongly encouraged to start the sequence with PHYS 116, even if they qualify for advanced placement credit for PHYS 112. Core courses in mechanics and electromagnetism will normally be PHYS 318 and PHYS 327, respectively. The minimum 15 hours beyond the core must be composed of physics courses with numbers greater than 300 and must include the senior laboratory course PHYS 410. This means a physics concentration needs a minimum of 7 credit hours of laboratory work to complete the requirements. The accompanying table shows several typical course sequences by means of which the major requirements may be completed. The primary distinction among students who may follow the different sequences is the amount and level of pre-college work in calculus and in physics. Changes in these typical patterns will be common, as agreed on between student and major faculty adviser. Research work is encouraged of all majors. If this work is done as an independent project, PHYS 490, up to eight credits can be applied to the concentration.

Concentration Outside Physics
The concentration will reflect the student's interest in some area related to physics. The array of courses that comprise the concentration must have internal coherence. The array will normally be worked out in conference with the major faculty adviser and must be approved by the adviser. Of the required 15 hours credit beyond the core, at least eight credits must be in courses numbered above 300. Students have chosen to concentrate in such topics as chemical physics, astrophysics, natural sciences, history and philosophy of science, computer science, meteorology, or econometrics. A combined biology-chemistry concentration is appropriate for pre-medical students or those who wish to prepare for work in biophysics.

For students with concentrations outside physics, the core requirements in mechanics and electromagnetism can be appropriately met with PHYS 314 and PHYS 323, respectively.

Students with an astronomy concentration who might continue in that field in graduate school should use PHYS 410 as part of the concentration; they are encouraged to use PHYS 318 and 327 to satisfy the core requirements in mechanics and electromagnetism.

Honors
A student may be granted honors in physics upon the recommendation of the Physics Advisers Committee of the physics faculty. There is no particular course structure or thesis requirement for honors.

Double Majors
Double majors including physics are possible and not at all uncommon. It should be noted, however, that any course used to satisfy a requirement of another major may be used in satisfaction of physics major requirements only if the student's concentration is within physics.

Courses with Overlapping Content
Because the department offers several courses with overlapping content, students should select courses carefully to meet the needs of their academic programs and to ensure credit for each course they take. Listed below are groups of courses with largely similar content. In general, students may receive credit for only one of the courses in each group.

PHYS 101, 112, 116, 207
PHYS 102, 208, 213, 217
PHYS 214, 218
PHYS 314, 318
PHYS 323, 327
PHYS 116, 216

Typical Physics Course Sequences (other sequences are also possible)

*For majors with concentrations outside physics, there will be wide variation in individual programs, arranged to best match the field of concentration.
*Crossovers between the two sequences 112–113–214 and 116–217–218 are possible, although the combinations 112–217–218 and 112–213–218 are difficult. PHYS 207 may be substituted for PHYS 112. Students taking 217 after 112 must coregister for 216.
*Students taking the honors sequence 116–217–218 are strongly encouraged to start with PHYS 116. Exceptionally well-prepared students may be able to begin work at Cornell with PHYS 217. Such students should come to the department office for advice in planning a course program.
*Physics electives for the major include 360, 444, 454, 455, 480, 490, 525, 553, 561, 572, the senior seminars 481–489, ASTRO 332 or 433–432, and A&EP 434.
*One semester of intermediate laboratory, listed here as 3x0, is required.
*Well-prepared sophomores wishing to take PHYS 318 should consult the instructor before registering.
PHYS 102 General Physics II (I)  
Spring, summer 4-week or 8-week session. 4 credits. Prerequisite for PHYS 102. PHYS 101 or 207. Includes less mathematical analysis than PHYS 208, but more than PHYS 200-206, 209, 210. Enrollment may be limited. Spring introductory lecture, M Jan. 20. Staff.

PHYS 101 emphasizes quantitative and conceptual understanding of the topics of introductory physics developed without use of calculus. The course is mostly self-paced in a mastery-oriented format including eight subject units and a final examination (review) unit each term. Most instruction occurs in the learning center using video-taped lectures, personal tutoring by staff, assigned laboratory exercises, and solutions of sample test questions at our learning center using video-taped lectures, personal tutoring by staff, and thermodynamics.

PHYS 116 Physics I: Mechanics and Special Relativity (I)  
Fall, spring, 4 credits. More analytic than PHYS 112, intended for students who will be comfortable with a deeper, somewhat more abstract approach. Intended mainly but not exclusively for prospective physics majors, astronomy majors, or applied and engineering physics majors. Prerequisites: a good secondary school physics course, familiarity with high school calculus, and enjoyment of puzzle-solving. Corrective transfers between PHYS 116 and PHYS 112 (in either direction) are encouraged during the first several weeks of instruction. Two recitations each week and six 2-hour labs. Lec. M W F. Fall, K. Berkelman; spring, staff.

A more rigorous version of PHYS 112, covering similar topics at the level of An Introduction to Mechanics, by Kleppner and Kolenkow.

PHYS 117 Concepts of Modern Physics  
Fall. 1 credit. S-F only. Enrollment may be limited. Coregistration in PHYS 112 or 116 or 217 is required. For freshmen who plan to major in physics, applied and engineering physics, or astronomy. Lec. W. A. Sadoff.

This course is intended for freshmen who plan to major in physics or a closely related field (i.e., applied and engineering physics or astronomy) and who would like to learn about the concepts of modern physics early in their physics education. Possible topics of discussion are methodology, symmetry and conservation laws, quantum theory, the unification of forces and matter, and big-bang cosmology.

PHYS 190 Supplemental Introductory Laboratory  
Fall, spring. 1 credit. Times by arrangement with instructor. S-U only. Enrollment limited to students who have all of the following: (1) 3 transfer credits for introductory physics lecture material; (2) a departmental rating of physics laboratory component of that introductory course; (3) approval of the director of undergraduate studies; and (4) permission of the lecturer of that course at Cornell. Enrollment limited. A PHYS 190 Permission Form must be filed in 121 Clark Hall with the physics department course coordinator. Students perform the laboratory component of one of the introductory courses (PHYS 112, 217, 208, 213, 214) to complement the lecture-related course credit acquired elsewhere. Those wishing to take the equivalent of one of these introductory courses at another institution should receive prior approval from the director of undergraduate studies.

PHYS 200 Art, Archaeology, and Analysis (also EAS 200, ENGRI 185, MS&E 285, ARKEO 285, and ART H 200) (I or IV)  
For description, see EAS 200.

PHYS 201 Why the Sky is Blue: Aspects of the Physical World (I)  
Fall. 3 credits. Instructor: W. A. Sadoff. This is a descriptive physics course aimed specifically at the non-science student. There is an emphasis on the ideas of modern physics where the approach is both historical and thematic. The methodology of science and the nature of evidence is emphasized. An overriding theme is the character of physical laws as shown through the great principles of symmetry and conservation. While there are a few computational problems assigned, the purpose is to help students to understand the concepts rather than to master problem-solving techniques. At the level of Physics Concepts and Connections by Hobson.

PHYS 202 Energy (I)  
Fall. 3 credits. For non-science majors. No specific prerequisites, but competence in high school level mathematics needed. Some high school level science (chemistry, physics or earth science) desirable. T R 2:55-4:10. D. Holcombe.

The course will cover (1) the basic science of different kinds of energy (mechanical, electrical, chemical, thermal, gravitational, solar, nuclear) and (2) the energy conversion processes, which power twenty-first century society. Some related ecological, economic, social and political issues would be touched upon. Weekly assigned problems, based on weekly study assignments, will be used as classroom study material. More abstract than the rest of the course, students will be invited to divide into groups to investigate more deeply particular energy sources or energy conversion processes.

PHYS 203 Physics of the Heavens and the Earth—A Synthesis (I)  
Spring. 3 credits. Prerequisite: none; uses high school algebra and geometry. For non-science majors. Lec, W. H. Padmanabhan.

This course shows how the unification of apparently distinct areas of physics leads to an explosion in the growth of our knowledge and understanding. The material is divided into three parts: the physics of motion on earth and motion in the heavens, showing how the two evolved separately, from the ideas of the ancient Greeks to the dynamics and telescopic discoveries of Galileo; the final melding of these two topics with Newton’s Universal Gravitation; and Einstein’s theories of relativity followed by an exploration of this “new” physics and its impact. The emphasis throughout on “how do we know the laws?” These are the stories of breakthrough discoveries and brilliant insights made by fascinating people, offering a humanistic perspective.

PHYS 204 Physics of Musical Sound (I)  
Spring. 3 credits. Intended for non-science majors; does not serve as a prerequisite for further science courses. Lec, M W 09:05-9:55. Not offered 2002-2003.

PHYS 205 Reasoning about Luck (I or II)  
Fall. 3 credits. Intended for non-science majors; does not serve as a prerequisite for further science courses and cannot be taken for credit by anyone who has taken a college-level physics course. Not offered 2002-2003.

PHYS 206 Physics in the News (I)  
Spring. 3 credits. Prerequisite: high school algebra. Intended for non-science majors. Does not serve as a prerequisite for further science courses. Lec T R. One rec. each Wednesday. V. Samorodin.

"Physics in the News" examines the physics concepts behind the everyday news headlines. Typical topics include space exploration, global warming, medical imaging, magnetic levitation trains and transportation, terrorist impacts, and other interesting headlines that may occur during the semester. This course is
intended for non-science majors and is mainly descriptive. Our tools for understanding these topics are some of the most basic principles of physics, illustrated using algebra at the high school level. Detailed lecture notes are provided on the web. Readings are from the scientific press at the level of Scientific American and the text by Hobson listed below. Students are encouraged to explore the social and environmental aspects of some of the more debatable topics through articles and webpages. At the level of Physics, Concepts and Connections, 2nd edition, by Art Hobson.

**PHYS 207 Fundamentals of Physics I (I)**

Fall. 4 credits. Prerequisites: high school physics plus MATH 111 or 191, or substantial previous contact with introductory calculus, combined with coregistration in a math course approved by instructor. Lec, M W F; two rec. and one lab each week. Evening exams. D. Fitchen.

PHYS 207–208 is a two-semester introduction to physics, intended for students majoring in an analytically oriented biological science, a physical science, or mathematics with emphasis on applications and on quantitative tools generally applicable to the sciences.

**PHYS 208 Fundamentals of Physics II (I)**

Spring. 4 credits. Prerequisites for PHYS 208: PHYS 207 or 112 or 101 and at least coregistration in MATH 112 or 192. PHYS 207–208 is a two-semester introduction to physics with emphasis on tools generally applicable in the sciences, intended for students majoring in a physical science, mathematics, or an analytically oriented biological science. Lec, M W F; two rec. and one lab each week. Evening exams.

Staff.

Course covers electricity and magnetism, and topics from physical and geometrical optics, quantum and nuclear physics. At the level of Fundamentals of Physics, Vol. II, 6th edition, by Halliday, Resnick, and Walker.

**PHYS 209 Relativity and Chaos (I or II)**

Spring. 3 credits. Intended for non-scientists; does not serve as a prerequisite for further science courses. Assumes no scientific background but uses high school algebra. Lec, T R; rec, M. Not offered 2002–2003.

**PHYS 213 Physics II: Heat/ Electromagnetism (I)**

Fall. Spring (alternative 6–week session). 4 credits. Primarily for students of engineering and for prospective physics majors.

Prerequisites: PHYS 112 and coregistration in the continuation of the mathematics sequence required for PHYS 112. Lec, T R; two rec. each week and six 2-hour labs. Evening exams. Fall, J. Rogers; spring, staff.

Course topics include: temperature, heat, thermal energy, electrostatics, behavior of matter in electric fields, DC circuits, magnetic fields, Faraday's law, Maxwell's equations, and electromagnetic oscillations. At the level of University Physics, Vol. 2, by Young and Freedman. Laboratory covers electrical measurements, circuits, and some aspects of heat transfer.

**PHYS 214 Physics III: Optics, Waves, and Particles (I)**

Fall, spring. (summer, 6 week session). 4 credits. Primarily for students of engineering and for prospective physics majors.

Prerequisites: PHYS 213 and completion of a course in differential equations. Two rec. each week and one 3-hour lab alternate weeks. Evening exams. Lec, T R; Fall, E. Bodenschatz; spring, staff.

Physics of waves and electromagnetic waves, interference and diffraction effects, wave properties of particles and introduction to quantum physics. Course includes computer use in solving problems and labs. At the level of University Physics, Vol. 1 & 2, by Young and Freedman.

**PHYS 216 Introduction to Special Relativity**

Fall, spring, based on preregistration. 1 credit. S-U only. Enrollment may be limited. Course is completed within first 4 to 6 weeks of term. Coregistration in this course is required for registration in PHYS 217, unless the student has taken a relativity course at the level of PHYS 116 or ASTRO 106. Prerequisites: PHYS 112 or PHYS 207 or permission of instructor. Lec, T R; Fall, P. staff.

Introduction to Einstein's Theory of Special Relativity including: Galilean and Lorentz transformations, the concept of simultaneity, time dilation and Lorentz contraction, the relativistic transformations of velocity, momentum and energy, and relativistic invariance in the laws of physics. At the level of An Introduction to Mechanics by Kleppner and Kolenkow.

**PHYS 217 Physics II: Electricity and Magnetism (also A&EP 217) (I)**

Fall, spring. 4 credits. Enrollment may be limited. Intended for students who have done very well in PHYS 112 or 116 and in mathematics and who desire a more analytic treatment than that of PHYS 213. Prospective physics majors are encouraged to select PHYS 217. Prerequisites: approval of student's adviser and permission from the instructor. A placement quiz may be given early in the semester, permitting those students who have PHYS 217 too abstract or analytical to transfer into PHYS 213, which they can do without difficulty at that time. Vector calculus is taught in this course, but previous contact, especially with the operations grad, div, and curl, is helpful. It is assumed the student has seen Special Relativity at the level of PHYS 116 or is currently enrolled in PHYS 216. It is also assumed that the student has covered the material of MATH 192 and is coregistered in MATH 292 or the equivalent. Lec, M W F; Fall, A. Sievers; spring, R. Buhman.

At the level of Electricity and Magnetism, by Purcell (Vol. 2, Berkeley Physics Series).

**PHYS 218 Physics III: Waves and Thermodynamics (I)**

Fall, spring. 4 credits. Enrollment may be limited. Intended for students who have done very well in PHYS 116 and 217 in and mathematics, and who desire a more analytic treatment than that of PHYS 214. Prospective physics majors are encouraged to select PHYS 218. Prerequisites: PHYS 217 (with a grade of B or higher) and completion of a course in differential equations or permission of instructor. Lec, M W F; Fall, J. Sethna; spring, E. Bodenschatz.

The first part of the course gives a thorough discussion of wave phenomena, including traveling waves, standing waves, energy, momentum, power, reflection and transmission, interference and diffraction. We will derive wave equations on strings, for sound and light, and in elastic media. We'll cover Fourier series and linear partial differential equations. In some semesters, elasticity theory and tensor calculus may be introduced. In the second part of the course we will discuss statistical thermodynamics and statistical mechanics, including heat engines, the Carnot cycle, and the concepts of temperature and entropy. In some semesters random walks and diffusion may be introduced. Evening exams may be scheduled. At the level of Physics of Waves by Elmore and Heald.

**PHYS 310 Intermediate Experimental Physics (I)**

Spring. 3 credits. Enrollment may be limited. Prerequisite: PHYS 208 or 213.

Labs T R.

Students elect from a variety of experiments. An individual, independent approach is encouraged. Facilities of the PHYS 410 lab are available for some experiments.

**PHYS 314 Intermediate Mechanics (I)**

Spring. 4 credits. Prerequisites: PHYS 208 or 214 (or equivalent) and MATH 294 (or equivalent); intended for physics majors with concentration outside of physics or astronomy. PHYS 318 covers similar material at a more analytical level. Lec. M W F, rec. F. C. Franck.

Likely topics include: Lagrangian mechanics; Newtonian mechanics based on a variational principle; conservation laws from symmetries; two-body orbits due to a central force, analysis of scattering experiments; small amplitude oscillating systems including normal mode analysis, parametrically driven systems; rigid body motion; motion in non-inertial reference frames; and nonlinear behavior including bistability and chaos. Students not only become more familiar with analytic methods for solving problems in mechanics but also gain experience with computer tools. At the level of Classical Dynamics by Marion and Thornton.

**PHYS 316 Modern Physics I (I)**

Fall, spring. 3 credits. Prerequisites: PHYS 214 or 218 and coregistration in at least MATH 294 or equivalent. It is assumed that majors registering in PHYS 316 will continue with PHYS 317. Lec, M W F; rec, R. D. Rubin.

Course topics include: breakdown of classical concepts in microphysics; light quanta and matter waves; Schrödinger equation and solutions in 1 and 3 dimensions; and the hydrogen atom, exclusion principle, and spin and magnetic moments. At the level of An Introduction to Quantum Physics by French and Taylor.

**PHYS 317 Modern Physics II (I)**

Fall, spring. 4 credits. Prerequisites: PHYS 316. Lec, M W F, rec. T. G. Dugan.

Course topics include: an investigation of quantum phenomena; atomic physics; classical and quantum statistical mechanics; molecules; solid state physics; nuclear physics and radioactivity, and elementary particle physics. At the level of Modern Physics by Serway.
PHYS 318 Analytical Mechanics (I)  
Spring, 4 credits. Prerequisites: PHYS 116 or permission of instructor; A&EP 321 or MATH 420. Intended for junior physics majors concentrating in physics or astronomy. PHYS 314 covers similar material at a less demanding level. Lec, M W F; rec, F. M. Neubert.

Newtonian mechanics of particles and systems of particles, rigid bodies, oscillating systems; gravitation and planetary motion; moving coordinate systems; Euler's equations; Lagrange and Hamilton formulations; normal modes and small vibrations; introduction to chaos. At the level of Classical Mechanics by Goldstein, Classical Dynamics by Marion and Thornton, and Analytical Mechanics by Hand and Finch. Supplementary reading is assigned.

PHYS 323 Intermediate Electricity and Magnetism (I)  
Fall, 4 credits. Prerequisites: PHYS 208 or 213/214 (or equivalent) and MATH 293/294. Magnetism, coregistration in A&EP 321 or MATH 420 recommended. Intended for physics majors with a concentration outside of physics or astronomy; PHYS 327 covers similar material at a more analytical level. Lec, M W F; rec, F. C. Franck.

Course covers: electro/magneto-statics, vector calculus; principles of electromagnetic radiation; introduction to digital imaging and image processing; light wave communications, fiber optics, electrical circuits, electronics and ionics, feedback amplifiers, oscillators, comparators, passive and active filters, diodes and transistor switches and amplifiers. Digital circuits: combinational and sequential logic (gates, flip-flops, registers, counters, timers), analog to digital (ADC) and digital to analog (DAC) conversion, computer architecture and interfacing. Additional topics may include analog and digital signal processing, light wave communications, transducers, and noise reduction techniques. At the level of Introduction to Electrodynamics by Griffiths.

PHYS 327 Advanced Electricity and Magnetism (I)  
Fall, 4 credits. Prerequisites: PHYS 217/218 or permission of instructor; coregistration in A&EP 321 or MATH 420. Intended for physics majors concentrating in physics or astronomy. PHYS 323 covers similar material at a less demanding level. N.B.: PHYS 327 assumes knowledge of the material at the level of PHYS 217, and makes extensive use of Fourier transforms.

Course covers: electro/magneto-statics, vector and scalar potentials, Laplace's Equation and boundary value problems, multipoles; radiation-solutions to Maxwell's Equations; electromagnetic radiation; electrodynamics in media; and special relativity-transformations, four vectors, particle kinematics and dynamics, relativistic electrodynamics. At the level of Classical Electromagnetic Radiation, by Heald and Marion.

PHYS 330 Modern Experimental Optics (also A&EP 330) (I)  
Fall, 4 credits. Enrollment limited.

Prerequisite: PHYS 214 or equivalent. Lec, W; lab, M T M. Wang.

A practical laboratory course in basic and modern optics. The six projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. Students are also introduced to digital imaging and image processing techniques. At the level of Optics by Hecht.

PHYS 341 Thermodynamics and Statistical Physics (I)  
Fall, 4 credits. Prerequisites: PHYS 214, 316, and MATH 294. Lec, M W F; rec, R. P. Brouwer.

Course covers: statistical physics, developing both thermodynamics and statistical mechanics simultaneously. Also covers concepts of temperature, laws of thermodynamics, entropy, thermodynamic relations, and free energy. Applications to phase equilibrium, multicomponent systems, chemical reactions, and thermodynamic cycles. Application of statistical mechanics to physical systems, and introduction to treatment of Maxwell-Boltzmann, Bose-Einstein, and Fermi-Dirac statistics with applications. Elementary transport theory. At the level of Fundamentals of Statistical and Thermal Physics, by Reif, or Introduction to Statistical Mechanics by Betts.

PHYS 360 Electronic Circuits (also A&E 363) (I)  
Fall; spring, 4 credits. S-U grade option available by permission of the instructor for students who do not require this course for their major. Prerequisites: undergraduate course in electricity and magnetism (e.g., PHYS 208, 213, or 217) or permission of the instructor. No previous electronics experience is assumed, although the course moves quickly through introductory topics such as basic dc circuits. Fall term usually has a smaller enrollment. Lec, M. Labs T R or W F; evening labs M W spring. Fall, E. Kirkland, spring, R. Thorne.

Practical electronics as encountered in a scientific or engineering research/development environment, including design, build, and test circuits using discrete components and integrated circuits. Analog circuits: resistors, capacitors, filters, operational amplifiers, feedback amplifiers, oscillators, comparators, passive and active filters, diodes and transistor switches and amplifiers. Digital circuits: combinational and sequential logic (gates, flip-flops, registers, counters, timers), analog to digital (ADC) and digital to analog (DAC) conversion, computer architecture and interfacing. Additional topics may include analog and digital signal processing, light wave communications, transducers, and noise reduction techniques. At the level of Art of Electronics by Horowitz and Hill.

PHYS 400 Informal Advanced Laboratory  
Fall, spring. Variable to 3 credits. Prerequisites: 2 years of physics or permission of instructor. Lab T W D. Hartill.

Experiments of widely varying difficulty in one or more areas, as listed under PHYS 410, may be chosen to fill the student's special requirements.

PHYS 410 Advanced Experimental Physics  
Fall, spring, 4 credits. Limited to seniors except by special permission. Prerequisites: PHYS 214 (or 310 or 360) plus 318 and 327, or permission of instructor. Lec, M; lab T W D. Hartill.

Selected topics in experimental concepts and techniques. About 60 different experiments are available in acoustics, optics, spectroscopy, electronics and ionics, magnetic resonance, X-rays, low temperature, solid state, cosmic rays, and nuclear physics. The student performs three to six diverse experiments, depending on difficulty, selected to meet individual needs and interests.

Independent work is stressed. Lectures are on experimental techniques used in experiments in the laboratory and on current research topics.

PHYS 443 Introductory Quantum Mechanics (I)  
Spring, 4 credits. Prerequisites: PHYS 327 or 323, and PHYS 341 Thermodynamics and Statistical Physics (I) or MATH 420; coregistration in PHYS 314 or 318; or permission of instructor. Lec, M W F, rec, R. S. Teukolsky.

This course provides an introduction to concepts and techniques of quantum mechanics, at the level of An Introduction to Quantum Mechanics, by Griffiths.

PHYS 444 Nuclear and High-Energy Particle Physics (I)  
Spring, 4 credits. Prerequisite: PHYS 443 or permission of instructor. Lec, M W F, rec, F. Behavior of high-energy particles and radiation, elementary particles, basic properties of accelerators and detectors; general symmetries and conservation laws. At the level of Introduction to Elementary Particles by Griffiths or Modern Elementary Particle Physics by Kane.

PHYS 451 Classical Mechanics, Nonlinear Dynamics, and Chaos (also PHYS 551) (I)  
Spring, 3 credits. Only students with a strong performance in PHYS 318 or the equivalent will be admitted to the course. Biweekly two-hour seminar to be scheduled. Lec, T R.

This course provides an introduction to advanced topics in modern classical mechanics: methods of formulating both discrete and continuum Hamiltonian dynamics, classical field theory, canonical transformations, action-angle variables, the Hamilton-Jacobi equation, connection between classical and quantum mechanics, solvable, integrable, and nonintegrable systems, and KAM tori. Includes analytic techniques in nonlinear dynamics with examples chosen from a variety of systems of physical interest, phase-locking and fractional order resonances, and classification of bifurcations. Also covers dissipative and Hamiltonian chaos: logistic and standard maps, renormalization, KAM theorem, and quantum chaos. Some fluid dynamics and Sturm-Liouville theory included as time permits. The first part of the course is at the level of Theoretical Mechanics of Particles and Continua, by Fetter and Walecka; the second part is at the level of Regular and Chaotic Dynamics, 2nd edition, by Lichtenberg and Lieberman.

PHYS 454 Introductory Solid-State Physics (also A&E 450) (I)  
Fall, 4 credits. Prerequisite: PHYS 443, A&E 361, or CHEM 791 is highly desirable but not required. Lec, M W F; Computer lab. W or R J. Brock.

An introduction to modern solid-state physics, including crystal structure, lattice vibrations, electron theory of metals and semiconductors, and selected topics from magnetic properties, optical properties, superconductivity, and defects. At the level of Introduction to Solid State Physics, by Kittel, and Solid State Physics, by Ashcroft and Mermin.
[PHYS 455 Geometrical Concepts in Physics]  
Spring. 4 credits. Prerequisite: PHYS 323 or equivalent and at least coregistration in PHYS 318 or permission of instructor. Usually offered every other spring. Lec, T R. Not offered 2002–2003.

[PHYS 456 Introduction to Accelerator Physics and Technology (also PHYS 656)]  
Fall. 3 credits. Prerequisites: Intermediate E&M (PHYS 323 or 327) and Classical Mechanics (PHYS 314 or 318). Lec, T R. Not offered 2002–2003. Fundamental physical principles of particle accelerators and enabling technologies, with a focus on circular high energy colliders, such as the Cornell Electron Storage Ring (CESR).

[PHYS 457 The Storage Ring as a Source of Synchrotron Radiation (also PHYS 657)]  
Spring. 3 credits. Prerequisites: intermediate level mechanics (PHYS 314 or 327) and E&M (PHYS 323 or 327) or permission of instructor. Previous completion of PHYS 456/656 is not required. Lec, T R. Not offered 2002–2003. S. Gruner and R. Talman. This course covers physics of synchrotron radiation with a focus on characteristics of radiation from dipole magnets, electron beam properties that influence radiation characteristics, issues of flux, brightness, emittance, brilliance, beam stability, and beam lifetime.

PHYS 480 Computational Physics (also PHYS 680 and ASTRO 680)]  
Fall, spring. 3 credits. S-U grades only. The course assumes familiarity with the standard mathematical methods for the physical sciences and engineering, differential equations and linear algebra in particular and with computer programming (e.g., Fortran or C). Lec, T R. T. Arias. This course covers numerical methods for ordinary and partial differential equations, linear algebra and eigenvalue problems, nonlinear equations, and fast Fourier transforms from the hands-on perspective of how they are used in modern computational research in the era of open software and the web. The computer assignments which teach the material are designed also to achieve a larger goal: in the end each student has developed his or her own working ab initio computer program for calculating the properties of molecules and materials with the methods which won Walter Kohn and John Pople the Nobel prize in Chemistry in 1998.

PHYS 481 Quantum Information Processing (also PHYS 681 and COMM 650)]  
Spring. 2 credits. S-U only. The only essential prerequisite is familiarity with the theory of finite-dimensional vector spaces over the complex numbers. Lec, T R. N. David Mermin. A technology that successfully exploits fundamental principles of quantum physics can spectacularly alter both the nature of computation and the means available for the transmission of information. Though implementation will be extremely difficult to achieve, the theory of quantum computation offers striking new perspectives on computation and information, as well as on the quantum theory itself. This course is intended both for physicists, unfamiliar with computational complexity theory, and computer scientists and mathematicians, unfamiliar with the principles of quantum mechanics. Topics are likely to include an introduction to the relevant principles of quantum physics, a survey of elementary quantum computational magic, Shor’s factoring algorithm, Grover’s search algorithm, quantum error correction, quantum cryptography, and the teleportation of quantum states.

PHYS 487 Selected Topics in Accelerator Technology (also PHYS 687)]  
Fall. 2 credits. S-U only. Prerequisites: intermediate E&M (PHYS 323 or 327). Lec, T R. Not offered 2002–2003. Fundamentals of accelerator technology. This course consists of a series of topical seminars covering the principal elements of accelerator technology.

PHYS 488 Introduction to Accelerator Physics and Technology (also PHYS 688)]  
Fall. 3 credits. Prerequisites: Intermediate E&M (PHYS 323 or 327) and Classical Mechanics (PHYS 314 or PHYS 318). Lec, T R. Not offered 2002–2003. Course covers fundamental physical principles of particle accelerators and enabling technologies.

PHYS 490 Independent Study in Physics  
Fall or spring. Variable to 4 credits. Students can apply a maximum of eight PHYS 490 credits to the physics major. Prerequisite: permission required of professor who will direct proposed work. A copy of the Request for Independent Study form must be filed with physics department course coordinator, 121 Clark Hall. Individual project work (reading or laboratory) in any branch of physics.

PHYS 500 Informal Graduate Laboratory  
Fall, spring, summer. Variable to 2 credits. By permission of instructor. Experiments of widely varying difficulty in one or more areas, as listed under PHYS 510, may be done to fill student’s special requirements. D. Hartill.

PHYS 510 Advanced Experimental Physics  
Fall, spring. 3 credits. Lab, T W. An optional lecture associated with PHYS 440, M is available. D. Hartill. About 60 different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics and ions, magnetic resonance, X-rays, low temperature, solid state, cosmic rays, and nuclear physics. Students perform four to eight experiments selected to meet individual needs. Independent work is stressed. Lectures include techniques used in experiments in the advanced laboratory and on current research topics.

PHYS 520 Projects in Experimental Physics  
Fall, spring. Summer. Variable to 3 credits. To be supervised by faculty member. Students must advise department course coordinator of faculty member responsible for their project. Prerequisite: PHYS 510. Projects of modern topical interest that involve some independent development work by student. Opportunity for more initiative in experimental work than is possible in PHYS 510.

PHYS 525 Physics of Black Holes, White Dwarfs, and Neutron Stars (also ASTRO 511)]  
Spring. 4 credits. No astronomy or general relativity prerequisites. D. Lai. This course covers the formation of compact objects: neutrino and gravitational radiation from supernova collapse and neutron stars; equilibrium configurations, equations of state, stability criteria, and mass limits; the influence of rotation and magnetic fields, pulsar phenomena, mass flow in binary systems; spherical and disk accretion; high-temperature radiation processes, compact X-ray sources; Gamma-Ray bursts; and high-energy processes near supermassive blackholes, Quasars, and active galactic nuclei. Emphasis is on the application of fundamental physical principles to compact objects. Topics in diverse areas of physics are discussed in the context of solid-state physics, nuclear physics, relativity, fluid dynamics, and high-energy physics.

PHYS 551 Classical Mechanics, Nonlinear Dynamics, and Chaos (also PHYS 451)]  
Spring. 3 credits. For description, see PHYS 451.

PHYS 553-554 General Relativity (also ASTRO 509-510)]  
553, fall; 554, spring. 4 credits. Prerequisite: knowledge of special relativity and methods of dynamics at the level of Classical Mechanics, by Goldstein. Lec, T R. J. York. A systematic introduction to Einstein’s theory using both modern and classical methods of computation. Topics include review of special relativity, differential geometry, foundations of general relativity (GR), laws of physics in the presence of a gravitational fields, GR as a dynamical theory, experimental tests of GR. At the level of Gravitation, by Misner, Thorne, and Wheeler. PHYS 554 is a continuation of 553 that emphasizes applications to astrophysics and cosmology. Topics include relativistic stars, gravitational collapse and black holes, gravitational waves, and cosmology, use of dynamics to formulate astrophysical and cosmological computations.

PHYS 561 Classical Electrodynamics  
Fall. 3 credits. S. Teukolsky. Course covers Maxwell’s equations, electromagnetic potentials, radiation, continuous media (selected topics), special relativity, and radiation theory. At the level of Classical Electrodynamics, by Jackson.

PHYS 562 Statistical Physics  
Spring. 4 credits. Primarily for graduate students. Prerequisites: A good knowledge of quantum mechanics, classical mechanics, and an undergraduate-level thermodynamics or statistical mechanics class will be expected. Lec M W F. J. Sethna. The course starts with the fundamental concepts of temperature, entropy, and free energy, defining the canonical, microcanonical, and grand canonical ensembles. We touch upon Markov chains, random walks, diffusion equations, and the fluctuation-dissipation theorem. We cover Bose-Einstein and Fermi-Dirac statistics, Black-body radiation, Bose condensation, superfluidity metals, and black dwarves. We discuss fundamental descriptions of phases, and introduce Landau theory, topological order parameters, and the homotopy classification of defects. We briefly study first order phase transitions and critical droplet theory, and
PHYS 572 Quantum Mechanics I
Fall. 4 credits.LEC, M W F. T. M. Yan.
Course covers the general principles of quantum mechanics, formulated in the language of Dirac. Covers systems with few degrees of freedom: hydrogen atom, including fine and hyperfine structure; the deuteron, and atomic reactions. Theory of angular momentum, symmetries, perturbations and collisions are developed to analyze phenomena displayed by these systems. At the level of Modern Quantum Mechanics by Sakurai.

PHYS 574 Quantum Mechanics II
Spring. 4 credits.LEC, M W F. E. Flanagan.
Course covers systems with many degrees of freedom. Topics include: quantization of the electromagnetic field, interaction of light with matter; many-electron theory. Theory of angular quantization for fermions: quantum liquids; scattering of complex systems; and an introduction to the Dirac equation. A knowledge of the subject at the level of PHYS 443 is assumed, but the course is self-contained.

PHYS 599 Cosmology (also ASTRO 599)
For description, see ASTRO 599.

PHYS 635 Solid State Physics I
Fall. 3 credits. Prerequisites: a good undergraduate solid-state physics course, such as PHYS 454, as well as familiarity with graduate-level quantum mechanics. N. Ashcroft.
A survey of the physics of solids: crystal structures, x-ray diffraction, phonons, and electrons. Selected topics from semiconductors, magnetism, superconductivity, disordered materials, dielectric properties, and mesoscopic physics. At the level of Solid State Physics by Ashcroft and Mermin.

PHYS 636 Solid State Physics II
Spring. 3 credits. Prerequisite: PHYS 635. P. Brouwer.
A continuation of PHYS 635. Topics covered include: Fermi Liquid Theory, magnetism, superconductivity, broken symmetries, elementary excitations, and other topics in quantum condensed matter physics not covered in Solid State Physics by Ashcroft and Mermin. These topics include: topological defects, superfluids, the quantum Hall effect, mesoscopic quantum transport theory, disordered systems, Anderson localization, and other mesoscopic transitions.

PHYS 645 High-Energy Particle Physics I

PHYS 646 High-Energy Particle Physics II
Spring. 3 credits. Not offered 2002–2003. This course covers: topics of current interest, such as high-energy electron and neutrino interactions, electron positron annihilation, and high-energy hadronic reactions.

PHYS 651 Relativistic Quantum Field Theory I
Fall. 3 credits. S-U grades only. M. Neubert.
Topics covered include consequences of causality and Lorentz invariance, field quantization, perturbation theory, calculation of cross sections and decay rates, and an introduction to radiative corrections and renormalization with applications to electromagnetic and weak interactions.

PHYS 652 Relativistic Quantum Field Theory II
Spring. 3 credits. S-U grades only. H. Yee. This course is a continuation of PHYS 651 and introduces more advanced methods and concepts in quantum field theory. Topics include functional integral methods, quantization of non-abelian gauge theories, the renormalization group, and spontaneous symmetry breaking. Topics in cosmology, supersymmetry or superstrings may be introduced.

PHYS 653 Statistical Physics
Fall. 3 credits. Normally taken by graduate students in their second or later years. Prerequisite: a good understanding of the basic principles of quantum mechanics, statistical physics at the level of PHYS 562, and thermodynamics. S-U grades only. V. Elser.
Survey of topics in modern statistical physics selected from: dynamical statistical physics (kinetic theory, Boltzmann equation, hydrodynamics); theory of simple fluids; scaling theories and the renormalization group; phase transitions in disordered systems; and pattern formation in nonlinear systems, percolation theory.

PHYS 654 Theory of Many-Particle Systems
Spring. 3 credits. Prerequisites: PHYS 562, 574, 635, 636, and 653 or permission of instructor. S-U grades only. Staff.
Equilibrium and transport properties of microscopic systems of many particles studied at zero and finite temperatures. Formalisms such as thermodynamic Green’s functions are introduced and applied to such topics as normal and superconducting Fermi systems, superfluidity, magnetism, insulating crystals.

PHYS 656 Introduction to Accelerator Physics and Technology (also PHYS 456)

PHYS 657 The Storage Ring as a Source of Synchronotron Radiation (also PHYS 457)

PHYS 661 Advanced Topics in High Energy Particle Theory
Fall. 3 credits. Prerequisites: PHYS 652, S-U grades only. C. Csaki.
This course presents advanced topics of current research interest. Subject matter varies from year to year. Some topics are two-dimensional conformal field theory with applications to string theory and condensed matter physics, applications of the electroweak theory, lattice gauge theory, mathematical methods (e.g. group theory), perturbative quantum chromodynamics, anomalies and geometry, supersymmetry, current algebra, heavy quark physics, heavy quark symmetry, and phenomenological issues beyond the standard model.

PHYS 667 Theory of Stellar Structure and Evolution (also ASTRO 560)
For description, see ASTRO 560.

PHYS 670 Instrumentation Seminar
Course covers conception, design, and performance of innovative instrumentation in condensed matter and elementary particle physics.

PHYS 680 Computational Physics (also PHYS 480 and ASTRO 680)
For description, see PHYS 480.

PHYS 681-689 Special Topics
Offerings are announced each term. Typical topics are group theory, analyticity in particle physics, weak interactions, superfluids, stellar evolution, surface physics, Monte Carlo methods, low-temperature physics, magnetic resonance, phase transitions, and the renormalization group.

PHYS 681 Quantum Information Processing (also PHYS 481 and COM S 453)
See PHYS 481 for description.

PHYS 687 Selected Topics in Accelerator Technology (also PHYS 487)

PHYS 688 Introduction to Accelerator Physics and Technology (also PHYS 488)
Fall. 3 credits. Not offered 2002–2003. For description, see PHYS 488.

PHYS 690 Independent Study in Physics
Fall or spring. Variable to 4 credits. Students must advise department course coordinator, 121 Clark Hall, of faculty member responsible for grading their project. S-U grades only. Special graduate study in some branch of physics, either theoretical or experimental, under the direction of any professorial member of the staff.

POLISH
See Department of Russian.

PORTUGUESE
See Department of Romance Studies.

PSYCHOLOGY

The major areas of psychology represented in the department are perceptual and cognitive psychology, biopsychology, and personality and social psychology. These areas are very broadly defined, and the courses are quite diverse. Biopsychology includes such things...
as animal learning, neuropsychology, interactions between hormones, other biochemical processes, and behavior. Perceptual and cognitive psychology includes such courses as perception, memory, and psycholinguistics. Personality and social psychology is represented by courses in social psychology and personality (such as Psychology and Law, Judgment and Decision Making, and Social Construction of Gender), as well as courses in fieldwork and psychopathology. In addition to the three major areas mentioned above, the department also emphasizes the statistical and logical analysis of psychological data and problems.

The Major
Admission to the major is usually granted to any student in good standing in the college who has passed three or more psychology courses with grades of C+ or better. Provisional admission requires two such courses. To apply to the major and receive an adviser, a major application form may be obtained from the department office (211 Uris Hall) and should be completed and taken to one of the faculty members whose name is listed on the form.

Requirements for the major are:
1) a total of 40 credits in psychology (including prerequisites), from which students majoring in psychology are expected to choose, in consultation with their advisers, a range of courses that covers the basic processes in psychology (laboratory and/or field experience is recommended); and
2) demonstration of proficiency in statistics before the beginning of the senior year. (See the section below on the statistics requirement.)

Normally it is expected that all undergraduate psychology majors will take at least one course in each of the following three areas of psychology:
1) Perceptual and cognitive psychology
2) Biopsychology
3) Social, personality, and abnormal psychology

The following classification of Department of Psychology offerings is intended to help students and their advisers choose courses that will ensure that such breadth is achieved.

3) Social, personality, and abnormal psychology: PSYCH 128, 265, 275, 277, 280, 281, 325, 327, 328, 402, 404, 450, 481, 489, 491.
4) Other courses: PSYCH 101, 199, 347, 435, 436, 439, 441, 470, 471, 472, 473, 475, 478, 479. The major adviser determines to which group, if any, these courses may be applied.

With the permission of the adviser, courses in other departments may be accepted toward the major requirements.

Fieldwork, independent study, and teaching. The department requires students to observe the following limits on fieldwork, independent study, and teaching.

1) Undergraduates may not serve as teaching assistants for psychology courses if they are serving as teaching assistants for any other course during the same semester.
2) An undergraduate psychology major cannot apply more than 12 of the credits earned in independent study (including honors work) and fieldwork toward the 40 credits required by the major.

Statistics requirement. Proficiency in statistics can be demonstrated in any one of the several ways listed below.

1) Passing PSYCH 350.
2) Passing an approved course or course sequence in statistics in some other department at Cornell. The approved list of courses and sequences may change. It has usually included SOC 301 and ILR 210 and 211. Requests that a particular course be added to this list may be made to Professor Gilovich.
3) Passing a course or course sequence in statistics at some other college, university, or college-level summer school. The course or sequence must be equivalent to at least six semester credits. The description of the course from the college catalog and the title and author of the textbook used must be submitted to Professor Gilovich for approval.
4) Passing an exemption examination. This examination can be given virtually any time during the academic year if the student gives notice at least one week before. Students who have completed a theoretical statistics course in a department of mathematics or engineering and who wish to demonstrate competence in applied statistics usually find this option the easiest. Students planning this option should discuss it in advance with Professor Gilovich.

Concentration in biopsychology. Psychology majors interested in psychology as a biological science can elect to specialize in biopsychology. Students in this concentration must meet all of the general requirements for the major in psychology and must also demonstrate a solid background in biology, the physical sciences, including at least introductory chemistry, and mathematics.

Students will design with their advisers an integrated program in biopsychology built around courses on physiological, chemical, anatomical, and ecological determinants of human and nonhuman behavior offered by the Department of Psychology. Additional courses in physiology, anatomy, biochemistry, neuroscience, neurobiology, and behavioral biology may be designated as part of the psychology major after consultation between the student and his or her biopsychology adviser.

Concentration in personality and social psychology. Psychology majors who wish to specialize in social psychology are expected to meet the general requirements set by their department, including statistics. To ensure a solid interdisciplinary grounding, students in the concentration will be permitted to include some major courses in sociology and related fields. Advisers will assist students in the selection of a coherent set of courses from social organization, cultural anthropology, experimental psychology, social methodology, and several aspects of personality and social psychology. Seniors in the concentration may elect advanced and graduate seminars, with the permission of the instructor.

Undergraduate honors program. The honors program is designed for those exceptionally able students who wish to pursue an intensive and independent program of research in psychology. Successful participation in this program serves as evidence of the student's facility in the two most important skills of an academic psychologist: the capacity to acquire and integrate a substantial body of theoretical and factual material and the ability to engage in creative research activity. All qualified students planning on a graduate education in psychology or other academic fields should consider the honors program seriously. The program offers most students the closest contact and consultation with faculty that they will receive during their time at Cornell.

The core of the honors program is a research project that the student carries out in close collaboration with a faculty member in the field of psychology. It is assumed that most students will do so while enrolled in PSYCH 470 (Undergraduate Research in Psychology). A written report of the research is to be given to the chair of the honors committee (currently Professor Owren) toward the end of the last semester of the student's senior year.

An oral defense of the thesis is then given before a committee of three faculty members, and the student presents his or her work in a public forum. Final honors standing (summa cum laude, magna cum laude, cum laude) is indicated on the student's diploma. The T. A. Ryan Award, accompanied by a cash prize, is awarded to the student who conducts the best honors project in a given year.

A student may formally apply to the honors program at any time during the senior year provided that she or he is actively engaged in independent research. However, students must do so by the second week of November. Applications should be given to Professor Owren and should be made directly by the student.

Distribution Requirement
The distribution requirement in the social sciences is satisfied by any two courses in psychology with the exception of PSYCH 223, 307, 322, 324, 326, 352, 354, 350, 361, 396, 410, 420, 422, 424, 425, 429, 431, 440, 441, 470, 471, 472, 473, 475, 478, 479, 491, 492.

Note: The Department of Psychology has listed all days and times for each course that we offer. If there should be changes in the days, times, or semester that a course is offered, we will post the necessary changes throughout the department and in the supplements of the Course and Time and Course and Room Rosters. Changes are also available on the web site, comp9.psych.cornell.edu.

Courses
PSYCH 101 Introduction to Psychology: The Frontiers of Psychological Inquiry (III) Fall. 3 credits. Students who would like to take a discussion seminar should also enroll in PSYCH 103. M W F. J. B. Maas.
The study of human behavior. Topics include brain functioning and mind control, psychophysiology of sleep and dreaming, psychological testing, perception, learning, cognition, memory, language, motivation, personality, abnormal behavior, psychotherapy, social psychology, and other aspects of applied psychology. Emphasis is on developing skills to critically evaluate claims made about human behavior.

**[PSYCH 102 Introduction to Cognitive Science (also COGST 101, COMS 101, LING 191)] (III)**
Fall. 3 or 4 credits (the four-credit option involves a writing section instead of taking exams). T.R. Not offered 2002–2003. M. Spivey.

This course surveys the study of how the mind/brain works. We examine how intelligent information processing can arise from biological and artificial systems. The course draws primarily from five disciplines that make important contributions to cognitive science: philosophy, psychology, neuroscience, linguistics, and computer science. The first part of the course introduces the roles played by these disciplines in cognitive science. The second part of the course focuses on how each of these disciplines contributes to the study of five topics in cognitive science: language, vision, learning and memory, action, and artificial intelligence.

**PSYCH 103 Introductory Psychology Seminars**
Fall. 1 credit. Limited to 300 students. Prerequisite: concurrent enrollment in PSYCH 101. 12 different time options. J. B. Maas and stuff.

A weekly seminar that may be taken in addition to PSYCH 101 to provide an in-depth exploration of selected areas in the field of psychology. Involves extensive discussion and a term paper related to the seminar topic. Choice of seminar topics and meeting times are available at the second lecture of PSYCH 101.

**PSYCH 111 Brain Mind and Behavior (also BIONB 111 and COGST 111) (II)**
Spring. 3 credits. Letter grades only. No prerequisites. Intended for freshmen in the humanities and social sciences; seniors not allowed. Not recommended for psychology majors; biology majors may not use the course for credit toward the major. M W F. Not offered 2002–2003. E. Adkins-Regan and R. Hoy.

Understanding how the brain creates complex human behavior and mental life is a great scientific frontier of the next century. This course enables students with little scientific background from any college or major to appreciate the excitement. What are the interesting and hard problems for the future? How are researchers trying to answer them? What are they discovering? Why did the brain evolve this remarkable capacity?

**PSYCH 201 Cognitive Science in Context Laboratory (also COGST 201 and COM S 201) (III)**

A laboratory course that explores the theories of cognitive science and provides direct experience with the techniques of cognitive science, in relation to the full range of both present and anticipated future activities in the workplace, the classroom, and in everyday life. Discussions of laboratory exercise results, supplementation of laboratory topics, and analyses of challenging primary research literature are done in meetings of the entire class. Laboratory exercises, which are done on an individual or small group basis, include both pre-planned investigations and student-developed experiments. Use of digital computers as well as the Internet, electronic mail, and web sites are integral components of the course.

The focus is on human-computer interactions that are intended to permit effective and efficient exchange of information and control of functions or operations. This approach is applied to real life settings. Students are expected to attend to each discussion meeting having read and thought about assigned materials, and to come to scheduled laboratory meetings fully prepared to perform the laboratory exercises. Laboratory facilities are available to students at all times so that statistical analysis of data, preparation of laboratory reports, and collection of experimental data is facilitated.

**PSYCH 205 Perception (III)**
Spring. 3 credits. Open to all students. Graduate students, see PSYCH 605. T R. J. E. Cutting.

One of four introductory courses in cognitive science. Basic perceptual concepts and phenomena are discussed with emphasis on stimulus variables and sensory mechanisms. All sensory modalities are considered. Visual and auditory perception are discussed in detail.

**PSYCH 209 Developmental Psychology (III)**
Spring. 4 credits. Graduate students, see PSYCH 709. M W S. Johnson.

One of four introductory courses in cognition and perception. A comprehensive introduction to current thinking and research in developmental psychology that approaches problems primarily from a cognitive perspective. The course focuses on the development of perception, action, cognition, language and social understanding in infancy and early childhood.

**PSYCH 214 Cognitive Psychology (also COGST 214) (III)**
Fall. 3 or 4 credits (the 4-credit option involves some participation in COGST 501, PSYCH 614). Sophomore standing required. Limited to 150 students.

Graduate students, see PSYCH 614. M W F. S. Edelman.

The course serves as a broad overview of problems arising in the study of cognition and of the information processing, or computational, approaches to solving these problems, in natural and artificial cognitive systems. Theoretical and experimental challenges posed by the understanding of perception, attention and consciousness, and memory, thinking, and language are discussed and analyzed. Participants acquire conceptual tools essential for the mind and its relationship to the brain.

**PSYCH 215 Psychology of Language (also COGST 215, LING 215) (III)**
Spring. 3 credits. Limited to sophomores, juniors, and seniors. Prerequisites: any one course in Psychology or Human Development. Graduate students, see PSYCH 715. T R. M. Christiansen.

This course provides an introduction to the psychology of language. The purpose of the course is to introduce students to the scientific study of psycholinguistic phenomena. It covers a broad range of topics from psycholinguistics, including the origin of language, the different components of language (phonology, morphology, syntax, and semantics), processing in reading, computational modeling of language processes, the acquisition of language (both under normal and special circumstances), and the brain bases of language.

**PSYCH 223 Introduction to Biopsychology (Ilsupplementary list)**
Fall. 3 credits. M W F 10:10. No prerequisites. Can be used to satisfy the psychology major breadth requirement and as an alternative prerequisite for upper-level biopsychology courses. M. J. Owren. An introduction to the biological basis of behavior. Topics include the structure and function of the nervous system, and biomedical models of behavior, hormones and behavior, biological bases of learning, cognition, communication, and language, and the evolution of social organization.

**Introductory courses in social and personality psychology**
Each of the following four courses (265, 275, 277, 280) provides an introduction to a major area of study within social and personality psychology. These courses are independent of one another, and none have any prerequisites. Students may take any one of the courses or any combination of them (including all four). Courses may be taken in any order or simultaneously.

**PSYCH 265 Psychology and Law (III)**
Fall. 3 credits. M W F. D. A. Dunning.

This course examines the implications of psychological theory and methods for law and the criminal justice system. We concentrate on psychological research and legal issues related to psychology, with special emphasis on psychology major breadth requirement and as an alternative prerequisite for upper-level biopsychology courses. M. J. Owren. An introduction to the biological basis of behavior. Topics include the structure and function of the nervous system, and biomedical models of behavior, hormones and behavior, biological bases of learning, cognition, communication, and language, and the evolution of social organization.

**PSYCH 275 Introduction to Personality Psychology (also HD 260) (III)**
Spring. 3 credits. Recommended: introductory course in psychology or human development. T R. C. Hazan.

This course is designed as an introduction to theory and research in the area of personality psychology, with special emphasis on personality development. It covers the major influences including genetic, environmental, and gene-environment interactions, and involves in-depth study of the major theories. The assumptions and models of human behavior that form the basis of each theoretical orientation are examined and compared, and the relevant empirical evidence reviewed and evaluated. In addition, basic psychometric concepts and the methods for measuring and...
assessing personality are covered, as will the major related debates and controversies.

[PSYCH 277 Social Construction of Gender (also WOMNS 277) (III)]
Fall. 3 credits. Limited to 180 students. T R.
PSYCH/WOMNS 277 is an interdisciplinary course that addresses two broad questions: How does an individual's gender and sexuality constructed? And how are hidden assumptions or "lenses" embedded in our social institutions, cultural discourses, and individual psyches perpetuate male power and oppress women and sexual minorities? Three lenses in particular are emphasized: androcentrism, gender polarization, and biological essentialism. A fundamental assumption of the course is that social science has worried too much about difference: per se and too little about how even our most neutral-looking institutions invisibly transform difference into disadvantage. Although some attention is given to biological perspectives, the course emphasizes psychological processes whereby the historically contingent comes to appear as the natural. Among some of the many topics discussed are the importance of looking at biology in context, the potential "instinct," androcentrism in law, sexual orientation cross-culturally, egalitarian relationships, gender-liberated child-rearing, and homophobia.

PSYCH 280 Introduction to Social Psychology (III)
Fall. 3 credits. T. R. T. D. Gilovich and D. T. Regan.
An introduction to research and theory in social psychology. Topics include social influence, persuasion, and attitude change; social interaction and group phenomena; altruism and aggression; stereotyping and prejudice; and everyday reasoning and judgment.

PSYCH 282 Community Outreach (also HD 282)
Fall and spring. 2 credits. Prerequisites: PSYCH 101 or HD 115. Students may not concurrently register with PSYCH 327 or PSYCH 328. Not offered 2002–2003. T. H. Segal.
This course provides students with information and perspectives essential to volunteer field work with human and social service programs in the community. To gain a practical understanding of what mental health professionals do in the workplace, students examine problems that emerge in fieldwork settings which range ethical, methodological, theoretical, and practical issues in the observation or treatment of clients or patients. Although students are not required to volunteer at a local agency, the instructor will assist students in finding sites that may provide appropriate learning opportunities. A paper relating current research to issues relevant to community mental health, is due at the end of the course.

PSYCH 292 Intelligence (III)
A scientific overview of the controversial issues that surround intelligence tests and what they measure. Topics include the history of testing, correlates of test scores, alternative approaches to mental ability, genetic and environmental contributions to diversity in intelligence, effects of schooling, worldwide IQ gains, cultural factors, and group differences.

PSYCH 305 Visual Perception (also VISST 305) (III)
Fall. 4 credits. Limited to 25 students. Prerequisite: PSYCH 205 or permission of instructor. E. Cutting.
A detailed examination of pictures and their comparison to the real world. Linear perspective in Renaissance art, photography, cinema, and video are discussed in light of contemporary research in perception and cognition.

[PSYCH 311 Introduction to Human Memory (III)]
Spring. 3 credits. Limited to 40 students. Some familiarity with statistical methods and experimental design and with the study of cognition is desirable. Graduate students, see PSYCH 611. T. R. Not offered 2002–2003. Staff.
This course offers an overview of experimental findings and theoretical issues in the study of human memory. Coverage includes topics such as the nature of memory, various memory systems, coding and retrieval processes, practice and habit acquisition, organization for learning and memory, interference and forgetting, models of memory and its function, and its relation to normal memory.

PSYCH 313 Problematic Behavior in Adolescence (also HD 313) (III)
Fall. 3 credits. Prerequisite: HD 115 or PSYCH 101 or HD 216 recommended. M. W. J. Haugaard.
This course explores several problematic behaviors of adolescence, including depression, drug abuse, eating disorders, and delinquency. Various psychological, sociological, and biological explanations for the behaviors are presented. Appropriate research is reviewed, treatment and prevention strategies are explored. An optional discussion section is available to students who would like an opportunity to discuss readings and lectures in greater depth.

PSYCH 316 Auditory Perception (III)
Fall. 3 or 4 credits; the 4-credit option involves a laboratory project or paper. Prerequisite: PSYCH 205, 209, 214 (other psychology, linguistics, or biology courses could serve as prerequisite with permission of instructor). Limited to 20 students. Graduate students, see PSYCH 716. M. W. Not offered 2002–2003. C. L. Knunhans.
A course that covers the major topics in auditory perception including: physics of sound; structure and function of the auditory system; perception of loudness, pitch, and spatial location, with applications to speech production and perception; and music and environmental sounds.

PSYCH 322 Hormones and Behavior (also BIONB 322) (I)
Fall. 3 credits. Two lectures plus a section in which students read and discuss original papers in the field, give oral presentations, and write a term paper. Limited to juniors and seniors. Prerequisites: any one of the following: (a) PSYCH 223, (b) BIONB 221, (c) BIONB 222, or (d) one year of introductory biology plus a course in psychology. Letter grade only. Graduate students see PSYCH 722. M. W. F. E. Adkins Regan.

The major focuses of the course are comparative and evolutionary approaches to the study of the relationship between reproductive hormones and sexual behavior in vertebrates, including humans. Also included are hormonal contributions to sexual behavior, aggression, stress, learning and memory, and biological rhythms.

PSYCH 324 Biopsychology Laboratory (also BIONB 324) (I)
Fall. 4 credits. Limited to 20 juniors and seniors. Prerequisites: PSYCH 223 or BIONB 221 or 222. Permission of instructor. T. R. T. J. DeVoogd.
Experiments designed to provide experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included.

PSYCH 326 Evolution of Human Behavior (also PSYCH 328) (I)
Fall. 4 credits. Prerequisite: PSYCH 223, or an introductory biology course, or an introductory anthropology course. Graduate students, see PSYCH 626. T. R. E. Johnston.
A broad comparative approach to the behavior of animals and humans with special emphasis on the evolution of human behavior. Topics covered vary but include some of the following: human evolution, evolutionary and sociobiological theory, animal communication, nonverbal communication, language, cognitive capacities, social behavior and organization, cooperation and altruism, sexual behavior, mating and marriage systems, aggression, and warfare.

PSYCH 327 Field Practicum I (also HD 327) (III)
Fall only. 3 credits. Prerequisites: PSYCH 325 or HD 370 (or taken concurrently), and permission of instructor. No S–U grades. Enrollment is limited to 30 students. Fee: $25 each semester. Enrolled students must commit to taking PSYCH 328 in the spring semester. No S–U option. M. W. H. Segal.
This course is composed of three components which form an intensive undergraduate field practicum. First, students spend three to six hours a week at a local mental health agency, schools, or nursing facilities working directly with children, adolescents, or adults; supervision is provided by host agency staff. Second, Cornell faculty provide additional weekly educational supervision for each student. Third, seminar meetings cover issues of adult and developmental psychopathology, clinical technique, case studies, and current research issues. Students write two short papers, two final take-home exams, and present an account of their field experience in class.
This course covers both those characteristics of sensory systems that are common across living organisms and those sensory properties that represent adaptations of animals to particular habitats, environments, or niches. The principles and limitations of major methods used to examine sensory systems are considered. Emphasis is on somesthetic, visual, and auditory systems. This course will be taught using the Socratic method, in which the instructor asks questions of the students. Students are assigned original literature in the form of printed or electronic journal articles or reviews and are expected to come to each class having read, thought about, and prepared to discuss the assigned readings and other assigned information resources. A course packet of reproduced articles, textbooks, a course website, and Internet sites are used. Students submit brief analyses of, and comments and questions on, all assignments by email to the course instructor. Electronic mailings are due before each class meeting. The mailing list distributes submissions to all members of the class and to the instructor. In addition to these brief tri-weekly written exercises, a web site or a term paper on a topic germaine to the course is required. All examinations are in take-home format. At the level of From Sound to Synapse by C. D. Geisler; The Retina, by J. E. Dowling courseinfo.cit.cornell.edu/courses/psych_nbb_396/.

[PSYCH 401 Theoretical Approaches to Psychopathology and Treatment (III)]

Fall. 3 credits. Limited to 20 students.
Prerequisites: PSYCH 281 or 325. TBA. Not offered 2002-2003. Staff. This course is designed to provide students with an overview of theoretical approaches to psychopathology and psychotherapy. It also aims to develop students' capacities to think in theoretical terms about psychological practice. We examine the theoretical and pragmatic features of major contemporary models of psychotherapy and explore the conceptual traditions on which they draw. Observation of the work of children and adolescents, audio and video case presentations and discussions are included to advance students' understanding of the application of theory to practice. At the end of the course, students should be prepared to take a particular case and discuss the theoretical, practice, and research issues it raises, including intervention strategies. This course is not intended to provide students simply with an understanding of methods. It is organized around theory, research, and practice relevant to the treatment of several of the Disorders of Infancy and Childhood as well as specific disorders of Adults on Axis I and Axis II of DSM IV. Special attention is given to the work of: Daniel Stern, M.D. and Otto Kernberg, M.D.—Psychoanalytic revisionists; Lorna Benjamin, Ph.D.—Interpersonal Theory; Aaron Beck, M.D.—Cognitive Theory; and Marsha Linehan, Ph.D.—Behavioral and Cognitive-Behavioral Treatment.

[PSYCH 402 Current Research on Psychopathology: Depression (III)]

Spring. 4 credits. Limited to 20 students.
Prerequisites: PSYCH 325 or HD 370 and permission of the instructor. M. Not offered 2002-2003. Staff. This course covers those characteristics of sensory systems that are common across living organisms and those sensory properties that represent adaptations of animals to particular habitats, environments, or niches. The principles and limitations of major methods used to examine sensory systems are considered. Emphasis is on somesthetic, visual, and auditory systems. This course will be taught using the Socratic method, in which the instructor asks questions of the students. Students are assigned original literature in the form of printed or electronic journal articles or reviews and are expected to come to each class having read, thought about, and prepared to discuss the assigned readings and other assigned information resources. A course packet of reproduced articles, textbooks, a course website, and Internet sites are used. Students submit brief analyses of, and comments and questions on, all assignments by email to the course instructor. Electronic mailings are due before each class meeting. The mailing list distributes submissions to all members of the class and to the instructor. In addition to these brief tri-weekly written exercises, a web site or a term paper on a topic germaine to the course is required. All examinations are in take-home format. At the level of From Sound to Synapse by C. D. Geisler; The Retina, by J. E. Dowling courseinfo.cit.cornell.edu/courses/psych_nbb_396/.

The course will survey the approaches that have been or are currently being used in order to understand the biological bases for learning and memory. Topics include invertebrate, "simple system" approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human pathology. Many of the readings are from primary literature.

PSYCH 332 Biopsychology of Learning and Memory (also BIONB 328) (I)
Spring. 3 credits. Prerequisites: 1 year of biology and either a biopsychology class or BIONB 222. Limited to 60 students. Graduate students, see PSYCH 632. M W F T. J. DeVoogd.
This course surveys the approaches that have been or are currently being used in order to understand the biological bases for learning and memory. Topics include invertebrate, "simple system" approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human pathology. Many of the readings are from primary literature.
various perspectives (biological, psychological, socio-cultural) are considered. Minimal attention given to psychotherapy and symptomatology.

[PSYCH 404] Psychopathology and the Family (II)
Spring. 4 credits. Limited to 20 students.
Prerequisite: PSYCH 325 or HD 370 and permission of the instructor. M. Not offered 2002–2003. Staff.
This course explores familial influences on the development of abnormal behavior. It examines how psychological, biological, and cultural factors in a family might contribute to such disorders as anorexia nervosa, depression, addiction, and psychosomatic illnesses. Emphasis is placed on early childhood experiences in the family and their impact on the development of later psychopathology. The course also discusses how the evolution of family structures in more recent times (e.g., the rise in day care and divorce) influences the individual. Family therapy approaches and techniques are also examined.

[PSYCH 410] Undergraduate Seminar in Psychology
Fall or spring. 4 credits. Nonmajors may be admitted, but psychology majors are given priority. Staff.
Information on specific sections for each term, including instructor, prerequisites, and time and place, may be obtained from the Department of Psychology office, 211 Uris Hall.

[PSYCH 412] Laboratory in Cognition and Perception (III)
Spring. 4 credits. Limited to 15 students.
Prerequisite: statistics and 1 course in cognition or perception is recommended. Graduate students, see PSYCH 612. Not offered 2002-2003. M. W. J. Field.
A laboratory course is designed to introduce students to experimental methods in perception and cognitive psychology. Students take part in a number of classic experiments and develop at least one independent project. Computers are available and used in many of the experiments although computer literacy is not required. Projects are selected from the areas of visual perception, pattern recognition, memory, and concept learning.

[PSYCH 413] Information Processing: Conscious and Nonconscious (III)
Spring. 4 credits. Prerequisite: at least 1 course in human experimental and permission of instructor: PSYCH 350 or equivalent will be useful for evaluating empirical articles. R. Not offered 2002–2003. Staff.
In the past decade, a not-so-quiet revolution has been taking place in the field of cognition regarding the problem of conscious mental computation. Data have come from patients with striking neuropsychological syndromes, i.e., the phenomenon of "blind sight" and the "amnesic" syndrome. This signature of independent mental computations has also been demonstrated in normal individuals in laboratory settings. We critically evaluate the theoretical worth and empirical justification of the distinction between "conscious" and "nonconscious" mental computations in normal and abnormal conditions. Weekly readings are from, but not limited to, topics such as visual processes, face recognition, explicit and implicit memory, language processing and social cognition. Students are required to: lead and partake in advanced level discussions of classic and current papers; submit weekly summaries of the assigned readings; and write a term paper on a topic of their interest. Students should be prepared to read extensively.

[PSYCH 414] Comparative Cognition (also COGST 414) (III)
Spring. 3 or 4 credits. The 4-credit option involves an annotated bibliography or creating a relevant web site. Prerequisites: PSYCH 205, 209, 214, 223, 292 or permission of instructor. Graduate students, see PSYCH 714. T. R. M. J. Owen.
This course examines some of the conceptual and ontological issues surrounding from and fueling the recent surge of interest in animals' thinking. Specific topics may include whether nonhumans behave intentionally; whether they show concept and category learning, memory, and abstract thinking similar to that of humans; the role of social cognition in the evolution of intelligence; and whether animals are conscious or self-aware. Evidence from communication studies in which animal signals provide the context plays a strong role in the deliberations, including studies of naturally occurring signaling in various species and experiments in which nonhumans are trained in human-like language behavior. Cognition in nonhuman primates is a specific focus throughout. The course is a mix of lecture and discussion, emphasizing the latter as much as possible.

[PSYCH 415] Concepts, Categories, and Word Meanings (III)
Fall. 4 credits. Prerequisites: PSYCH 205, 209, 214, or 215, or permission of instructor. Graduate students, see PSYCH 615. M. Not offered 2002–2003. Staff.
A consideration of what types of categories are psychologically important, how they are represented and used through concepts, and how conceptual structure and semantic structure are interrelated. Different models of concept structure and categorization processes are evaluated, as are models of conceptual change and concept acquisition. Other topics include: relations between theoretical and empirical levels of knowledge representation systems such as scripts, mental models, and intuitive theories; relative roles of associative information and beliefs in concept structure; categorization in other species; neuropsychological studies of categorization; comparisons of categorization systems across cultures; and comparisons of concept structures across different types of categories.

[PSYCH 416] Modeling Perception and Cognition (also COGST 416) (III)
Fall. 4 credits. Prerequisites: PSYCH 205, 209, 214, or permission of instructor. Graduate students, see PSYCH 616. M. W. F. Not offered 2002–2003. M. Spivey.
This course offers a survey of several computational approaches to understanding perception and cognition. We explore linear computational approaches to understanding the limitations and successful applications of neural networks to problems in cognitive and biological psychology. A variety of neural network architectures are discussed and explored using computer simulations. Applications of networks to perceptual recognition and representation are emphasized. We consider the class of problems that different networks can solve and consider the accuracy with which they model real nervous systems. Students complete weekly lab reports and develop one independent project demonstrating the application of a neural network to a problem discussed in the course.

[PSYCH 422] Developmental Biopsychology
Fall. 4 credits. Prerequisites: a course in introductory biology and a course in biopsychology or neurobiology (such as PSYCH 223 or BIONB 221). Graduate students, see PSYCH 622. M. W. F. Not offered 2002–2003. B. L. Finlay.
We discuss the relationship of the development and evolution of the brain to the development of behavior. Topics include: how neurons are generated, finding targets, and establishing connections; the emergence of reflexive and complex behavior; how experience affects the developing brain; evolutionary perspectives on the development...
of perception, memory, and communication systems; and abnormal development.

**PSYCH 424 Neuroethology (also BIONB 424) (I)**

Spring. 4 credits. Prerequisites: BIONB 221 or BIOG 101-102 and permission of instructor. S-U grading optional. MWF, 1 hour each week. Not offered 2002-2003. C. D. Hopkins.

Neuroethologists take a comparative and evolutionary approach to study the nervous system. They ask, how do brains of animals compare and how did they come about through the process of evolution? How are neural circuits adapted to species-typical behavior? What is the hope and interest in the study of a large diversity of animals, compared to a specialized look at just a few mammalian species? Can we hope to understand how animals with specialized behaviors have specialized nervous systems? What is the sensory world of a real animal and how does it vary from species to species? These and other questions drive this introductory survey of neuroethology: exictic senses; amazing motor programs; surprising integration.

**PSYCH 425 Cognitive Neuroscience**

Fall. 4 credits. Prerequisites: a course in introductory psychology and a course in biopsychology or neurobiology (such as PSYCH 223 or BIONB 221). Graduate students, see PSYCH 225. M W F. Not offered 2002-2003. B. L. Finlay.

We study the relation between structure and function in the central nervous system. The importance of evolutionary and mechanistic approaches for understanding the human brain and cognition is stressed. The course focuses on issues in cognitive neuroscience including, mechanisms of perception, particularly vision, and the neuropsychology of everyday acts involving complex cognitive skills such as recognition of individuals, navigation in the world, language, memory, social interaction and consciousness.

**PSYCH 428 Connectionist Psycholinguistics (also COGST 428) (III)**

Fall. 3 credits. Seniors status or permission of instructor. Graduate students see PSYCH 428. W. M. Christiansen.

Connectionist psycholinguistics involves using (artificial) "neural" networks, which are inspired by brain architecture, to model empirical data on the acquisition and processing of language. As such, connectionist psycholinguistics has had a far-reaching impact on language research. In this course, we survey the state of the art of connectionist psycholinguistics, ranging from speech processing and word recognition, to inferential morphological processing, language production and reading. An important focus of discussion is the methodological and theoretical issues related to computational modeling of psychological data. We furthermore discuss the broader implications of connectionist models of language, not only for psycholinguistics, but also for computational and linguistic perspectives on language.

**PSYCH 429 Olfaction and Taste: Structure and Function (also BIONB 429) (I)**

Fall. 3 or 4 credits (+-credit option requires a term paper or research project. The research project can, but does not need to, study nonhuman vertebrates). Preference given to junior and senior psychology and biology majors and graduate students. Prerequisite: one 300-level course in biopsychology or equivalent. Graduate students, see PSYCH 629. T R. Not offered 2002-2003. B. P. Halpern.

The structural and functional characteristics of olfaction and taste are explored by reading and discussing current literature in these areas. Structure is examined at the light levels of electron microscopes as well as at the molecular level. Function is primarily neurophysiological and biochemical aspects. The emphasis is on vertebrates, especially air-breathing vertebrates in the case of olfaction, but there is some coverage of invertebrate forms. At the level of Taste in Health and Disease, edited by T. V. Getchell, R. L. Dory, L. M. Bartoshuk, and J. B. Snow; The Neurobioloy of Taste and Smell, edited by T. E. Finger and W. L. Silver.

**PSYCH 431 Effects of Aging on Sensory and Perceptual Systems (also BIONB 421) (I)**

Fall. 3 or 4 credits. The 4-credit option involves a term paper or creation of a relevant web site. Limited to 25 students. Prerequisites: an introductory course in biology or psychology, plus a second course in psychology, cognitive science, or biopsychology. T R. P. Halpern.

A literature-based examination of post-maturation changes in the perceptual, structural, and physiological characteristics of somesthetic, visual, auditory, and chemosensory systems. Emphasis is on human data, with nonhuman information included when especially relevant. Quality of Life issues are included. Currents in human sensory prosthetic devices, and in regeneration or replacement of receptor structures or organs are examined. Brief written statements by e-mail of questions and problems related to each set of readings are required in advance of each class meeting and are automatically distributed to all members of the class. This course is taught using the Socratic Method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class difficult original literature dealing with the subject matter of the course. Readings are from the Course Info site, courseinfo.cit.cornell.edu/courses/psych431_nbk421, from Internet sites, from a course packet, and from materials on reserve. Students are expected to come to each class having already done and thought about the assigned readings, and to take an active part in every class. All examinations are take-home.

**PSYCH 435 Olfaction, Pheromones, and Behavior (III)**

Fall. 4 credits. Prerequisites: an introduction course in biology and one in neurobiology and behavior or biopsychology or a 300-level course in biopsychology or permission of instructor. Not offered 2002-2003. R. Johnston.

This course covers chemical signals, olfaction, and behavior in vertebrates (including humans), as well as the neurobiology of olfaction and odor-mediated behaviors. Behavioral topics may vary from year to year but include evaluation of and advertisement for mates, aggression and territorial behavior, parental-young interactions, social recognition (species, sex, individual, kin reproductive state, status), memory for odors, odor and endocrine interactions, imprinting, and homing and navigation. Basic aspects of the structure and function of the olfactory system and also covered, including the molecular biology of chemo-reception, olfactory coding, and higher-order processing in the central nervous system. The format includes lectures, discussions, and student presentations.

**PSYCH 436 Language Development (also COGST 436, HD 436, and LING 436) (III)**

Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll under HD 653. LING 700/PSYCH 600, a supplemental graduate seminar. Prerequisite: at least 1 course in developmental psychology, cognitive psychology, cognitive development, or linguistics. S-U grades optional. T R. B. Lust.

This course surveys basic issues, methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental linguistic issues of "Universal Grammar" and the biological foundations for acquisition are discussed, as are issues of relations between language and thought. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child. An optional lab course supplement is available. (See COGST 450/LING 450 and PSYCH 437.)

**PSYCH 437 Lab Course: Language Development (also COGST 450, HD 437, and LING 450) (in conjunction with COGST/HD/LING 436, Language Development)**

Spring. 2 credits. R. B. Lust.

This laboratory course is an optional supplement to the survey course, Language Development (HD/COGST/PSYCH/LING 436). The lab course provides students with a hands-on introduction to scientific research, including design and methods, in the area of first language acquisition.

**PSYCH 440 The Brain and Sleep**

Fall. 4 credits. Prerequisites: at least PSYCH 223 or BIONB 221. An additional course in biology, biopsychology or neurobiology is recommended. S-U grades optional. Graduate students, see PSYCH 640. M W H. S. Porte.

Taking a comparative evolutionary perspective, this course examines the neural events that instigate, maintain, and disturb the states and rhythms of sleep in various species. Emphasizing human data where possible, special topics include sleep deprivation and the biological functions of sleep; sleep's putative role in learning and memory; biologically interesting deviations from normal sleep; and the cognitive neuroscience of sleep.
High-level vision is a field of study concerned with functions such as visual object recognition and categorization, scene understanding, and reasoning about visual structure. It is an essentially cross-disciplinary endeavor, drawing on concepts and methods from neuroanatomy and neurophysiology, cognitive psychology, applied mathematics, computer science, and philosophy. The course concentrates on a critical examination of a collection of research publications, linked by a common thread, from the diverse perspectives offered by the different disciplines. Students will write bi-weekly commentaries on the assigned papers and a term paper integrating the material covered in class.

Students vote on topics to cover, choosing among time series, cluster analysis, multidimensional scaling, component analysis, factor analysis, MANOVA, canonical correlation, repeated measures, logistic regression, log-linear models, ANOVA with empty cells, meta-analysis, and other topics. First class sketches all these topics before vote.

PSYCH 481 Advanced Social Psychology (III)
Fall. 4 credits. Limited to 15 students by application. Senior psychology majors have priority. Graduate students, see PSYCH 681. T. R. D. T. Regan. Selected topics in social psychology are examined in depth with an emphasis on the relationship between experimental research and the development of theory. Readings are mostly primary sources. Among the theoretical approaches to social behavior we may discuss are social comparison theory, cognitive dissonance, attribution processes and social judgment, dramaturgy and impression management, and evolutionary perspectives.

PSYCH 489 Seminar: Beliefs, Attitudes, and Ideologies (also PSYCH 689/odomS 488/688) (III)
Fall. 4 credits. Prerequisites: admission is by application during the spring pre-registration period, or for the fall semester. Seniors and graduate students are given priority. M. D. J. Bem. This course in cultural analysis examines the properties of beliefs and attitudes, how they are formed and changed, the psychological functions they serve, and how we organize them into ideologies. Several specific issues involved in America's "culture wars" are examined, such as abortion, gender, sexual orientation, and affirmative action. Other topics include the culture of childhood, deaf culture, and the ideologies of science. Participants will write weekly commentaries on the readings and a term paper examining a particular ideology.

PSYCH 491 Research Methods in Psychology
Spring. 4 credits. Enrollment limited to 20 students. Recommended: permission of instructor, PSYCH 350, experience in upper-division psychology courses, or graduate standing. Graduate students see PSYCH 691. T. R. D. T. Regan. An intensive examination of the basic research methods used in social, personality, cognitive, and developmental psychology. The course focuses on designing and conducting experiments, i.e., how to turn vague theories into concrete and testable notions, evaluate studies, avoid common pitfalls, and, finally, remain ethical. Beyond learning methods of "correct" and rigorous experimentation, we also discuss what makes a research study actually interesting. The course in addition covers test construction, survey methods, and "quasi experiments." Students concentrate on completing a small research project in which they conduct an experiment, interpret its data, and write up the results.

PSYCH 496 Topics in High-Level Vision (also COGST 465 and COM S 392) (III)
Spring. 4 credits. Graduate students see PSYCH 665. Offered alternate years. S. Edelman.
PSYCH 492 Sensory Function (also BIONB 492, VISST 492) (II)
Spring. 4 credits. Limited to 25 students. Prerequisite: a 300-level course in biopsychology, or BIONB 222 or BIOAP 311, or equivalent. Students are expected to have a knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Graduate students, see PSYCH 692. Offered alternate years. M. F. B. Halpern and H. C. Howland.
In general, this course has covered classical topics in sensory function such as vision, hearing, touch, and balance, as well as some more modern topics like sensory processing, location of stimulus sources in space, the development of sensory system, and nonclassical topics such as electoreception and internal chemoreceptors.

Advanced Courses and Seminars
Advanced seminars are primarily for graduate students, but with the permission of the instructor they may be taken by qualified undergraduates. The selection of seminars to be offered each term is determined by the needs of the students.

A supplement describing these advanced seminars is available at the beginning of each semester and can be obtained from the department office (211 Uris Hall). The following courses may be offered either term and carry four credits unless otherwise indicated.

PSYCH 510-511 Perception
PSYCH 512-514 Visual Perception
PSYCH 518 Topics in Psycholinguistics
PSYCH 519-520 Cognition
PSYCH 521 Psychobiology (Developmental Seminar)
PSYCH 522 Topics in Perception and Cognition
PSYCH 523 Hormones and Behavior
PSYCH 527 Topics in Biopsychology
PSYCH 530 Representation of Structure in Vision and Language (also COGST 530 and LING 530)
Spring. 4 credits. Graduate seminar. Prerequisites: a course each in cognitive psychology, linguistics, computer science, or permission of instructor. Enrollment limited to 20 graduate students. Offered alternate years. S. Edelman.

This seminar concentrates on the nature of the representation of visual objects and scenes in the brain and compare it with the structural framework that serves as the main explanatory tool in current theories of language processing. Data and ideas are drawn from visual psychophysics, neurophysiology, psycholinguistics, computational vision and linguistics, and philosophy. Students present published research papers and preprints, which are then discussed and critiqued.

PSYCH 531 Topics in Cognitive Sciences (also PSYCH 431 and LING 531)
Spring. 4 credits. S. Edelman and H. Segal.

PSYCH 532 Cognition
PSYCH 533 Evolutionary Perspectives on Behavior
PSYCH 541 Statistics in Current Psychological Research
PSYCH 550 Special Topics in Cognitive Science

PSYCH 580 Experimental Social Psychology
PSYCH 600 General Research Seminar
Fall or spring. No credit.
[PSYCH 601 Computational Models of Language
Spring. 4 credits. Prerequisites: consent of instructor. R. Not offered 2002–2003. M. Spivey.]

This seminar involves in-depth discussion of a range of computational approaches to language representation, processing, and acquisition. We cover phrase-structure grammars, context-free grammars, connectionist models, statistical natural language processing, and dynamical systems, to name just a few. There is also some hands-on experience writing models in a computer lab using the MATLAB programming environment.

PSYCH 605 Perception (also PSYCH 205)
Spring. 4 credits. Non-arts graduate students only. T R. J. E. Cutting.

[PSYCH 607 Chemosensory Perception (also PSYCH 307)
Fall. 4 credits. T R. Not offered 2002–2003. B. P. Halpern.]

[PSYCH 611 Introduction to Human Memory (also PSYCH 311)

[PSYCH 612 Laboratory in Cognition and Perception (also PSYCH 412)

PSYCH 613 Obesity and the Regulation of Body Weight (also NS 315)
Spring. 3 credits. Limited to 30 students. Prerequisites: 1 course in psychology and 1 course in nutrition. Undergraduate students may register with permission of instructor. S-U grades optional. Offered alternate years. T R. D. A. Levinsky.

This course is a multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, the genetics of obesity, the role of activity and energy metabolism, psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.

PSYCH 614 Cognitive Psychology (also PSYCH 214)
Fall. 4 credits. M W. F. S. Edelman.

[PSYCH 615 Concepts, Categories, and Word Meaning (also PSYCH 415)
Fall. 4 credits. M. Not offered 2002–2003. Staff.]

[PSYCH 616 Modeling Perception and Cognition (also PSYCH 416 and COGST 416)

PSYCH 618 Psychology of Music (also PSYCH 418)
Spring. 4 credits. M. W. C. Krahnsl.

PSYCH 619 Neural Networks Laboratory (also PSYCH 419)

[PSYCH 622 Developmental Biopsychology (also PSYCH 422)
Fall. 4 credits. M W. F. Not offered 2002–2003. B. L. Finlay.]

[PSYCH 625 Cognitive Neuroscience (also PSYCH 425)
Fall. 4 credits. M W. F. Not offered 2002–2003. B. L. Finlay.]

PSYCH 626 Evolution of Human Behavior (also PSYCH 326)
Spring. 4 credits. T R. E. Johnston.

PSYCH 628 Connectionist Psycholinguistics (also PSYCH 428)
Fall. 4 credits. W. M. Christiansen.

[PSYCH 629 Illusion and Taste: Structure and Function (also PSYCH 429 and BIONB 429)

PSYCH 631 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 431 and BIONB 421)
Fall. 4 credits. T R. B. P. Halpern.

PSYCH 632 Biopsychology of Learning and Memory (also PSYCH 332 and BIONB 328)
Spring. 4 credits. M W. F. T. J. DeVogod.

PSYCH 640 The Brain and Sleep (also PSYCH 440)
Fall. 4 credits. M W. H. S. Porte.

PSYCH 641 Laboratory in Sleep Research (also PSYCH 441)
Spring. 4 credits. W. H. S. Porte.

PSYCH 642 Human Perception: Applications to Computer Graphics, Art, and Visual Display (also PSYCH 342 and COGST 342)
Fall. T R. D. J. Field.

PSYCH 650 Gender and Clinical Psychology (also PSYCH 450 and WOMNS 450 and 650)
Fall. 4 credits. W. S. L. Bem.

PSYCH 665 Topics in High-Level Vision (also PSYCH 465, COGST 465, and COM S 392)
Spring. 4 credits. S. Edelman.

PSYCH 681 Advanced Social Psychology (also PSYCH 481)
Fall. 4 credits. T R. D. T. Regan.
PSYCH 689 Seminar: Beliefs, Attitudes, and Ideologies (also PSYCH 489)
Fall. 4 credits. M. D. J. Ben.

PSYCH 691 Research Methods in Psychology (also PSYCH 491)
Spring. 4 credits. T. R. D. A. Dunng.

PSYCH 692 Sensory Function (also PSYCH 492 and BIONB 492)
Spring. 4 credits. M W F. B. P. Halpern and H. C. Howland.

PSYCH 696 Introduction to Sensory Systems (also PSYCH 396 and BION 396)

PSYCH 700 Research in Biopsychology
Spring. 4 credits. M W. S. Johnson.

PSYCH 710 Research in Human Experimental Psychology
Spring. 4 credits. T. R. M. J. Owren.

PSYCH 714 Comparative Cognition (also PSYCH 414 and COGST 414)
Spring. 4 credits. T. R. M. J. Owren.

PSYCH 715 Psychology of Language (also PSYCH 215)
Spring. 4 credits. T. R. M. Christiansen.

PSYCH 716 Auditory Perception (also PSYCH 316)
Fall. 4 credits. M W. Not offered 2002-2003. C. L. Krumhansl.

PSYCH 717 The Origins of Thought and Knowledge (also PSYCH 417)

PSYCH 720 Research in Social Psychology and Personality
PSYCH 722 Hormones and Behavior (also PSYCH 322 and BIONB 322)
Fall. 4 credits. M W. F. E. A. Regan.

PSYCH 775 Proseminar in Social Psychology I
Fall. 2 credits. Limited to 10 graduate students in social psychology. Prerequisite: permission of instructors. D. A. Dunng, T. D. Gilovich, and D. T. Regan.

PSYCH 776 Proseminar in Social Psychology II

This is the first term of a year-long discussion-seminar course intended to give graduate students an in-depth understanding of current research and theory in social psychology. The course will emphasize social cognition, but other topics, such as group dynamics, social influence, the social psychology of language, and emotional experience are covered.

PSYCH 900 Doctoral Thesis Research in Biopsychology

PSYCH 910 Doctoral Thesis Research in Human Experimental Psychology

PSYCH 920 Doctoral Thesis Research in Social Psychology and Personality

Summer Session Courses

The following courses are also frequently offered in the summer session, though not necessarily by the same instructor as during the academic year. Not all of these courses are offered in a particular summer. Information regarding these courses and additional summer session offerings in psychology is available from the department before the end of the fall semester.

PSYCH 101 Introduction to Psychology: The Frontiers of Psychological Inquiry
PSYCH 102 Introduction to Cognitive Science
PSYCH 128 Introduction to Psychology: Personality and Social Behavior
PSYCH 199 Sports Psychology
PSYCH 223 Introduction to Biopsychology
PSYCH 280 Introduction to Social Psychology
PSYCH 350 Statistics and Research Design

QUECHUA
See Romance Studies.

RELIGIOUS STUDIES MAJOR

The Religious Studies Program, an academic unit providing a major in the scholarly study of religion through the College of Arts and Sciences, offers a wide variety of courses. In addition to courses addressing with various approaches to and topics in the study of religion, we have integrated curricula within our program for in-depth studies of Judaism, Christianity, the Hindu tradition, and Buddhism. We also offer an increasing number of courses on Islam.

The Religious Studies Program is designed to meet the needs of three classes of students: (1) students planning to pursue advanced degrees in the academic study of religion or allied disciplines or subdisciplines (history of religions, religion and literature, religion and psychology, ethics, theology, area studies, etc.); (2) students seeking courses on topics relating to religion to fulfill distribution requirements; and (3) those students desiring a more systematic exposure to the academic study of religion as a significant component of their liberal arts experience. To all students, our program offers an excellent opportunity to develop a deeper understanding and appreciation of the complex ways in which religious traditions, with their individual, communal, and doctrinal dimensions inform human thought and behavior. The courses offered through our program are built on the established scholarly tradition of the study of religion as an academic, as opposed to confessional, pursuit. Religious traditions are explored in all of their complexity through comparative, contextual (in specific historical cultural contexts), and thematic studies.

The program also hosts lecture series, conferences, symposia, and periodic social gatherings for faculty and students throughout the academic year to foster a sense of intellectual community among our students and faculty.

The Major in Religious Studies
Sign into the major: To sign into the major in Religious Studies, a student must have completed at least one course in Religious Studies prior to scheduling an appointment with the program director. Here is the process:

1) Schedule an appointment with Professor Jane-Marie Law, Director of Religious Studies; please contact her by e-mail: jml16@cornell.edu.

2) In addition to a copy of your current Cornell transcript (the informal one you regularly receive is acceptable), please bring to your meeting with Professor Law all of these forms, which are available in the Religious Studies office:
   a) a completed Religious Studies Major Application Form (available in Rockefeller 182)
   b) a proposed "Course of Study," which will be used as a guide in your conversation with the director and revised for formal submission to the program upon your entrance as a major
   c) a College of Arts & Sciences Adviser/ Major form which will be signed by the director and your adviser.

Advising in the Religious Studies Program: Upon entering the major in Religious Studies, a student is assigned a faculty adviser whose area of expertise most closely matches the proposed interest of the student. An up-to-date approved adviser list is available in the Religious Studies office. Please note that not all faculty who cross-list courses with the director and revised for formal submission to the program upon your entrance as a major.

c) a College of Arts & Sciences Adviser/ Major form which will be signed by the director and your adviser.
ARTS AND SCIENCES - 2002-2003

Most courses approved for the major are offered by cooperating departments within the College of Arts and Sciences, a comprehensive up-to-date list of these courses is maintained at the office of the Religious Studies Program, 182 Rockefeller Hall.

Graduating with Honors in Religious Studies:

GENERAL INFORMATION

1. Eligibility. 3.0 cumulative average and 3.5 average inside the major with no grade in the major below B. Program Director notifies eligible candidates during the spring semester of the junior year, or prior to commencement of final year.

2. Honors Courses. Candidates must sign into RELST 495 (Senior Honors Essay) for up to eight credits (two courses) for two semesters with variable credit. This two-semester sequence is recommended but not required. After the first term, an R in the transcript indicates that this course (usually for 6 credits) is a yearlong course. When the project is completed at the end of the second semester, the grade recorded counts for all eight credits. (The eight-credit limit is the result of the conviction/belief that earning more than eight credits for a single "piece" of your undergraduate education is unwise.)

You submit your honors proposal (with and according to the program’s instruction/cover sheet) to the Religious Studies administrator before the end of the spring term of your junior year, or not later than Sept. 15 of the final year. She/he then approves your signing into the honors courses.

3. Honors Committee—three faculty members. While you are required to have three faculty members on your committee at the time of the submission of the final draft, we only require that two of them be identified when you submit your proposal. In the event the adviser is on leave, the program will assign a committee member from the list of approved RELST advisers. The three members should be:

   a. The professor who has agreed to work closely with you over the year and to be the supervisor/grader of your project is chair of the committee.
   b. Your Religious Studies major adviser (not optional)
   c. Another knowledgeable faculty member

Sometimes your adviser is the supervisor/ chair. If that is the case, you need two additional knowledgeable professors for your committee of three.

Courses Approved for the Major

RELST 123-124 Elementary Biblical Hebrew I and II (also NES 123-124, JWST 123-124)
123, fall, 124, spring. 3 credits. Enrollment limited to 17 students. Not offered 2002-2003. Staff.

For description, see NES 123-124.

RELST 131 Elementary Pali (also Pali
131-132)
Fall. 3 credits. Not offered 2002-2003. Staff.

RELST 133-134 Intro to Qur'anic and Classical Arabic I and II (also NES 133-134)
133, fall; 134, spring. 3 credits. R. Brann, S. Toorawa.

For description, see NES 133-134.

Fall. 4 credits. D. Gold.
For description, see ASIAN 460.

RELST 490-491 Directed Study
490. Fall, 491. Spring. 2–4 credits each term. For majors in Religious Studies; permission of director required. Staff.

RELST 495 Senior Honors Essay
Fall and Spring. Variable up to 8 credits. Required for honors in Religious Studies. Staff.

RELST 496 Seminar: Religion and Science (also NES 496)
Spring. 1 credit. W. Dickens.
For description, see NES 496.

RELST 531 Problems in Medieval Art and Architecture (also ART H 531)
R. G. Calkins.

RELST 650 Seminar on Asian Religions (also ASIAN 650)
Fall. 4 credits. J. M. Law.
For description, see ASIAN 650.

RELST 652 Straddling the Himalayas (also ASIAN 652)
Spring. 4 credits. D. Boucher.
For description, see ASIAN 652.

RELST 654 Indian Buddhism (also RELST 354, ASIAN 354/654)
Fall. 3 credits. D. Boucher.
For description, see ASIAN 354.

Additional courses offered by cooperating departments may also be approved through petition for the major in Religious Studies. For details see the program director, Jane Marie Law, 125 Rockefeller Hall or e-mail her at jml16@cornell.edu.

ROMANCE STUDIES

The Department of Romance Studies (Mitchell Greenberg, chair) offers courses in the following areas: French, Italian, and Spanish literature; French, Italian, Portuguese, Quechua, and Spanish language; Francophone, Italian, and Hispanic culture; and linguistics and semiotics. Through its course offerings and opportunities for independent study, the department seeks to encourage study of the interactions of the Romance literatures among themselves, with other literatures, and with other fields of inquiry.

French

The Major
The major in French is divided into two options: French Area Studies and French Literature. While prospective majors should try to plan their programs as far ahead as possible, especially if they intend to study abroad, no student will be refused admission.
Students interested in majoring in French linguistics should contact the Department of Linguistics.

Honors. The honors program encourages well-qualified students majoring in French linguistics to do independent work in French outside the structure of courses. The preparation of the senior honors essay, generally spread over two terms, provides a unique learning opportunity, since it allows for wide reading and extensive rewriting to a degree not practically possible in the case of course papers. No special seminars or courses are required of honors students, but they have regular meetings with faculty advisers who have agreed to supervise their work. They may receive course credit by enrolling in FRROM 420-430, but the independent study courses must be taken in addition to the courses that meet the minimum requirements for the major. At the end of the senior year each honors student is examined orally on the honors essay by a jury consisting of his or her faculty adviser and two other faculty members. The awarding of honors is determined by the student's grades in the major and the quality of the honors essay.

The Literature Option

The major in French, literature option, is designed to give students proficiency in the oral and written language, to acquaint them with French literature and culture, and to develop skills in literary analysis.

Admission

To be admitted to the major, students should have completed FRRLIT 201, 220, or 221 or its equivalent by the end of their sophomore year.

For completion of the major, a student must:

1) acquire a sound degree of competence in French language. This competence is demonstrated by the successful completion of FRROM 301-312 or their equivalents, such as properly accredited study abroad or the passing of a special language test (the CASE examination) or the permission of the adviser (this option applies only to 312).

2) take two courses in Romance Studies (literature or civilization) at the 300 level or above.

3) take six courses at the 300 level or above in no more than three areas of interest such as—but not limited to—African studies, anthropology, comparative literature, economics, government, history, history of art, linguistics, music, theater arts, women's studies, and visual studies. Each area must be represented by at least two courses, and each course must have a significant French component. At least one of these six courses should be at the 400 level.

Administration of French Area Studies

Students are admitted to the major by the director of undergraduate studies in the French section of the Department of Romance Studies but are guided by their individual advisers. A copy of each student's program is given to the director of undergraduate studies for approval and safe-keeping.

Study Abroad in France

French majors or other interested students may study in France for one or two semesters during their junior year. Options for one of several study-abroad plans recognized by the Departments of Romance Studies and Linguistics facilitates the transfer of credit. Information about these plans is available from the director of undergraduate studies.

Students must be Cornell undergraduates with a strong academic record. The minimum French preparation is the completion of FRROM 219 (formerly 213) or its equivalent in advanced credit or placement by the Cornell CASE examination. The taking of FRROM 301 and/or 312 is, however, strongly recommended.

Students interested in studying in France are encouraged to consider the special benefits offered by EDUCO, the program in Paris cosponsored by Cornell and by Emory University, and Duke University. EDUCO offers advanced students a challenging course of study and the experience of total immersion in French life and culture in Paris. Participants in this program spend the second year of their senior year in the French university course offerings. Students begin the academic year with an intensive three-week orientation in French history, society and daily life. While it is possible to enroll in the EDUCO Program for one semester, admission will be given first to students planning to study abroad for the full academic year. EDUCO maintains a center in Paris with appropriate support staff. The resident director, chosen annually from the Cornell, Emory, and Duke faculties, teaches a special seminar each semester, provides academic advice, and helps ensure the quality of the courses. The center, which includes a small library and word-processing facilities, is regularly used by students for special tutorials, seminars, and lectures, as well as informal gatherings.

Honors. The honors program encourages well-qualified students majoring in French literature and culture to do independent work in French outside the structure of courses. The preparation of the senior honors essay, generally spread over two terms, provides a unique learning opportunity, since it allows for wide reading and extensive rewriting to a degree not possible in the case of course papers.

To be eligible for Honors, students must have a general grade point average of at least 3.00 and a grade point average of at least 3.5 in their French major.

No special seminars or courses are required of honors students, but they will have regular meetings with the faculty advisers who have agreed to supervise their work. They may receive course credit by enrolling in French 429-430, but these independent study courses must be taken in addition to the courses that meet the minimum requirements for the major. At the end of the senior year, each honors student is examined orally on the honors essay by a jury consisting of his or her faculty adviser and two other faculty members. The senior essay is to be made available for reading by the jury on or before April 15. The awarding of honors is determined by the student's grades in the major and the quality of the honors essay.

Language

Enrollment in a language course is conditional upon the student's eligibility for the particular level and on attendance of the first scheduled class session. Further, a student who fails to attend the first three days of class will be automatically dropped from the course in order to accommodate those on the waiting list.

All French language courses are offered by the Department of Romance Studies and French linguistics courses are offered by the Department of Linguistics.

Note: Students placed in the 200-level courses have the option of taking language and/or literature courses; see listings under "Literature" for descriptions of the literature courses, some of which may be taken concurrently with FRROM 206, 209, or 219 or H ADM 266.

FRROM 112 Elementary French: Review and Continuation

Fall. 4 credits. Prerequisite: LPF score 37-44 or SAT II 410-480, or FRROM 121. S. Tun.

This course is designed for students who have taken some French and who have a placement score of 37-44 or SAT II 410-480. It provides a basic review and then moves on to cover new material for the remainder of the term. Students who have taken FRROM 121
may enroll for this course. As part of the final exam, students take the LPF and, according to their score, may place into FRROM 123 (score below 56), or receive qualification (56 or above) and place into the 200-level courses.

FRROM 121-122 Elementary French

121: fall, spring; 4 credits each term. Prerequisite for 121: this course is intended for students with no experience in French. Students who have previously studied French must have an LPF score lower than 37, or SAT II lower than 410, to be eligible for FRROM 121. Prerequisite for 122: FRROM 121. FRROM 122 (fall only) is recommended for students who didn’t take FRROM 121 but scored 57–44 on the LPF or 410–480 on the SAT II. Fall: C. Sparfel (course coordinator) and staff; spring: C. Sparfel (course coordinator), S. Tun, and staff.

The goal of FRROM 121–122 is to provide a thorough grounding in the language and insights into Francophone and francophone cultures so that students can function in basic situations in a French-speaking culture. Small classes provide intensive, context-specific practice in speaking, reading, writing, and listening comprehension.

FRROM 123 Continuing French
Fall, spring; 4 credits. Provides language qualification. Prerequisite: LPF score 45–55 or SAT II 490–590. Recommended courses after FRROM 123: FRROM 206 or 209 or FRLIT 201. The S-U option is not available to undergraduates only by exceptional permission from the course coordinator. Fall: K. Proux (course coordinator) and staff; spring: K. Proux. FRROM 123 is an all-skills course designed to improve pronunciation, oral communication, and reading ability; to establish a groundwork for correct writing; and to provide a substantial grammar review. The approach in the course encourages students to see the language within the context of its culture.

FRROM 206 French Intermediate Reading and Writing
Fall, spring; 3 credits. Provides language proficiency. Prerequisite: FRROM 123, LPF score 56–64, or SAT II 600–680. Conducted in French. Recommended courses after FRROM 206: FRROM 219, FRLIT 220 or FRLIT 221. The S-U option is not available to undergraduates, and is available to graduate students only by exceptional permission from the course coordinator. Fall: S. LoBello; spring: C. Sparfel.

This language course is designed for students who want to focus on their reading and writing skills. Emphasis is placed on grammar review and expansion, vocabulary development, and appreciation of different styles of language. Diverse text types are used, including a contemporary novel and student-picked material.

FRROM 209 French Intermediate Composition and Conversation I
Fall, spring, summer; 3 credits. Provides language proficiency. Prerequisite: FRROM 123, LPF score 56–64, or SAT II 600–680. Recommended courses after FRROM 209: FRROM 219, FRLIT 220 or 221. FRROM 219 may be taken concurrently with either FRLIT 220 or 221. The S-U option is not available to undergraduates, and is available to graduate students only by exceptional permission from the course coordinator. C. Waldron.

The course is designed to strengthen grammatical skills, to improve reading, speaking and writing ability, and to help students become independent learners. For more information go to: http://frofrench.cit.cornell.edu/courses/FRROM209/.

FRROM 219 French Intermediate Composition and Conversation II
Fall, spring; 4 credits. Prerequisite: FRROM 206 or 209, or permission of instructor, or Q+ on the Cornell Advanced Standing Examination (CASE). For admission to the Cornell Abroad Program, students are required to take either this course, or have completed an equivalent level of study. Taught in French. Recommended courses after FRROM 219: FRLIT 220 or 221, FRROM 222 or 223. Fall: S. LoBello (course coordinator), A. Grandjean-Levy and staff; spring: S. LoBello (course coordinator), A. Grandjean-Levy and staff.

The emphasis of this course is on improving grammatical accuracy; on enriching vocabulary in oral and written expression of French. Varied types of reading including newspaper articles, short videos, films, and presentations by students, provide the basis for writing assignments and class discussions. Themes and emphases may vary from section to section.

FRROM 300 Directed Studies
Fall, spring; 1–4 credits variable. Prerequisite: permission of instructor. Times arranged with instructor. Staff. Taught on a specialized basis to address particular student needs.

FRROM 301 Advanced French I
Fall, spring; 4 credits. Prerequisite: FRROM 219, or Q+ on the Cornell Advanced Standing Examination (CASE). Recommended courses after FRROM 301: FRROM 312, FRLIT 220, or FRLIT 221 may be taken concurrently with 301. Fall: N. Furman and staff; spring: S. LoBello and staff. Taught in French. Recommended courses after FRROM 301: FRROM 305. Fall: A. Grandjean-Levy (course coordinator), A. Grandjean-Levy and staff; spring: S. LoBello (course coordinator), A. Grandjean-Levy and staff.

This seminar-type experiment, open to students who have successfully passed the highest 300-level language course offered in either Spanish or French, focuses on translating from the SL (source language) into the TL (target language, i.e. English). The objective of the course is to learn and practice the skill of translating from one of the SLs into English, and in so doing, investigate the various technical, stylistic, and cultural difficulties encountered in the process. To attain this objective, the students are exposed to a series of translation tasks, conducted individually or in groups: they are asked to justify their translations, compare different translations of the same passage, work on different types of texts, and edit each other’s translations.

FRROM 630 French for Reading—Graduate Students
Spring; 3 credits. Limited to graduate students. T. Alkire.

This course is intended for students with little or no background in French, whose primary aim is to develop skill in reading French. Grammar basics, extensive vocabulary, and strategies for reading in a foreign language are covered. Some flexibility in selecting texts according to fields of interest is offered.

Literature

FRIL 201 Introduction to Techniques of Reading French Literature
Fall; 3 credits. Provides language proficiency. Prerequisites: SAT II score of 600, LPF score of 56 or FRROM 209. Students with an SAT II score of 600 or an LPF score of 60 or more, should take FRLIT 221. M. C. Vallois and staff.

Designed for students interested in improving their written and oral skills in French and also their literary proficiency. Texts have been chosen both for their literary merit and their manageable linguistic difficulty. Close scrutiny of the works and active class discussions sharpen students’ critical and analytical abilities. The reading list may include authors.
such as Baudelaire, Beckett, Ionesco, Camus, Rimbaud, Sartre, and Duras.

FRLIT 220 French and Francophone Culture @ (IV)
Fall, spring. 3 credits. Prerequisite: SAT II score of 600 and above, or LFP score of 60 or FRROM 206 or 209. Conducted in French. J. Coursal and staff.
This course serves as an introduction to French Area Studies. It provides an overview of Francophone culture and society from 1945 to the present. It includes a survey of articles dealing with issues of current concern in France: works by French and Maghrebi or African writers; poetry or drama; two films are also discussed.

FRLIT 221 Modern French Literature # (IV)
Fall, spring. 3 credits. Prerequisites: SAT II scores of 600 and above, or LFP score of 60, or FRROM 206 or 209. Conducted in French. Fall: A. Berger and staff; spring: K. P. Long and staff.
This course is intended as an introduction to French literature of the modern period. Texts are chosen because of their centrality to the traditional literary canon and with an eye to experimentation. The course considers literary genres (poetry, drama, the novel) as solicitations to read at different speeds, with diverse claims on our attention. One text may include French script. The course is designed to satisfy a general interest in modern French literature as well as to prepare students to pursue a French major in literature. Readings include works by Baudelaire, Mallarmé, Beckett, Camus, Proust, Duras, and Assia Djebar.

FRLIT 222 Early Modern French Literature # (IV)
Spring. 3 credits. Prerequisite: FRLIT 220, 221, or permission of the instructor. Conducted in French. M. C. Vallois.
Study of the classic literature of seventeenth-century France (Corneille, Racine, Moléire, Mme de Lafayette, La Fontaine) and of eighteenth-century Enlightenment literature (Voltaire, Rousseau, Diderot, Beaumarchais). Special attention is paid to the ways in which these various works represent or deal with the shift from an aristocratic cultural code of values to modern bourgeois ideology and aesthetic. The course also involves reflection on the status and centrality of female characters in classical and neo-classical French literature. Theater being central to this period, the course gives special attention to major plays of the classical period. It traces the evolution from the classical tragic heroine to more modern (but no less problematic) representations of women.

FRLIT 224 The French Experience (also HIST 240) (III or IV)
Fall. 3 credits. Conducted in English. Readings available both in French and in English translation. N. Furman and J. Weiss.
We look ethnographically and through literature at tastes and at class as they function and are discussed in France. We examine speech in its practice and as it is reflected upon; and we look at views from France, from America, and other countries. As we emphasize differences, the French experience emerges.

Note: Prerequisite for all 300-level courses in French literature: FRLIT 220, 221 or the equivalent.

FRLIT 327 In Search of the Origin of Language (also COM L 320) (IV)
Spring. 3 credits. Conducted in English. T. McNulty.
Where does language come from, and what does it respond to? What is the relationship between the origin of language and the creation of the between language and myth? What distinguishes human language from the structures of communication common to all animals? What is the relationship of language to sexual difference, the dead drive, and the prohibition of trace? What do people's' and computer science tell us about the function of writing? Why have so many thinkers across history associated language with the virus or with logics of contamination? This course is interdisciplinary in scope, drawing on works of philosophy, anthropology, psychoanalysis, religion, and the biological sciences, in addition to literature and film. Readings include texts from the Bible, Plato, Descartes, Pascal, Rousseau, Voltaire, Diderot, Saussure, Artaud, Levi-Strauss, Burroughs, and Derrida. Students may read texts in the original languages or in translation.

FRLIT 333 Contemporary French Thought (IV)
Fall. 4 credits. Conducted in French. R. Klein.
This course surveys the major contemporary post structuralist, psychoanalytic, and deconstructive theorists in French thought today. Lacan, Foucault, Derrida, Barthes, Bourdieu, Baudrillard and Wittig. Particular emphasis is on the construction of these theorists to the analysis of sexuality and pedagogy.

FRLIT 356 Renaissance France # (IV)
Spring. 4 credits. Conducted in French. K. P. Long.
This course traces the importance of a number of movements/crises/events for the evolution of France as a nation and a culture, as well as the impact of these movements on the origins of modern thought. We consider the ongoing debate over the status of women, known as the querelle des femmes; the discovery of the "New World;", and its subsequent colonization; the Reformation, which led eventually to a split between Church and State; the Thirty Years' War; and the Thirty Years' Peace. These areas of inquiry are studied by means of various texts: the works of Marguerite de Navarre, Louise Labbé, François Rabelais, Joachim du Bellay, Pierre de Ronsard, Ambroise Paré, and Michel de Montaigne, among others. Texts and discussions are in French.

FRLIT 362 Culture of the Renaissance (also ENGL 362, HIST 364, RELST 362, MUS 390, ART H 351) # (III or IV)
Fall. 4 credits. K. P. Long and C. Kaske.
For description see COM L 362.

FRLIT 370 The French Enlightenment and the Modern Citizen # (IV)
Fall. 4 credits. Conducted in French. T. McNulty.
Through a reading of various works of the French 18th century (by Montesquieu, Voltaire, Diderot, Rousseau, as well by less canonical authors) we study the emergence of the modern citizen. We examine speeches and practices aiming at a "secularization" of the literary field, in conjunction with the ideological and epistemological changes which took place under the name of Enlightenment. One of the most important of these changes is often seen as the production of the modern citizen.

FRLIT 381 Nineteenth-Century French Women Writers (also WOMNS 381) (IV)
Spring. 4 credits. Conducted in French. M. C. Vallois.
While situating the works read within their specific historical and literary context, this course attempts to address two sets of questions: 1) How does the inscription of literature as a Public Institution within a phallocentric cultural order effect women authors' status and writing strategies? 2) To what extent and at what levels do female being a woman inform or shape the text produced? In what ways is literary writing concerned with sexual difference? Writers include Mme. de Stael, George Sand, Flora Tristan, Rachilde, and others.

FRLIT 382 Literature and Science in the Nineteenth Century
Spring. 4 credits. Conducted in French. N. Furman.
From medicine to physics, from biology to mechanics, the major scientific discoveries of the nineteenth century held the promise of either a better or a more fruitful future. Literature reflects these hopes and fears. We study the nineteenth-century obsessive interest in science in the works of Balzac, Flaubert, Zola, Maupassant, Verne, and Villiers de l'Isle-Adam.

FRLIT 390 Fictions of the Self (also WOMNS 390)
Fall. 4 credits. Prerequisite: FRLIT 221 or permission of the instructor. Conducted in French. T. McNulty.
This course examines the relationship between the "self" and fiction, or between personhood and the literary "personnage." How does autobiography, as a "writing of one's own life," shape the relationship between the self and the written word? What is the relationship between the person and the persona (or "mask") from which it derives etymologically? To what extent is the self a fiction? Works by 20th century authors (Gide, Leiris, Bataille, Khatibi, Duras, Tourrier, Artaud, Jâbes, Blanchot) are supplemented by readings from Augustine, Rousseau, Nietzsche, and Freud.

FRLIT 412 Poetry and Poverty: 19th Century French Lyricism and the Times of Indigence (also FRLIT 617) @ (IV)
Fall. 4 credits. A. Berger.
From Flateurs Gent (Hugo) to the "pauvre Lelain" (Verlaine), from Baudelaire's Poor to Rimbaud's scan, French poetry takes up the poor's claim. But poverty as a social phenomenon doesn't simply become a poetic theme by striking lyricism's sentimental chord. If poverty is the main issue of the century, as French 19th century political and social thinkers agree, and if the question of the modern times is indeed the question of poverty (ça me paraît, as Michelet and Heidegger suggest in various ways, then the lyrical treatment of poverty raises the question of poverty's relation to modernity, and more specifically to the economy which defines it. Through a close examination of poems by Hugo, Baudelaire, Rimbaud, Verlaine, Mallarmé and Jehan-Rictus, read along with Michelet, Benjamin and Heidegger among others, we address the question of poetry's
relations to the modern experience of lack and need, as well as to the poor as a figure of the modern story. How can we give (itself), and what can it give in times of want, that is, in times of the retreat of the gift?"

FRLIT 419-420 Special Topics in French Literature
419, fall; 420, spring. 2-4 credits each term. Prerequisite: permission of instructor. Staff. Guided independent study of special topics.

FRLIT 428 Oulipo: Forms of Potential Literature (IV)
Fall. 4 credits. R. Klein.
"Oulipo (Ouvroir de litterature potentielle)" is a relatively small circle of writers and mathematicians that has been conducting radical experiments in literary form since its beginnings in 1960. Its members are largely but not exclusively French, and its meetings are held in Paris. Its aim is to identify and analyze older, even ancient experiments in literary form and to elaborate new forms or textual principles based on novel combinatorics or permutations, including computer algorithms. Its founding and continuing members include some of the most prominent contemporary French writers, poets and novelists, including Raymond Queneau, Jacques Roubaud, Georges Perec, as well as the Italian writer, Italo Calvino, and the American, Harry Matthews. The course aims primarily to examine the theoretical claims of Oulipo, its hostility to surrealism, its voluntarism, its experiments for formal constraints, its exemplification of rhetorical and literary procedures (lipograms, palindromes, rhapsodic verse, holonyms, Boolean haiku, etc.). At the same time, close readings of selected texts are encouraged.

FRLIT 429-430 Honors Work in French
429, fall; 430, spring. 8 credits year-long course. 8 grade fall semester, letter grade spring semester, with permission of the adviser. Open to juniors and seniors. Consult the director of the honors program. M. C. Vallois and staff.

FRLIT 447 Medieval Literature # (IV)
Spring. 4 credits. Prerequisite: FRLIT 221 or permission of instructor. Conducted in English. A. Collopy. Hall.
This course is designed to give students facility in reading Old French and an appreciation of two major genres of medieval French literature: the epic and the theater.

FRLIT 466 Proust and his Critics (also FRLIT 666)
Spring. 4 credits. R. Klein.
This course is intended for advanced students of French literature, who already have some acquaintance with the work of Marcel Proust. It aims to encourage students to have read the entire novels (in sale of the Quarto Gallimard edition) by the end of the semester, but that is not a requirement. Rather the course enters into the work through the perspectives offered by several of the leading, modern critics of Proust, including Deleuze, Genette, Poulet, DeMan, Benjamin, Kristeva, Girard, Compagnon, McDonald, and others.

FRLIT 476 Libertine Literature (also COM L 476) (IV)
Spring. 4 credits. Conducted in English. T. McNulty.
In France, the emergence of libertine literature as a distinct genre coincides with political and philosophical debates about universalism, the rights of man, and equality. What do the first libertine writers have to tell us about the nature of the human subject and its relationship to the law or to the universal? What are their insights into human eroticism, the relation between the sexes, violence and power? How does libertine literature deal with the female subject, and how, if at all, does the genre change in the hands of female authors? These questions lead to a theoretical examination of the relationships between libertine and the psychic structure of perversion (sadism, masochism, fetishism), understood as a contestation of the law or signifier and its castrating effects. Works by Sade, Casanova, Laurensant, Sacher-Masoch, Rachilde, Réjane, Bataille, Gombrowicz, Pasolini, and Acker will be read alongside critical texts by Freud, Lacan, Deleuze, Butler, Barthes, and others.

FRLIT 491 Femininity, Ethics and Aesthetics (also FRLIT 691 and WOMNS 491/691 and COM L 479/679) (IV)
Fall. 4 credits. Conducted in English. T. McNulty.
This course serves as a theoretical introduction to psychoanalytic treatments of femininity, especially in Freud and Lacan. The structure of femininity, distinct from biological sex or social gender, is understood as a particular ethical response to the death drive and to the signifier or law that seeks to limit its insistence. In the first half of the course, we explore the logic of femininity, its difference from masculinity, and its contestation of the phallic signifier; the second half focuses on the stakes of aesthetics in femininity, as a possible solution to the impasses of the signifier. We examine other important formulations of femininity and aesthetics (Kant, Cixous, Deleuze, Woolf), as well as writings and artwork by Marguerite Duras, Yayoi Kusama, Teresa of Avila, Daniel Paul Schreber, Sophie Calle, Stendhal, Sade, and others. Students are encouraged to present their own work and critical essays on the ―surplus of signification‖ (Lacan), the ―horde‖ (Bataille), the ―feminine‖ (Fredric Jameson), and the ―postcolonial‖ (Arendt), as they contribute to our understanding of femininity and aesthetics.

FRLIT 607-608 Proseminar
607, fall; 608, spring. 2 credits each term. M. Greenberg.
The pro-seminar is the place for sustained exchanges between graduate students, faculty, and visiting lecturers. Activities include reading and discussion of seminal texts, chapters from dissertations and works in-progress, and articles and essays from visiting lecturers.

FRLIT 617 Poetry and Poverty: 19th Century French Lyricism and the Times of Indigence (also FRLIT 412)
Fall. 4 credits. M. Berger. For description see FRLIT 412.

FRLIT 631 Seminar on Edouard Glissant
Fall. 4 credits. T. McNulty.
Introduction to francophone postcolonial literature through the study of one of its major crises, the work of Edouard Glissant. The seminar proposes analyses of the thematic break effects of Glissant's postcolonial francophone literature. The work of Edouard Glissant (from 1955 on, poetry, novel, theatre, essay) represents the most important rethinking of postcolonial francophone literature since its start in 1930 by the poets of Negritude L. S. Senghor and A. Césaire. This seminar upends and displaces traditional questions of domain and, in turn, displaces and renews its stakes.

The analyses of Edouard Glissant's break in the tradition and thought of African Antilles Negritude concentrates and allows a reordering of all the big questions about postcolonial francophone literature: questions of culture (races, culture, identity), politics (history of the colonial world, of the West, and of globalization), philosophy (postmodern critique of rationalism, paradox, chaos) and psychoanalysis (alienated memory, language). The seminar will thus be a general introduction to this domain through a new kind of reading.

FRLIT 632 Seminar on Movements of Identity
Spring. 4 credits. J. Counsell.
"Creole-ness" through a critical reading of Caribbean African and Magreb works. We will explore postcolonial francophone identity in its necessity as well as in its faults and limits. The works studied have for the most part received international acclaim and have been frequently translated. This confirms the social expectation of a literature of cultural identity. We will emphasize recurring questions that mark all francophone postcolonial tendencies, in particular that of the place of the outcast. How poetry can give (itself), and need, as well as to the poor as a figure of the double aspect of identity: cultural and political relevance in actual society, and subjectivity (literary voice). This study represents an introduction to some postmodern critiques bearing on language and the unconscious.

FRLIT 639-640 Special Topics in French Literature
639, fall; 640, spring. 2-4 credits each term. Staff. Guided independent study for graduate students.

FRLIT 666 Proust and his Critics (also FRLIT 466)
Spring. 4 credits. R. Klein. For description, see FRLIT 466.

FRLIT 674 Les critiques littéraires
Spring. 4 credits. N. Furman.

FRLIT 691 "Femininity, Ethics and Aesthetics" (also WOMNS 491/691, COM L 479/679 and FRLIT 491)
Fall. 4 credits. Conducted in English. T. McNulty. For description, see FRLIT 491.

FRLIT 693 [Un] Romantic Sexualities
Fall. 4 credits. Conducted in French. M. C. Vallois.
From the exotic and incestuous loves of Chateaubriand's René and Atala and the scandalous affairs of George Sand, Musset, and Chopin to the more discreet sentimental relationships between Flaubert, Louise Colet, and later Sand, love—be it fictive or real—has been the focus of numerous theories, definitions and debates during the Romantic Era. Through the close reading of the fictions and correspondence of selected authors of this period—Sand, Alfred et Paul de Musset, Colet, Fouquer—the course proposes to reexamine the mythic origins and practices of romantic love and other romantic relationships. In the first part of the course, we
consider briefly the origins and some traditional figures of so-called "romantic" love (The Song of Songs, and the poems of the Troubadours, "Tristan and Iseult," the Iliad (of Marie de France) from a historical point of view. Denis de Rougemont, Duby, Flandrin, Solé) as well as from a philosophical, ideological and psychoanalytical point of view (Julia Kristeva, Luce Irigaray, Michel Foucault.) The second part of the course is devoted to close readings of literary texts. Although the central case-study could be Sand-Musset, this part of the class is organized according to the ideological and psychoanalytical point of view.

Italian
Faculty: M. Migiel (director of undergraduate studies), T. Alkire, K. Bättig von Wittelsbach, T. Campbell, F. Cervesi-McCobb, S. Stewart-Steinberg, P. Swenson. Emeriti: A. Grossvogel

The Major
The major in Italian is designed for students who: 1) wish to study Italian language, literature, and culture through the works of writers, artists, and cultural figures who have developed rich aesthetic traditions; and 2) may wish to pursue a Ph.D. in Italian. The prerequisite for official admission to the Italian major is successful completion of either ITALL 216 or ITALL 217 (Introduction to Italian Literature).

Students who wish to major in Italian are advised to consult the DUS in Italian, Marilyn Migiel (311 Morrill Hall) as early as possible. The DUS, taking into account the student's interest, preparation, and career goals, will assign the student to an advisor. Students majoring in Italian are expected to become conversant with a fair portion of the masterworks of Italian literature, to acquaint themselves with the outlines of Italian literary and cultural history, and to develop some skill in textual and cultural analysis. In conjunction with the major advisor, the student will craft an individualized plan of studies that will meet the minimum requirements for the major in Italian as listed here below:

- At least ten ITALL courses at the 200 level and higher. (The prerequisite may be counted toward this requirement. The one-credit Italian Practicum and the one- or two-credit Independent Study options do not count as full courses.) One of these courses must be at the 400 level and one must be in the pre-eighteenth century. With permission of the advisor, the student may substitute for two of these courses other courses that are deemed relevant to the student's study of Italian, e.g., a course in another national literature, a course in critical theory, a course in European history, etc.
- At least twenty credits in courses conducted entirely in Italian. The Italian Practica may be used to fulfill three of these credits. Twelve of these credits must be in courses in Italian at the 300-level or above.
- Competency in the Italian language (as demonstrated by examination or by coursework approved by the DUS).

ITALA 402, History of the Italian Language, and ITALA 403, Linguistic Structure of Italian, may be counted toward the ten courses required for the major. (N.B. An introductory linguistics course is a prerequisite for ITALA 402 and 403).

Language
Enrollment in a language course is conditional upon the student's eligibility for the particular level and on attendance of the first scheduled class session. Further, a student who fails to attend the first three days of class will be automatically dropped from the course in order to accommodate those on the waiting lists.

ITALA 121-122 Elementary Italian 121, fall; 122, spring. 4 credits each term. Prerequisite: for ITALL 122, ITALA 121 or equivalent. The S-U option is not available to students placed by examination. At the end of ITALL 122, students who score lower than 56 on the LPI may take ITALL 123, those with 56 or higher on the LPI attain qualification and may enter the 200-level sequence; otherwise ITALL 123 is required for qualification. Evening prelims.
F. Cervesi-McCobb (course coordinator), M. Baraldi, K. Bättig von Wittelsbach, S. Stewart-Steinberg, and staff; spring: F. Cervesi-McCobb (course coordinator), M. Baraldi, T. Alkire, S. LoBello, and staff. This course provides a thorough grounding in all the language skills: listening, speaking, reading, and writing, with practice in small groups. Lectures cover grammar and cultural information.

ITALA 123 Continuing Italian
Fall, spring. 4 credits. Provides language qualification. Limited to students who have previously studied Italian and have an LPI score of 45-55, or an SAT II score of 600-680. The S-U option is not available to undergraduates, and is available to graduate students only by exceptional permission from the course coordinator. Fall: T. Alkire (course coordinator) and K. Bättig von Wittelsbach; spring: K. Bättig von Wittelsbach.
ITALA 123 is an all-skills course designed to improve speaking and reading ability, to establish a groundwork for correct writing, and to provide a substantial grammar review.

ITALA 209 Italian Intermediate Composition and Conversation I
Fall, spring. 3 credits. Provides language proficiency. Prerequisite: ITALL 123 or LPI 56-64, or SAT II 590-680, or CASE Q. Students wishing to major in Italian and students who wish to study abroad in Italy are strongly encouraged to enroll concurrently in ITALL 214, 215, 216, or 217. The S-U option is not available to undergraduates, and is available to graduate students only by exceptional permission from the course coordinator. Fall: P. Swenson, spring: K. Bättig von Wittelsbach.
This course provides a guided conversation, composition, reading, pronunciation, and grammar review, emphasizing the development of accurate and idiomatic expression in the language.

ITALA 219 Italian Intermediate Composition and Conversation II
Spring. 3 credits. Prerequisite: ITALA 209 or equivalent. Students wishing to major in Italian and students wishing to study abroad in Italy are strongly encouraged to enroll concurrently in ITALL 214, 215, 216, or 217. P. Swenson.
Guided conversation, composition, reading, pronunciation, and grammar review emphasizing the development of accurate and idiomatic expression in the language.

Note: Students placed in 200-level courses also have the option of taking courses in introductory literature, cultural studies, and cinema; see separate listings under ITALL 214, 215, 216 and 217 for descriptions of these courses.

ITALA 300 Directed Studies
Fall, spring. 1–4 credits variable. Prerequisite: permission of instructor. Times are arranged with instructor. Staff. Taught on a specialized basis to address particular student needs.

Literature

ITALA 214 World News, Italian Views (IV)
Spring. 4 credits. Course limited to 18 students. Prerequisite: ITALA 209 or permission of instructor. Conducted in Italian.

ITALA 215 The Cinematic Eye of Italy (IV)
Fall. 3 credits. Conducted in Italian. Prerequisite: ITALA 209 or permission of the instructor. T. Campbell.
In this sophomore seminar, Italian film is used to explore the basics of film theory, as well as some of the most pressing issues of modern Italian cultural history. Films viewed include neorealist works, spaghetti westerns and "trash" films, and political films from the 1970s (Wertmüller, Cavani, Bertolucci). Readings are designed to introduce students to film criticism and recent debates in Italian visual and cultural studies.

ITALA 216-217 Introduction to Italian Literature (IV)
Fall: 216; spring: 217. 3 credits. Prerequisite: permission of instructor. ITALL 216 is not prerequisite to ITALL 217. Conducted in Italian. Fall, F. Cervesi-McCobb; spring, T. Campbell.
In this course, students develop their language skills in Italian by reading, discussing, and writing about short works of fiction (twentieth-century short stories in ITALL 216; twentieth-century prose works in ITALL 217).

ITALA 221 The Italian Renaissance (also HIST 350) # (III or IV)
Spring. 4 credits. J. Najemy.
For description see HIST 350.

ITALA 223 The Rise of Modernism (also ITALL 623) (IV)
Fall. 4 credits. S. Stewart-Steinberg.
This course will cover the period from the early nineteenth century through the rise of fascism. We will study the movement for
national unification (the Risorgimento), the drive to "make Italians," the rise and fall of liberalism, and the coming to power of the cultural products, such as literature, opera, and film.

ITAL 230 The Uses of Learning
Spring. 4 credits. Enrollment is limited to 15 students. M. Migiel.
This seminar is dedicated to exploring questions such as: What is knowledge good for? That is, if there are "uses" for it, what are they? Are some kinds of knowledge better than others? Are there certain things that one absolutely ought to know? Should the acquisition of knowledge be restricted (to an elite, to a given class, sex, race, ethnicity, nationality, etc.)? Is the alternative (democratic mass education) at all possible? If it is the case that not all people achieve their full learning potential, why does this happen (i.e., do we in fact restrict the acquisition of knowledge without making this fully explicit)? What is the role of education in a contemporary democracy in which science and technology are ever more dominant? And what is the role for the humanities in such a society? What is an "intellectual" and how do we conceive of his/her role in society?

The seminar readings are organized around two interrelated clusters. On one hand, we read excerpts from authors who have done a great deal to shape our philosophical reflections about questions like these (e.g., Plato, Augustine, select Italian humanists, Rousseau, Wollstonecraft, Gramsci, Dewey, Montessori, Freire). On the other hand, we look to several acclaimed authors of the Italian 20th century (e.g., Italo Calvino, Primo Levi, Elsa Morante, Umberto Eco) to see how they have grappled with these questions in their fictional and other prose works. All readings for the course will be available in English translation. Students write analytic and personal essays. While not restricted to sophomores this course is intended to offer sophomores an opportunity to work closely with faculty in a seminar environment within a strong interdisciplinary context.

ITAL 300 Italian Practicum
Fall, spring. 1 credit. Conducted in Italian.
Fall: S. Stewart-Steinberg; spring: T. Campbell and M. Migiel.
Students enrolled in an Italian literature or culture course that is conducted in English (e.g., ITALL 221, 223, 230, and 479) may opt to take this one-credit Practicum in Italian, provided that they have already attained proficiency in the language. Students in the Practicum spend one class hour per week discussing selected issues or texts in Italian; they also complete an appropriate amount of written work in Italian.

ITAL 360 Fin-de-Siècle Italy: The Power of the Other (also ITALL 660) (IV)
Spring. 4 credits. Taught in Italian. S. Stewart-Steinberg.
This course explores the construction of Italian subjectivity after Italian Unification and the pressures exerted on this subjectivity in the wake of the crisis of the liberal state and of the advent of fascism. The analytic lens of this investigation is the power exerted on the Italian subject by the "Other": women, children, colonial subjects, criminals, Southern migrants, ghost angels. Texts include those of Verga, Collodi, D'Annunzio, Fogazzaro, Lombroso, Svevo, DeSancis, Verdi, Pastrone.

ITAL 385 Modern Italian Travel Writing (also ITALL 685)
Spring. 4 credits. Prerequisite: permission of instructor. Conducted in Italian. T. Campbell.
This course is an introduction to modern travel narratives in the Italian context. We read a range of texts dating from the late 19th to mid-20th centuries that urge travel as their theme, with a particular emphasis placed on North-East Africa and Latin America. The course begins with missionary accounts from Eritrea, continues with the correspondence of Italian emigrants to Argentina and Brazil, and then turns to minor classic of Italian travel literature: Fiancio's Tempo di uccidere, Tobino's Deserto di Libbia, Carlo Levi's Cristo si è fermato a Eboli, and Bordarono's La spartenza. We examine the ways in which travel writing produces a space of displacement, consider the relation between technology, travel and aesthetics, and discuss the forms by which the distinction between foreign and Italian are observed.

ITAL 389 Modern Italian Novel (also ITALL 689) (IV)
Fall. 4 credits. Prerequisite: permission of instructor. Students who have taken ITALL 389 previously are permitted to retake the course for credit, provided that the readings are different. Conducted in Italian. T. Campbell.
This course is devoted to theorizing the advent of the modern novel in Italy. Works by D'Aunnozun, Marinetti, Bontempielli, Pirandello, Pazzeschi and Svevo will be read in order to examine the strategies and the timing of narrative experience specific to modern narrative.

ITAL 419-420 Special Topics in Italian Literature
419, fall; 420, spring. 2-4 credits each term. Prerequisite: permission of instructor. Fall: T. Campbell and S. Stewart-Steinberg; spring: T. Campbell, M. Migiel and S. Stewart-Steinberg.
Guided independent study of specific topics.

ITAL 429-430 Honors in Italian Literature
429, fall; 430, spring. 8 credits year-long course. R, fall; letter grade, spring. Limited to seniors. Prerequisite: permission of instructor. M. Migiel and staff.

ITAL 479 Patronage and the Medici (also ITALL 679 and HIST 479) # (III or IV)
Spring. 4 credits. J. Najemy.
For description, see HIST 479.

ITAL 623 The Rise of Modernism (also ITALL 223)
Fall. 4 credits. S. Stewart-Steinberg.
For description, see ITALL 223.

ITAL 639-640 Special Topics in Italian Literature
639, fall; 640, spring. 4 credits each term. Fall: T. Campbell and S. Stewart-Steinberg; spring: T. Campbell, M. Migiel and S. Stewart-Steinberg.

ITAL 660 Fin-de-Siècle Italy: The Power of the Other (also ITALL 360)
Spring. 4 credits. S. Stewart-Steinberg.
For description, see ITALL 360.

ITAL 679 Patronage and the Medici (also ITALL 479 and HIST 479)
Spring. 4 credits. J. Najemy.
For description, see HIST 479.

ITAL 685 Modern Italian Travel Writing (also ITALL 385)
Spring. 4 credits. Prerequisite: permission of instructor. Conducted in Italian. T. Campbell.
For description, see ITALL 385.

ITAL 689 Modern Italian Novel (also ITALL 389)
Fall. 4 credits. Prerequisite: permission of instructor. Students who have taken ITALL 689 previously are permitted to re-take the course for credit, provided that the readings are different. Conducted in Italian. T. Campbell.
For description, see ITALL 389.

Portuguese
Faculty: J. Oliveira

PORT 121-122 Elementary Brazilian Portuguese
121, fall; 122, spring. 4 credits each term. Intended for beginners, for students with little or no Portuguese. Students may attain qualification upon completion of 122 by achieving a satisfactory score on a special examination. J. Oliveira.
A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

PORT 209 Intermediate Conversation I: Portuguese for Spanish Speakers @ Fall. 3 credits. Provides language proficiency. Prerequisites: PORT 122 or permission of instructor The S-U option is not available to undergraduates, and is available to graduate students only by exceptional permission from the course coordinator. J. Oliveira.
Intended for students who have taken 121-122, and for students who are either native/near-native speakers of Spanish or another Romance Language (or CASE Q++). The course presents a fast paced review on improving grammatical accuracy and on enriching vocabulary. This is an all-skills course designed to establish a groundwork with particular emphasis on Brazilian Portuguese spoken within the context of its culture. Listening comprehension and speaking activities aim at improving oral communication within its cultural context.

PORT 219 Intermediate Conversation II: Portuguese for Spanish Speakers Spring. 3 credits. Prerequisite: PORT 209. J. Oliveira.
This course further refines the development of accurate writing and oral expression. It provides a continuation of grammar review with special attention to pronunciation and the development of a more accurate conversational colloquial communication of Brazilian Portuguese. Includes readings in contemporary Brazilian Portuguese and Brazilian prose and some writing practice.

PORT 319 Readings in Luso-Brazilian Literature of the 19th Century @ (IV)
Fall. 4 credits. Prerequisite: permission of instructor. The S-U option is not available to undergraduates, and is available to graduate students only by exceptional permission from the course coordinator. J. Oliveira.
This course takes a broad approach to selective writings of representative Luso-Brazilian authors from the nineteenth century to the present Machado de Assis, Aluísio de
I Azevedo, Lima Breto, Manoel Antonio de Almeida, Eça de Queiroz, and others. The course is divided into small sections. The students may read all works in the Portuguese or in translation. Assignments include short book reports, and students select a topic for in-depth research to the writing of a final term paper.

PORT 320 Readings in Luso-Brazilian Literature of the 20th Century @ (IV)
Spanish. 4 credits. Prerequisite: permission of the instructor. The S-U option is not available to undergraduates, and is available to graduate students only by exceptional permission from the course coordinator, J. Oliveira.

This course explores a broad approach to selective writings of contemporary Brazilian and Portuguese authors such as Graciliano Ramos, J. L. do Rego, Jorge Amado, Clarice Lispector, Moacyr Scliar, Fernando Pessoa, João Saramago and others. The course is divided into small sections. The students may read all works in the Portuguese or in translation. Assignments include short book reports, and students select a topic for in-depth research to the writing of a final term paper.

Quechua
Faculty: L. Morató-Peña.

QUECH 121-122 Elementary Quechua
121, fall; 122, spring. 4 credits each term. Prerequisite: for 122: QUECH 121. L. Morató-Peña.

A beginning conversation course in Quechua.

QUECH 138 Quechua Writing Lab
Spring. 1 credit. Prerequisite: concurrent enrollment in QUECH 122 or instructor's approval. Letter grade only. L. Morató-Peña.

Computer-assisted drill and writing instruction in elementary Quechua.

QUECH 209-219 Continuing Quechua
209, fall; 219, spring. 3 credits each term. Prerequisites. For QUECH 209: QUECH 122 or equivalent. For QUECH 219: QUECH 209 or equivalent. The S-U option is not available to undergraduates, and is available to graduate students only by exceptional permission from the course coordinator, L. Morató-Peña.

An intermediate conversation and reading course. Study of the Huarochari manuscript.

QUECH 300 Directed Studies
Fall, spring. 1–4 credits variable. Prerequisite: permission of instructor. L. Morató-Peña.

Taught on a specialized basis to address particular student needs. Times arranged with instructor.

Romance Studies

ROM S 323 Comparative Romance Syntax (also LING 323) (III)
Spring. 4 credits. Prerequisites: LING 101, or equivalent, and qualification in any romance language. C. Rosen.

For description, see LING 323.

Spanish

The Major
The Spanish major is designed to give students proficiency in the oral and written language, to acquaint them with Hispanic culture, and to develop their skill in literary and linguistic analysis. Satisfactory completion of the major should enable students to meet language and literature requirements for teaching, to continue with graduate work in Spanish or other appropriate disciplines, and to satisfy standards for acceptance into the training programs of the government, social agencies, and business concerns. A Spanish major combined with another discipline may also allow a student to undertake preprofessional training for graduate study in law or medicine. Students interested in a Spanish major are encouraged to seek faculty advice as early as possible. For acceptance into the major, students should consult Professor Debra Castillo, dac9@cornell.edu, the Director of Undergraduate Studies, in Morrill Hall 323D, who will admit them to the major, and assign them an adviser from the Spanish faculty. Spanish majors will then work out a plan of study in consultation with their advisers. Spanish majors have great flexibility in devising their programs of study and areas of concentration. Previous training and interests as well as vocational goals will be taken into account when the student's program of courses is determined.

Students interested in majoring in Spanish linguistics should contact the Department of Linguistics.

SPANL 218 and SPANR 219 (or equivalent) are prerequisite to entering the major in Spanish. All majors will take the following core courses in their programs:

All tracks include the following core:

1. SPAN 311 and 312
2. SPANL 316, 318 and 319 (not necessarily in that order)

The Spanish Literature Option
The Spanish Literature Option normally includes at least 20 credits of Spanish literature beyond the core courses. Literature majors are strongly urged to include in their programs courses on all the major periods of Hispanic literature.

Spanish Language Option
A combination of literature and linguistics.

Area Studies Option (Spanish, Latin American, or U.S. Latinx Studies):
At least 20 credits of courses at the 300 level and above in any of these focus areas beyond the core, all courses to be approved through consultation with the major advisor. Courses should reflect interdisciplinary interests in the area and may include up to three other academic fields of interest. For example, a student interested in Latin American studies may want to include courses on such topics as Latin American history, government, rural sociology, and economics. Students who want to specialize in U.S. Latino issues may include such topics as sociology of Latinos, Latino history, and Latino medical issues in addition to further study in literature.

Students planning on spending a year or semester in Seville (but not exclusively such students) frequently plan their coursework to emphasize Spanish history, art, political economy, and other specific field courses, such as courses on Islam and Moorish Spain.

Students are encouraged to enroll in the major program by including a variety of courses from related fields or by combining Spanish with related fields such as History, Philosophy, Sociology, Anthropology, Art, Music, Classics, English, Comparative Literature, and other foreign languages and literatures. The interdepartmental programs in Latin American Studies and Latino Studies sponsor relevant courses in a variety of areas.

The J. G. White Prize and Scholarships are available annually to students who achieve excellence in Spanish.

Study Abroad in Spain. Cornell, the University of Michigan, and the University of Pennsylvania co-sponsor an academic year in Spain program. Students enrolled in this program spend the first month before the fall semester begins in an orientation session at the University of Seville, where they take coursework in Spanish language and culture and take advantage of special lectures and field trips in Andalucia. The College of Arts and Sciences awards three credits for orientation. Once the semester begins, students enroll in regular classes at the University of Seville and at the program's center facility. Center courses are designed for the program and include a seminar offered by the resident director, from the faculty of either Cornell, Michigan, or Pennsylvania. Other center courses typically include history of art, history of the Mediterranean region, a literature course, and Spanish composition and syntax. In Seville, students live in private homes and a rich array of cultural activities and excursions are organized every semester.

Applicants are expected to have at least completed SPAN 219 prior to departure. Students are strongly encouraged to study abroad for the entire year rather than one semester. Students interested in the study abroad program should visit Cornell Abroad in 474 Uris Hall and take a look at the Cornell Abroad web site: www.einaudi.cornell.edu/cubroad.

Study Abroad in Bolivia: The Summer program in Cochabamba, Bolivia is sponsored by the Latin American Studies Program and accepts both undergraduate and graduate students. Students live with Bolivian families and normally take two courses with Cornell faculty who participate in this program. In addition to course work in Bolivian culture, politics, and social movements, the program features the opportunity to do intensive study in Quechua, the native language spoken by many Bolivians, as well as Spanish, and to participate in research and internships with grass-roots communities, government offices, and businesses.
Honors. Honors in Spanish may be achieved by superior students who want to undertake guided independent reading and research in an area of the student's choice. Students in the senior year select a member of the Spanish faculty to supervise their work and direct the writing of their honors essay (see SPANL 429-430).

Language

Enrollment in a language course is conditional upon the student's eligibility for the particular level and on attendance of the first scheduled class session. Further, a student who fails to attend the first three days of class will be automatically dropped from the course in order to accommodate those on the waiting lists.

All Spanish language courses are offered by the Department of Romance Studies, and Spanish linguistics courses are offered by the Department of Linguistics.

SPANR 112 Elementary Spanish: Review and Continuation
Fall. 4 credits. Prerequisite: LPS score 37-44 or SAT II 370-450. S. Amigo Silvestre (course coordinator) and M. Alvarez.

This course is designed for students who have taken some Spanish and who have a placement score of 37-44 or SAT II 370-450. It provides a basic review and then moves on to cover new material for the remainder of the term. Students who have taken SPANR 121 may enroll for this course. As part of the final exam, students take the LPS and, according to their score, may place into SPANR 123 (score below 56), or receive qualification and place into the 200-level courses (score 56 or above).

SPANR 121-122 Elementary Spanish
121, fall and summer, 122, spring. 4 credits each term. Prerequisite: for SPANR 122.

SPANR 121 M. K. Redmond (course coordinator) and staff.

This course is intended for students with no experience in Spanish. (Students who have previously studied some years of Spanish are not eligible for 121 unless they have an LPS score lower than 37 or SAT II lower than 570.) The course provides a thorough grounding in all language skills.

SPANR 123 Continuing Spanish
Fall, spring, summer. 4 credits. Provides language qualification. Prerequisite: SPANR 112 or SPANR 122, or an LPS score 45-55 or SAT II 460-580. The S-U option is not available to undergraduates, and is available to graduate students only by exceptional permission from the course coordinator. Fall: N. Maldonado-Méndez (course coordinator), L. Morató-Peréa, and staff; spring: N. Maldonado-Méndez (course coordinator), L. Morató-Peréa, and staff; summer: A. Stratakos-Tío.

This is a lower-division, intermediate level course that provides an intensive grammar review in communicative contexts and practice in all skills. After this course, the student may take SPANR 200, 207, or 209.

SPANR 200 Spanish for English/Spanish Bilinguals (also LSP 202)
Fall. 3 credits. Provides language proficiency. Prerequisite: LPS score 56 or higher, SAT II 590 or higher, CASE placement, or permission of instructor. The S-U option is not available to undergraduates, and is available to graduate students only by exceptional permission from the course coordinator. N. Maldonado-Méndez.

This is a course designed to expand bilingual students' knowledge of Spanish by providing them with ample opportunities to develop and improve each of the basic language skills not available to students who have taken SPANR 207 or 209.

SPANR 207 Intermediate Spanish for the Medical and Health Professions
Fall, spring, 3 credits. Provides language proficiency. Prerequisite: Spanish 123, LPS score 56-64, or SAT II 590-680, or CASE Q, or permission of instructor. The S-U option is not available to undergraduates, and is available to graduate students only by exceptional permission from the course coordinator. Students who have taken SPANR 200 or 209 should speak to the instructor. A. Stratakos-Tío.

This course provides a conversational grammar review, with dialogues, debates, compositions, and readings on health-related themes. Special attention is given to relevant cultural differences.

SPANR 209 Spanish Intermediate Composition and Conversation I
Fall, spring. 3 credits. Provides language proficiency. Prerequisite: SPANR 123, LPS score 56-64, or SAT II 590-680. Not available to students who have taken SPANR 207. The S-U option is not available to undergraduates, and is available to graduate students only by exceptional permission from the course coordinator. Fall: J. Routier-Pucci (course coordinator), M. Alvarez, C. Lawless and staff, spring: S. Amigo-Silvestre, C. Lawless, J. Routier-Pucci (course coordinator), E. Sánchez-Blake and staff.

This course provides a conversational grammar review with special attention to the development of accurate and idiomatic oral and written expression. Assignments include composition-writing, the reading and discussing of Spanish and Spanish American short stories and poetry, and the viewing of several films.

SPANR 219 Spanish Intermediate Composition and Conversation II
Fall, spring. 4 credits. Prerequisite: SPANR 207 or 209, or CASE Q+, or permission of instructor. This course, or its equivalent, is required for entering the major and for admission to the Cornell Abroad program. Z. Iguina (course coordinator, fall) and E. Dozier (course coordinator, spring) and staff.

This is an advanced-intermediate course designed for students who want to further broaden their knowledge of the language and related cultures, as well as improve their comprehension and communication skills.

SPANR 300 Directed Studies
Fall, spring. 1-4 credits variable. Prerequisite: for SPANR 300 or Frrom 315 (course coordinator), L. Morató-Peña, and staff.

Times site: permission of instructor. Times are available to graduate students only by exceptional permission from the instructors. J. Routier-Pucci and C. Porter.

This seminar-type experiment, open to students who have successfully passed the highest 300-level language course offered in either Spanish or French, will focus on translating from the SL (source language) into the TL (target language, i.e. English). The objective of the course is to learn and practice the skill of translating from one of the SLs into English, and in so doing, investigate the various technical, stylistic, and cultural difficulties encountered in the process. To attain this objective, the students will be exposed to a series of translation tasks, conducted individually or in groups: they are asked to justify their translations, compare different translations of the same passage, work on different types of texts, and edit each other's translations.

SPANR 630 Spanish for Reading
Spring. 3 credits. Limited to graduate students. J. Routier-Pucci.

Designed for those with little or no background in Spanish and little exposure to written Spanish, this course primarily aims to develop skill in reading Spanish. Grammar basics, extensive vocabulary, and strategies for reading in a foreign language are covered. The choice of texts depends on the interests of the students in the course.

Literature

SPANL 218 Introduction to Hispanic Literature (IV)
Fall, spring. 4 credits. Prerequisite: SPANL 200, or 207, or 209 or CASE Q+, or permission of coordinator. The course is divided into small sections and is taught mainly in Spanish. The course that normally follows SPANL 218 is SPANL 311.

SPANL 310 Advanced Spanish Conversation and Pronunciation
Spring. 3 credits. Prerequisite: SPANL 219 or equivalent. The S-U option is not available to students who have taken SPANR 200 or 209 should speak to the instructor. Staff.

This is a conversation course with intensive oral practice obtained through the production of video programs. Students practice the fundamental aspects of communication in the standard spoken and written Spanish, with some focus on dialectal variations. There are weekly pronunciation labs.

SPANL 311 Advanced Spanish Composition and Conversation I
Fall, spring. 4 credits. Prerequisite: SPANL 218 or SPANL 219 or CASE Q+ or equivalent. M. Stycos and staff.

Advanced language skills, developed through reading, grammar review, and intensive practice in speaking, writing, and translation. Analysis of present-day Spanish usage in a wide variety of oral and written texts.

SPANL 312 Advanced Spanish Composition and Conversation II
Fall, spring. 4 credits. Prerequisite: SPANL 311 or permission of instructor. M. Stycos.

Readings and class discussion focus on the stylistic analysis of modern texts. Increased emphasis, through weekly essays, on students' development of an effective Spanish prose style.

SPANL 315 Translating From Spanish-Translating From French (also FRROM 315)
Fall. 4 credits. Prerequisite: SPANL 312 or FRROM 312, or permission of the instructors. J. Routier-Pucci and C. Porter.

This seminar-type experiment, open to students who have successfully passed the highest 300-level language course offered in either Spanish or French, will focus on translating from the SL (source language) into the TL (target language, i.e. English). The objective of the course is to learn and practice the skill of translating from one of the SLs into English, and in so doing, investigate the various technical, stylistic, and cultural difficulties encountered in the process. To attain this objective, the students will be exposed to a series of translation tasks, conducted individually or in groups: they are asked to justify their translations, compare different translations of the same passage, work on different types of texts, and edit each other's translations.

SPANL 630 Spanish for Reading
Spring. 3 credits. Limited to graduate students. J. Routier-Pucci.

Designed for those with little or no background in Spanish and little exposure to written Spanish, this course primarily aims to develop skill in reading Spanish. Grammar basics, extensive vocabulary, and strategies for reading in a foreign language are covered. The choice of texts depends on the interests of the students in the course.
analytical abilities. The cultural, sociological, and aesthetic implications of texts by authors such as Borges, Cortázar, Fuentes, García Márquez, García Lorca, and Cela are considered.

**SPANL 245 Cinematic Images of Change**
Spring, 3 credits. Prerequisite: SPANL 218 or SPANR 219, or CASE Q+, or permission of instructor. Conducted in Spanish. A maximum of 20 students. C. Lawless.

How does film reflect special political change in Latin America? Can cinematic images achieve changes in consciousness and questions forming part of our historical and cultural investigation. The focus is on three major Latin American film producers-Cuba, Mexico, and Argentina—and will include a comparative look at select Spanish films. An example of films under investigation are: "La hora de los hornos," "Lucía," "Amores Perros," and "La vida es silbar." Films and readings are in Spanish.

**SPANL 246 Contemporary Narratives by Latina Writers (also LSP 246 and WOmens 246) (IV)**
Fall, 3 credits. Conducted in English. L. Carrillo.

This course offers a survey of narratives, including novels, short fiction, essays, political/feminist manifestos and memoirs by representatives of the growing number of women in their own fiction. A selection of works from various Latin ethnic groups in the United States and the Americas including, Chicana, Chilean, Cuban, Dominican, and Puerto Rican, among others. We investigate the parallel development of a Latina perspective on personal, social and cultural issues alongside that of the U.S. ethnic liberation/revitalization movements of the 1960's through to contemporary feminist activism and women of color movements. We investigate these works as artistic attempts to deal with issues of culture, language and bilingualism, family, gender, sexuality, and domesticity among others. We account for regional distinctions and contributions. Readings include works by Julia Alvarez, Elena Castedo, Sandra Cisneros, Judith Ortiz Cofer, Cristina Garcia, Ana Lydia Vega, and others.

**SPANL 301 Hispanic Theater Production**
Fall, 1-2 credits. D. Castillo.

Students involved in Hispanic Theater Production develop a specific dramatic text for full-scale production. The course involves selection of an appropriate text, close analysis of the literary aspects of the play, and group evaluation of its representational value and effectiveness. All students signing up for the course are involved in some aspect of production of the play, and write a final paper as a course requirement. Credit is variable depending upon the student's role in play production: a minimum of 50 hours of work is required for one credit; a maximum of two credits will be awarded for 100 hours or more of work.

**SPANL 313 Creative Writing Workshop (IV)**
Fall, 4 credits. Prerequisite: Spanish 218 or 219, or CASE Q++, or permission of instructor. Conducted in Spanish. E. Paz-Soldán.

Focused on the practice of narrative writing in Spanish. We explore what makes a novel and a short story work, paying close attention to narrative structure, plot, beginnings/ending, character development, theme, etc. We read classic novels and short stories as points of departure for the discussion. Since the course is a workshop, students are expected to write their own fiction.

**SPANL 316 Readings in Modern Spanish Literature (IV)**
Fall, spring, 4 credits. Conducted in Spanish. Prerequisite: SPANL 218, SPANR 219 or CASE Q++, or permission of instructor. Fall: C. Arroyo and J. M. Rodríguez-García; spring: J. Resina and C. Arroyo.

Readings and discussion of representative texts from various regions of Spanish America. The present period to the present. Bécquer, Galdós, Unamuno, García Lorca, Cela, and others.

**SPANL 318 Readings in Modern Spanish American Literature (IV)**
Fall, spring, 4 credits. Conducted in Spanish. Prerequisite: SPANL 218, SPANR 219, or CASE Q++, or permission of instructor. Fall: M. García, M. Stycos, and C. Lawless; spring: C. Lawless and M. García.

Readings and discussion of representative texts of the nineteenth and twentieth centuries from various regions of Spanish America. Among the authors considered are Dario, Borges, Cortázar, García Márquez, and Valenzuela.

Note: The prerequisite for the following courses, unless otherwise indicated, is SPANL 316 and 318 or permission of instructor.

**SPANL 319 Renaissance Hispanismos (IV)**
Fall, 4 credits. Conducted in Spanish. M. A. Garces.

In Spain, the cultural revolution known as the Renaissance produced a glittering array of artistic works—both in literature and the arts—which gave rise to the term Golden Age. There was a "darker side" to the Renaissance, however, which juxtaposed the conquest of America with the establishment of the Inquisition and the expulsion of the Jews. The tale of these relations of exclusion and fascination with the other is recapitulated by the literature of the period. Readings may be drawn from Columbus, Gabeza de Vaca, Lazarillo de Tormes, Garcilaso de la Vega, San Juan de la Cruz, Cervantes, María de Zayas, Quevedo, Lope de Vega, and Calderón, among others.

**SPANL 320 Perspectives on Latin America (also LSP 301) (IV)**
Spring, 3 credits. Conducted in English. J. M. Rodríguez-García.

This interdisciplinary, co-taught course is offered every spring through the Latin American Program. It is highly recommended for Latin American Studies Concentrators. Topics vary by semester, but readings always focus on current research in various disciplines and regions of Latin America. The range of issues addressed include the economic, social, cultural, and political trends and transitions in the area. In the weekly meetings, instructors and guest lecturers facilitate student discussions. Students taking the course are required to participate in all class discussions and write one research paper in their chosen focus area.

**SPANL 323 Readings in Latin American Civilization**
Fall, 4 credits. P. Perez-del Solar.

The first half of the course will examine the historical development of Latin American society, culture, and institutions; the second half will be devoted to oral presentations and in-depth discussion of topics of contemporary interest that students will have chosen and researched (for example, the political and economic crisis in Central America, Caribbean literature, Mexican muralism, etc.). The final paper will be based on that presentation.

**SPANL 333 The Spanish-American Short Story**
Spring, 4 credits. E. Paz-Soldán.

A study of the short narrative genre as it has been practiced in Spanish America during the past two centuries. In addition to representatives of the Romantic, Realist, Modernist, and criollista schools, the course focuses on contemporary writers such as Arreola, Borges, Cortazar, Fuentes, García Márquez, and Ruflo.

**SPANL 352 Race and Literature in the Hispanic Caribbean/Literatura y raza en el Caribe Hispano**
Fall, 4 credits. Conducted in Spanish. M. García.

This course serves as an introduction to the discussion of the complex inter-relationships between race, colour, and class in the Caribbean. To explore the formation of these relationships over time we examine the cultural production of the region. Through a series of readings we discuss a number of issues ranging from race and national formations, to the shaping of cultural citizenship and subjectivity. We begin by looking at the similarities and diversity of slavery throughout the Caribbean, in the framework of Old and New World slave formations, and the Americas. We assess the impact of the plantation-based language representations as well as race and ideology in post war politics. We then concentrate our efforts on the literary production of the twentieth century and its representation of the contemporary debates on race and racism in the region. Students are expected to actively participate in class discussions.

**SPANL 358 Modern Catalan Literature**
Fall, 4 credits. Conducted in Spanish. J. R. Resina.

This course attempts to correct the usual misunderstanding of Spanish Peninsular literature and culture exclusively from the Castilian tradition and language. Despite this established misperception, Spanish culture is made up of different languages and traditions, representing widely divergent sensibilities and points of view. In order to understand modern Spanish culture in its complexity, it is indispensable to be acquainted with this diversity and to gain some familiarity with the cultural traditions in which the diversity is expressed. Among the various languages and traditions, Catalan is the strongest in density and scope. With ten million speakers, or one fourth of the population of Spain, it represents a cultural community larger than that of various European countries. Located in the city of Barcelona, this cultural community has long combined an active internationalism and interculturality with a heightened awareness of the concrete and the local as the embodiment of the universal. The purpose of the course is not only to highlight the existence of another literary tradition, but to change the uniform view of Spanish culture by supplementing an in-depth exploration of an alternative path to modernity. This course is a survey of the most important Catalan authors of the last century.
A seminar on one of the most controversial theories, as well as from the poststructuralist sociology, and translation and transculturation narratology, speech-act theories, political insights derived from recent work in SPANL 409 The Generation of 1898 (also course we treat poetry as both prophetic and dormces of Western European culture. In this by projecting his voice ahead of his time, in everywhere and where the (male) epic poet who have reflected on what it means to be an continent in which poetry can be discovered the lone individual in the time bubble of consciousness. Beginning with Ana Maria Mother’s Primera Memoria (1906), Merce Roldeda’s La plaça del Diamant (1962), and reading through significant works of 1980s and 1990s like Julín María Corazón can imaginatively steer the course of history and memory, the fantastic, and the social modernity/postmodernity debate, and in view include the new historical novel, the development of slave narratives. PREREQUISITE: permission of instructor. Staff. SPANL 419-420 Honors Work in Hispanic Literature 419, fall; 420, spring. 2-4 credits each term. Staff. SPANL 428 Vargas Llosa Fall. 4 credits. E. Paz-Soldán. The Peruvian Mario Vargas Llosa is one of the most important Latin American writers today, somebody whose works have already achieved classic status. One of the key figures of the Boom movement, he has managed to remain relevant and controversial. In this course, we explore the development of his literary career, with his short stories and early novels such as La ciudad y los perros, and ending with his latest works. We analyze his contributions to the form of the novel, and also study his political ideas, from his Marxism and his support of the Cuban revolution, to his switch to the right. 429-430 Honors Work in Hispanic Literature 429, fall; 430, spring. 8 credits. Year-long course, 8 grade fall semester, letter grade spring semester. Limited to seniors with a superior academic record. PREREQUISITE: permission of instructor. Fall: D. Castillo; spring: E. Paz-Soldán. SPANL 446 The Cross and the Crescent: Early Modern Christian Contacts with Islam (also NES 437 and HIST 429) # (III or IV) Fall. 4 credits. Conducted in Spanish. PREREQUISITE: permission of instructor. M. A. Garcia. Under the Medieval caliphate, and under the Persian and Turkish dynasties, the empire of Islam was the most powerful, most creative, most enlightened region in the world. Tenth-century Córdoba in al-Andalus was in the pinnacle of its glory, giving rise to such poets and philosophers as Ibn Hazm and Ibn Rushd, better known as Averroes. Christendom was on the defensive: in the Iberian Peninsula, the Reconquista advanced, fueling an in built hostility against Islam. In 1492, the Catholic monarchs Ferdinand and Isabella completed the Reconquista of the Peninsula and unified Spain under Christianity. But in the southeastern Europe, where the Ottoman Sultan assaulted first the Byzantine Emperor and then the Holy Roman Empire of Charles V, Muslim power continued to prevail, particularly in the early modern Mediterranean wars against Spain. This course traces the development of these encounters in medieval and early modern Spain through the study of historical and literary texts from Ibn Hazm of Córdoba to the sixteenth-century Iberian obsession with Moorish motifs, represented by the Abencerraje and the Romancero, to the depiction of the conflicts between Christianity and Islam in Iran and Spain, and the early modern development of the concept of the Other. particular attention will be paid to the construction of a Spanish national identity, created through Christian-Islamic confrontations. SPANL 454 La Imaginación antropológica en el Caribe Hispánico/The Anthropological Imagination in Caribbean Literature Spring. 4 credits. Conducted in Spanish. M. García. Can one truly know the Other without doing violence to him or her and to his or her culture? Is contamination and hybridity in the construction of culture desirable, will it not bring about destruction? Is it possible to write about one’s knowledge of the Other without distorting his or her culture beyond recognition? Is it impossible to make fiction that seeks to achieve these? These are some of the questions that are explored in this course. We begin with a broad consideration of anthropology that distinguishes between the various sub-genres and discourses that it has spawned, such as functional anthropology, ethnography, and the fieldwork diary of cultural anthropology. This discussion not only allows for a nuanced consideration of a series of Latin American literary texts but also provides a fruitful poetics for engaging other critics such as Roberto González Echevarria, who have also argued for the influence of anthropological discourse in modern Latin American literature. I believe that by making distinctions in the various discourses that anthropology has produced one can understand fully its presence and influence in the literature produced in the region. We follow with an examination of the various ways in which Latin American authors themselves and their writing with respect to the Subject/Other divide that is the crux of anthropological discourse. For example, in Carpenter, one can see a deliberate use of the aestheticization of anthropological thought—what James Clifford has called "ethnographic surrealism"—that marked the avant-garde in the Twenties and Thirties and allowed Carpenter to claim a superiority vis-à-vis European reality. We also engage in discussions about "ethnicity" and their formations, the uses of myth, folklore, and religion, the importance of travel stories, and the development of slave narratives. SPANL 469 Mystics and Moralists (also SPANL 669) # (IV) Fall. 4 credits. C. Arroyo. Reading of Francisco de Osuna, Spanish Erasmianism, St. Teresa of Jesus, Fr. Luis de León, and St. John of the Cross, preceded by an anthology of medieval mysticism in which we pursue the emergence of the mystical systems and terminology. The decline of mysticism in Spain around 1600 and the emergence of a moralist literature. The impact of Justus Lipsius’s new humanism. “French Learning,” J. Barclay, their presence in Quevedo and Granada. The baroque generation, the origin of the terms criticism and gusto. SPANL 483 MACONDO/McONDO: Our “Fin de Siglo” (IV) Spring. 4 credits. Conducted in Spanish. E. Paz-Soldán. A review of Latin American narrative of the last two decades, in the context of the modernity/postmodernity debate, and in view of the social, cultural, and political changes brought about by globalization. Topics will include the new historical novel, the emergence of new cultural actors, magical others.
realism, and the revolt against it by the new generation of Latin American writers. Works by Vargas Llosa, Allende, Tomas Eloy Martinez, Mastratta, among others.

SPANL 492 Latin American Women Writers (also WOMNS 481 and COM L 482) (IV) Fall: 4 credits. Conducted in English. D. Castillo. This course provides a sampler of novels and short stories by and about Latin American women. We look at the question of self-construction and issues such as the social and political concerns involved in a specifically Latin American feminine identity. All works are read in translation. (Romance Studies students should read orals of the works from the Spanish.) Authors may include writers like Luisa Valenzuela (Argentina) and Rigoberta Menchu (Guatemala), Helena Parente Cunha and Clarice Lispector (Brazil), Helena Maria Viramontes (U.S.A.), and Simonne Schwartz-Bart (Guadeloupe).

SPANL 609 The Generation of 1988 (also SPANL 408) Spring. 4 credits. Conducted in Spanish. C. Arroyo. For description, see SPANL 409.

SPANL 639-640 Special Topics in Hispanic Literature 639: fall, 640: spring. 2-4 credits each term. Staff.

SPANL 669 Mystics and Moralist (also SPANL 468) Fall. 4 credits. Conducted in Spanish. C. Arroyo. For description, see SPANL 469.

SPANL 673 Poetry and History of the Americas: Transatlantic Readings (also SPANL 373) Fall. 4 credits. Conducted in Spanish. J. M. Rodriguez-Garcia. For description, see SPANL 373.

SPANL 674 Contemporary Poetry and Culture (also COM L 674) Spring. 4 credits. J. Monroe. For description, see COM L 674.

RUSSIAN

P. Carden, acting chair, director of undergraduate studies (literature), (226B Morrill Hall); S. Paperno, director of Russian Language Program (226E Morrill Hall); W. Browne, L. Paperno, N. Pollak, S. Senderovich, G. Shapiro, V. Tsimberov, visiting: I. Medzhibovskaya.

For updated information consult our websites: literature http://www.arts.cornell.edu/russian (language) http://russian.cornell.edu

The Russian Major

Russian majors study Russian language, literature, and linguistics, and emphasize their specific interests. It is desirable, although not necessary, for prospective majors to complete RUSSA 121-122, 201-202, and 203-204 as freshmen and sophomores, since these courses are prerequisites to most of the junior and senior courses that count toward the major. Students may be admitted to the major upon satisfactory completion of RUSSA 122 or the equivalent. Students who elect to major in Russian should consult Professor Carden as soon as possible. For a major in Russian, students are required to complete (1) RUSSA 303-304 or the equivalent, and (2) 18 credits from 300- and 400-level literature and linguistics courses, of which 12 credits must be in literature in the original Russian.

Certain courses may, with the permission of the instructor, be taken for an additional credit. Such courses involve a one-hour section each week with work in the Russian language. Students may count two one-hour credits towards the 12 hours of Russian literature in the original language required for the major.

Study Abroad

Cornell is affiliated with the Council on International Educational Exchange program for Russian language study at St. Petersburg State University. Cornell students also frequently participate in the American Council of Teachers of Russian program in Moscow and other Russian language programs. Opportunities are available for study during the summer, a single semester, or the full year. Further information is available from W. Browne, in the Department of Linguistics.

Honors. Students taking honors in Russian undertake individual reading and research and write an honors essay. Students planning to take honors should consult Professor Carden in their junior year.

Russian Language

For details on all Russian language courses, see: http://russian.dml.cornell.edu. Any 3 or 4 credit Russian language course at the 200 level or above (203, 204 or 206) provides language proficiency.

RUSSA 103-104 Conversation Practice 103, fall, 104, spring. 2 credits each term. Must enroll in one section of 103 and one section of 121 in the fall, and one section of 104 and one section of 122 in the spring. M W 10:10-11:00. L. Paperno. A highly interactive course conversation class. Multimedia materials on our web site must be used on computers in the language lab or on the students' own computers.

RUSSA 121-122 Elementary Russian through Film 121, fall or summer, 122, spring or summer. 4 credits each term. May be taken alone and qualification will be achieved with satisfactory completion of 121-122-123, or may be taken concurrently with 103-104 and qualification will be achieved at completion of 122-124. M T W R F 11:15-12:05 or 12:20-1:10. L. Paperno, S. Paperno, V. Tsimberov. A thorough grounding is given in all the language skills: listening, speaking, reading, and writing. Course materials include clips from original Russian films and TV programs.

RUSSA 123 Continuing Russian Fall. 4 credits. Provides language qualification. Limited to students who have previously studied Russian or been placed by department. Satisfactory completion of RUSSA 123 fulfills the qualification portion of the language requirements. M T W R F 10:10-11:00. L. Paperno, S. Paperno, V. Tsimberov. A course designed to prepare students for study at the 200 level. Authentic Russian materials are used. TV, books, etc.

RUSSA 203-204 Intermediate Composition and Conversation 203, fall or summer; 204, spring or summer. 3 credits each term. Provides language proficiency. Prerequisites: for RUSSA 203, qualification in Russian (RUSSA 123 or placement by department); for RUSSA 204, RUSSA 203 or equivalent. M T R F 1:25-2:15. L. Paperno, S. Paperno, V. Tsimberov. Guided conversation, translation, reading, pronunciation, and grammar review, emphasizing the development of accurate and idiomatic expression in the language. Course materials include CD-ROMS with clips from an original Russian feature film and work with Russian web sites.

RUSSA 205-206 Reading Russian Press 205, fall, 206, spring. 2 credits each term. RUSSA 205 together with 206 provides language proficiency. Prerequisite: qualification in Russian (RUSSA 122, 123 or placement by department). Both semesters must be taken in order to satisfy the proficiency level for the language requirement. This course cannot be used to satisfy the humanities requirement. Times arranged with instructor. S. Paperno. In this course students read unabridged articles on a variety of topics from current Russian periodicals and web pages.

RUSSA 300 Directed Individual Studies Fall or spring. 1 credit. Prerequisite: permission of instructor. Times arranged with instructor. Staff. Taught on a specialized basis to address particular student needs usually related to a project or interests not addressed in other Russian courses.

RUSSA 303-304 Advanced Composition and Conversation 303, fall, 304, spring. 4 credits each term. Provides language proficiency. Prerequisites: for RUSSA 303, RUSSA 204 or equivalent, for RUSSA 304, RUSSA 303 or equivalent. M W F 2:30-3:20. L. Paperno, S. Paperno, V. Tsimberov. Course involves writing, reading, and conversation. Includes viewing and reading authentic language materials such as current Russian films (feature and documentary), newspapers, TV programs, and Russian web sites.

RUSSA 305-306 Directed Study in Writing and Grammar 305, fall; 306, spring. 2 credits each term. Prerequisite: placement by the department. Times arranged with instructor. Staff. This course is intended for students with particular needs that cannot be met by any other Russian course (e.g., children of Russian immigrants who speak Russian at home but have not learned to read or write grammatically correct Russian).

RUSSA 309-310 Advanced Reading 309, fall; 310, spring. 4 credits each term. Prerequisites: for RUSSA 309, RUSSA 204; for RUSSA 310, RUSSA 309 or equivalent. Times arranged with instructor. L. Paperno, S. Paperno, V. Tsimberov.
The purpose of the course is to teach advanced reading skills. The weekly reading assignment is 20–40 pages of unabridged Russian prose, fiction or non-fiction. The discussion of the reading is conducted entirely in Russian and is centered around the content of the assigned selection. When possible, a special section for native speakers of Russian is taught, with larger reading assignments—up to 130 pages per week. This course cannot be used to satisfy the Humanities requirement.

RUSSA 401-402 History of the Russian Language (also LING 417-418) (III) 401, fall; 402, spring. 4 credits each term.
Prerequisites: for RUSSA 401, permission of instructor; for RUSSA 402, RUSSA 401 or equivalent. Offered alternate years. Not offered 2002–2003. Times arranged with instructor. W. Browne.
Course considers phonological, morphological, and syntactic developments from Old Russian to modern Russian.

RUSSA 403-404 Linguistic Structure of Russian (also LING 443-444) (III) 403, fall; 404, spring. 4 credits each term.
Prerequisites: for RUSSA 403, LING 101 and permission of instructor, for RUSSA 404, RUSSA 403 or equivalent. Offered alternate years. Not offered 2002–2003. Times arranged with instructor. W. Browne.
A synchronic analysis of the structure of modern Russian. RUSSA 403 deals primarily with phonology and 404 with syntax and word order.

RUSSA 409 Teaching Russian as a Foreign Language Fall, spring. 1 credit. Prerequisite: very good command of Russian language. Times arranged with instructor. S. Paperno.
Designed to equip the teacher of Russian with the ability to practice language instruction in the classroom. Geared to the courses and methodology used in the Russian language program at Cornell. Not a theoretical course.

RUSSA 413-414 Advanced Conversation and Stylistics 413, fall; 414, spring. 2 credits each term.
Prerequisites: for RUSSA 413, RUSSA 303–304 or the equivalent, for RUSSA 414, RUSSA 413 or equivalent. Times arranged with instructor. V. Tsimberov.
Discussion of authentic unabridged Russian texts and films (feature or documentary) in a variety of nonliterary styles and genres.

RUSSA 601 Old Church Slavonic (also LING 661) Fall. 4 credits. Prerequisite: students should know a Slavic or classical Indo-European language. This course is prerequisite to RUSSA 602 and 651. Offered alternate years. Not offered 2002–2003; next offered 2003–2004. Times arranged with instructor. W. Browne.
Grammar and reading of basic texts.

RUSSA 632-834 Russian for Russian Specialists 632, fall; 634, spring. 1-4 credits variable. Prerequisite: 4 years of college Russian. For graduate and advanced undergraduate students. Times arranged with instructors L. Paperno, S. Paperno, V. Tsimberov.
The course is designed for students who specialize in an area of Russian studies requiring fine active control of the language. Fine points of syntax, usage, and style are practiced and discussed.

RUSSA 651-652 Comparative Slavic Linguistics (also LING 671-672) 651, fall; 652, spring. 4 credits each term.
Prerequisites: for RUSSA 651, RUSSA 601 taken previously or simultaneously or permission of instructor, for RUSSA 652, RUSSA 651 or permission of instructor. Offered alternate years. Not offered 2002–2003. Times arranged with instructor. V. Tsimberov.
Covers sounds and forms of the Slavic languages and of prehistoric common Slavic. Also covers main historical developments leading to the modern languages.

Topics chosen according to the interests of staff and students.

Russian Literature A variety of courses are offered in Russian literature. Not all course readings are in English translation, others are in the original Russian. Others use both. The connection between Russian history, society, and literature is particularly close, so instruction and discussion in class often include a variety of topics, such as culture and intellectual history, as well as literature. Several courses are interdisciplinary, co-sponsored with the departments of History, Economics, Government, Comparative Literature, and others.

First-Year Writing Seminars: consult the John S. Knight Institute brochure for times, instructors, and descriptions.

RUSSL 201-202 Readings in Russian Literature (IV) 201, fall; 202, spring. 3 credits each term.
Open to freshmen. For non-native speakers of Russian. This course serves as an introduction to Russian literature in the original language. Readings in prose and verse may include works by Pushkin, Lermontov, Turgenev, Tolstoy, Chekhov, and others.

These courses deal with various aspects of Russian culture, such as literature, art, music, religion, philosophy, and social thought. RUSSL 207 extends over the period from the beginning through the eighteenth century. RUSSL 208 covers the nineteenth and twentieth centuries. Russian culture is presented as part of Western civilization, with attention to its distinctive character. The basic texts are literary works of moderate length in English translation. Classes incorporate audio/visual presentations (slides, tapes, film).

RUSSL 233 Soviet Social and Family Life, WW II (also HIST 233) (III) For description, see HIST 233.

RUSSL 277 Growing Up the Russian Way: Childhood in Literature and Film Fall. 4 credits. T R 8:40–9:55. I. Medzhibovskaya.
Does childhood have a nationality? It is believed to be a universal, genuinely chaste human condition. As much as this is true, every culture and every epoch has its own distinct attitudes toward childhood. This is a survey course of key readings on childhood in the Russian mode. Particular attention is paid to conditions and policies that shape childhood in modern-era Russia. Course includes literary and other readings and film screenings, all in English.

RUSSL 279 The Russian Connection, 1830–1887 (also COM L 279) (IV) Fall. 4 credits. M W F 10:10–11:00. P. Carden.
As Russian prose began to find its voice, it responded with enthusiasm to the European prose tradition. One line of development in the Russian novel began with Rousseau’s division between the needs of individual growth, nourished by solitude and introspection, and the demands of society. Tolstoy’s War and Peace can be read as a summary and a testing of the novelistic tradition that grew out of the work of Rousseau, in both European and Russian literature. We follow the line that leads to Tolstoy’s multifaceted inquiry, beginning with two short novels (one for the introspective novel in the two traditions, Constant’s Adolphe and Lermontov’s Hero of Our Time). Looking at relevant excerpts from a range of European prose writers, Rousseau, Musset, Gide, Proust, and others, we think about the possibilities and limitations of the introspective novel as a form, especially as manifested in one of the monuments of the genre, War and Peace.

The European novel of introspection developed a second line of inquiry, in some respects counter to the tradition that grew out of the writings of Rousseau. Diderot’s “Rameau’s Nephew” may be taken as emblematic of a novel that goes beyond the search for self-understanding to focus on alienation, resentment, and rebellion. Dostoevsky was the inheritor of this line in the European prose tradition. His works, in particular Notes from Underground and The Idiot, are the focal point of our discussion. We follow up the tradition as Dostoevsky’s influence returns the line to Europe in the works of writers like Camus and Sartre.

RUSSL 331 Introduction to Russian Poetry (IV) Fall. 4 credits. Prerequisites: RUSSL 202 or equivalent and permission of instructor. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major, T R 10:10–11:25. S. Senderovich.
A survey of Russian poetry with primary emphasis on the analysis of individual poems by major poets.
[RUSSL 332 Russian Drama and Theatre (also THETR 322, COM L 322) # (IV)
Spring. 4 credits. Not offered 2002-2003; next offered 2003-2004. S. Senderovich. Covers selected topics. Includes discussion of a number of the most representative Russian plays of the nineteenth and twentieth centuries in chronological order. Offers introductions to the historical period, cultural atmosphere, literary trends, and crucial moments in the history of the Russian theater. Among the works studied are Gogol’s Inspector General, Ostrovsky’s The Storm, and Chekhov’s The Cherry Orchard. All readings are in English translation. Additional assignments in critical literature are made for graduate students.]

[RUSSL 333 Twentieth-Century Russian Poetry (IV)
Spring. 4 credits. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. Not offered 2002-2003. N. Pollak. Course involves close readings of lyrics by major twentieth-century poets. All readings are in Russian.]

[RUSSL 334 The Russian Short Story (IV)
Spring. 4 credits. Prerequisites: RUSSL 202 or equivalent and permission of instructor. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. Not offered 2002-2003. P. Carden. This course is a survey of two centuries of Russian story telling. Emphasis is on the analysis of individual stories by major writers, on narrative structure, and on related landmarks of Russian literary criticism.]

[RUSSL 335 Gogol # (IV)
Fall. 4 credits. M W F 2:30-3:20. G. Shapiro. Selected works of Gogol are read closely and viewed in relation to his life and to the literature of his time. Readings are in English translation.]

[RUSSL 337 Films of Russian Literary Masterpieces (also COM L 338) # (IV)
Fall. 4 credits. Not offered 2002-2003; next offered 2003-2004. S. Senderovich. War and Peace and Dr. Zhivago are well-known American translations of Russian literature of the nineteenth and twentieth centuries. Russian literature has been a matter of great interest both in the West and East. A clear cut practice of cultural translation is presented by film versions of Russian literary masterpieces. We perform a comparative analysis of these films, which provides an excellent opportunity for discussing problems of translation between various media and of cultural translation.]

[RUSSL 350 Education and the Philosophy of Fantasies (also COM L 350) # (IV)
Fall. 4 credits. T R 1:25-2:40. P. Carden. A major philosophical tradition has conceived of education as encompassing the whole of our lives. Whom should we be or be seen as the result of every choice we make? The whole of our human context is understood as a school in which we form ourselves. This all-encompassing vision of education has been enriched by the works of the great philosopher-fantasists who use the forms of fiction to explore fundamental issues of education. In this course we examine several key philosophical fantasies, among them Plato’s Republic, Rousseau’s Emile, and Tolstoy’s War and Peace. Our aim is to understand how the discourse on education became a central part of our Western tradition.]

[RUSSL 367 The Russian Novel (also COM L 367) # (IV)
Spring. 4 credits. Special discussion section for students who read Russian. Not offered 2002-2003; next offered 2003-2004. Staff. Readings are done in English translation. A survey focusing on the most important writers. Among the themes explored are Russian Modernism, social command, socialist realism, the Thaw, dissident and emigre literature, and post-modernism. Writers include Blok, Mayakovsky, Babel, Olesha, Platonov, Pasternak, Nabokov, Solzhenitsyn, the two Erofeevs, and contemporary women poets and short story writers.]

[RUSSL 369 Dostoevsky (also COM L 332) # (IV)
Spring. 4 credits. Limited to 30 students. Not offered 2002-2003. P. Carden. This course involves close reading of novels and short works by Fyodor Dostoevsky. Dostoevsky’s fiction is in contentuous dialogue with the literature and philosophy of the preceding century and opens out to the literature and philosophy of the following century. His critique of European culture, his searching examination of the interior life, and his bold experiments with narrative make his work seminal in world fiction. In this course we read Notes From Underground, Crime And Punishment, The Idiot, and Brothers Karamazov.]

[RUSSL 373 Chekhov in the Context of Contemporary European Literature and Art (also COM L 375) # (IV)
Spring. 4 credits. Not offered 2002-2003. S. Senderovich. Reading and discussion of Anton Chekhov’s short stories in the context of European culture of the short story and painting of that era. The course is designed for nonspecialists as well as literature majors. All reading is in English translation.]

[RUSSL 385 Reading Nabokov (also COM L 385 and ENGL 379) # (IV)
Fall. 4 credits. Not offered 2002-2003; next offered 2003-2004. G. Shapiro. This course offers an exciting trip into the intricate world of Nabokovian fiction. After establishing himself in Europe as a distinguished Russian writer, Nabokov, at the outbreak of WWII, came to the United States, where he reestablished himself, this time as an American writer of world renown. In our analysis of the fantastic universe, we focus on his Russian corpus of works, from Mary (1926) to The Enchanter (written 1939), all in English translation, and examine the two widely read novels that he wrote in Ithaca with the Rockefeller grant to Cornell, Lolita (1955) and Pnin (1957).]

[RUSSL 393 Honors Essay Tutorial
Fall and spring. 8 credits. Must be taken in two consecutive semesters in senior year. Credit for the first semester will be awarded upon completion of second semester. For information, please see Director of Undergraduate Studies. Times arranged with instructor.]

[RUSSL 409 Russian Stylistics (IV)
Fall. 4 credits. Also open to graduate students. Prerequisite: 3 years of Russian. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. T R 11:40-12:55. S. Senderovich. This course goes a few steps beyond normative grammar. Provides an introduction to the subtleties of idiomatic Russian on the levels of morphology, syntax, vocabulary, and phraseology. Also provides an introduction to the genres of live colloquial and written language. Students develop writing skills through short assignments and their analyses. Produces first notices of literary stylistics and their practical application.]

[RUSSL 415 Post-Symbolist Russian Poetry (IV)
Spring. 4 credits. Prerequisite: permission of instructor. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. Not offered 2002-2003. N. Pollak.]

[RUSSL 425 Vladimir Nabokov vs. Jean-Paul Sartre (also COM L 445) # (IV)
Spring. 4 credits. Not offered 2002-2003; next offered 2003-2004. S. Senderovich. Jean-Paul Sartre reviewed Nabokov’s Despair in 1938. Ten years later Nabokov returned the favor in his review of the English translation of Sartre’s La Nausée. The apparent tension between the two celebrated men of European letters of the twentieth century allows us to look at the works of each through the eyes of the other, to go into the problems of Existentialist philosophy, into Nabokov’s brand of it, and into responses to Sartre in Nabokov’s works. The latter gives an excellent yet unexplored approach to the poetic world of Vladimir Nabokov. Nabokov’s major response to Sartre occurred in the novel Pnin, written in Ithaca and largely about Cornell.]

[RUSSL 427 Russian Formalism (also COM L 427) # (IV)
Fall. 4 credits. Not offered 2002-2003. N. Pollak.]

[RUSSL 430 Practice in Translation (IV)

[RUSSL 431 Contemporary Russian Prose (IV)
Spring. 4 credits. Prerequisites: RUSSL 301-302 or 303-304, and permission of instructor. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. Graduate students may audit the course. Not offered 2002-2003. Staff.]}
RUSSL 432 Pushkin # (IV)
Spring. 4 credits. Prerequisites: RUSSL 202 or equivalent, and permission of instructor.
This course may be counted towards the 12 credits of Russian literature in the original language for the Russian major.
Reading in the original language and discussion of selected works by Pushkin: lyrics, narrative poems, and Eugene Onegin.

RUSSL 437 A Moralist and a Pornographer (also COM L 437) (IV)
Spring. 4 credits. Limited to 15 students.
Two great novels of the 20th century, Dr. Zhivago and Lolita, appeared in October of 1958 and competed for first place on the bestseller list. Both novels concerned the tragic story of a teenage girl sexually exploited by a mature man. Pasternak's novel was hailed as a highbrow and highly moral work of art, and the author soon received the Nobel Prize for literature. Nabokov's novel initially caused consternation in the U.S., for it was perceived as a pornographic text.

RUSSL 441 Bakhtin as Reader (also RUSSL 641, COM L 641) (IV)
P. Carden.

RUSSL 456 Great Russian Texts on Human Dignity and Social Action (IV)
Spring. 4 credits. T R 8:40–9:55.
I. Medzhidovskaya.
Russian literature is a mirror of the terrible dichotomy between human dignity and social action. It is torn between two extremes: transgression that is seeking open freedom in action, and submission that is seeking secret freedom in privacy. The goal of this seminar is to perform close readings of texts that take a borderline position on this dichotomy. They are neither literary works nor social-philosophical manifestoes proper. We contemplate what is specifically Russian in this approach and what pertains to the Western scheme of things. All readings, discussions, and papers are in English.

RUSSL 460 Short Works of Tolstoy and Dostoevsky # (IV)
Staff.
Readings in Russian and in translation. Open to graduate students.

RUSSL 485 The World of Anna Karenina (also HIST 485)
T 10:10–12:05. P. Holquist.
Leo Tolstoy's Anna Karenina is an epic tale of passion, intrigue, tragedy, and redemption. It is also a parable of Russian life and society in the period following the Great Reforms of the 1860s. This period, the third quarter of the nineteenth century, was both the time of the flowering of the Russian novel as well as the reign of Russia's imperial glory. In this course we will use Anna Karenina as the starting point for the multifaceted exploration of nineteenth-century Russian history and culture. Among topics we will discuss are family life, modernization and industrialization, gender and sexuality, revolutionary movements, imperialism, and political power. We will enhance our reading of the novel with a wide range of supplemental materials including memoirs, travel accounts, historical analysis, and art. This course will be organized in a seminar format.

RUSSL 491 Reading Course: Russian Literature in the Original Language
Fall or spring. 1 credit each term. Prerequisite: permission of instructor.
Times arranged with instructor. Staff.

RUSSL 492 Supervised Reading in Russian Literature
Fall or spring. 1–4 credits each term. Prerequisite: permission of instructor. Independent study. Students must find an adviser and submit a plan before signing up. Times arranged with instructor. Staff.

RUSSL 499 The Avant-Garde in Russian Literature and the Arts (IV)
Open to any student who has completed a second-year course in Russian, or who has equivalent reading skills in Russian. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. Not offered 2002–2003; next offered 2003–2004.
P. Carden.
The first decade of the twentieth century was perhaps the richest period ever in Russian literature and the arts. It began with the brilliant experimentation in poetry and prose of Andrei Bely, Blok, Remizov, and others. It continued with the breakthroughs in painting and sculpture of Malevich, Goncharova, Tatlin, et al. In the second decade the rambunctious Futurists take over in literature and establish a compact with theater and the visual arts in which all the art forms break down the barriers to produce a new kind of art. During this period Russian artists in every medium were on the cutting edge of the European art scene. After the Revolution Russian artists and writers of the avant-garde continued their dominance for a time, now including the developing medium of film. In this course we read representative Russian texts by the major authors of the period and we also investigate developments in the theater and visual arts.

Graduate Seminars

RUSSL 605 Russian Analytical Approaches to Literature
Fall. 4 credits. Prerequisite: a level of knowledge of Russian literature determined by the instructor. T R 2:55–4:10. S. Senderovich.
The course is designed for graduate and well-advanced undergraduate students who have sufficient knowledge of Russian literature and a developed interest in the analytical approaches to literary texts. The course provides an opportunity to study the most sophisticated analytical approaches to literature developed by Russian critics and theorists in the nineteenth and twentieth centuries. The course will focus on critical texts which have analytical value as opposed to speculative, that is, those which aim at discovering the unforeseeable in the literary texts. Russian sources will be studied against the background of contemporary American and European critical theory. Prominently featured will be studies by Alexander Veselovsky, Yuri Tynianov, Roman Jakobson, Mikhail Bakhtin, and Savely Senderovich.

RUSSL 611 Supervised Reading and Research
Fall or spring. 2–4 credits. Prerequisite: permission of the department. Times arranged with instructor. Staff.

[SEBCR 131–132 Elementary Serbo-Croatian]
Fall, 131; spring, 132. 3 credits each term. Prerequisite for SEBCR 132: SEBCR 131 or equivalent. This language series (131–132) is not sufficient to satisfy the language requirement. Offered alternate years.
W. Browne.
Admission to the Major

Students intending to major in Science & Technology Studies should submit an application during their sophomore year. Juniors are considered on a case-by-case basis. The application includes (1) a one-page statement explaining the student's intellectual interests and why the major is consistent with the student's academic interests and goals; (2) the theme the student wishes to pursue in the major; (3) a tentative plan of courses fulfilling S&T&S requirements; and (4) an up-to-date transcript of work completed at Cornell University (and elsewhere, if applicable).

Acceptance into the major requires completion of the following prerequisites:

(a) two introductory courses in history, philosophy, sociology, government, anthropology, economics, or other courses listed in the social sciences/history (Group III) requirement of the College of Arts & Sciences;
(b) the physical or biological science (Group I) requirement of the College of Arts & Sciences;
(c) mathematics or computer science courses in fulfillment of the Arts College Group II distribution requirement.

These courses cannot be used to fulfill the core or other course requirements for the major and must be taken for a letter grade. Sophomores in the process of completing these prerequisites may be admitted to the major on a provisional basis. Further information and application materials are available in 275 Clark Hall (255-6047).

Requirements

S&T&S majors must complete the following requirements:

1. Core: one course in each of the following groups (a-c).
   (a) Foundation (S&T&S 201)
   (b) Ethics (Choose from S&T&S 205, 206, 360, or 490)
   (c) History (Choose from S&T&S 233, 250, 281, 282, or 283)

2. Theme: Students must elect a theme and take four courses in the theme. Courses taken to satisfy the core course requirements may not be used as part of the required four courses in the theme. At least two of the courses should be at the 300-level or higher, and at least one should be at the 400-level.

Available themes are:

(a) Minds and Machines (S&T&S 250, 281-3, 286, 292, 349, 353, 355, 381, 400, 409, 438, 453, 525)
(b) Science, Technology and Public Policy (S&T&S 281-3, 350, 352, 360, 390, 391, 403, 404, 407, 411, 427, 433, 442, 444, 466, 467, 473, 483, 487, 490, 492, 493, 532
(c) Life in its Environment (S&T&S 205, 206, 233, 281-3, 285, 286, 287, 301, 311, 324, 333, 403, 406, 411, 427, 444, 447, 497, 492)

In consultation with an S&T&S faculty adviser, students may also devise their own theme as long as it meets the general criteria of coherence and rigor.

3. Additional Science & Technology Studies courses: additional courses to total 34 credit hours in the major.

4. Science Requirement: in addition to the science requirement of the College of Arts and Sciences, Science and Technology Studies majors are required to take an additional two semesters of a natural science or engineering (including computer science). Mathematics sufficient to provide background for the additional science requirement should be completed before undertaking that requirement. Choice of these courses should be made in consultation with the student's major adviser and should be related to the theme selected by the student.

The Honors Program

The honors program is designed to provide independent research opportunities for academically talented S&T&S majors. Students who enroll in the honors program are expected to do independent study and research, with faculty guidance, on issues in science and technology studies. Students who participate in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue research career. S&T&S majors are considered for entry into the honors program at the end of the second semester of their junior year. To qualify for the S&T&S honors program, students must have an overall Cornell cumulative grade point average of at least 3.00 and a 3.30 cumulative grade point average in courses taken for the major. Additionally, the student must have formulated a research topic, and have found a project supervisor and a second faculty member willing to serve as the adviser. More information on the honors program is available from the S&T&S undergraduate office at 275 Clark Hall (255-6047).

The Biology & Society Major

The Department of Science & Technology Studies also offers the Biology & Society major, which includes faculty from throughout the university. The Biology & Society major is designed for students who wish to combine the study of biology with exposure to perspectives from the social sciences and humanities. In addition to providing a foundation in biology, Biology & Society students obtain background in the social dimensions of modern biology and in the biological dimensions of contemporary social issues. The Biology & Society major is offered to students enrolled in the College of Arts and Sciences, the College of Human Ecology, and the College of Agriculture and Life Sciences. The major is coordinated for students in all colleges through the biology & society office. Students can get information, specific course requirements, and application forms for the major from the office in 275 Clark Hall, 255-6047.

A full description of the Biology & Society major can be found on p. 457 of this catalog.
The Concentration in Science & Technology Studies

The concentration (or minor) in Science & Technology Studies (S&TS) is designed for students who wish to engage in a systematic, interdisciplinary exploration of the role of science and technology in modern societies. The concentration is intended for students with varied academic interests and career goals. Majors in the natural sciences and engineering have an opportunity to explore the social, political, and ethical implications of their selected fields of specialization, while students majoring in the humanities and social sciences have a chance to study the processes, products, and impacts of science and technology from an S&TS perspective.

To satisfy the requirements for the S&TS concentration, students must complete with letter grades a minimum of four courses selected from the course offerings listed for the major. At least one course must be chosen from the list of core courses. Two courses must be chosen from one of the themes listed below:

(a) Minds and Machines
(b) Science, Technology, and Public Policy
(c) Life in its Environment.

The concentration is completed with one other course in S&TS. Interested students may obtain further information about courses by contacting the S&TS undergraduate office, 275 Clark Hall (255-6047).

Course Offerings

Introductory Course

Minds and Machines
Science, Technology and Public Policy
Life in its Environment
Independent Study

Introductory Course

S&T 101 Science and Technology In the Public Arena (III)
Fall. 3 credits. J. Reppy.

An introduction to public policy issues involving developments in science and technology. We study such topics as secrecy and national security, the politics of expertise, public understanding of science, computers and privacy, and the management of risk. We also consider the field of science and technology studies to analyze how issues are framed and public policy produced.

Minds and Machines

S&T 250 Technology in Society (also ECE 250, ENGRG 250 and HIST 250) (III)
Fall. 3 credits. R. Kline.

For description, see ENGRG 250.

S&T 281 Science in Western Civilization (also HIST 281) (III)
Fall. 4 credits. P. Dear.

For description, see HIST 281.

S&T 282 Science in Western Civilization (also HIST 282) (III)
Spring. 4 credits. P. Dear.

For description, see HIST 282.

S&T 283 The Sciences in the Twentieth Century (also HIST 280) (III)
Fall. 4 credits. M. Dennis.

Science emerged as a powerful source of social, economic, and political power during the twentieth century. Through an examination of the development of the sciences—physical and biomedical—during the twentieth century students learn about the reciprocal relations between science and society. Topics covered may include: the rise and development of quantum mechanics; the emergence of Big Science; the history of the sciences in totalitarian nations, especially the former Soviet Union, Nazi Germany, and Communist China; the evolutionary synthesis; the rise and fall of molecular biology; the multiple forms of eugenics; the transformation of the social sciences; the role of new technologies in scientific change, especially computer and communication technology; the growth of science as a profession; and the development of science in non-western cultures.

S&T 286 Science and Human Nature (also PHIL 286) (IV)
Spring. 4 credit. R. Boyd.

For description, see PHIL 286.

S&T 292 Inventing an Information Society (also ECE 298, ENGRG 298 and HIST 292) (III)
Spring. 3 credits. R. Kline.

For description, see ENGRG 298.

S&T 349 Media Technologies (III)
Fall. 3 credits. T. Gillespie.

From the first attempts at pressing symbols into clay, to the latest software available on the Net, our efforts to communicate have depended on the technologies we develop. Our commonplace notions of communication and of society regularly overlook the role of the material artifacts. This course will consider the technologies of media—including writing, printing, photography, film, telegraph, telephone, radio, television, computer networks—as an opportunity to think about the intersection of technology and its social context.

S&T 351 Knowledge and Society (also SOC 351) (III)
Fall. 3 credits. C. Leuenberger.

This course focuses on the historical evolution of the sociology of knowledge as a theoretical paradigm and an empirical research field. We examine the phenomenological origins of the sociology of knowledge and many of its central texts. We study how it has been applied to such areas as personhood, interaction, religion, identity, and the emotions. We also consider epistemological questions that arise, and cover various theoretical and empirical approaches that have been influenced by the sociology of knowledge such as ethnomethodology, conversation analysis, and the sociology of science and technology.

S&T 355 Computers: From Babbage to Gates (III)

Computers have not always been the ubiquitous beige boxes gracing our desks: in Victorian London, Charles Babbage attempted to build his analytical engine using brass gears and steel rods; and during World War II the Allied governments used sophisticated electro-mechanical and electronic "brains" to break Axis codes. Machines that once occupied entire rooms now travel in knapsacks. How did we get this technology, once considered esoteric and useful to only technical specialists, colonize industry, academia, the military, the federal government, and the home? Using primary historical materials, including memoirs, films, archival documents, and other texts we follow computers from Babbage's Victorian dream of an analytical engine to the visions of contemporary moguls like Bill Gates whose goal is "information at your fingertips." We explore not only how computer technology affects society, but also how culture and politics enable and sustain the development of the machine. This is a course in the history and sociology of computers; a background in computer science is not required. (No technical knowledge of computer use is presumed or required.)

S&T 381 Philosophy of Science: Knowledge and Objectivity (also PHIL 381) (IV)
Fall. 4 credits. R. Boyd.

For description, see PHIL 381.

S&T 387 The Automatic Lifestyle: Consumer Culture and Technology (also PHIL 387) (III)

Our daily lifestyle in consumer culture is intimately intertwined with technology. Industrialized technology makes consumer culture possible, yet at the same time the economic and cultural trends of consumer culture select and shape the kinds of technology that become available. How is our daily lifestyle in consumer culture shaped by technology? How are everyday technologies shaped by the demands of consumer culture? What alternatives do we have? In this class, we synthesize history, sociology, and speculative design to answer these questions.

S&T 400 Components and Systems: Engineering in a Social Context (also M&E 400) (III)
Spring. 3 credits. Z. Warhaft.

For description, see M&E 400.

S&T 409 From the Phonograph to Techno (also SOC 409) (III)

In this seminar, we treat music and sound and the ways they are produced and consumed as socio-cultural phenomena. We specifically investigate the way that music and sounds are related to technology and how such technologies and sounds have been shared and have shaped the wider society and culture of which they are a part. We look at the history of sounds technologies like the phonograph, the electronic music synthesizer, samplers, and the Sony Walkman. Our perspective is drawn from social and cultural studies of science and technology. Students are encouraged to carry out a small original research project on their favorite sound technology.

S&T 410 Social Studies of Science (also S NUM 410) (III)
Fall. 4 credits. Limited to 15. M. Lynch.

Are the social sciences really scientific? Should they even try to be scientific? And, if they can be scientific, what would make them that way? These questions have been debated ever
since the 19th century when social science disciplines first became established in modern universities. This seminar examines the emergence of the social sciences and their unsettled place in between the humanities and social sciences. The focus is on sociology, and a series of debates (including some very recent ones) about its prospects as a science, though other fields will also be discussed. Weekly seminars and discussions cover ideas and debates in social theory, the history and philosophy of social science, and the interdisciplinary field of science and technology studies.

S&TS 438 Minds, Machines and Intelligence (also COGST 438) (III)
Spring. 4 credits. H. Mialet.
Do machines think? Do they have minds? Are they intelligent? What can humans do that machines cannot do and vice versa? How do humans use machines and how do machines use humans? In this course we focus on how philosophers such as Turing, Searle, and Dreyfus have dealt with these questions. At the same time, however, we are also concerned with trying to rework the themes raised by these thinkers. We do this with an eye towards the work of social scientists who have studied how people and machines interact in specific contexts, as for example, in a plane's cockpit or on the Internet. Topics may also include virtual surgery, speech recognition, and expert systems in medicine.

[S&TS 453 Reflections on Scientific Personae: Visibility and Invisibility of the Body (III)]
H. Mialet.
Who produces science? Rational, deliberative models or brilliant, intuitive iconoclasts? Individuals or groups? Geniuses or ordinary practitioners? Human beings or assemblages of instruments? This course explores the question of where scientific intelligence resides. The mythical figure of the lone genius stands in sharp contrast to recent work in the social theories of technology, the history and philosophy of science, and the interdisciplinary field of science and technology studies.

[S&TS 525 Seminar in the History of Technology (also HIST 525)]
H. Kline.
An exploration of the history of technology in Europe and the United States from the eighteenth century to the present. Typical topics include the industrial revolution in Britain, the emergence of engineering as a profession, military support of technological change, labor and technology, the “corporation” of science and engineering, technological utopias, cultural myths of engineers and inventors, societal aspects of urbanization in the city and on the farm, post-war consumerism, and gender and technology. The interests of students and recent literature in the field are considered in selecting the topics for the seminar.

Science, Technology, and Public Policy

S&T 281 Science in Western Civilization (also HIST 281) (III)
Fall. 3 credits. P. Dear.
For description, see HIST 281.

S&T 282 Science in Western Civilization (also HIST 282) (III)
Spring. 4 credits. P. Dear.
For description, see HIST 282.

S&T 283 The Sciences in the Twentieth Century (also HIST 280) (III)
Fall. 4 credits. M. Dennis.
For description, see “Minds and Machines” theme.

[S&T 350 Atomic Consequences: The Incorporation of Nuclear Weapons in Postwar America (also GOVT 305, AM ST 350) (III)]
M. Dennis.
This course explicates the development of atomic weapons from early twentieth-century ruminations about super bombs in science fiction through the Manhattan Project, the postwar development of thermonuclear weapons and civil defense, and more recent plans for strategic defense. Our focus expands to cover the lives of researchers at such institutions as Los Alamos during and after World War II as well as discussions of national politics. Other topics include the Nazi effort to develop an atomic bomb, the role of technical espionage during and after World War II, and the problems posed by the classification of technical knowledge. We seek to understand how the bomb became part of American culture through the use of literature and film, as well as readings in primary historical documents and secondary analyses. In addition to class meetings, there is also a required screening session. Films generally last less than two hours, but some are longer. Viewing the movies is an essential part of the course.

[S&T 352 Science Writing for the Mass Media (also COMM 352) (III)]
Spring. 3 credits. B. Cowen.
For description, see COMM 352.

[S&T 360 Ethical Issues in Engineering (also B&SOC 360) (III)]
Spring. 3 credits. R. Kline.
For description, see ENGRG 360.

[S&T 390 Science in the American Polity, 1800–1960 (also GOVT 308, AM ST 388) (III)]
M. Dennis.
How did America become a leading nation in scientific and technical research? This course charts the development of American science from its origins in gentlemanly societies in the early nineteenth century to the development of large-scale federally funded research or Big Science. Particular attention is paid to the importance of government patronage in creating new social and intellectual spaces for research; the importance of medicine and the biomedical disciplines for the development of university-based research; the origins and expansion of research in corporations; and the role of war in the political economy of American science.

[S&T 391 Science in the American Polity, 1960–Now (also GOVT 309, AM ST 389) (III)]
Fall. 4 credits. M. Dennis.
This course reviews the changing political relations between science, technology, and the state in America from 1960 to the present. It focuses on the politics of choices involving science and technology, with a particular emphasis of institutional settings, from Congress to courts and regulatory agencies. The tensions and contradictions between the concepts of science as an autonomous republic and as just another special interest provide the central theme for the course. Topics addressed include research funding, technological controversies, scientific advice, citizen participation in science policy, and the use of experts in courts.

[S&T 403 Environmental Governance (also B&SOC 403, NTRRES 403, S&T 603)]
Fall. 3 credits. S. Wolf.
For description, see NTRRES 403.

[S&T 406 Biotechnology and Law (also B&SOC 406) (III)]
Spring. 4 credits. L. Palmer.
Biotechnology, with myriad applications in areas such as medicine and agriculture, is creating many challenges for basic social institutions. This course explores the use and potential abuse of biotechnology in areas such as genetic screening and counseling, reproductive technologies, and intentional release of genetically engineered organisms, patents, and ownership of human tissue. Particular attention is given to evolving legal and management strategies for regulating the applications of biotechnology. Readings are from science, medicine, law, and public policy. Several short written assignments as well as a research paper are required.

[S&T 407 Law, Science, and Public Values (also B&SOC 407, GOVT 407) (III)]
Spring. 4 credits. M. Lynch.
This course examines problems that arise at the interface of law and science. These problems include regulation of novel technology, the role of expert testimony in public decision-making, and the control over scientific research. The first part of the course covers basic perspectives in science and technology studies (S&TS) and how they relate to legal decisions and processes. The second part of the course covers a series of examples and legal cases on the role of expert judgments in legal and legislative settings, intellectual property considerations in science and medicine, and legal and political oversight of scientific research. The final part of the course examines social processes and practices in legal institutions, and relates these to specific cases of scientific and technological controversy. Lectures and assignments are designed to acquaint students with relevant ideas about the relationship between legal, political, and scientific institutions, and to encourage independent thought and research about specific problems covered in the course.

[S&T 411 Knowledge, Technology and Property (III)]
Spring. 4 credits. Prerequisite: one course in science and technology studies.
S. Hilgartner.
Should the human genome be treated as private property or a public resource? How should copyright be managed in the digital environment of the Internet? Is music "sampling" high-tech theft or artistic expression? Does bioprospecting represent an
enlightened strategy for preserving biodiversitv or a post-colonial means for transferring resources from the developing world? And, can we debate about the nature and scope of intellectual property and an increasingly salient feature of contemporary politics. This course examines the ownership of knowledge and technology, exploring fundamental tensions that intellectual property systems express and incompletely reconcile. Perspectives from science and technology studies, sociology, law, and economics will inform the course. Case studies explore the construction of property in contexts ranging from the copyright over the ownership of life forms, airwaves, algorithms, artistic content, electronic databases, and the personal identities of celebrities.

S&TS 427 Politics of Environmental Protection in America (also GOVT 427) (III)
Summer. 4 credits. S. Yearley.
This course provides an introduction to the distinctive features of environmental politics and policy-making. Using comparisons between North America and Europe, the course will focus particularly on the contributions of science, citizen activism and law to framing and resolving policy problems. Readings from political science, policy analysis, sociology, and law examine the changing political roles of national and international political bodies, courts, expert agencies, and regional/state governments, as well as industry and public interest groups, in environmental politics since the late 1970's. Case studies of contemporary environmental controversies—some at the national and some at the "global" level—are used to explore competing public conceptions of nature and environment, risk and safety, regulatory costs and benefits, and the goals and instruments of environmental policy.

S&TS 433 International History of Science (III)
A survey of the major scientific events and institutions in several foreign nations, including developing countries. The course covers the period 1660 to the present and gives some attention to who in each country becomes a scientist, who rises to the top, and who regulates. Weekly readings and a research paper.

S&TS 442 The Sociology of Science (also B&SOC 442, CRP 442, SOC 442) (III)
Spring. 4 credits. H. Mirole.
A view of science less as an autonomous activity than as a social institution. We discuss such issues as controversies in science, analysis of scientific text, gender, and the social shaping of scientific knowledge.

S&TS 444 Historical Issues of Gender and Science (also WOMNS 444) (III)
Spring. 4 credits. Not open to freshmen. M. Rosser.
One-semester survey of women's role in science and technology from antiquity to the 1980's, with special emphasis on the United States in the twentieth century. Readings include biographies and autobiographies of prominent women scientists, educational writings and other primary sources, and recent historical and sociological studies. By the end of the semester, we shall have attained a broad view of the problems that have faced women entering science and those that still remain.

S&TS 466 Public Communication of Science and Technology (also COMM 468) (III)
For description, see COMM 466.

S&TS 467 Innovation: Theory and Policy (III)
Fall. 4 credits. Open to upper-level undergraduates and interested graduate students. Prerequisite: ECON 102 or permission of the instructor. Not offered 2002-2003. J. Reppy.
In this course we study the innovation process (that is, the introduction of new technology into practice), through the critical analysis of selected theories of innovation and supporting empirical evidence. Economic theories are contrasted to the insights found in science and technology studies. The focus is on the context of interests and ideology in which the various theories have been framed and their differing implications for technology policy. Authors covered include Schumpeter, Solow, Scherer, Nelson and Winter, and Bijker and Pinch.

S&TS 473 Knowledge and Politics in Seventeenth Century England (also HIST 471) # (III)
For description, see HIST 471.

S&TS 483 The Military and New Technology (also GOVT 483) (III)
For description, see GOVT 483.

S&TS 487 Seminar in the History of the Agricultural Sciences (III)
This course is a one-semester survey of the general topic of the history of scientific agriculture, broadly defined, world-wide. It seeks to cover some of the best of the more recent literature on this topic. Depending on the interests of the students, topics may include Amish culture, Hoover Dam, the Green Revolution, farm women and technology, particularly scientists or crops, innovations, and epidemics.

S&TS 490 The Integrity of Scientific Practice (III)
Recent scandals over scientific fraud, debates about financial conflicts of interest, disputes about the use of human and animal subjects, and tensions over ownership of data have raised concern about integrity in science. In addition, changes in the American research system—from the emergence of industry—relationships to the growth of electronic communication—pose new questions about who owns and controls research. This course addresses practices that present problems of integrity in research (e.g., fraud, secrecy, commercialization). It also examines how scientific practices affect the structural integrity of science as an institution. Through these complementary concepts of integrity, the course explores the connections between the conduct of science and its cultural authority.

S&TS 491 Disease and Culture (III)
Fall. 4 credits. E. Toon.
Influenza and Ebola, syphilis and AIDS, breast cancer and heart disease—whether rare or pervasive, disease frightens and threatens us, shaping our identities and our interactions with others. In this seminar, we will look at how scholars and others have written about disease, and we will begin to explore our own ideas about illness, consumption, risk, danger, and death. Course materials include historical and social scientific studies of medical knowledge and the experience of illness.

S&TS 492 Politics and the Public Health (III)
Who is responsible for the public's health? Both now and in the past, the answer to that question has been a source of bitter debate. In the past three centuries, public health has become a contested mix of aims, advocates, and practices: it is simultaneously a field of scientific activity, a vehicle for social reform, and a site of political controversy. This course will examine the history of U.S. public health.

S&TS 493 Economics Meets Science Studies (III)
Fall. 4 credits. J. Reppy.
This course covers a variety of possible interactions between the disciplines of economics and science and technology studies. Economists (at least some economists) are interested in science and technology as important components of economic growth, while scholars in science studies often appeal to economic motives and institutions to explain behavior in the production of scientific and technological knowledge. We explore ways in which economics can provide new questions and theoretical approaches for science and technology studies. From another perspective, economics, as the most "scientific" of the social sciences, is itself a subject for study. Internal critiques by economists are compared to external analyses in the science studies literature. Readings include works on the epistemology and use of rhetoric in economics and on the "new economics of science," and examples of the use of economic analysis in the science studies literature.

S&TS 532 Inside Technology: The Social Construction of Technology (also SOC 532)
Rather than analyze the social impact of technology upon society, in this course we investigate how society gets inside technology. In other words, is it possible that the very design of technologies embody assumptions about the nature of society? And, if so, are alternative technologies, which embody different assumptions about society possible? Do engineers have implicit theories about society? Is technology gendered? How can we understand the interaction of society and technology? Through traditional and alternative methods, the course explores the connections between the conduct of science and its cultural authority.

S&TS 205 Ethical Issues in Health and Medicine (also B&SOC 205) (IV)
Fall. 4 credits. S. Hilgartner.
For description, see B&SOC 205.

S&TS 206 Ethics and the Environment (also B&SOC 206, PHIL 246) (IV)
Spring. 4 credits. N. Sethi.
For description, see B&SOC 206.
More information and applications are available in 275 Clark Hall.

S&T 498-499 Honors Project I and II
Fall and spring. 3–5 credits each. Open only to Science & Technology Studies students in their senior year by permission of the department. Applications and information available in 275 Clark Hall. Students who are admitted to the honors program are required to complete two semesters of honors project research, and to write an honors thesis. The project must include substantial research and the completed work should be of wider scope and greater originality than is normal for an upper-level course. Students may take three to five credits per semester up to a maximum of eight credits in S&T 498 and 499, Honors Projects I and II. Students should note that these courses are to be taken in addition to those courses that meet the regular major requirements.

SCIENCE AND TECHNOLOGY STUDIES 639

Graduate Seminars

[S&T 552 Seminar in the History of Technology (also HIST 525)] Fall. 4 credits. Not offered 2002-2003. R. Kline. An exploration of the history of technology in Europe and the United States from the eighteenth century to the present. Typical topics include the industrial revolution in Britain, the emergence of engineering as a profession, military support of technological change, labor and technology, the "incorporation" of science and engineering, technological utopias, cultural myths of engineers and inventors, social aspects of urbanization in the city and on the farm, post-war consumerism, and gender and technology. The interests of students and recent literature in the field are considered in selecting the topics for the seminar.

[S&T 532 Inside Technology: The Social Construction of Technology (also SOC 532)] Spring. 4 credits. Not offered 2002-2003. T. Pinch. Rather than analyze the social impact of technology upon society, in this course we investigate how society gets inside technology. In other words, it possible that the very design of technologies embody assumptions about the nature of society? And, if so, are alternative technologies, which embody different assumptions about society possible? Do engineers have implicit theories about society? Is technology gendered? How can we understand the interaction of society and technology? Throughout the course the arguments are illustrated by detailed examina-
tions of particular technologies, such as the ballistic missile, the bicycle, the electric car, and the refrigerator.

[S&S 616 Enlightened Science (also HIST 616)]
Fall. 3 credits. Limited to graduate students. Not offered 2002-2003. P. Dear, M. Dennis. For description, see HIST 616.

[S&S 625 Visualisation and Discourse in Science]
This seminar covers two interrelated areas of science and technology studies: visualisation and discourse. Visualisation refers to the practices and technologies through which scientists and designers develop images, graphs, models, and other representations. Discourse refers, broadly, to practical uses of language. In the context of this course, discourse and visualization are treated as important aspects of the production of scientific data and technological artifacts. The course focuses mainly on historical and ethnographic studies that pay close attention to the material and linguistic repertoires through which scientific and technological innovations are made visible, palpable, and intersubjectively accountable.

[S&S 631 Qualitative Research Methods for Studying Science (also SOC 631)]
Spring. 4 credits. M. Lynch.
Much has been learned about the nature of science by sociologists and anthropologists doing lab coats and studying scientists in action. In this course we look at the methods used in this new wave of science studies. We examine those used by interviewing scientists, from videos, and from detailed examinations of scientific texts. Students gain hands-on experience by conducting a mini-project in which they investigate some aspect of scientific culture.

[S&S 644 Topics in the History of Women in Science (also WOMNS 644)]
This is a one-semester graduate seminar on selected topics in the history of women and gender in science and technology, covering mostly the United States in the 20th century but broadly defined to include earlier periods and other countries. It seeks to acquaint advanced students with some of the best recent literature on this topic and to identify and explore possible new topics. Weekly readings and a research paper.

[S&S 645 Genetics: Politics and Society in Comparative Perspective (also GOVT 634)]
Fall. 4 credits. S. Hilgartner.
Contemporary genetics and biotechnology are highly controversial, creating high hopes for some and deep anxieties for others. This course traces the conflicts and power struggles over genetic engineering, using it as a case to examine some of the issues in the relationship among science, politics, and technology. In particular, the course focuses on three themes—the politics of property, the politics of identity, and the politics of risk—as they pertain to genetics. Topics may include the social shaping of biological research; eugenics and genetics; genetics and medicine; the regulation of risks; the growth of commercial biotechnology; university-industry relation-hips; Green parties and social movements; North-South issues and biotechnology; the Human Genome Project, intellectual property and patenting genes; and the debate over human cloning.

[S&S 649 Media Technologies]
Spring. 4 credits. T. Gillespie.
From the first attempt to etch circuits into clay, to the latest software available on the Net, our efforts to communicate our culture and drive social agendas have depended on the technologies we develop for getting our ideas to others. Beliefs as to how and why we communicate have shaped the technologies we design. In, turn, those technologies have shaped our efforts to communicate, and the consequences of those efforts. This course will consider the technologies of media, both historically and theoretically, in order to consider the intersection of technology and its social context. We will apply theories of technology developed inside of S&S to a set of artifacts that has less often scrutinized. We will also draw from critical analysis of theory, which traditionally overlook the technological mediation of social relations, for work that deals intelligently with the material dimensions of media and could surprise the field with new perspectives and theoretical tools.

[S&S 664 Constructionism in Social Science]
Constructionist approaches have become commonplace in many fields of social and cultural study. The very word 'social construction' often provoke heated arguments, but exactly what these words mean or imply is seldom made clear. This course examines philosophical arguments, counterarguments, and empirical case studies associated with constructionism. The main focus is on constructionist approaches in the sociology of knowledge and science & technology studies, but other variants in sociology, psychology, and the humanities are also discussed. The aim is to develop a critical understanding of the arguments, narratives, and concepts that inform and identify these approaches.

[S&S 680 Seminar in Historiographical Approaches to Sciences (also HIST 680)]
Spring. 4 credits. P. Dear.
For description, see HIST 680.

[S&S 681 Philosophy of Science (also PHIL 681)]
For description, see PHIL 681.

[S&S 682 Topics in the Scientific Revolution (also HIST 682)]
For description, see HIST 682.

[S&S 686 Politics and the Public Health]
Who is responsible for the public's health? Both now and in the past, the answer to that question has been a source of bitter debate. In the past three centuries, public health has become a contested mix of aims, advocates, and practices: it is simultaneously a field of scientific activity, a vehicle for social reform, and a site of political controversy. This course examines the history of American public health, with an eye to understanding how public health has been defined and how responsibility for the public's health has been apportioned. Course readings and discussions focus on the evolution of this balance of science, reform, and politics in the United States, but include some material on public health in other national and cultural contexts.

[S&S 700 Special Topic 1: Science Studies and the Politics of Science]
Fall. 4 credits. Prerequisites: S&S 711 or permission of instructor. Not offered 2002-2003.
Theoretical developments in science and technology studies have called attention to the contingent and socially embedded character of both knowledge claims and technological systems. Drawing on literature from several disciplines, this seminar explores the consequences of these findings for social and political studies of science. Issues and problems considered include trust and skepticism, political and legal agency, reflexive institutions, relativism and social action, science and technology, and the production of knowledge and social order.

[S&S 702 Special Topic 2: Technology Transfer Issues]
The goal of this course is to develop a coherent analytical framework for analyzing technology transfer, using insights from economics, sociology, history, and science and technology studies and to employ that framework to evaluate current policy issues. We study the process of technology transfer in different contexts, ranging from intra-firm and intra­industry to technology transfer between civil and military sectors, and between industrialized countries and LDCs. The readings include a mix of theoretical writings and case studies.

[S&S 703 Special Topic 3: Issues in the Social and Cultural History of Technology]
Fall. 4 credits. R. Kline.
This seminar focuses on different issues in the social and cultural history of technology each semester. Typical issues include Gender and Technology, Rethinking Technology Determinism, Was there an Information Revolution?, Consumerism, and the Military and Technology in the United States. The topic for fall 2002 is "Information." Students read and discuss exemplary books and articles on a topic for the first half of the course, then give presentations on their research papers.

[S&S 711 Introduction to Science and Technology Studies (also HIST 711)]
Fall. 4 credits. T. Pinch.
This introductory course provides students with a foundation in science and technology studies. Using classic works as well as contemporary exemplars, seminar participants chart the terrain of this new field. Topics for discussion include, but are not limited to: historiography of science and technology and their relation to social studies of science and technology; laboratory studies; intellectual properties; science and the state; the role of instruments, fieldwork, politics and technical knowledge; the history of science; sociological studies of science and technology; and popularization.

[S&S 777 Science, Technology, and the Cold War]
This graduate seminar examines the historical transformation wrought in the organization and practice of the physical, biomedical, and environmental sciences since 1945. How did military and federal patronage affect the development of the sciences, the organization of the postwar university, and the armed services? Students read contemporary historical materials as well as primary texts to understand the development of particular institutions, technologies, and individuals. In addition to participation in the weekly discussion, each student prepares a research paper for presentation to the seminar.

Independent Study

S&TS 699 Graduate Independent Study

Fall or spring. 2-4 credits. Applications and information are available in 275 Clark Hall.

SCIENCE OF EARTH SYSTEMS

The full faculty of the Department of Earth and Atmospheric Sciences (see page 448) plus the following: W. Brutsaert (civil and environmental engineering), P. Giersch (astronomy), M. Kelley (electrical engineering), J. Yavitt (natural resources).

The Science of Earth Systems (SES) is the study of the interactions among the atmosphere, oceans, biosphere, and solid Earth; these dynamic interactions control the global environment. The interdisciplinary, basic science approach of SES incorporates major components of geology, ocean and atmospheric sciences, terrestrial hydrology, biogeochemistry, and ecology into an integrated study of Earth as a complex system. Earth science presents one of the outstanding intellectual challenges in modern science and is the primary foundation for the future management of our home planet.

The Major

The major in Science of Earth Systems emphasizes a rigorous, objective study of the Earth and its systems with broad preparation in basic sciences and mathematics, followed by the choice of an area of concentration for study in greater depth. The Science of Earth Systems program seeks to train students in a strong set of fundamental skills that will allow them to approach with quantitative rigor a wide range of questions about the Earth and its environment, and to adapt those skills rapidly to new areas of inquiry as they arise. The major in Science of Earth Systems is by nature interdisciplinary, and involves faculty from the College of Arts and Sciences, the College of Engineering, and the College of Agriculture and Life Sciences. In the College of Arts and Sciences the program is administered by the Department of Earth and Atmospheric Sciences in collaboration with the Departments of Astronomy, and Ecology and Evolutionary Biology.

The SES curriculum begins with a series of courses designed to provide preparation in fundamental science and mathematics necessary for a rigorous study of Earth Systems. This preparation is followed by three SES core courses providing breadth and integration. An additional set of four intermedia -

date to advanced courses is selected to provide depth and a degree of specialization.

Students in the College of Arts and Sciences choosing to pursue the Science of Earth Systems major are required to take the following courses: PHYS 207-208 or 212-213, CHEM 207-208, BIOSCI 101/103-102/104 (or 109-110), and MATH 111-112 (or 121-122, or 190/191-192). Three additional 3-4 credit hour courses in mathematics, physics, chemistry, or biology are required; these additional courses must require one or more of the basic courses listed above as a prerequisite. One of the courses must be either EAS 201 or BIOES 261. Both EAS 201 and BIOES 261 can be chosen. Mathematics at the level of MATH 221 or 293 is strongly recommended for all SES students, and those choosing areas of concentration in Atmospheric Sciences, Environmental Geophysics, or Hydrology should take MATH 222 or 294.

The three required SES core courses include the following:

EAS 331/ASTRO 331 Climate Dynamics
EAS 302 Evolution of the Earth System
EAS 321/NTRES 321 Introduction to Biogeochemistry

Four additional 3-4 credit courses selected from 300- and 400-level courses, approved for an SES concentration, are required. These courses will ordinarily be organized around one of the SES areas of specialization. Areas of specialization include, but are not limited to, the following: Climate Dynamics, Ocean Science, Environmental Geophysics, Environmental Biophysics, Biogeochemistry, Soil Science, Ecological Systems, Hydrological Science.

Further information and applications contact Kerri L. Cook, khc@cornell.edu. Also see the SES web site at www.eas.cornell.edu for up-to-date information. Administrative offices are located at 2122 Snee Hall.

SERBO-CROATIAN

SOCIETY FOR THE HUMANITIES

Dominick LaCapra, Director

Fellows for 2002-2003

Leif Alsheimer (Jonkoping International Business School, Sweden)
Phillip Barrish (University of Texas, Austin)
Dominic Boyer (Cornell University)
Rebecca Bryant (National Academy of Education, Turkey)
Christine Cuomo (University of Cincinnati)
Catherine Dhavernas (University of Western Ontario)
Peter Gilgen (Cornell University)
Davydd Greenwood (Cornell University)
Peter Hohendahl (Cornell University)

Peggy Kamuf (University of Southern California)
Michael Lynch (Cornell University)
Paul Rosenberg (Cornell University)
Deborah Starr (Cornell University)
Jeffrey Williams (University of Missouri)

The Society annually awards fellowships for research in the humanities. The fellows offer, in line with their research, informal seminars intended to be exploratory or interdisciplinary. These seminars are open to graduate students, suitably qualified undergraduates, and interested auditors. Students who want credit for a seminar should formally register in their own college. Persons other than those officially enrolled may attend as visitors with permission of the fellow. The theme for 2002-2003 is "The Idea of a University."

S HUM 301 Mind and Memory (also ENGL 301, MUSC 372, FILM 301)

S HUM 401 The Future of Universities

Fall. 4 credits. Limited to 15 students. M 2:30-4:25. L. Alsheimer.

This course studies American liberal education, and compares it with general education in Sweden, Germany, Great Britain, and the future of the universities. The course addresses questions like: What should liberal education do? What responsibilities have the universities and colleges for moral well-being, character shaping, ethical, and intellectual development? Is there an increasing demand from students for more substantial all-embracing courses as a complement to vocational courses? Will liberal education survive in a time when utility and instant reward is in focus? How can the universities recapture their important task as conveyor of broad and deep general knowledge? Are there a future and a role for the universities, as we know them?

S HUM 403 Censorship and the Production of Knowledge (also ANTHR 433)

This course seeks to productively expand the definition of "censorship" to ideological interdiction by exploring psychoanalytic and social-theoretical approaches to censorship, practices and actions of self-censorship. We are especially interested in the relationship of censorship to the social formation of knowledge and we explore this relationship through case studies of media control, academic peer review processes, and the commodification of knowledge in corporate "knowledge industries."

S HUM 404 The University as Locus of National Culture (also ANTHR 434)

This course focuses on the place of the university as a site for the articulation, negotiation, and dissemination of knowledge of nation. We investigate the university as a public cultural institution and how it both (1) becomes a symbol of the cultural achievement of the nation-state and (2) serves to elaborate and publicize knowledges of national belonging alongside the cultivation of plurality of specialized fields of knowledge (including critical knowledges of nationhood).
These discussions are grounded historically in a study of the evolution of the modern German research university and its dual role as producer of scientific knowledge and as site for the production of national culture.

S HUM 408 Narratives of the University (also ENGL 408/608, COM L 401, HIST 428)
Fall. 4 credits. Limited to 15 students. R 2:30—4:25. J. Williams.

What is the university? This institution in which we find ourselves, and to which we’ve committed considerable time, money, and effort? The typical way to answer this is to look at the tradition of “the idea of the university.” In this seminar, we examine some of those key “ideas,” from Kant through Newman to Readings. But we also focus on other ideas of the university, as represented in histories of the university, “academic” novels and popular life, and statements such as media reports and university memoranda, from the eighteenth century to the present.

S HUM 410 Social Studies as Science (also S&T&S 410)
Fall. 4 credits. Limited to 15 students. R 2:30—4:25. M. Lynch.

Are social sciences really scientific? Should they even try to be scientific? And, if they can be scientific, what would make them that way? These questions have been debated ever since the 19th century when social science discards as it ordinarily functions in the modern universities. This seminar examines the emergence of the social sciences and their unsettled place in between the humanities and social sciences. The focus is on sociology, and a series of readings (some very recent ones) about its prospects as a science, though other fields are also discussed. Weekly seminar discussions cover ideas and debates in social theory, the history and philosophy of social science, and the interdisciplinary field of science and technology studies.

S HUM 411 Cosmopolitan Alexandria (also NES 493, COM L 406, JWST 493)
Fall. 4 credits. Limited to 15 students. W 2:30—4:25. D. Starr.

In the first half of the twentieth century the Mediterranean city of Alexandria supported a multi-lingual, cosmopolitan culture. This course explores the discursive and theoretical potential offered by this unique cosmopolitan space-time, and the literary and artistic legacy it spawned. We discuss works by Aciman, Cavafy, Chahine, Durrell, al-Kharrat, and Tsalas, among others.

S HUM 412 Reading Practices of the University (also COM L 407)
Fall. 4 credits. Limited to 15 students. T 2:30—4:25. P. Kamuf

This course examines ways in which different modes of inquiry in the university conceive of the practice of reading. For this, we look principally at three fields in which reading is taken as a kind of object. We ask first about scientific research on reading, which generally does not problematize the concept of its object, assumed to be self-evident. Then we take up two discourses that do question in some manner the ordinary concepts: the history of reading (a particular discipline of intellectual history), which unsettles many unhistoriected assumptions about reading, and literary studies, where ordinary concepts and practices of reading are routinely shown to be insufficient. In addition to our concern with concepts of reading that are well represented in the disciplines of the university, we interrogate the general lack of psychoanalytic reflection dealing specifically with reading, in particular with what are called reading disorders. This survey of reading disciplines thus allows us to pose some questions about interdisciplinary reading. Does the “object” called reading challenge a prevailing model of interdisciplinarity, which tends to preserve or even reinforce the division between scientific and humanistic disciplines? Or does the “object” called reading necessarily define an impossible interdisciplinary object? The readings range widely and include works by Roger Chartier, Paul de Man, Freud, Foucault, Mary Jacobus, Friedrich Kittler, and others.

S HUM 416 Culture, Freedom, and the University (also GERST 422, HIST 413)
Spring. 4 credits. Limited to 15 students. T 2:30—4:25. P. Hohenadl.

The seminar addresses the rise and the eventual decline of the classical German research universities and the present concept of the university as a semi-autonomous community based on freedom of teaching and research. It examines the development of German education during the 19th and 20th centuries and the modernization of the German university between 1810 and the present. The concept of the university as a unique cosmopolitan space-time, and the unique cosmopolitan space-time, and the the intersection between the innovative idea of the university and the actual development of the institution. Readings are taken from the works of Kant, Fichte, Schleiermacher, Schelling, Nietzsche, Weber, Jaspers, and Habermas.

S HUM 418 Moving Beyond the Readymade (also COM L 408)
Spring. 4 credits. Limited to 15 students. M 10:10—12:05. C. Dhavanes.

This seminar proposes to address the work of contemporary painters, writers, and filmmakers who have sought to defy the stronghold of representation as a function in the cultural context of our everyday. The first part of the seminar seeks to provide an understanding of the everyday as readymade by looking at ways in which our relationship to the everyday has undergone a radical transformation in the age of mechanical reproduction (Walter Benjamin), how, for instance, with the advent of photography, specificity has progressively given way to generic ahistorical conformity, to readymade forms of representation (Theodor Adorno, Max Horkheimer, Jean Baudrillard). Our objective is to explore parallels between the mechanisms of representation within photography and history (Friedrich Nietzsche) by situating our discussion of representation in relation to current debates of postmodern historiography (F. R. Ankersmit, Saul Friedlander, Dominick LaCapra, Michael Roth, Hans-Peter Blume). The second part of the seminar explores specific examples of literature (Marguerite Duras), painting (Gerhard Richter), and film (Lars von Trier) which have attempted to break through the recuperating trend of pre-established representational forms in order to open the way for “otherness,” “objectivity” and “truth.” Our objective is to consider the effectiveness of these artists in challenging current trends of representation and to evaluate their appropriateness with regards to the cultural context of today.

S HUM 419 Prestige in American Literary Realism (also AM ST 406, ENGL 419/619)

Turn of the century American literary realism implicitly articulated for its readers new ways to earn social recognition as intelligent or sophisticated individuals. We explore the changing (and contested) meanings for acuity, knowledge, wisdom, cultivation, and related terms in works by Charles Chesnutt, William Dean Howells, Henry James, Edith Wharton, Abraham Cahan, Anzia Yezierska, Amerigo Paredo, and other writers.

S HUM 420 Humanities and the Modern University (also HIST 487)

The seminar studies conceptions of the place of the humanities in university education from the Renaissance to the present. We examine debates about the content and purpose of a liberal or humanistic education and place these debates in the context of changing values of the social functions of the university. Readings are in both secondary and primary sources; principally in intellectual history but with occasional forays into social history. Major topics of the course include Renaissance humanism, the Scientific Revolution, the Enlightenment, the 19th century German universities, the growth of professionalism and academic specialization in 20th century America, and recent debates about postmodernism and the academic canon. All readings are in English.

S HUM 421 Reading the Revolution (also GERST 421)

The goal of this course is to understand Kant’s seemingly loosely constructed argument in The Conflict of the Faculties as a systematic attempt to establish the unity of practical reason. To this end, we examine in detail the discursive repercussions and echoes of the French Revolution in Kant’s outline of the university of reason. A primary reference is the theory of the “sign of history,” in which the political intentions of the Revolution and the moral orientation of the university of reason intersect. Reading the “sign of history” is a foundational moment. Kant understands foundation and revolution as two sides of the same coin; in each case, one must ask: By what right? As Kant recognizes, on this basis no revolution can legitimate itself. However, in reading the “sign of history,” moral justification can be performed by the distanced spectator. Similarly, the university of utility is converted into a university of reason—precisely by the application of reason to higher disciplines in a moment of legitimate recognition.
the social sciences in contemporary universities and some international comparisons with the trajectories of universities around the world. The overall aim is to link an ethnographic analysis of the microstructures of departmental differentiation, professional hegemonies, and local financing with the larger-scale processes of transformation of universities' place in society under the pressures of corporativization, globalization, and competition from a host of alternative higher education institutions.

S HUM 424 Personhood, Schooling, Society
Spring. 4 credits. Limited to 15 students. W 2:30-4:25. R. Bryant.
This course will examine, historically and ethnoculturally, the university as a place for negotiating the passage from youth to adulthood. In the West, the university has become the place for the transformation of undifferentiated youth into adults categorized by profession. Hence, the university is the site for socializing adults into specific roles in the world of work. At the same time, the university itself is a liminal space, characterized by its presumed distance from that world of work. This distance makes it a site for preparing themselves. This course will look at the emergence of this particular form of socialization in the West, at its counterparts elsewhere, and at what this form of socialization tells us about forms of personhood in the West.

Sociology
Sociology is the study of human social organization, institutions, and groups. The Department of Sociology offers courses in a number of research areas, including: comparative sociology, culture, economy and society, family and the life course, gender inequality, political behavior and public policy, organizations, race and ethnicity, social inequality, social psychology and group processes, social and political movements, and social networks. A particular emphasis of the department is the linkage of sociological theory to issues of public concern such as ethnic conflict, drug policy, and gender. The interdisciplinary nature of sociology makes it particularly interesting to students who are preparing for a wide variety of careers. Sociology is the study of human social interactions, including all aspects of society, and provides a broad theoretical and methodological framework for understanding the complexities of modern life. For many students, the undergraduate years are a last opportunity to gain the insights these fields have to offer. The Department of Sociology is continuing to design an array of beginning and advanced courses that convey a broad understanding of the methods and insights of sociological analysis—courses that will be of particular interest to undergraduates who may not major in sociology. First- and second-year students should note that the introductory courses (101, 103, 109, 108, and 115) focus on the sociological analysis of major issues of public life, and that a wide selection of general education courses is available at the 200 level. Advanced undergraduates who are majors in other fields should also see, in particular, descriptions of the 300- and 400-level courses, for which there are no prerequisites other than junior or senior status.

Related Courses in Other Departments
Students interested in sociology should consult the course lists of the other social science departments in the College of Arts and Sciences (including Anthropology, Economics, Government, and Psychology) and of the following departments in other colleges: Organizational Behavior (College of Industrial and Labor Relations), Human Development (College of Human Ecology), and Rural Sociology (College of Agriculture and Life Sciences).

The Sociology Major
The Department of Sociology is one of the social science departments at Cornell with the highest national ranking. Faculty members are internationally recognized for their scholarly work, and have received numerous awards, research fellowships, and research grants.

The sixteen or so professors who are currently in the department are dedicated to scholarly inquiry that is both methodologically rigorous and theoretically innovative. The breadth of their substantive interests and the variety of their methodological styles are well demonstrated in the different fields that are represented within the department. These include: comparative societal analysis, culture, deviance and social control, education, economic sociology, family, gender, inequality, social networks, organizations, political sociology, public policy, race and ethnic relations, religion, science and technology, social movements, and social psychology.

Career Opportunities for Graduates
An undergraduate degree in sociology is one of the most popular degrees with employers. After engineering and computer science, sociology is the most able to place graduates into jobs immediately after completing their Bachelor's degree. This is not altogether surprising, since sociology can lead to a rewarding career in any of the following fields:

- government: urban/regional planning, affirmative action, foreign service, human rights management, personnel management
- research: social research, consumer research, data analysis, market research, survey research, census analysis, systems analysis
- criminal justice: corrections, criminology assistance, police work, rehabilitation counseling, criminal investigation, parole management
- teaching: public health education, school admissions, college placement
- community affairs: occupational counseling, career counseling, public health administration, hospital administration, public administration, social assistance advocacy, fund-raising, community organizing, social work
- business: advertising, sales, project management, sales representation, market analysis, real estate management, journalism, public relations, insurance, human resource management, production management, labor relations, quality control management

A large number of our majors also go onto graduate school and obtain advanced (i.e., Master's and Ph.D.) degrees in such varied fields as sociology, political science, philosophy, economics, and psychology. Many also complete professional degrees in education, law, medicine, social work, and business administration.

Requirements for the Major
In addition to the academic requirements established by the College of Arts and Sciences, you must also fulfill requirements towards a specified major. There are 10 courses required in the sociology major. All courses towards the major must be taken for a letter grade and students must maintain at least a 2.0 grade point average while enrolled in the major. The 10 courses required for the major are divided into the following categories:

- Sociology 101
- one additional introductory-level course in sociology (at the 100- or 200-level)
- two research methods courses (SOC 301 and 303)
- one advanced-level sociology course (-300-level or higher)
- five additional (i.e., elective) courses in sociology

Declaring the Sociology Major
If you are a student in the College of Arts and Sciences and wish to declare a major in sociology, it is in your best interest to do so as soon as possible. If you are not currently in the College of Arts and Sciences, you need to be admitted to A&S before you can declare. In order to declare the sociology major, you need to take the following steps:

- Obtain a campus copy of your transcript from Day Hall and bring it to the department office (316 Uris Hall).
- Make an appointment for advising with the Undergraduate Coordinator, Susan Meyer, or visit her office hours (in 316 Uris Hall). During your meeting with her, you will fill out a major declaration form.
- Leave this form and your transcript with the Undergraduate Coordinator. Your declaration will be reviewed by the Director of Undergraduate Studies, Szonja Szelenyi, and sent on to the College of Arts and Sciences for official notification.
that you have declared a major. Please allow two weeks for your declaration to be approved and entered into the campus computer.

A student file will be set up to maintain your records in the department. Once you are officially recognized as a major in sociology, the Sociology Department will receive a copy of your transcript at the end of each semester, which will be kept in your student file at 316 Uris Hall. Your records will be maintained until five years after you graduate.

Academic Advising in Sociology
As a student at Cornell, you are ultimately responsible for the policies, procedures, and requirements regarding your degree as stated in the current Courses of Study. After reading this document, you may find that you are still confused or unclear about some of the requirements, and you may have questions and concerns that pertain to your individual situation. Several sources of academic assistance and advice are available to you.

College Adviser: As a sociology major, you are a student in the College of Arts and Sciences. For assistance and advice, College Advisers are available to you by appointment in the Office of Undergraduate Admissions and Academic Advising (Advising Office, 316 Uris Hall). It is recommended that you consult with a College Adviser sometime before your last semester to discuss the completion of College requirements, graduation, and residency requirements.

Undergraduate Program Coordinator: The Undergraduate Program Coordinator (Susan Meyer) is located in Room 316, Uris Hall. You are available to provide assistance with the following:

- the process of declaring the sociology major.
- forms relating to transferring courses from other universities and/or other departments.
- other administrative matters or concerns (e.g., forms, adding and dropping courses).

Director of Undergraduate Studies: The Director of Undergraduate Studies (Szonja Szelenyi) is located in Room 346, Uris Hall. She is there to:

- provide information about departmental curricula and the requirements for the major.
- meet with applicants to the major.
- review applications for sociology majors and accept students into the program.
- assist students in finding an advisor in the sociology department.
- screen sociology classes taken outside Cornell for acceptance as Cornell credit.
- serve as the backup for faculty advisers who are absent during advising periods.

Faculty Advising: Once you are a declared sociology major, you will be assigned a faculty advisor within the Sociology Department. When you declare sociology as a major, you will be asked to name your preference for an advisor; however, if you are not sufficiently familiar with the program, the Director of Undergraduate Studies can assist you in selecting a faculty member to work with you.

Faculty advisers are there to:

- discuss your education, career goals, and graduate school opportunities.
- meet with you to talk about courses and plan your program of study within the department.
- go over your academic program each semester and provide you with your Personal Identification Number (PIN) so that you can register for courses via the campus computer.

Sociology Peer Advisers: There are approximately 10 advanced sociology majors who serve as peer advisers in the department. These advisers change from year to year, but a complete list of their names and email addresses is available to you from the Undergraduate Program Coordinator in the sociology office (Room 316, Uris Hall). Peer advisers do not provide you with academic counseling; they are there to help you adjust to life in the major, as well as to let you know about the department's many support services and activities.

Research Opportunities
Qualified sociology majors are invited to participate with faculty members in conducting research. Such projects are usually initiated in one of two ways: the student may offer to assist the faculty member in an ongoing project, or the student may request that the faculty member supervise the execution of a project conceived by the student. In either case, the student should enroll in SOC 491 (Independent Study). Interested students may direct inquiries to any faculty member.

The Sociology Honors Program
Honors in sociology are awarded for excellence in the major, which includes overall grade point average and completion of an honors thesis. In addition to the regular requirements of the major, candidates for honors must maintain a cumulative grade point average of at least a B+ in all sociology classes, complete at least 2 credits of SOC 491 (in the junior year), complete SOC 495 and SOC 496 (in the senior year), and write an honors thesis.

Students are awarded either honors (cum-laude), high honors (magna cum laude), or highest honors (summa cum laude) in the program based on the honors advisers' evaluation of the level and the quality of the work completed towards the honors degree. The honors distinction will be noted on the student's official Bachelor of Arts degree. Both the honors adviser and the other will indicate on the student's diploma.

Admission to the Honors Program
To qualify for entrance into the honors program, students must have at least a B grade point average overall and a B+ grade point average in the major. In addition, they must secure the consent of a faculty member in the Sociology Department who will guide their honors thesis.

Students who wish to be considered for honors should apply to the Director of Undergraduate Studies no later than the second term of their junior year. Honors program application forms are available in 316 Uris Hall. The application must include a copy of the student's undergraduate transcript, a brief description of the proposed research project, and the endorsement of a faculty member in the Sociology Department.

The Honors Thesis
During the senior year, each candidate for honors in sociology will write a year-long tutorial (SOC 495 and SOC 496) with the faculty member who has agreed to serve as the student's thesis adviser. During the first term of their senior year, students determine the focus of their honors thesis, and submit a 10- to 15-page overview (or, alternatively, a preliminary draft) of the thesis to their adviser. During the second term, they complete their honors thesis and submit final copies to the department.

The text of the honors thesis may not exceed 60 pages except by permission of the honors adviser. Two copies of the honors thesis are due to the Undergraduate Program Coordinator (316 Uris Hall) during the third or fourth week of April. One of these copies will go to the student's thesis adviser and the other will remain on file in the department.

Any honors candidate whose research directly involves working with human subjects must receive approval for the project from the Cornell University Committee on Human Subjects.

Business and Organizational Studies Concentration
Majors who wish to prepare for postgraduate study in professional schools (business, management, or law) or a career in business or nonprofit organizations may elect to acquire a concentration in Business and Organizational Studies in sociology. This program provides Cornell students with training in economic sociology, organizational studies, and comparative societal analysis, all of which are useful areas of expertise in a world increasingly shaped by economic and social forces of a truly global dimension. In order to complete a concentration in Business and Organizational Studies, students must meet the following requirements:

- complete both of the required core courses in the concentration: SOC 105 and SOC 215, and

- complete four additional courses from the following list: SOC 203, 217, 222, 311, 315, 326/526, 340, 356, 358/558, 370/570, 373, and 427.

Students completing the concentration receive a letter of recommendation from the chair based on their cumulative academic record in the concentration. Please contact Susan Meyer (Undergraduate Program Coordinator), A. Dow, and Szelenyi (Director of Undergraduate Studies) for additional information on the Business and Organizational Studies concentration.

Introductory Courses

SOC 101 Introduction to Sociology (III)
Fall, spring. 3 credits. Fall, W. Burkard; spring, S. Szelenyi.

The purpose of this course is to introduce students to the distinctive features of the sociological perspective, as opposed to psychological, historical, or economic approaches. We do so by first discussing the sociological perspective in the context of small
groups and face-to-face interaction. As the course unfolds, we apply the same perspective to progressively larger social groupings, such as peer groups and families, formal organizations, social classes, racial and ethnic groupings, and states. This approach also provides new insights into such topics as deviance, gender inequality, culture, and lifestyles. Whenever possible, class lectures and discussions illustrate these themes by exploring contemporary social problems and developments, including the rise of Generation X (and Generation Y), the sources of current racial tensions, and the gender gap in the workplace.

[SOC 103] Self and Society (also R SOC 103) (III)
3 credits. Not offered 2002–2003. M. Macy. The course is an introduction to micro-sociology, focusing on social processes within small groups, including the family. Emphasis is on leadership, conformity, social influence, cooperation and competition, distributive justice, and micro analyses of interaction.

[SOC 105] Introduction to Economic Sociology (also R SOC 105) (III)
Fall. 3 credits. V. Navab. Modern social thought arose out of attempts to explain the relationship between economic development and the social transformations that gave rise to the contemporary world. Classical theorists from Karl Marx and Max Weber to Karl Polanyi focused their writings on emergent capitalist economies and societies. Contemporary sociologists likewise have sought to understand the interaction between capitalism and the social forces reacting against and emerging from modern economic development. From exchange and rational choice theories to network analysis and institutional theory, a central theme in contemporary social thought has been the relationship between the economy and society, economic action and social structure, and rationality and fundamental social processes. This course provides an introduction to social thought and research seeking to understand and explain the relationship between economy and society in the modern era.

[SOC 108] Introduction to Social Inequality (III)
Fall. 3 credits. M. Britton. This course examines the nature and processes of social and economic inequality in industrial societies. The principal focus is on the contemporary United States, with some comparisons to other industrial societies with different educational and class structures. We examine how social and economic institutions encourage or discourage the use of ascription (i.e. inherited or unchangeable traits) vs. achievement as the basis of rewarding individuals, and we consider how individuals make choices as they face different decision points in their schooling and work. Throughout the course we focus on the varied mechanisms of stratification that sort people into social and workplace positions, and we also consider how to judge the "fairness" of these mechanisms. The readings include theoretical and empirical materials on stratification along race, class, and gender lines, and several book-length ethnographies of workplaces or urban settings.

[SOC 115] Utopia in Theory and Practice (III)
Spring. 3 credits. D. Strang. Peer cultures have always sought to imagine and realize a better society, with both inspiring and disastrous results. In this course we discuss the literary utopias of Moore, Morris, and Bellamy, and the dystopias of Huxley, Orwell, and Zamyatin, and we examine real social experiments, including nineteenth-century intentional communities, twentieth-century socialisms and religious cults, and modern ecological, political, and millennial movements. Throughout, the emphasis is on two sociological questions: What kinds of social relationships appear as ideal? How can we tell societies that might work from those that cannot?

General Education Courses

[SOC 200] Social Problems (also R SOC 200) (III)

[SOC 202] Population Dynamics (also R SOC 201) (III)
Spring. 3 credits. P. Elwood-Enyekte. For course description, see R SOC 201.

[SOC 203] Work and Family (also WOMNS 203) (III)
4 credits. Not offered 2002–2003. Staff. Family life is often portrayed in the popular media as a haven away from the harsh realities of public life, suggesting that work and family constitute separate and distinct spheres. By contrast, many sociologists point out the links between work and family, and how these links have different consequences for men and women. This course highlights the responses of individuals, employers, and governments, both in the United States and internationally, to the dilemmas posed by the interface between work and family.

[SOC 206] International Development (also R SOC 205) (III)
Spring. 3 credits. Staff. For course description, see R SOC 205.

[SOC 207] Problems in Contemporary Society (III)
Fall. 4 credits. D. Heckathorn. This course examines contemporary social problems, with a focus on their sources in the organization of society. Modern societies are based on three fundamental types of institutions—social norms, hierarchies, and markets. Each is subject to distinctive types of failures resulting in problems that include poverty, prejudice and discrimination, intolerance and hate, alcohol and drug abuse, physical and mental illness, crime and delinquency, and urban problems. In analyzing these problems we emphasize the institutions through which they are created and perpetuated, and the form of institutional change required to address them.

[SOC 208] Social Inequality (III)
Spring. 4 credits. D. Grusky. This course reviews contemporary approaches to understanding inequality and the processes by which it comes to be seen as legitimate, natural, or desirable. We address questions of the following kind: What are the major forms of stratification in human history? Are inequality and poverty inevitable? How many social classes are there in advanced industrial societies? Is there a "ruling class"...
inevitable, and the forces making for change and stability in inequality regimes. These topics are addressed through readings, class discussions, and papers, and from the work of distinguished scholars of inequality, and debates staged between faculty who take opposing positions on pressing inequality-relevant issues (e.g., welfare reform, school vouchers, immigration policy, etc.). Although this course is required for students in the Inequality Concentration, it is also open to other students who have completed prior coursework relevant to issues of inequality.

**SOC 246 Drugs and Society (III)**
Fall. 4 credits. D. Heckathorn. The course focuses on drug use and abuse as a sociological phenomenon. Specifically, the course deals with the history of drug use and regulatory attempts in the United States and around the world; the relationship between drug use and racism/class conflict; pharmacology and use patterns related to specific drugs; perspectives on the etiology of drug use/abuse; AIDS prevention and harm reduction interventions; drug-using subcultures; drug policy, drug legislation, and drug enforcement; and the promotion and condemnation of drug activities in the mass media.

**SOC 248 Politics and Culture (III)**
Spring. 4 credits. M. Berezin. The course focuses on currently salient themes of nationalism, multi-culturalism and democracy. It explores such questions as: who is a citizen; who is a non-citizen; what is a political institution; and how do bonds of solidarity form in modern civil society. Readings are drawn principally from sociology and where applicable from political science and history. Journalist accounts, films, and web sites will supplement readings.

**SOC 251 Families and the Life Course (also HD 281) (III)**
Spring. 3 credits. E. Wethington. For course description, see HD 250.

**SOC 265 Latinos in the U.S. (also LSP 201 and R SOC 265) (III)**
Spring. 3 credits (4-credit option available). H. Velez. This course is an exploration and analysis of the Hispanic experience in the United States. It examines the sociohistorical background and economic, psychological, and political factors that converge to shape a Latino group identity in the United States. Perspectives are suggested and developed for understanding Hispanic migrations, the plight of Latinos in urban and rural areas, and the unique problems faced by the diverse Latino groups. Groups studied include Mexican Americans, Dominicans, Cubans, and Puerto Ricans.

**SOC 269 Inequality, Diversity, and Justice (also LSP 293, GOVT 293, PHIL 193, SOC 293) (III or IV)**
Fall. 4 credits. No prerequisites: intended for freshmen and sophomores. R. Miller. An examination of the nature and moral significance of social inequality, diversity, and poverty and of the search for just responses to them. How unequal are economic opportunities? What are the causes of poverty? To what extent is greater equality a demand of justice? Are traditional welfare programs an appropriate response to poverty? What special significance have race and gender as sources of inequality? Do they merit special remedies such as affirmative action? How should governments deal with religious diversity and other differences in ultimate values? For example, should abortion statutes be neutral toward rival views of the importance of potential human life? What are the causes of worldwide inequality? To what extent do people in per-capita rich countries have a duty to help the foreign poor? Moral argument, investigations of social causes, and legal reasoning interact in the search for answers to these questions. To provide these resources, the course is taught by leading faculty researchers in philosophy, political theory, the social sciences, and law.

**Methods and Statistics Courses**

**SOC 301 Evaluating Statistical Evidence (II)**
Fall. 4 credits. M. Clarkberg. A first course in statistical evidence in the social sciences, with emphasis on statistical inference and multiple regression models. Theory is supplemented with numerous applications.

**SOC 303 Design and Measurement (III)**
Spring. 4 credits. M. Burkhard. This course covers the foundations of sociological analysis, issues arising from using humans as data sources, the quality of our primary data; methods of data collection; research designs in wide use and their limitations; and pragmatic considerations in doing research on humans, organizations, communities, and nations.

**SOC 304 Social Networks and Social Processes (III)**
Fall. 4 credits. D. Strong. How do groups self-segregate? What leads fashions to rise and fall? How do rumors spread? How do social networks organize themselves on the Internet? This course examines these kinds of issues through the study of fundamental social processes such as exchange, diffusion, and group formation. We focus on models that can be explored through computer simulation and improved through observation.

**Intermediate Courses**

**SOC 309 The Sociology of Marriage (also SOC 509) (III)**
Spring. 4 credits. M. Clarkberg. Contemporary debate on the nature of the family in the United States often assumes a simplistic diach of the "traditional marriage." This course unpacks the myths and facts that undergird this model. We overview the historical patterns of marriage in the United States, examine data on contemporary union formation and dissolution and the consequences, and explore various theoretical models of marriage and its decline.

**SOC 311 Group Solidarity (III)**
Spring. 4 credits. M. Macy. What is the most important group that you belong to? What makes it important? What holds the group together, and how might it fall apart? How does the group recruit new members? Select leaders? Make and enforce rules? Do some members end up doing most of the work while others get a free ride? We explore these questions from an interdisciplinary perspective, drawing on sociobiology, economics, and social psychology, as we apply alternative theories of group solidarity to a series of case studies, such as urban gangs, spiritual communities, the civil rights movement, pro-life activists, athletic teams, work groups, and college fraternities.

**SOC 316 Gender Inequality (III)**
Fall. 4 credits. S. Szelényi. This course offers a comprehensive overview of historical and contemporary patterns of gender stratification. The first few weeks are devoted to the examination of different ideas (biological, functionalist, feminist) about gender inequality. The remainder of the course involves both theoretical analyses and empirical investigations of four substantive areas: the historical development of gender stratification, the nature of gender inequality in contemporary societies, cross-national comparison of gender inequality, and strategies for social change. Specific topics include: division of labor between men and women; relationship between social class and gender; dynamics of occupational sex segregation; gender differences in social mobility, socialization, and educational attainment, and race and ethnicity and variations in gender inequality. Each section includes examination of key theoretical debates and a survey of recent feminist research that is relevant to those debates.

**SOC 320 Globalization and Inequality (III)**
Fall. 4 credits. S. Szelényi. What is globalization and where is it taking us? The objective of the course is to explore the impact of globalization on patterns of social inequality. We begin the semester by considering what the term "globalization" means. We then explore competing accounts of this world-wide trend (e.g., modernization, world-system; post-modernity) and examine the various ways in which contemporary patterns of globalization are different from historical patterns of inequality. The second part of the semester takes on theoretical and empirical investigations of the way in which globalization has shaped the international division of labor, the structure of class relationships, gender inequality, racial and ethnic relations, migration, poverty, social networks, and indigenous world cultures.

**SOC 322 Service Learning (also ILROB 322)**
Fall. 4 credits. M. Lounsbury. For course description, see ILROB 322.

**SOC 324 Environment and Society (also SSTS 324 and R SOC 324) (III)**
Spring. 3 credits. Staff. For course description, see R SOC 324.

**SOC 326 Social Policy (also SOC 526) (III)**
Fall. 4 credits. S. Caldwell. The dramatic growth of the policy research sector as an institutional and intellectual force signals the changing relationship of social science to social policy in the United States. With an eye on that relationship, this course examines the development of social policy in selected areas, among them welfare, poverty, housing, crime, and health. The policy research sector itself—people, values, and institutions—is also surveyed.

**SOC 340 Health, Behavior, and Health Policy (III)**
Spring. 4 credits. S. Caldwell. This course examines the social contexts of physical and mental health, illness and medical care; its purpose is to explore the contributions of social science to health promotion and health policy. Topic areas
include: the social context of health, disease and illness; the social organization of health services; use of health services; effectiveness of health service use; health promotion and disease prevention; and national health care policies.

SOC 341 Modern European Society and Politics (also GOVT 341) (III)
Spring. 4 credits. T. Tarrow.
For course description, see GOVT 341.

[SOC 352 The Sociology of Contemporary Culture (III)
Spring. 4 credits. C. Leuenberger.
This course introduces the rapidly expanding field at the intersection of sociology and cultural studies. It provides an introduction to theoretical debates in cultural studies and to sociological studies of popular culture. We discuss the emergence of the tourist industry, the significance of consumption in modern life, narratives in popular films, the culture of malls, and the use of rhetoric in social life, cultural analyses of science, and the social construction of self, bodies, and identities.]

SOC 353 Knowledge and Society (also S&TS 353) (III)
Fall. 3 credits. C. Leuenberger.
This course focuses on the historical evolution of the sociology of knowledge as a theoretical paradigm and an empirical research field. We examine the phenomenological origins of the sociology of knowledge and many of its central texts. We study how it has been applied to such areas as panethood, interaction, religion, identity, and the emotions. We also consider epistemological questions that arise, and cover various sociological and empirical approaches which have been influenced by the sociology of knowledge such as ethnmethodology, conversation analysis, and the sociology of science and technology.

SOC 356 Law and Society (also SOC 556) (III)
Fall. 4 credits. W. Burkard.
The phrase "law and society" misleadingly suggests that we are speaking of two discrete entities: "law" and "society." But law is itself part of society, its basic processes are social processes, and it contains within its own internal workings social dimensions worthy of study by the sociologist.

In this course we will examine law in society. The classical sociological models law—those of Marx, Weber and Durkheim are well-represented. The works of several significant American and European critical legal theorists—those of the Frankfurt School, Michel Foucault, Roberto Unger, Duncan Kennedy, and Jurgen Habermas—are also well-represented, not only to facilitate and understanding of the bases for the attacks on the liberal Rule of Law, but also to facilitate an understanding of the relationship between law and politics and the potential for revitalizing the Rule of Law through democracy. The major themes in classical and contemporary legal anthropology, e.g., hierarchy, rule-centered vs. processual v. interpretive paradigms, are reviewed. We also consider the extent to which the various perspectives on law in society have been appropriated internationally.

SOC 357 Schooling and Society (III)
Spring. 4 credits. S. Morgan.
After an examination of alternative theories of the development and changing function of educational institutions in society, this course examines explanations of individuals obtain educational training, how an individual's family background and race affect his or her trajectory through the educational system, and how and why society confers advantages on educated individuals. Following a review of recent empirical research on effective schools, the course concludes with an examination of current policy debates in the United States, focusing primarily on school choice, vouchers and financial aid for a college education.

SOC 370 Careers (also SOC 570) (III)
Fall. 4 credits. W. Burkard.
By examining various career paths, we will consider the implications of career as a continuous process or as a sequence of positions. We will explore the differences and similarities among different career paths and lay out the patterns and structures of career formation from a sociological point of view. We will also discuss the settings in which career development takes place, giving some comparative attention to ways of organizing careers in other societies.

SOC 371 Comparative Social Stratification (also R SOC 370) (III)
Fall. 3 credits. T. Lyson.
For course description, see R SOC 370.

SOC 375 Classical Theory (III)
Spring. 3 credits. R. Swedberg.
The course introduces students to major macro-sociological paradigms and encourages them to participate in "cross-paradigm" debates. The three main theorists of sociology (i.e., Marx, Durkheim, and Weber) are compared with respect to their approaches to the social sciences, their views on human history, their conceptions of capitalist society, and their ideas on social change. The assigned readings focus on the original writings of these theorists, while the lectures provide the requisite socio-historical context.

Advanced Courses

The following courses are intended for advanced undergraduates with substantial preparation, as well as for graduate students in sociology and related disciplines. The normal prerequisite for all 400-level courses is one introductory course plus 301 (or an equivalent statistics course). Students who are not sure whether their background is sufficient for a particular course should consult the professor.

SOC 408 Qualitative Methods (also SOC 508) (III)
Spring. 4 credits. M. Brinton.
This course aims to acquaint students with the practice of non-quantitative research methods. It does not offer a laundry list of techniques, rather it asks students to think about how particular methods are moved or less suited to the answering of particular types of research questions. The course is divided into four parts: (1) a general discussion of theory, methods and evidence in social science; (2) a series of readings and exercises on particular methods; (3) an analysis of full-length works to see how they were put together; (4) discussion of student projects.

[SOC 427 The Professions: Organization and Control (also ILROB 427) (III)
Fall. 3 credits. Prerequisite: permission of the instructor. Not offered 2002-2003. P. Tolbert.
For course description, see ILROB 427.]

[SOC 437 Social Demography (also R SOC 438) (III)
Fall. 3 credits. D. Gurak.
For course description, see R SOC 438.

[SOC 457 Health and Social Behavior (also HD 457) (III)
Fall. 3 credits. Prerequisites: HD 250, SOC 101, R SOC 101, or SOC 251 and a course in statistics. Letter grades only. Not offered 2002-2003. E. Wethington.
For course description, see HD 457.]

SOC 470 Theories of the Family and the Life Course (also SOC 570) (III)
Spring. 4 credits. M. Clarkberg.
This seminar examines theoretical frameworks for understanding the family and the life course. Foci include the dynamics of role transitions and normative role trajectories, linkages across the various domains of individual lives (such as work and family), the interplay of individual and historical times, the social significance of age, and the linkages between individuals and the families and other social contexts they live in. We also briefly consider various methodological challenges associated with putting these theoretical perspectives into practice.

SOC 491 Independent Study
Fall or spring. 1-4 credits. This is for undergraduates who wish to obtain research experience or to do extensive reading on a special topic. Permission to enroll for independent study will be granted only to students who present an acceptable prospectus and secure the agreement of a faculty member to serve as supervisor for the project throughout the term. Graduate students should enroll in 891–892.

SOC 495 Honors Research
Fall or spring. 4 credits. Limited to sociology majors in their senior year. Prerequisite: permission of instructor.

SOC 496 Honors Thesis: Senior Year
Fall or spring. 4 credits. Prerequisite: Sociology 495.

Graduate Core Courses

These courses are primarily for graduate students in sociology but may be taken by other graduate students with permission of the instructor.

SOC 501 Basic Problems in Sociology I
Fall. 4 credits. M. Brinton.
Analysis of theory shaping current sociological research. Examination of several central problems in sociological inquiry provides an occasion for understanding tensions and continuities between classical and contemporary approaches, for indicating the prospects for unifying macrosociological and microsociological orientations, and for developing a critical appreciation of efforts to integrate theory and research.

SOC 502 Basic Problems in Sociology II
Spring. 4 credits. D. Heckathorn.
Continuation of SOC 501. Emphasis is on the logical analysis of theoretical perspectives,
theories, and theoretical research programs shaping current sociological research. The course includes an introduction to basic concepts used in the logical analysis of theories and examines their application to specific theoretical research programs. Theoretical perspectives include functionalism, social exchange, and Interactionism.

**SOC 505 Research Methods I: The Logic of Social Inference**

Fall. 4 credits. Prerequisite: a first course in statistics and an introductory course in sociology. S. Caldwell. This course is an introduction to techniques of social inference. We cover research methods, sources of evidence, model design, and questions of empirical validity.

**SOC 506 Research Methods II**

Spring. 4 credits. S. Morgan. This is a course on advanced linear regression analysis in theory and practice. After a review of classical bivariate regression and elementary matrix algebra, the course progresses under the credulous assumption that the most important fundamentals of data analysis techniques can be taught in the context of simple multivariate linear models. Accordingly, the course provides a relatively formal treatment of the identification and estimation of single equation OLS and GLS regression models, instrumental variable models, traditional path models, and multiple indicator models. Interspersed with this material, the course addresses complications of regression modeling for the practicing researcher including missing data problems, measurement error, regression diagnostics, weighting, and inference for surveys. The course concludes with a brief introduction to nonlinear regression, counterfactual models of causality, Bayesian inference, and hierarchical models.

**SOC 507 Research Methods III**

Fall. 4 credits. D. Grusky, D. Strang. Introduction to the general linear model for discrete outcomes. Discussion of principles of estimation, model selection, coefficient interpretation, specification error, and fit assessment. The first half of the course covers logistic regression, probit, log-linear, and latent class models, while the second half of the course covers event history models. Although the statistical theory underlying these models is reviewed, issues of interpretation and estimation typically take precedence. Emphasis is accordingly placed on the analytic issues that arise in writing research papers with models of this kind.

**Graduate Seminars**

These seminars are primarily for graduate students but may be taken by qualified advanced undergraduates who have permission of the instructor. The seminars offered in each term are determined in part by the interests of students, but it is unlikely that any seminar will be offered more frequently than every other year. The list below indicates seminars that are likely to be offered, but others may be added and some may be deleted. Students should check with the department before each term.

**SOC 504 Economy and Family (also SOC 404)**

**SOC 508 Qualitative Methods (also SOC 408)**

Spring. 4 credits. M. Berezin. For course description, see SOC 408.

**SOC 509 The Sociology of Marriage (also SOC 309, WOMNS 309, WOMNS 509)**

Spring. 4 credits. M. Clarkberg. For course description, see SOC 309.

**SOC 510 Seminar on Comparative Societal Advancement**

3 credits. Open to advanced graduate students throughout the social sciences, with permission of instructor. Not offered 2002–2003. M. Brinton. This seminar is intended for advanced graduate students interested in comparative methods and research in the social sciences. It is offered in conjunction with the Comparative Societal Advancement program in the Einaudi Center for International Studies. Students enrolled for credit write critiques of papers presented at the seminar by faculty members and other graduate students, and work on their own project. Some weeks are devoted to collective reading and analysis of background work. Students may enroll for more than one semester.

**SOC 518 Social Inequality: Contemporary Theories, Debates, and Models**

4 credits. Not offered 2002–2003. D. Grusky. This course serves as an introduction to contemporary theories, debates, and models regarding the structure of social classes, the determinants of social mobility, the sources and causes of racial, ethnic, and gender-based inequality, and the implications of postmodern forms of stratification. The twofold objective is to both review contemporary theorizing and to identify areas in which new theories, hypotheses, and research agendas might be fruitfully developed.

**SOC 519 Workshop on Social Inequality**

Spring. 4 credits. R. Weeden. This workshop provides a forum for students, faculty, and guest speakers to present and discuss their current research projects related to social inequality.

**SOC 526 Social Policy (also SOC 326)**

Fall. 4 credits. S. Caldwell. For course description, see SOC 326.

**SOC 546 Economic Sociology**

Spring. 4 credits. R. Swedberg. This course introduces the field of economic sociology and covers major topics addressed by sociologists studying the intersection of economy and society. We begin with classic statements on economic sociology and then move to the invigoration of the field in recent years, reading works that have been instrumental in this invigoration. Consideration is given to the several variants of "institutionalism" that have informed the sociological study of markets, organizations, and economic exchange.

**SOC 570 Theories of the Family and the Life Course**

Spring. 4 credits. M. Clarkberg. This course provides an analysis of the theoretical approaches informing sociological understandings of the family and the human life course. Approaches include power and exchange models, interactionism, the new home economics, and life course approaches. Emphasis is on understanding the conflict and congruence between existing theoretical frameworks, and on translating theoretical issues into empirical research questions.

**SOC 580 Simulating Social Dilemmas (also SOC 480)**

**SOC 590 Special Topics: Research Methods**

4 credits. Not offered 2002–2003. M. Macy, D. Strang. This course covers special topics in the analysis of quantitative and qualitative data. The topics covered vary from year to year, but are typically chosen from such possibilities as: networks, social simulation, Bayesian methods, game theory, qualitative research methods, and laboratory experimentation. In fall 2002 the course will include a one-half semester module on event history analysis, and a one-half semester module on social simulation.

**SOC 591 Special Seminars in Sociology**

Fall and spring. 2–4 credits. Staff. These graduate seminars are offered irregularly. Topics, credit, and instructors vary from semester to semester. Students should look at the sociology department bulletin board at the beginning of each semester for current offerings.

**SOC 606-607 Sociology Colloquium**

Fall and spring. No credit. Required of all sociology graduate students. A series of talks representative of current research interests in sociology, given by distinguished visitors and faculty members.

**SOC 608 Proseminar in Sociology**

Fall. 1 credit. Enrollment restricted to first-semester sociology graduate students. Staff. Discussion of the current state of sociology and of the research interests of members of the graduate field, taught by all members of the field.

**SOC 660 States and Social Movements (also GOVT 660)**

Fall. 4 credits. S. Tarrow. For course description see GOVT 660.

**SOC 680 Workshop on Transnational Contention (also GOVT 681)**

Fall. 4 credits. S. Tarrow. For course description, see GOVT 681.

**SOC 691 Independent Study**

Fall or spring. 2–4 credits. Prerequisite: graduate status and permission of a faculty member willing to supervise the project. Staff. For graduates who wish to obtain research experience or to do extensive reading on a special topic. Permission to enroll for independent study will be granted only to students who present an acceptable prospectus and secure the agreement of a faculty member to serve as supervisor for the project throughout the term.

**SOC 725 Analysis of Published Research in Organizational Behavior (also ILROB 725)**

SOUTH ASIA PROGRAM

The South Asia Program coordinates research, teaching, and events related to South Asia, including Nepal, Pakistan, Sri Lanka, Bangladesh, and India. The program includes a rich array of courses and events that enrich the academic experience for students interested in the region.

Asian Studies concentrations are available in South Asia, including a South Asia concentration within the framework of the Department of Asian Studies. Seventeen core faculty members provide expertise in various South Asian languages and cultures, and South Asia studies or pursue a Master of Professional Studies in another school with a concentration in South Asian studies, or for further information on research opportunities, direct questions to the program office, 180 Uris Hall, (607) 255-2378 or SEAP@cornell.edu.

SOC 891-892 Graduate Research

891. fall; 892. spring. Up to 4 credits each term. Prerequisite: graduate standing and permission of a faculty member willing to supervise the project.

SOC 895-896 Thesis Research

895. fall; 896. spring. Up to 6 credits each term. Prerequisite: permission of thesis supervisor.

SOUTH ASIA PROGRAM

SOUTHEAST ASIA PROGRAM

Southeast Asia studies at Cornell is included within the framework of the Department of Asian Studies. Seventeen core faculty members in the colleges of Arts and Sciences, Business and the Johnson Graduate School of Management, the School of Industrial and Labor Relations, and Agriculture and Life Sciences participate in interdisciplinary programs of teaching and research on the history, culture, and societies of the region stretching from Burma through the Philippines. Courses are offered in such fields as anthropology, Asian studies, economics, finance, government, history, history of art, labor relations, linguistics, music, and rural sociology. Instruction is also offered in a wide variety of Southeast Asian languages: Burmese, Cambodian (Khmer), Cebuano (Bisayan), Indonesian, Javanese, Tagalog, Thai, and Vietnamese. In addition, faculty from other disciplines also provide area instruction on Southeast Asia. The formal program of study is enriched by a diverse range of extracurricular activities, including an informal weekly brown bag seminar, an exhibit at the Johnson Museum, and concerts of the Gamelan Ensemble. The George McT. Kahin Center for Advanced Research on Southeast Asia is also the site for public lectures as well as publication and outreach activities related to this area. The John M. Echols Collection on Southeast Asia, in Kroch Library, is the most comprehensive collection on this region in America.

Undergraduates may major in Asian Studies with a focus on Southeast Asia and its languages, or they may elect to take a concentration in Southeast Asia studies with any other major by completing 18 credits of course work. Graduate students may work toward an M.A. degree in Southeast Asian studies or pursue a Master of Professional Studies in another school with a concentration in Southeast Asian studies. Ph.D. students specializing in Southeast Asia receive a doctorate in a discipline such as history, history of art, anthropology, government, music, economics, or city and regional planning. Academic Year and Summer Foreign Language and Area Studies scholarships are available for graduate students who are U.S. citizens or permanent residents.

For courses available in Southeast Asian studies and details on the major, see the Department of Asian Studies listing in this volume. Additional information is available on the internet at: www.einaudi.cornell.edu/southeastasia. Inquiries for further information should be directed to the program office, 180 Uris Hall, (607) 255-2378 or SEAP@cornell.edu.

SPANISH

See Department of Romance Studies.

STATISTICAL SCIENCE DEPARTMENT

The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the section, “Interdisciplinary Centers, Programs, and Studies,” in the front of this catalog.

SWAHILI

See Africana Studies and Research Center.

THEATRE, FILM & DANCE

Through its courses and production laboratories, the department provides students with a wide range of opportunities in theatre, film, and dance. It also offers majors in each of those areas. Those majors educate students in accordance with the general liberal arts ethic of the college. The department encourages academic and studio participation by students from all disciplines.

Theatre Arts Major

The theatre major offers studies in the history of theatre, dramatic theory and criticism, playwriting, acting, directing, design, technology, and stage management. Students interested in the Theatre Arts major should consult with Alison Van Dyke (Director of Undergraduate Studies, Theatre, Film & Dance).

Theatre major requirements

1) THETR 240 and THETR 241 (two-semester introduction to theatre) 8

2) Four laboratory courses distributed as follows:

THETR 151 Production Lab I 1–3

THETR 153, THETR 253, or THETR 353 Stage Management Lab I, II, or III 1–3

THETR 155 Rehearsal and Performance of THETR 151 in a different area 1–3

THETR 251 or THETR 351 Production Lab II or III 1–4
3) Four courses in the area of Theatre Studies (see Theatre Studies section of theatre courses) chosen in the following manner:
   one course must be at 300 level
   one course must be at 400 level
   two additional courses at the 300 or above level
   one of the four courses must be pre-twentieth century.

4) Three courses (at least 9 credits) in other Theatre courses chosen in consultation with the faculty adviser. Course taken to qualify for admission to the Advanced Undergraduate Theatre Program (described below) may also be used to fulfill this requirement.

5) Courses in which a student receives a grade below “C” cannot be used to fulfill the requirements for a Theatre major.

Honors
The Theatre honors program is for majors who have demonstrated exceptional ability in the major and who seek an opportunity to explore branches of their subject not represented in the regular curriculum or to gain experience in original research. To be part of the honors program the student must maintain a GPA of 3.5 in classes for the theatre major and an average of 3.0 in all courses. Students must consult with their advisers in the spring of their junior year in order to enroll in the honors programs.

The Advanced Undergraduate Theatre Program
The department offers advanced study in directing, playwriting, design/technology, and stage management to students who qualify on the basis of outstanding achievement in course work. Admission to the AUTP is by invitation of the area faculty supervisor and the completion of a recommended “track” of courses or equivalent experience. (Students interested in the AUTP are encouraged to consult the faculty in their area of interest before beginning to fulfill this requirement. Approval process will include a portfolio review and/or interview. The program provides students with intensive study in theatre as well as the opportunity to collaborate with professional faculty and guest artists.

Independent Study, Internships and Honors

THETR 300 Independent Study
Fall, spring, or summer. 1-4 credits.
Independent study in theatre, film or dance allows students the opportunity to pursue special interests not treated in regularly scheduled courses. A faculty member, who becomes the student’s instructor for the course, must approve the student's program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study which is available in 225 Schwartz Center.

THETR 485 Undergraduate Internship
Fall, spring, or summer. 1-3 credits.
To be eligible to enroll and receive credit for an internship, students must either be majors or be concentrators in the department. Students are responsible for arranging their own internships in consultation with the faculty in their area of choice prior to preregistration for the semester in which the internship is planned to take place. To receive credit for the course, the internship must be unpaid. Students must follow the rules and procedures stated in the departmental internship form.

THETR 495 Honors Research Tutorial
Fall, spring. 4 credits. Limited to Honors students in Theatre, Film and Dance. This course is the first of a two-semester sequence (the second is THETR 496) for seniors engaged in an honors project.

THETR 496 Honors Research Tutorial
Fall or spring. 4 credits. Limited to Honors students in Theatre, Film and Dance. This course is the second of a two-semester sequence (the first is THETR 495) for students engaged in an honors project.

First-Year Writing Seminars
Consult the John S. Knight Institute brochure for times, instructors, and descriptions.

General Survey Courses

THETR 230 Creating Theatre (IV)
Spring. 3 credits. Limited to 25 students. D. Hall and faculty.
An introduction to theatrical production for the non-majors. Students develop a new critical perspective of the performing arts by examining the creation of the theatre onstage and backstage through lectures, demonstrations, discussions with various faculty and staff at the Schwartz Center, and by attending department productions. Some writing is required.

THETR 301 Mind and Memory: Exploring Creativity in the Arts and Sciences (also MUSIC 372, S HUM 301, ENGL 301) (IV)
Spring. 4 credits. J. Morgenroth and staff. Creativity is the attribute of the mind that enables us to make new combinations from often-familiar information, to perceive analogies and other linkages in seemingly unlike elements, to see whole rather than parts. As true of all learning, creativity is dependent on memory—a memory that is genetic and collective as well as personal and experimental. This course explores the nature of creativity in science and art, indicating the differing requirements for discovery in the diverse disciplines while demonstrating the commonality that underlies the creative process and binds physicist or mathematician to poet, composer, or visual artist. The course presents lectures by weekly guests from various disciplines in the arts and sciences as possible, faculty members who discuss the process underlying their research or their work as creative and performing artists. Members of the course are encouraged to enroll in another course or be engaged in an activity (research, artistic production, or performance) in which the insights gained in this class can be applied or tested. In addition, each section of the course participates in a common creative project. To further abet the active participation necessary to learning, students are asked to keep a journal, one that summarizes their project. To further abet the active participation necessary to learning, students are asked to keep a journal that summarizes their project. To further abet the active participation necessary to learning, students are asked to keep a journal that summarizes their project.

THETR 240 Introduction to World Theatre I (IV)
Fall. 4 credits. E. Winet.
A survey of practices, literatures, and themes of theatrical performance in Africa, America, Asia, and Europe from antiquity to around 1600. Case studies drawn from ancient Egypt, Greece, Rome, the Near East, and India; medieval/federal Indonesia, China, Japan, and England up to the age of European colonialism. Issues of masking and identity, storytelling and ritual, stage and society, tradition and modernity. Lecture will be combined with frequent student projects.

THETR 241 Introduction to World Theatre II (IV)
Spring. 4 credits. E. Winet.
A survey of world theatrical performance from around 1600 to the present. Case studies drawn from English and French seventeenth-century theatres; recent traditional theatres of Japan, India, China, and Africa; bourgeois, realistic and avant-garde theatres of Europe and the United States; postmodern and postcolonial theatres of the past half century. Recurring issues of realism and theatricalism, innovation and nostalgia, globalization and marginalization. Lecture will be combined with frequent student projects.

THETR 320 Queer Theatre (also ENGL 352 and WOMNS 320) (IV)
What is Queer Theatre and did it exist before the politicization of Queer Identity? Starting with the Renaissance in England, we examine dramatic, critical, historical, and other writing as we pose questions about spectatorship, visibility and professionalism. Evening film screenings are required.

THETR 321 Asian Theatre and Drama (IV)
Spring. 4 credits. E. Winet.
A survey of the theatres of Asia from antiquity to the present. The course will progress regionally through the Pacific Ocean, South, Southeast and East Asia with a final unit addressing the modern theatres of Asia as a whole. We will consider performance forms and training methods, dramatic, non-dramatic, and other scenic elements of Asian theatre. With particular attention to the integration of music, dance, enactment, and speech, we will trace contexts for the development of major traditions and genealogies of influence
between Asian performance cultures and between Asia and the West.

**[THETR 322] Russian Drama and Theatre** (also RUSSL 332) (IV)
See RUSSL 322 for description.

**[THETR 332] Medieval and Renaissance Theatre** (also COM L 332) (IV)
Besides the discussion of representative plays from these periods, this class may focus on questions such as: What is the staging of medieval drama, the relation between the church and the community, and the ways in which historians and critics have interpreted the Renaissance, especially in light of race, class, gender on stage as well as in the audience?

**[THETR 333] European Drama 1660–1900: Molierie to Ibsen** (also ENGL 335 and COM L 336) (IV)
See ENGL 335 for description.

**[THETR 335] Modern Western Drama, Modern Western Theater: Theory and Practice** (also COM L 335, VISST 335) (IV)
Fall. 4 credits. Staff.
A study of drama and the cultural contexts of its performance from the mid-nineteenth century to the mid-twentieth century in Europe and America. We move from symbolism and naturalism through to constructivism, expressionism, dadaism, futurism, surrealism and on to Brecht and Artaud and a few of their more contemporary descendants. Students engage in performance projects as well as text analysis.

**[THETR 336] American Drama and Theatre** (also ENGL 336 and AM ST 334) (IV)
Fall. 4 credits. Limited to 25 students. R. Schneider.
Taking a broad spectrum approach to performance, this course includes anthropological texts on ritual and play, sociological texts on performances in everyday life, literary studies texts on "performatives" in speech and writing, folkloristic studies on parades and reenactments, psychological and philosophical studies on the role of performance in the formation of identity, as well as standard texts of the theatre. We consider the distinctions between play, ritual, spectacle, festival, theater, and the "visual" arts. We explore the differences between spectatoring and witnessing and examine studies on audience behavior. At the base of our inquiry is the broad issue of the role of representational practices within culture and among cultures. If, as Barbara Meyerhoff has written, we understand ourselves by showing ourselves to ourselves, what role does "showing" have in construction of the selves we seek to understand? Why is postmodern culture often called the "society of the spectacle" (Debord)? If, as Aristotle claimed, we are mimetic creatures at base, which comes first—representation or reality? Looking closely at the notion of "live" art, we weigh theorists who claim that performance is ephemeral and disappearing against those who claim that performance, such as oral history, is resilient and enduring. Students have the opportunity to do fieldwork, create performative works, and engage in scholarly study.

**[THETR 337] Contemporary American Theatre** (also ENGL 337) (IV)
A survey of American drama and theatre post-1960. Particular emphasis will be placed on plays by women and dramatists of color. We explore questions of identity and theatrical responses to contemporary American culture.

**[THETR 339] The Avant-Garde: Dead or Alive?** (IV)
This class will explore experimental performance today, with concentration on the performative bases of the European and American Avant-Garde in art and in theater. We engage in the debate about whether the avant-garde is "dead" or not, based on contemporary examples. We also explore whether or not there was/is an "avant-garde" in other parts of the world—Africa, Japan, India, and so on. We begin by studying the historical avant-garde, but move quickly to the "neo-avant-garde" and to theories and practices of theatrical postmodernism and performative installation art. Students make performative/art work as well as engage in text analysis.

**[THETR 345] The Tragic Theater** (also CLASS 345 and COM L 344) (IV)
Spring. 4 credits. Limited to 40 students. F. Ahl.
See CLASS 345 for description.

**[THETR 346] Adaptation: Text/ Theatricality** (IV)
Spring. 4 credits. Prerequisite: permission of instructor. B. Milles.
Mounting a script into a show is a process of adaptation from page to stage. But dramas have also been translations of other media. Sondheim’s *Sunday in the Park with George* “translated” a painting by Seurat. Stringberg’s *Ghost Sonata* “translated” a symphony by Beethoven. Plays can even be adapted into other plays. Césaire’s *A Tempest*, Paula Vogel’s *Desdemona: A Play about a Handkerchief*, and Heiner Muller’s *HomoEclipticus*. In performance art (where there is often no script) examples abound as well. Can you imagine reenacting Edward Manet’s *Olympia* while someone builds a frame around you? And there are lots of exciting possibilities that arise in adapting across cultures—such as a Kathakali *Lear* or a Shakespearean *Macbeth*.

**[THETR 403] Ritual, Play, Spectacle, Act: Performing Culture** (also THETR 603, VISST 403) (IV)
Taking a broad spectrum approach to performance, this course includes anthropological texts on ritual and play, sociological texts on performances in everyday life, literary studies texts on "performatives" in speech and writing, folkloristic studies on parades and reenactments, psychological and philosophical studies on the role of performance in the formation of identity, as well as standard texts of the theatre. We consider the distinctions between play, ritual, spectacle, festival, theater, and the "visual" arts. We explore the differences between spectatoring and witnessing and examine studies on audience behavior. At the base of our inquiry is the broad issue of the role of representational practices within culture and among cultures. If, as Barbara Meyerhoff has written, we understand ourselves by showing ourselves to ourselves, what role does "showing" have in construction of the selves we seek to understand? Why is postmodern culture often called the "society of the spectacle" (Debord)? If, as Aristotle claimed, we are mimetic creatures at base, which comes first—representation or reality? Looking closely at the notion of "live" art, we weigh theorists who claim that performance is ephemeral and disappearing against those who claim that performance, such as oral history, is resilient and enduring. Students have the opportunity to do fieldwork, create performative works, and engage in scholarly study.

**[THETR 405] Operatic Contacts** (also S HUM 405, GERST 404, COM L 408) (IV)
See Society for the Humanities for complete description.

**[THETR 420] Brecht, Artaud, Mueller, Wilson** (also GERST 430 and COM L 430) (IV)
See GERST 430 for description.

**[THETR 423/623] Translation for the Theatre** (also COM L 446/646) (IV)
Spring. 4 credits. Prerequisites: proficiency in language other then English; coursework in dramatic literature, directing, or playwriting. Not offered 2002–2003. J. E. Gainor.
What is involved in the process of translation for the theatre and what makes a translation effective on stage? What should factor into our selection or creation ofArtaud's translations? Using a case-study format for the first half of the term, we examine important dramatic texts in their English translations to consider such issues as humor, colloquial language, political and cultural allusion, poetics, and the use of "literal translation". Dramatists considered may include Aristophanes, Moliere, Chekov, and others. We begin with an overview of translation theory and then move more specifically to theatrical concerns, especially from directing, playwriting, and dramatical perspectives. The second half of the term functions as a writing workshop; each student selects a script and, bearing in mind our theoretical and practical discussions, works towards developing a playable translation as a final project.

**[THETR 424] Elizabethan and Jacobean Drama** (also ENGL 425) (IV)
See ENGL 425 for a complete description.

**[THETR 425] Introduction to Dramaturgy and Dramatic Criticism** (IV)
What is dramaturgy? What does a dramaturg do? We examine this position in the theatre in both historical and contemporary modes. The class is primarily a practicum, involving dramaturgical work on departmental productions, participation with student playwrights on new script development, and practice in the writing of dramatic criticism.

**[THETR 426] Seminar in Theatre History: The Provincetown Players and Greenwich Village Culture, 1915–1922** (also AM ST 430.3 Honors Program, ENGL 426) (IV)
Fall. 4 credits. B. Milles.
This seminar explores a number of artistic, political, and social movements emanating from Greenwich Village in the 'teens and
twenty, and explore their impact on the evolution of American drama. The Production/Play Center is a non-profit theatre company that first showcased O'Neill, Glaspell, Millay, and other important American writers, as the focus of our analysis. The seminar is designed as a case study in the critical practice of cultural studies.

[THETR 431 Theory of the Theatre and Drama (also COM L 433) # (IV)]
Fall 4 credits. Prerequisite: Some theatre history and dramatic literature work at the 300 level or permission of instructor. Not offered 2002–2003. D. Bathrick.
A survey of dramatic theory and theories of theatrical representation from Aristotle to the present.

[THETR 433 Dramaturgy: Play and Period (also ENGL 435)]

[THETR 435 Special Topics: The Victorian and Edwardian Theatre (also ENGL 422)]
An in-depth exploration of theatre and drama in England from the mid-nineteenth through early twentieth centuries. Topics include melodrama, the social problem play, the popular stage, the conditions of theatrical production, and the impact of European theatre. Representative authors include Robertson, Pinero, Shaw, Wilde, Robins, Galsworthy, and St. John.

[THETR 438 The Female Dramatic Tradition (also WOMNS 433)]
Spring 4 credits. Staff.
Is there a "female dramatic tradition?" What is the female tradition in the theatre? The course explores these questions through an investigation of texts by women dramatists, including Henrik Ibsen, Apha Behn, and Caryl Churchill, as well as theory by such critics as Sue Ellen Case and Jill Dolan.

[THETR 439 East and West German Drama (also GERST 438 and THETR 648)]
The course covers major historical and textual developments in German theatre from the end of World War II to the present. Leading dramatists from West and East Germany, Switzerland, and Austria (Brecht, Frisch, Durrenmatt, Weiss, Hochhuth, Braut, Kroetz, Handke, and others) are treated in the light of the political events and aesthetic-theoretical roots of the interculturalist. This course focuses on how the texts themselves are blueprints for productions with particular emphasis on the choices available to the actor inherent in the text.

[THETR 446 Shakespeare in (Con)text (also VISST 446)]
Fall 4 credits. Prerequisite: THETR 280 or permission of instructor. B. Levit.
This course examines how collaboration among stage directors, designers, and actors leads to differing interpretations of the plays. The course focuses on how the texts themselves are blueprints for productions with particular emphasis on the choices available to the actor inherent in the text.

[THETR 454 American Musical Theatre (also ENGL 454 and MUSIC 490)]
Spring 4 credits. Prerequisite: ENGL 272 or THETR 240 and 241 and ability to read music at the level of MUSIC 105. S. McMillin.
See ENGL 454 for description.

[THETR 459 Contemporary British Drama (also ENGL 459)]
Spring 4 credits. Limited to 15 students. S. McMillin.
See ENGL 459 for a complete description.

[THETR 472 Sondheim and Musical Theatre (also ENGL 472)]
Fall 4 credits. S. McMillin.
See ENGL 473 for description.

[THETR 483 Seminar in Comparative Twentieth-Century Anglophone Drama (also ENGL 483)]
Fall 4 credits. Some knowledge of classical and avant-garde theories of drama and theatre would be useful, but is not a prerequisite. T. Not offered 2002–2003. J. B. Jeyifo.
The course explores twentieth-century Anglophone drama in diverse areas of the English-speaking world. Through works of Irish, African, Caribbean, and U.S. playwrights like Frei, Soyinka, Fugard, Walcott, and Shange, the seminar is organized around two principal issues: the use of folk, ritual, vernacular, and carnivalesque performance idioms to transform the received genre of Western literary drama and themes of empire, colony, and postcolonial in the making of the modern world.

[THETR 580 Problems in Asian Art: Dancing the Stone: Body, Memory, and Architecture (also ART H 580 and ASIAN 580)]
Spring 4 credits. K. McGowan.
See ART H 580 for description.

[THETR 660 Visual Ideology (also COM L 660 and GERST 660)]
For description, see GERST 660.

[THETR 679 Bertolt Brecht in Context (also GERST 679 and COM L 679)]
See GERST 679 for description.

[THETR 703 Theorizing Film (also ENGL 703 and FRLIT 695)]
See ENGL 705 for description.

[THETR 710 The Pedagogy of Theatre]
Fall 4 credits. The taking of this course must coincide with the offering of the relevant undergraduate class, with the permission of the instructor. Staff.
This class provides graduate students in the field of theatre an opportunity to work directly with a faculty member to explore pedagogical theory and practice for undergraduate theatre classes in all areas of the curriculum.

Acting

[THETR 155 Rehearsal and Performance]
Fall or spring. 1–2 credits. 1 credit per production experience per semester up to 2 credits per semester. Students must register for the course in the term in which credit is earned. Limited to 15 students. S-U grades only.

[THETR 205 Rehearsal Workshop]
Fall or spring. 2 credits. Limited to 30 students. Prerequisites: participation in a particular department production; and permission. Staff.
This course enables students participating in a particular production to gain expertise and/or knowledge to contribute to that production. The focus of the class depends on the needs of a particular production (history, choreography, textwork, dramaturgy, etc).
THETR 280 Introduction to Acting (IV)
Fall or spring. 3 credits. Each section is limited to 16 students. Prerequisites: THETR 280 and audition. Registration only through roster in the 225 Schwartz Center. Staff. An introduction to the actor's technique and performance skills, exploring the elements necessary to begin training as an actor, i.e., observation, concentration, and imagination. Focus is on physical and vocal exercises, improvisation, and text and character. There is required play reading, play attendance, and some scene study.

THETR 281 Acting I (IV)
Fall or spring. 3 credits. Each section is limited to 14 students. Prerequisites: THETR 280 and audition. Limitation only through roster in department office. 225 Schwartz Center. 281 is restricted to sophomores and above. Practical exploration of the actor's craft through exercises in physical and psychological action, improvisation and scene study.

THETR 282 Standard American Stage Speech (IV)
Spring. 3 credits. Prerequisites: THETR 280 and permission of instructor. Limited to 10 students. A. Van Dyke. An introduction to Standard American Stage Speech. We study various regional American accents and Standard American Stage Speech using the International Phonetic Alphabet (IPA) as a way to designate the vowel, diphthong, and consonant sounds of spoken English. The goal of this course is to learn speech introduction to the processes of acting. Practice in training techniques, rehearsal procedures, and methodology.

THETR 287 Summer Acting Workshop
Summer. 3 credits. Limited to 16 students in a section. B. Levitt and staff. An introduction to the processes of acting. Practice in training techniques, rehearsal procedures, and methodology.

THETR 288 Acting II (IV)
Fall. 3 credits. Prerequisite: THETR 281 and audition. Limited to 12 students. S. Cole. A continuation of Acting I. Special consideration is given to students who have completed THETR 280 or are intending to continue in the area of stage or screen directing. Students should see instructor one year in advance to sign up for course. D. Feldshuh. Focused, practical exercises teach the student fundamental staging techniques that bring written text to theatrical life. A core objective is to increase the student's awareness of why and how certain stage events communicate effectively to an audience. Each student directs a number of exercises as well as a short scene.

THETR 289 Acting III Advanced Scene
Fall. 3 credits. Prerequisite: THETR 280 and audition. Strong preference given to those who have taken THETR 446. Limited to 10 students. B. Levitt. This course focuses on advanced problems in the stage. Monologues and scenes are drawn from Shakespeare and classical sources.

THETR 385 Advanced Studies in Acting Techniques (IV)
Fall. 3 credits. Prerequisites: THETR 281, audition, and permission of instructor. Limited to 10 students. Topic varies each semester. May be repeated for credit. S. Cole.

THETR 387 Movement for the Actor
Fall. 3 credits. Prerequisites: THETR 281 and permission of instructor. Limited to 10 students. B. Milles. Physical skills for the actor are developed through work with LeCoq-based Neutral Mask corporeal mime, and physical acting techniques.

THETR 415 The History of Acting (IV)
Spring. 3 credits. Limited to 10 students. Prerequisites: THETR 380 and permission of instructor. S. Cole. A study of the art of acting in its historical and cultural context from the Greeks to the early twentieth century, with an emphasis on an analytical understanding of acting methodology in relation to social context. Lectures and film showings, with student papers and presentations required.

Directing

THETR 177 Student Laboratory Theatre Company
Spring. 1-2 credits. The Student Laboratory Theatre Company is a group of student-actors who earn credit by participating in small-scale productions of Shakespeare, Shaw, Chekhov, Moliere, etc.

THETR 398 Fundamentals of Directing I (also VISST 398) (IV)
Fall. 3 credits. Limited to 9 students. Prerequisite: permission of instructor. Special consideration is given to students who have completed THETR 280 or are intending to continue in the area of stage or screen directing. Students should see instructor one year in advance to sign up for course. D. Feldshuh. This class is an extension of THETR 348 and 398. Students formulate a process for developing a full-length play, which they develop over the course of the semester. The class meetings are made up of discussions about the students' process and creative tactics, and reading of material generated by the playwrights.

THETR 348 Playwriting (IV)
Fall. 4 credits. Limited to 12 students. Prerequisite: permission of instructor. B. Milles. Various approaches and techniques are examined as the student is introduced to the art and craft of dramatic writing. The student is required to read dramatic texts, observe theatre productions and rehearsals, and write. The semester culminates in the completion of a 20- to 30-minute one-act play.

THETR 349 Advanced Playwriting (IV)
Spring. 4 credits. Prerequisite: THETR 348 or permission of instructor. Not offered 2002-2003. Staff. A continuation of THETR 348, emphasizing advanced techniques and culminating in the completion of a full-length play.

THETR 300 Design, Technology, and Stage Management

Design

THETR 250 Fundamentals of Theatre Design and Technology (IV)
Fall and spring. 4 credits. Not open to first-term freshmen. Limited to 12 students. Registration only through department roster in 225 Schwartz Center. Minimum of one credit of Production Lab (THETR 151 or 251) is strongly recommended concurrently. K. Goetz, W. Cross, T. Zintemann, S. Bernstein. Lectures, discussion, and project work introduce the principles of designing scenery, costumes, lighting and sound, and the technical process of realizing designs on stage. Students are required to purchase materials, which the instructors will specify (approximate cost, $50).

THETR 254 Theatrical Makeup Studio
Spring. 3 credits. Students are required to purchase makeup kits which the instructor will provide (approx. cost $50) Limited to 10 students. S. Bernstein Basic techniques of make-up for the stage including corrective, old age, likeness, and fantasy; use of three-dimensional make-up, wigs and hair pieces.

THETR 253 CAD Studio for the Theatre
Spring. 3 credits. Limited to 8 students. Prerequisite: permission of instructor. K. Goetz and selected theatre production faculty and staff.
Students use commercially available 3-D modeling and rendering software to explore the process of designing scenery and lighting for the live theatre. Vectorworks and Photoshop are the primary applications used. Former theatre experience is helpful but not essential.

**THETR 319 Music, Dance, and Light (also DANCE 319, VISST 319)**
Fall. 3 credits. Attendance at dance concerts and music concerts is required. E. Intemann and A. Fogelsanger. Artistic values and concerns of music (sound design), dance, and lighting design are compared and contrasted, and the combination of design elements is analyzed in contemporary dance. Includes writing in response to design; analysis of audio and video recordings, and performances. Some classes devoted to creating sound, movement, and lighting.

**THETR 343 Costume History: From Fig Leaf to Vanity**
Fall. 3 credits. Limited to 20 students. S. Bernstein. Costume History offers an overview of the history of clothing from the first signs of clothing to the early twentieth century. It investigates personal, social, religious, political, and regional reasons for why and how clothing evolved.

**THETR 362 Lighting Design Studio I: Lighting in the Performing Arts (IV)**
Fall. 4 credits. Prerequisite: THETR 250 or permission of instructor. Limited to 6 students. E. Intemann. The theory and practice of lighting design as a medium for artistic expression. This course explores the aesthetic and mechanical aspects of light and their application in the theatre. Artistic style and viewpoint are also covered.

**THETR 364 Scenic Design Studio (IV)**
Fall. 3 credits. Limited to 10 students. Prerequisite: THETR 250 and 340 or permission of instructor. Students are required to purchase materials which the instructor will specify (approximate cost: $50). K. Goetz. An exploration of the process of designing scenery for the live theatre. Projects employ various media to explore dramatic use of architecture, scenic space, and elements of interior design. Experience in theatre production and graphic skills is helpful but not essential.

**THETR 365 Costume Design Studio (IV)**
Spring. 3 credits. Students are required to purchase materials which the instructor will specify (approximate cost: $50). Limited to 10 students. S. Bernstein. Design of costumes for the theatre, concentrating on script and character analysis, period research, design elements, figure drawing and rendering skills, and an understanding of production style. May be repeated for credit.

**THETR 368 Sound Design Studio (IV)**
Fall. 3 credits. Limited enrollment to 6 students. Prerequisite: THETR 250 or 252 or permission of instructor. Students are required to purchase supplies (approximate cost $20). W. Cross. The use of sound as a medium of design for the theatre; research and creation of the theatrical sound score, digital recording and basic audio engineering techniques with projects in post production studio engineering and live recording. Emphasis is on producing viable sound designs for live theatre events.

**THETR 369 Digital Audio Studio (IV)**
Spring. 3 credits. Prerequisite: THETR 368. Limited to 6 students. By permission of instructor. W. Cross. A project oriented course focusing on current techniques in digital audio recording, editing and processing for theatre, and video production. Students explore Digidesign's Pro Tools multitrack environment, MOTU's Digital Performer including basic MIDI operation and methods of synching audio to video. Some experience with audio recording, music, or video production is helpful but not necessary.

**THETR 371 Costume Design Studio II (IV)**
Fall. 3 credits. Prerequisite: THETR 250 or 366, or permission of instructor. Students are required to purchase materials which the instructor will specify (approximate cost $50) Limited to 10 students. S. Bernstein. This course explores unconventional costume designs for theatre and dance. It deals with the special considerations found in many plays and performance pieces, such as the theatricalization of non-human subjects (animals, plants, machines, magical creatures, etc.), the visualization of the scarp or enhancement of movement. It also covers alternative (some non-western) ways to create character through costume, make-up, masks, and wearable forms of puppetry.

**THETR 462 Lighting Design Studio II (IV)**
Spring. 4 credits. Prerequisite: THETR 362 or permission of instructor. Limited to 6 students. E. Intemann. This course concentrates on designing lighting for different genres in various venues, developing the lighting designer as a versatile artist. Personal style and artistic commitment are stressed.

**THETR 464 Scene Design Studio II (IV)**
Spring. 3 credits. Prerequisite: THETR 364 or permission of instructor. Students are required to purchase materials which the instructor will specify (approximate cost $50). K. Goetz. Projects and quantities are tailored to the creative and developmental needs of the individual student with emphasis on developing professional standards and practices that would prepare the student for a major design assignment.

**Technology**

**THETR 252 Technical Production Studio I**
Fall. 3 credits. Limited to 6 students. D. Hall and F. Sellers. Stage Lighting and Sound Technology: the practical aspects of lighting and sound technology including equipment setup, engineering, electrical organization, recording techniques, and production paperwork are explored through projects, lectures, and class discussions. In addition to twice-weekly class meetings the course requires a laboratory commitment of 50 hours for the semester.

**THETR 256 Technical Production Studio II**
Spring. 3 credits. Limited to 6 students. Additional hands-on time in prop and paint shops required, to be discussed. A. Mansfield.

**Scene Painting**
Introduction to the basic techniques of painting scenery, including but not limited to the layout and painting of bricks, marble, stone, and wood grain for the theatre. Individual projects in scene painting and participation on paint crew for productions are included.

**Stage Properties**
Introduction to the processes of propmaking, including furniture construction and upholstery techniques, use of shop tools and materials, period research, and painting and finishing.

**THETR 340 Theatrical Drafting and Technical Drawing Studio**
Fall. 3 credits. Limited to 6 students. Prerequisite: THETR 250 or permission of instructor. S. Brookhouse. Implementation of the fundamentals of drafting and technical drawing. Introduction of the concept of an individual style in the approach to drafting for the theatre. Involves a series of projects to familiarize students with the convention and process of visualization and drafting.

**THETR 352 Themed Entertainment: The Technical Perspective**
Fall. 3 credits. Limited to 12 students. R. Archer. Exploration into the integration of art and science in today's theme parks and interactive entertainment attractions. Papers, projects, and discussions deal with planning and development aspects of large-scale entertainment projects including architecture, engineering, construction, and attraction installation. Focus is on the specialized entertainment technologies that make these attractions work: audio and lighting design, ride and show control systems, and special effects.

**THETR 354 Stagecraft Studio**
Fall. 3 credits. A minimum of 1 credit of production laboratory (THETR 151 or 251) is strongly recommended concurrently. Lab fee of $25 to be paid in class. R. MacPike. A project/lecture/discussion class in costume research, patterning, cutting, construction, and fitting.

**THETR 355 Costume Construction Studio**
Spring. 3 credits. A minimum of 1 credit of production laboratory (THETR 151 or 251) is strongly recommended concurrently. Lab fee of $25 to be paid in class. R. MacPike. This course is designed for students who have completed a basic construction class in (THETR or TXA, or other) and are interested in acquiring skills beyond the basic techniques. The objective is to introduce students to areas of costuming that are not taught presently such as millinery, fabric modification, corsery, and underpinnings-skills that make a costume student more marketable upon graduation. Areas of focus for each semester may be determined by particular production needs. Along with the pieces constructed, students are asked to research and record their findings.
Stage Management

THETR 153 Stage Management
Production Laboratory I
Fall and spring. 1-2 credits. May be repeated for credit. Before registering, students must attend an orientation meeting in the Kiplinger Theatre at the Schwartz Center on the first Tuesday of classes. Prerequisite: permission of instructor. P. Lillard.
Practical experience in theatrical production as assistant stage manager for a dance theatre concert or as a stage manager for readings, Black Box lab productions, or S.L.T.C. under the supervision of the faculty production manager. THETR 370 complements this course.

THETR 253 Stage Management
Laboratory II
Fall and spring. 1-4 credits. May be repeated for credit. Before registering, students must attend an orientation meeting in the Kiplinger Theatre at the Schwartz Center on the first Tuesday of classes. Prerequisite: permission of instructor. P. Lillard.
Practical experience in theatrical production as assistant stage manager for a dance theatre concert or as a stage manager for readings, Black Box lab productions, or S.L.T.C. under the supervision of the faculty production manager. THETR 370 complements this course.

THETR 353 Stage Management
Laboratory III
Fall and spring. 1-4 credits. May be repeated for credit. Before registering, students must attend an orientation meeting in the Kiplinger Theatre at the Schwartz Center on the first Tuesday of classes. Prerequisite: permission of the instructor. P. Lillard.
Practical experience in theatrical production as assistant stage manager for a season production under the supervision of the faculty production manager. THETR 370 complements this course.

THETR 370 Stage Management Studio
Fall. 2 credits. Prerequisite: THETR 250 or 280 or permission of instructor. Students are required to purchase materials which the instructor will specify (approximate cost: $10). P. Lillard.
Introduction to the concepts and techniques of stage management as they relate to specific areas of production. Development of relevant communication skills and an understanding of the production process as experienced by a working stage manager or assistant stage manager. THETR 153, 253, and 353 complement this course.

THETR 453 Stage Management
Laboratory IV
Fall and spring. 1-5 credits. May be repeated for credit. Prerequisite: admission to Advanced Undergraduate Theatre Program. P. Lillard.
Practical experience in theatrical production as stage manager for a season production under the supervision of the faculty production manager.

Production Laboratories

THETR 151 Production Laboratory I
Fall and spring. 1-3 credits. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester in the Kiplinger Theatre at the Schwartz Center. P. Lillard, S. Brookhouse, F. Sellers.
This course provides practical experiences in theatrical production. Students can work on scenery, costumes, properties, lighting, or stage crew. No prerequisites or experience required.

THETR 251 Production Laboratory II
Fall and spring. 1-3 credits. Prerequisite: permission of instructor. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester in the Kiplinger Theatre at the Schwartz Center. P. Lillard, D. Hall, F. Sellers, R. MacPike.
Practical experience in theatrical production, as a light board operator, sound board operator, sound technician, head dresser, or scenery/prop special project.

THETR 351 Production Laboratory III
Fall and spring. 1-4 credits. May be repeated for credit. Prerequisite: permission of instructor. P. Lillard, R. Archer, S. Brookhouse, K. Goetz, D. Hall, E. Intemann, F. Sellers.
Practical experience in theatrical production as a master electrician, assistant technical director, assistant costume shop manager, or assistant to a faculty or guest director or designer.

THETR 451 Production Laboratory IV
Fall and spring. 1-4 credits. May be repeated for credit. Prerequisite: admission to Advanced Undergraduate Theatre Program. P. Lillard, R. Archer, S. Brookhouse, K. Goetz, D. Hall, E. Intemann.
Practical experience in theatrical production, in the position of designer, shop manager, technical director or sound engineer.

Independent Study, Internships and Honors

THETR 300 Independent Study
Summer, fall, or spring. 1-4 credits.
Independent study in the theatre allows students the opportunity to pursue special interests not treated in regularly scheduled courses. A faculty member becomes the student's instructor for the course, must approve the student's program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study which is available in 225 Schwartz Center.

THETR 485 Undergraduate Internship
Fall, spring, or summer. 1-3 credits.
To be eligible to enroll and receive credit for an internship, students must either be majors or be concentrators in the department. Students are responsible for arranging their own internships in consultation with the faculty in their area of choice prior to preregistration for the semester in which the internship is planned to take place. To receive credit within this course, the internship must be unpaid. Students must complete the rules and procedures stated in the departmental internship form.

THETR 495 Honors Research Tutorial
Fall or spring. 4 credits. Limited to Honors students in Theatre, Film and Dance.
This course is the first of a two-semester sequence (the second is THETR 496) for students engaged in an honors project.

THETR 496 Honors Research Tutorial
Fall or spring. 4 credits. Limited to Honors students in Theatre, Film and Dance.
This course is the second of a two-semester sequence (the first is THETR 495) for students engaged in an honors project.

Film

D. Bathrick (on leave 2002-2003), D. Fredericksen (director of the undergraduate program in film), S. Haenni, M. Rivchin, A. Villarejo
The study of film began in this department in the 1930s and continues to be based here. In the intervening years, however, it has spread into a significant number of other departments in the College: Africana studies, anthropology, Asian studies, comparative literature, English, German studies, history, psychology, romance studies, and women's studies. This proliferation of courses has been accompanied by a comparable proliferation of perspectives and faculty concerns, e.g., the relationship of national cinemas to national literatures and specific cultures, film's relationships to myth and ideology, the use of film as historical evidence, film's efficacy as a rhetorical medium, and film's contribution to perennial issues in aesthetics, the history of the arts, and studies in cognition. The foundational course in film production and in the history, theory, and criticism of film as an art are centered in this department.

This richness of courses and perspectives is matched by the ways in which students may make film the focus of their undergraduate studies. The three ways currently being used are as follows: (1) majoring in film within the Department of Theatre, Film & Dance; (2) constructing an individually tailored Independent Major in film (including the possibility of placing film in tandem with another medium or discipline); and (3) focusing on film as a College Scholar. Students interested in options 2 or 3 should consult Don Fredericksen (Theatre, Film & Dance) and Ken Gabard (director of the College Scholar Program or Lynne Abel (director of Independent Major program). Students interested in the first option should consult Don Fredericksen (director of the undergraduate program in film). In addition, students should be aware that the College has recently approved a five-course concentration in visual studies, which can be taken independently of, or in conjunction with, a major in film. Students interested in the visual studies concentration should contact Brett DeBarry, Asian Studies, its director.

Film Major Requirements

The department's film major requires a total of 50 credits in film and related courses. Students should note that a number of film courses, including two required courses (FILM 375 and 376)—are offered in alternating years. This means that students cannot fulfill the requirements for the major in less than two years, and that they should plan accordingly, in consultation with their major adviser. In particular, students must plan to be in residence at Cornell during both their junior and senior years. FILM 375 and 376. Within the "core" required courses, FILM 274, 375, and 376. Analysis, should be taken during the sophomore year. Please note: beginning fall 2002 prospective majors must earn a grade of B- or higher in FILM 274 to be accepted into the major. Students may not
enter the major until they have completed FILM 274 in the fall semester of their sophomore year.

Majors wishing to use the production courses in a substantial manner must plan carefully and work within certain limits. These courses are: FILM 377, 378, 383, 477, 478, 493. Enrollment in each of these courses is limited by the nature of the work and by facilities. Enrollment in FILM 477, 478, and 493 depends on the quality of previous work in FILM 277, 377, and/or 383; enrollment is not guaranteed. Majors without a strong interest in production can complete the production requirement with one course: FILM 277. Majors with a strong interest in production should begin instead with FILM 277, after they have taken FILM 274 in their sophomore year. The total credits in production courses cannot exceed 20 hours; this limit is strictly enforced.

1. A core of four film courses:
   - [FILM 274] Introduction to Film Analysis (offered every fall semester) 4
   - [FILM 375] History and Theory of Commercial Narrative Film (offered alternate fall semesters; offered 2002-2003) (prerequisite for film majors: FILM 274) 4
   - [FILM 376] History and Theory of Documentary and Experimental Film (offered alternate fall semesters; not offered 2002-2003) (prerequisite for Film majors: FILM 274) 4
   - [FILM 277] Video Production I (offered alternate spring semesters, and some summers; next offered spring 2003) 3
   - OR
   - [FILM 377] Fundamentals of 16mm Filmmaking (offered three semesters in every four; offered fall 2002 and 2003, and spring 2004) 4

2. One of the following theatre courses:
   - [THETR 250] Fundamentals of Theatre Design/Technology (offered every semester) 4
   - [THETR 280] Introduction to Acting (offered every semester) 3
   - [THETR 398] Directing I (prerequisite: permission) (offered every fall semester) 3

3. Four courses (15-16 credits) in film offered by Theatre, Film & Dance as below, or (with consent of advisor) by other departments:
   - [FILM 264] Interpreting Hitchcock (Not offered 2002-2003; next offered spring 2004) 4
   - [FILM 277] Video Production I (offered spring 2003 and spring 2005) 3
   - [FILM 291] Filming Other Cultures (TBA) 3
   - [FILM 341] French Film (not offered 2002-2003; next offered 2003-2004) 4
   - [FILM 342] The Cinema and the American City 4
   - [FILM 369] Fast Talking Dames (not offered fall 2002; next offered fall 2003) 3

4. [FILM 378] Soviet Film of 20s and French Film of 60s (offered occasionally; not offered spring 2002-2003) 4
   - [FILM 379] Modern Documentary Film (offered alternate spring semesters, not offered spring 2003; next offered spring 2004) 4
   - [FILM 383] Screenwriting (offered every spring semester) 4
   - [FILM 386] Third Cinema (offered alternate years; offered spring 2005) 4
   - [FILM 391] Media Arts Studio I (tentatively scheduled for fall 2002 or spring 2003) 3
   - [FILM 395] Video: Art, Theory, Politics (offered occasionally; next tentative offering 2004-2005) 4
   - [FILM 396] German Film (offered occasionally; not offered 2002-2003) 4
   - [ASRRC 435] African Cinema offered fall 2002 4
   - [FILM 450] Rescreening the Holocaust (offered occasionally; next offered fall 2003) 4
   - [FILM 455] History of Modern Polish Cinema (offered alternate spring semesters; offered spring semester 2003) 4
   - [FILM 473] Film and Spiritual Questions (offered alternate spring semesters; not offered spring 2003; next offered spring 2004) 4
   - [FILM 474] Jung, Film, and the Process of Self-Knowledge (offered alternate spring semesters; offered spring 2003) 4
   - [FILM 475] Seminar in the Cinema I (offered every fall semester; topic varies; may be repeated for credit; topic for fall 2002: Cognitive Film Theory) 4
   - [FILM 476] Seminar in the Cinema II (offered occasionally; offered spring 2003; topic varies; may be repeated for credit; topic for spring 2003: American Melodrama and Film) 4
   - [FILM 477] Intermediate Film and Video Projects: Documentary and Experimental Workshop (offered alternate years; Not offered 2002-2003; next offered fall 2003) 4
   - [FILM 478] Intermediate Film and Video Projects: Narrative Workshop (offered alternate years; offered fall 2002) 4
   - [FILM 493] Advanced Film and Video Projects (offered spring 2003) 4

4. 15 credits of related coursework inside or outside the Department of Theatre, Film & Dance, or (as approved by the major advisor), courses chosen to fulfill this requirement should reinforce the major’s particular interest in film, and will not necessarily be film courses per se. For example, a student interested in the psychology of film, or in ethnic/cultural film, or in film as a tool of intellectual or social history, will be encouraged to choose “related course work” in those areas.

5. Starting fall 2002 students must earn at least a B- in FILM 274 in order to enter the major. In all subsequent courses used for the major a grade of C (not C-) must be achieved. Courses in which these minimums are not achieved must be repeated if they are to receive credit in the major.

6. Course work in production cannot exceed 20 credit hours.

Honors
Students who have maintained a GPA of 3.5 in their film major courses, and an average of 3.0 in all courses, may elect to work for honors in film during their senior year. They must consult with their adviser in the spring of their junior year about the honors program in film. Honors projects are possible in filmmaking, screen writing, and film analysis (history, criticism, theory).

The Advanced Undergraduate Filmmaking Program
The department offers advanced study in filmmaking to students who qualify on the basis of outstanding achievement in film studies and film production courses. Acceptance to the AUPF and admission to the advanced film production course (FILM 493) will be determined by a committee of film faculty in December of each year, based on applications from students who have a proposal (script or treatment) for a film or video project. Up to four such students will also be selected to receive the Melville Shavelson Award to help fund their advanced film projects.

Film Study Abroad
The College of Arts and Sciences, through this department and in consort with a number of other American colleges and universities, offers up to a full year of study at the Paris Center for Critical Studies. The center's film program is theoretical, critical, and historical. It is most useful to students whose major interest is in the academic study of film and serves as an intensive supplement to Cornell's film courses. Fluency in French is required. FILM 274 and 375 are prerequisites. Inquiries should be addressed to Professor Fredericksen, Cornell's liaison with the center.

Film majors may also complement their Cornell film studies with work in the Intermediate and Advanced Film and Television Programs of the British American Film in London. Direct inquiries to Professor Fredericksen.

[FILM 264] Interpreting Hitchcock (also ENGL 263) (IV)
See ENGL 263 for complete description.]

[FILM 274] Introduction to Film Analysis: Meaning and Value (also FILM 674) (IV)
Fall. 4 credits. Limited to 40 students. Graduate students should enroll in FILM 674. D. Fredericksen. An intensive consideration of the ways films generate meaning and of the ways we attribute meaning and value to films. Discussion ranges over commercial narrative, documentary, and personal film modes. Prospective film majors should enroll in their sophomore year.
A hands-on, beginning video production course using Super-VHS cameras and editing equipment. Students learn camera, lighting, sound recording, editing, and digital effects through a series of technical exercises. Students develop two short, original video projects to be shown publicly at the end of the semester. A $100 equipment maintenance fee per student is collected in class. Cost for videotape is approximately $50-100.

FILM 281 Filming Other Cultures (also FILM 691 and ANTHR 291/691) [III or IV]
TBA. 4 credits. Limited to 20 students, with preference given to those who have taken either ANTHR 102 or FILM 274. Fee for screening and maintenance, $35. TBA. For description, see ANTHR 291.

[FILM 329 Political Theory and Cinema (also GERST 330, COM L 330 and GOVT 370) (III or IV)]
For description, see GERST 330.

[FILM 341 French Film (also FRLLIT 336) (IV)]
For description, see FRLLIT 336.

FILM 342 The Cinema and the American City (also AM ST 309) (IV)
Spring. 4 credits. S. Haenni.
See AM ST 309 for description.

[FILM 369 Fast-Talking Dames: Hollywood Comedy (also ENGL 369) (IV)]
See ENGL 369 for complete description.

FILM 375 History and Theory of the Commercial Narrative Film (also VISST 375) (IV)
Fall. 4 credits. Fee for screening expenses, $10 (paid in class). Prerequisite for film majors FILM 274. Offered alternate years; offered fall 2002 and fall 2004.
A. Villarejo. Consideration of the broad patterns of narration in the history of the commercial narrative film. Emphases are placed on the early articulation of a cinematic means of narration, realism as an artistic style, the nature and functions of popular film, and the modes of modernist and post-modernist "art cinema" narration.

[FILM 376 History and Theory of Documentary and Experimental Film (also VISST 376) (IV)]
Fall. 4 credits. Fee for screening expenses, $10 (paid in class). Prerequisite: FILM 274 is strongly recommended, but not required. Offered alternate years; next offered fall 2003 and fall 2005.
A. Villarejo. Covers first the history and theory of documentary film up to the end of World War II. Second we cover the history and theory of the experimental and postmodern film forms in Europe and the United States.

FILM 377 Fundamentals of 16mm Filmmaking (IV)
Fall and spring. 4 credits. Limited to 12 students. Intended for juniors and seniors (who may need to sign up a year or more in advance) and to film majors. Prerequisite: FILM 274 or (higher-level film studies course) and permission of instructor. Equipment fee, $100 (paid in class). The average cost to each student for materials and processing is $400. Offered fall 2002, fall 2003, and spring 2004. M. Rivchin. A hands-on course in the basics of 16mm filmmaking techniques and digital editing, requiring no prior production experience, emphasizing creative development of filmic ideas through critical discussion. Students may explore narrative, experimental, documentary, animation, and abstract genres, producing short exercises and a final sound film project (8-12 minutes) to be screened publicly.

[FILM 378 Soviet Film of the 1920s and French Film of the 1960s (IV)]
Spring. 4 credits. Fee for screening expenses, $10 (paid in class). Prerequisite: FILM 375 is strongly recommended, but not required. Offered alternate years; not offered 2002-2003. D. Fredericksen. An intensive treatment of two distinct periods of radical innovation in film theory and history. Emphasis is on the animated relationship between theory and filmmaking during these two decades. Major figures include Eisenstein, Pudovkin, Vertov, Kuleshov, Dovzhenko, and Room, in the Soviet 1920s; Godard, Truffaut, Resnais, Rohmer, Tati, Roug, Resnou, and Bazin in the French 1960s.

[FILM 379 Modern Documentary Film (IV)]
Spring. 4 credits. Prerequisite: FILM 376 is strongly recommended but not required. Fee for screening expenses, $10 (paid in class). Offered alternate spring semesters; next offered spring 2004. D. Fredericksen. An intensive consideration of canonical documentary films from 1945 to the present. Emphases are on the documentary film as an artistic form with a distinct history and set of theoretical and ideological dimensions, as an ethnographic medium within and outside of filmmaking.

[FILM 383 Screenwriting (IV)]
Spring. 3 credits. Prerequisites: FILM 274 and 377, or permission of instructor. Limited to 12 students. Staff.
Exercises in various genres of screenwriting. Note: this class is an intensive writing course that demands a great deal of outside work.

[FILM 386 Third Cinema (also LSP 386, VISST 386) (IV)]
Spring. 4 credits. Prerequisite: previous course in history or analysis helpful, though not mandatory. Offered alternate years; offered spring 2003.
A. Villarejo. This course explores postcolonial film and video throughout the "third cinema." We investigate the political, cultural, and aesthetic dimensions of the films.
Analysis of Polish film from 1945 to the present, within the context of Poland’s postwar history. Topics include the period of socialist realism, the so-called “Polish School” (1956-1962), the cinema of moral anxiety, Socialist cinema, and the Polish documentary tradition. Key directors to be considered include Ford, Wajda, Munk, Polanski, Skolimowski, Zanussi, Falk, Piowski, Bugajski, Krzystek, Kijowski, Zaorski, Kiejstut and Leszczynski. Attention is given to the development of Polish film theory. The extra-filmic context is set by such works as Norman Davies’ Heart of Europe, Czeslaw Milosz’ The Captive Mind, and Eva Hoffmann’s Exit into History.

[FIGM 473 Film and Spiritual Questions (also RELST 473) (IV)]
Spring. 4 credits. Limited to 20 students. Offered alternate spring semesters; next offered spring 2004. D. Fredericksen.
The use of film as a medium for the expression of spiritual questions has a long and rich history, although little attention has been given to this fact in contemporary film studies. This seminar examines films and writings by filmmakers who are so inclined, including Baillie, Gardner, Bergman, Dreyer, Bresson, Godard, Scorcese, Whitley, Rouquier, Newby, Kubrick, and Bac Yong-Kyun. Special attention is given to the work of Andrei Tarkovsky, the Russian film director and theorist. Readings include Tarkovsky’s Sculpting in Time, Groth’s The Cosmic Game, Eliade’s The Sacred and the Profane, Edinger’s The Christian Archetype, Schradier’s Transcendental Style in Film, and Warren and Locke’s Women and the Sacred in Film.

[FIGM 474 Jung, Film, and the Process of Self-Knowledge (also College Scholes Seminars) (IV)]
Spring. 4 credits. Limited to 20 students. Offered alternate spring semesters; offered spring 2003. D. Fredericksen.
“Know thyself” is one of the oldest and most enduring imperatives of the human spirit, and the raison d’etre for liberal studies. This seminar traces in some detail the Jungian approach to this imperative and then tests its critical capacities with respect to films by Fellini (8 1/2, Marcello), and Roeg (Walkabout). Readings include Jung’s Memories, Dreams, Reflections, Two Essays in Analytical Psychology, Archeetypes and the Collective Unconscious, and Murray Stein’s In Midlife.

[FIGM 475 Seminar in Cinema I (also VISST 475) (IV)]
Fall. 4 credits. Limited to 20 students. Recommended: FILM 274 or 375, or work in cognitive studies. D. Fredericksen.
Topic for fall 2002: An intensive study of Danish cognitivist Torben Grodal’s Moving Pictures, A New Genre, Feelings and Cognition, with additional reading from Dutch cognitivist Ed Tan. Topics include: fiction and symbolic simulation, brain processes and narration, analogical communication, cognitive identification, subjectivity and causality, cognitivist typologies of genre, metframes as emotional filters, and melodrama and automatic response.

[FIGM 476 Seminar in the Cinema II: American Melodrama and Film (also AM ST 476) (IV)]
Spring. 4 credits. Limited to 20 students. S. Haeney.
Melodrama has been understood as a “mode of excess” of overwrought emotion, moral polarization, and sensationalism. This course examines how and to what purposes melodrama has been used in the U.S. context. How does melodrama allow us to understand the nation? How does it address questions of social justice? How does it use tropes of paranoia, victimization, and entrapment? We look at film melodrama’s generic features, its inheritance from 19th century stage melodrama, melodrama as a form in silent cinema, Depression-era social problem film, racial melodrama, and melodrama’s particular relation to the women’s film. Screenings include films by Griffith, Vidor, Cukor, Hitchcock, Ophuls, and Sirk.

[FIGM 477 Intermediate Film and Video Projects: Documentary and Experiment (IV)]
Fall. 4 credits. Limited to 8 students. Prerequisites: FILM 377 or 277 as minimum production; preference given to those who have taken FILM 376 (History and Theory of Documentary and Experimental Film), 379 (Molecular Film, 486 (Third Cinema), or 291/291 (Filming Other Cultures); and permission of instructor based on project proposals. Equipment fee: $100 (paid in class). Film projects costs: $1,000-$200. Not offered 2002–2003; next offered fall 2003. M. Rivchin.
An intensive course in 16mm filmmaking and digital video in which each student develops a significant documentary or experimental project both critically and creatively. Readings, discussions, and exercises are designed to increase the student’s knowledge and practice of: cinematography, lighting, sync-sound filming, and editing techniques; working with labs and sound houses; digital video camera; and both analog and nonlinear (AVID) digital editing.

[FIGM 478 Intermediate Film and Video Projects: Narrative and Experimental Workshop (also VISST 478) (IV)]
Fall. 4 credits. Limited to 15 students. Prerequisites: FILM 377 or 277 as minimum production; and FILM 383 (Screenwriting) or THETR 398 (Directing I), and permission of instructor based on proposals. Equipment fee: $100 (paid in class). Film project costs: $500-$1,500, video $100-$200. M. Rivchin.
An intensive course in 16mm filmmaking and digital video in which each student develops a significant, original narrative script project which he or she then directs, shoots in crews, and edits. Student may opt for narrative documentary or experimental work as well. Readings, discussions, and exercises are designed to increase the student’s knowledge and practice of: directing, cinematography, lighting, sync-sound filming, and editing techniques; working with labs and sound houses; digital video camera; and nonlinear (AVID) and final Cut Pro editing.

[FIGM 493 Advanced Film and Video Projects (also VISST 493) (IV)]
Spring. 4 credits. Limited to 6–8 students. Prerequisite: minimum FILM 377 or 277. Preference to those who have taken 477 or 478; recommended: FILM 383 (Screenwriting) or THETR 398 (Directing I). Equipment fee: $100. Project costs: $500–2000, unless group project is funded by the Melville Shavelson fund. M. Rivchin.
This is a third-level film production course in which the entire class produces, directs, and edits a larger sync-sound film project from a

prize-winning student screenplay. After a pre-production period including script analysis and directing practice through scene work, students are either selected as or rotate as directors, cinematographers, and sound recordists. They prepare budgets, casting and production management and scheduling. Students may shoot in sync-sound 16mm film or video, working on a specific budget, and will co-edit the film, learning the Avid for digital editing, sound mixing, and so on. The final project is screened publicly at the end of the semester.

FILM 674 Introduction to Film Analysis: Meaning and Value
Fall. 4 credits. Limited to 20 graduate students. D. Fredericksen.
An intensive consideration of the ways films generate meaning and of the ways we attribute meaning and value to films. Discussion ranges over commercial narrative, documentary, and personal film modes. Graduate students who intend to teach film at the undergraduate level will be welcome. In addition to full participation in the work of FILM 274, graduate students will read and discuss in tutorials Dudley Andrew’s The Major Film Theories, Francesco Casetti’s Theories of Film 1945–1995 and primary sources in film theory.

FILM 699 German Film Theory (also GERST 699 and CMU L 699)
The dance program offers courses in dance technique, improvisation, composition, performance, anatomical analysis of movement, dance technology, and the history, theory, and criticism of dance. Technique courses include introductory dance technique, modern dance at three levels, and ballet at three levels. (Other dance forms, such as Japanese Noh, Indian dance, and Javanese dance, are periodically offered. A variety of courses in other dance idioms, taken through the Physical Education Department, supplement these offerings.) Technique courses develop strength, flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with clarity of rhythm, body design, and expression. The more advanced courses require the ability to perform complex phrases in various styles. Students may earn up to eight academic credits (one each semester) in technique courses. Students may also satisfy the physical education requirement by taking dance technique courses in the dance program. Students taking technique for academic credit must also register through their own colleges. Students who wish to enroll in nonintroductory level dance technique courses must attend a placement class. Placement classes are offered at the beginning of each semester. The schedule for all dance technique courses and placement classes is available in the main office of the Sheila W. and Richard J. Schwartz Center for the Performing Arts.
The faculty offer rehearsal and performance workshops in which they choreograph and rehearse original dances, performed in public.
### Dance Major Requirements

To be admitted to the major, students must have completed two technique courses in modern dance or ballet at level II or above, DANCE 210 (Beginning Dance Composition), and one semester DANCE 212 (Music Resources I), concurrently with DANCE 210. It is recommended that students take DANCE 201 (Dance Improvisation), the optional THETR 250 (Fundamentals of Theatre Design and Technology), and the optional music course before the junior year. The following requirements are expected of the major.

#### Prerequisites for the Major:

- **DANCE 210** Beginning Dance Composition (offered every semester) 1
- **DANCE 212** Music Resources I (offered every semester) concurrently with DANCE 210 2

**Two technique courses in modern dance or ballet at level II or above**

**TOTAL** 3

#### Requirements for the Major: Credits

**Two semesters each of ballet and modern dance (in addition to the prerequisite)** 4

**One academic or studio course in non-western form** 0–4

- **DANCE 155** Rehearsal and Performance 1
- **DANCE 201** Dance Improvisation (offered every spring semester) 1
- **DANCE 233** Explorations in Movement and Performance (offered every fall semester) 1

**Two courses from the following approved list selected in consultation with the student’s advisor:** 6–8

<table>

- **DANCE 323 Music Resources II (offered every spring semester)** 2
- **DANCE 418 Seminar in Dance Studies or other 400-level academic dance course (offered alternate years; offered spring 2003)** 4
- **DANCE 491 Senior Project (year-long course offered every year)** 4

**Total 42–48**

Students will be expected to perform in at least two concerts and to present at least two of their own dances, in addition to the senior project.

#### Honors

Students who have maintained a GPA of 3.5 in classes for the dance major and an average of 3.0 in all courses may elect to work for honors in dance during their senior year. They must consult with their adviser in the spring of their junior year about the honors program in dance.

**Courses**

- The courses DANCE 122, 125, 231, 232, 233, 303, 304, 306, 307, 308, 309, and 316 are co-listed in the Department of Physical Education (PE) and the Dance major (DANCE) of the Department of Theatre, Film & Dance. Students may register for these courses either through PE in order to satisfy the university's physical education requirement or through DANCE for 0 or 1 academic credit, with a limit of 1 credit per semester and 8 credits total. Students may not get DANCE and PE credit simultaneously for the same course.

  - **DANCE 122 Technique I (also PE 160)** Fall and spring. 0 to 1 credit. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. Fall: J. Chu and J. Kovar; spring: J. Chu and J. Morgenroth.
  - **DANCE 125 Introduction to Tap Dancing (also PE 170)** Fall. 0 to 1 credit. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. Fall: J. Chu.
  - **DANCE 155 Rehearsal and Performance** Fall and/or spring. 1–2 credits. 1 credit per production experience per semester up to 2 credits per semester. Students must register for the course in the term in which the credit is earned; requests for retroactive credit will not be honored. Limited to students who are cast in faculty-choreographed dances. Students may add this course only after they have been assigned roles. S-U grades only.
  - **DANCE 231 Dance Technique II/Ballet (also PE 161)** Spring. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. J. Chu. Beginning Ballet technique intended for students with some dance training. Includes all basic barre and center work focusing on presence and presentation.
  - **DANCE 232 Dance Technique II/Modern (also PE 162)** Fall and spring. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. Fall, B. Suber; spring, J. Self.
  - **DANCE 233 Explorations in Movement and Performance (also PE 166, VISST 223)** Fall. 0 or 1 credit. Limited to 16 students. Satisfies PE requirement if taken as PE. Attendance at dance concerts is required. J. Self. A physically demanding exploration into various movement realms. Specific subjects covered are genderized movement, erotic power, spiritual power, ritual, and performance. Techniques include extensive use of breath, animal movement, improvisation, and group games. This course requires an eagerness to investigate the nature of performance and explore unfamiliar territory in movement.
  - **DANCE 303 Dance Technique Workshop (also PE 167, VISST 303)** Fall. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. J. Self. This class goes beyond the conventional modern dance class and looks into the very nature of technical training for dancers by studying and investigating a variety of movement forms including yoga, improvisation, classical, and modern western dance.
  - **DANCE 304 Dance Technique II/Ballet (also PE 163)** Spring. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. B. Suber. Intermediate Ballet technique. Work is done on strengthening the body through a movement technique emphasizing presence and musicality based on harmonic muscular control.

**THEATRE, FILM & DANCE 659**
DANCE 306  Dance Technique III/Modern (also PE 164)
Fall and spring. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. Fall, J. Chu; spring, J. Kovar.

Intermediate modern technique focusing on rhythm, placement, and embracing for students who are prepared to refine the skills of dancing. Students are challenged by complex phrases and musicality.

[DANCE 307  Asian Dance and Dance Drama (also PE 427)
Sec. 01. Indian Dance. 0, 1, or 3 credits. Satisfies the PE requirement if taken as PE. Not offered 2002-2003. Satisfies @ if taken for 3 credits. D. Bor.

This course is designed to give the student a practical working knowledge of Indian classical dance, specifically in the indigenous style of Orissa known as Odissi. The technique strengthens the body and develops grace, rhythmic expression, and dexterity that can benefit all forms of dance.]

DANCE 308  Dance Technique IV/Modern (also PE 166, VISST 308)
Fall and spring. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. Fall, J. Self; spring, J. Chu.

Advanced and pre-professional Modern technique. A continuation of and supplement to DANCE 306.

DANCE 309  Dance Technique IV/Ballet (also PE 165)
Fall. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. B. Suber;

Advanced and pre-professional Ballet technique. A continuation of and supplement to DANCE 304.

[DANCE 310 Intermediate Dance Composition I (IV)
Fall and spring. 3 credits. Prerequisite: DANCE 210. Concurrent enrollment in a technique class at the appropriate level is required. Fall, J. Chu; spring, J. Self.

Intermediate choreographic projects are critiqued in progress by faculty and peers. Consideration of design problems in costuming and lighting.

DANCE 311 Intermediate Dance Composition II (IV)
Fall and spring. 3 credits. Prerequisite: DANCE 310 and DANCE 323, though DANCE 323 may be taken concurrently. Attendance at dance concerts is required. Concurrent enrollment in a dance technique class at the appropriate level is required. Fall, J. Chu; spring, J. Self.

A continuation of DANCE 310.

DANCE 323  Music Resources II
Spring. 2 credits. Prerequisite: DANCE 212. MUSIC 105 is strongly recommended as a prerequisite but not required. Attendance at dance concerts and music concerts is required. DANCE 212 and DANCE 323 together count as a course for purposes of graduation and satisfy Group IV distribution. A. Fogelsanger.

Intended to expand choreographers' conceptions of music and its uses for dance, including serving as a source for ideas of choreographic organization. A continuation of DANCE 212 in its survey of contemporary music for dance and the study of music and dance collaborations, and rhythm studies. Includes discussing and writing about concerts, recordings, and videotapes. May include rehearsing and performing music or dance. Concentrates on the related ideas of counterpoint, polyphony, and simultaneity with regard to music, dance, the two considered together, and other arts singly and in combination. This is a co-requisite for DANCE 210 but other students are welcome.

DANCE 325  Western Dance History I: Classical Ballet History as a Reflection of Western Ideology (IV)

This course examines the bodily systems involved in human movement with particular attention to dance movement. Readings in texts on human anatomy, physiology and kinesiology. We will emphasize the relationships between bodily form and function. Includes guest lectures by experts in anatomy and health areas. Practical analyses of human movement. Demonstration of dissection.

DANCE 330  Dance Improvisation
Spring. 1 credit. Limited to 12 students. Attendance at dance concerts is required. J. Self.

What the body knows when, where, and how to move without prior direction, we call that improvisation. This course coaxes inspiration, seeking to make it reliable and to keep it surprising. It offers the possibility of "training" one's movement instincts to respond relevantly and with spontaneity. Solo and group forms are covered. Live musical accompaniment.

DANCE 401 Advanced Dance Composition I (IV)
Fall and spring. 3 credits. Prerequisite: DANCE 311. Concurrent enrollment in a technique class at the appropriate level is required. Attendance at dance concerts is required. Fall, J. Chu; spring, J. Self.

Students work on advanced choreographic problems, to be presented in performance. Work in progress is critiqued by faculty on a regular basis.

DANCE 402 Advanced Dance Composition II (IV)
Fall and spring. 3 credits. Prerequisite: DANCE 401. Concurrent enrollment in a technique class at the appropriate level. Attendance at dance concerts is required. Fall, J. Chu; spring, J. Self.

A continuation of DANCE 410.

DANCE 403  Senior Project in Dance
Fall and spring. 6 credits per semester. Prerequisite: DANCE 311. This course is limited to senior dance majors only. Students who take this course create a project in choreography and performance, dance or video, dance pedagogy, or other appropriate area agreed on with a member of the dance faculty. In addition, there is a 1-15 page paper which expands their work into a theoretical or historical context.

History, Criticism, and Theory

[DANCE 312  The Moving Body: Form and Function (IV)

This course examines the bodily systems involved in human movement with particular attention to dance movement. Readings in texts on human anatomy, physiology and kinesiology. We will emphasize the relationships between bodily form and function. Includes guest lectures by experts in anatomy and health areas. Practical analyses of human movement. Demonstration of dissection.

DANCE 414  Western Dance History II: Classical Ballet History as a Reflection of Western Ideology II (IV)
Fall. 4 credits. Attendance at dance concerts is required. Not offered 2002-2003. J. Javorek.

A critical survey of the history of classical ballet defining elements of classicism and determining why ballet is defined as classical. Through texts, videotapes, and live performance, the class explores how ballet has perpetuated or confronted social issues of race, class, gender, sexuality, the body, and abuse.

DANCE 415  Western Dance History III: History of Modern Dance (IV)

This course examines the bodily systems involved in human movement with particular attention to dance movement. Readings in texts on human anatomy, physiology and kinesiology. We will emphasize the relationship between bodily form and function. Includes guest lectures by experts in anatomy and health areas. Practical analyses of human movement. Demonstration of dissection.

DANCE 416  Western Dance History IV: History of Modern Dance (IV)

This class studies the course of modern dance in the twentieth-century United States. We examine each generation of dancers, starting with Isadora Duncan and ending with performers emerging today. Issues of gender, cultural identity, elitism, and democracy are discussed.
DANCE 418 Seminar in Dance Studies (also VISST 419) (IV)
Spring. 4 credits. Limited to 15 students. B. Suber.
Utropic Space, the Moving Body, and the Built Environment. Considering space as defined from the source of the choreographed body, as well as through planned volumetric division and enclosure, this class compares and explores relationships between concepts of utopia existing in both the realm of dance and the realm of architecture. Through this premise, constructed utopic spaces are examined as they have been specifically used as tools for social, cultural, and political change. Questioning concepts of progress, purity, harmony, proportion, universalism, primitivism, organicity, and taste.

DANCE 490 Senior Paper in Dance
Fall and spring. 4 credits. Prerequisite: DANCE 418, senior standing. Attendance at dance concerts is required. Under faculty direction, the students write a senior paper in dance history, criticism, or theory.

Interdisciplinary Courses
DANCE 258 Techno Soma Kinesics I: Technology and the Moving Body (also VISST 258) (IV)
Spring. 4 credits. Prerequisite: DANCE 201 or DANCE 210 (or equivalent) or permission of instructor; no freshmen. Limited to 5 students. B. Suber.
Expanding on the specific aesthetic of formal concert dance, this studio class explores new forms of performance dealing with the moving body. Computer programs such as human form animation software (Life Forms and Poser), digital sound production (Protocols and Digital Performer), digital imaging (Photoshop and Premiere), as well as traditional lighting, set, and costume design and construction, and sound recording and design techniques, are all utilized to create experimental and/or conceptual multimedia performance/installation work. Theoretical texts on the body and technology are also used.

DANCE 301 Mind and Memory: Explorations of Creativity in the Arts and Sciences (also ENGL 301, MUSIC 372, S HUM 301, THETR 301) (IV)
Spring. 4 credits. Creativity is the attribute of the mind than enables us to make new combinations from off-familiar information, to perceive analogies and other linkages in seemingly unlike elements, to seek for synthesis. As is true of all learning, creativity is dependent on memory—a memory that is genetic and collective as well as personal and experimental. This course will explore the nature of creativity in science and art, indicating the differing requirements for discovery in the disparate disciplines while demonstrating the commonality that underlies the creative process and binds physicist or mathematician to poet, composer, or visual artist. The course will present lectures by weekly guests from as many disciplines in the arts and sciences as possible, faculty members who will discuss the process underlying their research or creative and performing artists. Members of the course are encouraged to enroll in another course or be engaged in an activity (research, artistic production, or performance) in which the insights gained in this class can be applied or tested. In addition, each section will engage in a common creative project. To further abet the active participation so necessary to learning, students will be asked to keep a journal, one that summarizes their understanding of, and response to, the lectures and readings from the required texts. Students will also be obliged to attend several public art exhibits or performances and write two papers.

DANCE 319 Music, Dance, and Light (also THETR 319) (IV)
Fall. 3 credits. Attendance at dance concerts and music concerts is required. E. Intemann, A. Fogelsanger. Artistic values, parameters, and concerns of music (sound design), dance, and lighting design are compared and contrasted, and the combination of design elements is analyzed in contemporary dance. Includes writing in response to readings, audio and video recordings, and performances. Some classes are devoted to creating sound, movement, and lighting.

DANCE 358 Techno Soma Kinesics II: The Moving Body and Technology (also VISST 358) (IV)
Spring. 4 credits. Prerequisite: DANCE 258 (or equivalent), or permission of instructor. Limited to 5 students. B. Suber.
Reflecting the aesthetic of formal concert dance, and expanding on the work accomplished in DANCE 258, students work with more complex elements of multimedia interactive software to create more extensive projects in the field of dance and technology. As opposed to the smaller experimental projects accomplished in DANCE 258, DANCE 358 students are expected to complete substantial projects in interactive multimedia gallery installation/performance work as well as interactive multimedia CD ROM’s and web projects, all focused on the moving body.

DANCE 391 Media Arts Studio I (also ART 391, MUSIC 391, FILM 391) (IV)
Fall or spring. 3 credits. Prerequisite: permission of instructor and junior-level standing required, minimum FILM 377 or 277, or DANCE 258. $50 equipment fee (to be paid in class). Participating faculty include: M. Rivchin, FILM; M. Lyons, ART; D. Borden, MUSIC.
A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, dance, film, and video. Group projects and discussions also investigate the artistic and interactive potential of using arts spaces on campus, including virtual and performative events.

Independent Study, Internships and Honors
DANCE 300 Independent Study
Summer, fall, or spring. 1-4 credits. Independent Study in the dance allows students the opportunity to pursue special interests not treated in regularly scheduled courses. A faculty member, who becomes the student’s instructor for the course, must approve the student’s program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study which is available in 225 CT.

DANCE 485 Undergraduate Internship
Fall, spring, or summer. 1-3 credits. To be eligible to enroll and receive credit for an internship, students must be majors in the department. Students are responsible for arranging their own internships in consultation with the faculty in their area of choice prior to registration for the semester in which the internship is planned to take place. To receive credit within this course, the internship must be unpaid. Students must follow the rules and procedures stated in the departmental internship form.

DANCE 498 Honors Research Tutorial
Fall or spring. 4 credits. Limited to Honors students in Dance. This course is the first of a two-semester sequence (the second is DANCE 499) for seniors engaged in an honors project.

DANCE 496 Honors Research Tutorial
Fall or spring. 4 credits. Limited to Honors students in Dance. This course is the second of a two-semester sequence (the first is DANCE 495) for students engaged in an honors project.

Tracks toward admission into the advanced undergraduate theatre program
Design, Technology, and Stage Management
Recommended for individuals interested in a Design, Technology, or Stage Management track:
THETR 250 Fundamentals of Theatre Design and Technology
THETR 151 and 251 Production Lab I and II (at least one credit each)
Recommended for Scenic Design emphasis:
THETR 340 Theatrical Drafting and Technical Drawing Studio
THETR 351 Production Lab III (as Design Assistant)
THETR 354 Stagecraft Studio
THETR 364 Scene Design Studio
Upon admission to the program:
THETR 451 Production Lab IV (at least 1 credit)
Recommended for costume design or costume shop management emphasis:
THETR 351 Production Lab III (as Design Assistant)
THETR 356 Costume Construction Studio
THETR 366 Costume Design Studio
Upon admission to the program:
THETR 451 Production Lab IV (at least 1 credit)
Recommended for Lighting Design or costume shop management emphasis:
THETR 252 Technical Production Studio I
THETR 351 Production Lab III (as Student Electrician)
THETR 351 Production Lab III (as Design Assistant)
THETR 362 Lighting Design Studio I
Upon admission to the program:
THETR 451 Production Lab IV (at least 1 credit)
Recommended for Sound Design emphasis:
THETR 251 Production Lab II (as Student Sound Technician)
THETR 252 Technical Production Studio I
THETR 351 Production Lab III (as Design Assistant)
THETR 368 Sound Design Studio
Upon admission to the program:

**THETR 451** Production Lab IV (at least 1 credit)

Recommended for Technical Direction emphasis:

**THETR 252** Technical Production Studio I
**THETR 256** Technical Production Studio II

**THETR 350** Theatrical Drafting and Technical Drawing Studio

**THETR 351** Production Lab III (as Assistant Technical Director)
**THETR 354** Stagecraft Studio

Upon admission to the program:

**THETR 451** Production Lab IV (at least 1 credit)

Recommended for Stage Management emphasis:

**THETR 253** or **353** Stage Management Lab II or III—two assignments

**THETR 280** Introduction to Acting

**THETR 370** Stage Management Studio

**THETR 398** Fundamentals of Directing I

Upon admission to the program:

**THETR 453** Stage Management Lab IV

**Directing**

Recommended for individuals interested in a directing track:

**THETR 151** and **THETR 251** Production Lab I and II (at least 2 combined credits)

**THETR 240/THETR 241** Introduction to Western Theatre (1 Semester ONLY)

**THETR 250** Fundamentals of Design and Technology

**THETR 280** Introduction to Acting

**THETR 398** Directing I

**THETR 498** Directing II

**Playwriting**

Recommended for individuals interested in a playwriting track:

**THETR 240/THETR 241** Introduction to Western Theatre (1 Semester ONLY)

**THETR 250** Fundamentals of Design and Technology

**THETR 280** Introduction to Acting

**THETR 348** Playwriting

**THETR 349** Advanced Playwriting

Students in the advanced undergraduate theatre program may also elect to take FILM 485 (Undergraduate Internship) in addition to or in place of one production assignment.

---

**VISUAL STUDIES CONCENTRATION**

Visual Studies is a concentration that provides students with an interdisciplinary approach to visual art, media (including digital works), performance, and perception. Faculty from departments throughout the college offer courses toward the concentration, drawing on such various disciplines as the history of art, film, literary studies, psychology, theatre, and other. Requirements for the concentration include selection of one from two possible core courses (the two core courses may be offered in tandem or on an alternating basis depending on the availability of staff), which introduce students to critical thinking about visual studies as well as close textual analysis in social and historical contexts. Responsibility for teaching the core course will rotate among faculty affiliated with the concentration, and the course will, as much as possible, entail interdepartmental collaboration in the form of team-teaching or visiting lectures. In addition to the core course, students must choose four Cornell courses from among the different categories of courses offered in the concentration. One of the four courses must include a significant component of practical work (such courses are listed under the category “Theory/Practicum”). No more than two courses from the concentration may be double-counted toward a student’s major. All courses must be taken for a letter grade.

Students interested in pursuing the concentration should discuss it with their advisers, and then contact the director of the concentration. The director will register students in the concentration and assign each student an adviser selected from among the concentration’s affiliated faculty. Advisers should forward a copy of each advisee’s transcript to the director, indicating courses completed for the concentration.

**Director and Affiliated Faculty**

Director, Brett de Bary, Asian Studies and Comparative Literature

Affiliated Faculty:

David Batrick, Theatre, Film, and Dance
Robert Bertoia, Art
Susan Buck-Mors, Government
James Cutting, Psychology
David Field, Psychology
Donald Fredericksen, Theatre, Film, and Dance
Werner Goehner, Architecture
Salah Hassan, Africana Studies
Ellis Hanson, English
Marcia Lyons, Art
Laura Meixner, History of Art
Kaja McGowan, History of Art
Timothy Murray, English
Marilyn Rivchin, Theatre, Film, and Dance
Rebecca Schneider, Theatre, Film, and Dance
Michael Steinberg, History

Amy Villarejo, Theatre, Film, and Dance
Geoff Waite, German Studies

**Visual Studies Concentration Course List**

**Core Course for 2002-2003**

**VISST 200** Introduction to Visual Studies (IV)

Spring. 4 credits. Requirements: two objective midterm exams; occasional listserv postings; two five page papers. T. Murray.

Introduction to Visual Studies will provide a broad introduction of modes of vision and the historical impact of visual images, visual structures, and visual space on culture, communication, and politics. The question of “how we see” will be discussed in terms of (1) procedures of sight (from optical machines to the psychology of vision and the philosophy of aesthetics); (2) spaces of vision (from landscapes to maps to cities); (3) objects of vision (from sacred sites to illuminated books to digital art); and (4) performances of vision (race, sexualities, ethnicities, cultures). Of importance to the course will be the practical and conceptual relation of twentieth-century visual technologies (photography, cinema, video, and computing) to their historical corollaries in the arts.

The course will draw on the visual traditions of both Western and non-Western societies and study texts that have defined the premises and analytic vocabularies of the visual. Through viewings, screenings, collaborative writing, and art projects, students will develop the critical skills necessary to appreciate how the approaches that define visual studies complicate traditional models of defining and analyzing art objects. Guest lecturers will occasionally address the class.

**Concentration Categories**

1. New Media

**VISST 336** French Film (also FRLIT 336 and THETR 341)

Spring. 4 credits. Offered alternate years; not offered 2002-2003. T. Murray.

For description, see FRLIT 336.

**VISST 375** History and Theory of Commercial Narrative Film (also FILM 378)

Fall. 4 credits. Fee for screening expenses, $10 (paid in class). A. Villarejo.

For description, see FILM 375.

**VISST 376** History and Theory of Documentary and Experimental Film (also FILM 376)

For description, see FILM 376.

**VISST 386** Third Cinema (also FILM 386)

Spring. 4 credits. A. Villarejo.

For description, see FILM 386.

**VISST 395** Video: Art, Theory, Politics (also ENGL 395, THETR 395)

Fall. 4 credits. Offered alternate years; not offered 2002-2003. T. Murray.

For description, see ENGL 395.

**VISST 433** Electronic Innovation (also ENGL 433)

Fall. 4 credits. T. Murray.

For description, see ENGL 433.

---

**UKRAINIAN**

See Department of Russian.

**URDU**

See Department of Asian Studies.

**VIETNAMESE**

See Department of Asian Studies.
VISST 435 African Cinema (also AS&RC 435 and ART H 478)
Fall. 4 credits. S. Hassan.
For description, see AS&RC 435.2.

Interdisciplinary, Intermedia Studies

VISST 202 Art, Archaeology and Analysis
(also ART H 200, ARCH 200, EAS 200, and PMYS 200)
Spring. 4 credits. R. Kay.
For description, see EAS 200.

ART H 400 Proseminar for Undergrads
Fall. 4 credits. Prerequisite: History of Art Majors only. Enrollment is limited. K. McGowan.
For description, see ART H 400.

VISST 580 Dancing the Stone: Body, Memory and Architecture (also ART H 580)
Spring. 4 credits. Prerequisite: permission of instructor. K. McGowan.
For description, see ART H 580.

VISST 651 The Sexual Child (also ENGL 651 and WOMNS 651)
Fall. 4 credits. E. Hanson.
For description, see ENGL 651.

3. Perception, Cognitive Studies

VISST 305 Visual Perception (also PSYCH 305)
Fall. 4 credits. Prerequisite: PSYCH 205 or permission of instructor. Limited to 20 students. J. Cutting.
For description, see PSYCH 305.

VISST 342 Human Perception: Application to Computer Graphics, Art and Visual Display (also PSYCH 342)
Fall. 3 or 4 credits. The 4-credit option involves a term paper. Prerequisite: PSYCH 101 or permission of instructor. PSYCH 205 strongly recommended. D. Field.
For description, see PSYCH 342.

VISST 347 Psychology of Visual Communications (also PSYCH 347)
Spring. 3 credits. Limited to 15 students. Prerequisites: PSYCH 101 and permission of instructor. J. Maas.
For description, see PSYCH 347.

MATH 451 Euclidean and Spherical Geometry
Fall. 4 credits. Prerequisite: MATH 221, 223, 231, or 294, or permission of instructor. D. Henderson.
For description, see MATH 451.

VISST 475 Seminar in Cinema: Cognitive Film Theory (also FILM 475 and AM ST 475)
Fall. 4 credits. Limited to 20 students. D. Fredericksen.
For description, see FILM 475.

VISST 492 Sensory Function (also BIONB 492 and PSYCH 492/692)
Spring. 4 credits. Limited to 25 students. Prerequisite: A 300-level course in biopsychology, or BIONB 222 or BIOAP 311, or equivalent. Students are expected to have a knowledge of elementary physics, chemistry, and behavior. S-U grades optional. B. Halpern.
For description, see PSYCH 492.4.

Theory and Visuality

4. Theory and Visuality

WOMNS 210 Introduction to Feminist Theory
Spring. 3 credits. A. Villarejo.
For description, see WOMNS 210.

VISST 367 Visual Culture and Social Theory (also ART H 370, COM L 360, and GOVT 375)
Spring. 4 credits. S. Buck-Morss.
For description, see COM L 360.

5. Performance and Visuality

VISST 233 Explorations in Movement (also DANCE 233 and PE 168)
Fall. 0 to 1 credit. Limited to 16 students. Prerequisite: permission of instructor. Attendance at dance concerts is required. J. Self.
For description, see DANCE 233.

VISST 303 Dance Technique Workshop (also DANCE 303 and PE 167)
Fall. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies PE requirement if taken as PE. Attendance at dance concerts is required. J. Self.
For description, see DANCE 303.

VISST 308 Modern Dance (also DANCE 308 and PE 166)
Fall. 0 to 1 credit. By placement only; no pre-enrollment. Satisfies PE requirement if taken as PE. Attendance at dance concerts is required. J. Self.
For description, see DANCE 308.

VISST 319 Music, Dance and Light (also DANCE 319 and THEATR 319)
Fall. 3 credits. Attendance at dance and music concerts is required. A. Fogelsanger and E. Intemann.
For description, see THEATR 319.

VISST 403 Ritual, Play, Spectacle, Act: Performing Culture (also THEATR 403/603)
For description, see THEATR 403.

VISST 445 Text Analysis for Production: How to Get from the Text onto the Stage (also THEATR 445)
Spring. 4 credits. Prerequisites: THEATR 240 or THEATR 281 or THEATR 250 or THEATR 398 or permission of the instructor. Limited to 16 students. B. Levitt.
For description, see THEATR 445.

VISST 446 Shakespeare in (Con)text (also THEATR 446)
Fall. 4 credits. B. Levitt.
For description, see THEATR 446.

6. Visuality and Society

VISST 245 Renaissance and Baroque (also ART H 245)
Fall. 4 credits. Each student must enroll in a section. S. Benson.
For description, see ART H 245.

VISST 361 European Cultural History 1750–1870 (also COM L 353 and HIST 362)
Fall. 4 credits. S. Steinberg.
For description, see HIST 362.

VISST 362 Impressionism in Society (also ART H 362, WOMNS 361)
Spring. 4 credits. L. Meixner.
For description, see ART H 362.

VISST 363 European Cultural History 1870–1945 (also COM L 353 and HIST 363)
For description, see HIST 363.

VISST 384 Introduction to Japanese Art (also ART H 384, ASIAN 381)
Fall. 4 credits. A. Pan.
For description, see ART H 384.

VISST 394 The House and the World: Architecture of Asia (also ART H 395 and ASIAN 394)
Spring. 4 credits. K. McGowan.
For description, see ART H 395.

VISST 407 The Museum and the Object (also ART H 407)
Fall. 4 credits. Prerequisites: permission of instructor. All classes meet in the Johnson Art Museum Study Gallery. A. Pan.
For description, see ART H 407.

VISST 452 The Printed Image: The World on Paper (also ART H 452)
Fall. 4 credits. Not open to freshmen or sophomores without permission of instructor. S. Benson.
For description, see ART H 452.

VISST 462 Topics in Early Modernism: America and the Machine Age (also ART H 462)
Spring. 4 credits. Prerequisite: permission of instructor. Auditing is not permitted. Not open to freshmen or sophomores. L. Meixner.
For description, see ART H 462.

7. Theory/Practice

VISST 104 Introduction to World Music: Asia (also MUSIC 104)
Fall. 3 credits. 1-hour discussion to be arranged. No previous training in music required. M. Hadrich.
For description, see MUSIC 104.

COGST 201 Cognitive Studies in Context Laboratory (also COM S 201 and PSYCH 201)
For description, see COGST 201.

VISUAL STUDIES CONCENTRATION 663
VISST 211 Beginning Dance Composition (also DANCE 210)
Fall and spring. 3 credits. Concurrent enrollment in DANCE 212 and a dance technique class at the appropriate level is required. Attendance at dance concerts is required. Fall, R. Suber, spring, J. Morgenroth.
For description, see DANCE 210.

VISST 244 Gamelan in Indonesian History and Cultures (also MUSIC 245)
Fall or spring. 3 credits. Permission of instructor. No previous knowledge of musical notation or performance experience required. M. Hatch.
For description, see MUSIC 245.

VISST 258 Techno Soma Kinesics I: Technology and the Moving Body (also DANCE 258)
Spring. 4 credits. Prerequisite: DANCE 201 or DANCE 210 (or equivalent) or permission of instructor. Limited to 5 students. B. Suber.
For description, see DANCE 258.

VISST 335 Modern Western Drama, Modern Western Theater: Theory and Practice (also COM L 335 and THETR 335)
Fall. 4 credits. Staff.
For description, see THETR 335.

VISST 358 Techno Soma Kinesics II: Technology and the Moving Body (also DANCE 358)
Spring. 4 credits. Prerequisite: DANCE 258 (or equivalent) or permission of instructor. Limited to 5 students. B. Suber.
For description, see DANCE 358.

VISST 391 Media Studio I (also ART 391, FILM 391)
Fall. 3 credits. Prerequisite: permission of instructor and junior-level standing required. 60-80 students. B. Suber.
For description, see FILM 391.

VISST 398 Fundamentals of Directing I (also THETR 398)
Fall. 3 credits. Limited to 10 students. Prerequisite: permission of instructor. Special consideration is given to students who have completed THETR 280 or are intending to continue in the area of stage or screen directing. Students should see instructor one year in advance to sign up for the course. D. Feldshuh.
For description, see THETR 398.

COM S 417 Interactive Computer Graphics (also ARCH 374)
Fall. 3 credits. Prerequisite COM S 211. Staff.
For description, see COM S 417.

COM S 418 Practicum in Computer Graphics (also ARCH 375)
Fall. 2 credits. Enrollment limited Prerequisites: COM S 212 and permission of instructor. Recommended: COM S 314. Corequisite: COM S 417. Staff.
For description, see COM S 418.

VISIT 419 Seminar in the History of Dance (also DANCE 419)
Spring. 4 credits. B. Suber.
For description, see DANCE 419.

VISIT 478 Intermediate Film and Video Projects, Narrative Workshop (also FILM 478)
Fall. 4 credits. Limited to 8 students. Prerequisites: FILM 277 or 277. As minimum production; and THETR 398 (Screenwriting) or 398 (Directing I). Enrollment limited to 4 by permission of instructor based on proposals. Equipment fee $100 (paid in class). Film project costs: $900-$1500. Video $100-$200. M. Rivchin.
For description, see FILM 478.

VISST 493 Advanced Film and Video Projects (also FILM 493)
Spring. 4 credits. Limited to 8-8 students. Prerequisite: minimum FILM 377 or 277. Preference to those who have taken 477 or 478. Recommended: 383 (Screenwriting) and 398 (Directing I). Equipment fee: $100. Project costs: $500-$2000, unless group project is funded by the Melville Shavelson Fund. M. Rivchin.
For description, see FILM 493.

WELSH
See Department of Linguistics.

WOMEN’S STUDIES PROGRAM
See Feminist, Gender and Sexuality Studies.

WRITING PROGRAM
See John S. Knight Institute for Writing in the Disciplines.

YIDDISH
See Department of Near Eastern Studies.

FACULTY ROSTER
FOR ARTS AND SCIENCES BIOLOGY
FACULTY SEE UNDER “BIOLOGICAL SCIENCES”
Abusn, Dorit, Ph.D., U. of Massachusetts at Amherst. Assoc. Prof., Linguistics.
Adams, Anne, Ph.D., U. of Michigan. Assoc. Prof., Africana Studies and Research Center/Comparative Literature.
Adams, James, Ph.D., Cornell U. Assoc. Prof., English.
Adickson, Leslie A., Ph.D., Washington U. Prof., German Studies.
Alfred, Frederick M., Ph.D., U. of Texas at Austin. Prof., Classics/Comparative Literature.
Albrecht, Andreas C., Ph.D., U. of Washington. Prof., Chemistry and Chemical Biology.
Alexander, James P., Ph.D., U. of Chicago. Prof., Physics/LNS.
Allaire, Elbern H., Ph.D., Cornell U. Lecturer, Romance Studies.
Almendinger, Richard W., Ph.D., Stanford U. Prof., Earth and Atmospheric Sciences/INSTOC.
Altschuler, Glenn C., Ph.D., Cornell U. The Thomas and Dorothy Liwan Professor of American Studies, Prof., American Studies.
Alvarez, Maria A., M.S., U. of St. Thomas. Lecturer, Romance Studies.
Ambegaokar, Vinay, Ph.D., Carnegie Inst. of Technology. Goldwin Smith Professor of Physics, Physics/LASSP.
Anderson, Benedict R., Ph.D., Cornell U. Aaron L. Bienenstock Professor of International Studies Emeritus, Government.
Arch, Richard J., M.A., U. of Missouri at Kansas City. Assoc. Prof., Theatre, Film and Dance.
Argues, Philip C., Ph.D., Princeton U. Assoc. Prof., Physics/LNS.
Arias, Tomas A., Ph.D., Massachusetts Inst. of Tech. Assoc. Prof., Physics/LASSP.
Arms, William, Ph.D., U. of Sussex. Prof., Computer Science.
Arnesen, Ingrid. M.A., U.C. Davis; M.A. SUNY Stony Brook. Senior Lecturer, English for Academic Purposes.
Arroyo, Carolo M., Ph.D., U. of Munich (Germany). Emerson Hinchliff Professor of Spanish Literature, Romance Studies/Comparative Literature.
Ascher, Robert, Ph.D., U. of California at Los Angeles. Prof., Anthropology Emeritus.
Ashcroft, Neil W., Ph.D., Cambridge U. (England). Horace White Professor of Physics, Physics/LASSP.
Bairley, Greene, Ph.D., U. of Birmingham. Prof., Computer Science.
Baird, Barbara, Ph.D., Cornell U. Prof., Chemistry and Chemical Biology.
Baraldi, Michela, B.A. equivalent, U. of Bologna. Lecturer, Romance Studies.
Barzangi, Muawia, Ph.D., Columbia U. Prof., Earth and Atmospheric Sciences/INSTOC.
Barkus, Dan, Ph.D., U. of Illinois. Prof., Mathematics.
Bassett, William A., Ph.D., Columbia U. Prof., Emeritus, Earth and Atmospheric Sciences.
Basu, Kaushik, Ph.D., London School of Economics (England). Carl Marks Prof. of International Studies.
Bartnick, David, Ph.D., U. of Chicago. Prof., German Studies/Theatre, Film and Dance.
Bättig von Wettelsbach, Kora. M.A., University of Zagreb. Senior Lecturer, Romance Studies.
Bauer, Simon H., Ph.D., U. of Chicago. Prof., Emeritus, Chemistry and Chemical Biology.
Begley, Tadhg P., Ph.D., California Inst. of Technology. Prof., Chemistry and Chemical Biology.
Belterie, Yoele, Ph.D., Temple U. Asst. Prof., Africana Studies and Research Center.
Bell, James F., Ph.D., U. of Hawaii. Prof., Astronomy/CRSR.
Bem, Sandra L., Ph.D., U. of Michigan. Prof., Psychology/Women’s Studies.
Bencina, Lourdes, Ph.D., Columbia U. Prof., City and Regional Planning/Women’s Studies.
Bensel, Richard, Ph.D., Cornell U. Prof., Government
Bercaut, Jacques, Docteur d'Univ., U. of Lille (France). Prof., Romance Studies
Berest, Yuri, Ph.D., Université de Montréal (Canada). Asst. Prof., Mathematics
Berger, Anne, Ph.D., Paris VII (France). Prof., Romance Studies
Berkelman, Karl, Ph.D., Cornell U. Goldwin Smith Professor of Physics, Physics/ LNS
Bernal, Martin G., Ph.D., Cambridge U. (England). Prof. Emeritus, Government/Eastern European Studies
Bernstein, Sarah E. M.F.A., Yale U. Senior Lecturer, Theatre, Film and Dance
Bernstech, Judith, Ph.D., Columbia U. Assoc. Prof., History of Art
Bertes, Hans, Ph.D., U. of Munich (Germany). John Wendell Anderson Professor of Physics Emeritus
Beekuchen, Erik Jan, Ph.D., Indiana U., Bloomington. Senior Lecturer, Intensive English Program
Billera, Louis J., Ph.D., City U. of New York. Prof., Mathematics
Bird, John D., Ph.D., Rensselaer Polytechnic Inst. Prof., Earth and Atmospheric Sciences
Birman, Kenneth P., Ph D., U. of California at Berkeley. Prof., Computer Science
Bishop, Jonathan P., Ph.D., Harvard U. Emeritus, English
Bierken, Jak, D.M.A. Peabody Conservatory of Music. Asst. Prof., Music
Blackall, Jean F., Ph.D., Harvard U. Emerita, English
Blackber, Berkeley, Ph.D., Cornell U. Lecturer, Africana Studies
Bloom, Arthur L., Ph.D., Yale U. Emeritus, Earth and Atmospheric Sciences/INSTOC
Blume, Lawrence E., Ph.D., U. of California at Berkeley. Prof., Economics
Blumina, Stuart M., Ph.D., U. of Pennsylvania. Prof., History
Bodenschutz, Eberhard, Ph.D., U. of Bayreuth (Germany). Assoc. Prof., Philosophy/LASSP*
Boehm, Elizabette Ann. M.A., Hollins College. Senior Lecturer, English
Boigel, Fredric V., Ph.D., Yale U. Emeritus, English
Boigel, Lynda Donelia, M.Phil., Yale U. Emeritus, English
Borden, David R. M.A., Harvard U. Senior Lecturer, Music
Borselmann, Thomas, Ph.D., Duke U. Assoc. Prof., History
Boucher, Daniel, Ph.D., U. of Pennsylvania. Asst. Prof., Asian Studies
Bowers, John S., Ph.D., Massachusetts Inst. of Technology. Prof., Linguistics
Boyd, Richard N., Ph.D., Cornell U. Prof., Philosophy/Science and Technology Studies
Boyter, Dominic, Ph.D., U. of Chicago. Asst. Prof., Anthropology
Bracken, William F., Ph.D., Harvard U. Prof., Economics
Braddick, Martin, Ph.D., Cambridge U. Professor Emeritus, Mathematics
Brendel, Martin G., Ph.D., U. of California at Los Angeles. Assoc. Prof., Linguistics
Brenner, Stephen G., Ph.D., Cornell U. Senior Lecturer, Romance Studies/Latino & Hispanic Studies
Brink, David B., Ph.D., Columbia U. Prof., Computer Science
Brisson, Joseph, Ph.D., Cornell U. Irving Porter Church Professor of Engineering, Astronomy/Theoretical and Applied Mechanics/CRSR*
Buell, Steven B., Ph.D., Cornell U. Assoc. Prof., Romance Studies/Latino & Hispanic Studies
Buck-Morss, Susan F., Ph.D., Georgetown U. Emerita, History of Art
Burnett, Bonnie, Ph.D., Cornell U. Emerita, English
Burns, Joseph, Ph.D., Cornell U. Irving Porter Church Professor of Engineering, Astronomy/Theoretical and Applied Mechanics/CRSR*
Campbell, Donald B., Ph.D., Cornell U. Emeritus, Astronomy/NASA*
Campbell, Timothy C., Ph.D., Columbia U. Asst. Prof., Romance Studies
Caputi, Anthony F., Ph.D., Cornell U. Emeritus, English/Comparative Literature
Carden, Patrick J., Ph.D., Columbia U. Emeritus, Russian Literature
Cardie, Claire, Ph.D., U. Mass. Assoc. Prof., Computer Science
Carlson, Allen, Ph.D., Yale U. Asst. Prof., Classics
Carmichael, Calum M., LL.D., Glasgow U. Emeritus, Mathematics
Chaloomartianan, Thak, Ph.D., Cornell U. Emeritus, Romance Studies
Chang, Deryn, Ph.D., Duke U. Asst. Prof., History/Asian American Studies
Chase, Cynthia, Ph.D., Yale U. Emerita, English/Comparative Literature
Chase, Stephen U., Ph.D., U. of Chicago. Prof., Mathematics
Chernoff, David F., Ph.D., U. of California at Berkeley. Prof., Astronomy/CRSR*
Chester Geoffrey, Ph.D., King's Coll. London (England). Emeritus, Physics/LASSP*
Chirik, Paul T., Ph.D., Cal. Tech. Asst. Prof., Chemistry and Chemical Biology
Christiansen, Marten, Ph.D., U. of Edinburgh. U.K. Asst. Prof., Psychology
Chu, Jumay Ruth B.A., U. of California at Berkeley. Senior Lecturer, Theatre, Film and Dance
Clinc, John L., Ph.D., U. of Chicago. Prof., Earth and Atmospheric Sciences/INSTOC
Clardy, Jon C., Ph.D., Harvard U. Emeritus, White Professor of Chemistry and Chemical Biology
Clark Arcadi, Adam, Ph.D., U. of Michigan. Asst. Prof., Anthropology
Clarke, Matthew, Ph.D., U. of Chicago. Asst. Prof., Sociology
Clintoon, Kevin M., Ph.D., Johns Hopkins U. Emeritus, Classics
Coate, Stephen, Ph.D., Northwestern U. Emeritus, Professor of Economic Policy
Coffees, Geoffrey, Ph.D., Stanford U. Emeritus, Philosophy, Chemistry and Chemical Biology
Cochran, Sherman G., Ph.D., Yale U. Emeritus, History
Cohen, Walter I., Ph.D., U. of California at Berkeley. Emeritus, Comparative Literature
Cohn, Abigail C., Ph.D., U. of California at Los Angeles. Assoc. Prof., Linguistics
Collins, Edward M., Ph.D., Columbia U. Emeritus, History of Art
Connelly, Robert, Ph.D., U. of Cincinnati. Emeritus, Classics
Conlon, Thomas F., Ph.D., U. of Waterloo. Emeritus, Computer Science
Cooke, W. Donald, Ph.D., U. of Pennsylvania. Emeritus, Mathematics
Correll, Barbara, Ph.D., U. of Wisconsin. Emeritus, Medicine
Cordes, James M., Ph.D., U. of California at San Diego. Emeritus, Astronomy/NAIC*
Cots, Robert M., Ph.D., U. of California at Berkeley. Prof Emeritus, Physics/LASSP*
Cowden, Jonathan, Ph.D., Yale U. Asst. Prof., Government
Crawford, Raymond, Ph.D., Yale U. Asst. Prof., Philosophy
Crane, Brian R., Ph.D., The Scripps Research Institute. Asst. Prof., Chemistry and Chemical Biology
Cross, Warren Dennis, B.A., SUNY Stony Brook. Lecturer, Theatre, Film & Dance
Czak, Csaba, Ph.D., MIT. Asst. Prof., Physics/LNS
Culler, Jonathan D., Ph.D., Oxford U. (England). Class of 1916 Professor, English/Comparative Literature
Cutting, Jane L., Ph.D., Yale U. Prof., Psychology
Dannhauser, Werner J., Ph.D., U. of Chicago. Prof Emeritus, Government
Darlington, Richard B., Ph.D., U. of Minnesota. Prof., Psychology
Davis, H. Floyd, Ph.D., U. of California at Berkeley. Assoc. Prof., Chemistry and Chemical Biology
Davis, Stuart Arrowsmith, M.Phil., Yale U. Associate Lecturer, English
Davis, Tom E., Ph.D., Johns Hopkins U. Prof., Economics
Dear, Peter, Ph.D., Princeton U. Prof., History/Science and Technology Studies
DeCerchio, Arthur T., Ph.D., Rutgers U. Assoc. Prof., Earth and Atmospheric Science
De Brey, Brett, Ph.D., Harvard U. Prof., Asian Studies/Comparative Literature
Deinert, Herbert, Ph.D., Yale U. Prof., German Studies
Deloughrey, Elizabeth, Ph.D., U. of Maryland. Asst. Prof., English
Demers, Alan, Ph.D., Princeton U. Prof., Computer Science
Dennis, Michael A., Ph.D., Johns Hopkins U. Asst. Prof., Science and Technology Studies
Dennis, R. Keith, Ph.D., Rice U. Prof., Mathematics
Derry, Louis A., Ph.D., Harvard U. Asst. Prof., Earth and Atmospheric Sciences
DeVoogd, Timothy J., Ph.D., U. of Illinois. Assoc. Prof., Physical Science, Astronomy/NAIC*
DeVincentiis, Karen, Ph.D., U. of Toronto. Senior Lecturer, English
Doss, Hills, Ph.D., WSHA Women's University. Senior Lecturer, Asian Studies
Disalvo, Francis J. Jr., Ph.D., Stanford U. John A. Newman Professor of Physical Science, Chemistry and Chemical Biology
Donaldson, Laura Ph.D., Emeritus. U. of Wisconsin. Asst Prof., English
Donatelli, Stephen A., Ph.D., Brown U. Senior Lecturer, Knight Institute for Writing in the Disciplines and Comparative Literature
Doyne, Arch T., Ph.D., Harvard U. Prof., Government
Dotton, Esther G., Ph.D., New York U. Prof., Emeritus, History of Art
Dozier, Eleanor. M.A., Cornell U. Senior Lecturer, Romance Studies
Dugan, Gerald F., Ph.D., Columbia U. Prof., Physics/LNS*
Dunning, David, Ph.D., Stanford U. Prof., Psychology
Dunne, Richard T. Ph.D, Stanford U. Prof., Mathematics
Dykstra, Eugene B., Dr. of Sci., Moscow U. (USSR). Abram R. Bullis Professor of Mathematics, Mathematics
Ellick, Tom R., Ph.D. of Oklahoma. Prof., Chemistry and Chemical Biology
Earle, Clifford J., Ph.D., Harvard U. Prof., Mathematics
Easley, David, Ph.D., Northwestern U. Henry Scarborough Prof. of Social Sciences
Eberhard, Carolyn Ph.D., Boston U. Senior Lecturer, Plant Biology
Eddy, Donald D., Ph.D., U. of Chicago. Prof Emeritus, English
Edelman, Shimon, Ph.D., Weizmann Institute of Science (Israel). Prof., Psychology
Edmondson, Lockley G., Ph.D., Queens U. (Canada). Prof., Africana Studies and Research Center
Ehrenberg, Ronald, Ph.D., Northwestern U. Prof., Industrial and Labor Relations/Economics
Eichenberger, Stephen S., Ph.D., Harvard U. Asst. Prof., Astronomy/CIRS/
Elber, Ron, Ph.D., Hebrew U. Professor, Computer Science
Elie, Robert Ph.D., U. of Pennsylvania. Goldwin Smith Professor of English Literature and American Studies, Emeritus, English
Elsar, Veit, Ph.D., U. of California at Berkeley. Prof., Physics/LASSP*
Escober, Jose C., Ph.D., U. of California at Berkeley. Prof., Mathematics
Essman, Milton J., Ph.D., Princeton U. John S. Knight Professor of International Studies, Emeritus, Government
Evangelista, Matthew Ph.D., Cornell U. Government
Ergang, Ina M., Ph.D., Cornell U. Emerita, German Studies
Ezra, Gregory S., Ph.D., Oxford U. (England). Prof., Chemistry and Chemical Biology
Fajans, Jane, Ph.D., Stanford U. Assoc. Prof., Anthropology
Fakundiny, Lydia E. B. Ph.D., Oxford U. B. Lit., Oxford U. Senior Lecturer, English
Falk, Oren, Ph.D., U. of Toronto. Asst. Prof., History
Far, K-Y Daisy, Ph.D., Cornell U. Asst. Prof., Computer Science
Fara, Michael, Ph.D., Princeton U. Asst. Prof., Philosophy
Faroqui, Mehr. Ph.D., Allahabad U. Lecturer, Asian Studies
Farrell, Robert T., Ph.D., Fordham U. Prof., English/Medieval Studies/Archaeology
Farrell, Roger H., Ph.D., U. of Illinois. Prof Emeritus, Mathematics
Fay, Robert C., Ph.D., U. of Illinois. Prof., Chemistry and Chemical Biology
Feldman, Richard L. M.A., U. of Illinois at Urbana-Champaign. Senior Lecturer, Intensive English Program
Fieldshuh, David, Ph.D., U. of Minnesota. Prof., Theatre, Film and Dance
Field, David J., Ph.D., U. of Pennsylvania. Assoc. Prof., Psychology
Fine, Gail J., Ph.D., Harvard U. Prof., Philosophy
Finlay, Barbara L., Ph.D., Massachusetts Inst. of Technology. Prof., Psychology
Fitchett, Douglas B., Ph.D., U. of Illinois. Prof., Physics/LASSP*
Flanagan, Eamonn E., Ph.D., California Inst. of Technology. Assoc. Prof., Physics/Astronomy/LNS*
Fogel, Allen L. Ph.D., Cornell U. Senior Lecturer, Theatre, Film and Dance
Fortune, Jonathan Ph.D., Cornell U. Assoc. Prof., Physiology/Women's Studies
Fronck, Carl P., Ph.D., Princeton U. Assoc. Prof., Physics/LASSP*
Frank, Robert H., Ph.D., U. of California at Berkeley. Emeritus, Philosophy
Frederickson, Donald L., Ph.D., U. of Iowa. Assoc. Prof., Theatre, Film and Dance
Freed, Jack H., Ph.D., Columbia U. Prof., Chemistry and Chemical Biology
Fried, Debra, Ph.D., Yale U. Assoc. Prof., English
Fulton, Alice, MFA, Cornell U. Prof., English
Furman, Nelly, Ph.D., Columbia U. Prof., Romance Studies
Gainor, Ellen J., Ph.D., Princeton U. Prof., Theatre, Film and Dance
Gair, James W., Ph.D., Cornell U. Emeritus, Linguistics
Galik, Richard S. Ph.D., Cornell U. Prof., Physics/LNS*
Galloway, Andrew, Ph.D., U. of California at Berkeley. Assoc. Prof., English
Ganem, Bruce Ph.D., Columbia U. Franz and Elisabeth Roesler Professor of Chemistry and Chemical Biology
Garces, Maria Antonia, Ph.D., Johns Hopkins U. Assoc. Prof., Romance Studies
Garcia, Maria Cristina, Ph.D., U. of Texas at Austin. Assoc. Prof., History/Latinx Studies
Gehrke, Johannes, Ph.D., U. of Wisconsin at Madison. Asst. Prof., Computer Science
Giamatti, Alan M. G.S., Cornell U. Senior Lecturer, Physics
Gibbons, Lawrence K., Ph.D., U. of Chicago. Asst. Prof., Physics/LNS*
Gibson, Eleanor J., Ph.D., Yale U. Susan Linn Sage Professor of Psychology Emeritus, Psychology
Giereck, Peter J., Ph.D., Harvard U. Prof., Astronomy/CIRS/
Gilbert, Roger S., Ph.D., Yale U. Assoc. Prof., English
Gilgen, Peter, Ph.D., Stanford U. Asst. Prof., German Studies
Gillespie, Tarleton L., Ph.D., U. of California at San Diego. Asst. Prof., Science and Technology Studies
Gilliland, Mary A., Cornell U. Senior Lecturer, Knight Institute for Writing in the Disciplines
Gilovich, Thomas, Ph.D., Stanford U. Prof., Psychology
Ginet, Carl A., Ph.D., Cornell U. Emeritus, Philosophy
Ginsburg, Judith R., Ph.D., U. of California at Berkeley. Assoc. Prof., Classics
Ginsparg, Paul, Ph.D., Cornell U. Prof., Physics/CIS
Giovarelli, Riccardo, Ph.D., Indiana U. Prof., Astronomy/NAIC*
Gittelmann, Bernard, Ph.D., Massachusetts Inst. of Technology. Prof., Physics/LNS*
Goetz, Kent M.F.A., U. of Wisconsin at Madison. Asst. Prof., Theatre, Film and Dance
Gold, Daniel, Ph.D., U. of Chicago Divinity School. Prof., Asian Studies
Gold, Thomas, Ph.D., Cambridge U. (England). John L. Wetherill Professor of Astronomy Emeritus
Goldsmith, Paul F., Ph.D., U. of California at Berkeley. James A. Weekes Professor of Physical Sciences, Astronomy/NAIC*
Gorewitz, Krystyna Urszta, Ph.D., Jagiellonian University (Poland). Senior Lecturer, Intensive English Program
Gottfried, Katheryn Kibbinger, Ph.D., U. of Chicago. Senior Lecturer, English and Knight Institute for Writing in the Disciplines
Graff, Delia, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Philosophy
Grauhart, Karen Ph.D., U. of Massachusetts at Amherst. Assoc. Prof., History
Greenberg, Donald P., Ph.D., Cornell U. Prof., Computer Science
Greenberg, Mitchell, Ph.D., U. of California at Berkeley. Prof., Romance Studies
Greenfield, Charles H., Ph.D., U. of Washington. Assoc. Prof., Earth and Atmospheric Sciences/CFE
Greene, Sandra E., Ph.D., Northwestern U. Prof., History
Greenwood, George V., Ph.D., U. of Pittsburgh. Goldwin Smith Professor of Anthropology
Greisen, Kenneth L., Ph.D., Cornell U. Prof., Emeritus, Physics
Grimes, Joseph E., Ph.D., Cornell U. Emeritus, Modern Languages and Linguistics
Grossvogel, Anita V., Ph.D., Cornell U. Assoc. Prof., Emerita, Romance Studies

It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, sexual orientation, age, or handicap. The university is committed to the maintenance of affirmative action programs that will assure the continuation of such equality of opportunity. Sexual harassment is an act of discrimination and, as such, will not be tolerated. Inquiries concerning the application of Title IX can be referred to the director of the Office of Workforce Diversity, Equity and Life Quality, Cornell University, 160 Day Hall, Ithaca, NY 14853-2801 (telephone: 607 255-3976; TDD: 607 255-7066).

Requests for information about services for Cornell faculty and staff members, applicants for employment, and visitors with disabilities who have special needs, as well as related questions or requests for special assistance, can be directed to the Office of Workforce Diversity, Equity and Life Quality, Cornell University, 160 Day Hall, Ithaca, NY 14853-2801 (telephone: 607 255-3976; TDD: 607 255-7066). Students with disabilities should contact Student Disability Services, Center for Learning and Teaching, Cornell University, 420 Computing and Communications Center, Ithaca, NY 14853-2801 (telephone: 607 254-1545; TDD: 607 255-7065).

For Cornell University directory information or general information, call 607 255-2000 or 607 254-INFO. The web page for 2002-2003 Courses of Study has been made available at cuinfo.cornell.edu/Academic/Courses/.

To obtain a copy of this catalog, please follow these guidelines:

If you are a prospective undergraduate student and don't have web access, please contact the Undergraduate Admissions Office, Cornell University, 410 Thurston Ave., Ithaca, NY 14850-2488, 607 255-5241.
If you are a prospective graduate student, please consult the listing of the course catalog on the web (see above for address).
If you are a currently enrolled student, please contact your college registrar.
All others please contact the Office of the University Registrar, Cornell University, B07 Day Hall, Ithaca, NY 14853-2801, 607 255-4232, e-mail: day1@cornell.edu
